municate with the medicine contractors, reminding them of their obligation under their bond, and that the clerks should also write to each dispensary and workhouse Medical Officer of the unions, pointing out that in future all medicines will be in accordance with the standard prescribed in the new British Pharmacopœia. The Board thinks that this latter course is inadvisable, inasmuch as considerable alterations in the doses of important medicines have been made in the recent edition of the Pharmacopœia. The Board requests, at the same time, that the Guardians will be so good as to direct each of their medical officers to send, periodically, samples of drugs to the clerks of the unions, to be forwarded by them to the county analysts for analysis and report, in accordance with the terms of the medicine contract and bond prescribed by the Local Government Board's General Order of February 9, 1892. The analyst's reports are, in each instance, to be recorded fully on the Guardians' minutes for the information of the Local Government Board.

A CHINESE PRESCRIPTION.—As is well-known, the Chinese use a large and varied assortment of products in the preparation of their medicines, and Mr. J. B. Davy says that in the drug stores of China Town one can usually obtain a panacea for all ills, varying in the number of ingredients according to the price paid (25, 35, or 50 cents). Such a prescription usually contains a few slices of the root of glycyrrhiza, dried flower-heads of a composite plant, dried cockroaches, dried cockchafers, and the skin, head, and tail of a lizard stretched on thin sticks; an extra 5 cents will procure a dried "sea-horse"; and yet another 5 cents a dried fish of peculiarly narrow shape and about four inches in length. All these are boiled together and the decoction drunk as a remedy for heartburn, toothache, cough, dimness of sight and almost any other ailment. The vegetable portion of one of these mixtures has been examined at Kew. Among the drugs recognised were the fruit-heads of a species of *Eriocaulon*. This plant has a reputation in China for various diseases, such as ophthalmia, especially in children, as a styptic in nose-bleeding and in affections of the kidney. Another ingredient consisted of the spiny hooks from the stems of the Gambier plant (*Uncaria gambier*, Roxb.). Transverse sections of the stem of *Akebia quinata* were found in small quantities, as well as the bark of *Ericornia ulmoides*, known as "Tu Chung." Tonic and invigorating properties are assigned to it, and it is said to be valued at from 4s. to 8s. per pound. Though the bark is very thin, it is abundantly charged with elastic gum, which can be drawn out in silvery threads when it is broken apart. Among other ingredients which have not been identified are crushed flower-heads of a composite plant and slices of a slender, twig-like stem, probably a willow.—*Kew Bulletin*.

Accidental Poisoning Cases.

CHLORAL HYDRATE.—On Saturday, August 20, a young lady named Eliza Kent, of Rathmines, Ireland, took a dose of chloral hydrate in mistake for salts. An inquest was held and a verdict of "Death by Misadventure" was returned.

LAUDANUM.—Francis Mason (58), wife of Isaac John Mason, joiner, of Newcastle, died on Saturday, August 13, from the effects of an overdose of laudanum taken to relieve pain. A jury subsequently returned a verdict to the above effect.—Evan McDonald, plasterer, of Johnstone, N.B., took an overdose of laudanum on the night of August 16, and died in hospital the next morning from the effects of the drug.

CARBOLIC ACID.—Thoughtlessness in keeping carbolie acid in bottles similar to and together with bottles containing beer and other beverages has been the cause of still another death from carbolie acid poisoning: This time the victim was John Thomas Thompson (63), a storekeeper of Wolverhampton, who, on Monday, August 22, asked his daughter for a cup of tea, but before it could be procured, drank a quantity of carbolie acid from a bottle in mistake for beer. It was stated at the inquest that there were two bottles in the room, one of which was used for beer and the other to contain carbolie acid. "Death by Accidental poisoning" was the verdict returned.

Marriages.

PRIESTLEY—MYRING.—On August 20, at St. Peter's Church, East Bridgford, Notts, by licence, by the Rev. A. Du Boulay Hill, Lawrence Priestley, pharmaceutical chemist, to Kate Myring, both of Newark-on-Trent.

BILLINGTON—BARLEY.—On August 11, at St. Anne's, Stanley, Liverpool, Thos. Herbert, second son of the late Thos. Billington, of Roy Towers, Co. Mayo, Ireland, to Maude, youngest daughter of Mr. J. Ogden Barley, of Fairfield.

Publications Received.

DISEASES AND REMEDIES. A concise survey of the most modern methods of medicine, written expressly for the drug trade by physicians and pharmacists. Pp. viii. + 228. London: *Chemist and Druggist Office*, 42, Cannon Street, E.C. 1898.

RADIATION: AN ELEMENTARY TREATISE ON ELECTRO-MAGNETIC RADIATION AND ON RÖNTGEN AND CATHODE RAYS. By H. H. FRANCIS HYNDMAN, B.Sc. (Lond.), with a preface by Professor Silvanus P. Thompson, D.Sc., F.R.S. Pp. xviii. + 307. Price 6s. London: Swan, Sonnenschein & Co., Ltd. 1898. From the Publishers.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

Ernest Ellis, Photographer, Westgate, Cleckheaton.
Charles Long, Photographer, 103, Union Street, Plymouth.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Photographic mounts, Bristol cartes, 3s.; G.B.E., 10s.; cabinets, 10s.; G.B.E., 15s.; quarter-plates, 6s.; half-plates, 12s. 1000; plate-sunk mounts, 12 by 10, 40s. 1000. Samples free.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns. second-hand; triples and binials; oxyhydrogen microscope; marvellous pampengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

A few gross Iolanthe Hair-curling Fluid, 3d. size, 18s. gross, carriage paid; Camwal Shares wanted.—S. Sugden, Pharmacist, Waterfoot, Manchester.

Moulds.—Suppository, Pessary, Bougie, Capsule, Fumigating Pastille, all Maw's patterns, some new; particulars free.—Warnes, Chemist, 333, Gray's Inn Road, W.C.

Honey.—New season English, fine flavour, 28-lb tins, 9d. per lb.; 1 cwt. 8d. per lb., carriage paid.—Faraday, Chemist, Saffron Walden.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Two Specie or Show Jars for window, with stands, height about 18 ins.—Mason, Broadway, West Norwood.

Empty Tin-lined Cod-liver Oil Barrels in good condition for immediate, September and October delivery, against prompt cash. Offers to—F. Shearing & Co., 21, Water Lane, London, E.C.

Wanted, cheap for cash, 'Pharmacopœia Londinensis,' 1851 Edition.—Hunt, 129, Rose Hill Road, Ipswich.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Alcock, Allen, Andrews, Atkinson, Bennison, Burgoyne, Burroughs, Center, Churchill, Clayton, Coleman, Cowley, Cruickshank, Davis, Dodd, Dudderidge, Duncan, Dunne, Evans, Fairley, Flovd, Gardner, Green, Griffith, Griffiths, Grimshaw, Haigh, Harrison, Hearon, Hewlett, Horniblow, Hough, Jack, Johnson, Kirkby, Lothian, Mackenzie, Proctor, Rees, Reynolds, Bhead, Smyth, Stewart, Taplin, Thomas, Thwaites, Warrell, Watson, Wright.

London Report.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

SEPTEMBER 1, 1898.

Business continues exceedingly quiet in the drug and chemical trade, and no changes of importance have taken place during past week in any of the articles of chief interest. Acid Citric remains firm. Tartaric and Cream of Tartar steady. Quicksilver and Mercurials firm. Bromides, Iodides, Bismuth and Salts without change. Quinine very dull. Opium quiet but firm, and with the reported small crops we should, if same proves correct, see a further important advance in value of this article, which would no doubt also make itself felt as regards price of Morphia and Codeia, which remain also at present quiet but firm. Phenazone weak. Acetanilide, Phenacetin and Sulphonol quiet and unchanged. Cocaine firm and expected to advance. Same applies to Cascara Sagrada. Menthol rather dearer. Glycerine firm. Cod-liver Oil quiet. The following are prices actually ruling:—

ACID BORACIC.—In fair demand at 23s. per cwt. for *Crystals*, and 25s. per cwt. for *Powder*.

ACID CARBOLIC.—Rather firmer at 6½d. per lb. for 35-36° *ice crystal* in large bulk packing. *Liquid*: 95 per cent. of pale straw colour 1s. 2d. per gallon in 40-gallon casks.

ACID CITRIC.—Makers still ask 1s. 3d. per lb. for *crystals*, but some few second-hand parcels can still be obtained below this figure.

ACID OXALIC.—Quiet but steady at 3½d. per lb. on spot.

ACID TARTARIC.—Steady at 1s. 1d. per lb. for English *crystals*, and 12¼d. per lb. for *foreign*.

ALUM.—Is quiet. Loose lump, £5 7s. 6d. per ton; ground, in bags, £6 per ton.

AMMONIA COMPOUNDS.—*Sulphate* is quiet at £10 5s. per ton for grey prompt 24 per cent., London; Hull, £10; Leith, £10 1s. 3d. *Carbonate* steady at 3½d. to 4d. per lb., according to package. *Bromide* unchanged at 2s. 1d. per lb. *Iodide* quiet at 14s. 6d. per lb. *Sulpho-cyanide* firm at 1s. 2d. per lb. *Sal Ammoniac*: A good business doing in firsts sublimed at 35s. per cwt.; seconds, 33s. per cwt.

BISMUTH.—Unchanged at 5s. per lb. for the *metal* and 4s. 10d. per lb. for the *subnitrate* in 5-cwt. lots.

BLEACHING POWDER.—Steady at £6 15s. to £7 10s., according to brand, quantity, and packing.

BORAX.—Is steady at 14s. per cwt. for *Lump*, and 14s. 6d. per cwt. for *Powder*.

BROMIDES.—Are in fair demand at unchanged prices.

CAMPHOR.—*Crude* continues quite. *China* on the spot sold at 84s. per cwt., to arrive, 82s. per cwt., *c.i.f.* *Japan*, to arrive, quoted at 90s. per cwt., *c.i.f.* *Refined* quiet but unchanged.

CASCARA SAGRADA.—Market is very firm, buyers are however holding off, in hopes of doing better later on, expectations which

will hardly be realised. Present price for good old bark is still nominally 25s. per cwt.

CINCHONA BARK.—At the Amsterdam sales on the 26th ult. there was a very good demand, and fully three-fourths of the large supply offered (7503 packages) sold at a reduction of about 4 per cent. in the unit value. The bark offered was estimated to contain nearly a million and a quarter ounces of quinine.

CINNAMON.—The quarterly auctions were held on Monday. 1517 bales *Ceylon* were offered as compared with 959 bales in June. The demand was very slow and less than half sold, unworked at a decline of 1d. per lb. and worked at a decline of ½d. to 1d. per lb. 546 bales worked *Ceylon* were chiefly sold: 162 bales first sort, medium to fine 11d. to 1s. 2d., superior 1s. 3d. to 1s. 4d.; 147 bales second sort, medium to fine 9½d. to 1s., superior 1s. 3d.; 98 bales third sort, fair to good 10d. to 11½d., superior 1s. 1d. to 1s. 2d.; and 141 bales fourth sort, ordinary to good 7d. to 10d., superior 11½d. to 1s. 964 bales unworked partly sold, first sort 8d. to 10d., good 11½d. to 1s., second sort 8d. to 8½d., woody 7d. to 7½d., third sort 6½d. to 8½d., fourths 7d. to 8d.

CLOVES.—Privately *Zanzibar* are quiet; spot, 4½d.; September to November delivery, 4¾d.; October to December, 4¼d. to 4¾d. At auction 117 bales of *Zanzibar* bought in at 4½d. 20 bags *Amboyna* sold without reserve at 4½d. to 5d. Of 95 cases of *Penang*, 60 cases ordinary unpicked, 1897 import, sold without reserve at 5½d. to 5¾d. 30 bales clove stems sold without reserve at 1½d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: Commercial, 1s. 4d.; refined, 2s. 3d. per gallon. *Benzole*: 50 per cent., 1s.; 90 per cent., 11d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C., 5d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 8d. per gallon.

COCAINE.—Market is decidedly firm, best brands are, however, still obtainable from the makers, in limited quantity, however, at 9s. 3d. per oz. for 100-oz. lots in 25-oz. tins, there being practically no sellers from secondhand below this price.

CODEIA.—Is still quoted at 12s. 6d. per oz.

COD LIVER OIL.—Is quiet and without change.

CREAM OF TARTAR.—A very fair business doing at steady rates. First white crystals on the spot, 74s. per cwt.; powder, 76s. to 77s. per cwt., B.P. strength crystals 80s. per cwt.; powder, 82s. 6d. per cwt.

GINGER.—*Cochin* found slow demand; of 992 bags rough 200 bags sold, fair washed 23s. 6d. to 24s., a few small and ends 18s.; of 88 cases 79 sold, fine brown Calicut 42s. 6d., small limed native part cut 33s., medium and small 44s. 6d., B-cut 58s.; 100 bags *Japan* bought in at 20s. *Jamaica* met fair demand, 120 packages out of 158 sold, good common and low middling 66s. to 71s., middling to good middling bright 75s. to 80s. 6d.

GLYCERIN.—Market is firm with an upward tendency, at, however, nominally unchanged prices from last week.

ISINGLASS.—The periodical auctions which took place on Tuesday passed off very quietly, and prices were mainly on the down grade. *Penang* was the exception, selling well at previous rates. One lot *Russian* mixed leaf sold 4s. 11d. per lb.

IODIDES.—In good demand at prices lately quoted.

JAPAN WAX.—Is again weaker, sellers being willing to accept 32s. to 33s. per cwt. for good squares.

MENTHOL.—Steady at 7s. 1½d. to 7s. 3d. per lb. for good dry *crystals*.

MERCURIALS.—Steady and unchanged.

MORPHIA.—Remains without change at 5s. per oz. for the *Hydrochlorate* powder in quantity and bulk packing.

OILS (ESSENTIAL).—American *Peppermint* is steady, and with a little improvement in the demand must go dearer. *H.G.II.* 5s. 7½d. to 5s. 9d. per lb. *Wayne County* 3s. 10d. to 4s. 3d. per lb. *Japanese* firm at 3s. 3d. per lb. for dementholised and 5s. per lb.

for 40 per cent. *Star aniseed* firm on the spot at 7s. 3d. to 7s. 4½d. per lb. *Cassia* in better demand, prices range from 5s. to 5s. 9d. per lb. as to quality. *Citronelle* steady but quiet; tins on spot quoted 1s. 2d. per lb., drums 1s. 1½d. *Cinnamon* of good quality continues scarce; common kinds in large supply and difficult of sale. *Lemongrass* slow of sale at 3¾d. to 4d. per oz.

OILS (FIXED) AND SPIRITS.—*Linseed*: Firm spot pipes, London, £16 17s. 6d.; barrels, £17 5s. *Rape* steady; ordinary brown spot, £22 to £22 5s.; refined, £23 10s. *Cotton* quiet; London crude spot, £13 12s. 6d. to £13 15s.; refined, £15 7s. 6d. to £16, according to make. *Olive*: Spanish, £29; Levant, £29 to £32; Mogador, £29 to £32. *Coconut Oil*: Ceylon spot, £23 15s.; Cochin spot, £27 10s. to £28. *Palm*: Lagos spot, £22 10s. *Turpentine* decidedly firmer in all positions, with more inquiry; American spot, 21s. 9d.; September to December, 21s. 9d.; January to April, 22s. 3d. *Petroleum Oil* quiet but steady; Russian spot, 4½d. to 4¾d.; American spot, 5½d. to 5¾d.; water white, 6¾d. *Petroleum Spirit*, 5½d.; deodorised, 6¾d. per gallon.

OPIUM.—Market is quiet but firm at nominally unchanged prices. Reports as to the crop state that same will not exceed 2,800 cases, which, if it prove correct, can hardly fail to produce a further advance in price of *opium* and also of its products.

PHENACETIN.—Unchanged at 3s. 9d. to 4s. 3d. per lb., according to quantity and make, *Bayer's* article being still quoted 5s. 6d. per lb.

PHENAZONE—Is quiet, and weak at nominally 9s. per lb., for both crystals and powder in quantity and bulk packing. Dr. Knorr's *Antipyrine* is firm at unchanged price.

POTASH COMPOUNDS.—*Chlorate* firm at 3¾d. to 3¼d. per lb. *Bromide* quiet at 1s. 9½d. per lb. *Bicarbonate* firm at 30s. per cwt. for foreign and 35s. per cwt. for English, in crystal or powder. *Prussiate* steady at 7d. per lb. for yellow, 1s. 2d. per lb. for red. *Bichromate* steady at 3¾d. to 3¼d. per lb. *Iodide* firm at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Cyanide* very firm on the spot at 1s. 2d. per lb. for the 98-100 per cent. cake. *Permanganate* quiet at 62s. 6d. per cwt. for small and 67s. 6d. per cwt. for large crystals.

QUICKSILVER—Steady at £7 12s. 6d. per bottle from first hands, and 6d. less from second hands.

QUININE—Is exceedingly dull, and in the absence of business prices are quite nominal. *B. & S.* and or *Brunswick* quoted from second-hand, makers' price remaining 10d. per oz., 9½d. per oz. for 1000-oz. lots in bulk.

SHELLAC—Is distinctly firmer, and prices of *Second Orange* are rather dearer. There is a fair inquiry on the spot and moderate sales have been made at 64s. per cwt. for *TN* basis, fair and cakey *AC Garnet* at 65s. per cwt. There is also more doing in both the speculative and arrival markets.

SODA COMPOUNDS.—*Crystals* steady at £2 17s. 6d. per ton. *Bicarbonate* quiet at £7 10s. *Bichromate*: 2¾d. to 3d. per lb. *Bromide* in fair demand at 2s. *Crustic*: White 70 per cent., £8; 60 per cent., £7 per ton. *Nitrate* quiet at £7 12s. 6d. for commercial and £8 per ton for refined.

SPICES (VARIOUS).—*Black Pepper*: Only 46 bags Singapore offered, and bought in at 4¾d. *White Pepper*: Only 144 bags offered, and also all bought in; Siam, 8¾d.; Singapore, 8¾d. to 9½d., and 5 cases extra fine at 10½d. *Chillies*: 80 bales Zanzibar bought in at 35s. *Cassia Lignea*: Of 100 bales broken 50 bales sold at 34s. *Cinnamon*: 150 bags common Ceylon chips bought in at 3¾d.; 14 bags bark sold, subject, at 4¾d.; 28 bags broken quill, etc., sold at 8d. to 8½d. *Mace*: Of 25 cases Penang 4 cases sold; pickings, 1s. 4d.; good bold red, partly wormy, at 2s. 4d. to 2s. 5d.; 27 packages West India sold, ordinary to good fair, 1s. 4d. to 1s. 8d.; one lot pale, 2s. *Nutmegs* quiet at about previous rates. *Pimento* flat, 709 bags being all bought in at 4¾d. to 5½d.

STRYCHNINE.—With a view of meeting American competition here the combined European makers reduced their price 3d. per oz. to 1s. 9d. per oz. for the *pure crystals* in 1000-ounce lots.

SUGAR OF LEAD.—Foreign continues very firm at 27s. 6d. per cwt.; English, 31s. per cwt.

SULPHATE OF COPPER—Is easier. Quotations, £15 15s. to £17 per ton, according to brand.

SULPHONAL—Is still obtainable from the makers in limited quantity at 7s. 3d. per lb. for bulk packing.

SULPHUR—Firm. Foreign roll, 6s. 6d. per cwt.; foreign flowers, 7s. per cwt.; English roll, 7s. 6d. to 8s. per cwt.; flowers, 11s. per cwt.

To-day's drug auctions passed off quietly. *Senna* sold with good demand, otherwise there are no changes of any particular importance to record; the following being the particulars:—

ALOES.—17 boxes good bright livery *Curacao* part sold at 30s. per cwt.; 108 packages *Capey Curacao* realised 12s. 6d. to 13s. 6d. per cwt.; 36 cases *Cape* sold at 26s. per cwt. for good hard bright down to 19s. 6d. for inferior rather drossy; 4 cases common ditto bought in at 18s.; 45 kegs and 10 cases fair *Socotrine* were held for 75s. per cwt.

AMBERGRIS.—1 tin dark undeveloped heavy and of weak flavour was bought in.

ANNATTO SEEDS.—18 bags were bought in at 5½d. per lb. for the medium bright quality.

ARGOL.—7 bags *Cape* part sold at 49s. per cwt.

ASAFETIDA.—136 cases of low to medium quality were offered, the broker announcing that he was prepared to accept decidedly less than his late limits, but the few bids made were so much lower that he was unable to sell more than a few cases of fair quality, which realised 50s. per cwt.

BALSAM PERU.—5 cases were bought in at 8s. 6d. per lb.

BALSAM TOLU.—Ten cases were bought in at 1s. 6d. per lb.

BUCHU LEAVES.—Fine green round sold at 6¾d. per lb., fair grey ditto being bought in at 6¼d. and very yellow ditto at 4½d. per lb.

CARDAMOMS.—Fair bold long *Mysore*, slightly brownish, were taken out at 2s. 10d. per lb. Ditto second size and somewhat browner in colour selling at 2s. 1d. down to 1s. 8d. per lb.; 4 cases lean small wild were held for 2s. 6d. and fair pale *Tellichelly* for 3s. 9d. per lb. Good seed sold at 2s. 9d. per lb.

CASTOR OIL.—20 cases fair *firsts* were held for 4¼d. per lb.

CASTORUM.—4 packages were all bought in at 35s. per lb. for skinny pickings, 45s. per lb. for oily thirds, and 50s. per lb. for dry thirds.

CINCHONA BARK.—70 serons *crown and grey* sold at 10½d. per lb. down to 6¾d. for *CD* and *SD*. 17 bales *yellow* realised 3d. to 4¼d. down to 1d. per lb. for 1 bale in bad condition. 2 packages *red* were bought in at 6s. and 10s. per lb. respectively. 1 case *Madras Cinchona* was withdrawn.

CIVET.—2 horns of somewhat low quality, rather thin, brought in, a bid of 5s. per oz. being declined.

COLOCYNTH.—8 cases *Turkey apple* rather darkish in colour were taken out at 1s. 1d. per lb.

COLOMBO ROOT.—Seven bales fine washed were bought in at 40s. per cwt.; 50 bags fair sorts at 14s. per cwt.; 101 bags dark sorts all sold at 9s. to 10s. per cwt.

COWAGE.—1 case with beans bought in at 1½d. per oz.

CUBEBS.—105 bags, quality of which was not all that could be desired, were held for 24s. to 25s. per cwt.

CUMMIN SEEDS.—44 bags fair *Malta* were taken out at 30s. per cwt.

CUS CUS ROOT.—Seven bales good cleaned were taken out at 35s. per cwt.

CUTTLE FISH.—24 mats taken out at 2½d. to 3d. per lb. for rather dark to pale small.

DILL SEED.—85 bags of good quality were held for 14s. 6d. per cwt.

DRAGON'S BLOOD.—1 case consisting of dull slabs was taken out at £8 per cwt.

ERGOT OF RYE.—Fair sound *Spanish* part sold at 8d. per lb. balance being taken out at 9d. 17 bags fair *Continental* were held for 8¾d. per lb.

ESSENTIAL OILS.—*Citronella*: Ten cases labelled "Prime Quality" were held for 1s. 4d. per lb.; 6 cases of *Cinnamon* for 1s. 6d. to 1s. 8d. per oz.; 4 cases of *Cedarwood* for 1s. per lb.; 5 cases of *Cassia* part sold at 5s. 6d. per lb.; 6 cases of *Nutmeg leaf* sold without reserve at 1½d. to 1¾d. per oz.; 1 barrel *Cedarwood* bought in at 1s. per lb.

GALLS.—19 cases *China* held for 55s. per cwt.

GAMBOGE.—Bright, soft, broken pipe part run, was held for £7 15s. to £8 15s. per cwt.

GENTIAN ROOT.—11 bales fair dry bought in at 22s. per cwt.

GUAZA.—23 robbins, brown tops, held for 6d. per lb.

GUM AMMONIACUM.—Fair, clean, small seed to bean size, part sold at 35s. per cwt. down to 25s. for dark blocky and mixed, and 12s. per cwt. for dark, blocky, and sandy.

GUM ARABIC.—3 serons *Turkey* sorts held for 70s. per cwt. 3 cases picked gum bought in at £13 per cwt. for good yellow grain.

GUM BENJAMIN.—61 cases *Siam* bought in at £16 per cwt. for small to bold free almonds down to £9 for small pea size, part friable block, fair *Palembang* held for 35s., fair *Penang* for 54s., 12 cases selling without reserve at 48s. to 49s. per cwt. *Sumatra*: 7 cases fair almondy seconds sold cheaply at £5 per cwt.

GUM KINO.—1 case genuine of fair quality was taken out at 12s. 6d. per lb.; 5 cases African held for 2s. 6d. for blocky, and 4s. 6d. per lb. for small grain.

GUM MYRRH.—7 casks were bought in at 110s. per cwt. for picked and 41s. for fair bright siftings. Fair sorts were held for 55s. per cwt.

GUM TRAGACANTH.—11 cases were bought in at £7 per cwt.

HONEY.—111 packages fair *Jamaica* part sold at 18s. to 20s. 6d. per cwt. 108 barrels *Chilian* sold at 21s., down to 18s. per cwt. for inferior.

IPECACUANHA.—Ten bags good *Carthagera* were held for 5s. 3d. per lb.; 20 bales fair *Rio* sold at 9s. per lb.

KAMALA.—8 cases fair bright were bought in at 9d. per lb.

KOLA NUTS.—Three bags dull *African* sold at 1d. per lb. subject to approval; 10 bags cut were bought in at 2d. per lb.

LIME JUICE.—1 hogshead sold at 9d. per gallon subject to approval; 4 packages concentrated *West Indian* were bought in at £17 per 108 gallons.

MATICO.—19 bags fair leaves were bought in at 7d. per lb.

MUSK.—1 bottle *Nepaul* grain bought in at 40s. per oz. 4 caddies *Tonquin* good thin skin medium to bold were held for 70s. per oz.; 4 tins ditto, thin skin, damp, one or two pasty, 30s. per oz.

NUTMEG PASTE.—Two cases were bought in at 2½d. per oz.

NUX VOMICA.—177 bags part sold at 5s. 6d. to 7s. per cwt. for small dull, good bold sound bright being held for 10s. per cwt.

ORANGE PEEL.—Medium quality, thin cut, was held for 6½d. up to 8d. per lb. for good; 3 cases sold cheaply without reserve at 3½d. per lb.

ORRIS ROOT.—Five bales *Mogador* sold without reserve at 15s. per cwt.

QUINCE SEED.—11 bags sold at 1s. per lb. for good bright, down to 10d. per lb. for slightly dull.

RHUBARB.—Bold light coated flat, high dried, half grey, half dark was bought in at 1s. 2d. per lb.; common at 7d. to 8d.; bold round *Shensi* pinky and grey at 2s. to 2s. 6d.; good bold round *Canton*, part slightly rough, at 1s. 3d.; 1 case small ditto, part trimming, selling at 1s. 2d. per lb.; good bold flat ditto held for 1s. 6d. per lb.; good pickings for 1s.

SAFFRON.—20 tins, quality of which did not meet approval, were bought in at 32s. per lb.

SCAMMONY ROOT.—167 bags were bought in at 30s. per cwt. 85 bags held for 23s. per cwt.

SENNA.—*Tinnevely*, about 650 bales, mainly of new crop, were offered and sold with good competition at full to rather dearer prices. Medium green leaf sold up to 3¼d. per lb. Small green 2¼d. to 2½d. per lb. Small spotty leaves were most keenly competed for, and were fully ¼d. lb. dearer at 1½d. to 2d. per lb. *Mecca* kind held for ½d. lb. *Alexandrian* all withdrawn at 7d. for fair whole leaf, and 6d. for darkish ditto, and 3d. for siftings.

SQUILLS.—42 bags were bought in at 3d. to 3½d. per lb.

TAMARINDS.—31 bales good *Antigua* were taken out at 10s. per cwt.

TONQUIN BEANS.—12 casks fair *Angostura*, slightly damaged, were bought in at 4s. 6d. per lb., an offer of 3s. 10d. per lb. being declined. 2 cases common *Para* bought in at 6d. per lb.

TURMERIC.—500 bags fair bright *China* bought in at 17s. per cwt.

WAX.—26 packages fair *Jamaica* part sold at £6 12s. 6d. per cwt. Fair *Zanzibar* realised £5 12s. 6d. to £6. *Bombay* bought in at £6. Fair *Madagascar* fetched £5 5s. to £5 12s. 6d. Fair *Italian* £6 10s. per cwt.

WEST INDIAN MOSS.—4 barrels sold without reserve at 5s. per cwt.

Newcastle Chemical Report.

AUGUST 31, 1898.

This market moves steadily, but more on old contracts than extra new business. Prices are practically unchanged, and as follow:—Bleaching Powder: £5 10s. to £6. Soda Crystals: Basis price £7 to £7 10s. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £5 per ton.

Liverpool Market Report.

AUGUST 31, 1898.

AMMONIA SALTS.—*Carbonate*: 3d. per lb. *Sal ammoniac*: 33s. to 35s. per cwt. *Sulphate*: £10 5s. to £10 7s. 6d. per ton.

BEESWAX.—10 sacks Peruvian at £7 2s. 6d. to £7 10s. per cwt.

BLEACHING POWDER.—£5 7s. 6d. to £5 15s. per ton.

CANARYSEED.—Is steady at the advanced rate of 29s. 6d. to 30s. per 464 lbs. for Turkish seed. 400 bags sold early in the week at 29s. to 29s. 6d.

COPPERAS.—38s. per ton for Lancashire and 37s. for Welsh.

GINGER.—150 bags of Cochin sold privately. 28s. to 30s. per cwt. now asked.

LINSEED.—There have been no sales of spot parcels. A little business has been done in Calcutta "to arrive" at 35s. 6d. per 416 lbs.

OILS (FIXED) AND SPIRITS.—*Castor* commands steady prices on the spot with a fair business. Some 500 cases of Calcutta were sold at an advance "to arrive," but particulars are not forthcoming as to the figure. Calcutta, 3¼d. per lb., French, 3½d. per lb., Madras, 3d. to 3½d. per lb. *Olive* is inquired for to a moderate extent, and the price for Malaga is £30 10s. to £32 per tun. *Linseed* is quiet at 18s. to 18s. 6d. per cwt. *Cottonseed* offers at 16s. to 16s. 3d. per cwt. for Liverpool refined. *Spirits of Turpentine* are selling slowly at 22s. 6d. per cwt.

POTASH SALTS.—*Bichromate*, 3¼d. per lb. *Chlorate* 3½d. to 3¾d. per lb. *Cream of Tartar* is steady, supplies limited, and offering at 78s. 6d. per cwt. for best white. *Pearlashes* are nominal at 35s. per cwt. *Potashes* are only in slow demand at 22s. per cwt. *Prussiate*, 6¼d. to 6½d. per lb.

SODA SALTS.—*Bicarbonate*, £6 15s. per ton. *Borax*, £13 10s. to £14 per ton. *Caustic*, 77 per cent., £8 per ton, 70 per cent. £7 2s. 6d. per ton. *Crystals*, £2 17s. 6d. to £3 per ton. *Nitrate*, 7s. 7½d. to per cwt.

Manchester Chemical Report.

AUGUST 31, 1898.

Owing to the festivities known as "Wakes" in this part of Lancashire, whole districts are given over to holiday making, with the result that there are great complaints of a paucity of orders in the drysaltery departments. In heavy chemicals the consumption continues light locally, although some few contracts are being put through at £3 17s. 6d. per ton, in bags, on rails, for 58 per cent. Ammonia Alkali over next year. Stocks of Caustic Soda are reported to be heavy, and holders readily concede 2s. 6d. to 5s. per ton on current rates for firm orders. In miscellaneous chemicals, Sulphate of Copper is variously quoted £16 15s. to £17 5s., according to brand, delivered Manchester. Acetate of Soda has advanced to £11 10s. per ton, on rails, and tends upwards. Brown Acetate of Lime is stiffening, and ranges from £4 17s. 6d. to £5 2s. 6d. per ton, according to quantity, Manchester. Glaubers and Epsom Salts continue scarce, and prices are firm. Green Copperas is in smaller demand, and about 1s. to 1s. 6d. per ton less would be accepted on last week's rates.

News in Brief.

TRADE MARK CASE.—In the Chancery Division of the High Courts of Justice, before Mr. Justice North, the case *Roberts v. R. Hovenden & Sons*, came on for hearing last week. This was an action in which George William Roberts, veterinary surgeon, Corve Street, Ludlow, asked for an injunction to restrain the defendants, R. Hovenden & Sons, London, from infringing the plaintiff's registered trade mark, No. 25,422, and advertising or exposing for sale, or procuring to be sold, any medicinal preparation not compounded or prepared by, or for the plaintiff, under the name of "Koptica."—Mr. Swinfen Eady, Q.C., was leading counsel for the plaintiff, and Mr. Macnaghten, Q.C., for the defendants.—From the statement of counsel it appeared that this preparation belonged at one time to a gentleman named Harness. He sold it to a person called French many years ago. Mr. French did not register the title, and the defendants sold it as the agents for Mr. French. In February, this year, the preparation was sold to the plaintiff, and he registered the title. The defendants went on selling it as agents for Mr. French, but they admitted now that

the plaintiff had the proper title to the goods, and they were quite prepared to give the undertaking.—Judgment was given for the plaintiff with costs and damages, and direction given that defendants hand over all the bottles, labels, wrappers, boxes, and other articles in their possession, custody, or power relating to the registered trade mark, "Koptica."

MR. G. H. NICOL has opened another business at 73, St. Paul's Road, Seacombe, Cheshire. Messrs. Ayrton and Saunders, of Liverpool, have supplied the mahogany fixtures for this pharmacy.

MR. J. RYMER YOUNG, of Warrington, member of the Council of the Pharmaceutical Society, is expected to deliver the annual address to the Sheffield School of Pharmacy, which is now affiliated to Sheffield University College, in October next.

MR. F. W. DOWNES, has recently opened the Broadheath Pharmacy, Manchester Road, Altrincham. A new town has practically sprung up in this neighbourhood during the past two or three years, and as Mr. Downes is the first in the field with a handsome and well-stocked establishment, he will no doubt reap the fruits of his enterprise in the future.

MR. STEPHEN HARRIS, chemist, Droitwich, was on Monday last elected Vice-Chairman of the Droitwich School Board, and a vote of thanks was accorded to him for his past services.

Trade Notes.

MESSRS. TAYLOR, TAYLOR & HOBSON, of Leicester, are offering a handsome new silk-lined morocco-covered casket containing a Cooke lens of 7.5 inches focus ($f/6.5$) and a single lens of longer focus, both designed for use on half-plates. Each lens has its own iris diaphragm, and, being complete in itself, is ready for immediate use; they each fit the same standard flange as the other; their hoods each receive the same shutter or cap; while the total weight and cost of the complete instrument (£7 13s.) are actually less than some of the more complicated anastigmats alone.

MESSRS. ARMBRECHT, NELSON & Co., of Duke Street, Manchester Square, have adopted quite a novel idea in connection with their products. They offer to purchasers of one gross of their coca wine framed copies in oils of some of the celebrated paintings in the public galleries. Copies of several of Turner's masterpieces can be had, also replicas of pictures by Clarkson Stanfield, Müller, Constable, and others.

MESSRS. BURGOYNE, BURBIDGES & Co., of London, have been appointed agents for the sale of "Ammonol," which they put up in various suitable and convenient forms. "Ammonol" (ammoniated phenyl-acetamide), a coal tar derivative, has lately come into much favour as a stimulant, antipyretic and analgesic, and, judging from the reports from various reliable sources, bids fair to occupy a very prominent position as a nerve sedative, especially in cases of nervous exhaustion brought on by over-study or protracted worry and anxiety. It has, according to various medical reports, been extensively tested by many eminent physicians of America and the Continent; the results have all been of a highly satisfactory nature. It differs from other medicinal coal tar products in being purely a stimulant and not exercising any injurious effects on the heart or other organs. According to reports from trustworthy sources it is a safe and reliable remedy in cases of neuralgia, dysmenorrhœa, dyspepsia, gastralgia, hyperacidity of the stomach, and atonic dyspepsia. Its action on the respiratory tract is very marked, and in cases of chronic asthma it has a palliative action. In the various painful and inflammatory conditions which come under the care of the dental surgeon "Ammonol" has proved to be of singular value.

MESSRS. MOTTERSHEAD AND Co., of Manchester, have produced a new and much enlarged edition of their 'Pharmacy Notes,' for the use of the medical profession. It includes well-arranged particulars about many new remedies, synthetic and others; then there is a useful table, in which the preparations of the new Pharmacopœia are compared with those of its predecessor. The latter part is interleaved with blank pages, and altogether the little book constitutes a very handy pocket guide to modern materia medica.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Photographic mounts, Bristol cartes, 3s.; G.B.E., 10s.; cabinets, 10s.; G.B.E., 15s.; quarter-plates, 6s.; half-plates, 12s. 1000; plate-sunk mounts, 12 by 10, 40s. 1000. Samples free.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns, second-hand; triples and binials: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, S2, Mortimer Road, Kingsland, N.

Moulds.—Suppository, Pessary, Bougie, Capsule, Fumigating Pastille, all Maw's patterns, some new; particulars free.—Warnes, Chemist, 333, Gray's Inn Road, W.C.

Microscope by Mottershead, mahogany lock-up case, 1 inch and $\frac{1}{4}$ inch objectives, almost new, cost £5 10s.; what offers? Squire's 'Companion,' latest, 3s. 6d.; Bentley's 'Manual,' latest, 5s. 6d.—Gower, Publisher, Waterloo, Liverpool.

Toilet Recipes.—Etherised lavender water, exquisite aroma, superior dental essence recipes, with directions, Belgravia-relish recipe (profit 150 per cent.), 2s. each.—"Galen," 1, St. John Street, Westminster, S.W.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

'Pharmaceutical Journal,' January 1, 1898. Full price will be paid for clean and complete copies by the Publishers, 5, Serle Street, London, W.C.

Publication Received.

PRACTICAL PHARMACY. By E. W. LUCAS, F.C.S. Pp. 528, with 283 illustrations. Price 12s. 6d. London: J. & A. Churchill. 1898.

Partnerships Dissolved.

(From the London Gazette.)

Sarah Merry and Thomas P. Sims (trading as J. S. Merry and Co.), Assayers and Analytical Chemists, Swansea. Debts will be received and paid by Thomas P. Sims, who will continue the business under the same style.

Alfred T. Thompson and Edward B. Thompson (trading as Thompson Brothers) Wholesale Druggists, 8, King Charles Street, Leeds.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

George J. Eady, Surgeon, Juglans Lodge, Enfield.
Dr. David Robertson, Amberley House, Mold Green, Huddersfield.

George J. Garwood, Chemist and Druggist, lately carrying on business at Rosary Corner, Thorpe Hamlet, and Earlham Road, Heigham Road, Norwich.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Allen, Ashton, Austen, Bottle, Burrell, Cowie, Cruickshank, Davis, Dickinson, Dudderidge, Ebbage, Eberlin, Field, Gadd, Greaves, Greenwood, Henderson, Ireland, Isenthal, Keen, Kirkby, McCarthy, McKnight, McWalter, Maddison, Mumbray, Pater, Peck, Proctor, Reade, Roberts, Skerry, Smith, Swinbank, Turner, Wamsley, Weddell, Whysall.

London Report.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

SEPTEMBER 8, 1898.

Business in drugs and chemicals has been very quiet during past week, while there are no changes of importance to record. Acid Citric remains firm. Same may be said of Opium, Morphia and Codeia, as also of Glycerin and Cascara Sagrada. Quinine dull. Acid Tartaric and Cream of Tartar quiet but fairly steady. Sulphate of Ammonia quiet and weak. Borax and Acid Boracic steady. Quicksilver rather easier from second hand. Mercurials unchanged. Iodine and Iodides, Bromine and Bromides, Lithia, and Bismuth unaltered. American Oil of Peppermint firm and expected to advance. Cocaine dearer. Camphor steady. Chamomiles dearer. Shellac and Ipecacuanha firm. The following are some of the prices actually ruling:—

ACETANLIDE—Quiet at 1s. 1d. to 1s. 2d. per lb., according to quantity.

ACID ACETIC—Has been in fair demand; 28 per cent. at 13s. 9d. per cwt.; 30 per cent. (1 to 7), 14s. 3d.; 33 per cent. (B.P.), 15s. 6d.; 40 per cent., 18s.; 50 per cent., 21s. 6d.; 60 per cent., 25s.; 70 per cent., 28s. 9d.; 74 per cent., 30s.; 80 per cent., 32s. 3d.; 85 per cent., 34s.; 90 per cent., 35s. 9d.; 95 per cent., 37s. 9d.; and 98-100 per cent. (glacial), 39s. 6d. per cwt.

ACID BORACIC—Unchanged at 23s. per cwt. for *crystals* and 25s. per cwt. for *powder*.

ACID CARBOLIC—Quiet but firm at 6½d. per lb. for 35-36° C. *ice crystal*, 7d. for 39-40° C. ditto, and 7½d. per lb. for 39-40° C. *detached crystals* in large bulk, other packing in proportion. *Crude*: 60° F., 2s. 1d. per gallon; 75° F., 2s. 7d. *Liquid*: 95 per cent., of pale straw colour, 1s. 2d. to 1s. 3d. per gallon, according to quantity, in 40-gallon casks.

ACID CITRIC—Is fairly steady at 1s. 2¾d. to 1s. 3d. per lb., makers asking the latter figure.

ACID OXALIC—Firm at 3½d. per lb. on the spot.

ACID TARTARIC.—English *crystals* are firm at 1s. 1d. per lb. Foreign slightly easier at 12¾d. per lb.

ALUM—Is firm at £5 7s. 6d. per ton for loose lump, and £6 10s. for ground in bags.

AMMONIA COMPOUNDS.—*Sulphate* quiet and rather easier at £10 2s. 6d. per ton for grey prompt, 24 per cent. London; Hull, £9 17s. 6d.; Leith, £10 1s. 3d. *Carbonate* firm at 3½d. to 4d. per lb., according to package. *Bromide* quiet at 2s. 1d. per lb. *Iodide* unchanged at 14s. 6d. per lb. *Sulpho Cyanide* steady at 1s. 2d. per lb. *Sal ammoniac* 35s. per cwt. for firsts, 33s. for seconds.

AMBERGRIS—Is very scarce, and quotations are firm at 85s. to 110s. per oz., according to quality.

APOMORPHIA—Is firm at 17s. 6d. to 18s. per oz., according to quantity.

ASAFETIDA.—With a desire on the part of holders to meet the views of buyers, more business has been done this week at from 40s. to 50s. per cwt. It is probable a further quantity will be offered in next week's drug auctions.

ATROPIN—Is very firm at 15s. 6d. per oz. for the *Sulphate*, good raw material continuing scarce and dear.

BISMUTH—Is still quoted 5s. per lb. for the metal, and 4s. 10d. per lb. for the *Subnitrate* in 5 cwt. lots.

BLEACHING POWDER—Unchanged at £6 15s. to £7 10s., according to brand, quantity, and packing.

BORAX—Firm at 14s. per cwt. for *lump*, and 14s. 6d. per cwt. for *powder*.

BROMIDES.—Makers' prices are unchanged at 1s. 9½d. per lb. for *Potass. Bromide*; 2s. 1d. per lb. for *Ammon. Bromide*; and 2s. ½d. per lb. for *Sodii Bromide*.

CAMPHOR.—The market quotations for crude are firm, but there is little doing. German refined is dearer at 1s. 1¾d. per lb. for bells, with the usual advances for the various sized tablets.

CASCARA SAGRADA.—There are several buyers of new bark on the market at 20s. per cwt., but no sellers thereat. Prime old bark held for 25s. to 27s. 6d. per cwt.

CHAMOMILES—Are reported 5s. per cwt. dearer, in consequence of shortage of the crop, caused, no doubt, by the prevailing drought.

CLOVES.—Privately *Zanzibar* are firm but quiet. Business comprises October to December delivery at 4¾d., and January to March steamer, London, at 4½d. At auction 60 bales *Zanzibar* bought in. 76 cases *Penang* sold, without reserve, unpicked 5d. to 5½d., fair dull picked 6½d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: Commercial 1s. 4d., pure 2s. 4d. per gallon. *Benzole*: 50 per cent. 1s. 1d., 90 per cent. 10½d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C., 5d., *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 9d. per gallon.

COCAINE.—The agents for the brand most in favour here have raised their price to 9s. 6d. per oz. for 100-lots in 25 oz. tins, it being stated that this is only the commencement of a more important advance; there are, however, still a few second-hand sellers at 9s. 3d. per oz.

CODEIA—Is very firm at 12s. 6d. per oz., with prospect of higher prices when the autumn and winter demand sets in.

COD-LIVER OIL—Is very quiet nominally at 85s. per barrel *f.o.b.* for best new non-congealing Norwegian oil in tin-lined barrels of 25 gallons each. It is, probable, however, that we shall see more doing in the article shortly.

CREAM OF TARTAR—Is quiet, first white *Crystals* 73s. to 78s. per cwt., according to strength, on the spot, with corresponding *Powders* at 75s. to 81s. per cwt.

GINGER.—Of 1376 bags *Cochin* offered 694 bags sold, partly without reserve, ordinary to fair washed, rough mouldy, 21s. 6d. to 23s.; ordinary sound ditto, 22s.; brown rough, 23s. 6d. to 24s. 36 cases native limed, part cut, bought in at 46s. 98 bags *Japan* bought in at 19s. *Jamaica* all bought in at 68s. to 85s.

GLYCERINE—Is firm at £52 10s. per ton for best *English* makes for large quantity. *German* brands are quoted 54s. to 65s. per cwt. for best white, chemically pure, double distilled 1260° quality, in tins and cases.

IODIDES without change at 9s. 9d. to 10s. 3d. per lb. for *Potass. Iodide*, and 13s. 4d. to 13s. 7d. per lb. for *Iodoform cryst.*, *powder*, and *Precip.*

IPECACUANHA.—There has been some inquiry this week. Holders are very firm at 9s. per lb. for *Rio* and 5s. per lb. for *Carthagena*.

JAPAN WAX.—There has been more business doing, the market closing quiet but firm at 32s. per cwt. for good squares.

MENTHOL—Steady at 7s. 1½d. to 7s. 3d. per lb. for good dry *crystals*.

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns.

MERCURIALS—Without change at 2s. 5d. per lb. for *Corrosive Sublimite*, and 2s. 9d. per lb. for *Calomel* in $\frac{1}{2}$ -cwt. lots.

MORPHIA.—Makers are still quoting 5s. per oz. for the *Hydrochlorate powder*; in view, however, of the position of *Opium*, an advance is considered highly probable in the not too distant future.

NITRATE OF SODA—Steady at £7 12s. 6d. to £7 15s. per ton for *Commercial*, and £8 per ton for *Refined*.

OILS (ESSENTIAL).—*Star Aniseed* is quiet at 7s. 1½d. to 7s. 3d. per lb. on the spot. *Cassia* is firm, 70 to 75 per cent. 5s. per lb.; 75 to 80 per cent. 5s. 3d. per lb.; 80 to 85 per cent. 5s. 6d. per lb., on the spot. *Lemongrass* steady at 3½d. to 4d. per oz. *Peppermint*: American, H.G.H., is quiet but firm, and the tendency is certainly towards higher prices. On the spot 5s. 7½d. per lb. is asked. *Wayne County* 3s. 9d. to 4s. per lb., according to quality. *Japanese dementholised* 3s. 3d. per lb.; 40 per cent. 5s. per lb. *Lavender*: English firm at 47s. per lb.

OILS (FIXED) AND SPIRITS.—*Linseed* firm, but unchanged at £16 17s. 6d. for spot pipes, London; barrels, £17 5s. *Rape* quiet and easier at £21 10s. for ordinary brown on the spot; refined, spot, £23. *Colton* firm at £13 15s. for London crude, spot, and £15 7s. 6d. to £16 for refined, according to make. *Coconut*: Ceylon, on the spot, £24; Cochin nominally £27 10s. *Palm*: £22 10s. *Turpentine* quiet; American, spot, 21s. 7½d. per cwt. *Petroleum Oil* unchanged; Russian, on the spot, 4½d. per gallon; American, 5½d. per gallon; water white, 6½d. per gallon. *Petroleum Spirit*: American, 5½d. per gallon.

OPIUM—Market is very firm, quotations remaining nominally unchanged, there is, however, practically nothing doing in this article at the moment.

PHENACETIN—Without change at 3s. 9d. to 4s. 3d. per lb. for *Powder* and *Crystals*, according to quantity and packing.

POTASH PERMANGANATE—Is rather weaker, there being sellers of *small crystals* at 57s. 6d. per cwt. for ton lots.

POTASH COMPOUNDS.—*Chlorate* continues firm at 3½d. to 3¾d. per lb. *Bicarbonate* steady at 30s. per cwt. for foreign crystals or powder. *Bromide* quiet at 1s. 9½d. per lb. *Prussiate Yellow*, English slightly easier at 7d. per lb.; *Red* firm at 1s. 2d. per lb. *Bichromate* unchanged at 3½d. to 3¾d. per lb. *Iodide* unchanged at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Permanganate* quiet at 60s. per cwt. for small crystals, and 65s. per cwt. for large. *Cyanide* is in fair inquiry for immediate delivery, for which position prices are maintained.

QUICKSILVER—Is quiet, although importers are firm at £7 12s. 6d. per bottle. Second hands are, however, lower at £7 11s. 6d.

QUININE—Continues in the same inactive state as for some time past, but quotations are nominally unchanged from second hands at 9½d. per oz. in large bulk and for not less than 1000-oz. lots. London stocks are still on the increase.

RHUBARB.—A fair inquiry since the auctions, and a certain quantity has been sold for export at steady rates. *Shensi* continues scarce and is firmly held.

SENNA.—Since the auctions there has been a strong demand for common small leaf at 1½d. per lb., but the bulk of the orders have

remained unexecuted for want of sellers. A Bombay steamer is just in with about 150 bales, which will probably be included in next week's auctions.

SHELLAC—Is very firm, but business is restricted owing to firmness of holders. Since the auctions a moderate business has been done on a basis of 65s. per cwt. for fair *TN*. At the auctions on Tuesday only a small quantity was offered, demand was slow, but sales showed an advance of 1s. per cwt. A total of 484 cases were offered and 143 cases sold, 15 cases fine pale *Octagon B* bought in at 95s., and 75 cases *AA* in circle, red of the mark at 72s. to 74s. Of 191 cases *TN Orange* 84 cases sold, palish flat flimsy free at 64s. bright red flat ditto at 64s., and *Rangoon* red flint block at 52s. to 53s. *Garnet*: Of 54 cases 29 sold, *Rangoon* hard block at 53s. *Button*: Of 149 cases 33 sold, dark *BL 2* at 65s., pale flint block at 71s., cakey to blocky 2's at 65s. to 66s., hard block 4's at 39s.

SODA COMPOUNDS.—*Crystals* remain at 57s. 6d. per ton, ex ship, Thames. *Ash*: £5 5s. to £5 15s. per ton, according to strength. *Bicarbonate*: £7 5s. to £7 10s. per ton for the 97 per cent. and 18s. 6d. per cwt. for the fully bicarbonated chemically pure article. *Caustic*: 70 per cent., £8 per ton; 60 per cent., £7 per ton. *Bichromate*: 2¾d. to 3d. per lb. *Bromide*: Steady at 2s. per lb. *Nitrate*: £7 12s. 6d. per ton for ordinary and £8 per ton for refined.

SOY—Is quiet but firm at 1s. 4½d. to 1s. 5d. per gallon.

SPICES (VARIOUS).—*Black Pepper*, 234 bags Penang bought at in 4¾d.; of 505 bags Singapore 34 bags sold at 4¾d. to 4¾d. *White Pepper*: 150 bags Siam bought in at 8¾d., and 203 bags Singapore at 8¾d. to 8¾d. *Cassia Lignea*: 60 boxes old sold at 55s.; 535 bales broken bought in at 35s. to 37s. 6d. *Mace*: 14 cases Penang sold, ordinary to low middling red 1s. 6d. to 1s. 7d., good, 2s., fine bold palish, 2s. 6d.; 16 packages West India sold at 1s. 6d. to 1s. 8d., good bright, 1s. 10d. to 2s.; 1 case red Java sold at 1s. 6d. *Nutmegs* quiet. *Pimento* flat; of 314 bags only 83 sold, middling of old import, 4½d., good firm 4½d.

