UNEMPLOYMENT CONSIDERED BY COMMITTEE OF UNITED STATES SENATE

THE Committee on Education and Labour of the United States Senate on the Causes of unemployment, presented a report in February, which contains also suggestions for its prevention and cure. Three classes of unemployment are recognized in the report, namely, cyclical, seasonal, and technological. The cyclical type of unemployment has been hitherto considered as being inevitable, but the committee holds that remedies may be found, and suggests that it can best be attacked through the control of credit, the Federal reserve system being mentioned as an example of successful action in this direction.

"We all know the story of progression and retrogression in industry as told in the history of all cyclical unemployment. Although there may be different causes and although no student seems to be able to lay down a dogma as to causes which is universally accepted, the results are much the same. We have the first evidence of increased business, development of 'better times' psychology, increased orders, and increased production, plant extensions, increased stocks on shelves, extensions of credit and then the swing downward, a swing which is merely accelerated. And for labour, we have the inculcation of the practices of inefficiency which are definite marks of every period of overdevelopment and overexpansion and then—unemployment. As Dr. John R. Commons put it in his testimony before your committee, 'We first demoralize labour and then we pauperize it.'"

As to seasonal unemployment, this, the committee states, is already being attacked in many industries; and, "if the business men of the country will solve this problem to the extent it is possible of solution, will eliminate this waste, the saving to industry will be two billions of dollars a year."

"Technological unemployment," the report continues, "covers that vast field where, through one device or another, and chiefly through a machine supplanting a human, skilled workers have found that their trades no longer exist and that their skill is no longer needed. What becomes of these men? What can be done about these thousands of individual tragedies? What do these individual tragedies mean to society as a whole? It is an imponderable thing. Some of the experienced witnesses who appeared before your committees stated that new industries absorb the labour turned adrift by machine development. The automobile, the airplane, the

radio, and related industries were suggested as examples. Undoubtedly there is much truth in these statements, but nevertheless we are not relieved of the individual problem. It offers little to the skilled musician to say that he, who has devoted his life to his art, may find a job in a factory where radio equipment is manufactured. Then there is the delay, that inevitable period of idleness when readjustments are being effected, the suffering, the loss, the enforced change in environment. True, this may all be 'the price of progress' but society has an obligation to try, at least, to see that all this 'price' does not become the burden of the worker."

In addition to the three types already mentioned the report points out that "there is one other field of unemployment, the field wherein we find the crippled, the superannuated, the infirm. This field constitutes a problem for industry and for society. It is a growing field, we believe. The man of mature years is not so successful when competing with a machine as is a younger man."

Recommendations

The suggestions and recommendations made by the Committee are summed up as follows:

1. Private industry should recognize the responsibility it has to stabilize employment within the industry. The Government should encourage this effort in every way, through sponsoring national conferences, through publishing information concerning the experience had by industries in this work, and through watching every opportunity to keep the thought of stability uppermost in the minds of employers.

2. Insurance plans against unemployment should be confined to the industry itself as much as possible. There is no necessity and no place for Federal interference in such efforts at this time. If any public insurance scheme is considered it should be left to the State legislatures to study that problem.

3. The States and municipalities should be responsible for building efficient unemployment exchanges. The Government should be responsible for co-ordinating the work of the States so as to give a national understanding of any condition which may rise and so as to be able to assist in any national functioning of the unemployment exchanges

4. The existing United States Employment Service should be reorganized, and every employee should be placed under civil service.

5. Efforts should be made to provide an efficient system for obtaining statistics of unemployment. The first step should be taken by the Bureau of Census in 1930, when the bureau should ascertain how many were unemployed as of a certain date and how many were not seeking employment and yet were unemployed as of that date.

6. The Government should adopt legislation without delay which would provide a system of planning public works so that they would

form a reserve against unemployment in times of depression. States and municipalities and other public agencies should do likewise.

7. Further consideration might well be given to two questions, the effect had on unemployment by industrial developments such as consolidation of capital, and the necessity and advisability of providing either through private industry, through the States, or through the Federal Government, a system of old-age pensions.

Metropolitan Company's Estimate of Unemployment in United States

The Metropolitan Life Insurance Company made an employment survey of its policy holders in the United States in the first week of December, which was submitted to the President's Emergency Committee for Employment, as indicating the general extent of unemployment throughout the country. The number of persons in the families canvassed by the company was 886,929 or 3.1 per cent of the total population of these 46 cities, which was shown by the census to be 28,296,849. It is estimated that between 5,500,000 and 6,000,000, nearly half of the total number of gainfully occupied persons in these cities, are of the industrial wage-earning class, of which the policy-holders of this company may be considered representative. The survey showed that, in the 46 cities as a whole, 84,627 out of the total of 355,759 workers in all families canvassed by the company, or 23.8 per cent, were unemployed in the first week of December. It should be remembered that this percentage is an average or composite of many diverse conditions in the various cities covered and is therefore not a measure of conditions in the country as a whole or in any specific locality. Assuming that this percentage is representative of the estimated total of five and one-half to six million industrial workers, this would indicate that between 1,310,000 and 1,430,000 of the industrial workers in these cities were unemployed for various reasons at the time of the survey.

In addition to this total there is the unemployment existing among the higher grade salaried workers not generally represented among the families of industrial policy-holders, although unemployment has been more prevalent among industrial wage earners than among salaried and executive workers. It is estimated that the number of executives, salaried workers, and other classes of employed persons (excluding of course, the independent, professional, and other self-employed groups) who might be subject to unemployment, is about half as large as the number of industrial workers in these cities, or between 2,750,000 and 3,000,000.

"If the same relation between the number of unemployed in these cities to the number in the country as a whole now exists, it would appear that the estimated unemployment of 1,810,000 to 1,990,000 in these cities is between 39 and 40 per cent of the total unemployment in the entire United States. Figured on this basis, total unemployment in the first week of December was between 4,600,000 and 5,060,000, but in view of the liberal estimate of unemployment among the higher grade salaried workers (who were not included in the Metropolitan survey) it seems probable that the total number of wholly unemployed persons in the United States in the first week of December, 1930, was between 4,500,000 and 5,000,000, or about 10 per cent of the total number of persons with gainful occupations. It must be remembered that such a figure is only a very rough approximation, being based upon a number of assumptions that unfortunately cannot be verified at the present time."

The State of New Jersey enacted a law last year to provide that persons forty years of age or over shall not be discriminated against, by reason of their age, in applying for public employment. Such persons, however, are not eligible for a pension, and the act does not apply to police and fire departments or penal institution guards.

There were 4,523 accidents reported to the Ontario Workmen's Compensation Board during the month of March as compared with 3,924 during February and 6,016 during March a year ago. The fatal accidents numbered 29 as compared with 42 in March last year. The total benefits awarded amounted to \$560,662.92 of which \$463,809.93 was for compensation and \$96,852.99 for medical aid. The first quarter of 1931 shows a decrease of 5,609 accidents from the number for the same period last year, the figures being 12,683 and 18,292 respectively. The total benefits awarded during the first quarter of 1931 were \$1,646,188.71 as compared with \$1,949,500.72 during the same period a year ago.

PLANS OF LARGE INDUSTRIES IN THE UNITED STATES FOR MEETING UNEMPLOYMENT

A SERIES of radio addresses was given recently throughout the United States, under the auspices of the President's Emergency Committee for Employment, for the purpose of placing before all those concerned with the problem of unemployment the experience and judgment of outstanding industrial executives. Some of the plans described have been noted in previous issues of the *LABOUR GAZETTE*, (September, 1930, page 1059, etc.).

The General Electric Company.—During the past 12 years this company has been developing a balanced program designed to provide security of employment. This program includes provision of life insurance, ownership of homes, investment of employees' savings, old age pensions, and finally unemployment benefits, loans and relief. The unemployment relief program is based upon the following principles:—(1). Joint and equal contributions by employees and the company; (2). Joint participation in the administration of the plan; (3). Aid through group action to those workers who are in need or require temporary loans, or who become unemployed, or for whom only part-time work is available; (4). In times of unemployment emergency, co-operation and assistance from those employees of the company not usually affected by unemployment, and assistance by the company in equal amount.

The company has also adopted a further plan for the year 1931 of guaranteeing 50 weeks work of not less than 30 hours each week in the incandescent lamp department. This plan is entirely voluntary and will not be adopted unless 60 per cent or more of the employees in the works are interested and agree to set aside 1 per cent of earnings. The company guarantees 5 per cent interest and the money so saved always belongs to the employee: he takes it with him if he leaves; if he dies, the accumulation is given to his beneficiary, and if he remains with the company until he retires on pension, it is added to his retirement allowance.

The president of the company in concluding his address remarked that "we are now in a situation where things must be done on a broader scale than this. The efforts of a constructive character that are being made to relieve distress and to avoid and ameliorate these conditions in the future are having and should have very general support."

International Harvester Company.—Finding it necessary to lay off some of its regular employees during the present depression, the International Harvester Co. inaugurated the plan of loans to these employees to tide them over the period of reduced income. Mr. Cyrus McCormick, vice-president of the company, described the methods used in carrying out this plan of relief as follows:—

"Throughout Chicago and the other cities where we manufacture, we have sent representatives to call upon our men who have lost their jobs. The message these representatives bring is this: Whenever a regular Harvester man is in need of help because he is out of work or because his earnings have been severely reduced by part-time operations, we lend him the money to carry him through. The amount of the loan varies with the needs of the different individuals, but it is at least sufficient to provide the necessities of life, sufficient to relieve the hard-pressed organized charities of caring for him and his. It will be enough to keep regular Harvester men out of bread lines.

"We believe that lending money to workmen is better than giving it. I have been told by many employee representatives in our works councils that our men are proud that we have not offered them charity. A loan is a business proposition. When it is accepted the recipient expects to pay it back. He feels that he is still standing on his own feet. He understands that the loan is considered an advance against future wages. He maintains his self-respect. Best of all, Harvester men feel that our plan is proof of our confidence in the future. They are out of work, possibly they are in want. Just then a foreman or a fellow worker comes to their homes to tell them that some day times will be better and that they will then have their jobs back. In the meantime they can rely on loans from us. These loans are paid by weekly cheque, exactly like wages. They are without interest. We urge every borrower to find himself a job elsewhere if he can, so that he will have less money to repay when he comes back to work. When he does get his own job back with us, or finds employment in some other shop and is again earning reasonable wages, he repays the money. In the meantime he is able to provide food and fuel and shelter for his family with money he can rightly call his own."

Dennison Manufacturing Company.—As early as 1908 this company has had special plans for meeting recurring slackness in their

business. In 1915 the practice was adopted of making reservations out of profits in good years, from which, during times of unemployment or partial employment, some part of the loss to wage earners could be lessened. The distribution of the reserve was regulated by a joint committee composed of two representatives from the management and two from the employees. "Since 1921," Mr. Dennison stated, "the fund has been drawn upon to make up the pay of our permanent force of wage earners whenever they had to be laid off for lack of work, those with dependants getting approximately 80 per cent of normal rates, and those without dependants approximately 60 per cent of normal. We could not guarantee such payments for all time because we had no sufficient records of experience to tell us what such a guarantee would involve, but payments were to continue as long as the fund lasted, and have continued, as a matter of fact, without any interruption to date.

"The effects of this scheme have been very striking. Undoubtedly it has afforded welcome relief to individuals and probably has held the purchasing power in our community up somewhat higher than it would otherwise have been; and we are assured that it has added a good deal to that feeling of security and confidence without which employees suffer in spirit and in their working abilities as well. But even more valuable have been its effects in stiffening and refreshing the determination of every one who is connected with the management, from salesmen and department heads to general manager, by careful planning and all possible foresight to make payments from the fund as little necessary as they can.

"Our unemployment fund did not originally plan to cover any payments to those who might be laid off permanently—for whom, for one reason or another, no permanent place could be found in our organization. It applied primarily to the trained staff. But gradually, as it was being used, logic forced us to consider some cushioning payment to those whom he had to lay off for keeps—a separation allowance, as it is now coming to be called. Our experience with this form of unemployment relief is short, but over the last 12 months we have been feeling our way and have paid considerable amounts for this purpose. Its influence will undoubtedly add to the good influences of the older scheme, and will especially tend to make us even more careful when planning expansions, temporary or permanent, that we do not fall into the error of unwise overexpansion, which is surely one strongly contributory cause of the alternating periods of prosperity and depression.

"The establishment of unemployment funds requires no new or complicated machinery or statistical records. A moderate amount to begin with may be set aside out of profits or surplus, like any other reserve. Some companies even to-day, although making an unsatisfactory operating showing for the year, have nevertheless reserve assets from which a start can be made—and a little may go a long way. In the Dennison company during the past 10 years the payments have not averaged one-half of 1 per cent of the total pay roll, and even over the worst 10 months of this year have not exceeded 2 per cent. Even small sums may relieve great needs, and such sums may be withdrawn from years of business activity at an individual cost hardly to be felt, and yet at a very real advantage to society as a whole.

"Again, I must emphasize that while the actual funds withheld from use during prosperous times, and put into circulation in slack times are of value in relieving distress, and of still more value in helping to keep our economic blood pressure from running too high and falling too low, they are of the greatest value of all in their psychological effects upon management. They offer very practical arguments against undue expansions at the peak of the cycle, and for the toughest kind of thinking as to what can be done to keep things moving in the cycle's trough.

Standard Oil Company of New Jersey.—Mr. W. C. Teagle, president, described this company's methods as follows:—

"As the first step in the present crisis, we stipulated that managers should hire no new employees. We thought that by adjustments and transfers we might better provide work for those already in our service than to discharge in one quarter and hire in another. We ordered elimination of overtime, so as to spread the available work over the largest part of the personnel. Employees have been transferred from slack to busy departments and from one plant to another. To increase the amount of employment, it was suggested that managers begin work of dismantling, maintenance, and repair which had been postponed from busier times. As a general rule our employees have been working full time, but in two or three centres where there has not been work for the entire force employees cheerfully accepted part time in order that no member of the group should be thrown out of work.

"There have been some men laid off for inefficiency and others who have been discharged for cause; but in the few cases where it has been necessary to lay off men permanently

for lack of work, or for any other reason which was no fault of their own, such men have received a cash allowance, the amount depending both on their age and length of service, and this allowance has taken care of them during the time they were seeking work elsewhere. The company has sought to alleviate any distress that might occur through the reduction of working hours or number employed. For instance, in one plant the company has made a contribution to the employees' Association and this, together with money contributed by employees who are at work, will be used for relief work, including loans. Should it become evident that there is distress among other groups of employees, the company would undoubtedly make a similar offer to employees of any plants so affected."

Leeds and Northrup Company.—This company manufactures electrical measuring instruments and employs about 1,100 people. Mr. Morris Leeds, the president, stated that the company opened an unemployment fund in 1923 with a payment of \$5,000, and arranged to contribute to the fund 2 per cent of each pay roll until the total fund should equal twice the largest pay roll of any week in the previous 12 months. The total pay roll, including officers' salaries, is used as a base for these calculations, and is considerably larger than the pay roll of those entitled to benefit. Estimates made at that time indicated that these provisions would give a sufficient fund, when fully accumulated, to pay what we then thought suitable retiring allowances to as many as were likely to be laid off or have their working time reduced.

This fund is managed mainly by the Leeds and Northrup Co-operative Association, an organization of all the employees, which through its elected council, deals with all matters of employee interest. Some of them—such as athletics, a sick benefit organization, and various activities of a cultural and social nature—it handles entirely on its own responsibility; others such as cafeteria management, group life insurance and old age pension, good order of the plant, rules in regard to vacations with pay, on time bonus, etc., it handles in co-operation with management.

The Council of the Co-operative Association made the following rules (among others) for managing and disbursing the unemployment fund:—Control of the fund is vested in a committee of 5, 3 appointed by council and 2 by the company; Unemployment benefits are to be paid only to employees whose annual compensation is \$2,600 or less; Unemployment benefits are to be paid at the rate of 75 per cent of wages for those having depen-

dents and 50 per cent for those without dependents; Unemployment benefits are to be paid to those discharged, laid off for a time, or working less time than the company's 44-hour week. (Those who may be discharged for cause do not benefit from the fund, but have the right of appeal to a board composed entirely of employees appointed by council; Unemployment benefits are to run for a time which varies with the length of time the recipient has been with the company, and ranges from 3 weeks for those who have served 3 months up to 26 weeks for those who have served 5 years. In general, each year of service adds 5 weeks of compensation; Those who work on a reduced schedule are compensated for the time lost in the same proportion as those who lose full time; Benefits cease if the recipient gets another job, but may be reinstated if he loses or quits that job and has not yet received all payments due him.

Eastman Kodak Company.—This company despite a highly varied line of products and marked seasonal fluctuations in demand, has been able to level out peaks in production and avoid lay-offs. The technique thus developed, supplemented by other measures, has assisted the company in maintaining employment during the depression period.

The Kodak Company now has 25,000 employees, one half of these being at Rochester, N.Y. Mr W. G. Stuber, the president, stated that during the first part of 1930 there were more employees at Kodak Park Works than in 1929. "When the effects of the depression were felt in the summer of 1930 and it became necessary to curtail production, a number of departments were put on a 5-day week. In a few cases, a shorter week has been necessary. Lay offs have been kept at a minimum and during the year 1930 only 2½ per cent of the workers engaged in production have been laid off, only slightly more than during normal years. This compares with lay offs of 14 per cent in 1921.

"In the fall of 1929 an extensive construction program was inaugurated to increase the facilities of some of the departments at Kodak Park. When the depression came and it was realized that our business would be affected during 1930, the management decided nevertheless not to interrupt this construction program. The management felt justified in continuing this program, because it had confidence that the business would continue to grow after the depression was over and also because construction costs were low. As a result of this building program, employment was given to 600 workers, a large number of whom would

otherwise have been idle. As these buildings have been completed it has been necessary to lay off some of these construction workers who were engaged temporarily. The total lay-offs at Kodak Park, however, including construction workers, have been only 5 per cent.

"In our other Rochester plants, the products of which are affected more by business depressions, it has been necessary to curtail production to a greater extent. Every effort has been made to put workers in these plants on part time instead of laying them off. The departments affected were placed on a 5-day week and in some cases a greater shortening of the working hours has been necessary. During the past year we have done as much repair and maintenance work as possible and have thus kept men employed who might otherwise have been laid off. We have continued our advertising at the normal rate and have also used special efforts to stimulate sales.

"Due to the stabilization methods in use and the construction program, the average force employed in Rochester in 1930 was greater than in 1929, although many of the workers were on reduced hours during the latter part of the year. Some reduction in the force during the latter part of the year was also necessary. Although the employees at the end of 1930 were 8 per cent fewer than at the beginning of the year, the force was still as large as in the middle of 1929, just prior to the decline in business.

Proctor and Gamble Company.—This company's system of "guaranteed employment," as described by Col. W. C. Proctor, was outlined in the LABOUR GAZETTE, October, 1930, page 1118.

United States Steel Corporation.—Despite a marked decline in operations, the United States Steel Corporation, with over 200,000 employees dependent upon it for their livelihood, has been able, by a vigorous policy of spreading work supplemented by a program of new construction, to provide employment to thousands who might otherwise be in distress.

Mr. Myron C. Taylor, chairman of the finance committee of the corporation, stated that on the approach of the depression in 1929, plans were promptly made and a really simple expedient employed—that if operations should be substantially lessened, the remaining work would be distributed equitably, as nearly as might be, among all the workers, giving to each a ratable portion of such work as was going; this program to be continued as well as could be done throughout such emergency.

"Attention is called to the fact that upward of 12,000 men have been given employment on construction work, in the advancement of which we have consistently carried out our construction program without change as outlined at President Hoover's conference in Washington, on November 21, 1929. The record of assistance rendered to employees and their families has been classified under three heads: direct relief given by the corporation; credits extended by the corporation; relief extended by good fellowship clubs and other employees' welfare organizations. For the period between October 1 and December 31, 1930, our reports show under these three headings that total expenditures for relief had amounted to \$210,782. Other ways in which relief is constantly being extended are through the regularly organized company hospitals, the company medical staffs and visiting nurse organizations, and groups of employees organized at some of the plants."

The Railways Systems.—The railroads are among the largest employers of labour and at the same time are acutely sensitive to the changing conditions of business. Railroad managements have been increasingly active in attempting to stabilize the employment of the various groups of workers engaged in operations and maintenance. The Illinois Central System not only exemplifies this movement but has had the opportunity in its own territory, which reaches from the Great Lakes to the Gulf, to test its policies in the face of varying economic conditions.

When the President of the United States, seeing the situation which was developing, undertook more than a year ago to organize the business forces of the country to withstand the shock of a recession, the railroads were among the first to be called into conference. They pledged themselves to do their utmost to maintain employment and wages. In carrying out that program they spent more money for additions and betterments to their properties in 1930 than had been spent in any other year since 1926, despite the fact that their net earnings for 1930 were lower than they had been in any other year since 1921.

Various other methods of stabilizing employment have been worked out by the railroads during the last year. Railway workers, especially those engaged in train operations, have willingly co-operated in accepting shorter hours in order to make the railway pay rolls cover a larger number of people. Some railroads in the closing months of the year succeeding in carrying on their maintenance work with normal or only slightly reduced forces.

EFFECTS OF FARM MECHANIZATION ON LABOUR

THE recent and sudden development of mechanized agriculture and its effects on labour, are described in an article appearing in the March issue of the *International Labour Review* (Geneva), by L. E. Matthaëi, chief of the Agricultural Service, International Labour Office. The mechanical equipment of agriculture, it is stated, remained incomplete for many years until the advent of the gasoline engine. "The period 1860 to 1920 will be known as the period when the three methods of human hand labour, animal draught power, and mechanical appliances were found in simultaneous use over a large portion of the earth's surface, only empirically systematized as far as the genius of each farmer permitted."

It is shown that with the development of the gasoline engine "the principle of automation can now be applied to every one of those perfected tools on which so much inventive labour has been spent in the past; not only can every form of agricultural machine now be put into motion cheaply and easily, but such machines can also move themselves over the ground at a regular rate, without any call on animal power, and, as a rule, carrying their human directors and saving human fatigue, even that of walking."

Of all the new mechanical devices the "combine" which combines the cutting and threshing processes in one machine has made the most spectacular progress. This is strikingly shown by the following figures, which indicate the total number of combines in use in western Canada from 1922 to 1929:—1922—2 combines; 1923—2 combines; 1924—5 combines; 1925—18 combines; 1926—199 combines; 1927—791 combines; 1928—4,341 combines; 1929—7,255 combines. According to the Canada Year Book, the number of "harvesters and reaper threshers" exported rose from 6,617 in 1925 to 17,285 in 1927, to sink again, however, to 11,510 in 1929; in the last year 2,472 machines are first definitely classified as combines ("reaper-threshers").

The effects of the combine on labour may be judged from the fact that while the financial cost of harvesting is about halved by the use of the combine, this pronounced economy is wholly effected by the resulting saving in labour. According to the writer, "the detailed figures for total costs show that the combine costs the farmer about four times as much in initial capital investment, about twice as much in depreciation, about three times as much in repairs, and about a quarter as much in fuel, oil, etc.: traction costs are uneven,

with an uncertain advantage to one machine or the other. The pronounced economy of the combine is therefore wholly effected by a saving in labour; more especially does the complete elimination of a separate labour gang for threshing bring down the figures."

Again, it is pointed that "unlike the earlier machines, the combine has been invented at a period when increased expansion of cultivation areas is not required because increased markets simply do not exist; in operating over already cultivated areas its remarkable labour-saving properties can thus apparently end in only one thing—a decrease in the amount of human labour to be used. It is, of course, dramatic to realize that an acre of wheat can now be harvested in one-fortieth to one-sixtieth of the time used a hundred years ago, but the world has to a large extent already adjusted itself to this improvement; it has not yet faced, and not yet adjusted its labour supply to, the shrinkage in the demand for human labour entailed by being able to harvest in one-fifth to one-sixth of the time required only ten years ago."

Moreover, the movement is only in its early stages: "Even in Canada, out of about 23 million acres of wheat on the prairies only about 3.5 millions are as yet being harvested by combine. Even assuming that not all lands in Canada will be suitable to this machine its future extension (and therefore the effects upon labour) are clearly going to be 'assured.'"

The writer anticipates that the economic consequences of mechanization will be a lowered value of land, transfer of certain crop cultivations to other regions, larger farms, and some withdrawal from the proprietor class into the managerial. "Whatever they may be, practically all observers agree as to the inevitable immediate effects of a great deal of mechanization on the labour situation. It certainly does seem inevitable that there must be, in the first place, a shrinkage in the volume of agricultural labour. The general trend towards greater individual efficiency of workers in farming is too well supported to be ignored, even if particular sets of figures may not be perfectly accurate; this greater efficiency, if again intensified by more and more mechanization and allied with stationary consumption, is bound to bring a general shrinkage in the labour force usable on farms."

Two other possible results are discussed by the writer; first, the partial disappearance of the seasonal "peak" in farm work. "In Canada and the United States and also in Argen-

tina, though less definitely, the method has always been to withdraw from the cities, for harvesting purposes, an enormous fringe of casual labour and to let that surplus disperse itself as best it might when once the harvest was over; a portion in Canada, was absorbed into the winter lumbering industry, but, as a rule, such labour drifted slowly back to the cities. But in 1928 the largest wheat crop ever produced in Western Canada was harvested by 16,500 fewer men, it is estimated, than would have been necessary if some 4,000 combines had not been in operation; in 1929, with 7,500 combines operating, the (rather poor) Western Canadian wheat crop was being harvested without the dispatch of a single harvest excursion from Eastern Canada; 'it is generally considered that the day of the harvest excursion is ended.' Similar announcements are pouring in from the United States."

The second additional result of mechanization anticipated by the writer is the "leveling up," or "urbanization" of rural labour. "It does not require very prolonged thought to realize how important in the lives of the farm workers intimate and continuous contact with the machine world might become. Some go so far as to prophesy the total disappearance of both the peasant and the old type of unskilled farm worker—if indeed he ever has been unskilled."

Discussing the problem raised for the worker by mechanization the writer says: "It is unfortunate, perhaps, that the first stages of renewed progress in the mechanization of agriculture should have coincided with a great phase of world unemployment, unfortunate in two ways, not only in that the displaced agricultural workers will not easily be absorbed into urban industries, but also in that the consuming capacity of populations is, from the purchasing point of view, at a low ebb. As for absorption into other industries, the following is true, in spite of the prevailing unemployment. In the first place, some new employment will be available in the manufacture of the very machines which will have to be placed on the market for agricultural purposes. This will be especially the case in those countries which are already accustomed to manufacture such machinery. Thus a Canadian source attributes shrinkage in rural population partly to a transfer of occupations to cities, and the same point was made by the Canadian representative at the Fourth Session of the Mixed Advisory Agricultural Committee. In the second place, a minor alleviation will be found in that increasing commercial competition on food markets has given a marked impulse to the grading, sorting, packing and labelling of food

products, and, of course, to advertising; the manual processes connected with these tendencies will absorb some workers; so will perfected processes for preserving food. But neither this, nor the manufacture of agricultural machines, can compensate fully for the release of human effort implied in the mechanization of agriculture; indeed, it would be a tragedy for the human race if they could. The facts must be faced: mechanization in farming (if it continues on any very considerable scale) means, to the sociologist, advance by release of human effort; to the persons immediately concerned, unemployment. . . . "The frank acceptance of the coming changes on the part of agricultural workers' organizations is a feature in the situation. Already unemployment is a menace in certain cereal districts. Indeed, it is the purpose of the present article to draw attention to just that menace."

As against the menace of unemployment, mechanization offers two permanent benefits to the workers who remain employed, namely, the saving of fatigue, and shorter working time; but the problem of unemployment remains to be solved, and the writer concludes: "machinery has shortened human effort in agriculture; it remains to translate this knowledge into the required social arrangements."

An analysis of the employment experience of 1,240 plants in six major manufacturing industries in the United States from October, 1929, to October, 1930, published in the March issue of the *Monthly Labour Review*, shows that individual plants have been affected very differently during this period of diminishing employment. Although there was a decrease of 22.2 per cent in total employment in these plants during the year covered, an actual increase in employment occurred in 228 plants and there was no change in the numbers employed in 42 plants. Plans for moderating the effects of adverse employment conditions have been adopted, in the absence of unemployment-insurance legislation in this country, in a number of instances either through collective agreements between employers and the unions or by individual firms. The collective agreements provide generally for guaranteed employment for a specified period in the year, and the unemployment funds are maintained either by the employers or by joint contributions by employers and employees. The plans of individual firms are in most cases a part of a definite stabilization policy by which the employer endeavours to forestall or minimize unemployment. Several trade unions pay out-of-work benefits to their members.

CHANGES IN RELATIVE IMPORTANCE OF BRITISH INDUSTRIES

THE *Ministry of Labour Gazette*, of Great Britain, February, 1931, published a new estimate of the numbers of workers actually employed in insured trades, recent changes in the conditions of unemployment insurance having resulted in making the recent figures not strictly comparable with those of former years. The new figures for unemployment omit those workers who are absent from their occupations through sickness, trade dispute, or other causes, and include only those affected by changes in the volume of available employment.

Over half the number of insured persons in employment in 1923 and 1930, the two years selected for comparison, belonged to the ten

largest industrial groups. Important changes as between 1923 and 1930 may be noticed in the relative importance of certain industries in regard to the number employed therein. As the *Economist* points out, "the most significant changes are the decline in the part played by coal mining, the immense absolute and relative expansion in the distributive trades, and the departure of the wool textile industries from the list (of ten principal groups) in favour of the motor industry." The ten largest groups and the numbers and percentages of total insured work-people in employment that is represented by each group, are shown as follows for June, 1923, and June, 1930.

June, 1923			June, 1930		
Industry	Number employed (1)	Percentage of employed in all industries	Industry	Number employed (2)	Percentage of employed in all industries
Coal mining.....	1,211,559	11.9	Distributive trades.....	1,622,112	15.5
Distributive trades.....	1,180,548	11.6	Coal mining.....	813,711	7.8
Building.....	626,440	6.1	Building.....	726,268	6.9
General engineering.....	525,737	5.2	General engineering.....	499,399	4.8
Cotton.....	445,422	4.4	Cotton.....	329,853	3.1
Wool and worsted.....	250,755	2.5	Hotel, etc.....	311,257	3.0
Hotel, boarding house, etc.....	233,437	2.3	Local government.....	279,107	2.7
Local government.....	227,503	2.2	Printing, etc.....	256,368	2.4
Commerce, banking, etc.....	216,735	2.1	Commerce, etc.....	224,790	2.1
Printing, etc.....	215,010	2.1	Motors, cycles and aircraft.....	214,696	2.0
Total of above.....	5,133,206	50.4	Total of above.....	5,277,561	50.3

(1) Insured persons aged 16 and over.

(2) Insured persons aged 16-64 inclusive.

The changes shown in the table in the distribution of employment as between the various industrial groups have resulted in a marked shifting of British industry towards the south. The *Economist* comments on the Department's new figures as follows:—"It is becoming increasingly evident from these annual analyses that this country's habit of regarding itself as mainly a producer of coal,

textiles, and iron and steel, with its industry concentrated around the coal fields of the North, the Midlands and South Wales, is gradually becoming an anachronism. The part played in our manufacture by newer industries, and the increasing proportion of labour in occupations other than manufacture, are circumstances of which sight must not be lost in the framing of economic policy."

Unemployment Insurance to be Studied in United States

The Washington correspondent of the *Wall Street Journal* stated in a recent issue that "it is not impossible the next Congress will enact legislation on unemployment insurance. If that does not happen, it is almost certain that both party platforms in 1932 will promise some action." The basis for this prediction is an investigation shortly to be begun

by a special committee of the Senate under Senator Robert F. Wagner of New York, who has specialized on legislation dealing with unemployment ever since he came to Congress. The committee is authorized to study job insurance plans by private employers in the United States and other countries, how they are instituted and operated, costs and results achieved and responsibility of state and federal governments and private employers to the systems.

COMBINES INVESTIGATION ACT

Members of Plumbing Combine Convicted under Combines Investigation Act

MR. Justice Wright, at the assizes of the Supreme Court of Ontario at Sandwich, delivered judgment on March 23 in the case of *Rex v. Singer et al*, against members of the Amalgamated Builders' Council and related organizations, an alleged combine in the plumbing and heating industry; finding Louis M. Singer, K.C., of Toronto, and Charles E. Paddon and Herbert Ward, Windsor plumbing contractors, to be guilty of being parties to an illegal combine under all seven charges laid against them by the Crown. Three others accused in this case, all residents of Toronto, were found not guilty of the same charges. The judgment imposed fines of \$8,000 on Louis M. Singer, with an alternative of eight months' imprisonment, and fines of \$800 on each of the remaining two parties convicted, with alternatives of two months' imprisonment. The convictions were appealed. The hearing of this case by Mr. Justice Wright occupied five days, from March 3 to March 7. The defendants elected to be tried without a jury.

On March 23 the trial of the remaining eleven Windsor members of the Amalgamated Builders' Council, charged with similar offences, was commenced at the continuation of the Sandwich assizes under Mr. Justice Sedgewick, in the case of *Rex v. White et al*. The defendants elected trial by jury. The trial lasted eight days, concluding on April 1 when all eleven accused were convicted by the jury under all seven charges laid against each. Mr. Justice Sedgewick was to impose sentences in this case later in the month of April.

The prosecutions in these cases followed an investigation conducted under the Combines Investigation Act in 1929 into the Amalgamated Builders' Council, the Canadian Plumbing and Heating Guild and related organizations, an alleged combine of plumbing and heating contractors and others, in the province of Ontario. Preliminary hearings on charges under the Combines Investigation Act and under section 498 of the Criminal Code were commenced early in 1930 before Magistrate Brodie at Windsor and Magistrate Scandrett at London, Ontario. A further charge under section 444 of the Criminal Code, dealing with conspiracy to affect prices or defraud the public, was laid against those charged at London. The prosecutions were conducted by A. G. Slaght, K.C., and J. C. McRuer, K.C., counsel appointed by the Dominion Government. Certain parties to

the combine in London and Windsor pleaded guilty in May and June, 1930, and fines totalling \$26,500 were imposed.

Pending the decision of the Privy Council confirming the constitutional validity of the Combines Investigation Act and of section 498 of the Criminal Code,* completion of the preliminary hearings was postponed until February, 1931, when the accused were committed for trial. The prosecutions were then taken over by the Ontario Government and were conducted at Sandwich by D. L. McCarthy, K.C., A. G. Slaght, K.C., and J. C. McRuer, K.C. Each of the accused was charged with seven counts, four of which were laid under the Combines Investigation Act and three under the Criminal Code, section 498. The charges related to combining with the result of lessening competition, enhancing prices, fixing common or resale prices, limiting facilities for supplying and dealing, and otherwise restraining or injuring trade in relation to plumbers', steam-fitters', sheet metal workers' and other builders' supplies or services. On March 2 the Grand Jury returned a true bill against all persons charged at Sandwich excepting three sheet metal contractors. The trial in *Rex v. Singer* against the principal persons associated with the combine was then commenced before Mr. Justice Wright under a separate indictment. James H. Clark, L. M. Singer, K. C., and W. F. O'Connor acted as counsel for the defendants.

The judgment of Mr. Justice Wright in this case, delivered March 23, reads in part as follows:

"As this was stated to be the first prosecution under The Combines Investigation Act in this Province, it is eminently proper that the whole question should be fully considered, and with that object in view I postponed delivery of judgment until I had an opportunity to review and analyze the evidence, and consult the various authorities to which I was referred by counsel.

"The Act in question was recently declared by the Judicial Committee of the Privy Council to be *intra vires* of the Dominion Parliament in a judgment delivered on January 29th of the present year. The judgment of the Privy Council which was delivered by Lord Atkin, traces the origin and history of the legislation so fully that I do not think it necessary to discuss origin or history of the legislation in this judgment. The judgment referred to declared *inter alia* that the Act in question was one relating to Criminal Law."

*The text of this judgment was given in the LABOUR GAZETTE, March, 1931, page 378.

"The logical and convenient method or procedure to be followed is first to determine whether there was a combine within the prohibitions of the Act, and in the next place to determine if the part taken by the accused in such combine renders them liable under the provisions of Sec. 32 of the Statute.

"At this stage it is desirable to sketch the history of the various organizations leading up to the offences charged in the indictment, in order that a proper conception of the situation may be obtained.

"Prior to March, 1927, there was in existence in Ontario an association known as the Ontario Society of Domestic Sanitary and Heating Engineers. This association had been somewhat dormant for years, but at a convention held in Guelph in March, 1927, it was resolved to revive the association with a view to extend its usefulness. At that convention the accused Belyea and Weinraub were elected as directors, together with one Baker. The latter is said by the witness Frankland to have outlined a new organization and plans were then laid to hold a meeting at a subsequent date, in order to get all the allied trades into one organization. It was also suggested that a Commissioner with plenary power should be appointed as head of the organization."

"As a result of this campaign a largely attended convention was held at Hamilton on June 11th, 1927, at which applications for membership were received from a large number of persons, firms or corporations, and it was then decided to proceed to form a new association and to have a Commissioner appointed to guide and govern its affairs.

"Letters of incorporation of the Canadian Plumbing and Heating Guild were granted on June 30th, 1927. Prior to the granting of this charter, the sum of \$7,500 was paid to Singer as his charges for his services in connection with the organization and incorporation of the Guild.

"The purposes and objects of the Guild as set forth in the letters of incorporation did not disclose the real purposes or objects as shown by the future operations of the Guild. Two of the accused, namely Belyea and Weinraub, were among the incorporators of this Guild. The membership in the Guild included manufacturers and wholesalers of plumbing supplies, but shortly after the incorporation these parties became restless owing, it was stated at the trial, to a legal opinion received by them to the effect that it was illegal for them to be in the same organization as the master plumbers, when the purpose of the organization was to enhance the price of material or to fix a common price or in any way to act against public interest."

"Singer conceived the idea of another organization, and on April 13th, 1928, it was arranged that a new organization to be known as the Amalgamated Builders' Council should be registered under the Trade Unions Act, and the same was duly registered on the 8th day of June, 1928, with the Deputy Registrar General of Canada, as required by the Trade Unions Act. Of this organization, the accused Belyea was appointed President, and Weinraub as Secretary. The President, on the 9th July, 1928, appointed Singer as Commissioner under rule 3 of the By-laws of the new organization."

"Certain master plumbers residing in Windsor and the adjoining border cities made application for a charter for a local section of

the Amalgamated Builders' Council and on September 25th, 1928, a charter was granted to the branch at Windsor to be designated as Local Section No. 112. Of this Local Section, Paddon and Ward were members, and Ward was duly elected secretary. Throughout its entire existence, Ward and Paddon were most active in the interests of the Local Section—indeed they appear to have been the most active of all the members.

"This organization continued to function until the 31st day of December, 1929, when after an investigation under the Combines Investigation Act, the certificate of registration of the Amalgamated Builders' Council was cancelled by the Secretary of State and Registrar General of Canada.

"This is, in short, the history of the various organizations. The evidence disclosed that they were the creation of Singer, and that his was the guiding hand throughout the entire operation of the different organizations. Under the terms of the by-law which will be referred to, he was vested with wide powers, and the evidence disclosed that he exercised them to the limit."

"Had it (the A. B. C.) confined its operations to those authorized by that Act (the Trade Unions Act), no objection could well be taken, but from its operations it is clearly evident that the purpose of those responsible for its creation and operation was to avail themselves of any immunity provided by this Act, and, if possible, evade the provisions of the Combines Investigation Act, and the Criminal Code."

"From the foregoing it is manifest that these three organizations (Canadian Plumbing and Heating Guild, Dominion Chamber of Credits, Limited, and Amalgamated Builders' Council) were formed and operated for the express purpose of controlling the plumbing and heating industry in its various branches, including manufacturing and jobbing, and to further that end absolute control and direction of these organizations were vested in one individual, styled "Commissioner", which in itself was a vicious and indefensible system.

"The inquiry will now be directed to the various acts and matters alleged by the Crown to constitute a contravention or violation of the Statutes referred to in the indictment.

"In the first instance there is the act of bringing into one organization the manufacturers, jobbers and master plumbers so as to create or control a monopoly of the sale of plumbers' supplies and the plumbing industry generally. This was in the first instance effected by the organization of the Canadian Heating and Plumbing Guild and the other two organizations were merely to further that object.

"That there was a fixing of a common price was shown by the action of the members of the Guild in Windsor, at their meeting on September 12, 1927, when the following resolutions were carried:

"Whereas it is unanimous and for the best interest of all concerned that we figure on all jobs up to \$5,000, an overhead of 15 per cent and a profit of 10 per cent on the cost of all material and labour. Carried and signed by every member present.

"That the secretary inform all members of the guild that we have arrived at the 15 and 10 method of figuring.

"That it is the best interest of all members of this guild to charge at the rate of \$1.75 per hour for plumbers working on job."

"The accused Paddon was chairman at this meeting.

"At the meeting of the Windsor Guild held on January 5th, 1928, a committee was appointed to report as to prices and their report was adopted. . . . The material parts of it may be summarized thus:

(1) That labour on repair work be charged at \$1.75 per hour for plumbers or steam-fitters and \$1.00 per hour for helpers.

(2) That all contract work 20 per cent, plus 2 per cent be added to the cost.

"It also recommended certain fixed prices for labour. The item of two per cent mentioned in this report was, as appears from the evidence, collected for the purpose of the Guild. Thus the public was forced to pay tribute to the Guild.

"At the meeting of May 10th, 1928, a new committee was appointed to work out a new schedule and the new schedule was adopted. On May 31st the schedule of prices recommended in the report of the heating committee was adopted. The minutes of the meeting of July 5th, 1928, also show that the schedule of prices recommended by the heating committee was adopted.

"The evidence established that at one stage of the operations of this organization schedules were adopted by the members whereby 30 per cent was to be added to the cost of the materials for labour and to the total cost of labour and materials a further addition of 30 per cent was to be added as profit. It was strenuously argued by counsel for the accused that the foregoing resolution and the methods adopted in pursuance thereof was not the fixing of a common price. In my view it was substantially the fixing of a common price as the method of computing price was standardized and the cost of labour was fixed.

"Another branch of the case concerns or includes the operations of these organizations as creating a monopoly or limiting competition in the plumbing and heating industry at Windsor. At a meeting of Local Sec. 112, held on October 4, 1928, at Windsor, a resolution was adopted in the following terms:

"Resolved that the members of this Local ought not to purchase and after communication of this resolution will not purchase from any supplier who directly or indirectly sells plumbing, heating or radiation fixtures, goods, materials or systems in or about or for installation or use in or about the Border Cities to persons, firms or corporations other than members of this Local."

"The minutes show that the Secretary-Treasurer was directed to communicate the foregoing resolution to such suppliers as customarily sell within the territory of the local, and this was done accordingly. This resolution was either drafted by Singer or submitted to him for approval, as appears from his letter to Paddon of October 3rd, 1928.

"The evidence established that this resolution was acted upon in many instances and non-members of the Amalgamated Builders' Council at Windsor found great difficulty in procuring supplies and were greatly embarrassed in their business operations. From time to time manufacturers and wholesalers of plumbing and heating supplies were furnished with lists of members of the local Section 112 of the Amalgamated Builders' Council and there was a

tacit, if not an express agreement, that the dealers would refuse to sell to non-members and this was actually done in many instances.

"Local Section 112 of the A. B. C. under the advice and with the approval of Singer made a written agreement (drawn by Singer) with Local Union 552 of the United Association of Plumbers and Steamfitters of the United States and Canada, dated September 26th, 1928, whereby the former agreed to employ only members of the latter union and the latter on its part agreed that its members would not work for any non-members of the former. The evidence established that both parties to this agreement carried out its provisions.

"In order to finance these organizations, a levy was made upon the members varying at times according to the volume of business done by the members. If default was made by a member in payment of his assessment, he was liable to expulsion by the Commissioner Singer, and this power was exercised in several instances. The resulting effect was that the expelled member was precluded from obtaining labour or supplies wherewith to carry on his operations.

"These various activities built up an autocratic and despotic organization of the plumbing and heating industry in Windsor, and the problem now presented for solution is as to whether or not the provisions of The Combines Investigation Act have been violated by the individuals now on trial.

"Section 32 of the Combines Investigation Act, R. S. C. 1927, chapter 26, declares it to be an indictable offence on the part of anyone who is a party or privy to or knowingly assists in the formation or operation of a combine within the meaning of the Act. There is no express definition of what constitutes a combine, found in the Act itself although section 2 defines the class of combines which is prohibited. Applying the rule of construction that words in the Statute are to receive their ordinary meaning unless a contrary intention is indicated by the context, I interpret the word "combine" as used in subsec. 1 of sec. 2 to mean a combination or agreement. A more extended definition or meaning is given in Corpus Juris, Vol. II, p. 1230, where a combine is stated to be 'a combination, contract, understanding or agreement expressed or implied between two or more persons, corporations or firms and associations of persons.' I have no hesitation in holding that the evidence in this case established that there was a combine falling within these definitions.

"The next step is to determine if this combine has operated or is likely to operate to the detriment or against the interest of the public, whether consumers, producers or others. The deductions I have already drawn from the evidence clearly establish that the combine in this case falls within the class indicated in this sub-section.

"However, the Statute requires other conditions to bring a combine within the Act. To come within the Statute, the combine must also be a merger, trust, or monopoly so-called or (a) result from any actual or tacit contract, agreement, arrangement or combination which has or is designed to have the effect of any of the results set forth in clauses i, ii, iii, iv, v, or vi of sec. 2, sub-sec. 1 (c).

"The indictment does not charge that the combine under review was a merger, trust or monopoly, and while the evidence appears to establish that there was a virtual monopoly

created by the workings of this combine, it is not necessary for me to decide this point.

"The indictment does, however, allege that the combine resulted from an actual or tacit contract, agreement, arrangement or combination which has or is designed to have the effects set forth in clauses i, iii, iv and v of sec. 2, sub-sec. 1 (c). The evidence, in my view, as already indicated, clearly establishes that there was an actual or tacit agreement, arrangement or combination, but it is still open for decision as to the actual or designed effect of such combine.

"In my opinion the evidence establishes, and I so find, that the combine did have or was designed to have the following effects:

- (a) Limiting facilities for supplying or dealing in plumbing and heating supplies within the purview of sub-sec. 1 (c) (i).
- (b) Fixing a common price within the meaning of sub-sec. 1 (c) (iii).
- (c) Enhancing the price or cost of articles within the meaning of sub-sec. 1 (c) (iv).
- (d) Preventing or lessening competition or substantially controlling within the City of Windsor and adjoining district the purchase, sale or supply of plumbing and heating materials.

"Summarizing these findings, the result is that I hold the combine disclosed in the evidence falls within the class of combines prohibited by sec. 2 of this Act."

"Stress was also laid by counsel for the accused on the provisions of Sec. 4 of the Combines Investigation Act, and sections 2, 4 and 29 of the Trade Unions Act, R. S. C. 1927, chapter 202.

"Dealing first with section 4 of the Combines Investigation Act, it clearly applies to combinations of workmen or employees only and the accused are certainly not in that class.

"The sections of the Trade Unions Act present greater difficulty. Section 2 defines a trade union. Section 4 relates to civil actions only. Section 29 declares a member of a trade union shall not be liable to criminal prosecution for conspiracy or otherwise merely because the purposes of the trade union are in restraint of trade. In the present instance it is not the purpose of the so-called trade union (Amalgamated Builders' Council), which is called in question; but the operations of its individual members which greatly exceed the legitimate purposes and objects of a trade union. It would be a travesty on justice if acts and transactions such as those disclosed in the evidence in this case could be justified or excused merely because the offenders were members of a trade union.

"Thus far I have dealt with the evidence mainly from the viewpoint of the Combines Investigation Act, but the indictment in counts 5, 6 and 7 contains charges under the provisions of sec. 498 sub-sec. 1 (a), 1 (b) and 1 (d) of the Criminal Code. The evidence applies to these charges as well as to those already reviewed, and the findings of fact will also apply to these counts.

"The evidence establishes a conspiracy to unduly limit the facilities for supplying and dealing in plumbing and heating supplies. I need only refer to the evidence as to the arrangement restricting the sale or supply of materials to members of the organization in question, which clearly establishes an offence under this section.

"The evidence also establishes a conspiracy to unduly prevent or lessen competition in the sale or supply of plumbing and heating materials within the meaning of sub-sec. (d) of sec. 498.

"I find upon the evidence that there was a conspiracy to restrain or injure trade or commerce as defined in sub-sec. (b).

"Section 498 contains a saving clause in sub-sec. 2 similar in its terms to sec. 4 of the Combines Investigation Act, and as I have already stated my views on the scope and meaning of this provision, it is unnecessary to repeat them here. It is strenuously argued that the provisions of sec. 497 apply to the situation in this case. It was contended by counsel for the Crown and I think properly that the provisions of sec. 497 relate only to offences charged under sub-sec. (b) of sec. 498. It will be noted also that sec. 497 of the Criminal Code is in practically the same language as sec. 29 of the Trade Unions Act, which has already been considered. It is quite evident that it was never intended by Parliament that sec. 497 should operate as a complete defence to all the offences created by sec. 498 of the Code. As already stated it is not the purposes of the trade union that are attacked in these proceedings, but the acts and operations of some of the members which are entirely outside the ambit of a trade union, and in this view section 497 cannot avail as a defence.

"The situation here resembles in many respects that dealt with by the present Chief Justice of Ontario in *Rex. v. McMichael*, 18 C. C. C. 185, where there was an agreement in writing similar in its provisions and objects to that disclosed in the present case between the master plumbers and the supply houses, and it was held that such an agreement amounted to a conspiracy within the provisions of the Criminal Code.

"The decision of the Supreme Court of Canada in *Stinson-Reeb Builders Supply Co. v. Rex*, (1929) S. C. R. 276, establishes that the proper test to be applied in a prosecution under section 498 of the Criminal Code is the injury to the public notwithstanding any advantage to the members of the combine. Some of the other authorities which are relevant to the issue here are:

Rex v. Elliott, 9 O. L. R. 648;¹

Weidman v. Schragge, 46 S. C. R. 1;

Attorney General of Ontario v. Canadian Wholesale Grocers, 53 O. L. R. 627;

Rex v. Master Plumbers, 14 O. L. R. 295.

"Having arrived at the conclusion that offences were committed against both the Combines Investigation Act and the Criminal Code, it now becomes necessary to decide as to the complicity or participation of the accused in the offences established.

"I shall deal first with the case of the accused Singer. I have already, in discussing the evidence, pointed out that he was the originator of the three organizations referred to; that he was the Commissioner of the Canadian Plumbing and Heating Guild, The Dominion Chamber of Credits and the Amalgamated Builders' Council; that he directed the operation of all three organizations, not as an ordinary member but as a paid Commissioner receiving from these organizations during their existence the sum of approximately \$40,000 by way of salary in addition to his expenses. He

¹See particularly the judgment of Osler, J. A. at page 661 as to the meaning of 'unduly'.

had the veto power over all the by-laws and proceedings of these organizations; he drafted the agreements and resolutions for the Windsor Local 112 of the Amalgamated Builders' Council; he frequently addressed meetings not only of the Associations in general conference assembled, but also the meetings held at Windsor and was in close touch with the workings of the organizations and the actions of the members. There can be no doubt that he was a party and privy to and knowingly assisted in the formation and operation of all the combines which I have already found to have existed. In view of this he should be found guilty of all the offences charged in the indictment. The methods adopted by him showed a studied and deliberate effort to effect an unlawful result under the pretence of keeping within the letter of the law."

"As to Paddon and Ward, there can be no doubt, and I so find, that these two men played an active part in all the transactions that took place in Windsor. Paddon was particularly active in that respect as his correspondence with Singer and other parties discloses. Ward at times acted as Secretary to the Windsor group and had a full knowledge of everything that was going on, and actively participated in the workings of the combines. I find upon the evidence that these two men were parties to the combines, and were also parties to the conspiracies which were entered into. However, Paddon and Ward are laymen and acted generally under the advice and direction of Singer and while they are no less guilty on that account, yet in awarding punishment I propose to take cognizance of these circumstances.

"I find the accused Singer guilty upon the 1st, 2nd, 3rd and 4th counts of the indictment and for such offences I impose a fine of \$4,000, and I direct that in default of payment of such fine he be imprisoned for the period of four months. I also find the accused Singer guilty upon the 5th, 6th and 7th counts of the indictment and in respect thereof I impose a fine of \$4,000 and in default of payment thereof I direct that he be imprisoned for the period of four months.

"I find the accused Paddon and Ward guilty on all the counts of the indictment. For the offences set forth in the 1st, 2nd, 3rd and 4th counts, I impose a fine of \$400 on the accused Paddon and a further fine of \$400 in respect of the offences set forth in the 5th, 6th and 7th counts, and in default of payment I direct that he be imprisoned for a term of two months. I impose on the accused Ward a fine of \$400 for the offences set forth in the 1st, 2nd, 3rd and 4th counts of the indictment and a further fine of \$400 in respect of the offences set forth in the 5th, 6th and 7th counts, and in default of payment I direct that he be imprisoned for the term of two months.

"I find the accused O'Connor, Belyea and Weinraub not guilty on all counts of the indictment."

The offences set forth in the seven counts of the indictment, under all of which three of the accused were convicted, were stated in the judgment as follows:—

"1. That they were parties or privies to or knowingly assisted in the formation or operation of a combine as defined in sec. 2, sub-sec. 1 (c) (v) of The Combines Investigation Act, R.S.C. 1927, cap. 26.

"2. That they were parties or privies to or knowingly assisted in the formation or operation of a combine as defined in sec. 2, sub-sec. 1 (c) (iv) of The Combines Investigation Act.

"3. That they were parties or privies to or knowingly assisted in the formation or operation of a combine as defined in sec. 2, sub-sec. 1 (c) (iii) of The Combines Investigation Act.

"4. That they were parties or privies to or knowingly assisted in the formation or operation of a combine as defined in sec. 2, sub-sec. 1 (c) (i) of The Combines Investigation Act.

"5. That they did unlawfully conspire, combine, agree or arrange together and with one another, and with certain persons named in the indictment to unduly prevent or lessen competition in the purchase, barter, sale or supply of articles or commodities which may be the subject of trade or commerce, to wit, plumbers' supplies, etc., contrary to the provisions of the Criminal Code, sec. 498, sub-sec. 1 (d).

"6. That they did unlawfully conspire, combine, agree or arrange together and with one another, and with certain other persons named in the indictment to restrain or injure trade or commerce in relation to articles or commodities which may be the subject of trade or commerce, to wit, plumbers' supplies, etc., contrary to the provisions of the Criminal Code, sec. 493, sub-sec. 1 (b).

"7. That they did unlawfully conspire, combine, agree or arrange together or with one another and with certain persons named in the indictment to unduly limit the facilities for supplying or dealing in plumbers' supplies, etc., contrary to the provisions of the Criminal Code, sec. 498, sub-sec. 1 (a)."

A study of hours and earnings in the men's clothing industry made by the United States Bureau of Labour Statistics in 1930 covered 212 representative establishments and 33,404 employees. Since 1928, when the Bureau's last previous study was made, average full-time hours per week have increased from 44·0 to 44·3; average earnings per hour have fallen from 73·1 to 70·1 cents; and average full-time earnings have decreased from \$32.16 to \$31.05.

RAILWAY WORKERS EXERCISING SENIORITY MAY CROSS INTERNATIONAL BOUNDARY

AN Order in Council (P.C. 1413) was passed on August 7, 1929, (LABOUR GAZETTE, August, 1929, page 844), prohibiting the entry into Canada of "contract labour"—"Provided that the Minister of Immigration and Colonization may admit any contract labour if satisfied that his labour or service is required in Canada; and provided further that the provisions of this Order in Council shall not apply to the inclusion of farmers, farm labourers and houseworkers." Several rulings have been since made by the Department of Immigration modifying the Order so as to except from this provision railway employees desirous of crossing the boundary line between Canada and the United States for the purpose of exercising their seniority rights, as follows:—

In October, 1929, an order was passed exempting locomotive engineers, firemen and railway trainmen.

In September, 1930, railway telegraphers were exempted.

In February, 1931, train-despatchers, station agents and lever men were exempted.

Finally, in March, 1931, maintenance-of-way employees were exempted.

All the above-mentioned classes are thus excluded from the definition of alien contract labour, and are therefore permitted to enter Canada in the exercise of their seniority in an International Division or District.

These modifications are in harmony with the attitude of the United States Department of Labour in waiving the provisions of its contract labour regulation in so far as concerns railway workers resident in Canada exercising their seniority rights in the United States.

LABOUR LEGISLATION IN SASKATCHEWAN IN 1931

A CONSIDERABLE amount of legislation of labour interest was enacted during the Session of the Saskatchewan Legislature which opened on January 8 and closed on March 11, 1931. An Act was passed providing for a weekly half-holiday for shop employees in certain cities, and amendments were made to the laws relating to workmen's compensations, masters and servants, minimum wages, mothers' pensions, licensing of chauffeurs and old age pensions.

Closing of Shops on Holidays

The Weekly Half-Holiday Act applies to cities having a population of 7,000 or over and provides for the closing of shops at 12 o'clock noon each Wednesday from April 1 to August 31. A list of trades or businesses exempt from the provisions of the Act is given in the Schedule and may be added to by the Lieutenant-Governor in Council, but city councils are authorized to pass by-laws declaring such trades or businesses subject to the provisions of the Act. Penalties are provided for breaches of the law.

Clauses added to The City Act, The Town Act and The Village Act and effective May 1, 1931, empower councils to pass by-laws requiring any class or classes of shops to be closed on holidays. These clauses do not apply, however, to cities which are within the scope of the Weekly Half-Holiday Act.

Workmen's Compensation

The Workmen's Compensation Act was amended to include in the definition of "workman" certain employees excluded from Part 1 of the Workmen's Compensation (Accident Fund) Act, including numerous classes of railway workers. Persons employed otherwise than by way of manual labour whose remuneration exceeds \$3,000 per annum are excluded from the definition "workman." Formerly all such persons earning more than \$2,000 per annum were excluded. The amending Act comes into force on June 30, 1931.

The Companies Act was amended to make directors of companies liable to the Workmen's Compensation Board for all assessments due by the company while they are directors. A certificate under the Workmen's Compensation Act must be filed within one year after the debt becomes due.

Non-payment of Wages

The Master and Servant Act was amended as from May 1, 1931, by the re-enactment of a clause deleted in 1930, providing for distress and sale of the goods and chattels of a master who defaults when payment of wages and costs of a suit is directed by the justice. The provisions of Part XV of the Criminal Code for enforcing an order for the payment of money are not to apply to proceedings under the Act.

Minimum Wages for Women

An amendment to the Minimum Wage Act which comes into force on May 1, 1931, authorizes the Minimum Wage Board to extend the provisions of the Act to any town having a population of 1,500 or more. Formerly the Board might extend the Act to any portion of the province.

Licensing of Chauffeurs, etc.

A subsection added to the Vehicles Act provides that no licensed chauffeur whose certificate of good character has been furnished by a person other than the chief of police or acting chief of police of a city shall operate a motor vehicle used in the business of a liveryman in a city unless his licence is endorsed with the approval of the chief or acting chief of police of that city. If such certificate has been furnished by the chief or acting chief of police of a city he may not operate such motor vehicle in another city unless his licence has been endorsed by the chief or acting chief of police of that other city. A licensed chauffeur changing his address must file notice of such change with the Minister of Highways or send such notice by registered mail within ten days. The amending Act comes into force on May 1, 1931.

In the revision and amendment of the Theatres and Cinematographs Act which also becomes effective on May 1 a clause was inserted requiring apprentices to operators of moving picture machines, etc., to have licences.

WORKMEN'S COMPENSATION IN MANITOBA IN 1930

THE report of the Workmen's Compensation Board of Manitoba for the year 1930 shows a decided reduction in the number of fatalities and of all accidents in all industrial groups. During the year there was an accident decrease of 22.6 per cent, there being a total of 10,329 as compared with 13,340 in 1929. This decrease was most marked in the steam railways group where the reduction was 44.6 per cent, while the decrease in the class covering the general body of employers was 17 per cent. Fatal accidents for all classes showed a decrease of 38.8 per cent, there being 52 such accidents during 1930, as compared with 85 for 1929. The decrease in fatal accidents was most marked in the group "general body of employers," the number reported for 1930 being 33 as compared with 61 during 1929.

Mothers' Allowances

The Child Welfare Act was amended to provide for the payment of a mothers' allowance to a mother whose husband is permanently incapacitated by blindness. A foster mother caring for children whose mother is dead and whose father is incapacitated or whose parents are both incapacitated is also eligible. These amendments are to be deemed always to have been in force. The amending Act becomes effective on May 1.

Old Age Pensions

The Old Age Pensions Act was amended to provide for the payment by the Dominion to the Province of such amount as may be agreed upon towards deferring the cost of old age pensions.

Resolutions

On February 24 the Legislature adopted unanimously a Resolution,—“That, in the opinion of this Assembly, the Dominion Government should be requested to grant pensions to the blind, in accordance with the Petition presented by the Canadian Federation of the Blind to the House of Commons of Canada on the 21st day of January, 1926, and that a copy of this Resolution be forwarded to the Dominion Government.”

On March 5th a Resolution was agreed to as follows:—

“That, in the opinion of this Assembly, the Government of Saskatchewan should request that immediate consideration be given to a plan of federal unemployment insurance by the Government of Canada.”

INDUSTRIAL ACCIDENTS IN MANITOBA, 1929-30

Group	1929	1930
Steam railways.....	2,890	1,600
Province of Manitoba.....	156	246
City of Winnipeg.....	318	414
General body of employers.....	8,893	7,380
Winnipeg Electric Company.....	142	129
Dominion Government.....	941	560
	13,340	10,329

The report comments on the decrease in accidents as follows: “Just how far this decrease in accidents is due to a reduction in

payroll we are as yet unable to say as the audited returns for 1930 are not yet available. There has been a good deal of interest in safety work in many industrial plants, and this cannot fail to have good results. The Board has, as heretofore, co-operated with the Bureau of Labour during the past year in the holding of first aid classes, which have been well attended. The instruction given is excellent and the interest on the part of the classes is commendable."

At the close of the year 1930, the Board had on its books 559 dependants of workmen killed in industry during the period March 1, 1917, to December 31, 1930, making a net addition of 10 dependants during 1930. Twenty employers made application to the Board during 1930 and were permitted self-coverage for themselves and their dependants. At December 31, 1930, there were 93 employers carrying this protection. During 1930, 92 employers had their operations brought under Part One of the Act by application approved by the Board. At December 31, 1930, there were 437 employers whose operations had been brought under the Act in this manner.

During 1930 the actual cash disbursed by the Board amounted to \$1,024,982.90 as compared with \$1,068,378.86 disbursed during 1929, a decrease of \$43,395.96. The number of cheques issued by the Board during the year totalled 35,585 as compared with 37,379 issued during 1929, a decrease of 1,794.

THE MINING INDUSTRY OF NOVA SCOTIA IN 1930

THE annual report of the Department of Public Works and Mines of Nova Scotia reviews the mining activities in that province during the fiscal year ended September 30, 1930. In a preliminary note the Minister states that "the difficulties of the past year have had their effect upon the mining industry in Nova Scotia, yet when one views the conditions surrounding similar industries in other countries of the world, it is apparent that we in this Province can take at least some measure of satisfaction in the knowledge that we have avoided to a large extent the acute industrial conditions which exist elsewhere. . . . The main problem facing this industry is the securing of larger markets. Our tremendous coal deposits are sufficient to meet the requirements of all of Canada for generations, yet our miners have seen, year after year, additional inroads upon the Canadian market by importations from foreign countries. It is my confident hope that the people of Canada will soon awake to the necessity for a national fuel policy through which Can-

The value of Board Orders passed during 1930 for the payment of compensation, including orders respecting Dominion Government employees, and amounts transferred to General Unclassified Reserve to provide for future payments in fatal and permanent disability cases, was \$1,236,824.04 as compared with \$1,208,451.28 for the year 1929, an increase of \$28,372.76.

The final statistics for 1929 show that 13,285 accidents were reported to the Board as having occurred during that year. Of these accidents, 78.6 per cent entailed the payment of compensation, either for medical aid only or for compensation for time loss and medical aid, while in 21.4 per cent of cases no expense was entailed.

In the final statistics for 1929, which are presented in the present report, the compensable accidents during that year have been analysed according to number of accidents by classes, nature of disability, time loss, average age and average wage; causes of accidents; month of occurrence; week of termination of temporary disability; nature of injuries (temporary disability cases); permanent disability cases; death cases; sex, marital conditions of claimants; nativity of claimants; industries in which permanent disability cases occurred; industries in which fatal accidents occurred.

adian coal will be used more extensively by the Canadian people. Such a development will, I believe, mean very much in the way of advancement for the coal industry of this province."

The following extracts from the report summarize the principal facts in regard to the mining industry:—

The average number of men employed at the coal mines show the total to be 13,423, as compared with 13,060 of the previous year.

The total number of man-days worked was 2,989,428, as compared with 3,261,764 in the fiscal year of 1929, which is a decrease of 272,336 days.

The coal output for the year was 5,754,502 tons of 2,240 pounds, as compared with the previous year's output of 6,339,492 tons, a decrease of 584,990 tons.

Coal sales totalled 5,281,508 tons of 2,240 pounds, as compared with the previous year's sales of 5,766,212 tons, a decrease of 484,704 tons.

The quantity of coal distributed for consumption in Nova Scotia during the fiscal year was 1,844,480 tons of 2,240 pounds, as compared with the previous year of 1,925,519 tons, a decrease of 81,039 tons.

Shipments to the United States were 10,883 tons during the fiscal year as compared with 30,184 tons for the previous year.

During the year shipments to the St. Lawrence markets were 2,213,767 tons of 2,240 pounds as compared with 2,527,683 tons for the previous year, a decrease of 313,916 tons.

The quantity of coal supplied the Dominion Iron and Steel Company was 1,004,845 tons as against 927,752 tons in 1929, an increase of 77,093 tons.

The total output of coal used by the coke ovens in the province last year was 751,657 tons—742,213 tons by the Dominion Iron and Steel Company and 9,444 tons by the N.S. Light and Power Co., while this year a total of 566,768 tons were used—556,976 tons by the Dominion Iron and Steel Co., and 9,792 tons by the N.S. Light and Power Co.

The total quantity of coke manufactured in the province during the year was 342,155 tons—335,753 tons by the Dominion Iron and Steel Co., and 5,467 tons by the N.S. Light and Power Co. Last year there was a total of 459,305 tons produced—452,406 tons by the Dominion Iron and Steel Co. and 6,899 tons by the N.S. Light and Power Co.

The quantity of tar manufactured from coal during the fiscal year was 5,491,723 imperial gallons, as against 7,012,027 gallons manufactured during the previous year.

The benzol gas, from coal manufactured for motor fuel, etc., during the year was 966,044 imperial gallons, as against 1,074,928 in

the previous year, showing a decrease of 108,884 gallons.

During the year 2,341 oz. of gold were produced showing an increase of 773 oz. as compared with last year.

During the period under review, 1,548,556 silicate brick were manufactured. This is a decrease of 558,578 as compared with the previous year.

The mining and shipment of crude and calcined gypsum reached 863,134 tons for the fiscal year. This is a decrease of 157,947 tons from the previous year.

The production of salt for the fiscal year was 25,703 tons as against 30,625 tons for the previous year.

Fatal accidents.—During the year there were 30 fatal accidents in the coal mining industry as compared with 24 in the previous year. The fatal accident ratio per 1,000,000 tons of 2,240 pounds was 5.21 in 1930 as compared with 3.78 in 1929, while the ratio per 1,000 men employed was 2.23 as against 1.91 in 1929. Of the total fatalities, 28 were underground. Falls of roof or face was the cause of the fatality in 33.3 per cent of the accidents, and gas and dust explosions in 26.7 per cent.

Included in the report are statistical tables containing information with respect to the mining industry, and records of boring. In addition, the operations at each mine are detailed. The annual review also contains the reports of the various officials, and in this respect, Mr. Norman McKenzie, Inspector of Mines, expresses the Department's appreciation of the important assistance rendered to the province by the Federal Department of Mines through the Canadian Geological Survey.

MINIMUM WAGES FOR WOMEN IN ONTARIO IN 1930

THE tenth annual report of the Minimum Wage Board of Ontario details the administration of the Act during the year 1930. This report marks the completion of ten years' operations, the Board having been appointed in 1920. Commenting on the general adoption of minimum wage legislation in Canada and throughout the British Commonwealth, the report observes: "When the Board was appointed in 1920, the minimum wage laws were in operation in Canada only in the western provinces. To-day the entire Dominion is covered except Prince Edward Island, which, with its slight industrialization, scarcely needs such a law. Thus, Canada has drawn into alignment with the other democracies of the British Empire, as Great Britain,

Australia, New Zealand and South Africa all possess such laws, enforcing them both as to male and female labour."

The report deals with the industrial depression as indicated by the trend of employment under its direct observation. This factor is dealt with in the following paragraphs:—

"These ten years have carried Ontario through one depression, followed by some years of business expansion, and brought us into a second depression. The statistical records of the Board reflect these changes. During the earlier part of this ten-year period the Board was busy studying its problem and issuing its orders, so that the records gathered at that time are not so complete as in more

recent years. We have chosen factory employment from 1926 to 1930, inclusive, as a section at once definite, compact and typical of general conditions, and herewith present some figures and facts which tell the story of four years of rapid advance followed by a year of recession. The picture so shown may be taken as exceptionally full and accurate:

Female factory workers in 1926	43,242
“ “ “ “ 1927	45,416
“ “ “ “ 1928	50,118
“ “ “ “ 1929	53,461
“ “ “ “ 1930	50,069

“Thus employment has fallen 6.7 per cent during the last year. Yet it is as high in 1930 as in 1928, and four per cent higher than

AVERAGE WEEKLY WAGES AND HOURS OF FEMALE EMPLOYEES IN VARIOUS INDUSTRIES IN ONTARIO, 1930

* In places between 10,000 and 30,000 population, minimum wage is \$11 per week; between 4,000 and 10,000, \$10; between 1,000 and 4,000, \$9; all below 1,000 and rural parts, \$8.

in the average of the four years 1926-1929. However, these figures do not tell the full story of unemployment, as many whose names are reported on the payrolls have been working short time. No statistics are obtainable as to the proportion of full time which they have been working. In detail, girls under eighteen have been dropped in larger proportion than adults. As between these two classes this is the better arrangement for fewer young girls are away from home. The proportion of married women at work is larger. This is in line with a tendency which has been evident in recent years. Doubtless, it also shows that some wives have gone to work when their husband's jobs failed. The women's trades, on the whole, suffer less than the men's trades in times of depression.

"Wage levels have been maintained. Indeed, more gains than losses are reported. This is quite surprising in view of the fact that wage rates have heretofore fallen in times of unemployment. We believe that this is in part due to the enforcement of our orders, in part to the desire of employers to pay decent wages, and in part to their desire to support the buying power of the general public, a consideration which the Board has always stressed. If the depression should end without wage levels having been lowered the workers will be fortunate and the general resumption of business activity will be accelerated."

The minimum wage rates are established as a result of surveys of the cost of living in the various sections of the province. The cost of living budget of an average working woman in Toronto is first estimated as a basis for these calculations, the budgets of the workers in other localities being adjusted in proportion to a recognized variation in the cost of living as between large and small cities, towns, villages and country districts. The budget for Toronto as reviewed to October, 1930, allows \$364 per year, or \$7 per week, for board and lodgings; \$127 per year for clothing; \$162 for sundries (including laundry, doctor, dentist, carfare, amusements, church, etc.), making a total of \$653 for the year. The weekly budget for Toronto is, therefore, as follows: board and lodging, \$7; clothing, \$2.44; sundries, \$3.06, making a total of \$12.50 per week. The figure thus arrived at is taken as the minimum wage required to provide a female worker at Toronto with the necessities of living.

The report stated that "there is reason to believe that the enforcement of its orders by the Board has had the effect, not only of forbidding wage rates beneath the prescribed minimum levels, but also of supporting wage

standards generally as menaced by the present depression."

The Board utilizes three chief methods in enforcing the provisions of the Act. The first is to require the posting of cards, containing the wage orders of the Board in all factories, stores, laundries, hotels and theatres. It is the duty of the factory inspectors while on their inspections to report whether these cards are properly displayed. The second method of enforcement is through the investigation of complaints. Regular meetings, attended by the chief factory inspector, are held to review these complaints. During the year, 350 complaints were dealt with and satisfactorily settled. The third method is based on an analysis of wage returns from firms employing women. Any apparent lack of conformity to the orders is taken up with the firm concerned. There were 409 firms interrogated during the year out of a total collection of 4,159 wage sheets. All of these were either explained or adjusted.

As a part of its administrative duties, the Board collects arrears of wages due to female workers. During the year, 57 firms made payments of arrears to 67 employees. The total amount collected was \$2,425.21, of which the largest to any one worker was \$250, the average being \$36.18.

The Board has authority to allow lower wages to handicapped employees or to suspend or vary an order in cases of emergency. During the year, 68 such permits were issued. The report points out that the proportion of these permits is so small as not to affect the general standards of wages, while allowing for a desirable flexibility in administration, and saving a number of handicapped women from dismissal.

Three new orders were issued during the year as follows: increasing the minimum wage in laundries, dye works and dry cleaning establishments in Toronto; amending the regulation of hours in retail stores in Toronto; and amending the provisions governing the custom tailoring shops in the five largest cities.

The report closes with a high tribute to the late Mrs. Lydia M. Parsons, a former member of the Board, and with an acknowledgment of the sympathy and co-operation received by the Board from organized labour, from employers generally, and from the public.

The accompanying table shows the average weekly wages and hours of female employees in the various industries in Ontario during the period covered by the report.

ONTARIO APPRENTICESHIP ACT

Review of Progress under the Act since 1928*

THE Ontario Apprenticeship Act, which is the first legislation of its kind in Canada, is the result of seven years' effort on the part of interested individuals representing both employers and employees in the construction industry. It is enabling legislation which permits the industry, as represented by joint committees of employers and employees, to regulate the training and instruction of apprentices in designated building trades. The program now in operation is experimental and will require frequent adjustments or amendments before it will meet the requirements of each trade in all parts of the province. It is, however, a definite advance in the methods of training young workers for the building trades.

The need of an organized system of apprenticeship has long been felt, but heretofore the various organizations in the construction industry have not been able to co-operate in their efforts to improve conditions. Repeated attempts were made to persuade the Dominion and provincial governments to enact legislation governing apprenticeship, but these attempts were not followed by any display of active interest on the part of the industry as a whole. Finally a group of general contractors, in co-operation with international labour officials, organized the Construction Apprenticeship Council of Ontario in 1926. This voluntary body consisted of four employers, four employees, a representative of the provincial Department of Education, and an advisory secretary. It undertook to demonstrate the feasibility of a scheme of apprenticeship proposed by J. M. Pigott, who for several years had been chairman of the apprenticeship committee of the Canadian Construction Association. This scheme, which is the basis of the work being carried on under the Apprenticeship Act, received the endorsement of organized labour and of various bodies representing trade contractors.

Approximately twenty-five apprentices in the bricklaying and carpentry trades were indentured in the cities of Hamilton and Toronto. Joint trade committees were organized and regulations were adopted governing the whole procedure. Expenses were borne by voluntary contributions from large employers, from organized labour, and a few individuals.

After approximately two years' operation, the scheme appeared to be acceptable to the industry, and the prime minister of Ontario, Hon. G. H. Ferguson, was convinced that government assistance was needed. He requested the council to co-operate with the Department of Labour in drafting legislation which would provide the necessary assistance without taking control out of the hands of industry.

Existing legislation in several countries was studied and the Apprenticeship Act of South Africa was selected as a model. A few changes were made and new features were incorporated in the bill, which was sponsored by the prime minister and became law on April 3, 1928.

Purpose of the Act.—The purpose of the Apprenticeship Act may be stated as follows: (a) To create a regulated supply of competent mechanics where needed; (b) to provide an opportunity for Canadian boys to learn skilled trades under favourable conditions, and (c) to develop and maintain a high standard of workmanship and ethics in the construction industry.

Scope of the Act.—The scope of the act is confined to nine designated building trades, namely: bricklaying; masonry; carpentry; painting and decorating; plastering; plumbing; steamfitting; sheet metal work; and electric installation. Provision is made whereby other trades and industries may be brought under the act, if employers and employees in these trades so desire.

Administration and Organization.—The act is administered by the Minister of Labour acting on the advice of the Provincial Apprenticeship Committee, consisting of an equal number of employers and employees (four of each), a representative of the provincial Department of Education and a chairman. The Inspector of Apprenticeship, appointed by the provincial government, is charged with the responsibility of supervising the training and instruction of apprentices, seeing that regulations are carried out by all concerned and promoting apprenticeship throughout the Province. He is assisted by district inspectors (five at present) who work through joint trade apprenticeship committees established in the larger cities. In addition to the inspectors, the apprenticeship staff comprises an assistant to the inspector, an assessment officer, and six clerks and stenographers.

* Address delivered at the annual convention of the Canadian Construction Association by Mr. A. W. Crawford, Deputy Minister of Labour for Ontario.

Principal requirements of the Act.—The provisions and requirements of the act may be summarized as follows:

(1) Every person between the ages of sixteen and twenty-one employed in a designated trade must be placed under contract of apprenticeship within three months after commencing employment, and the contract must be registered in the office of the inspector.

(2) The conditions of employment and training for apprentices are set forth in regulations made by order-in-council on the advice of the Provincial Apprenticeship Committee and local trade committee.

(3) The period of apprenticeship is four years, except in the painting and decorating trade which requires only three years, and in plumbing and steamfitting, in which trades five years must be served before a diploma is granted.

(4) All first and second year apprentices are required to attend special day classes for eight weeks of five eight-hour days (320 class-hours) during the winter months. Third and fourth year apprentices are required to attend evening classes during the winter months wherever available.

(5) The cost of administering the act is borne by the provincial government. The cost of school training for apprentices is borne by local school boards and the provincial department of education. The cost of paying apprentices while at work and in attendance at classes is borne by employers.

(6) Provision is made for regulating the number of apprentices in each trade, for transferring apprentices from one employer to another, for cancelling contracts, and imposing penalties for violation of the act or regulations.

Progress to Date.—On January 26, 1931, 1,484 apprentices had been indentured and registered in the nine trades. Of these, 187 had completed their training and 100 contracts had been cancelled for various reasons. The following table gives the distribution by trades:

Trade	Registrations	Cancellations	Completions	Active
Bricklaying.....	176	12	43	121
Masonry.....	12	2	0	10
Carpentry.....	169	6	36	127
Painting and Decorating.....	56	5	12	39
Plastering.....	106	7	20	79
Plumbing.....	462	29	37	396
Steamfitting.....	136	11	7	118
Sheet metal work.....	145	8	12	125
Electric installation.....	222	20	20	182
Totals.....	1,484	100	187	1,197

It is expected that approximately 2,500 apprentices will be constantly employed in the building trades throughout the province when the act is in full operation.

Classes.—Day classes have been conducted during the past three years in Hamilton and Toronto, and this year special day classes for all first and second apprentices throughout the province are being held in Windsor, Hamilton, Toronto and Ottawa. Classes for all trades are being held in Toronto; Hamilton has classes for all trades except steamfitting; Ottawa has bricklaying, plumbing, and sheet metal, while Windsor has plumbing alone. Enrolments in these classes are as follows:—

	Resident apprentices	From other centres	Total
Toronto.....	104	34	138
Hamilton.....	53	74	132
Windsor.....	3	7	10
Ottawa.....	20	20	40
			320

There are also a number of third and fourth year apprentices attending these classes at their own expense.

Apprentices are enthusiastic about the classes and are unanimous in expressing the view that the school training is of much greater benefit than that received on the job during an equivalent space of time. A number of employers whose apprentices attended classes during the past two years have stated that they found it a good investment to pay the wages of boys while attending classes. The majority of these employers, however, felt that since the benefits of apprenticeship are shared by all employers in the industry, the cost of sending boys to classes should be borne by all.

Assessment.—The act was therefore amended at the last session of the legislature to give the minister power to require employers in any designated trade to contribute annually, or otherwise, such sums as may be required. For this year the funds raised by assessment are being used to pay apprentices a weekly allowance of \$10 while attending classes, also the cost of the railway fares for boys from outside centres, and one half of the tuition fees of boys sent to classes from small centres where vocational schools have not been established. Apprentices are struck from the payroll while attending classes and each boy receives his allowance on Friday of each week.

The rate of assessment for this year is one-eighth of one per cent of the 1929 payroll. A total of approximately \$40,000 will be collected from more than 3,400 employers in all parts of the province. The average assessment is about twelve dollars, but more than 2,100 employers pay the minimum assessment of five dollars, while only 65 firms are assessed more than one hundred dollars.

Benefits of Act.—It is too early to judge the effects of the act on industry, but already there has been a decided improvement in the training being given to apprentices. Many boys who under previous conditions would have drifted about from employer to employer picking up their trades as best they could are receiving thorough training in the various branches of the work, which will fit them for responsible positions in later life. The supervision and assistance given by inspectors and teachers have aroused their interest and stimulated them to greater endeavor.

our. A visit to the classes now in session will convince the most confirmed sceptic of their value and necessity.

As a result of developments to date, particularly the collection of assessments, many employers have come to realize their responsibilities in training young workers as they have never done before. Some are decidedly opposed to being taxed for a service the value of which they do not appreciate, but the majority of employers are willing to give the act a fair trial. Organized labour feels that for the first time in many years an honest effort is being made to secure a regulated supply of skilled workers who will bring credit to the industry.

Given a measure of support from both employers and employees, which appears to be forthcoming, there is every reason to believe that a system of apprenticeship will be developed in Ontario which will benefit all concerned and which may be extended to other trades and industries in the near future.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Industrial Health Units

The *Public Health Nurse*, the official organ of the National Organization for Public Health Nursing (New York), has published its first special industrial nursing number. Among other valuable contributions this issue contains a paper by Dr. Glenn S. Everts on the "Organization and Administration of Industrial Health Units." (THE LABOUR GAZETTE, December, 1930, page 1369, noted that a joint industrial clinic was about to start at Montreal under the auspices of the Province of Quebec Safety League.)

An industrial health unit, as considered in this paper, is composed of a group of plants, each having 100 to 500 employees, which for purposes of health supervision are grouped into a single administrative unit with a total of approximately 1,000 employees. One industrial nurse, it is stated, if her time is carefully scheduled and the plants reasonably near together, can serve that number satisfactorily and do the necessary travel between plants. Dr. Everts bases his recommendation as to the best method of organization on the experience of the Philadelphia Health Council, of which he is the medical secretary.

Services.—The Philadelphia plan, he writes, enumerates the following as the services to be provided for each plant:—

1. Physical examinations, including examinations of all applicants for work before or

shortly after employment; re-examination at intervals of employees having physical defects; annual examination of employees;

2. Medical and surgical relief including emergency treatment of accidents and minor illnesses occurring at plant, and follow-up of all compensable cases; advice as to the correction of defects found upon examination; follow-up of sick employees in their homes by nurse when necessary; co-operation with family physician of sick, injured or defective employees.

3. Instruction in first aid to selected individuals or groups in each plant.

4. Industrial hygiene and sanitation including sanitary survey of plant annually; sanitary supervision of plant including regular inspection.

5. Health education and hygienic instruction, including health talks to employees, health classes for women workers, posters and especially prepared leaflets, motion pictures on health problems affecting industrial workers where suitable arrangements can be made.

Benefits.—Benefits derived from industrial health units include decreases of absenteeism and turn-over, with consequent increases in production, which are obtained in the following ways:—

1. Prevention of contagious diseases by detection, isolation and vaccination.

2. Prevention of slight illnesses developing into serious sickness.

3. Diagnosis of early beginnings of serious types of illness, as tuberculosis, kidney disease, heart disease.

4. Advice to employer in placing of physically defective workmen at occupations where they can do efficient work without accident hazard.

5. Investigation and advice regarding sanitation and any industrial health problems which may arise.

The cost of medical nursing service alone is borne by the participating plants. This cost is \$4.50 per employee per year, payable monthly. Plants participating also have the expense of equipping a clinic or first aid room which costs from \$100 to \$400, depending on the size of the plant.

Enginemen Demand Mechanical Aids

The Interstate Commerce Commission of the United States is holding hearings in Washington, D.C., on the petition of the Engine Service Brotherhoods, asking that railroads be required to install mechanical stokers and power reverse gears on all locomotives. The Brotherhood of Locomotive Firemen and Enginemen is presenting the case for mechanical stokers and the Brotherhood of Locomotive Engineers that for power reverse gears. The present situation in connection with the operation of large locomotives was explained recently by Mr. Timothy Shea, assistant president of the Brotherhood of Locomotive Engineers, as follows:—

“Engines have grown in size until hand firing is beyond human endurance,” he said. “Firing always has been hard work. When I was on the Jersey Central in 1898, it was not at all uncommon for firemen to be taken out of the cab in a state of utter exhaustion. Engines in those days ran from 100,000 to 198,000 pounds weight on the drivers. When this last size was introduced, the boys called them man killers. Now, the best freight engines run from 300,000 to 350,000 pounds on the drivers. It is impossible to fire such an engine properly by hand.

“Every one of these giant engines takes the place of two or three or four of the older type, stops promotion, and throws some man who once had an engine back to firing. Of course, the depression has made things very much worse. In April, 1930, 33,000 of our men were on furlough. I suppose now the total is close to 38,000. A very large percentage of all the men who got their engines since 1906 have been demoted, and are back firing. We are trying to fix it so that these men, who have given the best years of their lives to railroad

service, can still do the work they have been trained to do. They can't shovel from 10 to 30 tons of coal into a firebox on each run, and keep it up very long; and that's what these new engines take.”

Mr. Shea holds that the mechanical stokers will more than pay their way. “You can get a better fire with a mechanical stoker than it is possible to get by hand. An engine with a mechanical stoker will haul from 18 to 20 per cent more than the same engine will haul under hand firing.”

Mr. McLaughlin, of the same Brotherhood, presented a similar case for power reverse gears. “Hand reverse gears are no longer safe,” he declared. “You are putting human muscle against steam power, and the steam power has grown too great.”

Accident Prevention in Coal Mines in U.S.A.

“Safety in Coal Mines in 1930” is the subject of an article by Mr. Scott Turner, Director of the United States Bureau of Mines, which appears in the February issue of *Coal Age*. The writer points out that each ton of coal produced in 1930 represented a somewhat larger loss of life than in 1929. The death rate per million tons is estimated at 3.91 as compared with 3.59 in 1929. Most of this increase is attributed to the larger number of deaths from major explosions of gas or coal dust during the year. However, it is pointed out that without such explosions in either year the death rate would still have been a little higher in 1930, chiefly because of a slight increase in the rate for falls of roof and coal.

Mr. Turner states that “one definite achievement during 1930, so far as the Bureau of Mines is concerned, and one that should contribute toward the prevention of accidents, was completion of the training of 112,000 employees in the mining and related industries in first-aid or mine-rescue methods. Of this number, 72,000 men were employed in coal mines. The total number trained last year was about 31,000 more than in any previous year, and it brought the total number of persons so trained by the Bureau of Mines since its establishment to approximately 480,000.”

Other factors contributing to safety in coal mining were the increasing employment of rock-dusting in mines, and the increasing use of permissible explosives instead of the more dangerous black blasting powder.

The annual number of accidents in coal mines is given as ranging from 110,000 to 120,000, and the prevention of these accidents is considered to be the most important problem that confronts the coal mining industry.

Inexperienced Workers in Building Construction

The risks connected with the employment of unskilled men in the building industry are described by Mr. Charles Denning, supervisory inspector of building construction for the State of New York, in an article in the *United States Daily*, as follows:—

“We find little effort on the part of the employer to teach the safe method of working at dangerous operations. In recent years higher wages have attracted men to perform work for which they had but little training or experience. If such men prove unsatisfactory in one place they endeavour to secure work elsewhere; thus they gain a more or less haphazard training in a business which demands skill, judgment and experience. The result of these conditions has been that the industry has absorbed many untrained men, and such men are a source of danger to themselves and other employees. The inexperienced worker trips or stumbles over unfamiliar footings on which the experienced worker treads with comparative safety. Moreover, much of the work has to be done at high speed, in close quarters, often with insufficient and changing light and shadows, all of which tend to confuse the inexperienced worker. The best condition and the most co-operation is secured on both large and small construction work where the contractor is experienced and successful, and also among the greater portion of general contractors who properly install and maintain their own safeguarding.”

Carbon Monoxide Poisoning

Of one hundred and thirteen deaths from poisonous gases in New York State in 1929, forty-five were from carbon monoxide poisoning. Seventeen of these deaths were due to operating the engine of an automobile in a closed garage.

Employees of public garages frequently suffer from headaches or dizziness during the cold weather when the garage doors are closed. If exposure is prolonged these symptoms may go on to muscular weakness, vomiting, muscular twitchings or even convulsions. Garages should be equipped with exhaust fans or some efficient system of natural ventilation.

Unemployment and Health

The United States *Monthly Labour Review*, December, 1930, states that last year the Visiting Nurse Society of Philadelphia conducted a survey of all the unemployed families on their lists on that day. Four hundred and forty-two families were studied, and it was found that there was illness in all of these families and that in 70 per cent the illness was among adults. This was considered unusual as it is usually the children who fall ill through poverty. Although the data are incomplete there would appear to be a direct relationship between extensive unemployment and an increased amount of sickness.

Dust and Pulmonary Disease

The subject of dusty trades is receiving a great deal of consideration of recent years. As a result, it has been ascertained that morbidity and mortality records indicate that workers in dusty trades have excessive rates of respiratory diseases and that inorganic dusts produce more pulmonary disability than organic dusts. Silica of the crystalline variety is present in varying amounts in practically all industry dusts and is the chief element in the production of pulmonary disability. The disease silicosis is insidious in its onset and progress and presents few symptoms in its early stages. It is almost invariably complicated with tuberculosis and in latent tuberculosis hastens progress of the disease. Masks are ineffective and the only real protection is the removal of the dust at its sources.

The United States Public Health Service states that although in recent years it has been found that the human body takes up lead from its surroundings much more frequently than was formerly supposed, and although there are still important industrial sources of lead poisoning which need correction, the incidence of lead poisoning does not seem to be on the increase. The recent development of quick-drying lacquers and enamels has doubtless kept down the number of cases of this disease. One of the most prolific sources yet remaining is the painter's trade, and it is believed that here the dust arising from scraping or sandpapering dry paint may be more important than brush painting. Even the hazard in removing paint may be avoided by the use of wet methods.

LABOUR UNION ACTIVITIES

The executive of the United Mine Workers of America (District 26) presented its legislative program to the Nova Scotia Provincial Government on March 14. The recommendations included: Encouragement to establish coking plants; an eight-hour day for certain underground workers and all surface labour; old age pensions; amendments to the Workmen's Compensation Act, increasing the scale of compensation and bringing check-weighmen within the scope of the Act; special legislation to grant compensation in several cases of death and injury held by the Compensation Board not to come within the Act.

At another meeting the miners' executive accompanied a New Waterford delegation, headed by Mayor W. J. Hinchey, which interviewed the government regarding the anticipated closing of No. 14 colliery at New Waterford. Premier G. S. Harrington gave assurances the government would make a further investigation before allowing the closing.

The Edmonton Trades and Labour Council recently expressed strong opposition to a proposal made in the Alberta Legislature to establish the principle of appeals in Court from decisions of the Workmen's Compensation Board. It is considered that the result of such procedure would be to delay the payment of compensation to injured workmen, and to undermine the authority of the Board.

The Montreal Trades and Labour Congress Council, at a meeting on March 19, resolved to request the Dominion Government to institute a system of unemployment insurance in Canada. This action was taken on the motion of Local 111 of the International Association of Machinists.

Union Amalgamation in Australia.—An amalgamation conference of representatives of the Australian Workers' Union and the Miners' Federation was held at Sydney on January 19, 1931. It was agreed to retain the name "Australian Workers' Union," with headquarters in Sydney. The constitution of the new organization provides for division into branches. In addition to the Pastoral and Construction Branches, there will be a Mining Branch (comprising coal, shale and coke workers). The Mining Branch will be divided into districts similar to those provided for in the rules of the Miners' Federation. Membership will be open to all persons eligible to join the former Australian Workers' Union and all persons covered by the constitution of the Miners' Federation, and other classes of workers corresponding to the nature of the new organization. Provision is made for an annual convention of delegates from the branches on a membership basis of 4,000 and in the case of miners' delegates from districts on the same basis. The Mining Branch will be represented on the Executive Council by two members.

International Federation of Trade Unions

"The Activities of the International Federation of Trade Unions, 1927-1930" is the subject of a book recently published at the headquarters of that organization at Amsterdam. This publication, of 395 pages, contains a full account of the proceedings of the Fifth Ordinary International Trade Union Congress, held in Stockholm in July, to which reference was made in the LABOUR GAZETTE, July, 1930, page 741, and October, 1930, page 1170. It also includes the report of the conference of International Trade Secretariats, the report on activities presented to the congress, the text of the various papers submitted, and the resolutions adopted. Among the chief features of the book are the discussion of the economic policy of the I.F.T.U., its draft social legislation program, and the addresses given on "Disarmament and Peace" and "The Trade Union Movement in Countries Without Democracy."

In a brief introduction, the general international economic situation is described as follows:—

"This report on activities must be pre-faced by the general remark that recently there has been a great change for the worse in the economic position and that no signs of improvement are as yet in view. Especially in industrial countries, the unemployment figures are abnormally high. The creation of national and international trusts and cartels is making increasing progress, but the consumer reaps little or no advantage from the process. The improvement which it was hoped that the International Economic Conference might effect in the economic policy of individual countries has not materialized; in fact, tariff walls have been raised higher than ever."

In spite of unfavourable economic conditions, the membership of the Federation is

reported as showing an improvement, Germany and Sweden, in particular, indicating substantial increases. Three new national centres—the Greek and Esthonian national trade union organizations, and the Labour Union for Southwest Africa—became affiliated, while relations with non-affiliated national bodies were extended, thereby expanding the sphere of influence of the I.F.T.U. Tabular statistics indicate the membership of the affiliated national centres, the total at the end of 1929 being 13,800,567, comprised in 27 national organizations.

Discussing the attitude of the I.F.T.U. toward Communism, the report declares "the influence of the Communists in the free trade union movement has sunk to a minimum; the affiliated national centres and the international trade secretariats have all held and, of course, still hold the principles of the International Federation of Trade Unions, and the policy adopted by the Communists since the dissolution of the Anglo-Russian Committee—that of gaining influence in our movement via the Scandinavian unions—has been baffled. The only Russian union belonging to an international trade secretariat—the Russian food-workers' union, which was until recently a member of the Food-workers' International—has now withdrawn, having at last realized that the executive of that International was not to be induced to adopt its opportunist and highly impracticable policy."

On the other hand the report states that the "International Federation of Trade Unions has carefully watched the inflammatory and reactionary action which has taken place in various countries, and has warned the working class of the danger of such tendencies."

The draft social legislation policy of the I.F.T.U. is dealt with in several sections. This draft program, which formed the basis of the discussion of the congress at Stockholm, and which was referred back to the executive for further amendment, was outlined under its various sub-divisions in the LABOUR GAZETTE, October, 1930, page 1170.

Economic Policy.—The Economic Policy of the I.F.T.U. which was adopted at the Stockholm Congress, was formulated after several years of study of economic questions. It was considered that as a result of such policy, "the international working class will thus be provided with a clear statement of the standpoint of the free trade union movement in regard to current economic problems, and this will tend to strengthen the solidarity of the trade union fight of the individual countries for the realisation of international trade union demands."

The general object of such a policy is stated in part as follows:—

"The unprecedented concentration of capitalism during the last few years and the increasing competition for new markets and for the control of raw materials call for constant vigilance from the national and international trade union movements. In order to keep up its competitive capacity, every country and every enterprise endeavours to produce larger quantities of goods at lower costs. The organized working class does not oppose this process of development. But it must resolutely combat the unmistakable policy of the employers to appropriate for themselves alone the benefits of more systematic methods of production, which might otherwise be enjoyed by all mankind. Employers' attempts to keep the share of wages in production as low as possible and to force down the standard of living of the working class must be resisted, and a higher standard of living, in keeping with the increase in productive capacity, attained."

The policy is classified under two headings—international and national. The demands listed in the international sphere included: (1) the establishing of an international economic office in collaboration with the International Labour Office; (2) supervision of the operations of international trusts, cartels and agreements; (3) promotion of international trade; (4) creation of economic courts of arbitration; (5) equalization of working conditions; (6) maintenance of stable currency and purchasing power.

Prominent among the demands in the national sphere is that of rationalization of industry. "The Trade Unions" it is stated, "should further the conscious planning of the development of industries, rational organization into larger units, the reorganization of industrial finance, and substitution of the most modern plant and technique for less modern machinery and methods, provided safeguards against the exploitation of the workers are secured, and provided the standard of life of the workers rises proportionately as productivity increases. With regard to rationalization, the I.F.T.U. requires among other guarantees, the following:—

"(1) The participation of the trade union organizations in the preparation and application of measures of rationalization.

"(2) Comprehensive plans ensuring the transfer to other employment of workers who have been rendered superfluous in individual enterprises or branches of industry.

"(3) In case of delay in effecting this, the granting of unemployment benefit without restriction of time to persons thus thrown out of employment.

"(4) In the application of rationalization, full safeguards for the safety and health of the workers.

"(5) Guarantees that the workers shall receive their share in the advantages resulting from rationalization by the following means,

adopted wholly or in part according to the requirements of the public interest; the reduction of selling prices, the increase of real wages, the shortening of working hours and the guarantee of an annual holiday."

Other demands in the field of national activity included: national supervision of national credit and currency; promotion of public enterprises; improvement of agricultural efficiency; expansion of home markets.

Hours of Work in Australia

Shorter Hours in New South Wales

The Industrial Arbitration (Eight Hours) Amendment Act, 1930, restored the working week of eight hours in New South Wales. This Act also provided for a system of rationing of work whereby an employer was authorized to require any employee to lay off work for a time in order to allow whatever work was available to be shared equally among the employees. It also provided that during the lay-off the employee had no claim to wages. However, toward the close of 1930, the Government decided to revert to the 44-hour week and to prohibit rationing in private industry, the proclamation to this effect coming into force on January 5, 1931.

The decision to abolish rationing of employment has resulted in protests in various quarters on the ground that it would involve the dismissal of approximately 26,000 employees. The Employers' Federation and the Retail Traders Association were particularly opposed to the change. Certain labour leaders also expressed themselves as being in favour of rationing. On the other hand, a prominent trade union official stated that under the extensive rationing adopted by the employers the trade unions were losing heavily, as members could not keep up their payments and the unions were thus in danger of ceasing to function because of the exhaustion of funds. With rationing prohibited, employers would be compelled to extend full time to at least a proportion of their workers, and full dues could be collected from those at work. The strain on the unions would thus be relieved to some extent.

Hours for State Employees in Western Australia

The Arbitration Court of Western Australia recently granted an application by the Government for the amendment of the various awards covering employees in the State service, the objective being to revise the exist-

ing scheme of district allowances and to increase the working hours from 44 to 48 in the week. In giving judgment, the president stated that in 1923 the court had delivered a number of awards covering the workers involved in the present application. All these awards provided for a 48-hour week, but later, by an Act of Administration, the hours were reduced to 44. The Crown, as the employer, now stated that it could no longer afford to have this concession continued, and the Court would now order a reversion to the hours provisions as embodied in the original awards. The 48-hour week would apply to all but engine-drivers and firemen during the slack period of the year and painters on building construction. With regard to the latter, the Court, in 1924, had decided after thorough investigation that painting was undoubtedly an unhealthy occupation, and that the shorter hours would do something to ameliorate the conditions inseparable from the trade. In the absence of any evidence to show that there had been any change in the unhealthy features of the industry since 1924, the Court must maintain the judgment of 1924. When questions of health were involved financial considerations had to go by the board.

The Quebec Social Insurance Commission which was appointed last year (LABOUR GAZETTE, November, 1930, page 1236) is now conducting inquiries throughout the province into the various subjects referred to it for investigation. Among these subjects, that of family allowances has already, according to reports in the press, received the approval of the Commission. Among the witnesses who submitted evidence on this subject was the Rev. Father Leon Label, S.J., who was also one of the chief witnesses before the House of Commons committee on Industrial and International Relations in 1929, during their investigation of family allowances (LABOUR GAZETTE, June, 1929, page 605).

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Ratification of International Labour Conventions

On February 28, 1931, the total number of ratifications of International Labour Conventions registered with the Secretary-General of the League of Nations and officially notified to the International Labour Office was 421.

At the same date the number of Conventions of which ratification had been authorized by the competent authority in the countries concerned but had not yet been registered at the Secretariat of the League of Nations was 26.

During the month of February, 1931, six new ratifications were registered.

Marking of the Weight on Heavy Packages

The first country to ratify the Draft Convention concerning the marking of the weight on heavy packages transported by vessels, which was adopted by the International Labour Conference in 1929, was the Irish Free State. Australia was the second country to deposit its ratification and now Japan's ratification is being registered.

The object of the Convention is to protect dock and riverside workers against accidents due to the overstraining of cranes and other mechanical appliances used for lifting and lowering goods in the loading or unloading of vessels. As the result of a suggestion made by the German Government, the question was considered by the International Labour Conference in 1928 and again in the following year, when, in spite of certain opposition from the employers' representatives, the Conference adopted the present Convention. Its main operative provision requires that any package of one metric ton or more consigned within the territory of any country which ratifies the Convention for transport by sea or inland waterway shall have had its gross weight plainly marked on it before it is loaded on a vessel.

Australia and the International Labour Conference

Industrial and Labour Information, the weekly publication of the International Labour Office, in its issue of March 23, mentions that Australia has ratified to date three Conventions of the International Labour Conference, namely: (1) that concerning the creation of minimum wage-fixing machinery; (2) that concerning the marking of the weight on heavy packages transported by vessels; and (3) the Convention concerning facilities for finding employment for seamen. "If," the publication continues, "this number may seem small in proportion to the total of thirty Conventions so far adopted by the International Labour

Conference, it should be borne in mind that Australia is a federal country, and that the very definite limitations imposed by the Constitution on the powers of the Commonwealth with respect to industrial and labour matters complicate the question of the ratification of many of the Conventions."

Publications of the Office

The fifth issue of the *International Survey of Legal Decisions on Labour Law*, containing judgments delivered during 1929, has just appeared. As in previous years the survey contains a selection of typical cases heard in England, France, Germany, Italy and the United States, with a subject index. In the English section the judgments relating to minimum wage rates and the Trades Disputes and Trade Unions Act of 1927 are of special importance. The French section includes several decisions interpreting the Act of 1928 relating to notice of dismissal. Other important decisions define the limits of the legitimate exercise of trade union pressure. As regards Germany, attention may be called to the decision relating to collective agreements and to the nullification by the Federal Labour Court of an arbitration award issued by the chairman of the board without the concurrence of his colleagues. Finally, the United States section contains some interesting decisions on the subject of constitutionality and injunctions.

Russian Wages and Labour Conditions

Under the title "Wages and Regulation of Conditions of Labour in the U.S.S.R." the International Labour Office has just published a posthumous report by the late Simon Zagorski, formerly chief of the Russian Service in the Office. In a preface to the report the Director of the International Labour Office, Mr. Albert Thomas, draws attention to the fact that in this instance the Office has departed from its usual practice of assuming direct responsibility for its publications. The work has been published as left by Mr. Zagorski. The first part of the report, dealing with the regulations of working conditions, describes the machinery of State regulation, the system of discipline in factories and the forms of individual and collective contracts of service. The second part deals with the system of wage regulation and wages policy and traces the increase in wages from 1924 to 1929. Three appendices are added containing respectively exhaustive tables of monthly and daily wages in various industries, the methods of calculating cost-of-living index numbers and a bibliography.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN FEBRUARY, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on March 1 was 7,452, their employees numbering 906,813 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for February was 1,832, having an aggregate

membership of 202,669 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) The Employment Situation at the Beginning of March, 1931, as Reported by Employers

Largely owing to seasonal curtailment in the out-door industries, there was a falling-off in employment at the beginning of March, which, however, involved a smaller number of workers than that indicated on March 1, 1930. Statements were furnished to the Dominion Bureau of Statistics by 7,452 of the larger employers of labour throughout Canada, whose payrolls aggregated 901,585 persons, as compared with 906,813 in the preceding month. This decrease caused the index number (based upon the average for 1926 as 100) to decline from 100·7 on February 1, 1931, to 100·2 at the beginning of March, as compared with 110·2, 111·4, 102·6, 97·5, 92·6, 88·1, 91·8, 91·0, 82·9 and 89·1 on March 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Thus the index was lower than on March 1, 1930, 1929 and 1928, but with these exceptions was higher than in any previous year of the record.

Improvement was indicated in manufacturing, but seasonal reductions were shown in logging, mining, construction, trade and transportation, while communications also reported reduced employment.

Employment by Economic Areas

The trend was downward in the Maritime and Prairie Provinces and Ontario; in British Columbia there was no general change, while improvement was indicated in Quebec.

Maritime Provinces.—There was a considerable decrease in the Maritime Provinces, where 543 employers reduced their staffs from 75,130 persons on February 1, to 70,971 at the

beginning of March. Gains were registered in railway transportation, building and railway construction, but manufacturing, logging, mining, telephone communications and shipping and stevedoring were slacker, and there were large losses in highway construction, as the unemployment relief program progressed. Employment on March 1, 1930, had also shown a decline, but the index then was higher than on the date under review.

Quebec.—Employment showed an increase in Quebec, contrasting with the decrease noted on March 1, 1930, when the index was, however, several points higher. Logging was seasonally inactive on the date under review, and trade and services afforded less employment. On the other hand, manufacturing reported considerable seasonal improvement, especially in the leather, textile and iron and steel groups, and increased employment was also indicated in construction. Statements were tabulated from 1,736 firms, whose payrolls aggregated 263,174 employees, as against 260,692 at the beginning of February.

Ontario.—Very little general change was registered in Ontario, where the 3,327 co-operating establishments reduced their labour forces by 550 persons, bringing them 372,826 on March 1. The situation was not so favourable as that noted on the same date of last year, although the losses then recorded were much larger. Iron and steel and textiles reported considerable recovery, and metallic ore, mining and services were slightly more active than on February 1; logging and construction,

however, were seasonally slacker, while reductions were also indicated in pulp and paper, electrical apparatus and some other factories, and in trade.

Prairie Provinces.—As is customary in the late winter, there was a contraction in the Prairie Provinces on March 1; although this involved a smaller number of workers than that recorded on the same date in 1930, the index number was then higher than on the date under review. Statistics were tabulated from 1,096 firms with 119,037 employees, compared with 121,906 in their last report. Manufacturing, notably of pulp and paper products, registered a moderate decrease, while coal mining, transportation, construction and trade showed considerable declines.

Employment by Cities

Employment declined in Hamilton and Windsor and the adjacent Border Cities; in Vancouver, practically no change was indicated, while the trend was favourable in Montreal, Quebec city, Toronto, Ottawa and Winnipeg.

Montreal.—Additions to staffs were reported in Montreal, chiefly in textile, leather, iron and steel and vegetable food factories, and in construction. Statements were tabulated from 973 firms employing 140,587 workers, as compared with 137,259 in the preceding month. The tendency on March 1, 1930, was downward, but the index then was rather higher.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—Manufacturing, particularly of lumber products, recorded a falling-off in employment, and mining was also slacker, but logging and construction showed improvement, and fish-preserving plants reported the commencement of seasonal activity. The working forces of the 750 co-operating employers aggregated 75,577 persons, while the index, at 93·8, was the same as on February 1, but was over ten points lower than at the beginning of March, 1930, when additions to staffs had been indicated.

Index numbers of employment by economic areas are given in Table I.

Quebec.—Manufacturing afforded more employment, but construction was not so brisk, while other industries recorded only small, general changes. The working forces of the 131 co-operating employers totalled 13,071 persons, compared with 12,792 on February 1, 1931. The index was higher than on the same date in 1930, when losses had been indicated.

Toronto.—The iron and steel, textile and service groups showed increased activity, but there was a considerable decrease in printing and publishing plants, and in construction and trade. According to returns received from 1,047 firms in Toronto, they had enlarged their

staffs from 118,003 workers in the preceding month to 118,344 at the beginning of March. Losses had been indicated on the same date of last year, when the index stood at 115.9, compared with 107.5 on March 1, 1931.

Ottawa.—Employment in Ottawa improved; the gain took place chiefly in construction, while trade was not so active. The 153 co-operating employers reported a total payroll of 13,636 on the date under review, compared with 13,157 on February 1. The index was rather higher than on March 1, 1930, when a smaller advance had been noted.

Hamilton.—A downward tendency was in evidence in most groups in Hamilton, but the losses were generally small. An aggregate

payroll of 32,839 workers was reported by the 227 firms whose returns were tabulated, and who employed 33,001 in their last report. Decreases had also been recorded on the same date of last year, but the level of employment then was higher.

Windsor and the adjacent Border Cities.—A slight decline was indicated in the Border Cities, mainly in manufactures and construction. Data were received from 137 firms with 11,847 employees, or 112 less than on February 1. Employment was not so active as at the beginning of March, 1930, when improvement had been recorded.

Winnipeg.—There was an increase in Winnipeg, where 352 employers reported 29,752

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I. INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS
(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Mar. 1, 1921.....	89.1	101.8	84.6	91.8	90.4	77.5
Mar. 1, 1922.....	82.9	90.6	76.8	87.0	83.8	75.7
Mar. 1, 1923.....	91.0	101.7	83.8	96.7	88.3	81.5

Aug. 1.....	119.3	117.0	114.1	118.9	132.5	116.4
Sept. 1.....	119.1	115.4	115.7	119.5	127.8	115.5
Oct. 1.....	118.8	114.9	114.3	120.4	126.4	114.0
Nov. 1.....	118.9	109.5	114.8	121.1	128.6	112.1
Dec. 1.....	116.7	108.1	112.6	119.7	125.3	107.9
Jan. 1, 1929.....	109.1	103.3	103.3	113.8	116.6	100.4
Feb. 1.....	110.5	104.6	105.9	117.0	113.1	96.4
Mar. 1.....	111.4	106.8	104.7	118.4	112.3	103.7
April 1.....	110.4	107.5	101.1	117.4	113.9	106.0
May 1.....	116.2	108.3	107.3	123.8	119.7	111.6
June 1.....	122.2	112.5	115.9	126.2	132.4	117.5
July 1.....	124.7	117.9	119.4	127.2	136.7	118.2
Aug. 1.....	127.8	127.5	121.3	128.0	144.8	122.7
Sept. 1.....	126.8	127.3	120.5	126.9	143.3	121.5
Oct. 1.....	125.6	123.7	120.2	128.4	134.2	118.2
Nov. 1.....	124.6	124.6	122.8	126.5	129.5	113.9
Dec. 1.....	119.1	113.3	118.4	123.1	119.0	108.3
Jan. 1, 1930.....	111.2	113.6	107.4	116.1	111.0	99.1
Feb. 1.....	111.6	112.1	108.2	117.1	109.8	99.9
Mar. 1.....	110.2	110.2	106.6	115.6	105.3	104.2
April 1.....	107.8	107.8	103.7	112.7	103.2	106.0
May 1.....	111.4	113.1	106.1	115.7	109.2	110.7
June 1.....	116.5	122.4	114.5	117.8	115.8	113.3
July 1.....	118.9	141.1	116.8	116.9	120.4	113.5
Aug. 1.....	118.8	140.9	114.7	115.7	126.4	115.8
Sept. 1.....	116.6	122.5	113.6	113.6	129.8	114.6
Oct. 1.....	116.2	116.2	113.0	114.6	130.0	112.1
Nov. 1.....	112.9	110.1	111.9	111.6	125.8	105.4
Dec. 1.....	108.5	109.5	106.7	108.2	118.6	100.0
Jan. 1, 1931.....	101.7	119.3	99.3	100.1	106.4	94.1
Feb. 1.....	100.7	110.6	98.8	101.7	101.0	93.8
Mar. 1.....	100.2	104.5	99.7	101.6	98.6	93.8
Relative Weight of Employment by Districts as at Mar. 1, 1931.....	100.0	7.9	29.2	41.3	13.2	8.4

workers, as against 29,452 in the preceding month. The gain was largely in construction and manufacturing, while trade was seasonally slacker. Employment was in less volume than on March 1 of last year, although losses had then been registered.

Vancouver.—Manufactures recorded small gains in Vancouver, but trade showed seasonal curtailment; on the whole, there was practically no change in the employment reported by 305 firms, whose payrolls aggregated 30,931 persons. Improvement had been indicated on

the same date of a year ago, when the index was almost the same.

Index numbers of employment by cities are given in Table II.

Manufacturing

The trend of employment in this group continued upward, according to statistics furnished by 4,540 manufacturers employing 476,031 operatives, as compared with 468,500 at the beginning of February. The most pronounced recovery took place in iron and steel

Note.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

TABLE II—INDEX NUMBERS OF EMPLOYMENT BY PROVINCIAL CITIES

(AVERAGE CALENDAR YEAR, 1926=100)

—	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver
Mar. 1, 1922	81.6		90.5				84.5	78.9
Mar. 1, 1923	87.0		94.7	98.2	93.9		88.4	78.3
Mar. 1, 1924	88.9		93.4	95.1	87.6		85.8	81.5
Mar. 1, 1925	87.8	94.2	90.4	92.2	84.3		84.6	88.1

factories, but textiles also showed important seasonal gains and considerably increased activity was recorded in leather, food, chemical and building material plants. On the other hand, pulp and paper, tobacco, electrical apparatus and electric current works were slacker. The general improvement in manufactures, though greater than on March 1,

1930, was below the average recorded in the years since 1921, while the index was lower than at the beginning of March in the last four years.

Animal Products, Edible.—Employment in this industry showed a small increase, contrasting with the decline recorded on the same date last year. The index number, how-

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926 = 100)

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

The "Relative weight" column shows the proportion that the number of employees in the indicated industries of the total number of employees reported in all industries by the firms making returns on the date under review.

ever, stood at 95.0, as compared with 100.6 on March 1, 1930. The working forces of the 190 reporting establishments aggregated 16,393 persons, as compared with 16,227 in the preceding month. The advance occurred largely in dairies.

Leather and Products.—There was considerable improvement in employment in this industry at the beginning of March, according to statistics from 231 manufacturers, whose staffs aggregated 17,841 persons, compared with 15,477 on February 1. Gains were reported in Quebec and Ontario. A smaller increase had been noted on the corresponding date a year ago, but the index number then was rather higher.

Lumber and Products.—Practically no change was indicated in the lumber group, improvement in wooden vehicle plants being offset by losses in sawmills and container works. Statements were tabulated from 749 employers, whose staffs totalled 36,469 workers. The tendency was favourable in Quebec and Ontario, but decreases were registered in British Columbia. The index number was lower than on March 1, 1930, when considerable gains had been reported.

Plant Products, Edible.—An increase was recorded in the edible plant product group, chiefly in the sugar and syrup and chocolate and confectionery divisions. The firms making returns to the Dominion Bureau of Statistics, 379 in number, had 27,578 workers in their employ, or 591 more than at the beginning of February. Quebec and Ontario showed most of the gain. The tendency was downward at the beginning of March last year, when the index number stood at 100.9, compared with 97.6 on the date under review.

Pulp and Paper Products.—As on March 1, 1930, there was a falling-off on the date under review, chiefly in the pulp and paper and printing and publishing divisions, while paper products showed improvement. A combined working force of 57,241 persons was reported by 538 co-operating manufacturers, who had 58,408 employees on February 1. The situation was not so favourable as in the early spring of 1930. The largest decline took place in Ontario, while increased activity was reported in Quebec.

Rubber Products.—A moderate falling-off in employment was recorded in rubber factories, 40 of which employed 13,118 workers, as compared with 13,258 in their last report. The index number was lower than on March 1, 1930, when similar declines were indicated. The losses took place chiefly in Quebec and Ontario.

Textile Products.—Garment, cotton and knitting factories registered an increase which involved about the same number of employees as that reported on March 1, 1930. The level of employment then, however, was rather higher. The payrolls of the 710 co-operating establishments aggregated 82,524 persons, as compared with 80,289 on February 1. Considerable improvement was registered in Quebec and Ontario, while elsewhere comparatively small changes occurred.

Tobacco, Distilled and Malt Liquors.—Losses in employment were noted on March 1 in distilled and malt liquor factories; the index number, at 114.6, was nearly seven points lower than on the same date a year ago. Data were received from 148 firms employing 14,622 workers, or 350 less than in their last report. The bulk of the decrease was in Ontario and British Columbia.

Chemical Products.—Further improvement took place in this group, according to data from 132 establishments with 8,464 employees, compared with 8,262 on February 1. The index was practically the same as at the beginning of March last year.

Clay, Glass and Stone Products.—Activity increased in building material plants, in which the situation was not so good as on the same date in 1930. Statements were compiled from 152 manufacturers with 9,813 employees, as against 9,454 in the preceding month. Practically all the gain took place in glass and stone works, and was recorded in Quebec.

Electric Current.—Employment in plants producing electric power showed a moderate recession, according to the 94 co-operating firms who employed 14,471 workers, compared with 14,764 on February 1. There were declines in Quebec, Ontario and the Prairie Provinces, with slight improvement in the Maritime Provinces and British Columbia. The index number was lower than on March 1, 1930.

Electrical Apparatus.—The trend of employment was downward in electrical appliance factories, 74 of which reduced their payrolls by 567 persons to 15,294 on the date under review; Ontario registered most of the loss. Curtailment had also been indicated at the beginning of March, 1930, when the index number was much higher.

Iron and Steel Products.—Continued advances were reported in the iron and steel industry, in which employment was, however, in smaller volume than in the early spring of 1930. Automobile and railway car shops registered the greatest increases, but there was

also an upward movement in rolling mills, iron and steel fabrication, heating appliances and foundries and machine shops. Returns were tabulated from 724 establishments having 124,295 persons in their employ, or 3,762 more than in the preceding month. The most noteworthy expansion was in Ontario, but general improvement was noted except in British Columbia.

Non-Metal Ferrous Products.—Lead, tin, zinc and copper plants showed heightened activity, while other non-ferrous metal plants reported little change; 120 firms had 17,999 workers on their payrolls, as against 17,872 at the beginning of February. The additions to staffs were made chiefly in Quebec and Ontario, while there were losses in British Columbia. The level of employment was lower than on March 1, 1930, although the gains then indicated were smaller.

Mineral Products, n.e.s.—Statistics tabulated from 95 employers indicated that they had enlarged their forces from 11,932 workers in the preceding month to 12,085 at the beginning of March. Curtailment had been indicated on the corresponding date a year ago, but the index number then was decidedly higher.

Logging

Marked contractions were noted in logging camps, in many of which the season's operations were almost completed; 232 firms had 22,199 men in their employ, or 5,185 less than in their last report. The decline involved a smaller number of workers than that recorded at the beginning of March a year ago, when the index was, however, many points higher.

Mining

Coal.—Employment in both Eastern and Western coal fields showed a seasonal falling-off, which involved the release of fewer workers than that indicated on March 1, 1930, when the index number was some seven points higher. Eighty-three operators reduced their labour forces from 27,613 persons on February 1, to 26,409 at the beginning of March, 1931.

Metallic Ores.—As on the same date last year, there were general advances in employment in this group at the beginning of March. Data were received from 67 mines employing 16,249 workers, as against 15,947 at the beginning of February. The situation was not so good as on March 1, 1930, but was better than in any other March on record.

Non-Metallic Minerals (Other than coal).—Very little change was registered in these industries, according to statistics from 76 em-

ployers having 6,435 persons on their payrolls. An increase had been noted on March 1 of a year ago, when the index was higher.

Communications

Reductions in personnel were indicated on telephones, while telegraphs reported a slight gain. Returns were received from 68 companies and branches with 26,903 employees, compared with 27,555 in the preceding month. Curtailment had also been registered on March 1, 1930, when the index was higher.

Transportation

Street Railways and Cartage.—Statistics tabulated from 152 employers in this division showed that their staffs, including 24,005 persons, were practically unchanged at the beginning of March. Losses had been noted on the same date in 1930, when the index was slightly lower.

Steam Railways.—Continued but smaller reductions were registered in steam railway operation, from which 546 workers were released by the 104 co-operating companies and divisional superintendents, on whose payrolls were 71,369 persons. A loss had also been indicated on March 1 last year, but the index number was then several points higher. Declines were noted in the Prairie Provinces, but in the Maritime Provinces gains were recorded.

Shipping and Stevedoring.—There was a decrease in shipping and stevedoring, mainly in the Maritime Provinces. Employment was slightly less active than on March 1, 1930, when improvement had been indicated. On the date under review, 78 employers reported a staff of 12,109 persons, or 399 less than in the preceding month.

Construction and Maintenance

Building.—As on the same date last year, there was a falling-off in employment in building construction at the beginning of March; this was reported almost entirely in Ontario. The 687 contractors furnishing data throughout the Dominion had 35,419 employees as against 35,920 on February 1. The index number was considerably lower than in the early spring of 1930.

Highway.—Shrinkage in employment involving a larger number of workers than on the corresponding date in 1930 was indicated in this group on March 1, 1931, when 265 employers reported 45,296 workers, as compared with 49,043 on February 1. Most of this contraction took place in the Maritime Provinces.

Employment was in greater volume than on March 1 in any other year on record, due to the unemployment relief program being carried out.

Railways.—Employment on steam railway construction and maintenance showed a slight increase, according to data received from 46 companies and divisional superintendents employing 31,884 persons, or 108 more than at the beginning of February. The gain was chiefly in the Maritime Provinces and Ontario, while there were contractions in the Prairie Provinces. Losses had been noted at the beginning of March in 1930, when the index was lower.

Services

Very little change was indicated in the service group, in which 248 establishments reported a staff of 21,150 persons. Activity was slightly less than in the same month of 1930, although the index was higher than on March 1 in earlier years of the record.

(2) Unemployment in Trade Unions at the Close of February, 1931

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment among local trade unions at the close of February remained in much the same volume as in January, the tendency, however, being toward greater activity. This was manifest by the returns tabulated for February from an aggregate of 1,832 labour organizations, combining 202,669 members, of whom 31,602, or a percentage of 15.6, were idle on the last day of the month, compared with 16.0 per cent at the close of January. Noteworthy contractions in available work, however, were recorded from February last year when 11.5 per cent of the members reported were idle. A general upward employment trend from January was noted by unions in Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia, though the improvement registered was slight. On the other hand, Alberta unions reported moderate declines in activity from January and recessions

Trade

Retail and wholesale trade continued to release employees; there was a seasonal decrease of 981 in the personnel of the 806 firms furnishing data, who had 86,127 workers. The index stood at 122.0 on March 1, 1931, compared with 123.0 at the beginning of March, 1930, the maximum so far recorded for that date. In a few of the larger stores, however, it was reported that certain of the employees were being given work in rotation, rather than for the full time per month.

Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

of minor importance occurred among Manitoba and Saskatchewan unions. In every province a lower level of activity was maintained than in February a year ago, the contractions in Ontario being the most substantial.

Each month a separate tabulation is made of unemployment in the largest city in each province, with the exception of Prince Edward Island. Of these Saint John unions showed a noteworthy employment advance from January conditions, while fractional gains were reported by Montreal, Toronto, Winnipeg and Regina unions. Edmonton unions, on the other hand, reported a moderate drop in the volume of work afforded and in Halifax and Vancouver nominal reductions only occurred. With the exception of Edmonton all cities used for comparison reflected a lower level of employment than in February of last year, the recessions indicated by Saint John unions being particularly marked, though the contractions reported in the other cities were noteworthy. In Edmonton the tendency was toward greater employment than in February a year ago, but the improvement registered was slight.

Accompanying this article is a chart which shows the trend of unemployment by months from January, 1925, to date. The level of the curve changed but slightly during February from the previous month, the projection continuing in the downward movement shown during January and indicative of a better em-

ployment tendency. A distinct rise in the curve was noted from February last year, showing a marked increase in the volume of unemployment during the month reviewed.

Activity for workers in the manufacturing industries showed a further, though slight, increase at the close of February, the 481 unions from which returns were tabulated, with 56,875 members, indicating 10.6 per cent of idleness, compared with 12.0 per cent in January. Pulp and paper makers reported employment advances during February which involved the greatest number of workers. Viewed from a percentage basis glass workers, cigarmakers, hat and cap workers and metal polishers indicated pronounced expansion, but as these tradesmen formed but a small share of the entire membership in the manufactur-

other hand, more favourable conditions prevailed for hat and cap, leather, fur, jewellery and glass workers.

Employment for coal miners at the close of February eased off slightly from January, as shown by the returns received from 48 unions embracing a membership of 18,369 persons. Of these, 1,148, or a percentage of 6.2, were idle on the last day of the month, contrasted with 5.5 per cent of inactivity in January. This employment reduction indicated from January was entirely confined to the coal fields of Alberta, Nova Scotia unions showing nominally improved conditions, while in British Columbia all members were reported at work in the two months compared. A slight drop in the volume of work afforded was registered in the mining division from

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

ing industries they did not materially affect the percentage for the group as a whole. Among garment, leather and iron and steel workers an upward employment tendency was noted, though the gains were small. On the contrary, general labourers showed a substantial falling off in the employment afforded and among woodworkers the recessions were important, while minor declines in activity occurred among textile workers. In the printing trades approximately the same level of unemployment was maintained as in January. Compared with the situation for February last year, when 8.5 per cent of idleness was recorded in the manufacturing industries, pulp and paper makers, garment and iron and steel workers, printing tradesmen, wood workers, cigar makers, metal polishers, and bakers and confectioners, all reported a lower level of activity during the month reviewed. On the

February last year, when the unemployment percentage stood at 5.7. As in the previous comparison Alberta miners were wholly responsible for this unfavourable employment trend during the month reviewed. In Nova Scotia the situation remained practically unchanged, while in British Columbia no inactivity was recorded, compared with a substantial unemployment percentage in February a year ago.

Little change in the situation for building tradesmen was shown during February from the previous month, though marked depression was indicated from February a year ago. For the month reviewed reports were tabulated from 263 unions in the building trades with a membership total of 31,274 persons, 47.1 per cent of whom were without work on the last day of the month, contrasted with 46.2 per cent in January and with 34.0 per

cent in February, 1930. A downward employment movement was shown by carpenters and joiners, electrical workers, and plumbers and steamfitters from January, which was largely offset by the improvement recorded among bridge and structural iron workers, bricklayers, masons and plasterers, granite and stone cutters, painters, decorators and paper hangers, tile layers, lathers and roofers, and hod carriers and building labourers. Bridge and structural iron workers and granite and stone cutters were the only trades to report a better situation than in February of last year, the gains for these workers being quite pronounced while in the remaining trades curtailment of activity was noted, the most extensive of which occurred among bricklayers, masons and plasterers and carpenters and joiners.

Reports were tabulated from 788 unions in the transportation industries at the close of February, with 70,304 members, 7,312 of whom, or a percentage of 10.4 were without work, contrasted with 11.0 per cent in January. Steam railway employees, whose return constituted over 82 per cent of the entire group membership reporting, street and electrical railway employees and teamsters and chauffeurs all registered fractional employment increases, and navigation workers a minor decline in activity. Less favourable conditions prevailed in the transportation industries than in February last year, when 8.1 per cent of the workers reported were idle, steam railway employees and teamsters and chauffeurs showing moderate employment recessions and street and electrical railway employees nominal declines only. Unemployment for navigation workers, however, was in slightly lesser volume than in February a year ago.

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Sept., 1930.....	5.2	2.3	12.7	9.6	6.5	4.9	8.7	10.1	9.4
Oct., 1930.....	4.1	4.6	14.5	11.2	8.8	7.7	9.2	10.5	10.8
Nov., 1930.....	7.4	5.1	19.2	12.9	10.9	12.7	10.9	14.0	13.8
Dec., 1930.....	7.5	8.7	22.8	17.3	14.2	15.9	13.8	16.8	17.0
Jan., 1931.....	7.4	10.5	16.1	18.4	15.1	18.3	15.7	16.9	16.0
Feb., 1931.....	6.7	8.5	15.7	17.1	15.6	19.0	18.2	16.3	15.6

From longshore workers, whose returns are tabulated separately each month, 14 reports were received during February, covering 6,903 members, 1,907, or a percentage of 27.6, of whom were idle on the last day of the month, contrasted with percentages of 24.0 in January and with 10.8 in February last year.

Retail clerks at the close of February were better engaged than in the previous month, the seven reports tabulated, which represented a membership of 999 persons, indicating 1.5 per cent of inactivity compared with 3.4 per cent in January. In February of last year however all members were reported busy.

Civic employees, with 69 unions reporting in February, a membership of 6,982 persons, indicated 1.9 per cent of their members idle at the end of the month in contrast with 2.1 per cent in January and with 1.6 per cent in February last year.

Moderate improvement in conditions was reported by unions in the miscellaneous group of trades during February, the 127 unions from which reports were tabulated, with 6,842 members, showing 15.7 per cent of idleness, compared with 18.3 per cent in January. Hotel and restaurant, and theatre and stage employees, barbers, stationary engineers and firemen, and unclassified workers, all shared slightly this employment advance. With the exception of theatre and stage employees all trades participated in the unfavourable employment trend shown in comparison with February of last year, when 9.6 per cent of idleness was recorded in the miscellaneous group of trades, the recessions indicated by hotel and restaurant employees and unclassified workers being especially noteworthy.

Among fishermen an unemployment percentage of 19.2 was recorded at the close of

February, in contrast with 11.0 per cent in January and with 2.4 per cent in February, 1930. The percentage for the month under review was based on the reports received from 3 unions embracing a membership of 1,305 persons.

Lumber workers and loggers reported a slight decline in activity during February from January conditions, as shown by the reports tabulated from 5 unions with 896 members. Of these, 290 or a percentage of 32.4, were idle on the last day of the month, contrasted with 30.6 per cent of unemployment in January.

Heavy losses in employment were indicated from February last year, when 13.0 per cent of the members recorded were without work.

Table II shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930, inclusive, and also the percentage of unemployment by provinces for February of each year from 1919 to 1928, inclusive and for each month from January, 1929, to date. Table I summarizes the returns in the various groups of industries for the same months as in Table II.

(3) Employment Offices Reports for February, 1931

The volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1931, as indicated by the average daily placements effected, showed an increase of 2 per cent over that of the previous month and a gain of 130 per cent when compared with February, 1930. The total placements for the month under re-

view in the construction and maintenance group, which was the result of relief work carried on by different municipalities and provinces in road improvement, sewer construction, etc.; all other groups showed declines, that in logging being the heaviest.

The accompanying chart shows the trend of employment from January, 1929, as represented

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o—o—o—o—o—o

view in comparison with those of January were slightly less, however, due to the fewer number of working days. Manufacturing, farming and transportation were the only groups to show gains in placements over January and of the declines registered that in construction and maintenance was the heaviest. The marked gain over February last year was entirely accounted for by increased placements

by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curve, both of vacancies and placements, in relation to applications, showed an upward trend throughout the month, and at the end of the period the curve of vacancies had attained a

* In the corresponding table last month "K elowna" should have read "Nanaimo".

level eight points and that of placements ten points higher than the levels recorded at the close of February, 1930. The ratio of vacancies to each 100 applications was 69.9 during the first half and 71.7 during the second half of February, 1931, in comparison with the ratios of 63.8 and 64.1 during the corresponding periods of 1930. The ratios of placements to each 100 applications during the periods under review were 68.9 and 70.2 as compared with 62.0 and 59.9 during the corresponding month of 1930.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during February, 1931, was 2,159 as compared with 2,123 during the preceding month and with 966 in February, a year ago.

The average number of applications for employment received daily by the offices during the month under review was 3,052 in comparison with 3,310 in January, 1931, and with 1,510 during February last year.

The average number of placements made daily by the offices of the Service during February, 1931, was 2,120, of which 466 were in regular employment and 1,654 in work of one week's duration or less, as compared with a total daily average of 2,076 during the preceding month. Placements for February a year ago averaged 920 daily, consisting of 457 placements in regular and 463 in casual employment.

During the month of February, 1931, the offices of the Service referred 52,293 persons to vacancies and effected a total of 50,874 placements; of these the placements in regular employment were 11,188, of which 8,304 were of men and 2,884 of women, while placements in casual work totalled 39,686. The number of vacancies reported by employers was 44,798 for men and 7,011 for women, a total of 51,809, while applications for work numbered 73,240, of which 63,479 were from men and 9,761 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada each year from January, 1921, to date:—

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552

1931 (2 months).....	25,120	79,726	104,846

NOVA SCOTIA

There was a decrease of over 4 per cent in the number of positions offered through employment offices in Nova Scotia during February when compared with the preceding month, and of nearly 29 per cent in comparison with the corresponding month last year. Placements were 7 per cent less than in January and nearly 30 per cent below February, 1930. All industrial groups participated in the declines in placements from February last year except farming and mining, and in these divisions the gains were nominal only. Industrial divisions in which most of the placements were effected during the month were manufacturing 31; construction and maintenance 55; trade 38; and services 343, of which 267 were of household workers. There were 42 men and 47 women placed in regular employment during the month.

NEW BRUNSWICK

During February, orders received at employment offices in New Brunswick called for nearly 5 per cent more workers than in the preceding month and were over 64 per cent in excess of the corresponding month last year. There was a gain of 6 per cent in placements in comparison with January and of nearly 66 per cent when compared with February, 1930. There was a small decrease in placements in the manufacturing industries from February last year, but gains were reported in all other groups. Construction and maintenance showed the largest increase, attributable to work undertaken in relief of unemployment on highway and railway construction. Placements by industrial divisions included: manufacturing, 25; transportation, 24; construction and maintenance, 349; trade, 23; and services, 575, of which 327 were of household workers. During the month regular employment was obtained for 96 men and 50 women.

QUEBEC

Orders received at employment offices in the Province of Quebec during February called for nearly 14 per cent less workers than in the preceding month, but over 18 per cent more than in the corresponding month last year. There was a decline of over 5 per cent in placements when compared with January, but a gain of nearly 8 per cent in comparison with February, 1930. Services showed the largest increase in placements over February last year, but there were minor gains in construction and maintenance, mining and trade. All other groups reported fewer placements, but with the exception of logging, where a considerable

reduction was recorded, these declines were small. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 63; logging, 93; construction and maintenance, 154; trade, 39; and services, 644, of which 530 were of household workers. There were 351 men and 474 women placed in regular employment.

ONTARIO

Opportunities for employment, as indicated by orders received by employment offices in Ontario during February, were nearly 10 per cent less than in the preceding month, but nearly 183 per cent above the corresponding month last year. There was a decline of over 9 per cent in placements when compared with January, but a gain of nearly 210 per cent in comparison with February, 1930. The large increase in placements over February of last year was entirely due to work undertaken in relief of unemployment on highway and sewer construction, as the gains in services and transportation, the only other groups in which placements were higher, were more than offset by declines in all other divisions. Of the reductions, those in logging were the most pronounced. Placements by industrial groups included: manufacturing, 799; logging, 476; farming, 210; transportation, 138; construction and maintenance, 24,368; trade, 333; and services, 3,276, of which 2,004 were of household workers. During the month, 4,359 men and 1,233 women were placed in regular employment.

MANITOBA

There was a nominal gain only in both vacancies notified and placements effected by employment offices in Manitoba during February when compared with the preceding month, but a gain of nearly 200 per cent in vacancies and of nearly 164 per cent in placements when compared with the corresponding month of last year. The entire gain in placements over February, 1930, was due to relief work for the unemployed, as construction and maintenance, the industrial division under which this work is provided, was the only group to show improvement under this comparison. Of the declines in all other groups, those in logging, services and farming were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 41; logging, 53; farming, 158; construction and maintenance, 6,190; trade, 84; and services, 955, of which 811 were of household workers. Placements in regular employment numbered 457 of men and 357 of women.

SASKATCHEWAN

The demand for workers, as indicated by orders received at employment offices in Saskatchewan during February, was nearly 18 per cent less than in the preceding month but nearly 55 per cent better than in the corresponding month last year. Placements declined over 19 per cent from the preceding month, but were nearly 59 per cent higher than during the corresponding month last year. The improvement over February, 1930, was, for the greater part, due to placements on relief work under construction and maintenance, although more workers found employment in the logging industry. Of the declines in all other groups, those in services were the most noteworthy. Placements by industrial divisions included: manufacturing, 28; logging, 262; farming, 192; construction and maintenance, 1,406; trade, 39; and services, 614, of which 415 were of household workers. Regular employment was provided for 796 men and 295 women during the month.

ALBERTA

Employment opportunities, as indicated by orders received at employment offices in Alberta during February, were nearly 24 per cent better than in the preceding month and nearly 52 per cent in excess of February, 1930. There was a gain also of nearly 24 per cent in placements when compared with the preceding month and of over 53 per cent in comparison with the corresponding month last year. As in all other provinces, relief work accounted for the gain in placements over February a year ago. There was, however, a small increase in bush placements and a nominal gain in mining. Fewer placements were effected in all other groups, the reductions in services and farming being the most substantial. Placements by industrial divisions included: manufacturing, 52; logging, 495; farming, 200; construction and maintenance, 4,422; and services, 572, of which 495 were of household workers. During the month 1,849 men and 219 women were placed in regular employment.

BRITISH COLUMBIA

There was a decline of over 16 per cent in the number of positions offered through offices in British Columbia during February when compared with the preceding month, but a gain of over 38 per cent in comparison with the corresponding month last year. Placements declined over 16 per cent when compared with January, but were nearly 43 per cent higher than in February, 1930. The increase in placements over February of last

year was due to work undertaken in relief of unemployment on highway and sewer construction. Logging showed a nominal gain, but all other groups declines. Of the latter, the largest reductions were reported in services and manufacturing. Placements by industrial groups included: manufacturing, 44; logging, 229; farming, 93; construction and maintenance, 1,689; and services, 660, of which 419 were of household workers. During the month 354 men and 209 women were placed in regular employment.

Movement of Labour

During the month of February, 1931, the offices of the Employment Service of Canada made 11,188 placements in regular employment, 3,229 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 453 were granted the Employment Service reduced transportation rate, 423 going to points within the same province as the despatching office and 30 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Certificates issued in Quebec during February numbered 6, these being granted at Hull to bushmen proceeding to Pembroke and vicinity.

In Ontario 182 persons secured certificates for reduced transportation, 177 of whom went to provincial employment, the remainder representing an interprovincial movement. Within the province Port Arthur transferred 107 bush workers and Fort William 54 bush workers to centres within their respective zones. The Timmins zone was the destination of 2 carpenters, 1 cement finisher, and 1 pipefitter, travelling from Niagara Falls, 3 miners from Cobalt, 3 lumber loaders from North Bay, and 3 carpenters from Pembroke. In addition, Ottawa despatched 3 bushmen to Sudbury. The 5 persons going outside the province were mine workers conveyed from Cobalt to employment in the Amos zone.

Transfers, both within and from the Province of Manitoba during February were effected by the Winnipeg office and numbered 48. Of these, 33 were provincial and 15 interprovincial. Provincially 24 farm hands, 5 bushmen and 1 chef secured certificates to centres within the Winnipeg zone and 2 farm domestics and 1 hotel employee to points in the Brandon zone. The workers proceeding to employment outside the province included 1

farm hand, 1 farm domestic, and 1 blacksmith going to Port Arthur, 1 porcelain hand turner to Toronto, 1 hotel chef to Yorkton, and 8 farm hands and 2 farm domestics to various Saskatchewan rural points.

Benefiting by the Employment Service reduced rate in Saskatchewan 156 persons proceeded to employment within the province, and 3 to situations outside. Of the latter, Regina transferred 1 mine labourer to Dauphin, and 1 teacher to Edmonton, which zone also received 1 farm hand from Saskatoon. A large part of the provincial movement was of bush workers, 81 going to Yorkton zone, 39 to the Prince Albert zone and 2 to Regina, the Prince Albert, Saskatoon and Regina offices being responsible for the transfer of these workers. In addition, 25 farm hands and 2 farm domestics were despatched to various agricultural districts throughout the province, 5 farm hands and 1 farm domestic being transported from Moose Jaw, 3 farm hands from Prince Albert, 16 farm hands and 1 farm domestic from Regina and 1 farm hand from Saskatoon. From Regina also, 1 hotel employee was sent to Estevan, 1 teacher to Yorkton, and 2 teachers within the Regina zone. To centres within their respective zones Saskatoon despatched 1 hotel cook and 1 hotel porter, and Prince Albert 1 harness repairer.

All certificates issued in Alberta during February were to provincial points and totalled 31. Of these 23 were granted by the Edmonton office to 1 farm domestic and 2 farm workers travelling to Calgary, and to 11 farm hands, 1 farm housekeeper, 1 cook, 2 mine workers, 3 maids, 1 bushman and 1 labourer going to situations within the Edmonton zone. Securing certificates at Calgary 3 farm domestics were carried at the reduced rate to Lethbridge, 1 housekeeper, 1 farm hand and 1 hotel employee to Drumheller, and 2 farm hands within the Calgary zone.

Business transacted by British Columbia Offices during February involved an issue of 27 reduced rate certificates, 26 of which were to centres within the province, and 1 to a point outside. The latter was granted to a farm hand travelling from Vancouver to Edmonton. Within the province the Vancouver office effected transfers of 1 farm hand to Prince George and of 6 railway construction workers, 2 bush workers, 2 power construction workers, 1 farm hand, 1 housekeeper, 1 carpenter and 1 flunkey to employment within the Vancouver zone. In addition, 8 bushmen went from Prince George and 2 bushmen and 1 farm hand from Nelson to centres within their respective zones.

Of the 453 persons who took advantage of the Employment Service reduced transportation rate during February 320 were carried by the Canadian National Railways, 110 by the

Canadian Pacific Railway, 12 by the Pacific Great Eastern Railway and 11 by the Timiskaming and Northern Ontario railway.

(4) Building Permits Issued in Canada During February, 1931

The value of the building represented by the permits issued by 61 cities during February, as compiled by the Dominion Bureau of Statistics, was lower by \$1,581,158 or 21·1 per cent than in the preceding month, and was also less by \$2,989,491 or 33·5 per cent than in February of last year; the total stood at \$5,929,587 during February, 1931, as compared with \$7,510,745 in January, 1931, and \$8,919,078 in February, 1930. The February, 1931, total was below the average for February in the years 1920-30, but the aggregate for the first two months of this year was higher than the January-February average in the last eleven years; it was in fact higher than in any earlier year since 1920 except 1928, 1929 and 1930, while the wholesale costs of building materials were considerably lower than in any of the preceding eleven years.

Some 50 cities furnished detailed statistics, showing that they had granted over 600 permits for dwellings valued at about \$2,200,000, and nearly 1,100 permits for other buildings, estimated to cost in excess of \$3,500,000. In January, authority was given for the erection of some 400 dwellings and 1,000 other buildings, estimated at approximately \$1,800,000 and \$4,500,000, respectively.

Nova Scotia, Manitoba, Saskatchewan and Alberta reported increases in the value of the permits issued as compared with January, 1931; the largest gain, of \$488,950, took place in Manitoba. Of the declines in the remaining provinces, that of \$1,544,539 or 46·9 per cent in Ontario was most pronounced.

As compared with February, 1930, Manitoba, Saskatchewan and British Columbia registered gains, that of \$345,495, or 24·9 per cent in Saskatchewan being greatest. Of the decreases in the remaining provinces, that of \$2,492,352 or 48·8 per cent in Ontario was most marked.

Of the larger cities, Montreal recorded an increase in the value of the permits issued as compared with January, 1931, but a reduction as compared with February, 1930. In Toronto

there were declines, and in Winnipeg there were increases in both comparisons, while Vancouver reported a reduction as compared with January, but an increase over February of last year. Of the other cities, the following recorded increases in the value of building authorized during February as compared with January, 1931, and February, 1930: Westmount, Brantford, Fort William, Kingston, Owen Sound, Peterborough, St. Thomas, Sarnia, Sault Ste. Marie, Regina, Edmonton, Medicine Hat, Kamloops and Nanaimo.

