THESE FIGURES

REFER TO THE NUMBER OF DEATHS.

VITAL STATISTICS.

POPULATION.

The Registrar General's estimate of the population of the City in the middle of the year 1897 is 231,260. In my report for the previous year I gave reasons for supposing that this figure understates the number of persons living in Bradford, and my estimate based upon the number of houses and the average number of people per house, as ascertained at the last census, gives a population of over 249,000. Since the census of 1891 the number of births has exceeded the number of deaths by 12,262, which number added to the census population of 1891 would make the population during the year under review 228,623 but in the light of past experience it is probable that the population of Bradford has been largely increased by immigration and I am therefore inclined to think that my estimate is more nearly correct than that obtained by a mere consideration of the "natural" increase of population. I admit, however, that there is some uncertainty attaching to this matter and that we shall have no accurate knowledge as to population until the census of 1901. If, however, vital statistics are to be of value in judging of Sanitary Conditions it is essential that the figures upon which the calculations are made should be correct, but accuracy cannot be attained by merely taking a census every ten years and estimating the population for intermediate years. This statement applies not only to Bradford but to every City in the Kingdom. It would be a great help to Statisticians and those engaged in Sanitary work if the census were taken quinquennially instead of decennially.

In calculating the various mortality and other rates for the past year I have adopted as a basis the population as estimated by the Registrar General.

Table 1, gives the chief figures in reference to population and mortality rates since 1883.

YEAR.	Corrected Estimate of Population	ANNUAL RATE PER DEP LIVING.						
YEAR.	to middle of each year	Birth-Rate.	Death-Rate.	Zymotic Rate.

TABLE 11.

MARRIAGES.

Information obtained from Mr. Crowther, the Superintendent Registrar for the Bradford district and from Mr. Helmsley, the Superintendent Registrar for the North Bierley district, shows that the number of marriages contracted during the year ended December 31st, 1897, was 2,149. The annual rate of persons married per 1,000 of the population was 18'4, a diminution of 1'0 per 1,000 upon the rate for 1896. In London the rate was 18'5 per 1,000.

BIRTHS.

The births registered during 1897 amounted to 5,678, 2,838 being of males and 2,840 being of females. The birth-rate per 1,000 of the estimated population is 24.55 the lowest birth rate yet recorded in Bradford and diminution of 1.41 per 1,000 upon the extremely low rate for the previous year.

DEATHS.

The deaths from all causes registered during the year 1897 amounted to 4023, of which 2013 were of males and 2010 of females, as compared with a total of 3838 during the previous year. The death-rate per 1000 of the population is therefore 17.39, being an increase of '62 per 1000, upon the rate for 1896. The total death-rate for England and Wales was 17.43, and for the 33 large towns 19.10 per 1000. The London death-rate was 18.19 per 1000.

Measles		77	105	- 28
Pneumonia		272	304	- 32
Whooping Cough		42	105	- 63

TABLE VII.

It will be seen that there is an increase of 279 deaths from diarrhea upon the total for 1896, an increase shown chiefly in the prevalence of this disorder in children under twelve months of age. This melancholy fact is explained by the comparatively long prevalence of the hot weather during July and August. Reference to Appendix I., which gives the temperature of the ground at depths of 1 foot and 4 feet respectively shews that diarrhea does not exist in an epidemic form until the 4-foot thermometer reaches 56° F. This is quite in accord with the well-known fact that at a low temperature soil polluted with organic material does not form so favourable a medium for the growth of deleterious micro-organisms as at higher temperature. In districts, the soil of which is polluted by sewage or other organic material, diarrhœa in an epidemic form is always present during or following on a prolonged hot season.

The other class of diseases which shows a serious increase, viz. 97, on the total for the previous year is that of Tuberculous diseases. Many of those who succumb to Tuberculosis are infants brought up on cow's milk and evidently infected by their food. It is a matter for regret that the regulation of dairies and cowsheds outside the city boundaries is not under the authority of the community which consumes the milk produced. I am strongly of opinion that with proper ventilation of cow-sheds and the separation of the tuberculous from the non-tuberculous animals, milk could be produced free from the germs of tuberculosis.

TYPHOID OR ENTERIC FEVER.—Under the provisions of the Infectious Diseases Notification Act 149 cases of this disease were notified during the year, 30 of which ended fatally. Owing to lack of suitable accommodation for isolation in their own houses 79 of the cases were removed for isolation and treatment to the Fever Hospital. A detailed analysis of the cases is contained in the two following tables.

Deaths from other Tuberculous Diseases.*

*Deaths in Public Institutions are referred to in the Wards from whence the patients came.

BRONCHITIS, PNEUMONIA AND PLEURISY.—These three chief diseases of the respiratory organs accounted for 650 deaths, 236 of which were those of children under 5 years of age. The respiratory death-rate was equal to 2.81 per 1000 of the population. CANCER.—Table XXXII gives the number of deaths attributed to cancerous or other forms of malignant growths. There is seen to be a slow though steady increase in this class of disease.

TABLE XXXII.

Synopsis of Deaths from Cancer during the Years 1888-97.

	1888.	1889.	1890.	1891.	1892.	1893.	i894.	1895.	1896.	1897.

Females	101	87	77	98	107	89	102	122	118	130

VIOLENCE.—The deaths from violence amounted to 382, 21 of which were of children under 5 years of age Of these deaths 42 were due to fractures and contusions, 21 to burns or scalds, 9 to accidental suffocation.

Inquests.

Two hundred and twenty-eight (228) inquests were held by the City Coroner during the year, 56 of which were on children under 5 years of age.

Uncertified Deaths.

The deaths of 49 persons were registered without Certification by a Medical Practitioner or Coroner, being 1.2 per cent. of the total deaths, the average percentage of uncertified deaths for the 33 great towns being 1.3 per cent.

Insanitary Dwellings.

The following houses having been certified as unfit for habitation were ordered by the City Council to be closed (Building Regulation, XVIII., Bradford Gas and Improvement Act, 1871).

26a, 40 and 50, Duncan Street.	ta, Clarenton Lane.
71 and 73, Caledonia Street.	34, 36 and 38, Wharfe Street.
13, Carr Syke, Frizinghall.	46, 68 and 70, Longcroft Place.
27 and 29, Eastbrook Lane	2 and 4, Violet Court.
55, George Street.	2 and 4, Paul Street.
6, 3, 5, 9, 11, 13, 17 and 19, Dillon St.	17a, Acre Street.
1 and 3, Healey Street.	17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27 and 28, Farrar Square.
41 and 43, Greenaire Place.	27 and 28, Farrar Square.

Also the Cellar dwellings as follows :----

9, Tanhouse Yard.13, Duncan Street.16, Æolus Place.75, George Street.

In four of the houses improvements satisfactory to the City Council were made, and the closing order subsequently revoked.

REPORT

OF THE

CHIEF INSPECTOR OF NUISANCES.

TO THE MEDICAL OFFICER OF HEALTH,

SIR,—The following statement shews the nature and amount of work done in the Sanitary Department during the year 1897, including an abstract of work carried out in the previous nine years.

	No of Cases.									
Particulars of work done.	1888.	1889.	1890.					1895	1896.	1897.
Drains opened and cleansed	1011	1356	1298	1429	1178	1236	1518	1573	1710	1757
Drains provided for premises which had been previously without drainage	41	17	13	ſ7	32	16	87	29	50	31
Sink drains disconnected from the sewer or otherwise eff- ectually trapped	345	623	871	632	508	365	565	341	377	275
Street gullies cleansed	2976	2184	2867	3648	3602	4064	4831	4237	3927	5011
Water conductors provided and down spouts connected with the drains	828	1062	1251	1143	1127	947	1977	2105	1980	1856
Swine and Swine Styes removed from objectionable situations	45	24	30	29	13	31	20	35	41	18

12

The above particulars represent only those cases where Statutory Notices have been served and do not include Nuisances prevented or abated on the verbal request of the Inspector.

The number of persons summoned for non-abatement of Nuisances after Notices given is 69.

Eight persons were summoned and convicted for continuing to occupy their houses after the same had been ordered by Notices to be closed as unfit for human habitation.

Dight Scavenging.

During the year the Contractors have according to the returns of the Sanitary Officers, emptied 94,996 ash-pits and removed therefrom 4,537 loads of soil, and 67,990 loads of rubbish, a total of 72,527 loads.

Burial Grounds.

During the year 167 visits have been made by the Sanitary Officers to the various graveyards within the City, but no irregularities have been observed.

Owing to the utilization of portions of the North and South sides of the Burial ground attached to the Parish Church "St. Peters" for the purpose of restoration and enlargement of that edifice, by an order of the Home Secretary the remains of 1,035 persons have been removed therefrom and the same re-interred at Undercliffe Cemetery, under the control and supervision of the Medical Officer of Health and Sanitary Officers.

Dangerous and Unfenced Places.

Three hundred and nineteen place, including houses and other buildings have been reported by the Sanitary Officers as being in a dangerous condition. These have been dealt with and made secure from personal danger, either under the direction of the City Surveyor or the Chief Inspector of Nuisances.

Public Urinals.

The number of Public Urinals within the City is 40, as against 38 last year.

During the year two Public Urinals have been erected, viz.: One at the junction of Bolling Hall Road and Rooley Lane by permission of the owners of the premises, Messrs Waller & Son, Limited, and one at Grosvenor Road by permission of David Mellor, Esq.

The Public Urinal erected last year at Great Horton Road on land belonging to the trustees of the late George Turner, Esq., has been removed, the site having been acquired for building purposes and the same has since been re-erected on land adjacent thereto by the kind permission of the Great Northern Railway Company who are owners of the land.

Canal Boats.

There is only one Canal Boat registered within the City, and this, along with 219 others registered with other Authorities, but plying on the Canal within the City, has been examined by the Chief Inspector of Nuisances or his Assistant, Mr. Rhodes, and all boats inspected were free from bilge water, ventilation very good, and suitable provision for the storage of water for domestic use. In 10 cases the boats were found to be not in accordance with the regulations, 5 having defective cabins, 2 having no certificate of registration on board, 2 being overcrowded in cabins, and 1 not lettered nor having any distinctive mark or marks thereon for the purpose of identification as required by the Registration Authority. The master of one boat was summoned before the Justices for allowing the cabin to be overcrowded, and a penalty of 5s. and 11s. costs was inflicted, failing payment 7 days imprisonment.

The owners of the other defective boats were formally notified by the Chief Inspector of Nuisances to have the boats thoroughly repaired and in future to conform strictly with the regulations, and accordingly the whole of the necessary repairs have since been carried out.

Common Godging Houses.

The number of Common Lodging Houses within the City is 41, the same as last year.

The houses contain 192 rooms for sleeping purposes, and are registered to accommodate 1935 persons nightly.

The number of persons who have been accommodated during the year is 454,228, the nightly average being 1,244.

The number of visits paid to these houses during the year is 1903, and their reports shew the houses to have been fairly well conducted.

adulteration of Food and Drugs.

During the year ending December, 1897, 265 samples of food have been submitted to the City Analyst by the Food Inspector for analysis. Of these 243 were certified by the Analyst as not adulterated and 22 were found to be adulterated, but the amount of adulteration was trivial and did not warrant proceedings against the offenders beyond being formally cautioned against a repetition of the offence. The Food Inspector seized and destroyed 6 bags of turnips. 10 boxes of lettuce, 50 herrings, 26 bags of mussels, 6 boxes and 1 kit of haddocks, 27 boxes of hake, 2 bags of whelks, 2 baskets of shrimps, 6 bags of beast offal, 7 bags of cockles, 2 boxes of bream, 32 couples of rabbits, 1 barrel of cod fish, and 1 basket of pears.

The following table shews the nature of articles submitted for analysis :---

REPORT for Year ending December, 1897.

Dairies, Cow-sheds, and Milk-shops

There are at present registered under "the Contagious Diseases (Animals) Act, 1878, 244 Cow-sheds, and 1088 Dairies, Milk-shops, and Purveyors of Milk, as against 246 and 1068 respectively last year.