SUGAR OF LEAD.—*English* steady at 31s. per cwt. *Foreign* firm at 27s. 6d. per cwt.

SULPHATE OF COPPER—Is quiet, but quotations remain at £15 15s. to £17 per ton, according to brand.

SULPHONAL—Is still obtainable in limited quantity from the makers at 7s. 3d. per lb. for bulk.

SULPHUR—Firm. *English*: Roll, 7s. 6d. to 8s. per cwt.; flowers, 11s. *Foreign*: Roll, 6s. 6d. per cwt.; flowers, 7s. per cwt.

Manchester Chemical Report.

SEPTEMBER 7, 1898.

There is absolutely no improvement to report on last week, except that soda crystals continue very scarce, although there is no advance in price. Caustic soda is in a trifle better request for export, and Bleaching Powder is in fair consumptive demand. Acetate of Soda has advanced to £12 10s. per ton spot. Brown Acetate of Lime continues on the up grade, and is quoted generally £5 to £5 2s. 6d., although some holders refuse to sell under £5 5s.

Sulphate of Copper is firm at £16 15s. to £17 5s. per ton, according to brand, delivered Manchester. Lancashire-made Green Copperas is rather better at 32s. to 33s. *f.a.s.*, Ship Canal, and 38s. to 40s. *f.o.b.*, Liverpool. Yellow Prussiate is well sold, prompt, and forward. Epsom Salts, 50s. to 55s.; Glauber's, 25s., in bags, Manchester. The direct oil trade with Manchester is in a flourishing condition, and should result in those members of the profession—and there are a large number who have a good connection in this department—receiving considerable advantage in the way of cheap and prompt deliveries. The steamer "Bonjorn" is due with about 1,000,000 gallons, and this will be followed by the "Rocklight" with 1,250,000 gallons.

Newcastle Chemical Report.

SEPTEMBER 7, 1898.

Business moves slowly. Baltic shipments are fairly good against old orders. Soda Crystals, through the warm weather, are on the scarce side, but values unchanged. Prices are: Bleaching powder, £6 to £6 5s. Soda crystals, 45s. to 52s. 6d. Soda ash: 70 per cent. £7 5s. Alkali: £5 5s. Durham salt, 9s. 6d. per ton.

Liverpool Market Report.

SEPTEMBER 7, 1898.

Although the articles dealt in have this week been more varied than of late, business as a whole has been quiet, without either considerable rises or falls in price to chronicle. Considerable sales of Chilian Honey and Peruvian and Gambia Beeswax (this latter at easier rates) have been effected, as well as of Carnuba Wax of various grades. Higher prices are asked and obtained for Quillaya Bark, of which the stock here is almost exhausted. In chemicals the inquiry is said to be better, but actual sales have not been more than average.

AMMONIA SALTS.—*Carbonate*: 3d. per lb. *Sal ammoniac*: 33s. to 35s. per cwt. *Sulphate* is easier; £10 2s. 6d per ton.

BEESWAX.—25 sacks Peruvian, £7 2s. 6d. to £7 10s. per cwt., and 26 packages of Gambia at somewhat easier rates.

BLEACHING POWDER—Is depressed. £5 5s. to £5 15s. per ton.

CANARYSEED.—The revival which recently took place seems to have spent itself, for though quotations are still 29s. to 30s. per 464 lbs. for Turkish seed, buyers are few and there are no sales to report.

CARNAUBA WAX.—Sales of about 1000 bags have taken place at 27s. 6d. per cwt. to 55s. Higher prices are now ruling.

COPPERAS—Is very firm, and closes at 37s. to 38s. per ton.

COPPER SULPHATE—Is firmly held for £6 12s. 6d. to £6 15s. per ton.

FENUGREC.—81 bags sold at auction at 7s. 6d. per cwt.

HONEY (CHILIAN).—About 100 barrels sold at 24s. 6d. per cwt. for Pile I. and 28s. per cwt. for Pile X.

LINSEED.—Calcutta and River Plate seed are firm, but there is not much doing, as American is so cheap, 32s. 9d. per 416 lbs., September to October delivery.

OILS (FIXED) AND SPIRITS.—*Castor* is selling fairly well, Calcutta spot 3½d. per lb. quay and 3¼d. store, to arrive 3½d. per lb.; French, Madras and Brazilian being 3½d. per lb. spot prices. *Olive* is very firm, but high prices asked in Spain restrict transactions, holders here not being anxious for business. *Linseed* of Liverpool pressure is still firm and unchanged at 18s. to 18s. 6d. per cent. *Cottonseed*: Liverpool refined is in fair demand at 16s. to 16s. 3d. per cwt. *Spirits of Turpentine* are in moderate demand at 22s. 6d. per cwt.

POTASH SALTS.—*Bicarbonate*: 30s. per cwt. *Bichromate*: 3¼d. per lb. *Chlorate*: 3¼d. per lb. *Cream of Tartar*: 5 casks of Spanish were sold privately; Best White 78s. 6d. per cwt. *Pearlash*: 35s. per cwt. *Potashes* very slow of sale at 22s. per cwt. *Prussiate* is firmer at 6¼d. to 7d. per lb. *Saltpetre*: 21s. per cwt. *Quillaya Bark* £19 10s. per ton for Chilian; prices rising.

SODA SALTS.—*Bicarbonate*: £6 15s. per ton. *Borax*: £13 10s. per ton, powder £14. *Caustic* 76 per cent. to 77 per cent. £8 per ton. *Crystals*: £2 17s. 6d. to £3. *Nitrate*: 7s 7½d. to 7s. 9d. per cwt.

Trade Notes.

THE LIEBIG COMPANY'S BONUS SCHEME is announced. The Company is allowing a cash bonus of 5 per cent. on orders received under certain conditions between September 15, and October 15, which will doubtless be an inducement to the trade to give an impetus to the already extensive sales of this old-established Company's preparation.

MESSRS. C. E. MÜLLER & Co., of 148, High Holborn, W.C., call attention to a new patent double surface condenser, lately introduced by them. It is designed to take the place of the Liebig condenser, and being only one-fifth of the size and of greater efficiency will recommend itself to every worker who has only a limited amount of bench room. It uses a minimum amount of cooling water, no expensive clamp is required to support it, and it can be fixed to the same retort stand as the distilling flask, thus making a very compact apparatus. Full particulars may be had on application to the above firm.

News in Brief.

MESSRS. DAVIDSON & HARDIE'S pharmacy in Castle Place, Belfast, is being at present overhauled by Messrs. Sage, shop-fitters, London. A new set of shop rounds is also added.

MR. SAMUEL HOGG, L.P.S.I., is opening a new pharmacy on the Shankhill Road, Belfast. It will be known as the Albert Hall Pharmacy. Messrs. Ayrton & Saunders, Liverpool, have received the order for fitting it up, and Mr. Hogg hopes to open about the middle of October.

MR. GRAY, L.P.S.I., is also opening a new pharmacy in Belfast, on the Ormeau Road. For some time past he has been dispensing for Dr. James Graham.

MANCHESTER PHARMACEUTICAL SOCIETY.—The winter Session of this Society will commence on the 12th of next month. Already two or three Council meetings have been held to complete arrangements for various meetings, and we are assured by the energetic hon. sec. (Mr. A. Blackburn) that the programme will be one of the most interesting and practical which has probably been known in the annals of this Society. It only remains for the members to support the Council by large attendances and thus show appreciation of the efforts put forth for their benefit.

EDINBURGH PHARMACY ATHLETIC CLUB (SWIMMING SECTION).—The third of the series of summer handicaps (50 yards) took place in Dalry Baths on Monday, September 5, with the following result: G. H. G. Rowland, 1; L. S. Lamb, 2; J. Grieve, 3; J. Lockerbie and A. G. Paterson (dead heat), 4.

MR. JOHN H. MORRIS, chemist and druggist, Branksome, Bournemouth, was granted a wine licence at the Licensing Session held at Wimborne on September 2.

MR. T. E. EASTWOOD, chemist and druggist, on Wednesday, August 31, at the Ashton County Licensing Sessions, was granted a licence to sell spirits and wine off the premises at Ashton Old Road, Droylsden.

BOTANY RAMBLE.—On Friday, September 2, the students of the Sheffield College of Pharmacy, accompanied by the principal (Mr. J. Turner) took train to Masbro', and walked four miles through fields, woods, meadows, and park to Wentworth House, the residence of Earl Fitzwilliam, K.G., whose home is said to be the largest private house in England—at any rate, the longest frontage. A halt was made at the Wentworth Arms, in the picturesque village of the same name. On the return journey one of the landmarks, Keppel's column, was ascended (200ft. high), from which a fine view of the surrounding country was obtained. Over forty botanical specimens were collected and described.

DEWSBURY AND DISTRICT CHEMISTS' ASSOCIATION.—A meeting of the above Association was held on Monday evening, September 5, in the Town Hall, Dewsbury, the President, A. Foster, Esq., in

the chair. It was resolved to ask the proprietors of patent medicines to join the P.A.T.A. It was also resolved to take action against persons who are not qualified, but are retailing drugs which they have no right to do. It was also decided to forward a letter of congratulation to the Pharmaceutical Society on the passing of the Pharmacy Acts Amendment Act.

EMPLOYÉS OUTING.—On Saturday the 3rd inst., the employés of Messrs. Jewsbury & Brown, Manchester, made their annual picnic to Matlock Bath, where they arrived about half-past ten o'clock. After viewing the unique beauties of the town they sat down to an excellent dinner, provided by the firm, under the chairmanship of Mr. John Bardsley. A vote of thanks to Mr. Stones and Mr. Bardsley (the partners) was carried with acclamation. Among those who took part in the proceedings were Messrs. Hayes, Haslam and Archer. In the afternoon the party broke up into detachments to navigate the river; to scale the Heights of Abraham and the High Tor; to visit Cromford, Darley, and Haddon Hall, and other places of interest in the neighbourhood. At the close of the day the unanimous opinion was that a more enjoyable day had never been spent. The party returned to Manchester about half-past seven o'clock.

LONDON UNIVERSITY INTERMEDIATE SCIENCE EXAMINATIONS.—Two Bell scholars have taken high places in this examination. Mr. T. Anderson Henry, Bell's scholar, 1893, Redwood scholar, 1894, who had a distinguished career in the Pharmaceutical Society's School in 1893-4, obtained first-class honours in Inorganic Chemistry, but was disqualified by age for an exhibition. Mr. J. Irwin Scott, senior Bell scholar, 1898, was placed in the first-class honours Inorganic Chemistry and second-class honours Physics. In addition to this Mr. Scott recently obtained a Science Scholarship at Merton College, Oxford, whilst studying at the Royal College of Science. Mr. C. A. Bentley, who served his apprenticeship to Messrs. Cousins, Thomas & Co., of Oxford, and was until recently assistant to Mr. Anthony S. Buck, of Liverpool, had the title M.B.C.M. conferred upon him lately at the Edinburgh University Graduation ceremony.

SPIRIT OF SALTS.—Elizabeth Annie Pickering (30), a single woman of Pond Lane, Wolverhampton, suffered from fits, and on Tuesday, August 30, after one of the seizures she drank by mistake the contents of a bottle of spirit of salts. At a subsequent inquest a verdict of "Accidental death" was returned.

DIPHTHERIA ANTITOXIN.—According to the report of the medical department of the French army it would appear that since the introduction of the serum treatment of diphtheria the mortality amongst cases of that disease has fallen from 11.3 per cent. to 6 per cent.

CHARLES S. COWE, son of Dr. Cowe, proprietor of the Medical Hall, Dame Street, Dublin, whilst cycling last week in that city, was knocked down by a hackney car and seriously injured. The lad was on the wrong side of the road, and in the circumstances Dr. Cowe declined to take any proceedings in the matter.

A WELL GOT-UP PAMPHLET, entitled "Notes on High Explosives," has been issued by Messrs. Kynoch, chemical manufacturers, Arklow. The pamphlet gives an elaborate account of the modern high explosives which have been brought into existence by the development of mining industries, and an analysis of kynite is also given. The little volume is worth perusal.

Marriages.

CURTIS—SCOTT.—At St. George's, Bloomsbury, on September 1, Mitchael Curtis, of 51, High Holborn, to Margaret, eldest daughter of Augustus Scott, of Oxford Street.

WILSON—HANBURY.—On September 2, at Chefoo, China, William Wilson, M.B., C.M., third son of the late William Wilson, of Kendal, to Elizabeth, second daughter of Cornelius Hanbury, of Richmond, Surrey.

Partnerships Dissolved.

(From the London Gazette.)

E. F. Gartskell and H. M. Green, General Medical Practitioners, Sydenham, Kent.

C. W. Jenkinson and John Green (trading as J. Green & Co.), Drysalters, etc., Powis Street, Woolwich. Debts will be paid by J. Green.

C. W. Krohne, H. F. Sesemann, Chas. H. Sesemann, H. J. Sesemann (trading as Krohne & Sesemann), 8, Duke Street, Manchester Square, London, W. Debts will be received and paid by C. H. Sesemann and H. J. Sesemann, who will continue the business under the whole style.

W. H. Brooke and Percy Haley, Aërated Water Manufacturers, Lancaster. Debts will be received and paid by Percy Haley.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

Thos. B. Barnby, Dental Surgeon, 3, Manningham Lane, Bradford.

J. H. Preece (trading as John Henry), Photographer, 62A, Bold Street, Liverpool.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Photographic mounts, Bristol cartes, 3s.; G.B.E., 10s.; cabinets, 10s. G.B.E., 15s.; quarter-plates, 6s.; half-plates, 12s. 1000; plate-sunk mounts, 12 by 10, 40s. 1000. Samples free.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns, second-hand; triples and binoculars; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Moulds.—Suppository, Pessary, Bougie, Capsule, Fumigating Pastille, all Maw's patterns, some new; particulars free.—Warnes, Chemist, 333, Gray's Inn Road, W.C.

Microscope (Browning), splendid instrument, body entirely of brass and gun-metal, mechanical stage forward and lateral movements, rack motion and fine screw adjustment, two achromatic objectives, 1 inch 10°, ¼ inch 75°, large complete polarising apparatus mounted in brass cells, large stand condenser and swing adjustable substage condenser, live cage, hand-plier, stage forceps, fitted in lock mahogany cabinet; price £7 7s., originally cost £12 10s.—Day, Chemist, Hither Green, S.E.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours; post free, 5s.—Edward Peck, East Dereham, Norfolk.

Honey.—New English fine flavour, 28lbs., 9d. lb.; 1 cwt., 8d. lb.; tins free; carriage paid.—Faraday, Chemist, Saffron Walden.

Books.

'**Pharmaceutical Journals**,' unbound, 1872 to 1893; 'Chemist and Druggist,' 1886 to 1891. Offers of exchange, books, drugs, surgical and dental instruments, etc.—Lytton, 136, Gt. Portland Street, London, W.

Second-Hand Books by Atfield, Bentley, Cripps, Ince, Jago, Martindale, Oliver, Ostwald, Quain, Remsen, Squire, Thomé, Thorpe, Wagner, Watts, Wills, Wootton, and others. Also good microscope. List.—Gower, Waterloo, Liverpool.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

London Latin Pharmacopœia, edition of 1851, at once; state price and condition of book to E. Evans, 59, Bridge Street, Chester

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Culmer, Davies, Dickinson, Dowdard, Durrant, Gilligan, Gunn, Guthrie, Hart, Hogg, Hooper, Ince, Ingham, Jack, Jesper, Kenny, King, Kirkby, Lloyd, Morris, Newsholme, Nunn, Parson, Pickering, Polkinghorne, Proctor, Rodman, Rowland, Smith, Southall, Spence, Templeton, Turner, Vizer, Walton, Wyatt, Yewdall.

London Report.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

SEPTEMBER 16, 1898.

Business has been somewhat quiet during the past few days, and there are no changes of any great importance to record. Acid Citric remains firm, Quinine has hardened somewhat, while Quick-silver looks as if price might shortly make a start in a downward direction. Cocaine firm, as are also Opium, Morphia, and Codeia. Sulphate of Ammonia weak. Iodides and Bromides steady. Ipecacuonha firm and dearer. Shellac is also very firm. The following are prices actually ruling for articles of chief interest :

ACETANILIDE—Quiet but steady at 1s. to 1s. 1d. per lb. for quantity and bulk packing.

ACID BORACIC—Quiet at 23s. per cwt. for *crystals*, and 25s. per cwt. for *powder*.

ACID CARBOLIC—Is steady at 6½d. to 6¾d. per lb. for the 35-36° C. *ice crystal* in large bulk packing, other packing and quality being quoted in proportion. *Crude* : 60° F., 2s. 1d. per gallon; 75° F., 2s. 7d. *Liquid* : 95 per cent., of pale straw colour, 1s. 2d. to 1s. 3d. per gallon, according to quantity, in 40-gallon casks.

ACID CITRIC.—Makers continue firm at 1s. 3d. per lb. for immediate delivery, but second hands shade this price.

ACID OXALIC—Steady at 3½d. per lb. on the spot.

ACID TARTARIC.—*English crystals* are firm at 1s. 1d. per lb., *foreign* being lower at 12½d. per lb.

AMMONIA COMPOUNDS.—*sulphate* is dull and lower at £10 for grey prompt 24 per cent. London; Hull same price; Leith prompt £10 2s. 6d. per ton. *Carbonate* firm at 3½d. to 4d. per lb., according to package. *Bromide* steady at 2s. 1d. per lb. *Iodide* unchanged at 14s. 6d. per lb. *Sal ammoniac* : Sublimed "firsts" 35s. per cwt., "seconds" 33s. per cwt. *Sulpho-cyanide* firm at 1s. 2d. per lb.

BLEACHING POWDER.—Is fairly active at £6 15s. to £7 5s. per ton on the spot, according to packing.

BORAX.—A steady business doing at 14s. per cwt. for lump and 14s. 6d. per cwt. for powder.

BROMIDES—Are firm at unchanged prices.

CAMPHOR.—*Crude*, whilst little is doing, is dearer, and 85s. per cwt. is asked by importers for *China*, and 92s. 6d. for *Japan*, *c.i.f.* terms. *Refined* is firm, but unaltered.

CASCARA SAGRADA.—This market is harder, and nothing under 22s. per cwt. for new and 25s. per cwt. for old can be obtained.

CINCHONA BARK.—The London monthly auctions took place on Tuesday, when about 2200 bales of all descriptions were offered. The demand was good, notwithstanding general expectation, owing to the large Java shipments, and a fair quantity sold at fully last rates. *Ceylon* : 350 bales and 17 bags offered and 313 bales and 17 bags sold, according to analysis; *Succirubra* stem chips, fair at 2¼d., mixed at 1¾d., renewed chips and shavings, ordinary to fair, at 1¾d. to 2¼d.; *Officinalis* natural stem chips, fair to good at 2½d. to 3½d.; *Ledger* rather mixed stem chips, part renewed at 3¼d., good *Hybrid* natural chips at 2¼d.

East Indian : Of 355 bales and 2 cases offered 189 bales sold, red chips and shavings, ordinary to fair at 1½d. to 2¼., branch at 1d. to 1¾d., good root at 2¾d.; renewed chips and shavings, middling at 2d. to 2¼d.; *Officinalis*, chips and shavings, fair to good at 2d. to 2¾d.; renewed ditto, good at 3¾d.; *Ledger*, natural stem chips at 2¾d., ditto branch at 2¼d. Java : 143 bags offered and sold, fair *Ledger* stem chips at 3¼d. to 3¾d., *Ledger* branch at 2¼d. to 3¼d., and good *Ledger* root at 4½d. South American : Of 657 bales *Calisaya* 215 bales sold, chiefly *Bolivian* cultivated quill medium to bold at 4d. to 5d., broken, 3d. to 3¾d., flat cultivated, damaged at 5d. to 5¼d.; 14 bales *Carthagena* offered and sold at 1¼d. to 1¾d.; 101 bales soft *Columbian*, new import, sold at 1¾d. to 1¾d. African : 572 bales offered and sold, fair quill at 3½d. to 4d., broken quill and chips at 3½d. to 3¾d.; mixed chiefly thin quill at 2½d.

CLOVES.—Privately *Zanzibar* extremely quiet; quotations are, October-December delivery 4½d., and January-March 4¾d. At auction of 140 bales *Zanzibar* 60 bales sold, fair 4½d., good bright 4¾d., 47 cases *Penang* sold, without reserve, unpicked, at 6d. to 6½d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* : Commercial 1s. 4d., pure 2s. 3d. per gallon. *Benzole* : 50 per cent. 1s.; 90 per cent. 10½d. per gallon. *Crude Naphtha* : 30 per cent. at 120° C., 5d. *Solvent Naphtha* : 95 per cent. at 160° C., 1s. 9d. per gallon.

COCAINE—Is very firm with prospect of higher prices, makers' being willing to sell in limited quantities only at their advanced price of 9s. 6d. per oz. for 100-oz. lots in 25-oz. tins.

CODEIA—Is firm at 12s. 6d. per oz.

COD-LIVER OIL.—Market is quiet, best brands of *Norwegian* non-freezing oil, in 25-gallon tin-lined barrels, being quoted nominally 82s. 6d. to 85s. per barrel *f.o.b.*

CREAM OF TARTAR—Is quiet. First *White Crystals* on the spot are quoted at 72s. 6d. to 77s. 6d. per cwt. *Powder* 75s. to 81s. per cwt.

GINGER.—*Cochin* quiet, 441 bags sold; cuttings 13s. 6d., ordinary small and ends part shrivelled 14s. to 14s. 6d., fair rough small and ends 18s., common small wormy rough 16s. 6d. Of cut kinds 75 cases sold, small native part cut 29s. to 29s. 6d., ordinary small dull C cut 34s. 6d., bold A 80s. 179 bags *Bengal* bought in at 20s. No *Jamaica* offered.

GLYCERIN.—*English* is quoted 52s. 6d. to 54s. per cwt., while maker's price for *German* brands of the white double distilled chemically pure 1260° quality in tins and cases varies from 55s. to 65s. per cwt.

IODIDES—Remain without change as quoted last week.

IPECACUANHA.—A fair business has been done this week in *Rio* at 9s. per lb., and in *Carthagena* at 5s. per lb.

JAPAN WAX.—Good white squares on the spot have been done at 32s. per cwt. For arrival more money is asked.

MENTHOL—Is firm at 7s. 1½d. to 7s. 3d. per lb. for good dry *crystals* on the spot; price to arrive is firmer.

MERCURIALS—Are without change from last week.

MORPHIA—Is very firm, makers, however, still quote *Hydrochlorate Powder* 5s. per oz. for quantity and bulk packing.

OILS (ESSENTIAL).—*Peppermint* : American H.G.H. is firm at 5s. 7½d. per lb., and from New York the article is quoted dearer. *Wayne County* : 3s. 10d. to 4s. 1d. per lb. is quoted, according to quality. *Japanese* is quiet but unchanged at 3s. 3d. per lb. for dementholised, and 5s. per lb. for 40 per cent. *Star Aniseed* quiet at 7s. 1½d. per lb. *Cassia* quiet, with but little doing; 4s. 9d. per lb. is quoted for 65 to 70 per cent.; 5s. 1½d. per lb. for 75 to 80 per cent.; 5s. 1½d. for 80 to 85 per cent., all *c.i.f.* terms. *Citronella* is also quiet at 1s. 1½d. per lb. on the spot. *Lemongrass* quiet at 3½d. per oz. *Patchouli* rather easier, 24s. per lb. being asked for English drawn. *Lavender* : Foreign is quoted 6s. to 9s. per lb. as to quality.

OILS (FIXED) AND SPIRITS.—*Linseed* firm and rather dearer at £17 for spot pipes, and £17 10s. for barrels. *Rape* quiet but unchanged at £21 10s. for ordinary brown on the spot, refined remaining steady at £23. *Cotton* slightly dearer at £14 for crude on the spot, and £15 10s. to £16 for refined on the spot, and according to make. *Olive Green Oils* are easier at £29 to £32. *Cocoa Nut* in better demand. *Ceylon* on the spot £24. *Cochin* £27 10. *Palm* quiet and tending easier at £22 10s. *Turpentine* rather dearer at 21s. 9d. per cwt. *Petroleum Oil* dearer at 4½d. per gallon for Russian, and 5½d. per gallon for American; water white 6½d. per gallon. *Petroleum Spirit*: American dearer at 6d. per gallon. Deodorised 6½d. gallon.

OPIUM—Remains quiet for all descriptions, and only retail sales have been made, but prices are very firm. For good to fine *Smyrna* 11s. 6d. to 12s. per lb. is asked. Second “druggists” 10s. 9d. to 11s. 3d. per lb.

PHENACETIN—Can still be bought at 3s. 9d. to 4s. 3d. per lb., price of *Bayer's* article remaining 5s. 6d. per lb. for bulk.

PHENAZONE.—Some very low prices have been named by agents, who are apparently desirous of pushing a doubtful quality. Buyers will do well to remember that the lowest priced article does not always prove to be the cheapest in the long run. Price of *Dr. Knorr's Antipyrine* remains unchanged.

POTASH COMPOUNDS.—*Chlorate* steady at 3½d. to 3¾d. per lb. for crystals on the spot. *Bromide* steady at 1s. 9½d. per lb. *Bicarbonate* firm at 30s. per cwt. for foreign crystals and powder. *Yellow Prussiate* quiet at 6¾d. to 7d. per lb. *Red Prussiate* firm at 1s. 2d. per lb. *Bichromate* steady at 3½d. to 3¾d. per lb. *Iodide* firm at 9s. 9d. to 10s. 3d. per lb., according to quantity. *Permanganate* is dull at 60s. per cwt. for small, and 65s. per cwt. for large crystals.

QUICKSILVER.—First hands continue to ask £7 12s. 6d., but second hands are easier at £7 7s. 6d. per bottle. An official decline may therefore be expected.

QUININE—Is nominally firmer, but no business has taken place. Second-hand holders ask 9¾d. per oz. for the *Sulphate* in 100 oz. tins, and lots of 1000 ozs. as a minimum.

SENNA.—There has been a fair demand for the lower qualities of *Tinnevelly* at 1¾d. per lb., and a moderate business has been done thereat this week. For *Alexandrian* the demand is for really fine whole leaf, which, however, is scarce.

SHELLAC.—A firm market, and a continued steady demand for spot goods at full to slightly dearer rates. *Second Orange* has been done on the basis of 65s. per cwt. for fair *TN*.

SODA COMPOUNDS—*Crystals* in barrels are still quoted 57s. 6d. per ton ex-ship, London. *Ash*, £5 5s. to £5 15s. per ton, according to strength. *Bicarbonate* steady at £7 5s. to £7 10s. for the commercial and 18s. 6d. per cwt. for the fully bicarbonated quality. *Caustic*, 70 per cent., £8 per ton. *Bichromate*, 2¾d. to 3d. per lb. *Bromide* unchanged at 2s. per lb. *Nitrate*, £7 12s. 6d. for ordinary and £8 2s. 6d. for the refined on the spot.

SPICES (VARIOUS).—*Black Pepper*: 1671 bags all bought in; Penang, 4¾d. to 4½d.; Lampong, 4¾d.; Singapore, 4¾d. to 4½d. *White Pepper* also mostly bought in; Siam, 8¾d.; Singapore, 8¾d. to 8½d., with fine bold, 9½d. to 10½d. *Capsicums*: 1 bale Natal sold, subject, at 65s. *Cassia Lignea*: 110 boxes bought in at 55s.; 100 bales broken sold at 34s. *Cinnamon*: 60 boxes China bought in at 40s. per cwt.; 12 bags Ceylon chips partly sold at 5d. per lb. *Mace*: 62 cases Penang pickings bought in at 1s. 4d. to 1s. 5d.; 2 cases undescribed sold at 1s. 8d. to 2s.; 27 packages West India sold; ordinary to fair, 1s. 4d. to 1s. 7d.; low, 1s. 3d.; good, 1s. 9d. *Nutmegs* steady. *Pimento*: Of 262 bags only 30 bags sold at 4¾d.

STRYCHNINE—Is steady at the late reduction.

SUGAR OF LEAD.—English firm at 31s. per cwt., and 27s. 6d. per cwt. for foreign.

SULPHATE OF COPPER—Is steady but quiet at £15 15s. to £17 per ton according to brand.

SULPHONAL—Is still obtainable in limited quantities from the makers at 7s. 3d. per lb. in bulk packing.

SULPHUR—Steady. English, roll, 7s. 6d. to 8s. per cwt.; flowers, 11s. per cwt. Foreign, roll, 6s. 6d. per cwt., flowers, 7s. per cwt.

To-day's drug auctions passed off quietly, a large number of the lots offered being bought in. Chief feature of the sales was the firmness of *Ipecacuanha* and *Senna*. The following are the particulars of prices paid and required:—

ALOES.—25 kegs good softish *Socotrine* sold at 75s. per cwt., 10

cases of ditto of fair quality being held for same price (an offer of 70s. per cwt. being declined), 4 boxes watery ditto for 40s., 2 cases soft and rather drossy *Cape* realised the comparatively high price of 26s. per cwt. 23 boxes dark livery *Curacoa* bought in, only 13s. per cwt. being offered.

AMBERGRIS.—1 case heavy undeveloped sold at 8s. per oz., 1 tin fair quality, at 45s., while good fair grey was bought in at 80s. per oz.

ANATTO SEED.—77 bags fair bright held for 4d. and dark dull for 3d. per lb.

ANISEED.—21 bags fair *Spanish* held for 28s. per cwt.

ASAFETIDA.—99 cases were put up “without reserve,” but the broker's fears were shown when, before the sale, he stated that “without reserve” must be subject to paying freights and charges. As it proved, however, the demand was good, and the prices realised must have been satisfactory on the whole to importers. Slight pinky to fair and part almond block but heavy sold at 41s. per cwt., a fall on last rates of about 10s. per cwt. The lower grades sold well, down to 31s. for common.

BALSAM COPAIBÆ.—2 cases *Bahia* sold at 1s. 2d. per lb.

BALSAM TOLU.—4 packages were taken out at 2s. per lb.

CACTUS FLOWERS.—4 bags *Grandiflora* bought in at 8d. per lb.

CAMPHOR.—20 cases, each 112 lbs. Japan refined, in 1 oz. tablets were bought in at 1s. 3d. per lb.

CARDAMOMS—Were in good supply, and with a fairly active demand the bulk sold at and after the auctions at about steady rates. Decorticated were dearer at 3s. 1d. per lb. Good bold pale *Mysore* realised 3s. 4d. per lb., medium ditto 2s. 11d. to 3s. per lb. Wild, rather shelly, held for 2s. per lb.

CASCARA SAGRADA.—100 bags of fair quality were held for 22s. per cwt.

CASTOR OIL.—20 cases fair *Italian* held for 4¾d. per lb.

CHALMONGRA OIL.—3 cases of rather dark oil sold at 1s. 9½d. per lb.

CINCHONA BARK.—Of 40 serons *Crown*, good Huanuco was held for 8½d. per lb.; 1 seron dull *Loxa* selling at this figure. 60 serons *Guayaquil Loxa* bought in at 7½d. per lb., 4 serons only selling at 7d. per lb. 24 bales yellow bark fetched 1s. to 1s. 1d. per lb., down to 7d. per lb. for damaged and inferior.

CIVET.—12 horns good fair quality were held for 10s. 6d. per oz.

COLOCYNT.—11 packages medium *Turkey Apple* held for 1s., fair small ditto selling at 10½d. per lb.

COLOMBO ROOT.—10 bags fair washed were held for 35s., good ditto being bought in at 40s. per cwt.

CONDIMENTS.—25 cases, viz., 6 cases *Sweet Mango Chutney*, 6 cases *Green Mango Chutney*, 7 cases *Slice Chutney*, and 6 cases *Mango Chutney*, all sold at 8s. per dozen.

CUBEBS.—54 bags of fair quality were held for 24s. per cwt., 74 bags also being taken out at 27s. per cwt.

CUMMIN SEED.—41 bags fair Malta held for 27s. to 28s. per cwt.

CUSCUS ROOT.—8 bales were held for 45s. per cwt. for good.

CUTTLEFISH BONE.—9 cases small dark bought in at 4d. per lb. 40 mats fair pale broken to medium held at 3d., 3 mats small dark selling at 1d. per lb. subject to approval. 16 cases all sold at 5¾d. for good bold, down to 2½d. per lb. for small.

DAMIANA LEAVES.—9 bales were bought in at 10d. per lb. for fair quality.

DILL SEED.—32 bags of inferior quality were held for 10s. per cwt., good selling at 14s.

ERGOT OF RYE.—7 cases fair *Spanish* were bought in at 7d. per lb., weevily *Russian* being held for the fancy price of 9d. per lb.

ESSENTIAL OILS.—16 cases *Cinnamon Leaf Oil* held for 4d. per oz.; 2 cases *Dodge and Olcott's Oil Wintergreen* for 5s. per lb.; 1 case *Aniseed Oil* for 7s. 2d. per lb.; 4 cases *Cassia Oil* for 5s. 9d. per lb.; 3 cases fair commercial *Eucalyptus Oil* bought in at 10d. per lb.; 8 cases *Lime Oil* part sold at 3s. 4d. per lb., balance being bought in at 3s. 10d. per lb.

FENNEL SEED.—15 bags of fair quality were taken out at 12s. per cwt.

GENTIAN ROOT.—Good dry red root was bought in at 25s. per cwt., lower quality at 20s.

GAMBOGE.—2 cases bright pickings were held for £7 15s. per cwt. 8 cases fair bright softish part drossy were held for £8 5s. per cwt.

GUAZA.—23 robbins, brownish tops, were held for 6d. per lb.

GUM AMMONIACUM.—35 cases, good clean, mixed, part blocky, were bought in at 35s. per cwt.

GUM ARABIC.—2 cases sorts were bought in at 65s. per cwt.,

5 cases good grain at £6 15s., 35 packages *Aden* gum at 45s. per cwt.

GUM BENJAMIN.—19 cases *Siam* bought in at £15 per cwt., for fair small to medium free almondy down to £9 10s., for small part friable block; *Sumatra* seconds for £6 10s., ditto dark fracture for £5 per cwt.

GUM ELEMI.—7 cases yellow sold at 21s. per cwt.

GUM EUPHORBIIUM. 9 serons held for 10s. per cwt.

GUM GALBANUM.—15 packages bought in at 1s. 4d. per lb. for good, down to 9d. per lb. for dark, part blocky, and 4d. per lb. for woody.

GUM GUAIAIACUM.—10 boxes fair drop sold at 4½d. per lb.

GUM MYRRH.—25 packages chiefly bought in at £5 per cwt. for good pale sorts, pea siftings fetching 55s., dusty ditto, 43s., and pickings 25s. per cwt.

GUM KINO.—4 cases fair *African* were bought in at 2s. 6d. to 4s. per lb.

GUM TRAGACANRH.—5 cases of very low quality sold at 7s. per cwt.

HONEY.—36 cases pale *Peruvian* sold partly without reserve at 19s. 6d. to 20s. 6d. per cwt. 13 packages *Jamaica* offered on same terms realised 20s. to 20s. 6d. per cwt. 20 cases *West Indian* sold at 20s. 30 cases *Honolulu* at 22s. 11 cases *Queensland* at 20s.

IPECACUANHA.—There was a strong demand for *Rio*, presumably for the United States and after a considerable quantity had been sold at 9s., the brokers put up the prices and sold further lots at from 9s. 1d. to 9s. 3d. per lb. for fair quality. For *Carthage* there was no demand, importers asking 5s. to 5s. 3d. per lb.

KAMALA.—7 cases good bright were bought in at 10d. per lb.

KOLA NUTS.—10 bales washed were held for 3d. per lb.

LIME JUICE.—22 casks *South Island* bought in at 8½d. per gallon.

LIQUORICE ROOT.—40 bales rough *Syrian* bought in at 9s. 6d. per cwt.

MENTHOL.—1 case good dry crystals, *Kobayashi* brand held for 7s. per lb.

MUSK.—3 caddies *Tonquin*, old-fashioned, small to medium, well-trimmed, part rather dampish, were held for 50s. per oz. 1 caddy genuine skinny, untrimmed, fairly dry for 40s.; 4 caddies, fair pile 3, for 21s. per oz.; 4 caddies, thin skin blue, medium to bold, slightly broken, for 70s. per oz.

ORANGE PEEL.—8 packages dark thin cut were held for 7d. per lb.

ORANGE FLOWERS.—5 cases bought in at 2s. 6d. per lb.

PATCHOULI LEAVES.—9 bales rather dark in colour and somewhat damaged were held for 3d. per lb.

RHATAMA ROOT.—4 packages bought in at 10d. per lb.

RHUBARB.—10 chests flat high-dried, somewhat wormy, were held for 1s. 1d., small ditto selling at 10d. to 1s. per lb., good rough and horny ditto at 6½d. per lb. 4 cases bold round *Canton*, quality of which, however, left much to be desired, were bought in at 1s. 6d. per lb. 4 cases small ditto, part trimming, at same price, small to medium selling at 1s. Good bold flat *Canton* was bought in at 2s. 6d. per lb., smaller ditto being held for 1s. 3d. to 1s. 4d. 4 cases flat *Shensi* for 1s. 6d., 1 case round selling at 1s. 2d., and 2 cases round flat *Shensi* pickings at 1s. 1d. per lb.

ROSE LEAVES.—1 bale of old crop held for 1s. 5d. per lb.

ROSE OIL.—14 pots were taken out, price required being 4d. to 5d. per oz.

SAFFRON.—1 case bought in at 37s. per lb.

SARSAPARILLA.—9 bales *Jamaica* part sold at 1s. 8d. per lb. 4 bales part *red native* part *red* and *grey* sold at 10½d.; 2 bales *grey* selling at 9½d. per lb.; 6 bales *Lima* realised 1s. 1d. to 1s. 3d. per lb.; 9 serons fair *Honduras* held for 1s. 6d. to 1s. 7d. per lb.

SCAMMONY.—11 cases were all bought in at 30s. per lb. *firsts*, for and 24s. per lb. for *seconds*.

SCAMMONY ROOTS.—80 bales were held for 25s. per cwt.

SENEGA ROOT.—5 bales fair *Minnesota* sold at 1s. 2½d. per lb.

SENNA.—*Tinnevelly* was in good demand, especially for the better qualities which sold at an advance of fully 1d. per lb. on the prices obtained in the last auctions. Medium qualities sold at 2d. to 2½d. per lb. Bolder and greener leaves realised up to 4½d. per lb. *Alexandrian* leaves were all of lower and medium qualities only, whilst such demand as exists is for good leaf.

SOY.—10 casks *China* were held for 1s. 4½d. per gallon.

SQUILLS.—42 bags held for 2½d. to 3d. per lb.

STAR ANISEED.—3 cases held for 25s. per cwt.

TONQUIN BEANS.—6 casks *Angostura* of fair quality, slightly

damaged, were held for 3s. 9d. per lb.; 10 cases black *Paras* for 1s. per lb.

TURMERIC.—20 cases *China* were bought in at 22s. per cwt.

VANILLOES.—Were in small supply. *Tahiti* are firmly held at 8s. 6d. per lb., a rise on late rates. Good frosted *Bourbons*, 4½ to 5 inches, sold at 19s. per lb.

WAX.—Fair to good *Madagascar* was bought in at £5 15s. to £6 10s. per cwt., *East Indian* at £7, fair *Jamaica* selling at £6 10s. to £6 12s. 6d. *Italian* was held for £6 10s., and *Spanish* for £6 15s. to £7 per cwt. 1 case *Assam* fetched £5. 9 packages fair *Australian* part sold at £5 15s. to £6. Bleached *Calcutta* bought in at £6 12s. 6d. Fair *Zanzibar* sold at £6 per cwt.

Manchester Chemical Report.

SEPTEMBER 14, 1898.

Alkalies continue quiet, with the exception of bleaching powder, which is reported scarce. Difficulty is also experienced in filling orders for Soda Crystals, and Glauber and Epsom salts, both of which are firm. In miscellaneous articles there is much firmness. For prompt delivery, Sulphate of Copper is quoted £17 per ton best brands, delivered Manchester, £17 10s. October, and £18 November delivery, and makers are disinclined to quote for spring except at much higher prices. Brown Acetate of Lime is steady at £5 2s. 6d. to £5 5s. per ton, delivered here. Naphthas are steady, and Benzols are unchanged, the latter tending slightly upwards. Pitch is firmer and about a shilling higher. Anthracene is stagnant, but Creosote is steady. Arsenic is higher, being quoted £15 5s. per ton, ex ship, Garston. Green Copperas is firmer for Lancashire make. Yellow Prussiate unchanged. Glycerin, for local make, is active at £54 to £56 per ton *f.o.b.*, or on rails Manchester district, and £49 to £51, naked. The tank oil trade is still progressing. Messrs. Bagnall & Co. are building two more large storage tanks, each of 1,000,000 gallons holding capacity. When finished this firm will have half-a-dozen tanks, with a total holding capacity of 6,000,000 gallons. In the same vicinity a number of smaller tanks are erected, two belonging to the Manchester Corporation Gas Department. A tallow refinery is to be erected behind the lairages, in which the whole of the fat from the cattle slaughtered there will be dealt with, and this will be followed by the construction of a seed-crushing establishment.

Newcastle Chemical Report.

SEPTEMBER 14, 1898.

This market is steadying down. New orders for heavy chemicals are fewer now than the Baltic shipping season is working to close. Prices are practically unchanged and keep as follow:—Bleaching Powder: £6 to £6 10s. Soda Crystals: Basis, 45s. to 52s. 6d. Caustic Soda: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £4 15s. to £5 per ton.

Liverpool Market Report.

SEPTEMBER 14, 1898.

AMMONIA SALTS.—*Sulphate* slightly lower in price, £10 1s. 3d. to £10 2s. 6d. per ton.

BEESWAX.—10 cwt. of *Chilian* made prices between £6 12s. 6d. and £7 2s. 6d. per cwt., and 11 packages of *Peruvian* sold at £6 15s. to £6 17s. 6d. per cwt.

CANARY SEED.—Though quoted at 29s. to 30s. per 464 lbs. for *Turkish* seed this is only nominal, for there have been no transactions upon which to base prices, and inquiries are few.

KOLA NUTS.—30 bags of dried sold at 1¼d. to 1½d. per lb.

LINSEED.—200 bags of "feeding" *Turkish* made 39s. 6d. per 416 lbs. *American* is 9d. dearer for September, October shipment, viz., 32s. 9d. per 416 lbs. *Calcutta* same dates 35s. 9d.

OILS (FIXED) AND SPIRITS.—*Castor* has enjoyed a fair share of attention during the week, and good sales of *Calcutta* and *French* have been effected. *Calcutta* now is not to be had under 3¼d. per lb. ex store, none ex quay. *French* 1st pressure 2½d. per lb. ex quay and 3d. to 3¼d. ex store. *Madras* 3¼d. *Olive* is only in retail demand, prices for shipment are *Malaga* £30 10s. per tun cost and freight and *Seville* £29 to £30 ditto. *Linseed* is steady at 18s. to 18s. 6d. per cwt. *Cottonseed* is quiet at 16s. to 16s. 3d. per cwt. *Spirits of Turpentine* is in fair demand at 22s. 6d. per cwt.

Marriages.

JEEVES—ADAMS.—On September 6, at St. Paul's Church, South Hampstead, Arthur T. Jeeves, A.P.S., of Brighton, to Nellie Adams, youngest daughter of Thomas Weldon Adams, of Dublin.

MAIR—URQUHART.—At Tayport, Fifeshire, on September 14, by the Rev. H. R. Mackintosh, Ph.D., assisted by the Rev. James M. Brown, brother-in-law of the bride, and the Rev. R. S. Warren, William Mair (representative for Scotland of Messrs. Fletcher, Fletcher & Co.) to Isabella Jane, daughter of the late John Urquhart, Errol Park, Perthshire. Among other interesting and valuable presents was a handsome silver tea service and tray, bearing the following inscription, "presented by Mr. Mair's many friends in the Scottish community in Calcutta."

News in Brief.

PROCEEDINGS UNDER THE PHARMACY ACT (IRELAND).—At the Belfast Summons Court on Tuesday, September 13, several interesting cases were heard at the instigation of the Council of the Pharmaceutical Society of Ireland. Mr. F. G. Hodder, R.M., was the presiding magistrate, and was assisted by Mr. J. J. M'Donnell, J.P., and Mr. Wm. Masterton, J.P.—Mr. W. B. Galway, solicitor, conducted the prosecutions for the Society.—The first case was that against Hugh M'Intyre, in the employ of Messrs. Clarke and Co., Belfast, who was summoned in that on July 11 he did compound a certain medical prescription for one Stewart M'Williams, contrary to the provisions of Statute 38 and 39 Vict., cap. 57, sec. 30, he not being a person qualified in that behalf according to law.—Mr. Galway pointed out that a portion of the Pharmacy Act of 1875 had been repealed, but section 30 was still in full force, and under that section for each offence transgressors were liable to a penalty of £5.—After a lengthy hearing the magistrates decided that there was no evidence to sustain the case against the defendant, or to show that he did compound the medicine, and it would be dismissed without prejudice. He was also granted 12s. 6d. costs.—The next case was brought under Section 30 of the 1875 Act, against David Monson, employed by the Ulster Chemists, Limited, Peter's Hill, Belfast, for that on July 6 he did compound a certain medicine, he not being qualified so to do.—On hearing the evidence in the case, which was to the effect that defendant promised to compound a prescription and have it ready for the Society's inspector in three-quarters of an hour, and that at the expiration of that time he handed the medicine to him, the presiding magistrate said these prosecutions were very serious, and if fully proved he would impose a high penalty, but the prosecution appeared to be throwing cases at the Court and not calling evidence.—The case was dismissed without prejudice, with 12s. 6d. costs.—James Hogg, York Street, Belfast, was then summoned for keeping open shop, and also for compounding a medical prescription on July 7, he not being duly qualified.—The evidence was that defendant carried on the business of a druggist, but was not qualified, and that his son, Samuel Hogg, a registered pharmaceutical chemist, conducted a dispensing business in his shop. It was proved that the prescription was compounded by Samuel Hogg, and not by the defendant.—The Chief Magistrate said the prosecution against James Hogg for compounding must go by the board, as the inspector got his prescription filled by a pharmaceutical chemist. The next charge was that he kept open shop; but it was shown that he kept a qualified man there.—Mr. Galway said, with all respect, he did not agree with Mr. Hodder, but he would bow to his ruling.—Both cases were then dismissed with 10s. 6d. costs in one case. Subsequently, however, on Mr Galway stating that he should serve notice in the ordinary way for a case to be stated, the Chief Magistrate said that in the two cases against James Hogg he would adjourn both until Thursday for further argument.—On again coming before the Court both cases were dismissed with 20s. costs against the Society.

GEORGE B. PICKWORTH, chemist and druggist, has purchased the branch business of Mr. C. O. Wain, at 72, Victoria Street, Blackburn, of which he was formerly manager.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Herbaria wanted, specimens must be in good condition. Will give Magneto electric machine, or six dozen good microscope slides (chiefly botanical) in exchange.—"Botanist," Hall Quay Pharmacy, Great Yarmouth.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Adams, Alcock, Ayre, Beard, Brigham, Dowzard, Dunlop, Ferrall, Flux, Freeman, Garbett, Gibbard, Guthrie, Hendry, Holmes, Ingham, Ingle, James, Jeeves, Kemp, Lander, Lothian, Mair, Martin, Mason, Moon, Parry, Parsons, Pater, Pickworth, Poppelreuter, Proctor, Smith, Spitta, Tylar, Walker, Walther, Wendon, White, Williams.

London Report.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

SEPTEMBER 22, 1898.

Business has been very quiet during the past week, and many complaints have been heard that there was so little doing. Changes in value have been unimportant. Shellac is firm and higher. Acid Boracic also dearer. Borax firm. Cream of Tartar and Tartaric Acid dull. Acid Citric steady. Camphor dearer. Quicksilver and Mercurials lower. Iodides and Bromides unchanged. Quinine fairly steady. Cocaine firmer. Phenacetin, Sulphonal, and Acetanilid unaltered. Cod-liver Oil quiet. Glycerin steady at firm prices. Sulphate of Ammonia lower. The following are prices actually ruling for articles of chief interest:—

ACETANILIDE—Is quiet at 1s. to 1s. 2d. per lb., according to quantity and package.

ACID ACETIC—In fair demand, prices being steady. Quotations are as follows:—30 per cent. or 1 to 7, 14s. 3d. per cwt.; 33 per cent. or B.P., 15s. 6d. per cwt.; 40 per cent., 18s. per cwt.; 50 per cent., 21s. 6d. per cwt.; 60 per cent., 21s. 6d. per cwt.; 70 per cent., 28s. 9d. per cwt.; 80 per cent., 32s. 3d. per cwt.; 85 per cent., 34s. per cwt.; 90 per cent., 35s. 9d. per cwt.; 95 per cent., 37s. 9d. per cwt., and glacial 39s. 6d. per cwt.

ACID BORACIC—Dearer at 24s. per cwt. for *Crystals* and 26s. per cwt. for *Powder*.

ACID CARBOLIC—Is quiet but firm at 6½d. to 6¾d. for 35-36° C. ice crystal in 2½-cwt. drums and overcasks, other qualities and packing in proportion. *Crude*: 60° F., 1s. 11d. per gallon; 75° F., 2s. 4d. *Liquid*: 95 per cent. of pale straw colour, 1s. 2d. to 1s. 3d. per gallon in 40-gallon casks.

ACID CITRIC.—The position of this article remains steady at 1s. 3d. per lb. from makers and 1s. 2¾d. per lb. from second hands.

ACID OXALIC.—A fair business passing at 3½d. per lb. on the spot.

ACID TARTARIC.—*English Crystals* continue firm at 1s. 1d. per lb. on the spot, whilst *Foreign* are quiet at 12½d. per lb.

ALUM.—Loose lump, £5 7s. 6d. per ton; ground, in bags, £6 per ton.

AMBERGRIS—Is in good enquiry and is scarce. Prices range from 75s. to 110s. per oz. as to quality.

AMMONIA COMPOUNDS.—*Sulphate* is again lower at £9 18s. 9d. per ton for grey prompt, 24 per cent., London; Hull, prompt, £9 17s. 6d.; Leith, same price. *Carbonate* unchanged at 3½d. to 4d. per lb., according to package. *Muriate*: 22s. 6d. per cwt. for rough, and 26s. to 27s. 6d. per cwt. for best white. *Sal ammoniac*: Sublimed No. 1, 35s. per cwt.; No. 2, 33s. per cwt.; crushed, 2s. per cwt. more. *Sulphocyanide* steady at 1s. 2d. per lb. *Bromide*: 2s. 1d. per lb. *Iodide*: 14s. 6d. per lb.

ARSENIC.—*Powder* 19s. per cwt., *Lump* 34s. per cwt.

ASAFETIDA—Shows an improvement since the auctions, some 10 cases having been resold at an advance of about 4s. per cwt.

ATROPIN—Very firm at 15s. 6d. per oz. for the *Sulphate B.P.*, and 17s. 11d. per oz. for the *Pure*.

BALSAM TOLU.—Since the auctions sales have been made privately at 1s. 4d. per lb. The price is now 1s. 6d. per lb. in large bulk.

BISMUTH—Unchanged at 5s. per lb. for *metal*, and 4s. 10d. per lb. for *Subnitrate* in 5 cwt. lots.

BLEACHING POWDER—Is in good inquiry at £6 15s. to £7 5s. per ton, according to quantity and packing.

BORAX—Very firm at 14s. per cwt. for lump and 14s. 6d. per cwt. for powder.

BROMIDES—Steady at 1s. 8½d. per lb. for *Potass. Bromide* in half-ton lots, and *Bromine* 1s. 11d. per lb. for not less than 20 cases.

CAFFEINE—is unchanged at 14s. 4d. per lb. for the *pure*, and 11s. 2d. per lb. for the *citrate*.

CAMPHOR.—The market for *crude* remains very firm, and 85s. for *China*, and 92s. 6d. for *Japan*, are the nearest *c.i.f.* quotations. *Refined*: Both German and English makers have advanced their prices to 1s. 1¾d. and 1s. 2d. per lb. respectively for *Bells* in 1-ton lots.

CANTHARIDES.—*Russian* are firm at 1s. 9d. to 1s. 10d. per lb. on the spot. *Chinese*: None here.

CASCARA SAGRADA—Is unchanged at 22s. per cwt. for new and 25s. per cwt. for old bark.