Cumulative Record for First Two Months, 1931.—The following table gives the value of the building authorized by 61 cities during February, and in the first two months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1926=100).

Year	Value of permits issued in February	Value of permits issued in first two months	Indexes of value of permits issued in first two months (1920=100)	Average indexes of wholesale prices of building materials in first two months (1926=100)
	\$	\$

1920.....	6,156,287	10,173,311	100·0	137·5

The aggregate for the first two months of 1931 was lower by 16·7 per cent than the total for the same months of 1930, but was greater than the average of \$12,042,474 recorded in the years 1920-1930.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during February, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for March, 1931, and previous months are reproduced below.

Great Britain

The fluctuations in the course of employment observed in January continued during February, but by the end of the month there had been a slight net increase in the numbers unemployed.

There were increases in the numbers unemployed in coal mining; in the manufacture of glass, pig iron, non-ferrous metals, tin-plates, and iron and steel tubes; in engineering, shipbuilding and ship-repairing, the motor vehicle industry, the hosiery and carpet trades, textile bleaching, dyeing and finishing, paper manufacture and dock and harbour service.

There was a further improvement, however, in the manufacture of pottery, steel, silk and artificial silk. The numbers unemployed also decreased in the building trade, public works and contracting and cement manufacture, and in the cotton, woollen and worsted, linen, lace, boot and shoe, and clothing industries.

Among the workpeople, numbering approximately 12,400,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at February 23, 1931 (including those temporarily stopped as well as those wholly unemployed) was 21·7, as compared with 21·5 at January 26, 1931, and with 12·9 at February 24, 1930. The percentage wholly unemployed at February 23, 1931, was 16·7, as compared with 16·5 at January 26, 1931; while the percentage temporarily stopped was 5·0, the same as at January 26. For males alone the percentage at February 23, 1931, was 22·6, and for females 19·6; at January 26, 1931, the corresponding percentages were 22·1 and 19·9.

At February 23, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,888,716 wholly unemployed, 613,692 temporarily stopped, and 115,250 normally in casual employment, making a total of 2,617,658. This was 25,008 more than a month before, and 1,078,393 more than a year before. The total included 1,893,817 men, 70,958 boys, 591,623 women and 61,260 girls.

The 1,888,716 wholly unemployed included approximately 1,323,300 insured persons who had paid at least 30 contributions during the preceding two years and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 465,300 insured persons who had paid less than 30 contributions during the preceding two years; and 100,100 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,714,556, included 234,949 men, 6,050 boys, 45,473 women, and 3,468 girls, who had been on the register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at February 23, 1931, was 2,693,811.

United States

Employment in the United States increased less than one-tenth of one per cent in February, 1931, as compared with January, 1931, and pay-roll totals increased 4·7 per cent according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, quarrying and non-metalliferous mining, crude petroleum producing, public utilities, trade (wholesale and retail), hotels, canning and preserving, and laundries, dyeing and cleaning.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of November and December, 1930, and therefore cannot be included in the general statement for the month of February. The number of employees of Class I railroads as at December 15, totalled 1,340,470, representing a decrease of 2·7 per cent since November 15, 1930. The amount of pay-roll in the entire month of December was \$185,396,509, representing a decrease over the previous month of 0·4 per cent.

Employment in manufacturing industries in February, 1931, increased 1·4 per cent as compared with January and pay-roll totals increased 7·5 per cent. Those changes are based upon returns made by 13,377 identical establishments in 54 of the chief manufacturing industries in the United States, having in February, 2,772,219 employees whose combined earnings in one week were \$66,567,283.

Regular manufacturing employment and pay rolls show a marked upward trend in February following the customary decreases in January due to inventory taking and repairs, and the increases in February this year compare favourably with those in the years prior to 1930; in February, 1930, the increase in employment was only 0·1 per cent and the increase in pay rolls only 3·5 per cent.

The bureau's weighted index of employment for February, 1931, is 74·1, as compared with 73·1 for January, 1931, 75·1 for December, 1930, and 90·3 for February, 1930; the index of pay-roll totals for February, 1931, is 67·0, as compared with 62·3 for January, 1931, 67·4 for December, 1930, and 90·7 for February, 1930. The monthly average for 1926 equals 100.

Eight of the 12 groups of manufacturing industries showed employment gains in February, and 10 groups showed pay-roll gains. The textile group gained 4·1 per cent in employment, leather 3·5 per cent, stone-clay-glass 2·3 per cent, and tobacco 10·2 per cent. Pay-roll gains included 23·5 per cent in the vehicles group, 13·5 per cent in leather, 11·6 per cent in textiles, 10·5 per cent in stone-clay-glass, and over 6 per cent each in the iron and steel and the other metals group. Decreases were shown in both items in the food and the paper groups, and in employment alone in the chemicals and miscellaneous industries groups.

Increased employment in February was shown in 31 of the 54 separate industries and increased pay rolls in 43 industries. The out-

standing gains were 13·8 per cent in stoves, 11·9 per cent in cigars, 8·8 per cent in woollen and worsted goods, over 7 per cent each in millinery and carpets; and about 6 per cent each in both men's and women's clothing, shirts, stamped ware, cast-iron pipe, and hosiery, and 4·5 per cent in boots and shoes. Automobiles gained 2·4 per cent; the iron and steel industry, 0·4 per cent; and cotton goods, 0·2 per cent. In nearly every instance pay-roll increases were much greater than employment increases. The notable pay-roll increases were 52·5 per cent in automobiles, 24·9 per cent in carpets, 22·3 per cent each in stoves and stamped ware, and between 11 and 18 per cent each in 8 of the textile industries and in cement and glass.

There were no decreases in employment in February of especial significance.

Four of the 10 industries surveyed but not included in the bureau's indexes reported increased employment in February as compared with January, these being: rayon, 0·5 per cent; jewelry, 2·9 per cent; paint and varnish, 1·2 per cent; and beverages, 1·2 per cent. Decreased employment in February was shown as follows: radio, 5·4 per cent; aircraft, 4·8 per cent; rubber goods, 0·2 per cent; beet sugar, 76·1 per cent; cash registers, etc., 2·5 per cent; and typewriters, 1·6 per cent.

The beet-sugar industry reaches its minimum employment point in February or March; typewriters and supplies are presented for the first time in its comparison for January and February.

Six of the nine geographic divisions reported increased employment in February, the New England division leading with a gain of 2·3 per cent, followed by the East North Central with a gain of 1·6 per cent and the South Atlantic with a gain of 1·3 per cent.

The West North Central and the Mountain divisions both show decreased employment owing to the beet-sugar industry's ended season; the Pacific division reported a drop of 1 per cent.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labor, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent; June, 1930, 20 per cent; July, 1930, 22 per cent; August, 1930, 22 per cent; September, 1930, 21 per cent; October, 1930, 21 per cent; November, 1930, 22 per cent; December, 1930, 16·6 per cent; January, 1931, 19·8 per cent; February, 1931, 19·0 per cent; March, 1931, 18·2 per cent (first half of the month).

According to a recent press report, William Green, President of the American Federation of Labor, estimated the number unemployed in the United States at the end of March as approximately 6,000,000.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30 last. The text of this measure appeared in the April issue at page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the

work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

- (b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A"

conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other

Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

CONTRACTS AWARDED RECENTLY

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:

DEPARTMENT OF NATIONAL DEFENCE

Contract in Group "A" (Construction, etc.)

Installation of Automatic Sprinkler System in Hangar A. 2, R.C.A.F. Training Establishment, Trenton, Ont. Name of contractor, The Automatic Sprinkler Co. of Canada, Ltd., Montreal, P.Q. Date of contract, March 14,

1931. Amount of contract, \$15,900. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	
	per hour	per day
Sprinkler fitter.....	\$ 20	8
Labourers.....	0 40	8

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a public building at Lumsden, Sask. Name of contractors, School Builders and Equipment Co., Regina, Sask. Date of contract, March 16, 1931. Amount of contract, \$15,940 and unit prices for any additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	
	per hour	per day
Bricklayers and masons.....	\$ 1 45	8
Hollow tile layers.....	1 45	8
Plasterers.....	1 40	8
Marble setters.....	1 25	8
Plumbers and steamfitters.....	1 25	8
Stonecutters.....	1 25	8

Delivery and installation of blast plates on Bridge No. 6, Welland Ship Canal. Name of contractors, Standard Steel Construction Co., Ltd., Port Robinson, Ont. Date of contract,

Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" Conditions, shall, as far as practicable, be observed by the department or departments of Canada, in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan, or guarantee for any of the purposes mentioned.

Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissions throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and take the form of either the General Fair Wages Clause or a fair wages schedule.

The Department of Labour was recently notified that the following construction contract was executed by the Saint John Harbour Commissioners under the above-mentioned conditions:—

Saint John Harbour Commissioners

Construction of a wooden shed at Berth No. 17, West Saint John, N.B. Name of contractor, Mr. Ashley A. Colter, Fredericton, N.B. Date of contract, December 16, 1930. Amount of contract, approximately \$153,867.60. A fair wages schedule was inserted in the contract as follows:—

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Fishing and Trapping

PRINCE RUPERT, B.C.—FISHING VESSEL OWNERS' ASSOCIATION OF PRINCE RUPERT AND THE OWNERS AND CAPTAINS OPERATING HALIBUT FISHING BOATS FROM CANADIAN PORTS ON THE PACIFIC COAST AND THE DEEP SEA FISHERMEN'S UNION OF THE PACIFIC.

Agreement to be in effect for the fishing season from February 16, 1931, to December 31, 1931, and thereafter unless cancelled by either party giving 30 days' notice.

All members of the crews shall be union members except the captain and any owner who owns one forth or over in his own vessel.

A delegate will be elected in each boat to see that this is carried out.

The share of the vessel will be one fifth of the gross stock from which the price of any fishing gear lost on fishing grounds or stolen from the vessel and pilot and custom dues will be deducted. Fishermen agree to pay their share of certain supplies required and to replace lost and condemned fishing gear.

All Canadian halibut fishing boat owners will pay the Marine Sick Benefit tax* when taking their first clearance at the customs office.

The rights of sick mariners on ships paying the duty are stated in section 386 of the Act (LABOUR GAZETTE, April, 1925, page 332).

All disputes that cannot be settled on board must be referred to the Association and the union for adjustment. No union member may be refused employment because of any dispute with any other master or owner until the dispute in question has been finally settled between the association and the union.

Manufacturing: Printing and Publishing

QUEBEC, P.Q.—CERTAIN NEWSPAPER PUBLISHERS AND JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 302.

Agreement to be in effect from February 14, 1931, to February 14, 1932, but if anything should occur which might change the present working conditions, the agreement may be terminated on 15 days' notice from either party.

Only union members to be employed and competent men will be furnished by the union. If none available, other men may be employed but they shall apply to join the union.

Hours: for day work 8 per day, a 48-hour week; for night work, 7½ per night, a 45-hour

*Under the provisions of the Canada Shipping Act dues are levied on every ship arriving in port for the purpose of maintaining a hospital for the care and treatment of sick mariners.

week. Split shifts running from day into night hours or *vice versa* shall consist of 45 hours per week and be paid at night rates.

Overtime: all overtime, time and one half; double time to be paid to day staff for work before 7 a.m. and for all work performed by them on Sundays, Labour Day, Christmas Day and New Year's Day. A member who is called back for extra work after leaving the office, will be guaranteed the payment of two hours overtime.

Wages: \$32.50 per week for day work and \$34.50 per week for night work. Foremen to receive at least \$3 per week extra for day work and \$4 per week extra for night work.

Foremen to hire all help and to judge their competency.

When the staff is decreased, those last employed will be discharged first.

The union reserves the right to refuse to execute all work received from or destined for struck offices.

Apprentices may be employed in the ratio of one to every five journeymen or fraction thereof regularly employed. Apprentices will be examined by the foreman of the office and the local apprenticeship committee on beginning the apprenticeship. They will serve five years and must pass examinations before being promoted. They must also complete the course in printing given by the international union. Provision is made for apprentices to learn all branches of the work.

Wages for apprentices: for first two years at the discretion of the employer but not less than \$6 per week at the beginning. For day work wages are from \$10 per week for first half of third year, to \$18 per week for second half of fifth year; for night work \$2 per week extra.

Any dispute which cannot be settled between the parties will be referred to an arbitration committee consisting of two members from each party and a fifth chosen by them, whose decision will be final and binding.

Manufacturing: Textiles and Clothing

TORONTO, ONTARIO.—CERTAIN MANUFACTURERS OF LADIES' DRESSES AND THE INTERNATIONAL LADIES GARMENT WORKERS' UNION AND THE TORONTO JOINT BOARD OF CLOAK, SUIT AND DRESSMAKERS' UNION, LOCAL NOS. 14, 68, 72, 83 AND 92 OF THE INTERNATIONAL LADIES' GARMENT WORKERS.

This agreement was signed by a number of employers as a result of the strike which was noted in the *LABOUR GAZETTE*, March, page 281, and in this issue, page...., the strike being still in progress in other shops.

Agreement to be in effect from date of signing to January 31, 1932, and thereafter from year to year until either party gives notice 30 days before January 31, of any year.

Only members in good standing in the union will be employed and employers will apply to the union for all help required.

The manufacturer agrees that he individually, any member of a firm, syndicate or partnership, director of an incorporated company, foreman or forelady will not do any of the work of cutting, operating, pressing, finishing, draping, trimming, sample making, tucking and hem-stitching or other work required in the process of making the garment, except for the purpose of instructing workers.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: no overtime will be permitted as long as additional employees can be secured from the union. The amount of overtime will not exceed 2½ hours in any day or 10 hours in any week. No overtime work will be permitted on Saturday after 12 noon. For overtime work, cutters will be paid time and one half and other workers at straight time. Time workers will be entitled to a minimum of four hours pay whenever they are put to work. Week workers will be entitled to be paid for legal holidays in all shops where this has previously been the custom.

Wages per week: cutters \$37.50, assistant cutters and apprentices to be adjusted individually, finishers \$18, drapers \$22, operators \$37.50, pressers \$44. Wages for both time workers and piece workers are now 15 per cent higher than previously paid. Piece work prices will be based on the sum of \$37.50 per week for operators and \$44 for pressers of average ability, the piece work prices to be agreed upon between the manufacturer and a committee of employees.

No worker may employ a helper, but all workers in the shop must be directly hired and paid by the manufacturer. No employer will make any individual contract with any employee nor accept any cash deposit or other security from any employee and no work will be given the employees to be manufactured or worked upon at home.

No employee who has been engaged in the shop for a week or more will be discharged without good and sufficient cause. Any discharges will be subject to review by the union.

When there is not sufficient work for all employees, the available work in the shop will be divided as equally as possible among all the employees properly engaged in the work who are competent to do the work. The manufacturer will employ at least one cutter.

A shop chairman will be elected by the employees to whom all disputes will be referred. If he and the manufacturer cannot settle any dispute it will be referred to a union representative, and later, if necessary, to arbitration. If these means fail, the matter will be arbitrated in accordance with the Ontario Arbitration Act. No strike or lockout to occur pending such arbitration. No work shall be done by the manufacturer for any firm or company against whom the union is conducting a strike.

Construction: Buildings and Structures

HAMILTON, ONTARIO.—HAMILTON DISTRICT ELECTRICAL CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 105.

Agreement to be in effect from September 1, 1930, to August 31, 1931. Six months' notice of any change must be given by either party.

Only union members to be employed, with the exception of shop superintendents who are not included in the agreement. No union member will be permitted to work for any contractor who is not a party to this agreement, and no member shall engage in the business as an electrical contractor without first giving thirty days' notice to the union and to the electrical contractors.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. On shift work, men will be paid nine

hours for eight hours' work when two or more shifts per day are used. Shifts to be changed in rotation weekly.

Overtime: time and one half until 10 p.m. on other days and 5 p.m. on Saturdays; all other overtime and work on Sundays and holidays, double time.

Wages for journeymen wiremen: 95 cents per hour.

For work out of the city, fare and expenses will be paid by the employers and union members will receive the rate of wages paid in the district where they are working if it is higher than that provided in this agreement.

If any journeyman is responsible for doing any work in violation of the Canadian Electrical Code rules or in such a manner that it will not pass inspection, he shall do the work properly in his own time and at his own expense or pay for same being done.

One apprentice to be allowed to every four journeymen. Apprentices now in the trade are to be classified as soon as possible by a joint examining board upon determination of their length of service and qualifications, this board to be appointed by the local union and representative contractors. The first six months of apprenticeship to be probationary, after which they will become union members.

Wages for apprentices: first half of first year \$6 per week, second half \$9, first half of second year \$12 per week, second half \$16, first half of third year \$18 per week, second half \$20, first half of fourth year 60 cents per hour, second half 70 cents per hour.

VICTORIA, B.C.—GENERAL CONTRACTORS ASSOCIATION OF VICTORIA AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL No. 1598.

Agreement to be in effect from March 24, 1931, to April 30, 1932. Either party desiring any change will give 90 days' notice before April 30, 1932, after which date this agreement will remain in force until a new agreement is reached.

Hours: 8 per day from Monday to Friday inclusive, a 40-hour week; night shifts to be paid 8 hours' pay for 7½ hours' work.

Overtime: time and one half for first four hours, including Saturday mornings; all other overtime, including Sundays and holidays, double time.

Wages for journeymen carpenters: \$7.00 per day.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in March continued downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in February.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty-nine cities was again lower at \$9.14 at the beginning of March, as compared with \$9.44 for February; \$11.67 for March, 1930; \$11.23 for March, 1929; \$10.92 for March, 1928; \$11.05 for March, 1927; \$11.46 for March, 1926; \$10.74 for March, 1925; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for March, 1918; and \$7.68 for March, 1914. The most important declines occurred in the prices of beef, veal, mutton, pork, lard, fresh eggs, cheese, bread, flour, beans and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$19.47 at the beginning of March, as compared with \$19.78 for February; \$21.96 for March, 1930; \$21.52 for March, 1929; \$21.15 for March, 1928; \$21.29 for March, 1927; \$21.77 for March, 1926; \$21.00 for March, 1925; \$21.00 for March, 1924; \$21.42 for March, 1923; \$20.96 for March, 1922; \$23.87 for March, 1921; \$26.92 for July, 1920 (the peak);

\$20.00 for March, 1918; and \$14.35 for March, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower at 75.1 for March, as compared with 76 for February; 91.9 for March, 1930; 95.6 for March, 1929; 97.7 for March, 1928; 97.3 for March, 1927; and 101.3 for March, 1926. Ninety-six prices quotations were lower, fifty-eight were higher and three hundred and forty-eight were unchanged.

In the grouping according to chief component materials six of the eight main groups declined, while two were slightly higher. The groups which declined were: the Vegetables and Vegetable Products group, mainly because of lower prices for wheat, corn, cotton seed oil, cocoanut oil and potatoes, which more than offset higher prices for barley, rye, oatmeal and rolled oats; the Animals and their Products group, due to lower quotations for canned salmon, calves, hogs, lambs, eggs and leather; the Wood, Wood Products and Paper group, because of lower prices for certain lines of lumber; the Iron and its Products group, owing to lower prices for galvanized steel sheets and automobile body plates; the Non-Metallic Minerals and their Products group, because of reductions in the

(Continued on page 486)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

Table with columns: Commodities, Quantity, and prices for various years from 1910 to 1931. Rows include items like Beef, Butter, Flour, and various oils. Summary rows for 'All Foods', 'Starch, laundry', 'Fuel and light', 'Rent', and 'Totals' are also included.

AVERAGE COST OF STAPLE FOODS BY PROVINCES

Table showing average costs for staple foods by province: Nova Scotia, Prince Edward Island, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia. Each entry includes a price range and a central value.

†December only. \$Kind most sold. *For electric light and gas see text. ††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent. See text.

* Prior to 1926 number of commodities was 236.

(Continued from page 478)

prices of asbestos, crude oil, kerosene and gasoline; and the Chemicals and Allied Products group, due to lower prices for white lead, potassium iodide and bone meal. The Fibres, Textiles and Textile Products group was slightly higher, mainly because of higher quotations for raw silk and hessian. The Non-Ferrous Metals and their Products group was also somewhat higher, due to increased prices for copper sheets, copper wire bars, silver and tin.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former due mainly to lower prices for potatoes, eggs, lard, canned salmon, fresh and cured meats, kerosene and gasoline, and the latter due to lower quotations for pine, antimony, lead, zinc, calves, hogs, corn and wheat, which more than offset higher prices for barley, flax, rye, bran, steers, lambs, tin, silver and copper.

In the grouping according to origin lower prices for calves, hogs, eggs, wheat, antimony,

lead and zinc caused a decline in raw and partly manufactured goods. Fully and chiefly manufactured goods were also lower, because of declines in the prices of cured meats, leather, brass, lead pipe, kerosene and gasoline. Domestic farm products, articles of marine origin and articles of mineral origin were lower. Articles of forest origin were unchanged.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of

quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1918, quarterly from 1919 to 1929, and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5;

1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 74.4; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 66.7; 1929, 65.0. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1929, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices were again lower, sirloin steak being down from an average price of 31.2 cents per pound in February to 29.3 cents in March; round steak from 26.1 cents per pound in February to 24.8 cents in March; and shoulder roast from 18.5 cents per pound in February to 17.1 cents in March. Veal was down from an average price of 21.6 cents per pound in February to 20.8 cents in March. Mutton was also lower at 26.5 cents per pound in March, as compared with 27.2 cents in February. Pork prices averaged lower in most localities, fresh being down from an average of 25.2 cents per pound in February to 22.9 cents in March, and salt from 26.3

cents per pound in February to 24·7 cents in March. Breakfast bacon was also considerably lower at an average price of 38·7 cents per pound. Lard was down from an average price of 20·1 cents per pound in February to 18·4 cents in March.

Fresh eggs averaged 34 cents per dozen in March, as compared with 35·1 cents in February, 50·5 cents in January and 52·1 cents in March, 1930, while cooking eggs averaged 27·6 cents per dozen in March, 27·4 cents in February, 40·1 cents in January and 45·8 cents in March, 1930. Lower prices for milk were reported from Truro, Montreal, Prince Albert, Medicine Hat and Lethbridge. Butter showed little change, dairy at an average price of 33·3 cents per pound and creamery at 37·6 cents. Cheese was down from an average of 28·8 cents per pound in February to 28·2 cents in March.

Bread averaged 6·4 cents per pound in March, as compared with 6·5 cents in February and 7·8 cents in March, 1930. Lower prices were reported from Sherbrooke, Thetford Mines, Belleville, Woodstock, Cobalt, Sault Ste. Marie, Calgary, Fernie and Trail. Flour was slightly lower at an average price of 3·4 cents per pound, as compared with 3·5 cents in February and 5·1 cents in March, 1930. Beans averaged 6·5 cents per pound in March, 7·1 cents in February and 9·9 cents in March, 1930. Potatoes were again slightly lower, averaging \$1.16 per ninety pounds, as compared with \$1.24 in February and \$2.49 in March, 1930. Evaporated apples were down from an average of 19·3 cents per pound in February to 18·7 cents in March. Granulated sugar was unchanged at an average price of 6·2 cents per pound. Anthracite coal was practically unchanged, averaging \$16.24 per ton. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices, for the most part, averaged somewhat higher than in February, wheat being the exception. No. 1, Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 56·7 cents per bushel as compared with 59·3 cents in February. The somewhat lower prices were said to be due mainly to favourable wheat conditions in the winter wheat areas of the United States and

to the announcement by the United States Farm Board that it would not support the 1931 crop. In other grains western barley was up from 22·1 cents per bushel to 25·1 cents; flax from 96·9 cents per bushel to \$1.03; rye from 28·6 cents per bushel to 31·2 cents; and oats from 27·7 cents per bushel to 27·8 cents. American corn at Toronto was down from 79·3 cents per bushel to 73·3 cents. Flour at Toronto showed little change at an average price of \$5.27 per barrel. Rolled oats were up 10 cents per ninety pound bag to \$2.60. Raw sugar at New York was down from \$1.32 per hundred pounds to \$1.29. Granulated sugar at Montreal was unchanged at \$4.56 per hundred pounds. Ceylon rubber at New York was unchanged at 7·7 cents per pound. In livestock, good steers at Toronto advanced from an average price of \$6.56 per hundred pounds to \$6.74 but at Winnipeg the price declined from \$5.82 per hundred pounds to \$5.78. Veal calves at Toronto were down from \$9.60 per hundred pounds to \$8.98 and at Winnipeg from \$9.34 per hundred pounds to \$8.11. Bacon hogs at Toronto were also lower, the price being down from \$8.63 per hundred pounds to \$7.92 and at Winnipeg from \$7.47 per hundred pounds to \$6.91. Lambs at Toronto declined from \$9.21 per hundred pounds to \$8.85. The price of canned sockeye salmon at Montreal fell from \$19.19 per case to \$14.44. Creamery butter at Montreal averaged 34·3 cents per pound in March as compared with 34·9 cents, and at Toronto the average was 34 cents per pound as compared with 34·4 cents. Fresh eggs at Montreal were down from 33·9 cents per dozen in February to 29·9 cents in March and at Toronto from 32·6 cents per dozen to 26·8 cents. Raw cotton at New York was slightly lower at an average price of 10·9 cents per pound. The price of raw silk at New York declined from \$2.85 per pound in February to \$2.65. White pine lumber declined from \$90 per thousand board feet to \$85. White pine lath were down 50 cents per thousand to \$6. Automobile body plates declined from \$3.30 per hundred pounds to \$3.20 and galvanized steel sheets from \$3.90 per hundred pounds to \$3.85. In non-ferrous metals silver advanced from 26·7 cents per ounce in February to 29·2 cents; tin from 28½ cents per pound to 29½ cents; electrolytic copper from \$11.49 per hundred pounds to \$11.61; and copper wire bars from \$10 per hundred pounds to \$10.25. Gasoline and kerosene prices in Canadian cities ranged from ¼ to 2½ cents per gallon lower than in February.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and Other Countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 63·9 for February, a fall of 0·6 per cent for the month. Foods declined 1·3 per cent due to a fall of 5·2 per cent in meat and fish and of 0·2 per cent in cereals; on the other hand "other foods" advanced 1·5 per cent. Among non-foods, cotton advanced 4·1 per cent but all other non-food groups were lower than in January.

The *Economist* index number, on the base 1927=100, was 66·5 at the end of February, which is an advance of 0·3 per cent over the previous month. This is the first time an upward movement in this index number has occurred since July, 1929. Although cereals and meat and other foods continued to decline, advances were noted in textiles, minerals and miscellaneous commodities.

The *Statist* index number, on the base 1867-1877=100, was 85·5 at the end of February, which is a decline of 0·2 per cent for the month. This decline was due to a drop of 5·5 per cent in animal food and of 4·0 per cent in sugar, coffee and tea, while vegetable foods, minerals, textiles and sundries all advanced.

COST OF LIVING.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 150 at the end of February, a fall of 1·3 per cent for the month, due to a fall in food prices and in clothing. Among foods, declines were noted in the prices of eggs, bread and flour, butchers' meat and bacon, although butter was higher.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 115·2 for January, a decline of 2·2 per cent from December. Of the 18 groups included, 15 showed declines, the most notable being one of 10·1 per cent in rubber.

COST OF LIVING.—The official index number on the base 1913-1914=100, was 138·8 for February, a decline of 1·1 per cent for the month. Food, clothing and sundries were lower, while rent and heat and light showed no change from January.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce (gold basis) 1913=100, was 97·1 for January, a decline of 1·1 per cent for the month and of 19·5 per cent from January, 1930. With the exception of small increases in vegetable foods and textiles, all groups showed decreases for the month.

Australia

WHOLESALE PRICES.—The Melbourne index number of wholesale prices, on the base 1911=1000, was 1399 for December, as compared with 1437 for November. With the exception of a small increase in chemicals, all groups showed declines from November.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 75·5 for February, a fall of 1·9 per cent for the month. Every one of the ten groups were lower than in January, the principal decreases occurring in farm products and foods.

The *Annalist* index number, on the base 1913=100, was 109·3 for March, a decline of 1·7 per cent for the month. Except for the metals group where no change was shown, all groups were included in the decline.

Bradstreet's index number, which is the sum totals of the prices per pound of 96 articles of common consumption was \$9·2291 at April 1, an advance of 0·6 per cent over the March 1 level. This is the first increase after a decline lasting for seventeen consecutive months. Increases were shown in provisions, hides and leather, livestock, fruits and textiles, while all other groups declined.

Dun's index number which is based on the estimated *per capita* consumption of each of the many articles included in the compilation was \$152·525 at April 1, a decrease of 0·7 per cent for the month. With the exception of an advance in metals, all groups were lower, although the difference was very little in all groups.

COST OF LIVING.—The index number of the Department of Labour and Industries of Massachusetts, on the base 1913=100, was 143·9 for February, which is about 3 per cent lower than the January figure. All groups showed declines, the index number for food being the lowest recorded since October, 1916.

(a) Average for year. (b) Revised month. (c) 15th of month. (d) End of month. (e) Figure for previous month. (f) Figure for following month. (g) Quarter beginning in specified month. (h) New Series. (i) Sum totals of the prices per pound of 96 articles of common consumption. (j) Estimated cost per capita of a year's supply of commodities in wholesale markets. (l) Until end of 1926 "Cosplan". (m) Until end of 1927 "Dr. Lorenz".

WAGES OF EMPLOYEES ON FARMS IN CANADA, 1920-1930

THE Dominion Bureau of Statistics secures each year from its agricultural correspondents throughout Canada information as to the wages of employees on farms in Canada during the year just ended. The figures so secured are published in the *Monthly Bulletin of Agricultural Statistics* for the February of the following year. Tables of these

figures have appeared in the reports on Wages and Hours of Labour in Canada issued as supplements to the *LABOUR GAZETTE* for January, 1925 to 1931, inclusive, the first of these giving figures back to 1914. The accompanying table includes figures taken from the issue of the *Bulletin* for February, 1931, and from previous issues.

WAGES IN AGRICULTURE, 1920-1930

AVERAGE WAGES OF FARM HELP IN CANADA AS ESTIMATED BY CROP CORRESPONDENTS OF THE DOMINION BUREAU OF STATISTICS*

*Compiled from the Monthly Bulletin of Agricultural Statistics, February, 1931, and from the Canada Year Book figures since 1926 weighted according to population in each district.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Employer not Liable for Actions of Employee Outside his Duties

The manager of a dredge company required the temporary use of a derrick for the purpose of pile-driving. He obtained from another company the use of a dismantled derrick, with the services of an employee of the latter company to operate it. Five guy-cables were required for the derrick, the owner supplying four of these, the fifth cable being obtained from a junk pile, and not belonging to the owner. When a test of the efficiency of the derrick was being made this fifth cable broke, and the derrick fell to the ground, the mast striking and killing the manager. His widow brought an action against the company owning the derrick, under the Fatal Accidents Act, to recover damages. The trial judge gave a verdict for the plaintiff, which, however, was reversed on appeal by the defendant company in the Ontario Supreme Court.

The Supreme Court found that the employee of the defendant company was guilty of negligence in using a defective cable as a guy for the mast, but on the other hand the question rose whether the defendant company was liable for this negligence. The answer, it was pointed out, depended upon the terms of the agreement between the two parties for the use of the derrick. The Court stated that even if the employee took full charge and control of the work, that would not be evidence that the defendant company had agreed with the deceased manager that the employee, was, with respect to the erection of the derrick, to be its servant, and to have complete control. The onus was upon the plaintiff to prove that such was the position of the employee; and it appeared to the Court that there was no evidence to establish that contention. An English decision on this point was cited, in which Lord Justice Bowen said: "We have only to consider in whose employment the man was at the time when the acts complained of were done, in this sense, that by the employer is meant the person who has a right at the moment to control the doing of the act."

The Supreme Court found that the plaintiff had failed to show that the agreement entered into between the deceased and the defendant company was to the effect that in the performance of the work of erecting the derrick the employee of the latter company was to superintend it and be subject

to the company's orders in so doing; and that therefore the company was not liable for the employee's negligence.

Muir versus Sarnia Bridge Company, Ontario, 1931, *Dominion Law Reports*, vol. page 742.

Employer is Responsible for Unauthorized Actions of Worker while on Duty

A young girl received serious injury, resulting in permanent disablement, when she was struck by an automobile as she was crossing a street to enter the school yard. The car was driven by the employee of a firm while he was engaged in the firm's business, but it was owned by a third party. In an action for damages brought in the Ontario Supreme Court by the father of the child and the child herself against the owner of the car and the employer, the claim was dismissed as against the owner, who, it was found, had not given his express consent to the use of his car on this occasion. On the question of the employer's liability, it was held that although in this case the employer had not sent the employee on the errand on which he was engaged when the accident occurred, yet, in the words of a decision of Lord Macnaghten in 1912, "there is no doubt that the master is answerable for every wrong of the servant 'committed in the course of the service and for the master's benefit, though no express command or privity of the master be proved.'"

Mr. Justice Raney, in his judgment, cited a decision of the Supreme Court of Canada in the case *Hudson Bay Company versus Vaillancourt* (1923) where Mr. Justice Duff said: "If the thing done belongs to the kind of work which the servant is employed to perform, or the class of things falling within 'l'execution des fonctions,' then by the plain words of the text, responsibility rests upon the employer. Whether that is so or not in a particular case must, I think, always be, in substance, a question of fact. . . ."

"The last mentioned case", the judgment continued "is indeed the most recent illustration in our own Courts of the doctrine of *respondet superior*. It arose under Article 1054 of the Civil Code of Quebec, which provides that:—'Masters and employers are responsible for the damage caused by their servant and workmen in the performance of the work for which they are employed.' The facts were that the appellant company, known as the Hudson Bay Co., maintained a trading post in the far northern part of the Province

of Quebec. The post was in charge of one Wilson as manager, with two other employees of the company under his control, Vaillancourt as general helper, and his mother as housekeeper, all three living together. One morning Wilson came out of his room, half-naked and drunk, to inquire about some noise he had heard in the upper part of the building. Vaillancourt coming down saw Wilson, and knowing his mother was near asked him to go back to his room and get dressed. A few minutes later, Vaillancourt being in the kitchen, Wilson went there and shot him, injuring his leg so severely that it had to be amputated. It was held (Duff and Anglin, J. J., dissenting) that the company was liable under the article of the Civil Code above quoted, as the damages were caused by Wilson, 'in the performance of the work for which (he) was employed.'

"This case goes, it seems to me, a good deal farther than the Court is asked to go in the present case."

Judgment was given for the child for \$10,000 and for the father for \$5,000, against the driver and his employer with costs.

Boyd versus Smith (Ontario), 1931, *Dominion Law Reports*, vol. 1, page 729.

Employer is not Responsible for Doctor's Mistaken Diagnosis

A lumber company in Alberta had a contract with a doctor to furnish medical and surgical attendance to their workers. Payment for medical services was provided by the deduction of \$1.50 a month from the pay of each worker, and the doctor was to be responsible for the attendance of a properly qualified physician at the lumber camp during the winter months. In December, 1927, a workman (the plaintiff in this case) arrived in the camp, and shortly afterwards the Provincial Medical Officer placed the camp under quarantine for smallpox. The plaintiff developed symptoms which were diagnosed by the attending physician as influenza, these symptoms including a "scum" in the eye, which finally caused an impairment of his sight. Later he brought an action for damages against the company, alleging that the loss of the sight and vision of his eye was due to the company's negligence. The trial judge found that the injury was a result of smallpox contracted at the camp; that the contracting doctor was negligent in not diagnosing the disease prevalent in the camp as smallpox, and that the company "having sent the plaintiff to this camp infested with the disease, unfortunately for them I think, they are in law responsible for the result. The

result was that he contracted the disease and that one of these scabs that finally formed in the course of the disease formed on the corner of his eye and formed a scar which permanently impaired his eyesight."

On appeal by the defendant company the Alberta Supreme Court, Appellate Division, reversed the judgment of the lower court, holding that where a company, not bound to do so, arranges for a doctor to attend to its employees, making a small deduction from their wages for this purpose, the doctor is an independent contractor, and if a junior engaged by him, who is qualified and competent, makes an error in diagnosing a difficult case, as a result whereof the patient suffers consequential disability which might have been avoided by correct diagnosis, no liability attaches to the company. The judgment found further that a statutory duty to notify Health Authorities on certain diseases is discharged on calling in a qualified doctor and would not arise if the doctor diagnosed the case as not coming within the statute.

The action was therefore dismissed with costs.

Hamilton versus Phoenix Lumber Company (Alberta) 1931, *Dominion Law Reports*, vol. 1, page 777.

Mechanics' Lien is Subject to Performance of Contract

A building contractor in Manitoba undertook to erect a building, the contract to be performed "in a substantial and workmanlike manner, and to the full satisfaction of the owner." When the work was in progress the owner complained that parts of the work were defective and did not comply with specifications, and he declined to make further payments until this work was properly done. The contractor filed a mechanics' lien, and brought action for the amount due for portion of the contract. The County Court Judge found that there had been a substantial and serious violation of the contract and ordered the cost of the repairs made by the owner to be credited on the contract. On appeal by the plaintiff the Manitoba Court of Appeal gave judgment to the effect that where the agreement is for work to be done on a building "in a substantial and workmanlike manner to the full satisfaction of the owner," final payment to be withheld until completion, there is an entire contract, and if the contractor materially fails to complete the contract, he has no right to payment for the work actually done as for *quantum meruit* unless the contract has been superseded by a subsequent

different agreement. The situation is not changed by the owner entering into possession of the building.

The Pas Construction Company versus Olensky (Manitoba), 1931, *Dominion Law Reports*, vol. 1, page 843.

Picketing does not Necessarily Imply Disorderly Conduct

The proprietor of a moving picture theatre at Hamilton, Ontario, employed two non-union projectionists, and the local union of the International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada asked him to replace these men with union operators. When the proprietor refused to do so the union picketed the theatre, four men walking up and down the street in front of it, wearing raincoats bearing notices stating: "This theatre does not employ union projectionists." Charges of "watching and besetting" the theatre were then laid against the four men, and the magistrate found that they had been guilty of disorderly conduct and imposed fines of \$10 in each case. These convictions were afterwards quashed by Mr. Justice Rose. "The besetting is admitted," His Lordship said; "the conduct of the raincoat wearers was 'peaceable.' There was no disturbance, no one was seen to be accosted, no crowd gathered, there was no evidence of threats or obstruction against prospective patrons. The charges that the theatre was trying to destroy union working conditions and did not employ union projectionists, are not, in my opinion, *prima facie* libellous, without proof that the union conditions are conditions which ought to prevail so that there is something disgraceful in attempting to destroy them."

Union Enjoined from Unlawfully Picketing another Union

An unusual case was heard by the New York Court of Appeals in January, 1931, when an injunction was made restraining the members of one union from picketing at the places of employment of the members of another union. The Court stated the facts of the case as follows:—

"The controversy is one between rival labour unions competing for supremacy. The trade represented by the two unions is that of bakers and confectioners. The plaintiff association is a local union of the Amalgamated Food Workers; the defendant association, which is affiliated with the American Federation of Labour, is a local union of the Bakery and Confectionery Workers' International Union of America. Each union is accustomed to make contracts with employers

in the trade whereby the employers so contracting agree to employ the members of the chosen union to the exclusion of all others. The contracts are not for a fixed period, but are terminable at will. They prescribe the conditions of service for the workers, and in particular the wages. The schedule of wages fixed by the Amalgamated is considerably lower than that fixed by the International. The International, however, has established what is described as the 'substitute system' for the benefit of its members. According to this system, known also as the 'stagger system' a member employed by the week must give up part of his time to a member out of a job when the supply of union labour is in excess of the demand. The result is to shorten the week for some members, but to make it impossible for others to be idle altogether. The substitution is one to which a proprietor contracting with the union is required to submit. The Amalgamated, on the other hand, has refused to apply this system to the shops subject to its control. Its members, if employed at all, work more days in the week, but at a lower wage by the day. Their weekly earnings are sometimes higher and sometimes lower than the earnings of their rivals.

"For some years the two unions worked in harmony, each acting within its own sphere of influence, and not encroaching on the other. Gradually, however, the Amalgamated began to draw away employers who had given allegiance to the International. There was attraction in the lower wages and in escape from the inconvenience and perhaps the loss of efficiency occasioned at time by the employment of substitutes. Trouble soon developed.

"The International, menaced by defections, made demand on the Amalgamated that it merge or surrender. A blunt refusal followed. Upon this the International threatened to drive the Amalgamated out of existence. Members of the International spoke from wagons at the street corner, and others bearing signs paraded up and down the street. They denounced the Amalgamated as a "fake" union, a union made up of "scabs," asserted that theirs was the only regular or genuine union, and told passers-by that a strike was going on and that by encouraging their rival they would be giving aid and comfort to the bosses. On January 12, 1928, the Amalgamated began the present action to enjoin the International from destroying its existence by violent or illegal acts. . .

"The plaintiff, if threatened in its business life by the violence of the defendant or by other wrongful acts, may have the aid of the court to preserve itself from disruption through

recourse to these unlawful means. The remedy is not lost because the controversy is one between the members of rival unions, and not, as happens oftener, between unions and employers. On the other hand, the legality of the defendant's conduct is not affected by the fact that no strike is in progress in any of the plaintiff's shops. If the defendant believes in good faith that the policy pursued by the plaintiff and by the shops united with the plaintiff is hostile to the interests of organized labour, and is likely, if not suppressed, to lower the standards of living for workers in the trade, it has the privilege by the pressure of notoriety and persuasion to bring its own policy to triumph.

"Where unlawful picketing has been continued; where violence and intimidation have been used and where misstatements as to the employers' business have been distributed a broad injunction prohibiting all picketing may

be granted. The course of conduct of the strikers is then such as to indicate the danger of injury to property if any picketing whatever is allowed. . .

"A genuine controversy exists between two competing groups as to the effectiveness and sincerity of the methods of one of them. By concession the form of a union has been adopted by each of the two bodies. Whether the spirit also is there, the spirit, that is to say, for which unions are created, is a question not susceptible of answer without heed being given to many imponderable elements. The plaintiff does not prevail by showing that the defendant's criticism is wrong, though even this it fails to do. What is wrong must be so clearly wrong that only 'disinterested malevolence' or something close akin thereto, can have supplied the motive power. If less than this appears, a court of equity will stand aside."

MAY, 1931

[NUMBER 5

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada showed a slight decline at the beginning of April, according to returns tabulated by the Dominion Bureau of Statistics from 7,507 employers of labour, each with a minimum of 15 employees, representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 899,823 persons, as compared with 902,833 in the preceding month. The employment index declined from 100.2 on March 1 to 99.7 at the beginning of April, as compared with 107.8, 110.4, 102.3, 97.4, 92.5, 88.3, 90.4, 88.7, 81.8 and 85.1 on April 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The average number of workers employed in 1926 by the reporting firms forms the base, equal to 100, upon which these index numbers are computed.

At the beginning of April, 1931, the percentage of idleness reported to the Department of Labour by local trade unions in Canada stood at 15.5 as compared with percentages of 15.6 at the beginning of March, 1931, and 10.8 at the beginning of April, 1930. The April percentage was based on the reports received by the Department of Labour from a total of 1,825 labour organizations, representing 208,387 members.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a decrease in the volume of business transacted by those Offices during March, compared with the business of the preceding month, but a marked increase over that of the corresponding month a year ago. Vacancies in March, 1931, numbered 46,295, applications 68,034 and placements in regular and casual employment 44,884.

The average cost of a weekly family budget of twenty-nine staple foods was \$8.86 at the beginning of April, as compared with \$9.14 for March; \$11.24 for April, 1930; \$11.01 for April, 1929; \$10.87 for April, 1928; \$10.80 for April, 1927; \$11.36 for April, 1926; \$10.56 for April, 1925; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$15.99 for April, 1920; \$16.92 for

June, 1920 (the peak); \$12.57 for April, 1918; and \$7.51 for April, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 74.5 for April, as compared with 75.1 for March; 90.7 for April, 1930; 94.1 for April, 1929; 98.3 for April, 1928; 97.3 for April, 1927; and 101.2 for April, 1926.

The loss in working time caused by industrial disputes in Canada during April was slightly less than in the preceding month, but was greater than the corresponding loss in April last year. Ten disputes were in progress at some time during the month, involving 1,582 workers and resulting in the loss of 22,453 working days. Corresponding figures for March, 1931, were:—four disputes, 1,815 workers, and 25,969 working days; and for April, 1930, eleven disputes, 386 workers, and 3,616 working days.

Industrial Disputes Investigation Act

During the past month the Department received the report of the Board of Conciliation and Investigation appointed in connection with the dispute between the Dominion Atlantic Railway and its clerks, freight handlers, express and station employees. This report together with particulars of recent proceedings under the Act will be found on page 516.

Minimum Wages for boys in Manitoba

The Manitoba Legislature at the recent session amended the Minimum Wage Act by including within its scope male employees under 18 years of age. The amending bill was first introduced by Mr. S. J. Farmer (Winnipeg) at the session of 1927, when it met with general opposition, but it was considered with increasing favour at subsequent sessions and has now at last become law. While similar proposals have been made in other provinces, Manitoba is the first province in Canada to protect the wages of boys by means of the minimum wage legislation enacted primarily for the benefit of female employees. British

Columbia has a separate Male Minimum Wage Act, providing for the establishment of a board with authority to fix a minimum wage for various occupations; while in Alberta the Factories Act provides that "wherever (i.e., in establishments coming under that Act) a minimum wage has been fixed for female workers in any class of employment, no male worker shall be employed in such class of employment at a less wage." Under the new legislation in Manitoba boys in all the numerous occupations covered by existing women's minimum wage orders will be protected.

An outline of the legislation enacted at the recent session will be given in a future issue.

Dominion public works in relation to unemployment

In the House of Commons on April 30, Mr. A. A. Heaps asked the Minister of Public Works, in connection with the large reductions in the estimates for public works in Canada during the coming year, "whether the Government has in contemplation a program of public works which will in some way take care of those who are unemployed at the present time." Mr. Stewart in his reply pointed out that it was impossible, in preparing the estimates of the Public Works Department, to foresee in what locality unemployment will be acute, "and for that reason it is better, perhaps, to arrange for provision of funds to relieve unemployment where the funds are more fluid, where they can be expended to meet requirements as they develop. Unfortunately the consideration of public works by the Public Works Department is rigidly limited to the particular estimate for a particular place; and, unfortunately also, it does not afford that measure of relief to a large number of unemployed that can be afforded by other works undertaken locally according to the emergency as the municipality and the province approve, and in the prosecution of which they unite, thus very much increasing in this way the amount of money expended. As my hon. friend knows, the expenditure of the appropriation of twenty million dollars on the basis on which it was made last year resulted in a very much larger expenditure than that amount; whereas if we expend the money it is, as I have said, rigidly limited to the amount of the particular estimate and does not afford the relief which is sometimes so badly needed. However, my hon. friend's suggestion is very well worthy of consideration, and it will be carefully considered."

Suggestions for unemployment insurance for farm workers

In the recent proceedings before the British Royal Commission on Unemployment Insurance, to which reference is made on another page of this issue, evidence was presented concerning the possibility of extending unemployment insurance to agricultural workers. The chief witnesses on this subject were the Principal Assistant Secretaries of the Ministry of Agriculture and the Ministry of Labour, and the Superintendent of Agricultural Statistics for Scotland. A joint memorandum prepared by these officials stated that no statistics existed as to the extent of unemployment among agricultural workers, but till recently it had usually been assumed that unemployment among regular farm hands was rare, and that such unemployment as occurred was among the casual or seasonal workers. The absence of any scheme of unemployment insurance it was considered, had probably had the effect of making farmers reluctant to stand men off, and there was a risk that the inclusion of agricultural workers within the insurance scheme would have the effect of increasing the volume of unemployment among members of regular farm staffs. This risk made highly conjectural any estimate of the probable rate of unemployment likely to be experienced if agriculture was covered by an unemployment insurance scheme. The memorandum further stated as follows:—

"Until the machinery which would be set up as part of any scheme is brought into existence, it is impossible to obtain reliable statistics. It would, therefore, be advisable that at the outset any scheme should be entirely provisional and subject to review after experience has been gained, and that in framing a provisional scheme an ample margin should be provided. . . . The setting up of an entirely separate scheme for agriculture would be contrary to the policy underlying the existing unemployment insurance scheme. On the other hand, it appears to be impracticable to bring agriculture within the general scheme at the rates of contribution and benefit applying under that scheme, having regard to the lower standard of wages still almost universal in the agricultural industry (notwithstanding the operation of statutory minimum rates) and also to the low incidence of unemployment among regular workers in the industry. But, provided that the proportion of the total contributions furnished by the State and the principal conditions as to qualifications for benefit were the same as in the main scheme, it would be

practicable to have special rates of contribution and benefit. . . .

"On the basis of 5 per cent unemployment which is the least that could prudently be assumed, a total weekly contribution (for men) of 10½ pence would give a weekly benefit rate for men of 12 shillings with 6 shillings for an adult dependant and 2s. for each young dependent child, with corresponding rates for women, boys, and girls."

**Parliament
discusses
national health
system**

The House of Commons on April 27, discussed the subject of the functions and responsibilities of the state in regard to public health.

The debate arose out of a motion by Dr. J. P. Howden (St. Boniface) "that in the opinion of this House, a measure of federal state medicine would be in the best interests of the Canadian people." Mr. Howden advocated the adoption of a scheme of national health insurance namely on two main grounds: first, that the so-called middle classes, forming the majority of the population, do not care to avail themselves of the free hospital treatment which is provided for those in poor circumstances, being at the same time unable to pay for the cost of medical aid; and second, that a great proportion of existing sickness is preventible by periodical examination. At the present time, he stated, medical men throughout Canada were voluntarily giving treatment without payment, with the assistance in many cases of various boards of health which supply the costly sera, vaccines, and other material.

The Prime Minister, while expressing sympathy with the object of the motion, pointed out that to establish a system of federal state medicine would "change the whole theory upon which thus far in this country the medical profession has conducted its business." He said that grave differences of opinion existed throughout Canada on the subject of nationalization, and that whatever is done in this country must be the result of a gradual understanding of what would be involved in such a course. "I would suggest," Mr. Bennett continued "that we do not undertake to make a declaration of such far-reaching consequences without realizing fully what we are doing in the light of all the knowledge that can be secured.... It must be realized that we have two jurisdictions dealing with the same problem, the health of the people of the country. The municipality maintains its clinics in the schools for the purpose of ensuring that the teeth and tonsils of the youth of the country are so tested as to prevent the toxic conditions so often pro-

duced and having disastrous effects in later life. Then we have the civic hospitals maintained by the taxes paid by the people; we have the provincial boards of health, and the courts have held that the provinces may maintain such boards of health and upon the province alone rests that jurisdiction. We have a federal parliament with power to appropriate to any purpose it may desire the moneys which it collects, and it has given liberal grants in aid of medical education in the large sense of the term, and to assist in the discharge of very onerous responsibilities, to that extent lessening the obligations of the municipalities and provinces.... We are not at the present moment prepared to discuss completely the subject matter of the resolution and as the question will become more and more a subject for discussion I trust that every hon. member will in the meantime endeavour to make himself familiar with the points involved in the enactment of any legislation based upon a motion such as that which the hon. member has introduced."

A vote being taken on the motion it was rejected by 41 for, to 70 against, its adoption.

**Dominion
Government
Employees'
Compensation
Act**

The House of Commons, on April 23, agreed to a resolution proposed by the Hon. R. J. Manion, Minister of Railways and Canals, which declared that "it is expedient to amend the Government Employees Compensation Act to extend the benefits of the act to all employees in the service of His Majesty excepting those for whom provision is made under other statutes, and to extend the interpretation of the term 'compensation' to include any benefits, expenses or allowances that are provided for under provincial compensation acts." A government bill on these lines was subsequently adopted by the House of Commons and referred to the Senate. A similar bill was introduced in the House last year, but was not proceeded with; both it and this year's bill were drawn up after consultation with provincial representatives.

Dr. Manion explained that "at the present time in the various provinces the law varies. For instance postal employees are covered in the provinces of Quebec, Alberta, Saskatchewan and British Columbia only; customs officers are covered in Ontario, Manitoba and British Columbia only; lighthouse keepers and employees on boats carrying supplies to lighthouses or attending to aids to navigation are covered in Nova Scotia only. Some of the provincial compensation acts do not apply to government employees in the various depart-

ments; they may cover those engaged in some industry but the courts rule that the government service is not an industry. The purpose of the bill to be introduced, based on the resolution, is to bring all employees of the government under the various provincial compensation acts. It is expected that this will cost the government an additional \$70,000."

On another page of this issue will be found an outline of the report of the Department of Railways and Canals on the administration of this Act during the financial year ending March 31, 1930.

Ontario Workmen's Compensation Commission

The appointment by the Ontario government of Mr. Justice Middleton as a commissioner to inquire into the subject of Workmen's compensation in the province, and to make recommendations as to the advisability of amending the present Act, was noted in the *LABOUR GAZETTE*, February, 1931, page 122. The inquiry concluded early in April, the commissioner having heard expressions of opinion from representatives of organized labour and of employers. It is hoped that Judge Middleton's report will be made in time for the opening of the next session of the legislature.

The chief requests made by the organized labour were for an increase in the scale of compensation to 66½ per cent to 75 per cent of average wages; an increase in the wage base from \$2,000 to \$2,500; and an increase in the minimum weekly benefits from \$12.50 to \$15. It was proposed that all of these increases should be made retroactive in the sense that all pensioners now on the books should be paid in future on the increased scale. It was also proposed that an injured workman should, on restoration to health, continue to seek compensation until he resumes his former occupation or secures other suitable employment; and that the list of "industrial diseases" should be indefinitely extended.

The opinions of the employers in the province were presented by a joint committee representing the Canadian Manufacturers' Association, the Industrial Accident Prevention Associations, the Ontario Mining Association, and the Pulp and Paper Safety Association. This committee opposed the proposal for an increase in the scale of benefits as likely to place "an intolerable burden" on industry. They also advanced reasons against the continuation of compensation payments after a workman's recovery from industrial injury; and against the classification of ordinary sicknesses as "industrial diseases" where these have been contracted by a worker while in employment. The employers further suggest-

ed the following amendments to the Workmen's Compensation Act:—(1) That the "waiting period" should be changed from a seven-day "conditional"—to a three-day "absolute" waiting period, i.e. that there should be no compensation for the first three days in any event; (2) That there should be a separate rate for office and wholesale department staffs not exposed to the factory hazard; (3) That the board should be given power to reduce the rate of assessment on an employer with a consistently good accident record.

At the annual meeting of the Alberta Branch of the Canadian Manufacturers' Association, the Hon. J. E. Brownlee, premier of the province, stated that his government would carefully consider the report of Mr. Justice Middleton, the commissioner on Workmen's Compensation in Ontario, and that it was possible that, in the light of that report, action might be taken at a later date in regard to amending the Alberta Act.

Progress of unemployment insurance in United States

The *Survey* (New York) in its issue of April 15, describes the progress recently made in unemployment insurance legislation in the United States. Bills have been introduced this year in several State legislatures, and whether or not they are enacted, their introduction in the writer's opinion, will have served a useful purpose. A bill drafted by the American Association for Labour Legislation has been widely used in framing the unemployment insurance measures introduced the past winter. The Association's draft, entitled An Unemployment Reserve Act, would require each employer to pay a fixed percentage of his payroll into a mutual unemployment reserve fund, out of which workers, laid off for lack of work, would receive a limited proportion of their wages for a limited period of time. Under this plan the employees would not contribute directly to the fund.

In Wisconsin, two bills have been introduced: both put the full burden for an unemployment reserve on employers, and both provide for a state fund in which contributions are deposited. One bill provides that employers' contributions should be pooled in funds by industries; that the rates of contributions should be fixed on insurance principles, varying from industry to industry; and that individual employers should have a special "experience rating" on the basis of the unemployment records of their own plants. The second bill provides that the contributions of each employer are to be kept in a separate "employer's account" to be used only to pay

benefits to his own workers and never to be merged with any other employer's account; that the rate of contribution is set at 3½ per cent of the payroll; and that if an employer's account reaches an amount equal to \$80 for each employee he may cease all contributions so long as his account remains above this figure. The latter bill is said to resemble the plan followed by the Dennison Manufacturing Company (LABOUR GAZETTE, April, 1931, page 423), and also the "Rochester Plan" (LABOUR GAZETTE, March, 1931, page 295).

A bill introduced in Ohio calls for a contribution of 1½ per cent of his wages by the employee, and from 1½ to 3 per cent of his payroll by the employer, according to the prevalence of unemployment in his own plant.

In Connecticut, an unemployment insurance bill was killed in committee, but a measure providing for an investigating commission is still pending. Bills have also been introduced in Maryland and in Michigan, where they were killed in committee, and in Missouri and Pennsylvania, where at this writing no action on them has been taken.

Several measures dealing with unemployment insurance have been introduced into the New York legislature. Organized labour in New York sponsors a bill providing for a commission to study the whole question of unemployment insurance and its application to American conditions. The Governor recommends the creation of a small commission of experts appointed by the Governor, with two or three members appointed by and from the legislature, to report to the 1932 legislature "a plan for accomplishing some kind of scientific unemployment insurance."

Old age pensions in United States

Old Age Pension Acts were adopted early this year in the States of Delaware and Idaho. Both laws are state-wide and compulsory; in

both, the pensions are not to exceed \$25 monthly and will be paid to needy persons 65 years of age and over who have been citizens of the United States for 15 years. The Idaho law requires ten years residence in the state, provides for the payment of pensions from county funds, and puts administrative authority in the hands of the county commissioners. The Delaware law requires five years residence in the state, and in this respect it is the most liberal of any of the fourteen state laws now in existence. It is also the first of the American old age pension laws to provide that the entire cost shall be borne by the state.

The other states having pension systems are as follows:—California, Colorado, Ken-

tucky, Maryland, Montana, Nevada, Wisconsin, Wyoming, Minnesota, Utah, New York and Indiana. (LABOUR GAZETTE, March, 1930, page 255; December 1930 page 1,385; March 31, page 295).

Development of United States Employment Service

The Hon. William N. Doak, United States Secretary of Labour, announced on April 19 the Employment Service policy that is favoured by the government as an alter-

native to Senator Wagner's bill which was recently vetoed by President Hoover (LABOUR GAZETTE, April, page 389). "The United States Employment Service," he said, "has decided to open at least one employment bureau in each of the States and the District of Columbia to co-operate with State and local authorities. There will be a co-ordinated service throughout the entire country, making available its good offices to all those seeking employment in co-operation with free State and local offices. It likewise will co-operate in the broadest sense to take care of interstate labour placements in co-operation with employers and employees." One difference between Mr. Doak's system and the Wagner plan appeared to be that no money will be advanced to the State to aid them in their work, and the plan now must be carried out with considerably lower expenditures than the Senator had planned. Secretary Doak said that the new program involves expansion of all existing facilities of the service and co-operation between all of the State bureaus and the central office in Washington. In addition to the branch bureaus, seven special sections are provided to deal exclusively with the employment problems in as many distinct trades. Each section will be under the direction of a co-ordinating superintendent.

Plan for improving conditions of domestic service

An inquiry as to the causes of the unpopularity of domestic service was made recently by the Standing Joint Committee of Industrial Women's Organizations (Great Britain), and proposals for drawing up a "domestic workers' charter" are to be submitted to the National Conference of Labour Women in June. The replies received by the committee to a questionnaire sent out to a large number of domestic workers showed that, in order of importance, the length of working hours is the greatest grievance of these workers. Next on the list comes "lack of freedom" and then dislike of the "status" and "loneliness" of the domestic servant. There were few complaints of

low wages, and fewer still of "living in." A small number of replies referred to poor food and bad accommodation, and some replies (representing a considerable number of persons) gave non-insurability against unemployment as the chief objection to domestic service. The committee says:—"It is certain that if this work of caring for the house is to be an acceptable form of employment, the points enumerated above, in the order given, must be specially provided against."

The committee's proposals include special courses of training after leaving school; special departments of the Employment Exchanges, and abolition of confidential references; a standard of working hours, allowing reasonable elasticity; two weeks' holidays with pay each year; provision of a single bedroom; uniforms should not carry any badge of servility; clubs and social centres in connection with the Employment Exchanges; minimum scales of wages; experiments should be made in hostels for domestic workers, to be used as centres from which workers could be sent out to work by the hour; insurance against unemployment; organization in trade unions; and the formation of district and national joint councils of employers and domestic workers.

Economic work of National Research Council

An account of the work carried on by the National Research Council during the fiscal year ended March 31, 1931, is given in its 13th annual report. With the approaching completion of the new National Research Laboratories at Ottawa the Council is now entering upon a new phase of its activities, and is looking forward to a period of rapid expansion in scientific and industrial research. "Established in December, 1916, by the Dominion Government, the Honorary Advisory Council for Scientific and Industrial Research, as it was then called, found itself greatly handicapped during the early years by the lack of laboratory facilities. The only research laboratories of any consequence existing in Canada at that time were those of the universities, where many valuable researches were even then under way, but where the work was often seriously limited by lack of funds. This deficiency the National Research Council undertook to remedy, in especially urgent cases, by the provision of special equipment of much-needed technical assistance. The serious shortage of scientifically trained men which the country was then experiencing led to the establishment of post-graduate research scholarships in the universities. Advisory com-

mittees were also created in some of the more important branches of science and technology, in order that the Council might have the benefit of the advice of specialists in extending its various activities. Since 1924 the work of the National Research Council has expanded considerably through the establishment of a number of research committees to undertake investigations on major problems, some of them of national importance. Amongst these may be mentioned black stem rust of wheat, tuberculosis in man and animals, wool growing and manufacture, house insulation, and the utilization of Canadian deposits of dolomitic magnesite. Arrangements were made for co-operative researches in the laboratories of federal and provincial government departments and the universities."

A system of post-graduate scholarships for outstanding university graduates has been established for the purpose of meeting the existing "serious shortage" of men qualified to undertake independent research in connection with important scientific industrial problems. Four classes of scholarships are awarded under this system—bursaries, studentships, fellowships and travelling fellowships, of an annual value of \$750, \$1,000, \$1,200, and \$1,500 each, respectively. The minimum qualification for a bursary is graduation with distinction from a Canadian university of recognized standing. A few bursaries are reserved annually for the most brilliant men in the graduating classes, but the number of applicants for these scholarships has so increased in recent years that most of the awards are now made to men who have already had one year of postgraduate work. A second bursary is not ordinarily given to one individual. A person who has held a bursary, and who has demonstrated his capacity for original research, may apply for a studentship. A second studentship may be awarded to an individual who has done highly satisfactory work. Fellowships are awarded to only a few outstanding persons each year.

Death of a Canadian labour pioneer

The Canadian labour movement sustained the loss of its oldest member in the death of J. W. Carter of Toronto, on April 28. Mr. Carter was in his ninety-second year and was among the few surviving men who took part in the Canadian Labour Movement of the 'seventies and after. He was born in England, and in his early days in Toronto was a member of the painters' union which he represented in the Toronto Trades Assembly, the forerunner of the Toronto District Labour Council. As Presi-

dent of the Toronto Trades Assembly, Mr. Carter was active in promoting the organization of a central labour organization in Canada, and when the Canadian Labour Union was formed in 1873 he was made President. The following extracts are taken from the address of welcome given by Mr. Carter in 1872 to the delegates to the Canadian Labour Union from which organization the Trades and Labour Congress was developed in the 'eighties:

"You meet to-day to inaugurate one of the grandest events in connection with the labour movement that has ever taken place in the Dominion of Canada. Its significance may be gathered from the fact that in all the centres of industries in the provinces of Ontario and Quebec the working classes have determined to centralize their energies to promote the adoption of those laws and regulations which must be established for the good and protection of the labourer. The time has come when questions affecting the interests of labour must be taken hold of, and by the workmen dealt with in a prompt and systematic manner, when the many problems touching the moral and social position of the masses must be solved. . . .

"The future greatness of this country depends, to a very large extent, upon the identity of relationship between capital and labour, and I think I speak your sentiments and feelings when I say that you do not meet with a view of infusing a spirit of discontent and dissatisfaction; you do not meet to create hostilities between capital and labour, but you do meet for the purpose of disseminating the true principles of unionism, to foster a spirit of common brotherhood throughout the Dominion, to seek the promotion of those laws which shall make no distinction between man and man. To this end, and with these objects you are called upon, in the first place, to establish a Canadian labour union. Its necessity is beyond doubt. . . .

"It occurs to me that we are planting a standard this day, the influence of which will be felt by the workmen all their lives, and the mottoes inscribed on this unfurled banner should be an incentive to generations yet to come. Workingmen are beginning to realize the fact that they are possessed of power, power to think and power to act, and with increased knowledge will come increased power. And the time is not far distant when the great men of the land will find it absolutely necessary to consult with the workmen in the matter of legislation, both political and commercial. In conclusion, I urge upon you the necessity of being wise and moderate in your deliberations and enact-

ments, and let those who are watching your movements at this the first Canadian labour congress be compelled to admit that we are honest, earnest and prudent workers."

Death of Calvin Lawrence

The death occurred on May 4 of Mr. Calvin Lawrence, one of the members of the Board of Railway Commissioners for Canada, who, prior to his appointment on this body in 1921, served for thirteen years as legislative representative of the Brotherhood of Locomotive Engineers in Ottawa. Mr. Lawrence had a long and honourable career as a railway employee, as mayor of his native city of St. Thomas, Ont., as an officer of the Brotherhood of Locomotive Engineers and as a member of the Dominion Board of Railway Commissioners. During the war he served also on the Labour Sub-committee of the Reconstruction Committee of the Cabinet. The death of Mr. Lawrence is universally regretted by the railwaymen of Canada.

The Père Marquette Railway Shops at St. Thomas, Ontario, re-opened on May 4, between 80 and 100 mechanics and helpers being affected. During the previous five-months these shops worked only about two weeks, of five days each.

The City Council of Hamilton, Ontario, agreed to consider a suggestion of the Building Trades Council in April that the five-day week system should be followed in connection with work carried out under municipal contracts. It was stated that more than one-third of the building trade unions in the United States had adopted the five-day week.

The Overseas Settlement Department (Great Britain) has published a series of pamphlets containing official information regarding openings for settlers respectively in Canada, Australia, South Africa and New Zealand, special sections dealing with climate, land settlement schemes, wages and hours of labour, cost of living, assisted passages, fares, etc. Another handbook contains special information for women who are thinking of settling overseas.

One of the outstanding textile manufacturers of the United States, Henry B. Kendall, has originated a plan whereby night work for women is abolished. No less than 80 per cent of the textile concerns have agreed to join the movement. This innovation, it is believed, will first restrict overproduction, so prevalent in the industry; and, second, will bring about a reform seriously required.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of April was reported by the superintendents of the Employment Service of Canada to be as follows:—

With the arrival of fair weather, farmers in the Province of Nova Scotia were busy preparing for spring planting. Hothouse truck was in abundance, with prices good. Fair catches of fish were reported. Logging operations were quiet, but sawmills, where many hands were employed, operated to capacity. All coal mines at Stellarton operated five days a week, with production favourable. Elsewhere, the mines, for the most part, were open from two to four days a week. Manufacturers reported business steadily improving, while in the iron and steel group employment was fairly good. Building construction was progressing favourably, and as a result many skilled and unskilled workers were employed. Transportation, both freight and passenger, was fair, as was also trade. Due to spring cleaning additional calls for house workers were listed, but the demand for general domestics and clerical workers was small.

There was little activity in farming in the Province of New Brunswick, but early planting was expected. Large catches of fish were reported, especially at Saint John and along the Shediac and Kent shores. A few orders were listed for river drivers, though a short season was predicted, both on the south and northwest Miramichi. Manufacturing showed some improvement, except in the pulp and paper industry. Considerable building construction was under way. Many men, however, were still employed on sewer and highway work, provided as a relief measure. Transportation, both rail and water, was improving. Trade was good. In the Women's Domestic Section there was extra demand for day workers, and these were readily supplied.

Farm orders, in the Province of Quebec, were more numerous than in March, but little activity was evident in the logging industry. River driving, however, was expected to commence shortly, as notification of such vacancies had been received. Mining operation at Rouyn had not yet started. Manufacturing conditions in Montreal were reported as being active in boots and shoes and in the printing trades, but quiet in the textile, clothing, rubber and tobacco industries. At Quebec, leather workers were busy, but other factories were operating on reduced time. Sherbrooke stated conditions as satisfactory, while at Three Rivers manufacturing was also normal, except

in the paper industry, where no improvement was as yet perceptible. Building construction was quiet throughout the province, though at Montreal orders for tradesmen had increased somewhat, especially for plumbers and joiners. Municipal relief work had also been provided by that city, and this had furnished employment for a number of men. Transportation, both rail and water, was busier. Trade was, for the most part, quiet. There were more calls for workers in the Women's Domestic Division, but applicants were not numerous.

A greater demand for farm workers was noticeable in some sections of the Province of Ontario. Logging also showed increased activity, in that river drivers were being placed, as well as teamsters and general bushmen. Mining was quiet. Employment conditions in the iron and steel industry were satisfactory at Sault Ste. Marie, but slack in Peterborough. In some localities old hands were being rehired, showing some expansion, but staffs were by no means back to normal. Little change was recorded in the automobile industry. Building construction was dull and few projects were under way. With relief work closing at the end of April, it was expected that large numbers of men would once more be unemployed. Lack of orders calling for unskilled railway workers was also causing some concern, as these would have absorbed many of the foreign element. An increase was shown in the casual orders in the Women's Domestic Section. These were easily filled, but the demand for experienced cooks-general exceeded the supply.

Manitoba reports showed that seeding was progressing, though continuous high winds, which caused serious soil drifting on farms in the vicinity of Winnipeg, had hindered the work to some extent. Logging and mining were nil. Manufacturing continued fair. Building construction in Winnipeg was ahead of last year in value, with a number of large undertakings in sight for the coming summer. Railway and highway construction were quiet. A slight improvement was registered in trade, but collections in all lines continued slow. An increased demand for workers was reported by the Women's Domestic Section.

Unfavourable weather continued to retard farm operations in the Province of Saskatchewan, but it was hardly expected, even with spring seeding in full sway, that the excess supply of labour available would be absorbed until the harvest. A few vacancies for sawmill workers were listed and filled. Coal mining showed no activity. Little building con-

struction was in evidence, and few workers were being sent out on railway gangs. Relief work is still carried on in some centres, but in others it had ceased altogether or slackened considerably, so that large numbers of men were idle. Less than the usual amount of

activity was reported by the Women's Domestic Section, though in some cities a number of unfilled out-of-town orders were listed.

Throughout Alberta the demand for farm hands continued light, as farmers endeavoured to do the work themselves, being unable to

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

afford extra help. No demand for men existed in logging, nor would there be many opportunities for work in this industry until river driving operations had opened. Coal mining also showed no activity, with all mines closed, or working only one day a week. Manufacturing remained unchanged. Building construction was somewhat busier in some localities, but was entirely inadequate to take care of the great number of idle tradesmen. With little or no work being provided by the railways, some of the unemployed were still obtaining work as provided under the provincial relief scheme on highways and sewers, but this was nearing completion at some points. Trade was only average, with collections very difficult. Little change was shown in the Women's Domestic Section, with sufficient applicants to meet all demands.

There were few calls for farm help in the Province of British Columbia, as farmers generally cannot afford to employ labour except at the minimum salary. The first carload of honey ever shipped from the Province left Penticton recently, this from a new industry only commenced a few weeks ago. With the exception of the Queen Charlotte Islands, there was very little logging carried on in the district, though tie work gave an opportunity in a few camps. Mining also was extremely quiet, coal mines at Nanaimo working only three days a week. Manufacturing showed no change and prospects were not bright for the immediate future. Sawmills were operating, but wages were low. Factories and machine shops were also slack. Construction, other than that provided as a relief measure, showed little activity, and work under the latter category was gradually being cut down. Little railway construction was in progress except along Skaha Lake, and at Revelstoke, where an extra gang for ballasting purposes was engaged. Shipping and longshoring at Prince Rupert was somewhat better, but at Vancouver the waterfront continued extremely quiet. Trade was dull. There was little change in the Women's Domestic Section, plenty of applicants being available for all positions.

EMPLOYERS' REPORTS

Employment at the beginning of April showed a slight seasonal decline, which was smaller than the average reduction recorded in April in the years since 1920. The Dominion Bureau of Statistics tabulated returns from 7,507 firms whose staffs aggregated 899,823 persons, compared with 902,833 in the preceding month. The index number (based on the 1926 average as 100) stood at 99·7, as compared with 100·2 on

March 1, 1931, and 107·8, 110·4, 102·3, 97·4, 92·5, 88·3, 90·4, 88·7, 81·8 and 85·1 on April 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Thus the index at the beginning of April, though lower than in 1930, 1929 and 1928, was higher than in the spring of earlier years of the record.

All provinces except Ontario reported reduced employment, the losses in Quebec being greatest. In the Maritime Provinces there was a further decrease in employment; construction was slacker and logging showed important seasonal losses, while manufacturing and shipping were decidedly brisker. In Quebec, manufactures showed heightened activity, and mining, transportation, building construction and trade afforded more employment, while logging reported large seasonal contractions and railroad construction was also slacker. In Ontario there were pronounced seasonal losses in logging, and highway construction also showed curtailment, while manufactures, building construction, transportation and trade recorded increased employment. In the Prairie Provinces the decline took place chiefly in logging, mining, building construction and trade, while manufacturing and railway operation showed improvement. In British Columbia the greatest gains were in manufacturing, logging, railway construction and trade, while mining, transportation and building and highway construction released help.

Employment advanced in Montreal, Toronto, Ottawa, Hamilton and Windsor and the Adjacent Border Cities, while losses were noted in Quebec City, Winnipeg and Vancouver. In Montreal, iron and steel, non-ferrous metal and tobacco factories, building, transportation and trade recorded heightened activity, while the fluctuations in other industries were slight. In Quebec, manufacturing and trade registered gains, but construction was slacker. In Toronto, considerable increases were registered in manufacturing, notably of food, iron and steel and textile products, while construction and trade also afforded more employment. In Ottawa there was a small advance, chiefly in construction and manufacturing. In Hamilton, manufacturing afforded heightened employment, but construction released employees. In Windsor and the Adjacent Border Cities there was pronounced expansion, principally in automobile plants. In Winnipeg, manufacturing as a whole was more active, but construction and trade were slacker. In Vancouver the most marked increases were in construction and shipping.

An analysis of the statistics by industrial groups shows further improvement in manufacturing, particularly in the iron and steel industry; in addition, lumber, textile, leather, non-ferrous metal, food, pulp and paper and electric current plants also afforded increased employment. Steam railway and water transportation, building construction and trade reported improvement. On the other hand there were pronounced seasonal losses in logging, and smaller reductions in coal mines and in highway and railway construction.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of April, 1931.

TRADE UNION REPORTS

An almost unchanged employment volume was indicated by local trade unions at the close of March as compared with the previous month, as shown by the reports tabulated from 1,825 labour organizations, with an aggregate of 208,387 members. Of these 32,208, or a percentage of 15.5, were without work on the last day of the month, in contrast with 15.6 per cent of idleness in February. Conditions, however, were less favourable than in March last year when 10.8 per cent of the members recorded were unemployed. In Nova Scotia, Quebec, Ontario and Manitoba slight advances in employment were shown, due in Quebec to improvement in the manufacturing industries, particularly the garment trades, while in Ontario the tendency was generally upward. In Manitoba unemployment in the building and construction trades and in transportation eased off slightly, while in manufactures the level of activity was slightly reduced. The Nova Scotia increases were nominal only. Employment recessions which almost offset these gains were recorded from New Brunswick, Saskatchewan, Alberta and British Columbia, the decline of nearly 4 per cent in Alberta being the most extensive, slackness in the coal mines of the province being the deciding factor in this adverse situation. In the unfavourable employment movement shown in comparison with March, 1930, and shared by all provinces, Nova Scotia declines were slight, while noteworthy curtailment of activity was reported in the remaining provinces, building and construction operations being particularly affected by the depressed conditions.

On another page of this issue will be found a report in greater detail on unemployment among local trade unions at the close of March, 1931.

EMPLOYMENT OFFICE REPORTS

During the month of March, 1931, references of persons to employment made by the Offices of the Employment Service of Canada numbered 46,658, while the placements effected totalled 44,884. Of the latter, the placements in regular employment were 7,521 of men and 3,422 of women, a total of 10,943. Placements in casual work were 33,941. Applications for work reported at the Offices numbered 68,034, of which 56,770 were of men and 11,264 were of women workers. Employers notified the Service during the month of 38,154 vacancies for men and 8,141 for women, a total of 46,295. A decrease was shown in the business transacted when the above figures were compared with those of the preceding month, but a marked increase was recorded over the corresponding period last year, the reports for February, 1931, showing 51,809 vacancies offered, 73,240 applications made, and 50,874 placements effected, while in March, 1930, there were recorded 24,647 vacancies, 38,686 applications for work and 23,168 placements in regular and casual employment. A report in detail of the work of the Offices for the month of March, 1931, and also the quarterly period, January to March, may be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during March, 1931, was \$9,906,567 as compared with \$5,929,587 in the preceding month and with \$13,356,787 in March, 1930.

The *MacLean Building Review* states that construction contracts awarded during April, 1931, amounted in value to \$22,707,500. Awards for this year to the end of April are down 30 per cent from the same period of 1930. Of the above amount \$8,171,000 was for residential buildings; \$7,731,500 was for engineering purposes; \$5,368,200 was for business buildings and \$1,436,800 was for industrial purposes. The apportionment of the contracts awarded during April, by provinces, was as follows: Ontario, \$8,448,700; Quebec, \$7,035,300; Manitoba, \$2,123,000; British Columbia, \$1,993,000; Alberta, \$1,789,800; Nova Scotia, \$560,700; Saskatchewan, \$490,600; New Brunswick, \$251,400; Prince Edward Island, \$15,000.

Production and Trade

INDUSTRIAL PRODUCTION

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 511.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations in Canada showed a moderate expansion in March from the level of the preceding months of the year. The index of industrial production with adjustment for seasonal tendencies was 153.1 in the month under review compared with 141.7 in January and 145.6 in February. The gain in manufacturing operations was the chief influence leading to the betterment for the month. The primary iron and steel industry was more active in March, the production of pig iron being 57,110 tons compared with 46,395 tons in the preceding month; the increase, after seasonal adjustment, was 7.3 per cent; the daily rate of production during March was 1,842 tons, a gain of 11 per cent over the February daily rate of 1,657 tons which in turn was 44 per cent greater than the average of 1,145 tons reported for January. The output of steel ingots and castings totalled 99,341 tons, which was the third month in succession to show an increase since production dropped to its recent low of 56,101 tons in December; no change was made in the number of blast furnaces in operation during March, the present active capacity being two furnaces at Sault Ste. Marie, one at Hamilton and one at Sydney. The production of motor cars showed a sharp gain in March over the moderate levels of preceding months; the gain in the month under review, after seasonal adjustment, was nearly 14 per cent, the output in March was 12,993 units compared with 9,871 in the preceding month. The imports of crude rubber indicated substantial preparation for operations in the tire industry; the receipts from external sources amounted to 6,748,000 pounds compared with 4,316,000 pounds in February, a gain after seasonal adjustment of nearly 19 per cent. The imports of crude petroleum were 71,297,000 gallons, the gain not being equivalent to the normal increase for the season.

The gain in production of newsprint after adjustment was 5 per cent, and shipments were greater than the output, resulting in slight reduction in mill stocks. The relatively good showing made by the exports of lumber in February was not maintained in March, the decline after seasonal adjustment being 11 per cent.

The index of manufacturing production based on 16 factors with seasonal adjustment was 141.8 in March compared with 128.7 in the preceding month.

The index of mineral production based on seven factors was 147.4 in the month under review compared with 130.6 in February.

The gain in the freight movement in March was not equivalent to the normal gain for the season, carloadings amounting to 210,507 cars compared with 190,213, a decline after seasonal adjustment of about 4 per cent.

The index of the physical volume of business computed from ten major factors was 141.6 in March compared with 138.9 in February, a gain of 2 per cent.

Coal.—Canadian mines produced 1,028,269 tons of coal during March, a decline of 19.8 per cent from the five-year average for the month of 1,281,488 tons. The output during March consisted of 757,336 tons of bituminous coal, 23,973 tons of sub-bituminous coal and 246,960 tons of lignite coal. Nova Scotia mines produced 430,020 tons, or 41.8 per cent of the total Canadian output. Alberta mined 367,515 tons; British Columbia, 153,418 tons; Saskatchewan, 61,692 tons; and New Brunswick, 15,624 tons.

Coal imports into Canada totalled 815,429 tons, a falling-off of 35.8 per cent from the 1929-1930 average for March of 1,269,721 tons. Receipts from the United States amounted to 799,867 tons made up of 163,442 tons of anthracite, 635,130 tons of bituminous, and 1,295 tons of lignite. Shipments received from Great Britain consisted of 12,797 tons of anthracite and 2,765 tons of bituminous. Canadian coal exported in March reached a total of 32,251 tons, a decline of 55 per cent from the average for the month during the past five years, of 71,765 tons.

Canada's coal supply in March (computed as the total output plus imports less exports) amounted to 1,811,447 tons or 27 per cent below the March 1926-1930 average of 2,479,443 tons. The coal available for consumption during the month was drawn from the following sources: Canadian 55.0 per cent; United States, 44.1 per cent; and Great Britain 0.9 per cent.

EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in March, 1931, the merchandise entered for consumption amounted to \$75,347,854, as compared with \$50,994,084 in the preceding month and with \$112,991,460 in March, 1930. The chief imports for March, 1931, were: Iron and its products, \$17,281,869; Fibres, textiles and textile products, \$11,824,722; Non-metallic minerals and products, \$9,691,019.

The domestic merchandise exported during March, 1931, amounted to \$55,048,197 as compared with \$43,872,682 in the preceding month and with \$89,595,317 in March, 1930. The chief exports in March, 1931, were: Wood,

wood products and paper, \$19,149,014; Agricultural and vegetable products, mainly foods, \$12,594,093; Non-ferrous metals and their products, \$7,311,831.

Strikes and Lockouts

The time loss due to industrial disputes in Canada during April, 1931, was slightly lower than that occurring during March, 1931, although over twice as many disputes were recorded, the higher figure for March being due to the strike of clothing factory workers in Toronto which involved some 1,700 dress-makers at the beginning of the month and resulted in about 25,000 days time loss during the month. The number of workers involved in April showed a similar decline for the same reason. As compared with April, 1930, although one less dispute was recorded, the number of workers involved and the time loss incurred were both much greater, no disputes of any magnitude having occurred during the same month last year. There were in existence during the month ten disputes, involving 1,582 workers and resulting in a time loss of 22,453 working days, as compared with four disputes, involving 1,815 workers and resulting in a time loss of 25,969 working days in March, 1931. In April, 1930, there were on record eleven disputes, involving 386 workers and resulting in a time loss of 3,616 working days. At the end of the month there were five disputes recorded as strikes or lockouts, involving approximately 1,000 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been formally called off or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at \$8.86 at the beginning of April, as compared with \$9.14 for March; \$11.24 for April, 1930; \$11.01 for April, 1929; \$10.87 for April, 1928; \$10.80 for April, 1927; \$11.36 for April, 1926; \$10.56 for April, 1925; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$15.99 for April, 1920; \$16.92 for June, 1920 (the peak); \$12.57 for April, 1918; and \$7.51 for April, 1914. The most important decreases occurred in the prices of veal, salt pork, bacon, lard, eggs, milk, butter, cheese, bread, beans, evaporated apples and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$19.18 at the beginning of April, as compared with \$19.47 for March; \$21.53 for April, 1930; \$21.30 for April, 1929; \$21.11 for April, 1928; \$21.02 for

April, 1927; \$21.64 for April, 1926; \$20.82 for April, 1925; \$20.58 for April, 1924; \$21.21 for April, 1923; \$20.66 for April, 1922; \$23.31 for April, 1921; \$25.34 for April, 1920; \$26.92 for July, 1920 (the peak); \$20.01 for April, 1918; and \$14.32 for April, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 74.5 for April, as compared with 75.1 for March; 90.7 for April, 1930; 94.1 for April, 1929; 98.3 for April, 1928; 97.3 for April, 1927; and 101.2 for April, 1926. In the classification according to chief component materials six of the eight main groups declined, one advanced and one was practically unchanged. The groups which declined were: the Animals and their Products group, mainly because of lower prices for steers, calves, shoes, leather and eggs, which more than offset increased prices for hogs, lambs and hides; the Fibres, Textiles and Textile Products group, chiefly due to reduced prices for raw cotton and wool blankets; the Wood, Wood Products and Paper group, owing to lower prices for fir and ground-wood pulp; the Iron and its Products group, mainly because of reductions in the prices of steel sheets and automobile body plates; the Non-Ferrous Metals and their Products group, due to declines in copper, lead, zinc, tin and silver prices; and the Non-Metallic Minerals and their Products group, chiefly due to lower prices for anthracite coal. The Vegetables and Vegetable Products group advanced, due to higher prices for barley, flax, oats, rye and wheat, which more than offset declines in raw rubber, corn, flour, rolled oats and oatmeal. The Chemicals and Allied Products group was practically unchanged.

A "Southern Industrial Conference" was held at Greensboro, North Carolina, on March 7-8, under the auspices of the Women's Trade Union League of America, for the purpose of considering the problems arising out of the "industrialization" of North Carolina and the Southern States. The South, it was stated faces two difficulties, first the transition from an agricultural to an industrial society, and, second, the rapid substitution of machines for men; and the problem before the Conference was to find a method of avoiding strife and of establishing a democratic government in industry. The principles approved by the Conference as the basis for the new order included the maintaining of freedom of speech and assembly; the right to bargain collectively; the necessity for fact-finding agencies in making possible an informed public opinion; and the importance of social legislation.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

DURING the month of April the Department received the report of a Board of Conciliation and Investigation which had been established under the provisions of the Industrial Disputes Investigation Act to inquire into a dispute between the Dominion Atlantic Railway Company and certain of its employes being clerks, freight handlers, station and stores department employees, represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The dispute concerned the employes' request for an agreement with the company providing for increased wages and changed working conditions, ninety employees being directly affected. The personnel of the Board was as follows:—Mr. M. B. Archibald, of Halifax, N.S., Chairman, appointed on the joint recommendation of the other members of the Board; Mr. L. A. Lovett, K.C., of Halifax, N.S., appointed by the Minister in the absence of a recommendation from the employing company, and the Honourable John McDonald, of Kentville, N.S., appointed on the recommendation of the employees concerned. The report of the Board, the text of which is given below, was unanimous.

Applications Received

Three applications for the establishment of Boards of Conciliation and Investigation were received in the Department as follows:—

1. From employees of the Canadian National Railways represented by the International Brotherhood of Stationary Firemen, Oilers and Railroad Shop Labourers. The cause of the dispute as set forth in the application was the refusal of the railway management to negotiate a working agreement with the representatives of the applicants. Three thousand employees were stated to be directly affected by the dispute. Before a Board was fully constituted the right of the International Brotherhood of Stationary Firemen, Oilers and Railroad Shop Labourers to represent the men involved in this dispute was questioned, and, in view of the conflicting evidence before the Department, further steps looking to the establishment of the Board was stayed pending departmental inquiry on the subject.

2. From various tug boat owners, being members of the B.C. Tow Boat Owners' Association, namely:—Gilley Brothers, Ltd., Blue Band Navigation Co. Ltd., Canadian Western Lumber Co. Ltd., Joseph Mayers, M. R. Cliff Towing Co. Ltd., Pacific (Coyle) Navigation Co. Ltd., McKenzie Barge and

Derrick Co. Ltd., Vancouver Tugboat Co. Ltd., McKeen & Wilson, Ltd., Gulf of Georgia Towing Co. Ltd., Young and Gore Tugboat Co. Ltd., Pacific Salvage Co. Ltd., Island Tug and Barge Co. Ltd., and Marpole Towing Co. Ltd. The employees concerned in this dispute were masters and mates, members of the Canadian Merchant Service Guild, the application stating that one hundred and fifty were directly affected and three hundred and fifty indirectly. A reduction in wages had been put into effect by certain employers and a strike was called on April 21, the men demanding restoration of the former wage rates and that all employers agree to pay these rates for a period of one year; also that certain new working conditions be introduced. A statement with respect to this strike appears on page 522 of this issue of the *LABOUR GAZETTE*. The western representative of the Department of Labour, Mr. F. E. Harrison, held several conferences with the parties concerned, meeting both sides separately and jointly, and at the close of the month was continuing his efforts at mediation.

3. From the Ottawa Electric Railway Company. Four hundred and ninety-five employees, members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America, were stated to be directly affected by the dispute, which grew out of a wage reduction proposed by the company. A Board of Conciliation and Investigation was established by the Minister of Labour constituted as follows:—Mr. A. C. Boyce, K.C., of Ottawa, Ontario, Chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, Messrs. Redmond Quain, K.C., and H. J. Burns, both of Ottawa, nominees of the company and employees, respectively.

The Metropolitan Life Insurance Company recently published a pamphlet entitled "Unemployment: a summary of some existing government and private plans," being one of a series of monographs prepared by this company on Social Insurance questions. The new monograph summarizes the principal features of unemployment insurance as it exists in various countries whether in the shape of compulsory or voluntary state plans; and also describes numerous systems of insurance that are now conducted in the United States by trade unions or employees. The scope, amount of contributions, conditions and extent of benefits, and administration of these various schemes are shown in tabular form.

Report of Board in Dispute between the Dominion Atlantic Railway and its Clerks, Freight Handlers, etc.

Re *Industrial Disputes Investigation Act and re differences between the Dominion Atlantic Railway Company and certain of its employees, being Clerks, Freight Handlers, Station and Stores Department Employees, represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.*

HALIFAX, N.S.,

April 11, 1931.

To the Deputy Minister of Labour and Registrar, Industrial Disputes Investigation Act, Ottawa, Can.

SIR,—We have the honour to report that the Board of Conciliation and Investigation, established to investigate into and to report on the above dispute, convened, first, at Kentville, on the 16th and 17th days of December, 1929, and again convened at Kentville, N.S., on the 19th and 20th days of March, 1930, and at Kentville on the 15th, 16th, 17th and 18th days of December, 1930, and at Halifax on the 19th day of December, 1930, and on the 7th and 8th days of January, A.D. 1931.

At the several hearings held in Kentville, representatives of the Dominion Atlantic Railway Company were present, as well as representatives of the employees affected. In addition to certain local representatives of the employees affected, Messrs. F. H. Hall and W. A. Rowe, Chairman and Secretary, respectively, of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees were present on behalf of the employees affected, which Brotherhood represents the majority of the employees of the Dominion Atlantic Railway Company affected. Representatives of the employees first presented their case, which is fairly well summarized in the application for this Board. The position of the company is set forth in the Brief submitted on behalf of the company, particularly in Paragraph "C" on page 4, which is as follows:—

"That members of headquarters staffs are from time to time in possession of confidential information which is peculiarly the property of the company, and it would be unfair both to the company and to these confidential employees themselves if they should be placed in a position where supposed loyalty or duty to their organization would be an inducement to violate the confidence which they owe to the company."

Adjournments of the hearings before the Board were made from time to time, first, at the instance of the Board itself, subsequently at the request of both parties to the dispute, in the hope that the parties to the dispute

would come to a satisfactory agreement between themselves. The members of the Board considered its primary function to be an endeavour to get the parties together and to compose their differences themselves. Both the Dominion Atlantic Railway Company and the employees affected showed a willingness to do this, and in fairness to both, we are pleased to report that since the meetings of the Board in March, 1930, working conditions of the employees affected have been greatly improved and their wages substantially increased by the Dominion Atlantic Railway Company, and insofar as those employees affected who are employed by the Dominion Atlantic Railway Company at Halifax and other points outside of Kentville, and those employees at Kentville occupying positions there which are not the subject of controversy, the Dominion Atlantic Railway Company has already substantially put in effect the provisions of the Canadian Pacific Railway Eastern Lines Agreement, the terms of which are substantially in accordance with the terms of the agreement submitted with the application for this Board. It is the understanding of the Board that negotiations are being carried on for the purpose of effecting a written agreement on behalf of these other employees, and the Board is of opinion that such written agreement should be concluded.

For the employees it should be said also that they showed a willingness to eliminate from the provisions of the Agreement several of the employees listed in the statement as those to be governed by the agreement, and, in particular, the following:—

General Manager's Office.—Timekeeper, Chief Clerk, Purchasing Clerk, Stenographer, Clerk, Stenographer, Stenographer and Clerk, Office Boy.

Claims Department.—Investigator, Stenographer.

The management of the Dominion Atlantic Railway Company, however, refused to consider entering into an agreement which embraced those employees in the Accounting Office at Kentville and those employed in what is known as Form 45 Branch of the service. It developed from the hearing, first, as a contention on the part of the company, and subsequently as an admission by the representatives of employees, that in the negotiating and concluding of an agreement such as proposed in this case, good practice and the interests of both employer and employees made it advisable to exclude from such agreements those

employees occupying positions of a direct personal and confidential nature. In this case, the Dominion Atlantic Railway Company insisted that in addition to the employees which the representatives of the employees were willing should be excluded, the following should also be excluded:

Accounting Office.—Chief Clerk, Head Pay-roll and Treasury Clerk, Traffic Clerk, Travelling Auditor, Asst. Chief Clerk, Material and Voucher Clerk, Asst. Traffic Clerk, Traffic Clerk, Stenographer, Head Store Clerk, Statistical Clerk, Stenographer, Clerk, Clerk, Clerk, Stenographer, Stenographer, Stenographer and Clerk, Comptometer Operator, Traffic Clerk, Traffic Clerk, Stenographer and Clerk, Comptometer Operator, Ticket Sorter, Pay-roll Clerk, Clerk, Office Boy, Stenographer.

Form 45.—Rate Clerk, Clerk, Clerk.

The representatives of the employees contended that the foregoing employees do not come within the class to be exempted. Your Board is bound to report that neither the Dominion Atlantic Railway Company nor the representatives of the employees afforded it such information and evidence as would enable the Board to state whether any or all of the foregoing employees occupied positions of a

direct personal and confidential nature. Therefore, your Board recommends that the provisions of the proposed agreement as submitted with the application, with such modifications as may now be necessary to bring it in line with other like agreements now in force, and covering such a class, should be entered into between the Dominion Atlantic Railway Company and the employees affected, excepting such employees occupying positions or doing work which actually places them in a direct personal and confidential position. Your Board is of the opinion that these exceptions can best be determined by the company and representatives of the employees themselves, and suggests that proper officials of your Department could and should be a very material assistance to the parties to this dispute, in determining the employees who should be excepted from the proposed agreement.

Respectfully submitted,

(Sgd.) M. B. ARCHIBALD,
Chairman,
(Sgd.) John A. McDONALD,
Member,
(Sgd.) Laurence A. LOVETT,
Member.

CANADIAN RAILWAY BOARD OF ADJUSTMENT NO. 1

Summary of Recent Decisions

THREE new decisions were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, April, 1931, page 398, and in previous issues; and the fourth report of the proceedings of the Board covering the period from October, 1927, to September 30, 1930, was issued as a supplement to the issue of December, 1930.

This Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 374—Canadian National Railways (Atlantic Region) and Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen.

Prior to April 27, 1930, certain freight trains were regularly assigned to enginemen in "turn-around" service (Truro to Halifax, and return to Truro), but from that date these trains were assigned to enginemen in "straight away" service (Halifax to Moncton). The enginemen claimed that the new assignments required excessive hours of duty, that they did not conform with the spirit of the schedule, and that they were not in the interest of safe operation. The company contended that the provision in the schedule, providing that enginemen shall not be required to leave the subdivisions to which they are assigned, referred only to unassigned men; and that the assignments as arranged were in order and strictly conformed with the provisions of the schedule. It was not apparent to the Board that there was any violation of schedule or other agreements in assigning through fast service between Halifax

and Moncton, and the claim of the employees was not sustained.

Case No. 375—The Canadian National Railways (Central Region) and the Order of Railroad Telegraphers.

The position of agent at Brockville, Ontario, having fallen vacant, the senior applicant was passed over and the next in order of seniority was appointed. The Telegraphers contended that the former should have been appointed under Clause A of Article 2, and if his ability was doubted he should have been given the privilege guaranteed by Clause P of the same article, which reads:

"When a telegrapher accepts a position and after a fair trial is found to be incapable, he will take his place on the extra list, retaining his seniority rights."

The Company pointed out that Brockville was a strongly competitive station with a large staff, and it was necessary to appoint a man with experience in handling a large staff at a competitive station. In this case the senior applicant had no experience outside a one-man station, while the successful applicant had demonstrated his ability to handle such a station as Brockville.

Under these circumstances the Board considered that the seniority rule had not been violated and could not find that the judgment of the railway officers in deciding between the merit and ability of the two senior applicants was not justified. The claim of the employees, therefore, was not sustained.

Case No. 376—Canadian National Railways (Atlantic Region) and Order of Railroad Telegraphers.

In December, 1930, the despatching office at New Carlisle, Quebec, was closed and its work transferred to Campbellton, and one of the

despatchers from the former followed the work to the latter office. A controversy arose in connection with the transfer of this man. The Telegraphers contended that according to the terms of their agreement, when the despatchers' office was closed at New Carlisle, all despatchers' positions in that office were abolished, and the despatchers affected should have been governed by Clause V of Article 2 of the schedule, which is as follows:—

"When a Trick Despatcher's position is abolished or he has been displaced by a Senior Despatcher, the man affected shall on seniority basis have the option of displacing the Junior Full Time Despatcher, or the Junior Part-time Despatcher in that office (in the case of a Swing Despatcher this refers to the office in which he elected to exercise his seniority) or the Junior full time or part-time Despatcher on the Promotion District."

The Telegraphers contended further that when it was found necessary to create a new position in Campbellton despatching office, on account of abolishing the office at New Carlisle, the new position should have been bulletined and filled as required in Clause L of the same article, which reads:—

"New permanent positions and vacancies will be bulletined on the Promotion District, and will be filled within thirty (30) days after such positions are created or vacancies occur."

The Company explained that the transfer of the despatcher was made as the result of certain changes in the despatching facilities in the section, and in order that the work might be under the direct supervision of the chief despatcher and superintendent. They contended that his position was not abolished.

The Board considered that the work at New Carlisle was not abolished, the despatcher concerned being required to continue his work at another point; and accordingly the contention of the employees was not sustained.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1931

THE number of strikes and lockouts in existence in Canada during April, 1931, was ten, as compared with four in the preceding month. The number of workers involved showed a decline, a similar decrease appearing in the time loss incurred, the higher figures for March being due to a strike of women's clothing factory workers in Toronto which involved some 1,700 workers at the beginning of the month and caused about 25,000 days time loss in March. Comparing the figures with those for April, 1930, while one dispute less was recorded, the number of workers involved and the time loss incurred were both much greater, no disputes of any magnitude having occurred during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Apr. 1931...	10	1,582	22,453
*Mar. 1931...	4	1,815	25,969
Apr. 1930...	11	386	3,616

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day.

Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Three disputes, involving approximately 807 workers, were carried over from March and seven disputes commenced during April. Of these ten disputes five terminated during the month, the result of one being recorded as partially successful while three resulted in favour of the workers and one in favour of the employer concerned. At the end of April, therefore, there were five disputes recorded as strikes or lockouts, namely: clothing factory workers, Toronto, Ont.; motion picture projectionists, Ottawa, Ont.; fur factory workers, Toronto, Ont.; painters, Vancouver, B.C.; and masters, mates and engineers, Vancouver, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; photo engravers, Toronto, Ont., January 7, 1929, one employer; coal miners' Shaughnessy, Alta., January 15, 1931, one employer; pile drivers and hoisting engineers, Vancouver, B.C., Jan. 3, 1931, two employers; and shirt and overall factory workers, Winnipeg, Man., Apr. 6, 1931, one employer, this last being added this month. The dispute involving bakery drivers in Saskatoon since September 22, 1930, carried in this list for some months, appears to have lapsed.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

WOMEN'S CLOTHING FACTORY WORKERS (DRESSMAKERS), TORONTO, ONT.—At the end of April this dispute, called by the International Ladies' Garment Workers' Union on February 25, 1931, in seventy establishments employing about 2,000 workers, was not yet terminated; but it was reported that 400 or 500 workers were still on strike as compared with

upwards of eight hundred at the end of March, a number of employers having signed agreements with the union during March and others during April. On April 13 representatives of the employers and of the employees met the Minister of Labour for Ontario and it appeared that about 1,500 employees in sixty of the factories had gone on strike, the other establishments being affected not at all or very little, and that sixty per cent of the manufacturers had signed individual agreements with the union. The Minister, it was reported, asked the manufacturers to consider signing a collective agreement with the union and to meet him again on April 16. The employers, however, did not attend the conference, stating that some of them had decided not to recognize the union and that further negotiations would, therefore, be useless. An additional number of employers, however, signed individual agreements with the union later and toward the end of the month the union stated that only a small number of factories were still non-union. It appeared that these included some of the largest shops which had succeeded in replacing the strikers to a great extent. During April there were again a number of arrests for offences in connection with picketing and some convictions. On May 5, the strike was terminated, the union reporting that agreements had been signed with establishments employing 950 of the strikers.

MOTION PICTURE PROJECTIONISTS, OTTAWA, ONT.—In connection with this dispute, beginning February 23, 1931, involving three theatres under the same management, the union employees having been replaced, the theatres continued to be picketed and toward the end of April four of the picketers were arrested and charged with watching and besetting. At the end of the month the case had been adjourned.

MOTION PICTURE PROJECTIONISTS, ANSONVILLE, ONT.—Reference was made in the last issue of the LABOUR GAZETTE to a dispute involving motion picture projectionists in New Liskeard and Timmins, Ont., about which particulars had not been received. The reports indicate that projectionists in four theatres in New Liskeard, Timmins and Ansonville ceased work, claiming that the employer had not carried out the conditions of the arrangement with the unions regarding wages, the employment of union members, the employment of two projectionists in each theatre and the discharge of employees without notice. The employers claimed that the government regulation did not require two projectionists in each theatre, that there was a union agree-

ment in only one theatre in the district and that this theatre was not involved in the dispute. It appears that the projectionists in two of the theatres ceased work in sympathy with the employees in the other two laid off on March 3. The employees in three of the theatres resumed work on March 6 and in the remaining one on April 14, an agree-

ment for two of the theatres having been signed to be in effect from April 15, 1931, to August 31, 1932, to comply with the union conditions.

CLOTHING AND FACTORY WORKERS (OVERALL AND SHIRT FACTORY), WINNIPEG, MAN.—A cessation of work occurred on April 6 in one establishment, the employees claiming that

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to April, 1931.			
MANUFACTURING—			
<i>Textiles, clothing, etc.—</i>			
Women's clothing factory workers (dressmakers), Toronto, Ont.....	800	15,000	Commenced February 25, 1931; for union wages and working conditions; un-terminated.
SERVICE—			
<i>Recreational—</i>			
Motion picture projectionists, Ottawa, Ont.....	6	156	Commenced February 23, 1931; to maintain union working conditions; un-terminated.
Motion picture projectionists, Ansonville, Ont.....	1	10	Alleged lockout; commenced March 3, 1931; re maintenance of union working conditions; terminated April 14, 1931; in favour of workers.
(b) Strikes and Lockouts Commencing during April, 1931.			
MANUFACTURING—			
<i>Textiles, Clothing, etc.—</i>			
Clothing factory workers (overall and shirt factory), Winnipeg, Man.....	40	800	Alleged lockout; commenced April 6, 1931, reduction in wages, piece rates; terminated April 28, 1931; partially successful.
Custom tailors, Vancouver, B.C.....	15	45	Commenced April 11, 1931; against reduction in wages; terminated April 15, 1931; in favour of workers.
Fur factory workers, Toronto, Ont.....	30	450	Commenced April 14, 1931; alleged violation of agreement; un-terminated.
CONSTRUCTION			
<i>Building and Structures—</i>			
Painters, Vancouver, B.C.....	48	1,248	Commenced April 1, 1931; against reduction in wages; un-terminated.
Building trades workers, Montreal, P.Q.....	102	204	Commenced April 15, 1931; to maintain union conditions; terminated April 17, 1931; in favour of workers.
TRANSPORTATION—			
<i>Water—</i>			
Masters, mates and engineers, Vancouver, B.C.....	500	4,500	Commenced April 21, 1931; against reduction in wages; un-terminated.
SERVICE—			
<i>Public Administration—</i>			
Power line workers, South Minto, N.B.....	40	40	Commenced April 1, 1931; against discharge of worker; terminated April 2, 1931; in favour of employer.

the employer had an agreement with the United Garment Workers of America and that wages had been reduced from twenty to forty-eight per cent. The employer stated that he had begun the production of a new line of goods and some adjustments in prices were necessary, and that the union had called out the employees before these had been settled. It was reported in the press that the dispute was terminated on April 28, some of the workers having returned on open shop conditions at wages ten per cent below the union scale. It was also reported that most of the other employees had secured work in other establishments and that the balance would be taken back as required. The union, however, reports that the dispute is still in progress.

FUR FACTORY WORKERS, TORONTO, ONT.—A dispute involving employees in one establishment occurred, the factory being closed down by the management on April 11, and on reopening it some days later the union claims that the employer called back only some of the workers instead of providing for equal division of work among the employees in rotation, thus violating the agreement and reducing earnings below the union scale. The employer, on the other hand, claims that the union violated the agreement by not allowing these employees to resume work and by demanding an increase in pay. At the end of the month the dispute was unterminated.

CUSTOM TAILORS, VANCOUVER, B.C.—Tailors and tailoresses in two establishments ceased work on April 11, 1931, owing to the refusal of the employers to renew an agreement expiring March 31, 1931. The employers had proposed a reduction in wages of ten per cent and the negotiations between the journeymen tailors' association and the merchant tailors' association did not result in a settlement. Work was resumed in the two establishments affected by the strike on April 15, the previous agreement having been renewed. This agreement is summarized elsewhere in this issue.

PAINTERS, VANCOUVER, B.C.—Painters employed by the various firms in Vancouver ceased work on April 1 against a proposed reduction in wages from .90 cents per hour to 75 cents. Negotiations between the master painters' association and the International Brotherhood of Painters, Decorators and Paperhangers and the National Union of Painters, Decorators and Paperhangers of Canada did not result in a settlement as to a rate for the ensuing year. The master painters offered 80 cents per hour and the unions declined to accept less than 85 cents per hour, and at the end of the month no settlement was reported.

BUILDING TRADES WORKERS, MONTREAL, P.Q.—Employees of various classes on one construction job ceased work on April 15, 1931, to maintain union conditions, claiming that, while the contractor had verbally agreed to observe such conditions, he had reduced wages of carpenters from 85 cents per hour to 70 cents and increased the hours from eight to nine per day and that cement finishers were being paid only 50 cents per hour when the required rate was 75 cents; also that other conditions as to hoisting engineers and cement finishers were unsatisfactory. The employer, on the other hand, claimed that there was no dispute as to wages or working conditions and that the dispute arose over a misunderstanding between one cement finisher and his union. The Union reported 102 employees on strike while the employer reported 200 involved, there being apparently some indirectly affected. Work was resumed on April 17 under the conditions in effect before the dispute.

MASTERS, MATES AND ENGINEERS, VANCOUVER, B.C.—A cessation of work by masters and mates on certain boats occurred on April 21, 1931, owing to a dispute involving from 14 to 22 firms, as to a proposed reduction in wages of ten per cent below the scale in force since 1920 following the report of a Royal Commission in 1918 and 1919. (LABOUR GAZETTE, March, 1919, pp. 242-254). It is reported that 200 masters and mates were involved and 700 employees of other classes were indirectly affected. The ten per cent reduction was to apply to all classes on the boats and on April 23, 1931, marine engineers affected joined in the strike. It appears that in November, 1930, certain boat owners reduced wages, followed by others during 1931, and that, at the beginning of the season for towing logs to saw mills in the spring, at least one other owner of tow boats proposed a reduction in wages. The Canadian Merchant Service Guild, the organization of the masters and mates, made an attempt to secure an agreement with the British Columbia Tow Boat Owners' Association or with individual owners of boats and notified them that from April 21 their members would be on strike against all who had not signed the agreement. The departmental representative on the Pacific Coast took the matter up with the parties involved but a settlement was not secured. The British Columbia Tow Boat Owners' Association applied for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, and the conciliation proceedings were continued.

It has been reported in the press that some of the employees on tow boats in Victoria ceased work on April 21 in sympathy with the

employees in Vancouver but returned to work next day.

POWER LINE WORKERS, SOUTH MINTO, N.B.
—Employees engaged on the construction of a transmission line for the New Brunswick

Power Commission are reported to have ceased work about April 1, 1931, in protest against the dismissal of their foreman, being replaced shortly afterwards. Official reports and full particulars as to the dispute have not yet been received.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and Other Countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

Great Britain

During March, the number of disputes beginning was 28 and 14 were still in progress from the previous month, making a total of 42 disputes in progress during the month involving 28,200 workpeople and resulting in a time loss of 175,000 working days for the month. Of the 28 disputes beginning in the month, 11 were over proposed reductions in wages, 7 over other wages question, 4 on questions respecting the employment of particular classes or persons, 3 on other questions of working arrangements and 3 on questions of trade union principle. Settlements were reached in 35 disputes, of which 9 were in favour of workpeople, 15 in favour of employers and 11 ended in compromises.

The most important dispute during March occurred in the South Wales coal fields when workers protested against the award of the independent chairman of the local Joint Conciliation Board providing for reduction in wages. The stoppages of work lasted only one or two days at most of the collieries and occurred between March 7 and March 20. In all, 14,000 workers were involved and work was resumed under the terms of the award.

Another dispute involved 3,000 electrical workers in the London district. A strike of 50 workers on the border-line of the London area who demanded the London rate of wages was alleged by employers to constitute a breach of the general agreement and the employers then withdrew the special addition

to the London rate of wages and 3,000 workers went out on strike about March 20 to 23. The dispute was settled on April 2, when a partial advance in wages was given workers at the border-line works, and the special addition to the London rate of wages was restored.

Belgium

For the year 1930, the number of disputes terminating was 93, involving 712 establishments and directly affecting 54,149 workers and indirectly affecting 10,569, making a total of 64,718 workers affected. The time loss was 781,646 working days. The industries most affected by disputes during the year were mining, metal, textiles and construction. Of the 93 disputes, 60 were over wages questions, 14 over the discharge of workers and the others over various other questions. The results of the disputes show that 15 were in favour of workers, 46 in favour of employers, 30 ended in compromises, while two were strikes of protest.

France

Figures for the third quarter of 1930 show the number of disputes beginning in July as 402, involving 141,382 workers; in August 107 disputes involving 65,737 workers and in September 58 disputes involving 7,994 workers.

Germany

For the year 1929, the number of disputes terminating was 441, involving 8,606 establishments and 223,878 workers. The time loss for the year was 4,372,907 working days.

The number of disputes reported for the fourth quarter of 1930 was 92 involving 876 establishments and 136,577 workers with a time loss of 2,120,820 working days. Corresponding figures for the third quarter of the year are 113 disputes involving 355 establishments and 31,122 workers with a time loss of 569,814 working days.

A conciliation award providing for a wage reduction of about 5½ per cent in the iron and steel industry in Bavaria was rejected by the employers who wished to reduce wages 15 per cent and declared a lockout March 10. About 40,000 workers were affected. The lock-

out was terminated March 18, when a revised award, which was much the same as the original award, was issued, confirming the reduction of 5½ per cent and this award was declared binding.

Norway

A lockout in the paper industry involving 12,500 workers began March 14, when the workers refused to accept reductions in wages. Later on April 8, a further 43,500 workers were locked out in various industries when agreements terminated and workers were unwilling to make new agreements involving wage reductions of from 12 to 25 per cent. The industries so affected were iron, textile, building, sawmill, printing trades, boot and shoe and fur and leather industries.

Sweden

A strike in the textile industry involving 33,000 workers lasted from January 12 to March 20. The strike, which was the result of a general reduction in wages of 10 per cent, was settled through a Conciliation Commission. It is reported that the reduction in wages was agreed to, but certain increases in overtime rates were conceded by the employers, and an agreement was made to be in effect until the end of 1931.

Australia

The number of disputes terminating in the third quarter of 1930 was 35, involving 212 establishments. The number of workers directly involved was 10,858 with a time loss of 112,399 working days. During the second quarter of the year, the number of disputes was 41, involving 86 establishments and 9,184 workers with a time loss of 513,486 working days.

New Zealand

The number of disputes reported for the year 1930 was 45, involving 49 firms and 5,632 work-

ers. The number of working days lost was 33,223 and the approximate loss in wages £37,-274.

United States

During February, 57 disputes began and 46 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 15,709 and the time loss 24,983 working days for the month. Of the 57 disputes beginning in the month, 16 were in the textile industry, 9 in clothing and 9 in building trades, the other disputes being in various other industries.

A strike of 2,600 weavers employed by upholstery manufacturers at Philadelphia, Pennsylvania, against a reduction in wages of 14 per cent lasted from February 2 to April 25, when it was decided to resume work at the reduced wage rates pending a survey of the industry by a conciliation board.

Another strike at Philadelphia, Pennsylvania, which began February 16, involved 3,000 hosiery workers in open-shop mills in an attempt to stabilize conditions in the industry and to secure union wages. No final settlement of the strike was reported, but a number of mills signed the union agreement and work was resumed in these mills during April.

At Lawrence, Massachusetts, a strike of woolen textile workers lasted from February 16 to February 27. Several demands were made including resumption of work on the terms in effect previous to the strike, no discrimination against strikers, time and one half for overtime, recognition of the union and the dismissal of efficiency experts. The strike caused the mills to be temporarily shut down, thus affecting 10,575 workers. A settlement was reached and work resumed February 27 with some of the workers' demands granted and others to be considered.

It was reported that 11,000 coal miners at Shamokin, Pennsylvania, went out on strike about April 16, in an attempt to have the work evenly distributed. No report of a settlement was received.

A statement issued on May 6 by Mr. E. W. Beatty, K.C., president of the Canadian Pacific Railway Company, referred to the measures taken by the company to limit expenditures in view of the heavy declines in revenues in 1929 and 1930. He announced that the salaries of office staffs had been reduced approximately 10 per cent by means of a general three-days' lay-off each month without pay. The salaries of the president, vice-president and other senior officers were cut in the same proportion. Mr. Beatty stated that the rev-

enues of the company had been \$28,830,150 less than in 1930 than in 1929. This was met in part by a reduction in working expenses of \$23,934,266. The average number of employees had been decreased by only 5.95 per cent compared with 1929 and 8.01 per cent compared with 1928. Results of operations for the first three months of the year again reflected the prevailing business conditions, the decrease in gross earnings being \$5,919,869 and in net earnings \$943,308 under those of the first three months of 1930.

LABOUR LEGISLATION IN QUEBEC, BRITISH COLUMBIA AND ONTARIO IN 1931

Province of Quebec

THE Legislature of the Province of Quebec was in session from December 2, 1930 to April 4, 1931, and enacted a number of laws of interest to labour. These dealt with workmen's compensation, unemployment relief, the establishment of a Department of Labour, labour organizations, the prevention of silicosis, and earnings of married women.

Workmen's Compensation.

The Workmen's Compensation Act follows fairly closely the Ontario Act, establishing, for the majority of industries, a system of collective insurance in a provincial fund administered by the Workmen's Compensation Commission.

Application.—The Act applies to all industries included in Schedules I and II (which cover the greater part of the industrial field) and to such others as may be added from time to time by regulation. The Provincial Government, and subject to the Government Employees Compensation Act, the Government of Canada, municipal and school corporations, public service commissions and commissions operating an industry or service for municipal purposes are within the scope of the Act when carrying on industries included in the Schedules. Employers in the industries included in Schedule II, namely railway and navigation companies and public utilities, are individually liable for the payment of compensation. Agricultural workers, domestic servants, outworkers and casual workers are excluded from the scope of the Act. The Commission is authorized to withdraw from any class industries in which not more than a stated number of workmen are usually employed. An industry so withdrawn may be again included on application of the employer. The Commission may also on application of the employer add to Schedule 1 or Schedule 2 any industry or part of an industry. Compensation is payable for accidents arising out of and in the course of the work, and for industrial diseases included in Schedule III, and any that may be added by the regulations. The diseases specified are—Anthrax; lead, mercury, phosphorus and arsenic poisoning and their sequelae; ankylostomiasis; miners' phthisis; benzol poisoning; stone-workers' or grinders' phthisis; silicosis; pneumoconiosis; compressed air illness or caisson disease; and chrome poisoning.

"Accident" is defined to include a wilful and intentional act not being the act of the workman and a fortuitous event occasioned by a physical or natural cause. An injury attributable solely to the serious and wilful misconduct of the workman is not compensable unless it results in death or serious disablement. The waiting period is seven days but disability lasting longer than seven days is compensable from the first day.

Compensation is payable for accidents happening outside the Province where the employer has a place of business or an undertaking in the Province and the residence and usual place of employment of the workman are therein, provided that the employment outside the Province has not exceeded six months and was a continuation of employment in the Province by the same employer; and also when the workman has his residence in the Province and is obliged to work both within and without the Province by the nature of his work in a transportation business by land or by water, provided in the latter case that the vessel on which he is employed is registered in a Canadian port and the accident happens in the territorial waters of Canada. Compensation for accidents happening without the Province is payable by the employer individually unless he has fully contributed to the accident fund in respect of all the wages of workmen engaged in the business in which the accident happens. An employer whose undertaking is generally carried on outside the Province is also individually liable to pay compensation for an accident within the Province if the injured workman's usual place of employment is without the Province and the employer has not paid all the assessments for which he is liable under the Act.

To non-resident dependants the Commission may award such sum in lieu of compensation as it deems proper and may pay the amount out of the accident fund, or order it paid by the employer, as the case may be. A workman receiving compensation payments is not entitled to their continuance if he ceases to reside in the Province, unless the Commission's physician certifies that the disability is likely to be permanent.

Where compensation is payable out of the accident fund, a member of the family of an employer or the dependants of such member are not entitled to compensation unless carried on the payroll at the time of the accident

and included in the last statement furnished to the Commission. An employer or the executive officer of a corporation or their dependants are entitled to compensation if carried on the payroll and a statement of intention to include such person as a workman be sent to the Commission.

Rights of Action.—The Act does away with rights of action for the recovery of compensation except in the case of persons who cannot avail themselves of its provisions. An employer who is individually liable for the payment of compensation may enter into an agreement with a workman or his dependants respecting the compensation to which they are entitled. Such agreement to be valid must have the approval of the Commission except in cases of temporary disability lasting less than four weeks. The Commission may always, on application of the workman or his dependants, or of its own motion set aside the agreement on such terms as it may deem just.

Deductions from wages are forbidden except as provided by the Act.

Notice of Accidents.—Notice of the accident must be given within six months, or in case of death, within six months of death, but failure to give such notice does not bar the right to compensation if the Commission deems the claim just. Employers must give notice of accidents to the Commission within eight days. The Commission may, at the request of employer or workman or of its own motion review any award. If the workman was under twenty-one years of age at the date of the accident and the review takes place more than six months afterwards, the amount of compensation may be increased to the sum to which he would have been entitled if his average earnings had, at the date of the accident, been equal to what, if he had not been injured, he would have been earning at the date of the review.

Where compensation is paid by the employer individually he may, with the consent of the workman or dependant and the authorization of the Commission, commute the periodical payments for a capital sum representing such payments and pay such sum to the Commission who will use it in any of the several ways laid down in the Act. Where compensation is paid from the accident fund, the Commission may advance to a workman or dependant in case of need such sum as the circumstances warrant.

Employers who are individually liable may be required to insure their workmen, and in case of default the Commission may insure such workmen and recover the amount paid from the employer.

Where the accident causes death or permanent disability and the employer is individually liable, the employer may be required to give security for the payments; or the employer or insurer may be required to pay the Commission such sums as, with interest at such rate as it determines, will be sufficient to meet future compensation payments. Such sum is placed in a special fund. If it is insufficient the employer is liable for the difference.

Benefits.—In case of death the maximum amount payable for funeral expenses is \$125. A monthly payment of \$40 and a lump sum of \$100 is granted to a widow, invalid widower or a suitable foster-mother, with an additional \$10 per month for each child under 16 years of age. Orphan children under 16 receive \$15 per month each. Payments to an invalid child are continued without regard to age for so long as the Commission considers the workman, had he lived, might have been expected to contribute to its support. Dependants other than the foregoing receive a sum determined by the Commission to be reasonable and in proportion to their pecuniary loss. Exclusive of burial expenses compensation may not be more than 66 $\frac{2}{3}$ per cent of the average earnings of the workman reckoned at a rate not exceeding \$2,000 per annum, but the total payment to a widow or invalid husband with one or more children may not be less than \$12.50 per week.

Compensation for permanent total disability is a weekly payment for life equal to 66 $\frac{2}{3}$ per cent of the average earnings of the workman reckoned at a rate not exceeding \$2,000 per annum. In case of permanent partial disability the benefit is a weekly payment for life equal to 66 $\frac{2}{3}$ per cent of the difference between the average weekly earnings of the workman before the accident and the average weekly amount which he is able to earn in a suitable employment or business after the accident. Where the impairment is less than 10 per cent a lump sum may be given. Temporary disability is, for its duration, compensable at the same rate as permanent disability. Compensation for total disability may not be less than \$12.50 per week unless the earnings of the workman are less than that amount when compensation equals the amount of earnings. Compensation for partial disability is to be determined on the same basis in proportion to the impairment of earning capacity.

Medical Aid.—In addition to the compensation payments the injured workman is entitled to medical aid which includes the necessary medical, surgical, nursing, and hospital

services, medicines and other pharmaceutical supplies as well as the furnishing and normal renewing for a period of one year of prosthetic and orthopedic appliances. The workman may choose his own physician and also his own hospital if there is more than one. The cost of medical aid is paid out of the accident fund or by the employer according to the Schedule in which the employer is included. The expense of transportation to a hospital is also to be borne by the employer. Employers' schemes for medical aid may be continued if approved by the Commission. Employers may be required to maintain a first-aid service approved by the Commission.

Rehabilitation.—The Commission is authorized to take necessary measures for the rehabilitation in industry of injured workmen, the cost to be paid out of the accident fund or by the employer individually as the case may be, the expenditure being limited to \$100,000 in any calendar year.

The Board.—The Act is administered by a Commission of three members appointed by the Lieutenant-Governor in Council one of whom as president receives a salary of \$10,000 per annum and the other two \$8,000 per annum. The salaries are paid out of the accident fund. The Commissioners hold office during good behaviour but may be dismissed upon a joint address by the two Houses of the Legislature. The Commission has authority to divide industries into classes according to risks, to fix rates of assessment, with preferential or merit rating in favour of industries having good accident records, and to collect premiums, decide claims and pay compensation. The Superior Court of the District of Quebec may upon summary petition of the Commission or of any interested party, homologate a decision of the Commission upon the depositing in the office of the Prothonotary of an authentic copy of such decision. Fifteen days after homologation the decision becomes executive as any other judgment. Judgments homologating decisions are final and without appeal. A workman desiring homologation of a decision in his favour may apply to the Superior Court of the district in which he lives. Subject to these provisions the Commission has exclusive jurisdiction in all matters arising under the Act, and no proceedings can be taken against its decisions nor against the Superior Court or a judge homologating its decisions.

Accident Fund.—The accident fund is made up of contributions from employers in the classes or groups included in Schedule 1 levied according to the payroll of each employer as shown by the annual statement

made to the Commission. The Lieutenant-Governor in Council may authorize the payment from the Consolidated Revenue Fund of a sum not exceeding \$100,000 per annum to assist in defraying expenses. Employers who are individually liable pay such proportion of the expenses of the administration of the Act as the Commission deems just.

Employers carrying on industries in Schedule 1 may form themselves into an association for accident prevention and may make rules for that purpose. If the Commission considers such association sufficiently representative it may approve such rules which, when approved by the Lieutenant-Governor in Council, are binding upon all employers in the industries in that class.

Employers in any class may appoint a committee of not more than five members to watch over their interest in matters relating to the Act.

Accidents happening before September 1, 1931, are compensable under the old Act.

Unemployed Aid

The Unemployed Aid Act, 1930, ratifies the agreement entered into between the Government of Canada and the Government of the Province on October 22, 1930, pursuant to The Unemployment Relief Act, 1930, passed by the Parliament of Canada during its September Session. The agreement which appears as Schedule A to the Act provides for the payment by the Dominion to the Province of a sum not exceeding \$2,850,000 towards the carrying on of public works by the Province and its municipalities for the relief of unemployment and for direct relief where suitable work cannot be provided. The conditions of payment are those set forth in the Regulations issued under the Federal Act including the clause requiring observance of the Fair Wages and Eight Hour Day Act and the Fair Wages Policy of the Government of Canada as set forth in P.C. 1206, June 7, 1922. The Unemployed Aid Act requires that this provision be included in every contract made by a municipality for the execution of works. The Act also authorizes the Provincial Government and the municipalities to borrow the sums necessary to cover expenditures made in carrying out their part of the agreement. The provisions of the Act apply in respect of any additional sum which may be placed at the disposal of the Provincial Government or the municipalities.

The Certain Works Unemployed Aid Act confirms and validates certain Orders in Council passed prior to the enactment of the Unemployment Aid Act. These authorized the

carrying out by the municipalities of works approved by the Unemployment Commission and permitted temporary loans subject to the enactment of the present legislation.

Labour Department

An Act to amend The Acts Respecting the organization of Departments, which comes into force on Proclamation, adds a new chapter to the Revised Statutes, entitled the Labour Department Act, providing for establishment of a Department of Labour in charge of a Minister of Labour. The Minister is charged with the duty of instituting and controlling inquiries into important industrial questions as well as into labour conditions and may collect statistics relating thereto and transmit them to the Quebec Bureau of Statistics. He also has charge of the carrying out of any Acts respecting riots near public works; disputes between employers and employees; municipal strikes and lockouts; employment bureaus; minimum wages for women; safety in public buildings; inspection of scaffolding; protection of the public from fire; installation of lightning rods; safety and inspection of industrial establishments; stationary engineers; weekly day of rest for industrial employees; labour accidents; Workmen's Compensation Commission; and, generally, every thing concerning artisans, workmen, day and manual labourers.

Labour Organizations

The Professional Syndicates Act was the subject of a number of amendments. The paragraph authorizing the establishment of benefit and pension funds was replaced by a new provision empowering syndicates to establish and administer special indemnity funds for the heirs or beneficiaries of deceased members, and special funds for superannuation, assistance in case of illness, unemployment or other funds of a similar nature which are to be governed exclusively by the by-laws approved by the Lieutenant-Governor in Council and subject to the conditions provided for by the Order in Council approving such by-laws.

A new paragraph authorizes syndicates to exercise before any court of law, all the rights of their members with respect to acts directly or indirectly prejudicial to the collective interest of the profession which they represent.

A new section provides that if it be stipulated in any contract that workmen or the members of a syndicate, union or federation of syndicates shall receive a stated wage, such workmen or members, although not a party to the contract, are entitled to the rate of wages therein stated, notwithstanding any renunciation thereto afterwards agreed upon by them, whether expressed or implied.

Another new section permits the groups who may appear before the courts and who are parties to the collective labour agreement to exercise all rights of action arising out of such agreement in favour of their members without having to establish a transfer of claim by the person interested, provided that the latter has been advised and has not declared that he was opposed thereto. The person interested may intervene at any time in the proceedings taken by the group. When an action arising out of the collective labour agreement is brought by a person or by a group, the other groups with authority to appear before the courts, whose members are bound by the agreement, may intervene at any time in the proceedings taken, on the ground of the collective interest which the result of the litigation may have for their members.

Silicosis

The Silicosis Act, 1931, which comes into force on September 1st, 1931, requires every person employed in the cutting, polishing or finishing of granite to have a certificate of fitness from a medical examiner appointed under the Act which must be renewed annually. The owner, manager, or superintendent of a workyard or a shop where the cutting and polishing of granite is carried on must furnish for his employees at his own expense such masks or other safety devices as are approved by the Minister of Mines as a protection against silicosis, and take such precautions as the Minister may prescribe. The Minister, with the approval of the Lieutenant-Governor in Council, may make regulations for the protection of workers in such processes from the diseases incidental to their work, and may extend the Act and Regulations to cover workmen engaged in the cutting, etc., of substances other than granite.

An amendment to the Mining Act which comes into force on September 1, 1931, requires every workman employed below ground in any mine or applying for such work to be examined for silicosis at least once in every twelve months by a medical officer appointed under the Workmen's Compensation Act. If the medical officer finds the workman to be free from tuberculosis of the respiratory organs he shall deliver a certificate to the workman. Such certificate remains in force for not more than twelve months and if the manager or superintendent of the mine so requires, it must be delivered to him and remain in his custody during the period of the workman's employment in the mine. A similar certificate is required in the case of a workman engaged in any ore or rock-crushing operations at the surface of a mine except where the ore or rock

is crushed in water or a solution and kept constantly moist. Workmen in employments for which certificates are required under the Act may not be employed unless possessed of them. The Director of Mines may exempt from these provisions any mine which does not contain silica in quantities likely to produce silicosis, or which for any sufficient reason he deems should be exempt. The Lieutenant-Governor in Council may make regulations prescribing the nature of the medical examination and the form of the certificate. Workmen who are employed underground for less than fifty hours per calendar month are exempt from the operation of the law. The penalty for contravention of the Act is fixed at \$20 and costs for each day of such contravention, or one month's imprisonment.

Civil Rights of Women

An Act to amend the Code of Civil Procedure and the Revised Statutes, 1925, respecting the Civil Rights of Women permits a married woman, whose husband is unwilling or unable to act, to take action alone to recover damages for personal injury. The Act further reserves to the entire administration of the wife the proceeds of her personal work, the economies therefrom, and the movable or immovable property acquired by her by investing same, as well as any compensation received by her in an action for damages for personal injury. The wife may demand such property and may alienate it by onerous title. Such property, however, does not include the earnings from work carried on jointly by the consorts. In the event of the wife abusing the powers conferred on her, in the interest of the household (especially in cases of dissipation, imprudence or bad management) the husband may obtain judgment for the withdrawal of such powers by petition to a judge of the Supreme Court of the district in which the consorts have their domicile. Creditors of the wife may proceed for the payment of their claims against such reserved property and the creditors of the husband or of the community may also do so for debts contracted in the interest of the household. The other property of the husband or of the community cannot be seized for debts contracted by the

wife other than in the interest of the household or with marital authorization. If there be legal or conventional community the reserved property is included in the partition of the community property. If the wife renounces the community she shall keep such property free of all debts except those for which it is liable as noted above and her heirs have the same power. If the wife or her heirs accept the community and the wife has disposed of the reserved property, but in fraud of the rights of the husband or his heirs, all reserved property so alienated or its value at the date of the dissolution, must be returned as part of the community. The wife may appear before the court without authorization in any suit or contestation respecting her reserved property. These provisions apply to women married before as well as after the coming into force of this Act.

Agricultural Schools

The Act respecting Agricultural Schools and the Construction of Warehouses and Concerning the Société Co-Opérative Fédérée des Agriculteurs de la Province de Québec was amended to raise the appropriation for the establishment, enlargement, furnishing and equipment of agricultural schools from \$600,000 to \$700,000.

Lord's Day Observance

On March 28th a resolution was adopted in the following terms:—

"That this House expresses the opinion that the continued and general violation of the Lord's Day Act, besides causing overproduction, tends always, to diminish respect for law and authority, civil as well as religious, and to favour the spread of Bolshevik ideas; that this House thanks the Government for having adopted the request which was made to it to have the said law better observed, and for having appointed two inspectors for that purpose; that, moreover, it considers that the Government should appoint as many qualified inspectors, reasonably remunerated, as required, to have this fundamental law respected, and that it respectfully requests the government to prosecute the transgressors with more severity than ever."

British Columbia

The Legislature of British Columbia was in session from February 11 to April 1, 1931, and enacted a considerable amount of legislation on subjects of labour interest including unemployment relief, regulation of coal mines, male minimum wages, workmen's compensation, weekly rest-day, boiler inspection,

threshers' liens, and mothers' and old age pensions.

The Unemployment Relief Act validates the two agreements entered into on October 14, 1930, and March 5, 1931, respectively between the Provincial Government and the Government of Canada pursuant to the Unemploy-

ment Relief Act, 1930, passed by the Dominion Parliament in September, 1930, and which appear as Schedule A. The agreements provide for the payment by the Dominion Government of a sum not exceeding \$1,100,000. The Act also validates all agreements with municipalities. Power is given to the Provincial Government to enter into further agreements.

An amendment to the Coal Mines Regulation Act requires an owner, agent or lessee, before commencing to open or develop a coal mine to submit to the Chief Inspector a plan of the proposed system of working, and forbids the commencement of operations until such plan is approved. No change may be made in the system without the Chief Inspector's approval.

Members of the professions whose members are incorporated under the laws of the Province were withdrawn from the scope of the Male Minimum Wage Act by an amendment to that Act.

The Workmen's Compensation Act was amended to provide for the payment of the salaries of the Commissioners out of the Accident Fund instead of out of the Consolidated Revenue Fund.

An amendment to the Weekly Half-holiday Act provides that in a municipality in which no day has been fixed for a weekly half-holiday on a referendum to the electors, the municipal council, on petition of at least ten per cent of the qualified voters, shall by-law, select two days and submit to vote of the electors as to which day shall be fixed as a weekly half-holiday. Referenda held previous to the passing of the amendment are validated and confirmed.

The Boiler Inspection Act consolidates and amends the law on this subject with but few changes. Pressure-vessels, and boilers and steam-heating plants with a capacity not exceeding thirty square feet of heating surface, are within the scope of the Act if used in an industry within the scope of the Workman's Compensation Act. Certificates of inspection of a steam-boiler are granted and the suspension of an engineer's certificate for default in pointing out defects in a boiler is effected by the Chief Inspector on report of an inspector instead of by the latter on his own authority as was formerly the case. A fine not exceeding \$50 is fixed as penalty for offences against the Act for which no other penalty is provided.

The Motor Vehicle Act was amended to require a chauffeur to have his permit in his possession at all times when driving or operating a motor vehicle on any highway and to produce it on demand of any police officer or constable.

Those sections of the Moving-picture Act which deal with the safety and inspection of moving-picture theatres, and the examination and licensing of cinematograph operators were repealed and re-enacted as from July 1, 1931, as Part IV of the Fire Marshal Act. All licensing of operators and apprentices and the inspection and regulation of premises are in the hands of the Fire Marshal.

The Hairdressers Act was amended to provide for the registration of students in hair-dressing and for the inspection of premises by the Board of Examiners or some person delegated by it.

An amendment to the Barbers Act provides for inspection of barber shops, barber schools and barber colleges by the Board appointed under the Act, which is empowered to make rules governing the sanitary regulation of such establishments. The Board may revoke a certificate of registration or temporary permit if the holder employs as barber or apprentice any person not possessed of a permit issued under the provisions of the Act. A temporary permit entitles the holder to work as a journeyman barber only.

The Threshers' Lien Act gives the thresher a first lien on the grain handled.

The Mothers' Pensions Act as consolidated and amended comes into force on Proclamation and will be administered by an officer known as the Superintendent of Welfare in the Department of the Provincial Secretary. Other changes include a residence qualification of three years instead of eighteen months as formerly. The amount of real property used as a home which a mother may own without being excluded from the benefits of the Act was raised from \$1,500 to \$2,000.

An amendment to the Superannuation Act which comes into force on April 1, 1931, provides for its administration by a Superannuation Commissioner instead of by the Civil Service Commissioner.

The Old Age Pension Act was amended to provide for the payment by the Dominion to the Province of a sum greater than one-half of the cost of pensions.

Ontario

The Ontario Legislature which was in session from February 12 to April 2, 1931, passed laws dealing with unemployment and granting compensation to blind workmen, and amended statutes relating to workmen's compensation, Department of Labour, apprenticeship, vocational education and mothers' allowances.

The Unemployment Relief Act (Ontario), 1931, validates agreements made between the Provincial Government and the Government of Canada and between the Provincial Government and the municipalities pursuant to the Unemployment Relief Act passed by the Government of Canada in September, 1930, also an Order in Council dated October 14, 1930, containing recommendations for the administration of the Unemployment Relief Fund. These documents appear in the Schedules to the Act. The agreement with the Dominion Government provides for the payment of a sum not exceeding \$3,850,000 towards the cost of public works and undertakings. The Act authorizes municipalities to issue debentures to defray the cost of work undertaken in pursuance of an agreement without obtaining the consent of the electors thereto. The Act also appropriates a sum not exceeding \$4,000,000 for relief works and \$500,000 for direct relief.

The Blind Workmen's Compensation Act provides for the payment from the Consolidated Revenue Fund of the Province, to the Workmen's Compensation Board or the employer as the case may be, of the full cost of compensation for an accident to a blind workman where such cost exceeds \$50. Payment is made on a certificate of the Board. The assessment on an employer to be levied by the Board on the wages of a blind workman is to be fixed at such amount as is deemed fair, having regard to the provisions of the Workmen's Compensation Act. The Canadian National Institute for the Blind is given exclusive jurisdiction as to the nature of the work a blind workman shall do and as to his proper placement. Upon recommendation of the Workmen's Compensation Board, however, the Lieutenant-Governor in Council may designate any other organization or institution, to execute the powers and perform the duties assigned to the Institute. An employer giving employment to a blind workman with-

out the consent or approval of the Institute or changing the nature of such employment when once approved, is deemed to have waived benefit in respect of such workman. Officers of the Institute are to have access at all times to the place of employment of a blind workman with the knowledge and consent of the superintendent or foreman.

The Workmen's Compensation Act was amended by the removal of miners' phthisis from the Schedule of industrial diseases as from January 1, 1932.

An amendment to the Department of Labour Act authorizes the Minister of Labour, with the approval of the Lieutenant-Governor in Council, to make regulations for the protection of workmen engaged on work in the construction of which men are employed in compressed air, and also in the construction of tunnels and open caisson work.

The Apprenticeship Act was amended to alter the definition of "Employer" to overcome an interpretation to the effect that an employer need not contribute to the apprenticeship fund unless he had apprentices.

The School Law Amendment Act, 1931, amends the Vocational Education Act to empower the Minister to join two or more municipalities to form one vocational school district.

An amendment to the Companies Act enables companies to provide for the purchase of shares for the benefit of employees and to make loans to employees for the purchase of such shares.

The Municipal Act was amended to permit councils of towns and villages and boards of commissioners of police in cities to pass by-laws for licensing, regulating and governing persons selling newspapers and magazines upon a highway.

The Statute Law Amendment Act amends the Mothers' Allowances Act to authorize investigators in unorganized districts to take affidavits, etc.

A Bill providing for superannuation and benefit funds for firemen similar to the one introduced last year was dropped on recommendation of the Committee.

A Bill for the regulation of barber shops was withdrawn on motion for second reading.

In the report of the proceedings at the recent 13th Annual Convention of the Canadian Construction Association, which appeared in the LABOUR GAZETTE, February, 1931, it was stated that the convention had approved a

proposed resolution in favour of a five-day working week. It now appears that this statement was not correct, the resolution having represented the opinion of a section of the Association and not being adopted by the Association as a whole.

TRADE UNIONISM IN CANADA IN 1930

Synopsis of the Twentieth Annual Report on Labour Organization

THE Twentieth Annual Report on Labour Organization in Canada, being for the calendar year 1930, which has just been published by the Department of Labour, divides the labour bodies operating in Canada into six classes as follows: (1) Local branches of international craft organizations, having headquarters in the United States; (2) The One Big Union, an international industrial union, with headquarters in Winnipeg; (3) Local branches of the Industrial Workers of the World, a revolutionary industrial union which seeks to abolish the wage system, with headquarters in Chicago; (4) Canadian central labour organizations; (5) Independent trade union units, and (6) National Catholic Unions.

The international craft union group consists of the Canadian members of 84 organizations, one less than in 1929, and has 1,946 branches in the Dominion (a loss of 7), with a combined membership of 203,478 (a decrease of 36). The One Big Union reported 45 local units in Canada (a gain of 2), with a membership of 23,724 (an increase of 834). The Industrial Workers of the World claims 6 branches in the Dominion, the same number as in 1929, with 3,741 members, a decrease of 234. The group of Canadian central organizations, numbering 27 (an increase of 2), have between them 673 local branches (a gain of 34) with a combined membership of 57,168 (a gain of 3,891). The independent units number 31, the same as in 1929, the combined membership of which is 9,338, a loss of 1,482. The National Catholic group of unions number 108 (a gain of two), their combined membership being reported at 25,000, the same number as in the previous year. The net increase in branches for 1930 was 31, and the gain in membership was 2,973, making a grand total of 2,809 branches of all classes of unions in Canada, with a combined reported and estimated membership of 322,449. According to the latest estimate of population, trade unionists represent 3.25 per cent of the people in the Dominion; counting the 105,037 members comprised in the 106 non-trade union associations whose names appear in the report, organized wage-earners in Canada at the close of the year 1930 represented 4.30 per cent of the population.

The accompanying chart, which is taken from the report, indicates the fluctuations in the number of trade unionists in Canada from 1911 to 1930, the period covered by these annual reports on labour organization. Another chart published in the report shows that the

322,449 trade union members in the Dominion are divided by trade groups as follows:—

Railroad employees, 98,923 members, or 30.63 per cent of the total.

Building trades, 40,710, or 12.63 per cent.

Public employees, personal service and amusement trades, 32,384, or 10.04 per cent.

Mining and quarrying, 27,178, or 8.43 per cent.

Other transportation and navigation trades, 23,898, or 7.41 per cent.

Metal trades, 18,180, or 5.64 per cent.

Clothing, boots and shoes, 16,841, or 5.22 per cent.

Printing and paper making trades, 15,955, or 4.95 per cent.

All other trades and general labour, 48,380 members, or 15 per cent.

The report points out that the railroad employees' group contains a large number of metal trades workers who are not employed in railroad shop work and should be included in the metal trades group, but it was impossible to secure separate figures.

There are thirteen international craft unions with 5,000 or more members in Canada, with a combined membership of 134,536, comprised in 959 local branches.

Trade Union Membership by Provinces.—The division by provinces of the 2,809 branch unions of all classes is as follows: Ontario, 1,076; Quebec, 502; Alberta, 283; British Columbia, 275; Saskatchewan, 217; Manitoba, 187; Nova Scotia, 139; New Brunswick, 120, and Prince Edward Island, 11.

Trade Union Membership in Canadian Cities.—Thirty-seven cities in Canada have not less than 20 local branch unions of all classes. They represent about 61 per cent of the local branches in the Dominion and contain nearly 55 per cent of the total trade union membership. Montreal occupies first place with 193 branches, 159 of which reported 47,034 members; Toronto ranks second with 145 branches, 114 of which reported 31,592 members; Vancouver stands third with 111 branches, 96 of which reported 16,138 members; Winnipeg comes fourth with 110 branches, 81 of which reported 14,214 members; and Calgary is fifth with 77 branches, 63 of which reported 5,830 members. The remaining 32 cities in order of number of branches are: Quebec, 72 branches, 52 reporting 5,985 members; Edmonton, 69 branches, 60 reporting 5,725 members; Ottawa, 62 branches, 52 reporting 4,544 members; Hamilton, 61 branches, 54 reporting 5,351 members; London, 56 branches, 46 reporting 4,000 members; Victoria, 48 branches, 38 reporting, 2,294 mem-

TWENTY YEARS OF TRADE UNIONISM IN CANADA

MEMBERS

bers; Regina, 48 branches, 41 reporting 2,225 members; St. John, 44 branches, 40 reporting 2,921 members; Halifax, 41 branches, 33 reporting 2,755 members; Saskatoon, 38 branches, 31 reporting 2,187 members; Windsor, 37 branches, 29 reporting 2,088 members; Moose Jaw, 34 branches, 29 reporting 1,884 members; Lethbridge, 30 branches, 29 reporting 2,024 members; Port Arthur, 29 branches, 22 reporting 2,151 members; St. Thomas, 29 branches, 25 reporting 1,887 members; Fort William, 29 branches, 24 reporting 1,538 members; Sherbrooke, 28 branches, 17 reporting 777 members; North Bay, 26 branches, 23 reporting 1,767 members; Brandon, 26 branches, 19 reporting 892 members; Moncton, 24 branches, 23 reporting 3,104 members; Sault Ste. Marie, 23 branches, 19 reporting 1,001 members; Stratford, 21 branches, 19 reporting 1,736 members; Three Rivers, 21 branches, 19 reporting 1,562 members; Brantford, 21 branches, 17 reporting 609 members; Kitchener, 21 branches, 17 reporting 408 members; Sarnia, 20 branches, 20 reporting 949 members; Hull, 20 branches, 14 reporting 726 members; St. Catharines, 20 branches, 16 reporting 700 members; Kingston, 20 branches, 16 reporting 628 members; Brockville, 20 branches, 14 reporting 475 members; Guelph, 20 branches, 15 reporting 437 members; and Peterborough, 20 branches, 14 reporting 309 members.

