# USER'S GUIDE FOR THE CPEP DIRECT PRACTICE COSTS DATA BASE

## 1.0 Overview

### *Introduction*

This Guide provides background and technical information to assist users in understanding and analyzing the CPEP Direct Practice Costs Database ("CPEP Database"), developed for the Health Care Financing Administration by Abt Associates Inc. The database contains estimates of service-specific labor, equipment and supply resources ("resource profiles") developed by Clinical Practice Expert Panels (CPEPs), as well as direct practice costs computed from these profiles, for each of 6,251 Medicare Fee Schedule services.

This *User's Guide* is intended to be used with two other related documents:

- *Data Dictionaries* for each of the database files, containing file overviews, record layouts, and codebooks.
- *CPEP Recorders' Notes*, containing information which provides context for the data in the CPEP database files. Such information could not be reflected *per se* in the data, and is intended to support subsequent review of the data by HCFA.

Careful review of all three of these documents is critical to understanding the data files, as well as for performing any analysis of the data. In addition to the database documentation, users are advised to refer to the *Report on Clinical Practice Expert Panel (CPEP) Direct Cost Estimation*.

### *Objectives*

The CPEP database was developed to achieve the following objectives:

- Accurately capture the resource estimates provided by each CPEP. These estimates are contained in *resource profile files*.
- Create files of price data from external data sources for labor, equipment and supply profiles developed by the CPEPs. These prices are contained in *input price files* that identify wage rates, supply prices, and equipment prices. Data were compiled from a variety of sources including the Bureau of Labor Statistics and various equipment and supply sources.
- Develop and execute a methodology for deriving initial direct cost estimates from the application of prices to the input estimates.

[Faint, illegible header text]

[Faint, illegible body text consisting of several paragraphs]

## *Guidelines for CPEP Process*

The CPEPs were charged with providing estimates that would:

- Capture the costs associated with the practice expense component of the Medicare Fee Schedule (e.g., time for providers who bill separately to Medicare were excluded from practice cost labor estimates).
- Reflect resources required to provide services to a "typical" patient, not just a Medicare patient.
- Reflect the practice pattern that was typical for 1995.

## *User Caveats*

When reviewing or analyzing the CPEP Database, users should note the following:

- The resource input data represent the consensus of the CPEPs. They have not been validated against external frames of reference.
- These data and documentation were intended to serve as on potential source of data for developing resource-based practice expense relative value units. The enormous volume of data is maintained in 93 separate primary files relating to labor, supplies, and equipment. Many of these files are inter-related and include calculations and other information that are dependent on other files in the database. Use of these data files by non-technical users should be undertaken with care, and after the full set of documentation (see below) has been reviewed and understood.

## *Summary of Chapters*

The remainder of this Guide includes the following:

- Chapter 2 summarizes the policy context and objectives of the project.
- Chapter 3 defines key terms and concepts.
- Chapter 4 describes the process used to collect the data in the CPEP Database.
- Chapter 5 presents an overview of the CPEP database and describes each of its separate components.
- Chapter 6 contains technical user notes and issues to bear in mind when using the files.
- Appendix A lists all variables in the database and the file(s) in which each occurs.

## 2.0 Background

In 1992, the Medicare program implemented the Medicare Fee Schedule (MFS) to pay physician providers. Underlying the fee schedule is the Resource-Based Relative Value Scale (RBRVS), which defines the relative resource requirements for the services on the MFS. The total relative value units of each service consist of three components:

- Physician work relative value units;
- Practice expense relative value units; and
- Malpractice expense relative value units.

The current practice expense relative value units are based on historical charge data pre-dating the MFS. The Social Security Act Amendments of 1994 mandate that the Secretary of Health and Human Services “develop a methodology for implementing in 1998 a resource-based system for determining practice expense relative value units for each physician service” covered by the MFS. In March 1995, under this Congressional mandate, the Health Care Financing Administration (HCFA) engaged Abt Associates Inc. to collect the data that are required to develop resource-based practice-expense relative values for over 6,000 codes contained in the MFS.

A two-pronged approach was developed, as shown in Exhibit 1, to collect data that recognized the two parts of practice costs:

- **Direct practice costs**, which consist of clinical labor, some administrative labor, clinical supplies, and clinical equipment that are directly used in the provision of specific services. Estimates of direct costs were to be generated through an expert consensus panel process. CPEPs were convened to develop service-specific data that could be used to estimate direct costs of each service.
- **Overhead costs**, which consist of rent, utilities, maintenance, and other costs difficult to attribute to specific services. Estimates of overhead costs were to be generated from data collected in a survey of medical practices. This survey would collect information on aggregate costs and service mix (i.e., the frequency and types of specific services provided) at the practice-level. The data would be used as a possible source for determining the appropriate allocation of overhead costs to specific services.

The original research design anticipated that the individual service direct cost data collected during the CPEP process would be validated by applying the service mix data collected by the practice-level survey. This was to be accomplished by comparing the average of two numbers: (i) the total volume of each service provided by a practice, multiplied by the estimated practice expense payment for that service, and summed to the practice level; and (ii) actual aggregate practice expenses reported in the survey. In addition, it was initially anticipated that other researchers would utilize both the CPEP and survey data to explore various methods of arriving at total service-specific practice cost estimates. The survey was terminated, however, due to an inadequate response rate (see the *Report on the Survey of Practice Costs*, April, 30, 1997).

### 3.0 Key Terms and Concepts

This chapter defines terms and concepts that are crucial for understanding the nature of the CPEP database and data collection process. A basic level of familiarity with the Medicare Fee Schedule is assumed.

#### *Direct Practice Costs*

As noted in Chapter 2.0, the CPEP database contains data related to direct practice costs. *Direct practice costs* have a specific definition for the purposes of this project which is related to, but distinct from, the economic concept of variable cost and the accounting concept of direct cost. Direct practice costs are defined to be *those resources required of a medical practice that are easily attributable to providing a particular service*, including costs associated with:

- clinical labor time, excluding the time of clinical staff who can separately bill Medicare<sup>1</sup> (such time is included in the Physician Work Component of the Medicare Fee Schedule);
- administrative labor time for functions directly attributable to a specific service (e.g., the time required to bill and collect for a specific service is included, but the time required to generate monthly accounting reports is not).;
- clinical disposable supply items<sup>2</sup>; and
- clinical equipment costing \$500 or more.

#### *Resource Profile*

A *resource profile* is an itemization of the labor, supplies, and equipment used in the provision of a service. The resource profile can be converted into a *cost profile*, if prices for each of these inputs are available. If price data are unavailable for some inputs, a service may have a *resource profile* (i.e., inputs may be specified), but will be only partially *costed* (i.e., multiplying input quantities times prices to calculate costs is not possible when prices are missing).

#### *Global Period*

The global period defines the window of time around the provision of a procedure during which all related services are “bundled,” or included in the payment for the procedure. The direct cost estimates include all services provided during the defined window of the global period. Generally, global periods of up to 90 days apply to procedural services, but not to evaluation and management services and most

---

<sup>1</sup>Such staff include Medical Doctors (MDs), Doctors of Osteopathy (DOs), Dentists, Chiropractors, Podiatrists, Optometrists, Clinical Psychologists, Clinical Social Workers, or Physical Therapists (only if the Physical Therapist bills Medicare directly).

<sup>2</sup>All supply items profiled are disposable supplies. Reusable items profiles were limited to items meeting the \$500 equipment threshold; where they exceeded \$500, they were treated as capital equipment.

diagnostic tests. For example, payments for post-operative visits following a major surgical procedure are bundled into the payment for the procedure itself and are not separately billable.

The published Medicare Fee Schedule includes an indication of the global period assigned to each service. (The global period status code is included in the CPEP database as the variable GLOBAL on the PROCSUM file.) For the 1995 MFS, Medicare's global period status codes and their meanings are displayed in Table 1.

Table 1: Medicare Global Period Status Codes	
Status Code	Definition
000 010 090	These codes show the number of days in the global period for the code: 0, 10, or 90 days.
MMM	Maternity services (antepartum, delivery, and/or post-partum care).
XXX	The global concept does not apply.
YYY	Global period determined by carrier.
ZZZ	The code is an incremental service which falls within the global period of another service.

For services with global periods, the CPEP data generally reflect resource profiles (and resultant costs) required for the entire global period. For example, services with 090 global periods include resource estimates for post-operative visits. In some cases, however, the CPEP panelists disagreed with the Medicare global period classification. The *CPEP Recorders' Notes* for each CPEP indicate for which services the CPEP made such a judgment, as well as the global period assumed by the panel (e.g., "The CPEP treated this service as a "ZZZ global period").

#### *CPEP Service Periods*

For purposes of developing estimates of the labor resources, Abt Associates created service periods which divided the global period into specific sub-periods (detailed service period estimates were not collected for supply and equipment resources). Not all of the sub-periods are relevant for all of the global status codes. For example, post-procedure visits are not relevant for services with an 'XXX' global period. The service periods for global services are defined separately (and slightly differently) for clinical and administrative labor, as illustrated in Table 2.

Table 2: CPEP Service Period Names			
Type of Staff	CPEP Service Period		
	Pre-service Period	Procedure Period	Post-service Period
Clinical	G0	G1	G1X
Administrative	G2		G2X

For *clinical* labor, the service periods are defined as follows:

- **Pre-service period (G0)** includes clinical services provided within 24 hours prior to the procedure around which services are bundled. During the CPEP process, pre-service period times were collected for '000', '010', '090' and 'MMM' global period services. Clinical labor in the pre-service period is referred to as "G0".
- **Procedure period (G1)** includes resources expended during the provision of the procedure (or service for E&M services) itself, regardless of the global period status code. Clinical labor in the procedure period is referred to as "G1". Additional resources may be included in the procedure period, depending on the global status code:
  - For services with '000' global periods, the procedure period includes all related services on the day of the procedure.
  - For services with '010', '090', and 'MMM' global periods, the procedure period includes any services or activities commencing with the performance of the procedure (including patient prep), and ending with the commencement of the first follow-up office visit after discharge. If the service is performed on an inpatient basis, the procedure period includes the time associated with all services provided by practice staff before the patient is discharged from the hospital. For example, a '090' global service may require phone calls from the practice nursing staff to the hospital nursing staff while the patient is still in the hospital.
- **Post-service period (G1X)** for clinical labor applies only to services with '010', '090', or 'MMM' global periods, and commences with the first follow-up office visit after discharge and ends at the point defined by the global period (e.g., 10 or 90 days after the day of the procedure). Clinical labor in the post-service period is referred to as "G1X".

For *administrative* labor, service periods for global services are defined as follows:

- **Procedure period (G2)** includes administrative services preceding and contiguous to the procedure (or service for E&M services) itself. For global status codes that bundle the pre-service visit into the total payment, this encompasses administrative time associated with services provided in the 24-hour period prior to the provision of the procedure. For procedures with global periods of '010', '090', or 'MMM' performed in the hospital setting,

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. This is essential for ensuring the integrity of the financial statements and for providing a clear audit trail. The records should be kept up-to-date and should be easily accessible to all relevant parties.

2. The second part of the document outlines the procedures for handling any discrepancies or errors that may arise. It is important to identify the source of the error as soon as possible and to take appropriate corrective action. This may involve reviewing the original documents and consulting with the relevant staff members.

3. The third part of the document discusses the role of the internal audit function. The internal auditors are responsible for providing an independent and objective assessment of the effectiveness of the internal control system. They should report any weaknesses or deficiencies to the management and recommend appropriate improvements.

4. The fourth part of the document discusses the importance of communication and transparency. All relevant parties should be kept informed of any developments and should be encouraged to provide input and feedback. This will help to ensure that the system is working effectively and that any issues are identified and resolved as quickly as possible.

5. The fifth part of the document discusses the importance of regular reviews and updates. The internal control system should be reviewed regularly to ensure that it remains relevant and effective. Any changes to the system should be documented and approved by the appropriate authority.

the procedure period includes all services provided until the patient is discharged, and up until the first follow-up office visit after discharge. Administrative labor in the procedure period is referred to as "G2".

- **Post-service period (G2X)** commences with the first follow-up office visit provided after discharge for services with '010', '090', and 'MMM' global periods, and ends with the expiration of the global period (e.g., 10 or 90 days after the day of the procedure). Administrative labor in the post-service period is referred to as "G2X".

For procedures with 'XXX' and 'ZZZ' global periods, E&M services, non-global procedures, and pathology procedures, the three-level articulation of clinical service time periods was not appropriate, nor was the two-level articulation of administrative service time periods. The pre- and post-service clinical time periods are not applicable to these codes, nor is the post-service administrative time period. Therefore, a single time period (procedure period) is identified for these services, and clinical and administrative labor time estimates are reflected in the G1 and G2 periods, respectively.

### *Site of Service*

Two sites of service are distinguished: *in-office* and *out-office*. The distinction is necessary because the practice resources required to provide a service in the office are often greater than the requirements for providing the service out of the office.

- **In-office settings** include physician offices, freestanding imaging centers, and independent pathology labs.
- **Out-office settings** include all other settings, such as hospitals, clinics, ambulatory surgical centers, nursing homes, and patient homes.

*All data are classified in relation to procedure period site.* The in-office and out-office classifications are based on the site of service of the procedure period, not on the actual place of service in which particular pre-or post-service period activities occur. For example, the resources required to support follow-up office visits for an out-office procedure are recorded in the out-office setting, even though these visits typically occur in the physician's office. The site of service distinction provides important information to inform Medicare's site-of-service differential and technical/professional component policies.

### *Reference Services*

A reference service is a service that is among the services profiled in the first round of CPEP meetings (see Chapter 3.0 for a discussion of the CPEP process). The reference services were profiled with a greater sub-division of time periods than the remaining services addressed in the second round of CPEPs. Reference services were selected to facilitate the profiling process. Services chosen as reference services were selected primarily based on being high-volume, common services within their "family" of clinically

related services.<sup>3</sup> Other criteria considered, which were often dominated by the volume criterion, were that the service be approximately at the mid-point of the resource requirements within its family, that it be technologically stable, and that it be a common, well-understood service.

### *Service-specific vs. Overhead Clinical Equipment*

Clinical equipment was identified as being *service-specific* clinical equipment or *overhead* clinical equipment:

- ***Service-specific equipment*** is easily attributable to a subset of services in a CPEP (e.g., an EKG machine for EKG codes).
- ***Overhead clinical equipment*** was identified by the CPEP as either being used in the provision of virtually all services in a CPEP (e.g., an exam table in the E&M CPEP), or as difficult to attribute to specific services (e.g., a crash cart).

In some cases, equipment was re-categorized from one category to the other to ensure consistency across CPEPs. For example, if a CPEP identified an exam table as service-specific equipment for virtually all its services, it was re-categorized as clinical overhead equipment. This distinction between service-specific and clinical overhead equipment is captured and reported in two clinical equipment files (PXEQCAP and OVEQCAP).

No equipment-specific usage times were specified by the CPEP; instead, usage times were determined based on the labor profiles provided by the CPEP. A detailed discussion of the equipment cost allocation methodology is included in the Chapter 6.0 of the *Report on Clinical Practice Expert Panel (CPEP) Direct Cost Estimation*.

---

<sup>3</sup>See Chapter 2.0 of *the Report on Clinical Practice Expert Panel (CPEP) Direct Cost Estimation*, April 30, 1997 for a discussion of the service family system developed to facilitate resource profiling.

## 4.0 Data Collection

The CPEP data collection process consisted of the following steps:

- select the services included in the data collection process
- collect resource profiles (labor, equipment, supplies)
- collect price data
- compute direct costs

Each is summarized below. The *Report on Clinical Practice Expert Panel (CPEP) Direct Cost Estimation* contains a greater level of detail about this process.

### 4.1 Selection of the Services to be Profiled

Abt consulted with staff in HCFA's Bureau of Policy Development to determine the specific set of services for which practice expenses were to be measured. These services were selected from the HCFA Common Procedure Coding System (HCPCS), which has three levels of codes: level 1 CPT-4 (numeric codes), level 2 (alphanumeric national codes), and level 3 (alphanumeric local codes). Payment rates for the level 3 codes are assessed at the local level by local carriers; therefore, this project focused mostly on the level 1 and level 2 codes whose payment rates are determined at the national level.

All HCPCS level 1 and level 2 codes are designated by HCFA with a status indicator that identifies whether the HCPCS code is included in the fee schedule and whether it is separately payable if the service is covered by Medicare.<sup>4</sup> Table 3 lists the status indicators that are used to define the level 1 and level 2 codes. As illustrated in this exhibit, HCFA concluded that the practice expenses for selected services with status indicators A (5,873), B (3), C (45), G (4), N (30), R (39), and T (4) were to be evaluated as part of this project. In addition, 253 anesthesia codes were included in the project, resulting in a total of 6,251 services for which detailed data on the practice resource requirements of providing these services were to be collected. Approximately 850 of these codes had technical/professional component modifiers; the approach used for direct cost estimation allowed for the computation of the direct practice costs associated with these components.

A method was developed for categorizing the 6,251 services identified for evaluation into useful groups for analysis. These groups are referred to as *service families*. All services were grouped into service families based upon the following criteria as agreed upon by the CPEP-TEG:

- Services in each family were characterized by relatively comparable direct costs;
- Services within a family were clinically related so that panel members were familiar with all or most of the services in a family to promote discussions during the panel meetings;

---

<sup>4</sup>Except for enteral and parental therapy, durable medical equipment, orthotics, and temporary codes for non-physician services or items.

Table 3

Level 1 and Level 2 Codes (1995) with Status Indicators Evaluated by Project

Status Indicator	No. of Codes with Status Indicator	No. of Codes with Status Indicator Included in Project
A= Active code	5,875	5,873
B= Bundled into another service	41	3
C= Carrier-priced	161	45
D= Deleted codes	134	--
E= Excluded from the fee schedule by regulation	437	--
G= Not valid for Medicare	29	4
H= Deleted modifier	1	--
N= Non-covered service	140	30
P= Bundled or excluded codes	107	--
R= Restricted coverage	482	39
T= Injections	4	4
X= Exclusion by Law	1160	--
NONE (Anesthesia services)	--	253
<b>Total</b>	<b>8,571</b>	<b>6,251</b>

- Services were assigned to families based solely on the HCPCS/CPT-4 definitions of these services, not patient or physician-specific factors, so that a single payment rate could be derived for each HCPCS code as required by the MFS; and,
- Services were grouped such that each family had a manageable number of services that could be profiled in a reasonable time frame.

In addition to these criteria, to the extent possible, codes that were assigned to a family were predominantly performed in the same setting (e.g., simple skin procedures all performed in ambulatory settings.)

Portions of two existing classification systems were combined and modified to generate a preliminary grouping of services: the Ambulatory Patient Groups (APG) system developed by 3M and the Berenson-

Eggers-Holahan (BEH) system.<sup>5</sup> Useful elements of these two systems, as well as the criteria listed above, were used to arrange the services into appropriate service families. This resulting grouping of services was reviewed extensively to verify that all codes identified for inclusion in this study were accounted for and assigned uniquely into families. Since some families and individual services were assigned to more than one CPEP, the 6,251 total HCPCS codes within the scope of this project resulted in a total of 7,782 separate code assignments made to the CPEPs.

With the preliminary set of service families defined, the process began for organizing the service families into CPEP groupings, such that related families were grouped into the same CPEP. The CPEP grouping and their service family assignments were determined with the following objectives in mind:

- Service families should be organized in a manner to ensure that CPEP members would be familiar with the service families assigned to the CPEP;
- Each CPEP should have a workable number of services to evaluate (neither too many nor too few); and
- The number and size of the CPEPs had to be within the resource constraints of the project.

The Physician and Supplier Procedure Summary Master File was used to assess for each service family the distribution of the services performed by different specialties. Since some specialties (e.g., pediatrics, OB/GYN) are not well represented in this file, another source of private claims data was also used.<sup>6</sup> Those specialties that provide the largest percentage of services within each family (i.e., top specialty providers), as determined by these data, were identified. Families with similar top specialty providers were then grouped into the same CPEP. Thus, this process resulted in CPEPs that were organized largely along specialty lines.

The groupings by and large were successful in facilitating the estimation process. It should be kept in mind that in profiling services, CPEPs sometimes:

- Moved service codes across families
- Based estimates for a single code on components of multiple reference and non-reference services.

---

<sup>5</sup> Each of these systems had advantages and disadvantages for the purposes of classifying services into families. The APG system, with nine major categories and 297 APGs, was useful to the extent that it groups procedures performed on an outpatient basis according to resource and clinical homogeneity. However, it did not include inpatient services, and it classifies evaluation and management (E&M) codes by diagnosis. The BEH system, which collapses CPT codes into over 100 categories, assigns inpatient and E&M services into groups of services with similar clinical characteristics that could be incorporated into a meaningful classification scheme for estimating practice expenses. Averill, R., Goldfield, N., et al. "Design of a Prospective Payment. Classification System for Ambulatory Care." under HCFA cooperative agreement No. 17-C-90057/5-01; and Berenson, Robert and Holahan, John. "Using a New Type of Service Classification System to Examine the Growth in Medicare Physician Expenditure, 1985-88." Urban Institute Paper, December 1990.

<sup>6</sup> The American Medical Association provided an extract from a claims database developed by the MEDSTAT group, which contained claims from over 100 private insurers, spanning 3.3 million covered lives for the year of 1991 (personal correspondence from Kurt Gillis, American Medical Association, August 3rd, 1995).

- Often profiled non-reference services “from scratch,” without reference to any other services.

As a result, while the service family structure and reference service estimates from the first round of CPEP meetings were essentially retained, the service family structure became less critical to the final results obtained in second round of CPEP meetings. A service’s pre-CPEP service family assignment is not always a reliable indicator of the manner in which the service was profiled. In the end, each CPEP applied its clinical judgment in a way that was meaningful and efficient for the group.

## 4.2 Collection of Resource Profiles

The resource profiles for estimating direct costs were collected through a consensus process of 15 Clinical Practice Expert Panels (CPEPs) of physicians, other non-physician clinicians, and practice administrators. Pricing data with which to assign costs to the resource profiles were collected from a variety of sources (see Section 4.3).

### 4.2.1 The CPEP Process

The 15 CPEPs are displayed in Table 4:

<b>CPEP</b>	<b>Type</b>
CPEP 1	Integumentary & Physical Medicine
CPEP 2	Urology
CPEP 3	Orthopaedic Surgery
CPEP 4	OB/GYN
CPEP 5	Ophthalmology
CPEP 6	Radiology
CPEP 7	Evaluation & Management
CPEP 8	General Surgery
CPEP 9	Otolaryngology
CPEP 10	Miscellaneous Internal Medicine
CPEP 11	Gastroenterology
CPEP 12	Cardiothoracic and Vascular Surgery
CPEP 13	Cardiology
CPEP 14	Anesthesiology and Pathology
CPEP 15	Neurosurgery

The specialty mix of each CPEP was determined by using the 1994 Physician and Supplier Procedure Summary File and other information to identify the specialties which provide the services in each CPEP, as well as the percent of each specialty’s services performed across the various services assigned to each CPEP. In order to broaden the representation, a primary care provider and a general surgeon were also assigned to each panel. To the extent possible, the membership of each CPEP represented different types of practice staff (i.e., physicians, practice administrators, and other non-physician clinicians), relevant cross-specialty staff, as well as geographic and practice type variation. A typical CPEP totaled 10-12

Faint, illegible text at the top left of the page.

Faint, illegible text in the upper middle section of the page.

Faint, illegible text at the bottom left of the page.

members. For a more detailed description of the CPEP process and the related data collection, see the Report on Clinical Practice Expert Panel (CPEP) Direct Cost Estimation..

CPEP meetings were held to develop the resource profiles (types and quantities of labor, clinical supplies, and clinical equipment) for the MFS services, and were conducted in two rounds:

- Round 1 meetings occurred in February 1996, during which a detailed resource profile for the reference service(s) for each family was developed.
- Round 2 meetings occurred in June 1996, during which resource profiles generated for the reference service in each family were reviewed and modified, and resource profiles for all other services were developed.

Each CPEP was asked to profile all of the services in all of the service families assigned to the CPEP. Of the 7,782 separate codes that were assigned to all CPEPs, 542 were not profiled by a CPEP to which they were assigned; some CPEPs indicated that they did not have sufficient experience with the service to determine a reasonable profile. When a code was not profiled by a CPEP, it typically was profiled by one of the other CPEPs; overall, only 24 codes remained unprofiled by all CPEPs.