CAMOMILES—Are quoted 75s. per cwt., showing an advance of 15s. per cwt. on the week.

CLOVES.—Privately *Zanzibar* have been quiet and easy. On the spot small sale of fair at 4d., sales of October-December delivery have been made at 3½d., and January-March at 3¼d., but close fractionally higher. At auction 85 bales *Zanzibar* bought in at 4½d., also 58 bags *Amboyna* at 5d. Of 26 cases *Penang* 6 cases fine bright picked, sold at 11d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: Commercial 1s. 4d., pure 2s. 3d. per gallon. *Benzole*: 50 per cent. 10d.; 90 per cent. 9½d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C., 5d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 8d. per gallon.

COCAINE—Is dearer, one maker who was still selling at 9s. 3d. now asks 9s. 8d. per oz. for 100 oz. lots in 25 oz. tins. A further advance in the value of the article would appear not improbable.

CODEIA—Is firm at 12s. 6d. per oz.

COD-LIVER OIL—Remains quiet at 80s. to 85s. per barrel *f.o.b.* according to brand for best new non-freezing *Lofoten Oil* in tin-lined barrels of 25 gallons each. It stated that the *Finmarken Oil* will be very good this year and that price of same will probably be but little below that of the *Lofoten* fishery.

CREAM OF TARTAR—Is slightly easier at 72s. to 77s. per cwt. for first white *Crystals* on the spot; *Powder* 74s. 6d. to 80s. 6d. per cwt., according to percentage of bitartrate.

DAMIANA LEAVES—Are rather easier at 8½d. per lb. on the spot.

DRAGON'S BLOOD.—We note arrival of 7 boxes which will probably be offered in next drug sales. The article is very scarce.

ERGOT.—*Russian* firm at 9d. per lb. for sound. Good *Spanish* held for 1s. per lb.

GINGER.—*Cochin* steady. Of 477 bags, rough kinds, 200 bags sold; lean small and ends, 19s. 6d.; inferior, 17s. 6d.; fair washed rough, 23s. to 23s. 6d. Of cut kinds 39 cases sold; medium and small, part cut, 43s. 6d.; dull *B cut*, 55s. *Jamaica* quiet. Only 13 barrels sold; ordinary, 66s.; middling, 70s. to 73s. 6d.

GOLDEN SEAL ROOT—Is reported slightly easier in New York, but no actual change of price is quoted.

GUM TRAGACANTH.—Holders are very firm, and higher prices are generally asked. Firsts quoted up to £13 10s. per cwt., seconds £12 10s. per cwt., thirds £11. Demand is slack.

GLYCERIN—Quiet but firm at 52s. 6d. to 55s. per cwt. for *English* and 54s. to 65s. per cwt., according to brand, for *German* best white double distilled, chemically pure 1260° quality in tins and cases.

IODIDES—Are steady without change in price at 7½d. per oz.

for *Iodine*; 9s. 9d. to 10s. 3d. per lb. for *Potass. Iodide*, and 13s. 4d. to 13s. 7d. per lb. for *Iodoform*.

IPECACUANHA.—Since the auctions a good business has been done up to 9s. 3d. per lb. for *Rio*, and holders are now asking 9s. 4d. to 9s. 5d. per lb. For *Carthagena* the demand is also good at rather dearer rates.

JALAP.—For ordinary small root 5½d. per lb. has been paid.

JAPAN WAX.—Good squares on the spot 33s. to 33s. 6d. per cwt. Market quiet but steady.

KAMALA—Sells privately at 10d. per lb. for good bright.

KAVA KAVA—Is quoted 10d. per lb. on the spot.

LITHIA—Is firm at 10s. 8d. per lb. for the *Carbonate* in 2 cwt. lots.

LOBELIA HERB—Is offered on the spot at 4½d. per lb. for loose and 6d. per lb. for pressed in packets.

MENTHOL—Is dearer for arrival. On the spot 7s. 1½d. to 7s. 3d. per lb. is still quoted.

MERCURIALS—Have been reduced in price 1d. per lb., in consequence of the lower value of *Quicksilver*. Makers now quote 2s. 8d. per lb. for *Calomel* and 2s. 4d. per lb. for *Corrosive Sublimite* in 5 cwt. lots.

MORPHIA—Is quiet but firm at 5s. per oz. for the *Hydrochlorate Powder*.

NITRATE OF SODA—Is firm at £7 12s. 6d. to £7 15s. per ton for *Commercial*, and £8 to £8 5s. per ton for *Refined*.

OILS (ESSENTIAL).—*Peppermint*: American H.G.H., on the spot 5s. 6d. to 5s. 7½d. per lb. *Wayne County*: choice quality scarce and quoted 4s. to 4s. 3d. per lb., ordinary oil 3s. 9d. to 3s. 11d. per lb. *Japanese* very firm and extreme prices asked. *Star Aniseed* quiet, but holders are firm at 7s. to 7s. 1½d. *Cassia* firm for arrival but dull on the spot, quotations range from 4s. 9d. to 5s. 9d. per lb. as to percentage. *Lemongrass* is dull at 3½d. per oz. *Citronelle* steady at 1s. 1½d. to 1s. 2d. per lb. for tins.

OILS (FIXED) AND SPIRITS.—*Linseed* very firm at £17 2s. 6d. for spot pipes and £17 10s. for barrels. *Rape* is steady at £21 10s. for ordinary brown on the spot and £23 for refined, same position. *Cotton* steady. London crude spot £14, refined spot £15 12s. 6d. to £16 5s., according to make. *Olive*: Green oils £29 to £32. *Coconut* slightly dearer at £24 5s. for Ceylon on the spot, Cochin nominally £27 10s. *Palm*: Lagos on the spot unchanged £22 10s. *Turpentine* is dearer but closes quiet at 22s. 6d. per cwt. for American on the spot. *Petroleum Oil* again dearer at 4½d. per gallon for Russian on the spot, American 5¾d. per gallon, water white 6½d. per gallon. *Petroleum Spirit*: Firm at 6d. per gallon for American, deodorised 6½d. per gallon.

OPIUM—Remains quiet and unchanged, with small sales of manufacturing sorts at steady rates. There are no sales of druggists' descriptions to report, but prices are steady.

PHENACETIN.—Price remains unchanged at 3s. 9d. to 4s. 3d. per lb., according to quantity and packing. *Bayer's* make is still quoted 5s. 6d. per lb. in bulk.

PHENAZONE.—Market is very quiet at nominally unchanged prices. Value of *Dr. Knorr's Antipyrine* is also unchanged.

PODOPHYLLIN—Is steady at 12s. 6d. per lb. for good quality. American, not fully soluble, being quoted about 9s. to 10s. per lb. *Podophyllin Root* is firmer at 21s. per cwt. *c.i.f.*

POTASH PERMANGANATE—Is quiet at 60s. and 65s. per cwt. for small and large crystals respectively.

POTASH COMPOUNDS.—*Chlorate* steady at 3½d. to 3¾d. per lb. for early delivery. *Bromide* firm at 1s. 9½d. per lb. *Iodide* steady at 9s. 9d. to 10s. 3d. per lb. according to quantity. *Bicarbonate* unchanged at 30s. to 35s. per cwt. for crystal or powder. *Yellow Prussiate* firm at 6¾d. to 7d. per lb. for English. *Red Prussiate* steady at 1s. 2d. per lb. *Bichromate* firm at 3½d. to 3¾d. per lb. *Pernanganate* is very quiet at 60s. per cwt. for small crystals, and 65s. per cwt. for large.

QUICKSILVER.—As anticipated last week, importers have reduced their price to £7 per bottle, at which business has been done. Second hands are not offering.

QUININE—Continues quiet, but holders are, perhaps, not so ready to suggest low prices. 10d. per oz. in large bulk being about the lowest for best *German* brands.

ROSE LEAVES—Continue very firm at 2s. 3d. to 2s. 4d. per lb. being asked for Dutch.

SALICINE—Is in good demand at 10s. 6d. per lb.

SALTPETRE.—*English*, refined 20s. per cwt. in casks, 1s. more in kegs.

SCAMMONY.—The new arrivals of *Virgin* have been put on the market, but no business has been done. Firsts are held for 27s. to

30s. per lb., and seconds at 20s. to 25s. per lb. *Resin* is in fair demand at 6s. 9d. per lb.

SENNA—Has been in demand since the auctions, resulting in some little business. Next week about 700 bales will be offered if goods are landed in time.

SHELLAC.—There is a stronger feeling on this market, and at Tuesday's auctions, although but little sold, an advance of 2s. per cwt. was marked. A total of 474 cases offered and 172 cases sold. *Second Orange*: Of 199 cases 106 sold, fair bright cakey to blocky at 64s. to 65s., fair red slightly matted at 65s., ordinary red cakey at 64s. *Garnet*: 119 cases offered and chiefly bought in, ruby cakey at 59s. to 60s., and Rangoon hard block at 56s.; only 2 cases flint block Rangoon sold at 54s. *Button*: Of 156 cases 66 sold, fair pale free at 82s., middling firsts at 75s. to 77s., fair seconds at 68s. to 69s. ordinary to fair circle 2's at 62s. to 66s., pale blocky at 76s., ordinary blocky firsts at 70s. to 71s. Since the auctions a fair business has been done at full rates.

SODA COMPOUNDS.—*Ash* firm, £5 5s. to £5 15s., according to strength. *Crystals* remain steady at 57s. 6d. per ton ex ship terms in barrels. *Bicarbonate* £7 10s. per ton for the 97 p.c., and 18s. 6d. per cwt. for the fully bicarbonated. *Bichromate* 2¾d. to 3d. per lb. *Bromide* firm at 2s. per lb. *Iodide* 11s. 7d. per lb. *Caustic* 70 per cent. £8 per ton. *Hyposulphite* 6s. to 8s. per cwt. as to brand. *Nitrate* £7 12s. 6d. for ordinary and £8 2s. 6d. per ton for refined.

SPICES (VARIOUS).—*Black Pepper* all bought in, Penang 4¾d., Singapore 4¾d., Tellicherry 4¾d. *White Pepper* mostly bought in, Siam 8½d., Singapore 8½d., 17 bags Penang sold at 7½d. *Chillies*: 28 bales Zanzibar, first-class sea-damaged bought in at 35s. *Capsicums*: 1 bale Natal bought in at 80s. *Cassia Lignea*: 438 boxes bought in 52s. to 56s.; 238 bales broken bought in at 33s. *Cinnamon*, of 109 packages Ceylon, 49 bags sold, chips 4½d. to 5d., quillings 7½d., leaf 7¾d., broken quill, 8½d. *Mace*: Only 4 cases Penang sold, good bright bold palish, partly wormy, at 2s. to 2s. 1d.; 1 case Bombay pickings sold at 1s. 3d., and 1 box Travancore at 1s. 5d. 22 packages West India sold at 1s. 5d. to 1s. 8d., common and broken 1s. 3d. to 1s. 4d. *Pimento* flat. Of 710 bags only 10 bags sold at 4½d., the rest being bought in at 4½d. to 4½d.

SUGAR OF LEAD.—*English* is quoted at 31s. per cwt., *Foreign* firm at 27s. 6d. per cwt.

SULPHATE OF COPPER—Firm on the spot at £15 15s. to £17 per ton, according to brand.

SULPHONAL—Is still obtainable in limited quantity at 7s. 3d. per lb. for bulk packing.

SULPHUR—Is firm, *Foreign*, roll 6s. 6d. per cwt., flowers 7s. per cwt. *English*, roll 8s. per cwt., flowers 11s. per cwt.

TURMERIC—Is firm but quiet. Sales of fair *Bengal* finger at 19s. per cwt.; fair *Chinese* finger, 17s. per cwt. *Madras* is scarce. *Cochin* split bulbs, 10s. 6d. per cwt.

Liverpool Market Report.

SEPTEMBER 21, 1898.

Trade has been rather slow of late, and though inquiries have been numerous, the actual amount of business done has scarcely been up to the average. In Seeds some good business has been concluded in American Linseed to arrive, but spot prices are such as to cause prospective buyers to hold off. Canaryseed continues quiet, commanding only slight attention. Oils generally maintain their price, and are selling steadily; slight advances may be noted in Linseed Oil and Spirits of Turpentine. Among the miscellaneous items of the week's sales are 60 boxes of Curaçoa Aloes, disposed of privately, and Gambia Beeswax at fair rates. Chemicals generally are reported dull.

ALOES.—60 boxes Curaçoa sold on private terms.

AMMONIA SALTS.—*Carbonate* 3d. per lb.; *Sulphate* is dearer, £10 3s. 9d. to £10 5s. per ton.

BEESWAX.—31 packages of Gambia found buyers at £6 12s. 6d. per cwt.

BLEACHING POWDER—Is quietly steady at £5 5s. to £5 15s. per ton.

CANARY SEED—The market is inactive, and sales are confined to small amounts of Turkish from store at 29s. per 464 lbs.

COPPERAS—Is firm at 39s. per ton for Lancashire and 37s. for Welsh.

COPPER SULPHATE—Is quoted at £16 15s. to £16 17s. 6d. per ton.

LINSEED.—High prices are expected by holders on the spot, but buyers will not come to terms. Small amounts of Larnaca

from store have been sold at 42s. per 416 lbs., whilst for future delivery good business has been done in American at 32s. 6d. *c.i.f.*

OILS (FIXED) AND SPIRITS.—*Castor* is improved in tone owing to better prices obtained for forward lots of Calcutta. French first pressure ex quay 3d. per lb., ex store 3½d. per lb., Madras 3½d. per lb. and Calcutta 3½d. per lb. *Olive* is in limited demand, and a small amount of Lisbon sold at £30 per tun. For shipment Seville is quoted at £28 10s. to £29 10s. per tun, and Malaga £30 10s. per tun cost and freight. *Linseed* of Liverpool pressure has advanced 3d. per cwt., and is now firmly held for 18s. 3d. to 18s. 6d. per cwt. *Cottonseed* is quiet at the easier rate of 15s. 9d. to 16s. per cwt. *Spirits of Turpentine* are firm and in fair demand at the improved price of 23s. per cwt.

POTASH SALTS.—*Bichromate* 3½d. per lb., *Chlorate* 3½d. to 3¾d. per lb.; *Cream of Tartar* is quiet at 75s. per cwt. for best white; *Pearlashes* have been selling at 34s. to 35s. per cwt.; *Potashes*, 1896, fetch 21s. 6d. per cwt., 1898, 22s. 6d. per cwt.; *Saltpetre* 21s. per cwt.

SODA SALTS.—*Bicarbonate* £6 15s. per ton.; *Borax* 14s. per cwt.; *Caustic*, 77 per cent., £7 15s.; 70 per cent., £7 1s. 3d. per ton; *Crystals* £2 17s. 6d.; *Nitrate* is fairly steady, with moderate amount of trade doing at 7s. 7½d. to 7s. 9d. per cwt.

Manchester Chemical Report.

SEPTEMBER 21, 1898.

The heavy chemical trade in the district continues unsettled, with much uncertainty as to the future. There is further movement in the direction of diminishing the output, and the United Alkali Co., Ltd., are closing another works at Widnes with this object in view. In Drysalteries and Anilines there is more movement here since the resumption of business in the manufacturing towns surrounding Manchester after the holidays. Arsenic is improving somewhat rapidly, and to-day is quoted £16 5s. to £16 10s. Sulphate of Copper is very steady at £17 per ton for best brands, delivered Manchester, while as high as £18 10s. is asked for spring delivery. Coal Tar Products continue dull, except Creosote and Pitch, which are a trifle higher than last week. Owing to the difficulty of procuring packages, Lancashire-made Green Copperas is 1s. to 1s. 6d. over last week. Yellow Prussiate is unchanged at 6¼d. to 7d., and sells well. Brown Acetate of Lime is steady at £5 5s. per ton, both Welsh and American, delivered Manchester. Aniline Oil quoted 5¼d., and Salt 4¼d.

Newcastle Chemical Report.

SEPTEMBER 20, 1898.

This market is now approaching its dull season, as the bulk of Baltic shipments of heavy goods has been well worked away. Prices unchanged and quoted as follows: Bleaching Powder £6 to £6 5s. Soda Crystals, basis price, 45s. Caustic Soda, 70 per cent., basis price, £7 to £7 5s. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £5 per ton.

Personal.

MR. FRANK MAITLAND, chemist, 31, Chapel Street, Stonehouse, Plymouth, has been unanimously elected Deputy-Chairman of the Urban District Council, Stonehouse.

MR. G. D. ROBERTS, pharmaceutical chemist, has purchased the business of Mr. W. H. Mathew, pharmaceutical chemist, Saltash.

MR. F. A. WILCOCK, chemist and druggist, Bradford, has sold his business, and has entered into partnership with Mr. J. A. Mitchell, of 33, St. Mary's Road, Bradford.

MR. RICHARD BUTLER, chemist and druggist, of Drighlington, Yorks, has purchased the business of Mr. F. A. Wilcock, at 110, Great Horton Road, Bradford.

News in Brief.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.—The annual meeting of this Association was held on September 20 at the Victoria Hotel. A very satisfactory report was read by Mr. Pickard, after which the officers for the ensuing year were elected. The following gentlemen were voted into their respective offices: President, Mr. A. H. Waddington; vice-presidents, Mr. George Rimmington and Mr. S. N. Pickard; hon. sec, Mr. J. A. Mitchell; treasurer, Mr. R. W. Silson; council, Mr. J. O. Moulson, Mr. Rogerson, Mr. Dunn, Mr. Wilcock, Mr. Mackay, and Mr. Hanson. Mr. Waddington returned thanks for his election, and proposed a vote of thanks to Mr. Dunn, the retiring president. Mr. Mackay seconded, and it was thereupon carried unanimously.

ADULTERATED CAMPHORATED OIL.—At the North London Police Court, last week, Joseph Emsley, chemist and druggist (Mod. exam.), of High Street, Stoke Newington, was summoned for selling camphorated oil which was not made according to the formulary of the British Pharmacopœia. The summons was taken out by Mr. A. L. Bridge, inspector under the Food and Drugs Act for the Middlesex County Council; and he produced the analyst's certificate, which showed the mixture was made with cotton seed oil instead of olive oil. The defendant said cotton seed oil looked best, and was only about 6d. per gallon cheaper; but the prosecutor said cotton seed oil was only half the price of olive oil, and not nearly so good in its healing properties. The defendant added that it was an error of judgment on the part of his assistant. Fined £5, and 12s. 6d. costs.

GLASGOW SCHOOL OF PHARMACY.—On Thursday, September 8, the students of this School, together with Mr. Lothian, the Principal, visited the Longford Chemical Works of the Scottish Acid and Alkali Co. and Sir Wm. Baird's ironworks at Kilwinning. The party was conducted over the laboratories and vitriol factory of the Chemical Works, the various stages in the manufacture of sulphuric acid being elucidated in a most interesting manner. In the afternoon the ironworks were visited. These cover a large area, and are intersected by a network of railways. The party was hoisted to the top of the blast furnaces and saw them charged with ore, limestone, and coal by the cup and cone arrangement. The tapping of two of the furnaces was then seen. The gases from the blast furnaces are passed through about five miles of condensers and the condensation products—tar, ammonia, etc.—collected. The whole plant is of the most modern construction, and all the operations are conducted with scientific precision and clockwork regularity night and day. The return journey was enlivened with song, and altogether this proved a most enjoyable outing.

MESSRS. J. H. SMITH & Co.'s Flydooomo Works, Cartergate, Newark, have been visited by a representative of the *Newark Herald*, and in an interesting account of the visit it is stated that the advantage of "Flydooomo" over other kinds of fly-papers is that "the special preparation used is most effectual for the purpose"; then, "it is nicely wrapped up to hand over the counter," and "the sticky stuff is very tenacious and a thin coating is sufficient." The department for making summer drinks, such as Champagne Pop Powder and extract of herbs, in powder and in bottles, was also visited.

EDINBURGH DISTRICT CHEMISTS' GOLF CLUB.—The fourth competition this season for the "Gibson Handicap Medal" was held recently over the Braids course, with the following results: 1, Mr. Geo. Robertson, 106-14 = 92; 2 and 3, Mr. W. C. Baker, 106-12 = 94, Mr. A. M. Stewart, 101-7 = 94. The annual Autumn Holiday Prize Competition was held at Carnoustie on Monday, 19th inst., in splendid weather, with the following results: "Gibson Medal" and 1st prize, presented by Mr. D. N. Mylie, Mr. W. C. Baker; 2nd prize, Mr. H. D. Alexander; 3rd prize, Mr. George Robertson. After dining at the Panmure Arms, a hole competition, Captain *versus* Vice-Captain, was played, resulting in favour of the former team by 4 holes. Fourteen members were present.

THE SALE OF "FEMALE MEDICINES."—At an inquiry held at Milford on Monday, September 5, respecting the death of Sarah Ann Courtnadge (24), a married woman of Oxted Green, it transpired

that she had taken advertised female pills whilst enceinte, with the result that she died suddenly. At the coroner's request, Dr. A. P. Luff, of St. Mary's Hospital, who was instructed by the Home Office and gave evidence as to the composition of the pills, made a statement to the effect that there is no drug that can be relied upon to procure abortion. Certain drugs were sold by certain people, which in the majority of cases had no effect whatever, and which in a few cases only procured abortion at the expense of the life of the woman. The jury returned a verdict "that the deceased died of septicæmia and septic peritonitis, produced by abortion," and added a rider urging that legislation is necessary to prevent the selling of such drugs, put up and officially stamped as "patent" medicines.

REMEDY FOR BUGS.—Acetic acid injected by means of a glass syringe into all cracks and crannies is said to be an excellent remedy against these troublesome pests, as a drop of acetic acid infallibly kills a whole nest of them.—*Practitioner*, lxi., 111, July, 1898.

A CURIOUS LAWSUIT.—A Vienna specialist received 35 dollars for ridding a man of a tapeworm. Afterwards, the patient thought he had paid too much, and demanded 20 dollars back. The doctor demurred and was sued. He could not, he argued, put the tapeworm back from where he took it, and if he could he was not sure that either the patient or the law would let him; besides, the tapeworm was dead. The patient complained that it was only a short one. The doctor said he could not find any precedent for removing tapeworms at so much per yard, finally the doctor gave the patient back 2.50 dollars.—*Literary Digest*.

Trade Notes.

MESSRS. G. VAN ABBOTT AND SONS intimate that on and after September 19, 1898, all orders should be forwarded to Baden Place, Crosby Row, Borough, London, S.E.

PARKE'S DRUG STORES, LIMITED.—The Directors of this Company will recommend at the annual meeting of the shareholders to be held on the 29th inst., the payment of a dividend of $4\frac{1}{2}$ per cent. (free of income tax) on the Ordinary shares for the last half-year, making with the interim dividend paid on March 30, $7\frac{1}{2}$ per cent. for the year, carrying to Depreciation Fund £505 10s. 6d., and Reserve Fund £800.

PHOTOGRAPHIC APPLIANCES.—Mr. W. Tylar, 41, High Street, Aston, Birmingham, sends a copy of his new catalogue of specialties in photographic appliances, etc. The catalogue is beautifully got up, and contains new blocks of pictures taken by the Tit-bit camera, several specialties reproduced in the natural colours, and a good specimen of colour photography. The list has been carefully revised, new goods added, and the whole brought thoroughly up-to-date, while a few useful hints for beginners are given. Every dealer in photographic goods should possess a copy of this work.

Marriage.

JACK—CABLES.—At 32, Kyd Street, on the 14th inst., by the Rev. Henry Angus, D.D., assisted by the Rev. J. E. MacDougall, James Jack, F.L.S., pharmaceutical chemist, to Janet, second daughter of the late Patrick Cables, iron merchant and shipowner.

Partnerships Dissolved.

(From the London Gazette.)

Wm. Hedley and S. Galbraith, Mineral Water Manufacturers, Langley Bridge, Brandon, Durham. Debts will be received and paid by Wm. Hedley, who will continue the business in his own name.

C. Aggio and A. T. Copeland, Veterinary Surgeons. Debts will be received and paid by A. T. Copeland.

John Birch and W. Wademan, Aërated Water Manufacturers, Bare, Lancaster.

J. H. Tuff and A. A. Argent, Patent Medicine Vendors, 66, Fenchurch Street, E.C. Debts will be received and paid by J. H. Tuff, who will continue the business under the old style.

Publications Received.

PHARMAKOLOGISCHES ÜBER EINIGE MORPHINDERIVATE. Von PROFESSOR DR. MED. H. DRESER, in Elberfeld.

KLINISCHE VERSUCHE ÜBER DIE WIRKUNG UND ANWENDUNG DES HEROINS. Von DR. MED. FLORET, in Elberfeld. Reprinted from the *Therapeutische Monatshefte*. Berlin: Julius Springer. From the Publisher.

FORMULAIRE HYPODERMIQUE ET OPTHÉRAPIQUE. Par DR. E. BOISSON ET J. MOUSNIER. Pp. 261. Price 3 fr. Paris: J. B. Baillière et fils, 19, Rue Hautefeuille, Près du Boulevard Saint-Germain. 1899. From the Publishers.

UNIVERSITY COLLEGE, BRISTOL, CALENDAR, for the season 1898-99. Pp. 280. Bristol: J. W. Arrowsmith, Quay Street. 1898. From the Secretary.

A POCKET DICTIONARY OF HYGIENE. By C. T. KINGZETT, F.I.C., and D. HOMFRAY, B.Sc. Pp. 104. Price, 2s. 6d. London: Baillière, Tindall and Cox, 1898. From the Authors.

ANATOMISCHER ATLAS DER PHARMAKOLOGIE UND NAHRUNGSMITTELKUNDE. Von Dr. A. TSCHIRCH und Dr. O. OESTERLE. Lieferung 14. Price 1s. 6d. London: Messrs. Williams & Norgate, 14, Henrietta Street, Covent Garden. 1898. From the Publishers.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

Good Formulæ wanted for Cough Balsam, Neuralgia Mixture, Quinine and Iron Tonic, Skin Emollientine, or book of good reliable recipes, but must be good.—"Reliable," Pharm. Journ. Office, 5, Serle Street, W.C.

Erasmic Soap, Dent's Gum, and Frog in the Throat; state quantity and price, carriage paid, to—Eastman, Forest Lane, Stratford.

Two 2-gall. Swan-neck Carboys, cut glass stoppers, perfume stock bottles, lozenge jars, dispensing scales, etc., wanted cheap.—4, Blannel Street, Burnley.

OFFERED.

Miscellaneous.

Photographic mounts, Bristol cartes, 3s.; G.B.E., 10s.; cabinets, 10s.; G.B.E., 15s.; quarter-plates, 6s.; half-plates, 12s. 1000; plate-sunk mounts, 12 by 10, 40s. 1000. Samples free.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns, second-hand; triples and binials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours; post free, 5s.—Edward Peck, East Dereham, Norfolk.

74 Microscope Slides, 2s. 3d. per dozen, or 12s. the lot, or exchange unmounted objects, approval.—Lintin, 170, Freedom Road, Sheffield.

For Sale Cheap.—Dissecting case, cost 21s., never used, 10s., also 6 2-minute and 3 ½-minute English-made clinicals, 14s., approval.—Howard, 3, Church Road, Wimbledon, Surrey.

Water Bed, full size (practically new), £2. Indiarubber female urinal, artificial pin leg, and spinal apparatus with jury mast, 10s. the three.—Chemicus, 88, Sussex Road, Holloway.

Bath Chair, new, used once, cost seven guineas. What offers.—Cocks, chemist, Stonehouse, Plymouth.

What offers for *Chemist and Druggist*, 1870, 1872, 1877, also 1883 to 1888 inclusive, and 1891 to 1897 inclusive.—Smith, Chemist, Stroud.

Two 2-gall. swan-necked carboys (York glass); 15-gall. copper syrup-pan; what offers, cash or saleable patents?—Brigham, Chemist, Pocklington.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs Abbott, Allan, Baldock, Brandis, Brown, Cocks, Dell, Dowzard, Duncan, Elliman, Ferrall, Fielding, Fordred, Frizell, Gadd, Giles, Gillmour, Glyn-Jones, Hill, Hogg, Jack, James, Jarvis, Jones, Kingzett, Kinton, Kirkby, Kraemer, Lee, Leonard, Lindsey, Llovd, Martin, Mitchell, Moss, Orton, Pa'ke, Parry, Parson, Poppelreuter, Roberts, Robinson, Sharp, Skeats, Summers, Whiaeray, White, Wilcock, Willmot, Wilson.

ROYAL PHOTOGRAPHIC SOCIETY.

The forty-third annual Exhibition of the Royal Photographic Society is now being held at the Gallery of the Royal Water Colour Society, 5A, Pall Mall East, and will remain open to the public daily until November 12 next. It will also be open on Monday, Wednesday, and Saturday evenings, from 7 till 10, and on each evening there will be a display of lantern slides.

The private view, which took place on the morning of Saturday, September 24, was well attended, and that time-honoured institution, the *soirée*, which was held the same evening, was, as usual an extremely pleasant function. At these gatherings the country membership is always well represented, and as the Society extends an hospitable welcome to almost everyone of light and leading in photography and its allied sciences and arts, which is largely availed of, the occasion is an enjoyable as well as important feature in the Society's annual programme. The President, the Earl of Crawford, K.T., F.R.S., was unavoidably absent, but the majority of the officers and members of Council were present to receive the members and guests.

On entering the gallery one's first impression is that the aspect is a sombre one. This seems due, in the first place, to the dark tone of the curtains which divide the wall into panels and the festoons of the same material which are draped around the room. But on studying the matter the effect is in reality principally attributable to the low tone which the present fashion decrees as that most acceptable in a photograph, and the fashion of framing the picture close up without a mount, and frequently without even the relief of a gilt line or slip. With the pictures they had to deal with, the Hanging Committee of the Exhibition undoubtedly did right in keeping the background extremely subdued, and their wisdom becomes manifest when the time comes for studying the pictures individually. When one becomes acclimatised, as it were, to the prevailing low tone the aspect is far from unpleasing.

A noticeable feature of this year's Exhibition is an increase in the average size of the pictures. The catalogue gives no information whether the results on the walls are enlargements or are printed directly from the original negatives, but that in a large number of cases, perhaps even the majority of cases, they are the former, there is little room to doubt. The processes of enlarging, however, are now so skilfully carried out, and the prevailing methods of treatment lend themselves so readily to an enlarged image that the matter is not an important one, especially as the advance in general excellence which in recent times each year's Exhibition has shown over its predecessor is distinctly maintained. There are very few pictures that stand out from the rest, but that is because the average quality is so high; at the same time, there is an almost complete absence of mere padding. Comparing mentally the worst photographs in the present Exhibition with those of even last year's, and this is by no means an unreasonable test, the advance made is most marked.

Following the custom of last year, the majority of the portraits are hung together in one panel, and an opportunity is afforded of studying them as a whole. There is an almost complete absence of the kind of thing the ordinary professional portraitist aims at, the kind of thing he puts in his show-case and decorates his reception room with, and believes the public admires. Indeed, there is but one specimen of such work, and a very good one of its kind it is, but on these walls it strikes quite a jarring note. The other extreme, which might be termed the photographic freak, is not, however, much in evidence. One is apt to wonder whether anyone can find a better excuse for C. W. Richardson's "Study of a Head" than that it is a failure in what may have been an attempt to do something out of the common, and one cannot help smiling at Oscar Hardee's efforts at eccentricity, "A Profile Study," which represents a face cut down vertically in front of the ear, and "A Portrait of a Lady" who has evidently been scalped. G. Lafayette's study of a girl with a violin, too, strains after effect in a way that will not appeal to everyone, but the bulk of the portraits will repay study. Complete success has not been attained in every case, of course, and one can find many minor faults, but at least we have freedom from the bad traditions of the skylight which have always hampered the professional photographer's progress, and a praiseworthy attempt at more refined treatment, with greater simplicity and breadth of effect which cannot fail to bear good fruit when the public realise something of what photography is capable of.

John Stuart, in "A Portrait of a Gentleman" (42), shows a good

example of treatment. His subject is certainly not an ideal one, but he has succeeded by avoiding anything like a straining after effect. By treating a somewhat commonplace looking subject in a very simple manner, a picture, which is anything but commonplace, results. His portrait of a lady, though a far more attractive subject, is not so meritorious as a picture. R. W. Robinson has done well. His portrait group—"Mother with Children"—is an admirable example, and the "Light of Morning," which is perhaps a figure subject rather than a portrait, will also please many. "An Interesting Article," by N. S. Kay, is a good portrait study, which is also interesting as a picture. "Paulina," by W. M. Warneuke, is gracefully treated, and the works of Harold Baker, who, as one of the judges, is not competing, P. S. Lankester, H. W. Barnett, C. Sweet, and Miss Muriel Bell should be noticed, though the latter is extremely unfortunate in her choice of frames.

Among the figure subjects three pictures of considerable size by Th. and O. Hofmeister, of Homburg, claim attention from the boldness of their treatment, and the interest in them is increased by the fact that the prints are in gum bichromate. "Calling the Ferryman," by John E. Dumont, is also characterised by similar breadth of treatment.

The architectural pictures struck us as being singularly good as a whole. They are all hung together, so that comparison is easy, and, at the same time, this arrangement emphasises the fact that there is almost as much scope for originality of treatment in architectural subjects as in others. There are views of the same place, hung almost side by side, which are more unlike than most could imagine two views of the same place could be. There has been some high-falutin talk recently about placing the architectural pictures in the technical section. The only sense in the suggestion lies in the fact that architectural subjects require more technical skill than most others.

There are but few flower pictures, too few to be worth mentioning, but for those of Dr. G. McDonald, which are very fine.

Landscape subjects naturally are in the majority. Comparing this year's work with that of last year there is no great change of opinion indicated as to methods of treatment. The pictures as a whole are very similar, but the average is better. It seems strange to say so now-a-days, but we notice an improvement in technique. We do not mean that the biting sharp, hard, shiny thing whose absence some few are still lamenting, is upon us again, but that more are beginning to recognise that broad effects can be obtained without aggressive fuzziness, that clouds printed over the landscape are an offence, and that the spotting of the prints is not pleasing when it is the most noticeable feature. It would be difficult to discover a technical defect in W. Thomas's picture "Woodland Graces," while as a picture it will appeal to all varieties of critics. Horsley Hinton seems to have strayed into the birch and bracken, too. His pictures are good, but a great departure from his usual style. Viscount Maitland has made very distinct progress in his work, and J. Page Croft has also come well to the front. We do not like J. C. S. Mummery's work so well as some we have seen, and W. D. Welford's is too palpably a plagiarism to be praiseworthy. W. A. Fraser, who sends two pictures of New York by night, *à la* Paul Martin, receives a medal, but this kind of work after it ceases to be a novelty will take its natural place. One of the most admired pictures is a sea-piece by C. F. Inston, and A. Cochrane's two pictures, a "Study of Sheep" and "Going Milking," are both worth studying. W. J. Warren's charming little snap-shots of "London in December" have been distinguished by a medal.

The technical photographs are less numerous than usual. A medal has been awarded to W. Edwin Brewerton for a study of still life, printed in three colours from three negatives taken through screens. The blue print is made upon ferro-prussiate paper, the other colours being obtained by sensitising the blue print successively with yellow and red gum bichromate in transparent colours, the colours being printed, of course, each from its own negative. The result shown is passable, but does not arouse enthusiasm. It is probable it appealed to the judges more on account of the ingenuity and originality of the method of its production than on æsthetic grounds. Thos. Manly shows some examples of Ozotype printing in pigment, described as being a process of carbon printing without actinometer, transfer, or safe edge, and in which the pigmented gelatin does not come in contact with a chromic salt. The results are in no way distinguishable from carbon prints made in the usual way. There are also examples of Ozotype printing with aniline colours, which are

interesting. Messrs. Elliott and Son's enlargement in carbon of "St. George's Chapel, Windsor," from a negative by Bulbeck, is a *tour de force*. At a rough estimation its size is 8 feet by 5. A close examination shows that it is in reality made up of four prints, but the difficulties which occur under such circumstances have been so skilfully overcome that it requires minute attention to detect how it is done. Any one who has attempted to join up prints to form a panoramic view will appreciate what these difficulties are. Dr. Hall Edward's X-ray photographs are interesting, perhaps, rather from the sensationalism of the subjects than from their showing any great advance in this application of photography. That entitled "Victims of the Toy Pistol," from the number of examples given, points a moral with regard to the necessity for greater restrictions on the sale of these dangerous toys. The Radiograph through chest of child showing the position in the gullet of a shilling and a sixpence, which had been accidentally swallowed, has the agony piled up by the exhibition of the identical coins in the frame. There are reproductions of pictures by F. Hollyer and by the Autotype Co., and several exhibitors send work which will appeal to the naturalist, the architect, and others.

The lantern slides are not numerous, but we think they are unusually good in quality. The sets by H. T. Malby, illustrating the changes of form in clouds at sunset, the negatives being taken at intervals of three minutes, are particularly interesting. C. Dockree's architectural slides are exceedingly good, and several exhibitors send flower studies of great merit.

In recent years the display of apparatus has not formed a very important part of the Exhibition. The rule of the Society that each exhibit must be a novelty, or must have some point of novelty about it, keeps it down to reasonable limits. Before referring to the apparatus itself we should say something about Col. J. Waterhouse's specimens of pictures on Daguerreotype plates, orthochromatised and treated with ordinary developers, alkaline and acid, which are shown on the apparatus table. In these experiments Col. Waterhouse, with characteristic originality, has taken up a line of his own. The Daguerreotype process, for ordinary purposes, is as dead as the proverbial door-nail, but there are some scientific applications of photography where no process is more suitable or would be more suitable if some of its difficulties as it has hitherto been worked were removed. If Col. Waterhouse should succeed in simplifying the process he will deserve the thanks of the community.

The most imposing piece of apparatus is Stringer's photomicrographic apparatus exhibited by Messrs. Watson and Son, in which the whole condensing system is arranged to slide upon one rectangular bar firmly attached to a base board. The optical system, by which the rays from an oxyhydrogen jet falling upon a condenser of ordinary size are eventually parallelised, the parallel beam being of exactly the size to fill the substage condenser, seems to be an admirable one. Messrs. Watson and Sons also have a combination studio, copying and enlarging camera and stand, which is a well thought-out piece of apparatus. Those interested in the hand camera will find here plenty to amuse them. The Eastman Company send a selection of their new Kodaks, which, as they will take plates as well as films, may be expected to make their way into the regions of serious photography. Adams and Co. show the "Adams de Luxe" hand camera, and the "Tella," designed to take 50 cut films without sheaths or other backing. We were shown the working of this and tried it for ourselves. It is a marvel of ingenuity. Another hand camera taking cut films is the Fram, shown by W. Watson and Sons. The Frena shown seems to base its claim to be there on some difference in the construction of the lens used. J. Illingworth and Co. also show hand cameras.

These notes should not be closed without a word of praise for the catalogue, which is illustrated by some thirty full-page blocks in half-tone from the pictures, and in addition, there are numerous pen-and-ink sketches among the letterpress. Apart from its usefulness as a catalogue, as a picture-book it is worth more than the sixpence charged for it.

The judges were: In the Art Section, Harold Baker, Lt.-Col. J. Gale, A. Horsley Hinton, J. B. B. Wellington, W. L. Wyllie, A.R.A. In the Technical Section: T. Bolas, F.I.C., F.C.S., J. Bulbeck, Chapman Jones, F.I.C., F.C.S. The awards were: Art Section, C. S. Baynton, "Norwich Cathedral"; W. A. Fraser, "A Wet Night in New York"; G. E. Thompson, "Threshing Wheat, Le Puy, France"; W. J. Warren, "London in December"; and Miss Mathilde Neil, "Polly." Technical Section: W. E. Brewerton, "Still-Life," in three colours.

PHARMACY IN IRELAND.

[From our Dublin Correspondent.]

AS I ANTICIPATED IN MY LAST LETTER the candidates for the Council of the Pharmaceutical Society of Ireland have proved to be what is known in sporting circles as "good starters." All the outgoing councillors, save Dr. Merrin, have gone strongly to the poll, and at the last moment their number was reinforced by the addition of Mr. R. W. McKnight, Belfast, whose retirement from the precincts of Mount Street some time ago was the subject of mixed comment. Mr. McKnight, like an old war-horse, sniffed the battle afar off, and despite the gauntlet of company pharmacy thrown down by the seven apostles, threw himself into the breach as became a (Mac) Knight, determined to aid the weaker side and to give his company as *un bon camarade* to his fellow candidates. As the list now stands there are eleven candidates for seven vacancies, and these may be divided into three classes, namely, anti-company, company, and independent. My readers can fit the cap on those concerned. I have already described the "Richmonds," but a word in reference to Mr. McKnight may not be out of place. This gentleman represents no inconsiderable section of the Ulster pharmaceutical craft. For a goodly period he has thrown himself into matters of progress in things affecting the well-being of the trade generally. An active member of the Northern Pharmaceutical Association his name has become a "household word" in Belfast, and to his excellent management of the Ulster Chemists, Limited, may be ascribed the present flourishing condition of that recently floated company. In Mr. McKnight the "perfected number" have a strong adversary, and as his resignation from the Council was perhaps unpremeditated, his action in seeking re-election evinces a laudable desire to serve the Society which it would be a pity to check, more especially under existing circumstances.

SOMEONE HAS BEEN TRYING TO FIND OUT who is the Councillor referred to as sitting on the hedge, and I have been asked to be a little more explicit in my description of that gentleman. I am sorry I cannot gratify that perhaps natural curiosity, but sufficient to say that "Mr. Doubting," as our good old friend Bunyon would call him, has since bravely gone to the hustings, and I shall be very pleased to congratulate him on his return at the head of the list. With regard to Dr. Merrin, who does not seek re-election, it is right to say that his retirement has nothing to do with pharmaceutical politics, and for some time past it has been an open secret that the doctor was only awaiting the expiration of his term of office to bid farewell to his fellow Councillors. The fact is that Dr. Merrin, since he qualified as a physician and surgeon, has gone so rapidly to the front in medical circles, and his *clientèle* having extended proportionately, he has really no spare time at his disposal, and would fain occupy his very few hours of leisure in preparing for further honours in the healing art. I may add in parentheses that Dr. Merrin has just moved into his new professional residence in Harcourt Street, and *on dit* it is not unlikely that the genial doctor will shortly blossom forth as a Fellow of the Royal College of Physicians and Surgeons in Ireland. He will, I understand, still keep on his medical hall in Lower Camden Street, as its closing up would be a great inconvenience to the public.

GENERALLY SPEAKING, the combination of physician and pharmacist is uncommon in Dublin; not that there are few dually qualified in chemistry and chirurgery, but of those who keep both irons hot simultaneously the total might readily be counted on one's five fingers; indeed, so far as I am aware, there are only three gentlemen in the city who keep open shop as pharmacists and practise medicine at one and the same time, and these three are, it happens, doing excellently in their respective districts. The explanation of the scarcity of medical pharmacists lies in the fact that the medical profession proper—those who confine themselves to medicine and surgery, look with no favourable eye on their dually qualified brethren who prescribe and compound alternatively, and, whether accidentally or otherwise, very few medical prescriptions outside those written by the owners of the surgeries reach the laboratories of those concerned. The feeling is expressed by our French neighbours in the axiom *chacun à son métier*, and they say one cannot be a successful chemist and practising physician at the same time, but the contrary is proved in the case of Dr. Merrin and of Drs. Leybourne and Clendining, of Rathmines,

two old pharmacists' assistants, by the way, who do a great amount of good to the poorer classes of patients whose means do not admit of them visiting the half-guinea practitioner, and who hesitate to pauperise themselves by seeking free advice and medicine at the local dispensaries.

THIS BRINGS ME TO THE QUESTION OF CHEMISTS and their relations with the public. In Dublin there is little, if any, counter prescribing by chemists, and as a general rule the pharmacist will not diagnose an ailment or recommend therefor any particular medicine, although he may be in full possession of the knowledge of the remedy sought. But circumstances alter cases, and inasmuch as all things being lawful, all things are not expedient, the paraphrase of this more accurately suits the chemist than perhaps any other class of trader. A few days ago, in the course of an inquest held on the body of a man who obtained from a chemist a most innocent preparation for relieving stomachic pains, and who brought about his end by an overdose of bad whiskey, it transpired that the deceased had obtained from the pharmacist a bottle of medicine, and at once the coroner (himself a medical man) proceeded to put the chemist through his facings, winding up with a bitter complaint against men who had no medical qualifications being allowed to prescribe for the public, and who, he said, if so permitted, would constitute a menace and a danger to the community. It was notorious, he added, that chemists who had no diplomas were daily performing the work of the medical faculty on an extensive scale, in order to attract business to their respective pharmacies. This sapient coroner may be a very clever physician, but he is not a pharmacist, and if rumour speaks true his knowledge of practical pharmacy is not sufficiently extensive to enable him to compete with the average third year apprentice. It is well known that it is not the general practice of the public to run to a doctor on account of every trifling ailment.

THE FOUNDATION OF MEDICAL SCIENCE is experience, and many a chemist who has never set foot as a student inside a college of medicine knows as much about the treatment of common diseases as most doctors, and, without speaking disparagingly of the latter, is less interested in the coin or kudos attaching to the cure. It is conceded on broad principles that it is wrong for chemists to diagnose obscure or uncertain maladies, or to offer advice or compound medicine therefor; but I do think, from my experience of pharmacists, that as a class they do much good in a quiet unostentatious manner by kindly advice given gratuitously to the public—generally to the effect that a doctor should be consulted, and in other similar directions acting as good Samaritans in relieving poor humanity as far as lies consistently in their power. It is a common thing to hear the chemist asked what is good for so and so, and on replying to be asked to supply the article named. The "order" rarely exceeds one or two pence, and more frequently is not charged for at all, as, for example, a few drops of tincture of opium to relieve an aching tooth or a small dose of medicine to assist digestion, or perhaps a restorative in the case of sudden weakness or the accident of the moment, and this, forsooth, is the apprehended danger and public menace. It is said that the sin of wrong-doing consists in being found out, and the sweeping condemnation to the contrary. I hold that the skilled pharmacist is as well able to prescribe for one half the cases treated by the medical faculty as the, in many cases, fledgling physician, who has to consult his Roscoe or Martindale before writing out a simple prescription, and in this opinion I am supported by not a few who have grown grey in pharmacy, but whose hands are tied by the shibboleth of surgical etiquette hallowed by custom into a law. One is not always able to find a doctor, but the chemist's shop can always be located, and if a mixture curing the ailment be procured therefrom the same end is gained, except, perhaps, that the doctor is half a sovereign the poorer and the chemist a couple of *denarii* the richer.

THE FOLLOWING DRUG AND MEDICINE CONTRACTS are announced as having been made:—Messrs. John Clarke and Co., Belfast, to supply the Dungannon Union; Leslie and Co., Dublin, to supply the Ardee Poor Law Guardians; and Boileau and Boyd, Dublin, to supply the Newcastle West Board. The last-named contract was very keenly contested, no fewer than eight tenders having been received.

News in Brief.

THERAPEUTIC ACTIVITY OF ERGOT.—In the last line of the note on this subject, printed at page 345, last week, for "two thousand pounds" read "twenty thousand pounds." Messrs. Parke, Davis and Co., who make "ergot aseptic," a preparation referred to in the same note, ask us to state that they claim no proprietary rights in the preparation.

PROFESSOR J. NORMAN COLLIE and Mr. Woolley have returned from their trip to the Rocky Mountains, where they have been climbing and exploring for the past two years. Their object this year was to climb Mounts Brown and Hooker. Professor Collie was in the Himalayas with Mr. Mummery when the latter met his death, and Mr. Woolley's name is associated with much pioneer work in the Caucasus. In the Rockies they have discovered extensive snowfields and a group of peaks, both of which they have named after Mr. Douglas Freshfield. A full account of the trip will be communicated to the Alpine Club.

DRUG STORES AND DISPENSING.—According to the *Times*, at the Nottingham Guildhall, on September 23, an assistant of Messrs. Boots (Limited) was summoned under the Food and Drugs Acts for selling a compounded drug composed of potassium iodine and syrup of ginger, which was deficient to the extent of 10 per cent. in potassium iodine. Dr. Boobbyer, medical officer of health, proved writing the prescription and making the analysis. The deficiency might be detrimental to a patient. A fine of 20s., including costs, was inflicted. Writing to the *Times* of Monday last, Mr. Richard Bremridge, Registrar of the Pharmaceutical Society of Great Britain, refers to the paragraph referring to the above prosecution, and points out that in that report reference is made to "Messrs. Boots (Limited), chemists and druggists." He informs the editor, however, that the name of "Boot" or "Boots" does not appear on the register of persons entitled to keep open shop as chemists and druggists in Great Britain, which it is his duty to keep as Registrar, appointed under the provisions of the Pharmacy Act, 1868.

THE EUCALYPTUS GLOBULUS IN CORNWALL.—According to the *West Briton*, there is now growing in the garden of Mr. Charles H. Hext, at Polgwin, a specimen of the *Eucalyptus globulus* commonly known as the "Blue Gum Tree," showing quite a large number of seeds. For a tree of this kind to bloom and seed in the district is exceedingly rare, the gardener, Mr. Frank Polkinghorne, never having come across a specimen, either in the neighbourhood or elsewhere. "The seeds are carried on stems, reaching a height of twenty feet, the leaves of this portion of the tree being of a different shape to those on the ordinary branches, being longer and narrower, with the peculiar characteristic of hanging, not as ordinary leaves, with one side to the sky and the other side to the earth, but with faces vertical like the long feathers of a cock's tail."

THE COMPOSITION OF GREGORY'S POWDER.—At Lambeth Police Court, on September 22, Henry Thomas Hines, of Lucas Road, Newington, was summoned, at the instance of the Newington Vestry, for selling, to the prejudice of the purchaser, a certain drug, viz., Gregory's Powder, which was not of the nature, substance, and quality of the article demanded by the purchaser. Inspector Selby, one of the officers of the vestry, sent to the defendant's shop and purchased a sample of Gregory's Powder. The sample was submitted to the public analyst, who certified its constituents to be as follows: Rhubarb and ginger, 36.6; magnesia, 39.8, and carbonate of magnesia, 23.6. In a note appended to his certificate the analyst said, "According to the British Pharmacopœia Gregory's Powder should be made with magnesia, rhubarb, and ginger only, and should not contain any of the carbonate of magnesia, which is a cheaper article than the magnesia prescribed. Magnesia is magnesium oxide." The defendant explained that he had only had the business a few weeks at the time the purchase was made, and that the powder he sold was some he had taken over from the previous owner of the business. He was asked for two ounces of the powder, but was only able to supply one ounce, that being all he had in stock. Mr. Shiel ordered the defendant to pay a fine of 20s., and costs.

CHEMISTS' ASSISTANTS' UNION.—The first annual general meeting of this newly-formed Union will be held at the Horse Shoe Hotel on Thursday, October 6, at 9 p.m. Addresses will be delivered by Dr. Henry Dutch and Mr. Glyn-Jones. Amongst those who have promised to attend we notice the names of Dr. C. Taylor, Messrs. E. A. Holloway, A. H. Soloman, C. Islip, N. Smith, H. Lloyd, and many others well known in the trade. All assistants are invited to be present.