Of the 2,271 branch unions which reported their membership 26 have over 1,000 members, three more than the number in this class in 1929, the reporting branch with the largest following having 3,412 members.

Trades and Labour Congress of Canada.—This body was originally established in 1873, and is the recognized head of the internationally organized wage-earners in the Dominion. The American Federation of Labor and 60 of its more important affiliates have affiliated the whole of their Canadian membership by paying to the congress the regular *per capita* tax. A number of local branches of international organizations which had affiliated individually also paid *per capita* tax. The congress has under direct charters three Canadian central organizations, two provincial federations of labour, 38 trades and labour councils, and 42 local unions, the total membership being 168,250.

All-Canadian Congress of Labour.—This congress, which was formed in March, 1927, absorbed the Canadian Federation of Labour, and was organized in direct opposition to the old-established Trades Congress. The affiliates of the All-Canadian body number eleven

central organizations, including the Canadian Brotherhood of Railway Employees, together with 27 directly chartered local unions, and 14 labour councils, the whole membership numbering 27,963.

National Catholic Unions.—These bodies had their inception in Quebec in 1902, and in 1921 the Federation of Catholic Workers of Canada was established, with the object of giving a lead to the national Catholic union movement. The bulk of the membership of the national Catholic unions is located in the province of Quebec. At the close of 1930 there were 101 local unions and 7 study circles, their combined membership being reported at 25,000.

The report makes extended reference to the various classes of delegate bodies which have been formed as part of the plan of labour organization in North America with a view to co-ordinating the activities of unions of closely allied or particular trades in dealing with matters of like concern to all members of the bodies represented.

Organized Workers in the World.—Besides the figures published in the report giving the membership of labour organizations in Canada and the United States, information is included showing the standing of organized workers in 63 other countries, the grand total for the 65 countries being 46,872,902. The following are the figures for the various countries:

Argentine..	112,000
Australia..	911,541
Austria..	909,137
Belgium..	724,408
Bolivia..	5,000
Brazil..	116,500

United States..	3,768,567
Yugoslavia..	60,044

Revolutionary Labour Organizations.—The chief revolutionary political organization, the report states, is the Third (Communist) International, which was formed in Moscow on March 6, 1919. As a medium through which to propagate its doctrine in the labour unions the Communist International established in July, 1920, the Red International of Labour Unions, which proclaims itself to be "an international which, together with the Communist International, will organize the working class for the overthrow of capitalism, the destruction of the bourgeois state and the setting up of the dictatorship of the proletariat, an international which will seize all the means of production and establish the communist commonwealth." The communist International since its inception has stressed the importance of its members maintaining close contact with the trade unions, which it terms the natural link between the Communist Party and the working class, and it is only through this agency, it is stated, that the party can successfully propagate its principles. The representative in the Dominion of the Communist International is the Communist Party of Canada (originally the Worker's Party), with headquarters in Toronto, which recognizes the Moscow body as the only real centre of world revolutionary activities.

As an aid to the propagation of the communist doctrine among the Canadian youth there is the Young Communist League, a body which was formed under the auspices of the Communist Party, and which is af-

filiated with the Young Communist International of Moscow, and for the younger children there is a body known as the Young Pioneers.

The official representative in America of the Red International of Labour Unions is the Trade Union Unity League, originally known as the Trade Union Educational League, which with its re-organization under the new name has made provision for the setting up of industrial unions on a dues-paying basis, a plan entirely opposite to the original scheme of the league. The "boring from within" process, which adherents in Canada of the Red International had for some time carried on in trade unions of which they were members, having in many cases resulted in their expulsion, leaving them without opportunity to carry on communist propaganda in the ranks of organized labour, they have formed what they term the Workers' Unity League, which is the Canadian section of the Red International of Labour Unions, designed to organize the workers in Canada into revolutionary industrial unions, and is pledged to the program and policy of the Russian body. Two Canadian central industrial unions are known to be identified with the Workers' Unity League, and it was stated that there were some local unions connected with it, but no definite information was obtainable.

During 1930 raids were made by the police on offices of the Communist Party in three cities, *The Worker*, the communist organ, declaring in regard to the raid in Winnipeg that "This is one of the clearest expressions of the sharpening class struggle in Winnipeg. The situation has become extremely acute, and the workers showing a readiness for struggle that has not been evident for a long time."

International Federation of Trade Unions.—Reference is made in the report to the International Federation of Trade Unions, a body established in 1901 and reorganized in 1919 with the object among others of uniting the international working class and the promotion of the interests and activities of the trade union movement. The labour movement of the Dominion as represented by the Trades and Labour Congress of Canada is affiliated with the federation, and the president of the Congress is a member of its General Council. The I.F.T.U. has in affiliation the trade union centres of 28 countries, with a combined membership of approximately 14,000,000, as well as a similar number of international trade secretariats. The report points that the Red International of Labour Unions, which, it has been stated, was

formed for the purpose of destroying the International Federation, had attacked the last named body, and its officers, declaring that it was incapable of uniting the working classes of the world and was only an appendage of the International Labour Office.

Industrial Workers of the World—The report refers to the Industrial Workers of the World, usually referred to as the I.W.W., a body which declares itself to be an advocate of what is termed revolutionary industrial unionism, with its objective the abolition of the wage system. At its inception the organization claimed to have a strong following, but dissension arose in the ranks, and with the prosecution in 1918 of a large number of its members by the United States Government on the charge of interfering with the war-time measures of the Republic, the membership of the I.W.W. gradually fell off. Some of those who were convicted in 1918 subsequently accepted conditional pardons, an action which led to a court case, the holding of a special convention and the expulsion of certain recalcitrant members, who later set up a dual I.W.W. under the title of "Emergency Program." In 1905, the year the organization was formed, the membership was reported at 400,000. At the close of 1930 the membership was given at 23,993, of which 3,741 members belonged to the six Canadian branches.

Labour in Politics.—The report makes reference to the declaration of the Trades and Labour Congress of Canada in 1887 for independent political action on the part of organized labour, it being contended that "the working classes of the Dominion will never be properly represented in Parliament or receive justice in the legislation of the country until they are represented by men of their own class." Although a number of labour candidates were subsequently elected to various offices in some of the industrial districts, it was not until 1921 that the Canadian Labour Party was formed. A number of provincial sections were established, and under their auspices candidates were nominated for office, and in some instances were elected. In 1927 the secretary of the party since its inception resigned because his name had been removed by the Toronto Central Council of the C.L.P. (which it was alleged was dominated by communists) from the party nomination for controller in the Toronto municipal election. Since the secretary's retirement the main party has ceased to function, the British Columbia section has dissolved, and the Nova Scotia and Ontario

sections have not met since 1928, leaving only two sections—Quebec and Alberta—in existence.

British Columbia, Manitoba and Ontario have independent labour parties, that in the last named province having been formed by delegates to the 1927 convention of the Ontario section of the C.L.P. who objected to a number of revolutionary resolutions. In some of the other provinces there are labour political organizations operating under different names, the activities of some of which are confined to the principal cities, and in all of which except the sections of the C.L.P. individual membership is accepted. The All-Canadian Congress of Labour in 1930 went on record in favour of the members of its chartered and affiliated unions participating actively in politics. Of twelve Labour candidates who contested seats for the House of Commons in the 1930 election three were elected. Ten candidates of the Communist Party were also nominated, but all were defeated. In the Alberta provincial election of 1930 there were eleven Labour candidates, four of whom were elected. The four nominees of the Communist Party were defeated. There were 89 candidates nominated or endorsed by labour political parties or organized labour bodies for municipal office in 23 localities. Of these 41 were successful, the offices to which they were elected being: Mayors, 4; controllers, 2; commissioners, 1; aldermen, 21, and school trustees, 13. There were 12 communist candidates for municipal office, but all were defeated.

Trade Union Benefits.—Information is given in the report in regard to disbursements for trade union benefits. Of the 27 Canadian central labour organizations ten reported payments of benefits in 1930, the total expenditure being \$56,936.18, an increase of \$2,722.18. Of the 86 international bodies with branches in Canada 64 reported having disbursed \$28,079,856 for benefits, an increase of \$190,964. The expenditures in 1930 for the various benefits were:

Death benefits.	\$15,243,936
Unemployed and travelling benefits.	294,861
Strike benefits.	1,003,187
Sick and accident benefits.	3,408,436
Old age pensions and other benefits.	8,129,436

Besides the amounts expended by headquarters of the international organizations the report gives information showing that 670 of the local branch unions in Canada made benefit payments to their own members from their own funds, as did also 113 branches of Canadian bodies, 16 independent units and 29

national Catholic unions, the total disbursements being \$479,161, an increase of \$33,534 over the expenditures for the same purpose in 1929. The outlay for 1930 by the local branches for the classes of benefits named was:

Death benefits	\$161,445
Unemployed benefits	66,419
Strike benefits	21,352
Sick and accident benefits	171,867
Other benefits	58,008

Non-Trade Union Associations.—The report also contains the names of a class of associations which are not identified with organized labour, but in the main embrace wage-earners.

There are 106 of such bodies, chief of which are those comprised of school teachers, government employees and commercial travellers, the combined membership being 105,037.

Trade Union Directory.—The Twentieth Annual Report on Labour Organization, like earlier issues, forms a complete labour directory, embracing in its pages not only the names and addresses of the chief officers of local branch unions and delegate bodies in the Dominion, but also those of the central organizations with which the Canadian trade unionists are identified.

Handbook of American Trade Unions

The United States Department of Labour recently published the 1929 edition of its Handbook of American Trade Unions, bringing up to date the Handbook first published in 1926. The new volume deals only with *bona fide* national labour organizations, omitting local unions, works councils and company unions. The organizations included in the Handbook number 146—106 of these being affiliated to the American Federation of Labor.

The total membership of the international unions in the American Federation of Labor is given as 3,485,141. This, together with 25,286 additional in directly affiliated local unions, gives the American Federation of Labor a total membership of 3,510,427. The membership of unions outside the federation, including the Industrial Workers of the World, is 820,824, giving an aggregate of 4,331,251, in-

cluding the Canadian members. Eliminating the Canadian members from this total, the report estimates that there are 4,139,934 union members in the United States and its possessions.

This figure does not include three new organizations formed during the year, whose membership was not known. Two of these are secessionist groups, and because their inception was so recent their stability was considered by the compilers of the report to be problematic. The three organizations in question are the National Textile Workers' Union, the National Miners' Union and the Needle Trades Workers' Industrial Union.

A brief account is given of the history, organization and aims of each organization coming within the scope of the handbook.

General Motors Group Insurance Plan

The General Motors Corporation recently announced the extension of its group insurance plan to the dealers of General Motors of Canada and their employees, a total of approximately 7,000 in the Dominion. This plan was summarized in the LABOUR GAZETTE, January, 1927, page 63. References in the LABOUR GAZETTE to other employees' benefit plans which General Motors have established in recent years include the following: employees' stock ownership, March, 1929, page 297; employees' savings and investment, March, 1925, page 269, and April, 1925, page 367.

According to the announcement in the press, the group policy totals half a billion dollars and covers a total of 300,000 employees of General Motors in Canada, the United States and other countries. Payments already made in Canada and other countries to date under the group policy amount to nearly \$8,000,000 in life insurance benefits and nearly \$3,000,000 in disability benefits. All regular dealers in

General Motors cars and other products in Canada, with their employees, are eligible now under the group plan. It is required that a minimum of 75 per cent of the employees of individual dealers must subscribe, but it is believed that the number voluntarily applying will be more like 95 per cent of the total. The cost of the insurance is shouldered jointly by the dealer and the employee. For classes of employees earning less than \$3,000 annually, the cost is only about three cents a day, and the employer contributes about half that much. The employers benefit through the greater efficiency and continuity of service resulting to the staff. Other than this, no benefit whatsoever accrues to General Motors by the extension of the group plan. No medical examination is required and participation is free of the usual technicalities and limitations. The minimum policy is \$2,000. Monthly payments in the case of disability are \$52.50.

LABOUR UNION ACTIVITIES

International Brotherhood of Paper Makers

The thirteenth convention of the International Brotherhood of Paper Makers, was held in Montreal, Que., March 3-6, 1931, with approximately fifty Officers and delegates in attendance.

In his opening address, President M. J. Burns reviewed conditions as they existed throughout the whole paper making industry, and explained the difficulties confronting the organization. He informed the delegates that owing to the highly developed state of the industry and an under-consumption at the present time, the many members were faced with two alternatives, either to accept a reduction in wages or to stop work, thereby closing down the mills completely. The president regarded some plan of co-operation between employers and employees as the only solution of present conditions. The making of kraft from sulphite obtained from Russia was another factor to be considered, as it made possible the manufacture of this paper close to the market, thereby gaining an advantage over mills, which though situated near the source of the raw material, have to ship their paper a considerable distance to the markets. This being the case, the president was of the opinion that eventually all the Canadian mills would have to go back to a closer proximity to the markets.

A joint meeting was held with delegates attending the convention of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers which was also meeting in Montreal, and at which addresses were delivered by Ma. J. T. Foster, President of the Montreal Trades and Labour Council; Jas. Starr, secretary of the United Textile Workers of America, and Mr. Tom Moore, president of the Trades and Labour Congress of Canada.

The section of the constitution specifying that two representatives on the executive board shall be stationed in Canada was changed to read "Canada or Newfoundland".

Resolutions were adopted: forbidding local unions to use their funds to sustain political campaigns; suggesting that printers and pressmen exert their influence to persuade publishing companies to use union-made paper; and making the following recommendations:—Governmental unemployment insurance, sustained by contributions of the employer, the worker and the government; an increase in the *per capita* tax, ten cents of this to be used for organizing purposes only; that an expelled member of any organization affiliated with the

American Federation of Labour shall not be eligible to become an officer or organizer of the Brotherhood; an increase in the salary of the international secretary of \$500 per annum; a work-day of six hours for all members; that conventions be held biennially, commencing the first Monday in March, 1933, and every second year thereafter. A resolution favouring the holding of conventions quadriennially, commencing on the first Tuesday in March, 1935, and every fourth year thereafter, was defeated, but as a sufficient number of local unions endorsed the proposal, it will be sent to a referendum vote of the membership.

International Brotherhood of Pulp, Sulphite and Paper Mill Workers

The fourteenth convention of the International Brotherhood of Pulp Sulphite and Paper Mill Workers was held at Montreal, March 3-6, 1931, with approximately fifty delegates in attendance. President John P. Burke occupied the chair. After receiving the report of the credential committee a joint meeting was held with delegates to the convention of the International Brotherhood of Paper Makers which was also meeting in Montreal.

On resumption of business, a message was read from President William Green of the American Federation of Labour, in which the organization was urged to declare for the maintenance of high wages, a five-day work week, anti-injunction legislation, work security, and the shorter work day.

President Burke reviewed the various phases or periods in the organization's evolution. He made reference to the wage conference held in Montreal beginning March 10, 1930, at which the following resolutions were adopted recommending:—(1) the five-day work week; (2) a minimum of forty-five cents an hour; (3) that an effort be made to secure an agreement at Kapuskasing, Ont.; (4) that all day workers receive time and one-half after eight hours work. The delegates were informed that in only two mills of those under union shop agreement were wage schedules reduced during 1930.

Mr. James Starr, secretary of the United Textile Workers of America, spoke on working conditions in the Southern States, while Mr. Tom Moore, President of the Trades and Labour Congress of Canada, referred to the efforts of the Congress to secure remedial legislation for the workers and appealed for a broader understanding of labour problems on the part of trade unionists.

Resolutions were adopted recommending:— (1) the formation of united shop committees, composed of representatives of all crafts and departments in the mill; (2) the enactment of unemployment, sickness and invalidity insurance legislation; (3) enactment of the anti-injunction bill now before Congress of the United States; (4) the release of Tom Mooney and Warren Billings; (5) a Federal unemployment insurance Act which will provide sufficient maintenance for unemployed workers and their dependents.

Officers elected were: president, John P. Burke, Fort Edward, N.Y.; first vice-president, Maurice LaBelle, Ottawa, Canada; second vice-president, H. W. Sullivan, Worcester, Mass.; third vice-president, J. W. Taylor, Topsham, Me.; fourth vice-president, William Burnell, Espanola, Ont.; fifth vice-president, Alex. Gibson, Port Arthur, Ont.; sixth vice-president, Harry Beach, Iroquois Falls, Ont.; Treasurer, B. Doody, Palmer, N.Y. The president and second vice-president were elected delegates to the American Federation of Labour convention, while Maurice LaBelle, with Alex. Gibson alternate, was elected delegate to the Trades and Labour Congress of Canada convention.

Order of Sleeping Car Conductors

The fifth triennial convention of the Order of Sleeping Car Conductors was held at Kansas City, Missouri, on March 9-13. With forty-one delegates present, representing all active divisions of the organization. The reports of the various executive officers were received and approved by the convention.

The compulsory insurance plan, providing for the payment of \$1,000 on death or for total permanent disability, which had been in effect from the date of organization, was replaced by a group insurance scheme, which provides for a \$1,000 policy but on a voluntary basis and separate from the organization, effective April 1, 1931. All reference to insurance was eliminated from the constitution.

Instalment Credit in the United States

The average American family is nearly \$400 in debt, according to Evans Clark, writing in the *Nation's Business*, May, 1931. The recent National Retail Credit survey conducted by the Bureau of Foreign and Domestic Commerce indicates that the American public pays cash for only 58 per cent of its retail purchases. The remaining purchases are made on credit. Three-quarters of the credit is of the so-called open book account variety—32 per cent of the total purchases of the na-

The subject of establishing a home at Steamboat, Col., for sick and disabled conductors, members of the organization, which had been tabled at the previous convention, was again introduced, but the proposal was defeated.

In substituting Porters-in-charge for Conductors in regular line service, the convention went on record as recognizing this policy of the Pullman Company as being in violation of the intent of the agreement governing wages and working conditions. It was claimed that the removal of conductors constituted a menace to the travelling public from the standpoint of safety, as the porter's time was fully occupied with his own work, without taking on the added responsibility of the conductor's duties.

Chief officers elected were: President, M. S. Warfield, 107 West Linwood Blvd. Kansas City, Mo.; Secretary-treasurer, W. O. Murphy, 107 West Linwood Blvd., Kansas City, Mo.

Winnipeg Unions Unemployment Conference

A provisional plan of unemployment insurance was presented for the consideration of delegates to the Winnipeg Trade Unions Unemployment Conference which was held on April 18 at Winnipeg. According to a press report, there were 57 delegates present from various trade unions in the city. The provisional plan, which was prepared by a special committee, contains a total of 21 clauses. Federal, obligatory and contributory in nature, the scheme provides for 18 weeks' unemployment insurance in the year, subject to extension. Administration would be by a national advisory board, on which employers and employees would have equal representation. In the case of a strike against wage reductions, employees would be eligible for insurance, but in a strike for wage increases no insurance would be paid.

This scheme is to be distributed among all delegates and will be presented for endorsement at a subsequent meeting.

tion. If the total retail purchases are about 48 billion dollars—Copeland's estimate in *Recent Economic Changes*—and if the concerns covered by the Government's recent survey are representative, the open-account credit extended each year probably totals 15 billion dollars. The National Retail Credit Association estimates that the average rate of turnover in accounts of this kind is 70 days. If this estimate be accurate, it indicates that open book accounts outstanding at any one time total about three billion dollars.

UNEMPLOYMENT RELIEF ACT, 1930

Relief Provided in Co-operation with Provinces, Municipalities and Railway Companies

AN account was given in the **LABOUR GAZETTE**, September, 1930, of the special session of the Parliament of Canada summoned especially to deal with problems arising out of exceptional economic conditions with resultant unemployment, and of the enactment during that session of the Unemployment Relief Act. Particulars of the expenditures approved have been given from month to month in subsequent issues.

The following joint expenditures having been approved by the Minister of Labour up to May 10:

Province	Total cost of public works and undertakings
Prince Edward Island.....	\$ 200,000
Nova Scotia.....	2,338,873
New Brunswick.....	1,449,349
Quebec.....	10,176,600
Ontario.....	15,533,146
Manitoba.....	2,563,761
Saskatchewan.....	2,901,407
Saskatchewan (Drought Area).....	1,014,545
Alberta.....	2,839,232
British Columbia.....	3,445,794
Yukon.....	20,000
Grade Crossing Fund.....	2,445,312
Canadian Pacific Railway.....	11,514,000
Canadian National Railways.....	14,119,403
Dept. of the Interior (Parks).....	37,000
Banking Nova Scotia Coal.....	150,000
	70,746,422

The various Provinces, Railway Companies and Departments of the Government, which are co-operating under the Unemployment Relief Act, 1930, have furnished statistics showing the actual volume of employment given to April 30, 1931. Details for each Province are as follows:

Locality, etc.	(1) Individuals given employment	Number of man-days work given
Nova Scotia.....	31,161	416,770
Prince Edward Island.....	1,317	9,374
New Brunswick.....	18,000	220,000
Quebec.....	72,847	846,148
Ontario.....	43,000	2,234,000
Manitoba.....	25,150	257,965
Saskatchewan.....	21,385	502,241
Alberta.....	19,340	317,751
British Columbia.....	29,982	563,552
Yukon.....	150	2,096
Canadian Pacific Rly. Co.....	6,496	182,033
Canadian National Rlys.....	3,862	99,646
Totals.....	272,690	5,651,576

(1) This figure does not include repeaters, i.e. no one individual is counted more than once although he may have been laid off and re-employed.

It will be seen from the above figures that at least 272,690 individuals have been given employment and 5,651,576 man-days work from the commencement of operation, under the Unemployment Relief Act, to April 30, 1931.

It may be observed that the above figures take no account of individuals engaged in the production and distribution of the materials of all kinds which have been necessarily involved in the construction of the public works and undertakings which have been so far carried on.

The following figures show the number of families and individuals reported by the Provinces as having received direct relief to April 30, 1931.

Province	Families granted direct relief	Individuals granted direct relief
Nova Scotia.....	2,750
Prince Edward Island.....	275
New Brunswick.....	300
(1) Quebec.....	33,480	including 170,681
(2) Ontario.....	19,000
Manitoba.....	39,900
Saskatchewan.....	16,841
Alberta.....	5,890	and 17,376
British Columbia.....	5,117	and 14,103

(1) In addition to above the Cities of Montreal and Quebec report having given 273,767 nights' lodgings to single men and 1,577,296 meals.

(2) Including individuals.

Port Arthur Technical School

The Port Arthur Technical School was built quite a few years ago to accommodate 450 pupils. To-day, there are 719 on the rolls and it is expected that in 1932 the total will reach 842, this estimate being based on the rate of increase in the years since the school was opened. The Board of Education is now considering plans for a large addition. One proposal is for an addition to the Collegiate Institute, which would have to be financed by the city entirely itself, and an other is for an addition to the technical school which would be assisted by grants from the Provincial Government. There are 678 pupils in attendance at the Collegiate Institute. The Advisory Vocational Committee has authorized an architect to draw plans for the proposed addition to the technical school and when passed upon by the Board will be submitted for approval to the Department of Education.

PROPOSED FEDERAL SYSTEM OF INSURANCE AGAINST UNEMPLOYMENT, SICKNESS, AND INVALIDITY

Contributory System to be Introduced at Earliest Possible Moment

A MOTION was proposed in the House of Commons on April 29 by Mr. A. A. Heaps (Winnipeg North) in the following terms:—

"That, in the opinion of this House, the government should take into consideration the immediate establishment of a federal system of assurance against unemployment, sickness and invalidity".

Mr. Heaps pointed out that unemployment cannot be eradicated, and that it is "an inherent defect of the economic structure". "Cycles of prosperity", he said, "are always followed by periods of depression and in those periods there are wholesale dismissals in our factories, our workshops and our warehouses with the result that vast numbers of men and women all of a sudden are deprived of their livelihood....Our industrialists generally make provision for replacement depreciation and reserve. The fund set aside for replacement and depreciation is to take care of machinery and equipment. The reserve is for the purpose of tiding over the industry in times of industrial depression. But what of the human element in industry? The working man is hired and fired at will, without any regard for his well-being. Usually he is employed at wages which are barely at the subsistence level, and in no way sufficient to allow of his setting aside a reserve for unforeseen expenditures such as medical care, sickness and disability."

Referring to constitutional difficulties Mr. Heaps expressed the opinion that "just as we overcame the question of conflicting federal and provincial jurisdiction in dealing with the problem of old age pensions, so can we overcome it in adopting a system of social insurance. I think if this Parliament would give a lead we could obtain the sympathetic co-operation of practically all the provinces, because unemployment is not a provincial, it is not a municipal, it is a federal problem. Unemployment is not due to what is being done municipally or provincially, it is largely the result of policies for which this Parliament is more or less responsible. Consequently I am anxious that any scheme of unemployment insurance that we may institute should be federal in scope."

The Prime Minister's Statement

The Right. Hon. R. B. Bennett first referred to the constitutional question, stating his opinion that "as has been pointed out by the provincial premiers, there is no reason to doubt

that with the joint action of the provinces and the Dominion some satisfactory solution of this problem can be found. It has been suggested that a conference should be called between the provinces and the Dominion for the purpose of discussing this problem and if possible finding a solution....I can only say that the question could not be dealt with at any such conference in one or two days, or in half a dozen days; there are questions which involve consequences of the most far-reaching effect in every possible way so far as the body politic is concerned. There is not only the setting up of the machinery but there is the question of the ways and means by which that machinery is to be maintained."

The Prime Minister laid stress on the complicated nature of the legislation proposed, based as it should be on actuarial research, and consideration of the amount necessary to insure, in the light of general experience and expectations of cycles of unemployment, the payment of the weekly claim which would have to be met. He described the principles underlying a sound system of insurance and proceeded as follows:—

"Under these circumstances, with a census about to be taken and the necessary figures to become available, with our actuarial force willing and ready to tackle the problem from the angles that I have suggested, does any hon. gentleman think that we would be doing justice to the Dominion of Canada or to ourselves if we now passed a resolution asking the government immediately to do something which is not equipped to do? I propose, if we are spared as a government and as individuals, that the information we will have before our term of office is ended shall be crystallized into the form of legislative proposals to be submitted to this House. I have never had any desire other than that the legislation placed upon the statute book, whether by this government or by some other, shall be called legislation based upon knowledge, and not upon guess-work....

"I suggest therefore that the hon. member will best serve his purpose by dropping the word 'immediate' from his motion and adding thereto the word 'contributory' and other words which will make the fact clear that whatever is done must be done with the co-operation of the provinces. That involves the answer to the last question I submitted concerning what the contribution of the state should be. In this case the state would be

not only the Dominion of Canada but the provinces as well, because some of these matters are, as we have been advised by the law officers of the crown, solely within provincial jurisdiction"....

"This government is anxious and willing to promote in every possible way the advancement of social legislation along the lines suggested. I refer not to non-contributory insurance or to non-contributory social legislation, but to legislation which will encourage the habit of thrift and care on the part of every man who benefits therefrom. Although I have been criticized, I say once more that this country will not produce men of the character it has had until men and women begin to realize that life means responsibilities and that one of those responsibilities is to help themselves. That is the only method by which social legislation can effectively and efficiently be enacted. Of that I feel quite certain. Whatever my reading and inquiries may be worth, I have satisfied myself quite clearly that in whatever we do in this regard we must recognize and realize that insurance involves premiums and premiums should be paid by the joint action alike of the insurer and the insured themselves and with the assistance of the state. In that sense, if the hon. gentleman is prepared to accept the suggestions I make, I say to him on behalf of the administration that at the earliest possible moment consistent with obtaining information that is essential to make any measure of social insurance worth while, we will use that information for the purpose of preparing and submitting to this house a measure embodying the views I have expressed."

Mr. J. S. Woodsworth (Winnipeg North Centre), supporting the motion, stated that the word "immediate" in the motion meant that the promises of the government should be carried out and not indefinitely postponed. Most of the civilized countries of the world, outside of the United States have some form of unemployment insurance, he said. He outlined the English scheme, stating that legislation following the lines of that scheme was contemplated in the motion. Referring to criticisms of the English system, Mr. Woodsworth said: "Several years ago I had the opportunity of travelling for some days with the Empire Parliamentary Association delegation which toured the country. I was very much interested in the unemployment scheme of Great Britain, and inquiries were made privately from these men, and the question was also raised publicly. Every member of that delegation who spoke with regard to the matter said that Great Britain to-day simply could not get along without unemployment insur-

ance. Lord Peel, the head of the delegation, said that he was heartily in favour of it, and Liberal members and Labour members all agreed. In fact, several of the most prominent members of the delegation confessed that had there not been unemployment insurance in Great Britain following the war, Great Britain would have had a revolution on her hands, that it was only their unemployment insurance that had saved Great Britain from the revolution that had taken place on the continent. However, Mr. Woodsworth continued "we shall have to work out our scheme in Canada along our own lines."

Mr. King's Views

The Right Hon. W. L. Mackenzie King supported the motion, pointing out that the government of the day in providing for unemployment relief had already recognized a national obligation in regard to unemployment. "The essential point now is whether this national obligation may best be recognized as something to be met by relief measures or whether it is an ever-recurring condition which should be met in advance by some system of unemployment insurance. He understood the motion as being a declaration in that sense. "The resolution states that the government should take into consideration immediately the establishment of a federal system of insurance against unemployment, sickness and invalidity. Surely that means that the government should consider the immediate establishment of some system of insurance against unemployment. Frankly, as between meeting the problem of unemployment relief measures, voting millions of dollars as occasion arises, and meeting it by anticipating unemployment and its consequences through a system of insurance. I favour strongly the system of insurance."

Referring to the word "immediate" in the proposed resolution, Mr. King said: "If for a moment I thought it was anticipated that the government should present a bill to the House without due consideration of the many matters that will have to be considered, I would certainly agree with him (the Prime Minister) that anything of the kind would be unwise on the part of the administration. On the other hand, I take it that what is meant is that having regard to the problem of unemployment before us at the moment, a problem that we know is going to recur from time to time, the government should immediately consider how a system of unemployment insurance can be made applicable to help meet such a situation. Perhaps it would have been better had the word 'immediate' in the resolution been transposed and placed before the word 'consideration.' Personally I feel that that is

what primarily was in the mind of the introducer of the resolution."

Mr. King proceeded to describe the modern industrial system as being such as to make unemployment insurance necessary for the protection of the workers. "When one analyses the nature of industry," he said, "one discovers it is nothing other than the transformation of natural resources through human effort into services or commodities available for use; in other words, it is a great social service to which capital, labour, management and the community each make a contribution. All these four factors are essential in the carrying out of industry.... Those who are engaged in industry run certain inevitable risks. Industry, first of all, through the fact that it has assumed its present proportions, is subdivided first by way of employment; and within the individual employments there are further subdivisions of labour, which result in the worker being reduced pretty much in the last analysis to an atom,—an individual whose time and labour in large part, is spent in industry on a particular process or some operation within a particular process very small in itself. With industry developed as it is to-day, it so happens that, through no fault of anyone connected with a particular industry, a particular branch of industry itself may be terminated. World conditions may be such in one country that labour becomes unemployed in another. The failure of the cotton crop in one part of the world may throw out of employment thousands of workers engaged in the manufacture of cotton goods in another part. One might mention endless examples of this kind. That is a condition of unemployment for which no employer can be held responsible; it arises simply because of industry having as-

sumed its present proportions and character. Labour may also find itself displaced through some invention. All industry is subject to the play of discovery and invention, and for the most part discovery and invention enable those who are fortunate enough to possess capital to find means whereby it can be more profitably invested and its rewards thereby increased; but to labour for the most part the play of discovery and invention is in the opposite direction, it tends to throw out of employment large numbers of workers through the substitution of machines for labour....

"If that is a true picture of industry, then we must realize that throughout the world to-day and hereafter, as a normal condition, there will always be a large number of men and women who through no fault of their own will find themselves because of new inventions and discoveries unemployed. If I have given a true description of the problems of industry arising from its world-wide scope, it is equally true that we shall have these recurring periods of prolonged depression whereby again large numbers will for considerable periods be thrown out of employment. Knowing there is bound to be recurring unemployment to a very considerable extent, it does become part of the obligation of the state to meet such a situation with respect to the workers; and the only way in which it can be met is through the alternative of relief to meet unemployment when it comes and no provision has been made in advance, or through insurance against unemployment whereby provision is made in advance for inevitable unemployment. I think it will be generally agreed that of the two methods of the State's coping with unemployment, the insurance method is the preferable."

ALLEGED DEFECTS OF BRITISH UNEMPLOYMENT INSURANCE SYSTEM

GIVING evidence recently before the Royal Commission on Unemployment Insurance (LABOUR GAZETTE, January, 1931, page 4), Sir William Beveridge, Director of the London School of Economics, said that the present system of unemployment insurance bore no resemblance at all either to the old practice of trade unions, or to the scheme of 1911 that was meant as an extension of it. Every important idea in either had gone by the board. The benefit had been made unlimited in time and practically divorced from the payment of contributions. It had become neither insurance nor a spreading of wages, but out-relief financed mainly by a tax on employment. The Insurance Fund had be-

come indistinguishable from the national Exchequer. All interest of employer or of work-people in reducing unemployment had gone. Glaringly the scheme had become in many cases a means of subsidizing casual industries and insufficient wages. In the past, like other defenders of unemployment insurance, he had often had occasion to speak of "insurance popularly miscalled the dole." To-day he was afraid that it might be truer to speak of "the dole officially mis-called insurance."

A Self-supporting Scheme

"The main problem now is not that of finding an actuarial basis for the scheme as it stands. The objection to unlimited benefit

given as of right is not simply or mainly that of expense, but (a) that money payments without conditions are an inadequate and demoralizing way of dealing with prolonged unemployment; and (b) that the availability of such payments encourages unemployment.

"The essential evil of the present scheme is that it treats alike things which are unlike—the temporary unemployment of the regular worker thrown out by seasonal or cyclical depression, the permanent loss of their old employment by men whose trades have declined or moved, the chronic under-employment of the dock labourer, the loss of earnings by the short-time worker, the leisure of the married woman for whom earning has become incidental, the long decay of men ageing before their time. The remedy must lie in restoring discrimination and treating differing cases by different methods."

So long as the principle was maintained that the insurance fund, with a fixed contribution from the State, must be self-supporting, the rate and period of benefit and the terms on which it was drawn could all be generous. The rules defining continuity of unemployment, however, should be such as to prevent benefit from becoming a subsidy to chronic under-employment or short-time. Moreover, though insurance in one form or another should cover all industrial occupations, at least, and so far as possible, with uniform benefits, there should be some means of adjusting premiums to risks, not only in the scheme as a whole, but as among industries and individuals.

The Minister of Labour, Sir William Beveridge continued, might be empowered to schedule industries as having excessive unemployment. Where excessive unemployment was due to casual employment scheduling would have the further effect of modifying the insurance scheme in relation to that industry, either cutting them out altogether and making a special scheme to fit their peculiar condition (e.g. with dock labour) or simply increasing their contribution.

Tax on Dismissals

Part of the money required might be raised by a tax on dismissals, in place of raising it all as now by a tax on employment. The employer, besides affixing an insurance stamp for each week of employment (say 1s.) and deducting part from wages, would put on a special stamp (say 5s.) whenever for any reason a man left his employment in such a way as to qualify for benefit. The principle of the refund of surplus contributions at 60, embodied in the original scheme, might be reintroduced in an improved form, by providing that any man who at 60 had any contributions to his credit, might be allowed to

retire voluntarily on a small pension, say 10s. a week, in place of working at all.

Relief Distinct from Insurance Benefit

Provision should be made for those who exhausted their rights to insurance benefit. So long as they remained *prima facie* able to work and desiring to work, they should be treated as an industrial rather than a social problem, by the Ministry of Labour, or (preferably) a statutory commission supervised by the Ministry. The fact, however, that they had exhausted their claim on the insurance fund set up a presumption that they might not be able to recover work on their former terms. The relief of these men should be a matter not of contractual right enforced by quasi-legal process before an umpire, but of need, judged by the administering authority, and should be subject to conditions imposed by the authority. The necessity of side-tracking detailed Parliamentary scrutiny of the action taken in individual cases made it desirable that this authority should be a commission with statutory powers, and not a Minister directly responsible to Parliament. The recipient of relief would not be entitled, as under insurance, to hold out for substantially his former wages and former type of work, but would be required to take any work in any place judged suitable for him by the administering authority. He might be required as a condition of relief to enter a training establishment or otherwise have his time or thoughts occupied.

The Toronto Industrial Commission, through its general manager, Mr. H. B. Keenleyside, announced at the regular quarterly meeting of the board of directors the coming of 14 new industries of outside origin to the Toronto area since January 1, 11 of them within the city proper and 3 in the immediate suburbs. Seven of the new industries came during March, the largest number in any single month since the Commission was organized two years ago.

Hon. B. G. Mackenzie, Minister of Mines and Natural Resources for Manitoba has announced plans to develop Manitoba fisheries and to assist fur farming so that both may be established among the leading industries of the province. It is proposed to restore the depleted supply of white fish and pickerel in the larger lakes, followed by an effort to improve fishing conditions in the small non-commercial lakes. An experimental fur farm will be established at the Manitoba Agricultural College and placed under the management of a qualified supervisor.

SEVENTH CENSUS OF CANADA, 1931

Questions relating to Employment and Unemployment

REFERENCE has been made in previous issue (April, 1931, page 388; January, 1931, page 3, etc.) to the inclusion of unemployment among the subjects of questions contained in schedules for the approaching Census of Canada. It will be recalled that the House of Commons, during the session of 1929, adopted a recommendation of the Industrial and International Relations Committee "that in the forthcoming census provision should be made for the securing of the fullest possible data regarding the extent of unemployment and sickness, and that this should be compiled and published at as early a date as possible" (LABOUR GAZETTE, June, 1929, page 603). The Dominion Bureau of Statistics and the Department of Labour have since given attention to the form in which the questions as to employment and unemployment will appear in the census schedules, so that the replies secured by the enumerators may give a picture of conditions as regards unemployment as they actually exist on the date of the census.

The Dominion Bureau of Statistics has now completed the Census schedules, and these, together with the book of instructions to be issued to the Census commissioners and enumerators, have been approved by Order in Council. The following information is taken from both these sources.

The seventh general census of the Dominion is required to be taken in the year 1931 under the provisions of the Statistics Act, so as to ascertain, with the utmost possible accuracy, for the various territorial divisions of the country, their population and the classification or grouping of the people as regards age, sex, social condition, religion, education, race, occupation and otherwise, and whatever other matters are specified in the forms and instructions to be issued and used, as the Act provides.

The date selected for recording the population in the present Census is Monday, the first day of June, 1931. The decisive hour of reckoning is 12 o'clock or midnight on the night of 31st of May to 1st June; everyone born before that hour and everyone dying after it are to be counted in the population.

The Act provides that the Census is to be taken by what is known as the *de jure* system. Briefly, this means that the home or usual place of abode is the place where the majority of persons should be counted.

Occupation and Industry

In this section of the questionnaire the questions are as follows:—

28. *Occupation*—Trade, profession or particular kind of work, as carpenter, weaver, sawyer, merchant, farmer, salesman, teacher, etc. (Give as definite and precise information as possible).

29. *Industry*—Industry or business in which engaged or employed as cotton mill, brass foundry, grocery, coal mine, dairy farm, public school, business college, etc.

30. Class of Worker.

31. Total earnings in the past twelve months (since June 1, 1930).

It is pointed out that "it is very important that the entries under these headings in Columns 28 and 29 should be made in the proper detail. When an occupation is reported in Column 28 an entry must be made in Column 29 descriptive of the industry or business in which the worker is employed. The following are cited as examples; if the entry in Column 28 for any person is "Farmer" the entry in Column 29 should state whether the farm is a "dairy farm" "general farm" or other; if the entry in Column 28 is carpenter the entry in Column 29 should disclose the industry or business in which the person is employed as "car factory," "ship yard," "house," etc.

The chief or principal occupation or means of living of every person 10 years of age and over will be entered in Column 28. An entry must be made in this column for every person 10 years of age and over. The entry should be either (1) the word or words which most accurately indicate the particular kind of work done by which the individual earns money or money equivalent as physician, carpenter, dressmaker, salesman, farmer, stenographer, nurse, teacher, etc., etc.; or (2) income or (3) none, if the person has no gainful occupation. The entry none should be made in the case of persons who follow no gainful occupation.

A gainful occupation in census usage is an occupation by which the person who pursues it, earns money or money equivalent or in which he assists in the production of marketable goods. Children working at home merely on general household work, or chores or at odd times on other work are not to be entered as gainfully employed.

Persons who on account of old age, permanent physical disability or otherwise are no longer following a gainful occupation should not be reported as of the occupation formerly followed. If living on their own income the entry should be "income"; but if they are

supported gratuitously by other persons or institutions the entry in this column should be "none".

On the other hand, persons out of employment on June 1st may state that they have no occupation, when the fact is that they have an occupation, but happen to be idle or unemployed at the time of the visit. In such cases the entry should be the occupation followed when the person is employed or the occupation in which last regularly employed, and the fact that the person was not at work should be recorded in Column 32 and the reason for being out of employment stated, in Column 33. The number of weeks "out of work" will be reported in Column 34 to 40.

If a person has two occupations, the enumerators are instructed to return only the more important one; that is, the one from which he gets the more money. If that cannot be learnt, the one at which he spends the most time is to be shown. For example, the enumerator will return a man as a farmer if he gets more of his income from farming, although he may also follow the occupation of physician; but return him as physician, if he gets more of his income from that occupation than he does from farming. A person in charge of a farm should be returned as a farmer, whether he owns it or operates it as a tenant, renter or cropper, but a person who manages a farm for someone else for wages or salary should be reported as a farm manager or farm overseer; and a person who works on a farm for someone else, but not as manager, tenant or cropper, should be reported as farm labourer.

In the case of a woman doing housework in her own home, without salary or wages, and having no other employment but being responsible for the domestic management of the home, the entry in Column 28 should be "homemaker". But a woman working at housework for wages, should be returned in Column 28 as housekeeper, servant, cook, chambermaid, etc., as the case may be; and the entry in Column 29 should state the kind of place where she works, as private family, hotel or boarding house. If a woman, in addition to doing housework in her own house, regularly earns money by some other occupation, whether pursued in her own home or outside, the kind of occupation should be stated in Column 28 and the place where employed in Column 29. For instance, a woman who regularly takes in washing should be reported as laundress or washerwoman in Column 28 and the entry "at home" should be made in Column 29.

A woman who works only occasionally, or only a short time each day at outdoor farm or garden work, or in the dairy, or in caring for

livestock or poultry, should not be returned as a farm labourer; but for a woman who works regularly and most of the time at such work, the return in Column 28, should be "farm labourer." Of course, a woman who herself operates or runs a farm or ranch, should be reported as a farmer and not as a farm labourer. In either case the kind of "Farm" on which employed must be stated in Column 29.

In the case of children who work regularly for their own parents on a farm, in an orchard, on a truck farm, etc., the entry in Column 28 should be farm labourer, orchard labourer, or garden labourer, as the case may be, and the entry in Column 29 should be the kind of farm or orchard, etc.

Children of ten years of age and over who work for their parents at home at general household work, or on the farm, or at any other work or chores, when attending school, should not be recorded as having an occupation. Those, however, who spend the major portion of their time at home, and who materially assist their parents in the performance of work other than household duties, should be reported in column 28 as of the occupation in which their time is employed and the industry or business as "grain farm", "general farm", "grocery", entered in Column 29.

It is very unusual for a child to be a farmer or other proprietor of any kind; to be an official, a manager or a foreman; to follow a professional pursuit; or to pursue any of the skilled trades such as blacksmith, carpenter, machinist, etc. Therefore, should an enumerator be told that a child is following an occupation usually followed only by adults, he should ask whether the child is not merely a helper or an apprentice in the occupation, and make the entry accordingly in Column 28 and state the business or industry in Column 29.

Keeping boarders or lodgers should be returned as an occupation if the person engaged in it relies upon it as his (or her) principal means of support or principal source of income. In that case the return should be boarding house keeper or lodging house keeper. If, however, a family keeps a few boarders or roomers merely as a means of supplementing the earnings or income obtained from other occupations or from other sources, no one in the family should be returned as a boarding or lodging house keeper.

For an officer or regular employee of an institution or home, such as an asylum, penitentiary, jail, reform school, or convict camp, the enumerator is to return the occupation followed in the institution in Column 28 and the kind of institution in Column 29. For an

inmate of such institution, if regularly employed, he is to return the occupation pursued in the institution, whether the employment be a productive labour or at other duties such as cooking, scrubbing, laundry work, etc., but if an inmate is not regularly employed—that is, has no specific duties or work to perform—write “none” in Column 28. Do not return the occupation pursued prior to commitment to the institution.

Enumerators are given the following instructions in reference to certain occupations:—

Builders and contractors. Only persons engaged principally in securing and supervising the carrying out of building or other construction contracts should be returned as builders or contractors. Craftsmen who usually work with their tools should be returned as carpenters, plasterers, etc., and not as contractors.

Engineers. The different kinds of engineers should be carefully distinguished by stating the full descriptive title in Column 28 as civil engineer, electrical engineer, locomotive engineer, mechanical engineer, mining engineer, stationary engineer, etc., and in Column 29 how or where employed as “private practice,” or give industry in which employed or piece of work upon which engaged as “bridge work,” “road construction,” “railway,” etc.

Nurses. In the case of a nurse, always specify whether she is a trained nurse (R.N.), a practical nurse or a child’s nurse in Column 28 and whether occupied privately or in an institution in Column 29.

Cooks and general houseworkers. Distinguish carefully between cooks and general houseworkers. Return a person who does general housework as a servant and not as a cook in Column 28 and where employed as “hotel,” “private family,” etc., in Column 29.

Retail and Wholesale Merchants. The enumerator will distinguish carefully between retail and wholesale merchants; the kind or class will be entered in Column 28 as retail or wholesale and the kind of business, as dry goods, groceries, hardware, etc., will be entered in Column 29.

Clerk. The use of the word “clerk” should be avoided whenever a more definite occupation can be named. Thus a person in a store who is engaged in selling goods should be recorded as a “salesman” or a “saleswoman,” in Column 28 and where employed as dry goods store, grocery, general store, etc., in Column 29. A stenographer, typist, accountant, book-keeper, cashier, etc., should be reported as such and not as a clerk. Do not report a stenographer as secretary.

Mechanic. The use of the word “mechanic” should be avoided when a more specific occupation can be given, such as carpenter, painter, electrician, etc. In general the enumerator should avoid all indefinite terms.

Workers attending school. In the case of a person who is at work and also attends school or a college, enter the occupation followed in Columns 28 and 29 the fact of school or college attendance will be indicated in Column 27 by entering the number of months in school or college. In such cases make dashes thus (—) in Columns 32 to 40 opposite this name.

Labourer. The term “labourer” should be avoided if any more precise statement of the occupation can be secured. Employees in factories, and mills, for example, usually have some definite designation as weaver, roller, puddler, etc. Where the term “labourer” is used in Column 28 the enumerator should be careful to state accurately the industry or business in which the person worked in Column 29.

The purpose of Columns 28 and 29 is to bring out the specific occupation or work performed and the industry, business or place in which such work is performed. In rare cases, especially with professions, the enumerator may use in Column 29 the expression general practice or independent or, for some labourers, odd jobs.

In some instances the proper classification of an occupation may be dependent upon a statement of the materials worked in. The enumerator in such cases should find out the kind of material the worker is employed on and enter it, as well as the occupation in Column 28. For example, “polishers” may be employed on either wood, or brass, or nickel, or steel, or iron, or silver, or other material in the same industrial establishment, therefore the proper entry in Column 28 in such cases will be “wood polisher, brass polisher, nickel polisher, iron polisher,” or as the case may be.

If female dependents or children of ten years of age or over carry on a gainful or wage-earning occupation in any capacity, the kind of occupation will be given in column 28 and the business in which employed in column 29, and they will be classed as employers or employees, as the case may be, in column 30, but if they are only carrying on domestic affairs in a household without wages they are not to be classed as having any occupation in Column 28.

A person doing piece-work at home will be entered in Column 28 according to the occupation, whether employed under contract or agreement with a manufacturer or other em-

ployer of labour or as help to the person so employed, and will be classed in Column 30 as an employee by the letter "W."

Total earnings in past twelve months. In Column 31 the total earnings in the twelve months, June 1, 1930, to June 1, 1931, will be entered for every person who is recorded with an occupation or trade in Column 28, and who is reported in Column 30 with the letter "W" for "worker or employee." The enumerator must obtain from every person who works for salary, wages, commission or piece-work his or her total earnings in the past twelve months.

Unemployment

The questions in the schedule in regard to unemployment are as follows:—

32. If an employee, were you at work Monday, June 1, 1931.

33. If answer to previous question is No. Why were you not at work on Monday, June 1, 1931. (For example, no job, sick, accident, on holidays, strike or lock-out, plant closed, no materials, etc.)

34. Total number of weeks unemployed from any cause in the last 12 months.

Of the total number of weeks reported out of work in column 34, how many were due to—

35. No job.

36. Illness.

37. Accident.

38. Strike or lock-out.

39. Temporary lay-off.

40. Other causes.

The purpose of the inquiries under this heading in Columns 32 to 40 is to elicit information on the problem of the economic insecurity of the worker and to ascertain as far as possible the causes which make for unemployment. It is pointed out that the value of the information entered on the schedule under this heading will depend entirely upon the care exercised by the enumerator in prosecuting the inquiries.

Column 32: "If an employee, were you at work on Monday, June 1, 1931?" The enumerator must make an entry in this column for every person who is recorded with an occupation in Column 28 and is reported in Column 30 with the letter "W" for "employee" or "worker." The inquiry in this column is to be answered by "yes" or "no" as the case may be. If the entry in this column is "no" there must also be an entry in Column 33.

In addition to obtaining a record of unemployment at a given date the inquiry is also intended to direct the mind of the person to the length of time, if any, he was out of work during the 12 months immediately preceding the census. The cause or causes for being out of work will be stated in Columns 35 to 40.

In some occupations, however, such as the running trades on railways, where employment is reckoned by runs (with minimum monthly earnings guaranteed) Monday, June 1, 1931, may be the day when certain men will be off duty between runs. In such cases the person (train hand) is not to be reported as "not at work" consequently the proper answer in column will be "yes." There may also be other instances where Monday, June 1, will not be an ordinary working day, because the person had worked perhaps on the Sunday previous or overtime and was entitled to Monday as his rest day. For all such cases the proper answer in Column 32 will be "yes."

Column 33: If answer to previous question is "no" why were you not at work on Monday, June 1, 1931. The enumerator should enter in this column the exact reason why the person was not at work on June 1, 1931. The enumerator should make every effort to discover the correct reason why the person was not at work. The enumerator must be specific; general statements are not accepted. The following may be cited as examples:

No job. If the person was not at work on Monday, June 1, 1931, because he had "no job" then the entry in Column 33 should be "no job."

Illness. If the person is detained from his job because of illness, the enumerator should differentiate between the sickness of the person enumerated and that of the members of the family, other relatives or friends. The enumerator should enter in this column "ill" or "sick" if the person is idle because he himself is sick; but if the person is not at work because he is helping others who are ill, the entry should be "sickness in family."

Accident. Careful distinction should be made between personal accident to the wage earner and those which force the closing of part or all of the plant where he is employed. If it is a personal accident to the wage earner, the words "injury by accident" should be entered, and for closing of plant due to a breakdown the enumerator will enter "machinery broken down," "wreck" or some similar expression for the latter. The enumerator should endeavour to obtain a clear statement as to cause and enter it in Column 33.

Lay-off. There are two kinds of "lay-off," voluntary and involuntary, and they should be carefully distinguished. If the worker has taken days off for personal reasons, or has resigned to look for another job, the enumerator will enter in this column "Vol. lay-off," but if the person is laid off at the orders of the employers the enumerator will enter the

cause, such as "mill closed," "work completed," "plant burned," or whatever the cause of the "lay-off" may have been.

The enumerator will find many other causes such as "lack of materials" or of supplies or of equipment; weather conditions; floods, strikes or lock-outs, etc.; and he should be very explicit; as it is better to give too much detail than to have the record incomplete.

The enumerator should avoid general expressions such as "slack work", "no work", etc. He should also take time to ask of every person who is reported as an employee, "W" in Column 30, whether he or she had been unemployed for any period from June 1, 1930 to May 31, 1931 and if the answer is "yes" proceed to enquire how many weeks the person was out of work and to assign under its proper cause or causes (Columns 35-40) the number of weeks out of work.

Column 34: Total number of weeks unemployed from any cause in the last 12 months. The enumerator will enquire of every person who was described as an "employee" or "worker" (W) in Column 30, the number of weeks out of work for any cause during the twelve months preceding the census date, June 1, 1931. No entry should be made in this column for students at college who work during the holidays. The number of weeks in this column must be equal to the total of the number of weeks entered in Columns 35 to 40. If a period of less than one week were lost from work, the answer should be stated in days with the word days written in.

This inquiry has reference to persons who during some portion of the twelve months preceding the census were out of work and had no reasonable prospect of returning to their former jobs. A "no-job" person may be described as one who has no job, nor a promise nor understanding that he or she will be employed. It includes also all idle persons who are planning to change their occupation as well as those formerly attached to plants closed so long that it is improbable that they will reopen. For such persons the enumerator will enter in Column 35 the number of weeks they were out of employment.

The term "no job" does not, however, include persons who are temporarily out of work. For example, if persons employed on building and construction work were temporarily laid off by their employers at any time during the year, the number of weeks without work should not be entered in Column 35 (no job) but should be reported in Column 39 (temporary lay-off).

Column 36: Illness. The entry in this column will be the number of weeks lost from

work through illness of the person himself and which resulted in his not going to work at his regular job.

Column 37: Accident. If the period of unemployment was due to accident the enumerator will enter in this column the number of weeks the person was out of work because of an accident which disabled himself. When the unemployment was because of an accident to the plant, mine, factory, etc., the entry will be made in Column 39 and not in Column 37. Enter only weeks lost through accident to the worker in this column.

Column 38: Strike or Lockout. The number of weeks this person was idle in the last year because the plant was closed owing to disagreement of the management with employees or because of refusal of workers to continue under current working conditions will be entered in Column 38.

Column 39: Temporary lay-off. Generally speaking a "lay-off" is of two kinds, "voluntary" and "involuntary". A voluntary lay-off refers to instances where the employee quits to take holidays, while an "involuntary lay-off" includes instances where a plant is closed for repairs, reorganization, etc., and where the employees may return to work upon the reopening of the plant, mine, factory, etc. The number of weeks "out of work" which the worker considered as a "temporary lay-off" will be entered in Column 39 whether the "lay-off" was owing to his own action or whether due to plant conditions.

Column 40: Other Causes. If the total period of "Unemployment" entered in Column 34 is not covered by the causes entered in Columns 35, 36, 37, 38 and 39 the enumerator should make a definite statement as to the "other cause", which was responsible for the person being "out of work". The enumerator will enter the number of weeks "out of work" for the "other cause" in Column 40 and write the "cause" in the margin opposite the line on which the entries are made.

The enumerator, however, is strictly cautioned against accepting ridiculous answers and should insist on proper replies. As a rule it will be found that the causes of all unemployment may be classified under Columns 35 to 39.

When the enumerator has completed making the entries on the schedule for this person he will total the number of weeks entered under Columns 35 to 40 to see if they agree with the number of weeks entered in Column 34 and if there be a difference he will at once call the attention of the person to the discrepancy and require him or her to make readjustments so that the figures will balance.

UNEMPLOYMENT CENSUS IN THE UNITED STATES

THE methods and results of the United States federal unemployment census of 1930 were described in a paper read before the American Statistical Association in December, by Miss Mary Van Kleeck of the Russell Sage Foundation, New York (*Journal of the American Statistical Association*, March, 1931). This census was taken in April and May, 1930, in accordance with the recommendations of the Senate Committee on Education and Labour in the preceding year. The first returns for the country as a whole were issued in Washington on August 23. Three days earlier a statement had been given out, explaining for the first time the Bureau's method of classifying the workers reported idle on the day preceding the enumerator's visit. Class A was defined as including "persons out of a job, able to work and looking for a job." In the entire continental United States they numbered 2,508,151, or 2.0 per cent of the total population of 122,698,190. Class A was held by the census officials in Washington "undoubtedly" to "constitute by far the major part of the total number of unemployed under any definition that might reasonably be adopted."

Of Class B it was at the same time stated that it "will be made up in part of persons who are working on part time or who are idle for relatively short periods for seasonal or other temporary reasons, though it will include also many persons who have been laid off from their jobs for relatively long periods, some of whom are in very much the same economic position as the jobless in Class A. Class B will be particularly important in certain counties where coal mining is a prominent industry, since the coal miners tend to report that they still have a job, even though they have done no work for a fairly long period. Several of the other classes are composed mainly of persons who would not, even under the most elastic interpretation of the term, be considered unemployed. The schedule questions were made to include all persons usually working at a gainful occupation but not at work on the last regular working day preceding the enumerator's call, however, in order to make sure that no persons actually unemployed should be omitted by reason of the enumerator's misunderstanding of a more restricted definition."

Entries on the population schedule showed the occupation and industry of the gainfully employed, and whether or not the person was at work the last regular working day before the enumeration. For the gainfully employed

who were not at work on that day, entries were to be made on the unemployment schedule. The following outline shows the headings related to unemployment on these two schedules:

POPULATION SCHEDULE

(Questions related to Employment and Unemployment)

Occupation and Industry

Column 25.—*Occupation*—Trade, profession, or particular kind of work, as *spinner, salesman, riveter, teacher, etc.*

Column 26.—*Industry*—Industry or business, as *cotton mill, dry-goods store, shipyard, public school, etc.*

Employment.—Whether actually at work yesterday (or the last regular working day).

Column 28.—Yes or No.

Column 29.—If not, line number on Unemployment Schedule.

UNEMPLOYMENT SCHEDULE

(To be used in Connection with the Population Schedule).

Column 4.—*Name*—of each person who usually works at a gainful occupation but did not work yesterday (or on the last regular working day).

Column 5.—Does this person usually work at a gainful occupation? Yes or No.

Column 6.—Does this person have a job of any kind? Yes or No.

If this Person Has a Job:

Column 7.—How many weeks since he has worked on that job?

Column 8.—Why was he not at work yesterday? (Or in case yesterday was not a regular working day, why did he not work on the last regular working day?) For example, *sickness, was laid off, voluntary lay-off, bad weather, lack of materials, strike, etc.*

Column 9.—Does he lose a day's pay by not being at work? Yes or No.

Column 10.—How many days did he work last week?

Column 11.—How many days in a full-time week?

If this Person Has No Job Of Any Kind:

Column 12.—Is he able to work? Yes or No.

Column 13.—Is he looking for a job? Yes or No.

Column 14.—How many weeks has he been without a job?

Column 15.—Reason for being out of a job (or for losing his last job) as *plant closed down, sickness, off season, job completed, machines introduced, strike, etc.*

Census officials explained that they refrained from giving a definition of unemployment. They sought to have an enumeration made of those not at work on a given day, leaving to the users of statistics the decision as to which groups they would include for a particular definition.

The Census established the following classes of the unemployed:

Class A.—Persons out of a job, able to work, and looking for a job.

Class B.—Persons having jobs but on lay-off without pay, excluding those sick or voluntarily idle.

Class C.—Persons out of a job and unable to work.

Class D.—Persons having jobs but idle on account of sickness or disability.

Class E.—Persons out of job and not looking for a job.

Class F.—Persons having jobs but voluntarily idle without pay.

Class G.—Persons having jobs and drawing pay, though not at work (on vacation, etc.).

In addition to the preliminary returns published on August 23, the summary figures of which are quoted above, an intensive study was made of the returns from a selected section of the country, in which was shown the number of workers in each of these classes. It is considered that the areas included are not quite typical of the country as a whole, and represent unemployment as somewhat less prevalent than in other sections. However, "if the same proportion applies to the country as a whole, it will add to the count of the unemployed already given 652,119, making a total of 3,986,484 who in April, 1930, were out of work and out of wages for all causes, excluding the voluntarily idle and those who

were drawing pay. It would appear that all must be considered in any program of relief and prevention."

Miss Van Kleeck refers to numerous criticisms of the census as giving an inadequate picture of the extent of unemployment in the United States. The alleged defects in the procedure are enumerated as follows:—

(1) Absence of any enumeration of persons employed on part-time either by the day or by the week; (2) Lack of definiteness in the schedule, the enumerators being required to conduct an investigation rather than make a count; (3) A distinction should have been made in the schedule between persons working on their own account and wage earners; (4) "the emphasis put upon Class A, those without jobs, and the distinction made between this group and Class B, who were said to have jobs, though workless and wageless, has been confusing to the public, and has exposed the Bureau to the criticism of seeking to minimize the seriousness of unemployment. Moreover, the separation even from Class B of those on 'voluntary lay-off' and other more or less obscurely stated reasons which were held to be evidence of 'voluntary idleness' has not had precise enough basis to justify placing much weight upon these classifications."

PRESENT EMPLOYMENT CONDITIONS AND RELATED SOCIAL PROBLEMS

Round Table Conference held at Ottawa under the Auspices of the Canadian Council on Child and Family Welfare

A ROUND table conference on present employment conditions and related social problems was held at Ottawa on April 28-29, on the invitation of the Canadian Council of Child and Family Welfare. Various agencies within that organization had reported that they were faced with serious problems arising out of the existing depression, which had continued since the late autumn of 1929. Invitations to attend were issued by the Council to the provincial and municipal governments and to various financial and other private agencies throughout Canada.

Mr. A. D. Hardie, Secretary of the Federation for Community Service, Toronto, was named chairman. Major C. S. Ford, Social Service Commissioner, City of Ottawa was secretary of the Conference, and Miss Charlotte Whitton, executive director of the Council, was assistant secretary. A Findings Committee was appointed, consisting of the fol-

lowing members: the chairman and secretaries; Mr. A. Chevalier, Division of Public Assistance, Municipality of Montreal; Dr. Frank Pedley, Montreal Council of Social Agencies; Controller James Simpson and Controller W. D. Robbins, Toronto; Mr. F. N. Stapleford, Neighbourhood Workers Association, Toronto; Mr. H. S. Rupert, Civic Unemployment Relief Committee, Toronto; Mr. D. W. Beaubier, Brandon, Man.; Hon. J. A. Merkley, Regina, Sask.; Judge E. H. Blois, Halifax, N.S.; Mayor C. M. Bezeau, Kitchener, Ontario.

The Conference held four closed sessions on April 29 when the Conference findings were presented to Senator the Hon. Gideon Robertson, Minister of Labour, who was accompanied by the Deputy Minister, Mr. H. H. Ward, and the Assistant Deputy Minister, Mr. Gerald H. Brown.

Findings of the Conference

This conference, representative of the social and relief agencies of public and private bodies in the Dominion of Canada, respectfully finds as follows:—

1. That the deliberations of the conference have revealed beyond any doubt that unemployment with its resultant evils has been a serious social problem throughout this Dominion in recent months, and that while there are some indications of slight improvement in certain lines of activity, the situation on the whole gives no widespread or well-founded hope of improved conditions during the fall and winter of 1931 and 1932.

2. That these facts require careful and immediate consideration of the means and measures which may be adopted to deal with such conditions, but that regardless of what measures may be evolved to meet the immediate situation, we must realize that a much more constructive and comprehensive approach to the whole problem must be made, looking to the prevention of these recurring cycles and to definite provision for what appears to be a permanent percentage of unemployment.

3. That to this end this conference urge upon the Dominion Government the consideration of the appointment of a permanent national committee or commission, along Federal-Provincial lines, entrusted with an exhaustive study of the economic and social structure of Canada, with the purpose of pooling the best knowledge of governments, industrial, agriculture, and financial interests, social and health agencies, in evolving a more stabilized system of production and distribution, and of supply and demand. It is hoped that such a permanent commission would be able to study and plan ways and means by which this country would be able more intelligently and more effectively to prevent the recurrence of cycles of unemployment and to iron out the recurring peaks of unemployment.

4. In urging the creation of such a national commission, this conference wishes to emphasize the fact that in its judgment, the control and correction of such conditions as at present exist cannot lie within the power of governmental bodies alone, but must depend upon realization on the part of industrial interests themselves that production capacity must be more definitely controlled and related to the consuming and distributing power of the country.

5. Having regard to the immediate situation as revealed by the deliberations of this conference and in view of the fact that the continued disorganization of our economic life imposes a burden in relief and relief works that it is beyond the unaided resources of provincial, municipal, and private social agencies to meet, that the members of this conference further respectfully urge upon the Dominion Government that it continue to assist these respective groups in providing for the situation as circumstances may demand, from time to time.

6. Whereas the interests represented in this Conference are convinced of the immeasurably greater social desirability of providing work rather than direct relief for those requiring assistance and whereas the deliberations of the conference have revealed that continued provision for such relief works will be necessary

it is suggested to the respective authorities, that consideration be now given to setting plans under way for comprehensive undertakings which can be begun this year in national highways, main market roads in other areas, the elimination of level crossings, and the demolition of slum areas and erection of new homes in suitable areas.

7. That this Conference express its appreciation of the action of the Dominion Government in requiring adequate safeguards for the employment of labour in all works undertaken under the unemployment relief provisions 1930-1, and strongly recommend their continued observance in any similar undertakings.

8. That plans be further set under way towards the working out of a system of land settlement and loans as between the Dominion, the provinces, and the private agencies, similar to what has been followed in the past under the British Empire Settlement schemes, looking towards the placement on suitable existing lands in Canada of unemployed single men and families already resident in Canada and willing to take up settlement.

9. That plans be similarly set under way as between the Dominion and Provincial authorities for the establishment in Canada of special trainee hostels or the adaptation of existing facilities for the training in housework and agriculture of homeless, unemployed girls already resident in Canada, displaced in various unskilled or semi-skilled occupations, and that similarly the establishment of trainee farms be considered for men similarly displaced and facing possible prolonged idleness.

10. That the possibility be explored of providing for a co-ordinated program whereby the Dominion Department of Immigration and Colonization, the corresponding provincial authorities and the private and public agencies of the larger municipalities instead of providing hostel and part-time employment for homeless men in the large cities could operate clearing and construction camps in those parts of certain provinces in which it is planned to develop settlement. These men could then be accommodated in these camps and engaged in clearing and breaking land, erecting small houses, barns, etc., and making more available and suitable for family settlement areas, in which such settlement is being contemplated.

11. That the possibility be similarly explored of providing for the employment of some of these thousands of men now in city hostels in reforestation work in different areas in the different provinces.

12. Whereas it is the belief of this conference that under present conditions in this Dominion sufficient work cannot be found permanently for all citizens of this country the conference places itself on record as favouring a general reduction of the hours of labour, without reduction in the scales of remuneration.

13. That the Dominion Government be asked to obtain legal opinion as to the possibilities of general legislation which would give municipalities power to send back to their previous place of residence, of five months or more, persons who had no hope of securing work or maintaining themselves in the municipality which they had recently entered and where they had not established residence.

14. That all municipalities or social agencies dealing with single unemployed men or the families of unemployed men, be urged not to

provide transportation to another municipality except in cases—

- (a) Where such individuals have legal residence in the place to which they are to be sent.
- (b) Where through a careful investigation it is evident that such individuals would be better off in the second municipality by reason of a definite offer of employment or by the help which friends or relatives were willing to extend.

15. That the Dominion and Provincial governments make provision in any further enactments or Orders in Council *re* direct or indirect unemployment relief that administration costs be considered as constituting part of the relief expenditures.

16. That the establishment of Provincial and local advisory councils to the Employment Service of Canada be urged upon provincial authorities for the purpose of vocational guidance

and adjustment. Provision for this is made in the Employment Service Act of 1918.

17. That the Federal Government be asked to give immediate consideration to the question of Unemployment Insurance on a contributory basis.

18. That a copy of these findings be submitted to the Federal Government, through the Minister of Labour, the Provincial Governments through their respective Ministers of Labour, and the Mayors of all cities and towns with a population of 10,000 or more.

19. In conclusion, this Conference desires to record its appreciation of the relief measures adopted by the Federal and Provincial Governments in co-operation with the various municipalities to assist in meeting the unemployment situation as it existed in the winter of 1930-1931, and for the steps taken to restrict immigration into the country to those who are self-supporting.

PROPOSED NATIONAL COUNCIL FOR SOCIAL AND ECONOMIC RESEARCH

A PROPOSAL that the Dominion Government should give immediate consideration to the creation of a central economic body for the general guidance of industrial production and distribution in Canada was discussed in the House of Commons on May 4. The motion, which was introduced by Mr. Alfred Speakman (Red Deer), based this suggestion on the following grounds; that the problem of production has been largely solved, assisted greatly by the application of scientific methods and the results of organized technical research; that the federal government has contributed to that end by the establishment of the National Council of Scientific Research, and by the financial assistance given to that body; and that this can best be done at the instance of the state and by men of scientific training enabled to devote their entire time and energy to the study of this important subject.

Mr. Speakman suggested that the proposed body might be known as the "National Council of Social and Economic Research." Among the subjects which might be referred to such a council he mentioned the following:—Comparative production costs in respect of industry and agriculture; Sources and extent of credit; Interest rates cost and extent of floating and bonded indebtedness, and its effect upon agriculture and industry in general; Purchasing power, sources and distribution; Displacement of man power by machinery in the various industries, including agriculture; Extent of spread as between producer and consumer. How brought about. Advertising, including salesmanship, duplication of service. Transportation in its various stages; Fluctuation in price levels both actual

and relative; Relative importance of, and returns made to capital, management, labour in industry; Stabilization and control of production, and relation of these to cyclical periods of depression; Hours of labour and wages paid, in relation to production and purchasing power; Concentration of financial control and production, chain store developments, retail credit and instalment buying, and their relation to prices and to cost of distribution; Further than that, Mr. Speakman continued, "there is a necessity for the securing of authentic information regarding such great world experiments as that being carried on in Russia to-day. Perhaps that is the greatest experiment in centralized control we have yet seen, and in some respects it follows in logical sequence the policy of centralization to which effect is being given in all countries."

The Hon. H. H. Stevens, Minister of Trade and Commerce, on behalf of the Government, expressed doubt as to the advisability of establishing a new research body in addition to the machinery already in existence. He suggested that it would be wise economy on the part of the State to utilize to a fuller extent than heretofore the services of the trained and competent officials already in the service of the Government; and that the government might direct the activities of its own civil servants, through the proper departments, to a genuine effort towards the solution of industrial problems.

The Right Hon. W. L. Mackenzie King expressed the view that the machinery proposed in the motion was already in existence in the National Research Council established under the Research Council Act, 1924. This council

consists of fifteen members; "these members are appointed by the administration and it is their duty to arrange for the investigation of any subject coming within the scope of the act which is assigned to the council by this committee of the cabinet known as the Committee of the Privy Council on Scientific and Industrial Research. The definition of the duties of the council will be found in section 6 of the act. In a sentence, they are as follows:—

The council shall have charge of all matters affecting scientific and industrial research in Canada which may be assigned to it by the committee.

"Social and economic questions are just one class of questions which may be scientifically investigated. Economics is as much a science as any other science that may be named. The

cabinet have full powers under this act to refer to this committee any question that would come within the scope of the words: 'All matters affecting scientific and industrial research in Canada.'"

Referring in particular to the problem of unemployment and its underlying causes, Mr. King said: "Not only do I think the government might, but I think under the present circumstances it ought to, take advantage of this legislation in the statutes of Canada and have the research council bring together some of our leading economists in the universities or others of the type mentioned during the debate on this resolution and allow those men to give special time and thought to this great social problem, allow them to put in a year's work or more on the question of unemployment and means of coping with it."

Proposed Economic General Staff in United States

Senator Wagner, of New York, who has taken a leading part in promoting legislation for relieving unemployment in the United States (LABOUR GAZETTE, April, 1931, page 388), gave an address during April before the Conference for Unemployment Insurance Legislation, in which he recommended the establishment of an economic general staff which would plan industry for the benefit of the people. Such a staff, he said, should be able within six years to increase the income of every gainfully employed person by \$1,000 a year. He mentioned five goals at which the national economic program should aim: higher wages, shorter hours, abolition of child labour, old age pensions, and unemployment insurance.

"We have managed to improve the standard of living for the large majority, though we drifted without plan. Why not the same thing more universally and quickly by design and plan? If the average individual's annual income is increased by \$1,000, the national income would be higher by \$40,000,000,000. Can we not set that down as our task and immediate objective to be obtained within six years? The accomplishment of such a project would still not mean luxury for the average wage-earning family. It would simply make possible a little better housing, a trifle less drudgery for the housewife, and a little more schooling for the children. Upon American industry it would impose the burden of satisfying an additional demand for \$40,000,000,000 worth of goods and service. That is a burden under which business would thrive. To maintain the pace necessary to satisfy such a demand, all forms of waste would have to be

eliminated including child labour, the cruellest form of human waste. The aged would have to be comfortably retired. The involuntarily idle must be adequately insured."

Lawyers' Services for Poor Clients

The "Poor Prisoners' Defence Act" came into force in Great Britain on January 1, 1931. The subject of the provision of lawyers' services for poor clients was discussed in the Manitoba and Saskatchewan Legislatures in 1928 (LABOUR GAZETTE, March, 1928, page 245). In the United States Chief Justice Taft stated his opinion in 1926 that the time had arrived for the creation in every public court of the office of public defender (LABOUR GAZETTE, June, 1926, page 532). The new English Act provides that in indictable cases the committing justices or the trial judge may grant "a defence certificate" if the prisoner's means are insufficient to obtain services of solicitor and counsel. In murder cases such certificates shall be granted; in other cases, if "having regard to all the circumstances of the case (including the nature of such defence, if any, as may have been set up) it is desirable in the interests of justice." Such aid is for not only the conduct, but for the preparation of the defence. It may be that by the use of the words "defence, if any," provision is made for aid even when the prisoner pleads guilty. By words "defence, if any," provision is made for what is called a "legal aid certificate" entitling the prisoner to the services of a solicitor in courts of summary jurisdiction "by reason of the gravity of the charge or of exceptional circumstances."

OLD AGE PENSIONS IN CANADA

Statistical Summary of Administration During First Quarter of 1931 and Since Inception of the System

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the first three months of 1931, and since these Acts became severally effective. Similar tables, bringing the statistics down to December 31, 1930, were given in the LABOUR GAZETTE, February 1931. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. It makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. These provinces are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session last year, to become effective on its proclamation by the

Lieutenant Governor in Council. In Nova Scotia and Prince Edward Island Acts providing for the participation of these provinces in any federal scheme were passed at the session of 1931, both these Acts to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125

a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays

quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months.

DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

Report on Work on Behalf of Ex-Servicemen during Year ending March 31, 1930

THE annual report of the Department of Pensions and National Health for the fiscal year 1929-30 is divided into four sections, respectively describing the work of the Pensions Division, the Board of Pension Commissioners for Canada, the Federal Appeal Board, and the National Health Division. The activities of the Department on behalf of ex-service men are dealt with in the first three sections, while the report of the National Health Division deals with the work of the Child Welfare Branch and matters relating to public health. The Federal Appeal Board ceased to function on September 30, 1930, as a result of legislation passed at the session of Parliament in 1930, provision being made for the handling of pension cases by a Pension Tribunal and a Pension Appeal Court.

The number of admissions of ex-service men to hospitals during the year was 9,991 as compared with 8,890 in the previous year. The total number who received in-patient treatment was 12,828 as against 12,147 in 1928-29, and 11,030 in 1927-28. Treatments under the out-patient department increased from 104,091 to 122,651. Of the number actually in hospital on March 31, 1930, 2,103 were in departmental hospitals, while 1,300 were in civil institutions, making a total of 3,403 as against a total of 2,973 at the end of the previous fiscal year. The number of veterans' care cases showed an increase of 7, the total being 183.

Employment.—The report indicates that the two organizations which operated to assist in securing employment for disabled ex-service men were the Employment Service of Canada and the Montreal Rehabilitation Committee. The total number of employment placements of disabled veterans during the year was 10,146; the number of applicants was 17,524; the number of cancellations was 4,803; the number of pending placements at the end of the year was 2,575. The comparative figures for the year previous were: 11,307, 17,998, 4,565, and 2,126, respectively. The number of pensioners who were granted relief in the form of orders for food, rent, fuel, etc., in 1929-30 was 5,548. This relief was given 51,155 times, or an average of 9.22 times per man. The value of re-

lief orders amounted to \$517,947.19. The total number of pensioners at March 31, 1930, was 56,996, of which number 48,145 were in Canada and 8,851 outside of Canada.

With reference to sheltered employment and vocational training, the report shows that the Department operates Vetreraft factories located at Halifax, Montreal, Toronto, Hamilton and Vancouver (workshop totally destroyed by fire in February, 1930), while at Victoria a shop is operated under an agreement with the Canadian Red Cross Society. "These factories give employment under sheltered conditions to former members of the Forces who have been classified as 'problem cases.' The object is to study carefully the physical and mental condition of the man and to graduate him through different stages of work until his self-confidence and work ability are restored and he is able to accept employment in the outside labour market. Unfortunately industrial conditions have been such that great difficulty has been experienced in placing men in outside industries. During the year under review efforts were continued towards making the benefits of sheltered employment more active and 206 new cases were admitted and 198 discharged. On March 31, 1930, 292 men were on the strength. The problem of operating these Vetreraft Factories with sub-standard labour is a difficult one in view of the keen competition which has to be met, but on the whole, the response from those employed, many of whom have little remaining work value, is very good. The poppies and wreaths which are distributed for sale throughout the Dominion on Armistice Day provide work for men who would have little or no value in any other class of occupation." On March 31, 1930, there were 13 problem cases receiving probational training with industrial or other establishments in an endeavour to help them to become self-supporting.

Veterans' Insurance.—The report states that there was a falling off in the number of applications for returned soldiers' insurance, this being attributed to the monetary stringency. The number of applications was 3,580, as against 4,757 during the previous fiscal year.

Two hundred and eighty-one applications were refused for various reasons. Notwithstanding the employment situation the number of surrenders was slightly less than during the previous year. The number of policies in force on March 31, 1930, was 29,113, an increase during the year of 1,640.

Workmen's Compensation in Respect of Pensioners.—Under Order in Council, P.C. 553, 1928 (LABOUR GAZETTE, December, 1928, page 1333) the Dominion Government assumes workmen's compensation liability for pensioners of 25 per cent disability rating and upwards who are suffering injury or disease as a result of an industrial accident. This provision with certain amendments was renewed

by Order in Council P.C. 645, 1929, for a period of two years as from April 1, 1929.

Commenting on this enactment, the report observes that "the provision under which the department assumes responsibility in respect of accidents sustained by pensioners of 25 per cent and upwards while engaged in industry, continues to be of benefit to these men as otherwise they would, in many cases, be excluded from employment." The expenditure is largely governed by the number of fatal accidents. During the fiscal year under review, the number of claims made was 209 and the expenditure was \$35,727 which is practically double the expenditure during 1928-29, although only about one-half of that in 1927-28.

WORKMEN'S COMPENSATION FOR DOMINION GOVERNMENT EMPLOYEES

THE report of the Department of Railways and Canals (which is dealt with on page 564 of this issue) contains a review of operations under the Government Employees' Compensation Act, during the fiscal year covered by the report. Because the Canadian National Railways have the largest number of employees coming within the scope of this legislation, the Act is administered by the Department of Railways and Canals for the entire government service. The provisions of the Act, which was adopted in 1918, are as follows:

1. (1) An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed, shall be entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same boards, officers or authority as that established by the law of the province for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in Council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependants of any deceased employee of His Majesty by any board, officer or authority, or by any court, under the authority of this Act, shall be paid to such employee or dependant or to such person as the board, officer, or authority or the court may direct, and the said board, officer, authority and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurred.

The Act was amended in 1925 so as to provide that compensation should include medical and hospital expenses, the new section being retroactive in its operation to May 24, 1918.

A total of \$3,158,079.32 has been expended in compensation, pensions and administration, since the adoption of the Act to March 31, 1930. The amount disbursed in pensions and compensation for all departments during the fiscal year ended March 31, 1930, was \$429,098.19 an increase of \$48,016.64 over the previous year, this increase being largely due to increase in pension costs. During the same period, \$21,702.02 was expended on administration.

The number of claims dealt with in 1929-30 totalled 3,960, of which 2,134 involved both compensation and medical aid; 1,413 were for medical aid only; and 413 were for pensions.

Of the total of 3,960 claims, 2,446 were from employees of the Canadian Government Railways and entailed disbursements amounting to \$271,790.45. The Hudson Bay Railway had 200 claims, with disbursements totalling \$22,514.11. There were 615 claims resulting from canal operations, involving payments to the amount of \$42,425.98.

Claims from the Department of Public Works totalled 188, the disbursements amounting to \$26,264.70.

Other departments having a large number of claims and disbursement totals were as follows:—

Marine and Fisheries—132 claims, involving \$19,310.77.

Interior—134 claims, involving \$12,921.90.

Post Office—73 claims, involving \$7,844.39.

National Defence—69 claims involving \$7,050.22.

Pensions and National Health—28 claims, involving \$5,587.42.

The accompanying table indicates the payments under the Act from 1918 to March 31, 1930, by provinces.

Provincial Board	Dominion expenditure including amounts advanced	Disbursements	
		Compensation pensions, etc.	Proportion administrative expenses
	\$	\$	\$
Nova Scotia.....	377,666	322,918	44,737
New Brunswick.....	773,000	683,660	73,657

WORKMEN'S COMPENSATION IN NOVA SCOTIA IN 1930

THE annual report of the Workmen's Compensation Board of Nova Scotia for the year ended December 31, 1930, contains a general review of operations since the Act came into effect on January 1, 1917. The summary of this fourteen year period since 1917 indicates that during that time accidents in the industries within the jurisdiction of the Board to the number of 102,072 were reported. In that period 1,309 workmen were fatally injured. The amount actually paid to workmen or their dependants and for medical aid during those fourteen years, was \$9,052,491.79, and the amount required at the end of 1930 for the purpose of paying life and other pensions and compensation to disabled workmen, and for medical aid, was \$7,038,496.52. The total compensation paid or payable to workmen and their dependants and for medical aid for the fourteen years amounts to \$16,090,988.31. That amount does not, however, represent the entire cost of the accidents for the fourteen year period, as the administrations expense and cost of safety associations are not included. There were 695 widows to whom pensions for life or until remarriage were awarded; 1,608 children under sixteen years of age were awarded monthly pension while under that age, dependent mothers and fathers to the number of 384 were awarded compensation, 32 members of the family other than widows, children and parents, but who were wholly or partly dependent upon the earnings of deceased workmen at the time of their respective deaths, received benefits, and life pensions were awarded to 3,505 workmen who were disabled, either wholly or partially, for life. Prior to January 1, 1920, medical aid was not furnished to injured workmen except in special cases. Since that date injured workmen have been entitled to free medical aid for thirty days

from date of disability, and during the eleven years that have elapsed the cost of medical aid was \$848,041.40. The ratio of the administration expense to the compensation cost of accidents for fourteen years is 7.84 per cent.

Accidents in 1930.—The total number of accidents of all kinds reported to the Board in 1930 was less than those of the year 1929, the total number for 1930 being 9,434 as against 10,205 in the previous year, a difference of 771.

The total cost of all accidents for 1930, under Part 1 of the Act, was estimated at \$1,586,500, exclusive of the administration expense and cost of safety associations. The 9,434 accidents reported to the Board for the year 1930 are classified as follows:

Fatal accidents, dependency established and compensation commenced	50
Fatal accidents, burial expenses paid, no dependents	5
Fatal accidents, burial expenses paid or provisional payments made, dependency not yet established	6
Fatal accidents, claim non-compensable.	5
Accidents causing permanent partial disability	206
Accidents causing total disability for seven days or over	6,113
Accidents where medical aid only has been paid	2,132
Accidents pending adjustments, no payments	228
Accidents, claims not compensable (other than fatal)	689
	9,434

Summary for 1930.—The report summarizes the financial statement for 1930 in the following paragraphs:—

"During the year 1930 the Board decided to recalculate their pension reserves and their liabilities for outstanding claims on a 4½ per cent

basis instead of 3½ per cent. This work was not completed at the close of the year but all estimates for outstanding claims, as well as all pension reserves set aside in 1930, were calculated on a 4½ per cent basis. The surplus which accrued therefrom was carried forward from prior years. In many classes it was possible to reduce rates retroactively but in a few cases, on account of the very poor experience, it was necessary that rates should be increased for the year 1931.

"From the revaluation which took place as of date December 31, 1928, there still remains \$194,662.63. We considered it good practice at the time that a safety factor of about \$200,000 should be maintained to insure against any variation between our experience and the actuarial tables now in use and the \$194,662.63 will be held for the purpose.

"Our annual report for the year 1929 estimated that the surplus at the close of that year would be \$141,617.63. Owing to adjustment in payrolls and the surplus which accrued from the recalculation of our outstanding claims this surplus was increased to \$327,751.20.

"For industries under Part 1 of the Act the total income for the year 1930, actual and estimated, amounted \$1,261,244.33, and the estimated expenditure for the same period was \$1,684,528.23, showing a deficit for the year's occupations of \$423,283.90. The surplus forward from prior years was \$327,751.20, leaving a deficit at December 31, 1930, of \$95,532.70."

Benefit of Act to Workmen and Dependants.
—During the past year, 6,113 workmen, wholly disabled for seven days and upwards, were paid compensation. At the end of the year the persons receiving compensation for 1930 and

prior years were as follows: widows, 481; children under sixteen, 911; dependent mothers, 76; dependent fathers, 34; other dependents, 14; workmen disabled for life (partially or wholly), 743.

Income and Expenditure by Classes.—The actual and estimated income and expenditure of the Board in respect to each class of industry under Part 1 of the Act according to the provisional statement of such to December 31, 1930, were as follows:

Class	Income (actual and estimated)	Expenditure (actual and estimated)
	\$	\$
Mining.....	508,810 31	795,928 18
Lumbering and woodworking.....	203,854 31	299,340 54
Iron and steel.....	103,357 46	79,692 94
Manufacturing and operating (not otherwise specified).....	77,887 87	132,098 13
Building and construction.....	85,006 44	113,661 87
Public utilities.....	93,695 43	107,496 35
Transportation.....	188,577 26	156,254 97
Halifax Relief Commission.....	55 25	55 25
Total.....	1,261,244 33	1,684,528 23

The report analyses the accidents compensated in 1930 as follows: Total accidents compensated 8,740; claims partially disposed of, 833; deaths, 55; permanent disability, 206; temporary disability (compensation—5,521; medical aid only, 2,125).

There is also presented a tabular re-capitulation for 1929 indicating the accidents compensated by classes; month of occurrence of accidents compensated; locality of accidents; time loss, average age and average wage by classes; nature of injuries by classes; causes of accidents, etc.

Changes in Compensation Assessment Rates in Ontario for 1931

The Ontario Workmen's Compensation Board has recently published a pamphlet indicating the 1930 adjusted assessment rates and the provisional rates to be assessed on industries in the province during 1931. In addition, the general provisions of the Act are outlined and the method of rating explained. The method of rating was reviewed in the LABOUR GAZETTE, April, 1930, page 396 and previous issues. The rates of assessment are percentages of \$100 of pay-roll in each class. The provisional assessment changes for 1931 are as follows:—

Class 5, group 1—gold mining—the assessment is reduced from \$4.50 to \$4.00.

Class 5, group 7—gun-powder, nitro-glycerine, dynamite, and other high explosive manufacture—the rate is increased from \$1.00 to \$5.00. In this same group the rating for fireworks, or torpedo manufacture is also increased from \$1.00 to \$5.00. Other changes in the ratings in this group are as follows: fuse manufacture—increased from 60 cents to \$3.00; small arm cartridges manufacture—increased from 40 cents to \$2.00; loading and fixing artillery ammunition—increased from 80 cents to \$4.00.

Class 6, sand, shale, clay or gravel pits or sand sucking—the rating is reduced from \$5.00 to \$4.50. Also in this group the rating is reduced from \$2.50 to \$2.25 for sand and gravel pits operated with machine power.

INDUSTRIAL ACCIDENT PREVENTION ASSOCIATIONS OF ONTARIO

Annual Convention at Toronto, April, 1931

THE 1931 Convention of the industrial Accident Prevention Associations of Ontario was held at Toronto in April, 1,128 delegates from all parts of the Province being present. This large attendance indicated an increasing interest in accident prevention work.

The financial statement for the year and other reports were presented at the annual general meeting by Mr. R. B. Morley, the general manager of the Association. Ten class safety associations held their annual meetings and interested groups of executives discussed practical problems relating to their own classes of industry. Each meeting had its own program, but common subjects discussed were: "Is infection controllable?" and "Increased production through safeguarding machinery." In each case, the business portion of the meeting was carried through under the direction of the class chairman and a subsequent meeting of directors was held.

Report of General Manager

Accidents in 1930.—Last year there were 69,267 accidents reported to the Workmen's Compensation Board, including 520 fatalities. This is a sharp falling off from 87,103 in 1929 and is one way of measuring the decline in payroll. Total benefits awarded by the Compensation Board in 1930 were \$7,423,018.82, of which \$6,086,972.77 was for compensation and \$1,336,046.05 for medical aid. The particular job of these Associations is to keep information of this type constantly before employer and employee so that practical steps may be taken inside the firm under compensation, looking to a reduction in both severity and frequency.

Organized Prevention.—Section 114 of the Compensation Act authorizes the setting up of accident prevention associations and permits the Workmen's Compensation Board to make grants for the maintenance of those associations. Last year we welcomed the Construction Safety Association into the membership of the Industrial Accident Prevention Associations and this year we welcome the Steel Erectors Safety Association which was set up and came into the general organization in 1930.

Class Associations.—The Class Associations included in the Industrial Accident Prevention Associations are:—

Woodworkers Accident Prevention Associations; Ceramics and Stone Safety Association; Metal Trades Safety Association; Chemical Industries Safety Association; Food Products Safety Association; Leather, Rubber and Tan-

ners Safety Association; Textile and Allied Industries Safety Association; Printing Trades Accident Prevention Associations; Steel Erectors Safety Association; Construction Safety Association.

It has been customary to distribute the literature to the various industries comprising these classes under the general name of the Industrial Accident Prevention Associations and the field force is directed by the general organization.

Inspection Services.—The duties of the field force are carried on inside the plants and on the jobs of our membership. The Inspectors have authority under the Workmen's Compensation Act to enter plants at reasonable hours and they are given other authority which is necessary in work such as this. One important item has been the holding of meetings of employees and a number of such meetings have been held, in some cases motion pictures being very effectively used. As the inspectors are in many cases the only personal representative of the Associations, it is important that thoroughly good feeling exist between employers and members of the staff.

Safety Literature.—During 1930 a large amount of safety literature was distributed to the membership of these Associations, this figure running well over one million pieces of literature. Literature is exchanged with safety organizations throughout the world, including Austria, Australia, Belgium, Czecho-Slovakia, England, Estonia, Finland, France, Germany, Holland, Hungary, Italy, Norway, Poland, Russia, Sweden, Switzerland and the United States. Our thanks are due to these good friends throughout the world and to-night I shall have the pleasure of presenting greeting from a number of these organizations.

Cost Ratio.—Under an arrangement made with the Workmen's Compensation Board and referred to last year by the President, Mr. Kimbark, we are receiving from the Board cards giving information as to money experience of firm under compensation. This includes figures for adjusted payroll, assessments levied and awards for compensation and medical aid. A comparison of assessments with awards (for compensation and medical aid) sets up a cost ratio figure and we have found a limited number of firms where their cost ratio was continuously in excess of 1, which meant that for every dollar of assessments levied by the Workmen's Compensation Board, the plant had taken out a sum in excess and this short-

age, of course, was found by other industries in the Class. It will be some considerable time before cost ratio cards are received for our entire membership but, in the meantime, every effort is being made to clean up situations that are at all difficult and to get firms back on a proper basis so that undue costs may not be thrown on other industries in their class. This cost ratio information will, in the long, run prove one of the most important factors in the carrying out of the campaign of these Associations.

Accident Record.—For over two years we have received information from firms employing 250 or more on the average, giving for the previous month the total number of hours worked, the average number of employees, the number and type of injuries and the amount of the time lost through those injuries. This enables us to make a calculation showing accident frequency and severity. The report was commenced in January, 1929, and frequency has shown a steady downward trend as is indicated by the charts on display here to-day.

Average frequency for 1929 was 26.44 and for 1930 this had dropped to 14.90. The compilation of the report involves a considerable amount of work both on the part of the industries and of this organization, yet the use made of the material, month by month, indicates that the effort is well worth while.

Hon. W. Finlayson, Minister of Lands and Forests, spoke on "Workmen's Compensation and Accident Prevention". He said that the government would consider as soon as ready the report being prepared by Judge Middleton, (*LABOUR GAZETTE*, February, 1931, page 122), and suggested that there were not likely to be many changes in the Compensation Act.

Officers for the ensuing year were elected as follows:—Messrs. F. M. Morton, International Harvester Company, Hamilton, president; G. G. Cockshutt, Slingsby Manufacturing Company, Brantford, first vice-president; P. T. Herdegen, Dominion Forge and Stamping Co., Walkerville, second vice-president and W. S. Campbell, Canadian General Electric Company, Toronto, honorary-treasurer.

REPORT OF BUREAU OF LABOUR OF MANITOBA, 1929-30

THE fifteenth annual report of the Bureau of Labour and Fires Prevention Branch of the Department of Public Works, Province of Manitoba, reviews the administrative activities of the Branch during the fiscal year ended April 30, 1930.* The Bureau is responsible for the administration of the following legislative enactments: the Bureau of Labour Act; the Manitoba Factories Act; the Bake Shops Act; the Shops Regulation Act; the Minimum Wage Act; the Elevator and Hoist Act; the Steam Boiler Act; the Building Trades Protection Act; the Public Buildings Act; the Fair Wage Act; the Electricians' Licence Act; the Public Amusements Act (licensing of cinema projectionists); the Fires Prevention Act, and the One Day Rest in Seven Act.

Tabular statistics are presented indicating the number and nature of the inspections carried out and orders issued under the above-mentioned Acts. The number of orders issued during the year totalled 10,295, while during the same period there were 18,582 inspections. For the previous year the same totals were 11,066 and 19,929 respectively. All the orders issued under the Acts were for improvements in the interests of safety or health and sanitation. Eleven cases of child labour were found. Orders were issued for the remedying of

such conditions, and compliance obtained in each case. In regard to child labour, the report observes that this phase of the work was under very close supervision.

The accompanying table indicates the number of inspections and orders in connection with the administration of the various Acts during the year ended April 30, 1930.

SUMMARY OF INSPECTIONS MADE AND ORDERS ISSUED BY MANITOBA BUREAU OF LABOUR, 1929-1930

Statute	No. of Inspections	No. of Orders
The Manitoba Factories Act.....	2,017	2,122
The Bake Shops Act.....	99	110
The Shops Regulation Act.....	75	70
The Minimum Wage Act.....	2,512	843
The Elevator and Hoist Act.....	5,426	3,009
The Steam Boiler Act.....	4,161	1,404
The Building Trades Protection Act	885	518
The Public Buildings Act.....	37	65
The Electricians Licence Act.....	164	10
The Public Amusements Act.....	230	118
The Fires Prevention Act.....	2,598	1,922
The One Day Rest in Seven Act...	378	104
Total.....	18,582	10,295

Industrial Accidents.—During the year there was a total of 6,075 accidents, of which number 18 were fatal. In the previous year there were 6,928 accidents, including 25 fatalities. Of the 18 fatal accidents in 1929-30, there were 11 in the industrial group, 6 in the building trades and 1 in connection with elevator operation. The report gives particulars of each fatal accident, and also of in-

*An Act providing for the establishment of a separate Department of Labour was adopted by the Legislature of Manitoba at its session this year.

vestigations into two other fatalities which did not come under legislation administered by the Board.

Accident Prevention and First Aid.—An appropriation passed at the 1929-30 session of the Legislature enabled the Bureau to launch an intensive educational campaign on accident prevention and to inaugurate a bi-monthly bulletin service. These bulletins, carrying general and specific messages of safety, have been readily accepted in industrial establishments and are now to be found in practically every workshop in the province. In addition, noon-hour safety talks have been given in many plants. At the larger plants safety committees have been organized "with beneficial results." Final arrangements have been completed to extend this accident prevention campaign into Northern Manitoba. A special feature of the campaign was the attention given to traffic hazards.

As regards first aid, it is pointed out that the Bureau offers a training in "first aid to the injured" to any industrial worker in Manitoba. "Every second worker a first aider" is still the slogan of the Bureau, and the report states that every year this objective is more closely approached. This work is conducted, with some financial assistance from the Workmen's Compensation Board, under the auspices of the St. John Ambulance Association. During the year, instruction was given to 241 persons and 174 certificates were awarded.

Fire Prevention.—In addition to a continuous campaign of education in regard to fire prevention, the work of the Board is outlined in two main directions: (1) Inspection of industrial premises and public buildings with the object of remedying hazardous conditions; (2) examination of fire reports and special investigations to determine cause of serious or suspicious fires. The per capita fire loss in Manitoba during 1929-30 was \$4 as compared with \$3.67 in the year previous. During the year there were 43 fatalities due to fires. The two leading causes of fires investigated were careless smoking and careless use of gasoline. There were 63 fires of suspicious origin, and four charges of arson were laid with convictions obtained in each case.

General Complaints.—The report indicates that during the fiscal year 220 complaints, under the several Acts administered by the Bureau, were received and adjusted. These complaints were classified under the various Acts as follows: Minimum Wage Act, 189; Steam Boiler Act, 11; Electricians License Act, 9; Fires Prevention Act, 4; One Day Rest in Seven Act, 4; Elevator and Hoist Act, 2; Shops Regulation Act, 1.

Steam Boilers.—A strict supervision of all steam plants was maintained with the view of seeing that such were adequately staffed by duly licensed engineers in conformity with the Steam Boilers Act. A total of 1,201 certificates and renewals to engineers were issued during the year, the fees received amounting to \$2,914.50.

Electrician's Licences.—There were 14 examinations held under the Electrician's Licence Act. The total number of licences issued was 218; the number of permits issued was 13; and the number of contractors' certificates issued was 50. The total amount of fees collected in connection with the above was \$1,933.

Unemployment Relief.—As an appendix to the general report of the Bureau there was a special report in connection with destitution and unemployment relief during the fiscal year. The following paragraphs from this special report review the unemployment situation:—

During the winter 1929-30, the general industrial depression began to make itself felt in Manitoba, and as a result many cases of destitution through unemployment occurred. The provincial government adopted the same policy that it had followed for a number of years and came to the assistance of municipalities wherein it had been found necessary to issue groceries, fuel and other relief to out-of-work persons, thus making the tenth consecutive winter during which this consistent policy was followed. It was very strongly urged by the government, cities and municipalities of Manitoba that assistance be given by the federal government, but the report states that such assistance was refused. In Western Canada, at least, the problem of unemployment during the winter 1929-30 was probably more outstanding than any other problem and evidence of this is found in the fact that several conferences on the subject were held.

The financial extent to which the provincial government assisted the municipalities in dealing with the unemployment situation during the past nine winters is summarized as follows:—

Winter 1920-1921. . . .	\$ 78,952 28
Winter 1921-1922. . . .	151,718 85
Winter 1922-1923. . . .	63,542 80
Winter 1923-1924. . . .	55,104 39
Winter 1924-1925. . . .	\$ 61,064 79
Less refund. . . .	2,455 47
	<hr/>
Winter 1925-1926. . . .	58,609 32
Winter 1926-1927. . . .	16,567 57
Winter 1927-1928. . . .	9,640 41
Winter 1927-1928. . . .	11,552 58
Winter 1928-1929. . . .	10,962 82
Winter 1929-1930. . . .	64,282 69

Minimum Wages for Women in Manitoba

The report of the Minimum Wage Board is included in the report of the Bureau of Labour. In regard to the administration of the Minimum Wage Act the report refers to the appointment of Mr. Edward R. Kennedy to replace Mr. E. C. Stovel, who resigned, the existing personnel now being as follows: Mr. George N. Jackson, chairman; Mrs. Edna M. Nash and Mr. E. R. Kennedy, representing the employers; Mrs. Jessie Maclellan and Mr. James Winning, representing the employees.

The report points out that during the year considerable time was devoted to the revision of regulations governing females employed in all retail stores, including the Five, Ten and Fifteen Cent stores. A public meeting was called in the Legislative Buildings on December 4, 1929, to hear all parties interested in such revision, and two public hearings were held in Brandon for a similar purpose. Regulation No. 12 was finally adopted and became effective May 26, 1930. (Particulars with respect to this regulation, which established the minimum rate at \$12 per week for experienced employees, were detailed in the LABOUR GAZETTE for May, 1930, page 524.)

An amendment was made to Regulation No. 2 governing the occupation of female employees in all departments of a departmental store and mail order house, by the insertion of a new clause dealing with the wages paid to "Inexperienced Employees."

There were six prosecutions during the fiscal year as follows: one under Office Regulations; four under Regulation No. 5 (hotels, etc.); and one under Regulation No. 3 (laundries, etc.). Five of these cases concerned inadequate wages and one excessive hours. Three cases were satisfactorily settled out of court with all wages paid. Fines were imposed in two other cases, and in one case the summons could not be served, owing to the proprietor having left.

Seventy-nine claims for wages were adjusted, and the collection of the wages, involving a sum of \$913.94, was effected by the Bureau of Labour. In Winnipeg and district, 2,467 inspections were made, and of the resulting orders 100 concerned working conditions, 226 had to do with hours, 328 concerned wages, and 176 came under the heading of "other regulations." Outside of Winnipeg, the number of inspections totalled 45, and the corresponding numbers of orders were: 5, 1, 5 and 2, respectively.

LABOUR ON THE CANADIAN NATIONAL RAILWAYS

Annual Report of Department of Railways and Canals

THE annual report of the Department of Railways and Canals, recently presented to Parliament, details the varied activities in connection with the administration of the waterways and railways under the jurisdiction of the Dominion Government. The sections of the report relating to railway operation have to do with the calendar year, 1929, while those dealing with departmental and canal activities and financing are for the federal fiscal year ended March 31, 1930. The report contains the following information in regard to labour on the Canadian National System.

Wages and Labour.—It is stated that "harmonious relations between the management and employees were maintained during the year." The principal wage adjustments and the groups affected were outlined as follows:—

Effective May 1, shop craft employees both Canadian and United States lines.

Effective June 1, maintenance-of-way employees on Canadian lines and the Duluth, Winnipeg and Pacific Railway.

Effective August 1, clerks, freight handlers, station and baggage room employees, stores and shop labourers, on Canadian lines.

Various working rules affecting conductors and trainmen were consolidated.

Revised rules affecting locomotive engineers were adopted with respect to mileage regulations, promotion and representation.

As regards the industrial department it is pointed out that it continues to perform a highly useful service, industrial development along the lines of the Canadian National Railways showing a progressive improvement compared with previous years. Three hundred and sixty-nine new plants were established in addition to which 193 extensions to existing plants were constructed adjacent to the company's lines. The relative aggregate capital expenditures by manufacturing and other industrial concerns amounted to \$99,071,000, compared with \$120,013,400 in 1928.

Colonization and Natural Resources.—The work of the colonization department is described as being "a source of much gratification." This department is particularly com-

mended for placements of immigrants brought to Canada under its auspices, few, if any, having become a charge upon the public. Dealing with this phase of activity, the report states that "partly on account of changes in immigration conditions the number of immigrants recruited in Europe was decreased about 25 per cent as compared with 1928. Central European immigration showed the only decrease. There was an increase of 17½ per cent in immigration from Great Britain, notwithstanding the limit placed on farm labourers entering the country. Assisted immigration under different existing federal schemes has been continued. Over 2,600 families were settled by the Canadian National Land Settlement Association on lands in our territory in the Prairie Provinces. During the year employment was obtained for 15,355 immigrants, for 6,000 of whom work was again obtained after losing or giving up their positions. Many French-Canadian families returned from the United States. Agricultural development work has continued. The officers of the department have been active in various ways in connection with examinations into and the development of natural resources in different parts of the Dominion.

Pensions.—The report gives the names and service records of 14 employees with fifty or over years of service with the railways who were pensioned during the year. The general

pension scheme, approved by Act of Parliament, came into effect on August 1, 1929. It applies to all officers and employees, who are not already covered by and do not remain under previously established superannuation or provident funds on a contribution basis. The various enactments in connection with the pension program of the Canadian National Railway system have been outlined from time to time in the LABOUR GAZETTE, the most recent references being in the issues of March, 1929, page 264; April, 1929, page 396; June, 1929, page 602; January, 1930, page 26; May, 1930, page 530.

Medical Department.—Towards the end of 1927 there was appointed a chief medical officer with jurisdiction over the various regional medical officers, the purpose being to standardize, so far as might be considered wise, the work of the medical departments in the different regions; also to organize and develop various arrangements considered essential for the joint protection and benefit of the employees and the company. The results achieved have been particularly satisfactory.

Much further study and investigation will be necessary, however, to determine how far the functions of a railway medical department may be carried with advantage. Consequently what has already been accomplished must be regarded as merely the commencement of a development which it is believed will become much more beneficial.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Fifteenth Session of the International Labour Conference

THE Fifteenth Session of the International Labour Conference will open in Geneva on May 28, the agenda comprising the following items: (1) the age of admission of children to employment in non-industrial occupations; (2) hours of work in coal mines; and (3) partial revision of the Convention concerning employment of women during the night. Reports have been issued by the International Labour Office dealing with each of the above-mentioned items.

Item (1) is to be the subject of a preliminary discussion with a view to the possibility of adopting a Draft Convention or Recommendation at the 1932 Session. The protection of employed children began early to interest the legislative authorities of the different countries and especially of those which were industrialized. Great Britain led the way and still remains in the front rank, but many others have followed her example.

Child labour was, in fact, one of the first evils which arose from industrialization, and one which required the most energetic remedies.

Item (2) deals with a subject which was before the Conference in 1930, on which occasion a Convention was drafted dealing with the restriction of hours of work in coal mines in European countries, which failed, however, on the final vote to obtain the necessary two-thirds majority. It will be for this year's Conference to decide whether the subject shall be finally dealt with this year. It is generally recognized that differences in working conditions in the coal-mining industry as between different coal-producing countries tend to aggravate and embitter the struggle for markets which is one of the chief features of the "coal problem" of to-day. Solutions of that problem, by international agreements relating to production, marketing, etc., are being sought or advocated in many quarters; but no solution will be complete which is not accompanied by an international equalization of conditions of labour. In view of

this, the International Labour Office has for some time made a special study of hours of work, wages and other conditions of employment in mines, and is endeavouring to promote their standardization by international agreement.

Item (3) relates to minor amendments which are proposed in the Convention concerning employment of women during the night as the result of the experience gained under the Convention since its adoption in 1919. The two specific points on which revision is proposed relate respectively to the exclusion of women employed in a supervisory capacity, and the precise hours of the night during which women's work should be prohibited.

Ratification of International Labour Conventions

On March 31, 1931, the total number of ratifications of International Labour Conventions registered with the Secretary-General of the League of Nations was 425. The ratification of twenty-nine additional Conventions had been authorized in various countries, but had not yet been registered. Four new ratifications were registered during the month of March.

Advisory Committee on Salaried Employees

The Advisory Committee of the International Labour Office on Salaried Employees held its first meeting in Geneva on April 14 and 15. The following was the agenda of the meeting: (1) general examination of the claims of salaried employees; (2) protection of inventions by wage-earners; (3) clauses restricting liberty of employment (Radius Clauses); and (4) exchange of views on the effect to be given to the clause in the Recommendation adopted at the Fourteenth Session of the Conference providing for the preparation of a uniform plan of enquiry into hours of work of certain classes of salaried employees.

Although the question of unemployment was not on the agenda, a resolution was

adopted indicating some of the measures which were thought to be appropriate in order to alleviate unemployment existing among salaried employees.

On the question of the protection of salaried employees' inventions, the Committee adopted a resolution expressing the desire that international regulations on inventors' rights for salaried employees should be adopted as soon as possible. It was proposed that either this question should be placed on the agenda of the International Labour Conference, or that the competent authorities should be approached in order that the principles laid down by the Committee may be borne in mind when the revision of the International Convention on the protection of industrial copyright is discussed in London in 1933.

Action in Canada on International Labour Conventions

Industrial and Labour Information, the weekly publication of the International Labour Office, in its issue of April 27, 1931, reproduces in summarized form a memorandum which was communicated to the International Labour Office on February 4, 1931, indicating the extent to which the proposals contained in the various Conventions and Recommendations of the International Labour Conference are met by existing legislation in Canada. The memorandum in question dealt with all of the thirty Conventions and thirty-nine Recommendations which have been adopted by the International Labour Conference from 1919 to 1930. The summary published in *Industrial and Labour Information* deals with Conventions on the following subjects: Hours; Unemployment; Childbirth; Night Work of Women; Minimum Age for Employment in Industry; and Night Work for Young Persons. The information relating to the other Conventions and Recommendations will be summarized in subsequent numbers of *Industrial and Labour Information*.

Jurisdiction of Dominion and Provincial Legislatures on Decisions of Conference in 1927, 1928, 1929 and 1930

The Hon. W. A. Gordon, Minister of Immigration and Colonization, acting on behalf of the Hon. G. D. Robertson, Minister of Labour, laid on the table of the House of Commons on April 14, the texts of various Draft Conventions and Recommendations which had been adopted at the Tenth, Eleventh, Twelfth and Fourteenth Sessions of

the International Labour Conference; also the texts of certain Orders in Council which had been passed, on report of the Minister of Justice, dealing with the questions of jurisdiction involved in these subject-matters as between the Dominion Parliament and the respective Provincial Legislatures. It was intimated also on behalf of the Government

that the Draft Conventions and Recommendations in question, together with the Orders in Council, had been brought to the attention of the different provincial governments.

The Conventions and Recommendations adopted at the Tenth Session of the International Labour Conference in 1927, were printed in full in the *LABOUR GAZETTE*, July, 1927, page 745; those adopted at the 11th Session were given in the issue of July, 1928, page 738; those at the 12th Session in the issue of July, 1929, page 757; and those at the 14th Session in the issue of July, 1930, page 790.

Decisions of Conference of 1927

1. Draft convention concerning sickness insurance for workers in industry and commerce and domestic servants.

2. Draft convention concerning sickness insurance for agricultural workers.

3. Recommendations concerning the general principles of sickness insurance.

Order in Council, P.C. 494, dated 8th March, 1930, states as follows:—

Sickness Insurance.—The Minister of Justice is of opinion that, although legislation on the subject dealt with in the Convention concerning sickness insurance for workers in industry and commerce and domestic servants (1927) may perhaps be enacted by the Parliament of Canada in an ancillary way in relation to industrial and commercial undertakings subject to its exclusive legislative authority, legislative jurisdiction is, as regards those parts of Canada included within the several provinces, primarily vested in the provincial legislatures. The proposals of the Convention are directly concerned with the civil rights of both employers and employees in the province and incidentally involve the exercise of various powers assigned exclusively to the provincial legislatures by Section 92 of the British North America Act, 1867. Various decisions of the Judicial Committee of the Privy Council afford, in the Minister's view, strong support for the opinion that the provincial legislatures are competent to give effect to the proposals of the Convention generally and comprehensively, except for those parts of Canada which are not included within the limits of any province. As to the latter, exclusive legislative jurisdiction resides in the Parliament of Canada.

Sickness Insurance in Agriculture.—The Minister is of opinion that the provincial legislatures are competent, in virtue of their powers under Sections 92 and 95 of the British North America Act, to give effect to the Convention concerning sickness insurance for agricultural workers (1927) generally and comprehensively, subject to the qualification that the Parlia-

ment of Canada alone is competent to give effect to these proposals in regard to agricultural workers in the service of the Dominion Government and in those parts of Canada outside the limits of any province.

General Principles of Sickness Insurance.—In the opinion of the Minister the question of legislative jurisdiction to give effect to the principles set out in the Recommendation concerning the general principles of sickness insurance (1927) is governed by the opinion which the Minister has expressed above in relation to the Conventions.

Decisions of Conference of 1928

1. Draft Convention concerning the creation of Minimum Wage fixing machinery.

2. Recommendation concerning the application of minimum Wage fixing machinery.

Order in Council, P.C. 495, dated 8th March, 1930, states as follows:—

Minimum Wage Fixing Machinery.—As regards the Convention concerning the creation of minimum wage fixing machinery and the recommendation concerning the application of minimum wage fixing machinery (1928), the opinion of the Minister is that legislative jurisdiction with relation to the creation or maintenance of machinery for the fixing of minimum rates of wages is, subject to the qualifications to be mentioned, vested primarily in the provincial legislatures. Legislation creating minimum wage fixing machinery for works and undertakings subject to the exclusive legislative jurisdiction of the Dominion is, however, within the competence of the Dominion Government, although until the Dominion Parliament so legislates the primary authority of the provincial legislatures remains unimpaired and unrestricted, but the further qualification remains that the Parliament of Canada is exclusively competent as regards workers, servants or employees of the Dominion Government and for those parts of Canada which are not within the boundaries of a province.

If the Convention should be ratified upon the request of the provinces, the Dominion Government would, of course, be the only proper channel of communication for the transmission to the International Labour Office of the annual general statement referred to in Article 5 of the Convention.

Minimum wage laws applicable to women only are in force in Ontario, Quebec, Nova Scotia (where no Board has yet been appointed to administer the Act),* Manitoba, British Columbia, Alberta and Saskatchewan. In

* A Minimum Wage Board was appointed in Nova Scotia in March, 1930 (*LABOUR GAZETTE*, March, 1930, page 255).

British Columbia and Alberta statutes are also in force which provide for a minimum wage for male employees.

Decisions of Conference of 1929

1. Recommendation concerning the prevention of industrial accidents.

2. Draft Convention concerning the marking of the weight on heavy packages transported by vessels.

3. Recommendation concerning responsibility for the protection of power-driven machinery.

4. Draft Convention concerning the protection against accidents of workers employed in loading or unloading ships.

5. Recommendation concerning reciprocity as regards the protection against accidents of workers employed in loading or unloading ships.

6. Recommendation concerning the consultation of workers' and employers' organizations in the drawing up of regulations dealing with the safety of workers employed in loading or unloading ships.

Order in Council P.C. 2980, dated 19th December, 1930, states as follows:—

Accident Prevention.—The Minister is of opinion that the subject-matter of the Recommendations concerning the prevention of industrial accidents and concerning responsibility for the protection of power-driven machinery (1929) is within the competence of the provincial governments, subject to the same qualifications as are set forth above.

Protection of Dockers.—The Minister is of the opinion that the subject-matter of the Convention concerning the marking of the weight on heavy packages transported by vessels, the Convention concerning the protection against accidents of workers employed in loading or unloading ships, the Recommendation concerning reciprocity as regards the protection against accidents of workers employed in loading or unloading ships and the Recommendation concerning the consultation of workers' and employers' organizations in the drawing up of regulations dealing with the safety of workers employed in loading or unloading ships (1929) is within the legislative competence of Parliament.

Decisions of Conference of 1930

1. Draft convention concerning forced or compulsory labour.

2. Recommendation concerning indirect compulsory to labour.

3. Recommendation concerning the regulation of forced or compulsory labour.

4. Draft convention concerning the regulation of hours of work in commerce and offices.

5. Recommendation concerning the regulation of hours of work in hotels, restaurants and similar establishments.

6. Recommendation concerning the regulation of hours of work in theatres and other places of public amusement.

7. Recommendation concerning the regulation of hours of work in establishments for the treatment or the care of the sick, infirm, destitute or mentally unfit.

Order in Council P.C. 770, dated 2nd April, 1931, states as follows:—

The Minister is satisfied that the conditions relating to the use of forced or compulsory labour, which it is the object of the Draft Convention and Recommendations to regulate and suppress, do not exist in this country, and no legislative or other action, whether on the part of the Dominion or of the provinces, is therefore required to give effect, in relation to Canada, to the principle set forth in those instruments.

The Draft Convention and the three Recommendations of the Conference dealing with the regulation of hours of work contemplate the institution of uniform regulations as to hours of work in the various establishments dealt with. The implementing of the Draft Convention and Recommendations depends in part upon executive and administrative action and in part upon a basis of statutory requirements. Under the British North America Act, 1867, the distribution of executive authority follows the distribution of legislative power as between the Dominion and the Provinces and the whole power of government, legislative and executive, in relation to any given subject-matter, rests, consequently, with the government in which it is assigned for legislative purposes. It is, in the Minister's view, in harmony with this principle and most convenient, where executive or administrative action alone is required to give effect to the principles and rules set out in the Draft Convention and Recommendations and no question of legislative jurisdiction is strictly involved, that action should be taken by the Government, Dominion or Provincial, in which is vested the appropriate legislative power in relation to the subject-matter.

The principles and rules which are to be given effect by legislative action, clearly involve legislation which, in its subject-matter, would be directly concerned with classes of subjects assigned exclusively to the provincial legislatures by section 92 of the British North America Act, 1867: in particular, with "Local works and undertakings" [sec. 92(10)]; "Property and Civil Rights in the Province" [sec. 92(13)] and perhaps also, "Generally all matters of a merely local or private nature in the Province" [sec. 92(16)]. Therefore, legislative jurisdiction touching the subject-matter of those principles and rules is, as regards those parts of Canada included within the several provinces, primarily vested in the provincial legislatures, and the Minister is of the

opinion that it is within the competence of the several provincial governments by appropriate legislative or administrative action to give effect to the proposals of the said Draft Convention and Recommendations, generally, and comprehensively, subject only to the following qualifications.—

First, legislation upon such of the principles and rules set out in the said Draft Convention and Recommendations as require legislative action may, perhaps, be enacted by the Parliament of Canada, in an ancillary or incidental way, in relation to industrial undertakings, subject to its exclusive legislative authority; for example, the classes of undertakings enumerated in section 92, subsec. 10 (a), (b), (c) of the British North America Act, 1867. To the extent that such legislation may be truly ancillary or necessarily incidental to the exercise by Parliament of the powers conferred upon it, the effect of the legislation, if enacted, is that

provincial authority in relation to the subject-matter thereof is superseded and remains inoperative so long as the Dominion legislation continues in force. But until Parliament so legislates, the primary authority of the provincial legislatures in relation to that subject-matter remains within the provincial area, unimpaired and unrestrained.

Secondly, the Parliament of Canada has exclusive legislative and executive authority to provide for the carrying into effect of the principles and rules set out in the said Draft Convention and Recommendations in relation to such undertakings as are carried on by the Dominion Government.

Thirdly, the Parliament of Canada possesses exclusive legislative and administrative jurisdiction to provide for the carrying into effect of the principles and rules set out in the said Draft Convention and Recommendations for those parts of Canada which are within the boundaries of any province.

Welfare Work in Montreal in 1930

The ninth annual year book of "Welfare Work in Montreal," recently published by the Montreal Council of Social Agencies, includes the report of the Council for the past year, and also the reports of the thirty-two agencies that are members of the Financial Federation under the Council. The work of the School for Social Workers at McGill University is also described. The projected organization of a health service to serve the various agencies in Financial Federation became an accomplished fact in 1930. This service is conducted under the supervision of the Child Welfare Association and is stated to have been an unqualified success. It is anticipated that as finances permit, considerable expansion of its activities will be made. Dr. Frank G. Pedley was appointed executive Director of the Federation and Council as from November 1, 1930. Dr. Pedley has had a wide experience in industrial medicine both in Canada and in the United States, and for the past few years has directed that Department in the Montreal General Hospital.

The annual report refers to the heavy obligations incurred in 1930 owing to unemployment in Montreal. The unusual distress due to unemployment during the past eight months threw unexpected burdens upon the Council of Social Agencies. The Sun Life Assurance Company have suggested (LABOUR GAZETTE, February, 1931, page 168) that a central bureau be established for the registration and relief where necessary, of unemployed

office workers, and offered the Council the use of office space and staff from the company's personnel department. Accepting this offer the council made a study of the general unemployment situation, and this investigation resulted in a decision to appoint a Special Committee on Emergency Unemployment Relief, widely representative of business and charitable interests in the city.

"In view of the fact that there is no public department giving outdoor relief in Montreal, it became apparent that the private agencies would have to organize the necessary machinery to provide for the many people in distress who could not be cared for by existing agencies. Following conferences of members of this Council with officers of the Central Council of St. Vincent de Paul Societies, representing the charitable work of the Catholic community, and the Federation of Jewish Philanthropies, it was agreed that if the public authorities should desire the services of these agencies in dispensing public funds for emergency unemployment relief, each organization would take the necessary measures to provide for the people in distress falling within its own scope. The city authorities accepted the offers of assistance on this basis, and accordingly the Special Committee on Unemployment of the Council undertook responsibility for the co-ordination of emergency relief services for the Protestant community."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MARCH, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on April 1 was 7,507, their employees numbering 899,823 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for

March was 1,825, having an aggregate membership of 208,387 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) Employment Situation at the Beginning of April, 1931, as Reported by Employers

According to data tabulated by the Dominion Bureau of Statistics from 7,507 firms, employment at the beginning of April showed a seasonal falling-off, but this was smaller than the average decline recorded on April 1 in the years since 1920. The payrolls of these firms aggregated 899,823 persons, compared with 902,833 in the preceding month. The index, based on the 1926 average as 100, stood at 99.7, as compared with 100.2 on March 1, and with 107.8, 110.4, 102.3, 97.4, 92.5, 88.3, 90.4, 88.7, 81.8 and 85.1 on April 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Thus the index at the latest date, while lower than in 1930, 1929 and 1928, was higher than it was at the beginning of April in earlier years of the record.

The most outstanding changes in employment were the increases in manufacturing, which were unusually large for the time of year, and the heavy seasonal losses in logging camps. In addition, there were important advances in building construction, transportation and trade, while considerable curtailment was indicated in highway and railway construction and coal mining.

Employment by Economic Areas

All provinces except Ontario registered reduced employment, the losses in Quebec involving the greatest number of workers.

Maritime Provinces.—There was a further decrease in employment in the Maritime provinces on April 1, when the 549 co-operating employers reduced their payrolls by

1,584 persons to 69,546. Construction was slacker, and logging showed important seasonal losses, while manufacturing and shipping were decidedly brisker, and trade also showed improvement. The index, at 102.3, was between five and six points lower than at the beginning of April, 1930, when rather smaller declines had been indicated.

Quebec.—Manufactures showed heightened activity, there being increases in the textile, iron and steel, lumber, tobacco and non-ferrous metal divisions; on the other hand, losses were noted in pulp and paper, vegetable food and some other factories. Mining, transportation, building construction and trade afforded more employment, while logging reported large seasonal contractions, and railroad construction was also slacker. Statements were received from 1,743 firms, with 260,339 employees, as against 263,099 on March 1. The index was lower than on the same date last year, although the curtailment then indicated was on a much larger scale.

Ontario.—The trend of employment was upward in Ontario, where 3,369 employers added 3,152 workers to their staffs, bringing them to 377,494 on April 1. A pronounced reduction had been registered by the firms making returns for the same date in 1930, but the index then was some ten points higher than at the beginning of April this year. Important seasonal losses were indicated in logging on the date under review, and highway construction also showed curtailment, while manufactures (notably of iron and steel pro-

ducts), building construction, transportation and trade recorded increased employment.

Prairie Provinces.—Further seasonal losses were noted in the Prairie provinces, but these involved fewer workers than those reported on April 1, 1930, when the index was, however, higher than on the date under review. Most of the decline this year took place in coal mining, logging, building construction and trade, while manufacturing, chiefly of iron and steel products, and railway operation showed improvement. The working forces of the 1,091 co-operating employers aggregated 117,843 persons, compared with 119,006 on March 1. The index, at 97.7, was over five points lower than on April 1, 1930.

Table I gives index numbers by economic areas.

Employment by Cities

Employment increased in Montreal, Toronto, Ottawa, Hamilton and Windsor and the Adjacent Border Cities, while losses were noted in Quebec City, Winnipeg and Vancouver.

Montreal.—Expansion was shown in Montreal, according to 984 firms who reported the addition of 1,701 persons to their staffs, bringing them to 142,653 on April 1. Activity was less than on the same date last year, although the gains then indicated were on a smaller scale. Iron and steel, non-ferrous

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—Continued curtailment was indicated in British Columbia, according to returns tabulated by the Bureau from 755 firms with 74,660 employees, or 804 less than in the preceding month. Additions to staffs had been indicated on April 1 a year ago, when employment was in greater volume. There were gains at the beginning of April, 1931, in manufacturing, especially of lumber products, and in logging, railway construction and trade, while mining, transportation and building and highway construction released help.

metal and tobacco factories, building, transportation and trade recorded heightened activity as compared with March 1, while the fluctuations in other industries were slight.

Quebec.—Manufacturing and trade registered gains in Quebec City, but construction was slacker. Statements were received from 123 employers with 12,876 workers, as compared with 12,977 in the preceding month. Improvement was indicated on April 1, 1930, but the index then was lower than on the date under review.

Toronto.—Further advances were reported in Toronto, where employment was not quite so active as at the beginning of April, 1930. The working forces of the 1,068 co-operating firms totalled 121,412 persons, or 2,298 more than on March 1. Considerable improvement was registered in manufacturing, notably of food, iron and steel and textile products, while construction and trade also afforded more employment.

Ottawa.—There was an increase in activity in Ottawa, chiefly in construction and manufacturing; an aggregate payroll of 14,076 workers was reported by the 152 employers whose statistics were tabulated, and who had

13,593 in their last report. The index was higher than in the spring of 1930, when the trend was also upward.

Hamilton.—Manufacturing, especially of iron and steel products, afforded heightened employment in Hamilton, while construction released employees. Returns were compiled from 223 firms employing 34,031 persons, or 1,269 more than on March 1. The level of employment was lower than on the same date last year, when no general change was indicated.

Windsor and the Adjacent Border Cities.—There was a considerable increase in employment in the Border Cities on April 1. Data

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative Weight of Employment by Districts as at April 1, 1931.....		100.0	7.7	28.9	42.0	13.1	8.3

were received from 137 firms employing 12,912 workers, as against 11,803 in the preceding month. Automobile plants reported a very large share of the advance, while other groups showed only slight changes. Activity was not so great as in the spring of 1930, although the expansion then indicated was on a smaller scale.

Winnipeg.—Employment decreased in Winnipeg, where 302 persons were released from the payrolls of the 350 employers furnishing statistics, who reported 29,337 workers. Manufacturing as a whole was rather brisker, but construction and trade were slacker. On April 1, 1930, a loss had also been indicated, but the index then was higher.

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Vancouver.—Considerable declines were noted in Vancouver, according to 303 firms with 29,126 employees, as compared with 30,818 in the preceding month. The most marked decreases were in construction and shipping. Gains had been made at the beginning of April last year, when the index was higher.

Manufacturing

Further improvement was recorded in manufacturing, particularly in the iron and steel industries. Lumber, textile, leather non-ferrous metal, food, pulp and paper and electric current plants also afforded increased employment, while rubber and mineral product works showed curtailment. Statements

were received from 4,580 manufacturers, employing 487,678 operatives, as compared with 476,810 in the preceding month. The increase exceeded the average gain noted on April 1, in the years since 1920; it was considerably larger than that recorded at the beginning of April in 1930, but the index was the much higher than on the date under review.

Animal Products, Edible.—Improvement was noted in meat-packing establishments while dairies and fish-preserving plants were rather slacker. There were gains in all except the Western Provinces. Statements were tabulated from 191 firms employing 16,516 workers, as against 16,414 at the beginning of March.

This increase was practically the same as that recorded on April 1, 1930, when the index number was several points higher.

Leather and Products.—All branches of the leather group reported increases in personnel, those in footwear factories being most pronounced. The 228 co-operating employers enlarged their payrolls from 17,927 persons in the preceding month, to 18,408 at the beginning of April. A falling-off had been indicated on April 1 a year ago, when employment was at the same level.

Lumber and Products.—Seasonal expansion was indicated in rough and dressed lumber mills, in vehicle and container factories, while

TABLE III—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926 = 100)

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

¹The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

other branches of the group were also busier. The general improvement was greater than that noted on the same date a year ago, when the index was, however, many points higher. Statistics were compiled from 756 manufacturers, with 38,225 employees, as compared with 36,611 at the beginning of March. The largest gains were in British Columbia.

Musical Instruments.—There was a decline in musical instrument factories, 36 of which employed 1,348 persons, or 78 less than on March 1. The reduction took place in Ontario. Employment was not so active as at the beginning of April, 1930, although the losses then indicated were slightly larger.

Plant Products, Edible.—There was an increase in employment in the period under review, chiefly in canning, bakery, chocolate and confectionery factories. Returns were tabulated from 383 firms, whose payrolls rose from 27,452 persons in the preceding month to 27,722 at the beginning of April. Most of the gain took place in Ontario. The index was slightly lower than in the spring last year, although a decrease had then been noted.

Pulp and Paper Products.—The movement in pulp and paper and paper product factories was upward, while printing and publishing shops were rather slacker. According to data received from 546 firms, they employed 57,796 workers, as compared with 57,465 in their last report. Increases were noted in Ontario, but there were losses in Quebec and British Columbia. Employment was in smaller volume than on April 1, 1930, when curtailment had been indicated.

Rubber Products.—Activity in 41 rubber works declined, 124 persons being released from their staffs, which totalled 13,022. A rather larger reduction had been shown on the same date last year, but the index then was many points higher.

Textile Products.—There was a further increase in employment in textiles at the beginning of April, chiefly in knitting, garment and miscellaneous textile factories, while silk plants were slacker. Improvement had also been noted on April 1, 1930, when the situation was more favourable. Statements were compiled from 733 manufacturers with 84,431 employees, or 1,408 more than on March 1, 1931. There were general gains, those in Ontario being greatest.

Tobacco, Distilled and Malt Liquors.—Moderate improvements in employment were recorded in this group, 92 persons being added to the working forces of the 146 co-operating establishments, which employed 14,693 workers

on the date under review. There were increases in Quebec but decreases in Ontario. The index was a few points lower than in the spring last year.

Chemicals and Allied Products.—One hundred and twenty-eight plants turning out chemical and allied products reported 8,471 employees, as compared with 8,431 in their last return. Quebec registered practically all this slight gain, while the tendency in Ontario was downward. The index was very slightly lower than on April 1, 1930.

Clay, Glass and Stone Products.—Another but less pronounced increase in personnel was noted in building material works, 155 of which employed 10,013 persons, as against 9,942 in their last report. This advance involved a much smaller number of persons than that indicated on the corresponding date in 1930, when the index was higher.

Electric Current.—Further improvement was shown in this group, in which 93 plants reported 14,774 workers, or 336 more than at the beginning of March. There were gains in all provinces except British Columbia, those in Ontario being greatest. The level of employment was lower than on April 1, 1930, but higher than in the spring of other years of the record.

Electrical Apparatus.—Employment in electrical appliance factories showed practically no change, according to the 72 co-operating firms, who reported 15,230 persons on their payrolls. An increase had been noted on April 1, 1930, when the index was considerably higher.

Iron and Steel Products.—Statistics were received from 721 manufacturers in this group, whose staffs were enlarged by 5,940 employees to 130,040 at the beginning of April. There were considerable gains in the automobile and other vehicle, agricultural implement, crude, rolled and forged, heating appliance and boiler and machinery industries. Improvement was shown in all provinces, that in Ontario being most noteworthy. Less pronounced expansion had been recorded in the same period last year, but the index number then was some 19 points higher than on April 1, 1931.

Non-ferrous Metal Products.—Returns tabulated from 122 manufacturers in this group showed that they employed 18,515 persons, as against 17,973 on March 1. Most of the increase took place in smelting and refining and in the lead, tin, zinc and copper group, in Quebec, Ontario and British Columbia. The

level of employment was lower than in the spring of 1930, although curtailment had then been indicated.

Mineral Products.—Reduced activity was reported in these industries at the beginning of April, 119 workers having been let out from the forces of the 94 co-operating establishments, in which 11,969 persons were employed at the beginning of April. The volume of employment in this group was less than in the same period last year.

Logging

Continued and larger seasonal losses were shown in logging camps, 241 of which reduced their payrolls from 22,249 men on March 1 to 11,581 on the date under review. The most extensive decreases were in Quebec and Ontario, although all provinces except British Columbia indicated reductions. Much larger contractions had been reported on April 1, 1930, following a season of decidedly greater activity, and the index was then considerably higher.

Mining

Coal.—As is customary at the beginning of April, there was a falling-off in employment in coal mines during the period being reviewed, mainly in the Prairie Provinces. Data were received from 83 operators, whose staffs included 25,475 employees, as against 26,405 in their last report. The index was lower than in the spring of last year, although larger declines had then been reported.

Metallic Ores.—Reports were received from 66 firms in this group, employing 16,238 workers, or very slightly more than at the beginning of March. Losses had been indicated on the same date in 1930, when the index number was several points higher.

Non-metallic Minerals, other than Coal.—Advances were registered in quarries and other divisions of this group; 76 firms employed 6,693 persons as compared with 6,482 in the preceding month. Larger gains were indicated by the 70 employers furnishing statistics on April 1 last year, and activity then was much greater.

Communications

According to information received from 65 communication companies and branches, they reduced their staffs by 166 employees to 26,677 on April 1. The decline took place largely in the Western Provinces. A greater falling-off in employment had been recorded on April 1, 1930, but employment was then brisker than on the date under review.

Transportation

Steam railway and water transportation registered advances, while small losses were indicated in local transportation. Statistics were compiled from 337 employers of 108,914 workers, as compared with 107,539 on March 1. Of the former number, 23,967 persons belonged in the local transportation, 71,701 in the steam railway and 13,246 in the water transportation division. In the electric railway and cartage branch, employment was in much the same volume as on the corresponding date last year, but the indexes in steam railway and water transportation were lower.

Construction and Maintenance

Building.—Statements were compiled from 681 building contractors, with 36,870 persons in their employ, or 1,598 more than in their last report. The improvement took place in Quebec and Ontario, while activity declined in the Western Provinces. Although the increase indicated on April 1, 1930, was not so extensive, the index then was higher.

Highway.—Further curtailment in staffs was noted on highway construction and maintenance; 270 contractors employed 41,515 men, as compared with 45,869 in the preceding month. Ontario and British Columbia reported the greatest declines. Improvement had been shown on April 1, 1930, but the number then reported in this work was very much less than in the period under review, when unemployment relief works were continuing.

Railway.—There was a decrease in employment in the construction departments of the railways in the Maritime Provinces and Quebec, while gains were indicated in British Columbia. The working forces of the 46 co-operating contractors and divisional superintendents aggregated 30,015 men, whereas in the preceding month they had 31,907 employees. The index number was slightly higher than in the spring of 1930, although improvement had then been recorded.

Services

This group showed practically no general change, according to 243 firms with 21,057 employees, compared with 21,043 in the preceding month. Laundries and dry-cleaning establishments registered improvement, but hotels and restaurants released help. The trend was upward at the beginning of April, 1930, and employment then was in rather greater volume than on the date under review.

Trade

There was a gain of 924 persons in the forces of the 819 co-operating wholesale and retail establishments, which employed 87,110 workers on April 1. Very little general change had been indicated on the same date a year ago, when the index of employment, at 123·1, was the same as on the date under review. A small falling-off was registered in wholesale houses, while the trend was upward in retail stores.

Tables

Index numbers by economic areas, leading cities and industries, respectively, are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

(2) Unemployment in Trade Unions at the Close of March, 1931

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon

persons, of whom 32,208 were without work at the end of the month. An adverse employment situation was shown from March, 1930, when 10·8 per cent of the members recorded were idle. Nova Scotia, Quebec, Ontario and Manitoba unions registered heightened activity, though the expansion noted was slight, the advance in Quebec being chiefly due to somewhat better conditions prevailing for garment workers who, while

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

At the close of March there was practically no change from the previous month in the unemployment level among local trade unions, the percentage of idleness standing at 15·5 in contrast with a percentage of 15·6 on the last day of February. During March 1,825 labour organizations co-operated with the Department in making returns on unemployment, these embracing a membership of 208,387

showing considerable short time, recorded few workers as actually without employment. In Ontario a general upward employment trend was noticed throughout the province. Improvement in building and construction and transportation in Manitoba was partially offset by reductions in manufactures. In Nova Scotia the tendency was toward greater employment though the change was nominal only. Of the reductions in the remaining provinces which were almost sufficient to offset these gains, the most substantial was indicated by Alberta unions, coal mines in this province

suffering pronounced depression. All provinces participated in the retrogressive employment movement shown over March, 1930, the recessions in each province with the exception of Nova Scotia being noteworthy and affecting the majority of trades, building and construction showing the greatest curtailment of activity.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Each month a separate report is prepared on unemployment in the largest city in each province with the exception of Prince Edward Island. During March, Regina unions reported the greatest percentage of idleness of the cities compared, which was, however, fractionally less than that recorded in February. Halifax and Vancouver were next in line, each showing large unemployment per-

centages, in the former city indicative of a nominal gain in employment and in the latter city a decline of almost 4 per cent over February. In Montreal the improvement recorded was 3 per cent and in Edmonton and Toronto gains of lesser magnitude occurred. Saint John unions reported a noteworthy employment reduction, while in Winnipeg the situation remained substantially the same. Edmonton unions registered the same percentage of idleness as in March last year, while in the remaining cities large curtailment of activity was noted, the reductions in Saint John being particularly heavy.

From the chart which appears with this article it will be seen that the curve of unemployment during March remained on practically the same level as in the preceding month, indicating an almost unchanged employment situation. The point reached by the curve at the close of the month, however, was substantially above that indicated in March, 1930, showing a considerable increase in idleness during the month surveyed.

The reports tabulated from 490 unions in the manufacturing industries during March, with 59,238 members, indicated 5,466 without work on the last day of the month, a percentage of 9.2 contrasted with 10.6 per cent of inactivity in February and with 7.4 in March, 1930. The garment trades of Quebec reported a noteworthy employment advance over February, and among general labourers the situation showed moderate improvement. Cigarmakers, bakers and confectioners and hat and cap workers also reported gains which, however, affected but few workers, and fractional increases in activity were recorded by iron and steel workers. Among pulp and paper makers the same level of activity was maintained as in February, and conditions for fur, wood and leather workers and printing tradesmen varied but slightly. Employment was largely retarded for textile workers from February, and among glass workers the percentage decline was pronounced, though the membership involved was small. In practically all trades a falling off in the employment volume afforded was manifest from March last year, the printing trades and general labourers showing the greatest increase in members unemployed, though the reductions were not particularly pronounced in any one trade. Garment workers showed little variation in the level of activity from March a year ago, the tendency, however, being toward lessened employment during the month reviewed.

Depression in the coal mines of Alberta during March accounted to a large extent for the less favourable situation, as compared with February, shown in coal mining as a

TABLE II.—PERCENTAGE OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Table with columns for Months and various industry groups including Fishing, Lumbering, Mining, Manufacturing, Pulp and paper, Printing, Wood products, Fibres, Textile workers, Garment workers, Hat, cap and glove workers, Animal products, Iron and its products, Non-ferrous metals, Clay, glass and stone products, Mineral products, Miscellaneous industries, Building and construction, Transportation, Shipping and stevedoring, Steam railway operation, Local transportation, Communication, Telegraph operation, Telephone operation, Trade (retail shop clerks), Services, Governmental, Miscellaneous, and All occupations.

whole. In British Columbia also, declines in employment of minor importance occurred, while in Nova Scotia the situation showed some slight improvement. For March, returns were tabulated from a total of 49 unions of coal miners with 18,541 members, 9.9 per cent of whom were idle on the last day of the month, contrasted with 6.2 per cent in February. Little change was shown in the unemployment percentage from March, 1930, when 9.6 per cent of the members reported were without work, though fluctuations occurred in the various provinces, Alberta unions indicating noteworthy recessions and British Columbia unions decided increases in activity, with gains, on a smaller scale, from Nova Scotia unions. Many miners in both the eastern and western coal areas, however, continued to work only a few days a week. Asbestos miners in Quebec reported a substantial percentage of unemployment, compared with a fully engaged situation in both the previous month and March, 1930.

After several months of uninterrupted and increasing curtailment in building and construction operations, the trend of employment at the close of March was favourable, though the gains recorded were quite slight. Returns for March were tabulated from an aggregate of 250 unions of building tradesmen, covering a membership of 30,583 persons, 45.7 per cent of whom were idle on the last day of the month, contrasted with a percentage of 47.1 in February. Unemployment for bricklayers, masons and plasterers and carpenters and joiners, which has remained at an exceptionally low level during the winter months, eased off slightly during March, and a greater volume of work was afforded painters, decorators and paperhangers. Bridge and structural iron workers, hod carriers and building labourers, and tile layers, lathers and roofers, on the other hand, were much slacker than in February, and minor reductions occurred for plumbers and steamfitters, electrical workers, and granite and stonemasons. All trades reported a considerable drop in available work from March of last year when 30.5 per cent of inactivity was recorded in the building group as a whole, carpenters and joiners showing the most severe losses.

The situation for transportation workers showed little variation during March from the preceding month, as indicated by the returns tabulated from 782 unions with a membership of 71,854 persons. Of these 7,843, or a percentage of 10.9, were idle on the last day of the month compared with 10.4 per cent in February. Steam railway employees, whose returns include over 81 per cent of the entire group membership reporting, and street and

electric railway employees registered fractional unemployment increases during March, while among navigation workers the reductions were more extensive. Teamsters and chauffeurs, on the other hand, were slightly better engaged. Compared with the situation in March last year in the transportation industries when the unemployment percentage stood at 7.5 both steam railway employees and navigation workers recorded noteworthy employment contractions during the month reviewed, while nominal declines only were registered by street and electric railway employees and teamsters and chauffeurs.

From retail clerks 6 reports were received in March, representing a membership of 820 persons, 1.8 per cent of whom were idle on the last day of the month, contrasted with 1.5 per cent in February and with no inactivity in March, 1930.

A slight change only in the percentage unemployed was indicated by civic employees during March, the 65 unions from which reports were tabulated with 7,029 members showing 1.5 per cent of idleness, contrasted with 1.9 per cent in both the previous month and March, 1930.

Activity for union members in the miscellaneous group of trades was slightly retarded during March, the percentage of unemployment standing at 17.0 in contrast with 15.7 per cent at the close of February. The percentage for March was based on the reports received from 133 unions with a total membership of 7,434 persons. Hotel and restaurant employees, barbers, and unclassified workers were afforded somewhat greater employment, which, however, was more than offset by the declines recorded among stationary engineers and firemen and theatre and stage employees. Stationary engineers and firemen reported a large falling off in activity from March of last year, when 10.0 per cent of idleness was registered in the miscellaneous trades as a whole, and among hotel and restaurant employees the declines were noteworthy. Theatre and stage employees and barbers also recorded reductions in employment though on a much smaller scale. Some improvement in conditions, however, was noted by unclassified workers.