During the year, 107 applications have been made for registration of premises for the sale of milk, and upon inspection by the Medical Officer of Health or the Dairies and Cow-sheds Inspector 20 of these were found to be suitable and were registered accordingly. Forty-seven milk dealers have during the year voluntarily given up their premises which were found to be unsuitable and have since been registered for other premises more compatible with the proper preservation of the cleanliness of the milk and milk vessels used therein.

Inspection has frequently been made as heretofore of the milk and milk vessels coming into the City by railway and otherwise from places beyond the City boundaries and numerous samples thus delivered have been taken by the Food Inspector and the results (with a few exceptions) shew the milk to have been genuine and of good quality.

Two milk dealers whose milk vessels were found to contain colouring matter for the purpose as alleged of improving the appearance of the milk, appeared before the Sanitary Committee and were cautioned against repeating the offence.

Four milk dealers whose milk vessels were found to be in a dirty condition were formally warned.

The Committee as heretofore have inspected a number of Cow-sheds and Milk-shops, and where the sanitary condition was found to be at all defective instructions were given for the issuing of notices requiring the requisite improvements to be carried out, with the result that 3 Cow-sheds and farm buildings which were in defective sanitary condition have been put into good repair. Special attention has again been paid to the Fried Frish Shops and Ice Cream makers' premises within the City and many improvements have been effected in regard to cleanliness and general condition of these places and in the manipulation of the commodities produced thereat.

The number of visits and inspections made by the Officers has been as follows :---Cow-sheds, 897; Milk shops, 2990; and milk vessels, 1684.

Inspection of Meat, Slaughter-houses, Potted Meat and Sausage Manufactories.

There have been 42 seizures and 104 surrenders of unsound meat, fish, and fruit. In three cases the offenders were summoned before the Justices on separate charges for exposing for sale a quantity of rabbits, beef, and veal which were unfit for human food and penalties and costs amounting in the aggregate to \pounds_{10} 4s. were inflicted.

There have been seized and destroyed 4,190 lbs. of beef, 675 lbs. of pork, 230 lbs. of veal, 520 lbs. of mutton, 20 bags of cockles, 4 bags of onions, 32 rabbits, 3 bags of oysters, 38 boxes of smelts, 11 bags of mussels, 12 turkeys, and 3 barrels of herrings.

There have been surrendered and destroyed 6.700 lbs of beef, 530 lbs. of mutton, 1,276 lbs. of veal, 2,782 lbs. of pork, 5 barrels of codfish, 169 boxes of kippers, 96 bags of mussels, 6 tons of haddocks, 33 baskets of strawberries, 15 barrels of bloaters, 4 baskets of shrimps, 19 couples of rabbits, 1 box of mushrooms, 2 barrels of herrings, 36 boxes of hake, 6 boxes of finnon haddock, 2 bags of whelks, 19 bags of cockles, 26 brace of partridge, and 1 bag of oysters.

The above seizures and surrenders are exclusive of those made by and specified in the Food Inspector's Report.

The number of slaughterhouses under the old regulations is 7, and there are 4 others for which licenses have to be applied for annually.

The number of places at which Potted Meat and Sausages are made is 81, as against 76 last year, and these together with the private slaughter-houses are regularly visited and reported upon by the Inspectors.

The number of visits made during the year has been as follows :—Private Slaughter-houses, 354; Potted Meat and Sausage Works, 1,296. The Public Abbatoirs are visited daily.

Cattle Disease.

During the year there have been five outbreaks of Swine Fever within the City, all of which were duly notified by the Sanitary Department to the Board of Agriculture, whose officers took charge both of the infected animals and premises, and also gave customary notices to the respective owners and occupiers as required by the Orders in Council.

" Shop hours Act ": - Workshops and Bakehouses.

The number of shops visited by the Inspector during the year is 2146. In 1133 of these young persons were found to be employed and 532 of these shopkeepers failed to comply with Section 4 of the Act by not exhibiting the necessary notice stating the number of hours which a young person may be employed in a shop. Each of these shopkeepers was supplied with the abstract of "The Shop Hours Act" and requested to keep the same posted where young persons are employed on their premises.

Seven young persons were found to have been employed over 74 hours in one week. Nineteen young persons were found employed in shops having previously on the same day been employed in a factory or Workshop for the full number of hours allowed by "The Factory and Workshops Act." Thirteen of these young persons were employed in the Market Hall, Kirkgate.

All the above cases were first offences and in each case the employers were duly cautioned

The Inspector under "The Shop Hours Act" also visited workshops and bakehouses as follows : --

Bakehouses and Confectioners	· • •		347
Dress and Mantle Makers			96
Milliners			58
Blouse Makers		• • •	9
Tailors		• • •	201
Boot and Shoe Makers and Clogge	rs		52

Coopers	· • •		4
French Polishers			+
Paper Bag Works			4
File Makers			+
Wire Workers			3
Various			48
Total	•••		1076

Sixty-eight workshops were found without regulations. These were duly notified to Her Majesty's Inspector of Factories and Workshops. Forty-two Workshops and 23 Bakehouses were found in a dirty condition. The occupiers of these places were requested to have their premises cleansed and limewashed. In most cases this was immediately done on attention being drawn to the matter.

Ten occupiers of underground premises brought into use as bake-houses since January, 1896, have been requested to discontinue using the premises for the purpose, as required by "the Factory and Workshops Act, 1895."

Six workshops were found without any closet accommodation, and the provision of separate accommodation was found necessary in ten cases.

Five cases were found of persons sleeping in a room which during the day is used as a workshop.

Three cases of overcrowding in workshops have been dealt with satisfactorily.

All nuisances in and adjoining workshops have been referred to the Chief Inspector.

Yours obediently,

JAS. CHAMBERS,

Chief Inspector.

REPORT

ON

DESTRUCTOR WORKS.

TO THE MEDICAL OFFICER OF HEALTH,

SIR, -I beg to submit the following report of work done at the various Destructor's during the year 1897.

hannerton Street.

The number of loads of refuse destroyed is as follows :----

Ashpit I	Refuse	•••	•••	17,819	loads.	
Market	,,		•••	1,123	"	
Shop	,,		•••	1,696	,,	
	'n	¹ -4-1			landa	
	1	otal	•••	20,638	loads	

As against a total of 23,757 loads destroyed last year.

There has also been destroyed the carcases of 17 beasts, 701 stones of beef, 31 calves, 22 sheep, 58 pigs, 2 goats, 2 deers, 1 horse, 102 tongues, 26 brace of partridges, 13 turkeys, 14 hares, 38 couples of rabbits, 2 bags of tripe, 5 cases of eggs, 98 bags of cockles and mussels, 8 cases of currants, 23 barrels of grapes, 32 boxes of strawberries, 36 boxes of tomatoes, 5 barrels of pears, 10 boxes of lettuce, 859 dogs, 118 cats, 55 beds, and 320 mattresses.

5,060 tons of mortar, and 3,450 loads of clinker have been sold during the year.

As against 4,159 tons, and 2,826 loads last year.

The whole of the cells have been reconstructed by the Horsfall Furnace Syndicate (Limited) on their principle, and are now in full working order.

The whole of the residuals at this Destructor are now being utilized in some form or another.

The fish refuse works continues to be carried out in a satisfactory manner.

Sunbridge Road.

The number of loads of refuse destroyed is as follows :---

Ashpit I	Refus	e		16,488	loads.
Market	,,	• • •	• • •	607	"
Shop	,,	•••	•••	596	,,
		Total	•••	17,691	loads

As against a total of 17,507 loads last year.

There has also been destroyed the carcases of 1 beast, 1 calf, 42 pigs, 19 dogs, 7 beds, and 114 mattresses.

1330 tons of mortar have been sold, as against 1294 tons last year.

Southfield Lane.

The number of loads of refuse destroyed is as follows :---

Ashpit	Refuse	•••		11,070	loads.
Shop	>>	••••	•••	2	>>
	Т	otal	•••	11,072	loads

As against a total of 9879 loads last year.

There has also been destroyed the carcases of 1 calf, 1 sheep, 17 pigs, 17 dogs, 7 beds and 75 mattresses.

Cliffe Road.

The number of loads of refuse destroyed is as follows :----

Ashpit I	Refuse	•••	•••	16,099	loads.
Market	,,		•••	440	,•
Shop	,,		•••	114	,,
	ſ	otal		16,653	loads

As against a total of 12,954 loads last year.

These has also been destroyed the carcases of 4 pigs, 1 goat, 21 couples of rabbits, 2 fowls, 4 tons of turnips, 3 tons of beans, 73 dogs, 92 cats, 15 beds, and 141 mattresses.

1513 tons of mortar have been sold, as against 17 tons last year.

A clinker crushing machine is now being erected at Cliffe Road Destructor, and it is expected that the whole of the residuals will shortly be utilized in various forms.

Yours obediently,

JOHN McTAGGART.

TEMPERATURE. WEEKLY RANGE OF

REFER TO THE NUMBER OF DEATHS.

FIGURES

VITAL STATISTICS.

POPULATION.

The Registrar General's estimate of the population of the City in the middle of the year 1897 is 231,260. In my report for the previous year I gave reasons for supposing that this figure understates the number of persons living in Bradford, and my estimate based upon the number of houses and the average number of people per house, as ascertained at the last census, gives a population of over 249,000. Since the census of 1891 the number of births has exceeded the number of deaths by 12,262. which number added to the census population of 1891 would make the population during the year under review 228,623 but in the light of past experience it is probable that the population of Bradford has been largely increased by immigration and I am therefore inclined to think that my estimate is more nearly correct than that obtained by a mere consideration of the "natural" increase of population. I admit, however, that there is some uncertainty attaching to this matter and that we shall have no accurate knowledge as to population until the census of 1901. If, however, vital statistics are to be of value in judging of Sanitary Conditions it is essential that the figures upon which the calculations are made should be correct, but accuracy cannot be attained by merely taking a census every ten years and estimating the population for intermediate years. This statement applies not only to Bradford but to every City in the Kingdom. It would be a great help to Statisticians and those engaged in Sanitary work if the census were taken quinquennially instead of decennially.

In calculating the various mortality and other rates for the past year I have adopted as a basis the population as estimated by the Registrar General.

Table I, gives the chief figures in reference to population and mortality rates since 1883.

	Corrected Estimate	ANNUAL RATE PER 100 LIVING.					
YEAR.	to middle of each year			Zymetic Rate.			
1883	199,214	29.88	18.77	1.2

TABLE II.

MARRIAGES.

Information obtained from Mr. Crowther, the Superintendent Registrar for the Bradford district and from Mr. Helmsley, the Superintendent Registrar for the North Bierley district, shows that the number of marriages contracted during the year ended December 31st, 1897, was 2,149. The annual rate of persons married per 1,000 of the population was 18.4, a diminution of 1.0 per 1,000 upon the rate for 1896. In London the rate was 18.5 per 1,000.

Periods.	Number of Marriages.	Proportion of Marriages. to Population.
1891	2,171	1 in 99
189 2	2,059	1 in 106
1893	· 1,944	1 in 114
1894	2,035	1 in 110
1895	2,053	1 in 110
1896	2,244	1 in 102
1897	2,149	I in 107

TABLE III.

BIRTHS.

The births registered during 1897 amounted to 5,678, 2,838 being of males and 2,840 being of females. The birth-rate per 1,000 of the estimated population is 24.55 the lowest birth-rate yet recorded in Bradford and diminution of 1.41 per 1,000 upon the extremely low rate for the previous year.

DEATHS.

The deaths from all causes registered during the year 1897 amounted to 4023, of which 2013 were of males and 2010 of females, as compared with a total of 3838 during the previous year. The death-rate per 1000 of the population is therefore 17.39, being an increase of 62 per 1000, upon the rate for 1896. The total death-rate for England and Wales was 17.43, and for the 33 large towns 19.10 per 1000. The London death-rate was 18.19 per 1000.