SOCIAL MEETING AND PRESENTATION AT EDINBURGH.—On September 23, the employes of Messrs. Raimes, Clark and Co., Edinburgh, held their annual social and dance in Lodge Trafalgar Hall, Leith. Mr. W. A. Davies presided, having Mrs. Clark on his right, and Mr. Clark on his left, Messrs. G. Radford and W. J. B. Halley being croupiers. After an excellent tea, Mr. Davies in a few appropriate words welcomed the large company, and expressed his pleasure at having Mr. and Mrs. Clark present. Thereafter a capital programme of music and song was carried through, the performers all being employes or their wives and daughters. The mandoline duet by Misses Davies and Halley, and the cultured singing of Miss Coates were much appreciated. The comic songs of Messrs. Donaldson ("Graham Courtney") and Hunter caused great amusement. Among the other performers were Messrs. Cunningham, Davidson, J. H. Davies, and J. P. Gibb, Mrs. Jamieson, and Misses Amos, G. Davison, and Hughson. Miss Davies was accompanist. During and interval in the programme a presentation was made to Mr. and Mrs. Clark from the employes on the occasion of their marriage. This took the form of a massive silver loving cup on an ebony plinth, a replica of one presented to Sir Andrew McDonald, ex-Lord Provost of Edinburgh. In most felicitous terms Mr. W. A. Davies made the presentation, and wished in the name of the staff long life, health, and prosperity to Mr. and Mrs. Clark. In the course of his reply Mr. Clark, in thanking the employes for their very handsome gift to him, which he said would be considered an heirloom in his family, referred to the loyal manner in which they served the firm, and hoped the same cordial relations would always subsist between them. After votes of thanks to the chairman, croupiers, and committee, dancing was engaged in by seventy couples, and kept up with unabated vigour till 4.30 a.m. The cup is in the style of the early part of the seventeenth century and closely reproduces the form then in fashion, a fine example of which may be found in the pair of small cups, bearing the date mark 1682, the property of George Heriot's Hospital, and now in the keeping of the Lord Provost, as chairman of the governors. While adhering to the quaint form shown in these, the ornament adopted is admirably suited to the larger scale on which this cup is made, and consists of bold curved fluting carried round the lower parts and a raised band of spiral work above, each side having a large oval shield, surrounded with rich, effective mantling of antique scrollwork. The cup, which has two handles of simple but elegant form, stands 7½ inches high, and is mounted on an ebony plinth. One shield bears the following inscription: "Presented to Mr. and Mrs. Clark, on the occasion of their marriage, by the employes of Messrs. Raimes, Clark and Co., Edinburgh, August 24, 1898." The other shield is engraved with Mr. Clark's monogram. It has been manufactured and supplied by Mr. James Aitchison, silversmith to the Queen, 80, Princes Street, Edinburgh.

ROYAL PHOTOGRAPHIC SOCIETY.—On Saturday, September 24, the *soirée*, which inaugurates the annual exhibition of the Royal Photographic Society, was held in the gallery of the Royal Society of Painters in Water Colours, 5A, Pall Mall East. There was a very large attendance, nearly 600 ladies and gentlemen availing themselves of the invitations of the President and Council. In the unavoidable absence of the President of the Society, the Earl of Crawford, the guests were received by Mr. Chapman Jones, Vice-President. Amongst others of the officers and Council present were Sir H. Trueman Wood and Mr. John Spiller (past Presidents), Mr. G. Scamell, Colonel J. Waterhouse, Mr. R. Child Bayley, Mr. Thomas Bedding, Mr. T. Bolas, Mr. C. H. Bothamley, Mr. F. A. Bridge, Mr. W. E. Debenham, Mr. A. Haddon, Mr. A. Horsley Hinton, Mr. A. Mackie, Mr. J. W. Marchant, Mr. W. Thomas, Mr. H. Snowden Ward, and Mr. Leon Warneke. Professor Meldola was also present during the evening. A report of the exhibition will be found on another page in this issue.

MESSRS. AYRTON AND SAUNDERS, Hanover Street, Liverpool, have just completed the remodelling of the dispensing and compounding department of Messrs. Backhouse's pharmacy, Dundalk, which is now claimed to be on a par with any pharmacy in the country for comfort and elegance.

EDINBURGH PHARMACY ATHLETIC CLUB.—The last of the series of 50 yards swimming handicaps was brought off in Dalry-Baths on September 26, when the competitors finished in the following order; G. H. C. Rowland, 1; J. Grieve, 2; A. G. Paterson, 3; J. Lockerbie, 4; L. S. Lamb, 5. The prize winners in the competition (four races) being: 1, G. C. H. Rowland 15 points; 2 and 3, J. Grieve and L. S. Lamb 14 points each. The tie between the two latter will be swum off on October 10.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.—At a Committee meeting of this Association, held on Tuesday last, the 27th ult., Messrs. Hoblyn and Palmer were elected members. A vote of sympathy was passed to Mr. Mathew (Saltash), and hopes expressed of a speedy recovery from his painful illness. Mr. Mathew, who has been the only chemist in Saltash for about thirty years, is suffering from a cancerous growth in the tongue, and recently became a patient at the St. Barnabas Hospital. He has undergone an operation and gained much relief, and is now progressing satisfactorily. Mr. Kelly, of Devonport, represented Mr. Mathew during his absence, and it is interesting to note that it was Mr. Kelly's father whom Mr. Mathew succeeded thirty years ago.

ADDITIONAL TELEGRAPHIC FACILITIES.—The Post Office authorities give notice that on October 1, the compulsory repetition of the telegram of advice of a telegraph money order will be abolished, and from that date a fee for repetition will only be charged when the sender of an order gives special directions for the telegram of advice to be repeated at his own expense in order to ensure accuracy in transmission. On and from the same date the sender of a telegraph money order will be allowed, on paying for the additional words required, to add to the official telegram of advice any short communication which he may wish to send to the payee. On the arrival of such telegram of advice at the office of payment, a copy of the private communication will be enclosed with the order and delivered to the payee at the address given in the telegram, or will be handed to him at the paying office, as the case may be.

AT THE WORKING MEN'S COLLEGE, 46, Great Ormond Street, W.C., a course of about thirty lectures on electricity and magnetism will be delivered by Mr. Joseph J. Denton, on Monday evenings during the coming winter, beginning October 3. Courses of lectures on elementary, practical, and advanced theoretical mechanics will be delivered by Mr. Thomas H. Hill, Inter. B.Sc., Lond., on Tuesday and Wednesday evenings, beginning October 4. The fees are 5s. for each course, covering the right to use the common room, library, etc. Particulars of other classes may be obtained from the secretary of the College.

AT THE MEETING OF THE SANITARY INSTITUTE a resolution was carried, on the motion of Alderman Harrison, of Sunderland, that places where ice cream is made should be placed under sanitary control, and that registration of the vendors of ice creams should be established.

THE "ALLENBURYS" CRICKET CLUB played its last match for the season on Saturday, September 24, the opposing team being the "Allen" C.C. (Stafford Allen and Sons). The game ended with a score of 44, "Allens," against 52 for six wickets, "Allenburys." The club has played 11 matches during the season against clubs connected with the trade, with the following result. Won, 6; drawn, 3; lost, 2.

CITY SCHOOL OF CHEMISTRY AND PHARMACY.—An examination was held at the above School on Monday, September 19, for one or more scholarships entitling the successful candidate to free tuition at the School. As a result of this examination the Principal has decided to divide the scholarship awarded between Messrs. H. Bristow and T. W. Prosser, who were bracketed equal by the examiners. The awarding of the second scholarship has been deferred.

MARKET REPORT

London Report.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

SEPTEMBER 29, 1898.

Business during the past week has been quiet, the chief changes which have taken place being an advance in value of Ipecacuanha, which buyers so far decline to follow to the full extent of holders' views. Price of Quicksilver has also been advanced; Mercurials are, however, so far unchanged in price. Quinine is firm. Cocaine rather dearer. Acid Citric steady. Acid Tartaric and Cream of Tartar quiet, but fairly steady. Iodides and Bromides unchanged, as also are Phenacetin and Sulphonal. Acetanilid for large quantity lower, same may be said of Potash Permanganate. Phenazone weak. Acid Carbolic quiet. Glycerin firm. Cod-liver Oil quiet. Sulphate of Ammonia weak. The following are actual prices of articles of principal interest:—

ACETANILIDE.—It is reported that there have been offers at below 1s. per lb. for ton lots, and more especially for export; price for smaller quantity remains unchanged at 1s. to 1s. 2d. per lb.

ACID BORACIC.—Firm at 24s. per cwt. for crystals and 26s. per cwt. for powder.

ACID CARBOLIC.—Quiet but fairly steady at 6½d. to 6¾d. for 35° to 36° ice crystals in large bulk; other qualities and packing in proportion. *Crude*: 60° F., 1s. 11d.; 75° F., 2s. 3d. per gallon. *Liquid*: 95 per cent., of pale straw colour, 1s. 1d. to 1s. 2d. per gallon in large casks.

ACID CITRIC.—Is unchanged, makers being firm at 1s. 3d. per lb. for crystals, with second hand sellers at 1s. 2½d. per lb.

ACID OXALIC.—A steady business on the spot at 3½d. per lb.

ACID TARTARIC.—Is fairly steady at 1s. 1d. per lb. for *English*, but *foreign* is slightly easier at 12½d. per lb.

ALUM.—Loose lump, £5 7s. 6d. per ton; ground in bags, £6 per ton.

AMMONIA COMPOUNDS.—*Sulphate* is again lower and closes flat at £9 17s. 6d. for grey prompt, 24 per cent. London. *Hull* £9 16s. 3d. *Carbonate* steady at 3¼d. to 4d. per lb., according to package. *Muriate* quiet at 22s. 6d. per cwt., for rough and 26s. to 27s. 6d. per cwt. for best white chemically pure. *Sal ammoniac*: Sublimed firsts 35s. per cwt., seconds 33s. per cwt., crushed for batteries 35s. and 37s. per cwt. respectively. *Bromide* steady at 2s. 1d. per lb. *Iodide* 14s. 6d. per lb.

ARSENIC.—Steady at 19s. per cwt. for *powder*, and 34s. per cwt. for *lump*.

BLEACHING POWDER.—Is steady at £6 15s. to £7 5s. per ton on the spot, according to quantity and packing.

BORAX.—Firm at 14s. per cwt. for *Lump*, and 14s. 6d. to 15s. per cwt. for *Powder*.

BROMIDES.—Are steady at unchanged prices.

CAMPHOR.—*Crude* continues very firm and appears to be scarce. *English* refiners have again advanced their prices by one half-penny per lb. on last week's quotations.

CASCARA SAGRADA.—Market is quiet but steady at 22s. 6d. to 25s. per cwt. according to quantity and age of the bark.

CLOVES.—Privately *Zanzibar* are firm but quiet. October to December delivery business done at 4d. to 4½d.; January to March same figure. At auction 58 bales *Amboyna* bought in at 4¼d.; also 22 cases good to fine picked *Penang* at 11d. to 1s.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: Commercial, 1s. 2d.; pure 2s. 3d. per gallon. *Benzole*: 50 per cent., 10½d.; 90 per cent., 10d. per gallon. *Crude Naphtha*: 30 per cent. at 160° C. 4½d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 6d.; 90 per cent. at 160° C., 1s. 4d.; 90 per cent. at 190° C., 1s. 3d. per gallon.

COCAINE.—The chief makers now quote 9s. 6d. to 9s. 9d. per oz. for the *Hydrochlorate* for 100 oz. lots in 25 oz. tins. There are, however, sellers from second hand at somewhat below these figures.

CODEIA.—Is firm at 12s. 6d. per oz.

CODLIVER OIL.—Market is steady at 82s. 6d. to 85s. per barrel *f.o.b.* for best new non-congealing *Lofoten* oil in tin-lined barrels of 25 gallons.

CREAM OF TARTAR.—Is quiet at 72s. to 77s. for first white *Crystals* on the spot, and 74s. to 80s. per cwt. for *powder*, according to quality.

GINGER.—*Cochin*, dull; of 1221 bags rough 275 sold, shrivelled pickings, 11s. 6d.; cuttings, 13s.; lean small and ends, 18s. 6d.; ordinary small washed rough, partly mouldy, 19s. to 19s. 6d. Of cut kinds only 12 cases sold, B cut 57s. 6d.; A bold cut, 85s.; C cut bought in at 37s. to 45s. *Jamaica* also dull; of 106 barrels only 10 barrels sold, small at 67s. 6d.

GLYCERIN.—Is very steady at 52s. 6d. to 55s. per cwt. for best *English*, and 54s. to 65s. per cwt., according to brand, for best *German* white double distilled chemically pure, 1260° quality, in tins and cases.

IODIDES.—Without alteration in price, and are in fair demand.

IPECACUANHA.—A large business has been done in both *Rio* and *Carthagera* qualities. For the former 9s. 6d. per lb. has been paid for heavily damaged quality, and market closes firm at 10s. per lb. sellers. For *Carthagera* the demand has been very active, and for the few remaining bales in stock 7s. 6d. per lb. is asked.

MERCURIALS.—So far makers have not followed the advance in value of quicksilver; prices therefore remain unchanged.

MORPHIA.—Quiet and without change at 5s. for the *Hydrochlorate powder* in quantity and bulk packing.

OILS (FIXED) AND SPIRITS.—*Linseed* very firm, London spot pipes £17 5s., barrels £17 12s. 6d. *Rape* dearer, ordinary brown spot £21 15s.; refined spot £23 5s. to £23 10s. *Ravison* naked spot £19 10s., November-December £18 10s., January-April £18. *Cotton*, steady, London crude spot £14 5s., November-April £13 5s.; refined spot £15 10s. to £16 10s., according to make. *Olive*: Spanish £22, Levant £29 to £32, Mogador £29 to £32. *Coconut* firm, Ceylon spot pipes £24 5s., near at hand £23 5s. to £23 10s., *c.i.f.*, October to December £23 5s., *c.i.f.* *Cochin* spot pipes and hogsheads £27 10s., near at hand £26 *c.i.f.* October to November £26 to £26 10s., *c.i.f.* Mauritius spot £24 5s. to £24 10s. in hogsheads. *Palm*: Lagos spot £22 10s. *Turpentine* firm. American spot 22s. 3d. to 22s. 4½d., October to December 22s. 7½d. to 22s. 9d., January to April 23s. to 32s. 1½d. *Petroleum* firm. Russian spot and October to December 4¾d. American spot 5¾d. to 5¾d., October to December 5¾d. Water white 6¾d. to 6½d., October to December, 6½d. per gallon. *Petroleum Spirit*: American 6d. to 6¾d., deodorised 6½d. to 6¾d. per gallon.

OPIUM.—Market is quiet, prices remaining, however, nominally unchanged.

PHENACETIN.—Quiet at 3s. 9d. to 4s. 3d. per lb., *Bayer's* make being still held for 5s. 6d. per lb. in bulk packing.

PHENAZONE.—Is weak at nominally unchanged prices. The price of *Dr. Knorr's Antipyrine* remains firm and unchanged.

POTASH COMPOUNDS.—*Chlorate* quiet but steady at 3½d. to 3¾d. per lb. *Bromide* unchanged at 1s. 9½d. per lb. *Iodide*, 10s. 3d. per lb. *Bicarbonate*, 30s. to 35s. per cwt. *Yellow Prussiate*, 6¾d. to 7d. per lb. for *English* make. *Red Prussiate*, 1s. 2d. to 1s. 3d. per lb. *Bichromate*, 3¾d. to 3¼d. per lb. *Permanganate*, lower at 52s. 6d. per cwt. for small crystals and 57s. 6d. for large crystals.

QUASSIA WOOD.—Is scarce; although demand is not active prices are firm at £5 per ton for logs.

QUICKSILVER.—Has been put up 5s. per bottle to £7 5s. from first hand.

QUININE.—Market is firm and there are few sellers below makers' prices, best *German* brands of the *Sulphate* are quoted at 10d. per lb. for 1000 oz. lots in 100 oz. tins and cases.

SALPETRE.—*English* refined 20s. to 21s. per cwt. according to package.

SODA COMPOUNDS.—*Crystals* continue firm at 57s. 6d. per ton, ex ship terms. *Ash*: £5 to £5 10s. per ton on the spot, according to strength and packages. *Bicarbonate* steady at £7 5s. per ton for the 97 per cent. and 18s. 6d. per cwt. for the fully bicarbonated quality. *Caustic*: 70 per cent., £8 per ton. *Bichromate*: 2¼d. to 3d. per lb. *Bromide* steady at 2s. per lb. *Iodide* quiet at 11s. 7d. per lb. *Hyposulphite*: 6s. to 8s. per cwt., according to brand. *Nitrate*: £7 12s. 6d. per ton for ordinary and £8 2s. 6d. per ton for refined.

SPICES (VARIOUS).—*Black Pepper*: Only 40 bags Penang offered, and bought in at 4¼d. *White Pepper*: Only 20 bags mixed Penang offered and sold at 7¼d. *Chillies*: 20 bags good Japan bought in at 45s. *Cassia Buds*: 4 bags wild Bombay bought in at 30s. *Cinnamon Chips*: 126 bags Ceylon sold at 4d. to 4¼d. *Mace* dull. 40 cases Penang bought in; pickings, 1s. 3¼d. to 1s. 4d.; ordinary to fair, 1s. 7d. to 1s. 9d.; 35 packages West India sold at 1s. 4d. to 1s. 6d.; pickings, 1s. 3d. *Pimento* flat. Of 509 bags only 70 bags sold; ordinary grey, 4d.; middling, 4¼d.; fair, 4¾d.

SUGAR OF LEAD.—*English* steady at 31s. per cwt. *Foreign* firm at 27s. 6d. per cwt. on the spot.

SULPHATE OF COPPER—Dearer at £16 to £17 10s. per ton according to brand.

SULPHONAL—Is unchanged, the two makers still supplying in limited quantities at 7s. 3d. per lb. for bulk packing.

SULPHUR—Steady. *English*: Roll 7s. 6d. to 8s. per cwt., flowers 11s. per cwt. *Foreign*: Koll 6s. 6d. per cwt., flowers 7s. per cwt.

To-day's drug auctions passed off quietly, a considerable number of the lots offered failing to find buyers. Chief point of interest was the advance in price of Ipecacuanha. Tinnevelly Senna was also dearer. Cardamoms fairly steady. The following are the particulars as far as it is possible to give same up to time of going to press.

ALOES.—Fair hard bright *Cape* realised 26s. per cwt., ditto not quite so good 24s. 6d. down to 19s. for common drossy and 16s. for low inferior quality. 30 kegs good *Socotrine* held for 75s. per cwt. 100 boxes fair livery *Curacoa* sold at 23s. to 27s. per cwt., down to 12s. 6d. for low inferior. 117 boxes capey *Curacoa* bought in at 16s. per cwt.

ANISEED.—15 bags fair *Spanish* held for 28s. per cwt.

BALSAM COPAIBA—1 cask and 5 cases of fair quality bought in at 1s. 7d. per lb.

BALSAM PERU.—3 cases bought in at 8s. 3d. per lb.

BALSAM TOLU.—6 cases bought in at 1s. 8d. to 1s. 10d. per lb.

BUCHU LEAVES.—Brownish-green round were held for 5¼d. per lb., rather yellowish for 6¼d., and good green for 6½d. per lb. Fair longs bought in at 6d. per lb.

CAMPHOR.—10 cases refined sold cheaply without reserve at 1s. 1d. to 1s. 1¼d. per lb. for 1-oz. tablets.

CARDAMOMS—Were in fair supply, the bulk selling at about steady values. Good bold pale *Ceylon-Mysore* realised 3s. 7d. per lb., the second size, 3s. 1d. per lb.; small, 2s. 4d. to 2s. 7d. per lb. *Seed* realised 2s. 10d. to 3s. per lb., being slightly easier. Good *Malabars* held firmly at 2s. 9d. to 3s. 2d. per lb.

CIVET.—3 horns of good fair quality were bought in at 12s. per oz.

COLOCYNTH.—1 case inferior and broken *Spanish* sold at 6d. per lb.; 1 case good ditto bought in at 9d. per lb.

COLOMBO ROOT.—8 bags fair washed with stem were bought in at 14s. per cwt.; poor sorts with stem selling at 10s., ditto rather better being held for 17s., and fair washed with stems for 35s. per cwt.

CROTON SEED.—Good fair sold at 80s. to 85s., rather darker in colour at 72s. 6d. to 75s. per cwt.

CUBEBS.—53 bags of medium to fair quality were bought in at 25s.; 30 bags slightly mouldy at 24s. per cwt.

CUTTLEFISH.—Bold pale were bought in at 4d., small partly broken selling at 2¼., 8 cases very small at 1d. per lb.

DILL SEED.—32 bags of somewhat inferior quality were held for 9s. to 11s. per cwt.

DRAGON'S BLOOD.—Small seedy lump sold at £6 10s. per cwt., dull saucers and squares part sold at £7 10s. per cwt.

ERGOT OF RYE.—Fair *Spanish*, slightly weevily, bought in at 9d. Sound grey *Russian* bought in at 1s. per lb.

FENNEL SEED.—15 bags were held for 10s. per cwt.

GALANGAL ROOT.—10 bales bought in. at 26s. per cwt.

GAMBOGE.—Fair to good pipe, partly sold at £8 17s. 6d.; balance bought in at £8 5s. to £8 15s., and £8 for good pickings down to £6 5s. for ordinary ditto.

GUAZA.—23 robbins, consisting partly of brownish tops, were held for 6½d. per lb.

GUM ARABIC.—2 cases fair sorts bought in at 110s. per cwt.

GUM ASAFETIDA.—Heavy pinky block was bought in at 52s. 6d. per cwt.; ditto greyer and more sandy at 40s. to 42s. 6d.

GUM BENZOIN.—11 cases low *Siam* siftings sold at 50s. per cwt. Low to medium *Sumatra* sold at £4 12s. 6d. to £5 15s.; medium

to fair ditto at £6 to £7 5s.; very good ditto held for £10 10s. per cwt. Medium to fair *Siam* bought in at £13 to £13 10s. per cwt., up to £14 for beans and £16 for fair small free gum.

GUM KINO.—2 cases *African* held for 3s. 6d. to 4s. per lb.; 11 boxes *Cochin* part sold previously at 10s. per lb., balance being held for this price.

GUM MYRRH.—5 bales dark siftings sold at 35s. to 38s. per cwt.; fair sorts bought in at 55s. to 60s.; good sorts at 90s. to £5 10s. per cwt.

HONEY.—2 packages *West Indian* sold at 20s. 6d. per cwt. 16 cases *Australian* bought in at 19s.

IPECACUANHA.—Holders of both *Rio* and *Carthagera* kinds had put up their prices, the former to 10s. to 10s. 3d. per lb., and the latter to 7s. to 7s. 6d. per lb., which prices buyers were not prepared to pay yet. 1 odd bale *Rio* sold at 9s. 4d. per lb., which under the circumstances was cheap.

IGNATIUS BEANS.—10 bags good sound bought in at 4d. per lb.

KAMALA.—Fair bright quality was bought in at 1s., dull at 6d. per lb.

KOLA NUTS.—Good bright *West Indian* held for 6d. per lb.

LIME JUICE.—6 hogsheads concentrated *West Indian* were taken out at £16 per 108 gallons.

MUSK.—Thin skin *Tonquin*, medium to bold, few slightly broken were held for 67s. 6d. per cwt.; 4 tins thin skin grey, one or two partly damp for 33s.; 6 bottles grain *Nepaul* bought in at 35s. per oz.

NUX VOMICA.—Medium to bold very dull, Ceylon sold cheaply at 5s.; rather small but decidedly brighter being held for 6s. per cwt.

OILS ESSENTIAL.—1 case *Nutmeg* held for 2¼d. per oz. *Winter-green*, 1 case Dodge and Olcott's bought in at 5s. 3d. per lb. *Lime*, 3 cases distilled, *West Indian* held for 3s. 3d. per lb. 10 cases *Cajaptua* bought in at 3s. 7¼d. per bottle of 20-oz. net. 7 cases *Japanese Peppermint* demethylised held for 3s. 3d. per lb. 2 cases fine *Cinnamon Bark* for 3s. 3d. per oz. 20 cases *Citronella* bought in at 1s. 2d. per lb., while 5 drums, offered without reserve, were withdrawn, there being one bid, viz., 11½d. per lb. 5 cases Hale and Parshall's *Peppermint* bought in, 4s. 6d. per lb. being price required. 4 cases *Cassia* oil, containing according to Mr. C. J. Umney's analysis, 84 per cent. cinnamic aldehyde, were bought in. 2 cases *French Geranium* oil were held at 1s. 6d. per lb. 1 bottle *Ylang Ylang* bought in at 14s. 6d. per oz., 8 cases commercial oil *Eucalyptus* at 10d. per lb.

ORANGE PEEL.—Fair thin cut was bought in at 7d. per lb.

ORRIS ROOT.—4 serons *Mogador* offered without reserve, sold at 14s. per cwt.

PATCHOULI.—9 bales of medium quality taken out at 4d. per lb.

PERUVIAN BARK.—4 serons sold without reserve at 1¼d. per lb.

RHUBARB.—*Canton* rough pickings, medium colour, round and flat bought in at 1s. per lb., bold round held for 1s. 2d., small to medium selling at 1s., small trimming at 1s. 4d., medium to fairly bold flat *Canton* held for 1s. 3d., fair bold flat high dried sold at 11d. per lb. down to 10d. for small ditto, and at 6d. per lb. for rough horny round. Good small round *Shensi* trimming, part dull coat, was held for 2s. 6d. to 2s. 9d., medium rough ditto for 2s. per lb. 1 case small round of fine colour sold at 2s. 9d. per lb.

SAFFRON.—52 tins fair *Valencia* were held for 36s. to 38s. per lb.

SARSAPARILLA.—5 serons *Honduras* were held for 1s. 6d. per lb.

SENNA.—Of *Tinnevelly* 735 bales were offered, being of a better quality than the previous arrivals this season. Competition was good, and all sold at steady to rather dearer prices, especially for the better selections. Small leaf of fair colour realised 2d. to 2½d. per lb., medium 2½d. to 3d. per lb., and fair bold up to 4½d. per lb. Good pods 1½d. per lb. For *Alexandrian* there was no demand, the selection being very poor.

SOY.—20 casks *China* held for 1s. 4½d. per gallon.

TAMARINDS.—*West Indian* sold at 8s. 6d. to 9s. 6d. per cwt.

TONQUIN BEANS.—Fair frosted *Paras*, sold at 2s. per lb.; black ditto being bought in at 1s.; 2 cases foxy sold at 8d.; fair medium *Angostura* held at 3s. 9d. per lb.

TURMERIC.—One bag *East Indian* sold without reserve at 11s. per cwt.

VANILLA.—Prices about steady to slightly lower, supply was more than sufficient for the trade, and a not inconsiderable proportion of the offerings were bought in, good *Bourbons* realised 15s. to 19s. per lb. for 3½ to 7½-inch beans, and 11s. to 13s. for mouldy. The long lengths were bought in at 20s. to 22s. per lb. *Tahiti* beans are held for 8s. 6d. per lb. without finding buyers.

WAX.—Five casks good *Jamaica* sold at £6 12s. 6d. per cwt., fair *Madagascar* was bought in at £6 10s., *Zanzibar* part sold cheaply at £5 10s. subject to approval, *Madras* bought in at £6. Six packages *West Indian* at £6 10s. per cwt., 48 cases *Japan*, part sold previous to auctions, rest being bought in at 34s. per cwt.

Newcastle Chemical Report.

SEPTEMBER 28, 1898.

A quieter tone prevails in this market. Baltic shipment are nearing to a close, and little new business coming forward. Prices unchanged, and are quoted thus: Soda Crystals, basis, 45s. to 52s. 6d.; Bleaching Powder, £6 to £6 5s.; Caustic Soda, 52 per cent., £4 5s.; Alkali, 52 per cent., £5 2s.; Sulphur, £4 15s. to £5 per ton.

Manchester Chemical Report.

SEPTEMBER 28, 1898.

In heavy chemicals there is little new to report, except that there is some business forward over next year. Some complication is added owing to the fact that the over plus of American make of Ammonia Alkali is being offered in Liverpool at very low prices. Consumers, therefore, are averse to speculate forward, as there appears to be no level yet that figures will not touch. In general articles, there are one or two advances. Arsenic has gone up to £17, and Sulphate of Copper £18 per ton, while £18 10s. is quoted for spring delivery, best brands, Manchester. Brown Acetate of Lime is very steady and somewhat higher at £5 5s. to £5 7s. 6d. per ton, Welsh and American, delivered here. Naphthas continue stiff, and little offering. Benzols show no change on the abnormally low figures of the past few weeks. Pitch is firmer, and Creosote continues to improve, but Anthracene is dull. Aniline Oil 5½d., and Salt 4½d.

Liverpool Market Report.

SEPTEMBER 28, 1898.

A slight but all-round improvement has been noticeable in the week's business, both as regards the quantity of produce changing hands and the prices obtained. Considerable advances have taken place in the price of nearly all varieties of Linseed, whilst Canaryseed has improved in tone. In African produce a fair amount has been done in Sierra Leone Ginger and dried Kola Nuts at fully late rates. South American imports of Honey, Beeswax, Spermaceti, and Quillaya Bark have commanded a good share of attention and have sold at good prices. Oils generally are following the upward move, Linseed Oil and Cottonseed Oil having increased their quotations. The price of Quillaya Bark has not yet reached £20 per ton, as expected, for holders have been induced to part with some, at any rate, at £19. Chemicals are brisker, but in inquiry and to a smaller extent in demand, with better prices for Chlorate of Potash, Sulphate of Copper, and Ammonia Sulphate.

AMMONIA SALTS.—*Carbonate* 3d. per lb. *Sal Ammoniac* 35s. and 3s. per ton. *Sulphate* £10 per ton.

BEESWAX.—*Chilian* has been selling at £6 17s. 6d. per cwt.

CANARYSEED—Is steady at 28s. to 30s. per 464 lbs. for Turkish, of which 400 bags sold at 28s.

COPPERAS—Still rules 39s. per ton Lancashire, and 37s. Welsh.

COPPER SULPHATE—Is dearer, for prompt delivery £17 per ton, forward £17 10s. to £17 15s., according to date.

GINGER.—Sierra Leone has sold well at 19s. per cwt.

HONEY.—About 450 barrels of Chilian were disposed of early in the week at 25s. per cwt. for Pile X; 22s. 6d. for Pile 1; and 21s. 6d. for Pile 3. Later, 30 barrels Pile 1 made 23s. per cwt.

KOLA NUTS.—50 packages of dried changed hands at 1½d. per lb.

LINSEED—Has advanced generally about 1s. per cwt. over last week's rates. To arrive before end of year. North American is quoted at 34s. 6d. per 416 lbs.; Calcutta, 37s. 4½d.; and River Plate, 34s. The spot sales include 60 bags of Larnaca at 41s. to 42s., and 100 bags of "feeding quality" Bombay at 39s.

OILS (FIXED) AND SPIRITS.—*Castor* is continuing in good demand with a firm quotation for all qualities. Calcutta 3½d. per lb., French 3d. to 3½d. quay and store, and Madras 3½d. *Olive* is

steady, with Spanish oils quoted at £29 10s. to £30 10s. per tun on the spot. For shipment Malaga is now at £31 per tun, cost and freight. *Linseed* has been advanced in price to 18s. 6d. and 19s. per cwt. by Liverpool pressers owing to upward move in the price of seed. *Cottonseed* has also gone up, viz., 16s. to 16s. 3d. per cwt. *Spirits of Turpentine* is easier by 6d. per cwt., and a moderate amount of business has been done in it at 22s. 6d. per cwt.

POTASH SALTS.—*Bichromate*: 3½d. per lb. *Chlorate* dearer, 3½d. to 3¾d. per lb. *Cream of Tartar* is scarce on the spot, 75s. per cwt. *Pearlashes* are chronically nominal at 34s. to 35s. per cwt. *Potashes*: 22s. 6d. per cwt., to arrive. *Prussiate* is quiet at 6¾d. per lb. *Saltpetre*: 21s. per cwt.

QUILLAYA BARK.—236 bales were offered at auction, but offers of £19 per ton were declined, however since then business has been effected at that figure.

SODA SALTS.—*Bicarbonate*: £6 15s. per ton. *Borax*: £13 10s. to £14 per ton. *Caustic*: 77 per cent., £7 15s. per ton; 70 per cent., £7 1s. 3d. *Crystals*: £2 17s. 6d. to £3 per ton. *Nitrate* is in fair demand at 7s. 7½d. to 7s. 9d. per cwt.

Marriages

BRICE—CARMICHAEL.—On September 24, at the Parish Church, Aldridge, Staffs, by the Reverend C. M. Roberts, B.D., Rector of Aldridge, Ernest Brice, L.R.C.P., L.R.C.S., L.F.P.S., of Chaseterrace, seventh son of the late John Brice, of Leicester, and of Wirksworth, Derbyshire, to Olive Gorrie, eldest daughter of Peter Carmichael, of Chaseterrace, near Walsall.

BLACK—ROBERTSON.—At the Grand Hotel, Aberdeen, on the 24th inst., by the Rev. Robert Slessor, M.A., Trinity Parish, John Black, chemist, Aberdeen, to Nina, youngest daughter of the late James Smith Robertson, Aberdeen.

Trade Notes.

MESSRS. ALLEN AND HANBURYS, LIMITED, London, have established a depôt in Hamburg, with a view to extending their trade to Germany, and have appointed the firm of Otto Fuerst, Hamburg, their sole representatives for that country.

MESSRS. EVANS, GADD & Co., of Exeter, are offering an attractive novelty in their Victoria Violets Soap. It is a superfatted soap, perfumed just to the right degree, and should sell well at one shilling per box of three tablets, each of which is enclosed in a pretty wrapper. The retail price is protected by P.A.T.A. agreement, and the trade price is nine shillings per dozen boxes.

Personal.

MR. E. BROWNING, chemist and druggist, has recently opened a Pharmacy in Exeter Street, Plymouth.

DR. JAMES LEICESTER, F.I.C., late chief lecturer on chemistry and metallurgy at the Merchant Venturers' Technical College, Bristol, has been elected as the head of the Chemical Department of the Municipal Technical College at Derby.

MR. WILLIAM MARTINDALE has been elected an honorary member of the American Pharmaceutical Association, upon the recommendation of the Council of that body, on the occasion of the forty-sixth annual meeting, held at Baltimore, Md., during August last. It is pleasing to record this compliment paid to one of our leading practical pharmacists by representative fellow-craftsmen in the United States. No one in this country has done more than Mr. Martindale to advance scientific pharmacy, and distinctions such as that mentioned serve as evidence of the manner in which his endeavours are appreciated abroad.

MR. F. G. DE FAYE, chemist and druggist, David Place, Bath Street, Jersey, has recently erected at the rear of his pharmacy a new and fully equipped factory for the manufacture of table waters. In an account of a visit paid to the factory by a representative of the *Jersey Times*, some interesting details are given, it being described as "a model factory." Mr. de Faye is the sole contractor for the supply of aerated waters to Her Majesty's troops in the island, and has received many flattering testimonials from commanding officers, mess presidents, etc.

Publications Received.

SECOND STAGE MATHEMATICS. Edited by WILLIAM BRIGGS, M.A., LL.B., F.C.S., F.R.A.S. Pp. viii.+219. Price 3s. 6d. London: W. B. Clive, University Correspondence College Press, 13, Bookseller's Row, Strand, W.C. 1898. From the Publishers.

A SHORT MANUAL OF ANALYTICAL CHEMISTRY, by JOHN MUTER, Ph.D., F.R.S.E., F.I.C., F.C.S. Eighth Edition. Illus. Pp. xiv. + 229. Price 6s. 6d. London: Simpkin, Marshall, Hamilton, Kent, and Co., Ltd. 1898. From the Publishers.

Poisoning Cases.

LAUDANUM.—At Birmingham on Friday, September 23, an inquest was held concerning the death of Charles Ashton (63), brass-dresser. It appears that he lost his wife some few months ago, and since then had been despondent and could not sleep at night. On Tuesday, September 20, he was found to be suffering from the effects of poison, and was taken to the General Hospital, where he died two hours after admission. Two bottles which had contained laudanum were found in his possession. The jury returned a verdict that "Death was due to an overdose of laudanum."

CHLORODYNE.—William Mallon, a painter, of Landport, on Wednesday, September 21, was found by a police constable on a seat near Victoria Park insensible. He was taken to the Landport Hospital and medically attended, but death took place the next morning, the cause being an overdose of chlorodyne, taken to relieve pain. A jury subsequently returned a verdict of "Death from misadventure."

CARBOLIC POISONING.—The Manchester City Coroner, Mr. S. Smelt, held an inquest on September 23, regarding the death of Charles Warriner, labourer, who was stated to have bought six-pennyworth of carbolic acid, which he was shortly afterwards seen to drink. He was taken to the Infirmary, where he died. The Coroner spoke of the frequency of carbolic poisoning as a method of suicide, and said he could hardly understand it, seeing that to take carbolic acid was like swallowing red hot coals. If people only realised the terrible agony they would have to endure and the slow death which followed he was sure they would not take it. The jury suggested that some restriction should be placed upon the sale of it. The Coroner said the Legislature had no more contemplated that people would poison themselves in this way than that they would swallow live coals. However, cases of the kind were becoming so common that he thought it would be a good thing if something were done to prevent the indiscriminate sale of carbolic acid. As it was anybody could sell it. A verdict of "Suicide whilst insane" was returned.

Partnerships Dissolved.

(From the London Gazette.)

J. N. Chcat and Thomas Wardley (trading as the Red Cross Chemists' Co.), chemists and druggists, 4, York Road, Ilford. Debts will be received and paid by Thomas Wardley.

O. T. Stephenson and W. F. Bruce, surgeons, Woolston, Southampton. Debts will be received and paid by O. T. Stephenson.

J. Lockwood and R. A. Holden, Manufacturing Chemists, 6, Brook Street, Manchester. Debts will be received and paid by J. Lockwood.

H. W. Carter and E. M. Wright (trading as H. W. Carter and Co.), Aërated Water Manufacturers, etc., Old Refinery, Bristol. Debts will be received and paid by H. W. Carter.

R. B. Shuttleworth, Louisa H. Shuttleworth, Amelia Shuttleworth, Elizabeth Shuttleworth, and Henry Bartle (trading as Stockport Hop Bitters Co.), Aërated Water Manufacturers, Norris Street, Stockport, so far as regards Henry Bartle.

Diary of the Week.

Monday, October 3.

PHARMACEUTICAL SOCIETY.

Reopening of the School of Pharmacy, at 3 p.m.
Distribution of Prizes by the President.
Inaugural Address by Sir James Crichton Browne, M.D., F.R.S.

Tuesday, October 4.

PHARMACEUTICAL SOCIETY OF IRELAND.

Annual Dinner at the Shelbourne Hotel.

Saturday, October 8.

UNIVERSITY COLLEGE, LIVERPOOL, at 4.30 p.m.

Opening of the New Thompson-Yates Laboratories of Physiology and Pathology by Lord Lister.

Earlier in the day, at 3 p.m., Lord Spencer, Chancellor of the Victoria University, will confer the degree of Doctor of Science upon Lord Lister in St. George's Hall.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

A. C. Riding, Chemist, High Street, Docking, Norwich.
F. Tucker, Chemist, late of 110, Falcon Road, Battersea, London, S.W.

Albert Gledhill, Veterinary Surgeon, Perryfield Road, Crawley, Sussex.

Advertisement.

(Received too late for Classification.)

MANAGER. Out-door. Married, no family. Age 34. Disengaged second week in October. CHURCHHOUSE, Chard.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

OFFERED.

Miscellaneous.

Photographic mounts, Bristol cartes, 3s.; G.B.E., 10s.; cabinets, 10s.; G.B.E., 15s.; quarter-plates, 6s.; half-plates, 12s. 1000; plate-sunk mounts, 12 by 10, 40s. 1000. Samples free.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns, second-hand; triples and binials: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Six Pieces Perfume Ribbou, each 36 yards long (216 yards), assorted colours post free, 5s.—Edward Peck, East Dereham, Norfolk.

Set of four 1-gallon Cylindrical Percolators, with strainers, lids, and brass taps, all copper and tin-lined, £2 the set, or 10s. 6d. each.—Chemist, 34, Avondale Road, Chorley.

Students' and Chemists' Books offered and wanted, cash or exchange; purchasers send stamp for list; sellers send list stating edition, year of publication, condition, and price.—Gower, Publisher, Waterloo, Liverpool.

Surplus Stock.—What offers for 5 1-gall. tins Jeyes' perfect purifier; 11 1-gall. tins Jeyes' sheep-dip; 2 doz. 6d. bottles Jeyes' disinfectant-fluid; 2 doz. 6d. tins Jeyes' disinfectant-powder; ½ doz. 1s. boxes Jeyes' flower-soap (6 tabs. in box)?—Ferrie, Chemist, Bo'ness, N.B.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Bateson, Benson, Breeze, Browne, Burns, Carr, Clarke, Coull, Cruickshank, Dent, Devereux, Dowzard, Dyer, Faye, Grieve, Haigh, Happold, Hopkins, Jones, Lee, Lovibond, McWalter, Merck, Millar, Moore, Newsholme, Owen, Proctor, Robinson, Sewell, Umney, Walpole, Whineray, White, Wood.

EXHIBITION OF OPTICAL, MATHEMATICAL, AND SCIENTIFIC INSTRUMENTS.

There is a popular idea that the great City companies remain in existence solely for the purpose of spending their riches in feasts and riotous living. That this reproach might have had some truthful basis in the past cannot be gainsaid, but it is satisfactory to note that at the present time many of the companies are doing a great deal in an unostentatious manner to benefit the crafts to which they are allied. The Worshipful Company of Spectacle Makers, one of the poorest of the companies in wealth, its corporate income being only £1100 per annum, nevertheless takes a leading position in regard to usefulness.

At the time when the Company was granted its Royal Charter, in 1629, spectacles were practically the only optical instruments dealt in, and the comparatively few makers and sellers were all connected with the Guild. As science progressed, and the demand for other optical and philosophical instruments increased, the spectacle maker ceased to confine his trade to that one article, and became the general optician, while from the fact that spectacles are so generally in demand they became ordinary articles of commerce, and their sale extended to trades totally unconnected with optics. Thus the company lost touch with many of those who make or sell spectacles, but it is now making an endeavour to re-associate with the Guild opticians and others who satisfy their requirements as to technical ability, and on passing the examination approved by the Optical Committee of the Company any person will be admitted to the Guild and granted a diploma of membership.

As time goes on and the importance of something more than commercial knowledge in dealing with such instruments of precision as spectacles becomes more generally understood, the good work that the Company is now doing in arranging educational facilities for those who wish to become proficient in this branch of science, and in conducting examinations and granting diplomas to those who prove themselves capable, will be more fully appreciated.

The Spectacle Makers' Company is not, however, confining its attention to those matters which alone came within the scope of its founders, but, in a broad minded spirit, is using all its influence in promoting the interests of those engaged in that important branch of manufactures which may be included in the general term scientific instruments, and it may be taken as an earnest of the Company's intentions that the Exhibition of Optical, Mathematical, and Scientific Instruments, held at the Mansion House, from October 3 to 8, was organised.

The exhibition was opened on Monday afternoon last by the Lord Mayor, who was accompanied by the Lady Mayoress. The ceremony, which took place in the Long Room, was short, but decidedly quaint. Indeed, but for the modern costumes of those present, and the allusions of those who spoke to things of which our forefathers knew nothing, one might have imagined oneself back in the early days of the Company's existence. They do things that way in the City. Miss Kemp, having presented a bouquet to the Lady Mayoress, Mr. W. H. E. Thornthwaite, F.R.A.S., Upper Warden of the Company, gave a brief outline of the work of the Company, particularly with regard to the promotion of the present exhibition. The Renter Warden, Sir Reginald Hanson, Bart., M.A., LL.D., M.P., said a few words. Mr. A. A. Wood, C.C., introduced the exhibitors, or, at least, all who were present, individually to the Lord Mayor. The Lord Mayor said a few graceful words, expressing his pleasure in providing accommodation for the exhibition in his house, and then, with the Lady Mayoress, led the way to the room in which the exhibits were placed, which has for decoration the banners of the present and various past masters of the Company.

There are thirty-seven exhibitors, and they include the best known firms of scientific instrument makers. Naturally, spectacles form an important feature in the exhibition. The firms who seem to devote their attention principally to spectacles and appliances connected therewith, are Springate and Co., 108, King's Road, Southsea, J. Raphael and Co., 51, Clerkenwell Road, E.C., W. W. Whitehouse, of Eastbourne, G. Culver, White Lion Street, Pentonville, W. Dunscombe, 10, St. Augustine's Parade, Bristol, F. Bateman and Co., 401, Strand, etc., Gregory and Co., 51, Strand, W.C., and Botwright and Grey, Clerkenwell, E.C. In most cases these firms, in addition to their fine samples of modern work, show interesting relics of the past, which are always valuable for

comparison and sometimes curious on account of the personal history connected with them. Messrs. Carpenter and Westley, of 24, Regent Street, S.W., in particular have many such exhibits, and the case furnished by Mr. Evan Lewis, F.S.A., F.R.A.S., of Barnes Lodge, King's Langley, an enthusiastic collector of antique scientific instruments, is quite a museum in itself. Here we have astrolabes, the earliest form of scientific instrument in general use, which date from the fourteenth to the seventeenth centuries; a theodolite made in France towards the end of the sixteenth century; a surveying instrument by Tobias Volckmar, of Brunswick, dated 1612; several theodolites by English makers of the early part of the eighteenth century; a large number of portable sundials from England, France, Germany, Italy, etc., showing the development of the various types from the fifteenth century to the present time; besides other curiosities of a similar kind too difficult to describe and even too numerous to mention.

C. Baker, of 244, High Holborn, shows microscopes, telescopes, and mathematical and surveying instruments. R. and J. Beck, of 17, Cornhill, have a large case containing a varied assortment, the well-known "Frena" cameras, "Autograph" lenses, various models of microscopes, levels and theodolites, telescopes, and meteorological and other apparatus appertaining to most of the branches of science. Louis P. Casella, of 147, Holborn Bars, shows the Bridge-Lee patent photo-theodolite for photographic surveying, Short's patent gradient telemeter level, Dive's patent portable pressure anemometer, hygrometers, steam pressure gauges, a pocket altazimuth, rain gauges, thermometers, etc. J. H. Dallmeyer, Limited, in addition to specimens of their manufacture—photographic lenses, telescopes, etc.—show specimens of optical glass in the various stages of its manufacture into photographic lenses. W. Wray, of Laurel House, North Hill, Highgate, shows telescopes and photographic lenses. Dollond and Co., of 35, Ludgate Hill, have compasses, aneroids, thermometers, etc.; they also show a pair of spectacles for a horse.

Joseph Long, of 43, Eastcheap, makes a specialty of hydrometers, saccharometers, thermometers and other instruments especially useful to brewers, distillers, and maltsters. J. P. Maginnis, of 9, Carteret Street, Queen Anne's Gate, Westminster, S.W., has for his specialty instruments for the use of the mechanical and architectural draughtsman. Maw, Son and Thompson show ophthalmoscopes, laryngoscopes, rhinoscopes, clinical thermometers, and other instruments for the medical profession. Newton and Co., of 3, Fleet Street, show apparatus of the most elaborate kind for optical projection, including projecting microscopes, polariscopes, etc. Ernest Hinton, of 12, Vorley Road, Upper Holloway, N., shows preparations for the microscope. J. J. Hicks, 8, Hatton Garden, E.C., shows "ometers" too various to mention, as well as his well-known patent opaque measures. R. W. Paul, of 44, Hatton Garden, has all kinds of electrical appliances and instruments. W. Tylar, of 48, Waterloo Road, S.E., shows several forms of optical lanterns, and J. H. Steward, of 409, Strand, W.C., shows telescopes, etc. Negretti and Zambra show all kinds of instruments. W. Watson & Sons, of 413, High Holborn, have microscopes, photographic apparatus, etc. Lambert Matthews, 97, Queen Victoria Street, E.C., shows lanterns and accessories. E. G. Wood, of 74, Cheapside, has a varied collection. H. W. Cox, Ltd., of 10, Cursitor Street, Chancery Lane, W.C., shows electrical apparatus, and R. G. Mason, of 69, Clapham Park Road, S.W., a trade maker, shows microscopes, etc.

The Worshipful Company of Spectacle Makers is to be congratulated on the success of its enterprise, and the Company, the exhibition, and the public are equally indebted to Mr. H. C. Kemp, the organising manager of the exhibition, for the admirable way in which he has performed his task.

RECTAL ALIMENTATION.—The following prescriptions are given in the *Journal de Practiciens*:—Nutritive enema: Cod-liver oil, \mathfrak{z} i.; yolk of one egg; lime water, \mathfrak{z} x. This mixture is sufficient for four or five enemata, which may be given during the course of a day. In other instances the following may be employed: Cod-liver oil, \mathfrak{z} v.; yolk of one egg; chloride of sodium, gr. xl.; water, \mathfrak{z} v. This is also sufficient for four or five enemata. In still other cases where it is desirable to use the hypophosphites, and the stomach will not retain them, the following rectal injection may be employed: Cod-liver oil, Oj.; gum tragacanth, gr. xxxv.; gum arabic, \mathfrak{z} iss; calcium hypophosphite, gr. xxxv.; lime water a sufficient quantity to make onc quart. From four to six ounces of this liquid may be used for an injection.—*Practitioner*, lxi., 110.

ITEMS OF INTEREST.

A PATIENT in an English insane asylum imagined himself dead, and nothing could drive the delusion from his brain. One day the physician had a happy thought, and said to him: "Did you ever see a dead man bleed?" "No," he replied. "Did you ever hear of a dead man bleeding?" "No." "Well, if you will permit me, I will try an experiment with you, and see if you bleed or not." The patient gave his consent, the doctor whipped out his scalpel and drew a little blood. "There," he said, "you see that you bleed; that proves you are not dead." "Not at all," the patient instantly replied; "that proves that dead men can bleed."—*New York Tribune*.

THE trial of a doctor's suit was published in a Connecticut newspaper some years ago, in which a witness was called for the purpose of approving the correctness of the doctor's bill. The witness was asked by the lawyer whether the doctor did not make several visits after the patient was out of danger? "No," replied the witness, "I considered the patient in danger so long as the doctor continued his visits."—*The Samaritan*.

IN HIS LATEST BOOK, Mark Twain tabulates a "memorable scientific discovery." "According to the Hindoo creed the Ganges water makes everything pure that it touches." It had often been noted as a strange thing that while Benares is often afflicted with cholera, it does not spread beyond her borders." Mr. Henkin, Government Scientist, by investigations found that Ganges water, though mingled with sewer discharge, destroys cholera germs, whilst pure well water propagates them by millions.

W. H. HAWKINS, M.D., C.M., U.S.A., is a gentleman who is found per post at 7, Bristol Gardens, Sussex, England. His mission on the earth is the preservation of "vital fluid," whatever that may mean. His literary obscenity and "medical" fudge are being distributed in this country. His charges are two guineas for the first month, thirty shillings for the second, and a guinea for the third. He forwards with the pamphlet a small quantity of a powder, which, on analysis, proved to be acetate of lead. This is to be dissolved in two tablespoonfuls of water and added to a portion of urine. Should a "heavy white cloud" be produced, this indicates presence of organic matter, and shows that you are "losing vital fluid" and "your case is a grave and serious one," necessitating the immediate manipulation of this deceitful hoaxer. As normal urine necessarily gives a white precipitate with acetate of lead the "test" is so much rubbish. There is a "caution" not to open the packet in daylight "owing to the delicate nature of the test."

ALOPECIA CAUSED BY THALLIUM ACETATE.—The fact that thallium acetate in doses of 10 centigrammes causes the loss of hair, was noticed by Combemale, when he first drew attention to the antisudorific action of salt. This disastrous effect is now confirmed by Huchard, who regards the rapid loss of hair as sufficiently serious to prevent the drug being employed in medicine. *Les Nouv. Rem.*, xiv., 625.

PURAL.—This is a new disinfectant, prepared in cylindrical compressed cones and is said to consist of powdered charcoal saturated with liquefied benzoic acid, carbolic acid, and menthol. The cones fume, after being well lighted, and clear the atmosphere of all bad odours; only very sensitive persons are inconvenienced by the vapours, which have the same favourable influence on whooping cough as phenol vapours.—*Pharm. Post*, xxxi., 282.

ANTISCABINE.—A remedy for scabies has been introduced by Skettles under this name; it is a soapy substance, to be rubbed in two to three times per diem. It is composed of Peruvian balsam, Castile soap, glycerin, boric acid, spirit and β -naphthol.—*Pharm. Post*, xxxi., 282.

REMEDY FOR PERSPIRATION.—Monin recommends the following mixture: Lavender water, peppermint, orange flower water, tinct. of myrrh, tinct. of quillaya, aa 50; sodium benzoate, 20. To be used as a wash three times per diem, sprinkling a few drops on a cloth moistened with warm water.—*Zeit. d. allg. oest. Apoth. Ver.*, lii., 360, after *Apoth. Ztg.*

FIXING AND COLOURING FRESH-WATER ALGÆ.—Pfeiffer von Wellheim recommends a mixture of equal volumes of formaldehyde solution, acetic acid, and methyl alcohol. The staining is performed by immersing the algæ for four to six hours in a mixture of 100 C.c. of 50 per cent. alcohol and 2 to 3 C.c. concentrated alcoholic ferric chloride solution. The specimens are then immersed in pure alcohol, and a solution of carminic acid in 50 per cent. alcohol is added drop by drop.—*Pharm. Centr.*, xxxix., 437, after *Chem. Ztg. Rep.*, 104.