Fishermen showed a decidedly upward employment trend in March, the 4 unions which made returns with 1,362 members indicating an unemployment percentage of 4.0, in contrast with 19.2 per cent in February. The situation was, however, somewhat less favourable than in March, 1930, when 1.8 per cent of the members reported were idle.

Lumber workers and loggers, with 4 unions in March reporting a membership of 1,207 per-

sons, indicated 410 idle on the last day of the month, a percentage of 34.0, compared with 32.4 per cent of inactivity in February. Operations for these workers were largely restricted from March, 1930, when the unemployment percentage stood at 17.9.

Table I shows by provinces the percentage of members who were on an average unem-

ployed each year from 1919 to 1930 inclusive and also the percentage of unemployment by provinces for March of each year from 1919 to 1928 inclusive, and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for March, 1931

During the month of March, 1931, the volume of business, as indicated by the average daily placements effected by the Offices of the Employment Service of Canada, showed a decline of over 18 per cent from that of the previous month, but recorded an increase of nearly 94 per cent over that of the corresponding month a year ago. Construction and maintenance was entirely responsible for the change in both instances. Under this group,

in comparison with March last year, but farming, manufacturing and trade registered declines.

The accompanying chart shows the trend of employment since January, 1929, as represented by the ratio of vacancies offered and of placements effected for each one hundred applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o

unemployment relief work carried on by the provinces was provided. This had slackened in some localities during March, thus causing a decline from February, but as no work of this nature was being sponsored by the Government during March a year ago, a large gain was shown under the yearly comparison. Logging also showed a slight decline in placements from February, but this was more than counteracted by gains in farming, services and trade. Services showed a gain in placements

noted that the trend of the curve of vacancies and of placements was downward during March, though the change during the latter half of the month was slight, and at the end of the period under review, the curve of vacancies was nearly four points higher, and that of placements almost six points above the levels recorded at the close of March a year ago. The ratio of vacancies to each one hundred applications was 68.3 and 67.8 during the first and the second half of March, in

contrast with ratios of 63.5 and 64.0 during the same periods in 1930. The ratios of placements to each one hundred applications during the periods under review were 66.8 and 65.2 as compared with 60.3 and 59.4 during the corresponding month of 1930.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during March, 1931, was 1,781, as compared with 2,159 during the preceding month, and with 948 in March, 1930.

The average number of applications for employment received daily by the Offices during the month under review was 2,617, in comparison with 3,052 in February and with 1,488 during March last year.

The average number of placements made daily by the offices of the Service during March, 1931, was 1,727, of which 421 were in regular employment and 1,306 in work of one week's duration or less, as compared with the total daily average of 2,120 during the preceding month. Placements in March a year ago averaged 892 daily, consisting of 419 placements in regular and 473 in casual employment.

During the month of March, 1931, the offices of the Service referred 46,658 persons to vacancies and effected a total of 44,884 placements. Of these, the placements in regular employment were 10,943, of which 7,521 were of men and 3,422 of women, while placements in casual work totalled 33,941. The number of vacancies reported by employers was 38,154 for men and 8,141 for women, a total of 46,295, while applications for work numbered 68,034, of which 56,770 were from men and 11,264 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1921, to date:—

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,283	355,756
1922.....	297,827	95,695	393,522

1931 (3 months).....	36,063	113,667	149,730

NOVA SCOTIA

During March, orders received at employment offices in Nova Scotia were nearly 38 per cent more than in the preceding month, and over 20 per cent in excess of the cor-

responding month of last year. Placements also were 43 per cent above February, and nearly 23 per cent higher than in March, 1930. Increased placements in the highway division of construction and maintenance, due to work provided in relief of unemployment, accounted for the gain over March last year. The changes in all other groups were small. Of the declines, those in manufacturing and services were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 22; trade, 40; construction and maintenance, 230; and services, 396, of which 294 were of household workers. During the month 33 men and 58 women were placed in regular employment.

NEW BRUNSWICK

Orders listed at employment offices in New Brunswick during March called for over 27 per cent less workers than in the preceding month, but nearly 13 per cent more than during the corresponding month of last year. There was a decline of over 28 per cent in placements when compared with February, but a gain of 15 per cent in comparison with March, 1930. As in Nova Scotia, highway construction undertaken in relief of unemployment was responsible for the gain in placements over March of last year, as all other groups showed small change. The largest reductions were in manufacturing and trade. Industrial divisions in which most of the placements were effected during the month were: construction and maintenance, 173; and services, 511, of which 376 were of household workers. There were 29 men and 43 women placed in regular employment during the month.

QUEBEC

Opportunities for employment, as indicated by orders received at employment offices in the province of Quebec during March, were 47 per cent better than in the preceding month, and nearly 29 per cent above the corresponding month of last year. There was a gain of 31 per cent in placements when compared with February and of over 33 per cent in comparison with March, 1930. A substantial increase in the placement of female workers in the services' division was responsible for the gain in placements over March last year. Construction and maintenance and trade, however, also showed improvement, but these increases were more than offset by declines in manufacturing and logging. The changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 59; logging, 74; construction and

maintenance, 266; trade, 50; and services, 857, of which 694 were of household workers. During the month 483 men and 625 women were placed in regular employment.

ONTARIO

There was a decline of nearly 3 per cent in the number of positions offered through employment offices in Ontario during March, when compared with the preceding month, but a gain of 146 per cent when compared with the corresponding month of last year. Placements were nearly 4 per cent less than in February, but 157 per cent above March, 1930. The excessive gain in placements over March of last year was entirely due to work provided on road improvement, sewer construction, and similar projects in relief of unemployment. There were, however, increased placements in the services group, but the gain in this division was more than offset by declines in all other groups. The largest reductions in placements were in logging, manufacturing and farming. Placements by industrial divisions included: manufacturing, 757; logging, 187; farming, 405; transportation, 132; construction and maintenance, 22,587; trade, 456; and services, 4,018, of which 2,211 were of household workers. There were 3,228 men and 1,411 women placed in regular employment during the month.

MANITOBA

Employment opportunities as indicated by orders listed at offices in Manitoba during March were over 64 per cent less favourable than in the preceding month, but over 19 per cent better than during the corresponding month of last year. There was a decline also of over 64 per cent in placements when compared with February, but a gain of nearly 15 per cent in comparison with March, 1930. Construction and maintenance was the only group in which more placements were made during the month under review than in March last year. The gains in this division, however, were greater than the combined losses in all other divisions. Of the latter those in services, farming and logging were the most noteworthy. Industrial groups in which most of the placements were effected during the month were: manufacturing, 33; farming, 356; construction and maintenance, 1,094; trade, 95; and services, 1,063, of which 891 were of household workers. Regular placements numbered 678 of men and 364 of women.

SASKATCHEWAN

During the month of March, there were nearly 2 per cent fewer positions offered through employment offices in Saskatchewan

than in the preceding month, but over 32 per cent more than during the corresponding month of last year. Placements declined nearly 3 per cent when compared with February, but were nearly 42 per cent in excess of March, 1930. Construction and maintenance and logging were the only divisions in which more placements were made during the month under review than in the corresponding month last year, but, as in previous months, these gains were due to work provided in relief of unemployment. There were fewer placements in farming, services and trade than in March, 1930. Changes in all other divisions were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 40; logging, 155; farming, 318; construction and maintenance, 1,202; trade, 52; and services, 724, of which 540 were of household workers. There were 598 men and 396 women placed in regular employment during the month.

ALBERTA

A decrease of nearly 10 per cent was shown in the number of positions offered through employment offices in Alberta during March, when compared with the preceding month, but a gain of over 58 per cent when compared with the corresponding month of last year. Placements also were nearly 10 per cent less than in February, but over 60 per cent higher than in March, 1930. As in the Province of Saskatchewan, relief work on sewer and road construction, and in logging camps accounted for the increase in placements over March of last year. These gains, however, were offset in part by declines in other groups, of which those in farming, services, manufacturing and trade were the most noteworthy. Placements by industrial divisions included: manufacturing, 36; logging, 475; farming, 270; construction and maintenance, 3,815; and services, 599, of which 498 were of household workers. During the month 2,122 men and 272 women were placed in regular employment.

BRITISH COLUMBIA

The demand for workers, as indicated by orders received at employment offices in British Columbia during March, was over 9 per cent greater than in the preceding month and over 22 per cent in excess of the corresponding month of last year. There was an increase of over 9 per cent in placements when compared with February, and of nearly 25 per cent in comparison with March, 1930. Construction and maintenance and logging were the only groups to show any increase in placements over March a year ago. The gain in the former,

however, due to relief work, was substantial, and more than offset the losses in all other groups. Of the declines, those in manufacturing, services and farming were the most substantial. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 67; logging, 274; farming, 113; transportation, 44; construction and maintenance, 1,683; and services, 826, of which 514 were of household workers. Regular employment was found for 350 men and 253 women during the month.

Movement of Labour

During the month of March, 1931, the offices of the Employment Service of Canada made 10,943 placements in regular employment 3,322 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 370 were granted the Employment Service Reduced Transportation Rate, 320 going to points within the same province as the despatching office and 50 to other provinces. The Reduced Transportation Rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The movement of labour both within and from the province of Quebec during March was of bush workers, 6 in number. Of these 2 were granted certificates at the Quebec City office to points within the same zone, while at Hull 4 secured certificates for transportation to Pembroke.

Offices in Ontario issued 75 certificates for reduced transportation during March, 73 provincial, the balance representing an interprovincial movement. Within the province the transfer of workers from Sudbury included 9 machine drillers and one carpenter going to Timmins and 10 teamsters, 6 bushmen and 5 loaders journeying to employment within the Sudbury zone. The Timmins zone also was the destination of 5 miners and one carpenter who received their certificates for transportation at Cobalt. To points within their respective zones, Port Arthur despatched 18 bushmen and Fort William 17 bushmen. The remaining transfer within the province was of a millwright who was carried at the special rate from Pembroke to Cobalt. The 2 certificates issued for points outside the province were secured at the Fort William office by one carpenter and one building construction foreman who proceeded to Winnipeg.

Benefiting by the Reduced Transportation Rate in Manitoba during March, 110 workers went to situations within the province and 40

to points in other provinces. All transfers were effected by the Winnipeg office which despatched provincially, one farm hand, one town domestic and 7 farm housekeepers to Brandon and vicinity, one hotel cook to Dauphin and 92 farm hands, 2 farm domestics and 6 mine labourers to points within the Winnipeg zone. Of the workers going outside the province, 9 were for the Port Arthur zone and included 3 farm hands, 3 bushmen, 2 cooks and one cookee, while to Saskatchewan rural districts were despatched 29 farm hands and one farm household worker. The one remaining interprovincial transfer was of a hotel employee going to Regina.

Persons who availed themselves of the Reduced Transportation Rate in Saskatchewan during March were 57 in number, 56 of whom went to provincial situations. Of these 26 were farm hands and 3 farm household workers proceeding to various agricultural sections, several offices assisting in the transfer of these workers. In addition the Regina office was instrumental in transporting one hotel cook and one domestic to Moose Jaw, one housekeeper to Saskatoon, one janitor to Swift Current and 3 teachers and one bushman to centres within the Regina zone. At Prince Albert also, 7 bush workers secured certificates to Yorkton and 10 bushmen and 2 cooks to points within the Prince Albert zone. The one worker who travelled outside the province was a domestic who was conveyed from Regina to Montreal.

By offices in Alberta 37 transfers at the reduced rate were effected during March, 34 provincial and 3 interprovincial. The latter were of farm hands despatched from Edmonton, 2 of whom proceeded to Saskatoon and one to Moose Jaw. Provincially from Edmonton 7 farm hands, 4 sawmill workers, 2 mine workers, one mechanic, 8 labourers, one truck driver, one golf links attendant, 2 housemaids and one hotel porter went to employment within the territory covered by that office while from Calgary 3 farm hands and 2 farm housekeepers were sent to Drumheller and 2 farm hands within the Calgary zone.

British Columbia transportation vouchers numbered 45 during March all of which were issued to provincial points. At Nelson 23 rockmen were granted certificates for Kamloops which zone also received one miner, one engineer, one fireman and one steel sharpener from Vancouver. The Vancouver office also transferred 2 lead burners and one waitress to Nelson, one flunkey to Penticton and 3 bushmen, one flunkey, 3 cooks and one steel worker within the Vancouver zone. In addition 2 tie makers journeyed from Prince George and 3 steel workers and one farm hand from Prince Rupert to positions within their respective zones.

Of the 370 workers who were assisted by the Employment Service Reduced Transportation Rate during March, 198 travelled by the Canadian National Railways, 159 by the Can-

adian Pacific Railway, 6 by the Timiskaming and Northern Ontario Railway, 4 by the Pacific Great Eastern Railway and 3 by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During March, 1931

According to returns tabulated by the Dominion Bureau of Statistics, the value of the building permits issued by 61 cities during March was \$9,906,567; this was an increase of \$3,976,980 or 67.1 per cent, over the February total of \$5,929,587, but a decrease of \$3,450,220 or 25.8 per cent, as compared with the aggregate of \$13,356,787 reported for the same month in 1930. Building costs, as shown by the Bureau's index number of wholesale prices of building materials, showed a decided decrease as compared with the same period in 1930 and earlier years on record.

Some 50 cities furnished detailed statistics, showing that they had granted over 800 permits for dwellings valued at about \$3,600,000 and some 1,600 permits for other buildings estimated to cost approximately \$5,600,000. In February, authority was given for the erection of some 600 dwellings and nearly 1,100 other buildings, estimated at approximately \$2,200,000 and \$3,500,000, respectively.

All provinces except Manitoba and British Columbia reported increases in the building authorized during March as compared with the preceding month. The greatest gains were those of \$2,164,467 in Quebec and \$1,063,895 in Alberta.

As compared with March, 1930, Quebec and Manitoba recorded advances of 28.1 per cent and 8.6 per cent, respectively. There were decreases in the other provinces, the greatest decline, of \$2,126,870, or 40.6 per cent, taking place in Ontario.

Of the larger cities, Montreal registered a gain as compared with the preceding month and also as compared with March of last year. Toronto showed an increase in the first, but a decline in the second comparison; in Winnipeg there was a decrease as compared with February, 1931, but an increase over March, 1930, while Vancouver recorded reductions in both comparisons.

Cumulative Record for First Quarter, 1931.—The following table gives the value of the building authorized by 61 cities during March, and in the first quarter of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first quarter of the same years are also given (1926=100).

The aggregate value of building permits issued in the first quarter of 1931 was less than in the same period of the years 1927-1930, but was higher than in the months January-March in any preceding year since 1920, while wholesale prices of building materials were considerably lower than in the same quarter in any of the last eleven years.

The accompanying table gives the value of the building permits issued by 61 cities in February and March, 1931, and March, 1930. The 35 cities for which records are available since 1910 are indicated by asterisks.

Minimum Wages for Women in Alberta

In 1930 the Minimum Wage Act of Alberta was amended to provide that any Order of the Board should apply to the whole Province unless by its terms restricted to a part or parts thereof.

On May 10, 1930, Orders 1-7 (all that were then in existence) were made applicable to the whole Province as from July 1, 1930.

In December, 1930, an Order was issued that Order No. 3 (in so far as it establishes a minimum wage) should cease to apply to workers in hotels, etc., except those in Calgary, Edmonton, Lethbridge, Medicine Hat, Red Deer, Wetaskiwin, Blairmore, Camrose, Cardston, Coleman, Drumheller, and Red-cliff.

In January, 1931, telephone operators were removed from the scope of Order No. 5, and a new Order No. 8, was issued governing these workers. This Order applies to cities, towns and villages having a population of 600 and over. Order No. 8 (a) also issued in January, 1931, dealt with hours of work of telephone

operators and applies to the same part of the Province as Order No. 8.

On March 30, 1930, Order-in-Council 283-31 was issued providing that regulations made under Order-in-Council 885-25 should apply to the whole Province instead of to the twelve largest cities and towns of the Province named in paragraph 3. Order-in-Council 885-25 provided that the number of apprentices in any establishment should not exceed 25 per cent of the total female employees in that class of employment in that establishment; that employers should forward to the Board monthly statements of all overtime worked in excess of the periods of employment and shifts fixed by the Board or customary in the class of employment concerned, and all amounts paid for such overtime; and that employers should keep posted a copy of every Order of the Board affecting employees of that class and in the establishment concerned in every room in which such employees are employed.

Reasons for Increased Urgency of Old Age Pensions

The subject of "Public Old Age Pensions" is treated in a new bulletin recently published as number 8 of the series of Editorial Research Reports (Washington, D.C.). The writer, Mr. G. B. Galloway, points out that the problem of the dependency of aged persons has become

more acute through the agency of certain economic changes in recent years. These contributing causes are enumerated as follows: (1) the longer span of life, as a result of which the number of people over 65 years of age within the whole population has relatively

increased; (2) the reduced employment age level which shortens the earning period of a man's life; (3) the higher standard of American life meaning an increase in family expenses; (4) the movement of a majority of families from the country to the cities; and (5) the growth of machine industry. These conditions, together with waning earning power, sickness, industrial accidents, current unemployment, industrial disputes, and business and banking failures make the problem of security for old age increasingly serious. The writer points out that several means exist to meet this problem. These include individual savings, industrial and trade union pensions, public service retirement systems, the old-age benefits of professional and fraternal societies, poor-

houses, and private charity. The inadequacy of these existing securities has given rise to the movement for public old-age pensions which have been widely adopted in foreign countries and in 12 of the United States. In the United States, it is stated, various surveys that have been made indicate that from 25 to 33 per cent of the population aged 65 or more is dependent, that is, upwards of a million and one-half persons. About one-fifth of this number, as noted above, depend for their subsistence upon pensions or are being cared for in poorhouses and homes for the aged. Some are cared for by their families. The remainder have not enough to maintain them at the subsistence level. It is in their behalf that federal and state pensions are being urged.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1931

BUSINESS, as indicated by the work of the Offices of the Employment Service of Canada during the quarter January to March, 1931, showed increased activity when a comparison was made with the records of the corresponding period of 1930, as there was a gain of nearly 104 per cent in vacancies, and of over 110 per cent in placements. This was entirely due to exceptional gains shown under construction and maintenance and consisted of work undertaken by the provinces under the Unemployment Relief Act, which mainly included highway and park improvement, bridge, sewer, drain and sidewalk construction, as well as clearing of land and repairs to buildings. All other industrial groups showed declines both in vacancies and placements, the largest of which were in logging, manufacturing and farming. Provincially, Nova Scotia was the only province to show a decline, all other provinces recording more vacancies listed and placements made during the quarter under review, than during the corresponding period last year. The accompanying chart gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period January to March, 1931.

From the chart on page 582 which accompanies the article on the work of the Employment Offices for the month of March, it will be seen that the curves, both of vacancies and placements, in relation to applications, declined sharply during the first half of January, but showed an upward trend from the middle of that month until the close of February, when a downward tendency was again noticeable. At the close of the quarter, however, the curve of vacancies was nearly four points higher and that of placements almost six points above the levels shown at the

end of March, 1930. During the period January to March, 1931, there was a ratio of 67.4 vacancies and 65.9 placements for each one hundred applications for employment, as compared with 63.4 vacancies and 60.0 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 2,017, of applications registered 2,992, and of placements effected 1,971, in contrast with a daily average of 990 vacancies, 1,562 applications and 937 placements in regular and casual employment during the first quarter of 1930.

During the three months January to March, 1931, the Offices of the Service reported that they had made 154,578 references of persons to positions and had effected a total of 149,730 placements, of which 36,063 were in regular employment and 113,667 in casual work. Of the placements in regular employment, 26,671 were of men and 9,392 of women, while casual work was found for 103,582 men and 10,085 women. A comparison with the same quarter of 1930 shows that 71,170 placements were then made, of which 37,196 were in regular employment and 33,974 in casual work. Applications for employment during the period under review were received from 194,632 men and 32,688 women, a total of 227,318, in contrast with a registration of 118,699 persons during the same period of 1930. Employers notified the Service during the first quarter of 1931, of 153,289 positions, of which 130,805 were for men and 22,484 for women, as compared with 75,187 opportunities for work offered during the corresponding period of 1930.

In another section of this issue will be found a report in detail of the transactions of the Employment Offices for the month of March, 1931.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during March, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for April, 1931, and previous months are reproduced below.

Great Britain

Employment during March showed a slight improvement on the whole. This was the result mainly of the seasonal revival of employment in the building and clothing trades, and of the recent improvement in the textile industries. There was a further seasonal improvement in the building trade, public works contracting, brick and tile manufacture, and the clothing industries. The numbers unemployed also decreased in most of the textile industries, and in pottery, glass bottle, pig iron and tinplate manufacture. There were, however, increases in the numbers unemployed in coal mining, iron and steel manufacture, engineering, shipbuilding and ship-repairing, and the leather trades.

Among the workpeople, numbering approximately 12,400,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at March 23, 1931 (including those temporarily stopped as well as those wholly unemployed), was 21·5, as compared with 21·7 at February 23, 1931, and with 13·7 at March 24, 1930. The percentage wholly unemployed at March 23, 1931, was 16·5, as compared with 16·7 at February 23, 1931; while the percentage temporarily stopped was 5·0, the same as at February 23. For males alone the percentage at March 23, 1931, was 22·7, and for females 18·4; at February 23, 1931, the corresponding percentages were 22·6 and 19·6.

At March 23, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,859,526 wholly unemployed, 604,089 temporarily stopped, and 116,503 normally in casual employment, making a total of 2,580,118. This was 37,540 less than a month before, but 941,319 more than a year before. The total included 1,900,685 men, 67,510 boys, 557,662 women and 54,261 girls.

The 1,859,526 wholly unemployed included approximately 1,303,400 insured persons who had paid at least 30 contributions during the preceding two years and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 463,650 insured persons who had paid less than 30 contributions during the preceding two years; and 92,470 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,694,266, included 229,383 men, 5,813 boys, 44,447 women and 2,964 girls, who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at March 23, 1931, was 2,655,379, and at March 30, 1931, it was 2,655,475.

United States

Employment in the United States decreased less than one-tenth of one per cent in March, 1931, as compared with February, 1931, and pay-roll totals increased 0·7 per cent according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, quarrying and non-metallic mining, crude petroleum production, public utilities, trade (wholesale and retail), hotels, canning and preserving, and laundries, dyeing and cleaning.

Increased employment in March was shown in 6 of the 15 industrial groups: Manufacturing, 0·9 per cent; quarrying and non-metallic mining, 5·1 per cent; retail trade, 0·8 per cent; hotels, less than one-tenth of 1 per cent; canning and preserving, 9·7 per cent; dyeing and cleaning, 0·7 per cent.

Decreased employment was shown in March in each of the remaining 9 groups: Anthracite mining, 10·8 per cent; bituminous coal mining, 3·0 per cent; metalliferous mining, 2·7 per cent; crude petroleum producing, 1·4 per cent; telephone and telegraph, 0·7 per cent; power, light, water, 1·1 per cent; electric railroads, 0·2 per cent; wholesale trade, 0·9 per cent; laundries, 0·6 per cent.

Pay-roll totals were higher in March than in February in 10 of the 15 industrial groups, namely, manufacturing, quarrying and non-metallic mining, crude petroleum production, telephone and telegraph, power-light-water, electric railroads, wholesale trade, retail trade, canning and preserving, and dyeing and cleaning.

The New England, East North Central, South Atlantic, and Pacific geographic divisions reported increased employment in March, the percentage increases ranging from 0.7 per cent to 1.4 per cent.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of December, 1930, and January, 1931, and therefore cannot be included in the general statement for the month of March. The number of employees of Class I railroads as at January 15, totalled 1,317,817, representing a decrease of 1.6 per cent since December 15, 1930. The amount of pay-roll in the entire month of January was \$182,908,075, representing a decrease over the previous month of 1.3 per cent.

Unemployment Percentage.—Since the fall of 1927, the American Federation of Labour has compiled statistics each month which indicate the percentage of unemployed union members in 24 representative cities of the United States. These figures are included in the monthly review of industrial and economic conditions which is given in the *Monthly Survey of Business*, published by the Federation. In April, 1928, the proportion of unemployed union members was 16 per cent; in April, 1929, 12 per cent; in April, 1930, 21 per cent; in April, 1931, 17.7 per cent (first half of the month). The percentages since the beginning of 1931 are as follows: January, 19.8; February, 19; March, 18.1; April, 17.7.

According to an estimate by the American Federation of Labour the number of wage earners unemployed in the United States in April was between 5,500,000 and 6,000,000.

United States Census of Unemployment

The *Monthly Labour Review*, official publication of the United States Department of Labour, in its issue of April, 1931, contains a chapter on Unemployment Conditions and Relief. Featuring this section, is a review of unemployment in the United States based on the special census of unemployment taken recently. The following paragraphs indicate the trend and extent of unemployment as shown by the census.

On the basis of the special unemployment census made during the latter half of January, 1931, and covering 19 cities, Robert P. Lamont, Secretary of Commerce, has estimated that a total of 6,050,000 able-bodied persons in the United States were out of jobs, able to work, and seeking work at that time.

The special census of unemployment was undertaken in January, the month when unemployment normally reaches a seasonal peak, in order that the maximum unemployment due to the world-wide business depression might be revealed. For the 19 cities covered in the special census of unemployment a 149 per cent increase was reported in the number of persons out of a job, able to work, and looking for a job (Class A) between April, 1930, and January, 1931. By applying this percentage to the total number of persons out of a job, able to work, and looking for a job in the United States as a whole as of April, 1930, or 2,429,062 the total of 6,050,000 is arrived at. This basis of estimate of the increase in unemployment between April, 1930, and January, 1931, presupposes that the percentage increase in unemployment since last April has been as great in the rural areas as in the cities.

In addition to the unemployed falling under Class A, the January census of 19 cities showed that there were 368,149 persons having jobs but not working and not receiving pay on the day before the call of the enumerator, excluding those sick or voluntarily idle (Class B). Such tabulations of the census as are complete show that 75 per cent of the workers in class B were employed part time, and that the remainder had been laid off for more than a week. If this ratio prevails throughout the 19 cities it would indicate that one-fourth of the total of 368,149 persons, or 92,000, had been out of work for more than a week, although they considered themselves as having jobs. It is stated by Secretary Lamont that neither the data available for April, 1930, or January, 1931, census make it possible to determine accurately the total number of individuals throughout the country who should be regarded as unemployed because of having been temporarily laid off from their regular jobs. However, Secretary Lamont states that it appears that an additional 250,000 to 300,000 workers were not working because of lay-off in January, 1931.

The Alberta Legislature, at its session this year, passed a resolution which called for representations being made to the Dominion Government for the immediate institution of a scheme of unemployment insurance.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions, fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900

and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour here-

under the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from the to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the

trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

CONTRACTS AWARDED RECENTLY

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:

DEPARTMENT OF MARINE

Contracts in Group "A" (Construction, etc.)

Construction of a Pilotage Building at Quebec, Que. Name of Contractor, Mr. Ulric Latouche, Quebec, P.Q. Date of contract March 27, 1931. Amount of contract \$47,500. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters.....	\$0 60	8
Bricklayers.....	1 00	8
Masons.....	1 00	8
Painters.....	0 60	8
Plumbers.....	0 60	8
Labourers.....	0 40	8
Skilled labourers or helpers.....	0 45	8

DEPARTMENT OF NATIONAL REVENUE

Contracts in Group "A" (Construction, etc.)

Construction of a patrol boat for service in Atlantic waters. Name of contractors, Ditchburn Boat Builders, Ltd., Gravenhurst, Muskoka, Ont. Date of contract, March 12, 1931. Amount of contract, \$102,000. The General Fair Wages Clause was inserted in this contract.

Construction of a patrol boat for service in Atlantic waters. Name of contractors, Manseau Shipyards, Ltd., Sorel, P.Q. Date of contract, March 12, 1931. Amount of contract, \$102,000. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of Customs and Immigration Building, Forest City, N.B. Name of contractor, John L. Simms, Fredericton, N.B. Date of contract, April 20, 1931. Amount of

contract, \$4,350 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Concrete workers.....	\$0 35	8
Concrete mixers.....	0 40	8
Concrete floaters.....	0 45	8
Concrete finishers.....	0 60	8
Stone masons.....	1 00	8
Stone cutters.....	0 75	8
Brick and hollow tile layers.....	1 00	8
Structural steel workers.....	0 75	8
Sheet metal workers.....	0 60	8
Helpers.....	0 35	8
Felt and gravel roofers.....	0 50	8
Terrazzo layers.....	1 00	8
Carpenters.....	0 60	8
Painters.....	0 60	8
Glaziers.....	0 35	8
Helpers.....	1 00	8
Marble and tile setters.....	0 60	8
Metal lathers.....	1 00	8
Plasterers.....	0 40	8
Helpers.....	0 70	8
Plumbers.....	0 40	8
Helpers.....	0 70	8
Steamfitters.....	0 35	8
Helpers.....	0 60	8
Electricians.....	0 35	8
Helpers.....	0 35	8
Labourers.....	0 35	8
	per day

Driver, team and wagon.....	6 50	8
	per week	
Motor truck driver—		
1 ton.....	22 00	8
2 ton.....	28 00	8

Construction of alterations to the Bureau of Statistics, Ottawa, Ont. Name of contractor, Alex. I. Garvock, Ottawa, Ont. Date of contract, April 16, 1931. Amount of contract, \$25,046 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Concrete workers.....	\$0 50	8
Concrete mixers.....	0 50	8
Concrete floaters.....	0 50	8
Concrete finishers.....	0 75	8
Stonemasons.....	1 25	8
Brick and hollow tile layers.....	1 25	8
Carpenters and joiners.....	0 90	8
Sheet metal workers.....	1 00	8
Roofers, felt and gravel.....	0 70	8
Lathers, metal.....	0 75	8
Plasterers.....	1 00	8
Plasterers' helpers.....	0 50	8
Painters and glaziers.....	0 70	8
Plumbers and steamfitters.....	1 05	8
Electricians.....	0 80	8
Structural iron workers.....	1 00	8
Labourers.....	0 45	8
Driver, one horse and cart.....	0 70	8
Driver, two horses and wagon.....	1 00	8
Motor truck driver.....	0 50	8

Installation of electric wiring and fittings in the public building at Kentville, N.S. Name

of contractor, Wm. W. Hoyt, Halifax, N.S. Date of contract, April 16, 1931. Amount of contract, \$968. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Electricians.....	\$0 65	8
Electricians' helpers.....	0 40	8
Labourers.....	0 35	8

Construction of an extension to the western wharf, Notre Dame de l'Île Verte, Temiscouata Co., P.Q. Name of contractors, Letourneau & Renault, Montmagny, P.Q. Date of contract April 11, 1931. Amount of contract, approximately \$3,036.50. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters.....	\$0 55	8
Blacksmiths.....	0 55	8
Blacksmiths' helpers.....	0 45	8
Labourers.....	0 35	8
	per day	
Driver, horse and cart.....	5 00	8
Driver, team and wagon.....	6 50	8

Construction of alterations and additions to the Dockyard Manager's House at H.M.C. Dockyard, Esquimalt, B.C. Name of contractor, Mr. James Smethurst, Victoria, B.C. Date of contract, April 22, 1931. Amount of contract, \$6,900. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons.....	\$1 25	8
Carpenters and joiners.....	1 00	8

Truck drivers.....	0 65	8

Dredging, Musquodoboit Harbour, N.S. Name of contractors, Halifax Dredging Co.,

Ltd., Halifax, N.S. Date of contract, April 6, 1931. Amount of contract, approximately \$10,680. The General Fair Wages Clause was inserted in the contract.

Installation of an electric clock system in the public building at Winnipeg, Man. Name of contractor, Canada Clock Company, Toronto, Ont. Date of contract, April 8, 1931. Amount of contract, \$622. The General Fair Wages Clause was inserted in the contract.

Installation of an electric clock system in the public building at Regina, Sask. Name of contractors, Canada Clock Co., Toronto, Ont. Date of contract, April 8, 1931. Amount of contract, \$552. The General Fair Wages Clause was inserted in the contract.

Installation of an electric clock system in the public building at Saskatoon, Sask. Name of contractor, Canada Clock Co., Toronto, Ont. Date of contract, April 8, 1931. Amount of contract, \$815. The General Fair Wages Clause was inserted in the contract.

Installations of new interior fittings in the public building at Kentville, N.S. Name of contractor, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, April 1, 1931. Amount of contract, \$1,648. The "B" labour conditions were inserted in the contract.

Installation of new interior fittings in the public building at Edmonton, Alberta. Name of contractors, The Office Specialty Mfg. Co., Ltd., Ottawa, Ont. Date of contract, April 18, 1931. Amount of contract, \$13,868. The "B" conditions were inserted in the contract.

Installation of interior fittings in the public building at Ville Marin, P.Q. Name of contractors, Canadian Office and School Furniture, Ltd., Preston, Ont. Date of contract, April 20, 1931. Amount of contract, \$984. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the public building at Deloraine, Man. Name of contractors, Canadian Office and School Furniture, Ltd., Preston, Ont. Date of contract, April 20, 1931. Amount of contract, \$1,115. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the public building at Copper Cliff, Ont. Name of contractors, Canadian Office and School Furniture, Ltd., Preston, Ont. Date of contract, April 20, 1931. Amount of contract, \$1,310. The "B" labour conditions were inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

Contracts in Group "A" (Construction, etc.)

Erection of the Power Plant buildings in connection with the Government Grain Elevator at Churchill, Man. Name of contractors, Carter-Halls-Aldinger Co., Ltd., Winnipeg, Man. Date of contract, April 13, 1931. Amount of contract, \$174,229. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than
	per hour
Labour.....	\$0 42½
Pile driving or skilled labour.....	0 55
Pile driving crew.....	0 60
Pile driving captain.....	0 70
Firemen.....	0 55
Pile driving engineer.....	0 90
Carpenters.....	0 90
Hoist runners.....	0 85
Loco. crane operators.....	1 00
Plumber.....	1 20
Sheet metal workers.....	0 80
Bricklayers.....	1 45
Concrete finishers.....	0 75
Plasterers.....	1 35
Plasterers' helpers.....	0 55
Painters.....	0 90
Millwrights.....	0 90
Electricians.....	1 10
Caterpillar tractor operators.....	0 60
Structural steel workers.....	0 90

Time and one-half to be allowed for time over ten hours, and time and one-half for Sunday time.

POST OFFICE DEPARTMENT

Following is a statement of payments made in April, 1931, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

<i>Making Metal dating stamps and type, brass crown seals, cancellers, etc.</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	\$ 705 00
<i>Making and repairing rubber stamps, daters, etc.</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	228 95
Capital Rubber Stamp Works, Ottawa, Ont.	10 80
<i>Making up and supplying Letter Carriers' uniforms</i>	
Paton Manufacturing Co., Ltd., Montreal, P.Q.	6,039 15
Grant-Holden-Graham, Ltd., Ottawa, Ont.	11,905 33
<i>Mail Bag Fittings</i>	
Ontario Equipment Co., Ltd., Ottawa, Ont.	2,020 00
<i>Scales</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	123 75
<i>Stamping Ink and Pads</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	28 90

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect through though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Textiles and Clothing

VANCOUVER, B.C.—CERTAIN EMPLOYERS AND THE JOURNEYMEN TAILORS' UNION OF AMERICA, LOCAL No. 178.

This agreement, which is the same as that in force since 1927, is to be in effect from April,

1931, to March 31, 1932, and from year to year until either party gives notice of change.

A successful strike to secure this agreement occurred in two establishments and is reported on page 522 of this issue.

Only union members to be employed, or, if non-union members are employed, they must join the union within ten days.

A union representative will have free access to all shops during working hours.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime is limited to 4 hours per week with not more than one hour on Saturday afternoon. For overtime work and all work on Dominion holidays, time and one-half will be paid.

Wages: tailors (including operators, pressers and tailors) 91 cents per hour, finishers 63 cents, helpers 55 cents.

All work is to be done on the premises unless any employer has not enough work to employ a pants maker or vest maker steadily; in which case they may send their work out to union contractors and pay the following piece rates: pants \$4.50, vest \$4.

Incapacitated members who cannot demand the minimum wage rates may work on piece work or at a weekly wage agreed on by the parties concerned and the officers of the union.

Apprentices, (female) to receive \$7 per week for first six months with an increase of \$3 per

week every six months until the helpers' minimum is reached. If boy apprentices are employed, it will be by special arrangement with the union.

All work is to be as nearly as possible equally divided, particularly in the slack season, and no person will be discharged through scarcity of work during the slack season after three weeks' consecutive employment.

All workshops must be kept in a sanitary condition.

In consideration of the observance of the terms of the agreement by employers, the union label will be supplied by the union.

Construction: Buildings and Structures

MONTREAL, QUEBEC.—CERTAIN CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF SHEET METAL WORKERS, LOCAL No. 116.

Agreement to be in effect from May 1, 1931, to April 30, 1932.

Only local union members to be employed. Hours: 8 per day, 4 on Saturdays, a 44-hour week. (The hours formerly were 9 per day with a 50-hour week.)

Overtime: from 5 p.m. to midnight on other week days and from noon to 5 p.m. on Saturdays, time and one-half; all other overtime and work on Sundays, Christmas Day and New Year's Day, double time. No work on Labour Day.

Wages: 80 cents per hour.

One apprentice allowed for every three or less journeymen. Helpers are not permitted to use tools to do a journeyman's work.

For work out of the city, fare and board to be paid by employers and travelling time at straight time up to 8 hours per day or until 10 p.m. For work done in the outskirts of the city, the employer will pay the surplus of the price of a regular car fare.

No union member will be allowed to take sub-contracts or to work for persons taking such contracts or to do jobbing for himself.

WINNIPEG, MANITOBA.—MASTER PLUMBERS' ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAM FITTERS, LOCAL No. 254.

Agreement to be in effect from January 1, 1931, to December 31, 1931.

Renewal of previous agreement which was summarized in the LABOUR GAZETTE, July, 1928, and July, 1926, to continue in effect for the year 1931, with the provision that should any general reduction occur in the wages of building trades in Winnipeg a similar reduction would be considered for plumbers and steamfitters.

The regular rate of wages is \$1.25 per hour for a 44-hour week.

REGINA, SASKATCHEWAN.—ELECTRICAL CONTRACTORS OF REGINA AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 572.

Agreement to be in effect from May 1, 1931, to December 31, 1931. Both parties agree to meet during the month of December to formulate a new agreement.

This agreement is the same as the one previously in force between this local union and the Electrical Contractors Section of the Regina Builders' Exchange which was summarized in the LABOUR GAZETTE, June, 1930, page 715, with the following exceptions:

Hours: the regular hours have been reduced from 9 to 8 per day with a 44-hour week instead of a 49 hour week as in the previous agreement. For shift work the hours remain the same at 48 hours per week.

Wages: the wage rate for journeymen electrical workers has been reduced from \$1.10 to \$1.05 per hour.

CALGARY, ALBERTA.—THE CALGARY CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1779.

Agreement to be in effect from May 1, 1931, to April 30, 1932. Both parties are to meet during January, 1932 to negotiate a new agreement.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1928, page 788.

The wage rate remains at \$1 per hour with a 44-hour week.

Transportation and Public Utilities:

Water Transportation

MONTREAL, QUEBEC.—VARIOUS STEAMSHIP COMPANIES AND THE SYNDICATED LONGSHOREMEN OF THE PORT OF MONTREAL.

Agreement to be in effect from April 16, 1931, to December 31, 1931.

This agreement is similar to the one previously in effect which was mentioned in the LABOUR GAZETTE, June 1930, May, 1929 and May, 1928; the principal clauses having already been summarized in the issues of June and October, 1927.

The regular rate of wages remains at 65 cents per hour for day work, 75 cents for evening work and 97½ cents for night work.

There are a few minor changes in working conditions.

Farmers in Kelowna, British Columbia have organized under the Co-operative Associations' Act to carry on business of fruit, vegetables, grain, hay, feed, lumber, coal and general merchandise, retail and wholesale. It is understood that this organization has nothing to do with fruit marketing or pooling but is incorporated to deal with by-products of fruit, and the other articles mentioned.

The Hon. W. A. Gordon, Minister of Immigration and Colonization stated in the House of Commons on April 28, the hope of

the Government that the present difficulties in regard to unemployment would be relieved in a large measure at least before the coming of next winter. Such relief, he said, would be the result of the co-ordinated efforts that are being put forth by all agencies, both governmental and industrial, and by every other force in the country. However, the Minister continued, "if events do not materialize as we hope they will, then this government, I am sure, will take whatever steps are necessary to see that there will be no undue suffering among the people of this country."

PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in April was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in March.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty-nine cities was again lower at \$8.86 at the beginning of April, as compared with \$9.14 for March; \$11.24 for April, 1930; \$11.01 for April, 1929; \$10.87 for April, 1928; \$10.80 for April, 1927; \$11.36 for April, 1926; \$10.56 for April, 1925; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$15.99 for April, 1920; \$16.92 for June, 1920 (the peak); \$12.57 for April, 1918; and \$7.51 for April, 1914. The most important declines occurred in the prices of veal, salt pork, bacon, lard, eggs, milk, butter, cheese, bread, beans, evaporated apples and potatoes. Including the cost of fuel and rent with that of food the total budget averaged \$19.18 at the beginning of April, as compared with \$19.47 for March; \$21.53 for April, 1930; \$21.30 for April, 1929; \$21.11 for April, 1928; \$21.02 for April, 1927; \$21.64 for April, 1926; \$20.82 for April, 1925; \$20.58 for April, 1924; \$21.21 for April, 1923; \$20.66 for April, 1922; \$23.31 for April, 1921; \$25.34 for April, 1920; \$26.92 for July, 1920 (the peak); \$20.01 for April, 1918; and \$14.32 for April, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was slightly lower at 74.5 for April, as compared with 75.1 for March; 91.7 for April, 1930; 94.1 for April, 1929; 98.3 for April, 1928; 97.3 for April, 1927; and 101.2 for April, 1926. Sixty-six prices quotations advanced, ninety-two were lower and three hundred and forty-four were unchanged.

In the grouping according to chief component materials six of the eight main groups declined, one advanced and one was practically unchanged. The groups which declined were: the Animals and their Products group, mainly because of lower prices for steers, calves, shoes, leather and eggs, which more than offset increased prices for hogs, lambs and hides; the Fibres, Textiles and Textile Products group, chiefly due to reduced prices for raw cotton and wool blankets; the Wood, Wood Products and Paper group, owing to lower

prices for fir and groundwood pulp; the Iron and its Products group, mainly because of reductions in the prices of steel sheets and automobile body plates; the Non-Ferrous Metals and their Products group, due to declines in copper, lead, zinc, tin and silver prices; and the Non-Metallic Minerals and their Products group, chiefly due to lower prices for anthracite coal. The Vegetables and Vegetable Products group advanced, due to higher prices for barley, flax, oats, rye and wheat, which more than offset declines in raw rubber, corn, flour, rolled oats and oatmeal. The Chemicals and Allied Products group was practically unchanged.

In the grouping according to purpose consumers' goods were lower, mainly because of declines in the prices of coffee, flour, oatmeal, rolled oats, cured meats and boots and shoes, while producers' goods advanced slightly, higher prices for hides, hogs, lambs, wheat, oats, barley, flax and rye more than offsetting lower prices for raw rubber, lumber, tin, lead, copper, steers and calves.

In the grouping according to origin raw and partly manufactured goods were higher, chiefly because of increased quotations for wheat, oats, barley, hogs and lambs, which more than offset lower prices for cotton, eggs, tin, silver and copper. Fully and chiefly manufactured goods were lower, mainly because of price reductions for flour, oatmeal, butter, cheese, lard, copper wire bars and zinc sheets. Articles of marine origin, articles of forest origin and articles of mineral origin were lower, while domestic farm products advanced.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city. etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

(Continued on page 608)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

*Prior to 1926 number of commodities was 236.

(Continued from page 600)

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located,

but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and

soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table give figures for December each year from 1914 to 1918, quarterly from 1919 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 155.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 74.4; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 66.7; 1929, 65.0. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1929, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918; 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices, for the most part, were somewhat lower, round steak averaging 24.5 cents per pound in April as compared with 24.8 cents in March, rib roast 23 cents per pound in April and 23.3 cents in March, and stewing beef 13.6 cents per pound in April and 13.9 cents in March. Veal prices were lower in

most localities, averaging 19.7 cents per pound in April, as compared with 20.1 cents in March. Mutton was slightly higher, averaging 26.7 cents per pound. Fresh pork was little changed in the average, increases in some localities being offset by declines in others. Salt pork, however, was down from an average of 24.7 cents per pound in March to 23.8 cents in April. Declines occurred in most localities. Breakfast bacon was down from an average price of 34.3 cents per pound to 31.9 cents. In fresh fish cod steak, halibut and whitefish were lower. Lard prices were generally lower, averaging 16.7 cents per pound in April as compared with 18.4 cents in March.

Eggs were substantially lower in most localities, the decline, however, being more pronounced in the eastern provinces. Fresh averaged 28.4 cents per dozen in April as compared with 34 cents in March and cooking 23.2 cents per dozen in April and 27.6 cents in March. Milk declined from an average price of 11.9 cents per quart in March to 11.7 cents in April. Lower prices were reported from St. Hyacinthe, Hull, Ottawa, Niagara Falls, Brantford, Woodstock, Chatham, Sudbury and Regina. Butter prices were slightly lower, dairy averaging 33.2 cents per pound in April, as compared with 33.3 cents in March, and creamery 37.1 cents per pound in April as compared with 37.6 cents in March. Cheese was down from an average price of 28.2 cents per pound to 27.8 cents. The price in April, 1930, was 32.9 cents per pound.

Bread was again lower at an average price of 6.3 cents per pound as compared with 6.4 cents in March. Lower prices were reported from Fredericton, Kingston, Belleville, Peterborough, Brantford, London and Medicine Hat. Flour was unchanged at an average price of 3.4 cents per pound. Beans averaged 6.3 cents per pound in April, as compared with 6.5 cents in March and 9.5 cents in April, 1930. Potatoes were again lower in most localities, the price averaging \$1.08 per ninety pounds as compared with \$1.16 in March. Evaporated apples declined from 18.7 cents per pound in March to 18.1 cents in April. Prunes were little changed at an average price of 12.1 cents per pound. Granulated sugar was unchanged in most localities, averaging 6.3 cents per pound. Anthracite coal was down from an average price of \$16.24 per ton in March to \$16.09 in April. Lower quotations were reported from St. John, Sorel, Toronto, Galt, Kitchener, Woodstock, Stratford, and London. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Most grains averaged somewhat higher in April than in March. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaging 58.7 cents per bushel as compared with 56.7 cents in March. The figure for April is the highest monthly average recorded since last November. The high price for the month was 63 cents per bushel reached on April 18. The increase was said to be due to increased export demand and to the likelihood of a considerable cut in the Australian wheat acreage in 1931. In coarse grains western oats rose from 25.1 cents per bushel to 28.3 cents, flax from \$1.03 per bushel to \$1.04, and rye from 31.2 cents per bushel to 31.7 cents. Flour was slightly lower at \$5.20 per barrel as compared with \$5.27 in March. Rolled oats at Toronto also were lower at \$2.40 per ninety pound bag, as compared with \$2.60 in March. Raw sugar at New York advanced from \$1.20 per cwt. to \$1.32, while the price of granulated at Montreal was unchanged at \$4.56 per hundred pounds. Ceylon rubber at New York was down from 7.7 cents per pound to 6.4 cents. Coffee at Toronto fell 2 cents per pound to 15 cents. In livestock good steers at Toronto declined from \$6.74 per hundred pounds to \$6.22 and

at Winnipeg from \$5.78 per hundred pounds to \$5.53. Veal calves at Toronto declined from \$8.98 per hundred pounds to \$8.31 and at Winnipeg from \$8.11 per hundred pounds to \$7.33. Bacon hogs at Toronto were up from \$7.92 per hundred pounds to \$8.47 and at Winnipeg from \$6.91 per hundred pounds to \$7.27. Lambs also were higher at Toronto at \$10.66 per hundred pounds as compared with \$9.21 in March. Creamery butter at Montreal declined from 34.3 cents per pound to 31.6 cents and at Toronto from 34 cents per pound to 32.9 cents. Fresh eggs at Montreal were down from 29.9 cents per dozen to 26.9 cents and at Winnipeg from 23.8 cents per dozen to 23 cents. The price of raw cotton at New York fell from 10.9 cents per pound to 10.2 cents. The decline was said to be due to the unexpectedly large acreage of the 1931 crop. Raw silk at New York was unchanged at \$3.15 per pound. A cut of \$5 per ton in the price of newsprint was announced by the principal paper companies. Galvanized steel sheets declined from \$3.85 per hundred pounds to \$3.75. In non-ferrous metals copper fell from \$11.61 per hundred pounds to \$11.09, copper wire bars from \$10.25 per hundred pounds to \$10, tin from 29.5 cents per pound to 27.8 cents, and silver from 29.2 cents per ounce to 28.3 cents. Crude oil at Sarnia dropped from \$2.34 per barrel to \$2.29. Anthracite coal declined from \$13.22 per ton to \$12.13.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table showing wholesale and retail prices index numbers for various countries appeared in the LABOUR GAZETTE for April.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 63.7 for March, a decline of 0.3 per cent for the month. This continues the steady decline since October, 1929, which has now amounted to 22 per cent and is only 5.9 per cent above prices in 1913. As compared with February, the index number for foods declined 0.6 per cent due to declines in meat and fish and cereals, while other foods advanced 4.8 per cent. Non-foods on the whole

were unchanged, advances in wool and cotton being offset by declines in all other groups.

The *Economist* index number, on the base 1927=100, was 66.2 at the end of March, a decline of 0.5 per cent for the month. As there was a small increase in February, the index number at the end of March is only 0.2 per cent lower than at the end of January. As compared with prices at the end of February, cereals and meat advanced 0.8 per cent, while other foods declined 1.5 per cent; textiles advanced 6.1 per cent, while minerals declined 3.1 per cent and miscellaneous commodities 3.9 per cent. According to this index number, which applies "to a group of prices relating predominantly to primary products", the level of wholesale prices is now about 9 per cent lower than in 1913.

The *Statist* index number, on the base 1867-1877=100, was 85.5 at the end of March, showing no change from the previous month. Increases were recorded in vegetable food, animal food and textiles, while sugar, coffee and tea, minerals and sundries were lower.

COST OF LIVING.—The index number of the Ministry of Labour Gazette, on the base July, 1914=100, was 147 at the beginning of April, a decline of 2 per cent for the month. This was due to a fall of 3.7 per cent in food; all other groups were unchanged.

France

WHOLESALE PRICES.—The index number of the General Statistical Bureau, on the base 1914=100 (gold basis) was 100 for March; showing no change from February or January. As compared with February, prices for foods and textiles were higher, while minerals and metals and sundries were lower.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 113.9 for March, a decline of 0.1 per cent for the month. Advances were shown in agricultural products, non-ferrous metals and textiles, while all other groups declined.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 137.7 for March, a decline of 0.8 per cent for the month. With the exception of rent which was unchanged, the decline extended to all groups.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100 (gold basis), was 97.6 for March, an advance of 0.5 per cent for the month, due to advances in vegetable foods and miscellaneous vegetable products; all other groups were lower than in February.

COST OF LIVING.—The index number of the cost of living, Milan, on the base June, 1927=100, was 84.43 for March, an increase of 0.4 per cent for the month.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1442 for February, a decline of 2.3 per cent for the month. Of the six main groups, metals and their products increased, wood and wood products were unchanged, while the other groups showed decreases.

COST OF LIVING.—The official index number on the base July, 1914=1000, was 1504 for February, a decline of 3 per cent from November. All groups declined in this period with the exception of miscellaneous commodities which advanced slightly.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 74.5 for March, a decline of

1.3 per cent for the month. The feature of the month was a fall of 16.7 per cent in petroleum products due to much lower prices for crude petroleum, fuel oil and gasoline. This was the principal cause of the fall of 7.3 per cent in the fuel and lighting materials group. Of the other groups, farm products, hides and leather products, metals and metal products, building materials and miscellaneous commodities advanced, while foods, textile products and chemicals and drugs declined; there was no change in house-furnishing goods.

The *Annalist* index number, on the base 1913=100, was 106.1 for April, a decline of 2.9 per cent for the month. All groups showed decreases, the largest being in the fuels group, amounting to 4 per cent.

Bradstreet's index number, which is the sums total of the prices per pound of 96 commodities of common consumption, was \$8.9134 at May 1, which is a decline of 3.4 per cent for the month. The principal decreases occurred in metals, textiles and provisions, while smaller decreases were shown in livestock, fruits, hides and leather, oils, naval stores and miscellaneous commodities. Three groups showed advances, viz. bread-stuffs, building materials and coal and coke, while chemicals and drugs were unchanged.

Dun's index number of wholesale commodity quotations, proportioned to the *per capita* consumption of each of the many articles included, was \$149.419 at May 1, a decline of 2.0 per cent for the month, and of 16.0 per cent from May 1, 1930. Six of the seven groups were lower than for the previous month.

COST OF LIVING.—The index number of the Department of Labour and Industries of Massachusetts, on the base 1913=100, was 143.3 for March, which is slightly lower than for February, due to lower prices for food, clothing and sundries.

Establishment of all farm boys' and girls' club work in Canada upon a national basis, guided by a central executive with headquarters at Ottawa, representative of all the provinces concerned, as well as the Dominion Government, and other organizations interested, has been effected during the past few weeks, with the organization of what is to be known as the Canadian Council on Boys' and Girls' Club Work. The new plan has been brought into being with the active co-operation and approval of Hon. Robert Weir, Dominion Minister of Agriculture. The plan and policies of the new organization have been worked out by a committee representing various organizations which have in the past played a large part in this work.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1931

THE number of fatal industrial accidents (including fatalities from industrial diseases included with fatal accidents by workmen's compensation boards, etc., and also fatalities to persons incidental to the pursuit of their occupations), which were recorded in the Department as occurring during the first quarter of 1931, was 244, there being 69 in January, 95 in February, and 80 in March.

The report for the fourth quarter of 1930 was given in the *LABOUR GAZETTE*, February, page 251. In the first quarter of 1930, 322 fatal accidents were recorded (*LABOUR GAZETTE*, May, 1930, page 601). The supplementary list of fatal industrial accidents on pages 619 to 620 contain 38 fatalities for 1930. In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, and from certain other official sources; and from the correspondents of the *LABOUR GAZETTE*. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the first quarter of 1931 were as follows:—agriculture, 38; logging, 21; fishing and trapping, 8; mining, non-ferrous smelting and quarrying, 28; manufacturing, 31; construction, 36; electric light and power, 10; transportation and public utilities, 47; trade, 16; finance, 1; service, 8.

Of the mining accidents, 12 were in "metalliferous mining," 12 fatalities were in "coal mining," 2 in "non-metallic mineral mining and quarrying, n.e.s.," and 2 in "structural materials."

Of the accidents in manufacturing, 1 was in "textiles and clothing," 1 in "leather, fur and products," 4 in "saw and planing mill products," 6 in "pulp, paper and paper products," 2 in "printing and publishing," 8 in "iron, steel and products," 2 in "non-ferrous metal products," 6 in "non-metallic mineral products," and 1 in "chemical and allied products."

In construction there were 8 fatalities in "buildings and structures," 1 in "railway construction," 9 in "highway and bridge," and 18 in "miscellaneous construction."

In transportation and public utilities there were 24 fatalities in "steam railways," 2 in "street and electric railways," 9 in "water transportation," 2 in "air transportation," 9 in "local transportation," and 1 in "telegraphs and telephones."

In trade there were 4 fatalities in "wholesale," and 12 in "retail."

Of the fatalities in service, 2 were in "public administration," 2 in "custom and repair," 2 in "personal and domestic," and 2 in "professional establishments."

There was no serious disaster resulting in the loss of a very large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:

On March 17, three onion growers were killed in a collision of a train with their truck while returning from the market warehouse at Kingsville, Ontario.

On February 25, two fishermen were drowned from a dory off Lunenburg, N.S., and on March 29, another two fishermen were drowned when their skiff capsized near Goderich, Ontario.

Three paper mill workers lost their lives at Powell River, B.C., on March 21, when a rope of a scaffold broke while demolishing a chimney and they fell 97 feet.

In steam railways, two shop workers fell from a train near Winnipeg, Man., on February 18, and were run over while returning from work.

On January 14, two stevedores were fatally injured at Halifax, N.S., when they fell through a hold of a ship when the hatch broke through.

Supplementary List of Accidents in 1930

The supplementary list of fatal accidents occurring in 1930, to be found after the main table of accidents, contains 38 fatalities, of which 1 was in agriculture, 7 in logging, 1 in fishing and trapping, 1 in mining, non-ferrous smelting and quarrying, 4 in manufacturing, 10 in construction, 2 in electric light and power, 7 in transportation and public utilities, 3 in trade and 2 in service. Two of these accidents occurred in March, 1 in July, 3 in September, 3 in October, 7 in November and 22 in December.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER
OF 1931

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCK-RAISING—				
Farmer.....	North Alton, N.S.....	Jan. 10	51	Kicked by horse. Died Jan. 12.
Farmer.....	St. Gregoire de Nicolet, Que.	" 12	35	Struck by flying piece of circular saw.
Farmer.....	Lac-a-Noel, Que.....	" 13	35	Kicked by horse.
Farmer.....	Atwater, Sask.....	" 15	60	Collision of train with his wagon.
Farmer.....	Parkville, B. C.....	About Jan. 16	43	Killed by explosion while blasting stumps. Drawn into buzz saw he was operating.
Farmer.....	Sixsmith Dist., Alta.....	" 17	Attacked by bull.
Farmer.....	Near Milton, Ont.....	" 23	45	Collision of train with his truck.
Farmer.....	Near Edmonton, Alta.....	" 23	Injured in fire that destroyed his home caused by explosion of kerosene poured into stove. Died Feb. 28.
Farmer.....	Near Thurso, Que.....	" 29	48	Burned in fire that destroyed his home.
Farmer.....	Clairmont District, Alta.....	" 30
Farmer.....	Near Brockville, Ont.....	About Feb. 1	48	Infection from running a sliver into hand. Died Feb. 19.
Farmer's wife.....	Near Saskatoon, Sask.....	" 3	37	Kicked by horse while tying up bull in barn.
Farmer's wife.....	Near Kerrobert, Sask.....	" 9	29	Accidentally shot while helping husband to exterminate pests at barn.
Farmer.....	Near Indian Head, Sask.....	" 12	40	Crushed under truck load of grain when it upset.
Farm hand.....	Near Burnaby, B.C.....	" 13	Delayed dynamite explosion while blasting out stumps.
Farmer.....	Edson, Alta.....	" 14	Injured while loading coal.
Farmer.....	Near Belmont, Ont.....	" 14	50	Crushed by falling tree.
Farmer.....	Glen Valley, B.C.....	" 14	Killed by explosion at his home.
Farm labourer.....	Near Saskatoon, Sask.....	" 17	Fell from hay rack, fractured skull. Died Feb. 18.
Farmer.....	Alford Junction, Ont.....	About Feb. 19	66	Strained when his horses ran away.
Farmer's son.....	Near Coaldale, Alta.....	" 20	13	Killed by bull.
Farmer's son.....	St. Anne de Monts, Que.....	" 23	10	Crushed under cart load of cattle feed while dumping it.
Farm hand.....	Near Crossfield, Alta.....	" 23	14	Choked when clothing became caught in drive shaft of wind mill.
Farmer.....	St. Omer, Que.....	" 24	71	Run over when horse ran away while carting home wood.
Farm labourer.....	Near Lamont, Alta.....	" 26	Dragged by horse when it bolted.
Farmer.....	Near Grafton, Ont.....	" 28	45	Collision of train with his car while delivering milk supply.
Farmer's son.....	Near Fairlight, Sask.....	Mar. 1	Trampled by team of horses.
Farm hand.....	Valley River, Man.....	" 2	40	Fell on ice, fractured skull. Died Mar. 3.
Farmer.....	Near Ardill, Sask.....	" 3	Trampled by horses while moving granary.
Farm hand.....	Near Kenmore, Ont.....	" 9	18	Crushed by falling tree.
Farmer.....	Carrot Creek, Alta.....	" 14	61	Struck by falling tree, fractured skull.
Onion grower.....	Kingsville, Ont.....	" 17	25	Collision of train with their car while returning from market warehouse.
Onion grower.....		" 26	26	
Onion grower.....		" 26	26	
Farmer's son.....	Near Vankleek Hill, Ont.....	" 21	25	Struck on head by piece of flying pulley when it broke. Died Mar. 23.
Farmer.....	Near Weyburn, Sask.....	" 13	Caught in pulley rope and thrown 35 ft. to ground. Died Mar. 25.
Farmer.....	Near Alida, Sask.....	" 24	41	Dragged by pony he had lassoed.
Farmer.....	Near Riverhurst, Sask.....	About Mar. 30	Tore finger on nail, died April 1.
LOGGING—				
Logger.....	Cowichan Lake, B.C.....	Jan. 1	20	Struck by log rolling from flat car.
Bushman.....	Erith, Alta.....	" 12	38	Tree fell on him, fracturing skull. Died Jan. 13.
Tractor driver.....	Monastery, N.S.....	" 23	Pinned under tractor when it upset.
Sawyer.....	Blue Ridge, Alta.....	" 27	28	Crushed by falling tree.
Labourer.....	Flanders, Ont.....	Feb. 4	50	Struck by falling limb.
Faller.....	Campbell River, B.C.....	" 6	27	Struck by falling tree.
Labourer.....	Newport Woods, Que.....	" 11	42	Crushed by falling log.
Logger.....	Juniper, N.B.....	About Feb. 14	Log rolled on him. Died Mar. 2.
Tiemaker.....	Hudson, Ont.....	" 16	Struck by falling tree, fractured skull.
Chaser.....	Scott Cove, B.C.....	" 19	31	Drowned.
Logger.....	Near Sudbury, Ont.....	About Feb. 21	62	Trampled by horse in stable.
Top loader.....	Way Township, Ont.....	" 23	28	Fell and was crushed against stump by cable.
Logger.....	Albarni Canal, B.C.....	" 23	29	Struck on head by sapling.
Bush labourer.....	Meddy Brook, Que.....	" 24	46	Crushed by load of logs, fractured skull.
Brakeman.....	Pike Lake, Que.....	" 28	21	Drowned.
Sawyer.....	Near Watcom, Ont.....	Mar. 6	44	Struck by falling tree.
Chaser.....	Elk Bay, B.C.....	" 10	54	Hit by log, fractured spine.
Farmer.....	Nipawin, Sask.....	" 13	22	Struck by falling tree.
Logger.....	Horne Lake, B.C.....	" 21	45	Caught by rolling log.
Swamper.....	Port Alberni, B.C.....	" 23	Hit on head by choker.
Logger.....	North Vancouver, B.C.....	" 25	28	Log rolled over body.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER
OF 1931—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
FISHING AND TRAPPING—				
Trapper.....	Cedar Lake, Man.....	About Jan. 29	31	Badly frozen during storm. Died Feb. 24.
Fisherman.....	Long Lake, Sask.....	Feb. 17	Drowned when car broke through ice.
Fisherman.....	Off Vancouver Island, B.C..	" 19	40	Drowned when fishing craft was swept ashore by storm.
Fisherman.....	Off Lunenburg, N.S.....	" 25	28	Drowned from dory.
Fisherman.....		" 27	27	
Trapper.....	Near Sudbury, Ont.....	Mar. 26	Accidental discharge of his rifle.
Fisherman.....	Near Goderich, Ont.....	" 29	21	Drowned when their skiff capsized.
Fisherman.....		" 17	17	
MINING, NON-FERROUS, SMELTING AND QUAR- RYING—				
<i>Metaliferous mining—</i>				
Rigger's helper.....	Kirkland Lake, Ont.....	Jan. 7	22	Fell 26 feet when scaffolding gave way.
Driller.....	Kirkland Lake, Ont.....	" 8	45	Crushed by falling rock.
Miner.....	Schumacher, Ont.....	" 15	41	Silicosis, no lay off.
Mucker.....	Creighton Mine, Ont.....	" 19	26	Struck by falling rock.
Pipefitter.....	Schumacher, Ont.....	" 22	32	Fell 16 feet to cement floor, fractured skull.
Labourer.....	Flin Flon, Man.....	" 26	Injured in sand bin of concentrator. Died Jan. 27.
Miner.....	Timmins, Ont.....	Feb. 24	51	Silicosis, first laid off on July 13, 1926.
Miner.....	Premier, B.C.....	" 24	35	Struck by falling rock.
Electrician.....	South Porcupine, Ont.....	Mar. 1	22	Fell from platform. Died Mar. 2.
Miner.....	Timmins, Ont.....	" 6	Drowned.
Filterman.....	Kirkland Lake, Ont.....	" 9	34	Caught in filter gear.
Machine runner.....	Kirkland Lake, Ont.....	" 21	47	Silicosis, first laid off on Mar. 10, 1926.
<i>Coal Mining—</i>				
Miner.....	Thorburn, N.S.....	Jan. 6	32	Crushed by fall of stone.
Miner.....	Edmonton, Alta.....	" 8	32	Crushed by falling rock.
Miner.....	Glace Bay, N.S.....	About Jan. 15	Injured in mine.
Miner.....	Sydney, N.S.....	" 16	36	Struck by snowplough while returning from work during storm. Died Jan. 19.
Miner.....	Stellarton, N.S.....	" 28	48	Crushed by fall of coal. Died Jan. 31.
Miner.....	Hillcrest, Alta.....	Feb. 17	39	Struck by falling coal.
Rollerman.....	Caledonia, N.S.....	" 26	48	Struck by box car on haulage track.
Miner.....	Carbon, Alta.....	" 26	35	Crushed when roof of mine caved in.
Miner.....	Sydney Mines, N.S.....	Mar. 5	35	Crushed by fall of coal. Died Mar. 6.
Miner.....	Springhill, N.S.....	" 9	33	Crushed by fall of stone.
Miner.....	Minto, N.B.....	About Mar. 11	28	Crushed by fall of rock. Buried by cave-in.
Miner.....	Near Lethbridge, Alta.....	" 21	
<i>Non-Metallic Mineral Mining and Quarry- ing, (n.e.s.)—</i>				
Worker in quarry....	Near Marmora, Ont.....	Feb. 20	24	Injured by delayed charge while blasting. Died Feb. 21.
Miner.....	Thetford Mines, Que.....	Mar. 17	28	Crushed by falling rocks.
<i>Structural Materials—</i>				
Labourer in gravel pit.....	Souris, Man.....	Feb. 12	40	Crushed by falling piece of frozen gravel. Died Feb. 15.
Labourer in quarry..	St. John, N.B.....	Mar. 2	72	Buried by rock slide following blasting operations
MANUFACTURING—				
<i>Textiles and Clothing—</i>				
Worker in linoleum plant.....	Farnham, Que.....	Jan. 28	19	Fell from roof of plant.
<i>Leather, Fur and Products—</i>				
Labourer in leather factory.....	Acton, Ont.....	Mar. 25	Struck against pulley while operating machine, fractured skull. Died Mar. 26.
<i>Saw and Planing Mill Products—</i>				
Mill worker.....	Westchester, N.S.....	Jan. 5	33	Caught in shafting while attempting to attach chain of conveyor.
Mill worker.....	Milton, P.E.I.....	Feb. 2	23	Struck by belt when it slipped from pulley.
Labourer.....	Barnet, B.C.....	" 6	34	Dragged into carrier. Died Feb. 9.
Teamster.....	Hallewood, Ont.....	About Mar. 2	27	Fell across circular saw.
<i>Pulp, paper and paper products—</i>				
Labourer at beaver- board factory.....	Thorold, Ont.....	Jan. 30	56	Fell against side of wheelbarrow. Died Feb. 4.
Machine operator with paper mfrs.....	Brantford, Ont.....	Feb. 9	50	Pneumonicosis, first laid off on May 14, 1930.
Labourer.....	Kingsey Falls, Ont.....	Mar. 11	73	Cerebral hemorrhage.
Mill worker.....		" 26	26	
Mill worker.....	Powell River, B.C.....	" 21	29	
Mill worker.....		" 26	26	

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER
OF 1931—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—<i>Con.</i>				
<i>Printing and publishing—</i>				
Foreman with engraving co.	Toronto, Ont.	" 2	50	Shot by fellow worker.
Worker with press co.	Montreal, Que.	" 27	73	Fell down stairs. Died April 5.
<i>Iron, steel and products—</i>				
Steel-worker	Sydney, N.S.	Jan. 20	34	Crushed between furnace charger and pile of bricks.
Labourer with stove mfrs.	London, Ont.	Feb. 2	43	Pneumonicosis. First laid off on Aug. 25, 1930.
Worker in engine plant.	Guelph, Ont.	" 17	37	Struck by casting. Died Feb. 21.
Hooker-on	Hamilton, Ont.	" 17	35	Fell 30 feet with bucket when it overbalanced.
Dump man in blast furnace.	Sydney, N.S.	" 21	60	Struck by ladle train.
Worker at bridge co. plant.	Lachine, Que.	Mar. 12	64	Struck by falling plank. Died Mar. 14.
Worker in foundry	Montreal, Que.	" 12	42	Injured while at work. Died Mar. 20.
Blacksmith	Sault Ste. Marie, Ont.	" 21	Struck by tool which slipped out of tongs when being forged. Died Mar. 29.
<i>Non-ferrous metal products—</i>				
Worker in electro-metallurgical plant.	Welland, Ont.	Jan. 18	42	Caught in rope and whirled around winch.
Owner of Christmas tree lighting factory.	Bridgeburg, Ont.	Mar. 20	43	Burned by explosion and fire which destroyed his factory. Died Mar. 24.
<i>Non-metallic mineral products—</i>				
Stone cutter at stone works.	St. Samuel Stat., Que.	Jan. 16	24	Crushed under block of stone.
Granite cutter with monument firm.	Toronto, Ont.	" 26	42	Pneumonicosis. First laid off June 16, 1928.
Fireman at cement works.	Toronto, Ont.	Feb. 1	Slipped and fell to floor of boiler room.
Granite cutter with memorial firm.	Toronto, Ont.	" 12	53	Stone worker's phthisis. First laid off on June 16, 1926.
Miner	Thetford Mines, Que.	About Feb. 23	Crushed between two hoisting boxes in mine.
Labourer at cement plant.	Montreal, Que.	Mar. 30	30	Electrocuted when he touched high tension wire
<i>Chemical and allied products—</i>				
Mixer in explosives factory.	Brownsburg, Que.	" 24	48	Explosion in cement mixing house.
CONSTRUCTION—				
<i>Buildings and structures—</i>				
Labourer	Picard Sta., Que.	Jan. 8	42	Crushed by falling block of earth.
Foreman labourer	Halifax, N.S.	" 12	65	Struck by falling beam while tearing down building. Died Jan. 14.
Handyman with engineers.	Vancouver, B.C.	Feb. 2	55	Injured when crushed between pipes on Jan. 5, 1926.
Plumber	Montreal, Que.	" 13	55	Fell down elevator shaft.
Workman	Montreal, Que.	" 13	24	Collapse of scaffold.
Electrician installing switchboard.	St. Johns, Que.	" 20	40	Electrocuted when he fell across a high tension wire.
Labourer	York Twp., Ont.	Mar. 17	43	Fell from hoist platform to ground. Died Mar. 21.
Steamfitters' helper.	Toronto, Ont.	" 17	28	Inhaled gas fumes while removing hot coals from boiler. Died April 7.
<i>Railway—</i>				
Labourer	Salmon River Lake, N.S.	Feb. 3	52	Dynamite explosion.
<i>Highway and bridge—</i>				
Timekeeper	Near New Glasgow, N.S.	Jan. 7	34	Struck by train.
Labourer	Sturgeon River, Sask.	" 13	72	Hit by falling tree.
Gravel pit worker	Near Bowman, Man.	" 26	28	Buried by cave-in of gravel loosened by dynamite. Died Jan. 27.
Gravel pit worker	Near Englehart, Ont.	Feb. 6	31	Struck by gravel slide when bank caved in.
Labourer	Mather Twp., Ont.	" 10	31	Buried by cave-in of frozen gravel. Died Feb. 13.
Road worker	Near Quebec, Que.	" 9	Perished on road during severe storm.
Labourer	Matheson, Ont.	" 10	27	Struck on head by guide pole when it broke while unloading pipe from car. Died Mar. 11.
Labourer	St. Eustache, Que.	" 18	19	Crushed by truck.
Labourer with paving contractor.	Vancouver, B.C.	" 27	47	Fell and struck his head when he fainted.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER
OF 1931—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—<i>Con.</i>				
<i>Miscellaneous—</i>				
Brakeman on power dam construction.	Abitibi Canyon, Ont.....	Jan. 5	36	Jammed between two blocks while coupling cars. Fractured skull.
Worker on storm drain construction.	Galt, Ont.....	" 7	45	Cave-in of drain.
Gas locomotive driver on power construction.	Granite, B.C.....	Jan. 8	21	Crushed between locomotive and work train.
Labourer on tunnel construction.	Quebec, Que.....	" 28	26	Struck by wagon.
Labourer on power dam construction.	Beauharnois, Que.....	" 29	28	Crushed under boulder when it crashed into excavation.
Teamster on harbour construction.	Chicoutimi, Que.....	Feb. 2	43	Crushed by cave-in of quarry wall.
Labourer on coffer dam construction.	London, Ont.....	" 4	48	Struck by root of tree when it fell from bank. Died Feb. 7.
Lineman with telephone and power contractors.	Wetaskiwin, Alta.....	" 7	41	Fell off truck. Fractured skull.
Pitman on dam construction.	Fraserdale, Ont.....	" 8	32	Pinned by shovel against wall of tunnel.
Worker on dam construction.	Bonnington Falls, B.C.....	Mar. 5	19	Clothing became caught in revolving shaft.
Labourer on tunnel construction.	Montreal, Que.....	" 5	45	Poisoned by gaseous infiltration while working in tunnel below water level.
Labourer on sewer construction.	Sandwich, Ont.....	" 6	67	Crushed under cave-in of sewer.
Labourer on sewer construction.	Montreal, Que.....	" 13	40	Buried under cave-in of earth.
Concreteman on dam construction.	Fraserdale, Ont.....	" 17	48	Crushed in lower receiving hopper by concrete coming down chute.
Labourer on sewer construction.	Welland, Ont.....	" 18	52	Struck by truck.
Labourer on power dam construction.	Beauharnois, Que.....	" 19	31	Struck on head by large derrick block.
Labourer on power dam construction.	Fitzroy Harbour, Ont.....	" 19	48	Leg crushed when yard engine jumped track.
Labourer on power dam construction.	Abitibi Canyon, Ont.....	About Mar. 20	Caught in a flow of concrete.
ELECTRIC LIGHT AND POWER—				
Lineman.....	Montreal, Que.....	Jan. 13	45	Fell from pole.
Lineman.....	Granby, Que.....	" 17	35	Fell from pole.
Lineman.....	Richmond, Que.....	" 29	43	Electric shock and burns. Died Feb. 5.
Electrician.....	Warfield, B.C.....	Feb. 13	50	Electrocuted when he touched high tension wire.
Labourer at power plant.	Miesgrave Twp., Ont.....	" 17	40	Washed down river while cutting ice around stop logs at dam and was drowned.
Power plant worker....	Grassy Falls, Ont.....	About Feb. 19	About 40	Slipped while fixing stop blocks on dam and was drowned.
Electrical engineer.....	Montreal, Que.....	Mar. 2	32	Electrocuted while cleaning high tension wires.
Hydro worker.....	Woodstock, Ont.....	" 7	28	Fell from steel frame work when his hand came in contact with high tension cable. Fractured skull.
Lineman.....	Maniwaki, Que.....	" 24	34	Fell from pole, fractured skull.
Power house employee.	St. Joseph d'Alma, Que.....	" 27	24	Struck on head by wheel of machine, fractured skull.
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Steam Railways—</i>				
Switchman.....	Winnipeg, Man.....	Jan. 2	48	Fell from car and was run over during switching operations.
Trackman.....	Montreal, Que.....	" 8	40	Struck by train.
Brakeman.....	Halifax, N.S.....	" 13	35	Fell off train.
Shed foreman.....	Hull, Que.....	" 16	42	Fell to bottom of car and overcame by fumes of burner.
Yard brakeman.....	Farnham, Que.....	" 21	54	Injured while at work in yard. Died Jan. 22.
Carman.....	London, Ont.....	" 24	48	Run over by car.
Railway medical officer.	Mile 114 H. B. Rly., Man..	About Jan. 29	Fell from train.
Sectionman.....	Val Gagne, Ont.....	" 30	42	Collision of snow plough with his track motor car. Died Feb. 3.
Switchman.....	Tadanac, B.C.....	" 30	34	Run over by train.
Engineer.....	Near Deville, Alta.....	Feb. 1	53	Fell from engine.
Baggagemaster.....	Port Colborne, Ont.....	" 3	54	Run over by engine.
Shop worker.....	Moncton, N.B.....	" 11	42	Fell 30 feet from crane.
Shop worker.....	Near Winnipeg, Man.....	" 18	63	Fell from train and were run over when coupling broke while returning from work.
Shop worker.....			28	

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1931—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—<i>Con.</i>				
<i>Steam Railways—Con.</i>				
Car repairer.....	Bridgeburg, Ont.....	Feb. 20	52	Caught between cars while coupling air hose.
Signalman.....	Hamilton, Ont.....	" 21	22	Struck by train.
Conductor.....	Ruby Creek, B.C.....	" 22	47	Fell under wheels of train while crossing track.
Engineer.....	Sorel, Que.....	" 27	50	Injured in collision of his engine with another engine.
Tool house worker...	Niagara Falls, Ont.....	Mar. 2	45	Explosion from lighting stove with gasoline.
Engineer.....	Highlands, Que.....	" 4	43	Scalded when steam pipe burst in locomotive. Died Mar. 10.
Brakeman.....	Near Crossfield, Alta.....	" 11	40	Run over by train.
Sectionman.....	Kamloops, B.C.....	" 20	Hit by train while handling speeder.
Brakeman.....	Dunnville, Ont.....	" 21	25	Run over by train.
Section foreman.....	Retallack, B.C.....	" 24	52	Fell between two flat cars while unloading ties and was run over.
<i>Street and electric railways—</i>				
Mechanic at car barns.	Stellarton, N.S.....	Feb. 7	51	Struck by auto.
Labourer removing snow.	Toronto, Ont.....	Mar. 11	29	Struck by bus. Died Mar. 13.
<i>Water Transportation—</i>				
Longshoreman.....	Vancouver, B.C.....	Jan. 5	68	Injured when he fell on wet dock. Died Feb. 16.
Mate.....	Vancouver, B.C.....	" 7	35	Fell from deck and drowned.
Sailor.....	Near Vancouver, B.C.....	" 8	24	Fell down hold of ship.
Stevedore.....	Halifax, N.S.....	" 14	21	Fell into hold of ship when their hatch broke through. Second man died Jan. 15.
Stevedore.....			37	
Longshoreman.....	Ocean Falls, B.C.....	Feb. 6	Knocked into hold.
Sailor.....	Louisburg, N.S.....	" 24	17	Fell into hold of ship when hatch gave away.
Longshoreman.....	Saint John, N.B.....	" 28	58	Sling of iron pipe fell on him while working in hold.
Seaman.....	Off Vancouver, B.C.....	Mar. 1	43	Drowned.
<i>Air Transportation—</i>				
Pilot with mining co.	Camp Borden, Ont.....	Feb. 13	33	Aeroplane crashed from high altitude.
Medical officer for airways co.	Near Bagot, Man.....	" 20	33	Killed when plane crashed in dense fog.
<i>Local Transportation—</i>				
Labourer with carriers.	Saddle Rock, B.C.....	Jan. 5	50	Struck by rocks.
Trucker.....	Saint John, N.B.....	" 11	49	Injured hand when roll of paper fell from truck on Jan. 23, 1929.
Truck driver.....	Weston, Ont.....	Jan. 16	31	Collision of truck with another truck when it skidded on slippery street.
Cashier with taxi co.	Montreal, Que.....	" 26	37	Shot by bandit during hold up.
Carter.....	Montreal, Que.....	Feb. 25	72	Fell from wagon. Died Mar. 16.
Truck driver.....	Near Georgetown, Ont.....	Mar. 18	Collision of train with his truck.
Taxi driver.....	Vancouver, B.C.....	" 27	Car crashed through viaduct railing and dropped 50 feet.
Truck helper.....	Near Toronto, Ont.....	" 27	20	Truck crashed into telephone pole and took fire. Died Mar. 28.
Trucker.....	London, Ont.....	" 31	53	Struck by falling pole while unloading metal culverts from flat car. Died April 1.
<i>Telegraphs and telephones—</i>				
Cable station supervisor.	Near Port Alberni, B.C.....	Feb. 14	45	Fell from launch and was drowned.
TRADE—				
<i>Wholesale—</i>				
Workman with supply company.	Hamilton, Ont.....	Jan. 22	26	Crushed against freight car by swinging crane.
Worker with coal company.	Montreal, Que.....	Feb. 24	44	Fell from elevated car track. Died Mar. 12.
Foreman at cold storage plant for fish company.	Lockeport, N.S.....	" 25	50	Fell from box car. Died Feb. 26.
Watchman at coal and wood yard.	Montreal, Que.....	Mar. 7	19	Injured when attacked in stable.
<i>Retail—</i>				
Milk driver.....	Chatham, Ont.....	Jan. 1	26	Crushed under milk wagon when it overturned.
Grocery clerk.....	Quebec, Que.....	" 5	16	Injured when car of benzine exploded. Died Jan. 30.
Baker.....	St. Barthelemy, Que.....	" 31	52	Collision of train with his sleigh.
Baker.....	Delhi, Ont.....	Feb. 6	Collision of train with their truck.
Truck driver.....

Caretaker at hospital	Portage La Prairie, Man....	About Jan. 14	44	Explosion of jacket heater from too high pressure.
Janitor for school board.	Vancouver, B.C.....	Feb. 28	51	Injured foot. Infection. Died Mar. 11.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING
DURING 1930

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCK-RAISING—				
Farmer.....	Bancroft, Ont.....	About Dec. 18	60	Thrown from wagon and was run over. Died Jan. 19, 1931.
LOGGING—				
Woodsmen.....	Westmorland Co., N.B.....	Mar. 21	22	Cut by axe. Infection. Died Aug. 4.
Driver.....	Hartwell, Que.....	Dec. 13	16	Struck and crushed by log.
Bush labourer.....	N. D. Portmain, Que.....	" 19	30	Struck by falling tree. Died Dec. 22.
Labourer cutting out roads.	Shigawake, Que.....	" 22	16	Fell on small stub. Died Jan. 8, 1931.
Cook in camp.....	Near Timiskaming, Ont.....	About Dec. 24	47	Injured by fall in camp. Died April 4, 1931.
Logger.....	Rock Bay, B.C.....	" 30	Struck by falling tree. Fractured skull. Died Jan. 2, 1931.
Faller.....	Garrett, B.C.....	" 30	41	Struck by falling tree.
FISHING AND TRAPPING—				
Trapper.....	Turtle Lake, Ont.....	About Dec. 10	Shot by robber.
MINING, NON-FERROUS, SMELTING AND QUAR- RYING—				
<i>Coal mining—</i> Miner.....	Queen's Co., N.B.....	Sept. 20	43	Struck by pick axe. Dislocated spine on Mar. 25, 1925.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING
DURING 1930—*Cont.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—				
<i>Vegetable foods, drinks and tobacco—</i>				
Worker in flour mill..	Montreal, Que.....	Dec. 31	55	Fell from ladder. Died Mar. 11, 1931.
<i>Animal foods—</i>				
Labourer with fish curing company.	Yarmouth, N.S.....	Nov. 1	44	Fell into wharf while fastening boat and was drowned.
<i>Saw and planing mill products—</i>				
Labourer.....	Ingersoll, Ont.....	Mar. 5	53	Fell on revolving shaft. Died Mar. 7, 1931.
<i>Wood products—</i>				
Woodworker with truck body builders.	Toronto, Ont.....	Dec. 5	60	Hand cut by rip saw. Infection. Died Jan 7, 1931.
CONSTRUCTION—				
<i>Buildings and structures—</i>				
Painter with power plant constructors.	Toronto, Ont.....	Nov. 15	45	Lead poisoning. Died Dec. 21.
<i>Highway and bridges—</i>				
Labourer.....	Restigouche Co., N.B.....	Sept. 3	27	Gassed while in manhole.
Labourer.....	Port Dufferin, N.S.....	Oct. 20	35	Struck by auto. Died Oct. 21.
Labourer.....	Brock Twp., Ont.....	Nov. 20	70	Buried by cave-in of bank while shovelling gravel into wagon.
Labourer.....	St. John, N.B.....	Nov. 25	61	Struck by truck. Fractured skull.
Groundman.....	Westree, Ont.....	Dec. 15	Struck by falling tree. Fractured skull.
<i>Miscellaneous—</i>				
Labourer on harbour construction.	Chicoutimi, Que.....	Dec. 12	24	Crushed under falling earth and stone.
Powderman on power dam construction.	Melocheville, Que.....	Dec. 15	32	Killed during blasting operations.
Drill helper on dam construction.	Fraserdale, Ont.....	Dec. 19	55	Large rock rolled down on his leg.
Labourer on power dam construction.	Abitibi Canyon, Ont.....	About Dec. 20	Injured while working in canyon. Died about Mar. 20, 1931.
ELECTRIC LIGHT AND POWER—				
Lineman.....	Golden, B.C.....	Dec. 24	27	Electrocuted.
Labourer at hydro plant.	Madawaska Co., N.B.....	Nov. 3	45	Electrocuted when he came in contact with live wire.
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Steam railways—</i>				
Building and bridge foreman.	Westmorland Co., N.B.....	July 9	Fell from shed. Fractured spine. Died July 17.
Boilermaker helper..	Edson, Alta.....	Nov. 29	49	Pneumonia.
Brakeman.....	Preston, Ont.....	Dec. 19	52	Fell from box car while adjusting brakes. Died Dec. 28.
<i>Local Transportation—</i>				
Coach carpenter.....	Montreal, Que.....	Oct. 27	56	Cut on finger. Infection. Died Nov. 8.
Truck driver.....	Ancaster Mountain, Ont.....	Nov. 6	38	Fell from truck. Died April 7, 1931.
Truck driver.....	Near Hagersville, Ont.....	Dec. 29	23	Truck overturned on slippery highway. Died Dec. 30.
<i>Telegraphs and tele-phones—</i>				
Lineman.....	Kings Co., N.B.....	Oct. 21	47	Struck by falling pole.
TRADE—				
<i>Retail—</i>				
Truck driver for bakery.	Restigouche Co., N.B.....	Sept. 3	27	Struck by train. Fractured skull. Died Sept. 5.
Salesman for bakery.	Hamilton, Ont.....	Dec. 8	29	Poisoned by gas fumes while adjusting car in garage.
Salesman with car dealers.	Essex, Ont.....	" 19	32	Car skiddled and was struck by street car. Died Jan. 15, 1931.
SERVICE—

IMMIGRATION TO CANADA DURING THE FISCAL YEAR ENDING MARCH 31, 1931

A DECIDED decrease in the number of immigrants to the Dominion, as compared with the previous year, is indicated for the fiscal year ended March 31, 1931, in the statistics recently issued by the Department of Immigration and Colonization. The tabular summaries show that the immigration total

for 1930-31 was 88,223, as compared with 163,288—a reduction of 75,065, or 46 per cent. Of the total of 88,223 for 1930-31, the number of immigrants from the British Isles was 27,584 as compared with 64,082 in the year previous; of those from the United States the number for the period under review totalled 24,280, as compared with 30,727 in 1929-1930;

immigrants of the northern European races to the number of 13,493 came to Canada during the year, as compared 30,332 in the previous twelve months; while those classified under "other races" totalled 22,866 in 1930-31 and 30,147 in 1929-1930. Immigration reached its peak for the fiscal year in the month of April, 1930, during which period the total was 19,309, while the smallest monthly total was 1,429, in February, 1931.

The statement of returned Canadians from the United States during the year indicates a total of 30,209, of which number 26,811 were Canadian born; 2,111 were British subjects with Canadian domicile; and 1,287 were naturalized Canadians with domicile. The total of returned Canadians for the previous fiscal year was 29,830. Distinction is made between Canadians returning from the United States and immigration from the United States. In the latter class the total for the year, as already stated, was 24,280. Of this number, 6,045 came from the State of Michigan; 2,995 from New York State; 1,969 from

Massachusetts, 1,190 from Washington; 1,038 from California; 943 from Illinois; 791 from Ohio; and 742 from Maine.

The accompanying tables illustrate the trend in immigration from various angles.

RECENT LEGAL DECISIONS AFFECTING LABOUR

"Menial Servant" entitled to Month's Notice of Dismissal

An action for a breach of contract of hiring and for assault was brought by a workman against a farmer in Saskatchewan. The plaintiff had agreed verbally to work on the farm from March 11 to November 1, 1930, for the sum of \$350; and actually he worked until May 15, when the employer assaulted him and ordered him to leave the farm. He claimed wages for the time he worked, damages for the breach of the contract of hiring, and damages for the assault. The trial judge dismissed the action, but that decision was later reversed by the Saskatchewan Court of Appeal. In allowing damages Mr. Justice Martin said:—

"Where a contract of employment is for a definite time, and the employee is dismissed without cause, he may at once commence action for the breach of contract. The measure of damages is the actual loss sustained; the amount of damages may be much less than the wages for the unexpired period, depending upon the plaintiff's success in obtaining equally good employment elsewhere. In the case of menial servants however, usage has established the right to dismiss at any time by giving a month's notice, or a month's wages in lieu of notice.

"In the present case, the plaintiff falls within the category of menial servants, and

the contract of employment, therefore, could be terminated by one month's notice, or by the payment of one month's wages in lieu of notice, namely, the sum of \$45. In the result, the appeal should be allowed with costs, the judgment below set aside, and judgment entered for the plaintiff for the sums of \$94.60, \$45, and \$27, in all the sum of \$166.60; less the amount of \$23.70, for which the defendant is entitled to credit; leaving a balance of \$142.90, and the costs of the action."

—*Peidl versus Bonas* (Saskatchewan), 1931, *Dominion Law Reports*, vol. 2, page 362.

Question of Employer's "inexcusable fault" in Connection with Accident

In October, 1926, a workman, about thirty years of age, was engaged by a construction company in Quebec to work in a compressed air caisson. He was without experience in such work, but after undergoing the usual examination by the employer's doctor, he was set to work, and continued to work through a shift of eight hours. At the end of his shift he felt ill, and next day the same doctor placed him in hospital and applied the usual treatment, but without beneficial effect. In an action based on the Workmen's Compensation Act then in force in the Province, the Court found that his illness had produced a permanent total disability. At the trial the company admitted their liability for the maxi-

mum sum of \$3,000; but denied their responsibility under section 6, as for "inexcusable fault." The Court of first instance rejected the claim of the respondent under this latter head but this judgment was reversed by the Court of Appeal, which maintained the larger claim, and, upon that basis, awarded an additional indemnity of \$7,000.

On further appeal by the company the Supreme Court of Canada affirmed the judgment of the Court of Appeal. Mr. Justice Duff, in his judgment, pointed out that the workman charged the employer with "inexcusable fault" in two respects; first, he alleged that decompression was effected too rapidly; secondly, he averred that the appellants had been grossly negligent in failing to instruct him as to the risks attendant upon the work he was employed to do, and as to the necessity, in the event of untoward symptoms supervening, of resorting immediately to medical assistance; and moreover, that provision was not made at the works themselves for prompt medical attention.

"The evidence", Mr. Justice Duff continued, "shows that the risk of injury depends upon a number of factors; the intensity of the pressure, the duration of the exposure, the age of the workman and his physical condition in a variety of respects. By the practice of the appellants, each workman undergoes a medical examination before he is accepted as an employee. Nevertheless, there is evidence which I regard as satisfactory, that no such examination can be considered an entirely reliable test of the fitness of the subject. Therefore, it is not surprising to find that, at all events in some quarters, a practice prevails by which a workman is not accepted as qualified, until his suitability has been proved by experience. Sometimes the workman is subjected to a compression test in a hospital lock; and this, it appears, was at one time the practice of the appellants, a practice which was abandoned, because, according to the doctor's evidence, it frightened the men. In other works it is the rule not to permit an inexperienced hand to serve more than half a full shift without a second medical examination. No such precautions were observed by the appellants."

Mr. Justice Duff remarked that in the statutory phrase the word "inexcusable" is "not a juridical term of art or a word to which any special technical significance can attach. It must therefore be applied in its ordinary sense as determined by the common usage, in light of course of the context in which it occurs, and of the subject matter of the statute."

Morin versus Dufresne Construction Company (Quebec) 1931. Dominion Law Reports vol. 2, page 172.

Employer's Liability for Unauthorized Wrongful Act of Employee

Appeal was taken by the plaintiff in the Ontario Supreme Court from the judgment of Mr. Justice Logie in the case of *Croton versus Leonard and Johns*, which was reported in the *LABOUR GAZETTE*, December, 1930, page 1476. Johns, who was employed by Leonard to drive a motor truck, had picked up Croton on the road, in spite of instructions from his employer not to carry passengers, and an accident occurred resulting in serious injury to Croton. Mr. Justice Logie dismissed Croton's claim as against Leonard on the ground that the carrying of passengers was not within the scope of Johns' employment.

The Ontario Supreme Court affirmed the judgment of the lower court, Chief Justice Latchford stating as follows:—"We all think the appeal should be dismissed with costs, for the reason stated by the trial Judge, *supra*, for dismissal of the action, namely, that the taking of a passenger on the truck was not an act which came within the scope of the driver's authority, and was not a mode of exercising his master's employment. In addition, the driver's action was contrary to the express orders of his master. Consequently, the master should not be held liable for the injury sustained by the plaintiff."

—*Croton versus Leonard and Johns (Ontario) 1931, Dominion Law Reports*, vol. 2, page 38.

An automobile driven by an employee of the owner became involved in a collision which resulted in injuries to a third party. In an action for damages brought by the latter in the Superior Court at Montreal, the question arose as to the owner's liability for damages resulting from the action of his employee when that employee was acting in disobedience to the owner's instructions. In this case the chauffeur was ordered to take the car to the garage, but before doing so he drove elsewhere and met with the accident while off the direct route to the garage. The Court held that even although the chauffeur was disobeying the general orders of his employer, nevertheless in driving the car towards the garage where he subsequently stored it he was engaged in the work for which he was employed, and the employer was therefore liable for the damage involved. Mr. Justice Green-shields, in the course of his judgment, pointed out that the chauffeur was under control of the defendant and was subject to his orders.

"Mere disobedience by a servant of orders given by his master does not relieve the master of responsibility for damages resulting to third parties from the fault of the employee,

and happening when that employee is disobeying orders. The employer chooses his own employee, and if he selects a disobedient employee, and in consequence of disobeying the orders of his employer, and through his fault, an innocent third party is injured, I am of opinion that the responsibility of the employer to repair the damage caused to the innocent party is engaged.....

"Under the French law, which I suggest, with all respect to the opinion of others, applies in the present case, the fact that a person employed by his master to drive a car, with instructions to take the shortest route between two given points, and who in disobedience deviates from that direct route, and an accident happens through his fault, causing damage to another, does not relieve the master, but his liability attaches. It does not free the master from responsibility under our law."

—*Dame Prain, versus Bronfman and another* (Quebec), 1931, *Rapports Judiciaires de Québec* (Cour Supérieure), vol. 69, page 187.

Amount of Compensation for Loss of "Principal Support"

A young man was killed in the course of his employment and his mother brought an action against the employer for compensation under the Workmen's Compensation Act (Revised Statutes of Quebec, 1928, chapter 79), the ground of the claim being that the deceased was her "principal support." The Superior Court dismissed the claim, but that judgment was reversed by the Quebec Court of Appeal, and on further appeal the judgment of the latter court was affirmed by the Supreme Court of Canada. The point at issue in the case was mainly the meaning of the expression "the principal support." On this point Mr. Justice Rinfret stated that "the judge of first instance held that to determine if the victim had contributed to the upkeep and support of the ascendant for more than 50 per cent, there must be taken as a basis of calculation the term of 12 months preceding the accident. Then, applying this principle to the facts of the case, he came to the conclusion that at the time of the accident, the victim was not the principal support of the plaintiff" and, consequently he non-suited her.

"This judgment," Judge Rinfret continued, "the Court of Appeal reversed and with this latter Court we agree. To decide whether the victim of an accident was the principal support of the ascendant who sues for damages, there should be no reference to a fixed and

determined period of time. The Act shows the period at which it must be determined—'the moment of the accident.' This does not mean that matters are to be based on a transitory and accidental state of affairs. There must undoubtedly be taken account only of an established situation which has a certain character of duration; but there must not be, on the other hand, any adoption of an arbitrary and fictitious rule. Each case must be looked at according to its peculiar circumstances. The Court must weigh these, and the Act does not, therefore, restrict it to any particular limit of time"

After a discussion of the circumstances of the case the Supreme Court's judgment found that the deceased had been the principal support of his mother.

On the question of the amount of compensation awarded, this depended on the meaning to be placed on the words "average yearly wages of the deceased at the time of the accident." The deceased at the time of the accident was employed in unloading pulpwood from barges, his engagement in this business being only for one month. On the other hand, the unloading of barges was necessarily restricted to the period of navigation in the district, and the income could not be calculated on a yearly basis. Mr. Justice Rinfret concluded that the "average yearly wage of the deceased" ought to be calculated both according to the remuneration received while the work went on and according to the remuneration received during the rest of the year. The amount of \$2,726.96 "was arrived at by taking the amount of the daily wage, at the date of the accident, and the number of days on which the deceased worked at Port Alfred, then, by multiplying this daily wage by the number of days he worked, the amount thus obtained represented the salary received during three months. This was the basis adopted to compute the 'average yearly wage of the deceased at the time of the accident' at \$669.24. The compensation awarded by the Court of Appeal comprises an amount equal to four times the average yearly wage so found, plus \$50 for medical and funeral expenses, in accordance with the provisions of s. 4 of the Act. This compensation might certainly have been larger had it been calculated in conformity with para. (3) of s. 9 of the Act. The appellant has, therefore, no ground for complaint."

[NUMBER 6

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada showed an improvement at the beginning of May, according to returns received by the Dominion Bureau of Statistics from 7,696 firms, each employing a minimum of 15 workers and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces on the payroll of these firms aggregated 925,605 persons, as compared with 902,635 in the preceding month. The employment index (with the average in the calendar year 1926, as the base equal to 100) stood at 102.2, as compared with 99.7 on April 1, and with 111.4, 116.2, 106.8, 101.8, 95.4, 91.9, 92.9, 92.5, 84.3, and 85.1 on May 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The employment afforded by the co-operating firms was at a lower level at the beginning of May than on the same date in 1930, 1929 or 1928, but was higher than on May 1 in preceding years of the record. At the beginning of May, 1931, the percentage of unemployment reported to the Department of Labour by local trade unions in Canada was 14.9, contrasted with 15.5 per cent at the beginning of April, 1931, and 9.0 per cent at the beginning of May, 1930. The May percentage was based on reports received by the Department of Labour from an aggregate of 1,807 labour organizations, covering a membership of 206,563 persons. Reports received by the Department of Labour from the Office of the Employment Service of Canada showed a decline in business transacted by those offices during April, when compared with that of the previous month, but a marked gain was recorded over the transactions of April, 1930, construction and maintenance being the group in which the greatest change was shown under each comparison. Vacancies in April numbered 39,194, applications, 59,202 and placements in regular and casual employment, 37,474.

The average cost of a weekly family budget of twenty-nine staple foods was \$8.54 at the

beginning of May, as compared with \$8.86 for April; \$11.17 for May, 1930; \$10.94 for May, 1929; \$10.80 for May, 1928; \$10.76 for May, 1927; \$11.29 for May, 1926; \$10.48 for May, 1925; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.65 for May, 1920; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was 73.0 for May, as compared with 74.5 for April; 89.7 for May, 1930; 93.4 for May, 1929; 97.9 for May, 1928; 98.3 for May, 1927; and 100.2 for May, 1926.

The loss in working time caused by industrial disputes during May was much less than in April, when a strike of women's clothing workers was in progress at Toronto; but was almost double the corresponding loss in May, 1930, chiefly owing to a dispute involving masters, mates and marine engineers on the Pacific coast. Twelve disputes were in progress at some time during the month, involving 1,146 workers and resulting in the loss of 17,189 working days. Corresponding figures for April, 1931, were:—10 disputes, 1,582 workers, and 22,453 working days; and for May, 1930, twelve disputes, 1,836 workers, and 9,293 working days.

On another page of this issue will be found the text of the "Act for the Promotion of Vocational Education in Canada," as introduced by the Government in the House of Commons last month. The Act enables the Governor in Council to make regulations governing the types of vocational education for which assistance may be granted. It differs from the Act of 1919 in making possible the inclusion of agriculture among the subjects that may be taught under its provisions. The Governor in Council may determine also the extent to which federal assistance may be made available for "lands, buildings, equipment and furnishings."

Increased federal grant for Old Age Pensions

The Right Hon. R. B. Bennett, in his speech introducing the budget in the House of Commons on June 1, announced that the Government contemplated increasing the amount of the federal contribution towards the cost of Old Age Pensions from 50 per cent to 75 per cent, for this year only, in respect of the total sums that are paid. In a speech delivered later in the debate, the Hon. E. N. Rhodes, Minister of Fisheries, said that "the Government is pledged to the payment in full of old age pensions. If times were normal this pledge would be implemented now. We have taken one step; the next will be taken when it is consistent with sound finance." The amounts so far paid by the Dominion under the Old Age Pensions Act were given in the last issue of the *LABOUR GAZETTE*, page 556.

Inclusion of seamen under Workmen's Compensation

A proposal that the Dominion government should provide insurance for Canadian mariners on the Great Lakes, from November 1 to the end of navigation, was made in the House of Commons on May 25 by Mr. A. E. Ross (Kingston). The motion was withdrawn on the understanding that the question might be dealt with in the form of an amendment to the Canada Shipping Act. The Prime Minister pointed out that seamen's articles of agreement are governed in part by the Canada Shipping Act, and that "the application of the compensation acts of the various provinces to those who are subject to the risks and hazards of the sea must be determined by this Parliament taking such action as would make those compensation acts applicable and provide for the compensation that is to be paid; in other words, the owners of the ships must make their contributions to the fund out of which compensation is paid by the province to employees of various kinds throughout the Dominion.

"While I am of the opinion," Mr. Bennett continued, "that when the Merchant Shipping Act is revised, as it must be here ultimately after the statute of Westminster is passed, it will be competent for this Parliament to impose conditions to be incorporated in ships' articles that would necessitate insurance being carried by the owners of the ships on the lives of the seamen on the boats, it would not be right or fair to impose upon the taxpayers of Canada as a whole the burden of the duty, as it is here alleged to be, of providing insurance for every mariner on Cana-

dian boats from November first to the end of navigation. . . . The federal authority in conjunction with the provincial authorities may be able to work out a system by which the contributions by those concerned will be such as will enable compensation to be paid to survivors on the same terms as though the seamen came under the compensation acts applying to industry generally."

Industrial Disputes Investigation Act

During May the Department received an application for the appointment of a Board of Conciliation and Investigation from marine engineers employed by the Canadian Pacific Railway Company in the British Columbia Lake and River Service, but the matter in dispute was adjusted without recourse to the provisions of the Act. The similar application from masters and mates in British Columbia which was noted in the last issue, was withdrawn subsequently by the employees. Further particulars of the proceedings under the Act during the month appear on page 638.

Settlement of unemployed city workers on farms in Canada

In reply to a question in the House of Commons on June 9, the Hon. W. A. Gordon, Minister of Immigration and Colonization, made the following statement:—"Since last fall the colonization departments of the two railroads, instead of directing their efforts towards securing the entry of new migrants into Canada have, at the instance of the Government, joined their colonization forces with the forces of the Department over which I am presiding with a view to placing as many unemployed as possible who are now in cities, on the farm or in other useful occupations. We have heard, and I have listened to many statements in the House, about the dire conditions alleged to exist on the farms all over Canada. In spite of that, this effort prior to the end of last month has resulted in some 7,600 single unemployed men being placed with the farmers of this country, and very few of them have returned to the cities.

"In addition to that we have been able, with the joint help of the railroads and my Department, to place on selected locations some 1,500 families who have been paddling their own canoe, as it were, and have established themselves on the farm. I have no record, nor has our Department, nor have the railroads, of one of those families coming back to the city to join the ranks of the unemployed. With a view to furthering that work

and to consolidating the efforts of all those who have been heretofore engaged in bringing migrants into Canada, a conference is being held in Winnipeg, and another, I hope, will be held in the east. Wherever my Department can find in the various localities places in which unemployment can be relieved in this way, this work is being carried on without any expense to the Government other than that of maintaining the ordinary staff."

Piece-workers and minimum wage regulations in Ontario

The resolutions adopted by the Labour Educational Association of Ontario, at their recent annual convention, as outlined on another page of this issue, include one which asks for a revision of the provincial minimum wage regulations in regard to the proportion of piece-workers which are allowed to remain outside the scope of the several orders governing the employment of women in factories. The Minimum Wage Act of Ontario defines "wages" as including wages and salary "whether the employment in respect to which the same is payable is by time or by the job, or by piece or otherwise." Accordingly each of the group of orders which govern the wages paid to female employees in factories contains the following provision in reference to "piece workers":—"The wages paid to each time-worker and to each piece-worker during the first six months' employment in the industry shall conform to this order. In the case of piece-workers of more than six months' experience it is sufficient if at least 80 per cent receive wages conformable to this order."

Compensation for occupational deafness proposed

Dr. Frank G. Pedley, head of the Industrial Clinic at Montreal General Hospital, dealt with this subject in a recent address at Washington, D.C. (*American Labour Legislation Review*, June, 1931, page 249). "Everyone," he said, "has heard of boiler makers' deafness and perhaps some have heard of riveters' deafness, but there are a great many other occupations in which work is carried on amid a most frightful din, and in which the workers almost invariably lose their hearing. A partial list of these occupations is as follows: (1) in the metal industry: chipping, stamping, rolling, beating, boiler making, machining, and work with copper, sheet iron and tin plate; (2) in the textile industry: weaving, spinning, carding, and combing; (3) in the transport industry: the work of engineers, firemen, and ship stokers; (4) in the building industry: stone cutting, tunnel construction, and riveting. And there

are also the testing of fire arms, aviation, wood work, cement manufacturing, and others."

Dr. Pedley discussed the various types of occupational deafness and other effects on persons working in excessive noise and discussed possible methods of noise reduction. "In the meantime," he continued, "it seems only fair to workers in noisy trades that they be advised of the hazard they are exposed to. Unquestionably many individuals unwittingly undertake work under conditions which invariably produce deafness. In these enlightened days this state of affairs is intolerable. I question whether the state has morally the right to permit conditions which destroy the function of any part of the body, and certainly the individual citizen should be informed of these conditions, and given the option of refusing or accepting them. . . . In the case of industrial accidents and diseases the most powerful stimulus to prevention has been the enactment of compensation legislation. Unquestionably compensation for occupational deafness would stimulate the reduction of noise. The law now provides compensation for loss of vision; there is no reason why it should fail to indemnify for loss of hearing.

"In a study of the evolution of modern society," Dr. Pedley concluded, "one is impressed with conditions now regarded as unbearable, which formerly were looked upon with equanimity. Continued progress will, I presume, make some of our present day practices seem very crude. Eventually we may so consider the exposure of men to conditions which deprive them of one of their most important assets—the sense of hearing."

The Ontario workmen's compensation system

The Ontario Government has published in pamphlet form the revised text of the Workmen's Compensation Act, incorporating all amendments up to and including 1931, together with the regulations made by the Board, a synopsis of the act and an account of its administration. Some of the benefits of the Ontario system, as compared with compensation systems elsewhere, are described in the publication as follows:—

"In liberality of benefits Ontario stands first among the laws of the continent. Only one other province and 10 of some 46 states with compensation laws pay as high a wage percentage; and in most places the nominal percentage is sadly curtailed by weekly maximums or by limiting the period of payment or the maximum total. The weekly maximum in New York, for instance, is \$25, Ohio \$18.75,

Michigan, \$18, Pennsylvania \$15, British Columbia, \$24.04, and Nova Scotia \$13.85, as compared with Ontario's \$25.64 a week. A man losing an arm or a leg in Pennsylvania is paid for only 300 weeks, in Iowa, 400, and in Michigan 500 weeks and in death cases these states pay the widow for only 300 weeks, while Ontario pays the workman for life and the widow during widowhood. In Ohio for loss of an arm or a leg the total can never be more than \$3,750, in New York, \$5,000, and Massachusetts \$4,500, while in Ontario the total may run as high as \$20,000 or over. In Great Britain the weekly maximum is now 30 shillings, and the maximum total £600. Another very important factor is the absolute security of payment under the collective liability system. Recovery from individual employers is often impossible. The pension form of payment provided for in case of death or serious injury is also usually much better for the widow or crippled workman than a lump sum, the latter being too often improvidently used.

"With the liberal benefits which are provided it might be expected that Ontario employers would be paying more than the employers in the United States. In reality they are in most cases paying a great deal less. The reason for this is illustrated by the fact that in order to pay \$35,000,000 compensation to workmen in Pennsylvania the employers there were assessed \$80,000,000 in premiums—that is to say, in Pennsylvania it cost 126 per cent for administration expenses, profits, and overhead charges. In Ontario the cost is only 4.67 per cent of the benefits awarded. In Great Britain it is stated that the costs and expenses of administering similar acts are about equal to the benefits paid.

"Under the collective liability system in Ontario and other provinces that have adopted it the administering body, unlike the insurance companies which figure so largely in the handling of compensation in most of the United States, conducts the business at cost, and has no motive to give the workman or his dependants less than they are entitled to receive and no motive to charge the employer more than he should pay. Properly administered, this system should be the best and most satisfactory for both parties. In Ontario there is no waste. Probably nowhere else does so nearly the whole of what the employers pay actually get to the workman.

"The Act brings relief and assistance to many thousands of injured workmen and widows and children throughout the province who would otherwise be in need. More than 100,000 people, including workmen's families, receive from the Board some part of their maintenance each year. About 450,000 workmen are under the protection of the Act.

"After sixteen years' experience of the present Act it is believed few, either of the workmen or the employers, would desire to return to the old system. The outstanding features of the operation of the present law are the simplicity of its provisions and procedure, the elimination of litigation and expense, wide protection for workmen and their dependants, immunity of the employer from individual liability and expeditious payment of benefits directly into the hands of the injured workman or his dependants."

Dominion to confer with provinces on health units

The House of Commons, on May 18, unanimously adopted a resolution proposed by Mr. H. E. Spencer (Battle River) asking the government to take into consideration the possibility of a federal grant to the provinces "equal to one-third of the cost of establishing, and to cover permanently, such full time health units as may be organized." A resolution to the same effect was unanimously adopted by the House in March last year (LABOUR GAZETTE, March, 1930, page 253).

Mr. Spencer dwelt on the value of health units as a means of creating healthful conditions and preventing the occurrence of disease. "This system of preventive medicine," he said, "has been very successful indeed in the United States, where they have between 300 and 400 health units, working with splendid results. This system has been encouraged in this country and elsewhere. Some parts of this country have taken advantage of the offer of the Rockefeller Foundation, which very generously provides one-third of the cost of these health units for the first three years. When they have been going three years and the Rockefeller Foundation steps out, according to the agreement, the extra expense has to be taken care of locally by the provincial government or some other body, and what I am asking in this resolution is that the federal government shall assume its share and bear one-third of the cost of these full time health units. Sickness is not local or provincial; it is interprovincial, and as the federal government look after various matters of interprovincial concern, I ask that they assume the responsibility of looking after one-third of the cost of these health units for the purpose of preventing sickness, because sickness so far as we are concerned is interprovincial. The various provinces of Canada have begun to organize to a considerable extent full time health units. The province of Quebec has been ahead of all the rest. It has to-day twenty-three health units, and is organizing three more. British Columbia has five, and

is very enthusiastic indeed over their success already; Alberta is organizing two health units this year. As to the cost of these organizations, I was reading some literature from the province of Quebec this morning, which shows that the average cost of a health unit is from \$12,000 to \$13,000 and they are serving anywhere from 15,000 to 53,000 people, according to the density of the population."

The Prime Minister approved of the purpose of the resolution, pointing out, however, that it was possible to attain the operation of health units in every part of the country only through the joint action of federal and provincial authorities, and intimating that the proposal would be brought before a future conference of the governments concerned: "Without in any sense committing the government as to the extent to which contribution may be made, or as to the terms under which assistance may be rendered, or as to when it may be possible to have the matter dealt with, because I can hold out no hopes that it can be dealt with this week or next week, this month or next month—without, I say, in any sense committing the administration to any of these details, we are quite content that the resolution should be unanimously adopted by the House."

Municipal Medical Service in Saskatchewan

The Committee on the Costs of Medical Care (Washington, D.C.) has published the results of a study of the "municipal doctor" system in rural Saskatchewan. Under this system, which was described in the *LABOUR GAZETTE*, September, 1930, (page 1038) twenty rural communities in Saskatchewan levy taxes of \$7 to \$10 per family to engage the services of full-time physicians at annual salaries ranging from \$3,000 to \$5,000.

During the summers of 1929 and 1930 Dr. C. R. Rorem, the writer of the present study, made personal visits to five municipalities in Saskatchewan and one in Manitoba in order to observe the system in operation. Subsequently, data were obtained through questionnaires addressed to independent practitioners and to the municipal doctors and officials of the rural municipalities in which they are employed. The findings of the report as to the value of the system are in part as follows:—

The municipal doctor system has provided incomes and working conditions to physicians which assure their presence in communities which otherwise might not have resident physicians. The physicians now practising as municipal doctors allege that the freedom from "bill collecting" improves their professional services to patients.

The costs of the doctor's services to the entire community are distributed so that no individual patients are heavily burdened, and yet the taxation basis recognizes differences in financial ability to pay. Although well-to-do taxpayers contribute to the medical care of the poor, this burden falls *pro rata* upon all property holders, rather than upon only those who seek the doctors' services.

Under the municipal doctor system, more extensive immunization of children against communicable diseases and concentration upon preventive measures probably operate to reduce medical expenses which families would have to meet under ordinary circumstances.

Medical care appears to be regarded by the residents of these rural municipalities as an integral public service to be shared and supported by the entire community, and hence to be included in maintaining the standard of living. The cost of medical care is met as a "fixed charge" to be paid by potential as well as by actual patients. The experiences of these municipalities demonstrate that a rural and thinly-populated community as a whole is able to obtain an amount and quality of medical service which has not been provided equally well when the cost is met only by the direct and actual—instead of by the potential—beneficiaries.

Abuse of the privileges through demands on the doctor's time for trifling ailments has been discouraged by public opinion in the municipality. On the other hand, the accessibility of the doctor at his office at no extra cost has encouraged early consultation for diseases or conditions appearing to need medical care. Only occasionally have doctors complained of their patients' attitude toward immunization.

The municipal doctor system does not of itself completely solve the problem of distributing more equably the total costs of medical care in a community. Such distribution could be accomplished only by including in the system provision for complete medical care, including nursing, dentistry, and hospitalization, even if obtained from outside the municipalities. At present the most expensive illnesses—those requiring major surgery and hospitalization—are borne by a few individuals or families, except in the cases of indigent persons whose medical costs are not from community funds.

In rural areas in which no physician now resides and where his services are needed, a guaranteed salary might induce a qualified practitioner to engage in professional service. Moreover, his services would be less expensive than the attention of non-resident practitioners.

Five-day week recommended for furniture industry

Mr. Norman McClave, president of the National Association of Furniture Manufacturers (U. S. A.), speaking at Toronto last month, stated that the leading furniture manufacturers in the United States were opposed to reductions in wages at the present time, and were favourable to the five-day working week, which in their opinion would result in increased employment and efficiency. "The general feeling among the large manufacturers at this time," he said, "is to maintain wages at their present scale. In our divisional meetings, the manufacturers were called upon to express their views and

the sentiment was strongly against any wage-cuts in the United States at this time. Many manufacturers said that they had placed their plants on a five-day, 40-hour week basis, and through increased efficiency were effecting savings in production costs and at the same time maintaining a high standard of construction."

Mr. McClave suggested that a nation-wide appeal in both United States and Canada for adoption by all industries of such operation plans would be a sound economic move.

Probable future of vocational education

Mr. P. W. Reeves, the labour representative on the United States Federal Board for Vocational Education, speaking recently at a conference of teachers, predicted that vocational education for trade and industrial pursuits would eventually be carried out on a part-time basis, the learner spending part of his time as an employee in the occupation and part in the class-room. He believed that future courses would be given in units, each unit including training for some portion of an occupation. "For instance," he said, "a course in the carpentry trade might very well be divided up into short unit courses covering such items as form making, framing, shingling or siding, fitting trim, installing doors and windows, and similar items. Whether the prospective carpenter drops out of a course of this kind before he has completed all the units or finished the course in full, he will still have a knowledge and skill in one or more specialized branches of an occupation he can sell."

Mr. Reeves believes that the faculty of the vocational trade and industrial school of the future will be drawn from the ranks of workers, and that its personnel will be continually changed as conditions demand. "Finally," he continued, "I venture to prophesy that instead of being housed in expensive buildings filled with machinery, vocational schools will carry on their work all over the community so as to be readily accessible to workers and prospective workers; that they will utilize all the facilities of the occupations represented in industries in their immediate communities; and that they will be so tied up with the life of the community that they will be able to secure expert teaching service as needed and to continually keep themselves up-to-date with changing conditions."

Vocational education for engineering in England

method of the Board's inquiry into technical

Mr. P. W. Reeves, the labour representative on the United States Federal Board for Vocational Education, speaking recently at a conference of teachers, predicted that vocational education for trade and industrial pursuits would eventually be carried out on a part-time basis, the learner spending part of his time as an employee in the occupation and part in the class-room. He believed that future courses would be given in units, each unit including training for some portion of an occupation. "For instance," he said, "a course in the carpentry trade might very well be divided up into short unit courses covering such items as form making, framing, shingling or siding, fitting trim, installing doors and windows, and similar items. Whether the prospective carpenter drops out of a course of this kind before he has completed all the units or finished the course in full, he will still have a knowledge and skill in one or more specialized branches of an occupation he can sell."

The President of the Board of Education (England and Wales) appointed a committee in October, 1928, "to advise the Board of Education as to the scope and method of the Board's inquiry into technical

education for the engineering industry, and to review the material furnished to the Board in the course of the investigation." The Report of this Committee, together with the comments of the educational bodies concerned, has been published recently. On the subject of training in the works, the Committee consider that generally speaking this should be more systematically organized by individual firms. There should be a probationary period for boys at the beginning of their training, in order that the firm may determine the type of work for which each is most suitable, and may see that the boy is satisfied; and steps should be taken to broaden the training of trade apprentices who show special promise by transferring them to the grade of engineering apprentice or by other means. Promotion should be by merit, taking account of a boy's school-record as well as of his work in the shops.

On the subject of the part-time education of apprentices, etc., the Committee recommend that the practice of allowing time off for part-time attendance at technical courses in the day time should be further extended. Arrangements for such attendance can usually be made for selected boys only, but suitably qualified trade apprentices and shop boys should be eligible for the privilege, as well as engineering apprentices. Day attendance should normally be supplemented by attendance at evening classes on not more than two evenings a week. Firms should consider the possibility of securing the provision in the day time of instruction of a more general kind for younger boys who have not entered apprenticeship. Finally, every effort should be made to encourage the attendance of young workers at evening classes.

Rights of Border City commuters

Correspondence between the State Department of the United States and the Department of External Affairs of the Dominion in regard to the position of "commuters," that is, persons residing in Canada who cross the international border to work in the United States, was tabled in the House of Commons on May 19. The United States Secretary of State intimated that commuters who have been properly admitted as immigrants under general order No. 86 will be accorded the same consideration as if they had actually taken up their residence in the United States. Loss of employment in the United States by aliens of the immigrant commuter class of less than six months will not involve abandonment of status; commuters who visit European countries without securing entry permit or a new

immigration visé on their return will be assumed to have abandoned their status, inasmuch as one of these documents is required of an alien resident in the United States to secure re-entry. The information as to procedure in the latter part of the Secretary of State's note indicates certain concessions from the usual practice to facilitate reconsideration of the cases of persons already rejected. The final paragraph of the note permits persons rejected as commuters to apply for temporary entry to the United States as visitors, and constitutes a general exception to the regulation that persons who have been rejected may not be admitted to the United States within one year except by special permission of the Secretary of Labour.

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, was re-elected, on June 10, to the Governing Body of the International Labour Office for a period of three years.

The National Advisory Council for Juvenile Employment (England and Wales) has issued a questionnaire to Local Committees for Juvenile Employment regarding the employment of young persons under 18 years of age in occupations whose hours of employment are not at present limited by statute.

The Mothers' Pensions Act which was passed at the recent session of the British Columbia Legislature, to take effect on proclamation, was proclaimed as effective from April 15. The new Act, the provisions of which were outlined in the last issue (page 530) is administered by the Superintendent of Welfare, acting under the Provincial Secretary.

The National Conference of Labour Women (Great Britain) at their convention on June 4 adopted the "domestic workers' charter" which had been submitted by the Standing Joint Committee of Industrial Women's Organizations. The proposed charter was outlined in the last issue of the *LABOUR GAZETTE*, page 507.

There were 4,329 accidents reported to the Workmen's Compensation Board of Ontario during the month of May, as compared with 4,061 during April, and 6,177 during May of 1930. The fatal cases reported numbered 35, as against 25 in April. The benefits awarded amounted to \$463,206.37, of which \$372,-146.51 was for compensation and \$91,059.86 for medical aid, as compared with \$510,607.55 total benefits awarded during April.

A committee on technological unemployment was appointed by the Hon. W. N. Doak, United States Secretary of Labour, on May 19, to work in connection with the United States Employment Service, which was recently re-organized (*LABOUR GAZETTE*, May, 1931, page 507). The members of the committee are as follows: Dr. C. A. Prosser, of the Dunwoody Institute, Minneapolis, chairman; Perry W. Reeves, Federal Board of Vocational Education, Washington; Dr. J. C. Wright, director of the Federal Board of Vocational Education, Washington; A. O. Wharton, president, International Association of Machinists, Washington; F. C. Croxton, acting director of the President's Emergency Employment Committee, Washington; John P. Frey, secretary of the Metals Trades Department, American Federation of Labour, Washington; John R. Alpine, supervising director, United States Employment Service, Washington; Mrs. Josephine Barron, superintendent, Clothing, Textile and Needle Trades, United States Employment Service, Washington; Lawrence W. Wallace, executive secretary, American Engineering Council; E. E. Hunt, United States Department of Commerce, Washington.

Weekly Half Holiday in Saskatchewan

Additional exemptions under the Weekly Half Holiday Act of Saskatchewan were, under the provisions of section 3, added during May to the schedule of the Act, as follows: "The trade or business of the sale by retail of office supplies, equipment and furniture, and the sale and repair of typewriters, adding and multigraphing machines, and supplies and parts therefor."

The provisions of the Weekly Half Holiday Act of 1931 were outlined in the *LABOUR GAZETTE*, April, 1931, page 435. A list of the exempted trades and businesses, as given in the schedule to this Act, was as follows:—"Bakeries, cigar stands, drug stores, newspaper stands, restaurants, shop or stands for the sale of fresh fruits, vegetables, soft drinks, cut flowers, and dairy products; confectioners' shops, implement shops; blacksmiths' shops; service stations and garages; and such other trades or businesses as may be declared exempt by Order of the Lieutenant Governor in Council published in *The Saskatchewan Gazette*." City councils, however, are authorized to pass by-laws declaring any of the above trades or businesses to be subject to the provisions of the Act.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada at the end of May was reported by the superintendents of the offices of the Employment Service of Canada to be as follows:

Farmers in the province of Nova Scotia were busy completing spring work and several requests for help were received and vacancies filled. Fishermen reported exceptionally good catches of salmon, mackerel and lobsters, though prices were somewhat below those of last year. Pulpwood operators were very busy in the vicinity of New Glasgow with gangs cutting, peeling and junking. The Malagash Salt Mines were busily employed, but coal mines worked from two to four days per week only, this slack time being due to lack of orders. Many manufacturers reported an increase in business which resulted in an increased output, especially in foodstuffs, soft drinks and ice cream. Steel plants and the wheel foundry at Trenton operated on steady time, and woodworking factories were well employed. Municipal street and sewer work continued to furnish employment at Halifax for about 150 men, while the erection of many small dwellings provided work for more skilled labour. Railroad freight and passenger traffic, both incoming and outgoing, was good, also trade. Competent domestic help was difficult to secure, but in spite of this a number of satisfactory placements were made.

As in Nova Scotia, farmers in New Brunswick reported the spring season well advanced, with early planting progressing favourably. Prices for farm products, however, were low. There were plentiful supplies of lobster, salmon, haddock and halibut, but along the Shediac and Kent shores herring and gaspereaux were scarce. No demand existed for pulp cutters, owing to the low price per cord offered for peeled wood. Manufacturing plants, for the most part, remained normal, although confectionery and foodstuffs reported slightly increased activity. Woodworking factories were busy but foundries and machine shops were somewhat quiet. Building construction on a fair sized scale provided employment for skilled workers, but for the bulk of applicants, who are unskilled, little work offered. The waterfront at Saint John was quiet, although fruit boats operating to the West Indies afforded employment for 200 men per week, as well as for extra train crews. Passenger and freight traffic over the railroads was heavy. Wholesale houses report-

ed a fair volume of small repeat orders. Retail trade was slow, also collections. The usual demand for female domestic workers prevailed.

A slight improvement was noted in the number of orders for farm hands in the Province of Quebec. Hull was the only office to report activity in logging, which consisted of placements of river drivers. Idleness prevailed in the mining districts, with few men securing work there. Curtailment of operations in the boot and shoe industry was reported at Montreal. Quietness also prevailed in the textile and printing trades in that city, while there was slightly increased activity in rubber. In Sherbrooke, some factories operated only four days a week and at Three Rivers, a decrease was noted in the pulp and paper industry, but a slight increase in foundries. Building construction at Montreal, Hull and Quebec City showed improvement, but conditions at Sherbrooke and Three Rivers were quiet. Relief work in Montreal provided employment for a number of unskilled labourers. Transportation reported no gain. The commercial situation in the larger centres was satisfactory. There was an increased demand for women domestic workers, with a smaller registration of applicants.

Farm orders were scarce in the Province of Ontario, as low prices for farm produce resulted in the hiring of the minimum of help. In the north country, logging showed little activity, one office alone recording placements to any extent in that industry. River driving was well advanced. No new men were sent to the mines, as all necessary help was already hired. The majority of the factories throughout the province were still running, with reduced staffs and on short time. Quietness prevailed particularly in the steel plants, saw mills, paper mills and the rubber industry. Textiles were fairly busy at London and Guelph, but quiet in Oshawa. Here the automobile industry was running steadily, but no change was reported in Windsor. The volume of employment in the building trades was also low, as a number of skilled workmen were unemployed, only two centres reporting work available for a limited number of men. Summer hotel work created a demand for female workers and applications for these positions were at hand. There was the usual demand for cooks general and housemaids, but few suitable applicants registered for these positions.

There was no increase in the demand for farm help in the Province of Manitoba, and little change was expected before haying. Log-

ging and mining also were quiet. Manufacturers likewise reported very little improvement. Construction showed few new contracts under way, the building permits in Winnipeg for the first five months of 1931 being

\$375,000 less than those of the corresponding period last year. Over 100 building trades mechanics and labourers were directed to Fort Churchill for employment there. Railroad and highway construction also showed little

(8) MacLean's Building Review.

(4) Figures for end of previous months.

(9) Sugar production given in periods of four weeks.

(5) Figures for four weeks ending May 30, 1931, and corresponding previous periods.

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum, slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese.

activity. Retail trade was quiet and wholesale trade fair, with collections slow. Conditions remained unchanged in the women's domestic section, applicants being in excess of vacancies.

Dry weather and high winds, causing great damage to crops, were responsible for the decline in farm placements in the Province of Saskatchewan. With the exception of Prince Albert, where several new contracts had been given out, building construction was unusually quiet and more than sufficient workers were available for all work undertaken, all avenues of employment, everywhere, being canvassed by the large number of unemployed. Several centres were continuing relief work on highways and sewers, but road work was practically nil. A decreased demand for women domestics was reported, with many applicants registered at the offices.

Quietness prevailed in farming in the Province of Alberta, due to dry weather, and little increased activity was expected before harvest time. Logging, coal mining and manufacturing also were slack, miners at Lethbridge working only one day a week. Relief work provided by some municipalities furnished about the only employment available, and where this had been discontinued, direct relief was given. Outside of this, except at Lethbridge where a Government elevator was soon to be erected, building construction showed little improvement, and numerous tradesmen were working at anything at hand. Railroad maintenance work had been cut to a minimum at Calgary, with crews considerably below normal strength. Some extra gang labourers, however, had been sent out from Edmonton for work on the Northern Alberta Railway. Retailers reported business as quiet, with collections extremely difficult. Little change was recorded in the women's domestic section, there being sufficient applicants to meet most requirements, the majority of those seeking work being married women, whose husbands were unemployed.

As in the Prairie Provinces, the call for farm labour in British Columbia was very small, and men were far in excess of the demand. Logging continued slack as did also coal and metal mining. Factories at Nelson and Prince Rupert were running steadily, while at Vancouver, shingle mills were reported as operating spasmodically, saw mills showed no change, sash and door factories, slight improvement, and foundries and machine shops were quiet. Apart from highway and railway work, there was little activity shown in construction generally, and many tradesmen were idle, or on short time only. Relief work still continued in some districts

but general conditions showed no improvement. Little work also was available for long-shoremen. Trade, likewise, was dull, with collections slow. Although the season is advancing, few orders have been received by the women's domestic section for hotel workers. This resulted in a long list of women suitable for this type of work who are still unemployed. Others were anxious to secure employment of any kind, and though it was expected that when the berry picking season opened, some of these workers would be absorbed, still the applicants exceeded the demand.

The Dominion Bureau of Statistics tabulated returns from 7,696 firms, who reported a decidedly upward movement in employment on May 1, when they increased their pay-rolls by 22,970 persons to 995,605. Reflecting this gain of 2.5 per cent, the index (with the average for the calendar year 1926 as 100), rose to 102.2, as compared with 99.7 on April 1, and with 111.4, 116.2, 106.8, 101.8, 95.4, 91.9, 92.9, 92.5, 84.3, and 85.1, on May 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921 respectively. Thus the situation, though not so favourable as in the spring of 1930, 1929, or 1928, was better than on May 1 of earlier years for which data are available.

Heightened activity was recorded in all provinces, but Quebec registered the largest increases. In the Maritime Provinces, manufacturing showed the greatest advances; logging, quarrying and highway construction also showed important gains, while transportation and railway construction were slacker. In Quebec, important increases were shown in logging, transportation, construction and maintenance and manufacturing, while trade was duller. In Ontario, construction and transportation reported the most marked increases, but the movement was also upward in manufacturing and trade. In the Prairie Provinces, manufacturing, trade and construction showed heightened activity, the advances in the last-named being most noteworthy. In British Columbia, manufacturing and construction were decidedly busier, especially pronounced improvement taking place in the latter; transportation and logging were also more active, while curtailment was indicated in mining and trade.

Montreal, Quebec, Toronto, Ottawa, Windsor and the adjacent Border Cities and Vancouver showed considerably increased activity, but there was a decline in Hamilton and Winnipeg. In Montreal, transportation and manufacturing recorded gains, while construc-

EMPLOYERS' REPORTS

tion and trade were slacker. In Quebec, most of the improvement took place in manufacturing, transportation and construction. In Toronto, manufacturing, trade and transportation reported important increases in personnel. In Ottawa, manufacturing registered improvement, but construction was not so busy. In Hamilton, manufactures were slacker, while construction and transportation showed greater activity. In Windsor and the adjacent Border Cities, moderate advances were noted, chiefly in automobile factories. In Winnipeg, retail trade was rather more active, but construction and manufacturing reported losses. In Vancouver, manufacturing and construction registered increases.

An analysis of the returns by industries shows that there were advances in manufacturing, particularly in lumber mills, in which they were of a seasonal character. Marked improvement also took place in the fish-packing, pulp and paper, building material, vegetable food, leather and mineral product divisions, while rubber, textile and iron and steel factories were slacker. In the non-manufacturing division, logging, transportation, services, trade and construction and maintenance also registered large increases in employment, those in the last-named being most noteworthy. On the other hand, coal mines released employees.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of May, 1931.

TRADE UNION REPORTS.

The percentage of idleness reported by local trade unions at the close of April was slightly smaller than that indicated in the previous month, according to the reports tabulated from an aggregate of 1,807 labour organizations, with 206,563 members. Of these 30,786, or a percentage of 14.9, were without work on the last day of April, in contrast with 15.5 per cent of unemployment in March. More depressed conditions, however, were shown than in April of last year when 9.0 per cent of inactivity was recorded. With the exception of Saskatchewan where noteworthy gains in activity were registered from March, the changes in the various provinces were very slight, New Brunswick, Ontario, Manitoba, Alberta and British Columbia unions reporting a more favourable employment movement, and Nova Scotia and Quebec unions nominal recessions in activity. Employment generally was at a lower level throughout the country than in April of last year, Nova Scotia and Saskatchewan unions showing moderate curtailment of activity, and the remain-

ing provinces reductions of more extensive proportions.

A review in greater detail, with tabular statements on unemployment at the close of April, 1931, as shown by local trade unions, will be found elsewhere in this issue.

EMPLOYMENT OFFICE REPORTS.

During the month of April, 1931, the Offices of the Employment Service of Canada made 39,310 references of persons to positions and effected a total of 37,474 placements. Placements in regular employment were 13,123 of which 9,459 were of men and 3,664 of women, while those in casual work were 24,351 in number. Applications for work, reported at the various Offices, numbered 59,202 of which 46,856 were from men and 12,346 from women workers. Employers advised the Service of 39,194 vacancies during April, 29,625 for men and 9,569 for women. A decline was shown in the volume of business transacted when the above figures are compared with those of the preceding month, but a gain was recorded over the transactions of April last year, the records for March, 1931, showing 46,295 vacancies afforded, 68,034 applications made and 44,884 placements effected, while in April, 1930, the records showed 30,350 vacancies, 44,145 applications for work and a total of 28,325 placements in regular and casual work. A report in greater detail of the work of the Employment Offices for the month of April, 1931, appears elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during April, 1931, was \$13,786,466 as compared with \$9,906,567 in the preceding month and with \$16,978,076 in April, 1930.

The *MacLean Building Review* states that more construction was started in Canada during May than in any previous month this year. The total awards, \$36,895,700, were 62.5 per cent over April, although about ten million dollars down from May last year. Of the above total \$12,557,900 was for engineering purposes; \$10,298,900 was for residential buildings; \$10,123,100 was for business buildings and \$3,915,800 was for industrial purposes. The apportionment of the contracts awarded during May, by provinces, was as follows: Quebec, \$14,082,500; Ontario, \$13,995,900; Manitoba, \$2,330,400; British Columbia, \$2,194,400; Alberta, \$1,939,500; New Brunswick, \$901,500; Nova Scotia, \$779,100; Saskatchewan, \$630,400; Prince Edward Island, \$42,000.

Production and Trade

INDUSTRIAL PRODUCTION. Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 633.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations were uneven in April as compared with the preceding month. The moderate new business obtained by the construction industry was one of the backward features. The award of construction contracts was less in the month under review than in March, while a marked gain is normal for the season. The trend of building permits issued in 61 cities was also downward after seasonal adjustment.

The operations of the iron and steel industry also showed greater curtailment than normal for the season. Production of pig-iron during the 30 days of April was at the rate of 1,793 tons per day and totalled 53,792 tons, a decline of 49 tons or 2.7 per cent from the daily average of 1,842 tons in March, when the total production amounted to 57,110 tons. No change was made in the active furnaces during the month, the active furnaces being located two at Sault Ste. Marie, one at Hamilton and one at Sydney. Production of steel ingots and castings during April amounted to 91,461 tons, a daily average of 3,049 tons. This daily output was 5 per cent under the year's high average of 3,205 tons per day attained in the previous month but exceeded by 64 per cent the low of 1,858 tons per day in January.

The fluctuations in the automobile industry are generally regarded as corresponding with the ups and downs of construction. Prosperous conditions and a high level of purchasing power lead to expansion in both lines, while the lack of effective demand such as occurs in time of depression results in drastic curtailment. Under the circumstances the marked gain in motor car production in April, even after seasonal adjustment, was one of the most encouraging features. Production in April was 17,159 units, a gain, after allowance for seasonal trends, of 24 per cent.

The imports of crude petroleum, indicating operating conditions in the oil industry, were less than in March, but a sharp decline is normal for the season and the actual recession was not as great as usual, the gain after seasonal adjustment being 10 per cent.

The newsprint and lumber industries were more active in April. The output of newsprint, after seasonal adjustment, at 205,838 tons showed a gain of nearly 12.5 per cent.

The shipments of lumber to external markets, after seasonal adjustment, showed a gain of 16.5 per cent.

Imports of raw cotton and wool showed recession from the relatively high levels of the preceding month and the receipts of crude rubber from external points were considerably less than in March.

The net result was that the index of manufacturing production was 145.9 in April compared with 141.8 in March. Progressive increases have been shown month by month since the beginning of the year, the cumulative gain in the index in the four months being 17.5 per cent.

Coal.—Coal production from Canadian mines in April amounted to 888,312 tons or 23 per cent below the five-year average for the month of 1,153,241 tons. Output during April consisted of 750,588 tons of bituminous coal, 21,400 tons of sub-bituminous coal and 116,324 tons of lignite coal. Nova Scotia mines produced 443,817 tons, a slight increase over the April, 1930, total, but a decline of 6.8 per cent from the April 1926-1930 average of 476,313 tons. Alberta's production was 263,595 tons; British Columbia's, 136,332 tons, Saskatchewan's 30,096 tons; and New Brunswick's 14,472 tons.

Imports of coal into Canada during April were 32.5 per cent below the five-year average for the month and amounted to 537,530 tons. Shipments received from the United States totalled 528,363 tons made up of 106,362 tons of anthracite coal, 421,786 tons of bituminous coal, and 215 tons of lignite coal. Importations from Great Britain were recorded at 9,167 tons, consisting of 9,142 tons of anthracite coal and 25 tons of bituminous coal.

Exports of Canadian coal amounted to 12,431 tons, a falling-off of 52 per cent from the April 1926-1930 average of 25,859 tons.

Coal made available for consumption during April totalled 1,413,411 tons as compared with the five-year average for the month of 1,923,427 tons. During the month under review Canadian sources supplied 62 per cent of the total available supply, United States, 37.4 per cent, and Great Britain, 0.6 per cent.

EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in April, 1931, the merchandise entered for consumption amounted to \$51,189,376, as compared with \$75,247,854 in the preceding month and with \$71,401,839 in April, 1930. The chief imports for April, 1931, were: Iron and its products \$11,924,707; Fibres, textiles and textile products, \$6,986,998; Non-metallic minerals and products, \$6,969,132.

The domestic merchandise exported during April, 1931, amounted to \$33,935,075 as compared with \$55,048,197 in the preceding month and with \$50,744,139 in April, 1930. The chief exports in April, 1931, were: Wood, wood products and paper, \$13,432,135; Agricultural and vegetable products, mainly foods, \$6,103,015; Non-ferrous metals and their products, \$4,238,570.

Strikes and Lockouts

The time loss due to industrial disputes in Canada during May, 1931, was substantially lower than that occurring during April, 1931, although two more disputes were recorded, the higher figure for April being due chiefly to the strike of women's clothing factory workers in Toronto which involved some 800 workers at the beginning of the month and resulted in about 15,000 days time loss during the month. The number of workers involved showed a similar decline for the same reason. As compared with May, 1930, the same number of disputes was recorded, and, while the number of workers involved showed a substantial decline, the time loss incurred was almost twice as great as that recorded a year ago, the increase being due mainly to the dispute involving masters, mates and marine engineers on tow boats on the Pacific Coast. There were in existence during the month twelve disputes, involving 1,146 workers and resulting in a time loss of 17,189 working days, as compared with ten disputes, involving 1,582 workers and resulting in a time loss of 22,453 working days in April, 1931. In May, 1930, there were on record twelve disputes, involving 1,836 workers and resulting in a time loss of 9,293 working days. At the end of the month there were four disputes recorded as strikes or lockouts, involving approximately 600 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been formally called off or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty-nine cities was again lower at \$8.54 at the beginning of May, as compared with \$8.86 for April \$11.17 for May, 1930; \$10.94 for May, 1929; \$10.80 for May, 1928; \$10.76 for May, 1927; \$11.29 for May, 1926; \$10.48 for May, 1925; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.65 for May, 1920; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. The most important decreases occurred in the prices of butter, eggs, milk, cheese, beef, salt

pork, bacon, and flour. Including the cost of fuel and rent with that of foods the total budget averaged \$18.81 at the beginning of May, as compared with \$19.18 for April; \$21.49 for May, 1930; \$21.21 for May, 1929; \$21.04 for May, 1928; \$20.95 for May, 1927; \$21.54 for May, 1926; \$20.72 for May, 1925; \$20.24 for May, 1924; \$20.90 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.44 for May, 1920; \$26.92 for July, 1920 (the peak); \$20.09 for May, 1918; and \$14.21 for May, 1914. Fuel was slightly lower, due to seasonal declines in the price of anthracite coal and wood. Lower quotations for rent were reported from Thetford Mines, Kitchener and Moose Jaw.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued toward lower levels, being 73.0 for May, as compared with 74.5 for April; 89.7 for May, 1930; 93.4 for May, 1929; 97.9 for May, 1928; 98.3 for May, 1927; and 100.2 for May, 1926. In the classification according to chief component materials seven of the eight main groups were lower, while one was slightly higher. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for corn, flour, bread, bran, shorts and potatoes, which more than offset higher prices for barley, oats, flax, rye and wheat; the Animals and their products group, due chiefly to reduced quotations for hides, livestock, milk, butter and eggs; the Wood, Wood Products and Paper group, due to lower prices for newsprint and certain lines of lumber; the Iron and its Products group, because of declines in the prices of steel tank plates, automobile body plates and black steel sheets; the Non-Ferrous Metals and their Products group, because of reduced quotations for antimony, copper, silver and tin; the Non-Metallic Minerals and their Products group, mainly because of lower prices for asbestos; and the Chemicals and Allied Products group because of declines in the prices of copper sulphate and red lead. The Fibres, Textiles and Textile Products group was slightly higher, because of increased quotations for worsted cloth yarns and certain silk fabrics, which more than offset lower prices for raw cotton, hemp and raw silk.

The co-operative movement has now taken root in nearly every country in the world. The co-operative movements of 41 countries are federated in the International Co-operative Alliance which now embraces 229,890 local co-operative societies with an aggregate membership of more than 70,000,000 persons. These societies do an annual business of more than \$17,000,000,000 and have share capital and reserves of more than \$1,500,000,000.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF MAY, 1931

DURING the month of May an application for the establishment of a Board of Conciliation and Investigation was received in the Department of Labour from certain employees of the Canadian Pacific Railway Company, being marine engineers employed in the British Columbia Lake and River Service, members of Council No. 7, National Association of Marine Engineers of Canada, Inc. Notification by the company of a ten per cent reduction in wages effective as from May 1, 1931, was stated to be the cause of the dispute, fifteen employees being directly affected. The Department took the matter up immediately with the officials of the Canadian Pacific Railway Company, who advised that for the present the company would refrain from making any alteration in the wage rates of the employees in question.

An application for the establishment of a Board of Conciliation and Investigation was reported in the May issue of the *LABOUR GAZETTE* (page 516) as having been received from various tug boat owners being members of the British Columbia Tow Boat Owners' Association. The employees concerned in this dispute were masters and mates, members of the Canadian Merchant Service Guild, who had gone on strike on April 21 in protest against a reduction of wages. The Western Representative of the Department of Labour, Mr. F. E. Harrison, continued his efforts at mediation, but a settlement was not effected and the application was subsequently withdrawn by the employers concerned.