#### 4.2.2 *Collection of Labor, Equipment and Supply Profiles*

For each service, the CPEPs developed separate profiles for the labor, equipment and supply resources required. Labor profiles include details for the CPEP service periods as defined in Chapter 3.0; equipment and supply profiles were developed for each service as a whole rather than for the detailed CPEP service periods.

##### *Labor Profiles*

Labor resource estimates were collected from the CPEPs by individual staff types. Those estimates were obtained along each of the following dimensions:

- ***Clinical/Administrative.*** Clinical and administrative functions were separately identified and the staff types and time required for each of the two types of functions were then profiled separately. Examples of basic clinical functions include greeting/gowning patient, performance of the service/procedure, and tasks related to ordering tests. Examples of administrative functions include reception, registration, and billing/collections. Some staff types in some CPEPs performed both clinical and administrative functions, and are profiled under both of those classifications.
- ***Service period.*** Labor was profiled separately by service periods as defined in Chapter 3.0.
- ***Site of Service.*** Two sites of service are distinguished: *in-office* and *out-office*. (see Chapter 3.0 for a definition of site of service)

Global File:  
WAGEDAT

Global File:  
SUP\_PRC

Global File:  
EQP\_PRC

CPEP Specific File:  
LABDET

For each staff type involved in the provision of service, there are potentially 10 separate labor time estimates: 6 for clinical types (pre/procedure/post time periods; in- and out-of-office) and 4 for administrative staff types (procedure/post time periods; in- and out-of-office).

### *Supply Profiles*

The supply profiles obtained from the CPEPs include clinical disposable supplies only and do not distinguish the period (pre, procedure, post) during which the supplies are used. The only distinction made is between in-office and out-office sites (see Chapter 3.0 for a definition of key terms). Supplies are rarely provided by the practice when performing services in settings that are physically outside the office. However, since the definition of “in-office” vs. “out-office” is keyed on the site of the procedure itself, the out-office setting supply profiles often contain information for supplies provided during global period visits prior to or after the service was performed. Supplies for out-office procedural services with bundled visits (e.g., 090 day global services) were virtually always reported for visits provided during the pre and/or post-service periods.

### *Equipment Profiles*

The equipment profiles obtained from the CPEPs focus on clinical equipment with acquisition costs of \$500 or more. The CPEPs specified the types of equipment typically required for each service. Time constraints did not permit the collection of explicit equipment use time data during the CPEP meetings. Equipment use times were later estimated based on clinical support staff time estimates. For example, equipment use time for services involving plain film x-rays was estimated using the x-ray technician time profiled by the CPEP. (Refer to the report on the *Clinical Practice Expert Panel (CPEP) Direct Cost Estimation* for further details.) The great majority of equipment profiled by the CPEPs was used during the procedure period for in-office services. In some cases, equipment was used during the follow-up office visits provided in the post- service period for either in-office or out-office procedures (e.g., ophthalmology services with global periods often use eye examination equipment in post-service visits; see the discussion of the OUTEQCAP file in Chapter 5.0 for more details).

## **4.3 Collection of Input Price Data**

The resource profiles collected during the CPEP meetings require price data in order to convert the profiles into costs. These cost data are of three types, corresponding to the three types of inputs profiled by the CPEPs:

- Wage data, to be applied to the labor estimates;
- Supply price data, to be applied to the supply items; and
- Equipment price data, to be applied to the equipment items.

Recent national wage data were obtained from the Bureau of Labor Statistics and other sources, which is adjusted to reflect 1995 wage levels. Supply and equipment prices were collected from a variety of sources, including catalogs, manufacturer’s representatives, and individual CPEP members. These prices generally reflect 1995 price levels. Refer to the *Report on the Clinical Practice Expert Panel (CPEP) Direct Cost Estimation* for details of the sources and collection process for these price data.

LABDET

#### 4.4 Calculation of Direct Practice Costs

Exhibit 2 depicts the flow of data necessary to calculate total direct practice costs. This calculation requires several steps for each of the 15 CPEPs:

- Labor staff types must be matched against the staff types in the wage data, so that staff-specific time profiles can be converted into cost profiles. The costs for each staff type can then be summed to get the total labor direct cost for a service.
- Supply types must be matched against the supply price data, so that supply items can be converted into supply costs. The costs for each supply item used to provide a service can then be multiplied by the quantity of supply required, and the results can be summed to get the total supply direct cost for a service.
- Equipment types must be matched against the equipment price data, and then the equipment costing algorithm developed by Abt (which requires labor as well as equipment data) must be run to generate the service-specific equipment cost estimates.<sup>7</sup> The algorithm allocates a per-minute machine cost to services based on the number of minutes of labor for the relevant staff type. The default rule used in this assignment was the longest clinical staff time in the G1 period. Exceptions were made in cases for which the default rule was not appropriate (e.g., if the service was performed by the physician without clinical staff support). After computing equipment costs in this way, the costs for each equipment item can then be summed to derive the total equipment direct cost for a service.
- For each service, the total labor, supply, and equipment costs must be summed to determine the total direct practice costs.

Each of the files depicted in Exhibit 2 is summarized in Chapter 5.0. The Data Dictionary contains file- and variable-specific details, including file record layouts, sort order details, and codebooks for variables in each file.

---

<sup>7</sup>See *Clinical Practice Expert Panel (CPEP) Direct Cost Estimation* report for a detailed description of the equipment costing methodology.

## 5.0 CPEP Data Files

### 5.1 Overview of the CPEP Database

The CPEP data files are the product of the processes described in Chapters 2.0 through 4.0 and consist of four types of files related to direct practice expenses for each of the services included in this project:

- **Resource profiles.** The resource profile files contain the CPEPs' estimates of input quantities required to provide each service. Three types of resource profiles are available: labor minutes, supply item quantities, and required equipment usage.
- **Input prices.** The input price files contain data on wage rates, supply prices, and equipment prices. Data were compiled from a variety of sources (see below).
- **Service-specific direct practice costs.** The service-specific direct practice cost files contain the direct practice costs of each service (resulting from the application of prices to the resource profiles for labor, supplies and equipment). For equipment, useful life and other data collected outside the CPEP process were also used.
- **Auxiliary files.** Auxiliary files are available which document various aspects of the CPEP data development process. These files are described in section 5.2.2 below.

The resource profile files and the service-level direct cost files are *CPEP-specific*. There are 15 files for each CPEP-specific file type, one for each CPEP. The input price files are *global*, with one file only for each file type. These files are summarized below, and the primary files are depicted graphically in the attached Exhibit 2.

- **Global files.** Primary global files represent *master* files that are applicable to all CPT codes across all CPEPs. There are three primary global files:

- WAGEDAT: Provides wage information for each staff type
- SUP\_PRC: Provides pricing information on each type of supply item
- EQP\_PRC: Provides pricing information on each type of equipment item

There are also two auxiliary global files:

- EXPSITES: For all CPT codes addressed by the project, the settings in which each service was expected to be profiled, based on Medicare administrative data
- OUTEQCAP: For those CPEPs indicating use of equipment paid for by the practice in non-office settings, this file contains information about these equipment items. This file has the same format as PXEQCAP (see below).

Global File:  
WAGEDAT

Global File:  
SUP\_PRC

Global File:  
EQP\_PRC

CPEP-Specific File:  
LABDET

- *CPEP-specific detail files.* These files represent *CPEP-specific* detailed files regarding the labor, supply, and equipment resources required in the direct provision of each CPT code assigned to the CPEP. In all, there are six files per CPEP:
  - LABDET: Details the labor resource estimates and per-minute wage rates
  - SUPDET2: Details the supply item and quantity resource estimates
  - EQPDET: Details the service-specific equipment items required to provide each service (data for overhead types of equipment are contained in the OVEQCAP file, below)
  - PXEQCAP: Details the factors used in allocating service-specific clinical equipment costs to each service using the equipment
  - OVEQCAP: Details the factors in allocating clinical overhead equipment costs to all services in the entire CPEP<sup>8</sup>
  - PROCSUM: Contains the estimated service-specific direct costs (labor, supplies and equipment) for each HCPCS code by site of service (in- and out-office).

There is one auxiliary CPEP-specific file, SERVPT. Each of these files is summarized below. The Data Dictionary contains file- and variable-specific details, including file record layouts, sort order details, and codebooks for variables in each file. Appendix A contains a listing of all variables in the CPEP database and an indication of the file(s) on which each variable resides. For further information on data sources, application of wage, supply and equipment pricing, and the service specific and overhead allocation methodology for clinical equipment, see the *Clinical Practice Expert Panel (CPEP) Direct Cost Estimation Report*.

## 5.2 Global Files

Five global files apply to *all* CPEPs; as such, there is a single version of each file (in contrast to the fifteen versions of each of the CPEP-specific files). Three of the five files (WAGEDAT, SUP\_PRC, and EQP\_PRC) are master files used in the direct calculation of the total service cost estimates. Table 5 summarizes key information about each global file. A brief description of each file follows.

---

<sup>8</sup> The one exception to the allocation occurs for CPEP 1, in which clinical overhead equipment is allocated to specific families that pertain to only one of the several specialty areas in the CPEP (e.g., physical therapy). See the report on *CPEP Direct Cost Estimation* for details.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions.

2. It is essential to ensure that all entries are supported by proper documentation and receipts.

3. Regular audits should be conducted to verify the accuracy of the records and identify any discrepancies.

4. The second part of the document outlines the procedures for handling cash and credit transactions.

5. All cash receipts should be recorded immediately and deposited in a secure bank account.

6. Credit sales should be recorded on an accrual basis, and accounts receivable should be monitored closely.

7. The third part of the document provides guidelines for managing inventory and fixed assets.

8. Inventory should be counted regularly to ensure that the recorded quantities match the actual stock on hand.

9. Fixed assets should be depreciated according to the applicable tax laws and accounting standards.

10. The final part of the document discusses the preparation of financial statements and the role of the accountant.

11. The accountant is responsible for ensuring that all financial information is presented fairly and accurately.

Table 5: Global Files				
<i>Filename</i>	<i>Unit of Observation</i>	<i>Number of Observations</i>	<i>Number of Variables</i>	<i>Brief Description</i>
WAGEDAT	Staff type	207	3	Wage information for each staff type
SUP_PRC	Supply Item Code	630	6	Pricing information for each supply item
EQP_PRC	Equipment Item Code	334	5	Pricing information for each equipment item
EXPSITES	CPT-4 Code	6251	6	Expected sites of service to be profiled for each HCPCS code
OUTEQCAP	CPT-4 Code-Equipment Code	1689	22	Equipment cost information for out-of-office equipment

### 5.2.1 Primary Global Files

#### *WAGEDAT*

This file contains the total compensation rates (including fringe) and descriptions for staff types reported by each CPEP. National wage data were obtained from the Bureau of Labor Statistics and other sources. The file contains one record for each staff type that appears in the labor detail datasets (LABDET.T01 - LABDET.T15).

#### *SUP\_PRC*

This file contains the prices, units and sources of price information for disposable supply items identified by the CPEP members as required for the direct provision of each service. Supply prices were collected from a variety of sources, including catalogs, manufacturers' representatives, and individual CPEP members. The file contains one record for each supply item that appears in the supply detail files (SUPDET2.T01 - SUPDET2.T15).

#### *EQP\_PRC*

This file contains the price, useful life and source of price information for each piece of clinical equipment (service-specific and overhead) reported by CPEP members. Equipment prices were collected from a variety of sources, including catalogs, manufacturers' representatives, and individual CPEP members. (Note that the CPEP database defines equipment as items with acquisition costs of \$500 or more.) Each record represents an equipment item. Each equipment item has been assigned a unique identification code. The file contains one record for each equipment item that appears in the equipment detail datasets (EQPDET.T01 - EQPDET.T15, PXEQCAP.T01 - PXEQCAP.T15, and OVEQCAP.T01

- OVEQCAP.T15., and OUTEQCAP). For a detailed discussion of the equipment cost allocation methodology, refer to the *CPEP Direct Cost Estimation* report.

### 5.2.2 Auxiliary Global Files

#### *EXPSITES*

This file contains code-specific information on the percentage of services performed in the office and the percentage of services performed out-of-the office. The file is based on 1994 Physician and Supplier Procedure Summary Master File data. This information provided guidance to the panels regarding the expected site(s) in which to profile the service. A given service was recommended for profiling if it was performed 10 percent or more of the time in a given setting. CPEP panels, however, overrode this guideline based on their clinical judgment and practice experience regarding the site-of-service, and in some cases either did not profile a service in a setting suggested by the data, or profiled the service in a setting not suggested by the data.

#### *OUTEQCAP*

This file contains data pertaining to service-specific equipment costs, in those cases where the CPEPs indicated that they pay for equipment used in the procedure period in the out-office settings. This file contains records for all such cases, for all of the CPEPs in which they occurred. The costs detailed in this file are *not* included in the costs summarized in the PROCSUM file since these costs are not includable under the practice expense component of the MFS. The file contains data elements and computed variables generated by the methodology used to allocate service-specific clinical equipment costs to a single service. Each record represents a unique CPT-4 code/equipment item. Only services having such equipment are included in the file.

### 5.3 CPEP-Specific Files

Each CPEP has 6 detail files identifying the specific resource estimates for each service assigned to the CPEPs. Table 5 summarizes key information about each of the six types of files. Each type of file is sorted by CPT code (PROCCODE), with a secondary sort dependent on the file. Each of the CPEP-specific detail files contains at least one record for each CPT code assigned to the CPEP (regardless of whether any data could be collected on the code).

Global File:  
WAGEDAT

Global File:  
SUP\_PRC

LABDET

Table 6: CPEP-Specific Detail File Types			
<i>Filename</i>	<i>Unit of Observation</i>	<i>Number of Variables</i>	<i>Brief Description</i>
LABDET. <i>Tnn</i>	CPT Code - Staff Type	19	Detailed labor resource estimates by staff type for each HCPCS code
SUPDET2. <i>Tnn</i>	CPT Code - Supply Code	11	Detailed supply estimates for each HCPCS Code, with cost information added
EQPDET. <i>Tnn</i>	CPT Code - Equipment Code	4	Detailed service-specific equipment estimates for each HCPCS code
PXEQCAP. <i>Tnn</i>	CPT Code - Equipment Code	22	Detailed service-specific equipment estimates for each HCPCS code, with cost information on individual equipment as well as capital calculations
OVEQCAP. <i>Tnn</i>	CPT Code - Equipment Code	21	Detailed overhead equipment estimates for each HCPCS code with cost information on individual equipment as well as capital calculations
PROCSUM. <i>Tnn</i>	CPT Code	36	Service-specific master costs with labor, equipment and supply profiles incorporated for each HCPCS Code
<i>n</i> = (.T01 - .T15). For example, the 15 LABDET files are uniquely named LABDET.T01, LABDET.T02,...LABDET.T15.			

### 5.3.1 Primary CPEP-Specific Files

#### LABDET

This type of file contains the detailed labor inputs, indicating the labor time required for each type of staff. Each record represents a unique CPT code/staff type combination (i.e., there can be multiple records for a given CPT code, but each record represents a different staff type for that CPT code).

The labor estimates are expressed in minutes. This type of file includes the labor times for clinical and administrative activities for CPEP service periods (G0, G1, G1X, G2, G2X) for each unique type of staff involved in the provision of a given service. Each record includes separate labor estimates for the in- and out-office settings. The per-minute total compensation rate (RATE) has been added to the record (from the WAGEDAT file).

#### SUPDET2

This type of file contains details for each of the disposable supply items identified by the CPEPs as required to provide each service. Each record represents a unique CPT code/supply item combination (i.e., there can be multiple records for a given CPT code, but each record represents a different supply item for that CPT code). Each record includes the type of supply item, as well as information required to determine the total costs for the supply item (e.g., quantity, price per unit). The quantities and costs for

each supply item reflect the total required across the CPEP service periods (i.e., pre-service period + procedure period + post-service period). The SUPDET2 file for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP.

### *EQPDET*

This type of file details each clinical equipment item identified by the CPEPs as required to provide each service, (overhead clinical equipment items are contained in the OVEQCAP files). The files include equipment with a purchase price of \$500 or more; items identified by the CPEPs that were subsequently priced at less than \$500 are not included in the data files. Each record represents a unique CPT code/equipment item (i.e., there may be multiple records for a given CPT code, but each record represents a different equipment item for that CPT code). The EQPDET file for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP.

### *PXEQCAP*

This type of file represents a set of data pertaining to service-specific equipment costs. It contains data elements and computed variables generated by the methodology used to allocate service-specific clinical equipment costs to a single service. The files include equipment with a purchase price of \$500 or more; items identified by the CPEPs that were subsequently priced at less than \$500 are not included in the data files. Each record represents a unique CPT code/equipment item (i.e., there may be multiple records for a given CPT code, but each record represents a different equipment item for that CPT code).

In addition to all of the variables in EQPDET, PXEQCAP includes the data, calculation factors and intermediate values for components of formulas necessary to estimate the following:

- The total equipment cost over the life of the equipment;
- The annualized cost of the equipment, including maintenance and financing costs;
- The cost per minute for using the machine; and
- The equipment cost for the specific service.

Variables reflecting assumptions related to the total hours of operation of the equipment, loan interest rates, maintenance costs, and the percent of equipment capacity are included, as are data on purchase price and useful life. The equipment costing algorithm allocates a per-minute machine cost to services based on the number of minutes of labor for the relevant staff type. The default rule used in this assignment was the longest clinical staff time in the G1 period. Exceptions were made in cases for which the default rule was not appropriate (e.g., if the service was performed by the physician without clinical staff support), as indicated by the TEXCEP variable. The PXEQCAP file for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP.

Global File:  
WAGEDAT

Global File:  
SUP\_PRC

Global File:  
EQP\_PRC

CPEP-Specific File:  
LABDET

## OVEQCAP

This type of file represents an intermediate set of data pertaining to overhead equipment costs (see Chapter 3.0 for definition). The files contain data elements and computed variables generated by the methodology used to allocate clinical overhead equipment costs to specific services. (Items identified by the CPEP as service-specific equipment are contained in the PXEQCAP files.) The files include equipment with a purchase price of \$500 or more; items identified by the CPEPs that were subsequently priced at less than \$500 are not included in the data files. Each record represents a unique CPT code/equipment item (i.e., there may be multiple records for a given CPT code, but each record represents a different equipment item for that CPT code).

The calculation of overhead equipment cost at the service level uses the same algorithm used to generate the PXEQCAP file. It is different only in that it assumes equipment is 100% utilized, and it allocates equipment time based on labor times for all service periods during which the patient is physically present in the office. The files include variables analogous to those in PXEQCAP, except that they lack the TEXCEP indicator, since there are no exceptions to the overhead allocation rule. (Note that there is no analog of EQPDET for overhead equipment; the OVEQCAP files represent the sole source of overhead equipment data.) Specifically, these files include the data, calculation factors and intermediate values for components of formulas necessary to estimate the following:

- The total equipment cost over the life of the equipment;
- The annualized cost of the equipment, including maintenance and financing costs;
- The cost per minute for using the machine; and
- The equipment cost for the specific service.

Variables reflecting assumptions related to the total hours of operation of the equipment, loan interest rates, maintenance costs, and the percent of equipment capacity are included, as are data on purchase price and useful life. The OVEQCAP file for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP. A detailed discussion of the equipment cost allocation methodology is included in the *CPEP Direct Cost Estimation* report.

## PROCSUM

This type of file contains the estimated service-specific direct costs (labor, supplies and equipment) for each CPT code by site of service (in- and out-of-office). The unit of observation is the CPEP-specific CPT code. There is exactly one observation for each service the CPEP was asked to profile; this observation contains profile data for both sites of service. Services that were assigned to but not profiled by the CPEP have values of "N" (not profiled) for both the IN and OUT site of service indicator variables.

This type of file includes the components of the total direct costs, including: total labor costs, total clinical staff costs, total administrative staff costs, total disposable clinical supply costs, total clinical equipment costs, total service-specific clinical equipment costs, and total overhead clinical equipment costs, as well as detailed information on the separate clinical and administrative labor costs within each of the CPEP service periods (G0, G1, G1X, G2, and G2X).

Global File:  
WAGEDAT

Global File:  
SUP\_PRC

Global File:  
EQP\_PRC

CPEP-Specific File:  
LABDET

All of the cost (labor, supply, equipment) values in PROCSUM were arrived at by aggregating the respective detail files to the level of the linking key (i.e., CPEP-PROCCODE) and incorporating these results into the single corresponding record on PROCSUM. Total direct cost for each service was computed by calculating and summing costs across: all staff types for both clinical and administrative functions (derived from data in LABDET and WAGEDAT); all supply items (derived from data in SUPDET2 and SUP\_PRC); and all equipment items, including service-specific and clinical equipment overhead costs (derived from data in EQPDET, PXEQCAP, OVEQCAP, and EQP\_PRC). The primary cost variables (i.e., CG0\_I, CG1\_I, CG1X\_I etc. for labor; SUPP\_I for supplies; and PXEQ\_I and OVEQ\_I for equipment) were computed by aggregating the in- and out-of-office costs in the various detail files by CPEP-PROCCODE. The secondary cost variables on PROCSUM (e.g., TOTLABCI, TOTLABAI, TOTEQPI, TOTLABI, TOT\_I) were computed by summing the appropriate primary and/or secondary cost variables.

In addition to containing the aggregated direct cost results from the detail files, PROCSUM also serves as a CPEP-specific service-level master dataset for the service profiles. Among the relevant information contained in PROCSUM are variables indicating:

- which site(s) of service were profiled by the CPEP (IN and OUT);
- whether the service was a reference service (ISREF);
- the Medicare global period status code from the 1995 MFS (GLOBAL);
- whether (as occurred in a small number of cases) some of the CPEP's time estimates were edited after the CPEP meetings (TIMEDEL);
- the number of post-operative visits (POVIS) that the panel assumed in profiling the service.

Some of these indicators (notably the IN and OUT variables) are duplicated on some of the detail datasets, but in other cases they can be determined from other variables in the record. The IN and OUT variables are useful indicators of which sites were profiled and which records could be expected from the detail data. For example, variables referring to the in-office setting will be blank when IN = "N." When working with detail files that do not contain these indicators, the variables itemized above should be incorporated into the analysis to ensure that data are considered in a proper context. The PROCSUM file for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP.

### *Auxiliary CPEP-Specific File*

#### *SERVPT*

This file is a log of the data entry options used during the second round CPEP meetings. For the second round of CPEP meetings, Abt developed a PC-based data entry tool to enable the CPEP recorders to perform real-time entry of CPEP estimates developed during the meetings. The tool facilitated fast, accurate data entry of information that would be needed to later develop the final time estimates for the

6,000+ HCPCS/CPT codes profiled during the panel meetings. Data collected by the data entry tool were used in a series of processing steps which culminated in the production of the detailed labor estimates contained in the Labor Detail (LABDET) file. A small subset of items from the data entry tool tables were also extracted and copied to the CPEP Data Entry Log Extract file, which contains a record of the type of data entry option chosen for each code profiled. It is not possible to interpret a relationship between the method chosen to data enter the time estimates and the reasoning process used by the CPEPs. As a result, no conclusions about the underlying logic used by the CPEPs should be drawn from the data contained in the SERVPT file. The file contains information reflecting the method of data entry chosen; it does not convey any information about why a particular set of values were copied or why particular CPT codes were chosen to serve as the basis for adjustments.

### 5.3.2 CPEP Recorders' Notes

The *CPEP Recorders' Notes* contains information providing context for the data in the CPEP database files. Such information could not be reflected *per se* in the data, and is intended to support subsequent review. *This document is a cornerstone for obtaining a complete understanding of the data files as well as for performing any adjustments to the data.* Because of the need for the databases to support various analyses planned by HCFA in its process of developing practice expense relative values, the Notes files were created to assist users in understanding the data.

The notes are specific to each CPEP and are structured in three categories:

- **CPEP-level notes** describe specific conventions or formulae adopted by the CPEP. For example, the notes may indicate that a CPEP used the number of post-operative visits in a formula to generate staff times for post-surgical office visits for all of its 90 day global codes.
- **Family-level notes** provide similar information that applies only to that specific family of services.
- **Service-specific notes** provide a variety of explanatory information. For example:
  - Notes are present if the data in the data files may seem inconsistent or inaccurate when taken at face value. For example, notes are present when a panel provided an estimate that is in conflict with the global period status code contained in the Medicare Fee Schedule (such as treating a 90 day global service as a ZZZ code).
  - Notes are also present when there was uncertainty about the includability of a resource in the practice experience component of the MFS.