PTHISISIN.—This is a preparation prepared from bronchial glands in the tablet form, and recommended for all lung diseases. Each tablet is equivalent to 25 grammes fresh bronchial gland substance.—*Zeit. d. allg. oest. Apoth. Ver.*, lii., 440.

PREVENTIVE OF RUST ON METAL WARE.—Lard 125, camphor 20, are melted together and a little graphite added. The objects are dressed with this paste, which is removed after twenty-four hours.—*Zeit. d. allg. oest. Apoth. Ver.*, lii., 360, after *Allg. med. centr. Ztg.*

STERILISED MILK AND BACTERIA.—Schottelius has shown that milk which has been boiled offers a far less favourable culture medium for bacteria than milk which has not been heated. Into separate sterilised vessels he put milk drawn directly from the udder, sterilised milk and sterilised bouillon in 20 C.c. portions. To each he added 1 C.c. of a bouillon culture of diphtheria bacilli. He kept one set of tubes at the ordinary temperature, the other at that of the blood, and after the lapse of six hours estimated the number of bacilli in each. The result showed that under either condition of temperature, the multiplication of the bacilli was nearly ten times as rapid in the unboiled as in the boiled milk, the bouillon taking an intermediate position, as shown by the table:—

	At 15° C.	At 37° C.
Raw milk	21,230,000	50,160,000 per C.c.
Bouillon	7,600,000	18,240,000 "
Boiled milk	2,200,000	6,030,000 "

—*Practitioner*, lxi., 62.

UREA FORMALDEHYDE COMPOUND.—Goldschmidt has patented a process for the production of an odourless disinfectant obtained by the action of formalin on an alkaline solution of urea, which are stated to combine in molecular proportions, forming a white powder, which slowly decomposes in the air, liberating formaldehyde.—*Zeit. d. allg. oest. Apoth. Ver.*, lii., 410, through *Chem. Zeit.*

URANIUM-AMMONIUM FLUORIDE FOR SCREENS.—Kolle states that this salt, which is used for preparing fluorescent screens for Röntgen's apparatus, may be prepared by the following method. Two parts uranium nitrate are dissolved in 8 parts of boiling water, 1 part of ammonium fluoride is added, and boiled for some minutes. The octahedric crystals separating on cooling from the filtered solution are repeatedly washed with cold water, dried, mixed with collodion or gelatin solution, and these mixtures applied to the paper screens. The value of the screen depends on the perfect formation of the crystals.—*Pharm. Centr.*, xxxix., 454.

THE THERAPEUTICS OF NUCLEIN.—The failure which has been observed in some instances to follow the administration of nuclein, with a view to promoting an increase of the leucocytes in the blood, is attributed to the fact that frequently the source of that substance has been yeast, and not, as was originally specified by Horbaczewski, the splenic pulp of animals. Yeast nuclein is stated to be useless, being without influence on leucocytosis, while spleen nuclein increases the number of leucocytes 100 per cent.—*Les Nouv. Rem.*, xiv., 341, after *Klin. Therap. Wochens.*

LEAD POISONING IN THE POTTERIES.—Some startling statements have been published in North Staffordshire, on the authority of a nurse whom the Women's Trades Union League sent into the district recently to make inquiries respecting the number and nature of existing cases of lead poisoning. She told an interviewer that she was astounded at the extent of the suffering of people of both sexes employed in the pottery industry. She had seen within two months as many as 150 patients whose symptoms are those of lead poisoning.

ENGLISH NEWS.

THE VACCINATION ACT AND CALF LYMPH.—In a recent communication to the Bury Board of Guardians recently, the Local Government Board stated that they will not be in a position to supply glycerinated calf lymph to public vaccinators for the purposes of vaccination before January 1, when the Vaccination Act comes fully into operation. The supply to public vaccinators will then be furnished without charge.

THE LABELLING OF POISONS.—At an inquest held at Exmouth last week, Mr. C. E. Cox (Deputy District Coroner of Honiton) referred to the observations he had made towards Mr. J. T. Bickford, chemist, who sold some poison which a child drank and afterwards died. At the inquiry he expressed the opinion that Mr. Bickford was legally to blame for not having labelled the bottle "poison," it having contained a preparation of atropine. He wished now to say that he was not now of the same opinion, but thought to the contrary, that he was not legally to blame. When he made the remarks he did he was under a misapprehension as to the law with regard to the sale of poisons. He had overlooked an Act of Parliament passed in 1869, which amended the Act to which he referred at the inquest, viz., the Act of 1868. He had since seen Mr. Bickford, and he had assured him that the conditions of the Act of 1869 had been fully complied with, and under those circumstances no label whatever was required by law, so that Mr. Bickford had done even more than the law required him to do in putting the label on. Therefore, although in his private opinion the law on the labelling of poisons ought to be much more stringent, he unreservedly withdrew every expression which he made at the inquest imputing any legal blame to Mr. Bickford. He was quite satisfied that there was no blame, and as he always wished to do justice in the office which he held he wished to express his sorrow that he should ever have made such remarks under a misapprehension.

EDUCATIONAL FACILITIES AT BRISTOL.—The courses of lectures provided in the science department in connection with the evening classes of the Merchant Venturers' Technical College at Bristol include lectures and laboratory work in botany, chemical physics, chemistry (inorganic and organic), physiology, magnetism and electricity, and sound, light, and heat, laboratory work in biology, metallurgy, general physics, and zoology.

ADULTERATED MILK OF SULPHUR.—At the Chippenham Petty Sessions last week, Mr. Turpin, chemist, of Chippenham, was summoned by Mr. Smith, County Council inspector, for an infringement of the Food and Drugs Act. Mr. Bevin prosecuted. It appeared from the evidence that the inspector's representative bought some milk of sulphur, which was found adulterated with not less than 50 per cent. of calcium sulphate. The facts were not disputed, but the prosecution admitted Mr. Turpin sold the preparation as he bought it, and the Bench thought that the justice of the case would be met by Mr. Turpin paying the costs, whilst advising him to protect himself in the future by having a more distinct label.

NOVEL LABORATORY PROPOSAL.—At a meeting of the Devon County Council last week, the Technical Instruction Committee, referring to a communication which they had received from the Medical Officer of Health for Newton Abbot, suggesting the establishment of a laboratory, reported that they had made inquiries and found that the medical officer was prepared to start a laboratory on his own responsibility if he might say that he did so with the approval of the County Council. The Committee recommended the Council to give its approval, for, though the Council have official analysts for food and drugs, manure and feeding stuffs, they have no power to deal with analyses of water. The report was adopted.

THE PHOTOGRAPHIC SALON.—The sixth exhibition is now being held at the Dudley Gallery, Egyptian Hall, Piccadilly, S.W., and will remain open until November 5. The exhibition will also be open on Tuesday and Friday evenings from 7 till 10. It is stated in the "Forewords" of the catalogue that "the aim of the Salon since its inception six years ago has been to discredit ingrained traditions based on a narrow misconception of the true method of interpretation possible in pictorial photo-

graphy, and to change, or at least to modify, the harmfulness which the following of these traditions has brought about." It is not easy to discover any sense in the expression "the true method of interpretation possible," and the "Forewords" do not therefore help to make it clear why there are two separate photographic exhibitions at the present time, instead of one with all the best work under the same roof. The aspect of the gallery is in striking contrast to that of the Pall Mall exhibition. Here the idea seems to have been to carry out a decorative scheme in which the pictures figure as "notes" rather than to provide a background calculated to display the majority of the pictures to their greatest advantage. Whether the effort is successful or not is a question that must be left to individual taste to decide. It may be mentioned that the background for the pictures is in a rather pale shade of green, relieved with white hangings. Of the pictures themselves, as a whole, it is possible to speak in no uncertain terms. The exhibition is good and undoubtedly in advance of that of any previous year. As in former years, the distinctive characters of the exhibition is due more to the work of the foreign exhibitors, of whom there are a considerable number, and who, in most cases, send a number of pictures, rather than to any other cause. On turning to the list of exhibitors at the end of the catalogue, most of the names appear familiar, most of the individuals having sent work to the exhibition reviewed last week. In some cases there are the same pictures. Pictures produced by the gum-bichromate process are fairly numerous, as might be expected, and the fullest advantage has been taken of the power there is of modifying the result which the process admits of by the use of the brush or otherwise during development. Whilst the end may justify the means, this is not pure photography. George Davison's work is very fine, as usual; his pictures are numerous, and Horsley Hinton is seen at his best in "Suffolk Meadows." H. Henneberg, R. Demochy, and H. Watzek all contribute landscape work that deserves more than passing notice. In portraiture W. Crooke more than maintains his reputation, and F. Hollyer, in his portrait of the late Sir F. Burne-Jones, gives us an example of simple photography which should be of assistance in rebutting the charge that is sometimes made against photography of being nothing more than a mixture of chemistry and mechanics. Craig Annan's "Burgomaster's Daughter" is a remarkable picture and his portrait of "Oswald Fergus, Esq.," is almost as characteristic. Everyone who has the opportunity to visit this exhibition is heartily recommended to do so.

EXETER PUBLIC ANALYST.—The Exeter City Council last week authorised the Sanitary Committee to confer with the Exeter Museum and Technical Education Committee upon the subject of the appointment of a public analyst, with a view to securing the services of a gentleman who would also be qualified to lecture at the College, and also upon the subject of the use of the laboratory at the Museum.

DEWSBURY AND DISTRICT CHEMISTS' ASSOCIATION.—A meeting of the above Association was held in the Town Hall, Dewsbury, on Monday, the President, A. Foster, Esq., in the chair. A committee was appointed to draw up a circular, which was to be sent to the proprietors of patent medicines, asking them to join the P.A.T.A. Some members having received circulars with regard to the appointment of a local secretary of the Pharmaceutical Society, the treasurer, Mr. W. Stead, Heckmondwike, was appointed for this district.

DEATH OF A SALFORD CHEMIST.—The death is announced of Mr. Henry Bullock, chemist and druggist, of Oldfield Road, Salford, aged 63. Mr. Bullock was for seventeen years a member of the Salford Corporation, being one of the Conservative representatives of Islington Ward. When the re-arrangement of seats took place some four or five years ago Mr. Bullock, who was then in failing health, retired, and of late years took no active part in political matters.

MR. A. SIDNEY CAMPKIN, J.P., Chairman of the Cambridge Sewage Disposal Committee, attended the Sanitary Congress at Birmingham last week, as a delegate appointed by the Sanitary Committee of the Town Council of Cambridge. He was present at the reception of the Lord Mayor of Birmingham at the Council House on Wednesday evening, at which some 1200 were present. He also attended Sections II. and III. at the Mason University College, at the Physics Theatre, and the Biology Theatre on

Thursday and Friday, where lectures were given on several subjects, including sewer ventilation and sewage disposal, and took part in the discussion thereon. The medical officer of health for the Borough, Bushell Annington, Esq., M.D., was also present as Recording Secretary of Section III.

MESSRS. PERFECT AND Co., chemists, 161, Commercial Road, Landport, intimate that they have a well-appointed photographic dark-room in connection with their establishment.

SPONGE MERCHANT VERSUS CHEMIST.—Before his Honour Sir Richard Harington, at the Birmingham County Court, on Monday, an action was brought by Sam Marcason, sponge merchant, Snow Hill, Birmingham, against Arthur M. Carr, chemist, Church Gresley, near Burton-on-Trent. The claim was for £8 4s., balance of money due on a sale of sponges which the plaintiff alleged he made to the defendant. The point of the case turned on a receipt for £2 19s. purporting to be signed by the plaintiff. He, however, denied that the signature was his. It transpired, however, that the defendant had complained to the Inland Revenue authorities because this receipt was unstamped, and the plaintiff had to pay a fine of £1 to the Inland Revenue, who then gave permission for the document to be stamped. The evidence of the defendant, and he was corroborated by his nephew, was to the effect that the receipt represented the price of the whole of the sponges he bought from the plaintiff, and that the other lots claimed for were never purchased by him. Two cases were left by plaintiff at his premises at plaintiff's own desire, but these were returned. The judge gave judgment for the defendant. He expressed the belief that the plaintiff had committed perjury, and ordered all the documents in the case to be impounded. He also directed the Registrar to tax costs on the most liberal scale the circumstances would permit.

SCOTTISH NEWS.

MR. THOMAS HETHERINGTON, chemist, Moffat, one of the most prominent citizens and the oldest merchant in the town, died early on Sunday, October 2. Deceased, who had been suffering for several weeks from a critical ailment, had somewhat recovered, but a couple of days ago he contracted a chill, and pleurisy intervening, he succumbed. He was well known among the visiting population, having been in business for nearly half a century. The deceased gentleman was an enthusiastic curler and keen bowler.

EDINBURGH DISTRICT CHEMISTS' GOLF CLUB.—Six players representing pharmacy in Glasgow played a friendly match against six members of the Edinburgh District Chemists' Golf Club on Thursday, the 29th ult., over one of the Edinburgh private courses, resulting in favour of the Glasgow representatives by 9 holes. The results of the individual matches were as follows:—Mr. Robert McAdam, 11; Mr. W. L. Currie, 0; Mr. Alex. McAdam, 0; Mr. Geo. Robertson, 4; Mr. Geo. McDonald, 1; M. Jas. Moir, 0—16. Mr. W. C. Baker, 0; Mr. Jas. Stott, 2; Mr. H. D. Alexander, 5; Mr. Geo. Robertson, 0; Mr. J. G. Anderson, 0; Mr. W. B. Cowie, 0—7. After luncheon in the Club House a second round was played, during which rain fell pretty heavily, but did not affect the play very much. The outing was much enjoyed by all.

GLASGOW SCHOOL OF PHARMACY.—A smoking concert was held by the students of the above School on Friday evening, September 30, 1898, in the Bank Restaurant on the occasion of the departure of Mr. Brown, Demonstrator in Practical Chemistry, to take up a situation with Messrs. Savory & Moore, London. There were about forty students present, Mr. John Lothian (Principal) in the chair. A most enjoyable musical programme was contributed by Messrs. MacLeod, Mitchell, Hunter, Hamilton, Riddell, Taylor, Gilmour, and Lothian, with Mr. Kennedy, accompanist. Mr. Taylor, on behalf of the students, presented Mr. Brown with a handsome gold Albert and badge, bearing the inscription: "Presented to William Brown by the Students of the Glasgow School of Pharmacy in recognition of his services as Demonstrator, September, 1898." Mr. Brown, in a feeling and eloquent speech, thanked the students, and said his association with the Glasgow School of Pharmacy would always be to him a very pleasant recollection.

DR. H. BELLISE BAILDON, M.A. Cantab., F.R.S.E., etc., author of 'The Spirit of Nature' and other works in prose and verse, and editor of 'The Round Table Series,' who has been studying philology in the University of Freiburg (Baden) and has taken the degree of Doctor of Philosophy there, has been offered and has accepted the post of University Lecturer on the English Language and Literature in the Imperial University of Vienna. Dr. Baildon will thus be associated with the eminent English scholar, Professor J. Schipper, Ph.D., LL.D. (Edinburgh), etc., author of 'Die Englische Metrik' and editor of 'The Works of William Dunbar' and of the Anglo-Saxon 'Bede.' A series of articles by Dr. Baildon on his school friend Robert Louis Stevenson is now appearing in the scientific German review *Englische Studien*, edited by the distinguished Anglist Professor Kölbing, of Breslau University. 'Spirit of Nature' was delivered as a series of lectures at Evening Meetings of the Society in Edinburgh. Dr. Baildon is a pharmaceutical chemist and was a member of the Board of Examiners for Scotland for several years, and was also a member of the Council. Since he left the ranks of pharmacy he has devoted himself to literature and has travelled extensively.

IRISH NEWS.

THE PHARMACEUTICAL SOCIETY OF IRELAND was established by law in 1875. The Act of 1791, which gave power to licentiates of Apothecaries' Hall, Dublin, to practise the art and mystery of medicine, being amended, pharmacists were constituted to supply the deficiency which existed throughout the kingdom of establishments and shops for the sale of poisons and compounding of prescriptions. The chemists and druggists before 1875 sold poisons, but were not allowed to compound. The latter privilege was to be extended to those in business at the time of the passing of the Act, on condition of their undergoing a modified examination. Two years were allowed for preparation. Some passed, some failed. During the decade which followed the inscribing of 38 and 39 Vict., chap. 57, upon the Statute Book, a large body of apprentice chemists having emerged from the chrysalis state, did not feel inclined to hide their experience in a napkin, so in defiance of the law they opened shops as chemists and druggists. The Pharmaceutical Society determined to exert its authority, but the newly-started chemists formed themselves into an association, and they found in Sir James Haslett, M.P., a tower of strength. The latter gentleman got a Bill passed when the Pharmaceutical Council least expected it. This was the Pharmacy Amendment Act, which guaranteed immunity to the fledglings. Some years ago the Society made a stand against the company system in pharmacy. They were defeated, although they won on the certificate question. The following is the involved logic of the law: No person or persons unqualified can keep open shop. A company is not a person, therefore it can keep open shop. The law says an apprentice must serve five years in a shop kept by a qualified person; a company is not such, therefore, etc. Recently the Society has met with serious reverses in Belfast. Three separate prosecutions of alleged illegal compounding were preferred before a resident magistrate. Two were won by defendants, with costs. The third case was also decided for the druggist, and against the wish of the magistrate, solely because the Society's solicitor had arranged to have his holidays. Subsequently, the Society summoned defendants' assistants, because though unqualified, they had compounded and sold medical prescriptions. A fine of £5 was imposed in each case.

SOME MONTHS AGO an article (now appearing in local journals) was published in the *Lancet* anent the epidemic in Belfast. The gross negligence of the Special Commissioner in accepting the statistics of an assurance company based upon a census which is obsolete by 60,000, is little to be commended in the pursuit of medical or other knowledge. The deaths from typhoid in Belfast have never reached 7 per cent. of the notifications. Yet if the entire 3000 infectious cases reported in 1897 were considered as typhoid they would mean 210 deaths in a population of 350,000, or 600 per million; something different from the proportion in the *Lancet*, i.e., 965 per million for nine months. The fact that the general death-rate was lowest in the month of the greatest number of notifications is very remarkable.

THE ULSTER MEDICAL COUNCIL addressed an admonition sometime ago to the profession to make certain before notifying typhoid.

Charges, however, have been made that cases of typhoid have been notified twice or thrice. And lately, when a fever-notified patient died, a pathological examination by Professor Lorraine Smith revealed pneumonia but no typhoid, and three medical men testified that there was neither typhoid nor typhus. The thirty or forty thousand operatives engaged in the linen industry—a great cause of early bronchitis—places Belfast at a great disadvantage in comparison with other cities. It should likewise not be forgotten that the hospital system is very inadequate. The bulk of the work falls on the Union Infirmary (where the medical and nursing staff are greatly overworked), and the "Royal" or "General," which is £2000 in debt. The commercial capital, however, will be better equipped to combat disease when the Infectious Hospital and Royal Victoria (which latter rose into financial being under the magnetic and magnificent exertions of Mrs. Pirrie, late Lady Mayoress) are built.

THE SMALL FUN which confronts the provincial pharmacist in the following of his calling is not without interest. During an epidemic amongst cattle numerous Irish farmers applied to a chemist for a remedy. He made up a bottle containing tinct. rhei and sweet spirit of nitre, and labelled it "The Mixture." One purchaser on his return begged to know what was in it. Of course professional secrets could not thus be sported with, and so he was told. He then got very wroth, but the chemist remaining obdurate, he departed none the wiser. It never occurs to the large bulk of customers that the pharmacist is entitled to a percentage on his knowledge. It is consoling to think that he can "prescribe" for cattle without a V. S. fulminating. It is a well-known fact that no man shrinks from "curing" his neighbour. Sometimes he kills him, but that is blamed on the attending doctor. Like a well-to-do agriculturist, who required the village apothecary to give him 12 grains of corrosive sublimate in 1½ ozs. of sweet spirit of nitre. Believing it was for cattle the chemist, to say something, asked, "What's the matter." "Oh!" said the bucolic physician, "it's fur a man with an itch in his bared" (beard). The chemist thought indeed that it would "cure" the itch in a thorough manner. "What quantity do you give?" "About 15 drops." "Is there a doctor attending the case?" "Yis, but I heerd this wuz a good cure." "Oh well, my man, I couldn't give it you without a medical order."

Poisoning Cases.

CARBOLIC ACID.—At Liverpool on Friday, September 30, an inquest was held with respect to the death of Eleanor Parry Austin (43), wife of a carter. The evidence was to the effect that she was a healthy woman, but addicted to drink, and that on the previous Wednesday she awoke from a drunken sleep and asked for a drink. She poured something from a bottle, similar to one used for beer, and drank it, discovering when too late that it was carbolic acid. The jury found that death was caused by taking carbolic acid while in a state of intoxication.

CAUSTIC SODA.—James Summers (28), labourer at Messrs. Pilkington's plate-glass works, St. Helens, died on Monday, September 26, from the effects of drinking caustic soda solution in mistake for lime-juice on Friday, August 5. A verdict of "Death from misadventure" was returned by a jury.

CHLORODYNE.—On Thursday, September 29, an inquest was held at Shooter's Hill on the body of Mary Amelia Handford (31), a wards-maid at the Brook Hospital. It appeared from the evidence that she was in the habit of taking chlorodyne for sleeplessness, and on Sunday, September 25, had evidently taken an overdose. The deputy coroner said it could not be ascertained where the chlorodyne was obtained, but no chemist should have served it without labelling it poison. A verdict of "Accidental death from chlorodyne poisoning" was returned.

OIL OF JUNIPER.—Matthew Henry Bielby (41), painter, of Ewell, suffered from pains in the back, for which he used oil of juniper. On September 21 he remained in bed until 4.30 p.m., on account of his back, and then went out to get some oil. He did not return until after midnight, when he told his wife he had taken two pennyworth of oil of juniper. A doctor was sent for, but death took place before his arrival, being due to enteritis. A verdict of "Death from misadventure" was returned at an inquest held on Saturday, September 24.

MARKET REPORT.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

OCTOBER 6, 1898.

Business in drugs and chemicals has been extremely quiet during the past week. There are also hardly any changes of importance to record. Quinine is firm, the possibility of dearer prices being hinted at. Camphor very firm, both for crude and refined. Opium quiet, but firm. Acid Citric, Acid Tartaric and Cream of Tartar steady. Quicksilver and Mercurials unchanged. Acetanilide lower. Phenacetin and Sulphonal without change. Cocaine dearer. Cod-liver Oil quiet. Glycerin Steady. Permanganate of Potash lower. Bromides and Iodides without change. Ipecacuanha exceedingly firm. Borax and Acid Boracic quiet. Phenazone dull and weak. Antipyrine Knorr unchanged. The following are prices actually ruling:—

ACETANILIDE—Has been further reduced in price, one of the best makes being now quoted at 11d. per lb. for 10 cwt. lots, smaller quantity being higher in proportion.

ACID BORACIC—Steady. Crystals 24s. Powder 26s. per cwt.

ACID CARBOLIC—Is somewhat dull at 6¼d. to 6½d. per lb. for 35-36° ice crystal, in 2½ cwt. drums and overcasks; 39-40° C. 7d.; and 39-40° C. detached crystals, 8d. per lb.; crude 60° F. 1s. 11d. per gallon; 75° F. 2s. 3d. per gallon; liquid 95 per cent., of pale straw colour, 1s. 1d. to 1s. 2d. per gallon in 40 gallon casks.

ACID CITRIC—Is firm at 1s. 2½d. to 1s. 3d. on the spot.

ACID TARTARIC.—Quiet but fairly steady. English spot 1s. 1d. per lb., foreign 1s. 0¾d. to 1s. 0½d.

AMMONIA COMPOUNDS.—Sulphate flat. Grey, October, 24 per cent. London, Hull, and Leith, £9 15s. per ton; Beckton, £9 12s. 6d.; Beckton terms, £9 10s. Carbonate quiet at 3½d. to 4d. per lb., according to packing. Muriate steady at 22s. 6d. to 25s. for the commercial quality, and 26s. 6d. to 27s. 6d. for the chemically pure. Sal Ammoniac: Sublimed, 35s. and 33s. per cwt. for firsts and seconds respectively; crushed, for batteries, 2s. per cwt. more. Bromide: 2s. 1d. per lb. Iodide: 13s. 7d. per lb.

APOMORPHIA—Is quoted 18s. to 18s. 6d. per oz.

ASAFETIDA.—Really good quality appears to be scarce, and for such there is a demand; 199 cases, which arrived this week from Bombay, are probably, judging from port of shipment, of inferior quality.

ATROPIN.—Market is firm at 15s. 6d. for the Sulphate, B.P. and 17s. 10d. for the alkaloid.

BLEACHING POWDER—Is quoted £6 10s. to £7 per ton on the spot.

BISMUTH—Is unchanged at 5s. per lb. for the metal, 4s. 10d. for the subnitrate, and 5s. 5d. for the carbonate in 5-cwt. lots.

BORAX—Quiet at 14s. and 14s. 6d. per cwt. for Crystals and Powder respectively.

BROMIDES—Are without change at 1s. 9½d. per lb. for Potass. Bromide, 2s. 1d. per lb. for Ammon. Bromide, and 2s. 0½d. for Sodii Bromide, price of Bromine being 2s. per lb.

CAMPHOR—Both crude and refined, are very firm, English makers quoting 1s. 3½d. per lb. for bells and flowers, tablets being dearer in proportion.

CASCARA SAGRADA—Is steady, 25s. per cwt. being asked for old bark, last year's crop being offered at a rather lower figure, say, 22s. 6d. to 23s. per cwt.

CHIRETTA—Scarce and very firm at 6d. per lb.

CLOVES.—Privately Zanzibar quiet, but steady business has been done in October-December delivery at 3¾d. to 4d., January-March quoted at same price. At auction of 265 bales Zanzibar 40 bales

Monthly Statement of Drugs, etc., Warehoused in London.—October, 1898.

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns.

sold, fair at 4d. to 4 1/32d. Of 25 cases *Penang*, 7 cases sold, middling small picked at 6 3/4d. to 7d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* lower, ordinary at 1s. 1 1/2d., pure 2s. per gallon. *Benzole* is very weak at 9d. per gallon on the spot for 50 per cent., and 8 1/2d. to 9d. for 90 per cent. For delivery next year a large business has been done at 10d. to 11 1/2d. per gallon. *Crude Naphtha*, 30 per cent. at 120° C., 4d. *Solvent Naphtha*, 95 per cent. at 160° C., 1s. 6d.; 90 per cent. at 160° C., 1s. 2d.; 90 per cent. at 190° C., 1s. 3d. per gallon.

COD-LIVER OIL.—Is quiet but steady, price of best *Lofoten* non-congealing oil ranging from 82s. 6d. to 87s. 6d. per barrel, according to brand, in tin-lined barrels of 25 gallons.

COCA LEAVES.—Are scarce; *Bolivian* held for 1s. 3d. per lb. for good and *Truxillo* 8d. per lb. for good green.

COCAINE.—Makers' price for best brands has been advanced to 9s. 9d. per oz. for the *Hydrochlorate* in 25 oz. tins for 100 oz. lots. Market is very firm and a further advance would appear probable in face of actual position of the *crude* article.

CODEIA.—Is firm at 12s. 6d. per oz. for quantity and bulk packing.

CORIANDE SEED.—6s. per cwt. asked for Morocco.

CREAM OF TARTAR.—First white crystals spot 71s. to 72s. per cwt., powder 73s. to 75s.

DRAGONS BLOOD.—This scarce article continues in good demand, and the bought in lots of poor quality ex last sales have, it is said, been sold at from £7 10s. to £8 10s. per cwt.

GINGER.—Of 376 bags rough *Cochin* 110 bags sold, ordinary to fair washed rough at 20s. 6d. to 23s. Of 139 cases cut kinds 117 cases sold, chiefly without reserve, B, 55s. to 56s., C's, wormy, 32s. 6d.; 69 barrels, 9 half-barrels *Jamaica* sold at firm rates: low middling to middling, 69s. to 74s. 6d., good middling to good, 76s. to 79s.

GLYCERIN.—Is firm at 52s. 6d. to 55s. per cwt. for *English*, and 54s. to 65s. per cwt. for best *German* makes of white double-distilled chemically pure 1260° quality, in cases of 8 × 56 lb. tins. It is said that a further advance in price is not improbable.

IODIDES.—Are steady and in good demand at 10s. 3d. per lb. for *Potass Iodide*; 11s. 7d. per lb. for *Sodii Iodide*; 13s. 7d. per lb. for *Ammon. Iodide*; and 13s. 7d. per lb. for *Iodoform cryst.*, powder and precipitated. Price of *Iodine* is unchanged at 7 1/2d. per oz.

IPECACUANHA.—Holders remain very firm, asking 10s. per lb. for *Rio*, and 7s. 6d. for *Carthagera*, 7s. per lb. having been refused for the latter. Looking at the position of the article it would appear probable that buyers will be obliged to pay the prices asked by holders.

LITHIA.—Is firm at 10s. 8d. per lb. for the subnitrate in 2 cwt. lots up to 11s. 1d. per lb. for smaller quantity.

MERCURIALS.—Makers' quotations for 5 to 10-cwt. lots are, *Corrosive sublimate*, 2s. 3d. per lb. *Calomel*, 2s. 7d., and *Red oxide cryst.* and *levigated*, 2s. 11d. per lb.

MORPHIA.—Is quiet but firm at 5s. per oz. in bulk for the *Hydrochlorate Salt* in powder.

NITRATE OF SODA.—Ordinary is quoted £7 10s. to £7 12s. 6d., and refined £8 to £8 2s. 6d. per ton.

OILS (FIXED) AND SPIRITS.—*Linseed* quiet at £17 spot London for pipes; £17 10s. for barrels. *Rape* steady ordinary brown spot, October to December, £21 15s.; January to April, £23 5s. *Olive*, Spanish, £29; Levant and Mogadors, £29 to £32. *Coconut*, Ceylon spot, £24; October to December, £23 5s. *c.i.f.* *Cochin* spot, £27; October to December, £26 to £26 10s. *c.i.f.*; Mauritius, £24 5s. spot. *Palm*, Lagos spot, £22 10s. *Turpentine*, strong and active, at dearer prices, American spot, 22s. 6d.; November to December, 22s. 9d.; January to April, 23s. 6d. *Petroleum* firm, Russian spot, November-December, 5d. per gallon, American spot 5 1/2d. to 5 3/4d., November-December 5 3/4d., water white 6 3/4d. to 6 1/2d., November-December 6 3/4d. to 6 1/2d. *Petroleum Spirit*: American, 6 1/4d. to 6 3/4d.; deodorised, 6 1/2d. to 6 3/4d. per gallon.

OPIMUM.—Market is firm. There has been rather more inquiry, but in face of firmness of holders, in consequence of late reports from Smyrna as to extent of the crop, little business has resulted. Present quotations are: Good *Druggists'* 11s. to 12s. per lb., seconds 10s. 6d. to 10s. 9d., *manufacturing* 10s. 3d. to 10s. 9d., *soft shipping* 10s. 6d. to 13s. 6d., according to quality, *Persian* 11s. 3d. to 11s. 9d.

ORRIS ROOT.—Extra picked *Florentine* 36s. per cwt., *c.i.f.*, picked, 34s. 6d. per cwt., sorts, 30s. per cwt.; *Mogador*, 14s. 6d. to 15s. per cwt.

OXALIC ACID.—3d. to 3 1/4d. per lb. *new*, delivered in London.

PERMANGANATE OF POTASH.—Over-production of this article has led to a decided fall in price, and it is now possible to buy in ton lots at 60s. per cwt. for small crystals, and 65s. per cwt. for large crystals.

PHENACETIN.—Unchanged at 3s. 9d. to 4s. 3d. per lb.

PHENAZONE.—Is dull and weak, while *Dr. Knorr's Antipyrine* is stated to be in good demand at unchanged price.

PILOCARPINE.—Makers' price is now 1s. 4d. per gramme for both the *Nitrate* and *Hydrochlorate* salts.

POTASH COMPOUNDS.—*Chlorate* is firm at 3 1/4d. per lb. spot London for crystals, powder 1/4d. per lb. more. *Bromide* 1s. 9 1/2d. per lb. *Iodide* 10s. 3d. per lb. *Bicarbonate* 32s. 6d. to 35s. per cwt. *Bichromate* 3 1/2d. per lb. *Prussiate*: yellow 6 1/4d. to 7d., red 1s. 2d. to 1s. 3d. per lb. *Permanganate* 52s. 6d. and 57s. 6d. per cwt. for small and large crystals respectively.

QUICKSILVER.—Is firm at £7 5s. per bottle from first hand; second-hand offering at 1s. per bottle less money.

QUININE.—As a result of the late bark sales in Amsterdam, at which the price of the unit was fully maintained *Quinine* remains firm, makers of German brands most in favour quote 10d. per oz. for the *Sulphate* in 100-oz. tins and for 1000 oz. lots, there being little or nothing offering from second hand below this figure. It is rumoured, on what should be reliable authority, that at the next sales quite moderate quantities only of bark will be offered, which may, in face of the actual large demand for the manufactured product quite possibly lead to an advance in price of the unit and a consequent rise in the value of quinine.

SENNA.—Small sales of *Tinnivelly* since the sales from second

hands at full prices. Arrivals of new crop are coming in freely, but on the other hand the deliveries are good.

SODA COMPOUNDS.—*Crystals* quiet; barrels, 55s. per ton; bags, 52s. 6d., ex-ship. *Ash*, £5 5s. to £5 10s. per ton on spot. *Bicar. bonate*, £7 5s. to £7 10s. landed for the commercial 97 per cent. quality, and £18 10s. per ton for the fully bicarbonated. *Caustic*: 60 per cent., £6 10s. per ton; 70 per cent., £7 10s. *Bichromate*, 2½d. per lb. *Bromide*, 2s. per lb. *Iodide*, 11s. 7d. *Hyposulphite*, 6s. 6d. to 8s. 6d. per cwt., according to packing and make. *Nitrate*, £7 12s. 6d. for commercial, and £8 2s. 6d. for the refined.

SPICES (VARIOUS).—*Black Pepper*: Only 80 bags Tellicherry offered and bought in at 4½d. *White Pepper*: 174 bags Penang bought in at 7½d., 21 bags Siam withdrawn, 120 bags fine Singapore sold at 8½d. *Red Pepper*: 10 cases Valencia bought in at 45s. *Chillies*: 10 bags good red Natal sold at 38s. *Capsicums*: 8 bags East India sold at 46s., also 2 bales Natal at 74s. *Cassia Lignea*: 30 boxes Quang Si sold without reserve at 25s.; 235 bales broken, partly sold at 37s. 6d. *Cinnamon*: 16 bales broken quill bought in at 1s.; 12 bags Ceylon broken sold at 8d.; 52 bags coarse bark bought in at 5d. *Mace* dull: Of 37 cases Penang only 1 case good palish sold at 2s.; 11 cases West India sold at 1s. 4d. to 1s. 7d. *Pimento*: Of 295 bag only 60 sold at 4½d. to 4¾d.

SULPHATE OF COPPER.—Quiet but firm at £16 5s. to £17 10s. per ton.

SULPHONAL.—Is still obtainable from the makers at 7s. 3d. per lb. for bulk packing. *Bayer's* make is unchanged at 5s. 6d. per lb. in bulk.

Newcastle Chemical Report.

OCTOBER 5, 1898.

This market, as a whole, remains quiet. Shipments are still fair, but not much new business passing. Bleaching powder £5 10s. to £6, according to markets. Soda crystals, basis price, 45s. Caustic soda, 70 per cent., basis price, £7. Soda ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £5 per ton.

Manchester Chemical Report.

OCTOBER 5, 1898.

There is absolutely no change to report in heavy chemicals. Inquiries in Liverpool show that no importance is to be attached to the rumours that American made alkali, 58 per cent., is being sold over next year. Orders can only be placed there on the usual terms, and this is undoubtedly the case in Manchester. Indeed, in many respects there is a scarcity of articles such as Soda Crystals, Glauber and Epsom Salts, and similar products. In miscellaneous articles, there is some firmness. Glycerin, for instance, is firmly held by local producers, and one order in particular was refused at current rates, and this for a considerable quantity of ten to twenty tons. Sulphate of copper is firm at £18 per ton, prompt delivery, best brands, Manchester. Arsenic is firm at £17, ex-ship Garston. Brown acetate of lime is in request, and is steady at £5 7s. 6d. per ton for Welsh and American, delivered Manchester. More oil cargoes are being brought to this port. Early in the week the "Petrina" came down with a full cargo of petroleum for the Bagnall Oil Co.'s Wharf, at Mode Wheel. The s.s. "Robert Dickinson" is on her second voyage from Philadelphia, and will land at the Mode Wheel Oil Wharf next week. There is also one Russian tanker and two American steamers on the way.

Liverpool Market Report.

OCTOBER 5, 1898.

The improvement in the tone of the market recently commented on still continues, prices are well sustained, and a good average of transactions has been concluded. The miscellaneous sales are worthy of note from their including a large parcel of Huanuco Coca Leaves. The slight fall in the price of Spirits of Turpentine has given place to a corresponding rise, and the quotation is now 6d. per cwt. over last week's figure. Good sales of high-class Chilian Honey and Sierra Leone Chillies, together with a lot of Cochin Ginger, complete the list of miscellaneous articles. Seeds, viz., Linseed and Canaryseed are in about the same position as last week, whilst Oils have only experienced slight variations in price, mostly as regards Spanish Olive.

The chemical business done has been done on a quiet and a small scale, most of attention being centered in Sulphate of Copper which is firm and seems to be about to command higher prices.

AMMONIA SALTS.—*Carbonate* is still quiet at 3d. per lb. *Sal ammoniac*, 35s. per cwt. *Sulphate* is quiet at £10 per ton.

BEE SWAX.—Good sales of Gambia at an average of £6 10s. per cwt. are reported, together with 20 bags of Chilian at £6 15s. per cwt.

CANARYSEED.—Commands slightly more attention, an offer of 28s. 6d. per 464 lbs. for high quality Turkish was refused—price is between 28s. and 30s.

CHILLIES.—Fine quality Sierra Leone sold at 39s. per cwt.

COCA LEAVES.—24 bales of Hunuco from store sold at 8½d. per lb.

COPPERAS.—Is exceedingly firm at 39s. and 37s. per ton.

COPPER SULPHATE.—For immediate delivery £17 2s. 6d., per cwt., forward £17 7s. 6d. to £18 per ton according to date.

GINGER.—Sierra Leone has been moving off in small quantities at 19s. per cwt., and 50 bags of Cochin made 23s. per cwt.

HONEY.—100 barrels of Chilian were sold at 21s. 9d. per cwt. for Pile 3, and 23s. 6d. Pile 1. 70 barrels Pile X found buyers at 27s. per cwt.

KOLA NUTS.—36 packages of dried wore disposed of for 1¼d. per lb.

LINSEED.—The prices for forward delivery of seed shipped September-November have been 37s. 9d. per 416 lbs. for Calcutta, and 34s. American. 50 tons of River Plate went for 34s. 6d. per 416 lbs., and Bombay feeding quality is selling at 39s. to 40s.

OILS (FIXED) AND SPIRITS.—*Castor* has a fair amount of attention, Madras being the only variety selling a shade lower than last week; Calcutta, "good seconds," 3½d. per lb.; French, 1st pressure, 3½d. per lb.; and Madras, 3d. to 3½d. *Olive* is firm at steady prices on the spot. Spanish sell at £29 10s. to £30 10s. per tun. For shipment Malaga is £31 per tun, cost and freight, and Seville £30 to £31 on same terms. *Linseed* is held for 18s. to 18s. 6d. per cwt. *Cottonseed* has fallen 3d. per cwt., and now is quiet at 15s. 9d. to 16s. *Spirits of Turpentine* has advanced to 23s. per cwt., and is very firm with a fair inquiry.

POTASH SALTS.—*Chlorate*: 3½d. to 3¾d., or 4d. per lb. *Cream of tartar* is firm at 75s. per cwt., and very scarce. *Pot.* and *Pearlashes* are unchanged from last week.

SODA SALTS.—*Bicarbonate*: £6 15s. per ton. *Borax* is firmer, £13 10s. to £14 per ton. *Caustic*, 77 per cent., £7 15s. per ton. *Crystals*: £2 17s. 6d. to £3 per ton. *Nitrate*: 7s. 7½d. to 7s. 9d. per cwt. 122 bags of damp and discoloured sold at 7s. 4½d. per cwt.

Marriage

VINCENT—DE VAN.—On September 22, at St. Mary's, Islington, by the Rev. J. M. Willoughby, Robert, second son of the late Joseph Vincent, of Kingstonswell, Chard, Somerset, to Clara, only daughter of the late George De Van, Surgeon, Lowman Road, N., and Mrs. De Van, Bathurst Mansions, Holloway, N.

Publications Received.

GENERAL ELEMENTARY SCIENCE, edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. Second edition, Pp. viii. + 136. Price 3s. 6d. London: W. B. CLIVE, University Correspondence College Press, 13, Booksellers' Row, Strand, W.C. 1898.

THE CALLING OF THE PHARMACIST. By OSCAR OLDBERG. Pp. 24. Chicago: North-Western University Press. 1898. From the Author.

Trade Notes.

MR. B. KÜHN, 36, St. Mary-at-Hill, Eastcheap, London, E.C., has obtained the bronze medal for "Chinosol" at this year's Sanitary Congress held at Birmingham.

MESSRS. BURROUGHS, WELLCOME AND Co. have been awarded two highest awards at the recent Health Exhibition at Birmingham, the one for their Water Analysis Case and the other for their "Soloid" products.

Announcements.

Tuesday, October 11.

ROYAL PHOTOGRAPHIC SOCIETY, 5A, Pall Mall East, London, W., at 8 p.m. Opening meeting; the President will deliver the annual address, to be followed by the presentation of the medals awarded at the Exhibition.

Wednesday, October 12.

MANCHESTER PHARMACEUTICAL ASSOCIATION, Chemical Club, Victoria Hotel, at 7.30 p.m. Opening meeting and election of Council. Mr. John Harrison, J.P., of Sunderland, member of the Council of the Pharmaceutical Society, will deliver an address on "Pharmacy and Parliament."

NEWCASTLE ON-TYNE AND DISTRICT CHEMISTS ASSOCIATION, Metropole Hotel, Clayton Street West, Newcastle, at 8 p.m. Annual meeting and election of Council. The inaugural address will be given by the new President Mr. F. E. Schofield, of Morpeth.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS ASSOCIATION, Whimble Street, Plymouth, at 2.30 p.m. Annual meeting to be followed by the annual dinner at 7.30 p.m., at Routly's Farley Hotel, Plymouth.

Thursday, October 13.

CHEMISTS' ASSISTANTS' ASSOCIATION, 73, Newman Street, London, W., at 8.30 p.m. Inaugural address by the new President, Mr. F. W. Gamble.

NORTH STAFFORDSHIRE AND DISTRICT CHEMISTS' ASSOCIATION, Copeland Arms Hotel, Stoke, at 6.30 p.m. Opening meeting; Mr. John Averill, of Stafford, will deliver the presidential address, followed by a smoking concert.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY, 37, Surrey Street, Sheffield, at 6.30.—Opening of the fourteenth session of the Society's School of Pharmacy at the Masonic Hall, when the President will distribute the prizes, and the inaugural address will be delivered by Mr. J. Rymer Young, F.C.S., of Warrington, member of the Council of the Pharmaceutical Society. The annual dinner will be held the same evening at 7.45.

Friday, October 14.

KING'S COLLEGE, London, at 8 p.m.—The introductory lecture of a systematic course of lectures and demonstrations for Sanitary Inspectors will be delivered by Professor W. J. Simpson.

Partnerships Dissolved.

(From the London Gazette)

J. A. Fox, John Fox, Ben Fox and Arthur Smith (trading as Fox Brothers and Co.), Soap Manufacturers, Lion Works, Macclesfield. Debts will be received and paid by Ben Fox and Arthur Smith.

J. W. Roe and C. J. Glasson, Physicians, Surgeons, etc., Ellesmere, Salop, so far as regards C. J. Glasson.

J. S. Sequeira and Thomas Jones, General Medical Practitioners, 68, Leman Street, Whitechapel.

W. J. Smart, J. J. Smart, and Geo. T. Smart (trading as Smart Brothers), Round Oak Glass Works, Brierley Hill, Stafford, so far as regards Geo. T. Smart.

Wm. Hoffmeister, J. B. Hoffmeister, and Henry E. W. Hoffmeister, Physicians and Surgeons, Cowes, Isle of Wight, so far as regards John B. Hoffmeister.

Geo. S. Passmore and J. E. Passmore, 5, Greenough Street, Wigan. Debts will be received and paid by Geo. S. Passmore.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

Dr. Henry S. Cook, 30, Selborne Road, Handsworth Wood, Birmingham, Medical Practitioner.

H. K. Vines, Medical Practitioner, 188, Adelaide Road, Brockley, Kent.

John Davidson, Drug Store Dealer, etc., 97, Laygate Lane and 154, South Eldon Street, South Shields.

Advertisements.

(Received too late for Classification).

DEVONSHIRE.—£160. For disposal, immediately, Chemist's BUSINESS in large seaport town in Devonshire. Immense neighbourhood. Double-fronted shop. Modern mahogany fittings. Unusual opportunity for young qualified man. Apply, A. E. care of Hodgkinson, Clarke & Ward, Upper Whitecross St., London.

QUALIFIED ASSISTANT wanted. Good dispenser. Also JUNIOR, accustomed to good-class trade. Apply to FRESHFIELD REYNOLDS, Chemist, Harrogate.

OBITUARY.

SANDEMAN.—On September 29, Patrick Sandeman, Chemist and Druggist, Dundee. Aged 56.

HETHERINGTON.—On October 2, Thomas Hetherington, Chemist and Druggist, Moffat. Aged 69.

BULLOCK.—On October 3, Henry Bullock, Chemist and Druggist, Salford. Aged 63.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

WANTED.

Old Platinum Utensils or Scrap, also Old Electric Lamps wanted for prompt cash by P. Rowsell, 14, Walcot Square, London, S.E.

OFFERED.

Miscellaneous.

Photographic mounts, Bristol cartes, 3s.; G.B.E., 10s.; cabinets, 10s.; G.B.E., 15s.; quarter-plates, 6s.; half-plates, 12s. 1000; plate-sunk mounts, 12 by 10, 40s. 1000. Samples free.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns, second-hand; triples and binoculars: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingland, N.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours, post free, 5s.—Edward Peck, East Dereham, Norfolk.

About 30 doz. Stopped-Rounds, and Four Specie Jars and Stands for £7 net cash.—Orchard, Salisbury.

Dispensatory.—Latest; quite new; cost 35s. What offers?—Kenyon, 22, Society Place, Derby.

Small Student's Balance, in glass case. Carries 500 grains in each pan and turns to 1-10th grain. £1 5s.—Weddell, Colchester.

Books.

Valuable Modern Books.—'Studies in Microscopical Science,' 2 vols., by Arthur C. Cole, 89 coloured lithographic plates, cost £4 4s.; price 24s. M'Alpine's 'Biological Atlas,' 4s. Ganot's 'Popular Natural Philosophy' (uncut), 5s. Williams' 'Pulmonary Consumption,' 2nd edition, cost 16s.; price 7s. 6d. Ringer's 'Therapeutics,' cost 12s. 6d.; price 5s. 6d. Whitt's 'Materia Medica,' 5th edition, 3s. 6d. Bentley's 'Students' Botany,' 2 vols., cost 11s.; price 5s. Cooke's 'Microscopic Fungi,' 1898 edition, 4s. 'Chapters on Evolution,' Dr. Andrew Wilson, 4s. 6d. 'Year-Books of Pharmacy,' 12 years, 6d. per volume. Or will exchange any of the above for old druggists' curiosities, ancient syrup jars, ointment pots, bottles, mortars, etc.—John Austen, Dore, near Sheffield.

Books by Armstrong, Attfield, Bentley, Bower, Jago, Martindale, Oliver, Ostwald, Prantl, Remser, Roberts (midwifery), Squire, Sutton, Thorne, Valentine, Watts, Wills, Wootton. Year Book of Pharmacy. Cheap.—Gower, publisher, Waterloo, Liverpool.

What Offers for Wills' 'Materia Medica' (smaller), 'Pharmacy,' 'Analysis, Cooke's 'Chemistry,' Thorpe's 'Qualitative Analysis,' Thorpe's 'Quantitative Analysis,' Ganot's 'Physics,' Squire's 'Companion,' B.P., 8s. As new.—Chemist, 2, Park Crescent, Torquay.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Adams, Adcock, Bayley, Beecham, Bishop, Blackburn, Browne, Burns, Burroughs, Butterworth, Campkin, Cowley, Dalton, Daniel, Dent, Emsley, Espinasse, Ferrall, Fletcher, Forrester, Fraser, Fresson, Hadfield, Hapgood, Harvie, Heap, Hill, Ho'ding, Horsfield, Hudson, Johnson, Jones, Lothian, Mair, Marshall, Martindale, Merson, Moss, Munden, Oldberg, Palmer, Pike, Payne, Perfect, Phillips, Prector, Reynolds, Russell, Saunders, Smith, Spitta, Todd, White.

MEDICAL JOTTINGS.

THE MEDICAL ASSOCIATION OF THE LOIRE AND HAUTE-LOIRE, which met at Roanne, according to the special correspondent of the *British Medical Journal*, has voted that the Lyons University be called upon to revoke their decision to create the title of doctor for pharmaceutical chemists. The medical profession is opposed to the proposal; it considers that medical men are not sufficiently protected in the present state of affairs, and would be greatly injured by the creation of doctors in pharmacy.

A POSTHUMOUS WORK by the late Sir B. W. Richardson is announced to be shortly published in two volumes under the title of 'Disciples of Æsculapius.' It will consist of memoirs of leading physicians, and will contain a large number of portraits and illustrations.

THE ANNUAL HARVEIAN ORATION at the Royal College of Physicians of London will be delivered in Pall Mall by Sir Dyce Duckworth, on Tuesday afternoon next, the 18th inst., at 4 o'clock. Dr. W. M. Ord will deliver the Bradshaw lecture at the same place on November 10, at 5 o'clock p.m. The subject will be "Myxœdema and Allied Conditions."

THE WILL, DATED JANUARY 2, 1896, of the late Mr. Henry Lee, Consulting Surgeon to St. George's Hospital, who died on June 9 last, has been proved by his widow, the sole executrix, the value of the estate being £46,948 6s. 4d. He bequeathed to his three daughters by his first marriage a legacy of £2000 each, free of duty, and the residue of his property to his wife absolutely.

ACCORDING TO THE 'LANCET,' the British Pharmacopœia is having as favourable reception as it well could have had. The sales up to September 22 amounted to 18,220 copies.

DR. NORMAN KERR read a paper at the recent meeting of the British Medical Association with the object of calling attention to the increasing peril from the rapid expansion of the traffic in proprietary so-called "remedies" containing alcohol, morphine, cocaine, and other strongly poisonous drugs without the purchaser having the slightest suspicion of the presence of any narcotic poison. He found not long ago a distinguished ecclesiastical dignitary, the sworn foe of alcohol and its congeners, was giving one of his children a generous daily allowance of a "wine" containing not only alcohol in substantial proportion but, in addition, a still deadlier drug. Dr. Kerr contended that it was the province of the medical profession to bring pressure to bear upon the Legislature for the adoption of such legislation as shall secure the open disclosure on the labels of all alcoholic intoxicating drinks and drug preparations which are not recognisable as intoxicating. By such a provision buyers would know what they are buying, and they would not be endangered by the unwitting use of alcoholic or other concealed intoxicating proprietary articles. Similar regulations should also apply to morphine, opium, cocaine, and other poisonous inebriants.