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1931

THE number of strikes and lockouts in existence in Canada during May, 1931, was twelve, as compared with ten in the preceding month. The number of workers involved showed a decline, a similar decrease appearing in the time loss incurred, the higher figures for April being due chiefly to a strike of women's clothing factory workers in Toronto which involved some 800 workers at the beginning of the month and caused about 15,000 days time loss in April. Comparing the figures with those of May, 1930, the same number of disputes were recorded, and while the number of workers involved showed a substantial decline, the time loss incurred was almost twice as great as that recorded a year ago, the increase being due mainly to the dispute involving masters, mates and marine engineers on tow boats on the Pacific coast.

Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Five disputes, involving approximately 890 workers, were carried over from April, and seven disputes commenced during May. Of these twelve disputes eight terminated during the month, two resulting in favour of the employers concerned, five being partially successful, or ending in compromises, and one being recorded as indefinite. At the end of May, therefore, there were four disputes recorded as strikes or lockouts, namely: masters, mates and engineers, Vancouver and Victoria, B.C.; photo engravers, Montreal, P.Q., Toronto and London, Ont.; moulders, Saint John, N.B.; and carpenters, Calgary, Alta.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet

Date	Number of disputes	Number of employees involved	Time loss in working days
*May, 1931 . . .	12	1,146	17,189
*Apr. 1931 . . .	10	1,582	22,453
May 1930 . . .	12	1,836	9,293

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more em-

declared terminated. Information is available as to six such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; photo engravers, Toronto, Ont., January 7, 1929, one employer; coal miners, Shaughnessy, Alta., January 15, 1931, one employer; pile drivers and hoisting engineers, Vancouver, B.C., January 3, 1931, two employers; shirt and overall factory workers, Winnipeg, Man., April 6, 1931, one employer; and motion picture projectionists, Ottawa, Ont., February 23, 1931, one employer, this last being added this month.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

WOMEN'S CLOTHING FACTORY WORKERS (DRESSMAKERS), TORONTO, ONT.—As stated in the last issue of the *LABOUR GAZETTE*, this dispute, commencing on February 25, 1931, to secure a union agreement, was terminated on May 5, 1931, agreements having been signed from time to time with a number of individual employers. The union reported that all but a few of the shops were covered by these agreements, which affected 950 of the strikers out of the 1,700 called out at the beginning of the dispute. The agreement was summarized in the *LABOUR GAZETTE*, April, 1931, page 477.

FUR FACTORY WORKERS, TORONTO, ONT.—This dispute, commencing in one establishment in Toronto on April 14, 1931, in protest against alleged violation of union conditions, was reported by the employer concerned to be terminated on May 18, 1931, the workers having returned without securing their demands.

PAINTERS, VANCOUVER, B.C.—This dispute, commencing April 1, 1931, against a reduction in wages, was terminated on May 15, 1931, the representatives of the national and international unions concerned having agreed to accept a rate of 80 cents per hour and the five-day week, eight hours per day, being a reduction from 90 cents per hour with the forty-four hour week provided under the agreement between the master painters' association and the national union, which had terminated. It was also arranged that the terms of a new agreement would be considered at a conference between the master painters' association and a joint committee of the two unions.

MASTERS, MATES AND ENGINEERS (TOW BOATS), VANCOUVER AND VICTORIA, B.C.—In the dispute involving masters, mates and marine engineers, commencing April 21, 1931, no termination had been brought about by the end of May. The reports from Victoria indicated that six workers employed by two firms had ceased work, and that two had secured work

with other employers, the remainder being still involved in the dispute at the end of the month. In Vancouver a number of tow boat operators had signed agreements with the union and were not affected by the strike. Toward the end of May it was reported that a sympathetic strike of employees on passenger and freight boats was being considered. During the early part of May conciliation proceedings were carried on by the resident officer of the Department of Labour with both parties to the dispute but no arrangements for a settlement were reached and the employers' application for a Board of Conciliation under the Industrial Disputes Investigation Act was withdrawn.

MOTION PICTURE PROJECTIONISTS, OTTAWA, ONT.—In connection with this dispute, commencing March 3, 1931, the case of the four pickets charged with watching and besetting toward the end of April was dealt with in the police court on May 14, 1931. The magistrate pronounced the accused guilty, and imposed a fine of \$10 and \$2 costs. It was intimated that an appeal would be taken. As employment conditions appear to be no longer affected, the dispute has been recorded as terminated at the end of May, being transferred to the list of such strikes and lockouts not called off by the union.

COAL MINERS, SPRINGHILL, N.S.—Twenty miners ceased work in one colliery on May 27, 1931, owing to a dispute as to the classification of work to be done at piece rates. Work was resumed after three days, it being arranged that the officers of the union and the mine officials would negotiate on the matter.

RUBBER FACTORY WORKERS, TORONTO, ONT.—Seventy-one girls ceased work on May 14, 1931, objecting to a bonus system of wage payment, twenty-five others being indirectly affected. Work was resumed the following day, it having been agreed that work would be carried on under the previous system for one week, after which a modified bonus system would be tried out with certain guarantees for two weeks.

PHOTO ENGRAVERS, MONTREAL, P.Q., TORONTO, ONT., AND LONDON, ONT.—Photo engravers employed in several establishments operated by one company in these three cities ceased work on the termination of agreements with the employer at the end of April. The company had amalgamated early in the year with another company with which the union had a dispute since January, 1927. The employer states that the union refused to sign agreements unless this non-union establishment were unionized. The union states that the company refused to sign an agreement for

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to May, 1931			
MANUFACTURING—			
<i>Textiles, clothing, etc.—</i>			
Women's clothing factory workers (dressmakers), Toronto, Ont.....	300	1,000	Commenced Feb. 25, 1931; for union wages and working conditions; terminated May 5, 1931; partially successful.
<i>Fur, Leather and Other Animal Products—</i>			
Fur factory workers, Toronto, Ont.....	40	560	Commenced April 14, 1931; alleged violation of agreement; terminated May 18, 1931; in favour of employer.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Painters, Vancouver, B.C.....	48	558	Commenced April 1, 1931; against reduction in wages; terminated May 15, 1931, compromise.
TRANSPORTATION—			
<i>Water—</i>			
Masters, mates and engineers (tow boats), Vancouver and Victoria, B.C.....	500	12,000	Commenced April 21, 1931; against reduction in wages; untermiated.
SERVICE—			
<i>Recreational—</i>			
Motion picture projectionists, Ottawa, Ont.....	4	100	Alleged lockout; commenced March 3, 1931; re maintenance of union working conditions; employment conditions no longer affected by end of May.
(b) Strikes and Lockouts Commencing during May, 1931.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Springhill, N.S..	20	60	Commenced May 27, 1931; regarding classification of work on piece rates; terminated May 30, 1931; indefinite.
MANUFACTURING—			
<i>Rubber-Products—</i>			
Rubber factory workers, Toronto, Ont.....	71	71	Commenced May 14, 1931; re application of bonus system; terminated May 15, 1931; compromise.
<i>Printing and Publishing—</i>			
Photo engravers, Montreal, P.Q., Toronto and London, Ont.....	69	1,500	Commenced May 4, 1931; for union agreement; untermiated.
<i>Metal Products—</i>			
Sheet metal workers, Toronto, Ont.....	30	360	Commenced May 1, 1931; against reduction in wages; terminated May 15, 1931; compromise.
Moulders, Saint John, N.B....	12	175	Alleged lockout; commenced May 11, 1931; against reduction in wages; untermiated.
<i>Other Wood Products—</i>			
Carpenters, planing mills, Calgary, Alta.....	30	750	Commenced May 1, 1931; against reduction in wages; untermiated.
CONSTRUCTION—			
<i>Buildings and Structures—</i>			
Bricklayers, Saskatoon, Sask.	22	55	Commenced May 11, 1931; against reduction in wages; terminated May 13, 1931; compromise.

this plant and for the others and announced certain reductions in wages. At Montreal the union had entered into agreements with other employers raising the minimum scale from \$40 per week to \$45. At Toronto other employers had renewed agreements with the union with a minimum rate of \$55 per week. On May 30, the Winnipeg plant was called out.

SHEET METAL WORKERS, TORONTO, ONT.— Sheet metal workers employed in fourteen establishments ceased work against a reduction in wages from \$1.15 per hour to \$1 on the termination of the agreement at the end of April. On May 15 work was resumed, a rate of \$1.07½ being agreed upon with the eight hour day and the forty-four hour week as before. The number of employees affect-

ed by the dispute was much greater than that of those actually ceasing work as many others were unemployed at the time.

MOULDERS, SAINT JOHN, N.B.—Moulders in one establishment ceased work on May 11, 1931, against a reduction in wages of ten per cent. Other crafts in the same establishment were also notified of reduced wages but continued at work while negotiations for new agreements were carried on. At the end of the month the dispute was unterminated. The employer reported, however, that some of the strikers had returned to work.

CARPENTERS (PLANING MILLS), CALGARY, ALTA.—Carpenters in four establishments ceased work on May 1, 1931, against a decrease in wages. An agreement in force for the past three years had provided for a nine

hour day at 90 cents per hour and the employers proposed a reduction to 75 cents per hour. The carpenters' union applied to the provincial government for a Board under the Alberta Disputes Act. Early in June it was reported that a Board had been established.

BRICKLAYERS, SASKATOON, SASK.—Bricklayers employed on one building ceased work on May 11, 1931, against a decrease in wages from \$1.45 per hour to \$1.25. The agreement between the Builders' Exchange and the union had expired at the end of April and a new agreement had not been negotiated. The contractor involved in the strike, it is reported, was not a member of the Builders' Exchange. On May 12 an agreement was signed between the Builders' Exchange and the union providing for a rate of \$1.35 per hour. The strikers resumed work on May 13 at this rate.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and Other Countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

Great Britain

Preliminary figures for the year 1930 were published in the *LABOUR GAZETTE*, February, page 132. Revised figures have recently been issued which give the number of disputes beginning in the year as 422, involving 308,700 workpeople and resulting in a time loss of 4,399,000 working days for the year.

For the month of April, 1931, the number of disputes reported was 45 and 12 disputes were still in progress from the previous month, making a total of 57 disputes in progress during the month, involving 24,300 workers with a time loss of 130,000 working days for the month. Of the 45 disputes beginning in April, 10 were over proposed reduc-

tions in wages, 17 over other wages questions, 4 on questions as to working hours, 3 on questions respecting the employment of particular classes or persons and 11 on other questions of working arrangements. Settlements were reached in 36 disputes, of which 9 were in favour of workpeople, 10 in favour of employers and 17 ended in compromises. In the case of one dispute, work was resumed pending negotiations.

A strike of 2,500 bricklayers and labourers at Glasgow, Paisley, Falkirk, etc., began April 27 "against new building trade agreement involving loss of differential rate for bricklayers"; no settlement was reported at the end of April.

France

On May 18, a strike began in the Roubaix-Tourcoing textile industry. It was reported on May 21, that 113,000 workers were involved. As noted in the *LABOUR GAZETTE*, February, 1931, page 155, these workers were on strike during July and August last year and a settlement was made by which wages were advanced about 4 per cent to meet the workers' contributions to the Social Insurance fund. When employers decided to discontinue this and thereby reduce wages 4 per cent, the strike began. No report of any settlement has been received.

Norway

No report has been received of a settlement of the lockout in Norway, which was noted in the last issue of the *LABOUR GAZETTE* and which involved about 82,000 workers in various industries who refused to accept wages reductions when their agreements with employers terminated.

Poland

A strike of 20,000 coal miners in the Dabrowa and Cracow districts is reported to have begun about May 20 against a wage reduction of 10 per cent.

United States

The number of disputes beginning in March was 31 and 36 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 30,157 and the time loss was 487,785 working days for the month.

A strike involving 20,000 coal miners, employees of one company, which occurred at Plymouth and at other collieries in the Wyoming and Lackawanna Valleys, Pennsylvania, was in effect from March 19, to April 9, when work was resumed. The company agreed to meet a committee of employees to discuss the working conditions which were the cause of the dispute.

VOCATIONAL EDUCATION BILL INTRODUCED BY DOMINION GOVERNMENT

A BILL to provide for the promotion of vocational education in Canada, and to appropriate the sum of \$750,000 *per annum* for fifteen years for such purpose, payments to be made conditional upon agreements with the respective provincial governments, was introduced in the House of Commons on May 26 by the Hon. Hugh Guthrie, Minister of Justice, and read the first time.

Mr. Guthrie pointed out that the word "vocational" had been substituted for "technical," the word formerly used. "The term technical education has become associated," he said, "rather with work of a scientific or investigational nature and work of university grade, while vocational education is considered a broader term, including what we formerly referred to as technical education." He recalled that in the year 1919 an Act was passed by Parliament providing for an expenditure of \$10,000,000 at the rate of \$1,000,000 *per annum* to assist in the work of technical education throughout Canada, in conjunction with the provincial authorities in every instance. That act ran its course and expired in the year 1929, and at that time there had been expended on technical education in Canada by the Dominion Government the sum of \$7,964,000 or an average annual expenditure of \$796,000 instead of the \$1,000,000 which was provided by the act of 1919.

"The general purpose of this grant," Mr. Guthrie proceeded, "will be very largely the same as that of the grant made under the statute of 1919. There are some slight changes, it is true; these will be developed as the matter proceeds before this House.

One or two of them I might mention now. In the grant made in 1919 agriculture was excluded as a matter of technical education. Under the present proposal agriculture will not be excluded, but it will be open to the provincial governments to make such representations as they see fit to the government here in order that the grant, or parts of the grant, may be appropriated to special courses such as those provinces desire to have carried on within their respective territories.

"I think it is realized on all hands that the technically trained man has become an essential in a country like this, and that technical education is so closely identified with the trade and commerce of the country—a matter which is entirely within the jurisdiction of this Parliament—that we can well justify a grant which is going to improve our trade and commerce position or methods. And I think it is realized throughout the trading world to-day that technically trained men are necessary not only for production purposes in the various branches of production, but that they are just as necessary in regard to the salesmanship of the various goods produced. I remember last autumn speaking to a large manufacturer from Sheffield, a producer of cutlery goods, and he said: 'We find that not only do we need highly trained men in the production of our goods, but that we need just as highly trained men in the salesmanship of our goods.' So in both these instances Canada will require the same training, and the grant is made for the purpose of encouraging education along that line."

Text of Bill

The text of the Bill, as introduced in the House, was as follows:—

AN ACT FOR THE PROMOTION OF VOCATIONAL EDUCATION IN CANADA

1. This Act may be cited as The Vocational Education Act, 1931.

2. In this Act the expression "Minister" means the Minister of Labour.

3. The sum is hereby appropriated from the Consolidated Revenue Fund of Canada of seven hundred and fifty thousand dollars per annum, for a period of fifteen years, from which payments may be made annually to the government of any province for the purpose of promoting and assisting vocational education.

4. (1) The payments to be made to any province shall be conditional upon an agreement being entered into between the Minister and the government of the province as to the terms, conditions and purposes on and for which the payments are to be made and applied, and such agreements shall be subject in all cases to the approval of the Governor in Council.

(2) The total payments made to the government of any province in any one year shall not exceed a proportion of the yearly appropriation mentioned in section three of this Act, corresponding to the proportion which the population of the province bears to the population of Canada, as determined by the latest federal decennial census.

5. The Governor in Council may, on the recommendation of the Minister, make regulations with respect to the following matters:—

(a) The definition of the expression "vocational education" in this Act;

(b) The particular types and grades of vocational education to which assistance may be granted;

(c) The procedure to be followed in the administration of this Act;

(d) The extent to which assistance may be made available towards the continuance of existing vocational education work;

(e) The extent to which assistance may be made available for lands, buildings, equipment and furnishings;

(f) The extent to which any portion of the annual appropriation under this Act remaining unexpended at the expiration of any fiscal year may be carried forward and remain available thereafter for the purposes of this Act;

(g) The auditing of vocational education accounts; and

(h) Any other matter as may be deemed expedient or necessary for the purpose of carrying out the provisions of this Act.

6. Such officers and employees as may be required for carrying out the provisions of this Act shall be appointed in the manner authorized by law.

7. The Minister shall make an annual report on or before the thirty-first day of March on the work done under the provisions of this Act, containing such information and particulars as the Governor in Council may prescribe, and such report shall be submitted to both Houses of Parliament by the Minister within fifteen days of the presentation of the report, if Parliament be then sitting, and if not, then within fifteen days after the opening of the next session of Parliament.

VOCATIONAL EDUCATION IN BRITISH COLUMBIA

THE vocational education system of British Columbia is described by Mr. John Kyle, organizer of technical education for the province, in an article appearing in *Industrial Canada*, May, 1931.

The outstanding school in the province for industrial training, he says, is the Vancouver Technical School, built at a cost of nearly \$900,000. The workshops provided are for the trades of sheet-metalwork, mechanical engineering, auto-mechanics, electrical engineering, cabinet-making, carpentry, and printing. The shops are equipped with all the necessary machinery to facilitate thorough vocational training, and skilled instructors having 100 per cent industrial efficiency are in charge.

There are at present 1,100 students attending, and the numbers increase annually. Moreover, the school is open each night of the week with an attendance of over 1,000 students, so that the citizens are taking full advantage of the building and equipment. It is fortunate that the 24 acres of land where the technical school is situated will permit of ample extension of workshop accommodation which will soon be required by a city having a population of over 300,000.

School of Decorative and Applied Arts, Vancouver.—In this school day and night courses are provided in the following subjects: drawing and design, applied design, modelling, lettering and illumination, figure drawing and composition, architecture, pottery. The work accomplished is of a high order of attainment and the good taste developed will gradually permeate the industrial productions of Vancouver.

Teaching of Agriculture.—Mr. Kyle points out that no course is of greater importance on the school curriculum than that of agriculture. Instructors in agriculture follow the practice of combining theory with practice. They are seizing every opportunity to supplement laboratory and classroom instruction in the science of agriculture, with practical applications in home projects, excursions to experimental farms, private farms, and exhibitions. The various junior judging competitions held in connection with the larger fairs have also served to give application to different branches of the science of agriculture. Competitions in the judging of all classes of live stock, field crops, fruits, and poultry were held at a number of the leading fairs this

year and have done a good deal to arouse the interest of both boys and girls in agricultural classes. In high schools where agriculture is taught the general science course of Grade IX is taken preliminary to the study of agriculture. This has been found to work advantageously, as almost all branches of science find some application in one or more of the numerous branches of agriculture, and the study of agriculture on the other hand, is greatly facilitated by the study of science. The Department of Education is ready to encourage the introduction of courses in agriculture in high schools and pay an annual grant in aid of the purchase of equipment and for providing a prize list for school students at the annual community fairs.

Night Schools.—Ten years ago night schools were organized in twelve cities and rural municipalities in the province. That number has

increased until now there are sixty-nine cities and municipalities participating in the work. In 1919 there was a total enrolment of 2,469 students in night schools. In 1926 the students numbered 6,124 and in 1929, 7,680.

Apprenticeship.—The Apprenticeship Council in the City of Vancouver is doing an extremely valuable work in laying the foundation of a stable apprenticeship system on modern lines. The apprentice classes are mostly held in the Technical School, Vancouver, and absolute harmony and confidence seems to exist between the Council, the trades unions and the young men. All the apprentice courses are held at night school. The building trades are naturally most prominent in advocating apprenticeship but the Typographical Union has the most thorough trade course of all for printers. Carpenters and joiners, sheet metalworkers, plumbers, painters and decorators, are all in the movement.

“FAIR WAGES” ON PUBLIC BUILDINGS ERECTED UNDER FEDERAL CONTRACTS IN THE UNITED STATES

A BILL “relating to the rate of wages for labourers and mechanics employed on public buildings of the United States and the District of Columbia by contractors and subcontractors, and for other purposes” was introduced by Senator Davis in the Senate and by Representative Bacon in the House, at the recent session of the United States Congress. It provides “that every contract in excess of \$5,000 in amount, to which the United States or the District of Columbia is a party, which requires or involves the employment of labourers or mechanics in the construction, alteration, and/or repair of any public buildings of the United States or the District of Columbia within the geographical limits of the States of the Union or the District of Columbia, shall contain a provision to the effect that the rate of wage for all labourers and mechanics employed by the contractor or any subcontractor on the public buildings covered by the contract shall be not less than the prevailing rate of wages for work of a similar nature in the city, town, village, or other civil division of the State in which the public buildings are located, or in the District of Columbia if the public buildings are located there, and a further provision that in case any dispute arises as to what are the prevailing rates of wages for work of a similar nature applicable to the contract which can not be adjusted by the

contracting officer, the matter shall be referred to the Secretary of Labour for determination and his decision thereon shall be conclusive on all parties to the contract: Provided, that in case of national emergency, the President is authorized to suspend the provisions of this act.”

The Hon. William N. Doak, Secretary of Labour, in explaining the measure before a Committee of the Senate, stated that the situation in regard to the wages paid under federal contracts constituted an emergency. “Some of these contracts,” he said, “had been awarded for these public buildings and they were having trouble with many of these contractors who were going into the higher wage territories and bringing in labourers and mechanics and paying them reduced wage rates, and it was not only disturbing to labour but disturbing to the business people as well. Realizing the emergency, we first endeavoured to see if we could not get a ruling from the Comptroller General which would permit the contracting officers to put a stipulation in the contract that they would pay not less than the prevailing wage rate in the localities where Federal buildings were to be constructed. After some delay the Comptroller General thought perhaps we did not have that authority and in substance turned us down. Then the only course we had was to resort to legislation.”

UNEMPLOYMENT RELIEF ACT, 1930

Relief Provided in Co-operation with Provinces, Municipalities and Railway Companies

AN account was given in the LABOUR GAZETTE, September, 1930, of the special session of the Parliament of Canada summoned especially to deal with problems arising out of exceptional economic conditions with resultant unemployment, and of the enactment during that session of the Unemployment Relief Act. Particulars of the expenditures approved have been given from month to month in subsequent issues.

The following joint expenditures having been approved by the Minister of Labour up to June 10:—

Province	Total cost of public works and undertakings
	\$
Prince Edward Island.....	200,000
Nova Scotia.....	2,338,875
New Brunswick.....	1,449,375
Quebec.....	10,064,850
Ontario.....	15,555,946
Manitoba.....	2,563,761
Saskatchewan.....	2,900,157
Saskatchewan (Drought Area).....	1,014,545
Alberta.....	2,839,232
British Columbia.....	3,447,794
Yukon.....	20,000
Direct Relief.....
Grade Crossing Fund.....	2,445,312
Canadian Pacific Railway.....	11,514,000
Canadian National Railways.....	14,119,403
Dept. of the Interior (Parks Branch).....	37,000
Banking Nova Scotia Coal.....	150,000
Administration.....
	\$ 70,660,250

The various provinces, railway companies and departments of the Government, which are co-operating under the Unemployment Relief Act, 1930, have furnished statistics showing the actual volume of employment given to May 31, 1931. Details for each province are as follows:—

Locality, etc.	(1) Individuals given employment	Number of man-days work given
Nova Scotia.....	31,908	445,221
Prince Edward Island.....	1,752	13,917
New Brunswick.....	18,500	235,000
Quebec.....	79,838	994,638
Ontario.....	43,000	2,384,000
Manitoba.....	27,030	284,031
(2)Saskatchewan.....	22,349	524,602
Alberta.....	21,452	353,246
British Columbia.....	31,627	641,923
Yukon.....	150	2,096
Canadian Pacific Railway Co.....	8,309	247,806
Canadian National Railways.....	5,820	146,748
Totals.....	291,735	6,273,228

(1) This figure does not include repeaters, i.e., no one individual is counted more than once although he may have been laid off and re-employed.

(2) Saskatchewan number of team-days—141,823.

It will be seen from above figures that at least 291,735 individuals have been given employment and 6,273,228 man-days work from commencement of operation, under the Unemployment Relief Act, to May 31, 1931.

It may be observed that the above figures take no account of individuals engaged in the production and distribution of the materials of all kinds which have been necessarily involved in the construction of the public works and undertakings which have been so far carried on.

The following figures show the number of families and individuals reported by the provinces as having received direct relief to May 31, 1931:—

Province	Families granted direct relief	Individuals granted direct relief
Nova Scotia.....	2,763
Prince Edward Island.....	496
New Brunswick.....	400
(1)Quebec.....	36,309 including	182,735
(2)Ontario.....	19,000
Manitoba.....	13,465 including	40,127
Saskatchewan.....	20,174
Alberta.....	6,254 and	18,018
British Columbia.....	5,487 and	14,961

(1) In addition to above the Cities of Montreal and Quebec report having given 300,174 nights' lodgings to single men and 1,685,658 meals.

(2) Including individuals.

The Commissioner of Labour and Statistics of the State of Maryland made an inquiry last year into the alleged practice of employers within the State of fixing age limits for their workers. It appeared that about one-third of the employees of the firms investigated were subject either to an actual maximum age limit or to an acknowledged preference for younger workers. The preference was stated to be given for the following reasons: heavy nature of work; alleged lesser activity, adaptability and efficiency of older workers; adoption of non-contributory pension systems; advancing cost of workmen's compensation; and the effect of the employment of older workers on the cost of group insurance. Over 80 per cent of the male workers in the Baltimore factories that were investigated were under 45 years of age, and about 90 per cent of the female workers were 44 years of age or less.

FEATURES OF UNEMPLOYMENT INSURANCE PLANS IN VARIOUS COUNTRIES

THE research department of the Metropolitan Life Insurance Company is now engaged in a systematic inquiry into various systems of social insurance existing in various countries, including unemployment insurance, sickness and invalidity insurance, and old age pensions. The first of these subjects is treated in a pamphlet recently issued (Monograph 1, in the Social Insurance Series) on "Unemployment Insurance: a Summary of Some Existing Governmental and Private Plans." The monograph summarizes these plans in tabular form indicating the scope of each plan, the amount of contributions and of benefits, the conditions under which benefits are paid, the administrative practices and the financial status. On the general question of the necessity for this class of insurance the monograph states that there must be found some permanent method of meeting the unemployment problem that will take care of the unemployment still remaining after industrial management has carried "stabilization" methods to their limit and after public works and other forms of public relief have become exhausted. Hitherto, it is stated, the necessary protection has been offered to the unemployed only in the form of charitable relief; but attention is now being given to various forms of insurance as furnishing a more satisfactory method, that would sustain the standards of the working people of this country at high levels; and eliminate the stigma attached to charity. After a detailed study of the systems existing in Great Britain, Germany and Switzerland, the monograph proceeds to draw an international comparison showing the essential features of the plans in the eighteen countries having state plans of insurance. These countries are: Australia (Queensland), Austria, Belgium, Bulgaria, Czechoslovakia, Denmark, Finland, France, Germany, Great Britain, Irish Free State, Italy, Netherlands, Norway, Poland, Russia, Spain, Switzerland.

As to the scope of the plans in these countries, the monograph remarks that "under all plans, whether compulsory or voluntary, the general intent seems to be to cover the wage-earning population subject to the risk of unemployment; but this is by no means generally accomplished, even in those countries which have compulsory plans, as may be seen from the lists of exclusions based on occupation. The proportion of the total population insured in countries having compulsory plans is about five times that found in countries having voluntary plans."

It is pointed out that all countries having voluntary schemes include contributions from the employee and the state. The employer need not and does not participate, with the single exception of Denmark, where the employer must contribute to a special unemployment reserve fund in connection with Industrial Accident Insurance.

"With regard to contributions and benefits, there is a fundamental difference in basis between the British system and Continental systems. The former provides flat rates for all members within certain age classifications, irrespective of wage, and the latter makes contributions a percentage of the wage. The British age classifications virtually constitute a concession to the wage principle by admitting special classes for low wage-earners, as represented by very young and moderately young workers."

Wide variations are noted between countries in respect to waiting period, duration, amount of benefit and additional benefits granted. The outstanding difference would seem to be the nature and extent of additional benefits in respect to children and other dependants. Great flexibility in both waiting period and duration of benefit is more noticeable under voluntary than under compulsory plans. The total absence of any restrictions on duration of benefit in Great Britain is unique. In a few countries, notably Germany, governmental machinery has been expressly devised for the purposes of handling the Unemployment Insurance Plan. In general, however, it may be said that existing machinery, especially that established in connection with other forms of social insurance, has been adapted to the purpose. In some countries, unemployment insurance is inseparable from other forms of social insurance.

Countries with voluntary plans leave the details of administration in large measure to trade unions or similar types of association, while in countries with compulsory plans local administration is often effected through the medium of labour exchanges, with, in general, a greater degree of co-ordination between central and local authorities.

American Experience.—The experience of the United States so far in regard to unemployment insurance has been of three kinds: union out of work benefits; joint agreements between the unions and the employers, and private company plans. Until recently these last have been financed entirely by each individual company, but, in the summer

of 1930, the General Electric Company established a trust fund to which both employer and employee contribute. The American unions having unemployment benefits are stated to be concentrated primarily in the various branches of the printing trades. For example, the International Typographical Union, Local No. 6, covers about 10,000 workers. The usual practice is for these unions to maintain a fund for the purpose of paying out-of-work benefits to members in good standing. These funds are built either by each member paying a specified sum for a certain number of weeks each year, or by a special assessment whenever the reserve falls below a given amount. The rules regarding the payment and amount of benefit vary widely in the different unions.

Another development in strongly organized trades is an agreement entered into by the manufacturers and the unions to pay unem-

ployment benefits to union members. In some cases both employers and employees contribute to the fund out of which benefits are to come; in others the employers alone are taxed to support the fund. Most of these arrangements are found in the various branches of the garment trades, the plan of the men's clothing industry alone including about 60,000 of the total of approximately 65,000 workers so covered. The agreement between the Amalgamated Clothing Workers of America and the Ladies Garment Workers Union and the associations of their employers have been described in previous issues (LABOUR GAZETTE, October, 1928, page 1041, etc.). The monograph describes the plans of various individual companies having unemployment insurance. Several of these plans were outlined in the LABOUR GAZETTE, April, 1931, page 423.

EFFECTS OF AGRICULTURAL DEPRESSION ON FARM WAGES

THE *International Labour Review* (Geneva) April, 1931, contains an article by L. E. Matthaëi, chief of the Agricultural Service, International Labour Office, summarizing the conclusions that were reached by the Mixed Advisory Agricultural Committee as to the effects of the agricultural depression on agricultural labour. This Committee is a mixed body composed of twelve members, of whom six represent the Governing Body of the International Labour Office (two government, two employers', and two workers' representatives) and six the Permanent Committee of the International Institute of Agriculture, Rome. It meets alternately at Geneva and Rome about once a year and its recommendations are submitted on the one hand to the Governing Body of the International Labour Office, and on the other to the Permanent Committee of the International Institute of Agriculture.

The Committee, and the experts who assisted it, were asked to consider the effects of the agricultural depression in four directions, namely: on agricultural wages; on the standard of living of the agricultural worker; on his chances of obtaining measures of social protection or of improving those which he already enjoys; and on his chances of employment. These four points are examined by the writer in the light of the opinions expressed during the proceedings of the Committee, and an attempt is made to indicate some general characteristics of the present situation in agriculture, and its probable future tendencies, in so far as they affect working populations in agriculture.

In the section on agricultural wages the committee deals with conditions since 1925 in four great producing centres,—Canada,* the United States, Australia and New Zealand,—as follows:—

Agricultural wages at best reach to within about 10 per cent of unskilled industrial wages, but much more often range somewhere about one-half such wages; indeed, they often fall below one-half. While agricultural wage earners have somewhat improved their position in relation to cost of living in Canada (especially women) and in Australia, in New Zealand they had only just managed to get back to their old position by 1929, while in the United States of America they had no sooner done so by that year than they again started falling behind very rapidly, and have thus almost throughout been materially worse off than before the war. Meanwhile—and most important of all—the gap between agricultural and industrial wages shows no abatement. Only in Canada was there a slight tendency towards closing it, and this soon disappeared. In Australia it has neither widened nor closed; in the United States of America and in New Zealand, it had widened.

The section on Canadian conditions is as follows:—

“In Canada, from 1924 to 1927 inclusive, a period of stable wage rates and stable cost of living, agriculture was by far the worse paid out of 13 selected occupations (6 industries).

*The last issue of the LABOUR GAZETTE (page 498) contained a table showing the wages of employees on farms in Canada, 1920-1930.

On quoting a weekly wage rate (average over the whole year) for each of these 13 occupations for each of the four years (52 quotations) it will be found that in all but 7 instances the agricultural wage rate (including the value of board and lodging) is less than one-half that of any other occupation in the same year, while in no instance is it more than a trifle over one-half; in 16 instances it approaches one-third or is less than one-third; while in 5 instances it approaches one-quarter or is even less than one-quarter that for other occupations in the same year.

"If the higher rates paid to agricultural workers during the summer form the basis of estimation—and it is only fair that they should do so, as so many workers only accept summer rates and afterwards transfer themselves to another industry—then the following rates emerge: in 37 instances the agricultural wage rate is less than one-half or only a trifle over, and in 5 instances it is less than one-third or a trifle over one-third that for other occupations in the same year.

"The general course of wages was as follows: The index of industrial wages started at 184 (skilled) and 183 (unskilled) in 1924 and reached 193 and 188 respectively in 1929; the index of agricultural wages started at 197 in 1924 and dropped to 194 in 1929. In other words, agricultural wages rose a little more (in proportion) than industrial wages after the crisis year of 1921, but gradually failed to maintain this slight advantage; with the exception of women's agricultural wages, which remained between 244 and 252 over these years (final figure 246). Thus women have really improved their position in agriculture since the war, both absolutely and relatively to all other classes of earners, while men in agriculture have improved their position to a lesser degree in common with their comrades in industry, but have not managed to lessen in any way the original gap between their wages and those of men in industry, being still often only able to earn less than one-half, and very occasionally only one-third, of what is earned in industry. In view of the fact that Canada is a country of mechanized agriculture, these results are certainly remarkable."

In England and Wales, the gap between agricultural and industrial wages was not so great as in certain other countries, owing, it is stated, to the effects of the Agricultural Wages (Regulation) Act, 1924. "What the English act has done has only been to prevent a great widening of the gap between agricultural and industrial wages after the war, such as was noted above in the case of Sweden and Germany. It has re-established the old relation between agricultural and in-

dustrial wages. . . . As a matter of fact English agricultural workers, if their wages are conceived in terms of the cost of living, have not improved their position nearly so much as agricultural workers in Sweden and Germany; what they have done is to keep more level with their industrial comrades or rather, industrial worker's wages in England have failed to soar ahead as they have so markedly done elsewhere, especially in Sweden."

The chief characteristic of agriculture in the past, it is pointed out, has been its stability. This condition is now becoming undermined in many countries by the farmer's uncertainty as to his tenure of land and property rights. Another radical change is the disappearance of the steadiness of output which formerly characterized agriculture; this is attributed to the "increasing efficiency both of tools and of men, i.e., scientific research and discoveries applied to soils and plants, mechanization and improvement of equipment, rationalization and better organization of management, populations, and, finally, invention of food, preservation processes. Consequently, a greatly increased agricultural production—the word "over-production" is to be avoided—not so far balanced by adequate increased consumption, is at the present time a fact to be reckoned with. . . . These three things—the threat to the age-old stability of agriculture, especially of peasant agriculture, the chance of a financial re-organization, and the alteration in the volume of agricultural output—seem to characterize the situation to-day."

The writer concludes with the prophecy "that a minimum measure of reorganization of the agricultural industry is pending, reorganization which will tend to demand more skilled and more highly organized labour, which therefore should be better paid, but rather less in quantity."

The Western Labour Women's Social and Economic Conference, at a meeting at Saskatoon in May, adopted resolutions in favour of free hospital, dental and other health services; that girls should not be allowed to work at housework, especially on farms, unless another woman was in residence in these places; that copies of the Kellogg Peace Pact should be hung in all schools for the purpose of setting peace ideals before the young; that the Dominion and Provincial governments, during the unemployment crisis, should protect families which have been paying for homes by the month and are now in danger of losing their holdings.

LABOUR LEGISLATION IN ALBERTA IN 1931

THE Legislature of the Province of Alberta which was in session from January 29 to March 28, 1931, enacted a number of laws of interest to labour. These dealt with unemployment, the regulation of coal mines, the employment of children, trade schools, mechanics' liens and old age pensions.

The Unemployment Relief Act ratifies and confirms an agreement, set out in the Schedule to the Act, between the Government of Canada and the Government of the Province pursuant to the Unemployment Relief Act passed by the Parliament of Canada during the session in September, 1930. The agreement provides for the payment by the Dominion to the Province of an amount not exceeding \$900,000 and stipulates that wages and hours on public works undertaken to relieve unemployment shall be in accordance with the Fair Wages and Eight-hour Day Act and the Fair Wages policy of the Government of Canada as set forth in P.C. 1206 dated June 7, 1922. The Act provides that the Lieutenant-Governor in Council may authorize the Provincial Treasurer to pay any sums payable by the Province under the terms of the agreement without other appropriation than is provided by the Act. The Lieutenant-Governor in Council is also empowered to do whatever is necessary for the carrying out of the agreement including the making of and performing agreements with the municipalities. Prior performances are confirmed and ratified. Pending the payment of the contributory share a municipality may borrow sums not exceeding in the aggregate the amount of such contributory share, such borrowings to be repayable immediately on the payment of the contributory share. This provision applies to borrowings effected before the coming into force of the Act.

The Coal Mines Regulation Act was amended to raise the minimum age of persons employed in mines from sixteen to seventeen years, and also to enable the Lieutenant-Governor in Council to suspend from time to time the operation of those provisions of the Act relating to the examination of miners and the granting of miners' certificates.

The Child Welfare Act, 1925, was amended in several respects. The Act of 1925 was to come into force on proclamation of the Lieutenant-Governor in Council but no proclamation was issued. The amending Act permits the proclamation of the whole or any part or parts of the Act. Under the 1931 statute when proclaimed, every city or town with a population of 5,000 or over must appoint and

pay one or more agents or officers for the enforcement of the Act and give notice of such appointment forthwith to the children's aid society of the city or town and to the Superintendent of Child Welfare. The agent or officer will have all the powers of a peace officer and authority to enter factories, workshops, stores, homes and all other places where children may be employed or congregated, and perform such services as may be necessary for the enforcement of the Act. If a city or town neglects to provide and pay such officer before February 1 in each year, the children's aid society or the Superintendent of Child Welfare may make the appointment at a salary approved by the Attorney-General and the agent or officer may recover such salary from the city or town. The Superintendent may make rules for the direction of the officer and the enforcement of the Act.

A child under the age of sixteen years who is employed anywhere between the hours of 9 p.m. and 8 a.m. may be apprehended without warrant as a "neglected child;" formerly the hours were from 10 p.m. to 6 a.m. A child under fifteen years of age not exempted by law from attending school who habitually hawks, peddles or sells articles in the streets or public places during school hours or after nine o'clock at night may also be apprehended without warrant as "neglected." Formerly the age limit was fourteen years. The Child Welfare Act, 1925, made it unlawful to employ habitually any child under the age of fourteen years between 9 p.m. and 6 a.m. The age limit has now been raised to sixteen years. Pin-boys in bowling alleys have been struck off the list of employed children that might be dealt with by by-laws of municipal councils in cities, towns and incorporated villages, since the Billiard Room Act, enacted in 1919, prohibits the employment of persons under 18 in billiard rooms or bowling alleys.

The Trade Schools Regulation Act applies to any place, conducted by any person, or association of persons other than the University of Alberta or the trustees of a school district in which any trade is taught and forbids any person to keep or operate a trade school unless he is registered under the Act. Application for registration is to be made in writing to the Minister on or before September 1, 1931. If the Minister is satisfied that the trade school is provided with competent instructors and sufficient equipment for the teaching of any specified trade or trades, and is furnishing instruction therein at reasonable rates, he may issue a certificate of registration. The Min-

ister or any person authorized by him is empowered to inspect trade schools, to observe methods of instruction and examine business books and records and all circulars, pamphlets and other material used for advertising the school. A penalty is provided for obstruction of the inspector. The Minister may cancel a certificate of registration if satisfied, as the result of inspection or upon credible information, that a trade school is insufficiently provided with means of instruction, that charges are unreasonable or that regulations with respect to advertising are not being observed. Any person is guilty of an offence and liable to a penalty who carries on, keeps or operates a trade school when he is not registered as the keeper or operator of such school, or for the purpose of giving instruction in a trade not specified in his certificate of registration, or who enters into a contract for the furnishing of instruction in a trade other than the contract set out in the application for registration or one approved by the Minister. The Lieutenant-Governor in Council is empowered to make regulations prescribing the minimum hours of instruction; the maximum fees; the terms and conditions upon which money paid shall be retained by the payee or be repayable to the payer; designating any callings or vocations as trades within the meaning of the Act; prohibiting the use within the province of misleading advertising; and generally as to the conduct, operation and management of any trade school.

An amendment of the Mechanics' Lien Act provides for the enforcement of a registered lien either by action or by the special procedure provided by the Act. A new section deals with the registration of liens claimed in respect of property consisting of an oil well or gas well or oil and gas well or held in connection with such well where such property is held under lease or licence from the Crown, granted pursuant to the Dominion Lands Act or the Provincial Lands Act, or by some person claiming through or under any person to whom such lease or licence has been granted. In these cases a claim for registration is to be made to the Minister of Lands and Mines instead of to the Registrar under the Land Titles Act. Upon registration the lien is enforceable in the same manner as a lien registered under the Mechanics' Lien Act.

The Old Age Pensions Legislation Act, which comes into force on Proclamation, provides that, in the event of the Parliament of Canada substituting for the provisions of the Old Age Pensions Act, 1927, other provisions whereby the amount to be contributed by the province is decreased, the Lieutenant-Governor in Council may enter into any agreement which may be deemed necessary and proper for the purpose of securing to the province

the benefits of such other provisions, and may, for that purpose, amend, add to or repeal any of the provisions of the Old Age Pensions Act, Alberta, in any manner which may be deemed necessary in order to adopt and make effective in the province any or all of the substituted provisions. Every Order in Council made pursuant to this Act is to be published in the *Alberta Gazette* and submitted to the Legislature within fifteen days of the commencement of the next session held after publication. On publication such Order in Council shall have the same force and effect as if enacted by this Act unless disallowed by resolution of the Legislature.

The Department of Lands and Mines Act provides for the establishment of a Department of Lands and Mines. By Order in Council 537-31 dated May 21, 1931, the administration of the Coal Mines Regulation Act was transferred to the newly-established Department.

Resolutions

On February 3, the Legislature adopted the following Resolution:—

"That this Assembly expresses approval of the intention of the Federal Government to assume the cost of Old Age Pensions and is of the opinion that the entire cost of the same should be borne by the Government of Canada."

On March 2, the following Resolution was unanimously adopted:—

"Whereas unemployment as a chronic condition for large numbers of working people, is inherent to our present economic system, and becomes aggravated during periods of financial depression; and Whereas the usual methods adopted for alleviating same are quite inadequate; Resolved, That this Assembly gives its approval to the principle of unemployment insurance and believes that steps should be taken by the Federal authorities for the immediate inauguration of such a scheme."

Two further resolutions of the Legislature dealing with unemployment and workmen's compensation have already been noted in the *LABOUR GAZETTE* appearing respectively in the March issue at page 268 and in the April issue at page 389.

A motion introduced in the House of Commons on May 18, by Mr. W. T. Lucas (Camrose), "that consideration should be given to the setting up of a system of intermediate credits for agriculture," was, on the Prime Minister's suggestion, amended to provide that this question should be referred to the Select Standing Committee on banking and commerce, with instructions to consider and report thereon. With this change the motion was agreed to.

LABOUR AND INDUSTRY IN ONTARIO IN 1930

Eleventh Annual Report of the Provincial Department of Labour

INDUSTRIAL conditions in the province of Ontario are reviewed in the eleventh annual report of the Ontario Department of Labour for the fiscal year 1929-30. Included in the duties of the department is the administration of the following Acts; The Sanitary and Hoisting Engineers Act; The Factory, Shop and Office Building Act; the Employment Agencies Act; the Steam Boiler Act; and the Apprenticeship Act. The operations of the Ontario Government Offices of the Employment Service of Canada are also described.

Dealing with employment conditions in the province the report points out that a slackening in industrial activity was general during the year in Ontario, as throughout the Dominion and in other countries, and quotes the employment figures for the province, based upon reports received from employers by the Dominion Bureau of Statistics (*LABOUR GAZETTE*, January, 1931, page 46). These statistics recorded declines in various manufacturing industries, chiefly in iron and steel, lumber and textile products. The mining industry and the services group showed fairly consistent gains, with smaller advances in communication, construction and trade.

Employment Service.—The report of the general superintendent of the Ontario Government Offices of the Employment Service of Canada points out that operations during the year were noticeably affected by the general industrial conditions. Commenting on the effectiveness with which the situation was met by the staffs of the various offices, the general superintendent expresses his conviction that “the importance of the Employment Service of Canada is not yet fully realized,” and that “the time will undoubtedly come when the value of the Service to the community at large will be more generally recognized.” He suggests that the possibility of extending the work of the Service to include vocational guidance is another question which will have to be faced in the near future. The following paragraph from the superintendent’s report reflects the situation during the year:—

The total number of vacancies listed with the Service—155,514—represents a decrease of 14.9 per cent as compared with 1929. This figure is interesting, inasmuch as general indices of trade conditions published by banks and other financial institutions showed an

average drop of 15 per cent in 1930 as compared with 1929. The total number of applications, however—237,367—showed an increase of 6.1 per cent as compared with the previous year. Placements as recorded by the Employment Service are designated as “Regular” or “Casual,” the former being those where the employment is of two weeks’ duration or longer. It is very significant that the regular placements in 1930 were 25.6 per cent below those of 1929. The casual placements, on the other hand, show an increase of 11 per cent. The net decrease in the total placements is 11.2 per cent which is interesting, indicating as it does that there was a greater willingness on the part of applicants to accept whatever employment was available. In other words, if the 1929 relationship of vacancies to placements had been maintained the total placements for 1930 would have been in the neighbourhood of 136,000, instead of totalling 141,841, as was actually the case. The increase of 6.1 per cent of 13,767 persons, also simplified the superintendents’ problems in finding a man or woman to fill each listed vacancy.

A new phase in the activities of the Employment Service is described as follows:

“One of the comparatively recent and exceedingly important developments in the work of the Employment Service of Canada is the system of co-operation with the Federal Department of Immigration in the administration of what is virtually a Contract Labour Law. Under the terms of an Order-in-Council which has been in effect for the last two years, Canadian employers wishing to bring workers into Canada from any other country must first file an order for the required help with the Employment Service of Canada. The order is then circulated throughout the entire length and breadth of the Dominion in order to give every office a chance to secure the man or woman required. If an applicant possessing the required qualifications presents himself at any of the offices, the employer’s request for importation may be refused. This measure is undoubtedly one of the best passed in recent years by the Dominion Government, assuring, as it does protection to the citizens of Canada.”

In the Handicap Section (where employment opportunities are looked after on behalf of disabled ex-service men and others crippled by injuries) placements of disabled ex-service men in 10 offices throughout the province

totalled 3,926, the applications numbering 6,984.

Private Employment Agencies.—The private employment agencies are licensed under the Ontario Employment Agencies Act and are under the supervision of the Department of Labour. In 1916, when the public employment service was organized in Ontario, there were 99 private agencies in the province. This number has been reduced to 14, of which number 12 last year reported placements totalling 18,400.

Factory Inspection.—A total of 20,227 inspections were made during the year, according to the report of the chief factory inspector. This was considerably greater than last years' total of 17,944 inspections. The number of employees in the industries, mercantile establishments, and office buildings inspected totalled 319,556 as compared with 319,646 in the previous year. Altogether, 6,996 orders relating to various requirements of the Factory, Shop and Office Building Act were issued as compared with 6,839 in 1929. Proceedings were taken against one firm under Section 33 of the Factory Act for working female employees overtime without a permit. Reports of 1,626 violations of Acts, in the enforcement of which inspectors have a responsibility, were submitted, the majority of such violations being due to negligence in connection with orders of the Minimum Wage Board. In addition, there were 139 complaints received during the year. Upon investigation, 82 were upheld, 36 not upheld, 14 are pending investigation, and 7 did not come within the jurisdiction of the branch. Of the total number of complaints, the chief causes were: hours of labour, 46; lavatories, 14; heat, 11; ventilation, 9; boilers, 9.

Employment.—The accompanying tables show the number of employees by sex and age in industrial and mercantile establishments and office buildings, together with hours of work, during 1929 and 1930.

NUMBER OF EMPLOYEES IN FACTORIES IN ONTARIO

Employees	1929	1930
Males over 16.....	240,173	226,957
Males 14-16.....	653	317
Females over 18.....	75,557	88,401
Females 14-18.....	3,263	3,881
Children under 14 dismissed.....	50	8
	319,646	319,556

HOURS OF LABOURS IN FACTORIES IN ONTARIO

Males	Number of Employees
45 hours per week.....	78,356
50 hours per week.....	71,568
54 hours per week.....	25,815
58 hours per week.....	9,500
60 hours per week.....	21,671
Females	
45 hours per week.....	47,356
50 hours per week.....	25,386
54 hours per week.....	5,058
58 hours per week.....	2,904
60 hours per week.....	4,498

In addition to the numbers in the above table there were also 27,444 employees, male and female, working approximately 50 hours per week. Applications for permits, overtime and others, numbered 1,618.

The examiner of plans of factory buildings, who is attached to the Factory Inspection Branch, reports that in spite of industrial depression, plans for buildings to the value of over \$21,000,000 were submitted during the year for approval. Although this is about 40 per cent less than the figures for last year, it is considered satisfactory in view of industrial conditions. This outlay for new buildings was proportioned as follows: factories, 53·8 per cent; office buildings, 38·9 per cent; and shops, 7·3 per cent. The report observes that almost 30 per cent of the amount scheduled for factory buildings has been used for extensions to existing plants, "indicating the confidence of experienced manufacturers in the certainty of better times near at hand."

Accidents.—In dealing with accidents to industrial workers, the report of the chief factory inspector indicates that during the year there were 4,817 accidents in the industries within his jurisdiction. Of this number 50 were fatal. The figures for the previous year were 7,083 accidents and 63 fatalities. Of the 50 fatal accidents, 10 were caused by falling substances, 6 by explosions, 6 by falls, 4 by burns and scalds, 4 by belts and shafting.

Boiler Inspection.—According to the eighteenth annual report of the Boiler Inspection Branch for the fiscal year, 417 drawings and specifications for steam boilers and pressure vessels were surveyed and registered, as compared with 624 in 1929; fifty-seven designs were returned to manufacturers for revision. The number of new pressure vessels inspected totalled 641 as against 831 last year and the used pressure vessels inspected numbered 1,582, or fifty-four fewer than in 1929. Altogether 3,522 certificates were issued during the year.

a decrease of 340 as compared with those for 1929. The revenue of the Branch amounted to \$20,136.84 as compared with \$25,167.15 the previous year.

Stationary and Hoisting Engineers.—The report of the chairman of the Board of Examiners of Stationary and Hoisting Engineers indicates increased activity on the part of the Board during the fiscal year 1930. The number of certificates issued by the Board totalled 17,865 as compared with 16,037 in 1929, the greatest increase being for renewals, which numbered 15,871 as compared with 14,149 last year, or an increase of 1,722. The number of candidates for examination showed an increase of seventy-nine, numbering 2,134. Of this number 876 were examined in Toronto and 1,258 at outside centres. Divided according to grades, 1,132 were trying for fourth class certificates, 474 for third, 155 for second, fifty-six for first, 176 for hoisting and 141 for portable certificates.

Apprenticeship Branch.—The report of the Apprenticeship Branch states that while "many problems remain to be solved and considerable opposition has still to be met before suitable programs can be worked out in each designated trade, a satisfactory beginning has been made," and that "the development of the work to date is encouraging."

"The chief development during the past year was the inauguration of the assessment scheme, under which all employers in designated trades are assessed for the purpose of paying a living allowance of ten dollars per week in lieu of wages to apprentices while attending day classes. It is felt that, since all employers in the industry will be benefited by the proper training of apprentices, all should share in the cost of producing an adequate supply of skilled workers. By distributing the cost over the whole industry the burden of any one employer will be kept at a minimum. The rate of assessment to cover the cost of classes for the coming winter has been set at one-eighth of one per cent of the payroll for 1929."

It is pointed out that arrangements are being made to conduct special day classes for apprentices in the larger industrial centres to be attended by first and second year apprentices from all parts of the Province, and it is expected that over three hundred apprentices will attend this winter. The instruction will be of an intensely practical nature, consisting of at least half time in trade training. The remaining time will be divided among such subjects as blueprint reading, mathematics and science directly relating to each trade.

The number of apprentices registered to October 31, 1930, was 1,418, an increase of 369 since the close of the previous year, and the number of active contracts was 1,168, an increase of 140. Altogether 129 apprentices successfully completed apprenticeship period during the year, whereas only thirty-one completions took place during the previous year.

Industrial Safety.—A feature of the work of the industrial safety division during the year was a study of seating conditions in factories, especially in the clothing and process factories where women have to sit at their work for four-hour periods. In order to promote correct sitting posture, a model chair was designed and three chairs built and subsequently there was an exhibit at the Canadian National Exhibition. Other safety work conducted by the division was the developing and building of an air-testing machine for the Division of Industrial Hygiene, and a study of the hazards in the dry cleaning and dyeing industry to enable the department to draft regulations governing the same.

The work of the caisson inspector was successfully carried on through the year, and it is pointed out that through the co-operation of contractors engaged on tunnel work satisfactory conditions have been maintained for the men employed in such construction. As illustrative of the care employed in this hazardous work, it was emphasized that in one job where 500 men were engaged each 24 hours, there were only three serious accidents, "indicating great precaution on the part of those responsible for the safety of the men."

The State of New Jersey recently enacted a law providing that all dependent persons seventy years of age shall receive one dollar a day whether they live in the homes of relatives or in public institutions; 75 per cent of the cost will be met by the State and the remainder by the counties; administration is in charge of county welfare boards; to insure the permanency of the pension fund the State will set up a reserve fund out of the proceeds of inheritance taxes. In the State of Michigan the House last month passed a bill, which was forwarded to the Senate, to provide a pension up to \$1 a day to indigent persons 70 years of age or over; funds for this purpose to be provided by means of a tax of \$1 a year to be levied upon each person in the State aged 21 years or over. A list of the other States in the United States having old age pension systems was given in the last issue, page 507.

WORKMEN'S COMPENSATION IN BRITISH COLUMBIA IN 1930

A DECIDED decrease in the total number of accidents in the province during 1930 is indicated by the fourteenth annual report of the Workmen's Compensation Board of British Columbia, there being 3,489 fewer accidents reported in 1930 than in 1929. Fatal accidents in 1930, however, showed an increase of 24 over 1929, one single disaster in the coal mining industry taking a toll of 45 lives.

Numbers benefiting.—The report states that during the fourteen years since the Act came into effect 352,375 claims have been made under it, and that there are now about 175,000 workmen protected in respect of accidents arising out of and in the course of their employment. Of the accidents that have occurred, 3,200 have proved fatal, and 8,234 others have resulted in totally or partially disabling the workmen for life. As a consequence of the fatal accidents there were on the pension-list at the end of 1930, 802 widows, 1,151 children, 132 dependent mothers, 43 dependent fathers, and 49 other dependants. There were also 1,732 workmen in receipt of pensions for the permanent total or partial disability sustained. Apart from and in addition to these there are at any given time approximately 2,000 temporary disabled workmen receiving time-loss compensation in respect of accidents which leave no permanent disability. By taking into account the dependants of those receiving pensions or time-loss compensation it is conservatively estimated that there are upwards of 15,000 persons relying in whole or in part on the benefits of the Act for their sustenance.

Payroll Statistics.—Measuring the industrial situation of the Province are the payroll statistics of industries coming within the scope of the Act. For the purpose of levying assessments the payrolls of all employers are checked each year. The payroll figures for 1921 totalled \$129,518,375; for 1922, \$130,592,502; for 1923, \$153,548,944; for 1924, \$155,410,227; for 1925, \$164,216,219; for 1926, \$172,862,307; for 1927, \$175,315,992; for 1928, \$183,576,470; for 1929, \$189,839,024. Since an audit of all the 1930 payrolls was not to be completed for several months after the publication of the report the exact figure for that year is not given, but it is estimated that it will approximate \$180,000,000.

The number of firms employing labour within the scope of the Act has increased year by year. The figures at the close of each of the past eight years were as follows: 6,524 in 1923;

6,838 in 1924; 7,197 in 1925; 7,613 in 1926; 8,243 in 1927; 8,688 in 1928; 8,888 in 1929 and 8,958 on December 31, 1930. During 1930, 1,263 new employers commenced employing workmen for the first time. Operations were resumed by 173 firms. Optional protection was extended to the workmen of 177 employers whose operations were not compulsorily within the scope of the Act. After making due allowance for all the firms which discontinued operating in 1930 there were still 70 more firms actively engaged in industry on December 31, 1930, than at the end of the preceding year.

Rehabilitation.—Dealing with the rehabilitation of physically handicapped workers, the report states:—"The re-establishment of partially disabled workmen is a difficult problem in this Province, where so much of the work to be done requires able-bodied workers. Every year hundreds of workmen meet with disabling accidents which impair their earning capacity permanently. Many of those workmen are capable of much useful service to industry, but not in the particular work at which they were injured. Their field of possible endeavour is restricted by the physical handicap they have sustained. Some employers feel an obligation to re-engage workmen who are crippled in their service. Others feel that their legal obligation has been met by an award made under the Act, and accept no moral obligation to re-establish those partially disabled. Crippled workmen feel that a larger number of employers should recognize their obligation to assist the partially disabled back to suitable employment. We have endeavoured to impress on all employers the necessity of absorbing those physically handicapped in industry, and in some cases our efforts have met with success."

Accident Prevention and First Aid.—The report, as in past years, emphasizes the importance of developing a "safety consciousness" in employers and employees. The factors entering into the safety problem are outlined as follows: "In organized industry there are three distinct functional groups, and they are actuated by different motives in approaching the accident problem. The owner group knows that accidents spell waste and reduction in profits. The workmen group knows that accidents means suffering, mutilation, and sometimes privation. The third group is the management group. Those who direct operations are not usually so vitally

interested in the financial waste caused by accidents and they, as a class, do not experience the physical suffering of a personal injury, yet on this group actually falls the major part of the responsibility for making safer working conditions for those in their charge. When the owner group becomes fully seized with the importance of accident-prevention it is not so difficult to convince the management and the workmen that unsafe practices will not be tolerated. In those establishments where safety is made the duty of each and every individual the success of the safety movement is assured."

The value of first aid in reducing the effects of injury is also stressed, and it is pointed out when employers are required to provide first aid equipment, it is the duty of workmen to utilize such service.

Claims.—In its presentation of accident statistics, the report indicates the striking reduction in accidents in 1930, although, as has already been stated, fatalities were more numerous, largely owing to a mining disaster. The accident totals for the past four years were as follows: 30,066 in 1927; 32,793 in 1928; 36,750 in 1929; and 33,285 in 1930.

Fatal accidents for the past eight years were as follows: 268 in 1923; 236 in 1924; 213 in 1925; 198 in 1926; 219 in 1927; 251 in 1928; 253 in 1929; and 277 in 1930. Non-fatal accidents for the same period were as follows: 24,184 in 1923; 25,566 in 1924; 27,563 in 1925; 30,167 in 1926; 29,847 in 1927; 32,542 in 1928; 36,497 in 1929; and 33,008 in 1930. In addition to the above there were last year about 3,000 other accidents reported, but no claims were filed in respect of them. In these cases first aid only was furnished and the workmen were able to resume work without more than three days' time-loss. Accidents last year occurred at the rate of 2,774 per month, or 111 for each working-day. There was a curtailment in the number of men employed in certain classes of work, particularly in the logging, sawmilling, and allied industries. There was, in turn, a reduction in the number of accidents in those industries.

The lumber industry accounted for 37 per cent of all time-loss accidents; the construction class 10 per cent; the railroading groups, 9 per cent; general manufacturing, 7 per cent; coal mining, 6 per cent; navigation and stevedoring, 5 per cent; and metal-mining, 3 per cent. Of the fatal accidents, 32 per cent were in the lumber industry; 24 per cent in coal mining; 15 per cent in the railroading groups; 9 per cent in metal-mining; 3 per cent in

construction; 3 per cent in navigation and stevedoring; and 2 per cent in general manufacturing.

Sixty-eight per cent of those injured gave their nationality as British or Canadian. (In this respect the report observes that "from the names of some of those who called themselves British it was apparent many were of foreign extraction."); 49.9 per cent of the claimants were married, and 50.1 per cent were single. Only 588 of those who were paid compensation in 1930 claimed to carry any other type of benefits or accident insurance. It is pointed out that the fact that less than 4 per cent of workmen received any other benefits while injured indicates the extent to which they rely on the provisions of the Act to tide them over periods of temporary or permanent disablement due to industrial accidents.

Finance.—The report explains the method used in handling the capitalized "reserves" that have accumulated under the provisions of the Act "to meet the periodical payments of compensation accruing in future years in respect of all accidents which occur during the year. Elsewhere in the Act," it is stated, "it is provided that widows, children, and permanently disabled workmen receive their pension awards in monthly payments. The unpaid portions of those awards made in respect of accidents which have already occurred are required, under the provisions of the Act, to be invested for those widows, children, and crippled workmen in securities permitted by the 'Trustee Act.' The Dominion, Provincial, and municipal bonds purchased with those award moneys constitute the capitalized 'reserves.' They are held in the names of the Minister of Finance and the Board jointly. These capitalized reserves are calculated on reliable actuarial tables to be exactly sufficient, using both principal and accumulating interest, to pay the beneficiaries the periodic pension payments to become due in the months and years to come. The claims finalised during any calendar year are paid for in full by the employers operating during that calendar year. So far as the employers are concerned, they are finished with those claims as if they had paid the amount of the awards in full in conformity with a judgment of a Court. The amount of each award made in 1930 was taken forthwith out of the assessments collected from employers operating in 1930 and placed in 'reserves,' so that employers commencing operations in the years to come will not be burdened with the cost of accidents disposed of prior to their engaging

in industry. These 'reserve' moneys are in reality the property of the widows, children, other dependents, and cripples."

The financial statement indicates that the reserve value at December 31, 1930, was \$8,076,509.18.

The statement of the condition of the Accident Fund shows that during 1930, the amount collected from employers including assessments and interest, was \$3,582,285; collections from employers for medical aid amounted to \$464,533; interest on reserve investments, totalled \$384,281 and collections from workmen for medical aid dues amounted to \$302,729, making total collections aggregating \$4,733,829.

Disbursements during the year included \$1,837,155 paid to workmen in compensation and \$773,397 paid for physicians, hospitals, drugs, etc. Pensions were paid during the year to the value of \$1,151,117; payments to dependents residing in Canada (under a statute of 1919) totalled \$23,084. The value of future payments of claims during 1930 is placed at \$1,053,344.

The report includes numerous tables giving statistics regarding finalled claims by industry; details of finalled temporary disability claims by industry, wage loss, length of disability, sex, age, etc.; nationality of workers; causes of accidents; nature of disability, etc.

WORKMEN'S COMPENSATION IN SASKATCHEWAN

Report for First Six Months' Administration of the Act of 1929

THE first annual report of the Workmen's Compensation Board of Saskatchewan is for the half year period from July 2 to December 31, 1930; the Act, though signed early in 1929, having become fully effective for payment of compensation only on July 2, 1930. The Board, in this its first report, details the organization, work, methods of procedure and the provisions and regulations under the Act (The Workmen's Compensation Act was outlined in the *LABOUR GAZETTE*, April, 1929, page 379, while text of the Board's regulations were published in the issue of April, 1930, page 392).

The period from December 1, 1929, to July 1, 1930, was spent in organization, in ascertaining and tabulating the employers of the province, in sending out payroll forms, in receiving returns from employers, in assessing and collecting on the returns made by employers, preparing and publishing the regulations necessary to the operation of the Act, dividing the employers into classes and groups, fixing the rate of assessment for each group of each class and taking all the steps necessary to furnish the machinery and funds to enable the Board to begin payment of compensation and medical aid from midnight of July 1, 1930, the date when the Act came fully into force.

The methods followed by the Board in dealing with claims for compensation are described as follows:—

"The manner of dealing with claims is very informal. Every injured workman should report at once to his employer. The employer must within three days of the occurrence of the accident notify the Board of the name of the injured workman and the time,

place and manner of the accident, the name of the attending physician and the hospital used, if any. The Board then at once mails to every party concerned the necessary forms for completion. Of course if forms are already in the hands of the interested parties they should be completed and forwarded in the first instance. If the necessary reports come back promptly and complete, the claim is then ripe for payment and compensation by cheque at par at any bank in the province can be mailed in two or three days. Where reports are incomplete, contradictory or questionable, further enquiry has to be made with consequent delay. The continuation of periodic payments following the initial payment must naturally depend on the progress reports furnished as to the workmen's condition by himself, his physician and his employer. These are too often neglected with consequent delay in payments and dissatisfaction to the workman. Notice of every payment made either for compensation or medical aid is given on the date of payment to the employer. When reports come in promptly and in order the Board is able to pay compensation fortnightly. In cases where this is not done, it is due to inability to obtain the necessary reports. Where the workman's right to compensation is disputed, or where issues of fact appearing in the written reports cannot be otherwise determined, the Board conducts a hearing in the nature of a trial to determine the issues of fact and the issues of law, if any."

The Board made arrangements with the Department of Railways, Labour and Industries by which the factory inspectors of that department are empowered to exercise, in addi-

tion to the powers given them under the Factories Act, the powers of inspectors of the Board as to inspection only, as given to the Board under the Workmen's Compensation Act. An account of all accidents reported to the Board is furnished to the Department of Railways, Labour and Industries. The Board considers that by this arrangement duplication of inspection work is saved.

The Board prescribed first aid kits for use in every industry in the province, the report adding the following comment: "Care was taken not to exceed the minimum requirements. Some objections have been raised by small employers to procuring these first aid kits on account of the expense involved. The Board has pointed out to such employers that the necessity is the same in a small as in a large industry and the cost is not a serious item when spread over the years during which the first aid kit will be of service, and the Board has insisted and will insist that its requirements regarding the keeping of first aid kits shall be strictly complied with." The Board expresses its intention to give active attention, in co-operation with employers and employees, to the reduction of industrial accidents.

Included in the report are tabular statistics on various phases of the six months' operations. It is pointed out, however, that these statistics do not give and cannot give a true picture of the work actually accomplished in 1930, and that it will not be until the end of 1931 that a complete account of the work in 1930 can be given. Subject to future revision the provisional financial statement for the year shows that for all classes the total income and credits amounted to \$551,115.48 as

against expenditures and charges of \$350,724.88. The total number of firms in the various groups and classes as at December 31, 1930, was 4,124. The estimate of wage expenditure indicates a total of \$28,284,196.43. During the period under review there was a total of 2,307 compensated accidents. Of this number, 18 were fatal, 15 involved permanent disability, 1,305 temporary disability, and 969 necessitated medical aid only. The time loss through accidents in the six months' period totalled 13,902 days. The average age of injured workmen was 35.46 years while the average weekly wage was \$23.81.

The accompanying table indicates the estimate of wage expenditure by classes in Schedule 1 from July 2, to December 31, 1930.

Class	Wage Expenditures

Workmen's Compensation in Great Britain in 1929

A report, dealing with statistics of accidents and compensation proceedings during 1929 under the workmen's compensation and employers' liability Acts, was issued recently by the Home Office of Great Britain. This report indicates that in seven large industrial groups—shipping, factories, railways, docks, mines, quarries and construction—a total of £6,569,918 was paid out in compensation in 1929. During that period the average number of workers employed in the seven groups was 7,450,112, the number of fatal accidents was 2,819, and non-fatal accidents totalled 478,602. The comparative figures for 1920 were: number of employees, 8,348,150; fatal cases, 3,531; non-fatal cases, 381,986. The amount paid in compensation increased in the ten year period from £5,978,009 in 1920 to £6,569,918 in 1929.

In 1929 the average amount paid in cases of death was £287; in cases of disablement the average amount (including cases settled by payment of a lump sum) was £12 1s. The average amount paid in lump sums was £88 11s., while the average amount paid in weekly payments (including weekly payments made prior to settlement by a lump sum) was £8 9s. The proportion of compensation paid in the seven industries in fatal cases was 12.3 per cent of the total amount paid for compensation. The percentages for the different industries were as follows: Shipping, 29.4; factories, 10.0; docks, 11.5; mines, 11.0; quarries, 17.0; constructional work, 15.1; and railways, 27.2.

It is pointed out that the cost of £6,569,918 paid out in 1929 in compensation does not

represent the total charge on the industries. To this figure must be added the administration expenses, medical and legal costs of employers, insurance companies and mutual indemnity associations together with the amounts placed in reserve and the profits

earned by the insurance companies. If all these items were taken into account, it is estimated that "the total amount paid in the seven great industries in 1929 in respect of workmen's compensation cannot have fallen far short of £8,500,000."

Licensing of Moving Picture Operators in Saskatchewan

New regulations governing theatres, public halls, film exchanges and moving picture machines in Saskatchewan were published in the *Saskatchewan Gazette*, May 30, 1931, amending the regulations published in March, 1926 (LABOUR GAZETTE, April, 1926, page 310). The new regulations provide for the application of the Canadian Electrical Code (LABOUR GAZETTE, March, 1930, page 290) in connection with installations in theatres and public halls. It is provided that in all theatres using synchronized sound projection, where more than one projection machine is used, there shall be two operators on duty at all times when the theatre is open to the public. One shall be duly licensed to operate the equipment used and his assistant shall also be licensed but may have a standing of a lower degree. In theatres in towns and villages, where incandescent light is used for projection, a duly licensed apprentice may, in the discretion of the minister, act as an assistant to the operator.

All operators must obtain a licence by passing an examination. The licences are of three classes: first class operators are eligible to operate any equipment. Second class operators are eligible for employment in any theatre except those equipped with transverters, motor generators, mercury arc rectifiers, or other sim-

ilar apparatus specified by the minister and may act as assistants to first class operators. Third class operators may be employed as assistants to first or second class operators in urban centres of a population of less than 7,500 and operate equipment in any theatre where incandescent light only is used for projection purposes.

A first class operator must possess a second class standing and have served as an assistant to a first class operator, using corresponding equipment, for a period of not less than three months. The applicant must have served at least twenty hours each week in an operating room under actual operating conditions for the period mentioned. Such proof may be in the form of a certificate signed by the operator with whom he served.

Every applicant for examination as a second class operator must (a) have served an apprenticeship of not less than six months under a duly licensed operator or (b) have held an operator's licence or standing, for that length of time, in Saskatchewan or elsewhere, of a degree satisfactory to the examiner or board of examiners.

Applicants for examination as third class operators shall be at least 18 years of age.

MOTHERS' ALLOWANCES IN ONTARIO IN 1930

THE tenth annual report of the Mothers' Allowances Commission of Ontario for the year ending October 31, 1930, states that there continues to be a steady increase in the number of beneficiaries and a corresponding increase in the amount expended under the Act.

The Commission was established under the Mothers' Allowance Act of 1920, to adjudicate upon applications forwarded by local boards on behalf of mothers of two or more dependent children. The municipality in which a beneficiary has resided for one year is required to contribute one-half the amount of the allowance granted in each case, the remainder being paid by the province. The cost of administration of the Act is also borne by the province. The amount of the allow-

ance is determined by the Board within limits fixed by regulation under the Act. The rate in cities is \$40, \$45, \$50, and \$55 per month for mothers with 2, 3, 4 and 5 children; in towns and country districts the rates are lower. The commission may grant an additional allowance for larger families. The commission is now composed of the following members; the Hon. David Jamieson, M.D., M.C.P.S. (former Speaker of the provincial Legislature), chairman; Miss Belle Thompson, vice-chairman; Mrs. Minnie Singer; Lieutenant-Colonel T. J. Murphy, K.C.; and Mr. A. J. Reynolds.

The number of families under the care of the Commission at the end of the financial year was 5,626, being 267 in excess of the number at the same time in the previous

year. The number of children in these families was 16,908, being an increase of 924 over the previous year. The amount of money paid to beneficiaries was \$2,394,088 whereas during the previous year it was \$2,306,083, showing an increase of \$88,005. The increased cost to the province is explained in the report as follows:—

“These increases shown are greater than might be expected in proportion to the increase of population, but may to some extent be owing to the public being better informed about the Act and the greater desire to take advantage of its provisions. Another reason is that on account of the unemployment situation, many older children of beneficiaries who may have been working and contributing to the support of the family and this source of revenue being cut off, has made it necessary to extend public assistance to families who, under normal conditions, would be self-supporting.”

Beneficiaries.—As mentioned previously, the number of families receiving allowances, together with the number of children in those families, at the end of the fiscal year (October, 1930) was 5,626, and 16,908, respectively. However, the statistics indicate that the number of families on the allowance list varies from month to month, and the total number during the entire year was 6,712 families and 19,620 children under 16 years, the average number of children per family, being 2.92. The average monthly increase in the number of beneficiaries and the amount disbursed was 22.25 and \$5,909.58, respectively.

The cost of administration was \$84,116.73, being 3.54 per cent of the amount expended.

This rate was slightly higher than last year, but was lower than in any other year since the Act came into force.

As already stated, half the disbursements for mothers' allowances are borne by the province. The province also bears all the cost of allowances in unorganized districts, which, in 1929-30, amounted to \$193,730. In addition the province assumes full charge of any amounts made to those lacking one year's continuous residence in any municipality. This total during the year was \$6,465. The payments by municipalities during the year amounted to \$1,084,742.50. In the 10 years since the Act has been in force, the net cost to the province was \$10,116,531.50 while the share of the municipalities during the same period was \$7,767,910.25.

Of the 6,712 families receiving allowances, 3,353 were in the cities; 3,267 were in the counties and judicial districts; and 92 were in the towns. The average number of children in these families was 2.77 in the cities; 3.03 in the counties; 3.37 in the judicial districts; and 2.79 in the towns.

The cause of dependency in 4,507 cases was the death of the father. In addition there were 1,485 cases where the father was totally incapacitated. Desertion was the cause of dependency in 452 cases, while in 268 cases both the father and the mother were dead and the children were in charge of a foster parent.

Of the total number of beneficiaries 64.48 per cent were Canadian; 27.42 per cent were other British and 9.10 per cent were of foreign birth.

New Industries Established in Canada

The Right Hon. R. B. Bennett, Minister of Finance, in the course of his speech in the House of Commons on June 1 introducing the budget for the current fiscal year, referred to the new industries that have been established in Canada since last August. “Since August, 1930,” he said, “there has been a marked influx of new concerns from outside countries into the Dominion. It will be some time before full details in regard to capital invested, number employed, etc., can be secured since some are still in process of organization, but eighty-seven such concerns have already been listed by the Dominion Bureau of Statistics, and the number continues to grow. Of the eighty-seven, seventy-

four are United States manufacturing concerns, eleven are British—seven manufacturing and four non-manufacturing—and two are French.

“These firms represent considerable diversification in industry. United States firms include eight in the vegetable products groups, such as foods and rubber; two animal products; eight textile; eight wood and paper products; twenty iron and steel; twelve non-ferrous metals; three non-metallic minerals; nine chemicals and allied products; two mining, and two miscellaneous. British firms include three textile, six iron and steel, one chemical and one miscellaneous. The two French firms are textile manufacturers.”

CIVIL SERVICE FEDERATION OF CANADA

Fourteenth National Convention, Ottawa, May, 1931

THE fourteenth national convention of the Civil Service Federation of Canada was held at the Chateau Laurier, Ottawa, on May 28 and 29. The report of the executive showed the following associations of Federal civil servants as constituting the Federation:—the Civil Service Association of Ottawa; Dominion Customs and Excise Officers' Association; Federated Association of Letter Carriers; Dominion Public Works Association; Quebec Marine Civil Service Association; Nova Scotia Marine Civil Service Association; Saint John Marine Civil Service Association; Meteorological Civil Service Association (Toronto); Dominion Grain Inspectors' Association (Fort William); Immigration Employees Association of Canada (Halifax); Dominion Weighing Department Association; Office Cleaners' Association; Quebec Marine Labour Association; Maritime Fisheries Civil Service Association; Dominion Civil Servants Association (Victoria); Champlain and Lorne Dry-Docks Employees Association; Quebec Immigration Branch; Prevailing Rates Employees Dominion Lighthouse Depot Association (Prescott); Department of Labour Association of Toronto; Niagara Falls Immigration Association; Windsor and District Immigration Association; Montreal Pensions and National Health Civil Service Association; Department of Pensions and National Health Civil Service Association of Toronto and Hamilton; Dominion Grain Inspectors Association (Winnipeg); the Canadian Federal Grain Employees Association; Railways and Canals Employees Association (Prescott); Interior Civil Service Association Alberta Unit; Interior Civil Service Association, Manitoba Unit; Edmonton District Income Tax Association; Halifax Naval Civil Service Association; National Defence Employees Association (Quebec Arsenal); Civil Service Association of Yukon; Dept. of Railways and Canals Association (Cornwall); Dominion Postal Clerks (Ottawa Branch). Of these thirty-four associations, the executive reported eighteen as having affiliated since the 1928 convention. The membership was well represented at the convention, 50 delegates being present.

The report of the executive outlined in detail the study given to and efforts put forth by the executive on the questions of salaries, amendments to the superannuation system, the securing of a National Civil Service Council, permanency of office, the securing of a maximum work day of eight hours, organization within the Civil Service, and publicity work in behalf of the Civil Service.

The procedure followed by the convention was to resolve itself into committees for the purpose of intensively studying the executive report, for considering Association resolutions, and for recommending policies to the incoming executive.

The more important resolutions reported by the committees and adopted by the convention are as follows:—

On the question of the general salary level in the Civil Service it was recommended that the executive study present economic trends with relation to the historical trend of salaries, and with a view to taking such future action on this question as seem necessary from time to time. It was also recommended that the minimum annual increase of \$120 per year be again sought.

On superannuation it was decided that the executive should continue its efforts to secure the improvements to the Act of 1924 which have been indicated by previous conventions, these including chiefly a further opportunity to elect to come under the Act, superannuation for prevailing rates employees, the minimum return in event of retirement on withdrawal, earlier retiring age, etc.

On the subject of the National Civil Service Council the convention reiterated the desire of the Federation to have such a Council set up and also recommended the establishment of an Appeal Board.

On Civil Service insurance it was decided to seek amendments to give further protection to the equitable right of those who, for any reason, discontinue payments to the fund.

On permanency of office it was decided to press to have made permanent long term temporaries, and, further, to have Civil Service employment with respect to transfers made more flexible in order that layoffs may be obviated.

On promotions the executive was instructed to work on the drafting of a uniform system of promotions, based on the merit system, and also to endeavour to have present procedures improved.

On the eight-hour day it was recommended that the principle of the Order in Council on this subject be more fully adopted.

It was decided to appear before the Beatty Commission on service problems.

On organization it was decided to continue past efforts for the purpose of securing memberships throughout the whole Civil Service.

It was decided to continue publication of the *Civil Service Review* in the interests of the Civil Service as the Federation organ.

By arrangement during the convention the delegates were addressed by the following:— Hon. H. H. Stevens, M.P., Minister of Trade and Commerce, on the Government and the Civil Service; by Hon. Senator G. D. Robertson on the Government and Civil Service Organization; by Sir William Clark, High Commissioner from the United Kingdom, on the British Civil Service; by Hon. Dr. W. J. Roche, Chairman of the Civil Service Commission, on the Civil Service of Canada; and by His Worship Mayor J. J. Allen of Ottawa on Ottawa and the Civil Service.

The executive elected for the ensuing term is as follows:—

President, Mr. V. C. Phelan; Vice-Presidents, 1st, Mr. T. H. Burns; 2nd, Miss E. L. Inglis; 3rd, Mr. J. A. MacIsaac; 4th, Mr. D. T. Robichaud; 5th, Mr. R. H. Bull; Secretary, Mr. W. J. Callaghan; Treasurer, Mr. V. L. Lawson; and Headquarters' Executive Council, Messrs. T. R. L. MacInnes, A. Bell, P. L. Smyth, C. F. Spence, T. R. Montgomery, C. J. Tulley, J. H. Ryan, and Miss E. G. Dufour.

Provincial Vice-Presidents:—

Prince Edward Island, Mr. S. T. Gallant, Charlottetown, Fisheries Department.

Nova Scotia, Mr. H. B. Kidd, Halifax, Health Department.

New Brunswick, Mr. W. M. Campbell, Saint John, Customs Department.

Quebec, Messrs. J. E. Power, Quebec City, Marine Department; and J. Sauvé, Montreal, Post Office Department.

Ontario, Messrs. W. A. McGuire, Toronto, Customs Department; W. Wilson, Fort William, Trade and Commerce Department (Grain Commission); and A. H. Lavery, Windsor, Immigration Department.

Manitoba, Mr. J. T. Bailie, Winnipeg, Customs Department.

Saskatchewan, Mr. George White, Regina, Post Office Department.

Alberta, Mr. A. Elliott, Edmonton, Customs Department.

British Columbia, Mr. A. C. Salt, Vancouver, Customs Department.

Yukon, Mr. G. I. MacLean, Dawson City, Interior Department.

It is proposed to hold the next convention in 1933.

Joint Council for Government Employees in Saskatchewan

Part V of the Public Service Act (Revised Statutes of Saskatchewan, 1930, chapter 8), makes provision for the establishment of a Joint Council for the purpose of hearing and determining appeals from decisions of the Public Service Commission in regard to the classification or grading of civil service positions, and generally for the purpose of hearing and adjudicating upon complaints of employees with respect to matters arising in the course of their duties, and upon appeals of persons dismissed.

The joint council consists of three members appointed by the government (including one member of the Executive Council), and five elected by the employees of the public service, provided that not more than three members elected by the employees shall sit at a hearing of any appeal or complaint. Only permanent employees may vote in the election of members of the joint council. The appointed members hold office during pleasure, while the term of those elected is for three years, with the privilege of re-election.

The Act provides that as soon as possible after the establishment of the Joint Council the members shall meet for the purpose of electing a chairman and a vice-chairman, and appointing a secretary, who shall not be a member of the Council. Four members con-

stitute a quorum, provided that at least two of those present are representatives of the government and two of the employees. Meetings are held monthly, with special meetings as required. The Joint Council has authority to make rules and regulations regarding procedure in lodging appeals and complaints, and also regarding procedure at meetings, and copies of such rules and regulations are required to be sent immediately to all employees in the public service. The Joint Council may decide questions brought before it by a majority vote of those present.

A person against whom a complaint is made must receive reasonable notice of the time and place fixed by the Joint Council for the hearing thereof, and be furnished with a copy of the complaint. Such a person is entitled to every reasonable facility for making his defence. For the purpose of hearing and adjudicating upon any appeal or complaint the Joint Council has full power and authority under the Public Inquiries Act. When it has finally adjudicated upon an appeal or complaint the Council must send a copy of its adjudication to the Public Service Commission for such action as may be required; and a copy must also be sent to the clerk of the Executive Council.

Personnel Administration Council in United States Civil Service

The following order establishing a Council of Personnel Administration for employees of the government of the United States was signed by President Hoover in April, 1931. The United States Government employs about half a million persons, there being a "turn over" of about 40,000 employees each year.

To the Heads of Departments and Independent Establishments:—

1. For the purpose of developing in the Federal government a more effective and economical system of employment and personnel management, and to promote the general welfare of the employees of the national government, there is hereby established a Council of Personnel Administration under the chairmanship of the President of the United States Civil Service Commission.

2. The Council shall consist of the heads of the departments, the President of the Civil Service Commission, the Director of the Bureau of the Budget, the chief of the Bureau of Efficiency, the chairman of the Interstate Commerce Commission and the Administrator of Veterans' Affairs. The president of the Civil Service Commission shall act as chairman of the Council.

3. The director of research in personnel administration of the United States Civil Service Commission shall serve as director of the Council of Personnel Administration and shall carry out the projects approved by the board. He shall appoint a project committee consisting of representatives of departments and advisory committees, who shall assist him in formulating projects to be submitted to the executive committee. He shall also appoint such planning and advisory committees as shall be necessary.

4. The following five members of the Council shall constitute an executive committee: Chairman—President of the Civil Service Commission; the Secretary of Agriculture, the Secretary of the Interior, the Secretary of Commons, and the chief of the Bureau of Efficiency. This executive committee shall (a) take action of plans and projects submitted by the director, subject to the ratification by the council; (b) present general plans to the director for formulation into projects.

5. The head of each department or independent establishment shall designate the employee best qualified to carry out in his establishment a fact-finding study, which shall be carried out as outlined by the Civil Service Commission. The findings of this study shall show the present personnel practices of the Federal government, shall serve as a basis for improvements, in selection, flexibility of registers, announcements, transfers, promotions, training, and co-ordination of personnel activities and administration, and shall indicate the extent to which the government service does offer, or can be made to offer, a partial or a permanent career.

6. The Council of Personnel Administration shall:

(a) Establish a liaison system between the Civil Service Commission and the several departments;

(b) With the assistance of advisory committees composed of representatives of industry, business organizations and educational institutions, and through co-operation with these organizations, make available to the government the best developments in personnel administration outside of government service, and make available to the public and to educational institutions authoritative information regarding employment by the Federal government, and

(c) Prepare specific plans for improvement and co-ordination of personnel administration in the Federal service, and co-operate with such departments and establishments as may desire to adopt such plans.

7. Each department representative shall also carry out in his department such of those projects hereafter approved by the council as the head of his department shall desire to have carried out.

8. Members of the council are authorized to assign to this work such members of their staffs as they believe essential for making this order effective.

The Hydro Board of Hamilton, Ontario, recently engaged the services of six former employees of the Dominion Power and Transmission Company who were above the age limit fixed for employees entering the pension scheme of the organization. It was decided to obtain quotations from insurance companies for insuring these men for \$1,500 each up to the retiring age of 65 years and provide for them a pension of \$365 after the age of 65, the board to pay an amount equivalent to five per cent of the men's wages and the employees to pay the remainder of the premiums.

There are in the United States twelve International Labour organizations which have a system of old-age pensions. Data supplied to the Bureau of Labour Statistics by 11 of these show that they had 13,049 pensioners in 1930, and paid in pensions during the year the sum of \$3,403,180. Of this amount more than one-third was paid by one organization—the International Typographical Union. During the 4-year period, 1927 to 1930, the number of persons cared for through the medium of old-age benefits by these organizations rose from 6,839 to 13,049, while the amount of benefits rose from \$2,362,476 to \$3,403,180, or 44 per cent.

ASSOCIATION OF GOVERNMENTAL OFFICIALS IN INDUSTRY OF THE UNITED STATES AND CANADA

THE eighteenth annual convention of the Association of Governmental Officials in Industry of the United States and Canada was held in Boston, Mass., May 18-22, the opening session being a complimentary dinner to the delegates tendered by the Commonwealth of Massachusetts. Gen. E. Leroy Sweetser, commissioner, Department of Labour of Massachusetts, presided. In the absence of Governor Joseph B. Ely, Mr. Dewitt Dewolf, secretary to the governor, extended a welcome on behalf of the state. Mr. Joseph McGrath, acting mayor, welcoming the delegates on behalf of the city of Boston.

The opening business session of the association was held on May 19, the president, Mr. W. A. Rooksbery, of Arkansas, presiding. Mr. John Scully, representative of the mayor spoke a few words of welcome, which were replied to by the president. Mr. Frank J. Plant, chief of the Labour Intelligence Branch of the Canadian Department of Labour, spoke on behalf of the Dominion. The roll call of members showed that the Departments of Labour of Canada and of the United States were represented, as were also those of the province of Ontario and the States of Arkansas, Colorado, Delaware, Georgia, Illinois, Indiana, Kentucky, Maryland, Massachusetts, Minnesota, New Hampshire, New Jersey, New York, North Dakota, and Pennsylvania, the total number of delegates and visitors being 113.

The report of the secretary-treasurer, Miss Louise E. Chultz, of Minnesota, showed that 30 states and provinces had paid dues during the year, the receipts, including balance on hand from 1930, amounting to \$1,049.10; expenditures, \$522.07; leaving on hand \$527.03. Mr. Charles E. Baldwin, assistant commissioner, Bureau of Labour Statistics, United States Department of Labour, reported on the status of safety codes in the various states of the union, following which brief reports on new legislation were presented by delegates from the member states and provinces.

Miss Maud Swett, of Wisconsin, fifth vice-president, presided at the morning session of the 19th, at which Miss Anne S. Davis, director of the Vocational Guidance Bureau, Board of Education, Chicago, Illinois, read a paper on "Re-evaluation of Some Phases of the White House Conference on Child Welfare," following which reports were received from delegates regarding the extent to which recommendations of the White House Conference had been carried out. "What Do Accident

Records Indicate is Happening to Minors Under 18 Employed at Hazardous Occupations" was the title of a paper read by Miss Beatrice McConnell, director, Bureau of Women and Children, Pennsylvania. The discussion on this paper was lead by Mr. James E. Reagin, chief inspector, Industrial Board, Indiana, following which reports were presented by representatives of states and provinces regarding what is happening to employed children under 18 years of age, and what is being done to protect them.

The morning session of the 20th, which was presided over by Dr. E. B. Patton, of New York, third vice-president, was set aside as an employment session. The first paper read was entitled "How to Stabilize Employment," and was presented by Mr. Edwin S. Smith, of Boston, author of "Reducing Seasonal Employment." This was followed by a paper entitled "Unemployment Remedies," by Dr. Wm. T. Foster, of the Pollak Foundation for Economic Research. A paper on "Employment Statistics" was given by Miss Mary Van Kleeck, director, Industrial Studies, Russell Sage Foundation, New York.

The afternoon meeting of the 20th, which was also termed an employment session, was presided over by Mr. H. C. Hudson, general superintendent of Ontario offices of the Employment Service of Canada. The first paper entitled "Relief of Unemployment in the United States and Europe," was by Miss Mary B. Gilson, formerly of the Industrial Relations Counsellors, New York, followed by an address on the "Work of the President's Committee on Unemployment," by Mr. Fred. C. Croxton, of the President's Emergency Employment Committee, Ohio. At this session Mr. H. L. Brunson, of the United States Department of Labour, spoke for the United States Secretary of Labour, Hon. Wm. N. Doak, who sent his regrets at being unable to attend the convention. At this session also a report on American Standards Association projects was presented by Mr. Cyril Ainsworth, assistant secretary of the American Standards Association, New York.

The morning meeting of the 21st, which was designated the industrial safety session, was presided over by Gen. E. Leroy Sweetser, second vice-president. The first paper presented was entitled "Industrial Safety by an Employer of Labour," and was read by Mr. H. L. Nickerson, who substituted for Mr. John F. Tinsley, vice-president of the Crompton and Knowles Loom Works, Worcester, Massa-

chusetts, by whom the paper was prepared. This was followed by a paper on "What I Would do, Based on my Experience to Make Work Places Safe, Were I an Employer or Owner." By Mr. James L. Gernon, director, Bureau of Inspection, Department of Labour, New York. "How the Massachusetts Safety Council Assists the Massachusetts Department of Labour and Industries" was a paper by Mr. Lewis E. McBrayne, general manager, Massachusetts Safety Council. A report was presented on recommendations for the organization and operation of a state factory inspection service by Mr. Alfred Briggs, of the American Association for Labour Legislation.

The afternoon session of the 21st, presided over by Mr. John Roach, deputy commissioner, Department of Labour of New Jersey, was devoted to the consideration of industrial diseases. A paper on "Lead Poisons" was read by Dr. Joseph C. Aub, associate professor of medicine at Harvard University, followed by a paper on "Dust Hazards and the Prevention of Injury from the Same," by Dr. W. Irving Clark, instructor in industrial medicine at Harvard School of Public Health. The concluding paper was on "Dangerous Chemicals," and was given by Dr. Leonard Greenberg, associate sanitary engineer, United States Public Health Service connected with the school of public health of Yale University.

At the concluding session on May 22, which was presided over by Mr. W. A. Rooksbery, the president, consideration was given to the recommendations regarding the problem of unemployment, the discussion being led by Mr. H. C. Hudson, of Ontario. Mr. T. E. Whittaker, commissioner, Industrial Commission of Georgia, led a discussion on how to build up the Association of Governmental Officials in Industry, this being followed by an endorsement of the suggestion of the retiring president that the objects and principles of the association should be made known to all the provinces of Canada and the states of the union.

The convention went on record as favouring federal co-operative supervision and financial aid in the development of state employment offices in the United States rather than an independent system of federal employment offices.

Another resolution adopted approved of co-operation with the committee on the regulation of the employment of minors in hazardous trades which was organized by the Children's

Bureau of the United States Department of Labour on the recommendation of the White House conference to collect and analyse information which might be used as a basis for the formulation of scientifically determined standards for the protection of children and young persons from occupational hazards, which standards may serve as a guide to the various states in the revision of their legislation in this field.

The convention went on record as being in favour of comprehensive and reliable information with reference to the trends of employment and the earnings of wage-earners, and suggested that all state bureaus of labour or like agencies which are not already engaged in the collection of pay-roll data to undertake such collection periodically and systematically, the scope of such data to include the building industry, wholesale and retail trade, public utilities, agriculture, office employment, employment in hotels and restaurants and all other important fields of employment.

Other resolutions adopted were (1) that the association urge the labour officials of all the States to stimulate interest in the child labour recommendations of the White House Conference and to assist in securing the adoption of those standards in their respective States; and (2) inviting the co-operation of the proper authorities with a view to insuring adequate protection from industrial accidents to minors who are taking courses in vocational and trade training schools.

Officers elected for the ensuing term were as follows: President, E. Leroy Sweetser, commissioner, Department of Labour and Industries of Massachusetts, Boston; first vice-president, Dr. Eugene B. Patton, director, Bureau of Statistics and Information, Department of Labour, New York; second vice-president, T. E. Whittaker, commissioner, Industrial Commission of Georgia, Atlanta; third vice-president, A. W. Crawford, deputy Minister of Labour of Ontario, Toronto; fourth vice-president, Edward F. Seiller, deputy State labour inspector of Kentucky, Louisville; fifth vice-president, Mrs. Isabella Summers, Bureau of Women and Children of the Department of Labour of New Jersey, Newark; secretary-treasurer, Miss Louise E. Schutz, superintendent of the Division of Women and Children, Industrial Commission of Minnesota, St. Paul.

Buffalo, N.Y., was chosen as the convention city for 1932.

NOTES ON LABOUR UNION ACTIVITIES

Order of Railway Conductors

The fortieth convention of the Order of Railway Conductors was held at Kansas City, Mo., May 4-23, 1931, with approximately 675 delegates in attendance, being presided over by senior vice-president S. N. Berry. (President E. P. Curtis, who took ill after arriving in Kansas City, died on May 7.)

In the address of the late president, which was presented to the convention, reference was made to the impairment of economic efficiency arising out of jurisdictional and resultant controversies among the organizations of the running trades; and he made the suggestion that the first step to overcome these difficulties, so far as protective activities were concerned, would be to effect a consolidation of their insurance departments into one association or company. All members of the existing organizations would be required to take out insurance in this new association or company, and membership hereafter would be conditional upon joining the insurance association. A resolution was adopted by the convention instructing the incoming president to endeavour to carry out the suggestion of the late president.

One of the most important subjects to come before the meeting was the report of a special committee on insurance, appointed at the previous convention, with instructions to make a complete financial and actuarial survey of the mutual benefit department, and to present a plan for placing this department on a more permanent basis. After a prolonged discussion, in which legal and actuarial advice was received, the convention adopted a plan whereby the mutual benefit insurance was placed on a legal reserve basis, and to be administered by a committee composed of the president, senior vice-president and secretary-treasurer. The special committee recommended that it be compulsory for the members to become insured, but by a vote of the delegates participation was made optional.

Provision was made that the accident and other funds of the Order should be invested in such securities as are required by the laws of the State of Iowa, having first been approved by a two-third vote of the board of directors.

The convention decided upon a program to secure legislation in Congress establishing a permanent pension system for all railroad employees over sixty-five years of age.

By unanimous vote the delegates adopted a memorial resolution which detailed the late President Curtis's long career of service with

the organization, and added heartfelt sentiments of appreciation and tributes of respect.

Resolutions were adopted containing the following recommendations, etc.:—

The limiting of freight trains to 70 cars and passenger trains to 14 cars;

The reduction in hours of service from 16 to 12;

The pardon of Thomas Mooney and the release of W. K. Billings;

The board of directors to be authorized to name a successor to the president in case of his retiring or death;

Opposition to the action of railway companies requiring conductors to handle passenger and motor trains of one or more cars without a brakeman or flagman;

A 100-mile day for conductors in passenger service;

That the newspaper *Labor* be reduced in cost to all subscribers and that the president ascertain the organization's equity in *Labor*;

Efforts to secure agreements whereby only members of the Order of Railway Conductors shall be used as conductors, and that 60 days be given non-members to join the Order or lose their seniority;

Enacting of legislation to control bus and truck rates;

That efforts be made to protect the interests of the Order of Railway Conductors in manning light engines, gas, electric or steam cars or other self-propelled machinery;

A national train length law;

That the operation of any train with more than one engine be prohibited;

That the legislative representative in Canada be required to report to all divisions in Canada, as well as to the President;

Granting state and legislative committees authority to enact by-laws for their guidance;

Authorizing the president to appoint a committee to make a study of conditions, investigate and compile statistics and evidence relative to long train operations;

Limiting the length of future conventions to twelve days, with an extension of two days only on a two-third vote of the delegates.

A resolution seeking to reduce convention representation was defeated.

Chief officers elected were: President, S. N. Berry, Cedar Rapids, Iowa; Senior vice-president, J. A. Phillips, Cedar Rapids, Iowa; Secretary-treasurer, J. E. Rogers, Cedar Rapids, Iowa.

The election of legislative committees will be held triennially instead of biennially as heretofore.

President S. N. Berry

The newly elected president of the Order of Railway Conductors is a Canadian, having been born at Erin, Ont. He commenced rail-roading as a bridge carpenter in 1883, but became a brakeman on the Canadian Pacific Railway the following year. Owing to injuries he left the company and did not re-enter the service until 1887. The next year he became a freight conductor and in 1905 was promoted to passenger service. President Berry joined the Order of Railway Conductors in 1892, and

was a delegate from Nipissing lodge, North Bay, Ont., to the Pittsburgh convention in 1903. Since August, 1905, he has been an officer of the Order continuously, being elected a vice-president in 1907, and senior vice-president in 1919. At the Kansas City convention in May, 1931, he was elected president, succeeding the late E. P. Curtis. Mr. Berry is the second Canadian to be elected during 1931 to an important post in the labour movement, Mr. E. W. A. O'Dell, of Hamilton, Ont., early in the present year being elected to the position of secretary-treasurer of the Boot and Shoe Workers' Union, with headquarters in Boston, Mass.

Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees

The sixth triennial convention of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees was held at Denver, Colo., during the third week in May, and completed its business in the shortest time in the organization's history. Officials of the Brotherhood estimated that every minute saved in the time of the convention checked an outlay of forty dollars.

The convention adopted a policy in regard to the social and economic problems of the members, which followed closely the recommendations contained in President Harrison's opening address. A committee was appointed to prepare and submit to referendum, proposals regarding payment of death benefits. If none of the plans submitted are approved, the death benefit will be \$300, without regard to age or length of membership. A proposal to hold conventions every four years instead of every three years was defeated.

Resolutions were adopted recommending:

State and federal regulation of motor buses and trucks;

Railroad consolidation without increasing unemployment;

The five-day week and six-hour day without reduction in wages;

The enactment of legislation providing for old age pensions, federal workmen's compensation, and compulsory job insurance;

Modification of the Volstead Act, so as to legalize the sale of light wine and beer;

Opposition to the agitation for cancellation of European debts;

Formation of an American labour party similar to that in England;

Public operation of railroads;

Amendment to the United States Railway Act of 1926 to make mandatory the creation of regional and national boards of adjustment;

Limiting of parcel post packages to twelve pounds;

Calling on Governor Rolph of California to pardon Tom Mooney and W. K. Billings, and for whose defence each delegate pledged two dollars.

Chief officers elected were: President, George M. Harrison, 701 Brotherhood of Railway Clerks' Bldg., Cincinnati, O.; Secretary-treasurer, George S. Levi, 706 Brotherhood of Railway Clerks' Bldg., Cincinnati, O. F. H. Hall, Montreal, Que., was elected a vice-president, while Arthur Blackwell, Weyburn, Sask., was elected to the board of trustees.

New Orleans, La., was chosen as the next convention city.

Labour Educational Association of Ontario

The 29th annual convention of the Labour Educational Association of Ontario was held in Hamilton on May 25, with about 100 delegates in attendance. The delegates were welcomed on behalf of organized labour by Mr. J. Fred Reed, president of the Hamilton Trades and Labour Council, the civic welcome being extended by Mayor John Peebles and supplemented by Mr. Samuel Lawrence, one

of the city controllers. Mr. E. W. A. O'Dell, the president, replied to the address of welcome, referring to his recent appointment to the secretary-treasurership of the Boot and Shoe Workers' Union with headquarters in Boston, and stating that consequently he would not be a candidate for re-election. Mr. George Keen, Brantford, secretary of the Co-operative Union of Canada, also addressed

the delegates, making special reference to the success of the co-operative movement in Great Britain, and stated that it had been of great assistance to the trade union movement in that country in times of stress.

The report of the executive, which was adopted, commented on the serious unemployment situation which had continued during the past year, and referred to the efforts of organized labour to offset such conditions by (1) a shortening of the work day and work week; (2) maintenance of wage rates at a level sufficient to ensure adequate purchasing power; (3) restriction of immigration consistent with the supply and demand for labour; and (4) establishment of unemployment insurance. It was recommended by the executive that the affiliated organizations embrace every opportunity to further the claims of the labour movement for this last mentioned measure of reform.

The report also reviewed the activities of the executive during the past year, which included (1) opposition to the passage of the Election Deposit Bill; (2) efforts to establish fair wage bylaws in various municipalities; (3) participation in various delegations before public bodies in the interests of wage-earners; (4) reporting violations of the Minimum Wage Act; and (5) efforts to have McMaster University establish a summer school for girls and women engaged in industry.

The report of the secretary-treasurer showed the finances of the association to be in a satisfactory condition.

Resolutions on the following matters were adopted by the convention:

Protesting against magistrates imposing severe sentences, including the lash, on boys "convicted of comparatively minor offences";

Condemning cadet training in schools and urging the substitution of a system of physical training;

Protesting against the policy of certain public utilities in eliminating workers of over 45 years of age;

Calling for a revision of the minimum wage regulations of Ontario so as to remove alleged injustices resulting from the provision allowing 20 per cent piece workers to be exempted from minimum wage orders;

That administration of the provincial One Day's Rest Act be placed under the jurisdiction of the Factory Inspection Department;

That the Old Age Pension Act be amended so as to reduce the pensionable age to 65 from 70 as at present;

Favouring enabling legislation so as to make the Federal Industrial Disputes Investigation Act fully operative in Ontario;

That court witness fees be raised on a basis at least equal to those paid to jurors;

Urging payment of compensation to students of technical schools who receive injuries during training courses;

Favouring the forming of workers' educational classes in all localities under the direction of the Workers' Educational Association of Ontario;

Pledging support to all efforts to extend the sale of union-labelled products;

Urging that action be taken with a view to securing greater benefits to workers in the paper-making industry through stabilization of employment.

The convention also went on record as favouring and supporting movements aiming at disarmament on land, sea and air and the prohibition of the use of poisonous gases in war.

Mrs. Jean Laing, of Toronto, secretary of the United Women's Educational Federation of Ontario, presented a review of the work carried on by that body during the past year, the report showing that the federation had been very active in advocating matters in harmony with the policy of organized labour.

Officers elected were; President, Larry O'Connell, Toronto; vice-president, Ald. Humphrey Mitchell, Hamilton; secretary-treasurer, Ald. Rod Plant, Ottawa; executive board, F. Acherknecht, Kitchener; Wm. Parsons, St. Thomas; Chas. Foreman, London; A. Donald Dear, Ottawa; F. W. Maxsted, Hamilton; J. Bird, Toronto; Ald. Peter Grant, St. Catharines; B. S. McSween, Niagara Falls, and Wm. Copen, Thorold.

The amounts of mothers' allowances in Alberta during May were slightly reduced in some cases in order to correspond with reductions in the cost of living. The Mothers' Allowances Act specifies no definite amount, and in practice each payment is fixed after consultation between the provincial government and the municipality concerned, having regard to the circumstances of individual cases. The Attorney General of the province recently explained that each case on the list was being carefully scrutinized, and that where circumstances were found to be such as to show that living costs of the family had been reduced during the past year the allowances were being reduced accordingly. There had been no general reduction, he said, but in view of the economic situation and the necessity for the government to make its funds go as far as possible, an effort was being made to revise the payments on this account without changing the proportionate status of the families concerned.

CANADIAN MANUFACTURERS' ASSOCIATION

Sixtieth Annual Convention, Vancouver, June, 1931

THE 60th annual general meeting of the Canadian Manufacturers' Association was held at Victoria, B.C. on June 1-3, the delegates including representatives of industries in every province of the Dominion.

Mr. Elmer Davis, in his opening address as president said that manufacturers of Canada, from Halifax to Vancouver, had one common task, the upbuilding of the Dominion. They were inclined at times to be impatient, but should remember that Canada and Canadians have progressed a long, long way in the last fifty years. The difficulties of the present situation, he considered, had been greatly over-emphasized. Depressions such as the present one were periodic: there had been several such periods in Canada, but each had been followed by one of greater prosperity. Mr. Davis said that when the recovery comes—"and there are many who see signs of it now"—Canada would be in the van of the improvement; hard work, efficiency and reliance on proven principles would aid in the recovery. Manufacturers, he continued, would have to reduce the costs of production, and must endeavour to market better products at lower prices; industrial research would play a great part in this movement. The same development was taking place in regard to agriculture and improved production methods would go far to solve problems of the farm.

The development of inter-Empire trade, Mr. Davis said, offered a great field for the advancement of Canadian industry; and there would be a changed re-alignment of commerce within the Empire.

Referring to western conditions the president pointed out that astonishing development along industrial lines had taken place in the western provinces in the last decade, and this development had strengthened the Association in its efforts to build up the Dominion. He anticipated that the growth would continue until possibly manufacturing would vie with agriculture as leading industry of the west.

Honorary officers for the ensuing year were elected as follows:—

President: Mr. W. H. Miner, Granby, Quebec.

First Vice-President: Mr. W. C. Coulter, Toronto, Ontario.

Second Vice-President: Mr. George Henderson, Montreal, Quebec.

Treasurer: Mr. T. F. Monypenny, Toronto, Ontario.

Mr. J. H. Walsh is the General Manager, and Mr. J. T. Stirrett, the General Secretary of the Association.

The report of the Industrial Relations Committee, which was adopted by the Convention, was as follows:—

Report of the Industrial Relations Committee

International Labour Organization

I. Fourteenth Session International Labour Conference

The 14th Session of the International Labour Conference was held in June, 1930, in Geneva, Switzerland. The employers of Canada were represented by Mr. J. H. Roaf, a past President of the British Columbia Division, who had as his adviser Mr. H. W. Macdonnell, Secretary of the Industrial Relations Committee. The Canadian Government was represented by Mr. Gerald H. Brown, of the Department of Labour and Dr. W. A. Riddell, Canadian Advisory Officer at Geneva, and Canadian labour by Mr. Tom Moore, President of the Trades and Labour Congress, and Mr. J. T. Foster, of Montreal.

Of the 55 countries which are members of the International Labour Organization, 51 (the largest number on record) sent delegates. Of the 51 countries represented, 23 were European, 4 were Central and South American, 6 were British Empire and 5 were Asiatic, viz. China, Japan, India, Persia and Siam.

The items on the agenda and the action taken thereon were as follows:

1. *Forced Labour.*—A Draft Convention was unanimously adopted embodying the undertaking to suppress the use of forced or compulsory labour in all its forms within the shortest possible period. The imposition of such labour for the benefit of private interests was to be immediately prohibited, as well as the use of such labour for work underground in mines. During a transitional period, recourse might be had to forced labour for public purposes only as an exceptional measure, and subject to conditions defined in the Convention. The question of final abolition would be considered after five years.

In addition to the Draft Convention two recommendations were adopted embodying principles for the avoidance of indirect compulsion to labour and laying down rules to be observed in the regulation of forced labour.

The above-described action was the result of collaboration between the Governments, the employers and the workers of colonial

powers such as Great Britain, France, Belgium and Portugal, no opposition being offered by any of the parties interested.

2. *Hours of Work of Salaried Employees.*—By 86 votes to 31, the Conference adopted a Draft Convention providing that the hours of work of persons employed in commercial establishments and offices should not exceed forty-eight in the week and eight in the day; provided, however, that the weekly maximum might be so arranged that on one or more days the hours worked might amount to ten. Provision was made for exemptions and exceptions.

By 103 votes to 18, the Conference adopted three recommendations in favour of national inquiries into hours of work in (a) hotels, restaurants and similar establishments, (b) theatres and other places of public amusement, and (c) establishments for the care of the sick, infirm, destitute or mentally unfit, such establishments being excluded from the Convention. The question of adopting special Conventions to cover them would be considered within four years.

The employers, with one or two exceptions, notably the French employers' representative, were entirely opposed throughout to the passing of a Draft Convention on the subject of hours of work of salaried employees, taking the view that international legislation on such a subject was not required and would be impossible in any case to make uniform or to administer with uniformity. As will be seen from the vote, however, the majority of the governments supported labour, so that a convention of some kind was inevitable.

The efforts of the employers were therefore directed to securing certain amendments which would make the convention as little harmful as possible and conversely opposing certain amendments proposed by labour, such as to make the eight-hour day and forty-eight-hour week apply to such workers as secretaries and employees in hospitals, hotels, theatres, etc. So far as the latter three classes of employees are concerned, the labour section of the Conference having failed to get them included within the scope of the convention, succeeded in securing three recommendations that countries which do not at present control their hours of work, should make special investigations into the conditions obtaining and report within four years to the International Labour Office.

3. *Hours of Work in Coal Mines.*—A Draft Convention limiting hours of work of underground workers in coal mines to 7½ hours from bank to bank, failed to obtain the necessary two-thirds majority on the final vote.

The employers were unanimously opposed throughout to an international convention on hours of work in coal mines, believing that the matter was not one for international regulation. Conditions were so different in the different coal-producing countries that real uniformity all round was impossible to achieve and the arbitrary fixing of shorter hours would inevitably (1) handicap certain coal-producing countries in competition with others, and (2) increase the already serious economic difficulties which confront the coal industry as a whole in competing with oil, electricity, etc. The result, it was urged, would be the reverse of beneficial to the very people on whose behalf the change was being sought, i.e., the workers.

Mr. J. H. Roaf, as Canadian employers' representative, pointed out the necessity of bearing in mind, in connection with such a question, the competition of a great coal-producing country like the United States which, not being a member of the International Labour Organization, would not be bound by any limiting conventions to which the member states might commit themselves.

In the result, as has been pointed out, the Draft Convention failed to obtain the necessary two-thirds majority.

II. Fifteenth Session

The 15th Session of the International Labour Conference will be held at Geneva, Switzerland, commencing the 28th of May. The items on the agenda include the following:

(1) Age of admission of children to employment in non-industrial occupations.

(2) Hours of work in coal mines.

(3) Review of all Conventions which have been in force for ten years, including those on unemployment, eight-hour day, age of admission of children to industrial employment, night work of young persons employed in industry, employment of women during the night.

The Canadian delegation is to consist of the Hon. G. H. Ferguson and Dr. W. A. Riddell, representing the Government, Mr. P. M. Draper, Secretary of the Trades and Labour Congress, and Mr. H. W. Macdonnell, Secretary of the Industrial Relations Committee, representing labour and the employers respectively.

III. Meeting of the Governing Body

At the request of the South African employer member of the Governing Body, i.e., the Board of Directors of the International Labour Organization, Mr. John R. Shaw, a past President of the Association, attended a meeting of the Governing Body held last

October in Brussels. This is the first time the Association has been represented at a meeting of this body which, in addition to preparing the agendas for the conferences, exercises supervision over the work of the permanent secretariat of some 422 employed at the headquarters of the Organization in Geneva. Mr. Shaw submitted an interesting report on the work of the Governing Body, emphasizing among other things the importance, from the point of view of a high-labour-standard country like Canada, of doing everything possible to bring about an improvement in the labour conditions in the less advanced countries.

Workmen's Compensation

In Alberta, Saskatchewan and Ontario increased benefits have been pressed for, including an increase in the scale of benefits from 66½ per cent to 75 per cent. These requests have been definitely refused in Alberta and Saskatchewan, and in Ontario a Royal Commission, appointed to investigate the whole question of the working of the Act, has held public hearings, at which the Association was represented, but has not yet made its report. In Alberta also a special committee has been appointed representative of the Government, the employers and the employees to carry out a thorough investigation and recommend any amendments which it may consider necessary.

It is of interest to note that the demands made by labour in Ontario included proposals that the scope of the legislation should be broadened to include a certain measure of both unemployment insurance and sickness insurance. Thus, it was proposed that injured workmen should continue to receive compensation, even after recovery, until they resumed their former work or secured other suitable employment. It was also proposed that the interpretation of the word "accident" should be broadened so as to include many disabilities which are not at present compensated for. The position taken by your Committee was, in brief, that it was no part of the function of a workmen's compensation act to provide unemployment or sickness benefit and that it would be altogether unsound and improper to extend the scope of the Workmen's Compensation Act in the manner proposed.

In Quebec a new Workmen's Compensation Act has been passed, modelled closely on the legislation in force in Ontario, the benefits being practically identical with those in Ontario and the right of self-insurance being accorded to the same class of employers as in Ontario, i.e., railway and navigation com-

panies, public utilities, municipalities, etc. The effort made to secure the right of self-insurance for the larger industrial corporations was unsuccessful.

In New Brunswick a Royal Commission has been appointed to report on the working of the Act, particularly on the financial side, but its report has not yet been made.

Minimum Wage Legislation

The only matters of note in connection with minimum wage legislation have been an amendment of the British Columbia Male Minimum Wage Act, making it clear that the Act applies to all male workers, and the demand in Manitoba to bring boys up to 18 years of age under the Act. This was successfully opposed by our Manitoba members on the same grounds on which a similar proposal was recently opposed in Ontario, the principal one being that such a provision would not be in the best interests of the boys themselves.

Thirteen Month Calendar

It will be recalled that at the 1928 Annual Meeting of the Association a resolution was passed favouring a change from the present calendar of 12 months of unequal number of days to a 13 month calendar of 28 days each, and offering the Dominion Government the co-operation of the Association in the event of a National Committee for Canada being set up.

It is of interest to note that National Committees on Calendar Reform have been set up in more than 30 countries, and that a Conference is to be held in October of this year for the purpose of considering and, if possible, agreeing to draw up, a Draft Treaty for Calendar Reform, to be submitted to the various countries for their ratification.

The 13 month calendar movement has made striking progress during the last three years. The United States National Committee reports that American opinion is very much in favour and that already a substantial number of large companies have adopted the new system. Similar reports come from Great Britain, France, Germany, Japan and other countries. In Great Britain, among organizations which have already adopted the new system, are all the railway companies, the General Electric and allied companies, the Imperial Chemicals and all chemical producers, the Miners' Federation, etc., etc.

Your Committee desires to express its approval of the proposed change as being in the interests of economy and efficiency and to recommend that it should be given all possible support.

Unemployment

It will be recalled that at the last Annual General Meeting a resolution was passed requesting the Industrial Relations Committee to make a special investigation into employment conditions along the following lines:—

1. To ascertain and to define the causes of the lack of employment, particularly at certain periods;

2. To consult with members of the Association and others in regard to these causes;

3. To secure part time employment at least, for those who are now out of work;

4. To suggest methods of providing additional opportunities which with those existing, will furnish all the people of Canada, who are willing to work, with employment at fair wages and under satisfactory conditions.

Pursuant to these instructions the Committee proceeded to make an investigation into unemployment in Canada with special reference to industry. Two circulars were sent out to the membership advising what the Special Committee was doing and asking for information as to the present situation and the outlook for the immediate future. The replies, which were unusually numerous, went to show that conditions were worst in the Prairie Provinces, next worst in British Columbia and Ontario, Quebec being somewhat better than the two latter provinces and employment in the Maritime Provinces being almost up to normal. The replies also showed that the great majority of employers were doing their utmost by regularizing employment, by manufacturing for stock and by carrying out repairs, etc., to keep a maximum of workers in at least part time work. It is of interest, in this connection, to note what striking results, in the way of reducing unemployment, have been achieved in a number of the large American concerns, by careful forecasting of the year's requirements and spreading production evenly over the year, by cutting out all possible overtime, by transferring people from slack to busier departments, by securing co-operation from customers in the way of regularizing the flow of orders, and other such methods.

Due to the continuance of unusual unemployment in Canada, requests are being made in certain quarters for a state system of unemployment insurance. The Alberta Legislature at its recent session passed a resolution in favour of unemployment insurance legislation and the governments of the three Prairie Provinces have asked Premier Bennett to convene a Dominion-Provincial Conference to discuss the subject. In the House of Commons on April 29th Premier Bennett declared that his Government was unalterably opposed

to any non-contributory scheme of unemployment insurance, but approved in principle of a federal contributory system of unemployment sickness and invalidity insurance, provided it was participated in by all the Provinces as well as by the Dominion, the employers and the employees. The Prime Minister pointed out that no satisfactory scheme could be devised until the most careful analysis had been made of the statistics of population and employment, which were now being compiled, and until satisfactory arrangements had been made with the Provinces.

The Premier also referred to one of the difficulties in the way of introducing such a scheme in a country like Canada, which has always impressed your Committee as being most serious, viz., the difficulty of applying such a system to agriculture, which still represents perhaps the largest single body of workers in the country, and which, along with other reasonable occupations, such as shipping, building, lumbering, etc., accounts for the bulk of ordinary unemployment in Canada.

It is apparent to all who give consideration to the question of federal insurance against unemployment, sickness and invalidity that it is a most important and far-reaching problem, including as it does such subsidiary questions as to whether or not agriculture, and such seasonal industries as fishing, lumbering, shipping and construction are to be included; and, if they are not included, what shall be done with their unemployed; and as to how the cost of a national system is to be fairly distributed over all sections of the population.

In view of the complexity of the whole problem, your Committee strongly urges members of the Association to study it carefully, during the coming year, particularly in its application to their various industries and also to the localities in which they live.

Old Age Pensions

It will be recalled that six of the provinces have now passed old age pensions legislation ancillary to the Dominion Old Age Pensions Act of 1926, under which the Dominion pays 50 per cent of the cost of the pensions. It has been intimated that the Dominion proposes, in the near future, to assume a substantially larger proportion of the cost. Your Committee feels that this is an appropriate time to reiterate the view which the Association took when this legislation was first introduced, viz., that the sound type of old age pensions legislation is not the non-contributory deserving-poor type, which has been adopted in Canada, but the contributory "all-in" type, under which no distinction is drawn

between the poor and the non-poor but both alike are pensioned, provided they contribute. Your Committee is convinced from its study of the experience of other countries that the principle of "selecting the poor" has been

proved to be unsound in that it encourages thriftlessness and fraud and saps that spirit of self-reliance and independence which is so essential to the social and political well-being of any community.

CANADIAN ENGINEERING STANDARDS ASSOCIATION

THE Canadian Engineering Standards Association recently published its 1930 Year Book, being the fifth of the series. The Association was organized during the latter part of the great war, at the suggestion of the British Board of Trade and the British Engineering Standards Association. This latter organization, the first central body to be established for the work of industrial standardization, was founded in 1901 and for fifteen years was alone in the field, all other national standardizing bodies having been founded subsequently to 1915. The Canadian Engineering Standards Association organization committee was formed in 1917, and immediately took up work on certain materials required for war purposes, and on January 21, 1919, letters patent were issued by the Secretary of State authorizing the formation of the Association. The Canadian Engineering Standards Association in age is the eighth on the list of twenty-one similar organizations throughout the world.

The main object of the Association is to promote the establishment of industrial standards by providing an organization to receive requests for standardization, investigate their desirability and arrange for the formation of committees, comprising representatives of both manufacturers and users, to determine standards that will be acceptable to all interests concerned. The Association itself is not concerned, nor does it take any active part, in the preparation of the specifications, but it reviews the findings of committees, to satisfy itself that the standards have been properly prepared, and finally arranges for their publication and issue as Canadian Standards.

In addition to the above, other objects of the Association are enumerated in its Charter as follows:

1. To co-ordinate the efforts of producers and consumers for the improvement and standardization of engineering products.
2. To promote the general adoption of engineering standards, and to revise and amend such standards when necessary.
3. To register, use and protect distinctive marks or names as applicable to materials or products which are in accordance with standards.

4. To make arrangements with governments or other authorities, to obtain from them privileges and concessions conducive to the objects of the Association.

The Association operated until 1925 with funds provided by grants from the Department of Trade and Commerce of the Dominion Government, and by subscriptions received from various industrial firms and technical organizations. In 1925, however, on account of the imperative necessity for economy, the grant from the Department of Trade and Commerce was withdrawn, but the National Research Council of Canada, realizing the importance of the work being carried on by the Association, made arrangements to guarantee the budget, with the understanding that special efforts be made to obtain financial support from Canadian industry. The Year Book reports that the financial support secured from industry has been steadily increasing. Sustaining memberships have now been fixed at fifty dollars per annum but firms may subscribe for as many memberships as they desire.

The Association is organized on a basis similar to that adopted by the British Engineering Standards Association. The members of the Association serve on its various committees gratuitously, giving it the benefit of their technical or business experience in the preparation of the various standards. The work of the Association is under the general direction of a main committee, which appoints a chairman, two vice-chairmen and an honorary secretary. These constitute the Executive Committee. The detailed work is handled by a paid secretary and staff with headquarters at Ottawa. Nominations for membership on the Main Committee are received from such bodies as the Canadian Manufacturers' Association, Canadian Electrical Association, the Institute of Civil Engineers, the Engineering Institute of Canada, the Canadian Institute of Mining and Metallurgy, National Research Council of Canada, McGill University, University of Toronto, Montreal l'Ecole Polytechnique and Trades and Labour Congress. Representatives of the various departments of the Dominion Government are *ex-officio* members, and other members are co-opted from universities, engineering schools, railways, important

industrial firms and associations and consulting engineers. At the present time sectional committees of the Association cover the following branches of engineering: civil engineering and construction; mechanical work; electrical work; automotive work, including aircraft; railway work; ferrous metals; mining machinery.

The Canadian Electrical Code, which reached its second edition in 1930, is now operating under provincial acts in the provinces of Nova Scotia, Quebec, Ontario, Saskatchewan, Alberta and British Columbia. In New Brunswick it is expected that legislation will be presented during 1931 and it is also hoped that adoption will be secured in Manitoba. In Alberta the new Act went into force on September 1, 1930, and is now being administered under the direction of the Fire Marshal at Edmonton. The second part of the Act covering regulations for licensing of electricians, has not yet been approved and is awaiting endorsement by the different municipalities.

The Western Canada Fire Underwriters' Association, with headquarters at Winnipeg, which has jurisdiction over the three prairie provinces, officially adopted the Canadian Electrical Code in June, 1930. The Code has also been adopted by the city of Calgary and is now used in the city of Winnipeg and by the Manitoba Department of Labour.

At a meeting of the New Brunswick Union of Municipalities held in August the Canadian Electrical Code was officially endorsed and recommendations presented to the government that it be adopted. A meeting of the Provincial Code Committees of Manitoba, Saskatchewan, Alberta and British Columbia was held in Calgary in September, and a meeting of the Code Committees of Ontario, Quebec, New Brunswick and Nova Scotia was held in Saint John in November, to discuss Code revisions and experience in the operation of the Code.

The National Bureau of Economic Research of the United States

Official recognition has been given in the United States to the National Bureau of Economic Research (U.S.A.), an organization for "impartial fact-finding as a basis for constructive social action" which has just completed the first ten years of its existence. Early this year the President's Committee on Economic Changes placed under the Bureau's direction the preparation of a further report on "Recent Economic Changes." The Bureau had published in May, 1929, a substantial report on this subject, in two volumes, giving a survey of the period from 1922 to 1928. That inquiry, which dealt with a long period of business activity, will now be continued with an examination and analysis of the great depression which began in midsummer, 1929. The Bureau will shortly publish the results of extensive studies that have been in progress on the subjects of the Business Cycle, Wages, Employment, Incomes, Bond Yields, Interest Rates, Profits, Price Trends, Health Insurance, Mechanization, Migrations, and other matters relating to the economic situation prevailing to-day.

The National Bureau of Economic Research consists of a Board of permanent officers, the directors being representative of business and labour and also of political science. The "directors at large" are as follows: Messrs. Harry W. Laidler, executive director, the League for Industrial Democracy (president); Oswald W. Knauth, executive vice-president,

R. H. Macy and Company; Thomas W. Lamont, member of the firm of J. P. Morgan and Company; L. C. Marshall, Institute for the Study of Law, Johns Hopkins University; George O. May, member of the firm of Price, Waterhouse and Company, New York; Elwood Mead, United States Commissioner of Reclamation, Washington, D.C.; George Soule, director, the Labour Bureau, Inc.; N. I. Stone, industrial and financial consultant, New York; Matthew Woll, president, Union Labour Life Insurance Company.

The following directors are appointed by the universities: Professor Adams, Yale University; Professor Commons, University of Wisconsin; Professor Gay, Harvard University; Professor Millis, University of Chicago; Professor Mitchell, Columbia University; Professor Willits, Wharton School of Finance and Commerce, University of Pennsylvania.

Representative organizations appoint other directors, as follows: Messrs. Hugh Frayne, American Federation of Labour; David Friday, American Economic Association; Lee Gallo-way, American Management Association; Chester H. Gray, American Farm Bureau Federation; George E. Roberts, American Bankers' Association; Malcolm C. Rorty, American Statistical Association; A. W. Shaw, National Publishers' Association; Robert B. Wolf, American Engineering Council. The research staff of the Bureau is in charge of Professor Wesley C. Mitchell.

TREATMENT CENTRES ON THE CANADIAN NATIONAL RAILWAYS

THE Canadian National Railways have within recent years developed a system of Treatment Centres at some of the principal points on the line in the nature of what is popularly known as industrial medicine; the object of which is both preventive and curative. These have been long enough in operation to prove of great benefit to the employees, and incidentally to the Railway itself. They help keep fit the vast army of employees scattered throughout the System, and by so doing maintain a more efficient railway staff, healthy, keen and alert in their duties, and as a result a more efficient service to the public may be expected.

A description of the first Treatment Centre operated for the benefit of the nine thousand employees on the Island of Montreal, will perhaps give an idea of the service rendered to the employees of the Railway through its Medical Staff. This service is available from 9.00 a.m. to 5.30 p.m. with all the necessary medical and surgical equipment, with doctors and nurses in attendance, in order that the members of the Canadian National family may take advantage of it whenever they so desire.

This Treatment Centre, which is situated in the Shaughnessy Building on McGill street, was officially opened in June, 1928, by the chairman and president, Sir Henry Thornton, in the presence of many of the officers and employees of the Company, and is but one of the many developments in the Medical Department which have taken place since Doctor John McCombe assumed the duties of Chief Medical Officer in March, 1928. The Treatment Centre on McGill street is practically the same as an outdoor department of a large modern hospital. No charge is made for the various examinations and treatments given. The Centre contains administrative offices; rest rooms; a room for physio-therapy apparatus, subdivided into cubicles for treating several cases at the same time; a dispensary; an X-Ray room in charge of a trained nurse; an operating and surgical dressing room; a consulting room for the treatment of nose and throat cases and for special examinations for vision, colour sense and hearing.

In addition to the staff which renders service in the administration of the Centre, there is a doctor in attendance from 9.00 a.m. to 1.00 p.m. and from 2 to 5.30 p.m., two doctors each are on duty for half the day, and a third doctor is on full time duty who devotes his whole time to the work of the four emergency hospitals, and such other special work as is from time to time assigned to him. There

is also a trained nurse on duty all day who assists the doctors in turn, looks after instruments, dressings, and prepares patients.

The physio-therapy department is in charge of a physio-therapist trained in this branch of medicine and in radiology. Physio-therapy is the use of natural forces, such as electricity, light, heat, air, water and exercise in the treatment of disease; and thus is treatment by light, electricity, water, massage and manipulation.

In addition to the work already outlined, the Treatment Centre makes physical examinations of all applicants for insurance in the Grand Trunk Railway Insurance and Provident Society, and gives special sense examinations in sight, hearing and colour vision, for all train service employees required to pass such tests.

In connection with the Treatment Centre, small emergency hospitals were opened in Montreal at the Point St. Charles Shops, Turcot Roundhouse, the offices in the Belgo building, on St. Catherine Street West, and the Canadian National Telegraphs, all under the care of fully trained nurses, with a doctor visiting each one daily for consultations, treatment and instructions.

In addition to these hospitals, the Company has in Montreal a modern motor ambulance and an automobile convertible into an ambulance for reclining patients when necessity requires. This car is used to transport disabled employees from their homes to the Centre, or to hospital, sometimes covering long distances for this purpose. It is also used to convey the doctors from the Treatment Centre to and from the various emergency hospitals. In enlarging the Medical Service, the Chief Medical Officer saw the necessity of establishing a pathological laboratory, which, in addition to dealing with matters usually undertaken in laboratories associated with hospitals, also renders a special service to those thousands who use trains, steamships, hotels, restaurants, and summer resorts each year, by examining and testing water, milk and other food supplies. In its every day work, the laboratory functions as an aid to proper diagnosis. Among the many diseases which require laboratory assistance in making a correct diagnosis, are diphtheria, typhoid fever, so-called sore throats, often due to the action of harmful bacteria. In assisting the Medical Department, through its physicians, to detect disease in its early stages, the laboratory plays a most important part in the general scheme.

The Medical Treatment Centre, as described, is only part of the activities of the Medical Department, which by degrees, as the staff and equipment may be secured, is continually branching out, so that eventually, the whole system will be taken care of from a medical point of view.

Up to the present time Centres have been established at Halifax, Toronto, Winnipeg, Edmonton, and Vancouver, in addition to the main centre at Montreal. Work is at present

progressing for the establishment of a centre at Moncton.

The Centre does not attempt to dig into the employees' past medical history, and possibly bring to light some hidden defect in their make-up. It is there solely for the employees' benefit. An employee's history is as safe in the Medical Centre as it would be in the home of his family physician. It is this feature of the medical work which is greatly appreciated by the employees generally, and makes for the real success of these Centres.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Training in Schools

Safety training in technical and public schools is being widely recommended in Canada and the United States. The Hon. Geo. S. Henry, Premier of Ontario, recently announced the provincial Department of Education is co-operating with the Ontario Safety League by supplying posters and blotters to schools and by urging teachers to have their classes write one composition each week on "carefulness" and its various phases. He pointed out that any appreciable decrease in accidents, minor or fatal, not to mention the number of vacant desks in class-rooms, largely depends on how principals and teachers co-operate in this work.

The Massachusetts Department of Education has recently published a course of study in safety education, compiled by a committee of principals and supervisors in the State, for the elementary and junior high school grades. The subject matter of this course includes many phases of safety education, the selection of which sometimes depends on the dictates of the community or the season of the year. In addition to highway safety, which has received the greatest emphasis, it is sought through the school child to decrease the number of home accidents. Safety at school, at play and in celebration; fire prevention and its bigger sphere of conservation; winter safety; vacation safety; industrial safety; safety in the use of gas and electricity; safety in rural communities and safety through health are the chief subdivisions of this subject.

Medical Clinics on Canadian National Railways

Reference was made in the LABOUR GAZETTE, May, 1930, page 543, to the recent establishment by the Canadian National Railways of a system of health centres for their employees. Since 1928, a serious effort had been made to

establish a medical department in charge of an experienced practitioner. The company employs some 109,000 people, and the first health centre under the present scheme has been established in Montreal, where about 9,000 of the railway staff concentrated. This central medical treatment office is in charge of Dr. John McCombe as Chief Medical Officer. All employees of the company are entitled to free advice and treatment, and, when required, specialists are called in for consultation at no charge to the patient. The doctors are in attendance from 9 o'clock in the morning till 5.30 in the evening, and a trained first-aid specialist is at hand for attending to any accident to those on the night staff. The main treatment centre is virtually an out-patient department of a modern hospital, including departments specializing in diseases of the eyes, ears, nose, teeth and throat. There are also rest-rooms for the nurses, a completely equipped operating theatre, and surgical dressing department. In addition to the centre which has now been established at Montreal, the nucleus of similar institutions has been set up at Toronto and Winnipeg, and plans are being considered for a similar centre at Moncton.

In addition to the central health centre there are established at the various workshops emergency offices where first-aid is rendered on the spot. An ambulance is provided to carry patients to the main treatment centre, to hospitals or their homes.

Proposed Safety Code to Control Dust Explosions

A new safety code for terminal grain elevators was presented before the annual meeting of the National Fire Protection Association at Toronto, on May 12, by Mr. David J. Price, chemical engineer of the United States Department of Agriculture,

who is chairman of the association's committee on dust explosion hazards in industrial plants. In addition to the new regulations for grain elevators Mr. Price's report included recommended safety codes for flour manufacturing establishments, spice grinding plants, starch factories, and sugar and cocoa pulverizing plants.

In addition to the Committee report on dust explosions, Mr. Price also presented a report on the Department's study of farm fires and methods for their control.

Decline in Accident Severity in U.S.A.

Data collected by the United States Bureau of Labour Statistics and presented in the *Monthly Labour Review*, May, 1931, show that, for 30 manufacturing industries combined, the frequency of accidents increased from 1928 to 1929. During 1929, 26·94 accidents occurred in these industries for every 1,000,000 man-hours worked; this was an increase of 3 per cent over the preceding year. Accidents were less serious in 1929 than in 1928, as measured by time loss. In 1929 the severity rate was 4 per cent less than in 1928; in 1929, 2·42 days were lost because of accident for every 1,000 man-hours worked, whereas in 1928 the loss was 2·52 days. Although the group as a whole showed an increased frequency rate, certain industries reduced their frequency rate; among these were the automobile tire; glass; lumber; chemical; steam fittings, apparatus, and supplies; and structural-iron industries. Noteworthy reductions in the severity of accidents occurred in the boot and shoe, chemical, electrical machinery, sawmill, pottery, structural-iron, and steam fittings, etc., industries.

Diseases caused by Pneumatic Tools

In a review of a work by Dr. Seyring, a professor of industrial pathology in Germany, the *Journal of Industrial Hygiene* (February, 1931) states that "contrary to expectation, pneumatic tools have not been found to cause much occupational trouble. The subject has been investigated in Germany and in England; there are, however, certain results, after prolonged use of the tools, upon the vascular system, the muscles, and the joints. Raynaud's disease is described among cleaners of castings with pneumatic tools. The right hand holds the handle of the tool, and the left the chisel itself. General health is unaffected; but a high percentage of workers complain of dead fingers with loss of sensation, as if the fingers had been put in cold water. Of those who had worked three years, half complained. Of ninety positive cases,

sixty had trouble only in the fingers of the left hand; five in the right hand only; and the remainder partly in both hands. The little finger is almost always the one most affected; and one man attributed gangrene of his little finger to this cause. Severe forms occurred only among men over 50, and arteriosclerosis may then be a factor. The affections of the muscles are much rarer than those of the vascular system, and only three were found. They all had atrophy of the muscles of the ball of the thumb and the neighbouring muscles, and in one case there was atrophy of the extensors of the thumb with sensory disturbances. This atrophic condition is probably due to direct pressure on the muscles and nerves, and the median nerve in particular. Ten cases of joint trouble were found, and in eight of them the right elbow was concerned. They were mostly hewers in mines. The duration of work before the joint trouble varied very much. In one case it was three years, but usually it was from six to ten years."

Another review appearing in the same publication of a French study by Dr. A. Fiel, states that "an examination of twenty-three men employed on road repairing indicated that they experienced some trouble from using pneumatic tools, of which the most characteristic was a sensation of deadness in the fingers of the right hand, with some diminution in sensation and power. This symptom was more severe in cold weather. Some men also had muscular cramps, and trembling of the hands. Slight deafness and buzzing in the ears was also fairly general. But these phenomena were not severe; they particularly affected young men, who had not become used to their work; they were slight or non-existent for older workers who had become adapted to their occupation, and knew how to use their pneumatic tools with the least effort. The author considers that work with these tools should be limited in duration and should be alternated with other work which does not bring the same muscles into play."

Bell Telephone's Accident Prevention Work

The safety work of the Bell Telephone Company of Canada was outlined by Mr. P. A. McFarlane in an address to the Industrial Accident Prevention Associations of Ontario at their recent convention (*Labour Gazette*, May, 1931, page 561). An account of the methods used by this Company for preventing accidents was given in the issue of June, 1929, page 646.

Mr. McFarlane placed stress on the need for general co-operation between management and employees: "the personnel policy of the Bell system seeks", he said, "to bring out and develop the best qualities in each individual and weld the individual performance of each into a competent and harmonious team-playing group, in a business of which we are all a part." The company develops the initiative and judgment of the employees by the following definite methods: (1) The creation and maintenance of a safety morale, one important step in this being to impress upon all management officials their responsibility for making every job a safe one; (2) practical instruction of employees in accident prevention and safety measures; (3) the establishment and operation of an effective system of inspection for the purpose of becoming informed regarding the presence of hazardous conditions in the plant; (4) the construction of a plant and equipment as free as possible from hazards and the maintenance of plant and equipment in that condition so that all work may be done in a safe manner with safe tools.

The company aims at creating in the foreman the feeling of responsibility for the safety of his men, instructing him in the safety methods which he must employ, and the safeguards which he must place around all the activities of his gang. "The foreman alone is in a position to know his men thoroughly, and should be their teacher, adviser, leader and personal friend. He is in the best possible position to influence their mental attitude toward safety. He must be made to understand that the management will aid and support him in all his efforts to promote safety, and that the safety of the employees is paramount in the judgement of the management."

In regard to First Aid Instruction the company has received many reports of accidents where employees through their first aid knowledge have been able to relieve suffering or to save life. In 1930 practically all employees in the plant organization were qualified "first aiders."

Accident Investigating Committees investigate all major and fatal accidents and report their findings and decisions. They are generally competent and decisive. As a rule one representative of management—the safety supervisor—is a member; the other three or four are from the ranks of employees.

The original safety code was drawn up in 1922 by a committee formed mostly of employees. Suggestions were invited from all employees in the Company and these were sorted, discussed and finally decided upon by this Committee. In 1926 the code was revised and suggestions again invited from all employees. When they were received, draft codes were made up and submitted to groups of employees for discussion and later a special representative was elected by the employees in each of the divisions to sit on the Committee for the final adoption.

The results of this safety organization are seen in the record of the largest employment group for the past five years, which shows the ratio of accidents to each thousand employees as follows: 1926, 1.86; 1927, 2.70; 1928, 2.29; 1929, 1.37; 1930, .60.

From 1926 to 1930 the company spent over half a million dollars in connection with its accident prevention work.

Safety caps and safety shoes are being supplied for the use of coal miners in Cape Breton. It is stated that the men are not compelled by the company to use these articles, but may secure them on payment of the cost, the amount being deducted from their wages. The caps are made to protect the wearers' heads when they strike against cooms or props in low seams; and the shoes are constructed to guard the feet against falling objects. It is hoped that these special caps and shoes will reduce the number of accidents considerably.

The week commencing May 17 was observed in Manitoba as "Accident Prevention Week" the Provincial Government having issued a proclamation appointing such an observance in order "to impress on the minds of the people of this province the necessity of at all times fostering such habits as will reduce preventable accidents to a minimum."

The director of the Bureau of Safety of the Interstate Commerce Commission (United States) reports that the number of railway workers who were killed last year in the course of their employment was 935, this figure representing a decline of 30 per cent from the figure for 1929, which was 1,348. The total number of workers who were injured declined from 60,090 in 1929 to 35,325 in 1930, a decline of 41 per cent.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Fifteenth Session

THE Fifteenth Session of the International Labour Conference opened at Geneva on May 28. The official report of the proceedings is not available at the time of going to press, but a full account will be given in the next issue, together with the text of the Draft Conventions and Recommendations adopted by the Conference. The agenda, as stated in the last issue, comprised the following items:

(1) the age of admission of children to employment in non-industrial occupations; (2) hours of work in coal mines; and (3) partial revision of the Convention concerning employment of women during the night. Reports have been issued by the International Labour Office dealing with each of the above-mentioned items.

Items (1) was the subject of a preliminary discussion, with a view to the possibility of adopting a Draft Convention or Recommendation at the 1932 Session. Item (2) dealt with a subject which was before the Conference in 1930, on which occasion a Convention was drafted dealing with the restriction of hours of work in coal mines in European countries, which failed, however, on the final vote to obtain the necessary two-thirds majority. This year's Conference was to decide

whether the subject should be finally dealt with this year. Item (3) related to minor amendments which had been proposed in the Convention concerning employment of women during the night as the result of the experience gained under the Convention since its adoption in 1919.

The Canadian delegates to the Conference were as follows:—

Representing the Dominion Government:

The Hon. G. Howard Ferguson, High Commissioner for Canada in London.

Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva.

Adviser to the Government Delegates:

Mr. V. A. Sinclair, K.C., chairman of the Ontario Workmen's Compensation Board.

Workers' Delegate:

Mr. P. M. Draper, secretary-treasurer, trades and Labour Congress of Canada.

Employers' Representative:

Mr. H. W. Macdonnell, secretary of the Industrial Relations committee of the Canadian Manufacturers' Association.

Annual Report of the Director of the International Labour Office

This year the report of the Director appears in a new form, being divided into two separate parts: the first consists of an annual review giving information on the internal developments in the International Labour Organization, its work, the great social movements in contact with it, and the legislative results, both national and international, obtained during the year on questions of the protection of the workers, social insurance, etc. In the second part the Director reviews the more urgent problems with which the Organization is faced, the outlook for the future, and the general policy of the Organization.

Ratifications

The Director reports that rather unsatisfactory progress was made last year by the member States of the Draft Conventions, and remarks that "if the States do not strictly observe the provisions of Article 405, or if they observe them only in the letter by laying the Draft Conventions before Parliament but without endeavouring to ratify them, then

the principle of mutual obligations on which the Organization is based will be undermined and the future of the Organization is doomed. Criticisms levelled against the work of the Organization have come mainly from persons who have declined to co-operate in its work, and the Director points out that "all that is wanted is the will to work it and to overcome the obstacles which hinder its operation."

The report discusses some of the obstacles to ratification. A number of these difficulties have already been partly removed, or have completely disappeared. In the view of the office, few of them could withstand close analysis or hold out against a firm desire for international agreement. Hitherto, one of the difficulties referred to has lain in the federal constitution of certain of the member States, which results in a division of the legislative authority necessary to give effect to the Conventions. The Director finds encouragement in the fact that some of the federal States are showing anxiety to receive full credit for the measures of social progress that have been taken by their constituent

legislatures in conformity with the decisions of the Conference. In this connection the report refers to the request of Mr. Gerald H. Brown, Canadian Government delegate to the Fourteenth session, to indicate in its tables showing the progress of ratifications the position of legislation in countries with federal constitutions in reference to the Conventions. In pursuance of this request the office proposes henceforward to indicate, in the tables periodically published in *Industrial and Labour Information*, the Conventions which are wholly or partially applied in federal countries. Another charge of ineffectiveness that has been brought against the Organization is based on the alleged failure of different countries to enforce Conventions they have ratified. The report states that this difficulty is disappearing. "In point of fact", the Director continues, "the most frequent difficulty in the work of ratification, the one which is still responsible for such unsatisfactory results as those of 1930, is primarily the fact that in the majority of cases Governments, and even the workers, the party most directly concerned, do not sufficiently realize in daily practice the immediate and real value to them of international labour legislation. After ten years—and who could honestly feel surprise?—the generous sentiments of 1919 which were enshrined in the words of the Peace Treaty have not secured such a hold on the world as to impel Governments almost automatically to put into effect the social reforms to which those sentiments pointed the way. Does this mean that the enthusiasm and faith manifested immediately after the war have evaporated, or that the idea of social justice has lost its force? It is noteworthy that each time a fresh appeal is made to the old spirit, to the Charter of 1919, it does not fall on deaf ears. . . .

