THE JAPAN SURGICAL INSTRUMENTS & APPARATUS
INDUSTRIAL CO., LTD.

NO. 22 YUSHIMA 6-CHOME, BUNKYOKU, TOKYO, JAPAN

September 12, 1949.

Mr. Etsuro Sasamura,
Chief of Shikoku Railway Bureau,
Shikoku, JAPAN.

Dear Sir:

Re: Period considered necessary for manufacturing High Pressure Sterilizing Apparatus for Bandage Materials

With regard to the heading item - High Pressure Sterilizing Apparatus for Bandage Materials - ordered by you recently, we wish to state that 50 days will be considered necessary to complete the fabrication of same due to the following reason.

Hitherto, having confined the manufacture of the above apparatus to 10 lbs. pressure ones, we have to say that the Sterilizer ordered by you requiring a normal pressure of 20 lbs. and a maximum pressure of 30 lbs. is entirely a new product. Therefore, it will necessitate further process of work - designing and working up of materials, etc. - and, though all efforts are concentrated in manufacturing the above apparatus it will require 50 days to see its completion.

Appreciating your kind understanding to the above situation, we remain,

Yours very truly,

NIPPON IKAKIKAI KOGYO K. K.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775013

Taiwantsu, Shiloku
19 September 1949

SUBJECT: Sterilizers, Type Autoclave

THRU: Channels

TO: Supreme Commander for the Allied Powers
General Headquarters, Far East
APO 500

1. We are enclosing a copy of a letter received by our Taiwantsu Railroad Hospital from the Japanese Surgical Instruments and Apparatus Industrial Col, Ltd. Survey of most of the sterilizers used on the island show that most of them have a pound pressure of about three (3) to five (5) pounds. Railroad Hospital, in attempting to buy a new sterilizer, requested one of twenty (20) or thirty (30) pound pressure and received the enclosed answer, which is self explanatory.

2. We thought you might be interested in this and probably you would desire to give some guidance on a higher level to the instrument company regarding the manufacture of autoclaves.

APO 500

1. Forwarded herewith, copy of a letter received by our Takamatsu Railroad Hospital from the Japanese Surgical Instruments and Apparatus Industrial Co., Ltd. A survey of most of the sterilizers used on the island shows that most of them have a pound pressure of about three (3) to five (5) pounds. Railroad Hospital, in attempting to buy a new sterilizer, requested one of twenty (20) to thirty (30) pound pressure and received the enclosed answer, which is self explanatory.

2. Since a minimum of twenty (20) pounds steam pressure is required in autoclaves to properly sterilize a surgical pak, it is felt that you might be interested in this and probably would desire to give some guidance on a higher level to the instrument company regarding the manufacture of autoclaves.

TO: Commanding General, Eighth Army, APO 343

1. Preliminary investigation indicates that autoclaves and sterilizers, both vaccuum and steam pressure types using pressures of twenty to forty pounds, are being manufactured in Japan. Although many manufacturers do not maintain inventory stocks of finished and assembled units, generally, only a minimum period of ten to twenty days is required by the producer, after receipt of an order, to make actual shipment. Some producers have furnished satisfactory equipment in a minimum amount of time for installation in railroad hospitals similar to the order of the Takamatsu Railroad Hospital.

2. There have been instances reported where, although boiler installations and sterilizing equipment are of adequate capacity, shortage of