Pneumonia	.272	304	- 32
Whooping Cough	42	105	- 63

TABLE VI	Ί.
----------	----

It will be seen that there is an increase of 279 deaths from diarrhœa upon the total for 1896, an increase shown chiefly in the prevalence of this disorder in children under twelve months of age. This melancholy fact is explained by the comparatively long prevalence of the hot weather during July and August. Reference to Appendix I., which gives the temperature of the ground at depths of 1 foot and 4 feet respectively shews that diarrhœa does not exist in an epidemic form until the 4-foot thermometer reaches 56° F. This is quite in accord with the well-known fact that at a low temperature soil polluted with organic material does not form so favourable a medium for the growth of deleterious micro-organisms as at higher temperature. In districts, the soil of which is polluted by sewage or other organic material; diarrhœa in an epidemic form is always present during or following on a prolonged hot season.

The other class of diseases which shows a serious increase, viz. 97, on the total for the previous year is that of Tuberculous diseases. Many of those who succumb to Tuberculosis are infants brought up on cow's milk and evidently infected by their food. It is a matter for regret that the regulation of dairies and cowsheds outside the city boundaries is not under the authority of the community which consumes the milk produced. I am strongly of opinion that with proper ventilation of cow-sheds and the separation of the tuberculous from the non-tuberculous animals, milk could be produced free from the germs of tuberculosis.

TABLE VIII.

Comparative Table shewing the Estimated Population, Birth-rate, Denthrate, and Infantile Death-rate in each of the Thirteen largest torm of England and Wales (those having a population of over 200,000) for the year 1807.

TYPHOID OR ENTERIC FEVER.—Under the provisions of the Infectious Diseases Notification Act 149 cases of this disease were notified during the year, 30 of which ended fatally. Owing to lack of suitable accommodation for isolation in their own houses 79 of the cases were removed for isolation and treatment to the Fever Hospital. A detailed analysis of the cases is contained in the two following tables.

Deaths from other Tuberculous Diseases.*

*Deaths in Public Institutions are referred to in the Wards from whence the patients came.

BRONCHITIS, PNEUMONIA AND PLEURISY.—These three chief diseases of the respiratory organs accounted for 650 deaths, 236 of which were those of children under 5 years of age. The respiratory death-rate was equal to 2.81 per 1000 of the population. CANCER.—Table XXXII gives the number of deaths attributed to cancerous or other forms of malignant growths. There is seen to be a slow though steady increase in this class of disease.

TABLE XXXII.

Synopsis of Deaths from Cancer during the Years 1888-97.

	1888.	1889.	1890.	1891.	1892.	1893.	1894 .	1892.	1896.	1897.

Females	101	87	77	98	107	89	102	122	118	130

VIOLENCE.—The deaths from violence amounted to 382, 21 of which were of children under 5 years of age. Of these deaths 42 were due to fractures and contusions, 21 to burns or scalds, 9 to accidental suffocation.

Inquests.

Two hundred and twenty-eight (228) inquests were held by the City Coroner during the year, 56 of which were on children under 5 years of age.

Uncertified Deaths.

The deaths of 49 persons were registered without Certification by a Medical Practitioner or Coroner, being 1.2 per cent. of the total deaths, the average percentage of uncertified deaths for the 33 great towns being 1.3 per cent.

Insenitary Dwellings.

The following houses having been certified as unfit for habitation were ordered by the City Council to be closed (Building Regulation, XVIII., Bradford Gas and Improvement Act, 1871).

1a, Clarenton Lane.
34, 36 and 38, Wharfe Street.
46, 68 and 70, Longcroft Place.
2 and 4, Violet Court.
2 and 4, Paul Street.
17a, Acre Street.
17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27 and 28, Farrar Square.
27 and 28, Farrar Square.

Also the Cellar dwellings as follows :---

9, Tanhouse Yard.	13, Duncan Street.
16, Æolus Place.	75, George Street.

In four of the houses improvements satisfactory to the City Council were made, and the closing order subsequently revoked.

REPORT

OF THE

CHIEF INSPECTOR OF NUISANCES.

TO THE MEDICAL OFFICER OF HEALTH,

SIR,—The following statement shews the nature and amount of work done in the Sanitary Department during the year 1897, including an abstract of work carried out in the previous nine years.

	No of Cases. 1888. 1889. 1890. 1891. 1892. 1893. 1894. 1895 1896. 1897.									
Particulars of work done.	1888.	1889.	1890.	1891.	1892.	1893.	1894.	1805	1896.	1897.
Drains opened and cleansed	1011	1356	1298	142 9	1178	1236	1518	1573	1710	1757
Drains provided for premises which had been previously without drainage	41	17	13	17	32	16	87	29	50	31
Sink drains disconnected from the sewer or otherwise eff- ectually trapped	345	623	871	632	508	365	565	341	377	275
Street gullies cleansed	2976	2184	2867	3 648	3602	4064	4831	4237	3927	5011
Water conductors provided and down spouts connected with the drains	828	1062	1251	1143	1127	947	1977	2105	1980	1856
Swine and Swine Styes removed from objectionable situations	45	24	30	29	13	31	20	35	41	τ8

43

The above particulars represent only those cases where Statutory Notices have been served and do not include Nuisances prevented or abated on the verbal request of the Inspector.

The number of persons summoned for non-abatement of Nuisances after Notices given is 69.

Eight persons were summoned and convicted for continuing to occupy their houses after the same had been ordered by Notices to be closed as unfit for human habitation.

Dight Seavenging.

During the year the Contractors have according to the returns of the Sanitary Officers, emptied 94,996 ash-pits and removed therefrom 4,537 loads of soil, and 67,990 loads of rubbish, a total of 72,527 loads.

Burial Grounds.

During the year 167 visits have been made by the Sanitary Officers to the various graveyards within the City, but no irregularities have been observed.

Owing to the utilization of portions of the North and South sides of the Burial ground attached to the Parish Church "St. Peters" for the purpose of restoration and enlargement of that edifice, by an order of the Home Secretary the remains of 1,035 persons have been removed therefrom and the same re-interred at Undercliffe Cemetery, under the control and supervision of the Medical Officer of Health and Sanitary Officers.

Dangerous and Unfenced Places.

Three hundred and nineteen place, including houses and other buildings have been reported by the Sanitary Officers as being in a dangerous condition. These have been dealt with and made secure from personal danger, either under the direction of the City Surveyor or the Chief Inspector of Nuisances.

Public Urinals.

The number of Public Urinals within the City is 40, as against 38 last year.

During the year two Public Urinals have been erected, viz.: One at the junction of Bolling Hall Road and Rooley Lane by permission of the owners of the premises, Messrs Waller & Son, Limited, and one at Grosvenor Road by permission of David Mellor, Esq.

The Public Urinal erected last year at Great Horton Road on land belonging to the trustees of the late George Turner, Esq., has been removed, the site having been acquired for building purposes and the same has since been re-erected on land adjacent thereto by the kind permission of the Great Northern Railway Company who are owners of the land.

Canal Boats.

There is only one Canal Boat registered within the City, and this, along with 219 others registered with other Authorities, but plying on the Canal within the City, has been examined by the Chief Inspector of Nuisances or his Assistant, Mr. Rhodes, and all boats inspected were free from bilge water, ventilation very good, and suitable provision for the storage of water for domestic use. In 10 cases the boats were found to be not in accordance with the regulations, 5 having defective cabins, 2 having no certificate of registration on board, 2 being overcrowded in cabins, and 1 not lettered nor having any distinctive mark or marks thereon for the purpose of identification as required by the Registration Authority. The master of one boat was summoned before the Justices for allowing the cabin to be overcrowded, and a penalty of 5s. and 11s. costs was inflicted, failing payment 7 days imprisonment.

The owners of the other defective boats were formally notified by the Chief Inspector of Nuisances to have the boats thoroughly repaired and in future to conform strictly with the regulations, and accordingly the whole of the necessary repairs have since been carried out.

Common Lodging houses.

The number of Common Lodging Houses within the City is 41, the same as last year.

The houses contain 192 rooms for sleeping purposes, and are registered to accommodate 1935 persons nightly.

The number of persons who have been accommodated during the year is 454,228, the nightly average being 1,244.

The number of visits paid to these houses during the year is 1903, and their reports shew the houses to have been fairly well conducted.

adulteration of Food and Drugs.

During the year ending December, 1897, 265 samples of food have been submitted to the City Analyst by the Food Inspector for analysis. Of these 243 were certified by the Analyst as not adulterated and 22 were found to be adulterated, but the amount of adulteration was trivial and did not warrant proceedings against the offenders beyond being formally cautioned against a repetition of the offence. The Food Inspector seized and destroyed 6 bags of turnips. 10 boxes of lettuce, 50 herrings, 26 bags of mussels, 6 boxes and 1 kit of haddocks, 27 boxes of hake, 2 bags of whelks, 2 baskets of shrimps, 6 bags of beast offal, 7 bags of cockles, 2 boxes of bream, 32 couples of rabbits, 1 barrel of cod fish, and 1 basket of pears.

The following table shews the nature of articles submitted for analysis :—

REPORT for Year ending December, 1897.

Dairies, Cow-sheds, and Milk-shops

There are at present registered under "the Contagious Diseases (Animals) Act, 1878, 244 Cow-sheds, and 1088 Dairies, Milk-shops, and Purveyors of Milk, as against 246 and 1068 respectively last year.

During the year, 107 applications have been made for registration of premises for the sale of milk, and upon inspection by the Medical Officer of Health or the Dairies and Cow-sheds Inspector 20 of these were found to be suitable and were registered accordingly. Forty-seven milk dealers have during the year voluntarily given up their premises which were found to be unsuitable and have since been registered for other premises more compatible with the proper preservation of the cleanliness of the milk and milk vessels used therein.

Inspection has frequently been made as heretofore of the milk and milk vessels coming into the City by railway and otherwise from places beyond the City boundaries and numerous samples thus delivered have been taken by the Food Inspector and the results (with a few exceptions) shew the milk to have been genuine and of good quality.

Two milk dealers whose milk vessels were found to contain colouring matter for the purpose as alleged of improving the appearance of the milk, appeared before the Sanitary Committee and were cautioned against repeating the offence.

Four milk dealers whose milk vessels were found to be in a dirty condition were formally warned.

The Committee as heretofore have inspected a number of Cow-sheds and Milk-shops, and where the sanitary condition was found to be at all defective instructions were given for the issuing of notices requiring the requisite improvements to be carried out, with the result that 3 Cow-sheds and farm buildings which were in defective sanitary condition have been put into good repair. Special attention has again been paid to the Fried Frish Shops and Ice Cream makers' premises within the City and many improvements have been effected in regard to cleanliness and general condition of these places and in the manipulation of the commodities produced thereat.

The number of visits and inspections made by the Officers has been as follows :—Cow-sheds, 897; Milk shops, 2990; and milk vessels, 1684.

Inspection of Meat, §laughter-houses, Potted Meat and §ausage Manufactories.

There have been 42 seizures and 104 surrenders of unsound meat, fish, and fruit. In three cases the offenders were summoned before the Justices on separate charges for exposing for sale a quantity of rabbits, beef, and veal which were unfit for human food and penalties and costs amounting in the aggregate to \pounds_{10} 4s. were inflicted.

There have been seized and destroyed 4,190 lbs. of beef, 675 lbs. of pork, 230 lbs. of veal, 520 lbs. of mutton, 20 bags of cockles, 4 bags of onions, 32 rabbits, 3 bags of oysters, 38 boxes of smelts, 11 bags of mussels, 12 turkeys, and 3 barrels of herrings.

There have been surrendered and destroyed 6,700 lbs of beef, 530 lbs. of mutton, 1,276 lbs. of veal, 2,782 lbs. of pork, 5 barrels of codfish, 169 boxes of kippers, 96 bags of mussels, 6 tons of haddocks, 33 baskets of strawberries, 15 barrels of bloaters, 4 baskets of shrimps, 19 couples of rabbits, 1 box of mushrooms, 2 barrels of herrings, 36 boxes of hake, 6 boxes of finnon haddock, 2 bags of whelks, 19 bags of cockles, 26 brace of partridge, and 1 bag of oysters.

The above seizures and surrenders are exclusive of those made by and specified in the Food Inspector's Report.

The number of slaughterhouses under the old regulations is 7, and there are 4 others for which licenses have to be applied for annually.