"Another obstacle is a natural hesitation on the part of the Governments to risk their own existence, which sometimes is precarious enough in any case, on measures which they regard as too chivalrous and which they feel find only half-hearted support in public opinion. In this connection there is nothing more striking than the present situation with regard to the Washington Convention on the eight-hour day."

On the subject of ratifications and practical legislation the Director concludes by pointing out that "there can be no true and complete international life until the Office's reminders, urgings and appeals are no longer needed, but Governments and peoples understand and feel spontaneously and continuously the

direct, practical and fundamental value to them of international agreements. For the present the only course to pursue is more intensive publicity and intervention, availing itself of all opportunities and carried on with unflinching courage."

Conditions in 1930

The most serious obstacle, however, to the progress of ratification is the economic difficulty. Referring to the general depression in 1930 the report states that "never have the immediate or permanent burdens which social reforms can impose on production appeared more difficult to undertake or more dangerous. There is no doubt but that therein lies the essential reason for the meagre progress made during the year at present under review. The economic depression has affected every movement, every effort for social improvement, including the activity of the International Labour Organization. Every chapter, almost every page, of the *Annual Review* for 1930 contains a melancholy record of this influence. . . . When, for example, reductions in working hours were suggested for industry, Governments and public opinion hesitated, in spite of the fact that such reduction seemed calculated to cause a temporary or lasting fall in the number of unemployed. It was doubted whether this was the time to undertake such substantial reorganization: one does not change horses in midstream. . . . A few comparatively simple reforms were contemplated for the housing and living-in conditions of agricultural workers, and for the stabilization and possible increase of their wages; but the slump in markets for agricultural produce has diminished the sources from which the necessary funds might have been obtained, either by law or by collective agreement, for the benefit of these workers. Even the co-operative movement, which was able to show its special advantages at a period when retail prices were slow to fall, by bringing them more rapidly into harmony with reduced wholesale prices, has been hampered by the decreased consuming power of the masses. . . .

"Further, the working of insurance institutions is becoming more difficult and their resources are declining. Unemployed no longer pay contributions; sometimes wages fall, and this means a decline in contributions as well as less regularity in payment. Insurance funds can count themselves lucky when the State itself is not in arrears with the subsidies which it undertook to supply. Meanwhile increasing expenditure has to be met. Unemployment means greater morbidity, and the older unemployed, losing hope

of finding work, try to obtain an invalidity pension from the insurance funds earlier than would otherwise be the case. Besides, although the principle of social insurance is not and cannot be called in question (and the depression itself has served to demonstrate its need), the controversy on social charges has become more acute. The policy of economy is being advocated with fresh force. Endeavours are being made at all cost to reduce benefits, even if this means a return to public relief. Steps are also being taken to reduce contributions and to introduce stricter and more frequent supervision, though these measures have not really proved profitable."

The director sums up the effects of the depression upon the workers as follows:—

"Once again thousands of human beings are suffering the material and mental torments of unemployment: the sudden loss of earnings, sometimes foreshadowed by a brief period of partial unemployment, but depending on mysterious and inevitable causes beyond their comprehension; the despairing hope of finding fresh employment, with constant applications to one factory or workshop after another and long and fruitless visits to employment exchanges; the resigned acceptance of unskilled jobs which corrupt occupational skill, but which only a fortunate few are able to obtain. Soon the savings of years amassed with considerable effort disappear; small insurance policies recently taken out have to be surrendered; possessions must be pawned; the mother of the family has to leave home in place of the husband to earn some modest sum by casual work; the children have to go to work too soon and will shortly prove competitors on the labour market; sometimes, last of all, after considerable privation and under-feeding, there comes the necessity of appealing for relief to public charity. This long and gradual decline, step by step, into the depths of misery means not only the destruction of future plans, not only discouragement and despair, but also family friction and quarrels and even moral degradation. . . .

"During the last few months, however, even in countries where insurance exists, the position has become much more serious. No doubt the unemployed are sheltered against suffering for a certain number of weeks. Unemployment benefit has enabled them to accept the loss of employment without too much difficulty and to return to work without being crushed by a weight of debt. All the same, in some countries, particularly Germany and Great Britain, there is a growing number of workers who have been unemployed for months and months, if not for years."

After a reference to the social dangers resulting from such conditions the Director proceeds to outline the activities of the International Labour Organization in the face of the depression. At the last session of the conference a resolution which was unanimously adopted requested the Office to pay special attention to the unemployment crisis and suggested certain definite studies which should be undertaken on various aspects of it. These instructions have resulted in the collection by the Office of a mass of information on topics suggested by the Governing Body, and in certain recommendations that are laid before the Conference in the present report.

The Economic Depression

In this section of his report the Director describes the extent causes and possible remedies of the depression, as outlined by the Governing Body early this year. He notes the unprecedentedly high rate of unemployment, which has doubled in the past year. As to the causes, it is stated that there has been an accumulation of economic disturbances, the result both of cyclical depression and of the upheavals of the war and post-war periods. "But what has made the present depression exceptionally serious," the Director states, "especially since the middle of 1930, and has prevented the recovery which experts felt would occur about that date, was the intervention of other disturbing factors—the agricultural depression, certain monetary and financial factors, the consequences of post-war political, and financial and industrial settlements, and also the lack of confidence and the anxiety as to the future which gripped public opinion generally."

The agricultural depression is attributed to "excessive production of certain agricultural products said to result partly from exceptionally good harvests and partly from an increase in the amount of cultivated land due to faulty estimates of the demand, which is sometimes diminished by under-consumption, leading to inability to sell, to a decrease in the purchasing power of the rural population and consequently to a contraction of outlets for industrial products."

Industrial over-production, another of the "causes," is analyzed in the report, being described as the result of maladjustment between the production of certain industrial products, such as raw materials and industrial equipment, and the markets' power of absorption. In regard to the monetary problem, and especially that connected with gold, the Director amplifies the statement of the Governing Body that "the alleged inelasticity in the links whereby effective purchas-

ing power, as expressed in currency and credit, is held by some to be connected with the world's available gold supply and to have been a factor in the unprecedented fall in world prices." Another section of the report deals with the proposition that "lack of confidence, which is often said to be the cause of an inadequate distribution of gold, of an imperfect circulation of capital and a restriction in the granting of credits and which, by preventing the financing of countries which are in need of capital and the development of the purchasing power of consumers, is said to have made it impossible to restrict the fall of world prices."

A fifth cause of the depression that is dealt with by the Director, is "the fall in the price of silver, which is said to have brought about a considerable decrease in the purchasing power of countries whose currency is based on that metal, a purchasing power already reduced by the political conditions in some of those countries."

Other factors in the situation that are dealt with in the report are as follows:—

The disturbances in international commerce caused not only by the development of new industrial areas but also by artificial barriers put in the way of international trade and by the difficulties said to be associated with the problem of political debts.

The difficulties in the way of adjusting movements of population to the possibilities of exploiting the resources of the world.

The disorganization of the labour market caused by the extra-rapid development of labour-saving machinery and of the process of rationalization.

The Director points out that the Economic Organization of the League of Nations is better equipped than the Office for a study of the foregoing causes, but on the other hand the International Labour Organization, "because of its collaboration with occupational groups or by reason of the moral, social or humanitarian aspects of the problems concerned" has often been able to make definite contributions to the solution of economic, financial and other questions in the past.

Action by International Labour Organization against Unemployment

It is recalled that the International Labour Organization, for the last ten years, has been taking action against unemployment: Conventions and Recommendations have been adopted, ratified, and applied by the States Members. Studies have been published with practical and definite conclusions. Without any previous economic investigations but simply on the basis of experience of long

standing, a considerable number of measures have been defined and applied.

Replying to criticisms of the action of the I.L.O. as being ineffective in coping with the evil of unemployment, the Director remarks that "social palliatives applied in proportion to the suffering which they are intended to relieve may eventually make profound economic changes inevitable. What started from a duty of charity or solidarity will inevitably bring about a revision of the rules and methods of social organization."

The Office concludes this section by making the following recommendations to the Conference:—

(1) That it should request the Governing Body to convene an advisory conference of placing experts, with a view to studying the placing methods followed in the different countries and the new practices and measures adopted in recent years, and to establishing co-ordination between national placing systems as provided for in the Washington Unemployment Convention:

(2) That it should request the Governing Body to instruct its Permanent Migration Committee to study, with a view to practical results at an early date, general programs for promoting migration and the utilization of undeveloped land:

(3) That it should request the Governing Body to consider the advisability of putting the question of unemployment insurance on the Agenda of an early Session of the International Labour Conference:

(4) That it should request the Governing Body to arrange for the collaboration of the International Labour Office with the competent bodies of the League of Nations (Economic Organization, Transit Organization, Commission of Enquiry for European Union, etc.), with a view to a policy of public works, national and international.

"If resolutions on these lines are adopted and if the courses of action they recommend are pursued energetically, it will soon be found that these measures are not merely palliatives, but that they are the first steps towards really organizing the labour market as a whole and will produce far reaching results for the prevention of unemployment. If the International Labour Organization set out to develop them, and them only, it would have deserved well of the working classes of the world."

Hours of Work, Wages and Unemployment

In addition to the direct forms of action suggested in the preceding section, the Director considers that the International Labour Organization might consider furthering other

measures for the protection of the workers which would indirectly tend to reduce the volume of unemployment. Such measures would deal with the questions of shorter hours of work and the economic level of wages. Discussing shorter hours the report states the opposing views of employers and labour on this subject, but suggests that the exigencies of the depression have created some *rap-prochement* between the two standpoints, and that "some form of concerted action might well be considered."

The Director suggests that fresh international endeavours should be made to secure ratification of the Washington convention; that "after the excessive use of overtime by industry throughout the world" the object should be to limit overtime more strictly; and that an immediate advance on the 8-hour day rule might be made in certain industries, such as that of coal mining. He next discusses the problem of the wage level and its relation to unemployment. "For ten years past," he says, "in the international field especially, the Office has had experience of the almost insurmountable difficulties in the way of any direct intervention in the matter of wages. The teaching of the pioneers of social legislation, is that action should be taken in other directions and that it is, so to speak, only by an oblique movement that any influence can be exercised on wages. The best qualified experts on wage movements also recommend great patience and prudence. It seems clear, nevertheless, that disequilibrium between wages and production and between wages and capitalization lies at the root of the present troubles. Needless to say, the Office would be glad to welcome in the near future any reliable suggestions or courageous attempts for discovering the principles of a rational wages policy."

The Director expects that a solution of the exceptional difficulties of this generation will be found; "Will it some day soon become possible," he asks, "in every country and in every industry, to conceive in the light of movements in productivity, an adequate distribution of income between capital and labour, between profits and wages? Could a properly balanced development of equipment and consumption, of supply and demand, be brought about and maintained? Has the time come when national and international bodies, furnished with the necessary information, and on which all the interests affected are represented, will be in a position to make general proposals of a practical character which would at one and the same time promote the regular and continuous development both of the different branches of production and of the well-being of the masses?"

"The situation should not be underestimated. If the modern industrial world is to fail to achieve such projects as these, which have hardly even been outlined and are still vague but which have been suggested by the prevailing disorder and distress, if it cannot find the courage and intelligence necessary for creating the new order, the order of peace and justice, then a spirit of despair, a spirit of destruction and revolt, for which ready-made formulæ are at hand, will almost inevitably produce most serious upheavals—just at a time, too, when it has undoubtedly become possible to create new instruments for organization and civilization.

"This must and can be avoided. By courageously making a beginning with joint action, on a modest scale but in the right direction, and by confidently developing its possibilities, the International Labour Organization can show that the strength, intelligence and faith necessary for discharging the task imposed on this generation are forthcoming."

Action taken by Provinces of Canada on Conventions of the International Labour Conference

A change, of special interest to Canadians, has been made by the International Labour Office in a chart which is issued monthly from Geneva dealing with the ratification of Conventions of the International Labour Conference and the legislative or other measures applying these Conventions in various countries. In the case of federal countries like Canada no attempt had been made previously to indicate the extent to which Conventions were applied by provincial or state bodies. The chart, therefore, did not do full justice to Canada on account of the fact that in this country much of the legislation on labour

matters has been passed by the respective provincial legislatures. The Canadian representative on the Governing Body of the International Labour Office at Geneva had urged the desirability of amending the chart in such a way as to indicate the legislative or other action in federal states which had been taken by provincial and state authorities on Conventions emanating from time to time from the International Labour Conference. The Canadian Government delegate in attendance at the Fourteenth Session of the International Labour Conference in 1930 had also asked the Office to indicate more adequately

in its ratification charts the legislation existing in countries with federal constitutions like our own. The request made by the Canadian Government delegate on this occasion was accepted by the Director and has now been implemented in the ratification chart issued by the International Labour Office for the month of May.

In addition, Canada is credited in the amended chart, as we have been for some time past, with the ratification of the Berne Convention for the prohibition of the use of white phosphorus in the manufacture of matches, together with the following Conventions of the International Labour Conference:

(1) Minimum Age for the Admission of Children to Employment at Sea;

(2) Unemployment Indemnity in case of Loss or Foundering of the Ship;

(3) Minimum Age for the Admission of Young Persons to Employment as Trimmers or Stokers; and

(4) Compulsory Medical Examination of Children and Young Persons employed at Sea.

In addition thereto, Canada is credited with the legislative or other action taken by the provincial authorities applying the following Conventions of the International Labour Conference in part of this country:—

(1) Limiting Hours of Work in Industrial Undertakings to eight in the day and forty-eight in the week;

(2) Unemployment;

(3) Employment of Women before and after Childbirth;

(4) Employment of Women during the Night;

(5) Minimum Age for Admission of Children to Industrial Employment;

(6) Night Work of Young Persons;

(7) Employment for Seamen;

(8) Minimum Age for Admission of Children to Employment at Sea;

(9) Workmen's Compensation in Agriculture;

(10) Weekly Rest in Industrial Undertakings;

(11) Workmen's Compensation for Accidents;

(12) Workmen's Compensation for Occupational Diseases;

(13) Night Work in Bakeries;

(14) Simplification of Inspection of Emigrants on Board Ship;

(15) Creation of Minimum Wage-Fixing Machinery;

(16) Protection against Accidents of Workers employed in Loading or Unloading Ships.

Industrial and Labour Information, the weekly official publication of the International Labour Office, in its issues of April 27 and May 4, respectively, has reproduced the text of a memorandum which had been prepared by the Department of Labour of Canada indicating the cases in which the proposals contained in the various Conventions of the International Labour Conference are covered by existing legislation in Canada, either of the Dominion Parliament or of the Provincial Legislatures.

League of Nations Society of Canada

At the ninth annual meeting of the League of Nations Society of Canada held at Ottawa during May, reports were received from all parts of the Dominion showing the general interest felt in the work of the society in the interest of peace. Dr. H. M. Tory, the Dominion President, appealed for further support for the Society's efforts. On the work of the labour branch of the work of the League, the report of the Executive Committee stated as follows:—

"The International Labour Organization during the past year, which has been crowded with economic difficulties for all those concerned in finance, industry and trade, is able to say that it has made steady headway towards its objective of establishing universal Peace based upon social justice.

"The International Labour Organization, in addition to creating a network of formal undertakings on the part of States to enforce the observance of the specified minimum conditions of labour, provides a strong moral deterrent to any measure which might be regarded as retrograde. It is encouraging to note that in such a year of depression and struggle international labour legislation has continued to make progress. Two new Conventions for the benefit of commercial workers and native races have been adopted and the States Members of the International Labour Organization have increased the number of ratifications of the earlier conventions from 383 to 415."

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, stated that that organization stood solidly behind the League of Nations in working for international peace. "It is necessary," he said, "that we should seek to build up the League of Nations to the utmost extent and that here in Canada we should foster a strong public opinion supporting the work of the League, so that the Canadian government will feel justified in assisting the League in every possible manner."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN APRIL, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on May 1 was 7,696, the employees on their payrolls numbering 925,605 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for April was 1,807, having an aggregate mem-

bership of 206,563 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) Employment Situation at the Beginning of May, 1931, as Reported by Employers

The Dominion Bureau of Statistics tabulated reports from 7,696 firms who reported an upward movement in employment on May 1; the payrolls of these employers were increased by 22,970 persons to 925,605 on the date under review, when the index, reflecting the gain of 2.5 per cent, rose to 102.2, as compared with 99.7 on April 1, and with 111.4, 116.2, 106.8, 101.8, 95.4, 91.9, 92.9, 92.5, 84.3 and 85.1 on May 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The base used in calculating these index numbers is the average for the calendar year 1926. The employment afforded by the co-operating firms was at a lower level at the beginning of May than on the same date in 1930, 1929 or 1928 but was higher than on May 1 in preceding years of the record.

Construction, manufacturing, logging and transportation recorded the greatest improvement, while there were also gains in communications, trade and services. On the other hand, there was seasonal curtailment in coal mining, and railway transportation also afforded less employment.

Employment by Economic Areas

Heightened activity was reported in all provinces, but the largest increases were in Quebec.

Maritime Provinces.—Additions to staffs were indicated in the Maritime Provinces, where 550 firms reported 70,612 employees, or 1,214 more than in their last return. This

gain was smaller than that noted on May 1 last year, when the index was some nine points higher. Manufacturing showed the greatest advances on the date under review; the increases took place mainly in pulp and paper and fish-preserving plants. Logging, quarrying and highway construction also recorded important gains, while transportation and railway construction were slacker.

Quebec.—Considerable improvement was indicated in Quebec, according to 1,799 employers with 272,017 workers, as against 261,618 in the preceding month. Large increases were reported in logging (as a result of river-driving), in transportation, construction and maintenance and manufacturing, while trade was slacker. Employment was in rather less volume than on the corresponding date of a year ago, although the advance then indicated was on a smaller scale.

Ontario.—The expansion in Ontario on May 1, 1931, was not so pronounced as that reported on the same date in 1930, when the index was higher. The working forces of the 3,450 co-operating firms aggregated 384,087 employees, compared with 378,569 on April 1. Construction and transportation registered the most marked increases, but the movement was also upward in manufacturing and trade.

Prairie Provinces.—Manufacturing, trade and construction showed heightened activity, the gain in the last-named being most marked. Statements were tabulated from 1,117 employers whose staffs rose from 117,956 persons

on April 1, to 120,771 on the date under review. This advance was smaller than that registered at the beginning of May, 1930, when the index was higher than on the date under review.

British Columbia.—The improvement in British Columbia was not quite so extensive as in the spring of last year, when the index was many points higher. An aggregate payroll of 78,118 workers was indicated by the 780 firms furnishing data, who had 75,094 in the preceding month. Manufacturing and con-

Montreal.—Transportation recorded the greatest advances in Montreal, but manufacturing also showed heightened activity, while construction and trade were slacker; 1,009 employers added 963 workers to their payrolls, bringing them to 144,275 at the beginning of May. Larger increases were indicated on the same date of last year, when the index stood at 110.8, as compared with 107.0 on May 1, 1931.

Quebec.—Statements were tabulated from 136 firms with 13,540 employees, as against

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

struction were decidedly busier, especially marked advances taking place in the latter; transportation and logging were also more active, while curtailment was shown in mining and trade.

Table I gives index numbers by economic areas.

Employment by Cities

Montreal, Quebec, Toronto, Ottawa, Windsor and the Adjacent Border Cities and Vancouver showed considerably increased activity, but there was a decline in Hamilton, and in Winnipeg the tendency was also slightly downward.

12,103 on April 1. Most of the improvement took place in construction, manufacturing and transportation. The gain involved approximately the same number of workers as that recorded on May 1, 1930, when the index was lower.

Toronto.—Manufacturing, trade and transportation reported important increases in personnel in Toronto, according to data furnished by 1,103 employers, whose payrolls aggregated 124,098 persons, as compared with 122,043 at the beginning of April. This expansion was rather more pronounced than that indicated on May 1 of last year, but the index then was

some six points higher than on the date under review.

Ottawa.—Manufacturing registered improvement in Ottawa, but construction was slacker; the general advance involved a much smaller number of persons than that noted at the beginning of May, 1930. Statistics were tabulated from 161 firms employing 14,440 persons, compared with 14,224 on April 1. The index was rather lower than in spring last year.

Hamilton.—A combined working force of 23,602 persons was reported by the 229 co-operating employers, who had 34,094 on April 1. Manufacturing was slacker, while construction and transportation showed greater activ-

ity. Employment was in smaller volume than in the same month of 1930, when curtailment was also indicated.

Windsor and the Adjacent Border Cities.—Moderate improvement was shown in the Border Cities, chiefly in automobile factories. Returns were tabulated from 136 firms with 13,088 workers, compared with 12,901 in the preceding month. Employment was not so brisk as at the beginning of May, 1930.

Winnipeg.—Retail trade was rather more active, but construction and manufacturing reported losses in Winnipeg. The 356 co-operating employers had 29,477 persons on their payrolls, compared with 29,518 on April 1.

NOTE.—The "Relative Weight" in Table 1, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I. INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Relative weight of employment by districts as at May 1, 1931.....	100.0	7.6	29.4	41.5	13.1	8.4

Employment was in less volume than on the same date last year, when gains had been indicated.

Vancouver.—Manufacturing and construction registered increases in Vancouver, according to 315 firms who employed an aggregate working force of 30,151 persons, compared with 29,380 on April 1. The index was lower than at the beginning of May of a year ago, although the additions to staffs then reported had been decidedly smaller.

Index numbers by cities are given in Table II.

Manufacturing

Employment in manufactures showed a gain at the beginning of May; 4,669 establishments reported 494,688 workers, compared with 488,894 in the preceding month. The largest advances were in lumber mills, where they were of a seasonal character, but noteworthy expansion also took place in the fish-packing, pulp and paper, building material, vegetable food, leather and mineral product groups. Rubber, textile and iron and steel factories, however, were slacker. Employment was in smaller volume than on May 1,

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

1930, when similar improvement had been noted.

Animal Products, Edible.—Continued and larger increases in employment were noted in fish-and meat-packing plants and in dairies; the improvement was rather more extensive than that reported on May 1, 1930, but the index then was some three points higher. Statements were tabulated from 215 firms in this group, employing 18,064 workers, or 1,406 more than at the beginning of April. The expansion took place chiefly in the Maritime Provinces and British Columbia, but the trend in the group as a whole was generally upward.

Leather and Products.—Employment in boot and shoe and other leather factories showed improvement, according to 236 manufacturers with 18,984 employees, as compared with 18,608 in the preceding month. The largest gains were in Quebec. The increase compares favourably with the reduction noted in May, 1930, when the index was lower.

Lumber and Products.—Seasonal activity caused a pronounced advance in this group, the improvement being particularly noteworthy in sawmills. Data were received from 772 employers of 41,834 persons, as against 38,712 in the preceding month. There were in-

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

creases in all but the Maritime Provinces, those in Ontario and Quebec being greatest. Rather larger additions to staffs had been

registered on May 1, 1930, when the index was much higher than at the beginning of May this year.

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	Relative weight	May 1 1931	April 1 1931	May 1 1930	May 1 1929	May 1 1928	May 1 1927	May 1 1926
<i>Manufacturing</i>	53.4	100.7	99.7	112.4	119.8	109.0	103.9	98.8
Animal products—edible.....	2.0	103.3	95.4	106.7	110.0	108.2	102.2	97.6
Fur and products.....	.2	94.5	90.9	88.6	100.3	89.5	93.4	96.7
Leather and products.....	2.1	93.8	91.7	90.4	91.4	102.6	100.2	97.6
Lumber and products.....	4.5	79.2	73.6	97.6	107.9	98.2	98.2	94.2
Rough and dressed lumber.....	2.3	63.6	54.8	87.7	100.8	89.7	94.0	90.2
Furniture.....	1.0	103.9	105.5	113.0	123.5	117.1	106.9	101.5
Other lumber products.....	1.2	108.4	105.3	115.0	117.8	111.1	105.1	101.8
Musical instruments.....	.1	47.2	46.1	63.0	97.8	87.8	96.1	95.3
Plant products—edible.....	3.1	101.8	98.6	102.9	101.6	94.9	94.4	91.4
Pulp and paper products.....	6.4	98.1	96.1	110.9	109.8	108.7	103.8	97.1
Pulp and paper.....	2.8	87.3	83.5	108.1	105.6	109.8	104.4	96.2
Paper products.....	.9	100.4	100.3	107.8	111.2	109.5	104.9	98.7
Printing and publishing.....	2.7	111.6	111.4	115.8	115.0	107.7	102.8	98.2

¹The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Musical Instruments.—Employment in musical instrument works showed practically no change, according to the 35 co-operating manufacturers, who had 1,368 workers. Employment was in less volume than in the corresponding period last year, when a decrease had been indicated.

Plant Products, Edible.—There was an important increase in activity in vegetable food factories, chiefly in those producing sugar and syrup and canned goods. This advance involved about the same number of persons as that noted on May 1, 1930, when the index number stood at 102.9, compared with 101.8 at the beginning of May this year. Statements were compiled from 391 employers, whose payrolls aggregated 28,788 persons, as compared with 27,932 on April 1. The gains took place in Quebec and Ontario.

Pulp and Paper Products.—There was considerable improvement in these industries, in which employment was in smaller volume than in the spring of 1930. Much of the increase on the date under review took place in pulp and paper mills, while printing and publishing plants also showed slight improvement. The working forces of the 551 co-operating establishments aggregated 59,174 employees, as against 57,895 in their last report. Heightened activity was shown in all except the Prairie Provinces.

Rubber Products.—Considerable losses were noted in rubber factories on May 1, 1931, as on the same date in 1930, when the index was many points higher. Returns were tabulated from 41 manufacturers employing 12,450 workers, or 560 less than at the commencement of April. Most of the decrease was in Quebec and Ontario.

Textile Products.—There was seasonal falling-off in employment in this group at the beginning of May, according to statistics from 741 manufacturers having 83,282 persons on their payrolls, as compared with 84,499 on April 1. Garment and personal furnishing factories released employees, and headwear and thread, yarn and cloth mills were also rather slacker. Quebec and Ontario reported the bulk of the loss. Greater declines had been noted on May 1 last year, when the index stood at 104.9, compared with 102.4 on the date under review.

Tobacco, Distilled and Malt Liquors.—Data were received from 147 plants in this group employing 14,923 persons, or 232 more than in the preceding month. This increase, which was of practically the same size as that recorded on May 1 last year, took place chiefly in tobacco manufacturing in Quebec. Employment was at a slightly lower level than on the same date in 1930.

Chemicals and Allied Products.—Employment in chemicals and allied products showed a moderate increase in the Maritime Provinces and Quebec. Information was compiled from 132 manufacturers, whose staffs included 8,806 workers, as against 8,601 in April. The index was almost the same as on May 1 a year ago, when the trend was also favourable.

Clay, Glass and Stone Products.—Building material factories in all provinces indicated seasonal improvement; the general gain was rather less than at the beginning of May last year, when the index number was higher. The 161 co-operating firms reported 11,140 employees, as against 9,982 in the preceding month.

Electric Current.—Further additions to staffs were recorded on May 1 in electric current plants, in which activity was not so great as in the spring of 1930. Statements were received from 95 companies employing 14,958 workers, an increase of 164 over their April 1 forces.

Electrical Apparatus.—The trend of employment in this group was upward, 55 persons being added to the payrolls of the 73 reporting establishments, which had 15,281 employees. Small gains had also been registered on May 1, 1930, when the index number was much higher.

Iron and Steel Products.—The rolling mill, agricultural implement, railway car shop and structural iron and steel groups reported considerable decreases in activity, but there were gains in automobile, machinery, heating appliance and sheet metal factories. Returns were tabulated from 730 manufacturers with 128,277 operatives, as compared with 130,086 in the preceding month. Curtailment had also been indicated at the beginning of May of last year, but employment then was in greater volume. Quebec, Ontario and the Prairie Provinces reported the greatest losses on the date under review, but the tendency was generally downward.

Non-Ferrous Metal Products.—Non-ferrous metal products showed no general change in employment, according to date from 124 firms with a working force of 18,495 persons. Decreases in staff were reported in this group in the same month in 1930, when the index number was higher.

Mineral Products.—Improvement was indicated in the mineral products division; the increases were not so pronounced as on May 1 a year ago, when the index number was considerably higher than on the date under review. Reports were received from 93 manufacturers, whose payrolls included 12,242 persons, as compared with 11,937 in the preceding month. The greatest advance was in Quebec.

Logging

Largely due to river-driving operations in Quebec, there was an increase in logging, according to 230 firms employing 15,187 men, or 3,586 more than in April. Curtailment was registered at the beginning of May, 1930, but the index then was higher.

Mining

Coal.—Employment in coal-mining showed a reduction, which was slightly larger than that noted in the same month last year. The index then was somewhat higher than on May 1, 1931. Data were received from 83 operators with 24,484 employees, as compared with 25,475 in the preceding month. The decreases took place mainly in the western coal fields.

Metallic Ores.—There was a small reduction in metallic ore mines, chiefly in the Prairie Provinces. An aggregate working force of 16,130 persons was employed by the 67 co-operating firms, who had 16,239 workers in their last report. Gains had been indicated at the beginning of May a year ago, when employment was more active.

Non-Metallic Minerals (Other than Coal).—Employment in this group showed a moderate increase; 73 employers enlarged their payrolls by 213 workers to 6,876 at the beginning of May. Quarries and other divisions reported heightened activity. The greatest advances were in the Maritime and Prairie Provinces. The index was lower than on May 1, 1930, when similar improvement was reported.

Communications

A slight increase was noted in telegraph and telephone operation, in which the level of employment was lower than on the corresponding date of last year. The co-operating branches and companies reported an aggregate working force of 26,899 persons, compared with 26,717 on April 1, 1931.

Transportation

Street Railways and Cartage.—Moderate improvement was shown in local transportation at the beginning of May, when the 156 firms from whom information was received, reported 24,136 employees, or 131 more than in the preceding month. The index was slightly lower than on the same date in 1930. Ontario registered most of the advance.

Steam Railways.—Steam railway operation afforded less employment in the Maritime Provinces, while the other provinces showed only slight changes. Statements were received

from 105 employers in this division, whose payrolls decreased from 71,684 persons on April 1 to 71,063 at the beginning of May. Improvement had been noted on May 1, 1930, when the index was higher.

Shipping and Stevedoring.—A combined staff of 16,525 men, as compared with 13,477 in the preceding month, was reported by the 83 firms furnishing statistics in the water transportation group. This gain was larger than that noted on the same date last year, but the index then was slightly higher. Reductions in the Maritime Provinces were offset by increases in Quebec, Ontario and British Columbia.

Construction and Maintenance

Building.—Employment in building construction continued to expand largely, although it was in smaller volume than on May 1, 1930. The working forces of the 714 co-operating contractors aggregated 42,157 persons, as against 37,309 at the beginning of April. The tendency was favourable in all except the Maritime Provinces, but the greatest gains were in Quebec.

Highway.—Activity on roads and highways advanced very considerably, 3,908 men being added to the forces of the 294 employers making returns, who had 45,186 workers on May 1. All provinces registered noteworthy increases. The additions to staffs indicated on the same date last year were on a larger scale, but employment then was not so active as this year, when the continuation of unemployment relief work has resulted in a higher index than in any other year on record.

Railway.—Fifty companies and divisional superintendents in this group employed 32,271 workers, as against 30,015 in the last report. Ontario and the Western Provinces shared in the upward movement, while the trend was downward in the Maritime Provinces and Quebec. Expansion involving a much larger number of men was noted at the beginning of May a year ago, when the index number stood considerably above its level at the time of writing.

Services

The service group, especially the laundry and dry cleaning division, reported heightened activity, according to statements from 279 establishments employing 22,425 persons, as against 22,028 in their last report. Employment was not quite so brisk as on May 1, in 1930, when greater gains had been indicated.

Trade

Continued additions to personnel were shown in trade, in which 826 establishments enlarged their forces by 328 employees to 87,578 on the date under review. The index was very slightly lower than at the beginning of May of a year ago, when greater improvement had been reported. The level of employment, however, was higher than in the spring of any earlier year of the record. The increase on the date under review took place in retail

trade; there were gains in Ontario and the Prairie Provinces, but declines in Quebec and British Columbia.

The accompanying tables give index number of employment by economic areas, leading cities, and industries. The columns headed "relative weight," show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on May 1, 1931.

(2) Unemployment in Trade Unions at the Close of April, 1931

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work outside their own trades or who are idle through illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Some lessening of the unemployment volume was apparent among local trade unions at the close of April, the 1,807 labour organizations which made returns, with a membership total of 206,563 persons, showing 14.9 per cent of idleness compared with 15.5 per cent in March. Activity, however, remained at a level below that of April a year ago, when the percentage of idle members stood at 9.0. During April the employment tendency in New Brunswick, Ontario, Manitoba, Alberta and British Columbia was upward from the preceding month, though the gains were very slight, while in Saskatchewan noteworthy improvement was indicated, principally in steam railway operation. On the other hand, Nova Scotia and Quebec unions reported contractions in activity of less than 1 per cent. All provinces shared to some extent in the adverse situation as compared with April, 1930, Nova Scotia and Saskatchewan unions reporting moderate declines in employment, while in the remaining provinces the recessions were substantial.

A separate compilation is made each month of unemployment in the largest city in each province except Prince Edward Island. Halifax unions, with nearly 7 per cent improvement during April, showed the most appreciable employment expansion from March,

followed by a 5 per cent gain in Regina. Vancouver and Toronto unions also reported advances which, however, were small. On the other hand, Saint John, Montreal, Winnipeg and Edmonton unions registered employment losses, none of which were outstanding. Curtailment of activity from April last year was noted in all cities compared, Saint John and Vancouver unions showing a decided slump, while in Montreal, Toronto, Winnipeg and Regina the recessions were substantial, and in Halifax and Edmonton moderate declines occurred.

Appearing with this article is a chart which illustrates the unemployment trend by months from January, 1925, to date. As will be noted the curve during April proceeded in a downward course from the close of March, indicative of an increasing employment volume and paralleling the trend of April, 1930. However, the unemployment level as shown by the curve was considerably higher than in April last year.

A slight increase from the previous month in the unemployment volume was recorded by unions in the manufacturing industries during April, the 593 unions making returns with 57,725 members showing 11.1 per cent of idleness, contrasted with 9.2 per cent in March. Inactivity for garment workers was a large factor in this unfavourable employment trend. In addition to the numbers actually unemployed, and due to the commencement of the slack period in the garment trades, the majority of the members were reported as working but part time only. Among iron and steel workers and bakers and confectioners also, activity was slightly curtailed. In the printing trades the same percentage of idleness was recorded as in March, and among wood and general labourers the situation remained practically stationary. Cigarmakers, textile, hat and cap, fur and glass workers and metal polishers all reported some employ-

ment expansion, which, however, did not involve a great number of workers. In comparison with the returns for April last year, when 6.6 per cent of idleness was registered in the manufacturing industries, garment, wood and glass workers reported a considerable increase in unemployment during the month reviewed, and substantial declines were recorded by pulp and paper makers, general labourers, and bakers and confectioners. Among iron and steel workers and printing tradesmen in addition, slight employment recessions were shown. Textile, fur, hat and cap workers, and cigarmakers, however, reported a higher level of activity than in April a year ago.

bia, on the contrary, largely improved conditions were indicated from April a year ago. Asbestos miners in Quebec reported the same unemployment volume during April as in March, the percentage in both months standing at 11.8, contrasted with a fully employed situation in April last year.

Further and more extensive improvement was shown by unions in the building trades during April, the 253 unions reporting with a membership total of 31,558 persons, indicating 40.5 per cent of idleness, contrasted with 45.7 per cent in March. The volume of employment available, however, was much lower than that of April a year ago, when 23.2 per cent of the members were reported

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The coal mining industry, as a whole, showed a small drop in employment from March, the Nova Scotia, Alberta and British Columbia unions all contributing slightly to this decline. In addition to the unemployment recorded by coal miners, which in some cases was due to entire mine shutdowns, a large number of members were shown as working but a few days a week. Reports for April were received from 47 unions of these workers, with 18,067 members, 11.2 per cent of whom were idle, contrasted with 9.9 per cent in March. The situation in coal mining was also less favourable than in April, 1930, when 8.6 per cent of the members reported were without employment, the contractions being chiefly confined to the Province of Alberta, though in Nova Scotia also a fractional unemployment gain was noted. In British Colum-

idle. The most noteworthy employment advance was recorded by carpenters and joiners, and among painters, decorators and paper-hangers the situation improved substantially. Hod carriers and steam shovel and dredgers, whose returns included but a small proportion of the total membership reported in the building trades, indicated large percentage gains, and among granite and stone-cutters the percentage increase was noteworthy. Fractional improvement only was reported by bricklayers, masons and plasterers, electrical workers, and plumbers and steam-fitters. On the other hand, employment for tile layers, lathers and roofers showed a large falling off, and minor contractions occurred among bridge and structural iron workers. All trades participated substantially in the adverse situation shown as compared with April, 1930, the contractions reported by brick-

layers, masons and plasterers, and carpenters and joiners, who together formed nearly 66 per cent of the entire membership reported in the building trades, affecting the greatest number of tradesmen.

The employment tendency in the transportation industries was upward during April, though the change from the previous month was slight. This was manifest by the returns tabulated from 759 unions of transportation workers, covering 71,603 members, 6,992 of whom, or a percentage of 9.8 were idle on the last day of April, contrasted with 10.9 per cent of unemployment in March. Steam, and street and electric railway employees, and navigation workers all contributed to this slight improvement, while among teamsters

and chauffeurs, nominal reductions occurred. A moderate employment drop was shown by steam railway employees from April, 1930, when 6.8 per cent of idleness was registered in the transportation industries as a whole, and navigation workers were decidedly less active. Minor declines in activity were reported by teamsters and chauffeurs. The situation for street and electric railway employees remained much the same, with a slight trend toward greater employment.

Retail clerks reported 2.1 per cent of unemployment in April, contrasted with 1.8 per cent in March, and with a fully engaged situation in April, 1930. The percentage for the month reviewed was based on the returns received from 5 associations of these workers, embracing a membership of 775 persons.

Civic employees, with 67 unions covering 7,234 workers, indicated 7 or .1 per cent of their members idle on the last day of April, as compared with 1.5 per cent of inactivity in March, and .5 per cent in April last year.

Workers in the miscellaneous group of trades were afforded a greater volume of employment during April than in the previous month, as shown by the returns tabulated from 132 unions with 6,588 members. Of these 929, or 14.1 per cent, were unemployed on the last day of April, in contrast with 17.0 per cent in March. Noteworthy improvement in conditions was manifest by hotel and restaurant employees, and stationary engineers and firemen, theatre and stage employees, and barbers were somewhat busier. Unclassified workers, however, reported small declines in activity. Compared with the situation in April last year in the miscellaneous group of trades when 7.2 per cent of the members reported were idle, stationary engineers and firemen, hotel and restaurant, and theatre and stage employees, barbers and unclassified workers all recorded employment losses during the month reviewed, the most extensive of which was reported by stationary engineers and firemen.

From fishermen 4 returns were received in April, comprising a membership of 1,382 persons, 33 of whom, or a percentage of 2.4 were unemployed on the last day of the month, as compared with percentages of 4.0 in March and 1.3 in April, 1930.

Unemployment among lumber workers and loggers was in slightly greater volume during April than in the preceding month, the 5 unions which made returns with a membership aggregate of 1,259 persons showing 37.3 per cent of inactivity, compared with 34.0 per cent in March. Large employment cur-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

tailment was noted from April a year ago when 11.9 per cent of the members reported were out of work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930 inclusive,

and also the percentage of unemployment by provinces for April of each year from 1919 to 1928 inclusive, and for each month from January, 1929, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for April, 1931

The volume of business transacted by Offices of the Employment Service of Canada during April, 1931, as indicated by the average daily placements effected, showed a decrease of nearly ten per cent when compared with that of the preceding month, while a gain of over thirty-two per cent was recorded over April last year. The decline from March was wholly attributable to fewer placements in construc-

The accompanying chart shows the trend of employment from January, 1929, to date, as represented by the ratio of vacancies offered and of placements effected for each one hundred applications for employment registered at the Offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curves of vacancies and of placements in relation to applications

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - Placements o-o-o-o-o

tion and maintenance, as relief work sponsored by the Government during the winter was gradually being completed. This decrease was partly offset by gains in farming and services, the changes in other groups being small. Construction and maintenance was also responsible for the gain shown over the corresponding month a year ago when no relief program was under way. All remaining divisions showed declines under the yearly comparison, the largest being in manufacturing, farming and services.

declined slightly during the first half of the month, but showed a slight upward tendency during the latter half of the period under review, though the levels then attained were about two points lower than those indicated at the close of April last year. The ratio of vacancies to each one hundred applications was 65.5 and 66.8 during the first and the second half of April respectively, in contrast with ratios of 68.3 and 69.3 during the corresponding periods of 1930. The ratios of placements to each one hundred applications dur-

ing the periods under review were 63.1 and 63.5 as compared with 63.2 and 65.3 during April, 1930.

The average number of vacancies reported daily by employers to the Offices of the Service throughout Canada was 1,634, as compared with 1,781 in the previous month and with 1,265 in April, 1930.

The average number of applications for employment received daily by the Offices during the month under review was 2,467, as compared with 2,617 in March and with 1,840 in April last year.

The average number of placements made daily by the Offices of the Service during April, 1931, was 1,562, of which 547 were in regular employment and 1,015 in work of one week's duration or less, as compared with a total daily average of 1,727 during the preceding month. Placements in April last year averaged 1,180 daily, consisting of 648 placements in regular and 532 in casual employment.

During the month of April, 1931, the offices of the Service referred 39,310 persons to vacancies and effected a total of 37,474 placements. Of these, the placements in regular employment were 13,123 of which 9,459 were of men and 3,664 of women, while placements in casual work totalled 24,351. The number of vacancies reported by employers was 29,625 for men and 9,569 for women, a total of 39,194, while applications for work numbered 59,202 of which 46,856 were from men and 12,346 from women.

The following table gives the placements effected by the Offices of the Employment Service of Canada, each year, from January, 1921, to date.

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825

1930.....	187,872	180,807	368,679
1931 (4 months).....	49,186	138,018	187,204

NOVA SCOTIA

Orders listed at Employment Offices in Nova Scotia during April showed an increase of nearly 19 per cent in comparison with the preceding month and of over 11 per cent when compared with the corresponding month last year. There was an increase of nearly 18 per cent in placements over March, and of

over 14 per cent in comparison with April, 1930. The gain in placements for the province, as a whole, over April of last year was all in the services' division, as, although there was also an increase under construction and maintenance, it was offset by declines in trade and transportation. The changes in other groups were nominal. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 27; trade, 50; construction and maintenance, 123; and services, 604, of which 426 were of household workers. During the month 41 men and 74 women were placed in regular employment.

NEW BRUNSWICK

Opportunities for employment, as indicated by orders received at Employment Offices in New Brunswick during April, were nearly 12 per cent better than in the preceding month, but over 2 per cent less favourable than during the corresponding month last year. There was a gain of over 9 per cent in placements when compared with March, but a decline of 3 per cent in comparison with April, 1930. Services was the only group to show any gain of importance in placements over April last year, and this increase was more than offset by declines in construction and maintenance, logging and trade. Small changes only were recorded in other industrial divisions. The only industrial groups in which a substantial number of placements were made were: construction and maintenance, with 68; and services with 681 placements. Of the latter 456 were of household workers. There were 114 men and 72 women placed in regular employment during the month.

QUEBEC

There was an increase of over 22 per cent in the number of orders received by Employment Offices in the Province of Quebec when compared with the preceding month, but a decline of nearly 5 per cent in comparison with the corresponding month last year. Placements were over 26 per cent higher than in March and 10 per cent above April, 1930. Increased placements of female workers in the household section of the services' division were responsible for the gain over April last year, although increases were also reported under construction and maintenance and farming. Of the declines in all other groups those in logging and manufacturing were the largest. Industrial groups in which most of the placements were effected during the month were: manufacturing, 94; logging, 76; farming, 51; construction and maintenance, 445;

* 70 Placements effected by offices since closed.

and services 983, of which 755 were of household workers. Placements in regular employment numbered 777 of men and 631 of women.

ONTARIO

Employment opportunities as indicated by orders listed at Ontario offices during April were nearly 27 per cent less favourable than in the preceding month, but nearly 70 per cent better than during the corresponding month last year. There was a decline of over 28 per cent in placements when compared with March, but a gain of nearly 76 per cent in comparison with April, 1930. The net gain in placements for all industrial divisions over April of last year was slightly less than that in construction and maintenance alone, as, although there were no additional large gains under services and farming these were more than offset by declines in all other groups. The exceptional gain under construction and maintenance was due to work undertaken in relief of unemployment. Manufacturing showed the largest decrease, followed by transportation, logging and trade, in the order named. Placements by industrial divisions included: manufacturing, 789; logging, 401; farming, 1,197; transportation, 152; construction and maintenance, 12,564; trade, 434, and services, 4,944, of which 2,507 were of household workers. During the month 4,261 men and 1,323 women were placed in regular employment.

MANITOBA

During the month of April, positions offered through Employment Offices in Manitoba were nearly 4 per cent less than in the preceding month and nearly 23 per cent below the corresponding month last year. There was a decline also in placements of over 2 per cent when compared with March and of nearly 29 per cent in comparison with April, 1930. All industrial divisions, except construction and maintenance, in which gains were small, participated in the declines in placements from April of last year, those in services and farming being mainly responsible for the reduction under this comparison. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 41; farming, 605; construction and maintenance, 493; trade, 81; and services, 1,369, of which 1,154 were of household workers. Regular employment was found for 787 men and 453 women.

SASKATCHEWAN

Employment Offices in Saskatchewan were notified of over 25 per cent more vacancies during April than in the preceding month, but nearly 14 per cent less than during the

corresponding month last year. There was a gain also of over 26 per cent in placements when compared with March, but a decline of over 6 per cent in comparison with April, 1930. As in Manitoba, reduced placements in farming and services were mainly responsible for the decline from April of last year, although trade also contributed to the reductions. The only gains of importance were in construction and maintenance and logging. The changes in other groups were nominal only. Placements by industrial groups included: manufacturing, 67; logging, 40; farming, 936; construction and maintenance, 1,052; and services, 977, of which 639 were of household workers. There were 1,061 men and 483 women placed in regular employment during the month.

ALBERTA

The demand for workers, as indicated by orders received at Employment Offices in Alberta during April, was nearly 15 per cent less than in the preceding month, but over 31 per cent greater than during the corresponding month of last year. There was a decrease of nearly 16 per cent in placements when compared with March, but a gain of over 31 per cent in comparison with April, 1930. Relief work accounted for the gain in placements over April of last year, as the only groups to show improvement were construction and maintenance and logging, under both of which work of this kind was provided. Of the declines, those in farming, services, and manufacturing were the most noteworthy. The majority of placements made during the month were in the following groups: logging, 129; farming, 887; construction and maintenance, 2,587; and services 747, of which 528 were of household workers. During the month 1,981 men and 389 women were placed in regular employment.

BRITISH COLUMBIA

During April, orders received at Employment Offices in British Columbia called for over 11 per cent more workers than in the preceding month and over 6 per cent in excess of the corresponding month last year. There was an increase of 12 per cent in placements when compared with March and of over 8 per cent in comparison with April, 1930: As in Alberta, increased placements under construction and maintenance and logging, due to work provided in relief of unemployment, were responsible for the gain over April last year, as the only other group to show any improvement was trade, and in this the increase was small. Of the declines, those in manufacturing, services and farming were the most noteworthy. Industrial groups

in which most of the placements were effected during the month were: manufacturing, 73; logging, 325; farming, 150; transportation, 137; construction and maintenance, 1,789; trade, 61; and services 874, of which 504 were of household workers. There were 437 men and 239 women placed in regular employment during the month.

Movement of Labour

During the month of April, 1931, the offices of the Employment Service of Canada made 13,123 placements in regular employment, 5,821 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 606 were granted the Employment Service reduced transportation rate, 546 going to points within the same province as the despatching office and 60 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The two certificates granted in the province of Quebec during April were issued at the Quebec city office to logging camp cooks travelling to employment within territory covered by that office.

Transfers at the reduced rate from Ontario centres during April were 108 in number, 106 of which were to provincial points. Of these 46 were issued at Port Arthur, to 43 bushmen, one hotel worker, one painter and one shoe maker going to situations within the same zone. Included in the transfers from Sudbury were one farm hand travelling to Toronto and 23 bush workers, 4 lumber mill workers, 2 gas engineers, one cook and one cookee to centres within the Sudbury zone. In addition, the Sudbury zone received 15 river drivers from Pembroke and 6 river drivers, one hotel potter and one cook from North Bay. The North Bay office also shipped one farm hand to Cobalt. From Hamilton one drag line operator was sent to Windsor and from Toronto 2 tile setters to Port Arthur, while to a point within its own zone Fort William transferred one cook. The 2 workers going outside the province were destined to the Winnipeg zone, one a mill-wright conveyed from Port Arthur and one a smelter worker journeying from Sudbury.

In Manitoba 278 persons secured certificates for reduced transportation during April, 234 of whom were travelling to provincial situations and 44 to points outside the province. Provincially the Winnipeg office was instru-

mental in the transfer of one farm hand, 10 farm household workers, one hotel waitress and 2 domestics to Brandon; one farm hand and one hotel worker to Dauphin; and of 109 farm hands, 2 farm domestics, 29 railway construction workers, 11 highway construction workers, 46 general labourer, 4 carpenters, 5 bricklayers, 2 town domestics, one butcher, one steel worker, 4 cookees, one blacksmith, one blacksmith's helper and one engineer to centres within the Winnipeg zone. In addition, Dauphin despatched one labourer to a point within its own zone. The Winnipeg office was responsible for the entire movement outside the province, which included transfers of 3 farm hands and 3 sawmill workers to Port Arthur, 3 hotel cooks to Regina and 35 farm hands to various agricultural districts throughout Saskatchewan.

Reduced rate certificates to the number of 83 were issued in Saskatchewan during April, 79 of which were provincial and 4 inter-provincial. The latter were granted at Saskatoon to one driller's helper and 2 farm hands travelling to Dauphin, and to one hotel worker going to Edmonton. To rural localities within the province Saskatoon despatched 27 farm hands and one farm household worker; Moose Jaw 8 farm hands; and Regina 10 farm hands. From Moose Jaw also one town domestic went to Regina and one blacksmith to Swift Current, while from Regina 3 railway construction labourers were conveyed to North Battleford; one mechanic and one hotel housekeeper to Swift Current; one labourer to Saskatoon; one town domestic to Moose Jaw; and one teacher and one telephone line man within the Regina zone. The Saskatoon office was, in addition, responsible for the transfer of one logger and one town housekeeper to the Prince Albert zone, which zone was also the destination of 17 sawmill labourers and 3 river drivers who secured their certificates for transportation at the Prince Albert office.

Taking advantage of the Employment Service reduced transportation rate 83 persons secured certificates at Alberta offices during April, 73 of whom travelled to employment at provincial points and 10 to centres in other provinces. The labour movement within the province comprised the transfer from Edmonton of 2 farm hands, one teamster and one store clerk to Calgary, 1 farm hand to Drumheller, and of 14 farm hands, 12 miners, 7 highway construction teamsters, 3 labourers, 3 gardeners, 3 carpenters, 2 farm domestics, one waitress, one cook, one blacksmith and one axe man to points within the Edmonton zone. In addition, Calgary despatched 5 farm hands and one farm housekeeper to Drum-

heller; one farm hand to Edmonton; and 12 farm hands and one farm housekeeper within the Calgary zone. The Edmonton office effected all transfers outside the province, which were of farm help, the Swift Current and North Battleford zones each receiving 1 farm hand, and the Saskatoon zone 7 farm hands and one farm housekeeper.

British Columbia offices despatched 52 workers at the special rate during April, all to provincial situations. Of these, 49 travelled on certificates issued at Vancouver and included 2 flunkeys and one cook going to Kamloops; one electrician to Kelowna; one farm hand each to the Pentiction and Prince George zones; and 35 loggers, 2 farm hands, 3

cooks, one waitress, one flunkey and one town housekeeper within the Vancouver zone. The balance of this provincial movement was from Prince Rupert, which office transferred one farm hand and one bookkeeper to Prince George and one steel worker within its own zone.

Of the 606 workers who received special rates transportation vouchers 369 were carried by the Canadian National Railways, 224 by the Canadian Pacific Railway Company, 7 by the Pacific Great Eastern Railway, 5 by the Northern Alberta Railway and one by the Temiskaming and Northern Ontario Railway.

(4) Building Permits issued in Canada during April

The Dominion Bureau of Statistics tabulated returns from 61 cities which granted building permits valued at \$13,786,466 during April, as compared with \$9,906,567 in the preceding month and \$16,978,076 in the same month last year. There was, therefore, an increase of \$3,879,899 or 39.2 per cent in the first comparison, but a decrease of \$3,191,610, or 18.8 per cent, as compared with April, 1930. In considering these figures, it should be noted that the wholesale costs of building materials have this year averaged much lower than in any of the past eleven years.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 1,000 permits for dwellings valued at nearly \$5,000,000 and for some 2,700 other buildings estimated to cost more than \$7,000,000. In March, authority was given for the erection of over 800 dwellings and 1,000 other buildings, valued at approximately \$3,600,000 and \$5,600,000 respectively.

Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia recorded increases in the value of building permits issued during April as compared with March, 1931, the greatest gain of \$1,335,605 taking place in Nova Scotia.

As compared with April, 1930, Nova Scotia, Quebec, Manitoba and British Columbia reported increases in the value of the building authorized; Quebec indicated the most pronounced gain of \$1,460,784; or 59 per cent. Among the remaining provinces, the greatest decline, of \$3,254,115 or 45.5 per cent, was in Ontario.

Of the larger cities, Montreal, Winnipeg and Vancouver registered increases in the building authorized during April as compared with the preceding month, and also as compared with April, 1930, while in Toronto there was an

increase in the former, but a decline in the latter comparison. Of the smaller centres, Halifax, New Glasgow, Moncton, Sherbrooke, Westmount, Belleville, Fort William, Ottawa, Owen Sound, Peterborough, Port Arthur, Welland, Woodstock, Brandon and Prince Rupert reported increases in the value of the building represented by the permits issued, as compared with March, 1931, and April, 1930.

Cumulative Record for First Four Months, 1920-1931.—The following table gives the value of the building authorized by 61 cities during April and in the first four months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first four months of the same years are also given (1926-100).

Year	Value of permits issued in April	Value of permits issued in first four months	Indexes of value of permits issued in first four months (1920=100)	Average Indexes of wholesale prices of building materials in first four months (1926 average=100)
	\$	\$		
1931.....	13,786,466	37,133,365	107.4	83.8
1930.....	16,978,076	46,471,338	134.5	98.2
1929.....	29,657,709	72,606,937	210.1	99.2
1928.....	18,606,167	51,769,505	149.8	96.8
1927.....	17,312,470	42,340,823	122.5	96.8
1926.....	19,044,499	41,538,073	120.2	101.7
1925.....	15,482,383	35,463,398	102.6	103.1
1924.....	13,689,101	31,737,100	91.8	111.6
1923.....	19,530,851	39,008,970	112.9	110.8
1922.....	15,833,688	34,513,861	99.9	107.7
1921.....	13,500,360	27,069,872	78.3	136.9
1920.....	15,648,915	34,558,901	100.0	143.1

The aggregate for the first four months of this year was smaller than the average for the months, January-April, in the years since

1920, although it was higher than the total recorded in 1925, 1924, 1922, 1921 or 1920. The average index number of wholesale prices of building materials, however, was decidedly lower than in any other year of the record.

The accompanying table gives the value of the building permits issued by 61 cities during April and March, 1931, and April, 1930. The 35 cities for which records are available since 1910 are marked with asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY PERMITS ISSUED BY 61 CITIES.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during April, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from the trade union locals in 24 representative

cities. Summary figures for May, 1931, and previous months are reproduced below.

Great Britain

Employment during April showed, on the whole, some further improvement. There was a further seasonal improvement in the building trade, public works contracting, brick and tile manufacture, and the clothing industries. The numbers unemployed showed a further decrease in a number of the textile industries (the principal exceptions being the cotton and lace industries), and employment also improved in coal-mining, slate quarrying, steel and tinsplate manufacture, constructional engineering, and the motor vehicle industry. There were increases, however, in the numbers unemployed in pottery manufacture, general and marine engineering, and the cotton and lace industries.

There was some improvement in employment in each of the administrative divisions, except the Northwestern, but in the north of England and in Scotland, Wales and Northern Ireland employment was still very bad. In the Midlands Division it remained bad. In London and the Southern area employment was moderate and much better than in other parts of the country.

Among the workpeople, numbering approximately 12,400,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at April 27, 1931 (including those temporarily stopped as well as those wholly unemployed), was 20.9, as compared with 21.5 at March 23, 1931, and with 14.2 at April 28, 1930. The percentage wholly unemployed at April 27, 1931, was 16.3, as compared with 16.5 at March 23, 1931; while the percentage temporarily stopped was 4.6, as compared with 5.0. For males alone the percentage at April 27, 1931, was 22.0, and for females, 18.0; at March 23, 1931, the corresponding percentages were 22.7 and 18.4.

At April 27, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain were 1,848,170 wholly unemployed, 556,978 temporarily stopped, and 114,965 normally in casual employment, making a total of 2,520,113. This was 60,005 less than a month before, but 821,727 more than a year before. The total included 1,844,129 men, 70,888 boys, 547,549 women and 57,547 girls.

The 1,848,170 wholly unemployed included approximately 1,276,110 insured persons who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 468,800 insured persons who had paid less than 30 contributions during the preceding two years; and 103,260 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,671,290, included 220,367 men, 5,374 boys, 46,101 women and 3,052 girls, who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at April 27, 1931, was 2,593,845.

United States

Employment in the United States increased 0.2 per cent in April 1931, as compared with March, 1931, and pay-roll totals decreased 1.5 per cent according to returns made to the Bureau of Labour Statistics. The industries

included in the above statement are manufacturing, coal mining, metalliferous mining, quarrying and non-metallic mining, crude petroleum production, public utilities, trade (wholesale and retail), hotels, canning and preserving, and laundries, dyeing and cleaning.

Increased employment in April was shown in 10 of the 15 industrial groups: Anthracite mining, 3.9 per cent; metalliferous mining, 0.7 per cent; quarrying and non-metallic mining, 8.7 per cent; power, light, and water, 0.4 per cent; electric railroads, 0.5 per cent; wholesale trade, less than one-tenth of 1 per cent; retail trade, 2.6 per cent; canning and preserving, 12.5 per cent; laundries, 1.1 per cent; and dyeing and cleaning, 8.8 per cent.

Decreased employment was shown in April in the remaining 5 groups: Manufacturing, 0.4 per cent; bituminous coal mining, 3.3 per cent; crude petroleum producing, 3.3 per cent; telephone and telegraph, 0.6 per cent; and hotels, 1.5 per cent.

Pay-roll totals were greater in April than in March in 6 of the 15 industrial groups, namely, anthracite mining, quarrying, and non-metallic mining, retail trade, canning and preserving, laundries, and dyeing and cleaning. The remaining nine groups showed decreased earnings over the month interval.

The Pacific geographic division showed an increase in employment of 2.6 per cent, the New England and East North Central divisions reported increases of 0.4 per cent each, and the West North Central division increased 0.1 per cent. The remaining 5 divisions reported decreased employment, the East South Central showing the greatest loss in employment, 0.8 per cent. Decreased pay-roll totals were shown in each geographic division, with the exception of the Mountain division which reported a slight increase over the month interval.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of January and February, 1931, and therefore cannot be included in the general statement for the month of April. The number of employees of Class I railroads as at February 15, totalled 1,300,580 representing a decrease of 1.3 per cent since January 15, 1930. The amount of pay-roll in the entire month of February was \$168,126,650, representing a decrease over the previous month of 8.1 per cent.

Unemployment Percentage.—Since the fall of 1927, the American Federation of Labour has compiled statistics each month which indicate the percentage of unemployed union members in 24 representative cities of the United States. These figures are included in the monthly review of industrial and economic conditions which is given in the *Monthly Survey of Business*, published by the Federation. In May, 1928, the proportion of unem-

ployed union members was 13 per cent; in May, 1929, 11 per cent; in May, 1930, 20 per cent; in May, 1931, 17.1 per cent. The percentages since the beginning of 1931 are as follows: January, 19.8; February, 19; March, 18.1; April, 17.7; May, 17.1.

According to an estimate by the American Federation of Labor, approximately 5,000,000 wage earners were unemployed in the United States during May.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the

character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working

hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from the to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of

default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above-mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Ploughing, harrowing and seeding the landing field at R.C.A.F. Training Station, Trenton, Ont. Name of Contractor, Mr. J. F. Rose, Trenton, Ont. Date of contract, May 5, 1931. Amount of contract, \$4,300. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
Driver, team and wagon.....	per day \$6 50	per day 8
Ordinary labourers.....	per hour 0 40	8
Tractor operators.....	0 45	8

Erection of hollow tile walls at Hangar A-3, R.C.A.F. Training Station, Trenton, Ont. Name of contractor, Quinte Construction Ltd., Trenton, Ont. Date of contract, May 13, 1931. Amount of contract, \$4,650. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
Bricklayers and masons.....	per hour \$1 00	per day 8
Bricklayers' labourers.....	0 45	8
Plasterers.....	1 00	8
Carpenters.....	0 80	8
Painters and glaziers.....	0 70	8
Ordinary labourers.....	0 40	8
Roofers (sheet metal).....	0 70	8
Driver, team, horse-wagon.....	per day 6 50	8
Structural ironworkers.....	per hour 1 00	8
Plumbers and steamfitters.....	0 70	8
Electricians.....	0 70	8
Concrete workers.....	0 40	8
Sheet metal workers.....	0 70	8
Roofers (felt and gravel).....	0 70	8
Plumbers and steamfitters' helpers	0 45	8

Construction of a concrete apron at Hangar A-2, R.C.A.F. Training Station, Trenton, Ont. Name of contractors, Rayner Construction Co., Ltd., Toronto, Ont. Date of contract, May 19, 1931. Amount of contract, \$4,900. The above-mentioned fair wages schedule was also inserted in this contract.

Laying and jointing 20-inch water main from Water Tower to Hangar A-2 at R.C.A.F. Training Station, Trenton, Ont. Name of contractors, Quinte Construction Ltd., Trenton, Ont. Date of contract, May 20, 1931. Amount of contract, \$4,925. The above-mentioned fair wages schedule was also inserted in this contract.

Laying and jointing suction pipe from Bay of Quinte to Water Tower, R.C.A.F. Training Station, Trenton, Ont. Name of contractors, Quinte Construction Ltd., Trenton, Ont. Date of contract, May 29, 1931. Amount of contract, \$3,950. The above-mentioned fair wages schedule was also inserted in this contract.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a public building at Shubenacadie, N.S. Name of contractor, Wm. R. McDonald, Liverpool, N.S. Date of contract, May 15, 1931. Amount of contract, \$15,124.90 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than		Hours of labour Not more than	
	per hour	per day	per day	per week
Concrete workers.....	\$0 35	8	8	48
Concrete mixers.....	0 50	8	8	48
Concrete finishers—				
Floor.....	0 60	8	8	48
Wall.....	1 00	8	8	48
Stonemasons.....	0 90	8	8	48
Stonecutters.....	0 90	8	8	48
Brick and hollow tile layers.....	0 90	8	8	48
Structural steel workers.....	0 75	8	8	48
Carpenters and joiners.....	0 60	8	8	48
Sheet metal workers.....	0 55	8	8	48
Helpers' sheet metal workers.....	0 40	8	8	48
Roofers, felt and gravel.....	0 60	8	8	48
Terrazzo layers.....	0 90	8	8	48
Terrazzo layers' helpers.....	0 40	8	8	48
Marble setters.....	0 90	8	8	48
Tile setters.....	0 90	8	8	48
Metal lathers.....	0 60	8	8	48
Plasterers.....	1 00	8	8	48
Plasterers' helpers.....	0 40	8	8	48
Painters and glaziers.....	0 60	8	8	48
Plumbers and steamfitters.....	0 90	8	8	48
Plumbers and steamfitters' helpers.....	0 40	8	8	48
Electricians.....	0 75	8	8	48
Electricians' helpers.....	0 40	8	8	48
Labourers.....	0 35	8	8	48
Motor truck driver.....	0 40	8	8	48
	per day			
Horse, cart and driver.....	4 80	8	8	48
Team, wagon and driver.....	6 50	8	8	48

Installation of electric wiring and fittings in the Dynamometer Room, National Research Council, Ottawa, Ont. Name of contractor, Fred. A. Wilson, Ottawa, Ont. Date of contract, April 28, 1931. Amount of contract, \$700. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than		Hours of labour Not more than	
	per hour	per day	per day	per week
Electricians.....	\$0 80	8	8	48
Labourers.....	0 45	8	8	48
Driver, horse and cart.....	0 70	8	8	48
Driver, team and wagon.....	1 00	8	8	48
Motor truck driver.....	0 50	8	8	48

Installation of electric wiring and fittings in the Drill Hall, Craig street, Montreal, P.Q. Name of contractor, Mr. Fred A. Wilson, Ottawa, Ont. Date of contract, May 22, 1931. Amount of contract, \$3,500. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than		Hours of labour Not more than	
	per hour	per day	per day	per week
Electricians.....	\$0 90	8	8	48
Skilled labourers.....	0 45	8	8	48
Labourers.....	0 40	8	8	48

Installation of electric fixtures in the addition to the public building at Edmonton, Alta. Name of contractors, Hillas Electric Co., Edmonton, Alta. Date of contract, March, 31, 1931. Amount of contract, \$1,124.70. The General Fair Wages Clause was inserted in the contract.

Installation of interior fittings in the public building, Keewatin, Ont. Name of contractors, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, May 1, 1931. Amount of contract, \$1,235. The "B" labour conditions were inserted in the contract.

Installation of interior fittings in the public building at Victoriaville, P.Q. Name of contractor, Gustave Mercure, Drummondville, P.Q. Date of contract, April 27, 1931. Amount of contract, \$1,716.25. The "B" labour conditions were inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in May, 1931, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

<i>Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.</i>		
Pritchard-Andrews Co., Ltd., Ottawa, Ont.....		\$ 416 70
<i>Making and Repairing Rubber Stamps, Daters, etc.</i>		
Pritchard-Andrews Co., Ltd., Ottawa, Ont.....		178 52
<i>Making up and Supplying Letter Carriers' Uniforms.</i>		
Paton Manufacturing Co., Ltd., Montreal, P.Q.....		7,978 01
Grant-Holden-Graham Ltd., Ottawa, Ont.....		328 37

<i>Stamping Ink and Pads</i>		
Pritchard-Andrews Co., Ltd., Ottawa, Ont.....		40 85

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

HALIFAX, N.S.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 130.

Agreement to be in effect from May 1, 1931, to April 30, 1932.

Only union members to be employed and the employers agree to respect and observe the constitution and by-laws of the union. Foremen must be union members.

Hours: 8 per day, 4 on Saturdays, a 44-hour week for both day and night work. If necessary to work split shift running from day into night hours or vice versa, the shift will consist of seven hours and be paid at night rates.

Wages for hand compositors, make-ups, machine operators and journeymen not otherwise specified not less than \$35 per week for day work and \$38 for night work. This is an increase of \$5 per week for day work and \$3 per week for night work over the rates formerly in effect. Machinists and machinist operators to be paid \$2 per week above the scale. Foremen to receive at least \$3 per week above the scale.

Overtime: time and one-half; Sundays and holidays double time.

One apprentice allowed for every three journeymen employed, and no office will have more than four apprentices. The foreman of the office and the local apprentice committee will examine applicants for apprenticeship as to their fitness, and all applicants must have a common school education. Apprentices must be at least 16 years of age and they will serve five years. They must complete the course in Printing of the International Union. They will try yearly examinations before the local committee on apprentices.

Wages for apprentices: two-fifths of journeyman's wages for third year, one-half for fourth year and two-thirds for fifth year.

A standing committee of two representatives of each party will be appointed, and all disputes will be referred to it. If this committee is unable to agree, the matter will be referred to a board of arbitration each party selecting two representatives and these four to agree on

a fifth, the decision of this board to be final and binding. It is provided however that local union laws not affecting wages, hours or working conditions or the laws of the International Union will not be subject to arbitration. Any member who is discharged may appeal to the union and later if necessary to the local standing committee whose decision will be final and binding.

The union reserves the right to refuse to execute struck work.

In consideration of the observance of the agreement, the union agrees to allow the use of the union label.

Construction: Buildings and Structures

QUEBEC, QUEBEC.—CERTAIN GENERAL CONTRACTORS AND THE NATIONAL CATHOLIC BUILDING TRADES UNIONS.

Agreements to be in effect from May 1931, to May 1932 (the wage scale being the same as that in effect for the year 1930 to 1931.)

Only members of the National Catholic unions to be employed by the general contractors, and sub-contractors must also observe the conditions and wage scale of the agreements. The business agent may visit the jobs.

The hours of work for each union are determined.

Overtime: time and one-half to midnight; from midnight to 7 a.m. double time. No work on Sundays, Church holy days of obligation, St. Jean Baptiste Day or Labour Day.

Disputes will be settled by conciliation and arbitration.

There is a provision that in case of infraction of the agreement, a fine may be imposed.

Minimum wages per hour: bricklayers \$1, bricklayers' apprentices 40 cents, plasterers \$1, plasterers' apprentices to be agreed upon with the contractor, masons \$1, masons' apprentices 40 cents, carpenters and joiners 55 and 60 cents, foreman carpenter (ordinary) 70 cents, foreman carpenter (general) \$1, painters 50 cents, tinsmiths and roofers 50 cents, plumbers and electricians 50 cents, labourers 40 cents, mortar and celanite mixers, plaster mixers and hod carriers 50 cents, cement finishers and polishers 70 cents, terrazzo experts, tile and marble setters \$1, wood lathers 55 cents (or \$3 per thousand) metal lathers 55 cents, stationary engineers on portable machines 65 cents, driver with one horse and cart 55 cents, driver with two horses and cart 80 cents.

QUEBEC, QUEBEC.—CERTAIN PAINTING CONTRACTORS AND THE NATIONAL CATHOLIC UNION OF PAINTERS.

Agreement to be in effect from May, 1931, to May 1, 1932.

This agreement is similar to the agreements with general contractors noted above with a wage rate of 50 cents per hour for painters but with the addition of the following clauses:

Union members are to work for the contractors parties to the agreement in preference to other employers, as long as work is available.

Union members will not take evening work which would injure contractors.

A joint committee consisting of three employers and three workers will be formed to study the problems of the trade.

One apprentice allowed for every ten journeymen.

If either party wishes a change in wages they must notify the other party on January 15.

QUEBEC, QUEBEC.—CERTAIN PLUMBING CONTRACTORS AND THE NATIONAL CATHOLIC UNION OF PLUMBERS AND ELECTRICIANS.

Agreement to be in effect from May, 1931, to May, 1932, one month's notice of renewal, change or cancellation to be given.

This agreement is similar to the agreements with general contractors noted above with a wage rate of 50 cents per hour for plumbers and electricians but with the addition of the following clauses:—

The right of the employer is recognized to discharge a workman who is incompetent or who does not observe shop rules.

Hours: 9 per day, a 54-hour week; during June, July and August 10 hours per day with no work on Saturday afternoon, a 55-hour week.

If in case of necessity work is done on Sunday or a holy day, double time will be paid.

Union members will not be allowed to work outside of regular working hours when they are employed by a contractor signing this agreement.

Apprentices are to be 16 years old and the number is limited to one to every journeyman. They must take the course at the technical school.

Wages for apprentices: first year \$6 per week, second year \$8, third year \$10, fourth year \$12.

A joint committee will be formed consisting of two employers and two union members to settle disputes and to study questions relating to the improvement of the trade.

QUEBEC, QUEBEC.—CERTAIN ROOFING CONTRACTORS AND THE NATIONAL CATHOLIC UNION OF TINSMITHS AND ROOFERS.

Agreement to be in effect from May, 1931, to May, 1932.

Only union members to be employed and the union agrees to furnish competent men.

Hours: 48 per week in the winter and 55 per week in the summer.

Overtime: time and one half to 11 p.m., and double time thereafter.

One apprentice allowed for every five journeymen.

Union members must not work at the shops of other employers after regular working hours.

Disputes will be referred to conciliation and arbitration and no strike or lockout to occur until all means of conciliation have been tried.

The wage rate for tinsmiths and roofers noted above in the agreement with general contractors is 50 cents per hour.

MONTREAL, QUEBEC.—CERTAIN CONTRACTORS AND THE BROTHERHOOD OF PAINTERS, DECORATORS, PAPERHANGERS, GLAZIERS AND GLASS WORKERS OF AMERICA, DISTRICT COUNCIL No. 5.

The agreement which is in effect from April 1, 1929, to April 1, 1932, and which was summarized in the LABOUR GAZETTE, June, 1929, has been amended.

The increase in wages which was to have been made on April 1, 1931, from 85 to 90 cents per hour has been deferred for one year, the rate

remaining at 85 cents per hour until April 1, 1932.

MONTREAL, QUEBEC.—MASTER PLASTERERS' SECTION OF THE BUILDERS' EXCHANGE INCORPORATED OF MONTREAL AND THE OPERATIVE PLASTERERS' AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL No. 33.

The agreement which is in effect from September 15, 1930, to April 30, 1932, which was summarized in the LABOUR GAZETTE, October, 1930, has been amended.

The increase in wages which was to have been made on May 1, 1931, from \$1.05 to \$1.15 per hour has been deferred for one year, the rate remaining at \$1.05 until April 30, 1932.

MONTREAL, QUEBEC.—CERTAIN EMPLOYERS AND THE INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, LOCAL No. 23.

Agreement to be in effect from May 11, 1931, to April 30, 1932. Either party wishing to renew it in its present form or with change will give notice 90 days prior to expiration.

Only union members to be employed. When an emergency exists for which the local union cannot supply mechanics or improvers other men may be employed and will work under permit until replaced by union members. The union agrees that it will work under this form of signed trade agreement with any master insulator to whom it furnishes labour and also that master insulators shall have preference in labour supply.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: Overtime on regular working days and work on Saturday afternoons, time and one-half; double time for work on Sundays and holidays. No work on Labour Day, except in case of emergency when double time will be paid.

Wages for mechanics: 80 cents per hour.

Not more than three improvers to every two mechanics to be employed. Improvers will not be eligible for mechanics' examination until they have spent four years at the trade.

Wages for improvers, 40 cents, 50 cents and 70 cents per hour.

Employers parties to the agreement will not sub-let any of their work nor will any member of a firm or officer of a corporation or their agents execute any of the work of application of materials. Union members agree not to contract, sub-contract or estimate on work or act in any trade capacity other than that of workman.

On work out of the city, fare and board to be paid and travelling time at straight time except where berth is provided.

No limitations or restrictions will be placed on the individual working effort of union members.

No lockouts except when of a general nature and ordered by the Building Trades Employers' Association and no strikes except when of a general nature and ordered by the Building Trades Council. Trade disputes will be settled without cessation of work and in cases where the parties fail to agree will be referred to a disinterested umpire whose findings will be final and binding.

TORONTO, ONTARIO.—THE CARPENTER AND GENERAL CONTRACTORS' SECTION AND THE GENERAL CONTRACTORS' ASSOCIATION OF THE TORONTO BUILDERS' EXCHANGE AND THE TORONTO DISTRICT MANAGING COMMITTEE OF THE AMALGAMATED CARPENTERS OF CANADA.

This agreement which is in effect from January 1, 1930, to December 31, 1931, was printed in the LABOUR GAZETTE, December, 1929, page 1414. Under its provision wages were to be increased on January 1, 1931, from \$1.10 to \$1.15 per hour, but at the beginning of the year, it was agreed to forego this increase and the wage rate remains at \$1.10 per hour for the year 1931.

TORONTO, ONTARIO.—CERTAIN CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, LOCAL No. 20.

Agreement to be in effect from May 25, 1931, to April 30, 1932.

This agreement is the same as the one previously in effect, which was noted in the LABOUR GAZETTE, June, 1930, February, 1929, and July, 1928, with the following exceptions:—

Wages for journeymen have been reduced from \$1 to 92½ cents per hour.

A third year improver may execute work on hot water heated jobs.

On work outside the territory of the local union the union will not prevent union members (in excess of one mechanic and one improver) from paying their own board and transportation.

For work on Labour Day which will only be done in case of emergency, triple time will be paid.

The regular hours of work are unchanged at 44 per week.

HAMILTON ONTARIO.—HAMILTON MASTER PLUMBERS AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS OF THE UNITED STATES AND CANADA, LOCAL No. 67.

The agreement which came into effect September 3, 1929, and was summarized in the LABOUR GAZETTE, September, 1929, continues to be in effect to April 30, 1932, and from year to year until either party gives notice of change two months before April 30, of any year.

The regular hours and wage rate remain the same at \$1.10 per hour for a 40-hour week.

NIAGARA FALLS, ONTARIO.—THE BUILDERS' EXCHANGE, MASTER CARPENTERS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 713.

Agreement to be in effect from May 1, 1931, to April 30, 1932.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1929, and August, 1927, with the following exception:

The clause providing that men regularly employed in contractors' shops be allowed to work one hour per day overtime on machines at straight time rates has been omitted.

Wages and hours are unchanged at \$1 per hour and a 44-hour week.

WINDSOR AND VICINITY, ONTARIO.—ELECTRICAL CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 773.

This agreement which was signed for the period May 1, 1930, to April 30, 1931, is still in effect.

All journeymen and apprentices required shall be employed through the union and the contractors parties to the agreement will be given preference by the union when men are required. The union to have access at all times to all time-books and pay rolls of the contractors.

Hours: 8 per day for 5 days, a 40-hour week.

Overtime: All overtime and work on Saturdays, Sundays and holidays, double time, except in case of emergency work when work on Saturday between 8 a.m. and 12 noon will be paid at straight time.

Wages for journeymen electrical workers: \$1.37½ per hour. Any job employing four or more journeymen must have a journeyman as supervisor or lay-out man who shall receive 10 per cent above journeyman's wages.

Apprentices shall be indentured under the Ontario Government Apprentices Act. First and second year apprentices to receive eight weeks' schooling each year with wages. Not more than one apprentice or helper to each three journeymen in any shop or job.

Wages for apprentices: first year 30 cents per hour, second year 40 cents, third year 65 cents, fourth year 90 cents.

Transportation, travelling time and all expenses to be paid by contractor to men working out of town.

No union member can make contracts for repairing or installing electrical work while in the employ of contractors, parties to the agreement.

Only one member of a firm is allowed to handle tools and no contractor or member of the firm can work with the tools unless a journeyman member of the union works with him. No union member shall be allowed to transport tools or material in his own car during working hours.

When men report to work at starting time they shall receive at least 4 hours pay.

All disputes will be referred to a joint Conference Committee consisting of three members of each party (this committee is to be selected annually). If they are unable to agree the matter will be referred to the Council of Industrial Relations for the Electrical Industry*, whose decision will be final and binding.

REGINA, SASK.—GENERAL CONTRACTORS' SECTION OF REGINA BUILDERS' EXCHANGE AND BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION No. 1.

Agreement to be in effect from May 14, 1931 to May 1, 1932, and from year to year until either party gives notice of change 90 days before May 1, of any year.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September 1930, page 1090 with the following exception:

*This is a joint council of the contractors' organization and the union.

Wages for journeymen bricklayers and stonemasons: \$1.35 per hour (a reduction in wages of 10 cents per hour from the previous agreement).

REGINA, SASK.—REGINA BUILDERS' EXCHANGE AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1867.

Agreement to be in effect from May 1, 1931, to January 31, 1932, and from year to year unless notice of change is given by either party before December 31, of any year.

Union members to be given preference in employment if they are available.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. In case of night shifts 7½ hours will be worked with 8 hours pay.

Overtime: time and one-half, Sundays and holidays, double time.

Wages for journeymen carpenters: 90 cents per hour (a reduction of 10 cents per hour from the previous rate).

One hour's notice of dismissal or leaving work to be given.

SASKATOON, SASK.—GENERAL CONTRACTORS' SECTION OF SASKATOON BUILDERS' EXCHANGE AND THE BRICKLAYERS MASONS AND PLASTERERS INTERNATIONAL UNION LOCAL No. 3, SASKATCHEWAN.

Agreement to be in effect from May 14, 1931, to May 1, 1932, and from year to year until either party gives notice of change 90 days before May 1, of any year.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, August, 1929, page 926, and which was renewed to April 30, 1931, as noted in the *LABOUR GAZETTE* August, 1930, page 969, with the following exceptions:

Wages: \$1.35 per hour (a reduction of 10 cents per hour from the previous agreement).

It is also provided that on all steel and concrete buildings, scaffolding shall be on the outside with handrail, which will be inspected by the shop steward and foreman before any members are allowed to work on it.

CALGARY, ALBERTA.—CALGARY CONTRACTORS AND THE AMALGAMATED CARPENTERS OF CANADA—CALGARY BRANCH.

Agreement to be in effect from May 1, 1931, to April 30, 1932, both parties agree to meet during January, 1932, to draw up a new agreement.

The terms of this agreement are the same as of the agreement between the Contractors and the United Brotherhood of Carpenters and Joiners, Local No. 1779, which was mentioned in the *LABOUR GAZETTE*, May, 1931, page 599, the terms being the same as in the previous agreement which was summarized in the *LABOUR GAZETTE*, July, 1928, page 788.

CALGARY, ALBERTA.—CERTAIN CONTRACTORS AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL No. 583.

Agreement to be in effect from April 1, 1931, to March 31, 1932.

This agreement is the same as the one previously in effect which was summarized in the *LABOUR GAZETTE*, September, 1930, page 1092, with the following exceptions.

The hours remain at 44 per week with the regular wage rate of 90 cents per hour, but the following clause is added:

"During the present business depression, union men to be allowed to work for a reduced scale, the minimum to be not less than 75 cents per hour in order to allow fair employers to compete with non-union shops, the merits of this clause to be subject to open discussion at any time, between a committee composed of three fair employers and three members of local union No. 583."

CALGARY, ALBERTA.—PLASTERING CONTRACTORS ASSOCIATION OF CALGARY AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS INTERNATIONAL ASSOCIATION, LOCAL No. 324.

Agreement to be in effect from May 1, 1931, to April 30, 1932. Any change in the agreement will be negotiated between the parties 90 days before the expiration of this one.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, May, 1929, page 536, with the following exceptions:

Hours: the hours have been reduced from 44 to 40 per week with a 5 day week.

It is provided that putty finishing on all business blocks, apartments and stores is to be mixed on the boards by the plasterers while that for all house work will be mixed by the labourer.

Wages: the wage rate remains at \$1.40 per hour.

Transportation and Public Utilities: Electricity and Gas

MOOSE JAW, SASK.—THE NATIONAL LIGHT AND POWER COMPANY AND THE SASKATCHEWAN BROTHERHOOD OF STEAM AND OPERATING ENGINEERS, LOCAL No. 2.

Agreement to be in effect from January 1, 1931, to December 31, 1931, and thereafter subject to 30 days' notice by either party.

Hours: in spite of the necessity of continuous operation, as far as conditions reasonably permit, employees will not work more than eight hours per day and each employee to have one day off in seven. Ashman and coal conveyor shall work if necessary seven days per week, but their work will be arranged to reduce as far as possible the work on Sundays or holidays.

Overtime: time and one-half for first four hours in any one day and double time thereafter. If on account of changing shifts, a second shift of eight hours is worked in one day by operating engineers, stoker operators or oilers, overtime rates will not apply. Double time for work on seventh day after employee has worked six consecutive days. If employees other than operating engineers, stoker operators, oilers, coal and ash handlers or assistants to any of these are required to work on statutory holidays they will be paid double time. Overtime rates will not apply to extra time worked by any employee on account of another employee being absent on annual holiday.

Wages per hour: operating engineers 95 cents, firemen 74 cents, oilers with second-class certificates 65 cents, oilers with third-class certificates 50 cents, repairmen 75 to 80 cents per hour, boiler cleaner 62½ cents, ashman 55 cents; coal conveyor operator \$136.50 per month.

The company agrees to continue to carry on the life insurance policies pertaining to employees at its own expense and to turn them over to employees leaving the company's service if they so request, the face value of the insurance policies to increase at the rate of \$100 per year up to a maximum of \$1,500.

All employees who are householders will receive electrical service for their households at half the regular rates.

All employees after one year's service to be paid one-half regular pay for a period not exceeding three weeks a year in case of personal illness.

All employees after each year's service will be entitled to 14 days' leave with full pay.

In filling vacancies, seniority of service to be given preference, other qualifications being equal.

One month's notice of leaving or of discharge to be given by or to operating engineers and stoker operators.

Transportation and Public Utilities; Water Transportation

MONTREAL, QUEBEC.—THE HARBOUR COMMISSIONERS OF MONTREAL AND THE INDEPENDENT ASSOCIATION OF HARBOUR EMPLOYEES OF THE PORT OF MONTREAL.

Agreement to be in effect from May 1, 1931, to April 30, 1932.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, September, 1927, page 1004, as amended and noted in the *LABOUR GAZETTE*, July, 1929, page 807, and further amended and noted in the *LABOUR GAZETTE*, September, 1930, page 1093, with the following exceptions:—

The wages of labourers (not classified) have been reduced from 42 to 40 cents per hour.

The clause providing that at the close of navigation the Superintendent is to tell the men laid off at what time their services will be required has been omitted.

The diver and assistant diver will be paid the scheduled rates for the working day when diving.

The hours of work are no longer specified for the following employees, but the same provision is made for the payment of overtime to them as in the previous agreement, that is: after 9 hours and after noon on Saturdays for harbour, yard, shop, locomotive shop, and guard pier employees; after 10 hours in summer and after 9 hours in winter for construction and maintenance forces and for journeymen electricians and linemen; after ten hours for cold storage warehouse employees; after ten hours and for work on Sundays on derricks and dredges.

Exemptions under Saskatchewan One Day Rest in Seven Act

Employees in drug stores serving a term of apprenticeship were declared by an order in Council of Saskatchewan, dated May 21, 1931, to be exempt from the provisions of the One Day's Rest In Seven Act (Statutes of Saskatchewan, 1930, Chapter 81). The provisions of this act were outlined in the *LABOUR GAZETTE*, June, 1930, page 656. It provides that, with certain specified exceptions (to which additions may be made by Order in Council) a rest period of at least 24 consecutive hours in each week, if possible on Sunday, shall be allowed to industrial workers, including employees of municipal corporations. The

following classes of workers are excepted: (a) watchmen, janitors or stationary boiler engineers; (b) employees who are not usually employed for more than five hours in any one day; (c) employees occupying supervisory, managerial or confidential positions; (d) employees engaged in repairing or replacing equipment or machinery by reason of breakage or work of a similar emergency nature; (e) employees employed during their period of rest for the sole purpose of maintaining fires, setting sponges in bakeries or feeding and attending animals when such work is part of their usual duties.

The Mining Laws of Canada

The Mines Branch of the Department of Mines has published a revised edition of the bulletin entitled the "Mining Laws of Canada: a Digest of Dominion and Provincial Laws Affecting Mining." This volume, which was first issued in 1924, is in six sections, as follows: (1) Synopsis of the mining laws at present in force; (2) Summary of special Acts relating to mining, mine taxation, etc.; (3) Lists of Acts, amendments, and regulations at present in force; (4) Royalties; (5) Bounties; (6) Schedules of fees. The material for the synopses of mining laws and regulations has been furnished for this publication by the officers of the several governments who are directly in charge of their administration.

These synopses are intended as a general guide to the principles underlying the administration of the laws governing the mining industry in different parts of Canada.

The Imperial Mining Resources Bureau, London, England, has published a series of volumes dealing with the Mining Laws of the different parts of the Empire, and volumes dealing with the Mining Laws of Ontario, British Columbia, and of the Dominion of Canada have already been issued by this Bureau. Somewhat similar volumes are also being issued by the United States Bureau of Mines, Department of Commerce, Washington, D.C.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in May was toward lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in April.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was again lower at \$8.54 at the beginning of May, as compared with \$8.86 for April; \$11.17 for May, 1930; \$10.94 for May, 1929; \$10.80 for May, 1928; \$10.76 for May, 1927; \$11.29 for May, 1926; \$10.48 for May, 1925; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.65 for May, 1920; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. The most important declines occurred in the prices of butter, eggs, milk, cheese, beef, salt pork, bacon, flour, rice, prunes and beans. Including the cost of fuel and rent with that of food the total budget averaged \$18.81 at the beginning of May, as compared with \$19.18 for April; \$21.49 for May, 1930; \$21.21 for May, 1929; \$21.04 for May, 1928; \$20.95 for May, 1927; \$21.54 for May, 1926; \$20.72 for May, 1925; \$20.24 for May, 1924; \$20.90 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.44 for May, 1920; \$26.92 for July, 1920 (the peak); \$20.09 for May, 1918; and \$14.21 for May, 1914. Fuel was slightly lower due to seasonal decreases in the price of anthracite coal and of wood. Lower quotations for rent were reported from Thetford Mines, Kitchener and Moose Jaw.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower at 73.0 for May, as compared with 74.5 for April; 89.7 for May, 1930; 93.4 for May, 1929; 97.9 for May, 1928; 98.3 for May, 1927; 100.3 for May, 1926. One hundred and twenty-one prices quotations declined, fifty-six advanced and three hundred and twenty-five were unchanged.

In the grouping according to chief component materials seven of the eight main groups were lower while one was slightly higher. The groups which declined were: the Vegetables and Vegetable Products group, due to lower prices for corn, flour, bread, bran, shorts and potatoes, which more than offset higher prices for barley, oats, flax, rye and

wheat; the Animals and their Products group, due to reduced quotations for hides, live stock, milk, butter and eggs; the Wood, Wood Products and Paper group, because of lower prices for newsprint and certain lines of lumber; the Iron and its Products group, because of declines in the prices of steel tank plates, automobile body plates and black steel sheets; the Non-Ferrous Metals and their Products group, because of reduced quotations for antimony, copper, silver and tin; the Non-Metallic Minerals and their Products group, mainly because of lower prices for asbestos; and the Chemicals and Allied Products group, because of declines in the prices of copper sulphate and red lead. The Fibres, Textiles and Textile products group was slightly higher, because of higher quotations for worsted cloth yarns and certain silk fabrics, which more than offset lower prices for raw cotton, hemp and raw silk.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former mainly due to lower prices for bread, coffee, tea, flour, bran, shorts, milk, butter and eggs, which more than offset advances in worsted cloth yarns, certain silk fabrics and anthracite coal, and the latter due to lower prices for lumber, raw cotton, raw silk, copper, steers and hogs, which more than offset higher prices for lambs, barley, oats, rye and wheat.

In the grouping according to origin raw and partly manufactured goods were lower, because of declines in the prices of corn, tea, potatoes, raw cotton, hogs, steers and eggs. Fully and chiefly manufactured goods were also lower, mainly due to reduced prices for flour, cured meats, lard, butter, cheese, canned salmon, copper wire bars and copper sheets. Domestic farm products, articles of marine origin, articles of forest origin and articles of mineral origin declined.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city ex-

cept milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the **LABOUR GAZETTE**.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the **LABOUR GAZETTE** resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the **LABOUR GAZETTE** was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the **LABOUR GAZETTE** since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the

expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the **LABOUR GAZETTE** a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the **LABOUR GAZETTE**, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1918, quarterly from 1919 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3;

*Prior to 1926 number of commodities was 236.

(Continued from page 714)

1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 74.4; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 66.7; 1929, 65.0. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1929, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years

1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0. Natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 158.9; 1929, 159.1. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices, for the most part, were somewhat lower, round steak averaging 24.4 cents per pound in May and 24.5 cents in April;

rib roast 22.6 cents in May and 23 cents in April; and shoulder roast 16.4 cents in May and 17 cents in April. Veal was generally lower, averaging 18.2 cents per pound in May as compared with 19.7 cents in April. Mutton was slightly higher at an average price of 26.9 cents per pound. Both fresh and salt pork declined, the former averaging 22.5 cents per pound as compared with 22.8 cents in April, and the latter averaging 23.2 cents per pound as compared with 23.8 cents in April. In fresh fish, cod steak, halibut and white fish were slightly higher. Lard was down from an average of 16.7 cents per pound in April to 16.1 cents in May. This compares with an average price of 21.3 cents per pound in May, 1930.

Eggs again showed a considerable decline, fresh averaging 25.4 cents per dozen in May, 28.4 cents in April and 35.1 cents in May, 1930, while cooking averaged 20.9 cents per dozen in May, 23.2 cents in April and 31.1 cents in May, 1930. Milk was down in April in the average from 11.7 cents per quart to 11.3 cents in May. Lower prices were reported from New Glasgow, St. John, Quebec, Three Rivers, Sherbrooke, St. Hyacinthe, St. John's, Thetford Mines, Kingston, Oshawa, Toronto, Hamilton, Guelph, Stratford, Chatham, Sarnia, Owen Sound, North Bay, Timmins, Winnipeg, Brandon, Edmonton, Calgary, New Westminster, Vancouver and Prince Rupert. Butter prices were lower in practically all localities, dairy averaging 28.9 cents per pound in May, 33.2 cents in April and 36.6 cents in May, 1930, and creamery averaging 32.8 cents per pound in May, 37.1 cents in April and 40.1 cents in May, 1930. Cheese was also generally lower, averaging 26.6 cents per pound, as compared with 27.8 cents in April.

Bread was unchanged at an average price of 6.3 cents per pound. Flour was slightly lower, averaging 3.3 cents per pound in May as compared with 3.4 cents in April. Canned vegetables were again slightly lower, tomatoes averaging 13.3 cents per tin, peas 12 cents per tin and corn 14 cents per tin. Beans were down from an average price of 6.3 cents per pound in April to 6.1 cents in May, as compared with 9.3 cents in May, 1930. Potatoes were practically unchanged at \$1.08 per ninety pounds. Evaporated apples and prunes were somewhat lower, the former averaging 17.7 cents per pound, as compared with 18.1 cents in April, and the latter 11.9 cents per pound, as compared with 12.1 cents in April. The price of granulated sugar has remained unchanged for the last four months at an average price of 6.3 cents per pound. Anthracite coal was down from an average price of \$16.09

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

per ton in April to \$15.81 in May. Lower quotations were reported from Halifax, St. John, Sherbrooke, St. Hyacinthe, St. John's, Montreal, Peterborough, Oshawa, Orillia, Toronto, Niagara Falls, Hamilton, Brantford, Guelph, Stratford and St. Thomas. Bituminous coal was also down in the average at \$9.87 per ton in May as compared with \$9.95 in April. Lower quotations for rent were reported from Thetford Mines, Kitchener and Moose Jaw while an increase occurred at Halifax.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 60.6 cents per bushel in May, as compared with 59.7 cents in April. The slight advance was said to be due mainly to unfavourable crop conditions in western Canada and to a better export demand. Coarse grains also were higher, with the exception of corn, western barley being up from 28.3 cents per bushel to 31 cents; flax from \$1.04 per bushel to \$1.06; oats from 28.1 cents per bushel to 29.1 cents; and rye from 31.7 cents per bushel to 34.2 cents. Flour prices averaged somewhat lower at \$5.16 per barrel as compared with \$5.20 in April. Bran and shorts each declined \$1.94 per ton, the former to \$20.31 and the latter to \$22.31. Raw sugar at New York was down from \$1.32 per cwt. to \$1.20, while granulated at Montreal was unchanged at \$4.56 per hundred pounds. Ceylon rubber at New York was slightly higher at 6.5 cents per pound as

compared with 6.4 cents in April. Coffee at Toronto declined $\frac{1}{2}$ cent per pound to 14.5 cents. In livestock, good steers at Toronto were down from \$6.22 per hundred pounds in April to \$6.07 in May, and at Winnipeg from \$5.53 per hundred pounds to \$5.22. Veal calves at Toronto declined from \$8.31 per hundred pounds to \$7.43 but were unchanged at Winnipeg at \$7.33. Bacon hogs at Toronto were down from \$8.47 per hundred pounds to \$8.25 but at Winnipeg the price advanced from \$7.27 per hundred pounds to \$7.42 and at Montreal from \$8.40 per hundred pounds to \$8.58. Creamery butter at Montreal was down from an average price of 30.5 cents per pound in April to 23.6 cents in May and at Toronto from 31.9 cents per pound in April to 23.9 cents in May. Fresh eggs at Montreal declined from 26.3 cents per dozen in April to 24.1 cents in May and at Winnipeg from 22.4 cents per dozen to 20.5 cents. Raw cotton at New York was down from 10.2 cents per pound to 9.4 cents and raw silk from \$3.15 per pound to \$2.65. Wool prices were practically unchanged at 14-15 cents per pound. Common white pine lumber declined from \$42 per thousand feet to \$40, and hemlock from \$22 per thousand feet to \$20. Black steel sheets at Montreal were down from \$2.72 per hundred pounds to \$2.67. In non-ferrous metals electrolytic copper at Montreal declined from \$11.09 per hundred pounds to \$10.30; tin at Toronto from 27.8 cents per pound to 25.8 cents; and silver at New York from 28.3 cents per ounce to 27.7 cents. Ground asbestos was down from \$275 per ton to \$225.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table showing wholesale and retail prices index numbers for various countries appeared in the LABOUR GAZETTE for April.

Great Britain

Wholesale Prices.—The Board of Trade index number on the base 1924=100, was 63.6 for April, a decline of 0.2 per cent for the month. Foods advanced 1.3 per cent showing increases in all of the three groups. Industrial materials, on the other hand declined

1.0 per cent with declines in all groups except for increases in coal and wool.

The *Statist* index number, on the base 1867-1877=100, was 84.4 at the end of April, a decline of 1.3 per cent for the month and of 16.8 per cent since April, 1930. Food-stuffs showed an advance of 0.9 per cent for the month, while industrial materials were 3.0 per cent lower with declines in all three groups.

Cost of Living.—The index number of the Ministry of Labour Gazette, on the base July, 1914=100, was 147 at May 1, showing no change from the previous month. The food group as a whole was unchanged, advances in potatoes and bacon being offset by lower prices for milk and butter. There was a slight decrease in clothing, but all other groups were unchanged for the month.

France

Wholesale Prices.—The index number of the General Statistical Bureau, on the base 1914=100, (gold basis) was 101 for April, an increase of one per cent over the previous month. The food group showed an advance due to increases in vegetable foods and sugar, coffee and cocoa, although animal foods were lower. Industrial materials declined due to declines in minerals and metals and miscellaneous commodities, while textiles were higher.

Germany

Cost of Living.—The official index number, on the base 1913-1914=100, was 137.2 for April, a decline of 0.4 per cent for the month. All groups contributed to the decline, the change being less than one per cent in each group.

Italy

Wholesale Prices.—The index number of the Milan Chamber of Commerce, on the base 1913=100 (gold basis) was 95.8 for April, a decline of 0.9 per cent for the month. Foods as a whole were higher due to increased prices for vegetable foods, although animal foods were lower. Industrial materials declined with decreases in textiles, minerals and metals, construction materials and miscellaneous commodities.

Cost of Living.—The index number of the cost of living Milan, on the base June, 1927=100, was 84.5 for March, an increase of 0.1 per cent for the month.

India

Wholesale Prices.—The index number of the Labour Office, Bombay, on the base July, 1914=100, was 112 for February, an increase of 0.9 per cent for the month. All food

groups were lower than in January, while non-foods advanced.

Cost of Living.—The working class cost of living index number in Bombay, on the base July, 1914=100, was 112 for March, a decrease of 1.8 per cent for the month. Food showed a decline, while fuel and lighting was higher and clothing and house rent were unchanged.

United States

Wholesale Prices.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 73.3 for April, a decrease of 1.6 per cent for the month. Of the ten main groups of commodities, nine declined from the previous month, while the tenth (house-furnishing goods) was unchanged.

The *Annalist* index number, on the base 1913=100, was 102.9 for May, a decline of 3 per cent for the month. With the exception of small increases in chemicals and miscellaneous commodities, all groups were lower than in April, the greatest fall in any one group being of 5.5 per cent in farm products.

Dun's index number of wholesale commodity quotations proportioned to the *per-capita* consumption of each of the many articles included, was \$145.885 at June 1, a decline of 2.4 per cent for the month. This index number is practically the same as that recorded on June 1, 1916. With the exception of a small increase in metals, all groups were lower on June 1, than on May 1.

Cost of Living.—The index number of the Department of Labour and Industries, Massachusetts, on the base 1913=100, was 141.5 for April, a decrease of 1.3 per cent for the month, and the lowest recorded since December, 1917. Reductions were noted in all groups for the month with the exception of the shelter group which was unchanged.

CENSUS OF INDUSTRY IN CANADA

Manufacturing Statistics for the Year 1929

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census covering statistics of fisheries, mines, forestry, and general manufacturing in Canada. Summary figures for all manufacturing industries for the year 1929 have recently been issued, and the accompanying tables give these figures in some detail.

Table I is a comparative study of the principal statistics of the manufacturing industries for the past ten years 1920-1929. It will be observed that there is a decided increase in

all the items since 1924, the figures for 1929 again showing an increase over those of the previous year. Compared with 1928 the figures show an increase in the number of wage earners of 31,047, and in wages paid of \$43,873,677; also the value added by manufacture was \$178,304,340 greater, and the value of products increased \$294,136,915 in the year 1929.

Table II presents the principal statistics of the manufacturing industries of Canada for the year 1929 by provinces and by groups of

(Continued on page 729)

(Continued from page 725)

industries classified according to chief component materials; for the sake of comparison the figures for 1928 are also given. In 1929 the province of Ontario ranks first in the number of wage earners and wages paid; while in production Ontario had 51·75 per cent of the total for the Dominion. Quebec comes second in the number of wage earners and wages paid, with 28·56 per cent of the value of products for Canada; whilst the remaining provinces follow in the order named:—British Columbia 6·81 per cent of the total production; Manitoba, 4·06 per cent; Alberta, 2·65 per cent; Nova Scotia, 2·32 per cent; Saskatchewan, 1·98 per cent; New Brunswick, 1·76 per cent; and Prince Edward Island, 0·11 per cent. In the groups by industries, for the year 1929 the first place is taken by the vegetable products group, having 18·96 per cent of the total of all groups. Iron and its pro-

ducts is second with 18·16 per cent; wood and paper products group is third with 17·86 per cent; animal products comes fourth with 11·75 per cent; textile products is fifth with 10·49 per cent; followed in order by the non-ferrous metal products group with 6·97 per cent; the central electric station group, with 3·88 per cent; the chemical group with 3·4 per cent; and the miscellaneous group last with 2·54 per cent.

Table III is a statement of the statistics by groups and principal sub-groups for 1929. The corresponding figures for the year 1928 were published in the LABOUR GAZETTE, May, 1930, pages 598-600, with the exception of the manufacturing minerals and chemicals, figures for which were published in the issue for December, 1929, pages 1435-1439. In Table III some of the smaller industries are omitted, but statistics of these are included in the totals of Tables I and II.

EMIGRATION FROM GREAT BRITAIN IN 1930

THE issues of the *Board of Trade Journal* for 5th, 12th, 19th and 26th March give statistics of the emigration and immigration of British subjects during the year 1930, with some particulars of the occupations and ages of the migrants. The number of British subjects who were recorded as leaving permanent residence in the United Kingdom (Great Britain and Northern Ireland) to take up permanent residence (i.e. residence for a year or more) in non-European countries was 92,158 in 1930, as compared with 143,686 in 1929 and with 136,834 in 1928. The number of British subjects who were recorded as leaving permanent residence in non-European countries to take up permanent residence in the United Kingdom was 66,203 in 1930, as compared with 56,217 in 1929 and with 59,105 in 1928. These figures are exclusive both of Irish Free State migrants travelling *via* ports in the United Kingdom and of migrants (of all nationalities) leaving or arriving at ports in the Irish Free State.

The following table shows the number of emigrants and immigrants, of British nationality, from the United Kingdom to each of the principal countries, and from those countries to the United Kingdom in 1930.

It will be seen that the reduction was chiefly due to a great decline in the emigration to British North America and to Australia, the totals for 1930 in each case being less than half the totals for 1929. The emigration to Australia was, in fact, considerably less than the immigration therefrom; in other words, there was a balance inwards from Australia in 1930 of 4,291, as against a balance outwards of 8,861 in 1929. The balance out-

Countries	Emigrants from United Kingdom	Immigrants into United Kingdom
	1930	1930
British North America.....	31,074	15,820
Australia.....	8,517	12,908
New Zealand.....	3,981	3,144
British South Africa.....	4,559	4,416
India and Ceylon.....	5,636	8,581
Other parts of British Empire.....	5,474	6,673
Totals, British Empire.....	59,241	51,442
United States.....	27,336	7,931
Other Foreign Countries.....	5,581	6,830
Totals Foreign Countries..	32,917	14,761
Totals, all destinations.....	92,158	66,203

wards to British North America was reduced from 53,264 in 1929 to 15,254 in 1930; that to New Zealand from 1,996 to 837; and that to all Empire destinations taken together from 62,951 to 7,799. To the United States, on the other hand (the only important country of destination of emigrants, outside the British Empire), there was a much smaller reduction in the balance outwards—from 24,697 in 1929 to 19,405 in 1930.

Assisted passages under the Empire Settlement Act numbered 12,605 in 1930 (of whom 9,244 went to Canada), as compared with 34,476 in 1929. In addition, 17,252 emigrants in 1930, and 37,254 in 1929, went to Canada at the special passage rate of £10 granted by the steamship lines, by agreement with the Oversea Settlement Department, to emigrants from the United Kingdom. (The figures for 1930 are provisional.)

RECENT LEGAL DECISIONS AFFECTING LABOUR

Liability of Mortgagee for Wages of Workers on Land

A firm of horticulturists in Ontario which grew roses and sold the cut flowers, having defaulted in payment of interest on a mortgage, the owners of the mortgage took possession of the premises, receiving the rents and profits of the business. A labourer who had been employed by the firm, sued the mortgagee of the land and also the bank which held a lien on the products of the business, for the wages which remained unpaid from the date of the mortgage.

Mr. Justice Logie, in the Ontario Supreme Court, found that a mortgagee exercising powers for sale, but without interfering with the operation of the business, is not liable for the wages of persons working the mortgaged lands. As concerned the plaintiffs' claim against the bank the Court declared that "the right of wage-earners under Section 88 (7) (of the Bank Act) depend upon whether the bank 'takes possession or in any way disposes of the said security or of the products, goods, wares and merchandise, stock or products thereof, or grain covered thereby. 'If the security in question could be considered as a security, authorized by s. 88, the plaintiff has not shown that the bank either took possession or disposed of the security or products covered thereby. No evidence at all was adduced to show that the bank took possession.

"In my opinion the bank is not liable, because it did not take possession or in any way dispose of its security or the products covered thereby."

The action was therefore dismissed.

MacPherson versus London Loan Assets Limited and Royal Bank (Ontario), 1931, *Dominion Law Reports*, vol. 2, page 631.

Position of Pupil Nurse under Workmen's Compensation

A pupil-dietician employed by the Oshawa Hospital, a private institution, sustained personal damages while operating a dumb-waiter in September, 1928. The dumb-waiter was used to carry food from the kitchen in the basement of the defendant corporation's building to the second floor. In an action by the injured employee for damages, the plaintiff alleged that the action was due to a defect in the hoist. The defence was a denial, with an allegation of contributory negligence. The

Ontario Supreme Court confirmed the judgment of the court of first hearing, assessing the damages at \$900, but reducing the amount awarded by one-third owing to the plaintiff's contributory negligence. The evidence showed that the hoisting apparatus had not been inspected since it was erected about ten years previously, and that the plaintiff had not been fully instructed as to its proper use. However, the plaintiff had taken unnecessary risks in inserting both her arms into the shaft. Discussing the application of the Workmen's Compensation Act to this case, Mr. Justice Raney said:—

"The Oshawa Hospital is a private institution, not operated by or for the municipality, and so would not come within sec. 1 (2) of the Workmen's Compensation Act, R.S.O. 1927 ch. 179, nor within Part I of the Act; but it is argued that Part II, which applies to industries as to which the Workmen's Compensation Board has no authority, and to workmen employed in such industries, and which consists of secs. 118 to 122, does apply. Section 119 provides that, where personal injury is caused to a workman by reason of any defect in the condition or arrangement of the ways, works, machinery, etc., used in the business of his employer, the workman shall have an action against the employer, and shall be entitled to recover the damages sustained, etc. Section 118 provides that sec. 119 shall apply only to industries to which Part I does not apply, and to workmen employed in such industries. By sec. 1, clause (i), of the Act, 'Industry' includes 'establishment, undertaking, trade, and business'; and (p) 'Workman' includes 'a person who has entered into or works under a contract of service or apprenticeship.' There appeared to be no authority on the point, but the learned Judge saw no reason to doubt that the hospital is an 'establishment' or that the plaintiff was a 'workman'. 'Domestic or menial servants' are, by sec. 122, excluded from the benefits of the Act, and it was argued that the plaintiff's hiring with the hospital brought her within those words. The learned Judge thinks not.

"The hoist was defective, and the plaintiff's injury was caused by the defect. She is, therefore, entitled to recover in this action by virtue of Part II of the Act, and also under the common law. In either case the basis of her claim is the same."

Jarvis versus Oshawa Hospital (Ontario) 1931, *Ontario Weekly Notes*, Vol. XL, page 286.

City Obligated to Pay Pension to Retired Fireman

A fireman who joined the Montreal Fire Brigade in 1893, subsequently rising to the rank of captain, was retired by the City Council in 1916. He brought action in the Superior Court in June, about sixteen years after his retirement, claiming that the city should pay him a pension, maintaining that he was retired only after the physicians to the Fire Department had certified that he was mentally and physically unfit for his duties because of injuries received in the course of his employment. The Council, on the other hand contended that the plaintiff had retired of his own free will.

Mr. Justice Surveyor ordered the city to pay the plaintiff \$6,050 for arrears of pension, and \$550 a year for the rest of his life. The case, he said, hinged on the question whether the plaintiff was a permanent employee within the meaning of the by-law dealing with the employment of firemen. Each year, His Lordship pointed out, a sum of money was voted in the city budget for salaries to captains and lieutenants of the fire brigade. It was not necessary for the names of these persons to be inserted in the budget provision. "If it was necessary for the name of each permanent employee to be put in the budget, retirement of an employee for chronic or incurable illness or infirmity contracted in the exercise of his duties would be practically in-existent." In June, 1916, he continued, the plaintiff fulfilled the conditions required for the status as a permanent employee, and he was retired because of illness contracted while in the city's service.

Responsibility of Employer to provide Safe Working Place

A girl who was employed in a store in Quebec fell into an opening in the floor from which the covering had been removed, sustaining injuries for which she sought damages from her employer. The employer contended that the business was conducted not by himself in person but by a company of which he was president; that neither he nor his company had control of the trap-door which had been left open; and that the girl was not obliged to pass by the place in the course of her duties. It appeared that the building was owned by another party who sublet parts of it to different tenants, and that the trap-door had been left open by an employee of the owner. The Superior Court (Quebec) ordered the employer to pay \$390 in damages, and this judgment was later confirmed on appeal.

The Appeal Court found that while the employees had been forbidden to use that part of the building where the trap-door was, no effort had been made to see that these instructions were obeyed, and the evidence showed that the plaintiff had no conception of the danger arising from the opening in the floor. The employer, it was stated, was bound to protect the plaintiff from this danger; the owner it was true was equally responsible, but the action was properly taken against the employer. As to the defendant's claim in regard to the existence of a company, no evidence was found that such a company had been registered.

Delle Blouin versus Glassborg (Quebec), 1931, Rapports Judiciaires de Québec (Cour de Banc du Roi), vol. 50, page 374.

Deceased Workman's Dependant may take Action at Common Law

The House of Lords recently dismissed an appeal by the employers from a decision of the second division of the Court of Session in Scotland, the question raised being whether the right of a widow to raise an action at common law (or, in England, under Lord Campbell's Act*) to recover damages against the person whose fault caused the death of her husband had been taken away by section 29 (1) of the Workmen's Compensation Act, 1925, by reason of the payment into court by the defender of the maximum amount payable under the Act in proceedings instituted by a third party.

In this case, as reported in the *Ministry of Labour Gazette*, May, 1931, a workman lost his life by a pit accident, leaving a wife, two children, and a stepson. The widow, on behalf of herself and the children, took proceedings alone under the Workmen's Compensation Act, in which the employers paid into court £600, the maximum compensation payable by them. The employers contended that, having paid into court the maximum compensation payable under the Workmen's Compensation Act, they were under no liability to proceedings brought by the widow independently of the Act.

Section 29 (1) of the Workmen's Compensation Act is as follows:—

"When the injury was caused by the personal negligence or wilful act of the employer, or of some person for whose act or default the employer is responsible, nothing in this Act shall affect any civil liability of the employer,

*A note on the Fatal Accidents Act of 1846 (Lord Campbell's Act) was given in the *LABOUR GAZETTE*, December, 1926, page 1179.

but in that case the workman may, at his option, either claim compensation under this Act or take proceedings independently of this Act; but the employer shall not be liable to pay compensation for injury to a workman by accident arising out of and in the course of the employment both independently of and also under this Act, and shall not be liable to any proceedings independently of this Act, except in case of such personal negligence or wilful act as aforesaid."

Lord Buckmaster, in giving judgment, said that the section began by an express provision that nothing should affect the civil liability of the employer in case of negligence, but that the workman might in that event, at his option, select which remedy he would pursue. It was the latter part of the section on which the appellants relied. They said that it emphatically provided that, in respect of an injury to the workman, the employer could not be called on to pay in two independent proceedings.

In his opinion the section had not that effect. The latter provision was intended to relate only to cases where the proceedings were taken by the same persons, and affected only the cases where the workman proceeding under the statute had the option of proceed-

ing either under the statute or at common law. The claims of the widow and children of proceeding at common law could not be defeated by the act of somebody to whom the common law remedy was not open. To hold otherwise would be to declare that the statute had, in special cases, inferentially destroyed the rights which, by the earlier part of the section, had been expressly kept alive.

Lords Dunedin, Warrington of Clyffe Thankerton, and Russell of Killowen agreed. The appeal was therefore dismissed. *Kinneil Cannell and Coking Coal Company, Limited, v. Sneddon or Waddell*, House of Lords, 21st April, 1931.

In 1926 a labourer who was employed by a junk dealer in Montreal sustained serious injuries when he, along with another workman, was engaged in removing sheets of iron from a derrick, one of these sheets falling on his foot. He brought action for \$3,000 against his employer, under the Workmen's Compensation Act then in force in the province of Quebec. The Superior Court found that the defendant, a junk dealer, was engaged in a mercantile, rather than an industrial business, and that the Act did not apply in the case. The action was accordingly dismissed.

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of June showed a further improvement, according to data tabulated by the Dominion Bureau of Statistics from 7,865 firms, each employing a minimum of 15 persons, the firms being representative of all industries except agriculture, fishing, hunting and highly specialized business. These firms had 940,875 employees on their payrolls on June 1, as compared with 927,437 on May 1. The index of employment (with the average for the calendar year 1926 as the base equal to 100) stood at 103.6 on June 1, as compared with 102.2 on May 1, 1931, and with 116.5, 122.2, 113.8, 107.2, 102.2, 95.6, 96.4, 98.5, 90.3 and 87.7 on June 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921 respectively. At the beginning of June, 1931, the percentage of idleness reported to the Department of Labour by local trade unions stood at 16.2 as compared with percentages of 14.9 at the beginning of May, 1931, and with 10.3 at the beginning of June, 1930. The June percentage was based on returns tabulated by the Department of Labour from 1,808 labour organizations including 198,059 members. Reports received by the Department of Labour from the Offices of the Employment Service of Canada showed that the number of placements effected each day during May was less than that recorded daily during the previous month, but was somewhat above the corresponding average for May, 1930, the major change under both comparisons being in construction and maintenance. Vacancies in May, 1931, numbered 32,280, applications 53,350 and placements in regular and casual employment, 30,728.

The average cost of a weekly family budget of twenty-nine staple foods was \$8.16 at the beginning of June, as compared with \$8.54 for May; \$11.10 for June, 1930; \$10.92 for June, 1929; \$10.73 for June, 1928; \$10.86 for June, 1927; \$11.06 for June, 1926; \$10.44 for June, 1925; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for

June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was 72.2 for June, as compared with 73.0 for May; 87.7 for June, 1930; 93.4 for June, 1929; 96.9 for June, 1928; 98.7 for June, 1927; and 100.1 for June 1926.

The loss in working time caused by industrial disputes in Canada in June was somewhat greater than in the preceding month, and was much in excess of the corresponding loss in June, 1930. Ten disputes were in progress at some time during the month involving 1,209 workers, and resulting in the loss of 22,437 working days. Corresponding figures for May, 1931, were: 12 disputes, 1,146 workers, and 17,189 working days; and for June, 1930, ten disputes, 1,190 workers, and 4,007 working days.

Industrial Disputes Investigation Act

The Department of Labour received in June reports from the Board of Conciliation and Investigation appointed to deal with the dispute between the Ottawa Electric Railway Company and certain of its employees. A Board was appointed during the month in connection with a coal-mining dispute in Alberta, while in connection with a dispute involving certain employees of the Toronto Transportation Commission an application was received from the employees, but at the suggestion of the Minister further negotiations took place which resulted in the ending of the dispute. A full account of the proceedings under the Act during the month appears on page 745 of this issue.

Minister of Labour and Conditions in the West

The Hon. G. D. Robertson, Minister of Labour, accompanied by members of the staff of his Department, visited the four western provinces in June for the purpose of ascertaining the facts respecting unemployment, and to investigate the serious

condition reported to have resulted from the failure of the crop in a section of Saskatchewan. The Minister consulted with members of the provincial governments, and through their courtesy in inviting representations from the mayors of the various municipalities he obtained considerable information as to the general situation throughout the west. On his return to Ottawa the Minister submitted to the government a detailed report of his investigations. Subsequently, in the House of Commons, the Prime Minister announced that before the end of the present session of Parliament the Government would introduce proposals for the relief of the special situation that had resulted from the drought, and for the relief of the abnormal unemployment conditions.

**Parliament
takes action
for relief of
distress and
unemployment**

In the House of Commons on July 1, the Prime Minister referred to the calamitous conditions that had resulted in a wide area of Saskatchewan from the intense heat and drought. "It is clear," he said, "that the tremendous heat has not only affected the possibility of the continued life of live stock over a substantial area, but that 5,000,000 acres of land have been adversely affected so far as crop is concerned, and probably more. Under those circumstances," Mr. Bennett continued, "Parliament has never been hesitant in granting relief by way of financial and other assistance to countries beyond our borders when such a disaster has overtaken their people, and before this House rises it is the purpose of the government to submit to parliament a measure that will, we believe, at least in part, show the desire and purpose of the Canadian people to assist those who are less fortunate than the inhabitants of other parts of Canada at this particular crisis in their history.....I fear that perhaps it is the greatest national calamity that has ever overtaken this country. I hope that my fears are groundless, but I am confident from the information that has been given us that at least 100,000 people are directly affected, and their herds as well.

"Obviously it has a direct bearing on the problem with which it will now become intimately associated, that of unemployment, and when dealing with this matter it is the intention of the government, after we have disposed of the business on the order paper and such other measures as we have to consider, to submit to parliament measures that we hope will enable us successfully to grapple with that difficulty during the coming winter and the balance of the year that is before us.

"I think I could not do more than say that notwithstanding these disquieting symptoms of the manifest difficulties that must confront any government charged with responsibility at this time in connection with these and allied matters, the faith and confidence that we have in our country is in no sense shaken, and although the trials and tribulations we face may be many and varied, we still have the confident belief that with the resources of our country and the perseverance and courage of the people we will be able to work out our manifest destiny upon the northern half of this continent. For that purpose I trust that whatever may be our beliefs politically, we may co-operate not only in rendering assistance to those stricken in the provinces, in the manner in which I have indicated, but in endeavouring to take care of the other situations which have developed in this country by reason of universal conditions prevailing throughout the world."

The Right Hon. W. L. Mackenzie King, leader of the opposition, stated that the co-operation for which the Prime Minister asked would be given by all the members on his side of the House in the fullest measure, and with the most hearty accord.

**Decline in
industrial
disputes in
United States**

The June issue of the *Monthly Labour Review*, published by the United States Department of Labour, contains a review of industrial disputes in the United States during the fifteen-year period from 1916 to 1930. The record shows a downward trend in the number of disputes over the whole period, and an even sharper decline since 1922, in the number of workers concerned in such disputes. Strike activity considered from the standpoint of the number of workers involved, was greatest in the coal mining, clothing, building, and textile industries, over 90 per cent of the total number of persons reported on strike during 1930 being found in these four groups.

Industrial disputes continued to involve principally questions of wages, hours of employment, or recognition of the union. The results of strike settlements in 1930 showed a material loss to employees as compared with 1929, there being 44 per cent in 1930 as against 40 per cent in 1929 settled in favour of employers, while only 25 per cent in 1930 as against 29 per cent in 1929 were settled in favour of employees. The number of strikes in which a compromise settlement was made in 1930 was 24 per cent as compared with 25 per cent in 1929.

Duties of new Tariff Board for Canada

The Tariff Board Act, passed by Parliament at its present session, provides for the creation of a Board for the purpose of securing, for the use of the Government and of Parliament, a constantly increasing body of information in regard to goods produced in or imported into Canada. At the request of the Minister, the Board is to inquire into the price and cost of raw materials; the cost of transportation; the cost of production; the cost, efficiency and conditions of labour; the prices received by producers, etc., in Canada or elsewhere; and into all conditions and factors affecting cost of production and price to the consumers in Canada, and as compared with other countries. The Board is empowered to make inquiry into any other matter upon which the Minister desires information, in relation to any goods which if brought into Canada or produced in Canada are subject to or exempt from duties of customs or excise. This inquiry may be into the effect which an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade, and the extent to which the consumer is protected from exploitation.

The Board will consist of three members, one of whom will be chairman. They will hold office for ten years, and be required to devote their whole time to their duties under the Act.

Technical education for textile workers

A series of articles describing the vocational classes provided for English textile mill workers is now appearing in the *Canadian Textile Journal*. The purpose of the series is to further the creation of similar educational facilities for workers in Canadian mills. The editor declares that "there never was a greater need or opportunity for Canadian textile mill executives to give this vitally important subject earnest consideration. Our industry has gained a certain objective: now is the time to consolidate our position, to establish this industry firmly and securely in the social, economic fabric of the Dominion." In the *LABOUR GAZETTE*, September, 1930, the *Canadian Textile Journal* was quoted as stating that "the textile industry is the only major industry that has not taken advantage of the very excellent system of technical education developed in each of the provinces." It was also noted that in 1920 the Department of Labour corresponded with certain textile manufacturers with a view to securing their co-operation with a view to

the provision of courses of instruction under the provisions of the Technical Education Act, but that the proposal failed to receive the necessary support at that time.

Increased Federal Contribution for Old Age Pensions.

Reference was made in the *LABOUR GAZETTE* of last month, page 626, to the announcement of the Right Honourable R. B. Bennett, that the government contemplated increasing the amount of the federal contribution to the cost of old age pensions from 50 to 75 per cent for a temporary period only. On July 21, the Prime Minister sponsored a government resolution along these lines, following which a bill was introduced and given its first reading. In addition to emphasizing the temporary nature of this enactment, the Prime Minister stated that the government was considering the ultimate establishment of a federal old age pension system on a contributory basis. The discussion on this subject, featuring the Prime Minister's announcement, is summarized in the concluding pages of this issue.

German advisory commission on unemployment

The German Government appointed an Advisory Commission on Unemployment early this year for the purpose of studying the subject in all its aspects. The first report, issued by the Committee in April, dealt with measures for combating unemployment through the wider distribution of the available work by means of the reduction of working hours and the restriction of secondary occupations. The second report was concerned with the possibility of creating additional opportunities for work, the Commission recommending that employment should be provided in connection with electricity and gas supply, transport and communications, land improvement and rural development, agricultural settlement and housing construction. Such schemes, it is stated, could in certain circumstances be carried out by means of loans without assistance from public funds; but public assistance might be given where the work takes the form of productive relief work of the nature contemplated under the unemployment insurance system. The commissioners are opposed to the subsidizing of private undertakings by grants in aid of wage or interest charges, and they recommend the provision of work by the local authorities responsible for administering poor relief for the able-bodied unemployed not in receipt of standard or emergency benefit. They regard labour conscription as

undesirable, but recommend the institution of a system of voluntary labour service as a means of combating the harmful effects of enforced idleness. The commissioners uphold the principle that the grant of benefit should be conditional upon the performance of work, subject to specified conditions, and advocate the further development of training facilities for unemployed persons.

The third and final report, recently issued, is concerned with the present organization of the direct relief of unemployment under the unemployment insurance, emergency benefit and poor relief systems, and a general consideration of the measures necessary to enable the heavy financial burdens imposed on these systems during the present period of acute unemployment to be met.

**Retirement of
Mr. J. D. McNiven,
Deputy Minister
of Labour of
British Columbia**

On the occasion of the recent retirement of Mr. J. D. McNiven from the position of Deputy Minister of Labour of Victoria, the Hon. Senator Robertson, on behalf of the Department of Labour of Canada, paid a tribute to Mr. McNiven's extended work on behalf of labour in Canada. When he was in Victoria in June the Minister, with Mr. R. A. Rigg, Director of the Employment Service of Canada, took the opportunity of joining in the presentation of an illuminated address and purse of gold that was being made to the retiring Deputy Minister by his former colleagues, including the Hon. W. A. McKenzie, Minister of Labour of the Province, and by labour leaders in the Province. Mr. McNiven had been Deputy Minister of Labour of British Columbia since that department was established thirteen years ago. During that time, in the words of the *Victoria Times*, "he has had the confidence of the general public, and that important qualification has enabled him to settle many disputes which have arisen in the province between employers and employees. His wide understanding of human nature, his intimate knowledge of labour conditions, his scrupulous fairness and amiable personality made him an ideal conciliator."

Mr. McNiven was closely associated with the printing trade in his early life. His connection with government labour administration began twenty-four years ago when he was requested by Mr. Mackenzie King, then Deputy Minister of Labour, to be one of the Department's "Fair Wage" officers. His special duty at Ottawa was to establish wage schedules on government works and his territory extended from the capital to the Pacific Coast. He also acted for the Dominion

Government in securing the settlement of various labour disputes which developed from time to time, especially in the coal mining industry in British Columbia and Alberta, many of these difficulties being amicably disposed of by conciliation. Mr. McNiven continued to serve under successive administrations at Ottawa until the British Columbia Department of Labour was established in 1917.

**Exemptions
from British
Columbia
eight-hour day
law are cancelled**

The Board of Adjustment which administers the Hours of Work Act, 1923, of British Columbia, has given notice of the repeal, as from July 11, 1931, of Regulation No. 10, which was approved on March 17, 1925 (*LABOUR GAZETTE*, April, 1925, page 346). Regulation 10 reads as follows:—

"All bakers employed in the baking industry shall be permitted to work ten hours per month in excess of forty-eight hours per week, and all bakery salesmen or deliverymen twenty-six hours per month in excess of forty-eight hours per week."

The chairman of the Board declared that the withdrawal of the bakery trade from the list of trades exempted from the eight-hour day regulations was in pursuance of the Board's usual policy in meeting unusual conditions in regard to unemployment; no lengthening of working hours, he said, would be permitted in any industry to which the Hours of Work Act applied. The chairman stated further that with the exception of specialty trades in the lumber industry the eight hour day law was generally applied to industries in the province.

**Unemployment
relief plan
at Hamilton,
Ohio.**

A successful plan for meeting the distress arising out of the industrial depression was followed last winter in Hamilton, Ohio, a city with a population of 53,000, mostly consisting of factory employees. An account of the plan and of the remarkable results it effected appears in *The Nation's Business* (Washington, D.C.), July, 1931. As unemployment threatened to become serious a citizens' unemployment committee was formed, and the following plan was adopted with the following principles:—

1. Give preference to local labour. Employ only such outside labour as is unavailable within the city;
2. Give preference to those who are supporting dependents;
3. Employ only those married women who have no other means of support;
4. Wherever possible rotate employees to provide work for the maximum

number or, in other words, distribute the work over the greatest possible number; 5. After employees who are now laid off are re-employed the situation can best be helped by obtaining additional labour required through the clearing house of the public employment agencies; 6. The city, the Bureau of Social Work, and other agencies will maintain a clearing house, where all men deserving employment will be listed.

This plan, as carried out, took care as well as possible of all men who were employed or might be employed by the factories.

The next step was to aid those whom the factories had laid off and would not re-employ for some time. The city manager announced that city employees from himself down to the lowest-salaried employee had agreed to contribute 2.5 per cent of their wages each month to an employment fund as long as the crisis threatened. This action started an avalanche of similar voluntary contributions. City school employees made a like donation. Business houses, professional offices, factory personnels announced that they, too, would co-operate. At the end of the first month the treasurer of the committee was receiving about \$10,000 a month in voluntary contributions.

The wage set by the unemployment committee was 37.5 cents an hour, or three dollars a working day, so that the \$10,000 monthly provides for about 27,000 working hours. Each week the Bureau of Social Work makes out its list of men who need employment for that week.

All the work carried out by means of these funds was useful and needed work. For example, the city last winter installed new boulevard street lights, and some of the men were used to take out the old lights. A new boulevard is being constructed around the outskirts of the town, and the men have cleared the timber off the road bed. This has been sawed up into fuel, which has been sold to the citizens.

Stabilization of employment of dock labour in England

Last year the Minister of Labour (Great Britain) appointed a committee to make inquiries into the subject of dock labour and the methods in use for its "decasualization" (LABOUR GAZETTE, February, 1930, page 108). This committee has now published a report. It is pointed out that within the various grades of dock workers there are many distinct occupations, ranging from unskilled to highly skilled. Owing to sudden and unpredictable fluctuations in traffic, employment, in general, is essentially casual; an

over-supply of work-people seeking odd work is attracted to the industry, with chronic under-employment as a frequent result. The recognition of the evils of this situation and of the inability of individual action to overcome them led to concerted effort by employers and port workers' organizations in some ports to establish registration schemes, the initial objects of which were to regulate the pool of workers who, while adequate in number and qualifications to meet all likely demands, could have a preference, valid throughout a port, over general unemployed, and thereby secure greater certainty of livelihood.

This method of controlling the supply of labour was first established in the port of Liverpool, and has since been adopted and is now in operation in 30 ports, the principal exception being Glasgow and the Tyne and Wear ports. Nearly 90,000 port workers—over two-thirds of the total number in Great Britain—are directly covered by these schemes. Most of the schemes are administered by committees representative of employers and work-people, generally with a Ministry of Labour official as secretary. Employment record books are used, at most ports, as tokens of registration; and the policy is pursued, with varying degrees of thoroughness, of limiting registration to those workers who can prove that they have real ground for claiming port work as their regular occupation. The report examines the methods of recruiting and engaging labour, and gives an outline of the experiments made at some ports in connection with the latter problem.

The Committee were impressed by the progress made towards the regularization of employment, and affirm that a jointly administered registration scheme is the only satisfactory foundation upon which to build hopes of eventual decasualization. They recommend that immediate steps should be taken to develop such schemes, and outline the administrative principles upon which they should be operated. It is also recommended that a new Standing Advisory Committee be established by the National Joint Council for Dock Labour for the purpose of encouraging and assisting in accomplishing the proposed reforms.

New view of welfare work in industry

A recent bulletin published by the Home Office (England and Wales) on "Welfare and Welfare Supervision in Factories" refers to the change that has taken place during the past ten years in the attitude of industry to welfare work. Formerly regarded as a philanthropic adjunct to industry, such work is now

held to be an essential part of good business organization. "From the point of view of industry, research and practical experience alike have shown that the efficiency of the worker depends on the conditions under which he works. The highest industrial efficiency can only be obtained where the conditions are the best possible. With other efforts in the direction of eliminating waste and organizing work to the best advantage, the welfare movement has taken its place as an essential part of the general movement which is called in some quarters 'rationalization' and which has been defined by the International Economic Conference as 'the methods of technique and of organization designed to secure the minimum waste of either effort or material.' Welfare work has broadened out in fact into employment management and includes the business of selecting and training the worker, as well as welfare in the narrower sense."

The bulletin is in two divisions: the first part relates to the provision of healthful and safe conditions of work; and the second covers all that relates to the worker himself—selection, training, supervision, etc. It is stated that this latter branch of welfare started later and was longer in securing recognition of its importance, but it has been greatly developed in recent years—so much so that labour or employment management has come to be regarded in many quarters as the central welfare activity to which other branches are subsidiary and round which they group themselves.

Labour union life insurance companies

The organization of the Union Labour Life Insurance Company by the American Federation of Labour in 1925 was noted in the *LABOUR GAZETTE*, November, 1925, page 1056. The company is owned by labour organizations affiliated with the American Federation of Labour. Though it was organized in 1925, it did not start to write insurance until July, 1927. The report of the company for 1930, as outlined in the *Monthly Labour Review*, June, 1931, shows that its assets at the end of the year were \$1,068,108, an increase of \$178,827 over the preceding year. Its income during the year was \$813,887, while claims paid amounted to \$480,536. The insurance in force at the end of the year amounted to \$48,372,328, of which \$5,315,778 was in individual policies and the remainder in group insurance. As compared with 1929, the insurance in force showed a gain of \$3,880,178.

The Union Co-operative Insurance Company, an organization owned by the International Brotherhood of Electrical Workers (*LABOUR GAZETTE*, February, 1925, page 177), completed its sixth year of operations on

December 31, 1930. It is stated that during 1930 its assets increased as much as during the entire first five years of its history, having risen during the year from \$661,348 to \$1,258,601, an increase of more than 90 per cent. The surplus increased during the same period from \$213,978 to \$267,497. The premium income (\$1,434,478) was more than double that of 1929 (\$714,039). Death claims were paid during the year amounting to \$579,011, as compared with \$426,975 in 1929. Claims paid since the organization of the company have aggregated \$1,527,049. The insurance now in force amounts to \$89,324,735. During the year the capital stock of the company was increased from \$100,000 to \$200,000, and the company took over the John Mitchell Life Insurance Company of Pennsylvania, a union labour company organized by the anthracite miners.

Change in wages policy in Soviet Russia

The Associated Press on July 7 published a despatch from Moscow outlining an address by Joseph Stalin that was delivered at the close of a conference of industrialists on June 23. Stalin took stock of industrial conditions at the close of the first five months of the year, and outlined a policy for the future. In regard to wages, he said: "Even under Socialism wages must be paid according to the work done and not according to the needs of the workers." He added that reorganization of the present system of wages was necessary if the shifting of labour was to be prevented. "In many of our factories," he continued, "the wage system is such as to leave no difference between the skilled and unskilled worker and between hard and easy labour. This leads to unskilled workers showing no interest in raising their qualifications and skilled workers move from factory to factory in search of a place where their qualifications will be more valued. To give this shifting a free hand would undermine our industry, wreck our plan of production, and stop improvement in the quality of manufactured goods. We must destroy such equal wages. It is unbearable to see the locomotive driver receiving the same wages as a book-keeper."

Another important change in the proposals involved the reversal of the policy of the "iron fist" towards members of the "old bourgeois industrial intelligentsia" and welcoming them into the service of the state.

Mr. Arthur Woods, chairman of the President's Emergency Committee for Employment (U.S.A.) has predicted that in the future there will be a national system of employment offices, vocational education, advance planning of public works, and unemployment insurance.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of June was reported by the superintendents of the Employment Service of Canada to be as follows:—

Crops in the Province of Nova Scotia were making good progress, but the demand for farm help was small. There were large catches of halibut, salmon and mackerel, with lobster fishing fair, for the season of the year. No new developments occurred in the logging industry, though over 50 pulpwood loaders were placed. Coal mines at Stellarton operated on steady time; elsewhere days worked averaged from two to four only. Increased business was reported by various manufacturing concerns, while the iron and steel industries showed slack time in several departments. Outside Halifax, little new construction was being started, but that already under way was progressing favourably. Passenger traffic was gradually increasing, owing to holiday and tourist travellers. The movement of freight at Sydney was heavy, but decreased coal and lumber shipments from New Glasgow caused much unemployment among long-shore workers at the ports concerned. Trade was fair. A moderate demand existed for charworkers and domestics, and a number of satisfactory placements were made.

There was little demand for farm help in the Province of New Brunswick. Large catches of assorted fish were reported along the New Brunswick shores. The logging industry still absorbed a fair number of workers. Manufacturers of confectionery and foodstuffs reported business good. Woodworking factories were also busy. Building construction was giving considerable employment, and satisfactory progress was being made on work already started. At West Saint John, 50 labourers were employed by the Harbour Board cleaning away debris after the fire, the C.P.R. also having extra gangs at the same work. Street and road repair likewise afforded employment to a large number of unskilled workers. Passenger and freight traffic was good. Wholesale trade was quiet, while retail stores were busy with sales. There was the usual demand for casual workers and several requests for general maids.

An increase in the number of orders for farm help was noticed in the Province of Quebec, especially at Montreal. Slackness still prevailed in the logging industry, with Hull the only office reporting placements in that line. Quietness continued in the mining districts, though considerable prospecting was

being carried on in the neighbourhood of Rouyn. Manufacturing activities increased slightly at Hull. In Montreal all trades, except tobacco, were quiet. Leather trades in Quebec worked at 75 per cent of their capacity, but all else was slack. Foundries and cotton at Three Rivers were somewhat improved, but no change occurred in the paper industry. Conditions in the building trades were encouraging, as there was a demand for painters and joiners, with few building labourers idle, except in Quebec City. Trade revived slightly at Montreal, but elsewhere showed little change. In the Women's Domestic Section applicants were in excess of the demand.

A marked improvement in farm orders was shown in the Province of Ontario as a result of haying and the forthcoming harvest. Logging remained quiet, but a few placements in mining districts in Northern Ontario seemed to indicate increased employment in that industry in the near future. Canning factories were employing many workers, though apart from this seasonal activity, the outlook for industrial concerns was not bright. Textile workers, however, were busy, and some pulp mills had resumed operations. No change for the better developed in the auto industry where further staff reductions had taken place. Very little construction work was in progress, except in Sudbury, Windsor and St. Thomas, where a slight improvement was noted. Although the number of orders received for women workers for summer hotels and golf clubs was not so great as in previous years, yet very good placements were made in this line, but calls for general domestics had declined somewhat.

Farming operations in Manitoba were not favourable in outlook, owing to continued hot weather, though many points in the province had benefited from recent rains. Logging, mining and manufacturing showed no improvement. Home building at Winnipeg made a good showing, but the total construction in this line was well below that of last year. No large prospects were contemplated; thus there was a substantial increase in the registration for employment of building trades mechanics and labourers. Little highway work was reported. In the Women's Domestic Section only a fair number of calls were listed while applications remained high.

The serious condition of the crops in the Province of Saskatchewan, especially about Swift Current, was reflecting its gravity on the labour market, the general feeling being that the maximum crop returns this fall would be

confined to a seed and feed harvest. With these conditions prevailing, even though the recent rains had improved the prospects in some localities, demand for farm help was small. Little building construction was being undertaken, and where highway or railway work was in progress, the rotation system was in use, that the maximum number of men

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughtering of cattle, sheep and hogs; storage holdings of butter and cheese.

might obtain relief. There was no difficulty in filling orders for women domestic workers for little activity existed in this group.

There was very little demand for farm help in Alberta, due to continued drought, although rains had helped out the situation considerably in several sections, especially about Edmonton. Under the most favourable conditions, however, only a fractional crop was expected, as a large acreage of seed throughout the province had been blown out earlier in the month. Logging, mining and manufacturing were quiet, also building construction, with prospects far from encouraging. Some railway gangs were engaged repairing tracks at Drumheller, but no new men were hired. Elsewhere there was no call for railway workers. Trade collections were difficult. An increased number of unplaced applicants was recorded in the Women's Domestic Section with fewer orders received.

Owing to inclement weather in the Province of British Columbia, orders for farm and orchard help showed a decrease. Fruit packing houses were busy with double shifts handling the cherry crop, and canneries were expected to open up shortly. Logging was practically at a standstill. Mining was quiet, also manufacturing. With the exception of Prince Rupert, where local contractors were fairly busy on new work in the building line, no improvement in that group was shown. Relief work in the form of highway construction and maintenance was being continued, and provided the only work available in nearly all localities. Many longshore workers also were idle. In the Women's Domestic Section a large number of women were unemployed, due to the fact that fruit picking, which usually absorbed a large number of workers, had been hampered by wet weather.

The Dominion Bureau of Statistics' **EMPLOYERS' REPORTS** tabulated returns on employment from 7,865 firms with 940,875 employees on June 1, as compared with 927,437 on May 1. This increase of 1.4 per cent brought the index to 103.6, as compared with 102.2 in the preceding month, while on June 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 116.5, 122.2, 113.8, 107.2, 102.2, 95.6, 96.4, 98.5, 90.3 and 87.7, respectively.

Expansion was noted in all of the five economic areas, the increase being greatest in Quebec and the Prairie Provinces. In the Maritime Provinces, manufacturing, logging, mining, trade and construction registered heightened activity, while transportation was seasonally slacker, and iron and steel plants also released employees. In Quebec, construction and transportation recorded import-

ant increases in personnel, and there were also gains in the trade group. In Ontario, construction and transportation registered the greatest expansion, but advances were also noted in logging and mining. In Manufacturing, increases in lumber, animal food, building material, mineral products and some other groups were offset by losses in iron and steel, textile and pulp and paper factories. In the Prairie Provinces, construction, especially railroad construction, transportation, services and communications reported the most marked improvement, but iron and steel works and trade released employees. In British Columbia, construction and transportation recorded the largest advances, but trade and services also afforded heightened employment, while metal works and mining showed curtailment.

The trend of employment was favourable in four of the eight cities for which separate tabulations are made: Montreal, Quebec, Winnipeg and Vancouver showed considerable gains; declines were noted in Toronto, Hamilton and Windsor (including the adjacent Border Cities), while in Ottawa the situation was reported unchanged. In Montreal, transportation, construction and trade reported the greatest increases, but manufacturing was slacker. In Quebec, the gains took place chiefly in manufacturing and transportation. In Toronto, manufacturing, particularly of textile and iron and steel products, was slacker, but improvement was shown in construction and transportation. In Ottawa, construction recorded heightened activity, while manufacturing released some employees, so that the general situation was unaltered. In Hamilton, most of the decrease took place in manufacturing, notably in iron and steel plants, but construction also showed a decline. In Windsor and the adjacent Border Cities, reductions were registered in automobile factories, while construction was rather busier. In Winnipeg, most of the improvement was recorded in construction, manufacturing and communications, while trading establishments released some help. Manufacturing, trade, communications and transportation reported minor gains in Vancouver, and there were larger increases in construction.

An analysis of the returns by industries shows general losses in manufacturing; there were increases in the lumber, fish-preserving, vegetable food, building material, cotton, electric current, and mineral product industries, but the iron and steel, non-ferrous metal, leather-using, electrical apparatus, pulp and paper, clothing, tobacco and some other groups together reported curtailment involving a greater number of persons. Com-

munications, services, trade, transportation, construction and maintenance registered improvement, that in the last-named group being most noteworthy. On the other hand, logging and mining as a whole were slacker.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of June, 1931.