PROFESSOR VIRCHOW, who, during his recent stay in this country was the guest of Sir Felix Semon, the celebrated laryngologist, has been interviewed by a representative of the *Pall Mall Gazette*. His views on politics, considering his position as leader of the German Radical party, would no doubt have been excellent "copy" from the interviewer's point of view, but for obvious reasons were not available. On such subjects as compulsory vaccination and the conscientious objector the professor said it was difficult to understand in Germany the attitude adopted by the British Parliament in dealing with the vaccination question. Make it either compulsory or entirely facultative, he said, and then you have a theoretical standpoint. But as you have it now with the conscientious objectors clause, it is simply ridiculous. You give the man in the street the right to a medical opinion! Why the objector thinks only of himself and what he imagines his own convenience. It is all very well for parents to arrange in a way for the future of their own children, but they must not be given the right to expose them, nay to condemn them to contagion. Take the case of a man with a sore leg, which according to medical advice must be amputated if the man's life is to be saved; he refuses to undergo the operation, and, well, if he prefers to die that is his own business. But suppose this leg contains the germs of a

contagious disease; would the doctors be justified in letting the man mix freely with others and spread contagion? Or in the case of a fire, are the feelings of owners of adjacent houses to be consulted when it is necessary to sacrifice them that the conflagration may be circumscribed? "It is not the rights of the individual but of Society at large which are to be considered in dealing with infectious disease; and for the good of the nation regulations concerning compulsory vaccination should be adhered to. The very existence of people hangs on the question. See how the population of some islands has been thinned by smallpox and how whole tribes of American Indians have disappeared from the same malady.

THE PROFESSOR WENT ON TO SAY that the same kind of immature and incompetent arguments that have been the stock in trade of the anti-vaccinationist have served the purpose of the anti-vivisectionist. People should understand that experiments are made for the sake of humanity and for its good, and not for the purpose of inflicting pain on animals. There is no doubt that abuses have existed, but you cannot condemn the practice because of them. Besides, since the discovery of bacteria, the method has taken a fresh lease of life, and it is impossible to test bacteria or their virulence otherwise than with the aid of experimental medicine. Nobody denies the number of cures of diphtheria due to injection of the serum, but could one have tested its efficacy otherwise than on animals? There are no means of curing certain diseases unless the virus is tested on animals. And the same applies to the testing of other injections which are kept in stock by chemists, and are manufactured and sold for medical purposes.

NOTES OF NOVELTIES.

"The Radiant" Limelight Jet.

Messrs. Ross, Ltd., of 111, New Bond Street, S.W., claim for this jet that the luminous area or "spot" is smaller than usual in proportion to the power of the jet, the intensity of the light being greater. We have not seen any comparative tests made, but the brilliancy of the illumination of the screen when one of these jets was used in the lantern convinced us that it is a jet of very high efficiency, and we observed for ourselves that the luminous spot on the lime was less than usual in area. This is, of course, a valuable characteristic. The mixing chamber is unusual in shape and is designed so to ensure silent working. The mechanical arrangements are admirably thought out. An extremely solid base carries upon it a stage which has a lateral motion actuated by a milled head. Upon this stage the jet is

built, the vertical adjustment being obtained by means of a screw turned by a milled head at the top of the jet. The lime adjustment is of the usual kind. The adjustments work very smoothly, and the whole is very firm and free from vibration. The gas valves are of the screw-down kind, and a "cut off" is provided which enables dissolving to be done with ease. The jet is made in two degrees of power. No. 1 is for use with screens of ordinary size, No. 2 for use with screens of excessive size or under other conditions where the maximum of light is required. The price for either size is £4 4s.

Portable Limelight Lantern.

The term "portable" lantern suggests at once a lantern that is liable to catch fire, if of wood, or to get inconveniently hot, if of metal. In that under notice, however, all difficulties arising from

the heating of the body of the lantern are obviated by the expedient of making the body very small—so small that it in reality consists of a chamber to contain the lime only. This arrangement allows of all the means of adjusting the jet to be placed outside the body, where there is no tendency for them to get heated. All the parts of the lantern are very rigid, notwithstanding the fact that its adaptability is greater than in the

ordinary patterns; for instance, a carrier of any thickness may be used and with a slight addition, which may be made, it will be possible to throw a vertical beam. An arrangement is provided for tilting the lantern to a considerable angle, and provision is made for placing one lantern over another to form a binomial, further, in using two lanterns the upper one may be separately tilted to obtain coincidence in the two discs. The instrument is very attractive in appearance. It is needless to say that the workmanship is admirable, and the price—£7 7s.—at which it is put upon the market by Messrs. Ross, Ltd., is extremely moderate.

“The Eclipse” Projection Arc Lamp.

This lamp is made by Messrs. Ross, Ltd., in two patterns A, and B. In the A pattern a frame is built from a stage on the base and set at the angle most suitable for obtaining the maximum of

light through the condensers whether employing a direct or alternating current. While the principal duty of the frame is to carry the working parts of the lamp, it also acts as a screen from the light and a shield from the heat of the carbons. A milled head upon the stage controls the cross motion of the lamp and enables the light to be brought to the optical centre, an important feature being that the motion is in a straight line, and not the swinging motion which many lamps have. A long-shaped milled head near the top of the lamp adjusts the light vertically. Both motions are extremely “sweet” in action, and, of course, there is perfect control over the position of the light, even to minute adjustment. For use with the cinematograph or the projecting microscope, or for making photo-micrographs, this is of immense importance. A small milled head at the top is for rough adjustment of the carbons in relation to one another, but the fine adjustment for feeding the carbons as they consume is provided by a larger milled head in the centre of the lamp. A lever is provided for striking the arc quickly, and thus preventing a heavy strain being put on the fuses and their consequent destruction. The price of the lamp is £4 15s. The B pattern lamp follows in the main the A as described above. The frame, however, is not a fixture to the stage, but is hinged, and the carbons may, therefore, be brought to a vertical position for use otherwise than in the lantern. A further modification, which is also an improvement, is the employment of a suitable non-conducting material in the place of brass for the milled heads. In this pattern a rack and pinion adjustment is substituted for a screw in the vertical traverse of the lamp.

An Improved Lantern Condenser.

The noted firm of opticians, Voigtlander and Sohn, of Brunswick, whose London agency is 92, Hatton Garden, have put upon the market an improved form of condenser for use with the optical

lantern. The front lens is double convex with dissimilar curves, and the back is a meniscus, having an unusually deep concave. It is claimed that in employing it the definition of the picture on the screen is greatly improved, that more light is obtained, and we noticed for ourselves that the glass is unusually white. For those who seek something better than is to be obtained in the ordinary way, this instrument is worthy of consideration. The price of the $4\frac{1}{2}$ inch is 44s.

PRACTICAL PHOTOGRAPHIC NOTES.

NOW THAT THE LIGHT is getting worse and weaker in actinic value by the absorption of the ultra-violet and violet rays by the aqueous vapour, which is—or should be—more prevalent in the atmosphere, many photographers are turning their attention to the use of colour-sensitive plates, that is, plates which are sensitised to the less refrangible rays, such as green, yellow, and orange. For indoor work, too, these plates are invaluable, as being so sensitive to yellow it is extremely easy to obtain really satisfactory negatives of still life, coloured pictures and objects by gas or lamp light, when an ordinary plate would most certainly fail. For those, too, who have followed the exceedingly interesting and instructive articles by Dr. Spitta on “Photo-Micrography” colour-sensitive plates will be found of considerable benefit.

BUT THE MAIN POINT of these remarks is to draw attention to one or two points in connection with the use of these plates which are either unknown or, being known, are ignored. In the first place it has been pointed out by Ives—and his statements can be confirmed from practice—that the use of hydroquinone developer intensifies the action of the blue rays at the expense of the others; further, that when a colour-sensitive plate is developed for too short a time, the action, no matter what developer is used, is almost entirely confined to the blue or more actinic rays. This latter fact has been quite recently pointed out by Dr. H. W. Vogel, or possibly, we should say, has been again emphasised by him, for it has been known for some time.

DURING THE WINTER MONTHS amateur photographers generally turn their attention to lantern slide making, and many chemists may be asked for developers. One of the most satisfactory which we have used for some time is the following, which, so far as our experiments have gone, is applicable to every make of lantern plate:—

	No. 1.	
Ortol.....		12 g.
Potassium Metabisulphite		6 g.
Distilled Water, to.....		1000 C.c.
	No. 2.	
Sodium Carbonate (crystal)		100 g.
Sodium Sulphite		100 g.
Potassium Bromide		2 g.
Distilled Water, to		1000 C.c.

For use mix equal quantities of Nos. 1 and 2, and add double the quantity of water. By using only half the quantity of water a colder tone is obtained, with the larger quantity the tone is a rich warm brownish black.

AS A ONE-SOLUTION DEVELOPER for black tones on lantern plates and bromide paper, there is nothing better than metol-hydroquinone developer, for which the following may be used:—

Hydroquinone	8 g.
Metol	2 g.
Sodium Sulphite	200 g.
Sodium Carbonate	100 g.
Potassium Bromide	4 g.
Distilled Water to.....	1000 C.c.

This is energetic, and may even be diluted with an equal quantity of water with advantage.

AT THE PRESENT TIME there are a few chemicals which are coming into fairly general repute in photographic circles with which chemists as pharmacists may not be well acquainted with. Ammonium persulphate, NH_4SO_4 , is the latest claimant for photographic notice, and this is being used as a reducer, and a very good one it is when used in 5 per cent. solution, and it acts fairly rapidly but evenly. It is not necessary to free the negative absolutely from hypo, as the persulphate oxidises this, and the neutral double sulphate of ammonium and silver formed is readily soluble in excess of the persulphate.

ENGLISH NEWS.

THE SUBJECT OF STRETCHER DRILL is very ably dealt with in a little book by Surg.-Major J. J. de Zouche Marshall, who is anxious to secure the services of chemists' assistants as stretcher-bearers in the Volunteer forces. With a view to putting that idea into practice he proposes to form a half-company or section amongst the chemists in the recruiting districts of his own corps—the 3rd Volunteer Battalion East Surrey Regiment—including Kingston-on-Thames, New Malden, Norbiton, Surbiton, Thames Ditton, Long Ditton, Molesey, Hampton Court, Hampton Wick, Teddington, Richmond, Mortlake, Barnes, East Sheen, Kew, Ham, Esher, Walton, Chertsey, Egham and Staines. Chemists' assistants desiring to take part in this useful work would be required to join the Volunteer force as ordinary recruits, after passing the medical examination, and then to devote two hours in the evening, once a week, to squad and company drill. The ambulance class to be commenced later for instruction in first-aid work, etc., will meet at Kingston, or alternately at Kingston and Richmond, one evening a week, for about twelve weeks, and the members of the class will then be expected to pass for the Army Ambulance Certificate. Further particulars may be obtained from Sergeant-Major de Zouche Marshall, Shortwood, Cromwell Road, Teddington, S.W.

THE LOCAL SECRETARYSHIP AT SHEFFIELD.—Mr. William Ward, F.C.S., having expressed his intention to resign the office of local secretary of the Pharmaceutical Society after twenty-one years' service, a meeting was held at the rooms of the Sheffield Pharmaceutical and Chemical Society on Wednesday, October 15, to nominate his successor. Amongst those present were Mr. W. Ward, F.C.S., Messrs. G. Squire, J. Preston, J. F. Eardley, etc. Mr. Squire was voted Chairman, and, in proposing a vote of thanks to Mr. Ward, said that during his term of office (twenty-one years) he had performed his many arduous duties in a manner worthy of all praise. Much of the work of a local secretary was not of the most pleasant nature, but when such cases had arisen Mr. Ward had displayed a tact and courtesy of which he might be envied. Mr. J. Preston seconded this vote, urging upon Mr. Ward to reconsider his decision. It was supported by Mr. Pater. Letters were read from Mr. G. T. W. Newsholme and Mr. J. M. Furness, both of whom spoke of the valuable service of Mr. Ward. Mr. Ward, in replying, said he heartily thanked the members present for the manner in which they had spoken. Now he looked back on twenty-one years of local secretaryship, it was with feelings of regret that he felt he must let his decision be final. There were many duties attendant upon the local secretary, some pleasing, some otherwise, but whatever form they had taken he endeavoured, to the best of his ability, to perform them well. It was a source of satisfaction to him to feel that during the time he had held the office he had done his duty. He had much pleasure in nominating Mr. Geo. Squire as his successor, and he hoped that the chemists of Sheffield would give that gentleman their votes and support. This proposition, on being put to the meeting, was unanimously carried.

THE FOOD AND DRUGS ACT IN SHEFFIELD.—Mr. A. H. Allen, public analyst for Sheffield, in his monthly report to the City Council, states that six samples of cream of tartar which he examined were of good quality; six samples of glycerin were of full strength and free from arsenic and other objectionable impurities; of six samples of sal-volatile, four were of good quality and two of inferior quality; of six samples of ground ginger, four were genuine, one of very suspicious character, and the remaining sample contained 3 per cent. of foreign mineral matter, consisting chiefly of calcium carbonate; nine out of twelve samples of lard were genuine, and three of very suspicious character, though no adulteration could be detected.

CASE UNDER THE APOTHECARIES ACT.—On Friday, October 7, before Judge Addison, at Greenwich County Court, Mrs. Hobbs, 81, High Road, Lee, S.E., certificated midwife, Queen Charlotte's Lying-in Hospital, was sued by the Medical Defence Union and the Apothecaries' Company for £20 for acting as an apothecary. The Court was crowded with doctors. Mr. Turner, for plaintiffs, proved that the defendant was not a chemist or apothecary, and sold and compounded medicines for patients. Mr. Schultess Young, for defendant, argued that any one could act as a

chemist unless selling poisons, and as midwife treat disease, and that selling particular medicines for diseases was not within the Apothecaries Act. The jury returned a verdict for the defendant and allowed costs on the highest scale. The judge refused leave to appeal.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY.—The following is a list of the officers of this Association for the ensuing session:—President, Mr. R. C. Cowley, 6, Sandon Terrace, Upper Duke Street; Treasurer, Mr. C. W. Cooke, Apothecaries' Hall, 4, Colquitt Street; Secretary, Percy G. Jenner, 4, Colquitt Street. The meetings of the Association are held at the School of Pharmacy, 6, Sandon Terrace, Upper Duke Street, once monthly, Thursdays, 8.30 p.m. Annual subscription 2s. 6d.

MANCHESTER MICROSCOPICAL SOCIETY.—Members of this Society held their annual soirée on Saturday evening, in the Lecture Hall of the Athenæum. There was as usual a good display of microscopes, and the objects shown included specimens of protozoa, hydrozoa, rotifera, insecta, vertebrata, algæ, lichens, fungi, and phanerogamia. There were also exhibited natural history specimens and preparations of maize. The Society maintains its sound conditions, and has lately made a new departure, for the purpose of extending its scope. A section has been formed to give lectures and demonstrations, and biological and general microscopical work. While a number of members have been selected as lecturers, others have volunteered their services as demonstrators. The list of lecturers already includes Messrs. Mark L. Sykes, H. G. Willis, E. C. Stump, Edward Ward, W. H. Pepworth, and W. Stanley. At Saturday's soirée a leading feature was the delivery of a lecture by Mr. Charles Bailey on "Maize." The President of the Society (Professor Weiss) was in the chair, and he commented favourably on the extension movement entered upon by the Society, following the lines of the Geographical Society.

A DRUG-STORE MANAGER IN TROUBLE.—At the Marylebone Police-court on Saturday, October 8, Charles Henry Fowler Borkwood, 39, described as a chemist's manager, although not a registered chemist, was charged, on remand, before Mr. Curtis-Bennett, with feloniously embezzling £3 4s., the money of his employers, Messrs. Lewis and Burrows (Limited), druggists, of 64, Baker Street, Portman Square. He was further charged with stealing £32 17s. 10d.; also photo cameras, mirrors, spirit lamps, etc., of the value of £9 10s., all belonging to the prosecutors.—The prisoner had been manager of the Baker Street branch for many months at a salary of £3 a week, and, according to the police, had behaved shamefully towards his wife and his two little children. He had for some time past, without the knowledge of his wife, taken up with a young lady who had acted as cashier at one of Messrs. Lewis and Burrow's branches, and had been going about with her. After having purloined his employer's money, he went off with the young woman, staying with her at first-class hotels in London, Brighton, and on the Continent. The prisoner had kept his wife short of money, had raised money on a bill of sale on her property, and left her penniless. But for the assistance of a friend she would probably have been put into the street with her children by a money-lender.—Without going into the third charge the prisoner pleaded guilty, and Mr. Curtis-Bennett sentenced him to three months' imprisonment on the first charge and four months on the second charge, total seven months.

CASHING CROSSED CHEQUES.—On Friday, October 7, at the Lambeth County Court, Edgar Frederick Howard Munday, described as a chemist (though the name as given does not appear in the Register of Chemists and Druggists published this year), carrying on business at New Cross, under the title of the Silico Enamel Co., sued Mr. Stone, a butcher, to recover £17 8s. 9d.—The evidence showed that the defendant cashed at different times four crossed cheques, which came to the total claimed, for a customer of his, a traveller named Hamilton, in the employment of the plaintiff's firm. The cheques were made payable to Mr. Howard Munday, but Hamilton represented they were paid to him by plaintiff for commission. Subsequently it transpired that the endorsements were fraudulently made, and Hamilton was prosecuted. In the meantime the cheques had been paid into the bank and honoured. The present action was brought to recover the value of the cheques, the defendant being, as was alleged, guilty of negligence.—Judge Emden said this was an important case for traders. It was a very different thing to cash a man's own cheque and that to

another person, and this difference was emphasised when the other person was the employer of the man seeking to cash the cheque. More especially ought suspicion to be aroused when cheques were offered, not once or twice, but four times.—The jury found for the plaintiff, but expressed sympathy with the defendant.—Plaintiff's counsel asked for costs on the higher scale, on the ground that the case was one of great public interest.—Judge Emden said, after the expression of the jury, he could not accede to the application. He trusted this case would be a warning to persons who were in the habit of cashing cheques.

ICE CREAM PROSECUTION.—It is interesting to note that the suggestion made by Alderman Harrison (Sunderland) at the Sanitary Congress recently held in Birmingham, with respect to the making and sale of ice cream, has been followed up by a zealous sanitary inspector. At Southwark, on Wednesday, October 12, before Mr. Fordham, Pantaleoni Manze, of Bermondsey Street, was summoned at the instance of the St. Olave's Board of Works for selling ice cream which was injurious to health. Mr. Ashdown, sanitary inspector, said that one of the defendant's men was selling the ice cream from a barrow in Maze Pond. A sample was analysed by Dr. Stevenson, who certified that there were a million microbes in every cubic centimetre, which was equal to fifteen millions in a cubic inch. The microbes were probably the result of the ice cream having been made from decomposing milk. Mr. Fordham said it was horrible that such a mixture should be sold, and he fined the defendant £10 and £5 5s. costs.

LIVERPOOL PHARMACEUTICAL STUDENTS SOCIETY.—The annual general meeting of this organisation was held at the Liverpool School of Pharmacy, Sandon Terrace, Duke Street, on Friday evening, October 7, Mr. Pierson presiding. The Secretary's and Treasurer's reports were read and approved, and the usual votes of thanks were awarded to their authors. It would appear that though the financial position of the Society is satisfactory, the attendance of members at the meetings during last year was by no means up to the average. In this the Society has evidently only been subjected to one of the fluctuations to which similar bodies are liable, and which, it is hoped, a united effort on the part of both officers and members may obviate for the future. There was every evidence at the meeting that the younger members of pharmaceutical circles in Liverpool were interested in the well-being of the Society, the Council having a large addition of new officers, a new Secretary being appointed, and a President in the person of Mr. R. C. Cowley being elected, thoroughly in touch with students generally, and one who is calculated to stir up the latent energies of a body which has earned a name for itself amongst provincial societies, both by its length of existence and by the quality of the work done by its members. The following are the officers for the ensuing session. President: Mr. R. C. Cowley, Ph.Ch. Vice-Presidents: Messrs. H. S. Pierson and H. Wyatt, jun., Ph.Ch. Hon. Sec.: Mr. P. G. Jenner. Hon. Treasurer: Mr. C. Cooke. Council: Messrs. Guest, Marshall, A. H. Morgan, T. S. Wokes, Ph.Ch., Prosper H. Marsden, Pratt, Pickering, Wardleworth, and Postlethwaite. The Council have under consideration the advisability of holding the meeting in future at the Liverpool School of Pharmacy as being more central than University College. Besides this, it is intended to revive the competitions for students, formerly instituted by the Society in the early days of its existence. The meetings will be held monthly, on Thursday evening, in future, at 8.30.

SCOTTISH NEWS.

MESSRS. DUNCAN, FLOCKHART AND Co. have now removed their east-end establishment from the temporary premises, 9, Princes Street, to the handsome new shop at 4, Princes Street, which is near the original position of the old pharmacy so long known as 52, North Bridge, but a little nearer to Princes Street. The fitting of the new shop was designed and carried out by Messrs. S. Maw, Son, and Thompson. The fittings are constructed chiefly of fine mahogany in Chippendale style. The windows are fitted with tasteful screens with neat plate glass panels, bearing the name and style of the firm in gold letters. The floors of the windows and of the shop are of parquetry. The chief retail counter, on the south side of the shop, is massively framed and fitted with projecting pilasters. The wall behind the chief retail counter is fitted with drawers labelled in old style, with handsome panelled pilasters and double cornices. The

shelves for bottles are backed with mirrors, and, unlike many modern pharmacies, the upper portion of the fittings are furnished with carboys of ancient but elegant shape. The pediments surmounting the fittings are exceedingly handsome, and fitted with superior carved panels. The wall opposite the retail counter is fitted with a handsome side counter, and range of wall show cases of very elegant design and superior construction. The very large dispensing department, to the rear, is fitted with three counters and screens, all fitted in the most complete and convenient manner, to cope with a large dispensing business. In this department there are also situated the telephone office and clerks' offices, and immediately in front of these are the private office, cash desk, etc. The impression produced by a look round the whole establishment is a feeling of quietness, elegance, dignity, and convenience, and it is safe to say that the shop is one of the most convenient and elegantly fitted pharmacies north of the Tweed, and well worthy of the honourable traditions so intimately associated with the old No. 52.

ATTEMPTED POISONING IN FIFE.—A sensational case of attempted poisoning occurred at Prinlows, Leslie (Fife), on Wednesday, October 5. It appears that William Hepburn, a millworker, about 15 years of age, residing with his mother at Prinlows, for some time has had a strong disinclination for work, and when urged by his mother to go to the mill threatened her with violence. On the Wednesday afternoon Mrs. Hepburn set about preparing tea, and while pouring the water from the kettle into the teapot she observed the colour was very dark, and remarked to her son that surely some soot had got into the kettle. Her son at this time remarked, "I don't want any tea." On pouring the tea from the teapot Mrs. Hepburn noticed a curious smell, and tasted the tea, and having used laudanum frequently as a medicine, she at once concluded that laudanum had been put into the water. She asked her son what he had put into the water. He at once replied that he had purchased a pennyworth of laudanum from Mr. Carmichael, chemist, Leslie, and had put it amongst the water, but added that he did not mean to poison his mother. The police were communicated with, and the lad was subsequently certified as insane by Dr. Turnbull, and was taken to the Fife and Kinross Asylum.

MR. THOS. S. BARRIE, pharmaceutical chemist, has taken over the Glasgow and West of Scotland School of Pharmacy, lately carried on by Mr. T. Mackenzie, M.P.S., and is now the sole Principal.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION.—The opening address will be delivered on Thursday, October 27, by Dr. Ralph Stockman, Professor of Materia Medica, Glasgow University. The subject chosen is entitled "The Sources of our Pharmacopœia."

IRISH NEWS.

IRISH PHARMACISTS' ASSISTANTS' ASSOCIATION.—At Dublin on Monday last a committee meeting of this Association was held at 52, Upper Sackville Street, the Vice-President, Mr. H. Hunt, M.P.S.I., in the chair. Mr. J. W. McClean, L.P.S.I., acted as honorary secretary *pro tem.*, in the absence of Mr. W. Vincent Johnston. It was decided to hold the opening meeting of the ensuing winter session on Friday, October 21, at 8.30 p.m., in the Pharmaceutical Society's House, 67, Lower Mount Street, and the Secretary was directed to issue notices to all the members, informing them of the fact. It was also decided to insert a notification of the opening meeting in the *Pharmaceutical Journal*. A discussion took place relative to the formation of an employment agency for the benefit of members, and it was hoped the incoming committee would be able to complete arrangements which would be of mutual benefit to assistants and employers. It was particularly requested that all the members would be present at the opening meeting, and a cordial invitation thereto was extended to all assistants and apprentices in the trade. The committee earnestly hoped the attendance would be large, as office bearers for the ensuing year would be elected that evening.

PHARMACEUTICAL SOCIETY OF IRELAND.—Registered Druggist Examination: S. R. Anderson, R. Blair, G. Hamilton, H. Haslett, G. M. Marshall, W. K. Young, passed. Six candidates have been rejected. Preliminary Examination.—The following have passed: C. W. Robinson, W. L. Swenarton (equal), T. J. Martin, J. A. W. Gilmour. Seven candidates have been rejected.

MARKET REPORT.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

OCTOBER 13, 1898.

Business has again been quiet during past week. There are also no changes of any particular importance to record. Ipecacuanha remains firm, while the possibility, not to say probability, of higher prices for Quinine is spoken of. Quicksilver and Mercurials, Iodine and Iodides, Bromine and Bromides unchanged. Acid Citric, Tartaric, and Cream of Tartar quiet, but fairly steady. Sulphate of Ammonia dull and weak. Cocaine steady. Phenacetin and Sulphonal without change. Cascara Sagrada firm and tending upwards. Chlorate of Potash dearer and excited. Borax and Acid Boracic firm. Camphor very firm, with an upward tendency. Codliver Oil quiet. Glycerin firm. Opium, Morphia, and Codeia steady and unchanged. Phenazone dull and weak. Antipyrine Knorr in good demand. The following are particulars of prices actually ruling for articles of chief interest.

ACETANILIDE—Is weak at 11d. to 1s. per lb. for quantity. The reduction in value is attributed to pressure to sell on part of the makers, combined with the low price of Benzole.

ACID BORACIC—Is firm at 24s. for crystals and 26s. per cwt. for powder.

ACID CARBOLIC.—Market is quiet at 6½d. to 6½d. per lb. for 35 to 36° C. ice crystal for large quantity and bulk packing; 39 to 40° C. ice crystal, 7d.; 39 to 40° C. detached crystals, 8d. per lb. Crude: 60° F., 1s. 11d. per gallon; 75° F., 2s. 3d. per gallon. Liquid: 95 per cent., of pale straw colour, 1s. 2d. to 1s. 3d. per gallon in 40-gallon casks.

ACID CITRIC—Is quiet at 1s. 2½d. to 1s. 3d. per lb. on the spot.

ACID OXALIC—Firm at 3¼d. to 3½d. per lb. for crystals; ¼d. per lb. more for powder.

ACID TARTARIC—Steady at 1s. 1d. per lb. for English, and 12½d. per lb. for foreign.

ALUM.—Loose lump, £5 7s. 6d. per ton; ground in bags £6 per ton.

AMMONIA COMPOUNDS.—Sulphate is lower and very quiet at £9 10s. for grey October, 24 per cent. London. Carbonate steady at 3d. to 4d. per lb., according to quality and package. Chloride: chemically pure small crystals, 30s. to 32s. per cwt., free from metals, 25s. 6d. to 26s. 6d. per cwt. Oxalate, 5¼d. to 5½d. per lb. Sulpho-cyanide lower at 1s. to 1s. 1d. per lb. Sal ammoniac: Sublimed No. 1, 35s. per cwt.; No. 2, 33s. per cwt.; crushed (for batteries), 35s. to 37s. per cwt. respectively; powdered, 36s. to 38s. per cwt.

ARSENIC—Is steady at 19s. per cwt. for powder, and 34s. per cwt. for lump.

ASAFETIDA.—The late arrival will not be landed in time for this week's drug auctions.

BLEACHING POWDER—Is firm at £6 10s. to £7 per ton on the spot.

BORAX—Is rather firmer at 14s. 3d. to 14s. 9d. per cwt. for lump and 14s. 6d. to 15s. per cwt. for powder.

BROMIDES AND BROMINE—Are unchanged at prices given last week.

CAMPHOR.—Crude continues very firm. Japan is quoted 105s. per cwt., c.i.f., and China 95s. per cwt., c.i.f. Refined is strong, and a further advance seems probable.

CASCARA SAGRADA—Is firm with an improved tendency, old Bark being held for 25s. per cwt. and upwards.

CHAMOMILES.—Prices are maintained, and in view of the small crop it is difficult to believe that lower prices will rule. Quotations range from 65s. to 75s. per cwt., according to quality.

CINCHONIDINE—Continues in good demand, and 7½d. to 7¾d. per oz. is the general quotation.

CINCHONA BARK.—At the monthly auctions on Tuesday small supplies only were offered, and with a good demand practically the whole sold at full to rather dearer rates. *Succirubra* especially was dearer owing to the demand for cinchonidine. The following are the particulars of the sales:—*Ceylon*: 148 bales offered and 98 bales sold, according to analysis, *Succirubra*, natural stem chips and shavings, fair to good 2¼d. to 2½d., ordinary renewed ditto at 2d.; *Officinalis*, natural stem chips at 2¼d. to 2½d. *East Indian*: 471 bales offered and 370 bales sold, red stem chips and shavings, fair at 2d. to 2½d., renewed ditto at 2½d. to 2¾d. *Officinalis*, natural chips and shavings, fair at 2¼d. to 3d. Ledger, natural stem and chips at 2¾d. to 3½d., branch at 3½d. *Java*: 755 bales offered and sold, Ledger stem chips, ordinary to good at 2¾d. to 4½d.; Ledger branch, common to fair at 1d. to 2¾d., Ledger root 1½d. to 2½d. *South American*: 106 bales Bolivian cultivated Calisaya quills offered and sold, fair to good at 4¾d. to 5d. *African*: 260 bales offered and sold, fair quill at 4¾d. to 4¾d., broken quill and chips at 4¾d. to 4¾d.

CLOVES.—Privately. *Zanzibar* are quiet, with little business passing and an easier tendency. Sales for January and March delivery have been made at 3½d., and there are further sellers at this price. At auction of 43 cases *Penang*, 7 cases sold, without reserve, at 10d. for good bright picked; also 110 cases from *Penang*, low dark mixed, unpicked, at 4½d. to 4¾d. Some very inferior, mixed with stems, 3¼d. to 3¾d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* weak at 1s. 1¼d. per gallon for commercial and 2s. per gallon for pure. *Benzole*, dull, at 9d. to 9½d. per gallon for 50 per cent. for prompt delivery, and 8½d. to 8¾d. per gallon for 90 per cent. *Crude Naphtha*, 30 per cent. at 120° C. 4d. per gallon. *Solvent Naphtha*, 95 per cent. at 160° C., 1s. 6d.; 90 per cent. at 160° C., 1s. 2d.; 90 per cent. at 190° C., 1s. 3d. per gallon.

COCAINE—Is steady at 9s. 9d. per oz. for the *Hydrochlorate* in 25 oz tins for 100 oz. lots, there were, however, a few sellers from second hand at slightly below this price. Buyers will do well to insist upon having only well-known and reliable brands of this article.

CODEIA steady at 12s. 6d. per oz. for the pure in quantity and 1s. per oz. less for the salts.

COD-LIVER OIL.—Market remains quiet at 80s. to 85s. f.o.b. for new *Norwegian* non-congealing oil in 25-gallon tin-lined barrels.

CREAM OF TARTAR.—First white crystals on the spot, 72s. to 77s. per cwt., and 74s. to 80s. per cwt. for powder, both according to quality.

GINGER.—*Cochin* continues dull, 871 bags rough being all bought in, medium and small washed at 24s.; of 98 cases 38 cases sold, small native partly cut 32s. to 32s. 6d., ordinary small B cut 58s. *Jamaica* also dull, of 165 barrels only 3 barrels mouldy were sold at 70s. 6d.

GLYCERIN—Is firm at 51s. to 52s. 6d. per cwt. for *English* in tins and cases, according to quantity, and 54s. to 65s. per cwt. for *German* brands, according to brand.

IODIDES AND IODINE—Are in good demand at unchanged prices.

IPECACUANHA—Is very firm, and a small business has been done in *Rio* at 10s. per lb. *Carthagen* has been dealt in at 7s. per lb.

JAPAN WAX—Quiet. Good squares quoted 33s. to 35s. per cwt., on the spot.

MENTHOL—Is firm at 7s. 1½d. to 7s. 3d. per lb., according to quantity.

MERCURIALS.—Makers' prices are unchanged at 2s. 3d. per lb. for *Corrosive sublimate*, 2s. 7d. per lb. for *Calomel*, and 2s. 11d. per lb. for *Red oxide crystals* and *levigated* for 5 to 10 cwt' contracts.

MORPHIA—Quiet at 5s. per oz. for the *Hydrochlorate* powder in bulk.

NITRATE OF SODA—Is quiet at £7 12s. to £7 15s. for ordinary, and £8 to £8 2s. 6d. per ton for refined.

OILS (ESSENTIAL).—*Peppermint* is exceedingly quiet, and American H.G.H. is still quoted 5s. 6d. to 5s. 7½d. per lb. on the spot, whilst no business is doing for forward delivery. For Wayne County the demand is also slow, and quotations range from 3s. 6d. to 4s. 3d. per lb., as to quality. *Star Aniseed* quiet at 6s. 10½d. to 7s. 1½d. per lb. *Cassia* very dull at 4s. 9d. to 5s. 9d. per lb. as to percentage. *Cajeput* dearer at 4s. to 4s. 3d. per bottle as to quantity. *Citronelle* dull at 1s. 1½d. to 1s. 1¾d. per lb. on the spot in tins; drums, ¼d. per lb. less. *Lemongrass* steady at 3¼d. to 3½d. *Lavender*; French is dearer at 4s. to 6s. 3d. per lb. as to quality.

OILS (FIXED) AND SPIRITS.—*Linseed* quiet but steady, on the spot, pipes £16 17s. 6d., barrels £17 7s. 6d. *Rape* firm, ordinary brown on the spot £21 15s., refined £23. *Cotton* steady, London crude spot £13 17s. 6d., refined spot £15 10s. to £16, according to make. *Olive*, green oils, steady at £29 to £32 per ton, table oils 4s. to 6s. per gallon, according to quality. *Nut* 37s. 6d. per cwt. *Sesame*, 35s. to 38s. per cwt. as to quality. *Castor*: Italian tasteless 4½d. to 4¾d. per lb., French medicinal 37s. 6d. per cwt. *Coconut*, firm, Ceylon on the spot £24 10s. *Cochin*, spot £27 10s. *Palm*: Lagos on the spot £22 15s. *Turpentine* quiet, American spot 23s. 6d. per cwt. *Petroleum Oil*: The market is advancing, Russian spot 5½d. per gallon; American 5½d. per gallon. *Water White* 7d. per gallon.

OPIUM—Is quiet, prices remaining nominally same as quoted last week.

PERMANGANATE OF POTASH—Is believed to have touched bottom prices at 60s. per cwt. for *small crystals*, and 65s. per cwt. for *large crystals* in ton lots.

PHENACETIN.—A good article is obtainable at 3s. 9d. to 4s. 3d. per lb., according to quantity, for both *crystals* and *powder*. *Bayer's* make is maintained at 5s. 6d. per lb. (we mentioned this last week, by a printer's error, under heading of sulphonal, a mistake which was, however, obvious).

PHENAZONE—Is very quiet, price being weak. Price of *Dr. Knorr's Antipyrine* remains unchanged.

POTASH COMPOUNDS.—*Chlorate* dearer and excited, price for early delivery 4d. to 4½d. per lb. *Bromide* firm at 1s. 9½d. per lb. *Iodide* 10s. 3d. per lb. *Bicarbonate*, 30s. to 35s. per cwt., according to brand. *Cyanide* tending lower for forward delivery, quotations for 98 to 100 per cent., white cake, range from 1s. to 1s. 1d. per lb. *Prussiate*, steady at 6½d. to 7d. per lb. for the yellow, and 1s. 1d. to 1s. 2d. per lb. for the red. *Oxalate*, the neutral is unchanged at 5d. per lb. *Fermanganate* is lower, consequent upon keen competition among makers, quotations are 52s. 6d. per cwt. for small crystals, and 57s. 6d. per cwt. for large. *Bichromate* steady at 3½d. to 3¾d. per lb.

QUICKSILVER—Firm at £7 5s. per bottle from importers and 1s. less from second hands.

QUININE—Is firm, makers' price remaining, however, so far unchanged at 10d. per oz. for best brands of *German Sulphate of Quinine* for 1000-oz. lots in 100 oz. tins, there being hardly any sellers from second hand below this figure, while the prospect of an advance in price is freely spoken of.

SAFFRON—Remains firm at 40s. to 45s. per lb. for *Valencia*.

SALTPETRE.—*English* refined, 20s. per cwt. in large casks; kegs, 21s. per cwt.

SHELLAC.—Whilst the market is quieter, prices are very firm. Moderate sales have been made at steady prices, including *TN Orange* at 67s. per cwt., basis fair, and *HC Garnet* at 67s. 6d. for fair free, and 67s. for matted. For arrival sellers ask rather more money, and this for the moment prevents business.

SODA COMPOUNDS.—*Crystals* steady at 57s. per ton, exship-terms. *Ash* firm at £5 to £5 10s. per ton, as to strength. *Acetate* unchanged at 35s. 6d. per cwt. for the chemically pure, and 13s. 6d. per cwt. for the ordinary refined. *Hyposulphite* quiet at 6s. to 8s. per cwt., as to brand. *Bicarbonate* steady at £7 5s. per ton for the 97 per cent. and 18s. 6d. per cwt. for the fully bicarbonated quality. *Bromide* unchanged at 2s. per lb. *Iodide* steady at 11s. 7d. per lb. *Nitrate* £7 12s. 6d. per ton for the ordinary and £8 2s. 6d. per ton for the refined.

SPICES (VARIOUS).—*Black Pepper* dull; 1160 bags all bought in, Penang at 4¾d; Singapore also 4¾d. *White Pepper*; 116 bags Palembang sold, without reserve, at 7d.; Siam bought in at 8¾d; and Singapore at 8¾d. to 8¾d. *Chillies*: 86 bales Zanzibar bought in at 38s. *Capsicums*: 1 bale Natal bought in at 75s. *Mace*: 7 cases good ordinary red Penang sold at 1s. 7d; 29 packages West India sold, ordinary to good fair, 1s. 3d. to 1s. 7d.; low pickings, 1s. to 1s. 1d. *Nutmegs* are dull at previous rates, except bold, which remain firm. *Pimento* is flat, and 515 bags were all bought in at 4¾d. to 4¾d.

SUGAR OF LEAD—Firm. *Foreign*, 27s. 6d. per cwt., landed terms; *English*, 31s. per cwt.]

[SULPHATE OF COPPER—Dearer, at £17 to £18 per ton, according, to brand and delivery.

SULPHONAL—Is still quoted by the two chief makers 7s. 3d. per lb. in bulk.

SULPHUR—Firm. *English*: Roll, 7s. 6d. to 8s. per cwt.; flowers 11s. per cwt. *Foreign*: Roll, 6s. 6d. per cwt.; flowers, 7s. per cwt

THYMOL—Is rather dearer at 7s. 3d. to 7s. 6d. per lb.

TURMERIC—Is quiet but steady, the moderate sales including *Bengal* at 19s. per cwt.; *China* bulby finger at 16s. 6d. per cwt.; and fair *Cochin* split bulbs at 10s. 6d. per cwt.

To-day's drug auctions passed off quietly without any particular change in values. The price of *Ipecacuanha* was firm, other values being also fairly maintained as far as business was actually effected. The following are the particulars of goods offered and sold:—

ACONITE ROOT.—10 bags of fair quality were held for 27s. 6d. per cwt.

ALOES.—32 boxes livery capey *Barbadoes* sold cheaply at 14s. per cwt.; 10 cases fair *Cape* bought in at 26s. per cwt.

AMBERGRIS.—1 box good grey, of good flavour, bought in at 100s. per oz.; 1 tin black undeveloped at 50s. per oz.

BALSAM PERU.—2 cases bought in at 8s. 3d. per lb.

BALSAM TOLU.—8 cases of good quality taken out at 1s. 9d. per lb.

BELLADONNA ROOT.—3 bales of fair quality held for 40s. per cwt.

BIRD LIME.—5 cases *Japanese*, offered with all faults, sold, subject to approval, at 3d. per lb. for re-weights

BUCHU LEAVES.—Good green rounds were bought in at 6d. to 9½d. per lb., fair ditto at 5¾d., a bid of 5d. being declined.

CARDAMOMS.—5 cases good to fine *Mangalore* were taken out at 3s. 9d. per lb. Fine, bold pale *Mysore* realised 4s. 2d. per lb.; second size, 3s. 8d. per lb.; small ditto, 3s. 1d. per lb.; dwarf, 2s. 4d. per lb.; splits, 2s. 2d. to 3s. 5d. per lb. Decorticated dearer at 3s. 3d. to 3s. 4d. per lb. for good, and 2s. 6d. per lb. for pale.

CASCARILLA {BARK.—73 packages part sold at 60s., for nice bright small to bold quality.

CHILLIES.—15 bales good *Zanzibar* were held for 37s. 6d. to 40s. per cwt.

CIVET.—3 horns of fair quality bought in at 12s. per oz.

CINCHONA BARK.—10 bales flat *Calisaya* sold at 9d. per lb. down to 4d. for 2CCD. 77 serons crown and grey bark sold at 1s. 1d. per lb. down to 6d. for 1CCD, and 2d. to 3d. for 3CSD. 18 bales yellow bark were held for 8d. per lb. 1 case red bark taken out at 7s. per lb. 3 bales *Maracaibo* sold without reserve at 3½d. for 1CCD.

COD-LIVER OIL.—10 barrels *Norwegian*, January, 1897, import, bought in at 75s. per barrel.

COLOCYNTH.—5 cases dull small to medium Turkey were bought in at 1s. per lb.

COLOMBO ROOT.—10 bags washed with stem were held for 40s. per cwt.; very stemmy sorts sold at 18s.

CROTON SEEDS.—11 bags of only medium quality taken out at 85s. per cwt.

CUBEBS.—22 bags of fair quality, but slightly stalky were bought in at 25s. per cwt.

CUMMIN SEEDS.—15 bags fair *Malta* held for 28s. per cwt.

CUTTLEFISH BONE.—9 cases small to medium dull quality sold at 1½d. per lb., 14 cases fair medium rather darkish realising 2¾d. per lb.

DAMIANA LEAVES.—5 bales rather yellow held for 7½d. per lb.

DRAGON'S BLOOD.—2 cases bright seedy block bought in at £8 per cwt.

ERGOT OF RYE.—25 bags wormy *Spanish* taken out at 8½d. per lb. Another lot of sound *Spanish* was held for 8d. per lb. fair *Russian* bought in at 9½d. per lb.

ESSENTIAL OILS.—6 cases West Indian distilled *Lime Oil* bought in at 3s. 3d. per lb. 5 cases *Cinnamon Leaf* bought in without mention of price. 1 case *Spearmint* taken out at 4s. per lb. 4 cases *Cinnamon* held for 1s. 6d. per oz.; 39 cases offered without reserve, selling at 3½d. to 3¾d. per oz. 2 cases French *Geranium* held for 1s. 3d. per lb.; 50 cases *Lemongrass* for 3¾d. per oz.; 1 case James B. Horner's *Oil Wintergreen* for 4s. 6d. per lb.; 5 cases James B. Horner's *Oil of Sassafras* for 2s. per lb.; 6 cases *Eucalyptus Globulus Flatypus* brand for 2s. 6d. per lb.; 1 drum *Citronella* for 1s. 2d. per lb.

GALANGAL ROOT.—10 bales were held for 26s. per cwt.

GAMBOGE.—11 cases bought in at £8 10s. for fair bright softish pipe, down to £6 5s. for pickings.

GENTIAN ROOT.—20 bales fair dry held for 18s. per cwt.

GUAZA.—18 bales siftings were held for 3¾d. per lb.

GUM AMMONIACUM.—8 cases bought in at 35s. per cwt. for blocky

clean, some small, free drop, and 20s. per cwt. for dark. 2 cases fair clean drop, part blocky, at 60s. per cwt.

GUM ARABIC.—5 bags red gum of low quality were bought in at 15s. per cwt. 4 cases grain at £6 15s.

GUM BENZOIN.—Medium to fair to good *Sumatra* was bought in at £6 to £7 10s., a bid of £7 for the better quality being declined, 8 cases *Penang* were bought in at 60s. per cwt.; 18 cases *Palembang* sold without reserve at 87s. 6d., down to 23s. 6d. for inferior.

GUM GUAIAECUM—20 packages part sold at 1s. 10d. per lb. for good glassy block down to 1s. 3d. per lb. for not quite so good.

GUM KINO.—3 cases *African* bought in at 4s. 6d. per lb.

GUM MYRRH.—Good bright sorts were bought in at 100s. per cwt.

HONEY.—70 packages *Jamaica* sold freely at 19s. to 21s. per cwt. 5 quarter casks ditto bought in at 21s. 22 cases *Australian* held for 21s. per cwt.

IPECACUANHA.—About 40 bale *Rio* were offered, part of which sold at 9s. 11d. to 10s. per lb., holders being very firm. For *Carthagera* there was a good demand for export, and from 6s. 11d. to 7s. 2d. per lb. was paid, the latter figure showing an advance of 2d. per lb. on private sales.

KAMALA.—5 cases of dull appearance bought in at 6d. per lb.

KOLA NUTS.—1 bag fair small *Grenada* bought in 7d. per lb., other lots of *West Indian* being held for 3d. to 6d. per lb.

LIME JUICE.—4 packages concentrated *West Indian* held for £15 per 108 gallons. 5 puncheons ordinary commercial quality held for 1s. 3d. per gallon.

MATICO LEAVES.—9 bags fair green partly broken were held for 6½d. per lb.

MUSK.—4 caddies *Tonquin*, small to medium pods blue, good thin skin and fairly dry, sold cheaply at 70s. per oz.

NUX VOMICA.—100 bags good bold bright *Cochin* were held for 10s. per cwt., 34 bags small dull for 6s. per cwt.

ORANGE PEEL.—3 cases darkish thin cut were held for 6½d. per lb. 3 bales old sold without reserve at 2d. per lb., and 2 cases at 3¾d. per lb.

RHUBARB.—31 cases rather rough horny round high-dried bought in, 6d. per lb. being apparently the price required, while 3 cases offered without reserve sold at 6d. per lb., 1 case flat *Canton* pickings sold at 11d. Small trimming round *Canton* held for 1s. 4d. per lb. Good round *Shensi* sold at 2s. 9d. per lb.

SARSAPARILLA.—17 bales *Jamaica* were taken out, a bid of 1s. 7d. per lb. not being entertained; 2 bales ditto of another parcel, rather dark in colour, sold at this price, the balance being bought in at 1s. 10d. 12 cases *Lima* were taken out at 1s. 4d. per lb.; 14 bales ditto selling at 1s. 2d. per lb. for 1 CCD down to 11d. for 2 CCD.; 3 serons *Honduras* 1 CCD bought in at 1s. 8d. per lb.

SENNA.—About 600 bales *Tinnivelly* offered and sold with good competition. Small leaf realised 2d. to 2½d. per lb.; medium 2½d. to 3d. per lb., whilst boldish leaf was dearer, up to 5d. per lb. Only a few bales *Alexandrian* offered but these being of indifferent quality no bids were made.

SQUILLS.—36 bags held for 3d. per lb.

STAR ANISEED OIL.—30 cases *China*, guaranteed genuine, sold cheaply without reserve at 6s. 4d. to 6s. 5d. per lb.

STROPHANTHUS SEEDS.—3 bags good fair green *Kombe* were bought in at 3s. 3d. per lb.

TAMARINDS.—5 barrels *West Indian* sold cheaply at 8s. 6d. per cwt.

TONQUIN BEANS.—5 casks fair *Angostura*, slightly damp, were taken out at 3s. 10d. per lb. 10 cases fair frosted *Para* part sold at 2s. per lb.

TURMERIC.—40 bags finger *Madras* taken out at 26s. per cwt.; 3 bags bulbs at 11s.

VERMILION.—2 cases *China* bought in at 2s. 2d. per lb.

WAX.—Of 12 packages *Jamaica*, 1 case sold at £6 10s. per cwt.; remainder being bought in at £6 15s.; 24 mats *Madagascar* bought in at £6 10s.; 10 bales *Madras*, at £5 15s.; fair *Zanzibar* at £5 5s.

WILD CHERRY BARK.—1 bale of fair quality bought in at 6d. per lb.

Mr. CHARLES CHRISTEY, of the firm of G. N. Souratty and Co., Colonial Brokers, of 38, Fenchurch Street, E.C., died very suddenly on the night of the 12th inst., of bronchitis. It will be remembered that Mr. Souratty died suddenly a few months ago, two deaths have, therefore, occurred in this firm, both the partners having joined the majority.

Newcastle Chemical Report.

OCTOBER 12, 1898.

Not much change in general business on this market, and value of heavy goods practically unaltered. Prices are:—Bleaching Powder: £6 to £6 5s. Soda Crystals: Basis, 45s. Caustic Soda: 70 per cent., £7 5s. Alkali: £4 5s. Sulphur: £5 per ton.

Manchester Chemical Report.

OCTOBER 12, 1898.

The much to be regretted decline in exports of heavy chemicals continues, chiefly, as for many months past, to the United States. The exports of chemicals and chemical and medicinal preparations show an increase of 5.6 per cent., but, on the other hand, Alkali shows a decrease in quantity of 20.3 per cent. and Bleaching Materials 25.6, and in value of 13.2 per cent. in Alkali and 35.0 in Bleaching Materials. Some idea of the decrease to the United States may be gathered from the fact that the exports of Alkali for September are 50,047 cwts., as against 101,472 cwts. in 1897, and 52,149 cwts. of Bleach, as against 66,348 cwts. in 1897. In this market things are steady and prices fairly firm. For next year, however, lower figures are ruling. Bleaching Powder ranges from £4 12s. 6d. to £4 15s., although for prompt it is £5 on rails, softwood casks. Ammonia Alkali, 58 per cent., does not seem to have altered much, and may be quoted £3 17s. 6d., while Soda Crystals are at £2 7s. 6d. in bags on rails, usual addition for casks. Chlorate of Potash has advanced to 4d. per lb. Arsenic is without material alteration and firm. Aniline Oil is quoted 5d., and Salt 4½d. Benzols are lower, 90's ranging from 8½d. to 9d., and 50's to 90's, 9d. to 9½d. Naphthas are easier, but unchanged. Permanganate of Potash is quoted £49 10s. per ton *c.i.f.*, Manchester, and the tendency is upward. Glycerin is firm for local makes at the rates of last week.

Liverpool Market Report.

OCTOBER 12, 1898.

AMMONIA SALTS.—*Carbonate*, 3d. per lb. *Sal Ammoniac*, 33s. and 35s. per cwt. *Sulphate* is lifeless at £9 17s. 6d. per ton.

BEE SWAX.—11 bags of Californian sold at £6 10s. per cwt., and 1 ton of Chilian at £6 15s. to £6 17s. 6d. Subsequently some fine Chilian made £7 to £7 2s. 6d. per cwt.

CANARY SEED.—A little more interest has been taken in this the last few days, and sales of 450 bags of Turkish at 28s. per 464 lbs. have resulted, since which retail amounts have changed hands at 28s. 6d. The price for Turkish is from 28s. 6d. to 30s. per 464 lbs.

COPPERAS.—Welsh, 37s. per ton; Lancashire 35s.

COPPER SULPHATE.—Is firm at £17 2s. 6d. per ton on the spot, or £17 12s. 6d. to £18 for next year's delivery.

HONEY.—Finest Californian is very scarce, and 42s. 6d. is asked for it, at which price several lots have found purchasers. Small sales of Chilian Pile 2 at 22s. 6d. per cwt. are also reported.

LINSEED.—Continues very firm at high rates. Calcutta seed October and November shipment being 37s. 6d. per 416 lbs., and North American 34s. 6d.

OILS (FIXED) AND SPIRITS.—*Castor* is rather quiet at the moment, and prices quoted are: Calcutta, "good seconds," 3½d. per lb.; French, 1st pressure, 3½d. per lb.; Madras, 3d. to 3½d. *Olive* is unchanged from last week, with a firmness in Spanish oils showing no immediate prospect of easier rates. *Linseed* of Liverpool make is slightly lower, being now priced at 18s. to 19s. per cwt. *Cottonseed* is likewise a turn easier, 15s. 9d. to 16s. *Spirits of Turpentine* is in fair demand at the advanced price of 24s. per cwt. or 1s. higher than last week.