The number of places at which Potted Meat and Sausages are made is 81, as against 76 last year, and these together with the private slaughter-houses are regularly visited and reported upon by the Inspectors.

The number of visits made during the year has been as follows :—Private Slaughter-houses, 354; Potted Meat and Sausage Works, 1,296. The Public Abbatoirs are visited daily.

Cattle Disease.

During the year there have been five outbreaks of Swine Fever within the City, all of which were duly notified by the Sanitary Department to the Board of Agriculture, whose officers took charge both of the infected animals and premises, and also gave customary notices to the respective owners and occupiers as required by the Orders in Council.

"\$hop hours Act":-Workshops and Bakehouses.

The number of shops visited by the Inspector during the year is 2146. In 1133 of these young persons were found to be employed and 532 of these shopkeepers failed to comply with Section 4 of the Act by not exhibiting the necessary notice stating the number of hours which a young person may be employed in a shop. Each of these shopkeepers was supplied with the abstract of "The Shop Hours Act" and requested to keep the same posted where young persons are employed on their premises.

Seven young persons were found to have been employed over 74 hours in one week. Nineteen young persons were found employed in shops having previously on the same day been employed in a factory or Workshop for the full number of hours allowed by "The Factory and Workshops Act." Thirteen of these young persons were employed in the Market Hall, Kirkgate.

All the above cases were first offences and in each case the employers were duly cautioned

The Inspector under "The Shop Hours Act" also visited workshops and bakehouses as follows : --

Bakehouses and Confectioners			347
Dress and Mantle Makers			96
Milliners			58
Blouse Makers			9
Tailors			201
Boot and Shoe Makers and Clog	gers		52
Hosiery Knitters			7
Burlers			8
Joiners, Cabinet Makers and Wo	od Carv	ers	88
Shoeing and General Smiths			46
Rag Sorters			11
Basket Makers			4
Brush Makers			II
Plumbers			10
Tin Plate Workers		··•.	38
Wheelwrights			I 2
Brassfounders			4
Picture Framers	•••		7
Coopers			4
French Polishers		• (+
Paper Bag Works			4
File Makers			4
Wire Workers			3
Various		•••	48
Total			1076

Sixty-eight workshops "were found without regulations. These were duly notified to Her Majesty's Inspector of Factories and Workshops. Forty-two Workshops and 23 Bakehouses were found in a dirty condition. The occupiers of these places were requested to have their premises cleansed and limewashed. In most cases this was immediately done on attention being drawn to the matter.

Ten occupiers of underground premises brought into use as bake-houses since January, 1896, have been requested to discontinue using the premises for the purpose, as required by "the Factory and Workshops Act, 1895."

Six workshops were found without any closet accommodation, and the provision of separate accommodation was found necessary in ten cases.

Five cases were found of persons sleeping in a room which during the day is used as a workshop.

Three cases of overcrowding in workshops have been dealt with satisfactorily.

All nuisances in and adjoining workshops have been referred to the Chief Inspector.

Yours obediently,

6

JAS. CHAMBERS,

Chief Inspector.

REPORT

ON

DESTRUCTOR WORKS.

TO THE MEDICAL OFFICER OF HEALTH,

SIR, - I beg to submit the following report of work done at the various Destructor's during the year 1897.

hannerton Street.

The number of loads of refuse destroyed is as follows :----

Ashpit I	Refuse	•••	•••	17,819	loads.
Market	,,			1,123	,,
Shop	,,		•••	1,696	,,
	Г	otal	••••	20,638	loads

As against a total of 23,757 loads destroyed last year.

There has also been destroyed the carcases of 17 beasts, 701 stones of beef, 31 calves, 22 sheep, 58 pigs, 2 goats, 2 deers, 1 horse, 102 tongues, 26 brace of partridges, 13 turkeys, 14 hares, 38 couples of rabbits, 2 bags of tripe, 5 cases of eggs, 98 bags of cockles and mussels, 8 cases of currants, 23 barrels of grapes, 32 boxes of strawberries, 36 boxes of tomatoes, 5 barrels of pears, 10 boxes of lettuce, 859 dogs, 118 cats, 55 beds, and 320 mattresses.

5,060 tons of mortar, and 3,450 loads of clinker have been sold during the year.

As against 4,159 tons, and 2,826 loads last year.

The whole of the cells have been reconstructed by the Horsfall Furnace Syndicate (Limited) on their principle, and are now in full working order.

The whole of the residuals at this Destructor are now being utilized in some form or another.

The fish refuse works continues to be carried out in a satisfactory manner.

Sunbridge Road.

The number of loads of refuse destroyed is as follows :----

Ashpit I	Refuse			16,488	loads.
Market	,,		•••	607	,,
Shop	,,	•••	•••	596	,,
	,	Total		17,691	loads

As against a total of 17,507 loads last year.

There has also been destroyed the carcases of 1 beast, 1 calf, 42 pigs, 19 dogs, 7 beds, and 114 mattresses.

1330 tons of mortar have been sold, as against 1294 tons last year.

Southfield Lane.

The number of loads of refuse destroyed is as follows :----

Ashpit	Refuse	•••		11,070	loads.
Shop	,,		•••	2	,,
	Т	otal	•••	11,072	loads

As against a total of 9879 loads last year.

There has also been destroyed the carcases of 1 calf, 1 sheep, 17 pigs, 17 dogs, 7 beds and 75 mattresses.

Cliffe Road.

The number of loads of refuse destroyed is as follows :----

Ashpit I	Refuse	• •••	•••	16,099	loads.	
Market	,,		•••	440	,,	
Shop	,,	••••	•••	114	"	
		Total	•••	16,653	loads	

As against a total of 12,954 loads last year.

These has also been destroyed the carcases of 4 pigs, 1 goat, 21 couples of rabbits, 2 fowls, 4 tons of turnips, 3 tons of beans, 73 dogs, 92 cats, 15 beds, and 141 mattresses.

1513 tons of mortar have been sold, as against 17 tons last year.

A clinker crushing machine is now being erected at Cliffe Road Destructor, and it is expected that the whole of the residuals will shortly be utilized in various forms.

Yours obediently,

JOHN MCTAGGART.

REPORT

ON THE

WORK OF THE CITY HOSPITAL

FOR

INFECTIOUS DISEASES.

During 1897 there were 317 patients admitted to the Hospital, which with 35 remaining in Hospital at the end of the previous year constitute a total of 352 patients who have passed through the Wards.

The cases of Scarlet Fever admitted amounted to 226, 5 only of which ended fatally.

There were 74 cases of Enteric Fever admitted, 11 of which proved fatal.

Of other diseases, including Diphtheria and Erysipelas 17 cases were admitted, 8 of which terminated fatally.

The Tabular Statements following give information in more detail.

Statistical Summary.

Situation : Latitude 53.4 N.; Longitude 1.7 W.

Elevation : 250—1,000 feet.

Area of City: 10,776 acres.

Density of Population : 21.6 persons per acre.

Number of Inhabited Houses: 52,700.

Population : 216,361 (1891).

233,737 (estimated to middle of 1898).

Birth-rate : 23'92 per 1,000.

Death-rate : Recorded, 17'54 per 1,000.

Zymotic, 2.20 per 1,000.

Infantile Mortality, 184 per 1,000 births.

Total Rainfall: 28.27 inches.

VITAL STATISTICS.

POPULATION.

The estimate of the Registrar General of the population of the City in the middle of the year 1898 is 233,737. It is difficult to state with any approach to accuracy what the number of people living in the City is, in consequence of the chief data upon which an estimate is based having been obtained so long ago as the Spring of 1891. However, the calculations in this report are made upon the Registrar General's estimate.

The first Table shows the chief statistical rates since the year 1883.

VEAR.	Corrected Estimate of Population	Annua	L RATE PER 100 L	IVING.
YEAK.	to middle of each year.	Birth-Rate.	Death-Rate.	Zymotic Rate.
1883	199,214	2 9·88	18.77	1.2
1884	201,347	30.86	21.13	2.6
1885	203,504	30.22	18.62	1.2
1886	205,684	30.22	20.32	2.3
1887	207,887	29.83	21.44	2.9
1888	210,113	29.82	18.66	1.6
1889	212,364	29.53	21.12	2.9
1890	214,634	29.10	23.21	2.3
1891	216,938	28.64	22.12	2.35
1892	219,262	27.18	17.91	1.40
1893	221,610	27.58	20.90	3.55
1894	223,985	26.60	16.92	1.62
1895	226,384	26.03	19.80	2•47
1896	228,809	25.94	16.77	1.20
1897	231,260	24.55	17.39	2.24
1898	233,737	23.92	17.54	2*20

TABLE I.—Shewing corrected Population, Birth-rate, and Mortality Rates from 1883—1898.

Appended is the distribution of the population in the Wards of the City. It will be seen that the density varies from 3⁵ persons per acre in Allerton Ward, to 92⁴ in the West Ward.

WARI	DS.			Population.	Acreage.	Persons per Acre.

TABLE II.

MARRIAGES.

From information kindly supplied by Mr. Crowther, Superintendent Registrar of the Bradford district, and by Mr. Helmsley, Superintendent of the North Bierley Registration district, I am enabled to compile the following table which shews that the marriage-rate was the same as in the previous year, viz.: I wedding to 107 of the population. This is equivalent to an annual rate of 18.6 persons married per 1,000 of the population. In London the corresponding figure was 18.7.

Period.	Number of Marriages.	Proportion of Marriages to Population.
1891	2,171	1 in 99
1892	2,059	1 in 106
1893	1,944	1 in 114
1894	2,035	1 in 110
1895	2,053	1 in 110
1896	2,244	I in 102
1897	2,149	I in 107
1898	2,174	1 in 107

TABLE III.

BIRTHS.

The number of births registered during the year was 5,593, consisting of 2,819 males and 2,774 females. The birth-rate per 1,000 of the estimated population is 23.92, the lowest figure yet recorded in Bradford, and a diminution of 0.53 per 1,000 on the birth-rate for 1897.

DEATHS.

The total number of deaths recorded in 1898 was 4102, of which 2,030 were of males and 2,072 of females, being a slight increase on the total for the previous year.

The death-rate per 1,000 of the population is 17.54, an increase of .15 per 1000 on the rate for 1897. The death-rate for the whole of England and Wales was 17 58, for London 18.68, and for the 33 large towns 19.03 per 1,000.

YEAR. lation	Estimated Popu- lation in the middle	Births.	Deaths.	Annual Rate per 1000 living.

1898	233,737	5593	4102	23.92	17.54

TABLE VI.

+ In these years, the births and deaths are those registered in 53 weeks.

In searching for the causes of the increase in the deathrate I find that four different affections chiefly contribute to it, three of which belong to the class usually known as preventible, viz., cancer, diarrhœa, measles, and tuberculous diseases.

The increase or decrease in the chief classes of diseases in comparison with average for the previous five years is shewn in Table VII.

DISEASES.	Deaths in 1898.	Average 1893-1897.	Increase or Decrease.
Heart Disease	242	312	- 70
Nervous Diseases	42 6	478	- 52

Measles	104	75	+ 29
Diarrhœa	267	224	+ 43
Cancer	208	165	+ 43

TABLE VII.

The Table following allows a comparison in the chief vital statistics to be made between Bradford and twelve other large towns. It will be seen that whilst Bradford is by far the lowest on the list in the birth-rate column, yet two other towns, viz., Bristol and Leicester, record a lower death-rate; but in the proportion of deaths from zymotic diseases, Bradford occupies the best position. In the infantile mortality rate, however, Bradford takes only a medium place, six of the other towns having a lower death-rate amongst infants under one year of age.

TABLE VIII.

Comparative Table shewing the Estimated Population, Birth-rate, Deathrate, and Infantile Death-rate in each of the Thirteen largest towns of England and Wales (those having a population of over 200,000) for the year 1898.

Shewing the Mortality Rates in the various Wards.

Ages at Death.

INFANTILE MORTALITY.—The deaths of infants under one year of age was 1,033, equivalent to a rate of 184 per 1,000 of the children born, an increase of 5 per 1,000 on the rate for the previous year. This rate amongst the 33 large towns varied from 150 per 1,000 births in Croydon, to 225 in Preston.