TRADE UNION REPORTS

The percentage of idleness among local trade union members at the close of May was slightly in excess of that

manifest in the previous month, as shown by the reports from 1,808 labour organizations, with 198,059 members. Of these 32,163, or a percentage of 16.2, were without work on the last day of the month, compared with 14.9 per cent in April. There was a noteworthy drop in the volume of work available from May last year, when the percentage of unemployment stood at 10.3. An outstanding feature in the unfavourable trend shown in comparison with April was the increase in idleness reported from Quebec, where employment in the garment trades was largely curtailed owing to the slack season. The building and construction trades in the same province, however, reported moderate increases in activity. Employment for Alberta members declined slightly from April, and in New Brunswick and Ontario nominal recessions occurred. Of the gains in activity reported from the remaining provinces those indicated by Manitoba, Saskatchewan and Nova Scotia unions were slight, while the situation in British Columbia showed moderate improvement. All provinces shared in the retrogressive employment movement as compared with May of last year, the recessions in every province, with the exception of Nova Scotia, being fairly substantial.

Appearing elsewhere in this issue is a more detailed article with tabular statements on unemployment among local trade unions at the close of May, 1931.

EMPLOYMENT OFFICE REPORTS

Reports from the Offices of the Employment Service of Canada for the month of May, 1931, showed 32,476 references of persons to positions and a total of 30,728 placements. Of these, the placements in regular employment were 11,071 of which 7,581 were of men and 3,490 of women, while placements in casual work totalled 19,657. Vacancies offered by employers to the Service numbered 32,280 and of these 23,028 were for men and 9,252 for women. Applications for employment were received from 41,308 men and 12,042 women, a total of 53,350. Business showed a

decrease in volume during May from that of the previous month, but a gain was apparent when a comparison was made with the records for the corresponding month last year, the reports for April, 1931, showing 39,194 vacancies available, 59,202 applications made and 37,474 placements effected, while in May, 1930, there were recorded 31,449 vacancies, 46,507 applications for work and 29,318 placements in regular and casual employment.

A report in detail of the work of the Offices for the month of May will be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during May, 1931, was \$11,868,171 as compared with \$13,786,466 in the preceding month and with \$20,321,160 in May, 1930.

The *MacLean Building Review* states that while construction throughout Canada is 32 per cent less in estimated dollar value than for the first six months of 1930, and the June total nineteen per cent less than May, the record for the half year is encouraging. Prospects for new work appear brighter. Of the June total, which is \$29,793,400, \$10,489,300 was for residential buildings; \$9,110,300 was for engineering purposes; \$9,062,800 was for business buildings; and \$1,131,000 for industrial purposes. The apportionment of the contracts awarded during May, by provinces, was as follows: Ontario, \$13,418,300; Quebec, \$10,414,000; British Columbia, \$1,600,000; Manitoba, \$1,041,300; Saskatchewan, \$1,032,000; Alberta, \$896,600; New Brunswick, \$780,300; Nova Scotia, \$583,400; Prince Edward Island, \$27,500.

Production and Trade

INDUSTRIAL
PRODUCTION

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 740.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations in Canada showed an improvement in May over the preceding month despite recession in several important industries. The production of pig iron and steel showed a decline in May even before adjustment for seasonal tendencies. The output of pig iron was 50,511 tons as compared with 53,792 tons in the preceding month. May was the first month this year to show a decline from the pre-

ceding month in the daily rate of production. Production of steel ingots and castings amounted to 75,235 tons, a daily rate of 2,407 tons. This rate of output was 20 per cent under the 3,049 tons per day in April. The production of automobiles showed marked contraction, the output being 12,738 units compared with 17,159 units in the preceding month. May is normally the most active season of the year, and adjustment for seasonal tendencies consequently accentuates the extent of the reduction. The output of newsprint at 202,607 tons showed moderate recession from the preceding month and the exports of lumber were down after seasonal adjustment.

The imports of raw materials indicating the trend of future production in certain lines, showed a marked gain in the month under review. The imports of crude rubber were 6,155,000 pounds compared with 4,638,000 in April, a decline being normal for the season. The imports of raw cotton at 8,405,000 pounds showed a marked gain over April, when cotton is normally imported in larger quantities. The imports of raw wool and wool yarn also showed considerable expansion. The imports of crude petroleum at 107,209,000 gallons was at the highest point for the present year, even when adjustment is made for seasonal tendencies. The net result was that the index of manufacturing production was 163.3 in May compared with 145.9 in April, each of the component factors having been adjusted for seasonal tendencies.

Mineral production, after adjustment for seasonal tendencies, was greater in May than in the preceding month, the index being 149.7 as compared with 146.1 in April. Gains were recorded in the shipments of silver and copper, while gold, nickel, and zinc showed recession.

Coal.—Canadian coal mines produced 901,514 tons of coal during May; a decline of 27.7 per cent from the average for the month during the past five years of 1,247,276 tons. May's output was made up of 786,950 tons of bituminous coal, 25,682 tons of sub-bituminous coal, and 88,882 tons of lignite coal. Nova Scotia was the leading coal producing province, with an output of 468,876 tons, or 52.0 per cent of the total production. Alberta mines produced 262,582 tons, or 29.1 per cent of the total output. British Columbia's production was 136,089 tons; Saskatchewan's 22,642 tons; and New Brunswick's 11,352 tons.

Imports of coal during May totalled 1,191,017 tons or 18.6 per cent below the five-year average for the month of 1,462,587 tons. Receipts of anthracite coal amounted to 352,805 tons consisting of 209,894 tons from the

United States and 142,911 tons from Great Britain. Bituminous coal importations reached a total of 838,111 tons, of which 829,586 tons were obtained from the United States and 8,525 tons from Great Britain. Lignite coal imports were recorded at 101 tons.

Canadian coal exported amounted to 27,887 tons as compared with the May 1926-1930 average of 59,330 tons.

Canada's coal supply in May was obtained from the following sources: United States, 50.4 per cent; Canada, 42.3 per cent; and Great Britain, 7.3 per cent. The total coal available for consumption in Canada during May was 2,064,644 tons, or 22.1 per cent below the 1926-1930 average for the month of 2,650,533 tons.

EXTERNAL TRADE. A summary of Canadian trade prepared by the Department of National Revenue shows that in May, 1931, the merchandise entered for consumption amounted to \$73,457,404, as compared with \$51,189,376 in the preceding month and with \$101,544,817 in May, 1930. The chief imports for May, 1931, were: Iron and its products \$14,807,196; Non-metallic minerals and products, \$12,152,332; Agricultural and vegetable products, mainly foods, \$10,761,842.

The domestic merchandise exported during May, 1931, amounted to \$59,833,245 as compared with \$33,935,075 in the preceding month and with \$77,260,557 in May, 1930. The chief exports in May, 1931, were: Agricultural and vegetable products, mainly foods, \$24,172,135; Wood, wood products and paper, \$16,450,566; Non-ferrous metals and their products, \$6,313,418.

Strikes and Lockouts

The time loss due to industrial disputes in Canada during June, 1931, showed an increase over that occurring during May, 1931, although the number of disputes recorded was slightly lower, a dispute involving some 300 salmon fishermen on the Pacific Coast for some weeks during June accounting for a large part of the increased time loss. The number of workers involved showed only a slight change, an increase of less than one hundred being recorded. As compared with June, 1930, the same number of disputes was recorded, and while the number of workers involved showed only a very slight decline, the time loss incurred was almost six times as great as that recorded a year ago when no disputes of any great duration were recorded. There were in existence during the month ten disputes, involving 1,209 workers and resulting in a time loss of 22,439 working days, as compared with twelve disputes, involving 1,146

workers and resulting in a time loss of 17,189 working days in May, 1931. In June, 1930, there were on record ten disputes, involving 1,190 workers and resulting in 4,007 days' time loss. At the end of the month there were two disputes recorded as strikes or lockouts, involving approximately six hundred workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been formally called off or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty-nine cities was again lower at \$8.16 at the beginning of June, as compared with \$8.54 for May; \$11.10 for June, 1930; \$10.92 for June, 1929; \$10.73 for June, 1928; \$10.86 for June, 1927; \$11.06 for June, 1926; \$10.44 for June, 1925; \$9.36 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. The most important declines occurred in the prices of butter and cheese, while less important decreases occurred in the prices of beef, veal, mutton, bacon, eggs, milk, bread, evaporated apples, granulated sugar and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$18.36 at the beginning of June, as compared with \$18.82 for May; \$21.44 for June, 1930; \$21.18 for June, 1929; \$20.97 for June, 1928; \$21.04 for June, 1927; \$21.31 for June, 1926; \$20.67 for June, 1925; \$20.22 for June, 1924; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921;

\$26.92 for July, 1920 (the peak); \$26.81 for June, 1920; \$20.36 for June, 1918; and \$14.27 for June, 1914. Fuel was slightly lower, due mainly to lower prices for wood. Rent was down in the average because of lower quotations for several cities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower, being 72.2 for June, as compared with 73.0 for May; 87.7 for June, 1930; 93.4 for June, 1929; 96.9 for June, 1928; 98.7 for June, 1927; and 100.1 for June, 1926. In the classification according to chief component materials five of the eight main groups were lower, two were slightly higher and one was practically unchanged. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for flour, bran, shorts, gluten meal and canned peas, which more than offset higher prices for barley, flax, oats and rye; the Animals and their Products group; due to lower quotations for leather, steers, calves, lambs and butter, which more than offset higher prices for hogs, hides and eggs; the Wood, Wood Products and Paper group, because of reduced prices for certain lines of lumber and groundwood pulp; The Non-Ferrous Metals and their Products group, because of lower prices for antimony, copper, silver and tin; and the Chemicals and Allied Products group. The Fibres, Textiles and Textile Products group and the Non-Metallic Minerals group were somewhat higher, the former due mainly to higher prices for silk and jute, and the latter due to increased prices for cement and brick. The Iron and its Products group was practically unchanged.

Safety Measures in British Mines

Sir Henry Walker, Chief Inspector of Mines in Great Britain, speaking at a safety conference held at Cardiff during May, said there had been a reduction in the death and serious-accident rate in the industry during the past 20 years. Explosions, falls, and haulage were the three principal causes of mining accidents. Happily, by attention to stone dusting, devastating explosions were largely things of the past; at the same time, he had to urge the point that adequate ventilation was the main preventive of these disasters. In regard to falls, he did not accept the view that they were inevitable, and advocated a greater use of steel support in place of timber. Progress in the use of steel supports was quickening, but it had been lamentably

slow hitherto. Steel arches were first introduced in South Wales in 1890, and in 40 years only 450 miles of underground roadways had been fitted with them, 150 miles being in the collieries of one company alone. He believed that in this matter safety and economy went hand in hand.

The Manitoba Board of Health has recently added to its regulations concerning the sanitary condition of lumbering, wood-cutting, timber, mining, construction, threshing and other camps in the province. The new regulation makes it obligatory on every employer in such camps to provide and maintain a first aid kit for the use of employees in case of injury or accident. The minimum requirements of such first aid equipment are specified in the new regulation.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JUNE

THE Board of Conciliation and Investigation established to deal with differences as between the Ottawa Electric Railway Company and certain of its employees, being members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America, presented its report to the Minister of Labour on June 30. A wage reduction proposed by the company was the cause of the dispute, 495 employees being directly affected. The personnel of the Board was as follows:—Mr. A. C. Boyce, K.C., of Ottawa, Ont., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other members of the board, Messrs. Redmond Quain, K.C., and H. J. Burns, both of Ottawa, nominees of the company and employees, respectively. The report of the board was signed by the chairman and Mr. Burns, and recommended in effect that no change be made in existing wage rates. Mr. Quain submitted a minority report. The text of each of these reports is given below.

Applications Received

Coal miners in the employ of the Mohawk Bituminous Mines, Limited, being members of Local Union No. 74, District 18, United Mine Workers of America, applied during June for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute relating to the company's failure to renew their working agreement which had expired on March 31.

Report of Board in Dispute between the Ottawa Electric Railway Company and certain of its Employees

In the matter of The Industrial Disputes Investigation Act, and amending Acts. Board of Conciliation and Adjustment re differences between the Ottawa Electric Railway Company and certain of its employees, being members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America.

To Senator, the Hon. GIDEON DECKER ROBERTSON, LL.D., a member of His Majesty's Privy Council for Canada, and Minister of Labour.

The Report of the undersigned members of the Board of Conciliation and Investigation appointed by you under the said Act, on the thirtieth day of April, A.D. 1931, respectfully sheweth:

The employees desired renewal of the day wage rates and contract mining rates, together with certain adjustments for "over pushing," while the company claimed that existing conditions did not justify rates as high as those which had been in force. Ninety-one employees were stated to be directly affected by the dispute. A Board of Conciliation and Investigation was established by the Minister of Labour, constituted as follows:—Mr. L. W. Brockington, of Calgary, Alberta, chairman, appointed on the joint recommendation of the other board members, Messrs. W. S. Henderson, of Calgary, and William Potter, of Wayne, Alberta, nominated by the company and employees, respectively.

An application for the establishment of a Board of Conciliation and Investigation was received in the Department of Labour on June 30 from masters and mates employed by the Toronto Transportation Commission in ferry service, being members of the Canadian Navigators' Federation, Inc. (Great Lakes Division). Twenty-two employees were stated to be directly affected by the dispute, which grew out of the alleged unjust dismissal of one captain and suspension of two others. The Minister took the matter up immediately with the General Manager of the Toronto Transportation Commission, who agreed to meet a committee of the employees and discuss with them the points at issue. The employees' representatives were agreeable to this course and the strike which had been set for midnight of June 30 was called off.

That the formation of the said Board under the Act was completed on the eighth day of May last by the appointment by the Minister, under the provisions of the Industrial Disputes Act, of the third member and Chairman of the said board, the members thereof, nominated respectively by the applicant and the employees concerned, having failed, within the time limited therefor, to agree upon the third member and Chairman of the said board. The said appointment of Chairman having been received on the eleventh day of May last, the board met on that and the following day for the purposes of organization, consideration of the scope of the inquiry and order of procedure.

The inquiry opened on May 19, 1931. The company was represented by Mr. F. D. Bur-

pee, its Vice-President and Manager, assisted by Mr. H. W. Steele, Chartered Accountant, and the employees were represented by Mr. Magnus Sinclair, and Messrs. J. A. Robinson and P. J. Tompkins, President and Secretary, respectively, of Division 279, Amalgamated Association of Street and Electric Railway Employees of America. Some 42 Exhibits were filed.

The application by the Ottawa Electric Railway Company for a Board, dated April 30, 1931, named the dispute as being the intention of the company to put into force, as soon as it legally may, a decrease of 10 per cent from the 1st of May, 1931, in the salaries and wages of all officials and employees. By a letter to the Deputy Minister of Labour, dated May 8, 1931, the applicants asked that their application be amended by substituting the words "substantial decrease" for the words "decrease of 10 per cent." The employees' Union in their answer filed pursuant to the Act, objected to the proposed reduction of wages as entirely unjustifiable, claiming that the wages now being paid by the company were below the standard of that paid to street railway men in cities of a like kind, throughout Canada and the United States, and they asked:—

- (a) That the hourly wage rate for conductors and motormen on 2-man cars be increased 5 cents per hour over the present rate; and that the wages of operators of 1-man cars and bus operators be increased 10 cents per hour above their present rates; and that employees in the car barns and men employed as trackmen be given an increase of 5 cents per hour over present rates, and,
- (b) That in respect of the retirement of men reaching the age of 65 years the Board be asked to deal with the matter and "to endeavour to find ways and means of avoiding such treatment of faithful and competent employees, to the end that they be retained in their positions, or until the company makes more adequate financial provision for such men's retirement than at present provided."

In the same answer the men agreed that the working conditions remain as at present set forth in the written agreement between the company and its employees.

Mr. Burpee, on behalf of the company, objected to increasing the scope of the inquiry by the consideration of the matters referred to in the answer, but the board held, pursuant to section 23 (1) of the Act, that it was incumbent upon it to deal with those matters.

The parties to the dispute were so wide apart in their claims, the applicants seeking to decrease, and the employees to increase the wages, that all efforts at conciliation made by the board were futile.

As to the counter application of the men for an increase in the present schedule of wages, the board, after a full hearing of all that was submitted in support of such a contention, is unconvinced that such relief is justified by present conditions as to cost of living and the application for increase of wages ought not to be allowed at this time.

As to the request of the men that more suitable provision should be made for the retirement of men in the company's service reaching the age of sixty-five years, we are of the opinion that such an arrangement by the Ottawa Electric Company is highly desirable, such fund to be contributed to by the employees as well as the company; but while that is our opinion we do feel that this is a matter of internal management of the company's affairs. Mr. Burpee stated that the company has in view the consideration of a scheme of pension or retirement fund but that its present financial position prevents such being formulated at the present time. We consider that no recommendation can be usefully made at this time with respect to so desirable a scheme which, we feel, when the company's finances will permit will receive the consideration its importance justifies.

As to the dispute caused by the intimation of the company of its intention to substantially decrease the wages of its officials and employees, we are concerned only with those employees represented by the union, motormen, conductors and bus drivers.

While employees in the car-barns and trackmen were included in the inquiry, and mentioned in the union's answer, and in some of the exhibits—evidence was not given as to their particular status.

The evidence of the applicants was directed, *inter alia*, to the following more prominent features upon which the company relied in justification of its proposed decrease in wages, viz.:—

1. The decline in revenues and net returns from operation during the years 1928, 1929 and 1930, and the failure of the company to obtain a just and reasonable return upon its invested capital.
2. The decline in the cost of living since January 1, 1930, and the consequent increase in the purchasing power of the wages now paid to the men.

By a judgment of the Board of Railway Commissioners, dated June 23, 1928, upon the application of the company for re-adjustment of its fares, a return to the company of 7 per

cent upon its capital and 2 per cent surplus was permitted, with a depreciation rate of 4.11 computed upon a plant life of 24.33 years. An increase in the basic fare to 7 cents, averaging 6.24 cents, was also allowed. These adjustments it was estimated would take care of the company's finances for the ensuing 5-year period. The above adjustments were allowed on the basis of the continuation of the then current operating costs, including wages now in question, and which wages were then—and since 1925 have been—on the same basis as now, viz., 50 cents per hour to motormen and conductors on 2-man cars, 55 cents per hour to drivers of 1-man cars, bus drivers 42½ cents per hour.

Following the terms of the company's agreement of January 25, 1924, with the City of Ottawa, as confirmed by Dominion Act, cap. 84, 14-15 George V, by section 2 of that Act, the rates of fares of the company were not to be altered before the thirteenth day of August, 1928, either by the parties to said agreement or by the Railway Commission, and thereafter any alteration in such fares is to be governed by the agreement which restricted the right of the company to readjust its fares only every five years, so that having had a readjustment in 1928 the company has, by its agreement, precluded itself until 1932 from applying for further adjustment of its fares, based upon the failure of the adjustment of 1928 to provide sufficient revenue to obtain the return from its operation intended by the Railway Board's Judgment of 1928.

In 1928, when the company obtained the sanction for its increased fare schedule, its gross earnings were \$1,788,691, based on 1927 statement, its operating expenses \$1,252,013, and its net earnings \$536,678, and its reserve and special charges \$140,000. In 1928 gross earnings increased by about \$68,000, operating expenses declined by about \$10,000, net earnings increased by about \$80,000 while, owing to necessary additional borrowings, the reserves and special charges increased by \$125,000, leaving a surplus of some \$91,000, insufficient to pay dividends. In 1929 the gross earnings again increased by some \$20,000, while operating expenses declined some \$30,000, leaving a net increase of some \$60,000, but again the reserve and special charges increased some \$4,000 over 1928, leaving a surplus, insufficient for dividends, of \$154,191. In 1930 gross earnings were down about \$125,000, while operating expenses slightly increased, the net earnings showing a decline of some \$58,000, the reserve and special charges decreased some \$3,000, and the surplus at \$254,472.23. These figures, taken from Exhibit 11, are approximately correct, and were not contested by the company, and indicate that the

sharp increase in interest and special charges since 1927 were largely responsible for the failure of the Railway Commission's judgment of 1928 to give the necessary return to the company upon its invested capital which was intended. Hence the company's present financial position and its inability to provide for its dividends. Operating costs, which include wages, are apparently not responsible for this condition as they were lower in 1930 than in 1928, but the company established its contention that its operations for the past three years did not yield it an adequate return upon its capital to which it was justly entitled.

Mr. Sinclair, for the carmen, filed as Exhibit 19, a statement showing that out of all street railways in Canada only 6 for the years 1925, 1926, 1927 and 1928, and 7 in 1929 paid dividends upon invested capital (many of the balance are municipally owned and may earn a fair return), so that while the wages paid its car-men and bus drivers by the Ottawa Electric Railway Company appear by the exhibits to be less than the Dominion Average for the same men on the whole of Canadian Street Railways (Exs. 15 and 18) for 2-man cars, and less than the average paid in the 22 Canadian cities shown by exhibit 16 for one-man car operators, this company appears to be no worse off than the other Canadian companies not municipally owned, which, paying at least as high and, in many cases, higher wages to its car-men are unable to secure a just return upon the capital employed.

Wages do not necessarily rise and fall with the prosperity or adversity of the employer. They depend upon value of the service rendered and the factors of supply and demand.

The car-men of the Ottawa Electric Railway Company in 1929 applied for and obtained a board on a dispute as to wages in which the men claimed that because the Board of Railway Commissioners had increased the rate of fares in August, 1928, and the company's revenues had thereby been increased, the wages should correspondingly increase. The wages were then the same as now, and as had been since 1925, and, although the gross revenues of the company did increase for the years 1928 and 1929, the operating expenses decreased and the net earnings increased, the board unanimously declined the increase asked by the men, and, in so doing, expressed the hope that, at the expiration of the year ending April 30, 1930, should the revenues of the company be sufficient to warrant it, the company deal generously with the men as it has always done hitherto.

The company's contention that the showing as to reduction in living costs during the past 18 months should justify a proportionate

reduction in wages was the subject of many exhibits and caused much argument. Exhibit 4 filed by Mr. Burpee, is a memorandum from the Department of Labour, and specifies four standards of living viz: (1). Poverty level, or about \$900 per year; the standard of the unskilled labourer without steady employment, and practically the basis upon which charitable organizations base relief costs; (2). Minimum subsistence level at \$1,200 to \$1,400 per year, the level of the semi-skilled worker, or the skilled worker without regular employment; (3). Health and decency level at \$1,600 to \$1,800 per year and (4). Comfort level at \$2,200 to \$2,400 per annum. It is unnecessary to consider the last two standards as they are not involved. Exhibit 5, filed by the company shows that the average yearly remuneration for the employees concerned, viz:—car-men and other employees, for 1930, including transportation and uniforms, etc., as part of the wages, was

(a) for car-men, \$1,522.

(b) other than car-men, \$1,446.

and

(c) for all employees, \$1,449.

Deducting the amounts added in for clothing and transportation, which are common to all street railway car-men, these figures stand at (a) Car-men \$1,423; (b) Other than car-men \$1,394; and all employees \$1,414. The official statistics of electric railways for the year ending December 31, 1929, published by the Department of Trade and Commerce, show 334 motormen and conductors of the Ottawa Electric Railway Company as receiving \$467,687 in wages for the year—or an average of just \$1,400 per man, and as the wages are the same now, that average would apply. The car-men involved in this application are therefore within the standard of the minimum subsistence level.

It is contended by the company that the wages of its motormen and conductors should decrease with the cost of living and the increased purchasing power of the dollar. The memorandum above referred to, as Exhibit 4, filed by the company, after referring to the four standards of living quoted, says, "Most classes of labour have secured in recent years wage increases greater than the relative change in the cost of living since 1913 so that their standard of living has improved."

Major Burpee filed an admirable Chart and comparison of wage rates of his company compared with cost of living (Ex. 2). The chart shows that for several years, notably from 1913 to 1920, wages did not follow the cost of living, and that during that period, 7 years, the living cost curve was for the most part either parallel to the wages curve or

above it, until the sharp advance in wages in 1920. This exhibit indicates that for a considerable time wages were paid lower than the cost of living, e.g., 1913, 1915, 1916, 1917, 1918, and parts of 1919 and 1920. In 1914 the two were practically parallel. In 1922 cost of living stood at \$22.07, wages at 48 cents per hour. In 1930 cost of living stood at \$22.25, wages at 55 cents and 50 cents per hour, the rate of wages existing since 1925, yet the spread between cost of living in 1925 below wage rate on 2-man cars was just about the same in 1930 as in 1922. The improved standard of living has become a recognized factor, as above quoted, and although there has been, during the last 18 months, a sharp decline in the department's figures of living costs, it must be borne in mind that for 7 years, shown on the chart, the wages paid were only for part of the time equal to and for the greater part of the time below the cost of living.

In making the comparisons between rates of wages paid to the men involved on this railway and those paid on other railways the clothing, transportation, and time allowed for going to and returning from work has been omitted in each case, as there is little doubt that these are common more or less to all electric railways, and to add them in this case, and leave them out in all others, would be an unfair comparison. The evidence and statistics appear to establish that the wages paid to the men before us are lower than the average wages paid by other electric railways to the same class of men having the same perquisites and privileges as these men—only in one or two isolated cases are they a cent or two higher.

The duties of the motormen and conductors are not those of ordinary labourers. They require training and a certain amount of skill, tact and a great deal of good judgment, and their duties involve heavy responsibility to the public in the care of human lives. They are governed by operating rules and are, of course, subject to discipline for failure to perform their duties in accordance with those rules. Yet they are paid only on the minimum subsistence level quoted by the Department of Labour, and even though, at present, there is a slightly wider margin between their pay, and the cost of living, owing to existing depression which is general, and they may have, while it lasts, some little adventitious advantage in purchasing power as against the seven-year period when they suffered adventitious disadvantage, we are of opinion that the wages now paid are not disproportionate to the value and responsibility of the services rendered to the company.

Under its agreement with the city, the company is able to take steps next year to establish a new schedule, and, failing agreement thereon with the city within one month of the company's notice to that end, to go again to the Railway Board, and the present wage schedule is open for revision for the year commencing first of May next. Under all circumstances shown in evidence upon this enquiry we are unable to find that the application for a decrease of wages is justified, and would so recommend.

We therefore recommend:—

- (a) That the application of the men for increase of wages be disallowed.
- (b) That the application of the men in respect of provision for retirement of

old employees, be not dealt with now, but be left for consideration and negotiation between the company and its men so soon as the company's finances will permit of the introduction of such a plan, and

- (c) That the application of the company for a substantial decrease in the wages of the men for the year ending April 30th, 1932, be disallowed.

Respectfully submitted,

(Signed) A. C. BOYCE,
Chairman.

(Signed) HAL. J. BURNS,
Member.

OTTAWA, 25th June, 1931.

Minority Report

To the Hon. G. D. ROBERTSON, LL.D., P.C.,
Minister of Labour, Ottawa.

*Re Board of Conciliation—O.E.R. Ry.
Employees*

DEAR SIR,—I am unable to agree with the other members of this Board on the question of a decrease in wages to employees of the Ottawa Electric Railway Company.

In my opinion it would be fair to put into effect the following:—

1. All car-men should get paid for actual time worked with a decrease of one cent per hour in the nominal rates of 55 cents and 50 cents per hour, with overtime pay after eight hours and a half. Their rates of pay will then be as follows:—

One-man car operators—54 cents per hour.

Two-man car operators—49 cents per hour.

2. Manual workers other than car-men work a full nine hours as it is and I understand their hours could be reduced by one hour per day. This should be done, with such adjustment in wage rates as makes the actual reduction in wage equal in percentage to that of the car-men (10 per cent) and with overtime pay after eight and a half hours.

3. All other employees (including all officers) should accept the proposed decrease of 10 per cent.

4. The company should either eliminate, or pay for, any time spent by car-men in getting their car and their reports ready for their daily run and in turning in their car and reports after the run.

5. A pension scheme for old employees should be put into effect as soon as the company's financial situation warrants it.

The practice apparently is that employees contribute to most pension schemes, and if this is so, some contribution should be made by the employees.

The company claims that it is justified in putting into effect a ten per cent decrease (which would affect all officers and clerical workers, as well as other employees) firstly because the cost of living has so decreased that the men at the present time are getting more than what is ordinarily described as a fair wage, and secondly because the company's financial position is so precarious at the present time that in any event it would not be unreasonable to ask the employees to accept the decrease proposed, altogether apart from the cost of living. The company claims that the reduction justified by these two things is a substantial one, but that it prefers to limit the reduction to ten per cent for the present.

The evidence establishes that the cost of living has fallen continuously since January, 1930, and that the company's gross revenues have also fallen continuously during 1930 and 1931 to date (the reduction being now at the rate of \$400 per day) and that the question of whether the company will be able to pay its bond interest is problematical from year to year and that the company has exhausted practically every other source of saving money except reduction in wages, on the one hand, or drastic cutting down of the number of employees, on the other.

The duty of indicating the propriety of a decrease in wages is not a pleasant one—but to my mind the necessity and fairness of the decrease has been very clearly established and I must differ decidedly from the conclusions and reasoning of the other members of the Board.

If the wage reduction proposed would lower the wages of the employees below what is a fair wage then the fall in the cost of living alone would be insufficient grounds for a wage reduction.

Furthermore, even in times of financial embarrassment on the part of the company, a reduction should not be put into effect that would reduce the wages for any lengthy period to below the amount required for the necessities of life.

To put into effect the wages mentioned in the second paragraph, would give the operators of one-man cars on the average \$1,407.66 and other car-men \$1,287, allowing for no work or pay during one day per week, statutory holidays and two weeks other holidays. Both figures include \$51.94 as the value of free transportation given the employees while not on duty and \$45.95 for clothing. The amounts allotted to these items were not attacked, though it was pointed out by the men that other street railways give the same privileges. However, the privileges are given, and are of value, and the amounts were not attacked, and it does not seem proper to exclude them.

Taking \$1,347 as the average decreased wage, the employees will still be well above the wage fixed in Exhibit 4 (United States figures) for semi-skilled labour (called somewhat pessimistically the "minimum subsistence" level) and will be at the maximum of the "skilled labour wage"—when both are adjusted in accordance with the difference between (a) the cost of living in Canada and United States, and (b) the cost of living to-day and the cost in 1926 which is the year the exhibit deals with. I suggest that a car-man is hardly in the skilled-labour class, with carpenters, electricians, plumbers, etc.

The Cost of Living Decrease

I enclose as appendix "A" to this report a memorandum showing that when the cost of living was going up the increase was urged by the men from time to time from 1908 to 1918, when it was near its peak, as the reason for increasing wages and, subject to what I say below on this subject, this should work both ways.

With the exception of the wholesale price reference, the references in this report to cost of living variations are the figures for Ottawa only and are not the average throughout the Dominion.

Once it is established that the employee is getting a fair wage, variations in the cost of living must necessarily affect the wage and as a rule the wage should vary with major variations in the cost of living.

The cost of living simply means the price sellers get for their product and when such price continues low, the "wages" of the sellers are low and eventually those of their employees must follow suit. To keep up the wages of employees who are unionized and to disregard the lowered "wages," or income, of farmers and others similarly placed, who buy the things produced by the unionized employee, would be grossly unfair and would cause hopeless confusion.

I am not to be taken as having the view that because the cost of living has gone down the wages of all employees engaged in all kinds of employment must necessarily follow. There may be, and doubtless are, classes of employees who even with the decrease in the cost of living are not getting reasonable pay, and as to these entirely different considerations apply. It is my view that the street railway employees do not belong to these classes.

The wages received by them were, as will be shown below, according to all the tests one can apply, at least "fair wages" up to the time the cost of living began to fall at the beginning of 1930, and it is upon this that my views as to the effect of the cost of living are based.

Apart from the cost of living figures, when the employer is in a precarious financial condition, it is wise for the employee to accept an experimental or temporary reduction in wages to prevent the loss of his employment through bankruptcy of his employer, or through cuts in the number of employees. This is particularly so if the reduction still leaves a wage sufficient for the necessities of life.

Apart from this, an employer should pay a "fair wage" and an employee should not be disgruntled if he does not get more than a fair wage, though he would hardly be human if he does not continue his efforts to get more.

What is a "fair wage" for any employee?

The labourer considering his manual labour more arduous than that of the electrician may value it more highly than does the electrician, and more highly than does the public—but he can hardly expect the electrician to agree with him. The wife of a labourer with six children would hardly consider it just that her husband should receive the same pay as the single labourer without dependents. The thrifty man requires less than the inherently extravagant man. The sickly man needs more money for medical bills than the healthy one, but the latter will reply that being healthy he must have more to eat than the other.

If the labourer were to ask why he ought not to receive a wage large enough to give him the same standard of living as the prosperous merchant or the professional man, it is I submit impossible to give an answer that would

be convincing to him—however convincing the answer might be to the merchant or professional man.

So far as I am aware no one has yet prepared a satisfactory and generally accepted table showing a price at which it is fair to value the services of any class of employees, for the simple reason that every individual has different requirements from every other individual. Budgets designed to show how much or how little food, clothing, education, and amusements the family of any employee ought to need are in my opinion of little assistance to a Board such as this. Catch phrases such as that the labourer is worthy of his hire and that he is entitled to a fair wage, a living wage, etc., do not settle or solve anything. Every one agrees that such statements are true and every one disagrees as to what they mean in dollars and cents.

Now one way of judging whether or not a wage is fair is to judge its effect on the manner of living and the mental attitude of the employees. This may not always be absolutely accurate but it is in my opinion as close to being a fair test as can be devised.

Considerations such as the following give a clue as to whether the wage is fair or not.

Are any substantial number of the employees being sued for the price of things which they ought reasonably to be expected to afford? Are they or their families unable to pay for proper medical attention? Are they unable to afford the amusements that they might reasonably be expected to be entitled to? Are they in the hands of loan sharks? Are they unhealthy or unhappy as a class? Do they have more frequent recourse to strikes than do other classes of labour similarly organized? Are their children inadequately clothed or educated? Do they feel antagonistic toward their employers?

These are only some of the tests it is fair to apply.

Department of Labour figures are useful for showing the trend of the cost of living but any effort by any authority to say how much money any individual or class should spend on food, clothing and amusements or what education facilities the family of a particular wage earner should get, is simply bound to be unacceptable as a standard. The only real tests that occur to me are those based on the actual results of a certain specified income on particular wage earners and their families over a period of years.

There is no evidence given that the above questions could have been answered in the affirmative in the years 1926, 1927, 1928, 1929, or that these conditions prevailed among the

employees then. And it is not unreasonable to assume therefore that such hard conditions did not exist.

If they did not prevail then the wages during that period were not too low, and the wages at January, 1930, were not less than fair wages.

Furthermore no strikes occurred. Moves for increases and decreases both occurred—the men from time to time seeking more pay, as ambitious employees will, and the company, in financial difficulties, suggesting reductions in pay—but there is no evidence of any unpleasantness during this period. The relations between the company and the men were apparently on a most friendly basis during that period.

In May, 1929, furthermore, a Board of Conciliation, of which I was a member, brought in an award which was unanimous and which was adopted by both parties. They left wages as they were and closed as follows:—

“Without agreeing with the principle that wages should increase with the increased prosperity of the company regardless of variations in the cost of living, the Board trusts that the company will after the year ending April 30th, 1930, should the revenue of the company be sufficient to warrant it, deal generously with the men *as it has always done hitherto.*”

In 1926, 1927, 1928 and 1929 wages were not only high enough to buy what the employee was accustomed to having in 1913 but were high enough in addition to allow him to buy in a very generous measure additional pleasures and conveniences not thought necessary for him in 1913—or in other words were sufficient to create for him an entirely new standard of living.

No strike has occurred since 1919 and, as stated above, practically no change has occurred in the two-man wages since 1922 (except a one cent increase in 1924 and in 1925) and no changes whatever in one-man car rates has occurred since their introduction in 1925.

The wages have been \$4.95 per day for one-man car operators and \$4.50 per day for others (plus certain clothing and transportation) from 1926 onward.

Now since January, 1930, there has been a steady decrease in the cost of living, until on the 1st of May of this year a man could buy with \$4.20 the same things of all sorts, approximately, as \$4.95 would have bought on the 1st January, 1930.

At 1st May, 1931, therefore he had 75 cents more to spend each day than at 1st January, 1930, and than he had during the years 1926, 1927, 1928 and 1929 (approximately), and

after a 10 per cent decrease he will still have 25 cents more to spend than in January, 1930, and after the decrease the two-man car operator will still have 24 cents more to spend.

This is not mere theory or speculation or guess work—it is an incontrovertible conclusion from Exhibit 2 and the Department of Labour figures upon which the Exhibit was based.

The increases in wages lagged behind the cost of living increase for some seven years after 1913 but this accumulated loss was recouped by shortly after the end of 1922; and since then the wage increase has continued to be far above the cost of living increase.

The cost of living to-day is at its lowest since 1917 in spite of the fact that rent, fuel, light and perhaps some other items have not gone down very much, if at all. Other items have so decreased in cost that the average is still far below any year since 1917.

No one can say for certain whether this reduction is temporary or permanent. Mr. Sinclair says it is temporary—others say it is not.

I take the stand that since the other major reduction in the cost of living (1920-21) was permanent, this one may possibly be permanent also—but that at any rate it will last for the period for which this Board is to make a recommendation, namely, till May, 1932.

There is no sign that the fall in the cost of living has been checked, nor of course do salaried workers desire that it should be checked, because every fall in the cost of living means an increase in wages unless a corresponding reduction is made in the wages.

Wholesale prices of commodities chosen by the government for purposes of comparison were in 1920 over 140 per cent in excess of 1913, whereas to-day they are roughly 15 per cent in excess (LABOUR GAZETTE, June, 1931, page 722); and they are still falling.

This would suggest that there is nothing to warrant the belief that the next ten months (expiring 1st May, 1932) will see a return to the prices of January, 1930.

I consider it evident that the cost of living as of January, 1930, will not even be approached during those ten months by any conceivable upturn. I consider it reasonable, also, to deduce from the wholesale price tendency that it will not be substantially higher on the 1st of May, 1932, than it is to-day.

The effect of the drop in the cost of living in Ottawa is simply this—that employees of the company have received an 18 per cent increase in the purchasing power of their wages since 1st January, 1930—and this in

turn is equivalent to an 18 per cent increase in wages.

In January, 1930 (according to Exhibit 2 attached hereto as Appendix "B") the cost of living was about 70 per cent in excess of what it was in 1913, and in May, 1930, it was 65 per cent in excess.

In January, 1930, it was about 18 per cent higher than to-day.

To-day it is only about 45 per cent in excess of 1913.

The meaning of this is simply that \$1.45 will buy to-day what \$1 would have bought at the beginning of 1913.

Furthermore \$1.45 will buy to-day what \$1.70 would have bought in January, 1930, or what \$1.65 would have bought in May, 1930.

It is evident therefore that the proposed reduction would still leave the employees better off than they were in January, 1930, and that their wages then were at least fair wages.

The Company's condition

The other important element in the application was the company's financial position.

The company's financial position was shown by figures filed with the Board by both sides. The figures filed by both sides were substantially correct except that in some exhibits purporting to portray the company's position, the employees' representative did not include the deductions necessary for bond mortgage interest and discount, taxes, depreciation, whereas the company's figures did take these into consideration, as of course they should.

The company has not paid shareholders any return on their capital invested for three years, notwithstanding a contract with the city and an order of the Board of Railway Commissioners, which were to insure a fair return; and having a small surplus in each of these three years it would have had at the end of 1930 a sum of money which would have been available for dividends but for the fact that the company has not been able to borrow money from any source for the capital expenditures which from time to time were necessary.

As it could not borrow any more money on its bond mortgage because of the fact that the terms of the mortgage forbade the company to borrow while it was not earning enough to allow a fair margin for bond interest, and as it was unlikely that they could get funds elsewhere otherwise than by a second bond mortgage (if even by that method) the company was obliged to use its comparatively small annual surplus to pay for capital expenditures necessitated by the replacing (at much higher than original cost) of tracks, cars

and other equipment, to say nothing of such extraordinary charges as bridges.

When the company entered into its agreement with the city it was understood that the company was to receive a fair return upon the cash invested in its business, and that the Board of Railway Commissioners in event of dispute would fix the rate of fare that would give them that return, if the five cent fare did not do so.

The amount required (according to the Board of Railway Commissioners' judgment) would be some \$600,000 annually and the amount available last year for this purpose was \$355,000 short and of the \$245,000 available, bond interest took all but about \$90,000.

Revenue has declined to a point where the payment of bond interest is problematical from year to year.

Drastic reductions in service mean reductions in number of employees.

Every avenue of saving, except cuts in wages, appears to have been tried or considered.

The present reduction in wages is an effort on the part of the company, according to the statement of Mr. Burpee, to keep on as many men as the condition of the company will warrant, and to maintain as many cars in operation as possible.

Under these circumstances it is hardly too much to say that the company's directors not only are justified in reducing wages, but in fact are hardly justified in doing otherwise in view of their responsibilities to the shareholders who elect them.

The financial condition of the company alone, altogether apart from the cost of living situation, would have justified a temporary reduction in wages to minimize reduction in number of employees and reductions in service.

Evidence was given as to the wages in other companies. So far as this evidence referred to companies in the eastern part of Canada, the wages paid by the Ottawa Electric Railway Company have been somewhat better than average.

On the average, the wages in Ottawa for one-man car operators per hour of work, have been higher hitherto than the average of Halifax, Quebec, Montreal, Toronto, Hamilton, London, Fort William, Windsor, Port Arthur and St. Catharines (from the employees' Exhibit 16) and 1-5 cent less for two-men car operators than the average of Toronto, Montreal, Quebec, Halifax and Hamilton (from the employees' Exhibit 18, which did not show the other Eastern cities).

According to exhibit 8 of the company which was not seriously attacked, the average

wages of car-men for 1930 (after allowing \$98 for free transportation while off duty, and for clothing supplied, items of course which must be included in comparing the wages of street car men with those in other occupations) were higher (and in most cases higher by far) than those of the following wage earners:—Taxi-drivers, auto truck drivers, horse vehicle drivers, coal drivers, retail store clerks (male), letter carriers, Dominion Government clerks, grade 1 and 2 (maximum), Dominion Government messengers (senior grade), postal clerks, postal helpers, labourers.

Evidence was given that after one week's training a man was qualified to act as a motor-man, and making all allowance for any circumstances that might suggest that this time should be longer, car-men can hardly be called skilled workers in the same sense as electricians, machinists, carpenters, painters and others who serve long apprenticeships are.

A recommendation that wages should remain as they are would, in my opinion, only be justified upon some of the following assumptions:—That the fall in the cost of living is temporary; that it will return to its former high level within a year, and combined with this an assumption that the company's financial position has nothing to do with the wages of the employees; the theory that employers, instead of reducing wages, should continually increase them (apparently ad infinitum) thus creating more buying power; a theory that the car-men are skilled workmen in the sense that an electrician or carpenter is a skilled workman; a theory that certain free clothes and free transportation should not (for some reason or other) be considered as worth any money to the employees and should not be considered in arriving at the total annual wage; the theory that because increases in wages from 1913 to 1920, lagged behind the increases in the cost of living, the same thing ought to occur on the downward curve, notwithstanding the fact that such lag was made up long ago; a theory that the car-men's wages are 50 cents and 55 cents an hour whereas the truth is that they are 54½ cents and 60 cents an hour for two-man and one-man cars respectively, due to the fact that the men are paid every day for nine hours' work, although their run averages eight hours and thirteen minutes.

These assumptions in my opinion are not justified.

The situation strikes me as being simply this—that the company being faced with the choice of a drastic reduction in the number of men employed, and consequently in the service to the public, on one hand, and a reduction in wages on the other hand, observed the

drop in the cost of living and chose the alternative which would keep the larger number of men employed at a wage which would be reduced, but which nevertheless will, in all probability, continue to be (as it is at present) high enough to buy even more than they would have been able to buy with the wages paid in the eight years preceding 1930

The meetings have all been very harmonious and the evidence well and honestly presented. The other members of the Board have given full and fair consideration to the above points but have felt bound to reach other conclusions.

Yours respectfully,

(Sgd.) REDMOND QUAIN.

APPENDIX "A"

Extracts from the Boards of Conciliation decision relating to O.E.R. indicating the manner in which the increase in cost of living was advanced in former years as a reason for increasing wages.

(1) *Labour Gazette*—July, 1908, p. 53—"The men claim however that the high cost of living rendered it difficult for many of them at least to meet their requirements upon their present incomes"—Unanimous decision—increase recommended.

(2) *Labour Gazette*—July, 1912, p. 37—"It was claimed however by the employees that the increased cost of living rendered it difficult to them to meet their requirements upon the present wage scale...."—(Unanimous).

(3) *Labour Gazette*—Sept., 1918, p. 731—"...the demands of the men is exclusively based on the increased cost of living." Majority award not accepted by employees who ceased work for one day. Dealt with by Labour Appeal Board which said (page 737) "...The Board is of opinion that the rates recommended by the Conciliation Board do not cover the increased cost of living and that having regard to the increased cost of all commodities....conditions would be fairly met as regards the men by granting increases."....

(4) *Labour Gazette*—June, 1923—"In regards to the demands of employees for increase of 25 per cent in wages, the Board from the evidence submitted, finds that the cost of living has increased somewhat...."....The Board recommended an increase in wages.

In spite of the prolonged depression the unemployment insurance fund of the men's clothing industry in Chicago remains on a solvent basis, after expending over \$1,000,000 during 1930. Average yearly payments total around \$700,000. An account of this scheme appeared in the *LABOUR GAZETTE*, June, 1930, page 677.

PROCEEDINGS UNDER THE ALBERTA LABOUR DISPUTES ACT

A DISPUTE involving four planing mills at Calgary and carpenters in their employment, resulted in a strike on May 1, 1931, when the employers reduced the wage rate to seventy-five cents per hour from ninety cents as provided under an agreement with the union in force during the previous three years. The employees applied for a Board

under the Alberta Disputes Act and a Board was accordingly appointed. The text of the Board's report is given below. The employers refused to accept the decision of the Board, and the employees involved called off the strike, resuming work on June 22 at the reduced rate of seventy-five cents per hour.

Report of Board of Conciliation in Dispute between Mill Owners at Calgary and the United Brotherhood of Carpenters

The Board of Conciliation, appointed under The Labour Disputes Act, 1926, in the matter of the mill-owners, represented by W. H. Cushing, Limited; A. B. Cushing Mills, Limited; Revelstoke Sawmill Co., Limited, and Manning Eggleston Lumber Co., Limited, called the Employers, and the United Brotherhood of Carpenters and Joiners of America, Local No. 1779, Calgary, called the Employees, met in the Council Chambers of the City Hall, Calgary, on Tuesday, June 9th, 1931. The Employers were represented by their managers in the persons of E. E. Fielder, J. W. Dingle, F. H. Pearce, and George Eggleston, and the Union members by Mr. Green.

Both sides expressed their views in a very fair manner, covering practically the same ground as set out in the Employers' letters of May 12th and 29th attached hereto, and the Union Secretary's letter dated May 14th, which is also attached hereto.*

*Letters omitted.

The following decision was agreed to by Mr. J. A. Tweddle as the Employers' representative, and by Mr. Fred J. White, as the Employees' representative on the Board, and concurred in by myself as chairman:—

“That the old agreement be renewed for one year, to expire on April 30th, 1932, with the exception that the rate of wages per hour be 80 cents instead of 90 cents per hour.”

The Union agreed beforehand to accept the decision of the Board, but the mill-owners refused to do so. At the request of the Board the mill-owners had a meeting yesterday, June 10th, to reconsider their decision, and they advised us that after giving the matter further consideration they are unable to change their previous decision.

Signed (on behalf of the Board),

J. F. QUIGLEY, Chairman,
FRED J. WHITE,
J. A. TWEDDLE.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Decisions

REPORTS have been received of three cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. An account of previous cases was given in the LABOUR GAZETTE, April, 1931, page 399, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1923, to December 31, 1929; and a similar summary of proceedings from the date of the inception of the Board to December 31, 1927, appeared in the issue of October, 1923, page 1060.

The Canadian National Railways Employees' Board of Adjustment No. 2, was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for “Clerks and Other Classes of Employees as herein named,” which are not

adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment, and it is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

Case No. 69—Stores Department, Rivière du Loup.

The hours of work of certain hourly-rated employees in the Stores Department at Rivière du Loup were reduced from 48 to 40 per week,

with resulting loss in wages. The grievance was taken up locally and was finally referred to the general chairman of the union, who protested against the change, with the result that the employees were finally restored to the 48-hour week, after they had been on short time for a period of about five weeks. The employees submitted that they had lost a total of \$120.80. They contended that they were laid off in violation of Article 3, Rule P of the schedule covering clerks and other classes of employees, and contrary to the decision of the arbitrator in Case No. 56 (LABOUR GAZETTE, August, 1930, page 904). The Article in question reads as follows:—

“When the management desires to effect a reduction in expenses, in order that the senior employees on the particular staff may be given full-time employment, the staff will preferably be reduced, where it is considered practicable to do so, and when the interests of the railways will not suffer thereby, unless otherwise desired by the employees locally and arranged through mutual understanding with the general chairman and the proper officers of the railways.”

The company stated that earlier in the year, at Rivière du Loup, the shops and store employees represented by the Canadian Brotherhood of Railway Employees had voted to be returned to the 48-hour week, and that owing to this decision it became necessary to reduce the staff. Later, the employees changed their decision and voted to be returned to the 40-hour week in order that the men who had been laid off might be restored; and the company acceded to this proposal. The union, however, desired that the store employees should be excepted from this new arrangement and that they should continue on the 48-hour week.

The Board decided that in view of the doubt in the minds of the officers of the railway with respect to the vote which was taken among the Mechanical and Stores Departments employees regarding the number of hours to be worked each week, the payment of fifty per cent of the amount claimed by each employee involved would be a reasonable settlement of the dispute, and so decided.

Case No. 71—Operating Department (Central Region)

The car service work at Moreau Street, Montreal, having declined in volume, the company decided to transfer it to the Bonaventure Freight Office, and abolished the position of car service clerk at the former point, the employee affected being advised to exercise his seniority in accordance with the provisions of the schedule. However, at his own request, this employee was engaged in another capacity at the Bonaventure office, but he finally took the position of car service clerk at that point

at a lower rate of pay than he had received at the other office. The employees contended that the employee should have been retained in car service work at his former rate of pay in accordance with Article 3, Rule (k) of the schedule, which provides that “when reducing forces, senior employees with sufficient ability to perform the work will be retained.”

The company submitted that they were not obliged to increase the rate of pay for a car service clerk at the Bonaventure office on account of the position being filled by an employee who had been receiving a higher rate.

The Board denied the employee's claim, but recommended that the parties to the dispute should confer further with a view to making any possible adjustment in the wages of the employee concerned.

Case No. 74—Sleeping, Dining and Parlour Car Departments

The dining car crews on two trains out of Toronto were formerly allowed four days relief per month, in addition to Sundays, at their home terminal. This practice was discontinued in the summer of 1928, and the employees contended that the discontinuance of the established practice was contrary to Article 4, Rule (c) of the schedule, which is as follows:—

“On summer runs the assignment of car conductors and porters, and dining, cafe and buffet car crews shall be arranged from time to time to meet the requirements, and will be in accord with agreement to be reached between the Superintendent and the employees' general committee; provision being made for adequate rest at home terminal, the established hours of rest to be a basis on which this is to be determined.”

On behalf of the employees it was contended that they were entitled to compensation, at their regular rates of pay, for the four days' relief each month that had not been allowed to them during the three years, 1928, 1929 and 1930.

The company pointed out that the conditions on the run compared favourably with those on other runs in regard to rest, and claimed further that members of the employees' committee had before the season of 1928 consented to the elimination of the four days' relief, and that the agreement at that time had been made in good faith.

The Board decided that the employees should have received two days' “lay-over” each month of 1930 exclusive of Sundays, and that this should be the basis for determining the rest period during 1931.

(This case was heard by the Board, earlier this year, when it was referred back to the parties for further consideration, LABOUR GAZETTE, April, 1931, page 400.)

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1931

THE number of strikes and lockouts in existence in Canada during June, 1931, was ten, as compared with twelve in the preceding month. The number of workers involved, however, showed a slight increase, a similar increase appearing in the time loss incurred, due chiefly to a dispute involving some 300 salmon fishermen on the Pacific Coast for several weeks during June. Comparing the figures with those for June, 1930, the same number of disputes was recorded, and while the number of workers involved showed only a very slight decline, the time loss incurred was almost six times as great as that recorded a year ago when no disputes of long duration were recorded.

Date	Number of disputes	Number of employees involved	Time loss in working days
*June, 1931...	10	1,209	22,439
*May, 1931..	12	1,146	17,189
June, 1930..	10	1,190	4,007

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes, involving approximately 634 workers, were carried over from May, and six disputes commenced during June. Of these ten disputes eight terminated during the month, three resulting in favour of the employers concerned, two in favour of the workers involved, two being partially successful, while the result of one was recorded as indefinite. At the end of June, therefore, there

were two disputes recorded as strikes or lockouts, namely: masters, mates and marine engineers, Vancouver and Victoria, B.C., and photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; coal miners, Shaughnessy, Alta., January 15, 1931, one employer; motion picture projectionists, Ottawa, Ont., February 23, 1931, one employer; and photo engravers, Toronto, Ont., March 23, 1931, one employer, this last being added this month. The strike of photo engravers employed by one firm in Toronto, commencing January 7, 1929, and carried in this list for some months, has been merged with the new strike of photo engravers in Toronto, Montreal, etc., commencing May 4, 1931, details of which are given elsewhere in this article. The dispute involving shirt and overall factory workers employed by one firm in Winnipeg, Man., commencing April 6, 1931, and carried in the above list during May and June, was called off by the union concerned about the end of June; while the strike of pile drivers and hoisting engineers in progress since January 3, 1931, against two contracting firms in Vancouver, B.C., which has also been carried in the above list, appears to have lapsed during June.

Information has reached the Department as to a minor dispute involving photo engravers in one establishment in Toronto on March 23, 1931, three union employees ceasing work. The union has not called off the dispute, and it is, therefore, included in the list of such cases.

Information has appeared in the press as to a dispute in a boot and shoe factory in Quebec. Reports to the Department indicate that, as the result of changes in the style of work, eight lasters had given up their positions and had been replaced the same day.

Information has been received as to a dispute involving journeymen tailors in one establishment in Vancouver, B.C., three employees ceasing work when placed on piece rates instead of weekly wages on June 6, 1931. The employer replaced the strikers, but the union has been picketing the shop.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

PHOTO ENGRAVERS, TORONTO AND LONDON, ONT., MONTREAL AND QUEBEC, P.Q., AND WINNIPEG, MAN.—The strike of photo engravers employed by one company having establishments in these cities, which began in

Toronto, Montreal and London on May 4, 1931, involved the shops in Winnipeg, employing nine workers, on May 30, 1931, and in Quebec, nineteen workers, on June 18, 1931, bringing the total number of employees involved up to approximately one hundred. The chief cause of this strike was a dispute with the union beginning in January, 1929, in one establishment in Toronto later taken

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1931

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks

SERVICE—			
<i>Public Administration—</i>			
Labourers, Victoria, B.C.....	130	520	Commenced June 18, 1931; for increase in wages; terminated June 23, 1931; in favour of employer.

* Continuation of dispute reported as commencing May 27, 1931, terminating May 30, in last issue.

over by the company. Although the employees involved were replaced shortly after the beginning of that dispute, it has not been called off by the union and has been carried in the list of such disputes in the *LABOUR GAZETTE* since that time. At the beginning of the present dispute forty-one workers were still affected by the previous dispute and have, therefore, become involved in the new one, bringing the number affected up to approximately one hundred. At the end of the month the dispute was un-terminated.

CARPENTERS, PLANING MILLS, CALGARY, ALTA.—This dispute, commencing May 1, 1931, resulting from a protest against a decrease in wages, was terminated on June 22, 1931, the employees returning to work at the reduced rate of seventy-five cents per hour. In the meantime a Board had been established under the Alberta Disputes Act, but the report of this Board was not accepted by the employers and the strikers returned to work on the employers' terms. The report of the Board appears elsewhere in this issue.

MOULDERS AND MOULDERS' HELPERS, ST. JOHN, N.B.—Moulders in one establishment had ceased work on May 11, 1931, on the announcement of a reduction in wages of ten per cent for all workers in the establishment. The union representative of the machinists, who did not cease work, negotiated with the management as to a restoration of the agreement, with the result that the previous rates of wages were restored for all classes. A number of the moulders returned to work and their rate of wages was also restored. On June 1 the dispute was declared terminated, and it was reported that the remaining moulders involved, four in number, were taken back as their services were required, all returning by June 8.

MASTERS, MATES AND MARINE ENGINEERS, VANCOUVER AND VICTORIA, B.C.—The result of a vote by members of the masters and mates organization as to calling a strike on all passenger and freight boats on the Pacific Coast in sympathy with the masters and mates on tow boats, on strike since April 21, 1931, against a ten per cent reduction in wages, was announced about June 10 and was reported to be overwhelmingly in favour of such a strike. The officials of the organizations, however, postponed further action until the arrival of the Minister of Labour, and on June 20, at his suggestion, they agreed to further negotiations with a view to a settlement of the tow boat dispute. Accordingly the representatives of the parties to the dispute held a conference with the resident officer of the Department, but no settlement

was reached. On July 12, the strike was reported to have been called off.

SALMON FISHERMEN, PRINCE RUPERT, B.C.—Fishermen operating their own boats ceased work on June 1, 1931, demanding an increase of about twenty-five per cent in the price for fish from the buyers and salmon canneries. The buyers stated they were unable to pay this and on June 23 the fishermen decided to apply for an arbitration board as provided for by the provincial government regarding the price of sockeye for the season just beginning. Work was resumed the following day, an increase having been granted in the price of Cohoe salmon with a reduction in the price of gasoline through a rebate.

COAL MINERS, SPRINGHILL, N.S.—Twenty-five coal miners were involved in a cessation of work for three days during June owing to a dispute as to conditions of work in tunneling. A tentative settlement was arranged between the officers of the union and the management. This was a continuation of a dispute reported as settled at the end of May.

CARPENTERS, ST. CATHARINES, ONT.—On the expiration of the agreement between the building contractors and the carpenters' union at the end of April, the contractors proposed a reduction in wages from \$1 per hour to eighty cents, but later raised this to ninety cents, which was refused. The Builders' Exchange has reported that approximately one hundred and sixty carpenters were affected by the dispute which lasted from June 6, 1931, to June 16. The union has reported that on June 15 twenty-five carpenters employed by five contractors ceased work. It was reported that some of the contractors did not make the reduction at that time and their employees were not, therefore, directly involved in the dispute. On June 17 work was resumed at a rate of ninety cents per hour under an agreement between the contractors and the union.

LABOURERS, OSHAWA, ONT.—Labourers employed on excavation work by a sub-contractor for a building ceased work on June 22, 1931, because certain workmen had not been paid their wages when due. The main contractor paid the wages and work was resumed within a few hours.

TRUCK DRIVERS, EDMONTON, ALTA.—Truck drivers, including a number driving their own trucks, engaged on road construction near Edmonton ceased work on June 18, 1931, demanding an increase in the rate paid for hauling gravel, also objecting to the high prices charged for gasoline and oil at the

location of the work. It was finally arranged that one trucker should take a sub-contract for the hauling at nine cents per cubic yard mile instead of eight cents and that the price of gasoline would be reduced two cents per gallon and the price of oil twenty cents per quart. The dispute was, therefore, terminated on June 23.

LABOURERS, VICTORIA, B.C.—Labourers employed by the city of Victoria on relief work near the city at \$1 per day and board ceased work on June 18 demanding \$4 per day. The matter was taken up with the City Council which refused to increase the rate, the men returning to work on June 23.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1931, in the review of Strikes and Lockouts in Canada and Other Countries, 1930. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates.

Great Britain

The number of disputes beginning in May was 33, and 21 were still in progress from the previous month, making a total of 54 disputes in progress during the month involving 18,500 workpeople with a time loss of 214,000 working days for the month. Of the 33 disputes beginning in the month, 12 were over proposed reductions in wages, 10 on other wage questions, 5 on questions respecting the employment of particular classes or persons, 4 on other questions of working arrangements and 2 on questions of trade union principle. Settlements were reached in 33 disputes, of which 9 were in favour of workpeople, 8 in favour of employers and 16 ended in compromises; in the case of three other disputes, work was resumed pending negotiations.

The strike of 2,500 bricklayers and labourers at Glasgow, Paisley, Falkirk, etc., which began April 27, over an adjustment in wage rates involving a decrease for bricklayers was terminated May 23 when a compromise was reached.

Estonia

During the year 1930, the number of establishments involved in strikes was 38 and the number of workers 1,547. The time loss was 12,077 working days for the year.

France

No settlement was reported of the strike involving about 120,000 textile workers in the Roubaix-Tourcoing district which began May 18 and was mentioned in the June LABOUR GAZETTE.

Australia

The number of disputes reported for the third quarter of 1930 was 35 involving 212 establishments and directly affecting 10,844 workers. The time loss for this period was 113,031 working days with an estimated loss in wages of £124,025.

India

The number of disputes in existence during the year 1930 was 148, involving 196,301 workers with a time loss of 2,261,731 working days. Of the 148 disputes, 69 were over wages, 4 over bonus, 34 over personnel, 7 over leave and hours, and the remaining 34 over other questions. Settlements were reached in 147 disputes of which the workers were successful in 36, partially successful in 22 and unsuccessful in 89.

Philippine Islands

The number of strikes reported for the year 1929 was 26, involving 4,939 workers. Of the 26 disputes, 13 were for higher wages and the remaining 13 over other questions. In the case of 10 of the disputes, the settlement was in favour of workers and in 16 cases in favour of employers.

United States

The number of disputes beginning in the year 1930 was 653, involving 158,114 workers with a time loss of 2,730,368 working days. The industries in which the larger number of workers were involved in disputes were clothing with 54,177 workers involved, coal mining with 35,403 workers, building trades with 25,529 workers, and textiles with 11,553 workers. Of the 653 disputes beginning in the year, 303 were over wages questions, 14 over hours, 170

over union questions and 166 over other questions. Settlements were made during the year in 667 disputes, of which 294 were in favour of employers, 167 in favour of employees, 159 ended in compromises and 47 were otherwise settled.

The number of disputes beginning in April, 1931, was 47, and 41 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 14,855, and the time loss 598,525 working days for the month.

Canadian National Institute for the Blind

The annual report of the Canadian National Institute for the Blind reviews the activities of that body during the year ended March 31, 1931. The general secretary states that "the year under review has been rendered exceedingly difficult by complications resulting from commercial depression with consequent general unemployment. In spite of these difficulties the Institute has maintained its services in every field on a level with those of the previous year while in a number of instances services have been expanded and new lines added. Sales of goods produced by Institute industries and home workers compare favourably with the high record set for the previous year. In spite of lower prices, on the average, for these commodities the subsidies on these industries show fair comparison with the year previous and in some instances show reductions, while at the same time cash benefits to the blind have been maintained or increased. Registration, prevention of blindness and conservation of vision, field work, home teaching, salesroom, workshop employment, placement work and helpful services of a general character have been energetically prosecuted.

The report of the assistant general secretary emphasizes the importance of recent enactment by the Ontario Legislature of the Blind Workmen's Compensation Act, which was summarized in the *LABOUR GAZETTE*, May, 1931, page 531. Reference is made also to the amendment to the Federal Election Act as regards blind voters. The effect of this amendment is to provide a new alternative method in which blind persons may vote. Heretofore the ballots of blind voters have been marked by the deputy returning officer in the presence of the poll clerk and agents for the candidates; under the amendment they may still be so marked, but alternatively the blind voter may bring a friend with him to the polling station, and upon both the voter and his friend taking the proper oaths they may go together into a voting compartment where the friend may mark the blind voter's ballot.

A strike of 7,000 anthracite coal miners at collieries in the Panther Creek Valley, Pennsylvania, lasted from April 4 to May 2. The strikers demanded that operating conditions be changed so as to distribute work to a larger number of miners but work was resumed under previous conditions. Another strike of 5,700 anthracite coal miners in Schuylkill and Northumberland Counties, Pennsylvania, was also unsuccessful. This strike was against the temporary closing of a section of one colliery.

The report of the National Supervision of Industrial Placement reviews the steps that must be taken to rehabilitate blind persons in industry and business. While business depression has hampered the work of rehabilitation, methods have now been solidified to ensure more permanent success. Detailed after-care is now carried on in the Western Ontario and Quebec divisions "where full-time placement agents attend to every problem that arises and where each opportunity is made to serve its maximum benefit." Referring to the enactment of the Blind Workmen's Compensation Act, it is stated that "social workers are unanimous in their opinion that this is one of the most progressive pieces of social legislation ever passed and it should be of immense value in making industrial placements in Ontario in the future."

A new development in the past year was the establishment of the Merchants' Association of the Canadian National Institute for the Blind. Its membership is made up entirely of blind men and women who are operating small businesses, and who were placed almost without exception by the Institute. During the last year a total of \$2,831.51 was distributed to the members as dividends in excess of their regular retail profits.

Placements of blind persons made from April 1, 1930, to March, 1931, totalled 782, and the payroll of earnings developed during that period amounted to \$51,005. During the first three years of this work, approximately \$200,000 has been earned by blind persons as a result of the efforts of the Institute's Placement Department. It is estimated that the total number of blind persons in Canada is approximately 6,800.

New regulations have been issued under the Public Health Act of Saskatchewan, governing respectively the plumbing and drainage of premises and disposal of sewage; apartment blocks; barber shops; tourist camps; and bake shops.

GOVERNMENT ANNUITIES ACT

Amendment to Reduce Maximum Annuity Purchasable from the Government

AN Act to amend the Government Annuities Act was introduced in the Senate by the Hon. G. D. Robertson, Minister of Labour, on May 26, and was assented to on June 11. The text of the Act is as follows:—

An Act to Amend The Government Annuities Act.

1. Subsection one of section eight of the Government Annuities Act, chapter seven of the Revised Statutes of Canada, 1927, is repealed, and the following is substituted therefor:—

“8. (1) An annuity shall not be granted or issued on the life of any person other than the actual annuitant, nor for an amount less than ten dollars a year; and the total amount payable by way of annuity or annuities to any annuitant or to joint annuitants shall not exceed *twelve hundred* dollars a year.”

2. This Act shall not affect any existing contract for an annuity.

The Hon. G. D. Robertson, Minister of Labour, introducing the measure in the Senate, said that this bill amended the original Act in only one respect. Section 8 as it now stands in that Act reads as follows:—

“An annuity shall not be granted or issued on the life of any person other than the actual annuitant, or for an amount less than ten dollars a year; and the total amount payable by way of an annuity or annuities to any annuitant or to joint annuitants shall not exceed \$5,000 a year.”

“The amendment proposed in the Bill that is now before the House provides that the maximum shall be reduced from \$5,000 to \$1,200. The reason for the change is this: Only a few of the annuities purchased amount to more than \$1,200 per year, or \$100 per month. The average of the annuities purchased during the past year, for example—and there were roughly 1,700 of them—amounted to about \$444. Occasionally, however, some person will come along and lay down \$60,000 or more and purchase an annuity of \$5,000, which is the maximum under the Act.”

The Minister recalled that the Annuities Act originated in this House and was introduced by the Right Hon. Sir Richard Cartwright, the then Minister of Trade and Commerce. The purpose of the Act, he said, was to give frugal persons in the humbler walks of life an opportunity to put their savings into a safe investment, the equivalent of a security backed by the Government. Originally the largest annuity possible was \$600 per year. Subsequently this was increased to \$1,000, and a few years later to \$5,000. Experience, the Minister continued, had indicated to the Department and the officers responsible for the administration of the Act that no good pur-

pose is being served by the sale of annuities of from \$2,000 to \$5,000 a year to a very few persons, and that it would be better to encourage a wider sale among the poorer classes of people. Therefore it was the Department's view, which was approved by the Government, that the maximum amount payable as an annuity should be reduced to approximately the limit prior to 1920. The purpose of the Bill was to give effect to that view.

Senator Robertson stated that last year 1,772 annuities were sold, of which 1,482 were for amounts of less than \$600, and 212 were for amounts between \$600 and \$1,200. That is, 1,694, out of the total of 1,772 fell within the limit that is now proposed. Nine were for amounts ranging from \$2,500 to \$5,000, 16 for amounts between \$2,000 and \$2,500, 15 for amounts between \$1,500 and \$2,000 and 38 for amounts between \$1,200 and \$1,500.

The Prime Minister, in moving the second reading of the bill in the House of Commons on June 23, said:—

“The House is familiar with the history of government annuities. The late Sir Richard Cartwright gave the matter a great deal of personal attention. Originally it was intended that the Government Annuities Act should provide for persons of small means who would secure an annuity for their old age. Gradually and later there came an increase in the amount that might be payable under the statute until at the last the present maximum of \$5,000 was fixed. In view of the fact that the government itself defrays the costs of administration, and the rate of interest upon which computations with respect to annuities are made is four per cent— which, as the House knows, is a very high rate—it has been suggested in many quarters that the fund is hardly solvent, because with the prolonging of life consequent upon modern scientific knowledge being applied to diet and hygiene, it is obvious that the old time computations of the period during which an assured might live must be based upon a lower interest rate than four per cent, which is the figure that has been used in connection with our annuity tables. Therefore the actuaries of the department, having gone over the matter roughly, are satisfied that we should not carry so large an annuity as \$5,000 without making an amendment of our rates. That, of course, is undesirable, and so the suggestion by those who have the responsibility for administration—from the standpoint of pure administration

apart from policy—is that \$1,200 would be a reasonable maximum.”

Later in the debate, Mr. Bennett referred to the suggested extension of the principle of annuities to include other kinds of social insurance. “The time will come,” he said, “when those matters will be considered on a contributory basis, which means that the contribution made is the premium paid for the insurance granted, whether it be old age insurance, unemployment or invalidity insurance, or whatever it may be. Insurance of any kind involves a premium and the premium must be based upon some consideration of facts and not fancy. We endeavoured in the first instance to base our premium rate upon a due and proper appreciation of the state absorbing certain charges, for the benefit of the man in whom we desired to encourage the habit of thrift, but advantage has been taken of this not only with respect to income tax but otherwise, and the officials of the department have endeavoured to set a rate based upon the scheme which was originally launched and to provide an annuity of \$1,200 which represents fairly now the \$600 which was in the minds of those who put forward the scheme in the first instance.”

The Hon. Peter Heenan, formerly Minister of Labour, considered the bill a very important measure, and was confident that no member on his side of the House would oppose it. He thought the impression that the annuity system was losing money should be corrected; possibly it was being administered at a loss, but it should be remembered that the revenue derived from the premiums was placed in the

Consolidated revenue fund and therefore earned no interest.

The Right Hon. W. L. Mackenzie King also approved the purpose of the measure. He had believed for some years past that the annuities system might be broadened out into a scheme of social insurance generally. “When the Annuities Act was introduced,” he continued, “some doubt was expressed as to the advantage which would be taken of a measure of that kind. The statistics of the department now prove conclusively that the people of Canada generally are appreciative of legislation of the kind, whereby through making a certain contribution themselves towards unforeseen contingencies, the state is placed in a position to protect them in a time of emergency. Annuities soon become a form of old age insurance, and as such are of service to the state as well as to individual, in the relief they afford in times of need to those who are of advanced years. If the Annuities Act performs a service in that regard, it seems to me the measure might be broadened out to include all forms of social insurance.”

Mr. Henri Bourassa said that this was the only form of insurance so far carried by the government, but alternately it would become the nucleus of the various forms of social insurances which the government would have to take over and operate before long.

Mr. G. G. Coote (MacLeod) suggested that the limit of \$1,200 was not sufficient for joint annuities; and he expressed the hope that the majority of the people would be able to enjoy a larger annuity when they gave up active work.

LABOUR LEGISLATION IN MANITOBA AND NEW BRUNSWICK IN 1931

THE following is a summary of the principal measures relating to labour matters enacted by the Legislatures of Manitoba and New Brunswick during their recent sessions.

The Legislature of Manitoba was in session from January 27 to April 20, 1931, and that of New Brunswick from February 12 to March 26, 1931.

Manitoba

Unemployment Relief.—An Act to authorize the implementing of the Unemployment Relief Act, 1930, of the Parliament of Canada, and to validate certain orders in council and the by-laws of certain municipalities passed in pursuance thereof, empowers the Lieutenant-Governor in Council, as from the passing of the Dominion Unemployment Relief Act, 1930, to authorize the payment of the necessary sums from the Consolidated Revenue Fund, and the doing of all things needful for the carrying out of the provisions of the Act.

Money required by the province for the purpose of unemployment relief work may be raised by way of loan. Municipalities are empowered to pass by-laws under the Municipal Act for the purposes of the Dominion Unemployment Relief Act and by-laws already so passed are validated. Special provision is made to enable the City of Winnipeg to pass by-laws for the raising of a sum not exceeding \$400,000 without submitting them to a vote of the ratepayers. A by-law of the City of St. Boniface is also confirmed.

Department of Labour.—The Department of Labour Act, which is to come into force on proclamation, provides for the creation of a Department of Labour charged with the administration of such statutes as may be assigned to it and of certain specified laws relating to industrial workers. Among these is the Bureau of Labour Act, 1915, which establishes a Bureau whose duties include the collection and publication of information and statistics relating to employment, wages and hours of labour, co-operation, strikes, lock-outs or other labour difficulties, trades unions, labour organization and other subjects of interest to workingmen.

Minimum Wages for Boys.—An amendment to the Minimum Wage Act brings boys under eighteen years of age within the scope of that Act which has hitherto applied only to female workers.

Master and Servant.—An amendment to the Master and Servants Act enables any justice in Manitoba to take an information or complaint under the Act, and to issue a warrant or summons requiring the person complained against to appear before a justice entitled to hear and determine the case. Formerly the warrant or summons was issued by a justice entitled to hear the case, namely, a justice in the municipality or judicial division in which the person complained against resides or, in the case of a clerk, journeyman, apprentice or servant deserting his service, then in the municipality in which such person is found. A section added to the Act provides that nothing therein shall curtail, abridge or defeat any civil or other remedy for the recovery of wages or damages by a servant, or of damages by a master, except in so far as a complaint under the Act has been determined by order of a justice.

Group Insurance.—An amendment to the Income Tax Act repeals that paragraph which exempted from taxation the amount paid by any corporation or joint stock company in group insurance premiums on the lives of all its employees.

Advance Polls.—In the revision and amendment of the Election Act it was provided that advance polls should be open from one p.m. to ten p.m. on the Thursday, Friday and Saturday preceding the election. The hours were formerly from six a.m. to eight p.m. The penalty for using undue influence is now a fine of \$200 or one year's imprisonment instead of a fine of \$100 to \$300 or one to six months' imprisonment or imprisonment without option of a fine.

Mothers' Allowances.—The sections of the Child Welfare Act which relate to mothers' allowances were the subject of several amendments. Allowances are now payable in respect of a child born in Canada, or a child whose father or mother at the time of the death of the father or his confinement in a hospital for mental diseases or his total and permanent disability was, or, if living is, a British subject, or a child whose mother, if the father at his death was not a British subject by naturalization, subsequently becomes a naturalized British subject. The Child Welfare Board is empowered to grant and rescind allowances and to fix the amount.

School Attendance.—An amendment to the School Attendance Act charges the principals of school districts, except those in cities, with the duty of reporting monthly to the Department of Education the name, age and address of each pupil reported to the school attendance officer during the month.

Unemployment Insurance.—On March 5, the Legislature passed a resolution in the following terms:—

"That whereas there is urgent necessity for the establishment of a system of unemployment insurance; and whereas after an exhaustive inquiry by a committee of the Federal Government, recommendation was made in favour of the establishment of an unemployment insurance scheme for the whole Dominion: Therefore be it resolved that the Legislature goes on record favouring the principle of unemployment insurance and urges the Dominion Government to call a Federal-Provincial conference to consider means by which a Dominion-wide system of unemployment insurance will be established; and be it further resolved, that copies of this resolution be sent to the Hon. the Premier of Canada, the Hon. the Minister of Labour for Canada, and to all the Hon. Premiers of the respective provinces in the Dominion."

Health Insurance, Etc.—On March 31, the following resolution was adopted:—

Resolved, that whereas at the last session of this Legislature the following resolution was unanimously passed, namely:—

"Whereas, owing to fear of inability to pay, many persons do not avail themselves of medical services and hospital facilities; And Whereas the public health is a matter of paramount importance, not only to the individual, but also to the State; And Whereas it is in the public interest to extend the practice of preventive medicine and to make more readily available medical services and hospital facilities to a greater number of persons; Be It Resolved, that the Minister of Health and Public Welfare be requested to consider the making of a comprehensive departmental enquiry and report to this House regarding the following matters, namely: 1, Preventive Medicine; 2, Municipalization of medical and hospital services; 3, Logical health areas; 4, Health Insurance and other practical methods for the more equal distribution of the cost of illness; 5, Public medical services; 6, Practical methods for making special required methods of diag-

nosis and treatment in certain diseases more readily available. Such departmental report to form the basis for investigation and consideration by a Special Select Committee of this House, to be later appointed for the purpose of co-operation with the Minister of Health and Public Welfare in the formation of a comprehensive public health scheme for the Province of Manitoba, with a view to providing more efficient and economical public health services."

Therefore be it Further Resolved, that a special select committee be appointed to inquire into, study and consider the report of the Department of Health and Public Welfare, on the matters mentioned in the said resolution. And that such Committee have power to sit during the present session and in the recess after adjournment or prorogation, and in due course to report to this House the recommendation of said committee. Such committee to consist of the following persons, namely: Hon. Mr. Montgomery, Mrs. Rogers, Messrs. Beresford, Campbell, Farmer, McGavin, Morton, Poole, Rutledge, Schultz, and the mover of this motion (Mr. Pratt)".

Bills not Passed.—Two Bills to amend the Workmen's Compensation Act introduced by Mr. Queen were ruled out of order on the ground that they would increase the annual assessment on employers which was in the nature of a tax, and would also be a charge on the public revenue, and that they should therefore be recommended by message to His

Honour the Lieutenant-Governor. These Bills would have repealed the clause of the Act requiring a workman claiming compensation for hernia to show that at the time of the occurrence of the strain or other accident, he immediately reported his condition to his employer or ceased work and reported within seventy-two hours.

Two bills to amend the Shops Regulation Act also failed to pass, one being negatived on motion for second reading and the other withdrawn. The first would have provided for the closing of all classes of shops within the meaning of the Act from noon on Wednesday until seven a.m. on Thursday in each week from January 1, to September 30. The second Bill would have enabled city councils to pass by-laws providing that the owner or occupier of any shop affected thereby may file a declaration in writing with the council within one month after the passing of the by-law and annually thereafter declaring his intention to close his shop for the half-holiday and for the hours specified in the by-law on any other day of the week than that mentioned in the by-law with the exception of Sunday. A clause similar to the above was inserted in the Winnipeg Charter but specifying that Wednesday or Saturday shall be chosen.

New Brunswick

Unemployment Relief.—An Act to Provide Funds for the Relief of the Unemployed in Incorporated Towns, Cities and Municipalities authorizes the Lieutenant-Governor in Council to borrow by the issue of debentures a sum not exceeding \$60,000 for the purpose of meeting the expenses incurred in carrying out an agreement between the province and the Dominion of Canada under the provisions of the Unemployment Relief Act, 1930, enacted by the Parliament of Canada.

Safety of Electrical Workers.—The Electrical Energy Act, which comes into force on proclamation, prohibits the installation of electrical equipment in any manner except that permitted or prescribed by the Canadian Electrical Code. Among the subjects regarding which the Lieutenant-Governor in Council is empowered to make regulations are the safety of workmen, the permits to be obtained before doing electrical work, and the appointment, duties and powers of inspectors.

Chauffeurs' Licences.—An amendment to the Motor Vehicle Act provides that the Minister of Public Works shall suspend the driver's licence, which includes a chauffeur's licence, of any person convicted of certain

specified offences. The licence is to remain suspended until such person gives proof of financial responsibility to the Registrar of Motor Vehicles in the form of a bond of an approved guarantee company, or a certificate of insurance or deposit of a sum of money. If the Registrar finds that such person was, at the time of the offence for which he was convicted, employed by the owner of the motor vehicle as a chauffeur or motor vehicle operator he may, if the owner of the vehicle submits proof of financial responsibility, relieve the chauffeur of the necessity of giving such proof in his own behalf.

Statute Labour.—The Highway Act was amended by the repeal of those sections which provided for the performance of statute labour in lieu of the payment of road tax.

Old Age Pensions.—The Old Age Pensions Act was amended so that agreements with the Government of Canada under any Old Age Pensions Act of the Dominion might provide for the payment by the Dominion to the province of a sum not less than one-half of the amount expended by the province for pensions.

Civil Service Superannuation.—The Public Service Superannuation Act, which is to come into force on proclamation, provides for the payment of superannuation allowances to employees who have been at least ten years in the public service of the province and are retired owing to age or ill-health. Provision is also made for the payment of pensions to dependants of superannuates and of employees entitled to superannuation. Every employee may be retired at the age of seventy years. Male employees may be retired at sixty-five years and female employees at fifty-five years of age if they have been in the service for

thirty years or longer. The superannuation allowance is calculated upon the average salary of the employee during the last three years of service and equals one-fiftieth of such average salary for each year of service with a maximum of thirty-fiftieths. In no case may the allowance exceed \$2,000 per annum. A pension equal to one-half the amount to which the employee would have been entitled is payable to a widow until death or remarriage, to children under eighteen years of age who are orphans or whose mother has remarried, and, where no widow or children survive, to other dependants.

Uniform Labour Laws Proposed by Conference of United States Governors

A conference of representatives of ten eastern States of the United States was held at Harrisburg, Pennsylvania, in June, at the invitation of Governor Pinchot of Pennsylvania, for the purpose of reaching an agreement as to a possible basis for uniform labour legislation. Approval was given to proposals for uniform laws dealing with the subjects of workmen's compensation, employment offices, the employment of women and minors, and industrial health.

In regard to the employment of women, it was considered that there should be uniform laws providing for minimum wages, a forty-eight-hour week of six days of eight hours, with thirty minutes for lunch, elimination of work between 10 p.m. and 6 a.m. and in the manufacturing industries, hotels and restaurants seating provisions. It was also suggested that each State set up and enforce minimum standards of experience and training for its inspectors, and that the work of enforcing the women's and child labour laws should be placed in the hands of a specialized group of inspectors.

The minimum age recommended for minors in employment is 16 years during school hours and 14 years outside of those hours. Employment certificates should be demanded of all minors under 18. A forty-eight-hour week of six days was recommended for minors of 14 to 16, with lunch periods of thirty minutes, and night work prohibited between 6 p.m. and 7 a.m.

For minors between 16 and 18 the forty-eight-hour week should prevail, the conference declared, but night work for girls should be prohibited between 7 p.m. and 6 a.m., and for boys between 10 p.m. and 6 a.m. A mandatory minimum wage for children under 18 was also proposed. Additional compensation, it was agreed, should be provided for minors illegally employed and who are injured at their work. Further consideration

of continuation school work for those minors who leave school for jobs was recommended.

In the sphere of industrial health the conference recommended uniform laws regulating drinking water for workers, adequate toilet facilities, wash and dressing rooms, lunch rooms and cleanliness in the work rooms; also that reports on all occupational diseases, and accident prevention measures, should be made mandatory.

The workmen's compensation laws of the ten States vary greatly, but a \$20 maximum and a \$10 minimum weekly payment were recommended as a fair compensation. The conference approved of coverage for all occupational diseases and all hazardous occupations in which one or more persons are employed, but considered that farm and domestic service should be exempted from compensation.

Full medical service for injured workers was recommended, as well as formation of staffs of physicians; and the assistance of counsel for adjudication of compensation laws and the regulation of legal fees. Another recommendation was for payment by insurance carriers of compensation for deaths when there are no dependants, the fund to be used for rehabilitation work.

Adoption was recommended of the schedule loss tables of the Federal Longshoremen and Harbour Workers Compensation Act for use as the standard measurement for permanent partial disabilities.

The committee which studied the question emphasized the necessity for uniformity in the laws regulating public and private employment bureaus, and co-operation with the United States Employment Service. Annual appropriations for State public employment offices, it was agreed, should be based on a minimum appropriation of 5 cents *per capita*. For private bureaus, the licence fee should be adequate to prevent the exploitation of applicants.

WOMEN'S MINIMUM WAGES IN NOVA SCOTIA

Order Governing Female Employees in the Food Trades

The Act establishing minimum wages for women workers in Nova Scotia was first enacted in 1920. It was proclaimed in force on May 1, 1924, but no Board under its provisions was appointed until March 3, 1930. The first Order of the Board—that governing female employees in laundries, dry cleaning establishments and dye works in the city of Halifax—was issued on August 5, 1930, and became effective on October 1, 1930. Since then, five Orders have been put into effect. The first five Orders were detailed in the LABOUR GAZETTE, January, 1931, page 34. The sixth—(Order No. 2a, governing female em-

ployees in the "food trades," including the making of confectionery, biscuits, chocolates, grocery specialties, together with bakeries and all allied industries in the cities and incorporated towns in Nova Scotia)—was officially announced to take effect on July 6, 1931.

Order No. 2a.—Governing Female Employees in the Food Trades in Cities and Towns

The wage provisions of the Order are set forth in the following table:—

Population Group	Experienced workers	Inexperienced Adults over 18 years	Young girls under 18 years
Cities and towns 17,000 population and over,.....	\$11 00	6 months at \$ 9 00 6 months at 10 00	6 months at \$ 7 00 6 months at 8 50 6 months at 10 00
All towns under 17,000 population.....	\$10 00	6 months at \$ 8 00 6 months at 9 00	6 months at \$ 6 00 6 months at 7 50 6 months at 9 00

The hours of work and board allowance are prescribed as follows:

Hours of Work:

(a) The work period for which these minimum wages shall be paid shall not be less than 44 nor more than 50 hours per week.

(b) Work in excess of 50 hours per week shall be counted as overtime and shall be paid for at not less than the minimum wage rates fixed by this order, reckoned on the basis of a 50-hour week.

(c) Work for less than 44 hours per week may be counted as short-time and shall be paid for at not less than the minimum wage rates fixed by this order, reckoned proportionately to the regular weekly period in the establishment.

(d) The Wage minimums shall be payable for the work-period in any establishment within the limits of from 44 to 50 hours per week. Any worker losing time during the operation of an establishment may be paid proportionately for the actual number of hours worked.

Board Allowance:—

Where lodging is furnished by employer there may be deducted from the wage a sum which shall be not more than Two Dollars (\$2.00) per week, and for Board not more than Four Dollars (\$4.00) per week, or single meals in excess of twenty-five cents (.25) per meal.

Permits.—The Order provides that the Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers or employees are invited to consult the Board regarding any problems which this order may concern.

The sections relating to deductions for absence, payment while employees wait on the premises, penalties, and posting of the order in a conspicuous position in the premises, are the same as in the former orders.

The following resolution, originating with the Winnipeg Trades and Labour Council, was adopted recently by other Trades and Labour Councils throughout Canada:—

"Resolved that this Council reiterate its former stand on the question of unemployment insurance, and urges upon the government of Canada immediate action in securing the necessary statistical information to enable it to have established at the earliest possible date a system of Unemployment Insurance. And, pending its enactment that the appropriation of funds be continued to provide employment or adequate relief for those who, through no fault of their own, are unable to secure a livelihood."

WOMEN'S MINIMUM WAGES IN QUEBEC

Orders Governing Employment in the Fur Industry

THE Minimum Wage Board of the Province of Quebec recently issued Order No. 13, governing female employees in the fur industry in the city and island of Montreal and a radius of ten miles around and beyond the island, and Order No. 13A to apply to the same class of employees in the rest of the province. Both Orders become effective on September 1. Earlier Orders of the Board were detailed in the LABOUR GAZETTE, May, 1930, page 522, and May, 1929, page 489, and in previous issues.

Order No. 13—Governing female employees in the Fur Industry in the City and Island of Montreal and a radius of ten miles around and beyond the Island.

Minimum.—No wage shall be less per week than is set forth in the following table:—

Experienced workers.—After 24 months' experience at the trade, no female worker shall be paid less than \$12.50.

Apprentices.—Beginners, not less than \$7; after 6 months' experience, \$8; after 12 months' experience, \$9.50; after 18 months' experience, \$11.

Hours of Work.—The work period for which these minimum wages shall be paid shall be 44 hours per week.

(a) Work in excess of the above work-period shall be counted as overtime and shall be paid for at not less than time and a half.

(b) Work for less than the above work-period may be counted as short-time and be paid for *pro rata* of the minimum wages fixed by this Order.

(c) The total of working hours cannot in any case exceed 55 hours per week unless a special permit has been obtained from the Public Buildings and Industrial Establishments Inspection Department.

Maximum of Apprentices.—The number of apprentices shall not exceed one-half of the total female working force. Temporary employees, whose term of employment does not exceed one month, shall not be subject to this rule, nor be included in this calculation.

Piece Work.—The wages paid to each time-worker and to each pieceworker during the first six months' employment in the industry

shall conform to this Order. In the case of pieceworkers of more than six months' experience, it is sufficient if at least 80 per cent receive wages conformable to this Order.

Deductions for Absence.—No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned proportionately to a working period of 44 hours.

Waiting.—Any employee required to wait on the premises shall be paid for the time thus spent. Pieceworkers shall be paid for all waiting time at a rate not less than that fixed for the class to which they belong.

Permits.—The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problems which this Order may concern.

Penalties.—Any violation of this Order is punishable by fine. (Section 12 of the Act.)

Every establishment is required to post the Order in a conspicuous place in the shop, and the Order is subject to annual revision by the Board.

The wages and hours provisions of Order No. 13A are as follows:

Order No. 13a—Governing female employees in the Fur Industry of the Province of Quebec with the exception of the City and Island of Montreal and a radius of 10 miles around and beyond the Island.

Minimum.—No wage shall be less per week than is set forth in the following table:—

Experienced Workers.—After 24 months' experience at the trade, no female worker shall be paid less than \$10.

Apprentices.—Beginners, not less than \$6; after 6 months' experience, \$7; after 12 months' experience, \$8; after 18 months' experience, \$9.

Hours of Work.—The work period for which these minimum wages shall be paid shall be 50 hours per week. Work in excess of the above work-period shall be counted as overtime and shall be paid for at not less than time and a half.

In all other respects the provisions are the same as Order No. 13.

Women's Minimum Wages Regulations in Manitoba

The Minimum Wage Board of Manitoba issued in May a new regulation to take the place of Regulation No. 4, which governs beauty parlours and hairdressing establishments. While the repealed regulation only concerned female employees in beauty parlours and hairdressing establishments, the new order also includes barber shops and governs the employment of boys under 18 years

of age. (The repealed regulation was issued in June, 1925, and was detailed in the LABOUR GAZETTE for July, 1925, page 676.) The new regulation does not make any major changes. Wage rates remain as formerly, viz: \$12 per week for experienced employees; \$8 per week for the first six months; \$9.50 per week for the second six months, and \$11 per week for the third six months.

As regards hours of labour, the new regulation remains unchanged with the exception that the clause relating to overtime now permits that overtime may be worked "not oftener for any employee than 20 days in one year." The former regulation specified only 12 days.

The conditions of labour that are required by the new order are the same as in previous orders, provisions being made in regard to cleanliness, supply of drinking water, ventilation, toilet rooms and wash basins, accident prevention and first aid.

Wages of Women in United States

The Women's Bureau of the United States Department of Labour recently published Bulletin 85, entitled "Wages of Women in Thirteen States." These States are Rhode Island, New Jersey, Ohio, Delaware, Oklahoma, Missouri, Georgia, Tennessee, Arkansas, Kentucky, South Carolina, Alabama and Mississippi.

In general, it is stated, the findings in the study may be said to signify that the earnings of women in manufacturing—and especially in certain of the important industries that employ many women—are very irregular; that women are subject to much undertime work, and their earnings often fall below their rates to a very considerable degree. The manufacturing industries employing the largest numbers of women use the piecework system to a great extent. It was found that earnings frequently were more regular and were at higher levels in general mercantile establishments than in manufacturing industries, but in laundries much irregularity appeared, and in 5-and-10-cent stores the earnings levels generally were the lowest of all. Up to a certain point the worker's experience counted for an increase in wages, varying somewhat as the industries differed. While there were many instances in which women suffered a decline in earnings beginning at a comparatively early age, this appeared less likely to be the case with those employed in general mercantile establishments than with those in the other types of industry.

The median of the week's earnings recorded 79,162 women in manufacturing industries in 13 States ranged from \$19.13 in Rhode Island in 1920 to \$8.35 in Mississippi in 1924. The median means that one-half the women earned more, one-half less, than the figure given. Among the full-time workers in 11 States, of every 10 timeworkers about 3 earned \$15 or more; about 3, \$12 and under \$15; nearly 2, \$10 and under \$12; about 1, \$8 and under \$10; and less than 1 earned under \$8. Of every 10 pieceworkers more than 5 earned \$15 or over; nearly 2, \$12 and under \$15; and the other 3 were in the other 3 wage groups.

Women's Minimum Wages in Massachusetts

The Massachusetts Minimum Wage Commission announced recently that it would publish the names of the clothing firms in Fall River and New Bedford that have not paid to the women and girls employed by them the minimum rates of wages established by the Commission. As already noted in the LABOUR GAZETTE (June, 1927, page 592), the Massachusetts minimum wage law is unique in the United States in being advisory rather than mandatory in its powers. Compulsory powers were omitted from the provisions of the law through the fear that to include such powers would be unconstitutional, the United States Supreme Court having, in 1923, declared unconstitutional the Minimum Wage law of the District of Columbia (LABOUR GAZETTE, May, 1923, page 461).

The recent declaration by the Massachusetts Commission relates to decrees governing the employment of female operatives in the men's furnishing and muslin underwear trades, which established a minimum rate of \$13.75 for women and girls 16 years of age and over who have been in the occupation for a year. "In a number of instances," the Commission states, "the wages paid to these concerns are far below any minimum rates established under the minimum wage decrees. Rates of \$5, \$6, and \$7 a week for full-time employment are paid to women and girls. In some individual instances, rates as low as \$3 and \$4 a week have been found. Owing to the serious business depression, it has been possible for these concerns to secure women and girls, and men and boys as well, at sub-normal rates of wages. The textile cities have suffered a great deal during the past two years. They need new industries. The industries they need, however, are ones that will pay at least a living wage and not take advantage of the distress of persons who are out of work."

Quebec Workmen's Compensation Act, 1931

The government of the Province of Quebec, by an Order-in-Council dated June 16, 1931, approved Regulation No. 1, of the Quebec Workmen's Compensation Commission.

Regulation No. 1

Every employer carrying on an industry subject to the provisions of the Workmen's Compensation Act, 1931, (21 Geo. V, Chap. 100) shall prepare and forward so as to reach the offices of the Quebec Workmen's Compensation Commission, 73, Grande-Allée, Quebec, on or before August 10, 1931, a statement of the amount of wages which he estimates will be paid to all his employees during the months of September, October, November and December, 1931, on a special form prepared for this purpose which will be furnished on demand, the whole in conformity with the provisions of Section 82 of the said Act.

If the employer has not produced this statement on or before the date above mentioned or if he has not obtained from the Commission an

additional delay to produce this statement, he will be obliged to pay the entire amount for which he should have been assessed and, in addition to liability to pay compensation for accidents and to the fine imposed by the Act, an addition not to exceed 5% of the assessment due will be levied plus an additional amount not to exceed 1% of such assessment for each month or fraction of a month in default after September 10, 1931.

In the case of under-estimate of the wages expected to be paid, the employer in default will be charged a flat rate of interest of 5% on the deficit as calculated in the amount of his final assessment. If on the other hand, there is an over-estimate, a similar flat rate of interest of 5% on the excess paid will be remitted to such employer.

If it is absolutely impossible to produce this statement within the period allowed, a demand in writing for additional delay with all the reasons in support thereof, stated under oath, should be made to the Commission so as to reach it on or before August 10, 1931. If this application is not allowed, the employer in default will be liable to the penalties herein mentioned.

Workmen's Compensation in South Africa

The Minister of Labour recently introduced into the House of Assembly of the Union of South Africa a Bill to consolidate, amend and extend the law relating to workmen's compensation. The Bill provides compensation for accidents arising out of and in the course of employment whereby the workman is killed or receives injury necessitating absence from work for more than three days, or, where the workman is a native, for more than fourteen days. Compensation is also granted for the following industrial diseases contracted in the following occupations:—

Disease	Occupation
Cyanide rash.....	The handling of cyanide or any work involving the use of cyanide.
Lead poisoning or its sequelae.	The handling of lead or its preparations or compounds or any work involving their use.
Mercury poisoning or its sequelae.	Any work involving the use of mercury or its preparations or compounds.
Hookworm	Any mining carried on underground by workmen other than Asiatics or natives.

vants, unless employed in licensed hotels or boarding houses, and persons employed in agriculture, unless their employment is in connection with any vehicle or machine worked by mechanical power.

Temporary Total Disablement.—The Bill provides that during any period of temporary total disablement as the result of an accident a native workman whose earnings do not exceed £13 6s. 8d. per month shall receive as compensation periodical payments at the rate of 60 per cent of his earnings for a period not exceeding three months, which may be extended for a further period of three months. As noted above, however, a native workman is not entitled to payments in respect of the first fourteen days of disablement. Moreover, where a native receives from his employer food, quarters and medical aid, he is not entitled to payments during the first six weeks of disablement, and in respect of any period thereafter the maximum rate of compensation is to be 25 per cent of the native's earnings.

Permanent Disablement.—The Bill provides, in the event of permanent total disablement, for the payment of lump sum awards of £75 where the native's monthly earnings do not exceed £5, up to £225 where the monthly earnings do not exceed £13 6s. 8d. For natives earning more than £13 6s. 8d. a month the lump sum award is calculated as twenty-five times the monthly earnings not in excess of £20, plus ten times the monthly earnings between £20 and £33 6s. 8d. Where the degree

Among the classes of workers excluded from the provisions of the Bill are domestic ser-

of disablement is not total, the lump sum award is to be reduced proportionately to the degree of disablement.

An interesting point of principle is illustrated by the increased scale of compensation for natives with wages over £13 6s. 8d. a month. The small minority of natives so treated will be those who are approaching European

standards of life. The purpose of the Bill in this respect is apparently to assist such natives, when possible, in retaining the standard of civilization to which they have struggled. Moreover, it appears that in the case of temporary disablement these natives would receive benefits on the European scale except in regard to the length of the waiting period.

Interprovincial Boiler Regulations apply in British Columbia

Pursuant to the provisions of the newly consolidated Boiler Inspection Act of British Columbia (LABOUR GAZETTE, May, 1931, page 530) new regulations were issued in May governing boilers and machinery in the province. These regulations, with a few variations, conform with the Canadian Interprovincial Regulations (LABOUR GAZETTE, July, 1922, page 705; October, 1922, page 1040).

The Canadian Interprovincial Regulations for the Construction and Inspection of Steam Boilers, Unfired Pressure Vessels and Machinery were drafted at a conference held in Winnipeg in September, 1918, and at a subsequent conference held in New Westminster, B.C., in April, 1920, were approved by the provinces represented, and have been in force since that time. These regulations, to meet the advance in engineering, required to be re-drafted, and for this purpose a conference was held at Toronto in May, 1927, at which the following delegates were present:—

Mr. John Peck, Mem. A.S.M.E., Chief Inspector of Steam Boilers and Machinery, New Westminster, B.C., representing the Province of British Columbia (chairman).

Mr. R. N. Blackburn, Wh. Sc., M.E.I.C., Chief Inspector of Steam Boilers, Regina, Sask., representing the Province of Saskatchewan (secretary).

Mr. F. W. Hobson, Chief Inspector of Steam Boilers, Edmonton, Alberta, representing the Province of Alberta.

Mr. R. A. Stewart, Ass. Mem. A.S.M.E., Chief Inspector of Steam Boilers, Winnipeg, Man., representing the Province of Manitoba.

Mr. D. M. Medcalf, Mem. A.S.M.E., Chief Inspector of Steam Boilers, Toronto, Ont., representing the Province of Ontario.

Mr. N. S. Walsh, Ass. Mem. E.I.C., Mem. A.I.E.E., Provincial Examiner of Steam Boilers and Machinery, Montreal, representing the Province of Quebec.

While the primary object of these regulations, it is stated, is to secure safe boilers, the standardization of design and construction is an important desideratum for economic production, and the maintenance of a good standard both of design and workmanship is of

vital importance not only to steam users but it is also in the best interests of the industrial welfare of the Dominion. The members of the Conference have endeavoured to keep all of the above objectives in view and hope that the general adoption of these regulations throughout the Dominion will materially assist in the furtherance of these aims.

The Canadian Interprovincial code committee for 1931 is composed of the following members:—Messrs. D. M. Medcalf, Mem. A.S.M.E., Toronto, Ont. (chairman); T. M. Inglis, A.M.E.I.C., Regina, Sask. (secretary); A. S. Bennett, Vancouver, B.C.; F. W. Hobson, Edmonton, Alberta; R. A. Stewart, Ass. Mem. A.S.M.E., Winnipeg, Manitoba; N. S. Walsh, A.M.E.I.C., Mem. A.I.E.E., Montreal, Quebec.

The regulations apply to all steam boilers, steam heating plants, compressed air tanks, gas tanks, retorts and all or any other tanks or reservoirs used for holding liquid and gaseous substances in so far as the same is provided for by the Inspection Acts of the several provinces. They apply to all steam boilers and steam-heating plants operated within the province, except as hereinafter exempted. Except where otherwise provided by the Act, they do not apply to railway locomotives on railways operating under the supervision of the Dominion Railway Commission, or to any boilers subject to inspection under the Dominion "Steamboat Inspection Act," or to any boiler or steam-heating plant with a capacity of 30 square feet of heating surface or under, or to steam-heating plants in private residences. Rooming houses and apartment houses are not considered private residences.

All fittings and piping attached to boilers after the coming into force of these regulations must be such as are sanctioned by the regulations.

The exceptions and variations made in the code by the new British Columbia Regulations are in the specifications for steel pipe, and in the sections on fittings; and an addition is made in the rules for welding. Certain exceptions are allowed in the application of the rules governing unfired pressure boilers.

MINING IN BRITISH COLUMBIA IN 1930

THE annual report of the British Columbia Bureau of Mines for 1930 describes the progress of mining and prospecting in the province, mineral production being reviewed by districts and divisions. Included also are the reports of the resident mining engineers and the reports of the inspectors of mines. The provincial mineralogist points out that the decrease in 1930 of \$12,853,450, or 18·8 per cent in the gross value of mineral production (as compared with the total of \$68,245,443 for 1929) was caused chiefly by lowered metal prices, together with a substantial drop in the outputs of coal and miscellaneous metals and minerals.

The mineral production of British Columbia is divided into four classes—metal-mining, coal-mining, structural materials, and miscellaneous metals and minerals. Of these, the first class is by far the most important, with a production for 1930 valued at \$41,067,630 (including placer gold). This is followed by coal, with an output valued at \$9,435,650, and structural materials and miscellaneous metals and minerals, totalling together \$4,888,713.

As compared with 1929, the figures show increased quantities of gold, silver, lead and zinc, and a decreased quantity of copper. Coal output was considerably lower than in the preceding year. The valuation of structural materials shows an increase over the 1929 figure, while that of miscellaneous metals and minerals is considerably less than in the preceding year.

The total number of workers employed in the mining industry in British Columbia during 1930 was 14,032 as compared with 15,565 in 1929. Of the total of 14,032, there were 4,645 employed in or about coal mines; 3,576 employed in lode mining; 425 in placer mining; 832 in concentrators; 843 in quarries; 344 in structural material plants; and 170 in miscellaneous mineral work.

As regards the coal industry the statistics show that during 1930 nineteen coal companies operated twenty-one collieries, with forty-three mines, employing 3,389 men underground. In the supervision of underground employees there were sixteen managers, two safety engineers, twenty-six overmen, 146 fire-bosses and shotlighters, a total of 190, or one official for every eighteen persons employed underground. The number of tons of coal mined per employee for the year was 406, while the number of tons of coal mined per underground employee was 556.

The collieries were practically free from labour disputes during the year, the only time

lost being through lack of trade. Taking the average of all the mines in the Vancouver Island district, about 30 per cent of the working days were lost through lack of trade. In the Nicola-Princeton district the different collieries worked from 76 to 90 per cent of the working days, averaging for the district about 85 per cent of the working days. The mines in the East Kootenay district worked from 51 per cent at the lowest to 79 per cent at the highest of the working days during the year, and worked for an average for the whole district about 63·4 per cent of the time.

Accidents.—During the year there were 54 fatal accidents as compared with 12 for 1929. However, of the 54 fatalities in 1930, a toll of 45 lives was taken by one mine disaster. Analyzed by causes, these 54 fatalities are accounted for as follows: explosion of gas, 45; falls of roof and coal, 6; mine cars and haulage, 2; blasting, 1.

The ratio of fatal accidents per 1,000 persons employed was 11·62 as compared with 2·38 in 1929. In 1928 the ratio was 2·64; in 1927, 2·10; in 1926, 1·88; in 1925, 1·10; in 1924, 1·66; in 1923, 7·32; in 1922, 4·66; in 1921, 1·45; the average for the ten-year period being 3·61.

The number of fatal accidents per 1,000,000 tons produced during 1930 was 28·61; during 1929 the fatalities per 1,000,000 tons mined was 5·33; in 1928, 5·54; in 1927, 4·48; in 1926, 4·3; in 1925, 2·45; in 1924, 4·52; in 1923, 1·76; in 1922, 12·01; in 1921, 3·98, the average for the ten-year period being 8·56.

There were 19 fatal accidents in and about metalliferous mines, being five more than the total for 1929. By causes the fatalities in metalliferous mining were divided as follows: falls of ground, 5; gases (following blasting), 4; moving ore, 4; falls in chutes and shafts, 3; haulage, 2; blasting, 1.

The ratio of fatal accidents was 5·31, compared with 2·81 in 1929. The ratio for the last ten-year period was 2·52. The tonnage mined per fatal accident was 358,097, compared with 498,406 tons per fatal accident in 1929. The tonnage mined per fatal accident for the last ten-year period was 426,214 tons.

Mine Rescue, Inspection, etc.—The report of the chief inspector of mines details the production at the various mines. In this respect, the effect of hydro power and fuel oil competition is traced. A tabular summary indicates the quantity of different explosives used in mining operations, while other sections show the distribution of safety lamps and the illuminant used.

Details are also given regarding mine ventilation, mine air sampling, precautions against coal dust and explosions. The mining disaster at No. 4 mine, Coalmont, is reviewed in two special reports which are included in general report of the department. During 1930 there were 10 prosecutions for infractions of the Coal Mines Regulation Act and special rules, all of which resulted in convictions.

The Department of Mines has now five mine-rescue stations in different parts of the Province and centrally located in the mining districts—namely, at Nanaimo, Cumberland, Merritt, Princeton, and Fernie. The stations are equipped with the most modern rescue apparatus and adequate supplies to maintain emergency service. The maintenance of rescue crews depends on voluntary service by mining employees and there has been no scarcity of men when their services were required.

There are also a number of mine-rescue and first-aid associations in the province—the East Kootenay, Association, with headquarters in Fernie; the Princeton and District Association at Princeton; and the Vancouver Island Mine Rescue and First Aid Association at Nanaimo. These associations carry on much valuable work in fostering the safety-work in the coal and metalliferous mines by holding demonstrations of mine-rescue and first-aid work and in maintaining classes of instruction of a nature to induce new men to take an interest in safety measures.

The training in mine-rescue work is carried on by qualified government instructors at the different stations and is free to all who wish to undertake the course.

In addition to the trained rescue crews that maintain a training schedule throughout the year, there are mine rescue training courses with certificates of competency for successful completion.

SOME ASPECTS OF UNEMPLOYMENT INSURANCE

Paper read by Mr. Bryce M. Stewart* at the Annual Meeting of the Canadian Political Science Association, May 27-29, 1931

APPROXIMATELY 48,000,000 of the world's workers are now protected against unemployment by some form of governmental unemployment insurance. Of this number, roughly 45,000,000 are covered by compulsory legislation and about 3,000,000 by voluntary systems which receive financial aid from governments. Except for approximately 150,000 workmen in the Australian state of Queensland and the comparatively small number to be covered by the recent law of New Zealand this body of insured persons is confined to the British Isles and the continent of Europe.

In the United States, Canada, Australia (except Queensland) and South Africa the workers are dependent on the unemployment benefits of their trade unions, employers' benefit plans, or schemes set up by employers and workers jointly with no help from governments. The number so covered is less than 250,000 in the United States and 1,000,000 is probably a high figure for all the countries mentioned. Apparently the compulsory principle is necessary to secure any adequate provision of unemployment insurance.

Examination of a list of countries with unemployment insurance legislation shows that

all the more important industrial countries have adopted compulsory insurance and that those of lesser industrial importance have voluntary forms, except that France is in the voluntary column. Nine cantons of Switzerland have compulsory and fourteen have voluntary systems, the remaining two being without legislation. Placing the countries with compulsory insurance in the sequence of their adopting it, one finds Great Britain at the head of the list, with 1911 as the date for partial inauguration of the scheme and 1920 for its extension to the great majority of the industrial wage earners. Despite Germany's industrial importance she was next to the last nation to adopt the compulsory principle, the legislation having been enacted in 1927. A glance at the two lists of countries and the order in which the compulsory form was adopted tempts one to suggest the following formula: the normal course of the evolution of unemployment insurance is from simple, local forms on a voluntary membership basis to highly complex, national forms compulsory for practically the whole body of wage earners; the stages of this evolution generally correspond with the degree of industrialization of the country, but its rate is accelerated or retarded and its form partly determined according as (a) the labour movement is strong or weak; (b) there is a centralized or decentralized form of government.

* Mr. Stewart was formerly Director of the Employment Service of Canada, and is now Director of Research, Industrial Relations Counselors, Inc., New York.

COUNTRIES WHICH HAVE ADOPTED UNEMPLOYMENT INSURANCE

<i>Compulsory Insurance</i>	<i>Date</i>	
	<i>First Adopted</i>	
Great Britain and Northern Ireland	1911 ^a	
Italy	1919 ^b	
Irish Free State ^c	1920	
Austria	1920	
Australia: Queensland	1922	
U.S.S.R.	1922	
Poland	1924	
Bulgaria	1925	
Switzerland (9 cantons)	1925-1930 ^c	
Germany	1927	
New Zealand	1930	
<i>Voluntary Insurance</i>		
France	1905	
Norway	1915	
Netherlands	1916	
Finland	1917	
Spain	1919	
Belgium	1920 ^d	
Denmark	1921 ^e	
Czechoslovakia	1921	
Luxemburg	1921	
Switzerland (14 cantons)	1924-1929 ^f	

^a The Act of 1911 covered only certain industrial groups. Various other industries were added by the Act of 1916, and the great majority of industrial wage earners by the Act of 1920.

^b The act was reorganized by a decree issued in 1923.

^c The federal Act granting subsidies to approved funds was passed in 1924.

^d A temporary measure was first adopted in 1919 which was made more permanent by 1920.

^e This Act was considerably restricted by an Act passed in 1927.

^f In eight cantons the municipalities are authorized to make unemployment insurance compulsory.

^g Before the constitution of the Irish Free State all of the Act of 1911 applied throughout the British Isles.

The experience of most countries exemplifies this evolution. Industrial unemployment in its early manifestations is regarded as part of the problem of poor relief and as a local concern. As industrial expansion knits all parts of the country together, and it is discovered that each geographic section and economic group is largely affected by the prosperity or depression of the others, the national government steadily assumes a larger measure of responsibility, and the earlier view that the local relief authorities should care for their own unemployed is not often expressed. This has been the history in Great Britain, until now the national government has reformed the poor law, established contributory old age pensions, employment exchanges and compulsory unemployment insurance. Unemployment is viewed as largely due to the imperfect adjustment of industry to the changing conditions in export trade, which absorbs so much of her production. Accordingly, the government is adopting remedial measures at home and asserting itself in the international sphere to

bring about better conditions in world trade. The most highly industrialized nation, the most dependent on world prosperity, with the highest degree of labour organization, Great Britain was first to turn to compulsory unemployment insurance, and all but France of the greater industrial countries of Europe have followed her lead. Her strong labour movement influenced the form of the insurance system adopted, and speeded its coming in that labour had developed its own forms of protection and a body of experience upon which the governmental system was largely based. It could not be disregarded in establishing the structure of the national scheme.

Much the same development might be traced in Germany, but here as elsewhere the federal form of government retarded the development. In the spread of responsibility from local to national government the state authorities stood in the way. The agricultural states were less concerned with the unemployment of the industrial districts and less interested in national attention to the problem. Accordingly, Germany adopted compulsory unemployment insurance in 1927, just sixteen years after the first British measure. Moreover, the German system was designed to place most of the burden on industry itself so that the agricultural states had less ground for protest.

The countries with voluntary schemes of unemployment insurance have some variation of the system adopted at Ghent in Belgium in 1900. This system provides government subsidies in proportion to the benefits paid to workers by the unemployment funds of their organizations; a variation adopted at Liege related the subsidies to the worker's contributions to such funds. These voluntary forms also reflect the peculiar trade union influences, political sentiment and structure of the countries in which they have developed. In Belgium, for example, local government is relatively strong. Before the war, when the labour movement was not highly centralized, each municipality established its own subsidy amounts and conditions. The national government in turn added its subsidies but allowed these widely varying local conditions to continue. Since the war the national government has been confronted with the problem of standardizing the insurance procedure, a task that will require years for complete achievement.

Denmark affords a direct contrast. Here political power is vested in the national government to a much greater degree. Accordingly, at an early stage in the development of unemployment insurance the national authorities established the conditions upon which

they would pay subsidies to unemployment funds and so brought about standardization.

The Netherlands stands midway between the two. Political power was more centralized than in Belgium, but in addition two powerful trade unions developed national forms of organizations and influenced the central government to use its subsidies to establish a considerable measure of uniformity among the unemployment funds.

So much for this general discussion. It suggests that unemployment insurance is an expression of the national life in which it functions and that no nation can wholly adopt the system of another. But granting this, each scheme in this new field is partly in the nature of an experiment. It affords a laboratory for the discovery of principles by which the nations that have yet to enact unemployment insurance legislation may profit.

Turn now to the unemployment insurance of three countries—Switzerland, where the first experiments in voluntary and compulsory insurance began; Great Britain, the first national government to adopt the compulsory principle; and Germany, the last important industrial nation to set up a national system. You will have to rely on your memories for the terms of the legislation in each case, for this paper refers to them only in the most incidental way. It is mainly concerned with the considerations for future legislation that seem to arise out of the separate experiences of these countries. You will appreciate that in trying to precipitate the insurance experience of three peoples within the limits of a single paper, it has been necessary to deal with each in the most summary fashion.

The Experience of Switzerland

Switzerland, the first country to experiment with unemployment insurance, was slow in developing national legislation. Varied local conditions, love of locality and a decentralized government have been contributing factors. The result is a permissive federal law passed in 1924 that provides subsidies of 30 or 40 per cent of benefits to recognized funds of cantons, municipalities, trade unions, and employers and workers. Since the passage of this measure nine cantons have adopted compulsory insurance laws which force workers to become members of public, trade union or joint funds. Cantonal subsidies are given in addition to the federal grant. Fourteen cantons subsidize any funds approved by the federal government, and eight of these provide that municipalities may make insurance compulsory. Two cantons with small non-industrial populations have taken no action. Only 41 per cent of the estimated insurable population is insured and

only 22 per cent of all wage earners. The experience suggests:—

(1) When a federal country leaves action to the component states there will be a variety of systems and degrees of protection ranging from compulsory insurance on through voluntary schemes to no legislative provision.

(2) Federal legislation providing subsidies and making for standardization will accelerate the rate of development among the highly industrialized states but the remainder will lag.

(3) Employers and workers are left free to establish their own systems within the prescribed subsidy provisions and so to secure flexibility and adaptation to the conditions of their industries.

(4) Such a procedure, with no administration by government, except in the case of municipal and cantonal funds, avoids bureaucratic methods and minimizes the danger of political interference with actuarial principles.

The Experience of Great Britain

First to adopt the compulsory system, Great Britain extended it in 1920 to the main body of wage earners. The extension occurred on the brink of a depression and the fund had to borrow. When recovery began, the fund encountered an unexpected risk—chronic unemployment in some of the older exporting industries—and has steadily gone deeper into debt. The pressure of the relief problem resulted in political manipulation of the scheme, practically unlimited duration of benefit, and sacrifice of the actuarial basis. The fund is burdened with non-insurables and persons who have exhausted their right to benefit. It is now confronted with the necessity for retrenchment, of delimiting the spheres of insurance and relief, and re-establishing its actuarial foundations. Retrenchment in such matters is always difficult and especially after a policy of marked liberality.

The following considerations arise out of the British experience:—

(1) Unemployment insurance should be so organized as to make all parties in industry more sensitive to changing conditions in internal and international trade.

(2) Unemployment insurance should be coordinated with a system of old age pensions. While apparently older workers are not discriminated against in dismissals, once released they have more than average difficulty in securing new jobs. A dismissal wage feature in the insurance scheme, and a pension system, would relieve pressure on the labour market in depressions.

(3) A system of unemployment insurance should be constructed and maintained on in-

insurance lines. The degree of protection paid for by, or in behalf of, the claimant and not his need is the only proper determinant of the amount of benefit he should receive.

(4) An insurance scheme that has adjusted its benefits to the wages of the unskilled worker has difficulty in maintaining the interest of the insured in the higher wage groups.¹

(5) State contributions and administration facilitate governmental liberalization of the provisions and sacrifice of insurance principles under social pressure in periods of distress.

(6) The system should not be financed in such a way as to force enterprises which have fairly even employment to carry an unreasonable share of the unemployment costs of industries with extremely irregular employment.

(7) The fact that the fund was depleted to meet the chronic unemployment of the post-war period, a risk that had not been considered, suggests that if reserves are not provided against all the risks, the fund may be consumed in meeting any one of them.²

(8) The experience has demonstrated the importance of a national system of employment exchanges as an administrative agency, but suggests that the exchanges should not be burdened with insurance duties to the detriment of their placement work.

(9) More elaborate statistics are necessary to provide an actuarial basis.

(10) Unemployment insurance has not overcome the need for a well-organized program of relief.

(11) Unemployment insurance should not be the sole or even major reliance in combating unemployment. There must be a framework of prevention.

The Experience of Germany

Germany determined to profit by British experience. She turned, in her law of 1927, from the tripartite system of contributions to equal contributions from employers and employees. Government aid was limited to emergency unemployment allowances, one-fifth to be contributed by the national government, and four-fifths by the localities needing such special aid. These allowances were in-

¹ On this point the *Economist* (May 9, 1931) says, "There is a strong case to be made for either having different scales of benefit in different industries and localities or, alternately, making benefit proportionate to the wages earned by the contributor when in employment."

² The *Economist* (May 9, 1931) has a somewhat similar suggestion: ". . . We are of opinion that there is much to be said for having two separate and self-contained funds, the one an insurance fund proper, the other a fund for financing the provision for exceptional unemployment." *Ibid.*

tended for periods of depression and were designed to aid insurable persons who had not qualified by contributions or had exhausted their right to benefit. Administration was vested in an autonomous body—the Federal Institution for Placement and Unemployment Insurance—which throughout its board of directors, national administrative council, district and local administrative committees was made equally representative of employers and employees. The flat rate of contributions was rejected in favour of a percentage-of-wages basis, and the flat rate of benefits in favour of a scale graduated according to eleven wage groups. Participation of workers' organizations in the administration of the scheme as provided for in Great Britain was omitted. Administration and finance were organized by districts, and it was provided that contributions might be reduced for districts showing a favourable balance, as against the English procedure of rebates to individual employers established by the Act of 1911 but abandoned by the Act of 1920.

Germany's severe unemployment has forced the Insurance Institution to borrow from the Treasury and to a considerable degree the financial experience of the British system has been repeated. But Germany has made a more serious effort to maintain insurance principles. The contribution rate has been raised from 3 to 3½ to 4½ and recently to 6½ per cent. Loans from the Treasury have been cancelled on the theory that they were granted for an emergency. The present purpose is that the actuarial basis shall be resumed with the aid of the higher contributions, and that in future borrowing with its attendant political control shall be avoided. The emergency allowances are regarded as a compromise. They are opposed by the proponents of pure insurance and a movement to abolish them is under way, leaving the unemployed to rely either on insurance or poor relief.

The German experience suggests the following considerations:—

(1) Opposition to state aid seems to have been strengthened by the experience with government loans and emergency unemployment allowances.

(2) As in Great Britain, disregard of the actuarial principles has forced in the end realization of the necessity for their re-establishment.

(3) It has been proved administratively feasible to adjust contributions and benefits to wages, that is, to protect the workers' standard of living rather than a minimum of subsistence as in Great Britain.

(4) The provision for reduction of contributions by districts that have accumulated re-

seems to have been little if any more effective than the system of rebates in the British Act of 1911. Some employers have been all too ready to throw their employees upon the fund and workers in some lines, such as seasonal industries, have participated unduly in the benefits.

(5) The experience has demonstrated the need for a well-organized relief system.

(6) As in England, the unemployment of abnormal market conditions, an unplanned-for risk, has depleted the fund, suggesting again that if all risks are not provided against the fund may be consumed in meeting any one of them.

(7) The experience has shown that there are limits to the benefits an insurance scheme can afford.

It would seem that the promoters of unemployment insurance legislation on this side of the Atlantic should be able to profit by European experience. However, persons examining that experience make contradictory deductions and it may be throwing caution to the winds to suggest any specific points for consideration. The following highly tentative conclusions are given for what they may be worth. They involve some repetition of points stated for the three countries considered.

Conclusions

The federal form of government in the United States and Canada will probably force a piecemeal approach to unemployment insurance, especially in the former. In other federal countries financial aid from the central government has speeded up the extension of coverage, but this implies participation of the state and national governments in the cost of the insurance. After the British experience with what Mr. Davison calls "political tinkering," and in view of Germany's action in almost doubling contributions from employers and employees in order to eliminate government aid and sharing in administration, it might be well in future legislation to avoid assistance from the state, except perhaps in administrative expense. If state participation is being questioned in Europe, we should consider well before adopting it in America, especially when one remembers the experience with Civil War pensions in the United States.

Government aid in voluntary schemes is not open to the same objection, but it is assumed that, with the small development of voluntary plans on this side of the Atlantic, any system of public subsidies is out of the question and that, when legislation is enacted, it will embody the compulsory principle.

Without government aid, the acceleration of the spread of legislation throughout the political subdivisions of the country that comes from central government participation in costs is lost, and each state is left to enact its own compulsory law whenever it so desires. It should be added that the principle of no federal contributions would have the advantage that states without legislation would not be taxed for the support of the systems of others.

With no government sharing the burden of costs, it seems essential that employees as well as employers should contribute. In many industries the cost of any reasonable measure of protection would be altogether too great to add to payroll expense in a brief span of years. Employee contributions would be contradictory to what has been the predominating opinion, especially in the United States, but that view seems to have been partly based on the fallacious analogy of accident compensation, where the costs are much lower and management has a larger measure of control. In no existing compulsory system do the employees escape contributions, except in Russia. It is noteworthy that although a vast majority of the earlier American industrial pension plans were non-contributory, as the heavy burden of accrued liability has become more apparent in recent years the trend toward the contributory type of plan has been pronounced. Finally, if the employees are to share in the administration it seems desirable that they should contribute.

It would be unfortunate not to utilize the stimulus to legislation and standardization involved in federal government contributions. We have noted as a suggestion arising out of the British experience that systems of insurance for unemployment and old age should be co-ordinated. Possibly this offers a solution. There is less objection to government participation in pension than in unemployment costs. True, pensions may be, and will be, increased by governments and the pension age may be lowered, but the annuity cannot be granted before the age of eligibility, the expectation of life is definite, and only a relatively small proportion of the population is affected. A national government might perhaps announce the general unemployment insurance principles it would favour; it might agree to share in the administrative expense of any such plan established by its political units; with regard to pensions it might indicate that it would assume a stated proportion, or even the entire pension costs of any unit of the federation that had established the approved unemployment insurance system. By some such indirect method, the federal urge

to the spread of insurance legislation and its standardizing influence might be preserved.

What further standards should a federal government establish for unemployment insurance? Time permits only the barest statement of some of them:—

(1) Equal contributions from employers and employees and no government contributions as already suggested. The contributions should be on a percentage of pay basis and, in the beginning at least, should be equal for all industries;

(2) The workers' contributions should be deducted regularly from their pay by the employer and forwarded by him, together with his own contribution and all necessary statistical data, to the designated state authority, to be placed in a state fund for investment and control;

(3) The contributions of each industry should constitute a separate branch of the fund, and each industrial fund should be administered by a stabilization board established for the industry.

(4) Each board should prescribe the benefit conditions for the industry with the approval of the state authority. These conditions should include the period to be established for the accumulation of reserves, allocation of the contributions to the different risks, the rate and duration of benefit

(5) In allocating contributions to the different risks, each board should determine as accurately as possible the relative importance of ordinary, emergency and separation unemployment, and should distribute the contributions to three corresponding accounts in the industry fund. Ordinary unemployment might be defined to include time lost from seasonal causes and the day-to-day loss of time through miscalculation by management, climatic or other reasons. Emergency unemployment should include the unemployment of depressions, and separation unemployment should include unemployment for technological or other reasons which necessitate the permanent release of the worker, in contrast with the other two types which ordinarily involve only temporary layoff.

(6) A scale of benefits, approved by the governmental authority, should be established for each of the three accounts. For the ordinary account, benefits should be a percentage of wages with a fixed duration period. Benefits on the emergency account might have a more flexible arrangement. In time of depression, a board, with the approval of the government authority, might declare that an emergency existed in the industry and might state a scale and duration of benefit. At the expiration of that period, another period of

benefit might be authorized if the circumstances and the state of the fund warranted. Benefit under the separation account might be in the form of a dismissal wage, scaled to earnings and length of service.

(7) The contributions from each industry should be pooled as an incentive to the stabilization board to plan for regular employment in the industrial group. With the approval of the government, each board should establish an experience rating, according to which firms might be refunded a portion of their contributions for affording a prescribed measure of regular employment. This would provide an incentive for regularization within the plant.

(8) As part of the machinery of regularization within the industry, stabilization boards might be authorized to establish industrial employment exchanges, which, if conducted on approved lines, might be financed from insurance contributions, or perhaps in large part from public funds. In that case the central government might bear part of the cost of the exchanges and it should also meet at least 50 per cent of the budget of the public exchanges. One condition for recognition of industrial exchanges would be their close co-ordination with the public employment service.

(9) The stabilization boards should be equally representative of employers and employees. They should be established by the state authority from panels submitted by organizations of the two parties in the proportion that such organizations are representative of management or labour in the industry. In the remaining degree, the members should be designated by the state authority. The chairman of each board should be chosen by the members of the board with the approval of the state.

Consideration of the terms of future legislation on unemployment insurance might be carried much further into such matters as the conditions of transfer between industrial funds and whether the separation allowances should be on a firm or industry basis.

The brief history of unemployment insurance has at least made clear that insurance is only one unit in the attack on unemployment; that it is only a part of a larger program of economic planning. The state that feels it can rest on its oars after adopting an insurance system will be rudely shocked, and the social welfare workers who think that all their difficult cases will be taken care of by the insurance schemes are doomed to disappointment. Indeed the British experience seems to have pointed to the need for better organization in relief work, to the importance of

national standardization of relief conditions and methods, following in some measure the principles of the insurance scheme itself.

Let me repeat that I have no strong convictions about any of these suggestions, they are submitted merely as a basis for discussion. It should be remembered that governmental unemployment insurance has a history of only thirty years, and as a national measure of

only twenty years. The element of trial and error must loom large in any system for many years to come. Fortunately for the American countries, the European nations are shaping, by hard experience, certain principles that may be found to stand the test over here when we take our part in the field of social experiment.

INTERIM REPORT OF BRITISH UNEMPLOYMENT INSURANCE COMMISSION

THE Unemployment Insurance Commission appointed by the British Government (LABOUR GAZETTE, January, 1931, page 4) with Judge Holman Gregory as chairman, presented interim majority and minority reports last month. The terms of reference of this Commission, as already stated, were as follows:—"To inquire into the provisions and working of the unemployment insurance scheme and to make recommendations with regard to (1) its future scope, the provisions which it should contain, and the means by which it may be made solvent and self-supporting, and (2) the arrangements which should be made outside the scheme for the unemployed who are capable of and available for work."

Majority Report

The report of the majority emphasizes the fact that the most serious element in the situation is the average level of unemployment, over the last ten years, of 12·2 per cent, which represents a "persistent and obdurate" problem. The Commission suggest that it would be unwise to treat this experience as transitory, or to assume that it overvalues the risk that has to be provided for in the next few years. Owing to the effects of the world-wide depression the present level of unemployment is much higher than 12·2 per cent. There is no assurance that it will fall appreciably in the next few months, and for the purpose of adjusting the finances of the Unemployment Fund to present circumstances the Commission do not feel justified in anticipating an average live register of less than 2,500,000.

In the section dealing with the development of unemployment insurance the Majority Report shows how "in the course of frequent amending legislation, there has been a progressive relaxation, amounting practically to the abandonment of the principles upon which the original insurance scheme was framed," and that 'successive Governments, confronted by an unprecedented mass of unemploy-

ment, have. . . . used the scheme as a means of dealing with a situation for which it was not suited."

Under the heading of public assistance it is pointed out that one effect of the Unemployment Insurance Act of 1930 has been to reduce very considerably the number of persons in receipt of poor relief, by transferring to unemployment benefit (mainly "transitional" benefit) large numbers of persons who had previously been disallowed or were not eligible for benefit. The decrease between March and July, 1930, in the total number of unemployed persons and their dependants in receipt of out-door relief was from 233,920 to 109,226 in England and Wales, and from 66,172 to 32,058 in Scotland. Since then, however, the numbers of the able-bodied unemployed in receipt of out-door relief have gradually increased.

When the Unemployment Insurance Act of 1920 came into operation the Unemployment Fund had a credit balance of over £22,000,000. In July, 1921, this reserve was exhausted, and recourse was had to borrowing. The outstanding debt of the Fund on May 23, 1931, was £82,810,000.

Assuming an average live register of 2,500,000, the annual income of the Fund from contributions would be £44,550,000; and the annual payments for insurance benefit alone (i.e., without counting "transitional" benefit) would be £84,000,000 (viz. £61,250,000 to insured persons; £13,250,000 to dependants; £5,000,000 cost of administration; and £4,500,000 interest on debt). The deficit would thus be £39,450,000, without taking into consideration the cost of transitional benefit. The additional cost of transitional benefit is estimated for a full year to amount to £35,000,000.

The Majority Report comments on the seriousness of the financial position thus disclosed, especially when considered in conjunction with other State expenditure on social services. Excluding war pensions, the contribution of the State to social services has in-

creased, since 1910 from £28,500,000 to £126,000,000 in 1927, and to £158,600,000 (estimated) in 1930. If account be taken also of loans to the Unemployment Fund the growth of the charge for Unemployment Insurance is still more pronounced. In the last financial year borrowing amounted to £36,440,000. If this sum were included, the total State contributions to social services for 1930-31 would be raised to about £195,000,000, and the contribution to Unemployment Insurance alone would be £73,000,000.

The report makes a series of proposals—on the assumption that unemployment will continue at a level of about 2½ millions—under which the total expenditure on benefits would be cut from the present figure of £119 millions to £95 millions. Half of this cut is to be secured by reducing the rate of benefit from 17s. to 15s. in the case of a man, from 15s. to 13s. in the case of a woman, and from 9s. to 8s. for an adult dependant, the rate for children being alone unchanged. As to the other half, £5 millions is to be saved by setting an upper limit to the amount of benefit which can be drawn by part-time workers—the limit varying with their earnings during the days that they are at work—and by regulations which will prevent the drawing of benefit by married women unless it is clear that they are likely to be re-employed in an insured occupation. A further £3 millions is to be saved by imposing a means test for transitional benefit, not in all cases, but in case of single adults living with relatives of married women, and of pensioners, etc., while £3¼ millions are to be saved by the provision that the 30 contributions which qualify a man or woman to become an insured person must have been paid during the preceding six years. This elimination from the scheme of persons who have practically not worked for several years is the only one of the economies which will involve recourse to the Poor Law, and inasmuch as there will be a strict means test in all these cases it may be presumed that the additional charge on the Poor Law will be less than the amount saved under the Insurance scheme.

On the other side of the account it is proposed that contributions should be raised to 9d. (taking as a representative case an adult male) from each of the three contributing parties, namely, the State, the employers and the workers, which means an addition of 2d. a week from the worker, 1d. a week from the employer and 1½d. a week from the State. These contributions are estimated to yield £9 millions of additional revenue, which, with the £24 millions of reduced expenditure, will make it possible to reduce the £40 millions a

year which are now being borrowed to a deficit of £7 millions. This is not solvency, but it is a serious attempt to attain it.

Minority Report

The minority propose that no changes should be made until the final report has been completed. They disapprove of borrowing and recommend that the whole of the cost in excess of contributions should be met by general taxation. They dissent from the proposals to limit the period of benefit, increase contributions or reduce rates: "so long as the rate of unemployment benefit is less than a reasonable subsistence level, any variation in the rate of benefit to take account of variations in the cost of living is irrelevant." With regard to transitional benefit, they object to any stiffening of conditions of qualification. As regards short-time workers, they think that the recommendations require further consideration; they agree with the majority in the proposals for dealing with seasonal and intermittent workers; and Mr. Asbury, but not Mrs. Rackham, agrees with the majority findings in the case of married women.

In addition to Judge Gregory, the commissioners are: Mr. W. Asbury, chairman of the Public Assistance Committee; Professor Henry Clay, of Manchester University; Dr. H. J. W. Hetherington, chancellor of Liverpool University; Mr. E. C. P. Lascelles, deputy umpire under the Unemployment Insurance Acts; Mrs. C. D. Rackham, temporary inspector of factories; and Mr. H. M. Trouncer, president of the Institute of Actuaries.

The experience of 167 Ontario firms employing 250 or more on the average as reported to the Industrial Accident Prevention Associations for the first four months of this year indicates a steady increase in the number of employees in industries in the province. The February figures showed 1,919 more workers than in January; in March there were 1,401 more than in February, and the April figures show a further increase of 248 employees. The average number of hours worked per employee in April stood at 193, and the total number of persons employed by 167 firms making the report stood at 78,519 in the same month. From reports that have been made for nearly two and a half years a steady decline in accident frequency is apparent. Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations, attributes this drop in accident frequency largely to more interest on the part of executive officials of the companies making the report. The average frequency in April, 1929, stood at 34·54, in April, 1930, at 14·78 and in April, 1931, at 12·23.

TRIENNIAL CONVENTION OF BROTHERHOOD OF LOCOMOTIVE FIREMEN AND ENGINEMEN

THE triennial convention of the Brotherhood of Locomotive Firemen and Enginemen convened at Columbus, Ohio, on June 8, with 934 delegates enrolled, while 629 delegates attended the sessions of the Ladies' Society of the Brotherhood. Governor George White of Ohio and Mayor J. J. Thomas of Columbus welcomed the delegates.

President Robertson in his opening address pointed out that the two essentials for the improvement of conditions were shorter hours and good wages. He referred to the loss sustained by the Brotherhood in the death of general secretary-treasurer Albert H. Hawley on May 28. The convention later passed a memorial resolution in recognition of the services of the late secretary during his forty years' connection with the Brotherhood, the last twenty-three in the position of general secretary-treasurer.

The report of the grand lodge officers was contained in a volume of 500 pages, a copy of which was handed to each delegate. This report gave in detail a review of conditions since the last convention, and outlined the activities carried on during that period. It stated that the paramount issue at the present time confronting the membership was the unemployment situation. The report further stated that notwithstanding that "many members of the Brotherhood voluntarily reduced their mileage so as to divide time with their brothers, 35,000 members have been furloughed, some because of the depression, and others because of the introduction of more powerful locomotives." It was regarded by the officers as a very creditable showing that although 35,000 members were out of work, the membership as at January 1, 1931, stood at 98,187, as compared with 107,637 on November 1, 1929, or a decline of only 9,180.

Considerable space in the report was devoted to activities in Canada, and emphasis was laid on the Brotherhood's efforts to straighten out complications arising out of the exercising of seniority rights in the operation of trains over the international boundary. The action of the United States Government in levying a head-tax and visa fees amounting to \$18 was denounced as "objectionable and unfair" in view of the more liberal attitude of the Canadian Govern-

ment. The report also stressed the need of a shorter work day.*

A recommendation of the committee on joint relations favouring an amalgamation with the Brotherhood of Locomotive Engineers, was adopted by the convention.

The delegates voted to create a finance committee of nine members, composed of the international president as chairman, the general secretary-treasurer as secretary, and the members of the board of directors. This committee will have complete jurisdiction over the finances of the Brotherhood, the investment of its funds and the custody of its securities.

In the revision of the insurance laws of the Brotherhood, which was authorized by the previous convention and recommended after careful study and investigation, two double indemnity features were adopted, certain departments abolished and others substituted. In speaking of the completed revision of the insurance laws, President Robertson stated that "the various insurance departments of the Firemen's Brotherhood, as a result of these extensive investigations, should prove to be as sound as the best actuarial advice can make them."

Among the resolutions adopted were the following:

Advocating the equipping of locomotive boilers with thermic syphons to prevent explosions;

Recommending that continued efforts be made to curb abuses in the issuance of injunctions by Federal judges in the United States;

Approving of the action taken to give relief to members of the Brotherhood who were flood victims in San Marcial, Mexico;

Favouring the substitution of the six-hour day for the present eight-hour day without reduction in pay;

Demanding the elimination of unfair competition with railroads through fair and proper regulations of competing transportation services, both on the highways and waterways and various pipe lines;

Recommending that steps be taken to secure a national compensation and pension law that would effectively and adequately protect in-

*Reference was made in the LABOUR GAZETTE, April, 1931, page 435, to the waiving of the provisions of the contract labour regulations in favour of railway workers exercising seniority rights.

jured, incapacitated and superannuated railroad employees;

Authorizing the president to use the influence of the organization to protect the interests of railroad employees in connection with railway consolidations;

Endorsing joint political action with other railroad labour organizations in the interest of the workers;

Expressing resentment at the practice of railroads in maintaining on adjustment boards

general managers and other operating officials who already had been required to pass on cases on their individual lines;

Reaffirming the policy of the Brotherhood in connection with the newspaper *Labour*, and authorizing the renewal of subscription for the entire membership.

The business of the convention was not concluded at the time the *LABOUR GAZETTE* went to press.

Ontario-Quebec Typographical Conference

The 20th annual convention of the Ontario and Quebec Conference of Typographical Unions was held at Montreal on June 29-30. The delegates, 36 in number, were welcomed by Mr. E. J. Teague, chairman of the local convention committee; Mr. Joseph Pelletier, president of the Montreal Allied Printing Trades Council; Mrs. E. Davis, president of the Women's Auxiliary of the Typographical Union; and Mr. John T. Edward, president of Montreal Typographical Union No. 176. Mr. Tom Moore, president of the Trades and Labour Congress, extended fraternal greetings from that organization. Others who spoke were Mr. W. R. Lucas, who presented the greetings of Mr. Charles Howard, president of the International Typographical Union; Mr. A. Tremblay, president of Typographical Union No. 145 (the local for French-speaking members), and Mr. Frank J. Plant, who gave an outline of the work of the Federal Department of Labour.

Mr. Wm. Schmitt, the president, referred to the tariff on foreign magazines, and in the discussion which followed the hope was expressed that the proposed tariff would be adopted, as being in the interest of the printing industry in Canada. Mr. Hugh S. Bentley, the second vice-president and chairman of apprenticeship was commended for his report on apprentices and the annual apprentice competition. The Typographical Union was shown to be assisting beginners and helping to turn out competent printers.

Reports were presented on trade conditions at Toronto, Montreal, Quebec, Hamilton, Ottawa, Peterborough, Kingston, London and Kitchener.

The report of the secretary-treasurer, which as adopted, showed receipts from all sources of \$409.23; expenditures, \$249.96, leaving a balance of \$159.27. It was decided that the head office of the International Typographical Union be asked to make a grant of \$200 for the work of the conference.

The conference went on record in favour of the limitation of the work day in the following resolution:—"That the shortening of hours is desirable without loss of purchasing power, and that same should be brought about through the co-operative efforts of the employers and employees to the common good in aiding the serious unemployment depression, and that the press should utilize its power to not only adopt the shorter work week in their own industry, but advocate this course in all branches of industry; and that local unions entering into wage agreements should present this view point."

Other resolutions recommended as follows:—

A high tariff on books of French authors resident in Quebec, who send their books abroad to be printed, mainly to France, Belgium and Scotland;

A fair wage clause in all provincial government contracts, including those for printing;

Establishment of an apprentice division in the conference whereby apprentices would be given representation in the conference, and the formation of "typo clubs" for apprentices;

That the Dominion Government be asked to exempt from sales tax and customs duty the I.T.U. printed courses of lessons to apprentices in the printing trade in Canada, they not being of any commercial value;

That the executive officers of the I.T.U. be asked to appoint two organizers in Canada, one for the east and the other for the western territory.

Officers elected were as follows:—President, L. A. Lewis, Toronto; first vice-president, Wm. Schmitt, Kitchener; second vice-president, Hugh Bentley, Hamilton; secretary-treasurer, E. J. Teague, Room 2, No. 408 St. James St., Montreal.

The question of the appointment of three persons as an advisory committee to the officers was referred to the executive.

London was chosen for the meeting place in 1932.

Ontario Provincial Council of United Brotherhood of Carpenters and Joiners

The 20th annual convention of the Ontario Provincial Council of the United Brotherhood of Carpenters and Joiners took place in Welland June 25-27, the delegates being welcomed by Mayor Fred. J. Bradey, E. J. Anderson, president of Welland Board of Trade, and Geo. T. Crowe, chief of police, Mr. John Cottam of Toronto, the president of the council, who presided, made reference to the year 1931 being the golden jubilee of the brotherhood, the organization having been formed in 1881, at which time the membership was about 10,000, as compared with approximately 400,000 at the present time.

Mr. Tom Moore, president of the Trades and Labour Congress of Canada addressed the delegates, making special reference to the unemployment situation. Among others who conveyed greetings during the meeting were Arthur Martel, Canadian member of the general executive board of the Brotherhood of Carpenters; Joseph Hunter, Canadian vice-president of the Brotherhood of Painters and Decorators; James F. March, representative of the Carpenters, and Fred J. Hawes, district instructor of apprenticeship, and Drummond Wren of the Workers' Education Association.

The report of the secretary-treasurer, T. Jackson, referred to the work of his office during the past year, the numerical strength of the council, the monthly bulletin, and the financial standing, the receipts for the year being \$4,652.77, with expenses of \$1,698.62, leaving a balance of \$2,954.15.

Resolutions on the following subjects received favourable consideration:

Empowering committees appointed to negotiate with employers to use their own discretion as to whether they shall report back to the local unions, the committees however to have power at all times to accept or reject any proposition of the employers affecting wages or working conditions for a period not longer than two years;

Opposing the acceptance by workers of stock in any company in lieu of wages;

That the provincial government adopt legislation to prevent the foreclosure of mortgages under present conditions;

Favouring unemployment insurance;

That the Ontario Government adopt a fair wage policy similar to that of the Dominion Government;

That all future wage agreements stipulate no overtime, except to save life or property; and that all money received in excess of straight time be handed to the treasurers of the respective local unions or district coun-

cils to be used in keeping unemployed members in good standing;

Opposition to reductions in wages as a means of stabilizing industry;

Congratulating the Ontario Apprenticeship Board on the progress made and for the effort that is now being put forth to enable Canadian boys to become competent mechanics; also advising local unions to give special attention to the Ontario Apprenticeship Act, and suggesting that all branches carry out the instructions of the general constitution and appoint apprenticeship committees;

That civic, provincial and federal bodies, as well as contractors and others, be urged to establish the five-day forty-hour week as a means of more evenly distributing the available work;

In favour of local branches and district councils of the Brotherhood initiating organizing campaigns with a view to all carpenters in Ontario being organized;

In favour of regulations being adopted by the Federal Government with a view to the enforcement of fair wages and labour conditions on all Government undertakings, as well as of the specifications of the contract;

That the Ontario Government adopt legislation providing that where the Government assists any corporation or public body with financial grants, subsidy or guarantee of bonds, a fair wage policy be imposed.