POTASH SALTS.—*Bichromate*: 3½d. per lb. *Chlorate* dearer, 4d. to 4½d. per lb. *Cream of Tartar* continues scarce and firmly held for 75s. per cwt. *Pearlashes* are quiet at 34s. to 35s. per cwt. *Potashes* remain with a slow sale at 22s. 6d. per cwt. *Prussiate* quiet, 6½d. per lb. *Saltpetre*, 21s. per cwt.

SODA SALTS.—*Bicarbonate*, £6 15s. per ton. *Borax*, £13 10s. to £14 per ton. *Caustic*, 76 to 77 per cent., £7 12s. 6d. per ton; 70 per cent., £7. *Crystals*, £3 per ton. *Nitrate* is selling steadily at 7s. 7½d. to 7s. 9d.

WAX.—Japan: 50 cases were sold on private terms.

Announcements.

Tuesday, October 18.

ROYAL PHOTOGRAPHIC SOCIETY, 5A, Pall Mall East, London, W. at 8 p.m. New methods of developing Daguerreotype plates will be explained by Colonel J. Waterhouse.

Wednesday, October 19.

ROYAL MICROSCOPICAL SOCIETY, 20, Hanover Square, London, W., at 8 p.m. A paper on "Reproduction of Diatoms," will be read by J. Newton Coombe, also Part 3 of the "Report on the Recent Foraminifera of the Malay Archipelago," by F. W. Millett.

THE WESTERN CHEMISTS' ASSOCIATION (OF LONDON), Westbourne Restaurant, 1, Craven Road, W., at 9 p.m. Annual meeting and election of the Committee for the ensuing year.

Thursday, October 20.

CHEMISTS' ASSISTANTS' ASSOCIATION, 73, Newman Street, London, W. The ex-President, Mr. T. Morley Taylor, will read a paper on "Vegetable Secretions."

Trade Notes.

PEPTARNIS (PEPTONE OF BEEF) has been introduced into this country by LIEBIG'S EXTRACT OF MEAT CO., LIMITED, 9, Fenchurch Avenue, London, E.C., specially with a view to meeting the necessity for an invalid food which satisfactorily combines the qualities of being highly nourishing, easy of digestion, palatable, and inexpensive. It is understood to be manufactured from specially selected cattle by a process which does away with the objectionable flavour so often noticeable in peptonised foods, and people who can digest nothing else are said to take Peptarnis with advantage. The following is the published analysis of Peptarnis:—

Water.....	28.95	per cent.
Gelatin.....	3.92	"
Albumin.....	1.85	"
Albumoses.....	23.42	"
Pancreas Peptone.....	23.06	"
Nitrogenous Meat Bases.....	8.94	"
Fat.....	0.18	"
Sodium Chloride and Phosphates.....	9.68	"

100.00

The total nitrogen equals 9.95 per cent. Peptarnis is retailed in tins at 1s., 1s. 9d., and 3s. 3d. each.

THE GALEN MANUFACTURING CO., LIMITED, send their latest illustrated catalogue, which has just been issued, and offer to forward a copy to any chemist who may apply to the firm. A sample of Lister's double cyanide gauze, manufactured by the firm, accompanies the catalogue. We understand there are so-called double cyanide gauzes on the market, which are simply dyed material treated with zinc carbonate, but that there is no record of mercurialism following the use of Milne's cyanide gauze.

MESSRS. JAMES TOWNSEND AND SON, of Exeter and London, send specimens of their almanacs and calendars for 1899, also of their handbills, chemists' labels, and an abridged price-list of patent medicines and proprietary articles. The octavo illustrated almanacs contain much useful domestic and other information, while the literary matter is quite abreast of the times. A purse-almanac is very neat, as are also the bouquet and pocket almanacs, and several small calendars. The "Household Assistant and Medical Guide" is another useful publication of this enterprising firm of chemists' printers. Particulars and prices may be obtained on application to the firm.

MESSRS. W. J. BUSH & Co., LTD., have published in volume form 'Current Observations on Essential Oils,' which should prove of value to all who have occasion to buy or test those products. The observations have been made on oils produced in Messrs. Bush's laboratories in London or the South of France, and of the purity and genuineness of which, therefore, an absolute degree of certainty was forthcoming. They extend over several years, and fresh reports are promised at future intervals.

Marriage.

CHERRY—COLES.—On October 8, at the Church of St. Lawrence, Milcombe, Oxfordshire, by the Rev. J. Mountain, M.A., Frederick Cherry, M.P.S., pharmaceutical chemist, to Emma E. Coles, eldest daughter of Mr. Jas. Coles, of Milcombe.

OBITUARY.

CADMAN.—On October 5, Daniel Charles Cadman, Pharmaceutical Chemist, Blackheath, S.E. Aged 59. Mr. Cadman had been a member of the Pharmaceutical Society since 1870.

VIGGARS.—On October 5, George Daniel Viggars, Chemist and Druggist, Tunstall. Aged 36. Mr. Viggars was an Associate of the Pharmaceutical Society.

SMITH.—On October 7, John Smith, Chemist and Druggist, late of Saxmundham. Aged 70.

Publications Received.

OBSERVATIONS ON THE VEGETATION OF LORD HOWE ISLAND. By J. H. MAIDEN, of the Botanic Gardens, Sydney. Pp. 47, and 4 plates.—Also, A CONTRIBUTION TOWARDS A FLORA OF MOUNT KOSCIUSKO, by the same author. Pp. 21. Sydney: William Applegate Gullick, Government Printer. 1898. From the Author.

COMMERCIAL ORGANIC ANALYSIS. By ALFRED H. ALLEN, F.I.C., F.C.S. Second Edition, revised and enlarged. Vol. iv. Pp. xi. + 580. Price 18s. London: J. and A. Churchill, 7, Great Marlborough Street, W. 1898. From the Publishers.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

Thomas T. Liddle (trading as T. & J. Liddle), glass manufacturer, Eslington Glass Works, Gateshead,
William T. Coombs, chemist and druggist, 4, Neville Street, Canton, Cardiff, Glam.

John Hoy, chemist and druggist, 22, Bridge Street, Leeds.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Photographic mounts, Bristol cartes, 3s.; G.B.E., 10s.; cabinets, 10s.; G.B.E., 15s.; quarter-plates, 6s.; half-plates, 12s. 1000; plate-sunk mounts, 12 by 10, 40s. 1000. Samples free.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns, second-hand; triples and binoculars; oxyhydrogen microscope; marvellous panphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours, post free, 5s.—Edward Peck, East Dereham, Norfolk.

On Sale, cheap, a Barclay's five-gallon air pressure filter or percolator, only been used twice, as good as new. What offers? or will exchange.—Berry's Drug Stores, Market Street, Farnworth, near Bolton.

O'Brien's Check Till for sale, used only six months, price 40s. cash.—J. R. Oliver, Stanhoe, Norfolk.

Surplus.—1 lb. pot. iodide pur., 9s. 6d.; 2 lb. 18s.; 1 lb. quin. sulp. B.P., 12s.; dozen Williams' 23s. 9d., 3 dozen at 23s. 7d. Carriage paid. Cheque or London References.—Eastman, Forest Lanc, Stratford.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Allen, Balkwill, Bayley, Blythe, Bourne, Bristow, Conyngham, Cowley, Cowling, Craeknell, Daniel, Espinasse, Ferrall, Groth, Hall, Harrington, Hebb, Hogg, Hughes, Jones, Kermath, Kershaw, Kirkby, Kraemar, Lloyd, Matthews, Merrikin, Mollison, Moss, North, Owen, Panchaud, Pater, Pears, Poppelreuter, Reynolds, Ridlington, Robins, Ross, Smith, Summers, Wallace, White, Wyatt, Wyeth.

PRACTICAL PHOTOGRAPHIC NOTES.

TARTAR EMETIC is a salt which may possibly be asked for by photographers. It is quite new to photographers, but as a preliminary bath, either before or after exposure, of a strength of 2 per cent., M. Mercier, of Paris, has found that it will cure an over-exposure of at least 500 times. The plate is merely bathed in the solution for two minutes, dried, and then developed, preferably with a hydroquinone developer of the following composition:—

Hydroquinone	8 g.
Sodium Sulphite	100 g.
Sodium Carbonate	75 g.
Potassium Bromide	2 g.
Distilled Water	1000 g.

BRENCATECHINE OR PYROCATECHINE is another developer which is not new, but to which some attention has been directed lately, due entirely to the production of it on a large scale by Ellon and Co., of Charlottenburg, Berlin. It is an open question whether it presents any great advantage over the commonly used developers, but it is cleanly, keeps well, and is open to control by dilution or the addition of bromide. A satisfactory formula is—

No. 1.	
Pyrocatechine	20 g.
Sodium Sulphite	100 g.
Distilled Water	1000 C.c.
No. 2.	
Sodium Phosphate	188 g.
Sodium Hydrate	20 g.
Distilled Water	1000 C.c.

For use mix 1 part of No. 1, 1 part of No. 2, and 1 part of water. To make No. 2 dissolve the phosphate in 750 parts of water, the hydrate in 250 parts of water, and mix the two. The developer is applicable to both negative and positive work.

STAND DEVELOPMENT is the name that has been given to a particular method of development in which the exposed plates are placed in a grooved trough, the latter filled with a weak developer and the whole allowed, in vulgar parlance, to rip till done. In cases of over-exposure this may be in a quarter of an hour, in cases of under-exposure, an hour. No attention is required, the plates may be simply left in the solution, and looked at every quarter of an hour till finished. We have been trying this lately and have hit on a simple developer that acts excellently, its composition is as follows:—

Metol	4 g.
Hydroquinone	6 g.
Sodium sulphite	50 g.
Potassium ferrocyanide	25 g.
Potassium bromide	0.5 g.
Potassium carbonate	100 g.
Water to	1000 C.c.

For use dilute 1 part with 60 parts of water. When used in the concentrated form this makes a capital developer for ordinary negative development, and with four times the quantity of water it is good for lantern slides and bromide paper. Photographic dealers who do not know anything about stand development, but who have a chance to fit out a novice with apparatus and want to get into his good graces, should strongly recommend stand development, and give him the above. The results obtained will make the novice a firm friend and a good customer for ever.

POSSIBLY SOME CHEMIST may be asked to make up the following intensifier, which is lauded as being non-poisonous and effective for moderate intensification:—Immerse the negative in

Ammonia 0.880	100 C.c.
Water	100 C.c.

for a couple of minutes or less, and then place in

Cadmium Bromide	1 g.
Alcohol	1000 C.c.

This was suggested first of all in 1889, and was for many years accepted without demur, and, we think, without trial. It was then pointed out that as an intensifier it was practically useless, the sole action being due to the alcohol, which caused a slight contraction of the gelatin and aggregation of the silver particles which could not be called intensification.

IRISH NEWS.

DURING THE PAST WEEK events of pharmaceutical interest have crowded rapidly on one another, each day bringing something fresh in its train. Matters have resumed their normal aspect in the Society's deliberations, and the three new Councillors, Messrs. Brittain, Tait, and Michie have made their *début* with the usual pharmaceutical fanfare. The famous *bordereau*, as the sevenfold manifesto, already referred to, has come to be called, is still shrouded in mystery, and in connection it is noteworthy that a reward of £5 is offered through the public press for such information as will lead to the discovery of the writer or the printer; up to the present, however, the "fiver" is going a-begging.

ON THE 12TH INST., a Committee meeting of that portion of the Pharmaceutical Society interested in the scientific gatherings purposed to be held during the ensuing winter evenings, met at 67, Lower Mount Street, when, it is understood, arrangements were made for the compilation of a syllabus of lectures, papers, etc., to be contributed by the craft and its friends. The opening meeting will be held on November 14, and it is the President's earnest desire that the gathering at that and subsequent meetings shall be largely attended, all assistants and apprentices being cordially invited. It is to be hoped that the worthy President's exertions to make these educational meetings a success will be recognised by a crowded house. There is a wide field, in the matter already entered on the syllabus, for interchange of thoughts and ideas, and it now remains for the general body of pharmacists to respond by their presence to the welcome extended to them by Mr. Downes.

MR. L. HEPENSTAL ORMSBY, M.D., a gentleman well known in Irish medical and pharmaceutical circles, delivered last week, on the occasion of the opening for the winter session of the County Dublin Infirmary, an interesting address on "A Century's Progress in Surgery," in the course of which he made special reference to the functions of the pharmacist in present-day surgery. He said if he were asked what had brought about the remarkable changes in surgery during the present century as compared with the last, he would say in the first place old customs and modes of practice had either disappeared or had been modified. For instance, the complete abandonment of excessive doses of mercury to patients who could be met with in the hospitals in bygone days, leaning over the sides of their beds and pints of saliva running from their mouths, their teeth loose, and a foetid odour exhaled from their breath; uncleanly and ill-smelling ointments and irritating lotions had given place to light, cleanly, and simple dressings and lotions in the treatment of wounds and ulcers. These circumstances assisted and conferred an incalculable boon on sick and suffering thousands. Then, again, might be mentioned the various aids to diagnosis by the invention of many surgical and medical appliances, the establishment of chemical, bacteriological, and other laboratories, the introduction and universal adoption of anaesthetics in the practice of operative surgery, the bloodless method of amputating and excising limbs as carried out by Esmarch's elastic bandage, antiseptic treatment of wounds, the adaptation to surgery of electricity, the Röntgen X rays and cautery, and the construction of new and improved operating theatres replete with all aseptic instruments and appliances, with sterilising room attached. If he were asked what he considered had done most to advance operative surgery during the last fifty years he would at once say, the general use of anaesthetics and the antiseptic treatment of wounds. Surgeon Ormsby's address was listened to attentively by a large number of medical men, many of whom were more or less connected with pharmacy past and present, and his words found a responsive echo in the minds of his hearers, as was evidenced in the subsequent discussion on the paper.

LAST WEEK, BEFORE THE DUBLIN RECORDER, a case of interest to those who combine physics and pharmacy was brought on for hearing. It was an action by Dr. Hamilton, Ballynahinch, a medical practitioner, to recover from a patient named Campbell the sum of £13 2s. for services, etc., rendered. The point arising in the case was the plaintiff's right to sue an uncertificated bankrupt, as the defendant was, and as to whether the latter was liable for services rendered to him while he remained uncertificated. It was contended by plaintiff's counsel that the bankrupt was liable, and that as he could make contracts and maintain actions for goods sold and

personal services, he was liable in an action for the recovery of medical fees and for medicines supplied. His Honour pointed out the distinction between the English and the Irish bankruptcy laws, the latter being specific on the point that after-acquired property did not vest in the assignee. If a decree were given it could not be levied, because the property was vested in the assignee. Plaintiff's representative urged that if a decree were granted the sheriff could return it *nulla bona* and then a claim could be made on the defendant's personal income. The Court adjourned the action for inquiry on the points raised by counsel.

AT THE OPENING MEETING IN DUBLIN last week of the Photographic Society of Ireland's winter session an interesting lecture was given by the President, Mr. Louis Werner, together with an elaborate exhibition of lantern slides. There was a large audience. Mr. Werner, who discoursed on pictorial photography, defined the relations between photography and pictorial art, and pointed out that, without trespassing on the domain of the painter, photography had an art of its own. He condemned the retouching methods which are at present so generally employed in portraiture, and showed that they in many cases interfered with the anatomical accuracy of portraits. Dealing with the methods to be adopted by the photographer, he spoke as to the necessity of following the example set by painters in the selection of subjects and the manner in which they were to be treated. An interesting description of an ingenious instrument known as Ives' photo-chromoscope was then given, and it was shown that by the imposition of three different photographs, each of which was taken in one of the three primary colours, an effect something like what might be looked for in instantaneous colour photography, if such a process ever came to be invented, was produced. The meeting concluded after a very fine display of lantern slides, amongst the best of which were several representing scenes in London on a wet day. It is of interest to note that many of the most prominent representatives of pharmacy have of late added the sale of photographic sundries to their concerns, and find it a very profitable extra.

LAST WEEK AT CHURCH STREET, Sir Charles Cameron, City Chemist, delivered an interesting lecture on "Flames." He dwelt at length on the nature of flames and the uses to which they might be put in the economy of life. Their functions in the production of heat and artificial light and the various modes of their production were dealt with, and the various phases of the lecture were illustrated by experiments.

DR. HADDEN, compounder of medicines for the past twenty years to the Skibbereen Union, has resigned his position on the score of age, and has been granted a substantial retiring allowance. The guardians of the Union want to confer the vacant appointment on Dr. Jennings, a local practitioner, the only one in the neighbourhood who possesses the diploma of the Apothecaries' Hall of Ireland, and give him £32 a year salary, but fears are expressed that the Local Government Board will insist on the dispensary doctor doing his own compounding in future, and with a view of keeping on good terms with the Board they have wisely resolved to inquire therefrom whether they are bound to appoint a qualified man as compounder of medicines, and as to whether the number of tickets issued for the past two years warrants the appointment.

THE RATHKEALE GUARDIANS who were recently surcharged by the Local Government Board in respect of certain medicines irregularly supplied, have received from the Local Government Board a letter to the effect that in view of the medical officer's explanation of the circumstance the surcharge will not be pressed, but think the doctor should be careful in future to observe the rules governing a distinct requisition for drugs. The letter has evoked much discussion, and a reply has been sent to Dublin pointing out that the guardians have every reason to believe that no medicines of an extraordinary nature were ordered by their medical officer, except such as were required for immediate and urgent use, and that as there was apparently no valid reason for the surcharge they request that the record be forthwith cancelled.

PHARMACY WAS WELL REPRESENTED at the distribution of prizes in connection with the Masonic Female Schools, on Friday last. The function, which partakes of a local pageant, attracts yearly a large and representative gathering of the brethren and the fair sex. The spectacle this year was on all fours with that held for

over the past hundred years in Dublin, and amongst those present were the following disciples of Galen: Grand Royal Arch Chapter of Ireland, Robert Montgomery, Janitor; Sir Charles Cameron, Great Seneschal; Grand Priory of Ireland; Dr. Alexander Gordon, L.P.S.I., Sword Bearer; Mr. Robert Keating Clay, J.P., Solicitor to the Pharmaceutical Society of Ireland, attended as Grand Treasurer-Elect, Grand Lodge of Ohio, and amongst the other members of the Order present were Messrs. T. W. Robinson, T.C., L.P.S.I., G. Lane McCormack, L.P.S.I., W. F. Wells, P.K., M.P.S.I., Dr. Clendinning, L.P.S.I., etc.

MR. J. B. BOLGER, L.P.S.I., late senior compounder at Messrs. J. J. Graham's Medical Hall, Dublin, has opened a well fitted-up pharmacy at Main Street, Maryborough.

DR. MCWALTER, proprietor of Leonard's Medical Halls, Dublin, has acquired an additional establishment at 76, Dame Street, which he will shortly open as a south city branch pharmacy.

MR. WILLIAM MOSS, wholesale druggist, Roe Street, Clifton Park, who was recently adjudicated a bankrupt, has made an offer of 7s. 6d. in the £, which has been accepted by his creditors. The composition was made at the second sitting, and the amount will be paid in three instalments of 2s. 6d. each.

THE FOLLOWING DRUG AND MEDICINE CONTRACTS have been announced during the past week:—Newry Board of Guardians, Messrs. John Clarke and Co., Belfast, for medicines, and Messrs. S. Connor and Sons, Newry, for medical and surgical appliances.

THE LOCAL GOVERNMENT BOARD is inquiring generally as to the safe custody of drugs and medicines by Boards of Guardians throughout the country, whether the supplies are kept under lock and key, and also as to the safe custody of poisons.

AT AN INQUEST held last week on the body of a child, whose mother gave it a dose of laudanum to "keep it quiet," the Coroner warned parents against giving laudanum to their children except under medical advice, and hoped the local chemists would carefully discriminate in supplying the drug to the public.

PHARMACEUTICAL SOCIETY OF IRELAND.—Pharmaceutical Licence Examination: W. F. Knight and J. P. Morrissey passed. Three candidates have been rejected.

FRENCH NEWS.

CONTINENTAL ANGLO-AMERICAN MEDICAL SOCIETY.—The most important medical association in Europe, so far as British and American practitioners are concerned, is the Continental Anglo-American Medical Society. This is an organisation entitled to respect, not only from its long-established position, but from the talent and ability to be found in its ranks, for it embraces members located and engaged in active practice in all the principal cities and health resorts of Europe and Northern Africa—men who would adorn any union, whether professional or social. Although the Society was founded on a social basis "to serve as a bond of union between British and American practitioners established on the Continent of Europe and Northern Africa," its weight in professional matters, and such things as pertain to the practice of medicine, is becoming greater every year. One strange point about this Society lies in the fact that no one is eligible to membership who does not possess a French qualification, so that the high standard and elevating influence of the Society are self-evident. The Honorary Presidents for Great Britain and Ireland are Lord Lister, Sir Samuel Wilks, F.R.S., and Mr. T. W. Nunn, F.R.C.S. For the United States Dr. J. S. Billings, Dr. S. Weir Mitchell, Dr. W. M. Polk, Dr. A. Jacobi, Dr. E. Keyer, and Dr. W. T. Lusk. According to the rules of the Society, three of the nine members composing the Executive Committee retire every year, and three new members, who are to serve in turn three years, are elected to fill their places. The retiring members this year were replaced by Dr. the Hon. Alan Herbert, who was re-elected; Dr. Brandt of Nice; and Dr. Thomas Linn, of Paris and Nice, the founder of the Society. This was but a small part of the business transacted at the annual meeting of the Society, held at the apartment of Dr. Ball, 4, Rue de la Paix. Dr. Brandt occupied the chair. The minutes of the

ast meeting having been read, and other minor matters disposed of, the great question of medical advertising came up for discussion. Whilst entertaining distinctly the time-honoured prejudice against individual advertising in the daily press, no objection was made to the insertion of a list of the Society's members in medical journals or such papers as afforded space for medical and scientific matters, provided such list appears as information beneficial to the public, and not as an advertisement. The anniversary meeting, held at Paris on October 11, was a successful one, and adjourned, to be followed by the annual banquet, which took place at 8 p.m. in one of the handsome salons of the Hôtel Ritz, Place Vendôme. After dinner the Hon. Hector Fabre, C.M.G., Commissioner-General of Canada, who presided at the table, proposed in appropriate words "The Queen," "The President of the United States," and "The President of the French Republic," paying a glowing tribute to Dr. Alan Herbert, who replied in fitting terms, referring to Dr. Linn as the founder of the Society. It was near midnight when this pleasant professional and social anniversary—a combination of medicine, music, and flowers—ended.

MR. PASSERON, partner in the well-known firm of Nicholls and Passeron, Chemists to the Queen, at Nice, has retired, the term of association having expired on October 14. Mr. Nicholls will continue, as heretofore, to direct the affairs of his important house, which is the best known high-class pharmacy on the Riviera.

UNIVERSITY OF BORDEAUX.—The Registers for entries to the mixed faculty of medicine and pharmacy will be open from October 21 to November 5 for medical students, and from November 1 to 15 for pharmaceutical students. The medical examinations commence November 4, and the pharmaceutical examinations about the end of this month. All students called up in November to finish their military service, who have yet an examination to pass, are expected to acquaint the Secretary in writing, giving the probable date of their call to serve under the colours.

TREATMENT OF WHOOPING COUGH.—A new method for the successful treatment of whooping cough by an apparatus designed by Messieurs Hugnet fils, and now in use at a medical establishment in Paris, has recently been introduced. The details are briefly as follows:—The patient breathes air forced into the room by a ventilator worked with a gas-engine. This air is deprived of its impurities in passing through layers of wadding, thence over an antiseptic liquid. The oxygen is converted into ozone by means of an ozonising apparatus possessing a powerful bobbin. It is then conducted over appropriate liquids, where it is charged with medicated vapours, such as of eucalyptol, phenol, etc., according to the ideas of the doctor in charge of the case. Finally, the air enters a heated tube through which it passes and reaches the chamber where the patient is comfortably installed, having nothing to do but breathe this new medicated air, which enters in abundance. The products of exhalation are passed off by means of another ventilator, distinct from the first, but worked by the same machine. In this manner a plentiful supply of fresh air is ensured without the inconvenience of a draught. After the first seance, which is usually of an hour's duration, the attacks become less in number per diem, and diminish in intensity. Generally speaking, nine or ten visits to this establishment suffice to effect a radical cure. In many instances five or six visits have sufficed.

REMOVAL OF PICRIC ACID STAINS.—Monsieur Prieur, of Besançon, suggests the following as a rapid means of removing the yellow stains of picric acid from the skin and linen. With a solution of lithia carbonate in distilled water it simply suffices to rub the stained skin to remove the traces of the acid. For linen, the spot is damped and then rubbed with a pinch of the carbonate, or the stained portion may be dipped into the solution.

USE OF PICRIC ACID IN ECZEMA.—Experiments have recently been made with picric acid in the treatment of acute eczema, and have been attended with much success. The affected surface is painted with a solution prepared with one part acid in 86 parts distilled water. The pruritus soon disappears after the application, and a kind of protecting layer is formed, under which cicatrisation is rapidly completed, when the crust (which generally occurs after a few days) of the skin is dry and covered with

a newly-formed and very thin epidermal layer. The same treatment may be employed upon children with eczema of the face or scalp. According to the author, picric acid is not toxic, and may safely be employed upon large surfaces denuded of their epidermis.

ENGLISH NEWS.

THE CHEMISTS' ASSISTANTS' UNION held its first annual general meeting at the Horse Shoe Hotel, Tottenham Court Road, on Thursday, October 6, when the chair was taken by Mr. Whineray, who, after remarking upon the progress made, called upon Dr. Dutch to address the meeting. Dr. Dutch advised chemists to take a leaf out of the Medical Council's books regarding unqualified practice, and also to support only those medical men who prescribed from the Pharmacopœia, and not those who prescribed every foreign nostrum and compressed tablet that was put on the market. The meeting was next addressed by Mr. Glyn-Jones, who urged the assistants to form a thoroughly organised Union. He spoke at length upon the organisation and objects of the Union, and suggested that a draft scheme be drawn up by the Council and forwarded to every local chemist's association for discussion. Subsequently it was decided that the attention of the Pharmaceutical Society be respectfully drawn to the practice of dispensing poisons by unqualified persons in doctors' surgeries, and that they be urged to take every possible step to minimise the evil. A smoking concert will be held in the interests of the Union at an early date.

CHEMISTS AND JURY SERVICE.—Mr. Hunt, the local secretary for Plymouth, at the annual meeting of the local association recently, mentioned the difficulty experienced by pharmaceutical chemists in Plymouth of obtaining exemption from jury service owing to the jury lists not being duly exhibited on the church doors, and read correspondence relating thereto. Mr. Hunt stated that he was still endeavouring to have this omission rectified.

CHEMISTS' ASSISTANTS' ASSOCIATION.—The fourth series of cinderella dances in connection with the C.A.A. will consist of four dances, to be held at the Dorset Hall of the Portman Rooms, Baker Street, W., on Thursdays, October 27 and December 8; Wednesday, January 4, 1899; and Thursday, March 33. Tickets will be issued as follows:—

	Patrons. Members.	Non- Members.
Admitting two to the series	15s.	17s. 6d.
Admitting one to the series.....	9s.	11s.
Admitting two to a dance	4s. 6d.	5s.
Admitting one to a dance	2s. 6d.	3s.
Admitting a lady, 2s.		

The tickets can be obtained from the Hon. Secretaries, Mr. Chas. Morley, 3, Bucklersbury, E.C., and Mr. H. H. Robins, 113, Ridley Road, Forest Gate, E.

AT THE TECHNICAL SCHOOL, BOOTLE, LIVERPOOL, a course of lectures on Organic Chemistry, consisting of about twenty-eight in number, will be delivered by Mr. R. E. Kenyon, M.Sc., F.C.S., during the winter session, on Thursday evenings, at 7.30, followed by practical work in the laboratory on Fridays, from 7.30 p.m. to 9.30 p.m. The fee for the double course is 12s. 6d. The class will not be held unless at least six students give in their names, and as four have already joined, local pharmacy will surely make up the deficit.

ACACIA HALL.—In pursuance of Mr. Wellcome's long-cherished plan, Messrs. Burroughs, Wellcome and Co. have just acquired the old manor house and grounds at Dartford, Kent, known as Acacia Hall, and are erecting a gymnasium, laying out the grounds for sports and pastimes, and adapting the buildings for use as a club house.

THE INTERNATIONAL CONFERENCE ON SCIENTIFIC LITERATURE.—The Royal Society gave a dinner, on October 10, at the Hôtel Métropole to the delegates from foreign Governments attending the International Conference which is at present dealing with the question of an international catalogue of scientific literature. Lord Lister occupied the chair, and among those present were Sir John Evans, Sir John Gorst, M.P., Sir E. Frankland, Sir Norman Lockyer, Sir Douglas Galton, Sir William Crookes, Professor

Koberts-Austen, Professor Michael Foster, Professor Rücker, Dr. Mond, Dr. Armstrong, and the following foreign and colonial representatives:—France: Professor Darboux, Professor Mascart, and Dr. Deniker; Germany: Professor Klein, of Göttingen; Austria: Professor Weiss and Professor Boltzmann; Hungary: Professor Heller and Dr. Theodore Duka; United States: Dr. Cyrus Adler; Belgium: Le Chevalier Descamps, M. Lafontaine, and M. Otlet; Holland: Professor Korteweg; Sweden: Dr. Dahlgren; Norway: Dr. Brunchorst; Mexico: Señor F. Don Troncoso; Switzerland: Dr. Graf and Dr. Bernouli; Queensland: Sir Horace Tozer; New Zealand: the Hon. W. Reeves; Natal: Sir W. Peace; Japan: Professor Yamaguchi.—Professor Rücker proposed the toast of "Science in all Lands," which was responded to in French by Professor Darboux, of the University of Paris. "Success to the Conference" was proposed by Professor Weiss, and responded to by Sir John Gorst, while Lord Lister acknowledged the toast of "The Royal Society," proposed by Professor Korteweg. Amongst other speakers were Professor Armstrong, Le Chevalier Descamps, delegate from the Belgian Government, Professor Klein, Sir Norman Lockyer, Professor Mascart, Sir William Crookes, Dr. Graf, and Dr. Cyrus Adler.

INSTRUCTION IN PHOTOGRAPHY AND PHOTO-ENGRAVING—In connection with the winter session trade classes at the Polytechnic, Regent Street, London, W., a six months' course of lectures and demonstrations in the practice and technique of photography will be given by Mr. Howard Farmer. Courses of lectures by specialists in other subjects will also be given, including colour photography, photo-lithography, photographic printing, bromide printing, bromide enlarging and enlarged negative making, finishing enlargements, retouching, photogravure, wet-collodion. For particulars of terms, hours, etc., application should be made to the Secretary.

FREEMASONRY AT READING.—At the installation of the Right Hon. Lord Wantage, V.C., K.C.B., as Provincial Grand Master of Berkshire at Provincial Grand Lodge, held at Reading on the 14th inst., his Lordship conferred the honour of Provincial Grand Steward upon Bro. W. R. Cook, W.M. of the Vale of White Horse Lodge, Faringdon, No. 1770.

DRINKING CARBOLIC ACID.—On Sunday afternoon last, Martha Hassal, aged eight years, residing with her parents at Thornton Street, Miles Platting, was playing with some other children in the scullery of the house. She presently left them, and running to her parents, said she had taken "something nasty." She then became unconscious, and was removed to the Royal Infirmary, Manchester, where it was found that she had swallowed carbolic acid. The child, who was in a serious condition, was detained in the institution.

DENTISTRY IN WORKHOUSES.—The King's Norton (Birmingham) Board of Guardians have instructed their superintendent to periodically examine the teeth of all the children in the workhouse, and to report all cases requiring attention to the medical officer. When necessary the children are to be treated by a surgeon dentist or taken to the Dental Hospital.

BORIC ACID AS A FOOD PRESERVATIVE.—Mr. W. Price, pharmaceutical chemist, Birmingham, was on the 14th inst. again selected by a representative meeting of ratepayers as the Unionist candidate for the St. Martin's Ward, which he has represented with so much credit in the past. Speaking as a member of the Health Committee, Mr. Price referred to the request made by a deputation which recently waited upon the Committee, to the effect that some definite declaration should be made for the guidance of the whole country in reference to the use of boric acid as a food preservative. He expressed thorough agreement with the request, and the Committee as a whole were of a like opinion. This was one of the questions the Government should take up without loss of time, because so far as the scientific experts had declared their opinions there appeared to be a great difference of opinion with regard to the effects of the acid upon the human system. Several prosecutions at Birmingham had resulted in convictions being obtained, but in other parts of the country prosecutions had failed. Medical experts had stated in evidence that in the small quantities in which it was introduced into food boric acid was not injurious. He would not set his own opinion against that of the experts, but it certainly was a

question whether the introduction of boric acid into milk, bacon, butter, and almost everything that was eaten, would not have some injurious effect, although taken in very small doses. He repeated that the Government should agree upon some standard for the guidance of health committees throughout the country.

SANITARY CONGRESS HEALTH EXHIBITION, BIRMINGHAM.—The Sanitary Institute's Medal for Aërated Waters in syphons and bottles has been awarded to "Camwal" waters, of which there is a very large exhibit. As is usual at these exhibitions "Camwal" is booming, and a large assortment of literature concerning table waters has been distributed.

NORTH-EAST LANCASHIRE CHEMISTS' ASSOCIATION.—A special general meeting of this Association will be held at the White Bull Hotel, Blackburn, on Tuesday, October 25, at 8.30 p.m., to receive a report from Messrs. Holt and Shorrocks, delegates to the annual meeting of the Federation of Local Associations, held at Belfast in August last. Resolutions will also be submitted:—

- (1) Urging all local associations to unite in demanding more vigorous action by the Pharmaceutical Council, more information of its intentions, and that these be persistently pressed forward to legislation, and that they invite the assistance and co-operation of the Medical Council.
- (2) Appealing to all chemists in the United Kingdom to discuss the question of "Company Pharmacy," recognising qualified companies (in such cases urging the proprietors to use their names on labels, etc.), to pass resolutions declaring that all unqualified practice of pharmacy, either collectively or singly, should be illegal.

MR. R. C. COWLEY, Principal of the Liverpool School of Pharmacy, has just published, in the shape of a neat card for the pocket, the substance of his paper on "Glucose Estimation at the Dispensing Counter," read at the last session of the Liverpool Chemists' Association. The card contains the method of manipulation, with the alterations necessary when dealing with a liquid of high or low glucose strength, and on the obverse are examples worked out together with useful tables. It is just what dispensers will appreciate, and a stamped directed envelope to Mr. Cowley will procure for them a copy.

POISONING HORSES.—The *Standard* reports a mysterious case of wholesale poisoning of horses at Abingdon. On Sunday, October 9, nearly sixty horses belonging to show people attending the annual fair were turned into a meadow adjoining the Thames. On Monday nearly forty showed symptoms of poisoning, and by noon on Tuesday about twenty had died. The matter is being investigated by experts from the Veterinary College, London.

FOOD AND DRUGS ACT PROSECUTIONS.—On October 10, Messrs. Boots (Limited), were charged at the Shire Hall, Nottingham, with selling a drug, viz., Gregory's powder, which was not prepared in accordance with the directions given in the British Pharmacopœia.—Inspector Crabtree gave evidence to the effect that he purchased 2 ozs. of Gregory's powder, loose, at Messrs. Boots' shop at Hucknall Torkard.—The public analyst's certificate showed that the powder was composed as follows:—Carbonate of magnesia, 66; rhubarb and ginger, 34. The B.P. gave the following formula:—Powdered rhubarb root, 2; ginger, 1; light magnesia, 6.—Dr. Bottrill for the defence, stated that this certificate was not inconsistent with the contention that the defendants were selling a pure article, though it was poor by reason of its age.—Mr. T. F. Harvey, pharmaceutical chemist, said he found that a quantity of Gregory's powder exposed to the air for three days absorbed about 14 per cent. of carbonic acid gas and water.—A fine of one guinea was imposed.—George Coombs, of Hucknall, was fined a similar amount for a like offence.—At the Swindon Petty Sessions on Monday, October 17, Jessie Boot, described as a chemist, though not registered as such, of Nottingham, and Henry Jones, of Bridge Street, New Swindon, were summoned on adjournment with selling lime water to the prejudice of the purchaser at Swindon on August 10.—Mr. Bevir prosecuted on behalf of the Wilts County Council, and Mr. A. Muir Wilson, of Sheffield, appeared for the defence.—Mr. Wilson having intimated that he was prepared to plead guilty to the summons against Jones, Mr. Bevir said he was quite ready to accept that plea and ask for a formal withdrawal of the case against Mr. Boot. The Analyst's certificate showed that the sample contained not more than a quarter of a grain of lime in

10 fluid ounces, whereas the proper proportion was 5 grains to 10 fluid ounces. There must have been some carelessness or negligence, and no doubt the defendant Jones was the person responsible, as it was from his immediate assistant that the purchase was made.—The defendant Jones said he was a qualified chemist, and was directly responsible for preparations made up at the Swindon shop. The lime water was made by his assistant, and he accounted for the deficiency from the fact that water was poured on the old lime and the bottle was not afterwards shaken.—The Chairman said the Bench would allow the case against Mr. Boot to be withdrawn on payment of the costs. With regard to Jones, although the pecuniary loss to the customer was very small, it was evident that there had been carelessness, and carelessness on the part of a chemist seemed to him to be extremely serious. At the same time the magistrates would only impose the light penalty of £1 and £1 16s. 6d. costs. The costs in Mr. Boot's case were £1 6s.

A PARTIALITY FOR SCENT.—John Wilson, 36, described as a clerk, having no home, was charged on remand at Bow Street on October 13 with theft. The evidence on the last occasion was to the effect that the prisoner went to the Palace Drug Stores, Bridge Street, and asked for a bottle of Dodd's mixture. While the manager was consulting a catalogue to see if the mixture was kept in stock, the prisoner took a bottle of scent from the counter, and place it in his pocket. It was now proved that two years ago prisoner was sentenced to eighteen months' imprisonment at the Old Bailey for stealing four bottles of scent, after seven previous convictions for similar thefts.—The prisoner was committed for trial.

PROFESSOR WILLIAM RAMSAY, one of the discoverers of the hitherto unknown elements of the air, is to lecture at Berlin on that subject on December 19, at the invitation of the German Chemical Society.

MANCHESTER LITERARY AND PHILOSOPHICAL SOCIETY.—The opening meeting of the new session was held on Monday night. Dr. Broadbent described further researches of his own in the life history of Vorticella, and illustrated his remarks by diagrams prepared from his own observations under the microscope. Mr. Mark Stirrup, who has been elected President of the Natural History Section, exhibited and described a large collection of corals from the Devonian and carboniferous rocks in districts round Torquay. Mr. W. Stanley exhibited and described a new microtome with a fine adjustment recently perfected by Mr. Aylward, made to cut section 1-500th of an inch in thickness, the cutting edge being fixed and the object from which a section is to be taken being moved, as in the Cambridge Rocking Microtome.

THE SENATE OF OWENS COLLEGE, MANCHESTER, has awarded a Dalton Chemical Scholarship to A. T. Moulpied, B.Sc., and a Pharmaceutical Entrance Exhibition to Wm. Botham.

NOTTINGHAM AND NOTTS CHEMISTS' ASSOCIATION.—The first general meeting of the winter session will be held at the Albert Hotel, Derby Road, on Wednesday, October 26, and the chair will be taken at 9 p.m. prompt, and a paper will be read by Mr. W. Gill entitled "Company Pharmacy, Considered with a View to Legislation thereon." Any paper given by Mr. Gill cannot fail to be most interesting, and the subject he has chosen should prove unusually so at the present time.

MR. DENCER WHITTLES, L.D.S., R.C.S., Eng., has been appointed dental surgeon to the Birmingham General Hospital.

A NEW POISONS BOOK.—Mr. Thomas Batty, chemist and druggist, 76, Upper Thomas Street, Aston, was called before the Birmingham Coroner (Mr. Isaac Bradley) on Wednesday to give evidence relative to the death of Ada Nellie Currier (19), who swallowed a quantity of vermin killer. Mr. Batty said the deceased, when she asked for vermin killer, stated that she required it for the destruction of cockroaches. He offered her a non-poisonous kind, but this she refused, insisting on having Battle's, which was eventually supplied to her. The Coroner called for Mr. Batty's poisons book, and having examined it, asked if it was one of Mr. Batty's own ideas? Mr. Batty replied that it was not, though it was a new style of book. The Coroner remarked it was the best he had seen. Instead of the names being written one under the other, there was a separate page for each purchase.

Mr. Batty said that under this system a purchaser was not able to see the name of the person who had previously signed the book.

WELSH NEWS.

INLAND REVENUE PROSECUTION.—At the Barry Dock Police Court on Friday, October 7, George W. Raynes, vendor of quack medicines, Barry Dock, was summoned for exposing for sale a bottle liable to stamp duty without the cover or wrapper of the Inland Revenue. It was stated for the prosecution that a purchase was made on the premises of a bottle of medicine—Rayne's Blood Mixture—which bore no stamp, and which was held out by a notice in the window to cure about a dozen different diseases, commencing with rheumatism, sciatica, and scrofula, and ending with scurvy, gravel, and glandular swellings. The stamp duty on the bottle amounted to 3d.—Raynes denied having sold the bottle of medicine, he being at the time in prison. It was, however, proved otherwise, and defendant was ordered to pay £1 and costs; in default, a fortnight's imprisonment.

SCOTTISH NEWS.

MR. THOMAS WALKER, for about thirty years Curator of the United College Museum, St. Andrews, died last week from the effects of carbolic acid poisoning. He was 71 years of age, and at one time carried on a grocer's business in St. Andrews. He was well known as a taxidermist, and was a general favourite with the students.

AN OVERDOSE OF LAUDANUM.—On Thursday, October 13, John Soutar (20), clerk, of Hawkhill, was admitted to Dundee Royal Infirmary suffering from the effects of laudanum poisoning. Soutar, according to his own statement, took an ounce and a half of laudanum at dinner time on Thursday to overcome nervous excitement. Towards evening he became so ill that he had to be conveyed to the Infirmary, where the usual antidotes were successfully applied.

Marriage.

CAMPBELL—BUCHANAN.—At 20, Henderson Street, Leith, on the 17th inst., by the Rev. James M. Scott, M.A., Donald Campbell, chemist, 255, Great Junction Street, Leith, to Mary, youngest daughter of the late John Buchanan, merchant, Glasgow.

Announcements.

Tuesday, October 25.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION, Great Northern Victoria Hotel, Bradford.—Inaugural meeting and address by Mr. A. H. Waddington, President.

NORTH-EAST LANCASHIRE CHEMISTS' ASSOCIATION, White Bull Hotel, Blackburn, at 8.30 p.m.—Special general meeting.

ROYAL PHOTOGRAPHIC SOCIETY, 5A, Pall Mall East, London, W., at 8 p.m. Papers will be read "On the Alleged Discovery of Photography in 1727," by R. B. Litchfield. "On the Grain of Photographic Negatives," by E. Duncan Stoney, communicated by Mr. Harry de Beer.

ON MONDAY, October 31, slides will be shown by members of the Affiliated Societies at the Exhibition of the Royal Photographic Society. With respect to the affiliation of photographic societies, there will be a meeting of the Committee of Delegates, on Friday, October 28, at 7.30 p.m.

Wednesday, October 26.

NOTTINGHAM AND NOTTS CHEMISTS' ASSOCIATION, Albert Hotel, Derby Road, Nottingham, at 9 p.m. Paper on "Company Pharmacy considered with a view to Legislation thereon," by W. Gill.

Thursday, October 27.

CHEMISTS' ASSISTANTS' ASSOCIATION, Dorset Hall, Portman Rooms, Baker Street, W., at 7.30 p.m. The first of the fourth series of Cinderella Dances.

NOTES OF NOVELTIES.

The "Fram" Hand Camera.

This camera, manufactured by W. Watson and Sons, 313, High Holborn, is constructed for twenty-four $\frac{1}{4}$ -plate films. The changing arrangement is of that kind known as "automatic," that is to say, the change is effected by mechanism actuated by some such proceeding on the part of the operator as pressing a knob or lever. In the present case, what appears to be a hinged flap at the back of the camera is drawn up by means of a handle. In reality it is the magazine containing the films that is partly drawn out. There are no sheaths, the films are separated by loose pieces of a suitable material and of the same size. In loading the magazine, therefore, all that has to be done is to insert the films and separators alternately. The changing mechanism is of a very simple nature, and unlikely to get out of order. When the magazine is in position for exposure the bottom film is held in position by projecting lips top and bottom. When it is required to change the film the magazine is swung backwards and at the same time the camera is tilted forward. By a very ingenious arrangement the projecting lips top and bottom are drawn aside,

thus allowing the first film with its separator to fall forward; at the same time similar lips are projected from the sides between the first separator and the second film, thus preventing any but the front film falling forward. Re-swinging the magazine into position withdraws the side lips and projects those top and bottom, the spring at the back of the magazine forcing the remaining films forward and the front one into register. The released film falls into a receptacle below.

The shutter is one giving time and instantaneous exposures from $1/75$ sec. downward, and is fitted with a mirror from which the actual picture, projected by the lens, is reflected upon a screen at the top of the camera. The objects before the camera are, therefore, shown the same size as they will be in the photograph, and can be focussed up to the moment of exposure. This arrangement gives practically all the advantages of a time lens camera. The camera is of attractive appearance and it is constructed so that it can easily be taken to pieces with a screwdriver in case of accident. An automatic recorder showing the number of plates exposed is provided, and there is an adjustment for focussing objects at varying distances. When loaded with twenty-four films the camera weighs 3 lbs. 8 oz. and it measures $8\frac{1}{2} \times 6\frac{3}{4} \times 5\frac{1}{4}$ inches. The diagram shows the internal construction of the camera; *a* is the magazine; *b*, the same swung to change a film; *c* the reservoir into which the exposed film falls; *d*, the door through which the exposed films are taken out of the camera; *e*, the revolving disc indicating the number of exposures made; *f*, the mirror attached to the shutter, which reflects the image on to the ground glass of the finder in the top of the camera; *g*, the lever and clamping nut, fixing the focus at any desired point. The price with R.R. lens and iris diaphragm is £8 10s.; with Goerz anastigmat, ser. iii., £11.

A Lanternist's Pocket Book.

MESSRS. W. BUTCHER AND SON, Blackheath, London, S.E., send a copy of their "Primus" Lanternist's Pocket Book for 1898. It contains reference tables of the size of disc obtainable, focus of lens required, distance between lantern and screen, amount of gas in cylinder, railway regulations for gases, and memoranda of requirements. There is also a diary and pages for a synopsis of engagements, for the record of gas used, list of own slides, and a list of borrowed slides. A very useful directory of dealers in lanterns and apparatus is given, and a list of lantern and lantern slide requisites. This pocket book is very compact and neatly got

up, and as it may be obtained free from all the principal dealers in photographic and lantern materials no lanternist should be without it.

EXTRACTS FROM CONSULAR REPORTS.

VITICULTURE HAS MADE ENORMOUS STRIDES IN RUSSIA during the last fifteen years. At one time confined to the south coast of the Crimea, it now extends in a northerly and north-easterly direction into the provinces of Kherson, Podolia, and Bessarabia, some of the plantations, notably that of Prince Trubetzkoi, covering an area of upwards of 500 acres. The area in Bessarabia under vine-cultivation in 1893 amounted to 108,000 acres, while in 1897 it was 175,000 acres. The quality of the Crimean and Bessarabian wines, both red and white, according to Acting Consul-General Mackie, should render them acceptable in England and other countries, the red bearing a close resemblance to burgundy, the white partaking of the nature of hock. The expansion of viticulture has led to the establishment in Odessa of two champagne factories. One of these is reported to have worked under most favourable circumstances for some time, and has competed most successfully with French champagne, but the other has not yet commenced operations.

REFERRING TO THE POSSIBLE INDUSTRIES in and around Sevastopol, Vice-Consul Cooke is of opinion that a manufactory of soda, both caustic and crystallised, should be a paying affair. These manufactories are reported to be very few and far between in Russia, and the products are very dear. A firm of Moscow merchants, representing a manufactory in the interior, replying recently to an inquiry, quoted something very high as the price of sodas, but intimated that no orders could be booked for six months ahead. Soap and candles, it is thought, could also be profitably manufactured.

THE STEADY DECREASE IN THE FOREIGN OPIUM IMPORTS into China is strikingly demonstrated in the report of Consul Fraser on the trade of Wuhu for the year 1897. The quantity of opium imported in 1885 was estimated at 649,906 lbs., value £484,475; ten years later it had decreased to 336,533 lbs., value £240,030; while in 1897 the total import was given as 207,627 lbs., value £152,978. This decrease in the arrivals of the foreign drug, and the increased use of the native, so far as these mark a diminution of the drain of China's money to foreign countries, are considered by the Chinese as subjects of congratulation, although the large consumption of opium by the people is looked upon by them as a national misfortune.

CHEMICAL FIRE ENGINES.—In an interesting report on the fire department of the city of Boston, Massachusetts, Consul-General Sir D. Colnaghi briefly describes the chemical engines, which are a distinct feature of American fire appliances. They form a useful piece of apparatus, always ready to go to work, the hose being light and easily handled. The capacity of the chemical engines of the Boston department is from fifty to one hundred gallons. They generally consist of two tanks with the necessary appliances hung on four wheels, and on account of their lightness they are drawn with great speed to a fire, carbonic acid being the working and extinguishing agent. The total number of fires extinguished by the chemical in 1897 was 241. During the same year 472 fires were extinguished by little hand or portable extinguishers. These are filled with water, soda, and a small bottle of vitriol. By turning a small valve on the top of the extinguisher the bottle is broken, which causes a pressure sufficient for the play of water on the fire through a small hose.

HARASSING PARCEL POST REGULATIONS are reported as having been introduced in China, whereby the receiver of a parcel from say Great Britain has to pay a substantial sum, in spite of the fact that the sender has paid in full "at the other end." The public strongly object to this imposition, but the "Imperial" post holds firmly to its regulations.

THE BRITISH EXPORTS of chemicals and chemical and medicinal preparations for August this year were valued at £612,241, as against £599,190 for the same month in 1897, showing an increase of £13,051. The imports of chemicals, dye stuffs, and tanning substances also show a substantial increase for August, 1898, as compared with last year, when the total value was £360,704, while this year it was £377,046, an increase of £16,342.

MARKET REPORT

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

OCTOBER 20, 1898.

Business has again been rather quiet during past week, although on the whole a somewhat better feeling appears to prevail, this is however tempered by the fear of dearer money. Quinine is firm, the probability of an advance in price being freely spoken of. Cocaine is firm. Same may be said of Quicksilver, an advance in price of which latter article being confidently predicted. Mercurials unchanged. Acid Citric, Acid Tartaric, and Cream of Tartar quiet. Glycerine steady. Codliver Oil quiet and dull. Opium, Morphia, and Codeia quiet, and practically unchanged. Acid Boracic and Borax quiet. Sulphonal and Phenacetin unchanged. Acetanilide weak. Potash Permanganate slightly better. The following are actual prices ruling for articles of chief interest:—

ACETANILIDE—Is weak at 11d. to 1s. per lb. for large quantity.

ATROPINE—Is firm at 17s. 10d. per oz. for the *alkaloid* and 15s. 6d. per oz. for the *Sulphate B.P.*

ACID ACETIC—Is in good demand; quotations remain as follows: 30 per cent., 14s. 3d. per cwt.; 33 per cent. (B. P.), 15s. 3d. per cwt.; 60 per cent., 25s. per cwt.; 70 per cent. 28s. 6d. per cwt.; 80 per cent., 32s. per cwt.; 85 per cent., 34s. per cwt.; 90 per cent., 35s. 9d. per cwt.; and 98-100 per cent. (glacial), 39s. 3d. per cwt.

ACID BORACIC—Steady at 24s. per cwt. for *crystals*, and 26s. per cwt. for *powder*.

ACID CARBOLIC—Market is quiet at 6½d. to 6¾d. per lb. for the 35-36° C. *ice crystals*, 7d. to 7½d. for the 39-40° C. *ice crystal*, and 7½d. to 8d. for the 39-40° C. *detached crystals* for quantity and in large bulk packing. *Crude* quiet at 1s. 11d. per gallon for the 60° F., and 2s. 3d. per gallon for the 75° F. *Liquid*: 95 per cent. of pale straw colour 1s. 2d. to 1s. 3d. per gallon, in 40 gallon casks, and for large quantities.

ACID CITRIC—Quiet at 1s. 2½d. to 1s. 3d. per lb. for *crystals* according to holder.