This document is intended for users familiar with the CPEP process. Familiarity with the *Users' Guide* and the report on the *CPEP Direct Cost Estimation* is necessary for proper interpretation of the information contained in this document.

## 6.0 Technical User Notes

### 6.1 Using the Data Files

#### 6.1.1 File Relationships and Linkages

Exhibit 3 contains a graphical representation of the linkages needed among the various types of CPEP-specific and global files in order to develop summary/aggregate values. In most cases, the variable CPEP is only needed as a linking variable if data have been combined across CPEPs; it is not necessary if files for only one of the CPEPs are to be linked. The exception to this is the OUTEQCAP file, which requires both CPEP and PROCCODE for all links.

In Exhibit 3, arrows with two points (  ) represent a one-to-many relationship. The variables listed alongside the connecting line represent the variable(s) that define the link. For example, for every CPEP-PROCCODE combination in PROCSUM, there can be multiple (i.e., one or more) records occurring in LABDET with the same CPEP-PROCCODE combination. These multiple records would be distinguished by the different values of the STAFTYPE field, which is the italicized variable indicated in parentheses next to each detail file. Note that the existence of a one-to-many relationship does not *require* that there be multiple detail records, but indicates that there *may* be multiple detail records. In fact, there may well be only a single detail record. However, there will always be at least one detail record for any CPEP-PROCCODE combination occurring in PROCSUM. The exception to this is the arrow with a dashed line, which indicates that there may be zero or more detail records (this occurs only with the file OUTEQCAP).

Arrows with a single point (  ) represent a one-to-one relationship. The variables listed alongside the connecting line indicate the variable(s) that define the link. For example, for every record in LABDET, there exists exactly one record in WAGEDAT with a matching value of STAFTYPE. Unlike the one-to-many relationships, the "linked-to" files (e.g., WAGEDAT) essentially represent "lookup" files.

#### 6.1.2 Assignments of Services to Multiple CPEPs: Linking Across CPEP-Specific Datasets

Of the 6,251 CPT services within the scope of this study, over 1,000 were assigned to be profiled by more than one CPEP. It is important to bear this in mind when working with the datasets, and to not overlook the CPEP variable in any linkages across the physically distinct CPEP-specific datasets.

The CPEP-specific datasets are physically distinct datasets. However, certain analyses might require the concatenation of data from two or more CPEPs. To avoid possible errors in linking, PROCCODE and CPEP records should be uniquely defined by the combination of both CPEP and PROCCODE (though when working with one CPEP at a time, omitting the CPEP variable will not alter the results).

#### 6.1.3 Variables Appearing on More Than One File

Users are cautioned that links such as those illustrated in Exhibit 3 would need to be re-applied should any of the data in the global files be changed as part of a subsequent analysis. With the exception of the link between EQPDET and EQP\_PRC, files involved in the one-to-one links pictured in Exhibit 3 are partially redundant with regard to their contents. For convenience, some or all of the link has already

EQP\_PRC

CPEP-Specific File:  
LABDET

been performed (i.e., some of the variables in the “linked-to” datasets already exist in the “linked-from” datasets. Examples of this include:

- The RATE variable, whose values in the WAGEDAT dataset have also been included in the LABDET datasets;
- The PRICE and LIFE variables, whose values in the EQP\_PRC dataset have also been included in PXEQCAP and OVEQCAP datasets;
- The DESC, PRICE, PRC\_CNT and PRC\_UNIT variables, whose values in the SUP\_PRC dataset have also been included in the SUPDET2 datasets.

Appendix A includes an indication of multiple occurrences of variables. It is always preferable to link to the global files and use the variables on the global file, rather than using the counterpart variables that have been added for convenience to the detail files.

All of the cost (labor, supply, equipment) values in PROCSUM were arrived at by aggregating the respective detail datasets to the level of the linking key (i.e., CPEP-PROCCODE) and incorporating these results into the single corresponding record on PROCSUM. For example, if five in-office supply item records are contained in the supply detail file for one HCPCS code, supply-item specific costs are calculated and summed across the five records to arrive at one supply cost total for the single record on PROCSUM.

#### 6.1.4 Conventions Regarding Missing Values

Missing values in data files are used to indicate values that were not or could not be obtained. Missing values occur in two general cases:

- When a service code was not profiled by a particular CPEP at a particular site of service (i.e., in-office or out-of-office), missing values are assigned to variables associated with the site of service which is not profiled. For example, if CPEP 1 did not profile service code "15101" for the in-office setting (IN="N"), variables on the supply detail dataset (SUPDET2) specific to the in-office setting (namely, INQCNV, INCOST) will contain missing values for observations with CPEP="C 1" and PROCCODE="15101". Similarly, the corresponding summary record for CPEP="C1" and PROCCODE="ABCDE" in the PROCSUM data set will contain missing values for all variables specific to the in-office setting.
- When a service code *was* profiled by a particular CPEP at a given site of service, missing values are assigned if:
  - a value for a particular variable relating to that site of service was not obtained (e.g., the CPEP could not provide supply details); or
  - the value of one or more of the components of a particular variable was either not provided or not available (e.g., cost fields are missing when either price or quantity is missing). *When a particular variable is missing, missing values propagate to*

Global File:  
EQP\_PRC

CPEP-Specific File:  
LABDET

*all other variables in the same or other datasets that are directly or indirectly dependent on that variable.* No assignment of partially complete or imputed values to variables with at least one component missing has been made.

### 6.1.5 Conventions Regarding Special Values

The CPEP database also uses some codes with special meaning to indicate particular types of situations in which the data are not present. These are detailed within each variable's entry in the Data Dictionary. For example, EQP\_CODE has a value of "code not profiled" (E99990) in the EQPDET file when a service has not been profiled. These special codes are specific to a type of data file; conventions vary across the files. The Data Dictionary documents the special codes used for each variable, and analysis of any of the files should be preceded by a careful review of the data dictionary information for that file.

## 6.2 Important Considerations in Using These Data

Points that should be kept in mind in using this data are:

- The terms and concepts for the project should be well understood before the files are used. Chapter 3.0, Key Terms and Concepts, should be reviewed. In particular, *for services that include global periods, the site of service is anchored to the procedure period site and is reported as such in the database.* This is a very important point to keep in mind when examining or analyzing the CPEP data files. Thus, the post-operative office visits that take place after an inpatient 90 day global surgical service are categorized as out-office, even though these visits may take place in the physician's office.
- The files have been created from an extensive process of data recording and entry verification. The reference service data have also undergone review by the CPEP panelists whose consensus produced the values; non-reference data have been reviewed extensively by Abt (e.g., quality review edits) but not by the CPEP panelists.
- The data represent the consensus of the CPEPs as recorded by Abt Associates. They have not been validated against external frames of reference.
- The data in these files have been carefully reviewed and quality controlled, drawing on the written notes recorded by Abt Associates staff during the CPEP meetings. The data reflect resource estimates provided by the CPEPs with few exceptions (as discussed in Section 5.3.1, PROCSUM file descriptions), these estimates have not been edited or altered.
- These data and documentation were originally intended for HCFA and the health services research community, to be used as an input into the process of developing practice expense relative value units. The enormous volume of data is maintained in separate files relating to labor, supplies, and equipment. Use of the detailed files (as opposed to the cost summary file PROCSUM) by non-technical users should be undertaken with care, and after the full set of documentation has been reviewed and understood.

Global File:  
WAGEDAT

CPEP-Specific File:  
LABDET

[The text on this page is extremely faint and illegible. It appears to be a list or a series of entries, possibly a table of contents or a list of items, but the specific details cannot be discerned.]

- Users should keep the ultimate use of these data in mind: they were collected as one source of data to determine relative values. As such, it is the relative relationships among the resource requirements, rather than the absolute levels, that are important.

**WAGEDAT**  
**Wage Global File**

This file contains the total compensation rates (including fringe) and descriptions for staff types reported by each CPEP. National wage data were obtained from the Bureau of Labor Statistics.

The file contains one record for each staff type that appears in the labor detail datasets (LABDET.T01 - LABDET.T15), including records for the special STAFTYPE codes of 99990 ("ZERO LABOR") and 99999 ("CODE NOT COSTED").

The RATE variable contains the total compensation rate assigned to each staff type; its values were used to convert labor time estimates to labor cost estimates. The RATE values have also been included in the LABDET files.

File Name: WAGEDAT.GBL  
No. of Records: 207  
Record Length: 65  
No. of Variables: 3  
Sort Order: STAFTYPE  
File Format: Standard ASCII file with carriage return and line feed at the end of each record.

WAGEDAT Record Layout

Name	Description	Type	Position	Length
DESC	Description	Character	1	40
RATE	Total compensation per minute	Numeric	41	5
STAFTYPE	Code for staff type	Numeric	46	5

When reading this data file, note that the first 12 lines contain copyright information rather than data records. The first data record occurs at the 13th line in the files. The record count listed above indicates the number of actual data records in the file, not the total number of text rows. If a numeric variable has decimal values, the decimal point has been entered explicitly in the ASCII file. There are no implicit decimal points

CPT five-digit codes, descriptions and other data only are copyright 1994 American Medical Association. All Rights Reserved. No fee schedules, basic units, relative value or related listings are included in CPT. AMA does not directly or indirectly practice medicine or dispense medical services. AMA assumes no liability for data contained or not contained herein.

**WAGEDAT**  
**Wage Global File**

<b>Variable Name:</b> <b>DESC</b>
-----------------------------------

**Variable Label:**      Description

**Definition:**            Description of the staff type.

**Type:**                  Character

**Allowed Values:**      Alphanumeric characters (no blanks allowed).

When the panel did not profile a service, a description of "CODE NOT COSTED" is assigned to the service.

When the panel profiled a service with no labor, a description of "ZERO LABOR" is assigned to the service.

**Links to Other Files:** Not a linking variable.

**Comments:**            None

**WAGEDAT**  
**Wage Global File**

<b>Variable Name:</b>	<b>RATE</b>
-----------------------	-------------

**Variable Label:** Total compensation per minute

**Definition:** For the specified staff type, this variable is the estimated rate of total compensation, expressed in dollars per minute.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A zero value occurs for records with STAFTYPE=99990, which represents, "ZERO LABOR."

A missing value occurs for records with STAFTYPE=99999, which represents, "CODE NOT COSTED."

**Link to Other Files:** Not a linking variable.

**Comments:** The rate represents the total compensation (wages and benefits). See the *CPEP Direct Cost Estimation Report* for a detailed discussion of the labor pricing methodology.

CPEP-Specific File:  
LABDET

**WAGEDAT**  
**Wage Global File**

<b>Variable Name:</b> <b>STAFTYPE</b>
---------------------------------------

**Variable Label:**        Code for staff type

**Definition:**            Numeric Code for staff type, assigned by Abt Associates Inc.

**Type:**                  Numeric

**Allowed Values:**      1017-99999

Codes are specific to CPEPs as well as staff types. The first two digits represent the CPEP; the last three digits represent a unique staff type. Within the last three digits, the following numerical structure applies:

- 001-080            Clinical staff (e.g., RN, physician assistant).
- 081-120            Administrative staff (e.g., medical secretary).
- 121-150            Clinical composite staff (types of staff reported by the CPEPs as serving interchangeably for specific functions, such as RN/LPN/medical assistant).
- 151-177            Administrative composite staff (types of staff reported by the CPEPs as serving interchangeably for specific functions, such as medical secretary/receptionist).
- 178-200            Clinical and Administrative composite staff (types of staff reported by the CPEPs as serving interchangeably for specific functions, such as RN/billing clerk).

Additionally, this variable has two values with special meaning:

- 99999              Indicates the service has not been costed.
- 99990              Indicates no labor is required.

See Attachments 1 and 2 for a complete listing of staff type codes and definitions.

**Link to Other Files:**    STAFTYPE serves as a linking variable to the LABDET file (allowing linking of wage rates in WAGEDAT to the labor time estimates in LABDET to generate labor cost estimates).

**Comments:**            Wage rates were assigned to CPEP-specific staff types. Currently, one wage rate estimate is assigned to each staff for each CPEP. However, the coding structure of CPEP/Staff type provides for the flexibility to apply differential wage rates to each CPEP/Staff type.

**SUP\_PRC**  
**Supply Pricing Global File**

This file contains the prices, units and sources of price information for disposable supply items identified by the CPEP members as required for the direct provision of each service. Supply prices were collected from a variety of sources, including catalogs, manufacturers' representatives, and individual CPEP members. The file contains one record for each supply item that appears in the supply detail files (SUPDET2.T01 - SUPDET2.T15), including records for the special SUP\_CODE codes of 10000 ("NO SUPPLIES") 10090 ("CODE NOT COSTED"), and 10099 ("INCOMPLETE PROFILE"). Each supply item has been assigned a unique identification code for pricing purposes. The codes identify different types of supply items as well as different sizes of supply items that are priced differently (e.g., 2x2 gauze, 4x4 gauze).

For each supply code, the variables indicate the price that was assumed for that item and the quantity of supply represented by that price (e.g., IPECAC, 1 oz, 41.80). All of these elements are required to price supply usage amounts.

The PRICE, PRC\_CNT and PRC\_UNIT values have also been included in the SUPDET2 dataset.

```
File Name:          SUP_PRC.GBL
No. of Records:    630
Record Length:     126
No. of Variables:  6
Sort Order:        SUP_CODE
File Format:        Standard ASCII file with carriage return and line
                    feed at the end of each record.
```

SUP\_PRC Record Layout

Name	Description	Type	Position	Length
DESC	Description	Character	1	48
PRC_CNT	Quantity associated with price	Numeric	49	8
PRC_UNIT	Unit of measure for stdrdzd supply price	Character	57	12
PRICE	Purchase price	Numeric	69	8
SOURCE	Source of estimate	Character	77	43
SUP_CODE	Code for supply item	Character	120	7

When reading this data file, note that the first 12 lines contain copyright information rather than data records. The first data record occurs at the 13th line in the files. The record count listed above indicates the number of actual data records in the file, not the total number of text rows. If a numeric variable has decimal values, the decimal point has been entered explicitly in the ASCII file. There are no implicit decimal points.

**SUP\_PRC**  
**Supply Pricing Global File**

<b>Variable Name:</b>	<b>DESC</b>
-----------------------	-------------

**Variable Label:** Description

**Definition:** Description of the supply item (e.g., needle 30g).

**Type:** Character

**Allowed Values:** Alphanumeric characters (no blanks allowed).

When the panel determined that a service required no supplies (SUP\_CODE=10000), a description of "NO SUPPLIES," is assigned to the service.

When the panel did not profile a service in either site of service (SUP\_CODE=10090), a description of "CODE NOT COSTED," is assigned to the service.

When the CPEP reported that there were additional supply items, but the CPEP was unable to identify the specific supply items (SUP\_CODE=10099), a description of "INCOMPLETE PROFILE," is assigned to the service.

**Link to Other Files:** Not a linking variable.

**Comments:** There is one unique description for each supply item. Items with identical prices and similar usage patterns (e.g. needle 18g and needle 20g), received a single, more generic description (e.g. needle 18-20g). Supply descriptions are as described either by the CPEPs, or by the written or verbal information used to determine the supply price.

**SUP\_PRC**  
**Supply Pricing Global File**

<b>Variable Name:</b> <b>PRC_CNT</b>
--------------------------------------

**Variable Label:**      No. units used for purchase price

**Definition:**          The number of units in which a supply item is priced. For example, if the price for hydrogen peroxide is recorded as \$0.78 per 20 ml, the value of PRC\_CNT for this supply item would be 20.

**Type:**                  Numeric

**Allowed Values:**      Non-negative numbers or missing values.

Missing values occur for PRC\_CNT when one of three conditions is met:

- A service was not profiled (SUP\_CODE=10090), or
- A service received an incomplete profile (SUP\_CODE=10099), or
- A supply item remains unpriced (variable PRICE is missing).

A value of "1" was assigned when the panel determined that no supplies were used for a service (SUP\_CODE=10000), so the cost calculation results in a value of zero rather than a missing value. For example, in the SUPDET2 data set,  $IN\_COST = INQCNV \times PRICE / PRC\_CNT$ .

**Links to Other Files:** Not a linking variable.

**Comments:**            None

**SUP\_PRC**  
**Supply Pricing Global File**

<b>Variable Name:</b> <b>PRC_UNIT</b>
---------------------------------------

**Variable Label:**      Units used for purchase price

**Definition:**          Units in which the supply item was priced (e.g., ml, ounce, foot).

**Type:**                Character

**Allowed Values:**    Alpha characters, or missing (blank).

Blanks occur for PRC\_UNIT when one of four conditions is met:

- The panel determined no supplies were used in a particular service (SUP\_CODE=10000), or
- A service was not profiled (SUP\_CODE=10090), or
- A service received an incomplete profile (SUP\_CODE=1099), or
- A supply item remains unpriced (variable PRICE is missing).

**Links to Other Files:** Not a linking variable.

**Comments:**          None

**SUP\_PRC**  
**Supply Pricing Global File**

<b>Variable Name:</b> <b>PRICE</b>
------------------------------------

**Variable Label:**        Purchase price

**Definition:**            The price for this supply item, in dollars, stated in terms of a specified quantity (PRC\_CNT) of a specified unit (PRC\_UNIT) (e.g., the PRICE of hydrogen peroxide is stated as \$0.78 per 20 ml).

**Type:**                    Numeric

**Allowed Values:**        Non-negative numbers or missing values.

Missing values occur for PRICE when one of three conditions is met:

- A service was not profiled (SUP\_CODE=10090), or
- A service received an incomplete profile (SUP\_CODE=10099), or
- A supply item remains unpriced (variable PRICE is missing).

Zero occurs for PRICE only if the panel determined no supplies were used in a particular service (SUP\_CODE=10000).

**Links to Other Files:** Not a linking variable.

**Comments:**            Missing values for PRICE exist for some supply items because those items could not be adequately identified and priced. Several sources were used in determining supply prices, including supply catalogs and CPEP member assistance. See the *CPEP Direct Cost Estimation Report* for further discussion on the supply pricing methodology.

**SUP\_PRC**  
**Supply Pricing Global File**

<b>Variable Name:</b> <b>SOURCE</b>
-------------------------------------

**Variable Label:**        Source of estimate

**Definition:**            The source of the estimated price data (e.g., Western Optical, for a bipolar hand piece)

**Type:**                    Character

**Allowed Values:**        Alpha characters, or missing (blank).

Blank values occur for source occurs when one of four conditions is met:

- SUP\_CODE=10000 ("NO SUPPLIES"), or
- SUP\_CODE=10090 ("CODE NOT COSTED"), or
- SUP\_CODE=10099 ("INCOMPLETE PROFILE"), or
- A supply remains unpriced (variable PRICE is missing).

**Links to Other Files:** Not a linking variable.

**Comments:**            A variety of manufacturer catalogs were used to price each supply item. In many cases, the specific supply item was not listed in the catalog. In these cases, CPEP members provided the necessary information to price the particular supply item, and the source is identified as "CPEP Member."

When a "/" appears in the source field, it indicates a source/brand distinction for that supply item. The source always appears on the left side of the "/" and the brand on the right. (e.g. Red Book / Pyrex indicates the Red Book was used to determine the price for the given supply, and Pyrex is the brand name of the supply priced).

**SUP\_PRC**  
**Supply Pricing Global File**

<b>Variable Name:</b> <b>SUP_CODE</b>
---------------------------------------

**Variable Label:**      Code for supply item

**Definition:**          Numeric code for a unique supply item, as assigned by Abt Associates Inc.

**Type:**                Character

**Allowed Values:**    10000-93816

SUP\_CODE has three values with special meaning:

- 10000 indicates that the service uses no supplies.
- 10090 indicates that the service was not profiled.
- 10099 indicates an incomplete profile.

**Links to Other Files:** Links to the SUPDET2 file for each CPEP.

**Comments:**          Each supply item has a distinct SUP\_CODE, with an associated description (DESC).

Global File:  
EQP\_PRC

OPCN-Specific File:  
LABDET

**EQP\_PRC**  
**Equipment Global Pricing File**

This file contains the price, useful life and source of price information for each piece of clinical equipment (service-specific and overhead) reported by CPEP members in the direct provision of a service. The file contains one record for each equipment item that appears in the equipment detail datasets (EQPDET.T01 - EQPDET.T15, PXEQCAP.T01 - PXEQCAP.T15, and OVEQCAP.T01 - OVEQCAP.T15 and OUTEQCAP), including records for the special EQP\_CODE codes of E99990 (code not profiled), E99997 (no equipment needed), and E99998 (incomplete profile).

Equipment prices were collected from a variety of sources, including catalogs, manufacturer's representatives, and individual CPEP members. (Note that the CPEP database defines equipment as items costing \$500 or more.) Each record represents an equipment item. Each equipment item has been assigned a unique identification code.

For a detailed discussion of the equipment cost allocation methodology, refer to the *CPEP Direct Cost Estimation* report.

For each equipment code, variables indicate the price that was assumed for that item, and its assumed useful life in years. A default useful life of 7.5 years was assumed if a specific estimate of useful life could not be found for a particular type of equipment.

The PRICE and LIFE variables have also been included in the EQPDET data file.

File Name: EQP\_PRC.GBL  
 No. of Records: 334  
 Record Length: 162  
 No. of Variables: 5  
 Sort Order: EQP\_CODE  
 File Format: Standard ASCII file with carriage return and line feed at the end of each record.

EQP\_PRC Record Layout

Name	Description	Type	Position	Length
DESC	Description	Character	1	100
EQP_CODE	Code for type of equipment	Character	101	6
LIFE	Equipment useful life (years)	Numeric	107	6
PRICE	Purchase price	Numeric	113	11
SOURCE	Source of estimate	Character	124	39

When reading this data file, note that the first 12 lines contain copyright information rather than data records. The first data record occurs at the 13th line in the files. The record count listed above indicates the number of actual data records in the file, not the total number of text rows. If a numeric variable has decimal values, the decimal point has been entered explicitly in the ASCII file. There are no implicit decimal points.

<b>Variable Name:</b> <b>DESC</b>
-----------------------------------

**Variable Label:**        Description

**Definition:**            Description of the clinical equipment item.

**Type:**                    Character

**Allowed Values:**        Alphanumeric characters (no blanks allowed).

When the panel did not profile a service in either site of service (EQP\_CODE=E99990), a description of "CODE NOT COSTED," is assigned to the service.

When the panel determined that a service required no service-specific equipment (EQP\_CODE=E99997), a description of "NO EQUIPMENT," is assigned to the service.

When the CPEP reported that there were additional service-specific equipment items, but the CPEP was unable to identify the specific equipment items (EQP\_CODE=E99998), a description of "INCOMPLETE PROFILE," is assigned to the service.

**Links to Other Files:** Not a linking variable.

**Comments:**            There is one unique description for each item of clinical equipment.

**EQP\_PRC**  
**Equipment Global Pricing File**

<b>Variable Name:</b> <b>EQP_CODE</b>
---------------------------------------

**Variable Label:**      Code for type of equipment

**Definition:**          Alphanumeric code for a unique type of clinical equipment, as assigned by Abt Associates Inc.

**Type:**                  Character

**Allowed Values:**      "E" followed by five numeric characters (no blanks).

This variable has three values with special meaning:

- E99990 indicates that the associated service was not profiled.
- E99997 indicates that the associated service required no service specific equipment.
- E99998 indicates an incomplete profile.

**Links to Other Files:** Links to the CPEP-specific EQPDET (Equipment Detail) files.

**Comments:**            Each equipment item has a distinct EQP\_CODE, with an associated description (DESC).

**EQP\_PRC**  
**Equipment Global Pricing File**

<b>Variable Name:</b> <b>LIFE</b>
-----------------------------------

**Variable Label:**      Equipment useful life (years)

**Definition:**      The estimated useful life of the clinical equipment, in years

**Type:**      Numeric

**Allowed Values:**      Non-negative numbers or missing values.

This field is irrelevant for records with the following EQP\_CODE:

- E99990 indicates that the associated service was not profiled.
- E99997 indicates that the associated service required no service specific equipment.
- E99998 indicates an incomplete profile.

Missing values occur for equipment items that could not be priced.