The following table gives the principal causes of infant mortality.

Table XII. sets forth the mortality at the different times of the year. It is seen that the largest number of deaths occurred in the first and third quarters. This is chiefly due to climatic causes, the cold weather in the early part of the year causing a larger number of deaths from diseases of the respiratory system, whilst the hot weather of the summer being more favourable to the propagation of affections of a diarrhœal nature.

Deaths from other Zymotic Diseases.

* Deaths in Public Institutions are referred to in the Wards from whence they come.

ENTERIC OR TYPHOID FEVER.—During the year 288 cases were reported to me in accordance with the provisions of the Infectious Diseases Notification Act, of which 47 had a fatal termination. Of these cases 173 were removed to the Leeds Road Hospital for isolation and treatment. Although the total number of cases has been large it is satisfactory to note the mortality has been low, the percentage fatality being only 16.3 in comparison with 20.1 for the year preceding. An analysis of the cases is contained in the tabular statements following.

TYPHUS FEVER — During the year there have been two outbreaks of this disease. The first one occurred in the early part of February and invaded two houses in Fitzgerald Street. Four persons were infected and two died. The second outbreak occurred in Myrtle Street, Leeds Road, but consisted of two cases only, both of which made a good recovery.

All the cases were promptly isolated in the Fever Hospital, the infected houses were at once disinfected, cleansed, and the remaining occupants kept under surveillance until all danger of the further spread of the disease was over. I feel convinced that by immediate isolation and disinfection a considerable prevalence of this most infectious and fatal disorder was prevented.

SMALLPOX.—One importation of Smallpox occurred during 1898. It was the case of David Broadbent, of 144, Willowfield Street. This man had been employed in repairing brickwork at the Smallpox Hospital in Middlesborough, where an epidemic of the disease was raging. He finished his work in Middlesborough on January 25th, on which day he came to Bradford, and sickened of Smallpox on the 4th of February. He was immediately isolated in the Bierley Hall Hospital. The house was disinfected and its occupants visited daily for 18 days. No extension of the disease took place.

Dotification of Infectious Diseases.

During the year the large number of 1,334 cases of Infectious disease were notified in accordance with the Infectious Diseases Notification Act; this is a large increase upon the number for the previous year, and as the following tabular statements show, is mainly due to an increase in the prevalence of Scarlatina during the latter part of the year.

Deaths from other Tuberculous Diseases.*

* Deaths in Public Institutions are referred to in the Wards from whence the patients came.

BRONCHITIS, PNEUMONIA AND PLEURISY.—These three chief diseases of the respiratory organs accounted for 739 deaths, 328 of which were those of children under 5 years of age. The respiratory death-rate was equal to 3'16 per 1000 of the population.

CANCER.-Table XXXI. gives the number of deaths attributed to cancerous or other forms of malignant growths.

TABLE XXXI. Synapsis of Deaths from Cancer during the Vears 1880-08

Inquests.

Two hundred and sixty-three (263) inquests were held by the City Coroner during the year, 60 of which were on children under 5 years of age.

Uncertified Deaths.

The deaths of 50 persons were registered without certification by a Medical Practitioner or Coroner, being 1'2 per cent. of the total deaths, the average percentage of uncertified deaths for the 33 great towns being the same.

Disinfecting Station.

The following table sets forth the work done in connection with the Disinfecting Station during 1898.

Insenitary Dwellings.

The undermentioned houses were certified by me as unfit for habitation and ordered by the City Council to be closed in pursuance of powers vested in the Corporation by a private Act of Parliament :---

32, Wood Street	52, Shuttleworth Lane
20, Marley Street	2, Toby Lane, Great Horton

Also the undermentioned Cellar Dwellings :---

75. 34, 42, 50, 54, and 58, George Street;
15. 19, 21, 33, and 35, Lower William Court, Leeds Road;
8, Caine Place, Leeds Road;
33 and 51, Acre Street.

Insanitary areas.

In September, I made a representation under Part I. of the Housing of the Working Classes Act, 1890. It was accepted by the Sanitary Committee but referred back by the Council for the consideration of some scheme to provide house accommodation for those who would be displaced by the demolition of the property contained in the area. A Sub-Committee formed for this purpose still has the matter under consideration.

REPORT

OF THE

CHIEF INSPECTOR OF NUISANCES.

TO THE MEDICAL OFFICER OF HEALTH.

SIR,—The following statement shews the nature and amount of work done in the Sanitary Department during the year 1898, including an abstract of work carried out in the previous nine years.

					No.	of Ca	ises.			
Particulars of work done.	1889.	1890	1891	1892	1893	1894	1895.	1896	1897	1898.

The above particulars represent only those cases where Statutory Notices have been served, and do not include nuisances prevented or abated on the verbal request of the Inspector.

The number of persons summoned for non-abatement of nuisances after Notices given is 15, as against 69 the previous year.

Night Scavenging.

The number of ashpits reported as having been emptied during the year is 102,318, viz., from January 1st to July 15th, under the old contract, 55,889 ashpits were emptied; 2,915 loads of soil and 41,833 loads of rubbish were removed, or a total of 44,748 loads.

From July 16th to December 31st, 46.429 ashpits were emptied by the Corporation; 777 loads of soil and 29,119 loads of rubbish, or a total of 29,918 loads were removed.

No. of ashpits emptied during the year 102,318. Loads of soil removed, 3,714. Loads of rubbish removed, 70,952. Total number of loads removed, 74,666.

Burial Grounds.

During the year 181 visits have been made by the Sanitary Officers to the various graveyards within the city, but no irregularities have been observed.

Owing to the alterations which are being carried out at Rawson Place Market, by an order of the Home Secretary the remains of 165 persons, viz, 140 adults and 25 infants, have been removed from that portion of the uncovered market next James Street, and which originally formed part of the graveyard attached to the Kirkgate Wesleyan Methodist Chapel, and the same were re-interred at Bowling Cemetery under the control and supervision of the Medical Officer of Health and Sanitary Officers.

Dangerous and Unfenced Places.

Two hundred and sixty-one places, including houses and other buildings, have been reported by the Sanitary Officers as being in a dangerous condition. These have been dealt with and made secure from personal danger, either under the direction of the City Surveyor or the Chief Inspector of Nuisances.

Public Urinals.

The number of Public Urinals within the City is 40, being one less than last year. The Public Urinal at Allerton Road on land belonging to Mr. C. Hardy having been removed for building purposes and no other site has yet been found on which to re-erect the same.

The rest of the Urinals are in a good state of repair.

Canal Boats.

There is only one Canal Boat registered within the City, and this, along with 190 others registered with other Authorities, but plying on the Canal within the City, has been examined by the Chief Inspector of Nuisances or by his Assistant, and their general condition, having special regard to proper ventilation and storage of water, has been found satisfactory.

In nine cases the boats were found to be defective and water leaking into the cabins. z boats were found to be without certificates of registration as required by the Act, and z boats' certificates of registration were not produced when requested by the Inspectors. One boat was found to be totally unfit for human habitation and legal proceedings were instituted against the owner and master of the boat resulting in a penalty of $\pounds I$ and IIS. costs against the owner or II days imprisonment. The master was acquitted on payment of 7s. costs. The owner and master of I boat found to be plying on the Canal without being registered were proceeded against and a penalty of IOS. and IIS. costs were inflicted against the owner. The charge against the master was dismissed on payment of 7s. costs.

The owners of the other defective boats were formally notified by the Chief Inspector of Nuisances to have the boats thoroughly repaired and provide certificates where required, and in future to conform strictly with the regulations, and accordingly the whole of the necessary repairs have since been carried out, and the necessary certificates obtained.

Common Lødging houses.

The number of Common Lodging Houses within the City is 41, the same as last year.

The houses contain 195 rooms for sleeping purposes, and are registered to accommodate 1913 persons nightly.

The number of persons who have been accommodated during the year is 433,486, the nightly average being 1187.

The number of visits paid by the Sanitary Officers to these houses during the year is 1978, and their reports shew the houses to have been fairly well conducted.

adulteration of Food and Drugs.

During the year ending December, 1898, 286 samples of food and drugs have been submitted to the City Analyst by the Food and Drugs Inspector. Of these 272 have been certified by the Analyst as pure, and 14 have been found to be adulterated. One of these was a sample of coffee, which contained 40 % of chicory, and proceedings were taken in this case, resulting in a penalty of 5/- and costs. Proceedings were also instituted in a milk of sulphur case, the defendant having to pay costs only, as this was the first case of its kind in the city under the new or 1898 section of the B P. A sample of "Scotch whiskey" was certified to be 4.6° U.P. below the standard fixed by the Act; the vendor in this case was cautioned by letter. Two samples of baking powder have been certified to be adulterated with 36.50 and 36.75 % of alum respectively, but, it having been decided in a previous case that baking powder is not a food "within the meaning of the Act," the cases were allowed to lapse. In the remaining cases of the 14 above-named, the amount of adulteration was too small to warrant further proceedings.

The Food Inspector seized and destroyed 43 bags of cockles, 66 bags of mussels, 8 boxes of haddocks, 1 small box of bacon, 330 lbs. of mushrooms. 25 couples of rabbits, 31 boxes of kippers, 4 bags of pickled shrimps, 72 pots of shrimps, 18 pots of lobster, 3 barrels of apples, and 7 kegs of pears.

Dairies, Cow-sheds, and Milk-shops.

There are at present registered under the Contagious Diseases (Animals) Act, 1878, 248 cow-sheds and 1109 dairies, milk-shops, and purveyors of milk, as against 244 and 1088 respectively last year.

During the year 46 applications have been made for registration of premises for the sale of milk, and upon inspection of the same by the Medical Officer of Health or the Dairies and Cowsheds Inspector, 43 of these were found to be suitable, and were registered accordingly.

Inspection has frequently been made as heretofore of the milk and milk vessels coming into the city by rail and otherwise from places beyond the city boundaries, and numerous samples thus delivered have been taken by the Food Inspector, and the results, with few exceptions, shew the milk to have been genuine and of good quality.

Six milk dealers whose vessels were found to be in a dirty condition were formally warned.

The Committee as heretofore have inspected a number of cow-sheds and milk-shops, and, where the sanitary condition thereof was found to be defective, instructions were given for the issuing of notices, requiring the requisite improvements to be carried out, and the same are now in progress.

Special attention has again been paid to the fried fish shops and ice cream makers' premises within the city, and many improvements have been effected in regard to cleanliness and general condition of these places, and in the manipulation of the commodities produced thereat.

The number of visits and inspections made by the officers has been as follows:—Cow-sheds 869, milk-shops 2,534, milk vessels 1576.

Inspection of Meat, Slaughterhouses, Potted Meat and Sausage Manufactories.

During the year there have been 36 seizures and 138 surrenders of unsound meat, fish, and fruit.

There have been seized and destroyed 1,900 lbs. of beef, 79 lbs. of mutton, 550 lbs. of pork, 100 lbs. of veal, 42 boxes of Finnon haddocks, 19 boxes of kippers, 9 bags of cockles, 5 bags of mussels, 3 boxes of haddock, 40 boxes of herrings, 5 boxes of cod-fish, 20½ couples of rabbits, 30 bundles of celery, 12 sets of beast's offal, 1 box of sheep's offal, 2 bags of whelks, 40 boned hams, 1 box of halibut, 1,800 bloaters, 1 ton of fish, and 169 Egyptian quail.

There have been surrendered and destroyed 15,700 lbs. of beef, 2,820 lbs. of mutton, 3,730 lbs. of pork, 400 lbs. of veal, 49 boxes of Finnon haddock, 162 boxes of kippers, 52 bags of cockles, 69 bags of mussels, 40 boxes of haddock. 4 boxes of mackerel. 13 boxes of herrings, 10 boxes of cod-fish, 76 couples of rabbits, 10¹/₂ baskets of shrimps, 20 bags of oysters, 2 bags of tripe, 5 boxes of kidney, 2 boxes of sweetbread, 55 baskets of mushrooms, 1 basket of tripe, 1 bag of offals, 1 box of lamb offals, 13 cases of frozen rabbits, 10 tons of turnips, and 29 baskets of potatoes.