It was also decided that the Provincial Council assist up to \$100 each local branch which sends a delegate to the Trades and Labour Congress convention to be held in Vancouver in September next.

Officers elected were: President, John Cottam, Toronto; vice-presidents, C. R. Nichols, Ottawa; Albert Blythe, Hamilton, and Wm. Thompson, Windsor; secretary-treasurer, Tension Jackson, 9 Mount Noel Ave., Toronto 6, Ont.

The convention for 1932 is to be held in Cornwall.

About 750 employees, or practically the entire staff of the Canadian Kodak Company's plant at Mount Dennis, Ontario, will share in the annual wage dividend due on July 1. The dividend of 2½ per cent of the annual payroll amounts to approximately \$115,000, or an average of about \$150 per worker. However, it will be distributed in proportion to the employees' service over a period of 5 years. Only those who were laid off before the first of the calendar year and have not been in the company's employ the required 26 weeks will be ineligible. Only forty employees are not eligible.

COMBINES INVESTIGATION ACT

Investigation by Commissioner finds Combine in Motion Picture Industry

That "a combine exists in the motion picture industry in Canada within the meaning of the Combines Investigation Act" is the finding of Mr. Peter White, K.C., appointed in September of last year as a Commissioner under the Combines Investigation Act to investigate the activities of certain distributors and exhibitors of motion pictures in Canada.

The Commissioner's report, made public on July 7 following the conclusion of the investigation June 29, states that those found to be the principal parties to the combine are Famous Players Canadian Corporation, Limited, the dominant company in the Canadian motion picture business; Paramount Publix Corporation, its United States parent company; thirteen companies distributing motion picture films in Canada; and Motion Picture Distributors and Exhibitors of Canada, an association of distributors referred to as the Cooper Organization. A number of theatre companies which are subsidiaries of Famous Players Canadian Corporation also are listed as participants in the offences stated to have been committed. The combine has operated against the public interest, according to the Commissioner, by various improper methods adopted for securing control of motion picture theatres throughout Canada and for influencing the operations of film distributors, independent theatre owners and others.

Hearings in the case were held in Toronto, and extended at intervals over a period of six months, concluding in March. The methods and results of the extension of control by Famous Players Canadian Corporation over Canadian movie theatres and the Canadian motion picture business were the chief subjects of the investigation.

Control in Motion Picture Industry

Taking Canada as a whole, the report states, Famous Players occupy either an exclusive or a dominant position in practically all towns and cities having a population of 10,000 or more. This finding is stated to apply almost with equal force to practically all towns where they are operating theatres. In many important locations Famous Players have a complete monopoly of the business. Some sixty pages of the report are occupied by a survey of Famous Players' theatres throughout Canada under the headings of the various cities and towns in which they are located.

"By the control and operation of the above theatres," reports Mr. White, "Famous Players is in a position to dictate to the exchanges in regard to the purchase, selection and booking of pictures, not only for its own theatres, but in a large measure in regard to the booking of and contracting for the pictures in the theatres which are in opposition to them."

Of the 299 chain theatres in Canada, controlled by owners of three or more theatres, 207 are controlled by the Famous Players company, most of them being in the larger centres. The company is stated also to have acquired control over or interests in the business of many other persons engaged in the motion picture industry and to have entered into

"contracts, agreements, arrangements and combinations which have or were designed to have the effect of preventing or lessening competition in the sale or supply of motion picture films to the exhibitors, and through them to the public."

As a further development,

"Famous Players and its subsidiaries and affiliations have obtained practically complete control of the vaudeville theatrical business in Canada."

The films shown in Canadian theatres are supplied almost entirely by ten Canadian distributing companies, of which all but one are controlled through direct stock ownership by United States producing companies, that one being controlled by persons close to the Famous Players organization. One of these United States companies, Paramount Publix Corporation "is in virtual control of Famous Players Canadian Corporation Limited," by its ownership of 93 per cent of the stock of the Canadian company. It also controls two of the Canadian distributors and "is a dominating influence in the motion picture business in Canada, as it controls the companies which dominate the situation here." Regarding the purchase of pictures, the Commissioner states, "it is a fair conclusion from the evidence that, while there may be a certain amount of bargaining between Famous Players and the distributors, the percentages and flat rentals paid by Famous Players are fixed by them; and the distributors, if they would deal with Famous Players, must accept Famous Players' terms." In contrast to this condition "there is no effective organization of independent theatre owners." Recently, however, an organization known as Exhibitors Co-operative of Canada, Limited, has been formed with a membership operating about 31 theatres. This group does some collective bargaining for

pictures, in a comparatively small way. The distributors which have been named as members of the combine are stated to control at least 95 per cent of the distribution of films in Canada.

Protection System

The Commissioner scores the policy of "protection" as enforced by Famous Players with the concurrence of the film distributors. Protection, or the withholding of a picture from a subsequent showing for a period of time after the close of a previous run, is found to have been afforded for periods "far beyond what could possibly be justified if it were for the purpose of protecting the business of these first run theatres and not for the purpose of injuring other independent exhibitors." The period of protection is frequently set at 60 or 90 days, and in some cases even at 120 days. It is the Commissioner's conclusion that Famous Players has demanded and obtained for its theatres

"protection for periods longer than is necessary for the proper conduct of the business of these theatres, by reason of which Famous Players has been able to lessen, by reason of actual or tacit agreements or arrangements, and has lessened competition in many areas and districts, and generally in Canada, in the supply of motion picture films to the independent theatres and that this has been detrimental to the public in that:

- (1) It has cost the public more money.
- (2) It has prevented large sections of the public from seeing pictures while they are still fairly new.
- (3) It has given Famous Players and its affiliations an undue advantage over its competitor exhibitors, and over the public generally in Canada."

The entire idea of protection as such is not condemned by the Commissioner:

"I am not prepared to find, on the evidence which I have heard," he states, "that a certain amount of protection may not be of some advantage to the industry, provided that it is not used as a weapon to delay the subsequent runs to such an extent that the subsequent run houses are unduly hampered in their business; and their patrons, who are not in a position to see the first runs at the downtown houses, are unable to see the pictures until after their novelty has disappeared.

Referring to the argument that, without such protection being given the first-run houses, the producers would not secure as large a revenue and therefore would be unable to expend the large sums now being spent on the production of the highest class of moving pictures, Mr. White says:

"I am not at all convinced that protection is a necessity. . . . If the doing away with protection had the result of decreasing some of the enormous sums of money paid to artists engaged in the production of pictures, and if their scale of living were thereby reduced to that of the ordinary citizen engaged in professional pur-

suits, it might not be altogether a bad thing for the industry, and although the place of production of practically all of our pictures is not in Canada, still Canada by means of this protection is made to contribute its share to the very extravagant salaries paid these artists."

Film Booking Arrangements

With regard to block booking, which is the contracting for a group of pictures offered as a whole; and blind booking, which is the making of contracts to accept a picture or a number of pictures which have not been produced and consequently cannot be screened and seen before purchase, Mr. White finds that these two systems "prevail generally in the sale of pictures by the distributors in Canada, and that by reason of the consequent overbuying on the part of the exhibitor, and the showing of inferior pictures, the system of distribution by block booking and blind booking is decidedly detrimental to the public."

Films are found to be withheld from independent theatres by contracts and arrangements allowing Famous Players to have first choice of the pictures to be released. Unfair competition against independent theatres is said to be created further by the distributors allowing lower prices to Famous Players' theatres, and granting other concessions of an unduly discriminating nature. It is found also that competition on the part of independent theatre owners in dealings with distributors is further lessened by booking arrangements and pooling agreements by which Famous Players books for other theatres the films which these theatres are to show to the public.

Monopoly Tactics

Evidence of the combine's operations is revealed in the report also in

"the acquisition by Famous Players, their subsidiaries and affiliations, of many theatres, sometimes by threats of building theatres in opposition to the theatre sought to be acquired, sometimes by threatening to cause the withholding of a supply of suitable pictures, sometimes by taking steps to actually withhold such supply, as evidenced particularly, but not exclusively, by the operations of B. & F. Theatres Limited, and of Mr. N. L. Nathanson, when manager of Famous Players, as disclosed by the evidence of various witnesses, including Mr. Wainwright, and by the improper use of Famous Players' buying power and paramount position in the moving picture business in Canada, looking to the concentration of moving picture theatres, particularly in the larger cities and towns and in the strategic positions therein, in the hands of Famous Players, their subsidiaries and affiliations, and to the lessening of competition in the operation of such theatres."

The following example of such methods is one of a number cited by the Commissioner.

In Trail, B.C., where one theatre was controlled by W. P. Dewees, an exhibitor holding substantial theatre interests throughout British Columbia in close association with Famous Players, the supply of films to an independent theatre was practically cut off by the film exchanges at the demand of Mr. Dewees, with the alleged purpose of forcing the independent owner out of business. The owner of the independent theatre threatened to charge the film exchanges with conspiracy in legal proceedings under the Criminal Code. Such liability was practically admitted by parties to the arrangement in their correspondence with Colonel John A. Cooper, president and secretary of the Motion Picture Distributors and Exhibitors of Canada, and in correspondence between various officers of the distributing companies. It was suggested that the independent be again offered films "as such offer would be good evidence in case of a Government investigation" and as "if proceedings were commenced it would prove rather expensive and damaging to the industry and might precipitate investigation at other centres." For a time certain concessions were made to Mr. Lauriente, the owner of the independent theatre. The Commissioner finds that

"it is quite clear that Mr. N. L. Nathanson, in his capacity of Managing Director of Famous Players, was able to frustrate the efforts of Mr. Lauriente to get a satisfactory supply of films for his theatre and that this was in pursuance of his determination to 'bring Lauriente to time,' even though Famous Players had no direct interest in Dewees' Trail Theatre. The conclusion is forced on one that this must have been not so much for the purpose of advancing the legitimate interests of Famous Players or protecting those interests as it was for the purpose of injuring the business of Lauriente."

Famous Players is found further to have purchased theatre sites and obtained options on such sites in various centres throughout Canada, and to have used these to deter others from building theatres in competition with those of Famous Players. The company is also stated to have closed and kept closed a number of theatres in such a way as to furnish a constant menace to anyone considering the building of a competing theatre.

Practices in Leasing Films

The joint policies of the Canadian film distributors and the Famous Players organization are stated to be put into effect mainly through Motion Picture Distributors and Exhibitors of Canada, an incorporated body of which most of the parties to the combine were members. Leading activities of this association, referred to in Mr. White's report as the Cooper Organization, where the imposi-

tion and enforcement of a Standard Exhibition Contract regulating the terms on which films should be leased to Canadian theatres, the formation and control of Film Boards of Trade for governing dealings between the film distributors and the theatre owners, including notably provisions for arbitration and for the enforcement of credit committee rules; as well as general propaganda efforts for the influencing of public opinion.

"The evidence, without going into particulars, clearly discloses that the Cooper Organization is a mere offshoot of a corresponding organization in United States, presided over by Mr. Will Hays, and referred to as the 'Hays Organization'; the policies being dictated by, the finances controlled by, the budgets subject to the approval of, and the activities generally subject to the control and direction of the Hays Organization. The minutes are submitted to New York, and also the proceedings of the Film Boards of Trade, and the New York office is consulted, not only on important matters such as censorship in Canada and amusement tax, but also on matters which might be considered almost routine."

The exhibitor members of the association are representatives of Famous Players only, and "any benefit to exhibitors has been incidental to the main and primary purpose of the Cooper Organization, which has been to advance the interests of the New York producers and their Canadian subsidiaries."

Rules of arbitration for dealing with disputes between distributors and exhibitors are found to have been adopted by the distributors to suit their own purposes, and the parties to the combine undertook "to enforce the awards of arbitrators by harsh and unreasonable means, leaving the exhibitor, against whom an award has been made, entirely at the mercy of the exchanges."

"If the exhibitor were free to contract with a distributor to the extent that he could agree or not agree to this arbitration clause, and if under those circumstances the exhibitor signed the clause willingly, he could not perhaps complain, but the fact is, and I so find, that all of the distributors require all of the exhibitors to sign contracts containing this clause, otherwise they cannot get any pictures for their theatres, as the distributors, acting in concert under the direction of the Cooper Organization, refuse to sell otherwise than under this Standard Exhibition Contract, now Canadian Exhibition Contract.

"I also find that by their actions in connection with arbitration under this clause, the distributors and the Cooper Organization have contributed very materially to the influence and strength of Famous Players in competition with the independent exhibitors, and this actually to the public detriment."

Generally concerning the credit committee rules, Mr. White has concluded that

"these distributors, and the Motion Picture Distributors and Exhibitors of Canada, and Famous Players, through their association as aforesaid with the Cooper Organization, are

a combine within the meaning of the Act, operating in this respect to the detriment of the public."

In its publicity work "the Cooper Organization has engaged in a program of propaganda with various social organizations, particularly women's organizations, with the idea of creating what to me appears to be a false idea of the objects and aims of this combination of producers, distributors and Famous Players."

British Films

In the release year 1928-29, a total of 548 feature pictures were released in Canada, and 401 in the release year of 1929-30. A total of only 73 pictures of British origin were released in Canada in the release year of 1928-29 and the year 1930, or seven and one-half per cent of all pictures provided for the Canadian public. The number of pictures produced in Canada has been of minor importance. The principal British producers whose pictures have been exhibited here are Gaumont British Corporation, Limited; Gainsborough Productions, Limited, and British International Pictures, Limited. Productions of the latter company are distributed in Canada by Regal Films, Limited, a distributor controlled by Paramount Publix Corporation. The Gaumont and Gainsborough pictures are supplied in Canada through the offices of Canadian Universal Film Company, which distributes the productions of Universal Picture Corporation, a United States company. Regarding these selling arrangements the Commissioner states in his report: "I can find no evidence that either of these distributors has made any serious effort to promote the exhibition of British pictures, and any utterance in the evidence has been of a more or less disparaging nature."

Parties to the Combine

The Commissioner's report states that the following companies "are parties or privies to or knowingly assisted in the formation or operation of the combine within the meaning of the Combines Investigation Act;"

Famous Players Canadian Corporation, Limited, and the following affiliated theatre companies:

B. & F. Theatres, Limited
 Eastern Theatres, Limited
 Premier Theatres, Limited
 Mansfield Theatre Company, Limited
 United Amusement Corporation, Limited
 Theatre Holding Corporation, Limited
 Hamilton United Theatres, Limited
 B.C. Paramount Theatres, Limited
 Paramount Theatres, Limited

Radio-Keith-Orpheum (Canada), Limited

Paramount Publix Corporation
 Motion Picture Distributors and Exhibitors of Canada, and the following distributors:
 Canadian Educational Films, Limited
 Canadian Universal Film Company, Limited
 Famous Lasky Film Service, Limited
 Fox Film Corporation, Limited
 R. K. O. Distributing Corporation of Canada, Limited
 Columbia Pictures of Canada, Limited
 Regal Films, Limited
 United Artists Corporation, Limited
 Vitagraph, Limited
 Tiffany Productions of Canada, Limited
 First National Pictures, Incorporated
 Warner Brothers Pictures Incorporated
 Vitagraph, Incorporated;

the latter three being United States companies distributing through Vitagraph, Limited, and the other distributors being companies incorporated in Canada.

The report states further that there are a number of other companies and individuals which might be properly included in this list but who are so closely identified with Famous Players that it appears unnecessary to name them separately.

In the conclusion of his report Mr. White states that

"under its present management, Famous Players does not appear to me to be conducted with quite the ruthless disregard of the rights of others, and of the public interest, as was formerly the case; though the present manager is, however, still under the direction of the United States interests who control the company. As an illustration of how far things are still carried, it might be mentioned that, failing to agree with the distributors on the length of protection or clearance periods, a demand has been made for protection for periods very much in excess of anything heretofore contemplated or demanded."

Counsel for the Dominion Government at the hearings of the Commission were A. C. Heighington, K.C., and B. H. L. Symmes. Strachan Johnston, K.C., and R. H. Parmenter, K.C., appeared as counsel representing Famous Players Canadian Corporation and related companies. Other counsel representing parties under investigation in the case were J. R. L. Starr, K.C., for Motion Picture Distributors and Exhibitors of Canada; G. W. Mason, K.C., and F. C. Carter for eight companies distributing films in Canada; M. H. Ludwig, K.C., and L. Rosenfeld for Columbia Pictures of Canada, Limited; and G. M. Willoughby for B. & F. Theatres, Limited.

Plumbing Combine Cases Appealed in Ontario Supreme Court

The conclusion of the Crown's court actions against members of the Amalgamated Builders' Council, a combine in the plumbing and heating industry in Ontario, was reached on June 26, when, in the case of *Rex v. Belyea and Weinraub*, the president and secretary-treasurer of the A. B. C. were convicted of violations of the Combines Investigation Act and of section 498 of the Criminal Code.

In the same judgment of the Second Divisional Court the appeal of the defendants in *Rex v. Singer et al.*, against their convictions and sentences for similar offences was dismissed. The judgment, delivered by Chief Justice Latchford, appears in full text below.

On April 25, in the case of *Rex v. White et al.*, sentences were imposed in Toronto by Mr. Justice Middleton on eleven previously convicted Windsor members of the same organization.

A further decision in the court actions following the investigation under the Combines Investigation Act into the A. B. C. and related organizations was delivered in Toronto on June 15, when the appeal by W. F. O'Connor, counsel associated with the plumbing combine, in his suit against Gordon Waldron, K.C., former Commissioner under the Combines Investigation Act, was dismissed in a judgment of the First Divisional Court.

A. B. C. Head Officers convicted in Crown Appeal

Roy E. Belyea, president of the Canadian Plumbing and Heating Guild and Amalgamated Builders' Council, and Harry A. Weinraub, secretary-treasurer of the same organizations, on June 26, in Toronto were found guilty of participating in the formation and operation of a combine within the meaning of the Combines Investigation Act and of conspiracy to injure trade or commerce under section 498 of the Criminal Code. The case was heard by the Second Divisional Court in an appeal by the Crown from a judgment of Mr. Justice Wright in the case of *Rex v. Singer et al.*, delivered at Sandwich, Ontario, on March 23, in which the above two Toronto plumbing contractors were found not guilty of the offences charged against them. The judgment of Mr. Justice Wright is reported in the *LABOUR GAZETTE*, April, 1931, p. 430. The two officers found guilty by the Appeal Court were sentenced to pay fines of \$4,000 each, with an alternative of four months' imprisonment.

Appeals by the defendants from the convictions and sentences of Louis M. Singer, K.C., of Toronto, and Charles E. Paddon and

Herbert Ward, Windsor plumbing contractors, in the case tried by Mr. Justice Wright at Sandwich, were argued before the Second Divisional Court together with the Crown's appeal, on May 26 to June 1, and concluded on June 10. The statement of reasons for judgment of the Appeal Court, which dismisses the defence appeal and upholds the appeal of the Crown, follows.

SUPREME COURT OF ONTARIO, APPELLATE DIVISION

Rex v. Singer, et al.

Rex v. Belyea and Weinraub.

Second Divisional Court

June 26, 1931.

Appeals by the defendants and the Crown from the judgment of Wright, J. (1931), 40 O. W. N. 195.

The appeals were heard by Latchford, C. J., Riddell, Masten, Orde and Fisher, JJ.A.

LATCHFORD, C. J.—The first of these appeals, which were argued together, is against the conviction by Mr. Justice Wright on March 23, 1931, of Louis M. Singer, Charles E. Paddon and Herbert Ward of offences against the Combines Investigation Act, R.S.C. 1927, c. 26, and of conspiracy contrary to the provisions of sec. 498 of the Criminal Code. Singer was condemned to pay fines amounting to \$8,000 or in default to suffer imprisonment and Paddon and Ward were fined \$400 each. Their appeals are by leave against the sentences as well as the convictions.

Three other persons accused of the same offences, W. F. O'Connor, Roy E. Belyea and Harry Weinraub, similarly accused were found not guilty. It is against the acquittal of Belyea and Weinraub that the second appeal has been taken by the Attorney General under the provisions of the Dominion Act of 1930, 20-21 Geo. V, 11, sec. 28.

The substance of the indictments and the facts adduced in evidence are, I think, stated accurately, and with sufficient fullness in the reasons for the judgment of the learned Trial Judge, and need not be repeated.

In opening his appeal Mr. O'Connor candidly admitted that if the facts were as found, the conclusions arrived at were justified, but the facts, he ably argued, were quite otherwise.

From the most careful consideration possible of the arguments presented in the first appeal, and of all the evidence we are not only unable to dissent from the conclusions of Mr. Justice Wright as to the guilt of Singer, Paddon and Ward, of the charges against them, but we agree in his conclusions. Each of the accused was a party or privy to or knowingly assisted in the formation of a combine within the meaning of the Act of 1927. Such actions on their part established that they had entered into a conspiracy to do or cause to be done unlawful acts in restraint of trade as defined by sec. 496 of the Code.

The organization and registration by the accused of the Amalgamated Builders' Council as a trade union was an attempt to cloak the

operations of the Canadian Plumbing and Heating Guild, under the protection of sec. 497 of the Code. What was in appearance a real trade union and registration under the Trade Unions Act, distinct from the Guild was, in fact, a mere sham, and the operations of the A.B.C., as it was called, were throughout those of the Guild itself, and always subject to the absolute control and direction of Singer, who was paid an annual salary of \$15,000 from the ample revenues obtained or levied from its members to the Guild. The evidence of Mr. Singer himself is conclusive on conditions and other matters relevant to the convictions.

We can see no ground for interference by this Court, and are of the opinion that the appeal of Singer, Paddon and Ward should be dismissed.

As to the second appeal, it may be said that it is limited to matters which involve only questions of law.

Mr. O'Connor argued that there are questions of fact involved in the appeal. In that view we cannot agree. Without saying that it is a rule of universal application, we are content to accept as the test whether this is a pure question of law the statement that if it would have been the duty of the Judge, were the matter to be tried by a jury, to instruct them that if they found the facts as they were in this case found by him, and admitted by the defendants themselves, it was proper for them to convict. This is the test suggested by the counsel for Belyea and Weinraub, and we accept it as satisfactory.

Had the case been tried by a jury, and the facts made to appear as they were at this trial, and indeed as admitted by the respondents themselves, it would have been the duty of the presiding Judge to instruct the jury that they should convict.

That these respondents took an active part in the original scheme,—the conspiracy which formed the basis for the prosecution,—is admitted; the error in law into which the learned Judge fell was in not distinguishing between the conspiracy itself and overt acts which, while not themselves the conspiracy, were evidence of the existence of the conspiracy. Because these respondents were not proved to have taken part in these subsequent overt acts, the learned Judge acquitted them, saying of one of the respondents, "There is no evidence that connects him with any of the illegal operations."

We are of opinion that the appeal of the Crown must succeed. Belyea and Weinraub were most active in carrying out the projects of the conspiracy; were originally united with Singer himself in the conspiracy of which the latter was found guilty. They should have been convicted as were Singer, Paddon and Ward. Their part in the illegal acts was much greater than that of Paddon and Ward, but less than that of Singer.

Finding Belyea and Weinraub guilty on the same counts as Singer was found guilty upon by Mr. Justice Wright, the Court after careful consideration has fixed their fines at one-half of those imposed on Singer. Each is condemned to pay a fine of \$2,000 for infraction of The Combines Act and \$2,000 for conspiracy or \$4,000 in all. In default of payment of \$2,000 in each case, imprisonment is imposed for a period of four months—to run concurrently.

A word may be added. In regard to the form of the indictments, they follow the Statutes under which they are laid, and their form is sanctioned by secs. 852,954 and 1010 (2) of the Code.

Windsor Plumbing Contractors Sentenced

Sentences were imposed on eleven Windsor plumbing contractors and sheet metal contractors, members of the Amalgamated Builders' Council by Mr. Justice Sedgewick at Toronto on April 20, in the case of *Rex v. White et al.* The conviction of the accused in this case by a jury at the Supreme Court Assizes in Sandwich on April 1 was reported in the LABOUR GAZETTE, April, 1931.

After the hearing by Mr. Justice Sedgewick of a motion in arrest of judgment, made by W. F. O'Connor for the defendants on April 10, the motion was dismissed on April 25 and each was sentenced to pay a fine of \$100 for offences against the Combines Investigation Act. Sentence was suspended on the three counts under section 498 of the Criminal Code, under which each of the eleven accused was found guilty by jury, and each was placed under \$4,000 recognizance to keep the peace for a period of one year. Those sentenced were A. J. Brian, F. W. Burford, J. C. Collins, A. R. Cook, Herbert Pragnell, B. E. Service, F. J. Tansley and Alexander White, plumbing contractors; and W. H. Cunningham, J. R. Lynn and J. E. Murphy, sheet metal contractors.

Appeal Against Commissioner Dismissed

The appeal of W. F. O'Connor, counsel associated with Louis M. Singer, K.C., the controlling officer of the Amalgamated Builders' Council and Canadian Plumbing and Heating Guild, against a judgment of Mr. Justice Orde delivered May 5, 1930, dismissing his suit against Gordon Waldron, K.C., Commissioner at the investigation into the Amalgamated Builders' Council under the Combines Investigation Act in 1929, for \$25,000 for alleged slander was dismissed in a judgment delivered at Osgoode Hall on June 15, 1931, by the First Divisional Court, Mr. Justice Hodgins dissenting. The judgment of Mr. Justice Orde was reported in the LABOUR GAZETTE, May, 1930, at p. 613.

The appeal was heard on April 20 and 21, by Mulock, C.J.O., Magee, Hodgins, Middleton and Grant, J.J.A. Mr. Justice Middleton, writing the judgment of the Court, stated in reviewing the facts of the case, that during the course of the investigation under the Combines Investigation Act "it was suggested that the plaintiff, who is a practising barrister and solicitor, had suggested or advised the things that were shown to have been done and which, in the opinion of the Commissioner constituted

a combine. The Commissioner expressed his disapproval of the plaintiff's conduct in strong and emphatic language. Hence this action."

"Upon the argument of the appeal," the judgment continues, "the plaintiff confined himself to the presentation of three contentions only, although the notice of motion took a wider range. During the course of the argument it became plain that there was only one contention really relied upon, to wit, that the appointment of the plaintiff under the Statute in question, did not confer upon him a status entitling him to rely upon that immunity which is commonly described as the judicial privilege, or the privilege of courts and other tribunals exercising true judicial functions."

The Court reviews the law relating to judicial privilege and makes extended reference to cases relating to this subject. In its conclusion the judgment states: "This case emphasizes the impossibility of an individual discharging a duty cast upon him by the law of the land, if at all times he should be constantly in fear of actions against him by reason of that which he might do in the discharge of this duty" The appeal by Mr. O'Connor is dismissed with costs.

Mr. Justice Hodgins in his dissenting minority judgment states that "there is a great preponderance of authority in favour of absolute privilege for those who act or profess to

act judicially in performing some statutory duty but none to my mind which settle definitely that there is no limit to what can be said to and of those who are during an inquiry being examined in public and in the face of the press and who are not then on their trial.

"As Commissions such as the one in question are frequently issued in Canada to Judges and others to inquire into social, economic and professional matters, and in some cases into questions which on working out may touch some political issue or party, it is to my mind advantageous that an authoritative pronouncement should be arrived at and that that can only be done by sending the case for trial.

"Apart from that view I think that the plaintiff is entitled to set up and prove, if he can, the words which the defendant does not admit using, as they seem rather irrelevant to the inquiry. The plaintiff has also the right to dispute the regularity of the issue of the Commission itself. On the whole therefore I am inclined to the view that the appeal should be allowed and the action sent to trial."

Mr. W. F. O'Connor appeared before the Court on his own behalf and H. H. Davis, K.C., acted as counsel for Mr. Gordon Waldron.

On behalf of R. E. Belyea and H. A. Weinraub, it has been intimated that appeals will be carried to the Supreme Court of Canada.

The Automobile Industry in Canada, 1930

Production from the automobile industry in Canada during 1930 was valued at \$101,677,487, according to a recent report prepared by the Dominion Bureau of Statistics. This value was 43 per cent below the record which was established in the previous year at \$177,315,593 and was the lowest reported for the industry since 1924. The total value for the industry includes the selling value at the works of cars and parts made in the automobile manufacturing plants and also the amount received for custom work and repairs done in these factories. Automobile production alone amounted to 153,372 cars with a sales value, f.o.b. plant, of \$91,766,806. This was a decline of 42 per cent in number and 44 per cent in value from 1929 when the high level of 262,625 cars valued at \$163,497,675 was attained. Export shipments (including re-exports) totalled 45,371 cars which was a drop of 56 per cent from the previous year and imports numbered 23,233 cars or 48 per cent less than the corresponding total of 44,724 in 1929.

During 1930 a total of 11 companies manufactured or assembled motor cars in Canada and sixteen separate factories were in operation. Ten establishments were in Ontario, 2 in Quebec, 2 in British Columbia, 1 in Manitoba, and 1 in Saskatchewan.

Capital employed in the industry was given at \$90,671,678; of this total, \$51,985,366 represented the value of lands, buildings, fixtures and machinery.

The average number of employees in 1930 was 12,541, as compared with 16,435 in 1929. The 2,208 salaried employees were paid \$4,775,918 during the year, and the 10,333 wage-earners received \$14,697,864. The number of wage-earners on the payrolls each month varied from 13,282 in April to 7,513 in October, the average being 10,333.

The recent report on "The Tourist Trade in Canada, 1930" issued by the Bureau, estimates the gross value of the automobile tourist trade to Canada at \$202,409,000 and the amount expended in the United States by Canadian motor tourists at \$63,489,000 as compared with revised data for 1929 of \$215,577,000 and \$65,055,000 respectively.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Fifteenth Session of the International Labour Conference

THE Fifteenth Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held at Geneva, Switzerland, from May 28 to June 17, 1931.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreements.

Fourteen previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (LABOUR GAZETTE, October, 1920); Geneva, 1921 (LABOUR GAZETTE, January, 1922); Geneva, 1922 (LABOUR GAZETTE, December, 1922); Geneva, 1923 (LABOUR GAZETTE, December, 1923); Geneva, 1924 (LABOUR GAZETTE, August, 1924); Geneva, 1925 (LABOUR GAZETTE, July, 1925); Geneva, 1926 (8th and 9th Sessions) (LABOUR GAZETTE, July, 1926); Geneva, 1927 (LABOUR GAZETTE, July, 1927); Geneva, 1928 (LABOUR GAZETTE, July, 1928); Geneva, 1929 (LABOUR GAZETTE, July, 1929); Geneva, 1929 (LABOUR GAZETTE, December, 1929); and Geneva, 1930 (LABOUR GAZETTE, July, 1930).

The Treaty of Peace requires that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year." It will be observed that two sessions of the Conference were held in 1926 and also in 1929.

Each member state is entitled, under the terms of the Treaties of Peace, to send four delegates to the International Labour Conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the conference may take the form of either a Recommendation or a Draft Convention. A two-third majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different

countries represented in the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

In Canada, the provisions of the different Draft Conventions and Recommendations have been examined in all cases by the Law Officers of the Crown to determine whether the subject-matters were within federal or provincial jurisdiction and they have thereupon been brought before the Dominion Parliament and the Provincial Governments, together with the Law Officers' reports on the subject of jurisdiction.

Conference Agenda

The agenda of the Fifteenth Session of the Conference comprised three items as follows: (1) The Age of Admission of Children to employment in non-industrial occupations; (2) Hours of Work in Coal Mines; and (3) Partial Revision of the Convention concerning employment of women during the night.

In accordance with the double-discussion procedure, the first of these items was the subject of a preliminary discussion with a view to the possibility of adopting a Draft Convention or Recommendation at the 1932 session. The second item came before the Fourteenth Session of the Conference, on which occasion a Convention was drafted dealing with the restriction of hours of work in coal mines in European countries, but failed on the final vote to obtain the necessary two-thirds majority. The third item related to minor amendments which had been proposed in the Convention concerning the employment of women during the night as the result of experience gained under the Convention since its adoption in 1919.

Decisions of the Conference

The decisions of the Fifteenth Conference may be summarized as follows:—

Age of Admission of Children to Employment in Non-Industrial Occupations

After a first discussion, the Conference decided by 101 votes to nil to place on the

agenda of the next session, for a second and final discussion, the question of the age of admission of children to employment in non-industrial occupations.

The Conference adopted unanimously a number of "conclusions" drawn up by a committee of the Conference with regard to the points on which governments should be consulted, by means of a questionnaire to be prepared and issued by the International Labour Office, prior to the second stage of the discussion. These conclusions were prefaced by the statement that, in the opinion of the committee, the questionnaire should be framed in such a way as to lead up to a Draft Convention.

Among the points on which governments are to be consulted is the question whether the minimum age should be fixed at 14. Other questions relate to light employment outside school hours, domestic work, work in theatres and film studios, and street trading.

Hours of Work in Coal Mines

The Conference adopted by 81 votes to 2 a Draft Convention for the limitation of hours of work in coal mines.

The Convention limits to 7½ hours a day the hours of work for underground workers in all coal mines, whether hard coal or lignite, the hours being calculated "from bank to bank." Provision is made for the authorization of overtime in certain circumstances and within certain limits. The Convention will come into force after ratification by any two of seven specified European coal-producing countries. Within three years of its coming into operation, the Conference will consider its revision with a view to a further reduction of the maximum working day and of the amount of overtime allowed.

The Conference also adopted unanimously a resolution requesting the governing body to consider the possibility of placing on the agenda of an early session of the Conference the question of the employment of workers under 16 and of women in underground work in coal mines.

Night Work of Women

The Conference adopted, by small majorities, two amendments to the Washington (1919) Convention concerning the night work of women. They related to the exemption from the general prohibition of women holding positions of managerial responsibility, and to the precise hours to be deemed "night." These amendments were embodied in a new Draft Convention, which on the final vote obtained only 74 votes against 40. As this did not give the necessary two-thirds majority required by the Peace Treaty, the Convention was not adopted.

Application of Conventions

The Conference took note of reports presented by the governing body on the application of a number of conventions which have been in force for ten years. It referred to the next session which will deal with maritime questions the reports relating to two maritime conventions.

The conference unanimously adopted the report of a committee on the annual reports presented by governments with regard to the observance of conventions ratified by them. The report contained observations on the failure of certain governments to present their reports in due time, or to apply conventions strictly, and on certain divergencies of interpretation which had been noticed.

Standing Orders

The Conference adopted some slight alterations in the Standing Orders with regard to the appointment of substitute delegates and substitute advisers. It referred to the governing body the questions of the use of non-official languages and of standing orders for committees of the Conference.

Governing Body

The Conference elected a new governing body, on the original basis of a membership of 24, the amendment to Article 393 of the Treaty for the enlargement of the membership to 32 not yet being in operation. A resolution was adopted expressing disappointment that this should be so, and requesting the governing body to make every effort to ensure that there should be no further delay in the ratification and bringing into force of the amendment, in order that the oversea countries might obtain due representation.

Resolutions

A number of resolutions were adopted. For the most part they called for the investigation of specific problems; in some cases they suggested that the problems should be considered by future sessions. The resolutions related to incomplete delegations, the application of recommendations, labour conditions in the East, representation of native and coloured workers in the Conference, conditions of labour in unorganized industries and non-industrial occupations, accidents to electrical workers, the promotion of ratifications, freedom of association, economic agreements in the coal industry, silicosis, conditions in the iron and steel industry, action to remedy unemployment, and consultation of governments on the ten-yearly reports relating to the operation of Conventions.

Countries Represented

Of the fifty-five countries which are members of the International Labour Organization, forty-six sent delegates to the fifteenth session. In addition, Mexico and Turkey each sent an observer. A list of the countries represented follows:—

Argentine Republic	Irish Free State
Australia	Italy
Austria	Japan
Belgium	Liberia
Brazil	Lithuania
Bulgaria	Luxemburg
Canada	Netherlands
Chile	Norway
China	Panama
Colombia	Paraguay
Czechoslovakia	Persia
Denmark	Peru
Dominican Republic	Poland
Estonia	Portugal
Finland	Rumania
France	Siam
Germany	South Africa
Great Britain	Spain
Greece	Sweden
Guatemala	Switzerland
Haiti	Uruguay
Hungary	Venezuela
India	Yugoslavia

Canadian Delegation

The Canadian delegates to the Conference were as follows:—

Delegates representing the Dominion Government:

The Hon. G. Howard Ferguson, High Commissioner for Canada in London.

Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva.

Adviser to the Government Delegates:

Mr. V. A. Sinclair, K.C., chairman of the Ontario Workmen's Compensation Board.

Workers' Delegate:

Mr. P. M. Draper, secretary-treasurer, Trades and Labour Congress of Canada.

Employers' Delegate:

Mr. H. W. Macdonnell, secretary of the Industrial Relations committee of the Canadian Manufacturers' Association.

On account of existing economic conditions in Canada, no technical advisers were appointed by the Dominion Government to accompany any of the delegates to the Conference this year. Mr. V. A. Sinclair, Chairman of the Workmen's Compensation Board of Ontario, attended the Conference, however, on behalf of the Government of Ontario and was accredited as an Adviser to the Government delegates.

Officers of the Conference

The following were elected as officers of the Conference:—

President.—Mr. Francois Sokal, Permanent Polish Delegate, was unanimously elected.

Vice-President.—Mr. Bramnaes, Government Delegate for Denmark; Mr. Gemmill, Employers' Delegate for South Africa; and Mr. Schürch, Workers' Delegate for Switzerland.

Secretary-General.—Mr. Albert Thomas, Director of the International Labour Office.

Deputy Secretary-General.—Mr. Harold B. Butler, Deputy Director of the International Labour Office.

Election of the Governing Body

During the sessions of the Conference an election was held for the appointment of the Governing Body of the International Labour Office, which, under the requirements of Article 393 of the Treaty of Versailles, is chosen every three years. The membership of this body comprises twelve Government representatives (of whom eight are entitled to be chosen, under the provisions of the Treaty, from the member states which are of the "chief industrial importance," and four by the Government delegates to the Conference), six persons elected by the Employers' delegates to the Conference and six persons elected by the Workers' delegates to the Conference. It was decided by the Council of the League of Nations in 1922 that the eight countries, members of the International Labour Organization, which are of "chief industrial importance" are as follows, in the alphabetical order of the names in the French language: Germany, Belgium, Canada, France, Great Britain, India, Italy and Japan. The Governments of these countries, including Canada, retain their membership accordingly in the Governing Body. Four other Governments were chosen for membership in the Governing Body by the Government group in attendance at the Conference as follows: Brazil, Poland, Spain and Denmark. The following were chosen to represent the Employers' and Workers' groups respectively:—

Employers' Group.—Mr. Gemmill (South Africa); Mr. Lambert-Ribot (France); Mr. Oersted (Denmark); Mr. Olivetti (Italy); Mr. Forbes Watson (British Empire); and Mr. Vogel (Germany).

Workers' Group.—Mr. Hayday (British Empire); Mr. Johanson (Sweden); Mr. Jouhaux (France); Mr. Mertens (Belgium); Mr. Moore (Canada); and Mr. Muller (Germany).

Appointment of Committees

Committees were appointed by the Conference as follows:—

Selection Committee.—Twenty-four members: 12 from the Government group and 6 from the Employers' and Workers' groups, respectively.

Standing Orders Committee.—Thirty members.

Committee on Hours of Work in Coal Mines.—Forty-eight members.

Committee on the Age of Admission of Children to Employment in Non-Industrial Occupations.—Forty-two members.

Committee on the Partial Revision of the Convention Concerning Employment of Women During the Night.—Thirty-six members.

Committee on Article 408.—Thirty-six members. (This committee considers the annual reports by States on measures taken to give effect to Draft Conventions ratified by them, these reports being summarized in the Director's Report to the Conference and accompanied by the findings of the Committee of Experts.)

Hon. G. H. Ferguson, senior Government Delegate of Canada, was chosen as Chairman of the Selection Committee, which is regarded as the principal committee of the Conference. Canada was represented on all but the second and third of the above-mentioned committees.

The President's Address

Mr. Francois Sokal, in his presidential address to the Conference, directed attention to the existing economic depression and the resultant unemployment.

"Although," he said, "the economists of the whole world collaborating to discover the means of overcoming the crisis now upon us have not yet found explanations satisfactory to all those seeking the real causes of the evil, two facts are nevertheless becoming more and more evident. The first is that this crisis, the causes of which are essentially international, a crisis which affects all countries without exception, can be overcome only by common action and not by isolated national action. The second is that this very state of crisis contains the seeds of a new economic and social order towards which the world is moving with ever-increasing rapidity. Only some few days ago Pope Pius XI expressed this necessity in his Encyclical *Quadragesimo Anno*, issued on the occasion of the fortieth anniversary of the Encyclical *Rerum Novarum*, by declaring that "the reorganization of the

economic system and its reconciliation with the principles of social justice are an absolute necessity."

"Human thought is beginning to rebel against the acceptance as an act of fate of economic cycles, against those 'inevitable' periods of depression which each time deliver millions of human beings into the power of poverty.

"The present crisis thus teaches us that it is of fundamental necessity to modify the economic and social structure of the world by concerted international action.

"In this connection there arises a problem, which has always confronted us whenever any task, no matter how unimportant, has been attempted by the International Labour Organization. I mean the interdependence of social and economic questions. How often this problem has been evident at Sessions of the Conference, in the Governing Body, and in the criticisms and appreciations of our work.

"Those who in the past regarded social reform solely as the realization of certain humanitarian reforms affecting the workers are coming to appreciate more clearly the purely economic importance of those reforms. Social policy, which has hitherto been dominated entirely by moral ideals, is beginning to seek for allies in the economic sphere. This is one of the most noticeable features of contemporary social life. The idea that social legislation may be a powerful force capable of influencing economic life is spreading. The question of the reduction of working hours is an example. This important social reform, which the workers of all countries have always made their first demand, is beginning to be regarded as one of the means of regulating production. The reduction of working hours as a means of combating unemployment and over-production has ceased to be a demand put forward by the workers alone. Without expressing any view on its significance in this respect, I may point out that it is very frequently mentioned in discussions on the means of preventing unemployment.

"Economic and social life are thus tending towards greater unity. Economic policy and social policy are two aspects of one problem—the direction which should be given to production, commerce and consumption. These two departments of public and international activity are as closely interdependent as different organs of the same body.

"If, therefore, it is desired to reconstruct the economic life of the world on rational lines, it is essential that there should be an economic policy inspired by social principles and a social policy conscious of the economic aims which it pursues.

"After ten years of strenuous work, new tasks await us; are we progressing on the right lines? Have we understood the historic commands dictated to us by the conditions in which we now have to work? I hope, and indeed I am profoundly convinced, that, thanks to the spirit of solidarity by which we are inspired, our work will effectively contribute to overcoming the crisis from which the world is suffering so acutely, and will open the way to further progress."

Discussion of the Director's Report

The Annual Report of the Director of the International Labour Office, a summary of which appeared in the June issue of the *LABOUR GAZETTE* (pp. 678-682), was under discussion in the Conference at a number of successive sittings.

No fewer than 53 speakers took part in this discussion—19 representatives of Governments—15 of employers and 19 of workers, from 28 countries in all.

First, it was recognized by all speakers—Government delegates, employers and workers equally—that the present crisis is not a mere cyclical phenomenon, due to the more or less regular alternation of prosperity and the reverse with which economists have for many years been familiar, but is rather the product of the addition to such a periodical depression of an exceptional dislocation of the economic life of the world.

Secondly, the speeches showed that the factors responsible for this disorganization are manifold, and political and financial rather than social, and that the evil is not susceptible of treatment by any single or clear-cut remedy. There was, it is true, a tendency to argue from the employers' side that the solution would be found in a lowering of the cost of production by a reduction of wages and a curtailment of social charges. On the other hand, workers' delegates sought to demonstrate that the way out was by a shortening of hours and a raising of wages. But it was generally recognized that the present situation was mainly attributable to the transition from an old economic system to a new, and that what was needed was a new policy adapted to meet new conditions.

Thirdly, it was recognized on the whole that the formulation and execution of any such policy, having regard to the political, financial and economic questions involved, was outside the scope of an institution such as the International Labour Organization, occupied primarily with social questions, but that, having regard to the interdependence of economic and social conditions, it was the bounden duty of the Organization to play an active

part in the devising and application of remedial measures.

Finally, in spite of some criticisms, there was common agreement that, pending the adoption of remedies which would go to the root of the trouble, it was the duty of the members of the International Labour Organization to persist in its program, including the establishment and co-ordination of labour exchanges, the advancement of public works and the institution or extension of unemployment insurance, all of which, although avowedly "palliatives," tend to mitigate the acuteness of unemployment.

The Director's Reply

Mr. Albert Thomas, Director of the International Labour Office, in replying to the discussion on his Annual Report, dealt in the main with the existing economic crisis and unemployment. Recent statistics of unemployment received in the International Labour Office had shown slight improvement in the situation in certain countries, but not more than was accounted for by seasonal variations, while in other countries, not subject to seasonal changes, the critical condition remained unchanged and in two or three countries was actually worse. The existing unemployment, indeed, was world-wide. True (he said) each country had its own illness but there was a sort of universal influenza which aggravated the situation everywhere. The duty of the International Labour Organization was, therefore, to do what might be possible to assist. Unhappily, in these cases there was no such thing possible as a specific solution. There were a number of different solutions and remedies which might be applied but no one solution existed for the unemployment crisis.

The Director proceeded to discuss the suggestions which had been made in his Annual Report for the relief of unemployment (see *LABOUR GAZETTE*, June, 1931, pp. 678-682), and pressed these proposals upon the further attention of the International Labour Organization: public employment exchanges; the gold standard; vocational guidance and re-training; the raising of the school-leaving age and of the minimum age for admission to industrial employment; hours of labour; migration; unemployment insurance; and public work.

"To-day," declared Mr. Thomas, "when the United States and the old world are trying by all the means at the disposal of the modern capitalist system to create more organization and order, there is a ready-made formula on the other side of Europe in case we should fail. This is a danger which threatens us and of which we are warned by far-seeing men of all parties. What I wish to em-

phasize is this: if we want to spare the world the waste of human resources from which Russia suffered during the first years of her revolution and which she is now trying to remedy by bending all her energies for the realization of the Five-Year Plan; if we wish to bring about the renewal, the transformation and the organization of Western and Central Europe and North America without violence and loss of energy, we must study together the methods of peaceful progress towards justice and stability. It is essential that we should all realize the efforts of collaboration which are necessary between all those who care for civilization."

Annual Reports under Article 408 of the Treaty of Versailles

The annual reports made by various countries on measures taken by them to give effect to draft conventions which they had respectively ratified under provisions of Article 408 of the Treaty of Versailles were referred to a committee composed of 42 members of the Conference, of whom fourteen represented governments, fourteen employers and fourteen workers. Mr. P. M. Draper, Workers' Delegate of Canada, was elected Vice-Chairman of this committee. Following the procedure which had been adopted in 1929 and 1930, the reports of the member states had been submitted on these matters for preliminary examination to a committee of international experts in advance of the committee of the 1931 Conference. The committee of experts in its report referred particularly to the following points: (a) missing, incomplete, or late reports; (b) failure to carry out the obligation incumbent upon the States which have ratified

a convention, under Article 405, paragraph 7, of the Treaty of Versailles; (c) divergent views with regard to the interpretation of certain conventions; and (d) application of the conventions to colonies.

The committee on Article 408 appointed in 1930 felt obliged to state in its report that "no ratification at all is better than a ratification which remains ineffective". The Conference committee of 1931 associated itself with this opinion and affirmed that the conventions of the International Labour Conference are of a strictly legal character and that immediately after the entry into force of each Convention, the obligations undertaken by the contracting states must be strictly and fully carried out. No question was raised either by the experts or by the committee of the Conference in regard to any of the ratifications which have been registered by Canada and their due observance.

In view of divergent views in regard to the interpretation of certain conventions, the committee suggested that any questions of this nature which may arise should be submitted in the first instance to the committee of experts appointed on Article 408 for examination and report and that in case of sufficient practical importance the question in dispute should be referred to the Permanent Court of International Justice for authoritative interpretation.

The report of the Conference on Article 408 was adopted without amendment by the general Conference.

The full texts of the Draft Convention concerning Hours of Work in Coal Mines, and of the various Resolutions that were adopted by the Conference are as follows:—

DRAFT CONVENTION CONCERNING HOURS OF WORK IN COAL MINES

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Fifteenth Session on May 28, 1931, and

Having decided upon the adoption of certain proposals with regard to hours of work in coal mines, which is the second item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Draft International Convention,

adopts, this day of June of the year one thousand nine hundred and thirty-one, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1

This Convention shall apply to all coal mines, that is to say, to any mine from which only

hard coal or lignite, or principally hard coal or lignite together with other minerals, is extracted.

For the purpose of this Convention, the term "lignite mine" shall mean any mine from which coal of a geological period subsequent to the carboniferous period is extracted.

Article 2

For the purpose of this Convention, the term "worker" shall mean:

- (a) In underground coal mines, any person occupied underground, by whatever employer and on whatever kind of work he may be employed, except persons engaged in supervision or management who do not ordinarily perform manual work;
- (b) In open coal mines, any person employed directly or indirectly in the extraction of coal, except persons engaged in supervision or management who do not ordinarily perform manual work.

Article 3

Hours of work in underground hard coal mines shall mean the time spent in the mine calculated as follows:

1. Time spent in an underground mine shall mean the period between the time when the worker enters the cage in order to descend and the time when he leaves the cage after re-ascending.

2. In mines where access is by an adit the time spent in the mine shall mean the period between the time when the worker passes through the entrance of the adit and the time of his return to the surface.

3. In no underground hard coal mine shall the time spent in the mine by any worker exceed seven hours and forty-five minutes in the day.

Article 4

The provisions of this Convention shall be deemed to be complied with if the period between the time when the first workers of the shift or of any group leave the surface and the time when they return to the surface is the same as that laid down in paragraph 3 of Article 3. The order of and the time required for the descent and ascent of a shift and of any group of workers shall, moreover, be approximately the same.

Article 5

Subject to the provisions of the second paragraph of this Article, the provisions of this Convention shall be deemed to be complied with if the national laws or regulations prescribe that for calculating the time spent in the mine the descent or ascent of the workers is to be calculated according to the weighted average duration of the descent or ascent of all shifts of workers in the whole country. In this case, the period between the time when the last worker of the shift leaves the surface and the time when the first worker of the same shift returns to the surface shall not in any mine exceed seven hours and fifteen minutes; provided that no method of regulation shall be permitted by which the hewers as a class of workers would on the average work longer hours than the other classes of underground workers in the same shift.

Any Member which, having applied the method laid down in this Article, subsequently applies the provisions of Article 3 and 4 shall make the change simultaneously for the whole country and not for any part thereof.

Article 6

1. Workers shall not be employed on underground work in coal mines on Sundays and legal public holidays. National laws or regulations may, however, authorize the following exceptions for workers over 18 years of age:

- (a) For work which, owing to its nature, must be carried on continuously;
- (b) For work in connection with the ventilation of the mine and the prevention of damage to the ventilation apparatus, safety work, work in connection with first aid in the case of accident and sickness, and the care of animals;
- (c) For survey work in so far as this cannot be done on other days without interrupting or disturbing the work of the undertaking;
- (d) For urgent work in connection with machinery and other appliances which cannot

not be carried out during the regular working time of the mine, and in other urgent or exceptional cases which are outside the control of the employer.

2. The competent authorities shall take appropriate measures for ensuring that no work is done on Sundays and legal public holidays except as authorized by this Article.

3. Work permitted under paragraph 1 of this Article shall be paid for at not less than one-and-a-quarter times the regular rate.

4. Workers who are engaged to any considerable extent on work permitted under paragraph 1 of this Article shall be assured either a compensatory rest period or an adequate extra payment in addition to the rate specified in paragraph 3 of this Article. The detailed application of this provision shall be regulated by national laws or regulations.

Article 7

Lower maxima than those specified in Articles 3, 4 and 5 shall be laid down by regulations made by public authority for workers in workplaces which are rendered particularly unhealthy by reason of abnormal conditions of temperature, humidity or other cause.

Article 8

1. Regulations made by public authority may provide that the hours specified in Articles 3, 4, 5 and 7 may be exceeded:

(a) In case of accident, actual or threatened, in case of *force majeure*, or in case of urgent work to be done to machinery, plant or equipment in the mine as a result of a breakdown of such machinery, plant or equipment, even if coal production is thereby incidentally involved, but only so far as may be necessary to avoid serious interference with the ordinary working of the mine;

(b) For workers employed on operations which by their nature must be carried on continuously or on technical work, in so far as their work is necessary for preparing or terminating work in the ordinary way or for a full resumption of work on the next shift, provided, however, that this shall not refer to the production or transport of coal. The additional time authorized by this paragraph shall not exceed half an hour on any day for any individual worker, and in the case of all mines in normal operation the number of workers concerned shall at no time exceed 5 per cent of the total number of persons employed at the mine.

2. Overtime worked in accordance with the provisions of this Article shall be paid for at not less than one-and-a-quarter times the regular rate.

Article 9

Regulations made by public authority may, in addition to the provisions of Article 8, put not more than sixty hours' overtime in the year at the disposal of undertakings throughout the country as a whole.

This overtime shall be paid for at not less than one-and-a-quarter times the regular rate.

Article 10

The regulations mentioned in Articles 7, 8 and 9 shall be made by public authority after consultation with the organizations of employers and workers concerned.

Article 11

The annual Reports to be submitted under Article 408 of the Treaty of Versailles and the corresponding Articles of the other Treaties of Peace shall contain all information as to the action taken to regulate the hours of work in accordance with the provisions of Articles 3, 4 and 5. They shall also furnish complete information concerning the regulations made under Articles 7, 8, 9, 12, 13 and 14 and concerning their enforcement.

Article 12

In order to facilitate the enforcement of the provisions of this Convention, the management of every mine shall be required:—

(a) To notify by means of notices conspicuously posted at the pithead or in some other suitable place, or by such other method as may be approved by the public authority, the hours at which the workers of each shift or group shall begin to descend and shall have completed the ascent.

These hours shall be approved by the public authority and be so fixed that the time spent in the mine by each worker shall not exceed the limits prescribed by this Convention. When once notified, they shall not be changed except with the approval of the public authority and by such notice and in such manner as may be approved by the public authority.

(b) To keep a record in the form prescribed by national laws or regulations of all additional hours worked under Articles 8 and 9.

Article 13

In underground lignite mines Articles 3 and 4 and Articles 6 to 12 of this Convention shall apply subject to the following provisions:—

(a) In accordance with such conditions as may be prescribed by national laws or regulations, the competent authority may permit collective breaks involving a stoppage of production not to be included in the time spent in the mine, provided that such breaks shall in no case exceed thirty minutes for each shift. Such permission shall only be given after the necessity for such a system has been established by official investigation in each individual case, and after consultation with the representatives of the workers concerned.

(b) The number of hours overtime provided for in Article 9 may be increased to not more than seventy-five hours in a year.

In addition, the competent authority may approve collective agreements which provide for not more than seventy-five hours further overtime a year. Such further overtime shall likewise be paid for at the rate prescribed in Article 9, paragraph 2. It shall not be authorized generally for all underground lignite mines, but only in the case of individual districts or mines where it is required on account of special technical or geological conditions.

Article 14

In open hard coal and lignite mines Articles 3 to 13 of this Convention shall not be applicable. Nevertheless, members which ratify this Convention undertake to apply to these

mines the provisions of the Washington Convention of 1919 limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week, provided that the amount of overtime which may be worked in virtue of Article 6, paragraph (b), of the said Convention shall not exceed one hundred hours a year. Where special needs so require, and only in such cases, the competent authority may approve collective agreements which provide for an increase of the aforesaid one hundred hours by not more than a further hundred hours a year.

Article 15

Nothing in this Convention shall have the effect of altering national laws or regulations with regard to hours of work so as to lessen the guarantees thereby afforded to the workers.

Article 16

The operation of the provisions of this Convention may be suspended in any country by the Government in the event of emergency endangering the national safety.

Article 17

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 18

This Convention shall be binding only upon those members of the International Labour Organization whose ratifications have been registered with the Secretariat.

It shall come into force six months after the date on which the ratifications of two of the following members have been registered by the Secretary-General of the League of Nations: Belgium, Czechoslovakia, France, Germany, Great Britain, Netherlands and Poland.

Thereafter the Convention shall come into force for any Member six months after the date on which its ratification has been registered.

Article 19

As soon as the ratifications of two of the members mentioned in the second paragraph of Article 18 have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other members of the Organization.

Article 20

A member which has ratified this Convention may denounce it after the expiration of five years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each member which has ratified this Convention and which does not, within the year following the expiration of the period of five

years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of three years under the terms provided for in this Article.

Article 21

At the latest within three years from the coming into force of this Convention the Governing Body of the International Labour Office shall place on the Agenda of the Conference the question of the revision of this Convention on the following points:—

- (a) The possibility of a further reduction in the hours of work provided for in paragraph 3 of Article 3;
- (b) The right to have recourse to the exceptional method of calculation laid down in Article 5;
- (c) The possibility of modifying the provisions of Article 13, paragraphs (a) and (b), in the direction of a reduction of the hours of work;
- (d) The possibility of a reduction in the amount of overtime provided for in Article 14.

Moreover, at the expiration of each period of ten years after the coming into force of this

Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

Article 22

Should the Conference adopt a new Convention revising this Convention in whole or in part, the ratification by a member of the new revising Convention shall *ipso jure* involve denunciation of this Convention without any requirement of delay, notwithstanding the provisions of Article 20 above, if and when the new revising Convention shall have come into force.

As from the date of the coming into force of the new revising Convention, the present Convention shall cease to be open to ratification by the members.

Nevertheless, this Convention shall remain in force in its actual form and content for those members which have ratified it but have not ratified the revising Convention.

Article 23

The French and English texts of this Convention shall both be authentic.

AGE OF ADMISSION OF CHILDREN TO EMPLOYMENT IN NON-INDUSTRIAL OCCUPATIONS

The following conclusions comprise the points which were adopted by a majority of the Committee appointed to examine the question of the age of admission of children to employment in non-industrial occupations:—

Preamble

The Conference, having held a first discussion on the question of the age of admission of children to employment in non-industrial occupations, first item on the Agenda, requests the International Labour Office to frame a complete questionnaire in order to enable the Governments to express their views on all the points which might be included in the international regulations contemplated and considers it desirable to consult the Governments in particular on the following points:—

I. General Principle

(1) Whether they are in favour of international regulations, i.e. a Draft Convention or Recommendation, on the subject of the age of admission of children to employment in non-industrial occupations.

The Committee expressed the opinion that the questionnaire should be framed in such a way as to lead up to a Draft Convention.

II. Scope

(2) Whether all children not covered by the three Conventions already adopted by the International Labour Conference should be included in the present Convention.

(3) (a) Whether they consider that the competent authority in each country should define the line of demarcation between non-industrial occupations and industrial, agricultural and maritime occupations.

(b) Whether they consider that the competent authority should consult employers' and workers' organizations before defining the above line of demarcation.

III. Age of Admission

(4) The desirability of adopting a general age limit; if so, what age?

(5) (a) If they are of opinion that 14 years should be the age of admission of children to non-industrial occupations.

(b) If they consider that an exception should be made for those countries where the school-leaving age is higher than fourteen years: in such cases should not the age of admission to occupation coincide with the school-leaving age?

IV. Effects of Employment on Education, Light Employment

(6) The desirability of prohibiting all employment during hours of school attendance.

(7) The desirability of prohibiting altogether the employment of children outside of school hours, as this would be in their educational interest.

(8) The possibility of allowing light employment outside school hours, provided such employment is not dangerous or unsuitable for children and not such as to prejudice their attendance at school.

(9) The desirability of leaving it to the competent authority in each country to define "light employment," or on the contrary of including a list of such employments in the regulations under consideration.

(10) The desirability of leaving it to the competent authority in each country to lay down the conditions in which light employment should be authorized.

(11) The desirability of limiting employment in light work outside school hours.

(12) The desirability of limiting if necessary by international regulations the employment in light work of children outside school hours, by fixing a definite number of hours:

- on days when instruction is given both morning and afternoon;
- on half holidays;
- on whole holidays.

(13) The desirability, in the interest of the physical and mental development of young people, of the absolute prohibition of overtime and night work for all children employed in non-industrial occupations. Is the definition of night work to be all work performed between 8 p.m. and 8 a.m.?

(14) The desirability of prohibiting or limiting employment on Sundays, public holidays and during school holidays.

(15) The desirability of entirely prohibiting, by international regulations, the employment in light work, before the minimum age of admission, of children whose health or education might suffer thereby.

V. Exemptions

(16) The desirability of taking special account, and if so in what way, of certain occupations, e.g., domestic work.

(17) Whether an exception should be made in the case of establishments in which only members of the same family are employed.

(18) The desirability of special regulations or special exemption in the case of technical and professional schools, this exception being conditional upon the work being essentially of an educative character and not utilized for commercial profit, and being approved and supervised by public authority.

(19) In the case of children being employed in theatres and in the film industry in the interests of art and science, what special safeguards for the health and physical development of such children they would recommend?

(20) Desirability of the absolute prohibition of the employment of children in those occupations which are dangerous in character or likely to injure their morals or health.

(21) Desirability, by international regulations, of deciding the question of what occupa-

tions are considered specially injurious to the health or morals of children and of making special regulations for them.

(22) Desirability of special regulations for the age of admission to street trading.

(23) In view of the moral dangers attending street trading.

(a) in the case of young females, if they should be prohibited altogether from street trading up to the age of 18;

(b) in the case of young males, if the minimum age should not be higher than the age of admission to non-industrial occupations, and if so, what the age of admission should be?

(24) Desirability of treating employment at counters outside shops in the same way, as regards age of admission, as street trading.

VI. Various Provisions

(25) a. Desirability of modifications for countries in which climatic conditions or other special circumstances make the conditions substantially different.

b. Desirability of a special minimum age for these countries and, if so, what age.

VII. Application

(26) Desirability of the following methods of enforcement of the provisions of the Convention:

(a) lists of children employed to be kept by the employer;

(b) licences to be carried and badges to be worn by children engaged in outdoor occupations;

(c) special consideration to be given to public entertainments, such as licences, right of entry, etc.

(d) penalties to be imposed for non-observance of conditions of control;

(e) any other recommendations suggested.

(27) Whether provision should be made for adequate public supervision of the enforcement of the protective measures laid down.

(28) Whether persons who have been convicted of crime or who are notorious drunkards should be forbidden to employ children other than their own, and whether the same provision shall apply when such persons are living in the same family community and desire to employ children other than their own.

RESOLUTION CONCERNING THE STATES MEMBERS OF THE ORGANIZATION AND INCOMPLETE DELEGATIONS

Whereas the International Labour Organization is intended to be universal in its membership and in the scope of its activities;

And whereas certain countries of industrial importance and others have not yet seen their way to become Members of the Organization with the result that large numbers of workers are excluded from the international protection that only the Organization can give, and further certain countries which have already assumed the obligations of membership are still being represented by incomplete delegations at successive Sessions of the Conference thereby seriously disturbing the balance of interests represented in the Organization to the prejudice of the workers.

The Conference requests the Governing Body to consider the possibility and advisability of instructing the International Labour Office to prepare for the consideration of an early Session of the Conference a report on the steps, if any, which have been or may be taken to induce such countries as are not Members of the Organization either to become Members or to accept the Conventions and Recommendations passed by the Conference, indicating at the same time the progress which has been achieved in the direction of remedying the unsatisfactory situation which arises year after year in the Conference owing to the presence of incomplete delegations.

RESOLUTION CONCERNING THE EFFECT GIVEN TO THE RECOMMENDATIONS OF THE CONFERENCE

Whereas more than a decade has elapsed since the International Labour Organization was established and it seems desirable that the General Conference should have an opportunity for taking stock of the legislative and other results obtained from the Conventions and the Recommendations hitherto adopted with a view to ascertaining the practical benefits which have accrued to the workers as a consequence of the adoption and application of such Conventions and Recommendations; and

Whereas adequate machinery already exists in the procedure for submitting annual reports under Article 408 of the Treaty on the application of ratified Conventions including the work of the Committee of Experts and of the Conference Committee on Article 408, and in the ten-yearly reports on the working of the Con-

ventions provided for in the Conventions themselves to enable some idea to be formed as regards the extent to which the States have taken legislative or other measures to apply the Conventions to which they are parties and to some extent also the practical value of such Conventions, while no such machinery exists in the case of the Recommendations;

The Conference requests the Governing Body to consider the advisability of instructing the International Labour Office to submit for the consideration if possible of the next Session of the Conference a detailed report on the measures taken by the States Members to apply the Recommendations which they have accepted along with such material as is already available with regard to the working of the Convention.

RESOLUTION CONCERNING THE CONVOCATION OF AN ADVISORY CONFERENCE OF ASIATIC COUNTRIES

Whereas the labour conditions obtaining in the Asiatic countries are somewhat different from those obtaining in the Western countries;

Whereas those labour conditions deserve to be considered in greater detail than is generally possible at the General Conference, and improved so as to bring them more into conformity with the general standards laid down by the International Labour Organization;

Whereas it is commonly objected that many of the Conventions hitherto adopted by the General Conference were framed more particularly with reference to European conditions; and

Whereas the failure to ratify these Conventions on those and other grounds has caused profound disappointment among the workers throughout the Asiatic countries;

The Conference requests the Governing Body to consider the desirability of consulting the Governments of the Asiatic countries Members of the International Labour Organization with a view to the convening at a reasonably early date of an advisory conference, including representatives of organized employers and workers, to consider such special matters affecting labour conditions in the East as may appear proper to the Governing Body and to report thereupon to the Governing Body.

RESOLUTION CONCERNING REPRESENTATION AT THE CONFERENCE OF WORKERS IN COLONIES AND MANDATED TERRITORIES AND NATIVE COLOURED WORKERS

The Conference draws the attention of the States Members of the International Labour Organization to the Resolutions passed by the Tenth and Twelfth Sessions of the Conference regarding the desirability of securing direct representation at the Conference of workers in colonies and mandated territories and of native and coloured workers;

The Conference reaffirms the two Resolutions passed by the Tenth and Twelfth Sessions of

the International Labour Conference and hopes that the State Members which are responsible for the administration of colonies and mandated territories or countries wherein the white people are the ruling class but where the natives or coloured workers form either a majority or a substantial portion of the population, will give effect to the said Resolutions at the future sessions of the Conference.

RESOLUTION CONCERNING THE CONDITIONS OF WORK IN UNORGANIZED INDUSTRIES AND NON-INDUSTRIAL OCCUPATIONS IN ASIATIC COUNTRIES

Whereas the conditions of work in unorganized industries and non-industrial occupations of Asiatic countries are in many respects worse than those in organized and industrial occupations, and it is urgently desirable that the conditions in such industries and occupations should be improved as soon as possible;

The Conference requests the Governing Body to consider the advisability of requesting the Governments of the States Members concerned

to undertake in their respective countries enquiries into the conditions of labour in unorganized industries and non-industrial occupations, and to communicate the results of such enquiries not later than the end of the year 1933 to the International Labour Office, in order to enable the Governing Body and the Conference, in the light of all the facts available, to consider what action, if any, may be taken to improve the conditions of labour in such industries and occupations.

RESOLUTION CONCERNING THE PROTECTION AGAINST ACCIDENTS OF WORKERS EMPLOYED IN ELECTRIC INDUSTRIES

Whereas serious accidents are liable to occur to workers employed in the generation, transformation, distribution or use of electrical energy, and the general utilization of electrical power is rapidly extending, the Con-

ference invites the Governing Body to consider the advisability of placing the question of the protection against accidents of workers so employed on the Agenda of a future Session of the International Labour Conference.

RESOLUTION CONCERNING THE RATIFICATION OF INTERNATIONAL LABOUR CONVENTIONS

The Conference, having examined the Directors' Report on the progress of ratifications,

Expresses its disappointment that the ratification of its decisions has not been more rapid and more widespread;

Asks the International Labour Office to continue by every means in its power to draw attention to the importance and urgency of ratification;

Ventures to ask the Members of the Organization:—

(1) to give immediate consideration to the possibility of further ratifications, and

(2) to examine, particularly where constitutional reform is in prospect, the machinery for the consideration, ratification and application of international Labour Conventions.

RESOLUTION CONCERNING FREEDOM OF ASSOCIATION

The Conference requests the Governing Body of the International Labour Office to consider the possibility of placing the question of freedom of association on the Agenda of the Inter-

national Labour Conference in as short a time as possible, with a view to the adoption of an international Convention to ensure freedom of association of the workers.

RESOLUTION CONCERNING MEASURES TO BE TAKEN IN THE ECONOMIC SPHERE TO REMEDY THE INTERNATIONAL CRISIS IN THE COAL INDUSTRY

Whereas the Resolution adopted by the Assembly of the League of Nations at its Tenth Session in September, 1929, asked the International Labour Organization to consider international regulation of working conditions, including hours of work, in coal mines, with a view to the conclusion of one or more international Conventions in this matter;

Whereas the Fourteenth Session of the International Labour Conference decided that the question should be referred to the Fifteenth Session with the object of arriving finally at the adoption of a Convention;

Whereas, too, the Assembly, in accordance with proposals submitted to it by the Economic Committee, considered that international action for the purpose of overcoming the difficulties at present being encountered in the coal industry should also include measures in the economic field, and for this reason in the resolution referred to above, invited the Council to convene a Conference of the Governments concerned for studying the recommendations formulated by the Economic Committee;

Whereas, moreover action in this direction, which was also advocated by the International

Miners' Federation in a resolution adopted at Nimes in 1927, which resolution has since been endorsed on different occasions by the Executive Committee of the said International, has not so far been taken to an extent which could improve the situation in the coal industry, which not only continues to be unsatisfactory but is constantly becoming worse;

Whereas the International Labour Office, within the limits assigned to it by Part XIII of the Treaty of Versailles, has dealt with the social aspect of the coal problem;

The Fifteenth Session of the International Labour Conference invites the Governing Body to draw the attention of the other competent bodies of the League of Nations to the results which have been secured by its own efforts to regulate internationally hours of work in coal mines and to urge such bodies not to delay further taking any measures which can contribute in the economic field to remedying the international crisis in the coal industry, where a solution of the problem in the social field is not possible without an economic agreement to supplement it.

RESOLUTION CONCERNING THE LIST OF OCCUPATIONAL DISEASES AND THE INCLUSION OF SILICOSIS IN THIS LIST

Whereas the Committee on occupational diseases appointed by the 1925 Session of the Conference expressed the opinion that the Governing Body should be instructed to include in the agenda of a future Conference, and if possible in 1926, a new and additional proposed Draft Convention containing a list of occupational diseases which would seem to merit addition to those mentioned in the 1925 Convention;

Whereas such a list of occupational diseases and toxic substances was framed in joint agreement by the Correspondence Committee on Industrial Hygiene of the International Labour Office at the meeting it held in Geneva from April 16 to 18, 1928;

Whereas the said list was officially communicated to the Governing Body, which took note of it at the meeting it held on April 25, 1928;

Whereas, moreover, the inclusion of silicosis in the said list was postponed by the said Correspondence Committee on Industrial Hygiene pending the result of fresh scientific research in different countries;

Whereas silicosis has been a subject of research of this kind not only nationally but also in the international field: International Occupational Diseases Congress, held at Lyons in April, 1929; International Silicosis Conference, held at Johannesburg in August, 1930;

Whereas the latter Conference settled the principle that from the medical standpoint

silicosis constitutes an occupational disease liable to involve diminution of capacity for work;

Whereas the results of the International Silicosis Conference were communicated by the International Labour Office for information to the States Members of the International Labour Organization;

The International Labour Conference at its Fifteenth Session invites the Governing Body to consider the desirability of including in the Agenda of a future Session of the International Labour Conference, and if possible in 1932, the question of drawing up an additional list of occupational diseases, including silicosis.

RESOLUTION CONCERNING THE CONDITION OF LABOUR IN THE IRON AND STEEL INDUSTRY

Considering the economic difficulties which are manifesting themselves in the iron and steel industry throughout the world;

The Conference requests the Governing Body

to consider the possibility of undertaking an investigation as early as possible into the conditions of work in the iron and steel industry in the various countries.

RESOLUTION CONCERNING THE RATIFICATION OF THE AMENDMENT TO ARTICLE 393 OF THE TREATY OF VERSAILLES

Whereas the participation by an increased number of States Members in the work of the Governing Body is desirable in order to promote closer and more active co-operation in the betterment of labour conditions throughout the world;

Whereas at the Fourth Session of the Conference held in 1922 a draft amendment to Article 393 of the Treaty of Versailles and the corresponding Articles of the other Treaties of Peace was adopted which had as its object the increase of the membership of the Governing Body from 24 to 32; and while the Conference notes with gratification that 42 out of the 44 States Members whose ratifications are necessary have duly ratified the said draft amend-

ment, and that one of States Members represented on the Council of the League of Nations has announced its adhesion to this amendment subject to the observance, of the necessary constitutional formalities;

The Conference expresses its deep disappointment that this amendment has not been put into application after nine years; and

The Conference specially requests the Governing Body to make all possible fresh efforts to ensure that there may be no further delay in bringing the amendment into operation; the Conference further requests the Governing Body to make a report on its efforts and the progress made concerning the matter to the next Session of the Conference.

RESOLUTION CONCERNING THE ACTION OF THE INTERNATIONAL LABOUR ORGANIZATION TO REMEDY UNEMPLOYMENT

The Conference, having discussed the Director's Report and having heard the speech by the Director which concluded the discussion,

Requests the Governing Body, taking into account the record of the Conference, to con-

sider the effect which might be given to the proposals which have been made for the continuance and development of the action of the International Labour Organization to remedy unemployment and its consequences.

RESOLUTION CONCERNING THE CONSULTATION OF GOVERNMENTS WITH A VIEW TO THE PREPARATION OF THE DECENNIAL REPORTS

Whereas the report of the Governing Body of the International Labour Office, for which provision is made in Article 7 A of the Standing Orders of the Governing Body, cannot give all the necessary and desired information unless the Governments have an opportunity of expressing their opinion with regard to the revision of the Convention concerned;

The Conference requests the Governing Body to instruct the International Labour Office, before preparing the said report, to ask the Governments to inform it, after consultations with the employers' and workers' organizations concerned, of their opinion concerning the revision of the Convention in question.

Representatives of twenty-nine manufacturers of pulp and paper in the province of Quebec, at a meeting held at Montreal early in July, decided to organize a safety association under the provisions of the Workmen's Compensation Act enacted by the Legislature at its recent session. The Act provides that employers carrying on industries in Schedule

1 may form themselves into an association for accident prevention; if the Commission considers that such an association is sufficiently representative of the industry any safety rules that may be drawn up by such an association may be made binding upon all employers in the industries in that class (LABOUR GAZETTE, May, 1931, page 527.)

The Fourth International Conference of Labour Statisticians

The Fourth International Conference of Labour Statisticians met at Geneva from 20 to 23 May, 1931. Twenty-six countries were represented, including the United States, which though not a member of the International Labour Organization is interested in the technical and social aspects of its work.

Canada was represented at the conference by Mr. Renaud, of the staff of the Canadian office. The other countries sending representatives were Argentina, Austria, Belgium, China, Colombia, Cuba, Czechoslovakia, Denmark, Estonia, Finland, France, Germany, Great Britain, Greece, Irish Free State, Italy, Japan, Netherlands, Poland, Portugal, Spain, Sweden, Switzerland, United States, and Yugoslavia.

The Conference unanimously elected Mr. J. Hilton, British delegate, as Chairman.

The subject dealt with at the conference was the purchasing power of wages in various countries, statistics on which have been compiled and published by the International Labour Office since 1924 and have also been given from time to time in summary form in the *LABOUR GAZETTE* (December, 1930, page 1471, etc.). This subject, the Statistics of Real Wages, was also on the agenda of the Second Conference of Labour Statisticians in April, 1925 (*LABOUR GAZETTE*, June, 1925, page 602).

In the Resolutions it adopted, the Conference, recognizing the value of the information

as to wages and prices which has in the past been collected by the International Labour Office for the purpose of calculations relating to the purchasing power of wages in different countries, made a number of recommendations with the object of improving the bases and methods of compilation of such statistics.

It declared among other resolutions that it would be desirable to include in the data referring to cost of living, information on the relative level of rents, and it expressed the wish that the International Labour Office invite the statistical authorities in each country to furnish regular information on this subject.

The Conference recommended that the Governing Body place the question of the supply of the data required for the purpose of these international comparisons of wages and cost of living on the agenda of a future International Labour Conference, with a view to the framing of a Convention binding the Governments which ratify it to collect and supply the information at regular intervals.

It recommended that a small Committee of Experts representing the competent national statistical authorities might be set up. The function of this Committee would be to assist the Office in its work of developing and publishing wage and cost of living statistics, and in preparing for any future international conference which might appear desirable in the near future.

48-Hour Week for Women in Shops in New York State

The New York State Legislature, at its session this year, enacted a law to provide for the establishment of a 48-hour week for women in mercantile establishments. The new law, which took effect on July 1, allows for two working schedules, one of 8 hours a day for a six-day week; and the other providing for a weekly half holiday and permitting nine hours a day for five days a week, plus four and a half hours on the day of the half holiday, making a working week of 49½ hours. The new law was worked out in a series of conferences between representatives of employer groups and the Women's Trade Union League and Consumers' League of New York representing working women.

For the firms on the six-day schedule, overtime, exclusive of inventory, is limited to 10 hours a year, with equivalent time off; and for the firms granting the half holiday, to 25 hours a year. Under previous legislation, overtime for women employees amounting to

78 hours a year was allowed those manufacturing and mercantile firms which gave a weekly half holiday, while those on the straight six-day schedule were permitted to use no overtime.

The Quarterly Summary of Australian Statistics published by the Commonwealth Bureau of Census and Statistics, gives the area under wheat in the fiscal year 1930-1931, as 18,149,424 acres, with a production of 215,625,651 bushels, or 11.88 bushels per acre. The following figures are given for manufacturing industries in the period 1928-29: number of establishments, 22,916; hands employed, 450,482; salaries and wages paid, £90,986,908; value of plant machinery, land and buildings, £239,348,849; value of materials used, £238,938,566; value added by manufacture, £167,623,316; value of output, £420,445,288. Of the total number of employees, 333,110 were male and 117,372 were female.

UNEMPLOYMENT RELIEF ACT, 1930

Relief Provided in Co-operation with Provinces, Municipalities and Railway Companies

AN account was given in the LABOUR GAZETTE, September, 1930, of the special session of the Parliament of Canada summoned especially to deal with problems arising out of exceptional economic conditions with resultant unemployment, and of the enactment during that session of the Unemployment Relief Act. Particulars of the expenditures approved have been given from month to month in subsequent issues.

The following joint expenditures have been approved by the Minister of Labour up to June 30:—

Province	Total cost of Public Works and Undertakings
Prince Edward Island.....	200,000
Nova Scotia.....	2,338,875
New Brunswick.....	1,452,675
Quebec.....	10,064,850
Ontario.....	15,556,127
Manitoba.....	2,563,761
Saskatchewan.....	2,900,157
Saskatchewan (Drought area).....	1,014,545
Alberta.....	2,839,232
British Columbia.....	3,439,893
Yukon.....	20,000
Grade Crossing Fund.....	2,445,312
Canadian Pacific Railway.....	11,514,000
Canadian National Railways.....	14,119,403
Dept. of the Interior (Parks Branch).....	37,000
Banking Nova Scotia Coal.....	150,000
	70,655,830

The various provinces, railway companies and departments of the Government, which are co-operating under the Unemployment Relief Act, 1930, have furnished statistics showing the actual volume of employment given to June 30, 1931. Details for each province are as follows:—

Locality, etc.	Individuals given employment	Number of Man-days work given
Nova Scotia.....	32,581	480,994
Prince Edward Island.....	2,195	19,389
New Brunswick.....	19,500	270,000
Quebec.....	85,452	1,069,284
² Ontario.....	43,000	2,384,000
Manitoba.....	28,997	316,519
³ Saskatchewan.....	26,506	593,592
Alberta.....	22,580	369,472
British Columbia.....	33,586	700,926
Yukon.....	150	2,096
Canadian Pacific Railway Co.....	9,538	291,115
Canadian National Railways.....	6,232	175,453
Totals.....	310,317	6,672,840

¹ This figures does not include repeaters, i.e., no one individual is counted more than once, although he may have been laid off and re-employed.

² In the City of Toronto from November 1st, 1930, to April 30th, 1931, 10,134 men were given work, totalling 112,177 man-days.

³ Saskatchewan number of team-days, 141,823.

It will be seen from above figures that at least 310,317 individuals have been given employment and 6,672,840 man-days work from commencement of operation, under the Unemployment Relief Act to June 30, 1931.

It may be observed that the above figures take no account of individuals engaged in the production and distribution of the materials of all kinds which have been necessarily involved in the construction of the public works and undertakings which have been so far carried on.

The following figures show the number of families and individuals reported by the provinces as having received direct relief to June 30, 1931:—

Province	Families granted Direct Relief	Individuals granted Direct Relief
Nova Scotia.....	2,790	
Prince Edward Island.....		496
New Brunswick.....	400	
Quebec ¹	39,669 including	196,163

¹ In addition to above the Cities of Montreal and Quebec report having given 324,620 nights' lodgings to single men and 1,794,304 meals.

² Including individuals.

³ Direct Relief given in Toronto, December 3rd, 1930, to April 27th, 1931, to 9,338 families with 14,818 children. Casual Relief given December 13th, 1930, to April 30th, 1931, 172,772 nights' lodgings and 527,745 meals.

The *American Labour Legislation Review* states that since state unemployment insurance funds have been given much unfavourable publicity because of their mounting obligations and the consequent financial difficulties in which some have become involved, a recent report concerning the prosperous condition of the fund in the Irish Free State is of particular interest. The administration of the fund has been so successful that an accumulated debt was practically paid off by the end of 1930, and contributions by employers, workers and the state have been reduced while the scale of benefits remains unchanged. The reduction in the rate of contributions will relieve employers and workers of a total payment amounting to approximately 250,000 pounds per year.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MAY, 1931

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on June 1 was 7,865, the employees on their payrolls numbering 940,875 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for April was 1,808, having an aggregate mem-

bership of 198,059 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction.

(1) Employment Situation at the Beginning of June, 1931, as reported by Employers

Employment at the beginning of June showed further improvement, according to data tabulated by the Dominion Bureau of Statistics from 7,865 firms throughout Canada, whose payrolls aggregated 940,875 persons, as compared with 927,437 on May 1. This increase of 13,438 persons, or 1.4 per cent brought the index number to 103.6, as compared with 102.2 in the preceding month and 116.5, 122.2, 113.8, 107.2, 102.2, 95.6, 96.4, 98.5, 90.3 and 87.7 on June 1, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The employment afforded by the co-operating firms was less than on the same date in the last four years, but was greater than on June 1 in the preceding years of the record.

Large advances were registered in construction, and transportation, trade, services and communications also reported increases. On the other hand, manufacturing, logging and mining showed curtailment.

Employment by Economic Areas

Expansion was indicated in all of the five economic areas, firms in Quebec and the Prairie Provinces employing the greatest number of extra workers.

Maritime Provinces.—Further gains were noted in the Maritime Provinces, according to statistics received from 598 employers with a combined working force of 72,086 persons, as compared with 71,254 on May 1. This increase was considerably less than that reported on June 1 last year, when the index was many points higher. Manufacturing (particularly

of lumber, fish and textile products), logging, mining, trade and construction registered heightened activity, the improvement in the last-named being most pronounced. On the other hand, transportation was seasonally slacker, and iron and steel plants also released employees.

Quebec.—Construction and transportation recorded important increases in personnel in Quebec, and there were also gains in the trade group. On the other hand, manufacturing was slacker, particularly in the iron and steel division, and logging and mining also showed less activity. Employment was in smaller volume than on the same date in 1930. Statements were tabulated from 1,831 firms employing 277,954 workers on June 1, or 5,597 more than in their last monthly report.

Ontario.—Employment in Ontario showed a further but smaller advance; the index, at 104.2, was lower than on June 1, 1930, when larger gains had been noted in the province. The payrolls of the 3,489 co-operating establishments aggregated 386,070 employees, as against 384,622 on May 1. Construction and transportation registered the greatest expansion, but gains were also noted in logging and mining. In manufacturing, considerable increases in the lumber, animal food, building material, mineral product and some other groups were offset by losses in iron and steel, textile and pulp and paper factories.

Prairie Provinces.—Construction, especially railroad construction, transportation, services and communications reported improvement in the Prairie Provinces, but iron and steel

factories and trade released employees. The 1,161 firms whose statistics were tabulated employed 125,312 persons, as against 121,098 in the preceding month. Larger increases were indicated on June 1, 1930, and the index then was higher.

British Columbia.—An aggregate payroll of 79,453 workers was registered by the 786 reporting employers, who had 78,106 at the beginning of May. Employment was in smaller volume than in the early summer of 1930, when the gains indicated were on a larger scale. Construction and transportation recorded the most noteworthy expansion on the date under review, but trade and services also afforded heightened employment, while metal works and mining showed curtailment.

over their May 1 staffs. Transportation construction and trade reported increases, but manufacturing, particularly of iron and steel products, was slacker. The index, at 107.1, was lower than in June, 1930.

Quebec.—Continued, but smaller gains were registered in Quebec City, chiefly in manufacturing and transportation. Statements were tabulated from 140 establishments having 13,759 workers, as against 13,661 in the preceding month. Considerable advances had been indicated at the beginning of June a year ago, when the index was a few points lower. Employment as reported by the employers making returns, was in greater volume on the date under review than on June 1 in any other year for which statistics are available.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Employment by Cities

The trend of employment was upward in four of the eight cities for which separate compilations are made: Montreal, Quebec, Winnipeg and Vancouver all showed considerable gains; declines were noted in Toronto, Hamilton and Windsor, including the adjacent Border Cities, while in Ottawa there was no general change.

Montreal.—Improvement was recorded in Montreal, where the 1,020 co-operating firms employed 144,625 persons, an increase of 232

Toronto.—Returns were furnished by 1,109 employers in Toronto with 123,216 persons on their payrolls, compared with 124,224 on May 1. Manufacturing, particularly of textile and iron and steel products, was slacker, but improvement was shown in construction and transportation. The index was lower than on June 1, 1930, when general gains had been indicated.

Ottawa.—Construction showed heightened activity in Ottawa but manufacturing released some employees, so that the general situation

was unchanged; employment was at a rather lower level than at the beginning of June last year, when an increase had been recorded. A combined working force of 14,457 employees was indicated by the 163 co-operating firms; this was practically the same as in the preceding month.

Hamilton.—Further reductions in staffs were noted in Hamilton, where 231 employers reported 32,376 workers on their paylists, as compared with 33,698 at the beginning of May. Most of the decrease took place in manufacturing, notably in iron and steel plants, but construction also showed a decline. Employment was not so active as on the same date a

year ago, when a smaller contraction was noted.

Windsor and the Adjacent Border Cities.—Employment in the Border Cities showed a decline on June 1, when data were received from 133 firms with 12,293 employees, or 733 less than at the beginning of May. Most of the reduction took place in automobile factories, while construction was rather busier. Smaller losses had been registered on June 1, 1930, and employment was then in greater volume.

Winnipeg.—An aggregate working force of 30,210 persons was indicated by the 370 employers whose statistics were received, and

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I. INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

who had 29,568 employees on May 1. This gain involved a larger number of persons than that noted at the beginning of June last year, but the index was then higher. Most of the advance recorded in June of the present year was in construction, manufacturing and communications, while trading establishments released some help.

Vancouver.—Manufacturing, trade, communications and transportation reported minor gains in Vancouver, and there were larger increases in construction. Statements were tabulated from 317 employers with 30,840 workers in their employ, as compared with 30,180 on

May 1. Practically no change, on the whole, was indicated on June 1 a year ago, when the index was a few points higher.

Index numbers by cities are given in Table II.

Manufacturing

Statements were tabulated from 4,767 manufacturers employing 489,837 operatives, as compared with 496,231 in the preceding month. Gains of a seasonal nature were registered in lumber mills, while advances were also made in the fish-preserving, vegetable food, building material, woollen, cotton, electric current and mineral product industries. On the other hand,

NOTE.—The "Relative Weight" in Table 2 shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by cities as at June 1, 1931.....	15.4	1.5	13.1	1.5	3.4	1.3	3.2	3.3

iron and steel, non-ferrous metal, leather-using, electrical apparatus, pulp and paper, clothing, tobacco and some other factories were slacker. Employment was in smaller volume than on June 1, 1930, when general improvement had been reported in manufacturing.

Animal Products, Edible.—There were further pronounced increases in the number employed in this group, particularly in the fish-preserving division in the Maritime Provinces. Statistics were tabulated from 237 firms employing 19,738 persons, as compared with 18,243 in the preceding month. This increase

was not so extensive as that reported on June 1, 1930, and the index was then a few points higher.

Leather and Products.—Employment in this group generally showed a falling off, which was somewhat larger than that indicated in the same month last year, when however the index was several points lower. The working forces of the 241 co-operating employers totalled 18,557 persons, as against 19,041 in the preceding month. The largest declines were in Quebec and Ontario.

Lumber and Products.—Continued seasonal expansion was noted in lumber mills, and

NOTE.—The "Relative Weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926 = 100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

there were also gains in container factories. Returns were compiled from 802 manufacturers in the lumber group having 44,643 em-

ployees, compared with 42,294 at the beginning of May. All except the Prairie Provinces shared in the upward movement on June 1,

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	Relative weight	June 1 1931	May 1 1931	June 1 1930	June 1 1929	June 1 1928	June 1 1927	June 1 1926

'The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

the most marked advance taking place in Ontario. Greater additions to staffs were made on the same date last year, when the index was considerably higher.

Musical Instruments.—There was an upward trend in employment in musical instruments factories, 34 of which increased their payrolls from 1,312 persons at the beginning of May to 1,536 on June 1. A slight gain only had been indicated on the same date last summer, but employment then was at a higher level.

Plant Products, Edible.—Increases were noted in this group at the beginning of June, when 310 persons were added to the forces of the 409 co-operating manufacturers, who had 29,375 employees. Fruit and vegetable canning and biscuit and confectionery establishments reported most of the improvement, which occurred mainly in Quebec and British Columbia. The increase registered on June 1, 1930, was larger, and the situation then was rather more favourable than on the date under review.

Pulp and Paper Products.—Printing and publishing establishments showed declines, and pulp and paper mills were also rather slacker. The index number stood at 97·5, compared with 110·9 at the beginning of June last year, when little general change had been noted. An aggregate payroll of 59,267 workers was reported by the 563 establishments whose statistics were compiled, which had employed 59,629 in the preceding month.

Rubber Products.—Forty-two rubber factories recorded a combined working force of 12,349 persons, or 129 less than in their last return, most of the loss being in Quebec. Employment was in smaller volume than at the beginning of June a year ago, when an increase had been indicated.

Textile Products.—There was a seasonal reduction in activity in textiles on the date under review, chiefly in clothing factories in Quebec and Ontario. Data were received from 734 firms employing 82,339 persons, as against 83,194 in the preceding month. This contraction involved a much smaller number of workers than that indicated on June 1, 1930, when the index was practically the same as at the time of writing.

Tobacco, Distilled and Malt Liquors.—Activity in this group showed a reduction, according to 148 employers whose staffs decreased from 15,047 in the preceding month to 14,802 on the date under review. Tobacco factories in Quebec reported most of this decline. The index number on June 1, 1930, was higher than on the date under review, an upward movement having then been indicated.

Chemicals and Allied Products.—Statements were tabulated from 133 plants in this division with 8,549 persons on their payrolls, as against 8,734 in the preceding month. The index number stood at 119·0, compared with 120·7 on the same date in 1930, when a small loss was also reported.

Clay, Glass and Stone Products.—Further improvement was noted in building material plants, 164 of which employed an aggregate working force of 11,519 persons, or 317 more than on May 1. The index stood at 111·3; this was lower than that recorded on June 1, 1930. Ontario reported the bulk of the increase, in which the brick and glass branches of the industry shared.

Electric Current.—An advance as compared with May was shown in electric current plants, in which activity was lower than at the beginning of June, 1930. The 96 co-operating companies increased their staffs by 186 workers to 15,167 at the beginning of June. The Prairie Provinces recorded the greatest gain.

Electrical Apparatus.—Decreased activity was shown in electrical appliance factories, 72 of which reduced their payrolls by 340 employees to 14,918 on the date under review. A recession had also been recorded on June 1, 1930, but employment then was at a higher level. Quebec and Ontario firms registered practically all the reduction.

Iron and Steel Products.—There was a further decline in iron and steel works, mainly in vehicle plants, although the rolling mill and some other divisions also reported curtailment. Returns were tabulated from 736 manufacturers employing 119,669 persons, compared with 128,331 on May 1. Contractions were noted in all provinces, the largest losses taking place in Ontario. Losses were also registered on June 1, 1930, when the index was many points higher.

Non-ferrous Metal Products.—Smelters and refineries and manufacturers of lead, tin, zinc and copper products reported slightly reduced activity, according to 125 firms employing 18,060 persons, compared with 18,521 at the beginning of May. The decrease took place chiefly in Quebec and British Columbia. Improvement had been recorded at the beginning of June a year ago, when employment was in greater volume.

Mineral Products.—Continued seasonal advances were noted generally in this group, in which they were slightly larger than those indicated on June 1, 1930, when the index number was, however, many points higher. An aggregate payroll of 12,495 persons was employed by the 93 co-operating firms, who had 12,195 in the preceding month.

Miscellaneous Manufacturing Industries.—The production of roofing materials and various other articles listed under this heading showed an increase, 64 workers having been added to the forces of the 88 manufacturers whose returns were tabulated, and who employed 4,521 at the beginning of May.

Logging

Employment in logging camps showed a decrease, chiefly in Quebec, where river-driving operations in many camps were this season completed earlier than usual. Returns were received from 231 firms employing 14,520 persons, or 837 less than on May 1. Increased activity had been indicated on June 1, 1930, when the index was higher.

Mining

Coal Mining.—Employment in the Eastern and Prairie coal fields showed slight improvement, but there was a moderate falling-off in British Columbia, so that practically no general change occurred. Statements were compiled from a total of 81 operators with 24,456 employees, or 13 less than at the beginning of May. The index was a few points lower than on June 1, 1930, when an increase had been recorded.

Metallic Ores.—An advance was shown in metallic ore mines, chiefly in Ontario; 64 employers enlarged their staffs from 16,277 workers on May 1, to 16,140 at the beginning of June. Despite this gain, the index was lower than on June 1, 1930, when curtailment was indicated.

Non-Metallic Minerals (other than coal).—According to data received from 80 firms in this group, they employed 6,477 persons, or 515 less than in the preceding month. Employment was not so active as on June 1, 1930, improvement having then been reported by the co-operating firms.

Transportation

Street Railways and Cartage.—A further increase was registered in local transportation on June 1, when 160 companies added 354 employees to their staffs, bringing them to 24,544 on the date under review. This gain was not quite so large as that noted at the beginning of June, 1930, when the index was about three points higher. The improvement shown was chiefly in Quebec.

Steam Railways.—Expansion was indicated in steam railway operation, in which the 102 co-operating employers enlarged their staffs from 71,038 in the preceding month to 72,407 on June 1. Quebec and the Maritime Provinces reported reductions, but elsewhere there

were increases, that in Ontario being most pronounced. Employment was at a lower level than on June 1 of last year.

Shipping and Stevedoring.—There were pronounced seasonal losses in employment in the Maritime Provinces, but the trend was decidedly upward in Quebec, Ontario and British Columbia. Statistics were received from 84 firms with 17,126 employees, as compared with 16,516 in the preceding month. Greater gains were noted on June 1, 1930, when the index was higher.

Communications

Continued improvement was indicated on telegraphs, but telephones were rather slacker; the 67 companies and branches reporting in the communications group enlarged their staffs from 26,899 persons at the beginning of May, to 27,087 on June 1. Employment was at a lower level than at the beginning of June, 1930.

Construction and Maintenance

Building.—An aggregate staff of 45,148 was reported by the 738 contractors furnishing statistics, who had 42,112 workers on May 1. Activity increased in all except the Maritime Provinces and British Columbia, but the largest gains were in Quebec and Ontario. Building was not so brisk as on the same date a year ago.

Highway.—The 338 highway and road contractors furnishing returns had 53,611 persons in their employ, or 8,271 more than at the beginning of May. This improvement, in which all provinces shared, was not so extensive as that noted on June 1, 1930, and the level of employment then was higher.

Railway.—Continued advances were registered by the track departments of the railways, in which the volume of employment was less than at the beginning of June last year. The working forces of the 51 co-operating employers totalled 38,454 persons, as against 32,274 in the preceding month. The most noteworthy increases were in Ontario and the Prairie Provinces, although general improvement was indicated.

Services

Hotels and restaurants showed their customary seasonal increase, while there were losses in employment in laundries and dry-cleaning establishments. Statements were compiled from 276 firms employing 22,766 workers, as compared with 22,269 on May 1. The index, at 125.9, was higher than on June 1 in any other year of the record, except 1929 and 1930.

Trade

Improvement was indicated in both retail and wholesale trade; 826 establishments reported 88,165 employees, or 555 more than in their last monthly return. This gain was smaller than that noted on June 1, 1930, when the index was a few points higher.

TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

(2) Unemployment in Trade Unions at the close of May, 1931

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied in work outside their own trades, or who are idle through illness, are not considered as unemployed while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is

extent with the Province of Quebec, and was confined chiefly to the garment trades of Montreal, which indicated marked unemployment due to the slack season. In the same province, however, the building trades showed moderate expansion from April, though inactivity still remained at a rather high level. Alberta unions also reported slight reductions in employment from April, and in New Brunswick and Ontario nominal declines only occurred. In the remaining provinces im-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

based, it should be understood that such figures have reference only to the organizations reporting.

Industrial activity among trade union members at the close of May was slightly retarded, the 1,808 labour organizations from which returns were tabulated, with 198,059 members, showing 16.2 per cent of idleness in contrast with 14.9 per cent in April. A substantial unemployment increase was noted from May last year, when 10.3 per cent of the members registered were without employment. Responsibility for the unfavourable situation shown from April rested to a large

extent with the Province of Quebec, and was confined chiefly to the garment trades of Montreal, which indicated marked unemployment due to the slack season. In the same province, however, the building trades showed moderate expansion from April, though inactivity still remained at a rather high level. Alberta unions also reported slight reductions in employment from April, and in New Brunswick and Ontario nominal declines only occurred. In the remaining provinces im-

provement in conditions was indicated, British Columbia unions showing the largest gains in activity, while in Manitoba, Saskatchewan and Nova Scotia the employment advances were slight. Unemployment in all provinces was in greater volume than in May last year, the declines in Nova Scotia being moderate while the other provinces suffered important losses in activity.

A separate tabulation is compiled monthly showing unemployment in the largest city in each province, excluding Prince Edward Island. Especially noteworthy during May were the extensive contractions of employ-

ment reported over the previous month from Montreal, where the clothing industry was seasonally slack, while in Saint John and Toronto fractional declines were noted. The situation in Regina, on the other hand, was substantially better than in April, and in Halifax, Edmonton and Vancouver the improvement registered was noteworthy. The trend of employment in Winnipeg was also slightly upward from April. The percentages of idleness recorded in all cities used for comparison exceeded those registered for May last year, Regina and Halifax showing moderate reductions of activity while in the remaining cities the curtailment indicated was noteworthy, Saint John unions particularly showing heavy contractions.

The chart which accompanies this article shows the trend of unemployment by months from January, 1924, to date. Contrary to the downward trend which has been indicated by the curve since the beginning of the year, the course traced during May was slightly upward, showing a less favourable employment situation during the month reviewed. The trend during May paralleled that of the same month last year when the tendency as shown by the curve was also toward greater inactivity, but the unemployment level during the month surveyed was considerably above that of May a year ago.

A substantial drop from the previous month in the volume of employment available for workers in the manufacturing industries was indicated during May, inactivity for garment workers influencing largely the percentage for the group as a whole. The metal trades and pulp and paper industry, in a much smaller way, contributed to the total increase in idleness and the tendency among printing tradesmen, wood, hat and cap, fur and jewellery workers was toward greater unemployment. The situation for textile workers was substantially improved as compared with April, and among glass and cigar and tobacco workers and bakers and confectioners the percentage gains were pronounced, though the members involved were few, as these tradesmen form a very small share of the total membership in the manufacturing industries. For May, reports were received from an aggregate of 488 local unions in the manufacturing industries, covering 57,745 members, and of these 10,350 or 17.9 per cent, were without work on the last day of the month, contrasted with a percentage of 11.1 in April and 12.4 in May a year ago. The metal and garment trades, and pulp and paper makers reported curtailment of activity from May last year, affecting the greatest number of workers, and among printing tradesmen declines on a more moderate scale were recorded. Viewed from a percentage basis the contractions indicated by wood workers, cigar makers, and general labourers were substantial, though the membership involved was slight. On the contrary, leather, textile, jewellery and glass workers were much better employed than in May a year ago and the situation for fur, and hat and cap workers also improved.

From unions of coal miners 44 returns were tabulated at the close of May, showing a membership of 16,569 persons, 2,124, or a percentage of 12.8, of whom were idle on the last day of the month, contrasted with a percentage of 11.2 in April. This slight reduction in employment from April was centred chiefly in the province of Alberta,

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

while in British Columbia the situation remained almost unchanged with a slight tendency in an unfavourable direction. In Nova Scotia fractional improvement was recorded. Compared with the returns for May last year, when 9.2 per cent of the coal miners reported were idle, British Columbia unions registered a much higher employment volume during the month reviewed, which was, however, more than offset by the heavy reductions registered from Alberta. In Nova Scotia nominal curtailment of activity was apparent.

The situation in the building and construction trades continued to improve during May, though employment on the whole was still quite slack. Returns were tabulated at the close of May from 253 unions of building tradesmen with 29,899 members, 37.7 per cent of whom were idle, contrasted with 40.5 per cent in April. Large percentage increases in employment were registered by hod carriers in comparison with April, and among granite and stone cutters, and bridge and structural iron workers the gains recorded were substantial. Moderate employment expansion was indicated by carpenters and joiners, and electrical workers. Tile layers, lathers and roofers showed a substantial falling off in available work from April, and employment for bricklayers, masons and plasterers, painters, decorators and paper hangers, and plumbers and steam fitters subsided slightly. In making a comparison with the return for May last year in the building trades, when the unemployment percentage stood at 23.3, bricklayers, masons and plasterers, carpenters and joiners, granite and stone cutters, painters, decorators and paper hangers, plumbers and steamfitters, tile layers, lathers and roofers and hod carriers and building labourers all reported large increases in slackness during the month reviewed, and among electrical workers slight contractions in activity were shown. Bridge and structural iron workers were the only tradesmen to report improvement in conditions from May a year ago, which, however, was but nominal.

Returns were tabulated from 763 unions of transportation workers at the close of May, combining a membership of 67,895 persons, 9.2 per cent of whom were reported idle, contrasted with 9.8 per cent of inactivity in April. Steam railway employees, whose returns constituted about 84 per cent of the entire group membership, reporting, and street and electric railway employees registered nominal gains in activity while among navigation workers the situation was much improved. Teamsters and chauffeurs, on the

contrary, reported minor employment contractions. Steam railway employees, navigation workers and teamsters and chauffeurs all shared in the total unemployment increase reported over May last year, when 6.1 per cent of idleness was registered in the group as a whole, and among street and electric railway employees the percentage remained unchanged during the two months compared.

Retail clerks were less engaged during May than in the preceding month, the percentage of idleness rising from 2.1 in April to 4.9 at the close of the month reviewed. The percentage for May was based on the returns tabulated from 5 associations of these workers with 1,257 members. In May last year all members were reported at work.

Activity for civic employees eased off slightly during May from both the previous month and May a year ago, as shown by the returns tabulated from 73 unions with a total of 7,451 members. Of these 158, or 2.1 per cent, were without work on the last day of May, contrasted with .1 per cent in April and with .7 per cent in May, 1930.

During May unemployment in the miscellaneous group of trades showed a moderate increase from the previous month, according to the reports tabulated from 131 local unions, with 6,192 members, 1,038, or a percentage of 16.8 of whom were idle on the last day of the month, compared with 14.1 per cent in April. Hotel and restaurant employees were decidedly less active than in April, and among stationary engineers and firemen employment showed a moderate drop. On the other hand, nominal improvement was manifest by theatre and stage employees, barbers and unclassified workers. Conditions prevailing for all tradesmen in the group during the month reviewed were less favourable than in May last year when 7.8 per cent of idleness was registered in the miscellaneous trades as a whole, stationary engineers and firemen, hotel and restaurant employees, and unclassified workers all reporting pronounced increases in slackness, while among theatre and stage employees, and barbers the declines in employment were fractional.

Fishermen, with 3 unions reporting in May a membership of 1,305 persons, indicated 1.1 per cent of idleness, contrasted with 2.4 per cent in April and with 1.3 per cent in May last year.

Lumber workers and loggers reported some lessening from the previous month of the unemployment volume during May, the 7 unions from which returns were received, with an aggregate of 910 persons, showing 31.8 per cent of inactivity, compared with 37.3 per

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

cent in April. Employment for these workers was largely curtailed from May last year, when 12.7 per cent of the members reported were idle.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1930, inclusive,

and also the percentages of unemployment by provinces for May of each year from 1919 to 1928, inclusive, and for each month from January, 1929 to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for May, 1931

During the month of May, 1931, the reports from the Offices of the Employment Service of Canada showed a decrease of 21 per cent in the average daily placements when compared with those of the preceding month, while a gain of nine per cent was indicated in comparison with the average daily placements effected in May a year ago. Construction and maintenance and farming registered the heaviest declines from April,

offered and of placements effected for each one hundred applications for work registered at the offices of the service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications declined steadily throughout the month and in each instance, at the end of the period, was about five points below the levels attained at the close of May, 1930. The ratio

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o—o—o—o—o—o

although fewer placements were also shown in all other groups, except services, trade and transportation. In these groups, however, the increases were not large. In comparison with May, 1930, construction and maintenance was the only division to show a gain, and though substantial in volume, it was offset by marked declines in services, logging, manufacturing and farming.

The accompanying chart shows the trend of employment from January, 1929, to date, as represented by the ratio of vacancies

of vacancies to each one hundred applications was 61.4 and 59.4 during the first and the second half of May respectively, contrasted with ratios of 70.0 and 65.1 during the corresponding periods of 1930. The ratios of placements to each one hundred applications during the month under review were 58.5 and 56.5 as compared with 64.1 and 61.9 during May a year ago.

The average number of vacancies reported daily by employers to the offices of the service throughout Canada during May,

1931, was 1,292, as compared with a daily average of 1,634 in the preceding month and with 1,210 in May, 1930.

The average number of applications for employment received daily by the offices during the month under review was 2,134, in comparison with 2,467 in April and with 1,789 in May last year.

The average number of placements made daily by the offices of the service during May, 1931, was 1,230, of which 443 were in regular employment and 787 in work of one week's duration or less, as compared with a total daily average of 1,562 in the previous month. Placements during May a year ago averaged 1,128, consisting of 630 placements in regular and 498 in casual employment.

During the month of May, 1931, the offices of the service referred 32,476 persons to vacancies and effected a total of 30,728 placements. Of these, the placements in regular employment were 11,071, of which 7,581 were for men and 3,490 for women, while placements in casual work numbered 19,657. The number of vacancies reported by employers was 23,028 for men and 9,252 for women, a total of 32,280, with applications for work numbering 53,350, of which 41,308 were from men and 12,042 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1921 to date:—

Year	Placements		
	Regular	Casual	Totals
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132

1930.....	187,872	180,807	368,679
1931 (5 months).....	60,257	157,675	217,932

NOVA SCOTIA

Opportunities for employment, as indicated by orders received at employment offices in Nova Scotia during May, were nearly 36 per cent better than in the preceding month and nearly 29 per cent in excess of the corresponding month of last year. There was a gain of 38 per cent in placements over April and 29 per cent over May, 1930. The gain in placements over May of last year was attributable to increases in construction and maintenance on account of work provided on highway construction in relief of unemployment. Transportation placements were also

higher, but the gain in this group was more than offset by declines in services, manufacturing and trade. The changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 20; logging, 21; farming, 22; transportation, 103; construction and maintenance, 378; trade, 57; and services 562, of which 417 were of household workers. During the month 155 men and 62 women were placed in regular employment.

NEW BRUNSWICK

There was a nominal decline only in the number of positions offered by New Brunswick Employment Offices during May, when compared with the preceding month, but a decrease of nearly 27 per cent compared with the corresponding month of last year. Placements were 6 per cent higher than in April but 21 per cent less than in May, 1930. Very few placements were made during the month under review other than in services, and in this group they were less than during May of last year. Construction and maintenance showed the largest decline under this comparison. Industrial divisions in which most of the placements were made during the month were: construction and maintenance, 20; trade, 21; and services, 755, of which 444 were of household workers. Regular employment was found for 56 men and 66 women.

QUEBEC

Employment opportunities, as indicated by orders received at employment offices in the Province of Quebec, were nearly 3 per cent less than in the preceding month and nearly 27 per cent fewer than in the corresponding month of last year. There was a nominal gain in placements over April, but a decline of over 29 per cent in comparison with May, 1930. All industrial groups, except services, participated in the declines in placements from May of last year, those in logging, construction and maintenance, manufacturing and farming being the most pronounced. Industrial groups in which most of the placements were effected during the month were: manufacturing, 57; logging, 227; farming, 27; construction and maintenance, 420; trade, 24; and services 924, of which 720 were of household workers. There were 852 men and 585 women placed in regular employment during the month.

ONTARIO

During the month of May, positions offered through the Employment Offices in Ontario were over 18 per cent less than in the preceding month but nearly 17 per cent in excess

* 17 Placements effected by offices since closed.

of the corresponding month of last year. There was a decline of 19 per cent in placements, when compared with April but a gain of over 20 per cent in comparison with May, 1930. Work provided in relief of unemployment was responsible for the gain in placements over May of last year, as the only other groups to show improvement were trade and finance and in these the gains were small. Of the declines, those in services, logging, manufacturing, farming, and transportation were the most noteworthy. They did not, however, offset the beforementioned substantial gain in construction and maintenance. Placements by industrial divisions included: manufacturing, 781; logging, 591; farming, 539; transportation, 108; construction and maintenance, 8,906; trade, 482; and services, 5,157, of which 2,514 were of household workers. During the month 3,347 men and 1,370 women were placed in regular employment.

MANITOBA

The Employment Offices in Manitoba were notified of nearly 16 per cent less vacancies during May than in the preceding month and of over 26 per cent less than in the corresponding month last year. Placements were nearly 17 per cent less than in April and over 26 per cent below May, 1930. The only industrial group to show any increase in placements over May of last year was construction and maintenance. Of the declines, those in services, farming, logging and manufacturing were largest. The reduction in services' placements was particularly heavy. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 28; farming, 234; construction and maintenance, 321; trade, 108; and services, 1,456; of which 1,137 were of household workers. Placements in regular employment numbered 504 of men and 462 of women.

SASKATCHEWAN

The demand for workers, as indicated by orders received at employment offices in Saskatchewan during May, was over 26 per cent less than in the preceding month and nearly 19 per cent below the corresponding month of last year. There was a decline of over 25 per cent in placements when compared with April, and of nearly 16 per cent in comparison with May, 1930. As in Manitoba, the only industrial group in which more placements were made than in May last year was construction and maintenance. Of the declines in all other groups, those in farming, services, manufacturing and trade were the most noteworthy. Placements by industrial divisions included: manufacturing, 20; farming, 353;

transportation, 27; construction and maintenance, 932; trade, 24; and services, 999, of which 585 were of household workers. There were 513 men and 357 women placed in regular employment during the month.

ALBERTA

During May, orders received at Employment Offices in Alberta called for nearly 35 per cent less workers than in the preceding month but nearly 11 per cent more than during the corresponding month of last year. There was a decline of over 34 per cent in placements, when compared with April, but a gain of 11 per cent in comparison with May, 1930. The gain in placements over May last year was all due to work provided in relief of unemployment, as with the exception of logging, in which there was a nominal gain only, all groups, other than construction and maintenance, showed declines. Of the latter, those in services farming and manufacturing were the largest. Industrial divisions in which most of the placements were made during the month were: manufacturing, 75; farming, 508; transportation, 20; construction and maintenance, 1,504; trade, 51; and services, 741, of which 478 were of household workers. During the month 1,651 men and 355 women were placed in regular employment.

BRITISH COLUMBIA

Orders received at Employment Offices in British Columbia during May called for over 13 per cent less workers than in the preceding month but over 3 per cent more than during the corresponding month of last year. There was a decline of over 15 per cent in placements when compared with April, but a gain of over 6 per cent in comparison with May, 1930. Work provided for relief of unemployment on highway construction was responsible for the increase in placements over May of last year. Of the declines in all other groups, those in services, manufacturing and logging were the largest. Placements by industrial divisions were: manufacturing, 70; logging, 72; farming, 127; transportation, 204; construction and maintenance, 1,644; trade, 48; and services 841, of which 462 were of household workers. There were 503 men and 233 women placed in regular employment.

Movement of Labour

During the month of May, 1931, the Offices of the Employment Service of Canada made 11,071 placements in regular employment, 4,013 of which were of persons for whom the employment found was outside the immediate locality of the Offices at which they were

registered. Of the latter 767 were granted the Employment Service reduced transportation rate, 686 going to points within the same province as the despatching office and 81 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the Railway Companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The reduced rate certificates granted in Quebec during May were 42 in number all of which were secured at the Hull office by bushmen proceeding to employment in the Pembroke zone.

Of the 346 reduced rate certificates granted by Ontario Offices during May, 340 were issued to points within the province and 6 to centres outside. From Port Arthur the provincial transfers included 238 bush workers, 9 survey men and 2 carpenters going to points within the territory covered by that office, while from Sudbury 38 river drivers and 15 sawmill workers travelled to points within its own zone and one pulp peeler to Ottawa. The Pembroke office effected transfers of 10 survey workers and one construction engineer to the Fort William zone, which zone was also the destination of 15 sawmill labourers and 2 bushmen travelling from Fort William. The North Bay office despatched one farm hand to Cobalt and one store-room porter to Timmins. In addition, Timmins received 6 miners from Cobalt, and Belleville one metal pattern maker from Brantford. Of the workers going to other provinces, Fort William transferred 3 carpenters and 2 cement finishers to Winnipeg and Cobalt and one carpenter to Amos.

Transfers numbering 270 were effected by Manitoba offices during May, the Winnipeg office being responsible for both the provincial and interprovincial labour movement. Provincially 243 persons were transported to situations, including 3 farm hands and 3 farm housekeepers going to Brandon, one farm domestic and one hotel waitress to Dauphin and 41 farm hands, one farm domestic, 66 carpenters, 86 construction labourers, 7 bricklayers, one bricklayers' helper, 7 steel workers, 4 cement finishers, 4 cookees, 3 construction cooks, 3 rock driller operators, 2 railway construction labourers, 2 painters, one clerk, one electrician, one fireman, one rockman, one locomotive engineer, one carpenters' helper, one garage mechanic and one hotel porter to employment at points throughout the Winnipeg zone. Twenty-seven workers received certificates to points outside the province during May, the Port Arthur zone receiving 10 bush workers, 7 sawmill labourers and one hotel waitress, and Saskatchewan rural

centres 6 farm hands and 2 farm domestics. In addition, one drag line operator was carried at the reduced rate to Prince Albert.

At Saskatchewan centres 20 persons secured certificates for reduced transportation during May, 18 of whom went to centres within the province and 2 to employment outside. The latter were steel workers who received their certificates at Prince Albert for transportation to Dauphin: The provincial movement was largely of agricultural labour, 13 farm hands travelling to situations at various points within the province on certificates issued at Regina, Saskatoon and Moose Jaw. The Regina office also despatched one hardware clerk to Swift Current, one labourer and one handyman to Prince Albert and one teacher within the Regina zone, while from Saskatoon one hotel cook was conveyed to North Battleford.

In Alberta 50 certificates for reduced transportation were granted during May, 46 provincial and 4 interprovincial. Of the former, 41 were issued at Edmonton to 3 farm hands going to Lethbridge, one farm hand to Drumheller, and to 8 loggers, 8 farm workers, 6 sawmill workers, 3 miners, 3 carpenters, 3 labourers, 2 maids, 2 hotel waitresses, one teamster and one farm domestic going to employment at various points in the Edmonton zone. The remaining provincial transfers were from Calgary from which centre one farm hand and one household worker went to Drumheller, and one farm hand, one farm housekeeper and one town maid within the Calgary zone. The persons travelling outside the province were farm workers 2 each, destined to the Saskatoon and Prince Albert zones and despatched from Edmonton.

The movement of labour from British Columbia centres during May was entirely to provincial employment and involved the transfer of 39 workers. Of these, 27 journeyed from Vancouver, which office despatched one miner and one sawyer to Prince George, one electrician to Kelowna, one construction flunkey to Penticton, one hotel cook to Vernon and 12 loggers, 2 farm hands, one farm housekeeper, 4 tunnel construction workers, one flunkey, one mine cook and one hotel waitress within the Vancouver zone. In addition, Prince George transferred 7 highway construction labourers and one highway construction cook, and Nelson 4 loggers to points within their respective zones.

Of the 767 persons who profited by the Employment Service reduced transportation rate during May, 618 were carried by the Canadian National Railways, 134 by the Canadian Pacific Railway, 8 by the Pacific Great Eastern Railway and 7 by the Timiskaming and Northern Ontario Railway.

(4) Building Permits issued in Canada during May, 1931

The value of the building permits issued by 61 cities during May, 1931, was lower by 13.9 per cent than in April, 1931, and lower by 41.6 per cent than in May, 1930. According to statements tabulated by the Dominion Bureau of Statistics, the authorizations amounted to \$11,868,171 as compared with \$13,786,466 in the preceding month and \$20,321,160 in May, 1930. The total for the first five months of 1931, namely, \$49,001,536, was lower than that for the corresponding period in any of the years since 1921. Wholesale prices of building materials were lower in 1931 than in any other year of the record.

Some 50 cities furnished detailed statistics, showing that they had issued over 1,200 permits for dwellings valued at approximately \$5,800,000 and for some 3,100 other buildings estimated to cost over \$5,300,000. In April, authority was given for the erection of some 1,000 dwellings and 2,700 other buildings, valued at approximately \$5,000,000 and \$7,000,000 respectively.

New Brunswick, Quebec and Ontario reported increases of 69.7 per cent, 12.8 per cent and 21.6 per cent, respectively, in the value of the permits issued as compared with April, 1931. Of the declines in the remaining provinces, that of \$1,332,810 or 85.5 per cent in Nova Scotia was most pronounced.

As compared with May, 1930, New Brunswick and Quebec alone registered increases. All the other provinces recorded declines, of which that of \$5,518,988 or 53.8 per cent in Ontario was most noteworthy.

Of the larger cities, Montreal reported a higher total of building permits issued both in April, 1931, and in May, 1930, while in Toronto, Winnipeg and Vancouver there was a decrease in both comparisons. Of the other centres, Fredericton, Saint John, Belleville, Hamilton, York and East York Townships, St. Boniface and North Vancouver recorded increases in the value of the building authorized as compared with both the preceding month and the same month of last year.

1 Report not received.

Cumulative Record for First Five Months, 1931.—The following table gives the value of the building authorized by 61 cities in May and in the first five months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first five months of the same years are also given (1926=100).

The aggregate for the first five months of this year was 50.6 per cent lower than in 1929, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued lower than in any of the years since 1920.

The accompanying table gives the value of the building permits issued by 61 cities during May and April, 1931, and May, 1930. The

35 cities for which records are available since 1910 are marked with asterisks.

Year	Value of permits issued in May	Value of permits issued in first five months	Indexes of value of permits issued in first five months (1920=100)	Average Indexes of wholesale prices of building materials in first five months (1926 average=100)
	\$	\$		
1931.....	11,868,171	49,001,536	102.9	83.7

Building Permits in Principal Cities of the United States, May, 1931

According to reports received by the Bureau of Labour Statistics of the United States Department of Labour from 342 identical cities having a population of 25,000 or over, there was a decrease of 19.5 per cent in the estimated cost of buildings for which permits were issued during May, 1931, as compared with the estimated cost of the buildings for which permits were issued during April, 1931. There was a decrease of 18.0 per cent in the estimated cost of new residential buildings, and a decrease of 20.9 per cent in the estimated cost of new non-residential buildings, comparing permits issued during these two periods. The estimated cost of total building operations for which permits were issued during May, 1931,

was \$130,398,526. New buildings for which permits were issued during the month of May, 1931, were planned to house 11,371 families. This is a decrease of 20.0 per cent in the number of family dwelling units, as compared with the month of April, 1931.

Comparing permits issued in 295 identical cities in May, 1931, and May, 1930, there was a decrease of 27.6 per cent in total construction, a decrease of 18.3 per cent in the estimated cost of new residential buildings, and a decrease of 30.2 per cent in the estimated cost of new non-residential buildings. The number of family dwelling units provided decreased 12.5 per cent, comparing May, 1931, permits with May, 1930, permits.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the British *Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during May, 1931, is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment throughout the country. The employment situation in the United States is further indicated by unemployment percentages based

on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for June, 1931, and previous months are reproduced below.

Great Britain

There was little change in employment in the first three weeks of May. Some improvement occurred immediately before Whitsuntide, but in a large number of establishments in the Midlands and North of England holiday stoppages extended throughout the last week of the month.

The seasonal improvement continued in the building and allied industries, and in most of the clothing trades. The numbers unemployed also decreased, prior to Whitsun, in the cotton industry, in textile bleaching, dyeing and finishing, in shipping service, in hotel and boarding-house service and in the distributive trades.

Unemployment increased, however, in coal-mining, slate quarrying, general and marine engineering, shipbuilding and ship-repairing, tinplate manufacture and in the wool textile and jute industries.

A slight improvement was experienced prior to Whitsuntide, in all divisions except Wales and Scotland, but employment was still very bad in the Northern part of the country and bad in the Midlands.

Among the workpeople, numbering approximately 12,400,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at May 18, 1931, (including those temporarily stopped as well as those wholly unemployed), was 20.8, as compared with 20.9 at April 27, 1931, and with 15.0 at May 26, 1930. The percentage wholly unemployed at May 18, 1931, was 16.3, the same percentage as at April 27, 1931; while the percentage temporarily stopped was 4.5, as compared with 4.6. For males alone the percentage at May 18, 1931, was 21.9, and for females, 17.9; at April 27, 1931, the corresponding percentages were 22.0 and 18.0.

At May 18, 1931, the numbers of persons on the Registers of Employment Exchanges in Great Britain, were 1,840,562 wholly unemployed, 550,907 temporarily stopped, and 115,468 normally in casual employment, making a total of 2,506,937. This was 13,176 less than a month before, but 736,886 more than a year before. The total included 1,837,941 men, 66,245 boys, 549,481 women and 53,270 girls.

The 1,840,562 wholly unemployed included approximately 1,266,920 insured persons, who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 477,190 insured persons, who had paid less than 30 contributions during the preceding two years; and 96,450 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,668,095, included 1,274,700 men, 19,000 boys, 364,970 women and 9,425 girls, who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at May 18, 1931, was 2,579,683, and at June 1, 1931, it was 2,702,066.

United States

The Bureau of Labour Statistics of the United States Department of Labour reports changes in employment and pay-roll totals in May, 1931, as compared with April, 1931, based on returns from 46,031 establishments, in 15 major industrial groups, having in May, 4,721,032 employees whose combined earnings in one week were \$115,617,936.

The combined totals of the 15 industrial groups show a decrease of 0.9 per cent both in employment and pay-roll totals.

Increased employment in May was shown in 2 of the 15 industrial groups: Power, light, and water, 0.5 per cent; and dyeing and cleaning, 1.0 per cent.

Decreased employment was shown in May in the remaining 13 groups: Manufacturing, 0.5 per cent; anthracite mining 5.7 per cent; bituminous coal mining, 4.1 per cent; metal-liferous mining, 2.4 per cent; quarrying and non-metallic mining, 1.5 per cent; crude petroleum producing, 2.9 per cent; telephone and telegraph, 0.8 per cent; electric railroads, 1.0 per cent; wholesale trade, 0.4 per cent; retail trade, 0.2 per cent; hotels, 3.5 per cent; canning and preserving, 6.1 per cent; and laundries, 0.2 per cent.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of February and March, 1931, and therefore cannot be included in the general statement for the month of May. The number of employees of Class I railroads as at March 15, totalled 1,303,468 representing an increase of 0.2 per cent since February 15, 1930. The amount of pay-roll in the entire month of March was \$181,744,757, representing an increase over the previous month of 8.1 per cent.

Unemployment Percentage.—Since the fall of 1927, the American Federation of Labour has compiled statistics each month which indicate the percentage of unemployed union members in 24 representative cities of the United States. These figures are included in the monthly review of industrial and economic conditions which is given in the *Monthly Survey of Business*, published by the Federation. In June, 1928, the proportion of unemployed union members was 11 per cent; in June, 1929, 9 per cent; in June, 1930, 20 per cent; in June, 1931, 18.3 per cent. The percentages since the beginning of 1931 are as follows: January, 19.8; February, 19; March, 18.1; April, 17.7; May, 17.1; June, 18.3.

According to an estimate by the American Federation of Labour, approximately 5,300,000 wage earners were unemployed in the United States during June.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

- (a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;
- (b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council

adopted June 7, 1922, and amended April 9, 1924, requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give

effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Contractor to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from the time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of

labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for in-

spection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above-mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Plastering lean-tos, Hanger A. 2, Trenton Airport, Trenton, Ont. Name of contractor, Messrs. Quinte Construction Ltd., Trenton, Ont. Date of contract, June 2, 1931. Amount of contract \$3,150. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons.....	\$1 00	8
Bricklayers' labourers.....	0 45	8

Stamping Ink and Pads
Pritchard-Andrews Co., Ltd., Ottawa, Ont..... 93 00

National Economic Council in Colombia

The Colombian Parliament recently adopted an Act (No. 23 of 1931) providing for the establishment of a National Economic Council to assist and guide the Government in all matters relating to industry and trade.

The Council will be presided over by the President or a minister appointed by him. The titular members will be the Ministers of Finance, Foreign Affairs, Industry and Public Works, the Governors of the National Bank and the Agricultural Mortgage Bank, the Director of the National Federation of Coffee Planters, the President of the Agricultural Association, the head of the National Statistical Department and representatives of the Chamber of Commerce of Bogota and the National Federation of Manufacturers. The powers of the Council are defined in the Act as the regulation and management of all matters connected with production and consumption, the tariff system, the negotiation of commercial treaties and foreign trade generally.

The Act also directs the Council to study the application of existing legislation relating to vocational training, industrial schools, water power and the electrification of the countryside and the National Academy of Science.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedule of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect, though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Food, Drink and Tobacco

MONTREAL, QUEBEC.—CERTAIN BAKERIES (JEWISH) AND THE BAKERY AND CONFECTIONERY WORKERS' INTERNATIONAL UNION OF AMERICA, LOCAL No. 115.

Agreement to be in effect from May 1, 1931, to May 1, 1932.

Only members of the local union to be employed. Employers must not sell or loan to or manufacture for a baker confectioner or other person whose employees are not members of the local union.

Hours: union members will not be obliged to work more than 9 hours per day and 6 days per week. Half an hour will be allowed for lunch.

Wages: first hand \$41 per week, second hand \$38.

Overtime at regular scale. Employers will pay for all Hebrew holidays except Easter; May 1, and Labour Day to be recognized as legal holidays.

Not more than one helper allowed for three bakers.

Employers must use the union label which will be supplied by the union.

Employees may take home a loaf of bread each day.

Manufacturing: Pulp, Paper and Paper Products

PINE FALLS, MANITOBA.—MANITOBA PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS.

Agreement to be in effect from May 1, 1929, to May 1, 1930, and from year to year thereafter subject to notice of change being given by either party thirty days before May 1, of any year.

Preference to be given to union members for employment and to the oldest in service among equally efficient employees. All permanent employees covered by the agreement will become union members within 15 days, but no employees shall be required to join more than one union.

Hours and overtime: the paper machines will operate between 8 a.m. Monday and 8 a.m. the

following Sunday. Only necessary repair work, oiling and cleaning etc. may be done on Sundays and time and one-half will be paid for such work. The pulp mill will operate not more than six days per week, except if necessary to operate on Sunday, time and one half will be paid.

Hours for day workers: 8 per day, six days per week and all work in excess of 8 hours per day will be paid at time and one half. Hours for outside day workers 8 per day, 6 days per week, and work done in excess of 8 hours per day will be paid at regular rate for first two hours and time and one half thereafter. If a day worker is called back to work after punching out he shall receive at least four hours pay.

Hours for tour workers: 8 per day, 6 days per week; overtime and work between 8 a.m. Sunday and 8 a.m. Monday time and one half. On vacancies after two weeks time and one half to be paid unless the union is unable to supply competent men, in which case straight time will be paid until the vacancy can be filled.

Hours for wood handling operations, including wood unloading, block piles, slasher and wood room, 8 per day, 6 days per week. Work done in excess of 8 hours to be paid at regular rate for first two hours, time and one half thereafter.

For work during the hours specified for the holidays on Dominion Day, Labour Day and Christmas, time and one half to be paid, except that day workers will be paid straight time between 4 and 5 p.m. on the day preceding the holiday.

An apprentice system is in effect in the mechanical trades, apprentices to be paid as follows: first year 35 per cent of journeyman's rate, second year 45 per cent, third year 65 per cent, fourth year 85 per cent, after four years journeyman's rate.

In case of any grievance, the matter will be referred to the general superintendent; if he and the men cannot agree, the question will be referred to the manager of the company. If no settlement is reached, the matter will be referred to the manager of the company and the president of the International Union or his representative. If they cannot reach a settlement, it will then be referred to arbitration, the manager of the company selecting one man, the president of the International Union concerned another man and the two thus chosen to select the third party who shall render a decision within five days. If unable to agree on the selection of the third party, the Federal Minister of Labour will be asked to appoint him. If any employee is unjustly discharged, his case may be reported to the general superintendent and if on investigation it is found that he was unjustly discharged, he will be reinstated without loss of time.

No strike or lockout to occur during the life of the agreement. In the event of cessation of work or a strike through failure to renew the agreement, the local unions agree to supply competent men to do electrical work, unloading of incoming freight previously purchased, power house operation, operation of dam or regulation of river flow, and work of a similar nature during such shutdown.

Wages per hour for some classes of labour are:

Wood room: chippermen 44 cents, oilers 40 and 42 cents, wood handlers (long wood) 41 cents, block pile 40 cents. Slasher: sawyers 45

cents. Grinder Room: grindermen 46 cents, chargers 42 cents. Sulphite Mill: cooks and acid makers \$1, cook's helpers 60 cents, knotter screens 40 cents. Mixing Room: stock runners 50 cents, broke beater man 44 cents. Finishing Room: car loaders 48 cents, finishers 46 cents. Steam Plant: tour engineers 75 cents, firemen 60 cents. Yards and Switching: teamsters 48 cents, labourers 38 cents. Mechanical: machinists 72 to 82 cents, painters 63 cents, millwrights 72 to 82 cents. Electrical: tour electricians 72 to 82 cents.

Manufacturing: Printing and Publishing

HALIFAX, NOVA SCOTIA.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 130.

Agreement to be in effect from January 1, 1931, to December 31, 1931, and thereafter until 60 days' notice of change is given by either party.

This signed agreement is practically the same as the verbal agreement which was previously in effect and summarized in the *LABOUR GAZETTE*, June, 1930.

The wages for journeymen remain at \$35 per week for day work and \$38 for night work with a 48-hour week.

HAMILTON, ONTARIO.—HAMILTON NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS' AND ELECTROTYPERS' UNION, LOCAL No. 113.

Agreement to be in effect from September 1, 1930, to September 1, 1933, and for such reasonable time thereafter (not exceeding sixty days) as may be required to negotiate a new agreement.

Union members to be employed if available and employers agree to respect and observe the union constitution. If union men are not available, non-union men may be employed and may be retained if accepted as union members.

Hours: for day work 8 per day to be completed in 8½ consecutive hours, 6 days per week; for night work 7 per night to be completed in 7 consecutive hours.

Overtime: time and one-half. If called back to work at least \$2 to be paid. All outside work to be paid at overtime rate.

Wages for journeymen stereotypers and electrotypers: \$42.50 per week for both day and night work (an increase of \$2 per week over the previous rate).

One apprentice allowed to an office employing two or more journeymen and each office employing four or more journeymen will be allowed two apprentices.

Wages for apprentices: \$12 per week for first six months and \$1 increase every six months thereafter until expiration of apprenticeship.

WINNIPEG, MANITOBA.—CERTAIN NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 191.

Agreement to be in effect from November 1, 1930, to October 31, 1931, and for such reasonable time thereafter (not exceeding thirty days) as may be required for the negotiation of a new one.

Only union members to be employed and employers agree to respect and observe the constitution and by-laws of the union.

Hours: 8 per day, 6 on Saturdays, a 46-hour week for day work and 7½ hours per night for night work; for middle shift 7½ hours for shift

except from June 1, to September 1, when 6 hours will be worked on Saturday (or Sunday).

Overtime: time and one-half for first three hours; double time thereafter and for work on all statutory and civic holidays. Overtime is to be distributed equally as far as possible.

Wages for machine operators, make ups, proofreaders, bankmen, machinists and employees engaged in hand composition and distribution \$47 per week for day work and \$49 for night work and for middle shift. (These are the same wage rates as previously in effect.) Extras working less than four days in any one week in any one office will be paid \$1 per day or night in addition to the regular rate.

Any union member with the permission of the foreman may learn to operate any typesetting or typesetting device in use in the office and will be paid as follows for day work: first three weeks \$15 per week, second three weeks \$17, third three weeks \$19, fourth three weeks \$22, fifth three weeks \$25, sixth three weeks \$28. Learners working night or middle shifts to be paid \$2 per week over the day rate. As soon as a learner attains and maintains the set standard of competency, he will be paid the regular wage rate. If at the end of the sixth three weeks, the standard of competency is not reached, an extension of two months may be granted.

One apprentice allowed for two and under ten journeymen, two for ten and under fifteen journeymen, three for fifteen and under thirty journeymen, four for thirty and under forty journeymen. In no case shall there be more than five apprentices in any chapel. A machinist's assistant shall be classed and paid as an apprentice, but will not interfere with the allotment of apprentices. Apprentices must complete the course of lessons of the International Union. The work to be done by apprentices in each of the five years of apprenticeship is specified. Apprentices are to be examined twice a year before the local committee on apprenticeship and the official examiner and their work must show if they are entitled to the increase in wages provided; if not so entitled, they will remain at the same wage rate for another three months.

Wages for apprentices: first year 25 per cent of journeymen's wage, second year 30 per cent, third year 40 per cent, fourth year 60 per cent and fifth year 75 per cent.

A standing committee consisting of two representatives of each party will be appointed, to whom will be referred all disputes. If they are unable to agree, a board of arbitration will be formed consisting of one representative of each party and a third chosen by them, and if they are unable to agree on the third party he will be chosen by lot from a list of ten names which is attached to the agreement. Any discharged employee may refer his case to this standing committee or board of arbitration.

The parties to the agreement guarantee each other against walkouts, strikes, lockouts or boycotts.

Construction: Buildings and Structures

MONTREAL, QUEBEC.—CERTAIN ORNAMENTAL AND ARCHITECTURAL FIRMS AND THE INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL AND ORNAMENTAL IRON WORKERS, LOCAL No. 418.

Agreement to be in effect from May 1, 1931, to April 30, 1932.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, December, 1930, under the heading "Manufacturing; Iron Steel and Products," with the following exceptions:

Shopmen and apprentices are omitted from the agreement.

Night work shall be for 7 hours only with 8 hours' pay and all work in excess of 7 hours will be paid at double time.

Wages for charge hand \$1.15 per hour.

The regular wage rate for outside finishers is unchanged at 85 cents per hour and 60 cents for helpers.

KINGSTON, ONTARIO.—CERTAIN ELECTRICAL CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 115.

Agreement to be in effect from May 1, 1931, to April 30, 1932. The two parties are to meet thirty days before the expiration date to draw up a new agreement or renew this one.

Only union members to be employed and union members will work only for contractors who are parties to the agreement.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one half to midnight; after midnight and all work on Sundays and holidays double time.

Wages for journeymen electrical workers: 80 cents per hour.

One helper or apprentice to be employed for each two journeymen. They will not be allowed to work alone for first three years but may work alone during the fourth year. At the end of the fourth year, they will be examined and if qualified, will be paid journeyman's rate.

Helpers or apprentices to be paid \$7 per week during first six months, \$8 during second six months, \$9 during first half of second year, \$10 during second half of second year, \$12 during first half of third year, \$15 during second half of third year, \$20 during fourth year.

No union member to work for anyone but the contractor while in his employ and no contractor will employ any other contractor as a journeyman.

Contractors signing the agreement are to be protected in case of a strike against any contractor who is not a party to the agreement.

HAMILTON, ONTARIO.—THE CANADIAN CONSTRUCTION ASSOCIATION, HAMILTON BRANCH, AND THE BRICKLAYERS, MASONS AND PLASTERERS' INTERNATIONAL UNION No. 1.

Agreement to be in effect from May 4, 1931, to May 3, 1932.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, November, 1929.

The regular wage rate remains at \$1.25 per hour for bricklayers with a 44-hour week.

HAMILTON, ONTARIO.—THE CONTRACTORS ASSOCIATION OF HAMILTON AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, HAMILTON DISTRICT COUNCIL.

Agreement to be in effect from March 1, 1931, to February 28, 1933.

This agreement is the same as the one previously in effect and summarized in the *LABOUR GAZETTE*, June, 1929, June, 1928, and July, 1927.

The wage rate remains at \$1 per hour with a 44-hour week.

WINDSOR, ONTARIO.—BORDER CITY SHEET METAL AND ROOFING CONTRACTORS AND THE SHEET METAL WORKERS INTERNATIONAL ASSOCIATION LOCAL No. 456 AND THE ROOFERS INTERNATIONAL ASSOCIATION, WINDSOR BRANCH.

Agreement to be in effect from June 1, 1930, to April 30, 1931, and from year to year until either party gives notice one month before April 30, of any year, except when a wage rate change is desired, when notice must be given 90 days before April 30.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Wages: sheet metal workers \$1.12½ per hour; first or head roofers (efficient men on built up roofs of pitch and felt and gravel, asphalt and felt, tile and slate) 90 cents per hour; roofers seconds or men who cannot meet with the same requirements 75 cents; ordinary labour 50 cents. Any man superintending work requiring three or more journeymen shall receive a minimum of 10 cents per hour over the rate.

Overtime: time and one-half from 6 p.m. to 10 p.m. on other days and from 1 p.m. to 5 p.m. on Saturdays; double time for all other overtime and all work on Sundays and four holidays.

One apprentice sheet metal worker allowed to every three journeymen sheet metal workers or majority fraction thereof. Apprentices to be governed by the Ontario Apprenticeship Act and paid at a rate which would meet with the approval of the Ontario Apprenticeship Committee.

FORT WILLIAM AND PORT ARTHUR, ONTARIO.—BUILDING CONTRACTORS AND THE BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION, LOCAL No. 25.

This verbal agreement which came into effect June 1, 1930 and was summarized in the *LABOUR GAZETTE*, October, 1930, and October, 1929, continues in effect to April 30, 1932 and three months notice shall be given by either party if any change in the wage schedule is desired.

The wage rate for bricklayers and masons remains at \$1.25 per hour with a 44-hour week.

VICTORIA, B.C.—MASTER PAINTERS OF VICTORIA AND THE UNITED BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL No. 1119.

Agreement to be in effect from May 1, 1931, to April 30, 1932.

Hours: 8 per day for first five days of week; no work on Saturdays except in case of emergency.

Overtime: time and one-half for work from 5 p.m. to midnight except where double shift is worked when straight time will be paid; double time from midnight to 8 a.m.; time and one-half for work on Saturday from 8 a.m. to 5 p.m. and double time from 5 p.m. on Saturday to 8 a.m. Monday. Double time for work on holidays: no work on Labour Day.

Wages for journeymen: 75 cents per hour (The minimum wage rate previously in effect was 85 cents per hour.)

For work out of the city, extra fare to be paid by employer and also board and room if unable to return home each night.

A standing committee consisting of three members of each party will be selected to take up all grievances and matters connected with the betterment of the trade.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1931

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement of prices toward lower levels continued in June, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in May.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in sixty-nine cities was again lower at \$8.16 at the beginning of June, as compared with \$8.54 for May; \$11.10 for June, 1930; \$10.92 for June, 1929; \$10.73 for June, 1928; \$10.86 for June, 1927; \$11.06 for June, 1926; \$10.44 for June, 1925; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. The most important declines occurred in the prices of butter and cheese, while less important decreases occurred in the prices of beef, veal, mutton, bacon, eggs, milk, bread, evaporated apples, granulated sugar and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$18.36 at the beginning of June, as compared with \$18.82 for May; \$21.44 for June, 1930; \$21.18 for June, 1929; \$20.97 for June, 1928; \$21.04 for June, 1927; \$21.31 for June, 1926; \$20.67 for June, 1925; \$20.22 for June, 1924; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.92 for July, 1920 (the peak); \$26.81 for June, 1920; \$20.36 for June, 1918; and \$14.27 for June, 1914. Fuel was slightly lower, due mainly to lower prices for wood. Rent was down in the average because of lower quotations for several cities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower at 72.2 for June as compared with 73.0 for May; 87.7 for June, 1930; 93.4 for June, 1929; 96.9 for June, 1928; 98.7 for June, 1927; and 100.1 for June, 1926. Sixty-eight prices quotations advanced, ninety-four declined and three hundred and forty were unchanged.

In the classification according to chief component materials five of the eight main groups were lower, two were slightly higher, and one was practically unchanged. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for flour, bran, shorts, gluten meal and canned peas, which more than offset higher prices for barley, flax, oats and rye; the Animals and Animal Products group, due to

lower quotations for leather, steers, calves, lambs and butter, which more than offset higher prices for hogs, hides and eggs; the Wood, Wood Products and Paper group, because of reduced prices for certain lines of lumber and groundwood pulp; the Non-Ferrous Metals and their Products group, because of lower prices for antimony, copper, silver and tin; and the Chemicals and Allied Products group. The Fibres, Textiles and Textile Products group and the Non-Metallic Minerals group were somewhat higher, the former due mainly to higher prices for silk and jute, and the latter due to increased prices for cement and brick. The Iron and its Products group was practically unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former due to declines in prices of flour, bran, shorts, gluten meal and potatoes, which more than offset higher prices for eggs, silk, cotton thread, matches and pottery; and the latter due to lower quotations for spades and shovels, kerosene, hemlock lumber, steers, calves, copper, tin and silver, which more than offset higher prices for zinc, cement, hides, barley, oats, rice and hogs.

In the grouping according to origin raw and partly manufactured goods were lower, mainly because of reduced prices for potatoes, raw cotton, steers, calves, copper, tin and groundwood pulp. Lower prices for flour, bran, shorts, gluten meal and butter caused declines in the fully and chiefly manufactured goods group. Domestic farm products, articles of forest origin and articles of mineral origin were lower while articles of marine origin advanced somewhat.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of

the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the *LABOUR GAZETTE* a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the *LABOUR GAZETTE*, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1918, quarterly from 1919 to 1929 and monthly since January, 1930. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 155.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to

(Continued on page 844)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for the average family