**Links to Other Files:** Not a linking variable.

**Comments:**      The useful life data were obtained from *Useful Lives of Depreciable Hospital Assets*, 1993 Edition. All useful lives from this source are integer values. When this source did not have an estimate of useful life specific to the equipment, a default value of 7.5 years was used. Refer to the *CPEP Direct Cost Estimation Report* for further details.

**EQP\_PRC**  
**Equipment Global Pricing File**

<b>Variable Name:</b> <b>PRICE</b>
------------------------------------

**Variable Label:**        Purchase price

**Definition:**            The original purchase price of the clinical equipment, in dollars.

**Type:**                  Numeric

**Allowed Values:**        Non-negative numbers equal to or greater than \$500, or missing values.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99998 ("INCOMPLETE PROFILE") and E99990 ("CODE NOT COSTED").

A missing value can also occur if it was not possible to obtain a price for a specific piece of equipment.

Zero occurs for PRICE only when an equipment item has the EQP\_CODE E9997 (no equipment required).

**Links to Other Files:** Not a linking variable.

**Comments:**            See the *CPEP Direct Cost Estimation Report* for further discussion on the equipment pricing methodology. Since this variable is a price figure, the values represent dollars and cents.

**EQP\_PRC**  
**Equipment Pricing Global File**

<b>Variable Name:</b> <b>SOURCE</b>
-------------------------------------

**Variable Label:**        Source of estimate

**Definition:**            The source of the estimated price data (e.g., Welch-Allyn, for a bronchoscope).

**Type:**                    Character

**Allowed Values:**        Alpha characters, or missing (blank).

Blank values occur for SOURCE when one of three conditions is met:

- EQP\_CODE=E99990 ("CODE NOT COSTED"), or
- EQP\_CODE=E99997 ("NO EQUIPMENT"), or
- EQP\_CODE=E99998 ("INCOMPLETE PROFILE"), or
- An equipment item remains unpriced (variable PRICE is missing).

**Links to Other Files:** Not a linking variable.

**Comments:**            A variety of manufacturer catalogs and manufacturer representatives were consulted to price each equipment item. In many cases, the specific equipment item was not listed in the catalog and manufacturer's representatives would not release price information. In these cases, CPEP members provided the necessary information to price the particular equipment item, and the source is identified as "CPEP member."

Codes with sources of "Various" refer to equipment prices that were derived from a variety of sources, specifically relating to equipment items that are composed of multiple pieces of equipment (e.g., crash cart, radiology rooms).

## LABDET Labor Detail File

This type of file contains the detailed labor inputs, indicating the labor time required for each type of staff. Each record represents a unique HCPCS code/staff type combination (i.e., there can be multiple records for a given HCPCS code, but each record represents a different staff type for that HCPCS code).

The labor estimates are expressed in minutes. This type of file includes the labor times for clinical and administrative activities for CPEP service periods (G0, G1, G1X, G2, G2X) for each unique type of staff involved in the provision of a given service. Each record includes separate labor estimates for the in- and out-of-office settings. The per-minute total compensation rate (RATE) has been added to the record (from the WAGEDAT file).

The combination of the PROCCODE and STAFTYPE fields uniquely identifies each record (i.e., the file has at most one observation for each possible combination of those variables). Note that if files of this type are combined across CPEPs, the variable CPEP must also be considered to uniquely identify each record.

As is the case for all of the detail datasets, the LABDET dataset for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP.

- For profiled codes, there is either one observation for each different staff type used in the profile, or there is a single placeholder record with a STAFTYPE value of 99990 to indicate that the profile explicitly specified zero staff time.
- For unprofiled codes, there is a single placeholder record with a STAFTYPE value of 99999 to indicate that the code was not profiled by the CPEP.

Missing labor time values only occur when a site of service was not profiled (i.e., IN=N or OUT=N). There are no cases where staff time profiles were incompletely specified. RATE will have a missing value only for records with a STAFTYPE of 99999 (indicating that the code was not profiled).

File Name	No. of Records	CPEP
LABDET.T01	1,609	1
LABDET.T02	2,130	2
LABDET.T03	7,366	3
LABDET.T04	1,422	4

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> CPEP
----------------------------

**Variable Label:** CPEP providing estimate

**Definition:** The Clinical Practice Expert Panel (abbreviated CPEP) that provided the estimates for the associated service.

**Type:** Character

**Allowed Values:**

C 1	=	Integumentary & Physical Medicine
C 2	=	Urology
C 3	=	Orthopaedic Surgery
C 4	=	OB/GYN
C 5	=	Ophthalmology
C 6	=	Radiology
C 7	=	Evaluation & Management
C 8	=	General Surgery
C 9	=	Otolaryngology
C10	=	Miscellaneous Internal Medicine
C11	=	Gastroenterology
C12	=	Cardiothoracic and Vascular Surgery
C13	=	Cardiology
C14	=	Anesthesiology/Pathology
C15	=	Neurosurgery

**Link to Other Files:** CPEP, in conjunction with PROCCODE, can be used to link the labor records to their corresponding service-specific equipment, overhead equipment, and supply profiles to construct the CPEP's complete profile for the service.

**Comments:** This variable indicates the CPEP which provided the labor type and time estimates contained in each LABDET record. Any single LABDET file will contain data from only one CPEP. Many services were profiled by more than one CPEP, however, making it important to consider the CPEP variable in any analysis of the LABDET files (see the *CPEP Direct Cost Estimation Report* for a list of the services that were profiled by more than one CPEP).

The internal blank in "C 1" through "C 9" preserves the numeric order of the 15 allowed values.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>DESC</b>
-----------------------------------

**Variable Label:**      Description

**Definition:**          Description of the staff type.

**Type:**                  Character

**Allowed Values:**      Alphanumeric characters (no blanks allowed).

When the panel did not profile a service, a description of "CODE NOT COSTED"  
is assigned to the service.

**Links to Other Files:** Not a linking variable.

**Comments:**            None

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>FAM</b>
----------------------------------

**Variable Label:**        The family number for the service

**Definition:**            The grouping ("family") of HCPCS codes to which the service was assigned for the purpose of facilitating development of resource estimates by the CPEPs.

**Type:**                    Numeric

**Allowed Values:**        Attachment 1 contains a listing of all valid families and their descriptions.

**Link to Other Files:**    Not a linking variable.

**Comments:**             The family variable indicates the service family in which a HCPCS code resides. The family assignment was designed to group services that are clinically similar and comparable with respect to resource requirements. However, the family structure was not necessarily maintained or drawn on by a CPEP in its development of the labor estimates contained in the LABDET file, and should be used with caution.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>G0_I</b>
-----------------------------------

**Variable Label:**      Clin staff time for pre-serv in-office

**Definition:**            Services in the G0 period occur within the 24-hour period prior to the performance of a procedure. This variable contains the minutes of clinical labor for services and/or visits provided during this 24-hour pre-service period of an in-office procedure for the specified staff type (see STAFTYPE variable).

**Type:**                    Numeric

**Allowed Values:**        Non-negative numbers or missing values.

Zero occurs for G0\_I only when the service is profiled in-office *and* one of two other conditions is met:

- The global period does not include a pre-service visit, or
- The global period includes a pre-service visit and the CPEP provided an estimate of zero minutes for this staff type.

A missing value for G0\_I will only occur in LABDET when a service was not profiled in the in-office site (IN = 'N').

**Link to Other Files:**    Not a linking variable.

**Comments:**             An example of G0\_I staff time is the RN time required to support a visit to the physician's office on the day prior to a surgical procedure performed in the office. In-office procedures with no global period are assigned a zero for G0\_I time. These services are evaluation and management services or services without a global period.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>G0_O</b>
-----------------------------------

**Variable Label:**      Clin staff time for pre-serv out-office

**Definition:**      Services in the G0 period occur within the 24-hour period prior to the performance of a procedure. This variable contains the minutes of clinical labor for services and/or visits provided during this 24-hour pre-service period of an out-office procedure for the specified staff type (see STAFTYPE variable).

**Type:**      Numeric

**Allowed Values:**      Non-negative numbers or missing values.

Zero occurs for G0\_O only when the service is profiled out-office *and* one of two other conditions is met:

- The global period does not include a pre-service visit, or
- The global period includes a pre-service visit and the CPEP provided an estimate of zero minutes for this staff type.

A missing value for G0\_O will only occur in LABDET when a service was not profiled in the out-office site (OUT = 'N').

**Link to Other Files:**      Not a linking variable.

**Comments:**      An example of G0\_O staff time is the RN time required to support a visit to the physician's office on the day prior to a surgical procedure performed out of the office. Out-office services with no global period are assigned a zero for G0\_O time. These services are evaluation and management services or services without a global period.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>G1X_I</b>
------------------------------------

**Variable Label:**      Clin staff time for post-ops in-office

**Definition:**      Services in the G1X period commence with the first follow-up office visit (provided after discharge) and ends with the expiration of the global period (e.g., 10 or 90 days after the day of the procedure). This variable contains the minutes of clinical labor for all G1X period services and/or follow-up office visits related to an in-office procedure for the specified staff type (see STAFTYPE variable).

**Type:**      Numeric

**Allowed Values:**      Non-negative numbers or missing values.

Zero occurs for G1X\_I only when the service is profiled in-office and *one* of two other conditions is met:

- The global period does not include post-service visits, or
- The global period includes post-service visits and the CPEP provided an estimate of zero minutes.

A missing value for G1X\_I will only occur in LABDET when a service was not profiled in the in-office site (IN = 'N').

**Link to Other Files:**      Not a linking variable.

**Comments:**      An example of G1X\_I staff time is the RN time required to support a follow-up visit to the physician's office one week after a surgical procedure performed in the office. In-office procedures with no global period are assigned a zero for G1X\_I time. These services are evaluation and management services or services without a global period.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>G1X_O</b>
------------------------------------

**Variable Label:**      Clin staff time for post-ops out-office

**Definition:**            Services in the G1X period commence with the first follow-up office visit (provided after discharge) and ends with the expiration of the global period (e.g., 10 or 90 days after the day of the procedure). This variable contains the minutes of clinical labor for all G1X period services and/or follow-up office visits related to an out-office procedure for the specified staff type (see STAFTYPE variable).

**Type:**                    Numeric

**Allowed Values:**        Non-negative numbers or missing values.

Zero occurs for G1X\_O only when the service is profiled out-office *and* one of two other conditions is met:

- The global period does not include post-service visits, or
- The global period includes post-service visits and the CPEP provided an estimate of zero minutes for this staff type.

A missing value for G1X\_O will only occur in LABDET when a service was not profiled in the out-office site (OUT = 'N').

**Link to Other Files:**    Not a linking variable.

**Comments:**             An example of G1X\_O staff time is the RN time required to support a follow-up visit to the physician's office one week after a surgical procedure performed out of the office. Out-office procedures with no global period are assigned a zero for G1X\_O time. These services are evaluation and management services or services without a global period.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>G1_I</b>
-----------------------------------

**Variable Label:**      Clin staff time for serv in-office

**Definition:**      Services in the G1 period occur during the provision of the service itself, regardless of the service's global status code. This variable contains the minutes of clinical labor for the provision of the in-office service itself for the specified staff type (see STAFTYPE variable). For '000' global periods, the G1 period includes all related services on day of procedure. For services with '010', '090', and 'MMM' global periods, G1 period encompasses any services or activities commencing with performance of procedure, and ending with commencement of first follow-up office visit after discharge.

**Type:**      Numeric

**Allowed Values:**      Non-negative numbers or missing values.

Zero occurs for G1\_I only when the service is profiled in-office *and* the CPEP provided an estimate of zero minutes for this staff type.

A missing value for G1\_I will only occur in LABDET when a service was not profiled in the in-office site (IN = 'N').

**Link to Other Files:**      Not a linking variable.

**Comments:**      An example of G1\_I staff time is the RN time required to support a service provided in the physician's office.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>G1_O</b>
-----------------------------------

**Variable Label:**        Clin staff time for serv out-office

**Definition:**            Services in the G1 period occur during the provision of the service itself regardless of the service's global status code. This variable contains the minutes of clinical labor for the provision of the out-office service itself for the specified staff type (see STAFTYPE variable). When the procedure is performed on an inpatient basis, the G1\_O period includes all services and visits provided by practice staff before discharge from hospital. For '000' global periods, the G1 period includes all related services on day of procedure. For services with '010', '090', and 'MMM' global periods, G1 period encompasses any services or activities commencing with performance of procedure, and ending with commencement of first follow-up office visit after discharge.

**Type:**                    Numeric

**Allowed Values:**        Non-negative numbers or missing values.

Zero occurs for G1\_O only when the service is profiled out-office *and* the CPEP provided an estimate of zero minutes for this staff type.

A missing value for G1\_O will only occur in LABDET when a service was not profiled in the out-office site (OUT = 'N').

**Link to Other Files:**    Not a linking variable.

**Comments:**             An example of G1\_O staff time is the RN time required to handle telephone calls from a patient's family for a service provided out of the physician's office.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>G2X_I</b>
------------------------------------

**Variable Label:**        Admin staff time for post-ops in-office

**Definition:**            Services in the G2X period commence with the first follow-up office visit (provided after discharge) and ends with the expiration of the global period (e.g., 10 or 90 days after day of procedure). This variable contains the minutes of administrative labor for all G2X period services and/or follow-up office visits related to an in-office procedure for the specified staff type (see STAFTYPE variable).

**Type:**                    Numeric

**Allowed Values:**        Non-negative numbers or missing values.

Zero occurs for G2X\_I only when the service is profiled in-office *and* one of two other conditions is met:

- The global period does not include post-service visits, or
- The global period includes post-service visits and the CPEP provided an estimate of zero minutes for this staff type.

A missing value for G2X\_I will only occur in LABDET when a service was not profiled in the in-office site (IN = 'N').

**Link to Other Files:**    Not a linking variable.

**Comments:**            An example of G2X\_I staff time is the time required of a billing clerk to handle billing issues related to follow-up office visits within the global period. In-office procedures with no global period are assigned a zero for G2X\_I time. These services are evaluation and management services or services without a global period.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>G2X_O</b>
------------------------------------

**Variable Label:**        Admin staff time for post-ops out-office

**Definition:**            Services in the G2X period commence with the first follow-up office visit (provided after discharge) and end with the expiration of the global period (e.g., 10 or 90 days after day of procedure). This variable contains the minutes of administrative labor for all G2X services and/or follow-up office visits related to an out-office procedure for the specified staff type (see STAFTYPE variable).

**Type:**                    Numeric

**Allowed Values:**        Non-negative numbers or missing values.

Zero occurs for G2X\_O only when the service is profiled out-office *and* one of two other conditions is met:

- The global period does not include post-service visits, or
- The global period includes post-service visits and the CPEP provided an estimate of zero minutes for this staff type.

A missing value for G2X\_O will only occur in LABDET when a service was not profiled in the out-office site (OUT = 'N').

**Link to Other Files:**    Not a linking variable.

**Comments:**             An example of G2X\_O staff time is the time required of a billing clerk to handle billing issues related to follow-up office visits within the global period. Out-office procedures with no global period are assigned a zero for G2X\_O time. These services are evaluation and management services or services without a global period.

<b>Variable Name:</b> <b>G2_I</b>
-----------------------------------

**Variable Label:**        Admin staff time for serv in-office

**Definition:**            Services in the G2 period include all administrative activities preceding and contiguous to the performance of a service. For global status codes that bundle a pre-service visit into total payment, this encompasses services rendered in the 24-hour period prior to provision of procedure. This variable contains the minutes of administrative labor for services and/or visits in the G2 period related to an in-office procedure for the specified staff type (see STAFTYPE variable).

**Type:**                    Numeric

**Allowed Values:**        Non-negative numbers or missing values.

Zero occurs for G2\_I only when the service is profiled in-office *and* the CPEP provided an estimate of zero minutes for this staff type.

A missing value for G2\_I will only occur in LABDET when a service was not profiled in the in-office site (IN = 'N').

**Link to Other Files:**    Not a linking variable.

**Comments:**             An example of G2\_I time is billing clerk time related to the provision of a minor surgical procedure performed in the office.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>G2_O</b>
-----------------------------------

**Variable Label:**      Admin staff time for serv out-office

**Definition:**            Services in the G2 period include all administrative activities preceding and contiguous to the performance of a service. For global status codes that bundle a pre-service visit into total payment, this encompasses services rendered in the 24-hour period prior to provision of procedure. This variable contains the minutes of administrative labor for services and/or visits in the G2 period related to out-office procedure for the specified staff type (see STAFTYPE variable).

**Type:**                    Numeric

**Allowed Values:**      Non-negative numbers or missing values.

Zero occurs for G2\_O only when the service is profiled out-office *and* the CPEP provided an estimate of zero minutes for this staff type.

A missing value for G2\_O will only occur in LABDET when a service was not profiled in the out-office site (OUT = 'N').

**Link to Other Files:** Not a linking variable.

**Comments:**            An example of G2\_O time is scheduling secretary and billing clerk time related to the provision of a procedure performed out of the office.

<b>Variable Name:</b> <b>IN</b>
---------------------------------

**Variable Label:**        Code profiled in the office (Y/N)

**Definition:**            For the specified service, this variable indicates whether the service was profiled for the "in-office" location.

**Type:**                    Character

**Allowed Values:**        Y        =        Yes, service was profiled for the in-office location  
                              N        =        No, service was not profiled for the in-office location

**Link to Other Files:**    Not a linking variable.

**Comments:**             All time variables in LABDET with an "\_I" suffix (in-office) will have missing values when IN is equal to 'N'.

<b>Variable Name:</b> <b>ISREF</b>
------------------------------------

**Variable Label:**        Indicates if code is a ref service (0,1)

**Definition:**            This variable indicates whether the service is a reference service (i.e., profiled during the first round of CPEP meetings).

**Type:**                    Numeric

**Allowed Values:**        0        =        Service is not a reference service  
                                  1        =        Service is a reference service

**Link to Other Files:**    Not a linking variable.

**Comments:**             Reference services were profiled in detail during the first round of CPEPs. These services were selected from each family based on several criteria, the first of which was that the service had a high volume (based on 1994 Physician and Supplier Procedure Summary Master File) relative to the other services in the family (see the *CPEP Direct Cost Estimation Report* for more details about the CPEP process). The time estimates for reference services may or may not have changed in the second round of CPEPs; the files contain the most recent estimates. The CPEPs may or may not have used the reference service in a family to profile the resource requirements for the other services in the family, therefore this variable should be used with caution.

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>OUT</b>
----------------------------------

**Variable Label:**        Code profiled out of the office (Y/N)

**Definition:**            For the specified service, this variable indicates whether the service was profiled for the "out-office" location.

**Type:**                    Character

**Allowed Values:**        Y        =        Yes, service was profiled for the out-office location  
                              N        =        No, service was not profiled for the out-office location

**Link to Other Files:**    Not a linking variable.

**Comments:**             All time variables in LABDET with an "\_O" suffix (out-office) will have missing values when OUT is equal to 'N'.

**Labor Detail File**

<b>Variable Name:</b> <b>PROCCODE</b>
---------------------------------------

**Variable Label:**      HCPCS (service) code

**Definition:**            The HCFA Common Procedure Coding System (HCPCS) code (levels I and II) for the specified service.

**Type:**                    Character

**Allowed Values:**      HCPCS codes (numeric and alphanumeric) within the project scope.

**Link to Other Files:** PROCCODE, in conjunction with CPEP, can be used to link the labor records to their corresponding service-specific equipment, overhead equipment, and supply profiles to construct the CPEP's complete profile for the service.

**Comments:**            For a description of the HCPCS codes included as part of the project scope, see Chapter 2.0 of the *CPEP Direct Cost Estimation Report*.

Any single LABDET file will contain service-specific labor data for only one CPEP. However, since many codes were profiled by more than one CPEP, it is important to take into account the possibility of multiple records for the same HCPCS code in any service-specific analyses (see *CPEP Direct Cost Estimation Report* for a list of services that were profiled by more than one CPEP).

**LABDET**  
**Labor Detail File**

<b>Variable Name:</b> <b>RATE</b>
-----------------------------------

**Variable Label:**      Total compensation per minute

**Definition:**      For the specified staff type, this variable is the estimated rate of total compensation, expressed in dollars per minute.

**Type:**      Numeric

**Allowed Values:**      Non-negative or missing values.

A zero value occurs for records with STAFTYPE = 99990 which represents "ZERO LABOR."

A missing value occurs for records with STAFTYPE=99999 which represents "CODE NOT COSTED."

**Link to Other Files:**      Not a linking variable.

**Comments:**      This variable is taken from the WAGEDAT file (a global file), using the staff type variable (STAFTYPE) for linkage. See the *CPEP Direct Cost Estimation Report* for a detailed discussion of the labor pricing methodology.

**Labor Detail File**

<b>Variable Name:</b> <b>STAFTYPE</b>
---------------------------------------

**Variable Label:**        Code for staff type

**Definition:**            Numeric Code for staff type, assigned by Abt Associates Inc.

**Type:**                  Numeric

**Allowed Values:**      1017-99999.

Codes are specific to CPEPs as well as staff types. The first two digits represent the CPEP; the last three digits represent a unique staff type. Within the last three digits, the following numerical structure applies:

- 001-080            Clinical staff (e.g., RN, physician assistant).
- 081-120            Administrative staff (e.g., medical secretary).
- 121-150            Clinical composite staff (types of staff reported by the CPEPs as serving interchangeably for specific functions, such as RN/LPN/medical assistant).
- 151-177            Administrative composite staff (types of staff reported by the CPEPs as serving interchangeably for specific functions, such as medical secretary/receptionist).
- 178-200            Clinical and Administrative composite staff (types of staff reported by the CPEPs as serving interchangeably for specific functions, such as RN/billing clerk).

Additionally, this variable has two values with special meaning:

- 99999              Indicates the service has not been costed.
- 99990              Indicates no labor is required.

See Attachments 2 and 3 for a complete listing of staff type codes and definitions.

**Link to Other Files:**    STAFTYPE serves as a linking variable to the WAGEDAT file (allowing linking of wage rates in WAGEDAT to the labor time estimates in LABDET to generate labor cost estimates).

**Comments:**              Wage rates were assigned to CPEP-specific staff types. Currently, one wage rate estimate is assigned to each staff for each CPEP. However, the coding structure of CPEP/Staff type provides for the flexibility to apply differential wage rates to each CPEP/Staff type.

**SUPDET2**  
**Supply Detail, Adjusted Files**

This type of file contains detailed information compiled for each of the disposable supply items identified by the CPEPs as required to provide each service. Each record represents a unique HCPCS code/supply item combination (i.e., there can be multiple records for a given HCPCS code, but each record represents a different supply item for that HCPCS code).

Each record includes the type of supply item, as well as information required to determine the total costs for the supply item (e.g., quantity, price per unit). The quantities and costs for each supply item reflect the total required across the CPEP service periods (i.e., pre-service period + procedure period + post-service period).

It is important to note that the quantities of supply items reported by the CPEP members were often *not* provided in the units in which manufacturers provided price information. As a result, information on the quantity of each supply item reported by the CPEP members has been converted, or standardized, to conform to the price data. This type of file includes the *standardized* quantities and pricing units, which were used to derive the cost for each supply item. For example, a supply's usage may have been specified once in milliliters and once in fluid ounces, while the item itself may have been priced in terms of gallons. In SUPDET2, each of these usage quantities is expressed in gallons. In addition, if the CPEP had specified both of the original usage amounts for the same service profile, the quantities have been added to yield a single record representing the total quantity required. Descriptions for supply items have also been standardized across CPEPs, so that the description and/or the units in which quantities are expressed for any particular item may be slightly different than the one originally reported by the CPEP. In no case should the calculated supply costs be affected by these standardizations.

The combination of the PROCCODE and SUP\_CODE fields uniquely identifies each record (i.e., the file has at most one observation for each possible combination of those variables). Note that if files of this type are combined across CPEPs, the variable CPEP must also be considered to uniquely identify each record.

As is the case for all of the detail datasets, the SUPDET2 dataset for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP:

- For profiled codes, there is either one observation for each different supply used in the profile, or there is a single placeholder record with a SUP\_CODE value of 10000 to indicate that the profile explicitly specified no supplies.
- For unprofiled codes, there is a single placeholder record with a SUP\_CODE value of 10090 to indicate that the code was not profiled by the CPEP.
- One additional special SUP\_CODE value that can occur is value 10099. An observation with this supply code represents an incomplete supply profile for a profiled code, and indicates that some supply items were discussed but could not be specified explicitly identified by the CPEP. Such a record can occur as the sole supply record for a service, or can occur in conjunction with other,

**SUPDET2**  
**Supply Detail, Adjusted Files**

specified supply items for the service. There is never more than one record with SUP\_CODE=10099 in a particular CPEP's profile of a service.