The above seizures and surrenders are exclusive of those made by and specified by the Food and Drugs Inspector.

The number of slaughterhouses under the old regulations remains the same as last year, viz. 7, and there are four others for which licences have to be applied for annually.

The number of places at which potted meat and sausages are made is 90, as against 81 last year, and these, together with the private slaughter-houses, are regularly visited and reported upon by the Inspectors.

The number of visits made during the year has been as follows:—Private Slaughter-houses, 358; Potted Meat and Sausage Works, 1240. The Public Abbatoirs are visited daily.

Cattle Disease.

During the year there have been three outbreaks of Swine Fever within the City, viz., one on the premises of Thomas Newton at Dundas Street; one on premises at 263, Wakefield Road, in the occupation of John Watson, and one at Usher Street on the premises of John Hudson. An outbreak of Anthrax occurred on the farm premises at Little Horton Green in the occupation of Mr. Philip Wright, one cow out of a herd of about 20 cattle being affected with the disease, all of which were duly notified by the Sanitary Department to the Board of Agriculture whose officers took charge both of the infected animals and premises and also gave customary notices to the respective owners and occupiers as required by the Orders in Council.

"Shop Hours Act":—Workshops and Bakehouses.

The number of shops visited by the Inspector under the "Shop Hours Act" during the year is 1405. In 1051 of these shops young persons under the age of 18 were found to be employed, and 312 of these shopkeepers failed to comply with Section 4 of the Act by not exhibiting the necessary notice stating the number of hours which a young person may be employed in a shop.

Nineteen young persons were found to have been employed for a period exceeding 74 hours in one week.

Eighteen young persons were found employed in shops, having previously on the same day been employed in a factory or workshop for the full number of hours allowed by the "Factory and Workshops Act."

Eight persons were summoned and convicted for offences against the Act. In one case the defendant was fined the maximum penalty of 40/- and 11/- costs. Total penalties and costs amounted to $\pounds 7$ 7s.

WORKSHOPS AND BAKEHOUSES.—The Shop Inspector also visited 932 workshops and 359 bakehouses. 196 workshops were found without regulations; these were duly notified to Her Majesty's Inspector of Factories and Workshops.

The following is a summary of work done and sanitary defects remedied :---

Dirty Workshops limewashed and cleansed	123
· ·	123
Dirty Bakehouses ,, ,, ,,	34
Workshops without closet accommodation	I 2
Workshops with insufficient closet accommo-	
dation	3
Workshops without separate closet accom-

Underground Bakehouses closed	7
Workshops closed	I
Gullies removed out of Bakehouses	8

A large number of workrooms and bakehouses have also been provided with additional ventilation.

Yours obediently,

JAS. CHAMBERS,

Chief Inspector.

REPORT

OF THE SUPERINTENDENT OF THE

ASHPIT CLEANSING AND DESTRUCTORS DEPARTMENT.

TO THE MEDICAL OFFICER OF HEALTH.

SIR,—I beg to submit the following report of work done in the above Department, during the year 1898.

Ashpit Cleansing Department.

The contract with Messrs. Greenwood Brothers for the emptying and cleansing of Privies and Ashpits within the City expired on the 15th of July, 1898, and on the evening of that day your Committee undertook the work in accordance with a resolution passed by the Council on the 11th of January, 1898.

The collection of refuse is now carried out in a systematic manner. The City is divided into four sections, and each section into 60 sub-sections, each consisting of one night's work. So far the system carried out has worked well.

Fifteen horses were purchased to start with, the remainder being hired from local team owners. Unfortunately the whole of the horses suffered from influenza and one died. The remainder recovered and are now working and in good health.

Temporary stabling at Harris Street was rented from Mr. Parkinson, pending the execution of the alterations and repairs to the Corporation Stables at the Hammerton Street Depot. At the last-named place the drains, floors, &c., have been thoroughly repaired, and every part of the premises has been thoroughly cleansed and painted or whitewashed. A new Hay-Chopper and a Corn-Crusher have been purchased, and also a Horse Food Boiler. The Gas Engine has been removed and the machinery is now being driven by steam from the Destructor.

The working plant at the present time consists of 14 horses, 25 carts made by local wheelwrights and 14 purchased from Messrs. Greenwood Brothers, 2 large four-wheeled vans, 1 lurry, 31 sets of gears, and a quantity of miscellaneous tools and implements.

Two small corrugated iron buildings have been^{*}removed from Scholemoor Hospital, and fixed at Hammerton Street Depot for use as store sheds in connection with this Department.

From the 16th of July to the 31st of December, 1898, 49,866 Ashpits have been cleansed, and 32,964 loads of refuse removed therefrom.

Destructor Department.

The following is a Report of the work done at the various Destructors during the year 1898 :---

HAMMERTON STREET.

The number of loads of refuse destroyed is as follows ;----

Ashpit F	Refus	е	•••		24,976	loads
Market	,,	•••	•••		1,345	,,
Shop	,,	•••	•••	•••	1,878	"
	Т	otal	•••		28,199	,,

As against a total of 20,638 loads destroyed last year.

There has also been destroyed the carcases of 22 beasts, 11 calves, 15 sheep, 61 pigs, 1 goat, 1,250 dogs, 195 cats, 152 beds, 422 mattresses, 336 hares, 11 turkeys, 1 box and 10 shoulders of bacon, 1 horse, 33 bags of cockles and 79 bags of mussels, 4 fowls, 23 couples and 1 hamper of rabbits, 6 boxes of lemons, 2 cases of black game, 6 bags and 7 cases of oysters, 54 stones of beef, 12 boxes and 20 barrels of herrings, 2 boxes of mackerel, 94 boxes of kippers, 1 case of eggs, 2 boxes of shrimps, 22 boxes of haddock, 11 tons of turnips, 5 boxes of kidneys, 2 boxes of sweetbreads, 12 sets and 1 box of offal, 50 cows' feet, 30 stones of cows' bags, 8 boxes of codling, 11 boxes of fish, 30 baskets and 1 load of gooseberries, 7 pillows, 100 boxes of figs, 18 stones of pork, 3 barrels of apples, 2 loads of old books, 2 sheets, 24 bags of potatoes.

4230 tons of mortar and 3039 loads of clinker have been sold during the year, as against 5060 tons and 3450 loads last year.

The New Destructor Cells erected by the Horsfall Furnace Syndicate continue to give every satisfaction.

In accordance with an Agreement made between the Corporation and Messrs. Currie and Rowlands, of Liverpool, the Corporation took over the Fish Manure Plant erected at Hammerton Street from the 7th of November last, and this work will now be carried on by the Destructors Department.

A new Clinker Crushing and Screening Machine has been erected at these works.

A Contract has been entered into with Messrs. C. and A. Musker, of Bootle, Liverpool, to supply and erect Hydraulic Machinery for the purpose of making concrete paving slabs.

Instructions have also been given to invite tenders for a considerable addition to the Electric Lighting Installation at these works. It is intended to light up the whole of the stables, &c., and also to erect Arc Lamps facing Hammerton Street and Birksland Street.

A new mechanics' shop has been fit up during the year, and considerable alterations have been made in the Blacksmith's and Waggen Repairing Shops.

The whole of the residuals at this Destructor continue to be utilized in some form or other.

SUNBRIDGE ROAD.

The number of loads of refuse destroyed is as follows .--

Ashpit I	Refu	se	•••	••••	17,657	loads
Market	,,		•••	•••	569	,,
Shop	,,	•••	•••	•••	429	"
			Total		18,655	loads

As against a total of 17,691 loads last year.

There has also been destroyed the carcases of 2 beasts, 1 calf, 2 sheep, 5 pigs, 5 dogs, 23 beds, 177 mattresses, 186 stones beef, 115 stones meat, and 20 stones hams.

891 tons of mortar have been sold as against 1,330 tons last year.

Owing to the breakdown of the steam engine, the making of mortar has been temporarily discontinued at these works. Plans have been submitted and approved of by the Committee for the erection of a mortar mill shed and engine house on the vacant ground facing Sunbridge Road. The present mortar pan will be removed and an additional one procured, and it is expected that a considerable portion of the clinker made at these works will then be utilized.

Instructions have also been given for an installation of Electric Light to be made at these works.

SOUTHFIELD LANE.

The nu	umber c	of loads	of ref	fuse des	stroyed	d is as fo	ollows :	_
	Ashpit	Refuse	•••	•••	•••	11,177	loads	
	Shop	,,	•••	•••	•••	2	,,	
		,	Total	•••		11,179	loads	

As against a total of 11,072 loads last year.

There has also been destroyed the carcases of z calves, 4 sheep, 1 donkey, 19 pigs, 7 dogs, z cats, 16 beds and 113 mattresses.

A proposal for the re-building of this Destructor is now receiving consideration.

During the construction of the Great Horton Tramway, a considerable amount of clinker from this Destructor has been made use of.

CLIFFE ROAD.

The number of loads of refuse destroyed is as follows : -

Ashpit R	efuse	•••		•••	15,018 loads
Market	,,	•••	•••	•••	364 ,.
Shop	,,	•••	•••	•••	303 ,,
					15,685 loads.

As against a total of 16,653 loads last year.

There has also been destroyed the carcases of 1 sheep, 15 dogs, 9 cats, 1 donkey, 8 beds, and 64 mattresses.

876 tons of mortar have been sold as against 1,513 tons last year.

The erection of the Clinker Crushing Machine has been completed, and 2,008 loads of screened clinker have been sold during the year.

The whole of the Residuals at this Destructor are now being utilised in some form or other.

The Electric Lighting Installation, the Mortar Pans, and the Clinker Crushing Machinery are giving every satisfaction.

SUMMARY.

The total number of loads of refuse destroyed at all the four Destructors is as follows :—

Ashpit R	efuse	e	•••		68,828	loads
Market	,,			•••	2,278	,,
Shop	,,			•••	2,612	,,
	Т	otal	•••		73,718	"

As against a total of 66,054 loads last year.

5,997 tons of mortar. and 5047 loads of screened clinker have been sold during the year, as against 7,903 tons and 3,450 loads last year.

THE CITY HOSPITAL FOR INFECTIOUS DISEASES.

During the year 1898, 760 patients were admitted into this Hospital, which, together with 35 remaining at the end of the previous year, constitute the total number which have been under treatment.

The cases of Scarlet Fever admitted amounted to 556, only 7 of which had a fatal termination.

There were 162 cases of Enteric Fever admitted, 21 of which ended fatally.

Of other diseases, including Typhus Fever, Diphtheria, and Erysipelas, 42 were admitted, 16 of which proved fatal.

The following tabular statements give more detailed information :---

CITY OF BRADFORD.

REPRESENTATION

UNDER THE

Housing of the Working Classes Acts,

MADE BY THE

Medical Officer of Health

To the Insanitary Areas Sub-Committee.

(Ordered to be printed August 8ih, 1898.)

BRADFORD : HENRY GASKARTH, PRINTER, SUNBRIDGE BUILDINGS

1898.

CITY OF BRADFORD.

At a Meeting of the Insanitary Areas Sub-Committee, held at the Town Hall, Bradford, on Monday, August 8th, Alderman J. W. JOWETT in the Chair,

IT WAS RESOLVED -

That the report submitted by the Medical Officer of Health as to an Insanitary Area in the Longcroft Place District be printed and a copy supplied to each Member of the Sanitary Committee.

Extracted from the proceedings of the said Sub-Committee.

GEORGE McGUIRE,

TOWN CLERK.

REPRESENTATION

BY THE

MEDICAL OFFICER OF HEALTH.

Mr. CHAIRMAN, GENTLEMEN,

The Sanitary Committee on 19th May, 1897, adopted a report by the Sub-Committee on Insanitary Areas, in which there was a recommendation that certain districts, viz. :— "Longlands Street, Longcroft Place, the district of Wapping, and many of the streets on the South side of Leeds Road" should be dealt with under the provisions of the Housing of the Working Classes Act.