The costs of a supply for the two sites of service (IN\_COST, OUT\_COST) were calculated as follows:

$$IN\_COST = \frac{INQCNV \cdot PRICE}{PRC\_CNT}$$

$$OUT\_COST = \frac{OUTQCNV \cdot PRICE}{PRC\_CNT}$$

where: INQCNV = total standardized in-office quantity  
 OUTQCNV = total standardized out-of-office quantity  
 PRICE = price  
 PRC\_CNT = the quantity represented by price

For example, if 10 ml costs \$5.00, then PRICE=\$5.00, PRC\_CNT=10, and PRC\_UNIT="mil").

This expression should be used in any recomputation of costs based on different pricing and/or usage amount assumptions. Note that for records indicating that no supplies are used (SUP\_CODE=10000), the value of PRC\_CNT has been set to 1 to allow the above calculations to yield the correct costs (i.e., \$0.00) without any special programming consideration. (Although a missing or zero value of PRC\_CNT may seem more intuitive in the case of no supplies, the result of the calculations using either of those values would result in a missing value, which is not the desired result for a profile using no supplies.)

Missing values occur for site-specific variables (INQCNV, IN\_COST, OUTQCNV, OUT\_COST) when the service was not profiled, when the service was incompletely profiled, or when an estimate for the specific variable could not be obtained. Zero values occur for site-specific variables when the service was profiled at the specific site but the panel assigned a zero value to the specific variable or determined that no supplies were used.

Missing values occur for supply-specific variables (PRC\_CNT, PRC\_UNIT, PRICE) when the service was not profiled at the specific site, when the service was incompletely profiled, or when an estimate for the specific variable could not be obtained. If no supplies were used for a particular service, PRC\_CNT is set to 1, PRC\_UNIT is set to blank, and PRICE is set to zero.

File Name	No. of Records	CPEP

File Format: Standard ASCII file with carriage return and line feed at the end of each record.

SUPDET2 Record Layout

Name	Description	Type	Position	Length
CPEP	CPEP providing estimate	Character	1	7
DESC	Description	Character	8	48
INQCNV	Qty of standardized supp. units, in-off	Numeric	56	11
IN_COST	Cost of supply item, in-office service	Numeric	67	7
OUTQCNV	Qty of standardized supp. units, out-off	Numeric	74	12
OUT_COST	Cost of supply item, out-office service	Numeric	86	7
PRC_CNT	No. units used for purchase price	Numeric	93	8
PRC_UNIT	Units used for purchase price	Character	101	12
PRICE	Purchase price	Numeric	113	8
PROCCODE	HCPCS (service) code	Character	121	5
SUP_CODE	Code for supply item	Character	126	7

When reading this data file, note that the first 12 lines contain copyright information rather than data records. The first data record occurs at the 13th line in the files. The record count listed above indicates the number of actual data records in the file, not the total number of text rows. If a numeric variable has decimal values, the decimal point has been entered explicitly in the ASCII file. There are no implicit decimal points.

CPT five-digit codes, descriptions and other data only are copyright 1994 American Medical Association. All Rights Reserved. No fee schedules, basic units, relative value or related listings are included in CPT. AMA does not directly or indirectly practice medicine or dispense medical services. AMA assumes no liability for data contained or not contained herein.

**SUPDET2**  
**Supply Detail, Adjusted Files**

<b>Variable Name:</b> CPEP
----------------------------

**Variable Label:** CPEP providing estimate

**Definition:** The Clinical Practice Expert Panel (abbreviated CPEP) that provided the estimates for the associated service.

**Type:** Character

- Allowed Values:**
- C 1 = Integumentary & Physical Medicine
  - C 2 = Urology
  - C 3 = Orthopaedic Surgery
  - C 4 = OB/GYN
  - C 5 = Ophthalmology
  - C 6 = Radiology
  - C 7 = Evaluation & Management
  - C 8 = General Surgery
  - C 9 = Otolaryngology
  - C10 = Miscellaneous Internal Medicine
  - C11 = Gastroenterology
  - C12 = Cardiothoracic and Vascular Surgery
  - C13 = Cardiology
  - C14 = Anesthesiology/Pathology
  - C15 = Neurosurgery

**Link to Other Files:** CPEP, in conjunction with PROCCODE, can be used to link the supply records to their corresponding service-specific equipment, overhead equipment, and labor profiles to construct the CPEP's complete profile for the service.

**Comments:** This variable indicates the CPEP which provided the supply estimate contained in each SUPDET2 record. Any single SUPDET2 file will contain data from only one CPEP. Many services were profiled by more than one CPEP, however, making it important to consider the CPEP variable in any analysis of the SUPDET2 files (see the *CPEP Direct Cost Estimation Report* for a list of the services that were profiled by more than one CPEP).

The internal blank in "C 1" through "C 9" preserves the numeric order for the 15 allowed values.

**SUPDET2**  
**Supply Detail, Adjusted Files**

<b>Variable Name:</b> <b>DESC</b>
-----------------------------------

**Variable Label:**      Description

**Definition:**          Description of the supply item (e.g., needle 30g).

**Type:**                  Character

**Allowed Values:**      Alphanumeric characters (no blanks allowed).

When the panel determined that a procedure required no supplies (SUP\_CODE=10000), a description of "NO SUPPLIES," is assigned to the service.

When the panel did not profile a service in either site of service (SUP\_CODE=10090), a description of "CODE NOT COSTED," is assigned to the service.

When the CPEP reported that there were additional supply items, but the CPEP was unable to identify the specific supply items (SUP\_CODE=10099), a description of "INCOMPLETE PROFILE," is assigned to the service.

**Link to Other Files:**   Not a linking variable.

**Comments:**            There is one unique description for each supply item. Items with identical prices and similar usage patterns (e.g. needle 18g and needle 20g), received a single, more generic description (e.g. needle 18-20g).

**SUPDET2**  
**Supply Detail, Adjusted Files**

<b>Variable Name:</b> <b>INQCNV</b>
-------------------------------------

**Variable Label:**      Qty of standardized supp. units, in-off

**Definition:**      For in-office provision of the service, the quantity of the associated supply item required, expressed in standardized units (i.e., not necessarily the units in which the CPEP provided the original estimates).

**Type:**      Numeric

**Allowed Values:**      Non-negative numbers or missing values.

Zero occurs for INQCNV when one of two conditions is met:

- The service is profiled in-office, and the panel assigned a quantity of zero to a supply item in that site, or
- The service is profiled in-office, and the panel determined that no supplies were used (SUP\_CODE=10000).

Missing values occur for INQCNV when one of four conditions is met:

- A service was not profiled (SUP\_CODE=10090), or
- A service was not profiled in-office (IN=N), or
- A service received an incomplete profile (SUP\_CODE=10099), or
- Panel did not provide a quantity for a particular supply item in-office.

**Link to Other Files:**      Not a linking variable.

**Comments:**      Quantities were adjusted as part of the standardization process to correct unit discrepancies between the panel's estimate and the pricing profile for an item (e.g. panel estimated 1 "roll" of tape used in the provision of a service, but tape is priced in "inches." Panel's quantity estimate (1 roll) is converted into the units priced (360 inches). The standardized unit is recorded in PRC\_UNIT.

This variable multiplied by the price (PRICE) gives the total cost of this item required for the service in-office (IN\_COST).

**SUPDET2**  
**Supply Detail, Adjusted Files**

<b>Variable Name:</b> <b>IN_COST</b>
--------------------------------------

**Variable Label:**      Cost of supply item, in-office service

**Definition:**      Total cost of the quantity of this item required for the service, in dollars.

**Type:**      Numeric

**Allowed Values:**      Non-negative numbers or missing values.

Zero occurs for IN\_COST when one of two conditions is met:

- The service is profiled in-office, and the panel assigned a quantity of zero to a supply item in that site, or
- The service is profiled in-office, and the panel determined that no supplies were used (SUP\_CODE=10000).

Missing values occur for IN\_COST when one of five conditions is met:

- A service was not profiled at all (SUP\_CODE=10090), or
- A service was not profiled in-office (IN=N), or
- A service received an incomplete profile (SUP\_CODE=10099), or
- Panel did not provide a quantity for a particular supply item in-office, or
- Supply item not priced (variable PRICE is missing).

**Links to Other Files:** Not a linking variable.

**Comments:**      IN\_COST was calculated by multiplying INQCNV by PRICE.

**SUPDET2**  
**Supply Detail, Adjusted Files**

<b>Variable Name:</b> <b>OUTQCNV</b>
--------------------------------------

**Variable Label:**        Qty of standardized supp. units, out-off.

**Definition:**            For out-office provision of the service, the quantity of the associated supply item required, expressed in standardized units (i.e., not necessarily the units in which the CPEP provided the original estimates).

**Type:**                    Numeric

**Allowed Values:**        Non-negative numbers or missing values.

Zero occurs for OUTQCNV when one of two conditions is met:

- The service is profiled out-of-office, and the panel assigned a quantity of zero to a supply item in that site, or
- The service is profiled out-of-office, and the panel determined that no supplies were used (SUP\_CODE=10000).

Missing values occur for OUTQCNV when one of four conditions is met:

- A service was not profiled at all (SUP\_CODE=10090), or
- A service was not profiled out-of-office (OUT=N), or
- A service received an incomplete profile (SUP\_CODE=10099), or
- Panel did not provide a quantity for a particular supply item out-of-office.

**Link to Other Files:**    Not a linking variable .

**Comments:**            Quantities were adjusted as part of the standardization process to correct unit discrepancies between the panel's estimate, and the pricing profile for an item (e.g. panel estimated 1 "roll" of tape used in the provision of a service, but tape is priced in "inches." Panel's quantity estimate (1 roll) is converted into the units priced (360 inches). The standardized unit is recorded in PRC\_UNIT.

This variable multiplied by the price (PRICE) gives the total cost of this item required for the service out-of-office (OUT\_COST).

Supply Detail, Adjusted Files

**Variable Name:** OUT\_COST

**Variable Label:** Cost of supply item, out-office service.

**Definition:** Total cost of the quantity of this item required for the service in dollars.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

Zero occurs for OUT\_COST when one of two conditions is met:

- The service is profiled out-of-office, and the panel assigned a quantity of zero to a supply item in that site, or
- The service is profiled out-of-office, and the panel determined that no supplies were used (SUP\_CODE=10000).

Missing values occur for OUT\_COST when one of five conditions is met:

- A service was not profiled at all (SUP\_CODE=10090), or
- A service was not profiled out-of-office (OUT=N), or
- A service received an incomplete profile (SUP\_CODE=10099), or
- Panel did not provide a quantity for a particular supply item out-of-office, or
- Supply item not priced (variable PRICE is missing).

**Links to Other Files:** Not a linking variable.

**Comments:** OUT\_COST is calculated by multiplying OUTQCNV by PRICE.

Auxiliary File:

OVEQCAP

CPEP-Specific File:  
BRNCSHM

**SUPDET2**  
**Supply Detail, Adjusted Files**

<b>Variable Name:</b> <b>PRC_CNT</b>
--------------------------------------

**Variable Label:**      No. units used for purchase price.

**Definition:**      The number of units in which a supply item is priced. For example, if the price for hydrogen peroxide is recorded as \$0.78 per 20 ml, the value of PRC\_CNT for this supply item would be 20.

**Type:**      Numeric

**Allowed Values:**      Non-negative numbers or missing values.

Missing values occur for PRC\_CNT when one of three conditions is met:

- A service was not profiled (SUP\_CODE=10090), or
- A service received an incomplete profile (SUP\_CODE=10099), or
- A supply item remains unpriced (variable PRICE is missing).

A value of "1" was assigned when the panel determined that no supplies were used for a service (SUP\_CODE=10000), so the cost calculation results in a value of zero rather than a missing value. For example,  $IN\_COST = INQCNV \times PRICE / PRC\_CNT$ .

**Links to Other Files:** Not a linking variable.

**Comments:**      None

Auxiliary File:

**SUPDET2**  
**Supply Detail, Adjusted Files**

<b>Variable Name:</b> <b>PRC_UNIT</b>
---------------------------------------

**Variable Label:**      Units used for purchase price

**Definition:**      Units in which the supply item was priced (e.g., ml, ounce, foot).

**Type:**      Character

**Allowed Values:**      Alpha characters, or missing (blank).

Blanks occur for PRC\_UNIT when one of four conditions is met:

- The panel determined no supplies were used in a particular service (SUP\_CODE=10000), or
- A service was not profiled (SUP\_CODE=10090), or
- A service received an incomplete profile (SUP\_CODE=10099), or
- A supply item remains unpriced (variable PRICE is missing).

**Links to Other Files:** Not a linking variable.

**Comments:**      INQCNV and OUTQCNV, supply item quantities in and out-of-office respectively, are implicitly stated in terms of PRC\_UNIT (e.g. a supply profile with an INQCNV value of "4" and a PRC\_UNIT of "ml" means the panel estimated that 4 ml of the supply item was used for the service in-office ).

Auxiliary File:  
EXPSITES

**SUPDET2**  
**Supply Detail, Adjusted Files**

<b>Variable Name:</b>	<b>PRICE</b>
-----------------------	--------------

**Variable Label:** Purchase price

**Definition:** The price for this supply item, in dollars, stated in terms of a specified quantity (PRC\_CNT) of a specified unit (PRC\_UNIT) (e.g., the PRICE of hydrogen peroxide is stated as \$0.78 per 20 ml).

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

Missing values occur for PRICE when one of three conditions is met:

- A service was not profiled (SUP\_CODE = 10090), or
- A service received an incomplete profile (SUP\_CODE = 10099), or
- A supply item remains unpriced (variable PRICE is missing).

Zero occurs for PRICE only if the panel determined no supplies were used in a particular service (SUP\_CODE = 10000).

**Links to Other Files:** Not a linking variable

**Comments:** Missing values for PRICE exist for some supply items because those items could not be adequately identified and priced. Several sources were used in determining supply prices, including supply catalogs and CPEP member assistance. See the *CPEP Direct Cost Estimation Report* for further discussion on the supply pricing methodology.

<b>Variable Name:</b> <b>PROCCODE</b>
---------------------------------------

**Variable Label:**        HCPCS (service) code

**Definition:**            The HCFA Common Procedure Coding System (HCPCS) code (levels I and II) for the specified service.

**Type:**                    Character

**Allowed Values:**        HCPCS codes (numeric and alphanumeric) within the project scope.

**Link to Other Files:**    PROCCODE, in conjunction with CPEP, can be used to link the supply records to their corresponding service-specific equipment, overhead equipment, and labor profiles to construct the CPEP's complete profile for the service.

**Comments:**              For a description of the HCPCS codes included as part of the project scope, see Chapter 2.0 of the *CPEP Direct Cost Estimation Report*.

Any single SUPDET2 file will contain service-specific supply data for only one CPEP. However, since many codes were profiled by more than one CPEP, it is important to consider the existence of multiple records for the same HCPCS Code in any service-specific analyses (see the *CPEP Direct Cost Estimation Report* for a list of services that were profiled by more than one CPEP).

**Supply Detail, Adjusted Files**

<b>Variable Name:</b> <b>SUP_CODE</b>
---------------------------------------

**Variable Label:**      Code for supply item.

**Definition:**          Numeric code for a unique supply item, as assigned by Abt Associates Inc.

**Type:**                Character

**Allowed Values:**    10000-93816

SUP\_CODE has three values with special meaning:

- 10000 indicates that the service uses no supplies.
- 10090 indicates that the code was not profiled.
- 10099 indicates that the CPEP reported that there were additional supply items, but the CPEP was unable to identify the specific supply items.

**Links to Other Files:** Links to the SUP\_PRC (Supply Price) global file.

**Comments:**          Each supply item has a distinct SUP\_CODE, with an associated description (DESC).

A complete listing of valid values along with descriptions is found in the SUP\_PRC data set.

**EQPDET**  
**Equipment Detail, adjusted Files**

This type of file contains detailed information for each clinical equipment item identified by the CPEPs as required to provide each service. (Items identified by the CPEP as overhead equipment are contained in the OVEQCAP files.) The files include equipment with a purchase price of \$500 or more; items identified by the CPEPs that were subsequently priced at less than \$500 are not included in the data files. Each record represents a unique HCPCS code/equipment item (i.e., there may be multiple records for a given HCPCS code, but each record represents a different equipment item for that HCPCS code).

As is the case for all of the detail files, the EQPDET file for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP.

Clinical equipment was identified as being *service-specific* clinical equipment or *overhead* clinical equipment:

- Service-specific equipment is easily attributable to a subset of services in a CPEP (e.g., an EKG machine for EKG codes).
- Overhead clinical equipment was identified by the CPEP as either being used in the provision of virtually all services in a CPEP (e.g., an exam table in the E&M CPEP), or was difficult to attribute to specific services (e.g., a crash cart).

This distinction was necessary because of the different estimates for utilization assumed: clinical equipment utilization varied but overhead equipment was assumed to be in use 100% of the time the office was open. In some cases, Abt Associates re-categorized equipment from one category to the other to ensure consistency across CPEPs. For example, if a CPEP identified an exam table as service-specific equipment for virtually all its services, it was re-categorized as clinical overhead equipment. This distinction between service-specific and clinical overhead equipment is captured and reported in two clinical equipment files (PXEQCAP and OVEQCAP).

No equipment-specific usage times were specified by the CPEP; instead, usage times were assumed based on the labor profiles provided by the CPEP.

The combination of the PROCCODE and EQP\_CODE fields uniquely identifies each record (i.e., the file has at most one observation for each possible combination of those variables). Note that if files of this type are combined across CPEPs, the variable CPEP must also be considered to uniquely identify each record.

As is the case for all of the detail files, the EQPDET file for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP:

- If no service-specific equipment was assigned by the CPEP in a service that was profiled, there is a single record with EQP\_CODE=E99997 ("NO EQUIPMENT").
- The special EQP\_CODE value of "E99998" can occur to indicate an "INCOMPLETE PROFILE". This record, which can be the sole record for a service or can exist in

addition to other equipment records, indicates that there is (additional) equipment used that was alluded to but not explicitly identified by the CPEP in their profile.

- Services that were not profiled by the CPEP have a single record with EQP\_CODE="E99990" ("CODE NOT COSTED").

A detailed discussion of the equipment cost allocation methodology is included in the *CPEP Direct Cost Estimation* report.

File Name	No. of Records	CPEP

Record Length: 114  
 No. of Variables: 4

Sort Order: PROC CODE EQP\_CODE  
 File Format: Standard ASCII file with carriage return and line feed at the end of each record.

EQPDET Record Layout

Name	Description	Type	Position	Length
CPEP	CPEP providing estimate	Character	1	3
DESC	Description	Character	4	100
EQP_CODE	Code for type of equipment	Character	104	6
PROCCODE	HCPCS (service) code	Character	110	5

When reading this data file, note that the first 12 lines contain copyright information rather than data records. The first data record occurs at the 13th line in the files. The record count listed above indicates the number of actual data records in the file, not the total number of text rows. If a numeric variable has decimal values, the decimal point has been entered explicitly in the ASCII file. There are no implicit decimal points.

CPT five-digit codes, descriptions and other data only are copyright 1994 American Medical Association. All Rights Reserved. No fee schedules, basic units, relative value or related listings are included in CPT. AMA does not directly or indirectly practice medicine or dispense medical services. AMA assumes no liability for data contained or not contained herein.

**EQPDET**  
Equipment Detail, adjusted Files

<b>Variable Name:</b> <b>CPEP</b>
-----------------------------------

**Variable Label:**        CPEP providing estimate

**Definition:**            The Clinical Practice Expert Panel (abbreviated CPEP) that provided the estimates for the associated service.

**Type:**                    Character

**Allowed Values:**

C 1	=	Integumentary & Physical Medicine
C 2	=	Urology
C 3	=	Orthopaedic Surgery
C 4	=	OB/GYN
C 5	=	Ophthalmology
C 6	=	Radiology
C 7	=	Evaluation & Management
C 8	=	General Surgery
C 9	=	Otolaryngology
C10	=	Miscellaneous Internal Medicine
C11	=	Gastroenterology
C12	=	Cardiothoracic and Vascular Surgery
C13	=	Cardiology
C14	=	Anesthesiology/Pathology
C15	=	Neurosurgery

**Link to Other Files:** CPEP, in conjunction with PROCCODE, can be used to link the equipment records to their corresponding labor and supply profiles to construct the CPEP's complete profile for the service.

**Comments:**            This variable indicates the CPEP which provided the equipment estimate contained in each EQPDET record. Any single EQPDET file will contain data from only one CPEP. Many services were profiled by more than one CPEP, making it important to consider the CPEP variable in any analysis of the EQPDET file (see the *CPEP Direct Cost Estimation Report* for a list of the services that were profiled by more than one CPEP).

The internal blank in "C 1" through "C 9" preserves the numeric order for the 15 allowed values.

**EQPDET**  
Equipment Detail, adjusted Files

<b>Variable Name:</b> <b>DESC</b>
-----------------------------------

**Variable Label:**        Description

**Definition:**            Description of the clinical equipment item \$500 or more.

**Type:**                    Character

**Allowed Values:**        Alphanumeric characters (no blanks allowed).

When the panel did not profile a service in either site of service (EQP\_CODE=E99990), a description of "CODE NOT COSTED," is assigned to the service.

When the panel determined that a service required no service-specific equipment (EQP\_CODE=E99997), a description of "NO EQUIPMENT," is assigned to the service.

When the CPEP reported that there were additional service-specific equipment items, but the CPEP was unable to identify the specific equipment items (EQP\_CODE=E99998), a description of "INCOMPLETE PROFILE," is assigned to the service.

**Links to Other Files:** Not a linking variable.

**Comments:**              There is one unique description for each item of clinical equipment.

CPEP-Specific File:  
BRN-STIAH

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

This type of file represents an intermediate set of data pertaining to service-specific equipment costs. It contains data elements and computed variables generated by the methodology used to allocate service-specific clinical equipment costs to the provision of a single service. As in EQPDET, each record represents a unique HCPCS code/equipment item.

In addition to all of the variables in EQPDET, PXEQCAP includes the data, calculation factors and intermediate values for components of formulas necessary to estimate the following:

- The total equipment cost over the life of the equipment;
- The annualized cost of the equipment, including maintenance and financing costs;
- The cost per minute for using the machine; and
- The equipment cost for the specific service.

Variables reflecting assumptions related to the total hours of operation of the equipment, loan interest rates, maintenance costs, and the percent of equipment capacity are included, as are data on purchase price and useful life. These variables have been set to blanks if no service-specific equipment was used (EQP\_CODE=E99997), if there was an incomplete equipment profile (EQP\_CODE=E99998), or if a code was not profiled (EQP\_CODE=E99990).

The combination of the PROC CODE and EQP\_CODE fields uniquely identifies each record (i.e., the file has at most one observation for each possible combination of those variables). Note that if files of this type are combined across CPEPs, the variable CPEP must also be considered to uniquely identify each record.

As is the case for all of the detail datasets, the PXEQCAP dataset for a given CPEP has at least one observation for every service code that was assigned to the CPEP, whether or not it was ultimately profiled by the CPEP.

A detailed discussion of the equipment cost allocation methodology can be found in the *CPEP Direct Cost Estimation* report.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b> <b>ANNFACT</b>
--------------------------------------

**Variable Label:**      Annualizing factor, eqp cost plus maint

**Definition:**      Factor to multiply by the equipment purchase price, PRICE, to obtain the total annualized cost of the equipment. This factor incorporates both the inflation of cost due to the cost of capital over time (e.g., loan interest payments) and the annual maintenance cost expressed as a percentage of acquisition cost.

**Type:**      Numeric

**Allowed Values:**      Non-negative numbers or missing values.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), E99998 ("INCOMPLETE PROFILE"), and E99990 ("CODE NOT COSTED").

**Links to Other Files:**      Not a linking variable.

**Comments:**      This is the sum of the annualized equipment purchase price (CAPFRAC) and the annual equipment maintenance cost rate (MAINT). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

C 8	=	General Surgery
C 9	=	Otolaryngology
C10	=	Miscellaneous Internal Medicine
C11	=	Gastroenterology
C12	=	Cardiothoracic and Vascular Surgery
C13	=	Cardiology
C14	=	Anesthesiology/Pathology
C15	=	Neurosurgery

**Links to Other Files:** CPEP, in conjunction with PROCCODE, can be used to link the service-specific equipment records to their corresponding overhead equipment, labor, and supply profiles to construct the CPEP's complete profile for the service.

**Comments:** This variable indicates the CPEP which provided the equipment estimate contained in the record, upon which the service-specific allocation is based. Any single PXEQCAP file will contain data from only one CPEP. Many services were profiled by more than one CPEP, making it important to consider the CPEP variable in any analysis of the PXEQCAP files (see the *CPEP Direct Cost Estimation Report* for a list of the services that were profiled by more than one CPEP).

The internal blank in "C 1" through "C 9" preserves the numeric order for the 15 allowed values.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>DESC</b>
-----------------------	-------------

**Variable Label:** Description

**Definition:** Description of the clinical equipment \$500 or more.

**Type:** Character

**Allowed Values:** Alphanumeric characters (no missing values).

When the panel did not profile a service in either site of service (EQP\_CODE=E99990), a description of "CODE NOT COSTED," is assigned to the service.

When the panel determined that a service required no service-specific equipment (EQP\_CODE=E99997), a description of "NO EQUIPMENT," is assigned to the service.

When the CPEP reported that there were additional service-specific equipment items, but the CPEP was unable to identify the specific equipment items (EQP\_CODE=E99998), a description of "INCOMPLETE PROFILE," is assigned to the service.

**Links to Other Files:** Not a linking variable.

**Comments:** The description can also be found in the equipment global pricing data set (EQP\_PRC) in the record with the same equipment ID code (EQP\_CODE).

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b> <b>EQP_CODE</b>
---------------------------------------

**Variable Label:**      Code for type of equipment

**Definition:**      Alphanumeric code for a unique type of equipment, as assigned by Abt Associates Inc.

**Type:**      Character

**Allowed Values:**      "E" followed by five numeric characters (no blanks).

This variable has three values with special meaning:

- E99990 indicates that the associated service code was not profiled.
- E99997 indicates that the associated service code required no service-specific equipment.
- E99998 indicates that the CPEP reported that there were additional service-specific equipment items, but the CPEP was unable to identify the specific equipment items.

A complete listing of valid values along with descriptions is contained in the EQP\_PRC data set.

**Links to Other Files:** Links to the EQP\_PRC (Equipment Price) global file.

**Comments:**      Each equipment item has a distinct EQP\_CODE, with an associated description (DESC).

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b> <b>EQTI</b>
-----------------------------------

**Variable Label:**      Minutes for equipment use, in-office

**Definition:**            The estimated total number of minutes that the equipment was assumed to be used for the service when provided in the in-office setting.

**Type:**                    Numeric

**Allowed Values:**      Non-negative numbers or missing values.

A missing value occurs if the service was not profiled in the in-office setting (IN="N") or if EQP\_CODE=99998.

A zero occurs if EQP\_CODE=99997.

**Links to Other Files:** Not a linking variable.

**Comments:**            This variable is derived from the various in-office clinical staff time estimates for the service. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>EQTO</b>
-----------------------	-------------

**Variable Label:** Minutes for equipment use, out-office

**Definition:** The estimated total number of minutes that the equipment was assumed to be used for the service when provided in the out-of-office setting.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A missing value occurs if the service was not profiled in the out-of-office setting (OUT="N") or if EQP\_CODE=99998.

A zero occurs if EQP\_CODE=99997.

**Links to Other Files:** Not a linking variable.

**Comments:** This variable is derived from the various out-of-office clinical staff time estimates for the service. Because equipment costs were allocated to the out-of-office setting only in specific circumstances, EQTO is frequently zero. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>HRSWK</b>
-----------------------	--------------

**Variable Label:** Hours per week office assumed open

**Definition:** The hours per week for which the office is assumed to be open.

**Type:** Numeric

**Allowed Values:** 50 or missing value.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), E99998 ("INCOMPLETE PROFILE"), and E99990 ("CODE NOT COSTED").

**Links to Other Files:** Not a linking variable.

**Comments:** This value is used in the capital cost calculation, and was always assumed to be 50. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b> <b>IN</b>
---------------------------------

**Variable Label:**      Code profiled in the office (Y/N)

**Definition:**      For the specified service, this variable indicates whether the service was profiled for the "in-office" location.

**Type:**      Character

**Allowed Values:**      Y      =      Yes, service was profiled for the in-office location  
                                 N      =      No, service was not profiled for the in-office location

**Links to Other Files:**      Not a linking variable.

**Comments:**      None.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>INTRATE</b>
-----------------------	----------------

**Variable Label:** Loan interest rate, this equipment type

**Definition:** The interest rate used to calculate the annualized opportunity cost (CAPFRAC) of the item of equipment.

**Type:** Numeric

**Allowed Values:** 0.095, 0.100, 0.105, 0.110, or missing value.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), E99998 ("INCOMPLETE PROFILE"), and E99990 ("CODE NOT COSTED").

**Links to Other Files:** Not a linking variable.

**Comments:** The interest rate was determined as a function of useful life (LIFE) and capital acquisition cost (PRICE). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>LIFE</b>
-----------------------	-------------

**Variable Label:** Equipment useful life (years)

**Definition:** The estimated useful life of the equipment, in years.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

This field is irrelevant for records with the following EQP\_CODE:

- E99990 indicates that the associated service was not profiled.
- E99997 indicates that the associated service required no service specific equipment.
- E99998 indicates an incomplete profile.

Missing values occur for equipment items that could not be priced.

**Links to Other Files:** Not a linking variable.

**Comments:** The useful life data were obtained from *Useful Lives of Depreciable Hospital Assets*, 1993 Edition. All useful lives from this source are integer values. When this source did not have an estimate of useful life specific to the equipment, a default value of 7.5 years was used. Refer to the *CPEP Direct Cost Estimation Report* for further details.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>MAINT</b>
-----------------------	--------------

**Variable Label:** Eqpt annual maint rate (% of purchase)

**Definition:** The amount, as a proportion of the equipment purchase price (PRICE), which is assumed to be required to maintain the equipment in working condition.

**Type:** Numeric

**Allowed Values:** 0.05 or missing value.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), E99998 ("INCOMPLETE PROFILE"), and E99990 ("CODE NOT COSTED").

**Links to Other Files:** Not a linking variable.

**Comments:** A value of 5% was assumed for all types of equipment.

Auxiliary File:  
EXPSITES

**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>MINS_YR</b>
-----------------------	----------------

**Variable Label:** Minutes/year equipment is assumed in use

**Definition:** The number of minutes per year that the equipment is assumed to be in use.

**Type:** Numeric

**Allowed Values:** 105000 or missing value.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), E99998 ("INCOMPLETE PROFILE"), and E99990 ("CODE NOT COSTED").

**Links to Other Files:** Not a linking variable.

**Comments:** This is calculated as the product of weeks per year (WKSYR), hours per week (HRSWK), minutes per hour, and the assumed usage rate (USAGE). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>OUT</b>
-----------------------	------------

**Variable Label:** Code profiled out of the office (Y/N)

**Definition:** For the specified service, this variable indicates whether the service was profiled for the "out-office" location.

**Type:** Character

**Allowed Values:** Y = Yes, service was profiled for the out-office location.  
N = No, service was not profiled for the out-office location.

**Link to Other Files:** Not a linking variable.

**Comments:** None.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>PRICE</b>
-----------------------	--------------

**Variable Label:** Purchase price

**Definition:** The purchase price of the equipment.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A value of zero occurs in records with equipment code (variable EQP\_CODE) E99997 ("NO EQUIPMENT").

A missing value occurs in records with equipment codes E99998 ("INCOMPLETE PROFILE") and E99990 ("CODE NOT COSTED").

A missing value can also occur if it was not possible to obtain a price for a specific piece of equipment.

**Links to Other Files:** Not a linking variable.

**Comments:** None.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>PROCCODE</b>
-----------------------	-----------------

**Variable Label:** HCPCS (service) code

**Definition:** The HCFA Common Procedure Coding System (HCPCS) code (levels I and II) for the specified service.

**Type:** Character

**Allowed Values:** HCPCS codes (numeric and alphanumeric) within the project scope.

**Link to Other Files:** PROCCODE, in conjunction with CPEP, can be used to link the service-specific equipment records to their corresponding overhead equipment, labor, and supply profiles to construct the CPEP's complete profile for the service.

**Comments:** For a description of the HCPCS codes included as part of the project scope, see Chapter 2.0 of the *CPEP Direct Cost Estimation Report*.

Any single PXEQCAP file will contain service-specific equipment data for only one CPEP. However, since many service codes were profiled by more than one CPEP, it is important to consider the existence of multiple records for the same HCPCS code in any service-specific analyses (see the *CPEP Direct Cost Estimation Report* for a list of services that were profiled by more than one CPEP).

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b> PXEQ I
------------------------------

**Variable Label:** Serv specific equipment cost in-office

**Definition:** The allocated cost, in dollars, of all service-specific equipment assigned by the CPEP with the provision of this service in the office.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A zero value occurs in records with IN="Y" and equipment code (variable EQP\_CODE) E99997 ("NO EQUIPMENT).

A missing value occurs in records with equipment codes E99998 ("INCOMPLETE PROFILE"), E99990 ("CODE NOT COSTED"), or IN="N".

A missing value can also occur if it was not possible to obtain a price for a specific piece of equipment.

**Links to Other Files:** Not a linking variable.

**Comments:** This cost was computed using the various parameters contained in the record. For further details regarding the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>PXEQ_O</b>
-----------------------	---------------

**Variable Label:** Serv specific equipment cost out-office

**Definition:** The allocated cost, in dollars, of all service-specific equipment assigned by the CPEP with the provision of this service out of the office.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A zero value occurs in records with OUT="Y" and equipment code (variable EQP\_CODE) E99997 ("NO EQUIPMENT").

A missing value occurs in records with equipment codes E99998 ("INCOMPLETE PROFILE"), E99990 ("CODE NOT COSTED"), or OUT="N".

A missing value can also occur if it was not possible to obtain a price for a specific piece of equipment.

Zero values occur if no service-specific clinical equipment was associated with this service or if zero equipment usage time was assumed based on the profile.

**Links to Other Files:** Not a linking variable.

**Comments:** This cost was computed using the various parameters contained in the record. For further details regarding the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>TEXCEP</b>
-----------------------	---------------

**Variable Label:** Exception to default equip use time(0,1)

**Definition:** Indicates whether the equipment usage times (EQTI and EQTO) were based on the default rule or were based on an exception rule (as noted in the Recorders' Notes File).

**Type:** Character

**Allowed Values:**

0	=	Equipment time used in calculating equipment cost was based on the default time.
1	=	Equipment time used in calculating equipment cost was not based on the default time.

A missing value occurs for unprofiled services (EQP\_CODE=E99990).

**Links to Other Files:** Not a linking variable.

**Comments:** For some services, if the default assignment of equipment time would significantly under- or over-estimate the actual time required (based on the maximum staff time in the G1 period), exceptions were applied to derive more accurate estimates. For further details regarding the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>USAGE</b>
-----------------------	--------------

**Variable Label:** Proportion of max time equipment used

**Definition:** The proportion of the time the equipment is used by practice staff.

**Type:** Numeric

**Allowed Values:** 0.70 or missing value.

A missing value occurs for equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), E99998 ("INCOMPLETE PROFILE"), and E99990 ("CODE NOT COSTED").

**Links to Other Files:** Not a linking variable.

**Comments:** For service-specific equipment, it was assumed that the equipment is used for 70% of the total time that it is available for use (i.e., there is 30% down-time). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**PXEQCAP**  
**Procedure-Specific Equipment Intermediate Capital Detail File**

<b>Variable Name:</b> <b>WKSYR</b>
------------------------------------

**Variable Label:**      Weeks per year office is assumed open

**Definition:**            The number of weeks per year that the office is in operation.

**Type:**                    Numeric

**Allowed Values:**      50 or missing.

A missing value occurs for equipment codes E99997 ("NO EQUIPMENT"), E99998 ("INCOMPLETE PROFILE"), and E99990 ("CODE NOT COSTED").

**Links to Other Files:** Not a linking variable.

**Comments:**            This is one of the parameters used in the calculation of capital costs. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

This type of file represents an intermediate set of data pertaining to overhead equipment costs. The files contain data elements and computed variables generated by the methodology used to allocate clinical overhead equipment costs to specific services. (Items identified by the CPEP as service-specific equipment are contained in the PXEQCAP files.) The files include equipment with a purchase price of \$500 or more; items identified by the CPEPs that were subsequently priced at less than \$500 are not included in the data files. Each record represents a unique HCPCS code/equipment item (i.e., there may be multiple records for a given HCPCS code, but each record represents a different equipment item for that HCPCS code).

The files include variables analogous to those in PXEQCAP, with the exception of the TEXCEP indicator, since there are no exceptions to the overhead rule. (Note that there is no analog of EQPDET for overhead equipment; the OVEQCAP files represent the sole source of overhead equipment data.) Specifically, these files include the data, calculation factors and intermediate values for components of formulas necessary to estimate the following:

- The total equipment cost over the life of the equipment;
- The annualized cost of the equipment, including maintenance and financing costs;
- The cost per minute for using the machine; and
- The equipment cost for the specific service.

Variables reflecting assumptions related to the total hours of operation of the equipment, loan interest rates, maintenance costs, and the percent of equipment capacity are included, as are data on purchase price and useful life. These variables have been set to blanks if no overhead equipment was used, or if a code was not profiled (incomplete equipment profiles never occurred).

The combination of the PROCCODE and EQP\_CODE fields uniquely identifies each record (i.e., the file has at most one observation for each possible combination of those variables). Note that if files of this type are combined across CPEPs, the variable CPEP must also be considered to uniquely identify each record.

Two steps were undertaken to allocate clinical overhead equipment to individual services. First, each service-specific equipment item was mapped to the set of codes which were identified by the CPEP as requiring the equipment. The mapping for overhead equipment was generally made to each code in the CPEP that profiled the overhead equipment. For example, an exam chair was an overhead equipment item in the CPEP 9, Otolaryngology. Services may have zero, one or more assigned overhead equipment items. Second, the costs of the overhead equipment were allocated to the services requiring the use of equipment. A staff time rule was used to allocate overhead clinical equipment costs. Overhead clinical equipment is assumed to be in use, in effect, for all services at all times. As a result, the rule used took the largest staff time from each CPEP service period during which a patient is physically in the physician's office (as opposed to at an out-of-office site, such as a hospital). Time for the procedure period for out-of-office services were not included, while time for post-operative visit services in the office were included. These steps were used for all CPEPs, with the exception of one CPEP. CPEP 1 included representatives from podiatry, dermatology, and physical therapy practices, among other, each of which use different overhead equipment items. Given that each type of practice provides services that are grouped into

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

specific family groupings, it was straightforward to allocate the overhead items identified by each practice type to a specific sub-set of families within CPEP 1. Some overhead items were used by all of the specialties represented (exam table, crash cart), and they were allocated to all the services in CPEP 1. See Chapter 6.0 in the *CPEP Direct Cost Estimation Report*.

As in PXEQCAP, every service assigned to be profiled by a CPEP has at least one observation in that CPEP's OVEQCAP file:

- Profiled services with no assigned overhead equipment have a single record in OVEQCAP with EQP\_CODE="E99997" (no equipment needed).
- Services that were not profiled by the CPEP have a single record with EQP\_CODE="E99990" (code not profiled).
- There are no cases where overhead equipment is incompletely profiled, therefore the special EQP\_CODE value of "E99998" never occurs in this file.

A detailed discussion of the equipment cost allocation methodology is included in the *CPEP Direct Cost Estimation* report.

File Name	No. of Records	CPEP
OVEQCAP.T01	1,858	1
OVEQCAP.T02	868	2
OVEQCAP.T03	9,687	3
OVEQCAP.T04	1,001	4

When reading this data file, note that the first 12 lines contain copyright information rather than data records. The first data record occurs at the 13th line in the files. The record count listed above indicates the number of actual data records in the file, not the total number of text rows. If a numeric variable has decimal values, the decimal point has been entered explicitly in the ASCII file. There are no implicit decimal points.

CPT five-digit codes, descriptions and other data only are copyright 1994 American Medical Association. All Rights Reserved. No fee schedules, basic units, relative value or related listings are included in CPT. AMA does not directly or indirectly practice medicine or dispense medical services. AMA assumes no liability for data contained or not contained herein.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b> ANNFACT
-------------------------------

**Variable Label:** Annualizing factor, eqp cost plus maint

**Definition:** Factor to multiply by the equipment purchase price, PRICE, to obtain the total annualized cost of the equipment. This factor incorporates both the inflation of cost due to the cost of capital over time (e.g., loan interest payments) and the annual maintenance cost expressed as a percentage of acquisition cost.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), and E99990 ("CODE NOT COSTED").

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This is the sum of the annualized equipment purchase price (CAPFRAC) and the annual equipment maintenance cost rate (MAINT). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>CAPFRAC</b>
-----------------------	----------------

**Variable Label:** Annualizing factor for capital eqp cost

**Definition:** Factor used to inflate the capital acquisition cost to reflect the cost of capital over time.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), and E99990 ("CODE NOT COSTED").

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This factor is added to the maintenance cost rate (MAINT) to obtain the total annualizing capital cost factor (ANNFACT). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
EXPSITES

Auxiliary File:  
OUTEQCAP

Auxiliary File:  
SEDPDT

CPEP-Specific File:  
BRNCS11M

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>COST_MIN</b>
-----------------------	-----------------

**Variable Label:** Equipment cost per minute

**Definition:** The estimated cost per minute of use of the equipment for the service.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), and E99990 ("CODE NOT COSTED").

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This value is computed as the total, annualized equipment cost divided by the number of minutes in the year during which the equipment is assumed to be in use. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>CPEP</b>
-----------------------	-------------

**Variable Label:** CPEP providing estimate

**Definition:** The Clinical Practice Expert Panel (abbreviated CPEP) that provided the estimates for the associated service.

**Type:** Character

**Allowed Values:**

C 1	=	Integumentary & Physical Medicine
C 2	=	Urology
C 3	=	Orthopaedic Surgery
C 4	=	OB/GYN
C 5	=	Ophthalmology
C 6	=	Radiology
C 7	=	Evaluation & Management
C 8	=	General Surgery
C 9	=	Otolaryngology
C10	=	Miscellaneous Internal Medicine
C11	=	Gastroenterology
C12	=	Cardiothoracic and Vascular Surgery
C13	=	Cardiology
C14	=	Anesthesiology/Pathology
C15	=	Neurosurgery

**Links to Other Files:** CPEP, in conjunction with PROCCODE, can be used to link the overhead equipment records to their corresponding service-specific equipment, labor, and supply profiles to construct the CPEP's complete profile for the service.

**Comments:** This variable indicates the CPEP which provided the equipment estimate contained in the record, upon which the overhead equipment allocation is based. Any single OVEQCAP file will contain data from only one CPEP. Many services were profiled by more than one CPEP, making it important to consider the CPEP variable in any analysis of the OVEQCAP files (see the *CPEP Direct Cost Estimation Report* for a list of the services that were profiled by more than one CPEP).

The internal blank in "C 1" through "C 9" preserves the numeric order for the 15 allowed values.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>DESC</b>
-----------------------	-------------

**Variable Label:** Description

**Definition:** Description of the clinical equipment item \$500 or more.

**Type:** Character

**Allowed Values:** Alphanumeric characters (no missing values).

When the panel did not profile a service in either site of service (EQP\_CODE=E99990), a description of "CODE NOT COSTED," is assigned to the service.

When it was determined that there was no clinical overhead equipment (EQP\_CODE=E99997), a description of "NO EQUIPMENT," is assigned to the service.

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** The description can also be found in the equipment global pricing data set (EQP\_PRC) in the record with the same equipment ID code (EQP\_CODE).

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>EQP_CODE</b>
-----------------------	-----------------

**Variable Label:** Code for type of equipment

**Definition:** Alphanumeric code for a unique type of equipment, as assigned by Abt Associates Inc.

**Type:** Character

**Allowed Values:** "E" followed by five numeric characters (no missing values).

This variable has two values with special meaning:

- E99990 indicates that the associated service code was not profiled.
- E99997 indicates that the associated service code required no overhead equipment.

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

A complete listing of valid values along with descriptions is contained in the EQP\_PRC data set.

**Links to Other Files:** Links to the EQP\_PRC (Equipment Price) global file.

**Comments:** Each equipment item has a distinct EQP\_CODE, with an associated description (DESC).

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>EQTI</b>
-----------------------	-------------

**Variable Label:** Minutes for equipment use, in-office

**Definition:** The estimated total number of minutes that the equipment was assumed to be used for the service when provided in the in-office setting.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A missing value occurs if the service was not profiled in the in-office setting (IN="N").

A zero occurs if EQP\_CODEE=99997 ("NO EQUIPMENT").

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This variable is derived from the various in-office clinical staff time estimates for the service. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>EQTO</b>
-----------------------	-------------

**Variable Label:** Minutes for equipment use, out-office

**Definition:** The estimated total number of minutes that the equipment was assumed to be used for the service when provided in the out-of-office setting.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A missing value occurs if the service was not profiled in the out-of-office setting (OUT="N").

A zero occurs if EQP\_CODE=99997 ("NO EQUIPMENT").

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This variable is derived from the various out-of-office clinical staff time estimates for the service. Because equipment costs were allocated to the out-of-office setting only in specific circumstances, EQTO is frequently zero. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>HRSWK</b>
-----------------------	--------------

**Variable Label:** Hours per week office assumed open

**Definition:** The hours per week for which the office is assumed to be open.

**Type:** Numeric

**Allowed Values:** 50 or missing value.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), and E99990 ("CODE NOT COSTED").

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This value is used in the capital cost calculation, and was always assumed to be 50. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>MINS_YR</b>
-----------------------	----------------

**Variable Label:** Minutes/year equipment is assumed in use

**Definition:** This is the number of minutes per year that the equipment is assumed to be in use.

**Type:** Numeric

**Allowed Values:** 150000 or missing value.

A missing value occurs in records with equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), and E99990 ("CODE NOT COSTED").

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This is calculated as the product of weeks per year (WKSYR), hours per week (HRSWK), minutes per hour, and the assumed usage rate (USAGE). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>OUT</b>
-----------------------	------------

**Variable Label:** Code profiled out of the office (Y/N)

**Definition:** For the specified service, this variable indicates whether the service was profiled for the "out-office" location.

**Type:** Character

**Allowed Values:** Y = Yes, service was profiled for the out-office location.  
N = No, service was not profiled for the out-office location.

**Link to Other Files:** Not a linking variable.

**Comments:** None.

DATA

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b> OVEQ I
------------------------------

**Variable Label:** Overhead equipment cost in-office

**Definition:** The estimated total cost attributed to clinical overhead equipment, when performing the service in the in-office setting.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A zero value occurs in records with equipment code (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), and IN="Y".

A missing value occurs in records with equipment code (variable EQP\_CODE) E99990 ("CODE NOT COSTED"), or IN="N".

A missing value can also occur if it was not possible to obtain a price for a specific piece of equipment.

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This cost was computed using the various parameters contained in the record. For further details regarding the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>OVEQ_O</b>
-----------------------	---------------

**Variable Label:** Overhead equipment cost out-office

**Definition:** The estimated total cost attributed to clinical overhead equipment, when performing the service in the out-of-office setting.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A zero value occurs in records with equipment code (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), and OUT="Y".

A missing value occurs in records with equipment code (variable EQP\_CODE) E99990 ("CODE NOT COSTED"), or OUT="N".

A missing value can also occur if it was not possible to obtain a price for a specific piece of equipment.

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This cost was computed using the various parameters contained in the record. For further details regarding capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>PRICE</b>
-----------------------	--------------

**Variable Label:** Purchase price

**Definition:** The purchase price of the equipment.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A value of zero occurs in records with equipment code (variable EQP\_CODE) E99997 ("NO EQUIPMENT").

A missing value occurs in records with equipment code E99990 ("CODE NOT COSTED").

A missing value can also occur if it was not possible to obtain a price for a specific piece of equipment.