I beg now to make an official representation in respect of the first-named, viz.:—Longlands Street and Longcroft Place, but include also some adjoining Streets, the extent of the area comprised in this representation being as follows, viz.:—the whole of Longlands Street, Longcroft Place (except three houses), Garden Place, Bell Street, Turk Street, One Street; the greater part of Chain Street; parts of West End Street, Grattan Road, St. Thomas' Road, and Roundhill place.

This area is situate in the West Ward, and its extent as shown on the accompanying plan is 4 acres, 2 roods, 28 perches, and 23 square yards, or 22,650 square yards.

The total number of houses contained in it is 284, consisting of 254 private dwelling-houses, 10 lodging-houses, 2 public-houses, 16 houses and shops combined or lock-up shops,

I bakehouse, and I store-room. The population living in these houses amounts to 1,357, giving an average of 4.8 persons per house. The density of the population is 301 persons per acre as compared with 21 persons per acre for the whole City.

The death rate from all causes in this area was in

1895 - 45.6 per 1,000. 1896 - 42.7 ,, 1897 - 41.2 ,,

For the purposes of my representation I divide the district into two parts, the sanitary condition of one being worse than that of the other. The first part consists of Longlands Street, Longcroft Place, Garden Place and the North East side of Chain Street. I am of the opinion that some of the houses in this part of the area are unfit for habitation, and that the narrowness, closeness, and bad arrangement of the streets and houses, the want of ventilation and proper sanitary conveniences, are dangerous to the health of the inhabitants of the buildings, and I am further of opinion that the evils connected with these houses and the sanitary defects of the area cannot be effectually remedied otherwise than by an improvement scheme for the rearrangement and reconstruction of the streets and houses within this area. This part of the district contains about three-quarters of the total area referred to and includes 209 houses.

The second part of the area consisting of Bell Street, Turk Street, One Street, the South West side of Chain Street, and parts of West End Street, Roundhill Place and Grattan Road, I do not consider in need of demolition but of such improvement as will serve to give better closet accommodation, although to provide such accommodation it will be necessary to remove some of the houses. In the event of your accepting my report and deciding to formulate an improvement scheme under Part I. of the Housing of the Working Classes Act, the consideration as to how you would deal with this part of the area may perhaps be left to some future date and dealt with under Part II. of the Act, the provisions of which are intended to apply to single houses rather than to larger areas.

The whole area is shown on the accompanying plan.

In the Appendix will be found detailed information of the Condition of the property included in the representation, together with a Chemical and Bacteriological examination of the air taken from some of the houses.

Believe me, Mr. Chairman and Gentlemen,

Yours obediently,

W. ARNOLD EVANS.

.

.

LONGLANDS STREET.

Total Buildings :- 68 : constituted as follows :-

Dwelling-Houses	-	-	-	53
Lodging-Houses	-	-	-	IO
House and Shop combine	ed or Loc	k-up Shop	-	3
Public Houses -	-	-	-	2

Fourteen out of the 53 dwelling-houses are not wholly let to one tenant but divided into 34 tenements and let as "furnished rooms."

The average width of this street is 15 feet 10 inches, and in half its length it is not divided by any cross streets, a condition which renders effective ventilation an impossibility.

CONDITION OF HOUSES :---

Walls, Roof, &c. The walls of some dwellings are considerably bulged outwards; many more require pointing. Dampness is noticed in some and in one instance the house wall adjacent to an ashpit and privy is described as "very damp." The roofs are defective in some cases but very fair in many.

Ceilings, floors, and staircases. The majority of houses are stated to be in fair condition but many are dilapidated and in a shaky state. Some window frames are broken, and nearly all cellars are wet.

Number of Rooms.

47 Houses each contain 2 Rooms.

	,,	••	,,	3	"
7	,,	,,	"	4	,,
2	,,	,,	,,	5	,,
3	,,	"	,,	б	,,
4	,	,,	,,	7	,,

Drainage. Some houses which contain slopstones have no sink waste, which in nearly every case when present requires disconnection from the drain. To some houses there is no eaves spouting. In the matter of drainage the Registered Lodging-houses are far superior to private dwelling-houses.

Surroundings. There is no yard space belonging to any house in this street, the houses having been built mostly in continuous rows, but here and there one has been removed to supply space for the erection of privies and ashpits. Many of the houses on the North East side are contiguous to the soil of Baptist Chapel Graveyard, moisture from which percolates through the foundations and renders the floors damp. The ashpits ahd privies are inconveniently placed, and generally built up to the housewall or gable end.

Closets. It appears as if no closet accommodation was originally provided, but a few houses have since been demolished and closets erected on the space thus made; the inhabitants of some of the houses have therefore to traverse a considerable part of the street in order to reach the closets, whilst others live unpleasantly near to them. Although in some few instances each house has its own privy or water closet, it is the rule for one privy or water closet to be used in common by the occupants of three houses. The result of such an arrangement can be better imagined than described, for the condition of the privies is usually as disgusting as it is possible for human beings to make them. Some five houses in the street are without privy accommodation, the closets having been removed by street improvement operations.

Population. 386.

Average	No.	of	people	per	house	-	5.2
Average	No.	of	people	per	closet	-	15

Total death rate.

In 1895 was 62[.]1 per 1,000 " 1896 " 69[.]9 " 1,000 " 1897 " 36[.]2 " 1,000

LONGCROFT PLACE.

Total Buildings :--- IIO constituted as follows :---

Dwelling-Ho	uses -	-	105
House and S	Shop combined	-	3
Bakehouse -		-	Ι
Storeroom -		-	I

Five of these houses are cellar dwellings, one of which is used as a Muffin Bakery. The average width of this street is 23 feet, and most of the houses are so situate as to form *cul de sacs*, at the blind end of which the Sanitary conveniences are placed,

CONDITION OF HOUSES :---

Walls, Roof, &c. Examples of every condition from that of good repair to complete ruin are to be found ; the majority of houses appear to be in fair condition, although in some the walls are distinctly leaning.

Ceilings, floors, and staircases. These are in fairly good condition in about thirty houses, but in the remainder there is evidence of either long continued neglect or wanton destruction.

Number of Rooms.

77 Houses each contain 2 Rooms.
23 ", ", ", 3 ",
5 ", ", ", 4 ",
5 Cellars each consisting of 1 Room.

Drainage, &c. Many houses have no sink stones, and the waste pipes from those which do exist, although in many instances trapped are not disconnected from the sewer.

Surroundings. Only a few of the houses have any yard space. The privies and ashpits are usually placed at the end of each *cul de sac* clear of the houses, but those situate in the yards are built up to the house wall. The flagging of the yards is generally in a broken condition.

Closets. There are thirty-four privies, and thirteeen water closets. Some of the former are in a bad state of repair, but the water closets are fairly good. These sanitary conveniences are placed in a better position than those in Longlands Street, but in some cases are unpleasantly near to the living room window.

Population.-466.

The average number of people per house - 4.2 The average number of people per closet - 9.9

Total death rate.

In	1895	was	49'3
,,	1896	,.	38.6

GARDEN PLACE.

Total Buildings.—6, all of which are private dwelling-houses. CONDITION OF HOUSES :—

Walls, Roof, &c. Are in fairly good condition except in one house which is damp.

Ceilings, Staircases, &c. In fair condition except in one instance.

No. of Rooms.

5 Houses each contain 3 rooms.

I House consists of I room.

Drainage, &c. Four sink wastes require disconnection. The caves spouting is in bad condition.

Surroundings. There is a row of privies and ashpits used by the inhabitants of Longcroft Place, contiguous to the back wall of those heuses. The gable end of two houses adjoins the Westgate Baptist Chapel Graveyard.

Closets. There are two privies and one ashpit in the yard. Population.--25.

Average number	of	persons	per	house	-	4.I
Average number	of	persons	per	closet	-	12

CHAIN STREET.

Total Buildings.—37, constituted as follows :— Dwelling-Houses - - 35

House and Shop combined - 2

One of the dwelling-houses is divided into tenements and let as "furnished rooms." The average width of this street is 18 feet. The houses on the north-east side form one continuous row, and have a yard in common in the rear.

CONDITION OF HOUSES :---

Walls, Roof, &c. These are fairly good in most houses, but defective in some, and the walls of others require pointing. In one instance the house wall is bulging outwards.

Ceilings, Staircases, &c. Most in fair condition.

Number of Rooms.

 18 houses each contain 4 rooms.

 14 ,, ,, ,, ,, 3 ,,

 5 ,, ,, ,, 2 ,,

Some are very clean, others filthy.

Drainage, &c. The sink wastes are usually trapped, but some are neither trapped nor disconnected. The drainage of one yard at the corner of Grattan Road is bad. *Surroundings.* Each house has some yard space attached to it, the yards themselves being in fairly good condition, generally, but here and there defective flagging is found.

Closets. The privies are too close to the back door or window, being situate in some instances only from 2 to 4 yards away. There are three water closets and twenty-eight privies for the whole street, which appear to be in a tolerably good state of repair.

Population.-201.

Average	number	of	persons	per	house	-	5.4
Average	number	of	persons	per	closet	-	6.6

GRATTAN ROAD.

Total Buildings.—10, constituted as follows :--

Dwelling-houses -	7
House and shop combined or	
lock-up shops -	3

CONDITION OF HOUSES. Several of the house walls require pointing, but with this exception are in fairly good condition. The woodwork and internal fittings appear also to be very little damaged. Most of the houses have yard space attached, but the flagging is need of repair, and the yard itself dirty.

Drainage. As a rule the houses are not provided with sink stones, and the waste pipes from those houses which possess them are neither trapped nor disconnected.

Number of Rooms.

- 2 Houses each consist of one room (shops).
- 6 Houses each contain 2 rooms.
- I House has 4 rooms.
- I House has 8 rooms.

Closets. The closet accommodation consists of 4 water closets, situate in a triangular shaped yard, and 1 privy.

Population.-23.

Average	number	of	persons	per	house	-	2.3
Average	number	of	persons	per	closet	-	4.6

BELL STREET.

Total Buildings .--- 10, all dwelling-houses.

CONDITION OF HOUSES. Six of the houses are built backto-back, and four are through houses, the latter alone having any yard space attached. The walls and roofs are moderately good, but the ceilings and staircases, &c., are in bad condition and many doors and steps are broken.

All these houses consist of two rooms. Only one house is provided with a sink stone, the waste pipe from which is neither trapped nor disconnected.

Closets. The closet accommodation consists of two privies and two water closets.

Population.-45.

Average	number	of	persons	per	house	-	4.5
Average	number	of	persons	per	closet	-	I I '2

TURK STREET.

Total Buildings .--- 13, all dwelling-houses.

CONDITION OF HOUSES. In the case of one house the roof is in bad condition, and the gable end of another house is damp, otherwise the houses are in a fairly good state of preservation. All the houses are built back-to-back and there is no yard space attached.

Drainage. About half the houses are provided with sink waste pipes, one of which is neither trapped nor disconnected.

9

Number of Rooms.

6 Houses each contain 3 rooms.

7 Houses each contain 2 rooms

Closets. There are five privies for the thirteen houses, the walls of two houses adjoining those of the privies.

Population.—76.

Average	number	of	persons	per	house	-	5.8
Average	number	of	persons	per	closet	-	I 5.2

ONE STREET.

Total Buildings. -14, all dwelling-houses.

CONDITION OF HOUSES. These houses are in fairly good condition with the exception of some dampness in two or three due to defective roof or spouting and want of wall pointing. All the houses with one exception are built back-toback and no yard space attached.

Number of Rooms.

3 Houses each contain 3 rooms.

11 Houses each contain 2 rooms.

Drainage, &c. The sink waste pipes are mostly trapped but not disconnected.

Closets. There are eight privies for the houses in this street situated in a recess which appears to have been made by the removal of a building. The privy walls directly adjoin those of some of the houses.

Population.-58.

Average	number	of	persons	per	house	-	4.9
Average	number	of	persons	per	closet	-	9.2

WEST END STREET.

Total Buildings .--- 7, all dwelling-houses.

The property is in fairly good condition with the exception of houses numbered 1, 3 and 5.

The privy accommodation is situate in a recess about the centre of the row of houses.

Population.-41.

Average number of persons per house	-	5.8
Average number of persons per closet	-	I 3.7

ROUNDHILL PLACE.