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** None.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>PROCCODE</b>
-----------------------	-----------------

**Variable Label:** HCPCS (service) code

**Definition:** The HCFA Common Procedure Coding System (HCPCS) code (levels I and II) for the specified service.

**Type:** Character

**Allowed Values:** HCPCS codes (numeric and alphanumeric) within the project scope.

**Link to Other Files:** PROCCODE, in conjunction with CPEP, can be used to link the overhead equipment records to their corresponding service-specific equipment, labor, and supply profiles to construct the CPEP's complete profile for the service.

**Comments:** For a description of the HCPCS codes included as part of the project scope, see Chapter 2.0 of the *CPEP Direct Cost Estimation Report*.

Any single OVEQCAP file will contain overhead equipment data for only one CPEP. However, since many service codes were profiled by more than one CPEP, it is important to consider the existence of multiple records for the same HCPCS Code in any service-specific analyses (see the *CPEP Direct Cost Estimation Report* for a list of services that were profiled by more than one CPEP).

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>USAGE</b>
-----------------------	--------------

**Variable Label:** Proportion of max time equipment used

**Definition:** The proportion of the time the that the equipment is used by practice staff .

**Type:** Numeric

**Allowed Values:** 1.00 or missing value.

A missing value occurs for equipment codes (variable EQP\_CODE) E99997 ("NO EQUIPMENT"), and E99990 ("CODE NOT COSTED").

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** For overhead equipment, it was assumed that the equipment is used for 100% of the total time that it is available for use. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OVEQCAP**  
**Overhead Equipment Intermediate Capital Detail File**

<b>Variable Name:</b>	<b>WKSYR</b>
-----------------------	--------------

**Variable Label:** Weeks per year office is assumed open

**Definition:** The number of weeks per year that the office is in operation.

**Type:** Numeric

**Allowed Values:** 50 or missing.

A missing value occurs for equipment codes E99997 ("NO EQUIPMENT"), and E99990 ("CODE NOT COSTED").

The special value E99998 ("INCOMPLETE PROFILE") for EQP\_CODE never occurs in this data set because overhead equipment profiles are never incomplete.

**Links to Other Files:** Not a linking variable.

**Comments:** This is one of the parameters used in the calculation of capital costs. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

CPEP-Specific File:  
PROCSUM

**PROCSUM**  
**Procedure Cost Summary Detail File**

This type of file contains the estimated service-specific direct costs (labor, supplies and equipment) for each HCPCS code by site of service (in- and out-of-office). The unit of observation is the CPEP-specific profile of a service. There is exactly one observation for each service for which the CPEP was asked to provide a profile; this observation contains profile data for both sites of service. Services that were assigned to but not profiled by the CPEP have values of "N" (not profiled) for both the IN and OUT site of service indicator variables.

This type of file includes the components of the total direct costs, including: total labor costs, total clinical staff costs, total administrative staff costs, total disposable clinical supply costs, total clinical equipment costs, total service-specific clinical equipment costs, and total overhead clinical equipment costs, as well as detailed information on the separate clinical and administrative labor costs within each of the CPEP service periods (G0, G1, G1X, G2, and G2X).

The files contain two parallel sets of cost variables, corresponding to the in- and out-of-office profiles. The two sets of variables can be distinguished by the suffix of I (in-office) or O (out-of-office) (e.g., CG0\_I and CG0\_O) or by a terminal character of I or O (e.g., TOTLABAI, TOTLABAO), whichever was practical within the common eight-character limitation on the length of variable names.

All of the cost (labor, supply, equipment) values in PROCSUM were arrived at by aggregating the respective detail files to the level of the linking key (i.e., CPEP-PROCCODE) and incorporating these results into the single corresponding record on PROCSUM. Total direct cost for each service was computed by calculating and summing costs across: all staff types for both clinical and administrative functions (derived from data in LABDET and WAGEDAT); all supply items (derived from data in SUPDET2 and SUP\_PRC); and all equipment items, including service-specific and clinical equipment overhead costs (derived from data in EQPDET, PXEQCAP, OVEQCAP, and EQP\_PRC). The primary cost variables (i.e., CG0\_I, CG1\_I, CG1X\_I etc. for labor; SUPP\_I for supplies; and PXEQ\_I and OVEQ\_I for equipment) were computed by aggregating the in- and out-of-office costs in the various detail files by CPEP-PROCCODE. The secondary cost variables on PROCSUM (e.g., TOTLABCI, TOTLABAI, TOTEQPI, TOTLABI, TOT\_I) were computed by summing the appropriate primary and/or secondary cost variables.

In addition to containing the aggregated direct cost results from the detail files, PROCSUM also serves as a CPEP-specific service-level master dataset for the service profiles. Among the relevant information contained in PROCSUM are variables indicating:

- which site(s) of service were profiled by the CPEP (IN and OUT);
- whether the service was a reference service (ISREF);
- the Medicare global period status code from the 1995 MFS (GLOBAL);
- whether (as occurred in a small number of cases) some of the CPEP's time estimates were edited after the CPEP meetings (TIMEDEL);

**PROCSUM**  
**Procedure Cost Summary Detail File**

- the number of post-operative visits (POVIS) that the panel assumed in profiling the service.

Some of these indicators (notably the IN and OUT variables) are duplicated on some of the detail datasets, but in other cases they can be determined from other variables in the record. The IN and OUT variables are useful indicators of which sites were profiled and which records could be expected from the detail data. For example, variables referring to the in-office setting will be blank when IN='N'. When working with detail files that do not contain these indicators, the variables itemized above should be incorporated into the analysis to ensure that data are considered in a proper context.

Missing values occur for site-specific variables when a site of service was not profiled, or for variables corresponding to a profiled site of service whose underlying data contains some missing or unknown values.

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>CG0 I</b>
-----------------------	--------------

**Variable Label:** Clin staff cost for pre-serv in-office

**Definition:** Services in the G0 period occur within the 24-hour period prior to the performance of a procedure. This variable contains the total costs of clinical labor for services or visits provided during this 24 hour pre-service period of an in-office procedure for the specified service (see PROCCODE variable).

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

Zero occurs for CG0\_I only when the service is profiled in-office *and* one of two other conditions is met:

- The global period does not include a pre-service visit, or
- The global period includes a pre-service visit and the CPEP provided an estimate of zero total direct labor for the pre-service visit.

A missing value for CG0\_I will only occur when a service was not profiled in the in-office site (IN = 'N').

**Links to Other Files:** Not a linking variable.

**Comments:** An example of G0\_I labor costs is the RN time required to support a visit to the physician's office on the day prior to a surgical procedure performed in the office. In-office procedures with no global period are assigned a zero for G0\_I costs. These services are evaluation and management services or services without a global period.

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>CG0_O</b>
-----------------------	--------------

**Variable Label:** Clin staff cost for pre-serv out-office

**Definition:** Services in the G0 period occur within the 24-hour period prior to the performance of a procedure. This variable contains the total costs of clinical labor for services or visits provided during this 24 hour pre-service period of an out-office procedure for the specified service (see PROCCODE variable).

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

Zero occurs for CG0\_O only when the service is profiled out-office *and* one of two other conditions is met:

- The global period does not include a pre-service visit, or
- The global period includes a pre-service visit and the CPEP provided an estimate of zero total clinical labor for the pre-service visit.

A missing value for CG0\_O will only occur when a service was not profiled in the out-office site (OUT = 'N').

**Links to Other Files:** Not a linking variable.

**Comments:** An example of G0\_O labor costs is the RN time required to support a visit to the physician's office on the day prior to a surgical procedure performed out of the office. Out-office services with no global period are assigned a zero for G0\_O costs. These services are evaluation and management services or services without a global period.

<b>Variable Name:</b>	<b>CG1X_I</b>
-----------------------	---------------

**Variable Label:** Clin staff cost for post-ops in-office

**Definition:** Services in the G1X period commence with the first follow-up office visit (provided after discharge) and end with the expiration of the global period (e.g., 10 or 90 days after the day of the procedure). This variable contains the total costs of clinical labor for all G1X period services and/or follow-up office visits related to an in-office procedure for the specified service (see PROCCODE variable).

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

Zero occurs for CG1X\_I only when the service is profiled in-office and *one* of two other conditions is met:

- The global period does not include post-service visits, or
- The global period includes post-service visits and the CPEP provided an estimate of zero total clinical labor for the post-service visits.

A missing value for CG1X\_I will only occur when a service was not profiled in the in-office site (IN = 'N').

**Links to Other Files:** Not a linking variable.

**Comments:** An example of G1X\_I labor costs is the RN time required to support a follow-up visit to the physician's office one week after a surgical procedure performed in the office. In-office procedures with no global period are assigned a zero for G1X\_I costs. These services are evaluation and management services or services without a global period.

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>CG1_I</b>
-----------------------	--------------

**Variable Label:** Clin staff cost for serv in-office

**Definition:** Services in the G1 period occur during the provision of the service itself, regardless of the service's global status code. This variable contains the total costs of clinical labor for the provision of the in-office service itself for the specified service (see PROCCODE variable). For '000' global periods, the G1 period includes all related services on day of procedure. For services with '010', '090', and 'MMM' global periods, G1 period encompasses any services or activities commencing with performance of procedure, and ending with commencement of first follow-up office visit after discharge.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

Zero occurs for CG1\_I only when the service is profiled in-office *and* the CPEP provided an estimate of zero total clinical labor for the service itself.

A missing value for CG1\_I will only occur when a service was not profiled in the in-office site (IN = 'N').

A missing value for CG2\_O will only occur when a code was not profiled in the out-office site (OUT = 'N').

**Links to Other Files:** Not a linking variable.

**Comments:** An example of G2\_O costs is scheduling secretary and billing clerk costs related to arranging provision of a procedure performed out of the office.

OUTEOCAP

Auxiliary File:  
SECRET

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>COMPFLAG</b>
-----------------------	-----------------

**Variable Label:** Procedure cost completion indicator

**Definition:** Identifier that reveals whether the given service is fully costed.

**Type:** Character

**Allowed Values:**  
F = Fully costed  
M = Partially costed; some missing elements remain  
U = Completely uncosted

**Links to Other Files:** Not a linking variable.

**Comments:** Partially costed services (COMPFLAG=M) are due to one or more of the following missing items: supply item, supply quantity, supply price, equipment item, equipment price (partially costed codes always have complete labor data and wage data). The following conventions are used to assign COMPFLAG=M:

<u>File</u>	<u>Condition</u>
SUPDET2:	SUP_CODE has a code of 10099 (missing supply item); or INQCNV or OUTQCNV is missing (for a missing quantity in the profiled site(s) of service);
SUP_PRC:	PRICE is missing (price of the supply could not be determined);
EQPDET:	EQP_CODE has a code of E99998 (missing equipment item);
EQP_PRC:	PRICE is missing (price of the equipment could not be determined).

Services with COMPFLAG=U are completely uncoded due to the panel's inability or unwillingness to profile the service (e.g., not knowledgeable about the service).

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b> CPEP
----------------------------

**Variable Label:** CPEP providing estimate

**Definition:** The Clinical Practice Expert Panel (abbreviated CPEP) that provided the estimates for the associated service.

**Type:** Character

**Allowed Values:**

C 1	=	Integumentary & Physical Medicine
C 2	=	Urology
C 3	=	Orthopaedic Surgery
C 4	=	OB/GYN
C 5	=	Ophthalmology
C 6	=	Radiology
C 7	=	Evaluation & Management
C 8	=	General Surgery
C 9	=	Otolaryngology
C10	=	Miscellaneous Internal Medicine
C11	=	Gastroenterology
C12	=	Cardiothoracic and Vascular Surgery
C13	=	Cardiology
C14	=	Anesthesiology/Pathology
C15	=	Neurosurgery

**Links to Other Files:** CPEP, in conjunction with PROCCODE, can be used to link to the detail records in the LABDET, SUPDET2, EQPDET, PXEQCAP and OVEQCAP datasets.

**Comments:** This variable indicates the CPEP which provided the labor type and time estimates contained in each LABDET record. The records in LABDET are aggregated across staff types to create each record in PROCSUM. Any single PROCSUM file will contain data from only one CPEP. Many services were profiled by more than one CPEP, making it important to consider the CPEP variable in any analysis of the PROCSUM files (see the *CPEP Direct Cost Estimation Report* for a list of the services that were profiled by more than one CPEP).

The internal blank in "C 1" through "C 9" preserves the numeric order for the 15 allowed values.

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>FAM</b>
-----------------------	------------

**Variable Label:** The family number for the service

**Definition:** The grouping ("family") of HCPCS codes to which the service was assigned for the purpose of facilitating development of resource estimates by the CPEPs.

**Type:** Numeric

**Allowed Values:** Attachment 1 contains a listing of all valid families and their descriptions.

**Links to Other Files:** Not a linking variable.

**Comments:** The family variable indicates the service family in which a HCPCS code resides. The family assignment was designed to group services that are clinically similar and comparable with respect to resource requirements. However, the family structure was not necessarily maintained or drawn on by a CPEP in its development of the labor estimates contained in the LABDET file (and its associated costs in PROCSUM), and should be used with caution.

OUTEQCAP

Auxiliary File:  
SERVDET

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>GLOBAL</b>
-----------------------	---------------

**Variable Label:** The Medicare global period

**Definition:** The Medicare global period for the procedure, as indicated in the 1995 Medicare Fee Schedule.

**Type:** Character

**Allowed Values:**

000	=	A global period of one day prior to the service (as well as the day of the service)
010	=	A global period of one day prior and 10 days after the service
090	=	A global period of one day prior and 90 days after the service
MMM	=	Maternity services which include antepartum, delivery, and postpartum care
XXX	=	The global concept does not apply
YYY	=	The global period is set by the carrier
ZZZ	=	The code is part of another service and falls within the global period of another service

Missing values occur for anesthesia (HCPCS 00100 through 01996), which are not assigned a global period by Medicare.

**Links to Other Files:** Not a linking variable.

**Comments:** None.

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>IN</b>
-----------------------	-----------

**Variable Label:** Code profiled in the office (Y/N)

**Definition:** For the specified service, this variable indicates whether the service was profiled for the "in-office" location.

**Type:** Character

**Allowed Values:** Y = Yes, service was profiled for the in-office location  
N = No, service was not profiled for the in-office location

**Links to Other Files:** Not a linking variable.

**Comments:** All cost variables in PROCSUM with an "\_I" suffix (in-office) will have missing values when IN is equal to 'N'.

Auxiliary File:  
EXPSITES

Auxiliary File:  
OUTEQCAP

Auxiliary File:  
PROCSUM

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>ISREF</b>
-----------------------	--------------

**Variable Label:** Indicates if code is a ref service(0,1)

**Definition:** For the specified service, this variable indicates whether the service is a reference service (i.e., profiled during the first round of CPEP meetings).

**Type:** Character

**Allowed Values:** 0 = Service is not a reference service  
1 = Service is a reference service

**Link to Other Files:** Not a linking variable.

**Comments:** Reference services were profiled in detail during the first round of CPEPs. These services were selected from each family based on several criteria, the first of which was that the service had a high volume (based on 1994 Physician and Supplier Procedure Summary) relative to the other services in the family (see the *CPEP Direct Cost Estimation Report* for more details about the CPEP process). The time estimates for reference services may or may not have changed in the second round of CPEPs; the files contain the most recent estimates. The CPEPs may or may not have used the reference service in a family to profile the resource requirements for the other services in the family, therefore this variable should be used with caution.

<b>Variable Name:</b>	<b>POVIS</b>
-----------------------	--------------

**Variable Label:** No. of post-op visits assigned by CPEP

**Definition:** Indicates the number of post-operative office visits profiled by the CPEP.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

POVIS will be missing if a service was not profiled by the CPEP.

**Links to Other Files:** Not a linking variable.

**Comments:** None.

Auxiliary File:  
EXPSITES

Auxiliary File:  
OUTEQCAP

Auxiliary File:  
SPRINT

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>PROCCODE</b>
-----------------------	-----------------

**Variable Label:** HCPCS (service) code

**Definition:** The HCFA Common Procedure Coding System (HCPCS) Code for the specified service.

**Type:** Character

**Allowed Values:** HCPCS codes (alphanumeric) within the project scope.

**Link to Other Files:** PROCCODE, in conjunction with CPEP, can be used to link the cost records to their corresponding service-specific equipment, overhead equipment, supply, and labor profiles to construct the CPEP's complete profile for the service.

**Comments:** For a description of the HCPCS codes included as part of the project scope, see Chapter 2.0 of the *CPEP Direct Cost Estimation Report*.

Any single PROCSUM file will contain service-specific cost data for only one CPEP. However, since many service codes were profiled by more than one CPEP, it is important to take into account the possibility of multiple records for the same HCPCS code in any service-specific analyses (see the *CPEP Direct Cost Estimation Report* for a list of services that were profiled by more than one CPEP).

Auxiliary File:  
EXPSTES

Auxiliary File:  
OUTEQCAP

Auxiliary File:  
CPEP

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b> PXEQ I
------------------------------

**Variable Label:** Serv specific equipment cost in-office

**Definition:** The allocated cost, in dollars, of all service-specific equipment assigned by the CPEP with the provision of this service in the office.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A missing value occurs in records where IN="N" or the equipment profile is incomplete, indicated by an E99998 ("INCOMPLETE PROFILE") EQP\_CODE value in the data set PXEQCAP.

A missing value can also occur if it was not possible to obtain a price for a specific piece of equipment.

Zero values occur if no service-specific clinical equipment was associated with this service or if zero equipment usage time was assumed based on the profile.

**Links to Other Files:** Not a linking variable.

**Comments:** This cost was computed using the various parameters contained in the record. For further details regarding the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

OUTEQCAP

Auxiliary File:  
SERVTIME

**PROCSUM**  
**Procedure Cost Summary Detail File**

<b>Variable Name:</b>	<b>PXEQ O</b>
-----------------------	---------------

**Variable Label:** Serv specific equipment cost out-office

**Definition:** The allocated cost, in dollars, of all service-specific equipment assigned by the CPEP with the provision of this service out of the office.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A missing value occurs in records where OUT="N" or the equipment profile is incomplete, indicated by an E99998 ("INCOMPLETE PROFILE") EQP\_CODE value in the data set PXEQCAP.

A missing value can also occur if it was not possible to obtain a price for a specific piece of equipment.

Zero values occur if no service-specific clinical equipment was associated with this service or if zero equipment usage time was assumed based on the profile.

**Links to Other Files:** Not a linking variable.

**Comments:** This cost was computed using the various parameters contained in the record. For further details regarding the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*. This variable will frequently be zero because service-specific equipment costs are generally not allocated to the out-office setting, except when equipment usage was specifically associated with the G0 and/or G1X service periods.

Auxiliary File:

<b>Variable Name:</b>	<b>TIMEDEL</b>
-----------------------	----------------

**Variable Label:** Indicates if time estimates edited (Y/N)

**Definition:** Flag to indicate whether time estimates received from the panelists were edited.

**Type:** Character

**Allowed Values:** Y = Time estimates edited  
N = Time estimates not edited

Missing values occur when a service was not profiled by the CPEP in either site of service (IN="N" and OUT="N").

**Links to Other Files:** Not a linking variable.

**Comments:** In a few instances, some of the CPEP's time estimates were edited. For example, a CPEP may have inadvertently applied a formula to generate insurance billing staff time to add-on codes (global status code = 'ZZZ') that already have billing time counted in a related code. Information to explain inputs are in the Recorders' Notes Files. The TIMEDEL variable in the PROCSUM identifies those few cases in which this occurred.

SERVINST

**EXPSITES**  
**Expected Sites Global File**

This file contains code-specific information on the percentage of services performed in the office and the percentage of services performed out-of-the office. The file is based on the 1994 Physician and Supplier Procedure Summary File data. This information provided guidance to the panels regarding the expected site(s) in which to profile the service. Services provided in-office more than 10% of the time, based on 1994 Medicare data, were expected to be profiled in the in-office setting. Similarly, services provided out-of-office more than 10% of the time based on 1994 Medicare data were expected to be profiled in the out-of-office setting. This 10% cutoff was established to maintain a manageable workload in each CPEP. CPEP panels, however, used their clinical judgement and practice experience to assess the validity of the information regarding the site-of-service, and in some cases either did not profile a service in a setting suggested by the data, or profiled the service in a setting suggested by the data. (This was reasonable, given the clinical experience of the panels and the fact that the site of service indicator in HCFA's data is less than fully reliable.)

File Name: EXPSITES.GBL  
 No. of Records: 6,251  
 Record Length: 29  
 No. of Variables: 6  
 Sort Order: PROCCODE  
 File Format: Standard ASCII file with carriage return and line feed at the end of each record.

EXPSITES Record Layout

Name	Description	Type	Position	Length
EXP_IN	Expected to be Profiled IN	Character	1	3
EXP_OUT	Expected to be Profiled OUT	Character	4	3
PCT_IN	Percent of Volume In-Office	Numeric	7	5
PCT_OUT	Percent of Volume Out-of-Office	Numeric	12	5
PROCCODE	HCPCS (service) Code	Character	17	5
VOL94	1994 Medicare Volume	Numeric	22	8

When reading this data file, note that the first 12 lines contain copyright information rather than data records. The first data record occurs at the 13th line in the files. The record count listed above indicates the number of actual data records in the file, not the total number of text rows. If a numeric variable has decimal values, the decimal point has been entered explicitly in the ASCII file. There are no implicit decimal points.

CPT five-digit codes, descriptions and other data only are copyright 1994 American Medical Association. All Rights Reserved. No fee schedules, basic units, relative value or related listings are included in CPT. AMA does not directly or indirectly practice medicine or dispense medical services. AMA assumes no liability for data contained or not contained herein.

**EXPSITES**  
**Expected Sites Global File**

<b>Variable Name:</b> <b>EXP_IN</b>
-------------------------------------

**Variable Label:**      Expected to be Profiled IN

**Definition:**      If the service meets the 10% rule for being provided in an office setting, based on the 1994 Medicare volume, this variable is assigned a value of "Y", for Yes; otherwise, it was assigned a value of "N", for No. In some cases, the volume for a given service was not available, in which case it was assigned a value of N/A (not available).

**Type:**      Character

**Allowed Values:**      Y =    Yes  
                                  N =    No  
                                  N/A=  Not available

**Links to Other Files:** Not a linking variable.

**Comments:**      The 10% rule provided a guide to the CPEP as to which site(s) a service should be profiled in. According to this rule, a service was expected to be profiled at a site if 10% or more of the 1994 Medicare volume occurred at that site. However, CPEP members used their clinical judgement and practice experience to assess the validity of the expected site. In some cases, the panel profiled a service in a setting not indicated by the 10% rule.

Auxiliary File:  
OUTEQCAP

Auxiliary File:  
SERVINT

**EXPSITES**  
**Expected Sites Global File**

<b>Variable Name:</b> <b>EXP_OUT</b>
--------------------------------------

**Variable Label:**      Expected to be Profiled OUT

**Definition:**            If the service meets the 10% rule for being provided out of an office setting, based on 1994 Medicare volume, this variable is assigned a value of "Y", for Yes; otherwise, it was assigned a value of "N", for No. In some cases, the volume for a given service was not available, in which case it was assigned a value of N/A (not available).

**Type:**                    Character

**Allowed Values:**      Y =    Yes  
                              N =    No  
                              N/A=  Not available

**Links to Other Files:** Not a linking variable.

**Comments:**            The 10% rule provided a guide to the CPEP as to which site(s) a service should be profiled in. According to this rule, a service was expected to be profiled at a site if 10% or more of the 1994 Medicare volume occurred at that site. However, CPEP members used their clinical judgement and practice experience to assess the validity of the expected site. In some cases, the panel profiled a service in a setting not indicated by the 10% rule.

## OUTEQCAP Out-of-Office Equipment Intermediate Capital File

This file contains data pertaining to service-specific equipment costs, in those cases where the CPEPs indicated that they pay for equipment used in out-of-office settings. This file contains records for all such cases, for all of the CPEPs in which they occurred. The costs detailed in this file are *not* included in the costs summarized in the PROCSUM file. The file contains data elements and computed variables generated by the methodology used to allocate service-specific clinical equipment costs to a single service. Each record represents a unique HCPCS code/equipment item. This file contains records only for those CPEPs and services for which this type of equipment usage was specified. There are no "placeholder" records as found in the other equipment files.

File Name:            OUTEQCAP.GBL  
 No. of Records:     1,689  
 Record Length:     198  
 No. of Variables:   22  
 Sort Order:         CPEP PROCCODE EQP\_CODE  
 File Format:         Standard ASCII file with carriage return and line  
                           feed at the end of each record.

### OUTEQCAP Record Layout

Name	Description	Type	Position	Length
ANNFACT	Annualizing factor, eqp cost plus maint.	Numeric	1	8
CAPFRAC	Annualizing factor for capital eqp cost	Numeric	9	8
COST_MIN	Equipment cost per minute	Numeric	17	8
CPEP	CPEP providing estimate	Character	25	3
DESC	Description	Character	28	100
EQP_CODE	Code for type of equipment	Character	128	6
EQTI	Minutes for equipment use, in-office	Numeric	134	1
EQTO	Minutes for equipment use, out-office	Numeric	135	4
HRSWK	Hours per week office assumed open	Numeric	139	2
IN	Code profiled in the office (Y/N)	Character	141	1
INTRATE	Loan interest rate, this equipment type	Numeric	142	5
LIFE	Equipment useful life (years)	Numeric	147	6
MAINT	Eqpt annual maint rate (% of purchase)	Numeric	153	5
MINS_YR	Minutes/year equipment is assumed in use	Numeric	158	6
OUT	Code profiled out of the office (Y/N)	Character	164	1
PRICE	Purchase price	Numeric	165	9
PROCCODE	HCPCS (service) code	Character	174	5
PXEQ_I	Serv specific equipment cost in-office	Numeric	179	5
PXEQ_O	Serv specific equipment cost out-office	Numeric	184	7
TEXCEP	Exception to default equip use time(0,1)	Character	191	1
USAGE	Proportion of max time equipment used	Numeric	192	5
WKSYR	Weeks per year office is assumed open	Numeric	197	2

When reading this data file, note that the first 12 lines contain copyright information rather than data records. The first data record occurs at the 13th line in the files. The record count listed above indicates the number of actual data records in the file, not the total number of text rows. If a numeric variable has decimal values, the decimal point has been entered explicitly in the ASCII file. There are no implicit decimal points.

CPT five-digit codes, descriptions and other data only are copyright 1994 American Medical Association. All Rights Reserved. No fee schedules, basic units, relative value or related listings are included in CPT. AMA does not directly or indirectly practice medicine or dispense medical services. AMA assumes no liability for data contained or not contained herein.

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> ANNFACT
-------------------------------

**Variable Label:** Annualizing factor, eqp cost plus maint

**Definition:** Factor to multiply by the equipment purchase price, PRICE, to obtain the total annualized cost of the equipment. This factor incorporates both the inflation of cost due to the cost of capital over time (e.g., loan interest payments) and the annual maintenance cost expressed as a percentage of acquisition cost.

**Type:** Numeric

**Allowed Values:** Non-negative numbers.

**Links to Other Files:** Not a linking variable.

**Comments:** This is the sum of the annualized equipment purchase price (CAPFRAC) and the annual equipment maintenance cost rate (MAINT). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
ANNFACT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> CAPFRAC
-------------------------------

**Variable Label:** Annualizing factor for capital eqp cost

**Definition:** Factor used to inflate the capital acquisition cost to reflect the cost of capital over time.

**Type:** Numeric

**Allowed Values:** Non-negative numbers.

**Links to Other Files:** Not a linking variable.

**Comments:** This factor is added to the maintenance cost rate (MAINT) to obtain the total annualizing capital cost factor (ANNFACT). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
CAPFRAC

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b>	<b>COST_MIN</b>
-----------------------	-----------------

**Variable Label:** Equipment cost per minute

**Definition:** The estimated cost per minute of use of the equipment for the service.

**Type:** Numeric

**Allowed Values:** Non-negative numbers.

**Links to Other Files:** Not a linking variable.

**Comments:** This value is computed as the total, annualized equipment cost divided by the number of minutes in the year during which the equipment is assumed to be in use. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
COST\_MIN

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b>	<b>CPEP</b>
-----------------------	-------------

**Variable Label:** CPEP providing estimate

**Definition:** The Clinical Practice Expert Panel (abbreviated CPEP) that provided the estimates for the associated service.

**Type:** Character

**Allowed Values:**

C 1	=	Integumentary & Physical Medicine
C 2	=	Urology
C 3	=	Orthopaedic Surgery
C 4	=	OB/GYN
C 5	=	Ophthalmology
C 6	=	Radiology
C 7	=	Evaluation & Management
C 8	=	General Surgery
C 9	=	Otolaryngology
C10	=	Miscellaneous Internal Medicine
C11	=	Gastroenterology
C12	=	Cardiothoracic and Vascular Surgery
C13	=	Cardiology
C14	=	Anesthesiology/Pathology
C15	=	Neurosurgery

**Links to Other Files:** CPEP, in conjunction with PROCCODE, can be used to link the service-specific equipment records to their corresponding overhead equipment, labor, and supply profiles to construct the CPEP's complete profile for the service.

**Comments:** This variable indicates the CPEP which provided the equipment estimate contained in the record, upon which the service-specific allocation is based. Many services were profiled by more than one CPEP, making it important to consider the CPEP variable in any analysis of the OUTEQCAP file (see the *CPEP Direct Cost Estimation Report* for a list of the services that were profiled by more than one CPEP).

The internal blank in "C 1" through "C 9" preserves the numeric order for the 15 allowed values.

Auxiliary File:  
CPEP

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> DESC
----------------------------

**Variable Label:**       Description

**Definition:**           Description of the clinical equipment item \$500 or more.

**Type:**                 Character

**Allowed Values:**      Alphanumeric characters (no blanks allowed).

**Links to Other Files:** Not a linking variable.

**Comments:**           The description can also be found in the equipment global pricing data set (EQP\_PRC) in the record with the same equipment ID code (EQP\_CODE).

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> <b>EQP_CODE</b>
---------------------------------------

**Variable Label:**      Code for type of equipment

**Definition:**          Alphanumeric code for a unique type of equipment, as assigned by Abt Associates Inc.

**Type:**                  Character

**Allowed Values:**      "E" followed by five numeric characters (no blanks).

A complete listing of valid values along with descriptions is contained in the EQP\_PRC data set.

**Links to Other Files:** Links to the EQP\_PRC (Equipment Price) global file.

**Comments:**            None.

Auxiliary File:  
SFRVDT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> EQTI
----------------------------

**Variable Label:** Minutes for equipment use, in-office

**Definition:** The estimated total number of minutes that the equipment was assumed to be used for the service when provided in the in-office setting.

**Type:** Numeric

**Allowed Values:** Zero or missing value.

A zero occurs for records corresponding to services that were profiled in the in-office setting (IN=Y).

A missing value occurs for records corresponding to services that were not profiled in the in-office setting (IN=N).

**Links to Other Files:** Not a linking variable.

**Comments:** The equipment identified in this data set is specifically associated with the out-of-office setting. It is therefore never assumed to be used in the in-office setting. EQTI is either zero (for services profiled in the in-office setting) or missing (for services not profiled in the in-office setting).

All service-specific equipment associated with the in-office setting is detailed in the PXEQCAP data set.

For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> EQTO
----------------------------

**Variable Label:** Minutes for equipment use, out-office

**Definition:** The estimated total number of minutes that the equipment was assumed to be used for the service when provided in the out-of-office setting.

**Type:** Numeric

**Allowed Values:** Non-negative numbers.

**Links to Other Files:** Not a linking variable.

**Comments:** This variable is derived from the various out-of-office clinical staff time estimates for the service.

This data set identifies equipment use specifically associated with the out-of-office setting, and observations occur only for services that were profiled in that setting (OUT=Y). There are therefore no observations in which EQTO has a missing value.

For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
SERVDT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> <b>HRSWK</b>
------------------------------------

**Variable Label:**      Hours per week office assumed open

**Definition:**            The hours per week for which the office is assumed to be open.

**Type:**                    Numeric

**Allowed Values:**      50.

**Links to Other Files:** Not a linking variable.

**Comments:**            This value is used in the capital cost calculation, and was always assumed to be 50. For further details regarding this variable and the capital equipment allocation methodology, refer to the CPEP Direct Cost Estimation Report.

Auxiliary File:  
SRP/DT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b>	<b>IN</b>
-----------------------	-----------

**Variable Label:** Code profiled in the office (Y/N)

**Definition:** For the specified service, this variable indicates whether the service was profiled for the "in-office" location.

**Type:** Character

**Allowed Values:** Y = Yes, service was profiled for the in-office location  
N = No, service was not profiled for the in-office location

**Links to Other Files:** Not a linking variable.

**Comments:** None.

Auxiliary File:  
SERVDT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> <b>INTRATE</b>
--------------------------------------

**Variable Label:**      Loan interest rate, this equipment type

**Definition:**            The interest rate used to calculate the annualized opportunity cost (CAPFRAC) of the item of equipment.

**Type:**                    Numeric

**Allowed Values:**      0.095, 0.100, 0.105, 0.110.

**Links to Other Files:** Not a linking variable.

**Comments:**            The interest rate was determined as a function of useful life (LIFE) and capital acquisition cost (PRICE). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
SERVDT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b>	<b>LIFE</b>
-----------------------	-------------

**Variable Label:** Equipment useful life (years)

**Definition:** The estimated useful life of the equipment, in years.

**Type:** Numeric

**Allowed Values:** Non-negative numbers.

**Links to Other Files:** Not a linking variable.

**Comments:** The useful life data were obtained from *Useful Lives of Depreciable Hospital Assets*, 1993 Edition. All useful lives from this source are integer values. When this source did not have an estimate of useful life specific to the equipment, a default value of 7.5 years was used. Refer to the *CPEP Direct Cost Estimation Report* for further details.

Auxiliary File:  
SEPVDT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> <b>MAINT</b>
------------------------------------

**Variable Label:**      Eqpt annual maint rate (% of purchase)

**Definition:**            The amount, as a proportion of the equipment purchase price (PRICE), which is assumed to be required to maintain the equipment in working condition.

**Type:**                    Numeric

**Allowed Values:**      0.05.

**Links to Other Files:** Not a linking variable.

**Comments:**            A value of 5% was assumed for all types of equipment.

Auxiliary File:  
SEPVDT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> MINS YR
-------------------------------

**Variable Label:** Minutes/year equipment is assumed in use

**Definition:** The number of minutes per year that the equipment is assumed to be in use.

**Type:** Numeric

**Allowed Values:** 105000.

**Links to Other Files:** Not a linking variable.

**Comments:** This is calculated as the product of weeks per year (WKSYR), hours per week (HRSWK), minutes per hour, and the assumed usage rate (USAGE). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
SERVDT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> <b>OUT</b>
----------------------------------

**Variable Label:**      Code profiled out of the office (Y/N)

**Definition:**      For the specified service, this variable indicates whether the service was profiled for the "out-office" location.

**Type:**      Character

**Allowed Values:**      Y      =      Yes, service was profiled for the out-office location.  
                                  N      =      No, service was not profiled for the out-office location.

**Link to Other Files:**      Not a linking variable.

**Comments:**      Because this data set specifically identifies equipment used in the out-of-office setting, it contains observations only for services profiled in that setting. There are therefore no observations in which OUT has a value of "N".

Auxiliary File:  
SERVDT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> <b>PRICE</b>
------------------------------------

**Variable Label:**      Purchase price

**Definition:**            The purchase price of the equipment.

**Type:**                    Numeric

**Allowed Values:**      Non-negative numbers or missing values.

A missing value can occur if it was not possible to obtain a price for a specific piece of equipment.

**Links to Other Files:** Not a linking variable.

**Comments:**            None.

Auxiliary File:  
SERVDT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> <b>PROCCODE</b>
---------------------------------------

**Variable Label:**      HCPCS (service) code

**Definition:**            The HCFA Common Procedure Coding System (HCPCS) code (levels I and II) for the specified service.

**Type:**                    Character

**Allowed Values:**      HCPCS codes (numeric and alphanumeric) within the project scope.

**Link to Other Files:**    PROCCODE, in conjunction with CPEP, can be used to link the service-specific equipment records to their corresponding overhead equipment, labor, and supply profiles to construct the CPEP's complete profile for the service.

**Comments:**              For a description of the HCPCS codes included as part of the project scope, see Chapter 2.0 of the *CPEP Direct Cost Estimation Report*.

Any single OUTEQCAP file will contain service-specific equipment data for only one CPEP. However, since many codes were profiled by more than one CPEP, it is important to consider the existence of multiple records for the same HCPCS code in any service-specific analyses (see the *CPEP Direct Cost Estimation Report* for a list of services that were profiled by more than one CPEP).

Auxiliary File:  
SERVPT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b>	<b>PXEQ_I</b>
-----------------------	---------------

**Variable Label:** Serv specific equipment cost in-office

**Definition:** The allocated cost, in dollars, of all service-specific equipment assigned by the CPEP with the provision of this service in the office.

**Type:** Numeric

**Allowed Values:** Zero or missing values.

A zero occurs for records corresponding to services that were profiled in the in-office setting (IN=Y).

A missing value occurs for records corresponding to services that were not profiled in the in-office setting.

**Links to Other Files:** Not a linking variable.

**Comments:** The equipment identified in this data set is specifically associated with the out-of-office setting. It is therefore never assumed to be used in the in-office setting. PXEQ\_I is either zero (for services profiled in the in-office setting) or missing (for services not profiled in the in-office setting).

All service-specific equipment associated with the in-office setting is detailed in the PXEQCAP data set.

For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> PXEQ_O
------------------------------

**Variable Label:** Serv specific equipment cost out-office

**Definition:** The allocated cost, in dollars, of all service-specific equipment assigned by the CPEP with the provision of this service out of the office.

**Type:** Numeric

**Allowed Values:** Non-negative numbers or missing values.

A missing value can occur if it was not possible to obtain a price for a specific piece of equipment.

**Links to Other Files:** Not a linking variable.

**Comments:** This cost was computed using the various parameters contained in the record. For further details regarding the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
SERV/PT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b>	<b>TEXCEP</b>
-----------------------	---------------

**Variable Label:** Exception to default equip use time(0,1)

**Definition:** Indicates whether the equipment usage times (EQTI and EQTO) were based on the default rule or were based on an exception rule (as noted in the Recorders' Notes File).

**Type:** Character

**Allowed Values:** 0 = Equipment time used in calculating equipment cost was based on the default time.

**Links to Other Files:** Not a linking variable.

**Comments:** There were no exceptions to the default usage time for out-of-office equipment. This variable is included on this data set to ensure that OUTEQCAP and PXEQCAP have the same structure, and will therefore be easily concatenated if desired.

For further details regarding the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
SFRVPT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b>	<b>USAGE</b>
-----------------------	--------------

**Variable Label:** Proportion of max time equipment used

**Definition:** The proportion of the time equipment is used by practice staff.

**Type:** Numeric

**Allowed Values:** 0.70.

**Links to Other Files:** Not a linking variable.

**Comments:** For service-specific equipment, it was assumed that the equipment is used for 70% of the total time that it is available for use (i.e., there is 30% down-time). For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

Auxiliary File:  
SFRVPT

**OUTEQCAP**  
**Out-of-Office Equipment Intermediate Capital File**

<b>Variable Name:</b> <b>WKSYR</b>
------------------------------------

**Variable Label:**      Weeks per year office is assumed open

**Definition:**            The number of weeks per year that the office is in operation.

**Type:**                    Numeric

**Allowed Values:**      50.

**Links to Other Files:** Not a linking variable.

**Comments:**            This is one of the parameters used in the calculation of capital costs. For further details regarding this variable and the capital equipment allocation methodology, refer to the *CPEP Direct Cost Estimation Report*.

**SERVPT**  
**CPEP Data Entry Log Extract**

This file is a log of the data entry options used during the second round CPEP meetings.

For the second round of CPEP meetings, Abt developed a PC-based data entry tool to enable the CPEP recorders to perform real-time entry of CPEP estimates developed during the meetings. The tool facilitated fast, accurate data entry of information that would be needed to later develop the final time estimates for the 6,000+ HCPCS/CPT-4 codes profiled during the panel meetings. Data collected by the data entry tool were used in a series of processing steps which culminated in the production of the detailed labor estimates contained in the Labor Detail (LABDET) file. A small subset of items from the entry file were also extracted and copied to the CPEP Data Entry Log Extract file, which contains a record of the type of data entry option chosen for each code profiled.

A key functionality of the PC-based tool allowed the CPEP recorder to choose the most efficient way to record information which would support the production of estimates for a given HCPCS/CPT-4 code. Recorders had three choices: (1) enter the actual estimates; (2) copy estimates from other services that the CPEP had already profiled; and (3) indicate adjustments to be made on another service that would yield the intended estimates for the service in question.

These choices, and how they appear in the CPEP Data Entry Log Extract file are summarized as follows. For each combination of HCPCS code-CPEP-site-function (PROCCODE-CPEP-SITE-TIMECAT-CLINADM), one or both of two possible record types will appear:

1. A record with "DELTA" in the SERVREF field, which indicates that an absolute time estimate was used, or that changes were made to specific staff time estimates from another service.
2. The SERVREF variable contains a HCPCS/CPT-4 code. This code indicates the service from which the time estimate was copied directly. The time estimates copied in this way may or may not have been modified from their copied values.

It is not possible to interpret a relationship between the method chosen to data enter the time estimates and the reasoning process used by the CPEPs. As a result, no conclusions about the underlying logic used by the CPEPs should be drawn from the data contained in the SERVPT file. The file contains information reflecting the method of data entry chosen; it does not convey any information about why a particular set of values were copied or why particular HCPCS/CPT-4 codes were chosen to serve as the basis for adjustments. In some cases, the codes indicated in the SERVREF variable may reflect a reference made to another service due to its clinical and resource-requirements similarity; in other cases the use of the time estimates may only reflect a convenient starting point to quickly enter the estimates. Since it is not possible to distinguish these cases, no conclusions about the underlying logic used to develop the time estimates can or should be drawn from the SERVPT file.

**SERVPT**  
**CPEP Data Entry Log Extract**

File Name	No. of Records	CPEP
SERVPT.T01	2,876	1
SERVPT.T02	2,325	2
SERVPT.T03	9,691	3
SERVPT.T04	1,116	4
SERVPT.T05	2,066	5
SERVPT.T06	2,144	6
SERVPT.T07	607	7
SERVPT.T08	3,838	8
SERVPT.T09	4,084	9
SERVPT.T10	858	10
SERVPT.T11	500	11
SERVPT.T12	3,365	12
SERVPT.T13	762	13
SERVPT.T14	1,153	14
SERVPT.T15	2,853	15

Record Length: 24  
No. of Variables: 6

Sort Order: PROCEDURE CLINADM SITE TIMECAT SERVREF

File Format: Standard ASCII file with carriage return and line feed at the end of each record.

Record Layout

Name	Description	Type	Position	Length
CLINADM	Record is CLIN or ADMIN estimate	Character	1	5
CPEP	CPEP providing estimate	Character	6	3
PROCEDURE	HCPCS (procedure) code	Character	9	5
SERVREF	Service referenced by CPEP	Character	14	5
SITE	In-office(IN) vs. out-office(OUT)	Character	19	3
TIMECAT	Labor time category(e.g., G2x)	Character	22	3

When reading this data file, note that the first 12 lines contain copyright information rather than data records. The first data record occurs at the 13th line in the files. The record count listed above indicates the number of actual data records in the file, not the total number of text rows. If a numeric variable has decimal values, the decimal point has been entered explicitly in the ASCII file. There are no implicit decimal points.

**SERVPT**  
**CPEP Data Entry Log Extract**

<b>Variable Name:</b> <b>CLINADM</b>
--------------------------------------

**Variable Label:**        Record is CLIN or ADMIN estimate

**Definition:**            This identifies the record as referring either to clinical staff time (CLIN) or administrative staff time (ADMIN).

**Type:**                    Character

**Allowed Values:**        ADMIN, CLIN.

**Links to Other Files:** Not a linking variable .

**Comments:**              None.

**SERVPT**  
**CPEP Data Entry Log Extract**

<b>Variable Name:</b> CPEP
----------------------------

**Variable Label:** CPEP providing estimate

**Definition:** The Clinical Practice Expert Panel (abbreviated CPEP) that provided the estimates for the associated service.

**Type:** Character

**Allowed Values:**

C 1	=	Integumentary & Physical Medicine
C 2	=	Urology
C 3	=	Orthopaedic Surgery
C 4	=	OB/GYN
C 5	=	Ophthalmology
C 6	=	Radiology
C 7	=	Evaluation & Management
C 8	=	General Surgery
C 9	=	Otolaryngology
C10	=	Miscellaneous Internal Medicine
C11	=	Gastroenterology
C12	=	Cardiothoracic and Vascular Surgery
C13	=	Cardiology
C14	=	Anesthesiology/Pathology
C15	=	Neurosurgery

**Link to Other Files:** Not a linking variable.

**Comments:** This variable indicates the CPEP which provided the labor time estimate contained in each SERVPT record. Any single SERVPT file will contain data from only one CPEP. Many services were profiled by more than one CPEP, making it important to consider the CPEP variable in any analysis of the SERVPT files, see Chapter 2.0 of the *CPEP Direct Cost Estimation Report*.

The internal blank in "C 1" through "C 9" preserves the numeric order for the 15 allowed values.

**SERVPT**  
**CPEP Data Entry Log Extract**

<b>Variable Name:</b> <b>PROCCODE</b>
---------------------------------------

**Variable Label:**        HCPCS (service) code

**Definition:**            The HCFA Common Procedure Coding System (HCPCS) code (levels I and II) for the specified service.

**Type:**                  Character

**Allowed Values:**        HCPCS codes (numeric and alphanumeric) within the project scope.

**Link to Other Files:**    Not a linking variable.

**Comments:**             For a description of the HCPCS codes included as part of the project scope, see the *CPEP Direct Cost Estimation Report*.

**SERVPT**  
**CPEP Data Entry Log Extract**

<b>Variable Name:</b> <b>SERVREF</b>
--------------------------------------

**Variable Label:**        Service referenced by CPEP

**Definition:**            For the PROCCODE-CPEP-SITE-TIMECAT-CLINADM combination defined by a particular record in the file, this variable indicates a HCPCS code that was referenced (specifically, the same CPEP-SITE-TIMECAT-CLINADM portion of that code) in the development of the labor time profile.

**Type:**                    Character

**Allowed Values:**        HCPCS codes (CPT-4 numeric and alphanumeric) within the project scope.

A value of "DELTA" indicates an incremental change from the existing value in a particular SITE and TIMECAT for the current PROCCODE.

**Links to Other Files:** Not a linking variable.

**Comments:**            This file is a record of the data entry process used during the second round CPEP meetings. For any one PROCCODE-CPEP-SITE-TIMECAT-CLINADM combination, there may exist multiple records in the file, the combined effect of which will produce the time estimate. *The particular values of this variable indicate only the HCPCS code from which a time estimate was copied, it does not convey any information about why the value was copied.* In some cases, the value of this variable may reflect a reference made to another service due to its clinical and resource-requirements similarity; in other cases in which panels were profiling services "from scratch," the use of the time estimates may only reflect a convenient starting point for the estimates. *As a result, no conclusions about the basis of time estimates can or should be drawn from this variable.*

When a "DELTA" record exists in addition to another record with a HCPCS value for this variable for the same PROCCODE-CPEP-SITE-TIMECAT-CLINADM combination, the profile was developed by adding or subtracting time from the profile for the HCPCS code in the non-DELTA record. When a "DELTA" record exists by itself for a particular PROCCODE-CPEP-SITE-TIMECAT-CLINADM combination, it indicates that the estimate was incremental from zero, i.e., set at an absolute level without addition or subtraction from another estimate.

**SERVPT**  
**CPEP Data Entry Log Extract**

<b>Variable Name:</b> <b>SITE</b>
-----------------------------------

**Variable Label:**        In-office (IN) vs. out-office (OUT)

**Definition:**            This identifies whether the service that is being referenced was profiled in-office (IN) or out-of-office (OUT).

**Type:**                    Character

**Allowed Values:**        IN, OUT

**Links to Other Files:** Not a linking variable .

**Comments:**              None.

**SERVPT**  
**CPEP Data Entry Log Extract**

<b>Variable Name:</b> <b>TIMECAT</b>
--------------------------------------

**Variable Label:**        Labor time category (e.g., G2X)

**Definition:**            This identifies the labor time category for which the reference service was used.

**Type:**                  Character

**Allowed Values:**        G0, G1, G1x, G2, G2x.

**Links to Other Files:** Not a linking variable.

**Comments:**            See documentation of the LABDET file for definitions of the labor time categories.