Total Buildings.—3, as follows :— Dwelling-houses - 2 House and shop - 1

CONDITION OF HOUSES.—Fairly good. Only one house has any yard space attached. All the sink wastes are trapped but not disconnected.

The closet accommodation consists of part use of privies in One street and Bell Street.

Population.—14.

ST. THOMAS'S ROAD.

The houses in this Road mentioned in the representation number five, and consist of two dwelling-houses and three shops and houses combined.

With the exception of defective sink waste pipes the property appears to be in fair condition. Owing to recent alterations for street improvements the closets, which consist of privies, are in a much exposed position and in need of repair.

PROVIDENCE STREET.

Only one building in Providence Street is included in the representation; it is a small lock-up shop.

REPORT OF CITY ANALYST.

Analysis of three samples of Air taken from Longcroft Place and Longlands Street, between 11 a.m. and 12.40 p.m., on July 25th, 1898.

METEOROLOGICAL CONDITIONS. Fine day with scarcely any wind.

Average Temperature - 71'5 F. Average Barometric Reading - 29.70"

(A) Air taken from Back-yard in Longcroft Place, opposite No. 32.

There were three privies in the yard, from which the smell was very offensive. The yard had been recently washed and the flags were wet.

- (B) Air from Mrs. Mullarky's tenement, No. 62, Longcroft Place.
 - The door was wide open and the only occupants were Mrs. Mullarky and two small children. The air in the room did not feel "close."
- (C) Air from tenement No. 69, Longlands Street.

The occupants were three women, and the air presented no disagreeable features to the senses.

The presence of so large a number of germs which are always associated with animal excrement is due to the existence of filthy privies.

F. W. RICHARDSON, F.I.C., F.C.S.

ANNUAL REPORT

OF THE

MEDICAL OFFICER OF HEALTH

TO THE

BRAMPTON AND WALTON URBAN DISTRICT COUNCIL,

FOR THE

YEAR 1898.

CHESTERFIELD :

Printed by WILFRED EDMUNDS at "The Derbyshire Times" Office. 1899.

ANNUAL REPORT

BY THE

MEDICAL OFFICER OF HEALTH

TO THE

BRAMPTON AND WALTON URBAN DISTRICT COUNCIL,

FOR THE YEAR 1898.

GENTLEMEN,

The past year has in many respects been satisfactory, and some important sanitary improvements have been effected.

Births and Deaths.

During the year there were registered 63 births (26 boys and 37 girls), giving an annual birth-rate of 23.3 per thousand, as compared with 25.5 in the preceding year.

The deaths recorded during the year numbered 28 (18 males and 10 females). The excess of births over deaths is, therefore, 35; but I have again taken the population at 2700 in calculating the birth and death rates. The death-rate for the year is the lowest I have yet been able to record, namely 10.3, as compared with 11.1 in 1897. The following table gives a comparison of the vital statistics for

the past six years.

Year.	Birth-rate.	Death-rate.	Infantile Mortality per 10 0 0 Births.	Zymotic Death-rate.
1893 1894 1895 1896 1897 1898	31.5 27.2 26.8 26.2 25.5 23.3	$ \begin{array}{r} 15.0 \\ 12.2 \\ 12.6 \\ 13.7 \\ 11.1 \\ 10.3 \end{array} $	$200 \\ 130 \\ 102 \\ 126 \\ 43 \\ 63$	$1.1 \\ 1.5 \\ 1.1 \\ 1.4 \\ 1.1 \\ .37$

At the end of the Report is the usual table giving the various causes of death; but it is worth noting here that only one death resulted from infectious disease (Measles), giving a Zymotic death-rate of .37, which is also the lowest figure in our record. It will be noticed that the number of deaths caused by Phthisis is somewhat larger than usual. No fewer than five deaths are set down to this cause, and most of these occurred at Holymoorside. Considerable attention has recently been directed to this subject, and it cannot be too widely known that Phthisis is now looked upon as an infectious disease, communicable from the sick to the healthy. The recognition of its true nature should lead to the adoption of practical measures, and more attention should be paid to the importance of fresh air and sunlight; bedroom ventilation; prevention of overcrowding; isolation of the sick; and disinfection of patients' sputum. The subject has also an important relation to tuberculous disease in cattle; and a pure milk supply.

The following summary gives a rough grouping of the deaths in relation to their cause :---

4

CONSTITUTIONAL	L DISE	ASES :

DEVELOPMENTA	l Dise	ASES :			
Prema	ture Bi	rth			1
Old Ag	ge				6

As to age, no fewer than 11 deaths took place at or over the age of 70, and 6 of them were returned as due to senile decay.

Infantile Mortality.

In 1897 your District had the lowest rate of Infantile Mortality of any Urban or Rural District in the County. For 1898 the figures are not much in excess, only 4 deaths having occurred under the age of 1 year, giving a rate of 63 per thousand births. The causes of these infantile deaths were as follows :—

Premature Birth			 	1
Asthenia	•••		 	1
Marausmus		•••	 • • •	2

Although in the summer and autumn infantile diarrhœa was extremely prevalent throughout the County, greatly increasing the death-rate in many places, not a single death is set down to this cause.

Infectious Diseases.

In February there was an outbreak of Scarlatina in the Industrials Schools, Ashgate Road. The Medical Officer took the necessary precautions to prevent the complaint spreading, but in spite of his efforts 21 children became infected. The fact that the Industrial School children now attend the various Public Schools, thus affording them increased opportunities of contracting infectious diseases, renders the Institution more liable to outbreaks of this nature.

Besides these, 9 other cases of Scarlatina, involving 4 houses, were notified. These were located as follows :—

Holymoors	side	 	 	6
Walton		 	 	2
Cutthorpe		 	 	1

In each case disinfectants were supplied, and the houses were afterwards fumigated. There were no deaths.

The only other Infectious disease notified was a case of Diphtheria, which occurred at Walton Hall, near the end of the year. A careful inspection of the house and farm-buildings was made, but no probable source of infection was found. About three years ago a case of Diphtheria occurred in a neighbouring cottage, and both families obtain their water-supply from the same well. I examined the water from this well, which is far removed from any dwelling, and found it to be a fair sample of surface well-water. It is placed at the bottom of a sloping field, and, of course, is liable to contamination from manure and cattledroppings. As the lad attended school at Chesterfield, it is possible that he contracted the disease away from his own home.

In January there were a few cases of Measles, while in March, Influenza was somewhat prevalent, and two deaths were occasioned by complications attending it.

Sewerage Works.

In my report last year I went very fully into the question of Sewage treatment at Holymoorside. You decided that something should be done to improve matters, and Mr. J. Aird Murray, of Sheffield, was instructed to prepare plans. This he did, but the estimated cost of the scheme (£850) was considered to be an unreasonable amount to expend on the improvement of works for the purification of village slop water from some 80 houses, and the dye-water from the Mill. It was, therefore, decided to proceed on more cautious lines, and your Surveyor was instructed to prepare a filter-bed on the modern bacteriological principle. This has been done, and we have now at work a filter which is 123 yards wide by 15 yards long, and over a yard in depth, built up from the bottom thus :---large rubble stones, small rubble stones, 6 inches ashes, and the remainder crushed coal, with a layer of sand on the surface. In my Report last month I stated "that the result is satisfactory. The bed is easily able to take all the sewage, and the examination of the effluent shows that the filter is acting not merely as a mechanical strainer, but as a bacteriological filter, as explained in my last Report." Since then we have had another month's experience, and the result lately has not been quite so satisfactory. The sewage does not pass through so readily, and the effluent is not so good. To improve matters the surface sand should be raked over at least once a week. Under the new system the works will require much

more attention than they have done in the past, necessitating increased remuneration to the attendant. Filters on this principle should not be used continuously. They require a daily rest of at least eight hours. At present we are using our new filter alternately with the best of the old filtering beds, each for twelve hours. But it would be better to proceed at once with the construction of another filter similar to the one we have, and alongside it. To further improve matters, and prevent the filter getting so soon choked, something should be done to remove the suspended matter. The usual way to do this is by the construction of a precipitation tank, but I think the same end might be attained at less expense by utilizing one of our old beds as a sort of settling pond. The old filtering bed on the higher side ought to be somewhat deepened and the ridges removed. The sewage would then be allowed to flood this bed, and allowed to settle before passing on to the biological filter. In a similar way the bed on the other side might be utilized for the reception of the filtered sewage, where, under the influence of air and sunlight, still further purification and discoloration would be effected before passing it into the stream. It would be a great convenience if the present reception tank had a depression made at the bottom into which the sludge would fall, and from which it could be removed by means of a pump. An automatic fiushing arrangement is also required to supply the filter with sewage intermittently. With these additions and improvements, I think there can be little doubt that your Sewerage Works would meet all reasonable requirements. A circumstance which

has made the sewage treatment much easier should be mentioned. The English Sewing Cotton Co. have adopted a new system of dyeing. They have discarded the use of Logwood and its derivatives, with the result that the fine black suspended matter we have always found so troublesome has now disappeared. The appearance of the stream indicates the improvement effected. Complaints were made to me about a large number of dead fish which were observed in the stream about Christmas and for some weeks after. Knowing that a new system of dyeing had been introduced, it was, perhaps, natural to suspect it as the cause. To set the matter at rest, during the past month I have made some experiments, and I am pleased to be able to state that our sewage contains nothing injurious to fish. I have kept gold-fish alive in pure sewage effluent for three weeks, changing the water three times. This is, of course, a severe test, as in practice the sewage is diluted many hundreds of times by the water in the stream. A portion of the dye waste, the used-up base bath, is only discharged at long intervals. Through the courtesy of Messrs. Manlove I obtained some of this fluid, and diluted it with water in the portion of 1 of dye to 19 of water. T find gold-fish live in it. I think it is, therefore, improbable that our sewage had anything to do with the large number of dead fish seen in the stream. A farmer, about the time mentioned, was known to lime his land near the river, and this circumstance affords a likely explanation.

Walton Water Supply.

The question of a water supply for Walton has engaged your attention, at intervals, for many years. I think it is now approaching a solution. I have pleasure in stating that the Chesterfield Gas and Water Board has decided to supply this portion of your district on what, I think, are very generous terms. It is proposed to construct a small reservoir near the site of the spring at Slate Pit Dale, and from it to lay a water main as far as the Blue Stoops. I have examined the water from this spring, and find it to be of excellent quality. Negotiations are now proceeding for the purchase of land for the reservoir, and if they are satisfactorily concluded, I think we can look forward to the residents of Walton having an abundant supply before the summer.

Old Brampton Water Supply.

In 1897 a child died at Old Brampton from tubercular disease of the bowel glands, and some of the other children in the same house were suffering from tubercular glands in the neck. The house is built quite close to the church-yard, and the well in the back-kitchen is not many feet from the graves. I examined the water and found it to be highly polluted, and ordered its use to be discontinued. This circumstance led me to examine the water from neighbouring wells, and I now give you the result.

1.	Well a	at Parish Clerk's (just described),	very bad.
2.	,,	,, George and Dragon,	,,
3.		,, House below George and Drag	on ,,
4.		n Vicarage kitchen,	bad.
5.		., field (supplying Vicarage),	good.
6.	,,	,, field behind Church-yard,	very bad.
7.	,,	behind Horsefall Row,	good.

From this it will be seen that the wells in the immediate vicinity of the Church-yard are polluted,

and some of them are dangerous to use. In the case of 2 and 3 there are local insanitary conditions which might affect the water. I think if a public well were sunk and a pump erected on ground above the level of the church-yard, it would meet the requirements of the case. Perhaps the Chesterfield Gas and Water Board could be induced to undertake the supply of Old Brampton as well as Walton.

Throughout the year the general health has been good, and continues so up to the present. The death-rate is low, and the sanitary condition of your district may be considered fairly satisfactory.

Appended is the usual summary of useful work done by your Inspector of Nuisances. It only represents the more formal portion of his work. As in former years much has been done of which no record is kept.

I am,

Gentlemen,

Your obedient servant,

JAMES A. GOODFELLOW.

15тн Максн, 1899.