ACID OXALIC—Steady at 3¼d. to 3½d. per lb. for *Crystals*; ¼d. per lb. more for *powder*.

ACID TARTARIC—Easier at 12¾d. to 1s. 1d. for *English crystals* on the spot. *Foreign crystals* 12¼d. to 12½d. per lb.

ALUM.—Loose lump £5 7s. 6d. per ton; ground in bags £6 per ton.

AMMONIA COMPOUNDS.—*Sulphate* very dull but unchanged at £9 10s. per ton for grey prompt 24 per cent. London. Hull and Leith same price. *Carbonate* unchanged at 3d. to 4d. per lb., according to quantity and package. *Bromide* firm at 2s. 1d. per lb. *Iodide* quiet at 13s. 7d. per lb. *Chloride*: Chemically pure small crystals 30s. to 32s. per cwt. free from metals, white 25s. 6d. to 26s. 6d. per cwt. *Oxalate* 5½d. to 5¾d. per lb. *Sulphocyanide* quiet at 1s. to 1s. 1d. per lb. *Sal ammoniac*: Sublimed firsts 35s. per cwt., seconds 33s. per cwt., crushed (for batteries) 35s. and 37s. per cwt. respectively, powdered 36s. and 38s. per cwt.

APOMORPHIA—Firm at 17s. 9d. to 18s. 6d. per oz., according to quantity.

ARSENIC.—Lump is steady at 34s. per cwt., powder being quiet at 18s. per cwt.

BLEACHING POWDER—Steady at £6 10s. to £7 per ton on the spot.

BORAX—Is steady at 14s. 3d. to 14s. 9d. per cwt. for lump, and 14s. 6d. to 15s. per cwt. for powder.

BROMIDES—Steady at 1s. 9½d. per lb. for *Potass. Bromide*; 2s. 1d. for *Ammon. Bromide*; 2s. 0½d. for *Soda Bromide*; 1s. 11d. for *Bromine*; in 20 case lots.

BISMUTH.—The *metal* remains at 5s. per lb., the price of the *sub-nitrate* being unaltered at 4s. 10d. and the *subcarbonate* at 5s. 5d. per lb. in 5-cwt. lots.

CAMPHOR—Is very firm both for *crude* and *refined*, it being rumoured that an advance in price of the *refined* article is impending.

CASCARA SAGRADA.—Some business has been done at dearer rates, 23s. per cwt. for new and 26s. 6d. per cwt. for good old bark.

CINCHONIDINE—Continues in active demand and business has been done at 7¼d. per oz. in large bulk.

CLOVES.—Privately *Zanzibar* are in good demand and prices are higher, business done comprises: October to December delivery at 3½d. to 4d., and January to March same figure. At auction 280 bales fair *Zanzibar* sold at 3½d.; 5 cases *Penang* sold, ordinary 6½d.; fine picked 10½d. to 10¾d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* quiet at 1s. 2d. to 1s. 3d. per gallon for commercial and 2s. to 2s. 3d. per gallon for the pure. *Benzole*: 50 per cent. 9d. to 10d. per gallon; 90 per cent. 8½d. to 9d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C., 4d. per gallon. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 6d.; 90 per cent. at 160° C., 1s. 2d.; 90 per cent. at 190° C., 1s. 3d. per gallon.

COCA LEAVES—Are very firm, good green *Truxillo* held for 8d. per lb.

COCAINE—Is firm at 9s. 9d. per oz. for best brands of *Hydrochlorate* for 100-oz. lots in 25-oz. tins. So far the anticipated advance has therefore not taken place. Makers are, however, firm at above figure, stating that the cost of the *Crude* would certainly warrant a further advance in price of the refined article.

CODEIA—Steady at 12s. 6d. per oz.

COD-LIVER OIL—Remains a quiet and somewhat disappointing market, new non-congealing *Norwegian Oil* being quoted 80s. to 87s. 6d. per barrel of 25 gallons in tin-lined barrels, according to position and brand.

COLCHICUM SEED—Is scarce, and 50s. per cwt. is now asked.

CREAM OF TARTAR—Is quiet. First white *crystals* on the spot 72s. to 77s. per cwt., and 74s. to 80s. per cwt. for *powder*, both according to quality.

EXTRACT FELICIS MARIS (Oil of Male Fern)—Is quoted at 4s. per lb. for cwt. lots for a good thick quality, a more fluid article, which would consequently contain more moisture and less active principle, being quoted at rather less money.

ESERINE (PHYSOSTIGMINE).—Makers quote 1s. 6d. per gramme, a make supposed to be of French origin, but which is said to be impure and therefore valueless, is stated to be offering at a lower figure.

GENTIAN ROOT.—There have been sales of good quality at 18s. per cwt., which shows rather lower value.

GINGER.—*Cochin* continues dull. Of 535 bags rough only 241 bags sold; ordinary washed, slightly wormy, 21s.; fair washed, 23s. Of 51 cases cut kinds 20 cases sold; medium and small native, part cut, 49s. No *Jamaica* offered.

GLYCERIN—Is steady at 52s. 6d. to 55s. per cwt. for *English* and 55s. to 65s. per cwt. for *German* double distilled chemically pure white 1260° quality in tins and cases.

GOLDEN SEAL ROOT—Is inquired for, but stocks here are very small. To come forward 2s. per lb. *c.i.f.* is asked.

GUM ACACIA.—The business in Soudan sorts is restricted owing to an expectation that large arrivals might take place in the near future, which would, of course, cause a decline. At present quotations range from 70s. to 80s. per cwt., according to quality.

GUM TRAGACANTH.—The position of this article is strong, yet business has been but small. Importers are very firm as to price, and this buyers hesitate to pay. *Firsts* are quoted at £14 10s. per cwt., *Seconds* £13 per cwt. *Thirds* £11 10s. per cwt., lower qualities down to £5 per cwt.

HONEY.—*Californian* is scarce, and 40s. to 42s. 6d. per cwt. is asked. It is stated that the crop of *English* honey is very short this year.

HYPHOSPHITES.—Makers' prices are 3s. 3d. per lb. for *Lime, Soda, or Potash Salts*, in 10 cwt. lots.

IODIDES.—Convention prices remain 10s. 3d. per lb. for *Potass Iodide*, 13s. 7d. per lb. for *Ammon Iodide*, 11s. 7d. per lb. for *Sodii Iodide*, 11s. 9d. per lb. for *Iodine Resublimed*, and 13s. 9d. per lb. for *Iodoform, Crystal, Powder or Precipitated*.

IPECACUANHA.—So far buyers are holding off as much as possible rather than meet the views of holders. Prices both for *Rio Carthagena*, remaining nominally unchanged from last week.

JALAP ROOT.—Is very firm, and fair small heavy is held here for 6d. per lb.

LITHIA.—Makers are firm at 10s. 8d. per lb. for the *carbonate*, 6s. 11½d. for the *citrate crystals*, and 7s. 5½d. for the *citrate powder* in 2 cwt. lots.

MENTHOL.—In better inquiry, price ranges from 7s. to 7s. 3d. per lb., according to quantity.

MERCURIALS.—Are firm in view of the fact that an advance in price of *Quicksilver* is thought probable. Makers still quote for ½-ton lots *Corrosive Sublimatè*, 2s. 3d. per lb.; *Calomel*, 2s. 7d. per lb., and *Red Oxide cryst. or levigated*, 2s. 11d. per lb.

MORPHIA.—Quiet at 5s. per oz. for the *Hydrochlorate powder* on contract.

NITRATE OF SODA.—Quiet at £7 12s. 6d. to £7 15s. per ton for the ordinary, and £8 to £8 2s. 6d. for the refined quality.

OILS (ESSENTIAL).—*Peppermint*: American continues quiet; H.G.H. quoted 5s. 6d. per lb. on the spot. *Wayne County*: Choice quality is scarce, and is quoted 4s. per lb. *c.i.f.* terms. *Star Aniseed* is very dull of sale, 6s. 9d. per lb. is the price on the spot. *Lemongrass* quiet at 3½d. per oz. *Cajuput* in good inquiry at 3s. 10d. to 4s. per bottle. *Cassia* quiet at 4s. 9d. to 5s. 9d. per lb., as to quality. *Citronella* slow of sale at 1s. 1½d. per lb. in tins; drums, ¼d. per lb. less.

OILS (FIXED) AND SPIRITS.—*Linseed* dearer at £17 7s. 6d. for spot pipes, London; barrels, £17 12s. 6d. *Rape* dearer at £22 for ordinary brown on the spot; refined, £23 10s. *Cotton* steady, London crude spot, £13 17s. 6d.; refined spot, £15 to £16, according to make. *Olive*: Green oils firm at £29 to £32 per ton; table oils, 4s. to 6s. per gallon, as to quality. *Cocoonut* firm; Ceylon, on the spot, £24 10s.; Cochin, £27 10s. *Palm*: Lagos, on spot, £22 10s. *Turpentine* dearer and very firm at the advance; American spot, 24s. 3d. per cwt. *Petroleum*: The market is strong at a further advance; Russian, on the spot, 5½d. per gallon; American, 6½d. per gallon; Water white, 7½d. per gallon.

OPIUM.—Is steady but quiet, prices on this side remaining nominally unchanged, while in *Smyrna* market is weak at a decline of about 3d. to 4d. per lb. bringing values there to a trifle below the parity here. It is said that the late rains having facilitated the completion of the autumn sowings is the cause of the decline in value on the other side.

PHENACETIN.—Inferior makes are being hawked round at low prices, the price for a really good and reliable article remains, however, unchanged at 3s. 9d. to 4s. 3d. per lb. for crystal or powder, according to quantity. "Bayers" make is still quoted at 5s. 6d. per lb. in bulk.

PHENAZONE.—Is quiet without further change in price, a good article being obtainable in quantity and bulk packing at 8s. to 8s. 6d. per lb., price of *Antipyrine Knorr* remains unaltered.

PILOCARPINE.—Is quoted by makers at 1s. 4d. per gramme for the *Hydrochlorate* and *Nitrate* salts.

PODOPHYLLIN.—Is firm owing to higher rates now being asked for the root which, especially for the autumn drug, is likely to be scarce this season.

POTASH COMPOUNDS.—*Chlorate* is very firm, and 4d. to 4½d. per lb. is asked for early delivery. *Bromide* is steady at 1s. 9½d. per lb. *Iodide* is quiet at 10s. 3d. per lb. *Bicarbonate*, 30s. to 35s. per cwt., according to brand. *Prussiate* firm at 6½d. to 7d. per lb. for the yellow, and 1s. 1d. to 1s. 2d. per lb. for the red. *Cyanide*, whilst still somewhat scarce for prompt delivery, is easier for forward at 1s. to 1s. 1d. per lb. for 98 to 100 per cent. white cake. *Bichromate* firm at 3½d. to 3¾d. per lb. *Oxalate* is steady at 5d. per lb. for the neutral. *Permanganate* is dull of sale at 52s. 6d. per cwt. for small, and 57s. 6d. per cwt. for large crystals.

POTASH PERMANGANATE.—Best makes are now quoted: 52s. 6d. per cwt. for *small crystals* and 5s. more for *large crystals*; the low price to which the article had been driven having apparently checked production and frightened off weak producers.

QUICKSILVER.—In fair demand at £7 5s. per bottle from importers, whilst second-hand holders quote £7 4s. per bottle, it is believed that an advance in price is impending.

QUININE.—Is firm at 10d. per oz. for best German brands of *Sulphate* in 100 oz. tins and for 1000 oz. lots, there being no sellers of these brands at a lower figure from second-hand, while an advance in makers' prices is confidently predicted in some quarters.

SALICINE.—Is unchanged, 10s. 6d. per lb. being makers' price for fair quantities.

SALTPETRE.—*English* refined, 20s. per cwt. in large casks; kegs, 21s. per cwt.

SENEKA ROOT.—Good *Minnesota* is wanted, but there seems to be very little here. To arrive 1s. 1¾d. per lb. *c.i.f.* is asked.

SHELLAC.—The market has become very dull, and at the auctions on Tuesday rather lower prices had to be accepted, in order to bring about business. A total of 1105 cases offered and 590 cases sold: *Second Orange*, of 816 cases 544 sold, cakey SG in diamond at 77s., bright free ditto being bought in at 85s., and SR in diamond at 82s., good pale part broken sold at 67s., good bright at 65s., bright shivered block at 64s., flimsy palish weak at 63s., good bright red broken at 62s. to 63s., curly bronze at 63s., good strong red at 62s. to 63s., strong red curly cakey at 62s. 6d., fair reddish little mixed and cakey at 61s. to 62s., strong free claret colour at 62s., broken red cakey at 61s. to 62s., red liver at 60s. to 61s., ordinary liver part flint block at 59s. *Garnet*: Of 64 cases 25 sold, fair ruby at 59s., blocky ditto 53s., blocky Rangoon at 57s. *Button*: Of 225 cases 21 sold, genuine stamped at 89s., BL 4 at 48s., common blocky at 37s. to 38s., the remainder bought in, including genuine blocky at 88s., good firsts at 84s., blocky ditto at 74s. to 77s., cakey seconds at 74s., blocky circle 2's at 69s., and dark thirds at 64s. The shipments from Calcutta for the first half of October were heavy as compared with same period last year.

SODA COMPOUNDS.—*Crystals* firm at 57s. per ton, ex-ship terms *Ash* unchanged at £5 to £5 10s., according to strength. *Acetate* steady at 35s. 6d. per cwt. for the chemically pure, and 13s. 6d. per cwt. for the ordinary refined. *Bicarbonate* unchanged at £7 5s. per ton for the 97 per cent., and 18s. 6d. per cwt. for the fully bicarbonated quality. *Hypsulphite* quiet at 6s. to 8s. per cwt., according to brand. *Bromide* steady at 2s. per lb. *Iodide* dull at 11s. 7d. per lb. *Nitrate*, £7 12s. 6d. per ton for the ordinary, and £8 2s. 6d. for the refined.

SPERMACETI.—American is dearer at 1s. 3½d. per lb., packed in 60 lb. boxes.

SPICES (VARIOUS).—*Black Pepper*: 56 bags Singapore sold at 4½d.; 50 bags Aleppy at 4¾d., and 80 bags Tellicherry at 4¾d. *White Pepper*: 102 bags Siam sold at 4¾d.; 12 cases extra fine Singapore bought in at 10½d. *Chillies*: 1 bag fine African, from Chinde, sold at 42s.; 4 bales, per land carriage, sold at 32s. 6d. *Cinnamon*: 10 bags Ceylon sold, broken quill, 9d.; quillings, 8½d.; 60 bags coarse bark bought in at 5½d. *Mace*: 21 cases Penang bought in, pickings at 1s. 4d.; 10 packages West Indian sold, ordinary to fair, 1s. 3d. to 1s. 7s.; good, 1s. 8d. to 1s. 10d.; pickings, 1s. 1d. *Nutmegs* are firm for bold; 20 cases Penang sold, 64's at 2s. 7d., 66's 2s. 4d., 89's 1s. 9d.; 31 packages West India sold, 84's at 1s. 8d., 111's and 100's 1s. 1d. to 1s. 2d. *Pimento* quiet but steady; 260 bags sold at 4½d. to 4¾d.

SUGAR OF LEAD.—*English* steady at 31s. per cwt. *Foreign* firm at 27s. 6d. per cwt.

SULPHATE OF COPPER.—Is very firm at £17 to £18 per ton, according to brand.

SULPHONAL.—Both *crystals* and *powder* are still obtainable in limited quantity from the two principal makers at 7s. 3d. per lb. for bulk packing.

SULPHUR.—Steady, *English* roll, 7s. 6d. to 8s. per cwt.; flowers, 11s. per cwt. *Foreign* roll, 6s. 6d. per cwt.; flowers, 7s. per cwt.

TONQUIN BEANS.—*Angosturas* are in large supply, and new beans are rather pressed for sale at 4s. per lb. Old beans are held for 5s. per lb.

TURMERIC.—*Bengal*, without reserve, sold at 17s. 3d. to 17s. 6d. per cwt. for fair finger, slightly wormy. Other descriptions were bought in.

Newcastle Chemical Report.

OCTOBER 19, 1898.

The market continues to move slowly. Shipments of Soda Crystals to the Channel ports may be said to be on a larger scale, but principally against running contracts. Prices keep as follow:—Bleaching Powder: £5 10s. to £6. Soda Crystals: Basis, 45s. Caustic Soda: 70 per cent., basis, £7. Soda Ash: 52 per cent., £4 5s. Alkali: 52 per cent., £5 5s. Sulphur: £5 per ton.

Liverpool Market Report.

OCTOBER 19, 1898.

Quotations have been subjected to alterations on the higher scale since last week, as regards Honey (particularly fine Californian), Linseed and its oil, and Spirits of Turpentine. This latter has advanced 1s. per cwt., and closes very firm. The alterations in the price of chemicals are but two, Arsenic and Sulphate of Copper, which have advanced. Business, taken as a whole, has been slow, but prices show no weakness.

AMMONIA SALTS.—Sulphate is a shade easier, £9 12s. 6d. to £9 15s. per ton.

ARSENIC.—Lump, £30 per ton. Powdered is dearer, £16 15s. to £17 per ton.

BEEWAX.—28 packages of Gambia sold at fully late rates; 7 sacks of Chilian sold at £6 17s. 6d. to £7 12s. 6d.

BLEACHING POWDER.—£5 5s. to £5 15s.

CANARYSEED.—Turkish seed is steady at 28s. 6d. to 30s. per 464 lbs. About 60 bags of Spanish sold from store at 33s.

COPPERAS—Is still firm at 37s. to 39s. per ton.

COPPER SULPHATE—Is dearer at £17 5s. to £17 10s. per ton for spot, and £18 for spring delivery.

HONEY.—The stock of finest Californian held here is quoted at 42s. 6d. per cwt. Sales of Chilian Pile X. have been made at 36s. per cwt.

LINSEED—Is moving steadily upwards. Calcutta, November to December shipment, brings 38s. 6d. per 416 lbs.; American ditto, 36s. 6d.; River Plate on the spot, 250 tons sold at 35s., or an advance of 9d. per 416 lbs.

OILS (FIXED) AND SPIRITS.—Castor is only in quiet demand with unaltered rates. Calcutta 3³/₄d. per lb., French 3d. to 3¹/₄d., and Madras 2¹/₄d. per lb. Olive, of Spanish production is selling steadily on the spot at £28 to £30 per tun. No business doing "to arrive." Linseed, of Liverpool pressing, is firmer at the improved price of 18s. 6d. to 19s. per cwt. Cottonseed, Liverpool refined, in export barrels, is quiet at 15s. 9d. to 16s. per cwt. Spirits of Turpentine have experienced two separate advances during the week and are now at 25s. per cwt.

POTASH SALTS.—Bichromate, 3¹/₂d. per lb.; Chlorate, 4d. to 4¹/₂d. per lb.; Cream of Tartar, 75s. per cwt., is not in much demand, but price is firm. Pearlash, 34s. to 35s. per cwt.; Potashes, 22s. 6d. per cwt.; Prussiate 6³/₄d. per lb.; Saltpetre, 21s. per cwt.

SODA SALTS.—Bicarbonate, £6 15s. per ton; Borax is very firm at 14s. per cwt.; Caustic, 76 to 77 per cent. £7 12s. 6d. per ton; Crystals, £3 per ton; Nitrate is in moderate demand and price steady at 7s. 7¹/₂d. to 7s. 9d. per cwt.

TURMERIC—40 bags of Bombay bulb sold ex quay at 10s. per cwt.

Manchester Chemical Report.

OCTOBER 19, 1898.

A fair turnover continues in heavy chemicals and drysalteries, locally. Caustic Soda is in good demand, and Soda Ash and Ammonia Alkali about the same as last week. Bleaching Powder is fairly firm for prompt delivery at £5 to £5 5s. per ton, soft wood casks on rails. Salt Cake is higher and strong at 27s. per ton in bulk on rails. Sulphate of Ammonia is firmly held, and is quoted £9 7s. 6d. per ton, on rails, Lancashire. Coal Tar products are somewhat dull, except Pitch, which is quoted 19s. f.a.s., Manchester Ship Canal, and 24s. to 25s. West Coast. Anthracene is unchanged at 4d. A and 3d. B quality. Benzols continue flat at 8¹/₂d. to 9d. for 90's, and 9d. for 50's to 90's. Carboic Acid moves fairly. Miscible Naphtha is unchanged, but solvent wood (white, colourless) is moving freely at 3s. to 3s. 3d., according to quantity. Sulphate of Copper firm at £18 per ton, prompt delivery, best brands here. Owing to increasing freights, Brown Acetate of Lime is firm at £5 7s. 6d. per ton for American, c.i.f., Manchester; Welsh ranges from £5 5s. to £5 7s. 6d., station here. Tin salts are higher, owing to the rise in the metal. Sulphur dull.

ITEMS OF INTEREST.

DISINFECTANT AND DEODORISER FOR A SICK ROOM.—Zinc sulphate, 100 grammes; sulphuric acid, 5 to 10 grammes; mirbaue oil, 2 grammes; indigo blue, 0.15 gramme. Five grammes are placed in the bed-pan before use. Urine and excreta are deodorised immediately by the salt. Decomposition being arrested, microscopical examination may, if required, be deferred until the following day.—*Zeit. d. allg. oest. Apoth. Ver.*, lii., 359, after *Allg. Med. Cent. Ztg.*

PEA-NUT MEAL BISCUITS.—The fact that pea nuts or earth-nuts contain but little, if any, carbohydrates, has led to the use of pea-nut meal in making bread and biscuits, which are highly palatable and useful in cases of diabetes and obesity.—*Med. Mod.*, vii., 134.

DIDYMIUM CHLORIDE AS A GERMICIDE.—According to Droisbach, this salt may be used as a powerful disinfecting and protective remedy. Diluted 1:500 or 1:1000, it prevents putrefaction and is more effective than carbolic acid, boric acid, cupric and ferrous sulphates or zinc chloride. It occurs in commerce as a concentrated rose-red solution of 25 to 30 per cent. It does not stain, is non-corrosive and may be used as a preservative for skins, wood and such-like. The price is not high, as it is obtained as a by-product in the production of rare earths used for incandescent lamps.—*Pharm. Zeit.*, xliii., 579.

SODIUM PERMANGANATE AS AN ANTIDOTE.—F. Scribeber suggests the use of sodium permanganate instead of the potassium salt as an antidote for phosphorus or morphine poisoning, since it is less toxic and may be used in large doses without danger. He advocates washing out the stomach with a 2 per cent. solution of the salt, and then introducing half a litre of the same, allowing it to remain.—*Therap. Gaz.*, viii., 201, after *Centralbl. für innere Med.*

Receiving Orders in Bankruptcy.

(From the London Gazette.)

William B. Brodie, Surgeon, 23, Rawson Street, Farnworth, near Bolton.

James A. Fox, soap manufacturer, Lion Works, Dale Street, Macclesfield.

John S. Carleton, medical practitioner, Manor House, Newnham, Gloucester.

Partnerships Dissolved.

(From the London Gazette.)

J. H. Waters and John R. Kemp, Physicians, Surgeons, 10, St. James's Street, London, W., so far as regards J. H. Waters.

H. Bennett and Thomas G. Cook, Mineral Water Manufacturers, Tong Street, Rochdale.

Arthur Hince and Joseph Thomas, Mineral Water Manufacturers, Cwm Dale, Church Stretton, Salop. Debts will be received and paid by Arthur Hince.

Reading: The National Publishing and Supply Association, Ltd., 26, Bridge Street. 1898. From the Author.

Trade Notes.

MR. H. WIPPELL GADD'S 'Pocket Synopsis of the British Pharmacopœia' has now reached its third edition. The whole of the matter has been carefully revised for this edition, and some additional information is now given, which it is hoped will render the book still more useful to practitioners and students, both medical and pharmaceutical.

SOUTHALL BROS. & BARCLAY, LTD.—The statutory meeting of this Company was held at the Offices, Lower Priory, on Tuesday, Mr. Thomas Barclay presiding. The Chairman, in the course of a brief statement, reported that the business had been transferred to the Company in due form, and an application had been made to the Stock Exchange for a settlement. The called-up shares had been fully subscribed; in fact, 168,807 applications were received for 46,667 shares to be allotted. Care had been taken as far as possible to allocate the shares amongst customers, whilst the heads of the departments and the travellers were also interested in the business. It was proposed to pay interest on the shares half-yearly, viz., on January 1 and on July 1, and interest for the first half-year would date from July 21 last. The business had been established for nearly eighty years; it had grown steadily, and it was continuing to grow. The whole of the former partners were directors of the Company, a fact sufficient in itself to guarantee that the business would be conducted on the same successful lines. A vote of thanks was passed to Mr. Barclay for presiding, on the motion of Mr. J. K. Andrews (Astwood Bank), seconded by Mr. G. White (Dudley).

MESSRS. A. DE ST. DALMAS AND Co., of Leicester, have established a depot in Hamburg with a view of extending their trade to Germany, and have appointed the firm of Otto Fuerst, Hamburg, their sole representative for that country. The firm has published a German price-list of the well-known medical plasters, printed in colours, and every effort is being made to bring the goods prominently before the German public.

IMITATION OF PEARS' SOAP IN GERMANY.—It will be interesting to soap manufacturers and makers of similar preparations to learn that it has been attempted in Germany to palm off upon the public a soap got up in the style of Pears' soap, and with wrapper to the outward appearance exactly the same as the original, only the wily German has used the name "Pearls" instead of Pears, which, with the otherwise exact imitation of print, colours, etc., of the wrapper is hardly noticeable to the eye of one not much accustomed to the original. Of course, the price was ridiculously cheap, and the piece was sold at 25 pfennig, equal to 3d. It is presumed that the soap was not only sold in Germany, but was also intended for export, as it contained on the back the distinct mark "Made in Germany," which would not have been put on if the soap was only intended for home consumption. However, the matter was sure to be found out sooner or later, and as this soap came under the notice of Mr. Otto Fuerst, of Hamburg, who is an importer of British manufactured druggists' and chemists' specialties, he reported the case to Messrs. Pears, Ltd, calling their attention to the fact that their soap was being imitated. As soon as the representative of the firm arrived in Hamburg he obtained, in conjunction with Mr. Fuerst, proof of the sale of the soap, and reported the matter at once to the police as being a fraud. The authorities have taken the matter up, and it is probable that not only the manufacturer, but also the seller, will be heavily punished, as it is not only an infringement of the registration of the label (Trade Mark Protection Act), but also a direct swindle, as Pears' soap was asked for and an inferior imitation supplied. The former will be perhaps not quite so heavily punished as the latter; but there is no doubt that the manufacturer of the soap will be heavily fined for his little enterprise, which will give a lesson to the majority of the German manufacturers not to trifle with the imitation of British goods again. The matter rests now with the Public Prosecutor, who will no doubt see that justice is done without any further trouble or expense to Messrs. Pears, Ltd. It can only be considered praiseworthy that Mr. Otto Fuerst has taken so much interest in the protection of British manufactured goods.

OBITUARY.

HALEY.—On October 5, Edward Haley, Chemist and Druggist, Bradford (Yorks). Aged 60.

Advertisements.

(Received too late for Classification).

ENGAGEMENT wanted as MANAGER or SENIOR. Qualified. London preferred. RHEI, Hancock's, Shelden St., Paddington.

VICTORIA CHILDREN'S HOSPITAL, Park St., Hull. 60 beds and out-patients.

Resident LADY DISPENSER wanted. Fully qualified. Salary £35 per annum, with board and laundry. Preference given to a lady who could devote the mornings to canvassing for new subscriptions.

Applications, stating age and experience, with copies of three recent testimonials, to be addressed to the HON. SECS and delivered at the Hospital by noon on Thursday, 27th October.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Books.

For Sale.—Muter's 'Analytical Chemistry' (7th edition), Ince's 'Latin Grammar,' Johns' 'Flowers of Field,' Woodward's 'Arithmetical Chemistry' (Parts I. and II). Good as new. What offers?—R. Allan, Irving Street, Dumfries

Minor Lectures for disposal. Cost £2 2s. Price 7s. 6d. Address—Minor 141, Verulam Road, St. Albans, Herts.

Pereira's 'Materia Medica,' 2 vols. in 3, genuine, 1855, fair condition; 7 numbers 'Dispensatory,' unbound; 14 numbers 'Household Physician,' unbound; 4 vols. 'Practitioner's Library,' viz., Trevis on 'Intestinal Obstruction,' Carter and Frost on 'Ophthalmic Surgery,' Savage on 'Insanity,' Bryant on 'Diseases of Breast'; all splendid condition.—Wild, 36, Queen's Road, Liverpool

Jago's 'Chemistry,' Cripps's 'Pharmacy,' Wright's 'Physics,' Oliver's 4s. 6d 'Botany,' and other books for Minor students; list on application.—Jackson 4, Arbour Street, Southport.

Miscellaneous.

6 lbs. Opium Turc Elect. Opt., at 11s., less quantity 12s.; cash with order.—Palmer, Thornbury, Glos.

Magic Lanterns, second-hand; triples and binoculars: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours post free, 5s.—Edward Peck, East Dereham, Norfolk.

WANTED.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsell 9, Derwent Grove, East Dulwich, London, S.E.

Marked Copies of the following Newspapers, etc., have been received during the week: the Evening Dispatch, the Western Morning News, Irish Figaro, Work, the New Penny Magazine, Evening North Wilts Herald.

PERFECTION IN PILL-MAKING.

WAND'S Pills are the Best—Soluble and Effective BEST INGREDIENTS ALWAYS USED.

WE FREQUENTLY RECEIVE UNSOLICITED OPINIONS:—

Feb. 3rd, 1898, SCOTLAND.—A Surgeon writes:—"Repeat Pill order. The results were satisfactory; I mean perfectly satisfactory. So is the solubility. My tests are not chemical, but tests under the conditions of actual work. I am quite satisfied with your productions."
Dec. 17th, 1897, WEST INDIES.—"I was much pleased with the Pills you sent me, and am enclosing further order."
Feb. 3rd, 1898, BRISTOL.—"I have had a few lots from you and find them very good."
May 11th, 1898, TIVERTON.—"Much pleased with your pills."
Aug. 26th, 1898, WEST INDIES.—"Your goods have given every satisfaction."

See Favourable Opinions in "THE LANCET," "BRITISH MEDICAL," "CHEMIST AND DRUGGIST," "BRITISH AND COLONIAL."

HOME AND COLONIAL BUYERS SHOULD SAVE MONEY BY BUYING WAND'S SOLUBLE EFFECTIVE PILLS BULLETS, SHOT, or PELLETS as HARD AS NAILS we do not make.

Effects obtained by Testing 25 Pills and 1 Tablet from 12 Makers.

"Nineteen of these Pills and the Compressed Tablet of Bland's Pill were knocked into a board with a blow of the hammer, and without crushing or apparent damage. Surely no comment is needed on the solubility of a pill, whether coated or uncoated, which is sufficiently hard to penetrate a board."—JOURNAL OF MEDICINE AND SCIENCE, Sept., 1897. (The Official Organ of the Maine Academy of Medicine.)
"Some factory-made coated pills were taken by a patient. After a few days eight of these pills re-appeared, having apparently passed through the body unchanged. The pills were discontinued, but for days continued to make their re-appearance. This naturally annoyed the prescriber, and rendered the position of all concerned rather an ignominious one."—CHEMIST AND DRUGGIST, May 29th, 1897.

WE MAKE PILLS, SOLUBLE PILLS

WAND, Manufacturing Chemist, LEICESTER.

NOTTINGHAM AND NOTTS. CHEMISTS' ASSOCIATION.

On Wednesday evening the first meeting of the winter session was held at the Albert Hotel, Mr. E. GASCOYNE (Vice-President) occupying the chair.—The CHAIRMAN referred to the fact that Messrs. Sergeant and Gill, who had been deputed to interview Mr. Yoxall, M.P. for West Nottingham, had persuaded him to withdraw his proposed amendment to the Pharmacy Acts Amendment Bill, and Mr. SERGEANT then explained what passed on the occasion referred to, after which Mr. GILL proceeded to read a paper on

Company Pharmacy.

He referred to the fact that during the passage of the Pharmacy Bill through the House of Lords, the Lord Chancellor called attention to the fact that the Pharmacy Acts did not cover the case of drug stores carried on by joint-stock companies or corporations, though common-sense required that such bodies should be treated in the same way as individuals. That opinion was endorsed by Lord Herschell, and eventually an amendment to the Bill was introduced in the name of the Lord Chancellor himself. That amendment, however, was subsequently withdrawn, but the pronouncement by the highest legal authority in the realm remained; and pharmacists would be wanting in their duty if they did not attempt to give effect to the views that had been expressed. With that object in view the Federation of Local Pharmaceutical Associations had suggested that the matter should be discussed by local associations throughout the country with the view of some definite and equitable line of policy being formulated. They must look upon this question of company pharmacy solely in respect to the influence it had on the public welfare. When a customer bought tea, sugar, meat, or cabbages he could easily tell by physical tests whether such commodities were what they ought to be, but with regard to drugs it was far different. The chemist knew that a drug which physically appeared to be all right may chemically be all wrong, and to guard against this he must either chemically test his stock-in-trade, or buy only from firms who would do it for him. Whichever course was adopted he must add to what might be called the market value of drugs, the cost of expert scientific supervision of their manufacture and storage, which was an important item financially. This placed drugs in a class by themselves. They constituted a domain into which none but the expert should be allowed to enter, for the moment they admitted the unqualified into competition with the qualified, then the professional safeguard was removed. Price and not quality became the determining factor, and a dangerous system was introduced which could not fail to have a degrading effect on the ranks of legitimate pharmacy, and diminish the safeguarding influence which the Pharmacy Act intended to supply. Undoubtedly this was the tendency which company pharmacy had started. He could assert with confidence that if it was dangerous for an unqualified individual to carry on the business of a chemist and druggist, it was equally, nay more, dangerous for an unqualified company to do so, for a company as such had neither body nor soul on which punishment could be inflicted if any mishap occurred, because of its transactions. The argument that the law was satisfied if an assistant, who was a registered chemist, had the control of an unqualified company's business was plausible, but he ventured to say that it would not bear the test of close scrutiny as to how it worked out in fact. These companies were formed for a definite purpose. They were all familiar with the philanthropic motives set forth in their advertisements, but as business men they knew that such statements were pure fables. The directors controlled the business, and the qualified assistant was only a cover to evade the law. His employment was not an adequate public safeguard. After laying aside all issues of doubtful importance, they had arrived at two conclusions which were sufficient to warrant them claiming an amendment of the law. These were: (1) It could not be right, and ought not to be legal for a company to do that which it was illegal for an individual to do; and (2) that a pharmacy managed by a registered chemist who was simply a salaried assistant of unqualified directors, could not afford adequate protection for the safety of the public. He thought it was very necessary that the word "persons" should be introduced into the Pharmacy Acts in order to prevent the use of registered titles by unqualified persons trading as joint-stock companies, and it was the duty of the Pharmaceutical Society to formulate a little measure dealing with this important and serious

evil, and endeavour to get it enacted. They might do worse than take it to the Lord Chancellor himself with the request that he would keep a fatherly eye on it during its passage through the stormy seas of Parliamentary debate.—A discussion followed the reading of the paper, which was opened by Mr. WARRENER, who remarked that Mr. Gill had pointed out an excellent way by which an alteration of the disastrous state of affairs in connection with company pharmacy could be secured.—Mr. LUMBY also approved every word Mr. Gill had read. He thought that in addition to the name of the registered assistant employed at a joint-stock drug store being printed on every label of poison or medicine dispensed, that name should also appear over the shop door.—Mr. BEILBY strongly sympathised with Mr. Gill's condemnation of the letter "s" being omitted from the word "person" in the Acts, so rendering company pharmacy possible, but he was afraid the time had gone by when they could expect from Parliament a Bill to prevent infringement of the rights of pharmacists.—Mr. EBERLIN contended that the law as it at present stood covered the case. If a test case were tried he believed the former ruling would be reversed. The registered assistant merely covered the company, and it seemed a farce that the law should allow seven persons, all unqualified, to start in trade whilst it denied that privilege to an individual. Messrs. Beverley, Sergeant, Brown, Wilson, and Freeman having also taken part in the discussion, the CHAIRMAN said Mr. Gill had made out as good a case as it was possible to do against company trading, but he differed from him as to the probability of getting any redress from Parliament. It was one of the great blots in the Act of 1868 that one man should be allowed to cover any number of shops. He was not speaking now of companies but of qualified chemists. With regard to company trading, he had not the slightest hope of any amendment of the Act that would do away with it. If chemists would combine and advertise a thorough exposure of company pharmacy, that would do more than any Act that could be passed.—Mr. GILL replied on the discussion, and moved—

That this meeting of Nottingham and Notts Chemists' Association, in consideration of the important pronouncement on company pharmacies recently made by the Lord Chancellor, and endorsed by the Ex-Lord Chancellor, would respectfully and strongly urge the necessity of the Pharmaceutical Society taking early action with a view to securing amendment of the Pharmacy Act in the direction of preventing companies doing that which it is illegal for a person to do.

—Mr. SERGEANT seconded the resolution, which was carried *nem. con.*

PHARMACY NEWS.

Special Notice.—The Editor will be glad if local secretaries and other members of the Pharmaceutical Society, or any other readers of the Journal, will send him marked copies of newspapers containing matters of interest to chemists and druggists, or communicate to him any items of news regarding the craft and those engaged in it.

IRISH NEWS.

DURING THE LAST WEEK the following drug and medicine contracts have been entered into: Dr. J. F. O'Ryan, Tipperary, for the supply of medicine to the Kilrush Union. The guardians complimented Dr. O'Ryan on the excellent quality of his drugs. Messrs. Clarke and Co., Belfast, the lowest of several tenders, have secured the contract for the supply of drugs to the Mill Street Union. At Naas Union the guardians state they are unable to check the prices, etc., in the tenders, so many of the articles named in the list being outside the official number.

IT IS NOT IMPROBABLE that the vacancy on the Council of the Pharmaceutical Society, caused by the recent death of Mr. Murray, M.C.P.S.I., Monaghan, will be filled by a representative of the druggist party from Ulster. The feeling exists that the chemical and drug section of the trade is not sufficiently represented on the Council, and the appointment of an additional druggist representative thereon would be a politic as well as a popular move on the part of the Society.

THERE IS TALK IN DUBLIN of the revival of the metropolitan branch of the Chemists' and Druggists' Society of Ireland. Already one gentleman representing a large section of the trade has set the ball rolling, and it is probable the preliminary steps to recommence the Association will have been taken by the time these notes appear

in print. Those concerned state that they are desirous of having an organisation working practically for the good of the rank and file of the business, and see no reason why the Society which flourished in 1890 should not take its place amongst kindred bodies.

THE DEATH HAS OCCURRED, at Queenstown, of Mr. William Savage, a popular young pharmacist who only a short time ago left Ireland for the Cape Colony with every prospect of a brilliant career, and whose return to his native soil on account of ill-health was the subject of sympathetic comment.

THE OPENING MEETING of the winter session of the Ulster Amateur Photographic Society has been held in Belfast under very favourable auspices. A demonstration on "Bromide Enlarging" was given, and a paper on "Enlarging" was read by Mr. Hyde. The lantern was worked by Mr. A. R. Hogg, registered druggist, of the firm of Messrs. Lizars and Co., chemists. An enjoyable evening was spent.

A PENNYWORTH OF STRYCHNINE purchased last week from a Londonderry chemist to poison mice has been swallowed by the buyer—a local vintner. "Death from poison" was the verdict.

THE FIRST MEETING of the newly-formed Dental Students' Society of Ireland was held last week at Dublin, when a paper on the "Six-Year Molar" was read by Dr. Story. The Society has been formed for the advancement of dental science among students, and is progressing rapidly.

THE MCGOVERN DOG DOCTOR continues to go between the Local Government Board and the various Boards of Guardians in Ulster. The former refuse to admit McGovern's claims to the right to prescribe for hydrophobia, or to recognise his sanatorium as an hospital, and the guardians are equally strong in their support of the "Cavan canine curer." The legal mill will not improbably begin to grind in the matter, as the unions are deciding in favour of the local man, and prosecutions are threatened against the refractory guardians.

DURING THE LAST COUPLE OF WEEKS the Pharmaceutical Society have brought two prosecutions against alleged offenders against the Pharmacy Act of 1875. One was in Dublin and the other in Cork. In the former case the defendant, a Mrs. Barnes, was charged with keeping open shop for the retailing and dispensing of poisons and for compounding a medical prescription. She was able to prove by producing a deed executed three years ago by Mr. C. B. Vance, L.P.S.I., that the pharmacy was let to that gentleman on a yearly tenancy, and Mr. Vance having satisfied the Court that the prescription was compounded by his qualified manager, the Society made the *amende honorable*, and the case fell through.

IN THE SECOND CASE, heard on Friday, October 21, at the Cork Police Office, Mr. Mayne, R.M., delivered his decision in the case of the Pharmaceutical Society against Messrs. J. Waters and Son, Winthrop Street, the evidence having been given at a previous hearing. The defendants were charged (1) that they described themselves as dispensing chemists, none of them being registered, or entitled to be registered; (2) for describing themselves as chemists and druggists, none of them being registered, or qualified to be registered, and (3) for keeping open a shop for the sale of poisons, they not being entitled to do so under the Pharmacy Act of 1875. Mr. A. Julian, solicitor, prosecuted on behalf of the Pharmaceutical Society, and Mr. George Lawrence (instructed by Mr. A. Blake) defended.—Mr. Mayne, in delivering his judgment, said he had delayed his opinion in the case because he was anxious to have the fullest possible opportunity of considering the judgment delivered in the House of Lords in the case of the Pharmaceutical Society against the London Supply Company, and also the decision of the Queen's Bench in Ireland in the case of the same Society against Alexander Boyd and Co., not, he need scarcely say, for the purpose of criticising those judgments, for that would simply be presumption on his part, but for the purpose of ascertaining how far those cited cases and the case of Messrs. Waters and Sons were analogous. It occurred to his poor judgment and he now found that they ran on practically parallel lines. In fact, he could see no difference whatever in the cases he saw decided and that of Messrs. Waters and Son. At least he could not see any such

difference as would justify him in departing from the rulings in the cases cited. Therefore he felt constrained to dismiss this case on the merits.—Mr. Lawrence applied for costs in each case.—Mr. Mayne refused to make any order.

THE BATTLE OF THE FROGS.—Last week, in the Dublin Law Courts, Messrs. Boileau and Boyd, Limited, chemists and druggists, were sued by Mr. J. E. Garratt, London, to recover £2 10s. 6d. discount, alleged to be due in reference to the sale to the defendants of a quantity of lozenges known as "Frog in your Throat." The defendants ordered twenty-five gross, and paid for part of the consignment, agreeing to hold the remainder on sale or return. The price was 60s. per gross, and out of the amount a stated discount was to be allowed if the "Frogs" were paid for within a certain period. The parties, however, fell out in the matter of discount, and hence the present action. The Recorder gave a decree for the amount claimed.

THE FOLLOWING HAVE BEEN ELECTED in connection with the annual meeting of the Royal College of Physicians of Ireland:—Dr. E. McDowel Cosgrave, L.A.H., Examiner to the Pharmaceutical Society of Ireland, to be an examiner in biology under the conjoint examination scheme; Dr. Ninian Falkiner, ex-pharmacist, as examiner in materia medica and pharmacy; Dr. Edwin Lapper, examiner in chemistry. These gentlemen are well-known figures in Irish pharmaceutical circles.

MESSRS. J. WATERS AND SONS, Limited, Cork, have opened a drug and medicine dispensing department to their concern in that city, under, they state, the charge of a qualified pharmaceutical chemist.

SCOTTISH NEWS.

THE KINNINMONT GOLD MEDAL has been this year awarded to Martin Meldrum, Glasgow, who has obtained the highest percentage of marks ever awarded in this competition. This is the second year in succession that this honour has been gained by a student of the Glasgow School of Pharmacy, of which Mr. John Lothian is the Principal.

THE SALE OF MEDICATED WINES.—At this week's licensing court in Glasgow, an application was made by Mr. Charles Holdway Osmond, chemist and druggist, for a licence for his premises at 362, Dumbarton Road, Partick, to enable him to sell medicated wines. At the Court it was explained that he was frequently asked to supply medicated wines, but was unable to do so, and that the Partick people had to travel into the city to get such medicine. There were only three such licences in Glasgow, it was pointed out, so that the hardship was all the greater. The Bench, however, would not entertain the petition, and Partick is still without its supply of medicated wines. In this connection a decision by the Glasgow City Parish Council is somewhat *à propos*. At a recent meeting attention was called to the medical officers of the Board prescribing stimulants, and now the following circular letter has been sent to each of the out-door medical officers and the various dispensaries:—

The Medical Committee desires that when medical officers find it proper to prescribe alcoholic stimulants for the sick poor, they shall endeavour to do so in such a manner as to cause what they prescribe to be recognised as medicines and not as popular stimulants. The Committee considers these, in all cases should be dispensed in the usual way in medicine bottles labelled with directions as to doses, etc., and that it would be preferable to prescribe them in combination with other preparations, so as to disguise their well-known characters.

It may be possible for the pharmacist to disguise the well-known taste, but will he be able to disguise the well-known effects?

THE BUSINESS OF CHEMIST AND BOOKSELLER (established over a century), which belonged to the late George Waldie, is still carried on as a chemist and bookseller's business, and was lately acquired as a branch shop by C. M. Spence, chemist and bookseller, of 133, High Street, Linlithgow. In connection with this business the following note, which appeared in a recent issue of the *People's Friend*, is particularly interesting:—"Professor Simpson is said to have obtained his first hint about chloroform from Mr. Waldie, a chemist and bookseller at Linlithgow. One day Mr. Waldie happened to have some of the liquid in a saucer when a gentleman entered the shop with a little dog. The chloroform was placed

upon the ground to be out of the way, and presently the dog was discovered lying by the side of the saucer unconscious and apparently dead. After a time the dog regained consciousness. Mr. Waldie began to think he had made a discovery, and after some experiments with cats, with the same result, he interviewed Professor Simpson."

ENGLISH NEWS.

AN EVENING MEETING of the Pharmaceutical Society will be held at 17, Bloomsbury Square, W.C., on Tuesday, November 8, at 8 p.m., when Professor W. Ramsay, D.Sc., F.R.S., will deliver a lecture on "The New Gases of the Atmosphere" (illustrated by experiments). The chair will be taken by the President, Mr. Walter Hills.

PRESENTATION TO MR. G. T. W. NEWSHOLME.—The annual meeting of the Sheffield Microscopical Society was held on Friday evening last at the Rutland Institute, Dr. Geo. Wilkinson, the President, in the chair. Among those present were Mr. G. T. W. Newsholme, Mr. J. Newton Coombe, Mr. Winder, Mr. J. Austin (Secretary), and about twenty others. The annual report stated that during the year the membership had increased from eighty-three to one hundred and twenty-one, and there had been an improvement in the finances of the Society. During the session fourteen fortnightly meetings had been held. Regret was expressed at the withdrawal of Mr. G. T. W. Newsholme from the office of Honorary Secretary after ten years' service. Dr. Porter was elected President for the ensuing year; Dr. Wilkinson, Mr. Winder, Mr. Newsholme, and Mr. C. Hoole, Vice-Presidents; Mr. Tolputt, Treasurer; and Mr. J. Austin, Hon. Secretary. At the close of the business meeting Dr. Wilkinson formally presented to Mr. Newsholme his portrait in oils, which had been subscribed for by the members in recognition of his services as Secretary. The portrait was painted by Mr. J. H. Bentley, R.B.A., who is a member of the Society. Dr. Wilkinson said when Mr. Newsholme accepted the office the Society was in low water, and its subsequent success was very largely due to his labours. At the present time the Society occupied a better position than it had ever been in before, the reason being that Mr. Newsholme had been the life and soul of the organisation. Testimony to the value of Mr. Newsholme's services was given by Mr. Coombe, Mr. Winder, and several other members. Mr. Newsholme, in returning thanks, said the ten years that he had spent in the service of the Society formed the happiest period of his life. He spoke of his belief in the value and usefulness of such societies, pointing out what a stimulus they were capable of affording to the serious study of important branches of science.

CHEMIST SUED FOR DAMAGES.—At the Blackburn County Court, on Monday, before His Honour Judge Coventry, Mary Ann Kay, 68, Moorgate Street, Blackburn, sued Joseph William Butterfield, chemist, Market Street, Darwen, for £20 damages for injuries sustained in consequence of alleged carelessness and negligence in extracting teeth. Plaintiff stated that in April last she suffered from toothache and visited defendant's shop. She told him she wanted to have three teeth extracted, two of which were in front of her mouth and one at the back. He examined the teeth, and pointed out that the two front teeth were only slightly decayed, and suggested that she should let them remain. Plaintiff however expressed a desire to have all three taken out, and he extracted them. During the operation he used three different syringes for the purpose of injecting "eucaine" into the gums, apparently because the first two syringes were clogged. He told her to bathe her gums with alum water. She became ill, and her husband noticing white matter on her gums, he acquainted defendant with the fact. Defendant told her husband to bathe the gums with alum water and Condy's fluid. Witness, however, at the end of twelve days, called in Dr. Walters, who said she was suffering from septic poisoning. She was medically attended for nine weeks. A small portion of the exposing portion of the bone had to be removed. In cross-examination, the plaintiff said she stopped bathing with alum water, and also went out to the fair whilst she was ill without any other covering but her hat. Dr. Walters stated that while unclean instruments might have set up the septic poisoning, there were half-a-dozen other things which might do the same. He could not say that the septic poisoning in this case was due to unclean syringes or to any specific cause. Mr. Broadbent, who

appeared for the defendant, said that after the doctor's evidence he thought there was no case for him to answer. His Honour concurred, and in non-suiting the plaintiff said she had not proved any neglect or carelessness on the part of the defendant, who was awarded his own and witnesses' costs.

PLYMOUTH PHOTOGRAPHIC SOCIETY.—At a meeting of the above, held on the 21st inst., Mr. J. D. Turney, pharmaceutical chemist, read an excellent paper on "Elementary Optics as Applied to Photography," by Mr. Child Bayley, Secretary of the Royal Photographic Society. The various points were lucidly explained by the aid of a clever series of diagrams shown by aid of the lantern, and at the conclusion Mr. Turney was heartily thanked.

MANCHESTER PHARMACEUTICAL STUDENTS' EXCURSION AND A PRESENTATION.—On Saturday last the students of the Manchester College of Pharmacy took an excursion to Knutsford, the last conducted by their demonstrator, Mr. F. Pilkington Sargeant, who is leaving to establish a school of pharmacy in Yorkshire. At five o'clock the party arrived at the principal hotel in the town, where a substantial tea was awaiting them. After tea, Mr. A. C. Critchley, Ph.C., of Blackburn, took the chair, and the loyal toasts having been honoured, he called upon Mr. Walter Harlow to make a presentation to Mr. Sargeant, consisting of a beautifully illuminated testimonial, bearing the names of over sixty past and present students, together with a "Fram" microscope and accessories by Watson and Sons. Mr. Harlow, in making the presentation, thanked Mr. Sargeant for his untiring energy in the fulfilment of his duties, and concluded by wishing him, on behalf of the students, every success in his new undertaking. Mr. Howell then, on behalf of the junior students, presented Mr. Sargeant with a silver mounted ebony stick, bearing a suitable inscription. Mr. Sargeant then thanked the students for their handsome presents. The toast of the Manchester College of Pharmacy, coupled with the name of Mr. Chas. Turner, was then proposed, and duly honoured. The rest of the evening was spent in the dilution of a splendid musical programme, prepared by Messrs. Hodgson and Heaton. A vote of thanks to the performers and the National Anthem concluded one of the brightest of pharmaceutical outings.

SILVER WEDDING.—On the occasion of their silver wedding Mr. and Mrs. F. Harwood Lescher, on the 18th inst., entertained the whole of the staff of Messrs. Evans, Lescher and Webb, to the number of 224, to supper at the Holborn Town Hall. After all had been seated Miss Crump presented Mrs. Lescher with a basket of flowers, accompanying it with the wish that both she and Mr. Lescher might live to see their golden wedding. Supper was then partaken of, at the conclusion of which Mr. Lescher proposed the health of "The Queen." The toast of the evening was reserved to Mr. H. George, the senior representative of the house, who in a very able speech proposed the health of Mr. and Mrs. Lescher, which met with a hearty reception at the hands of all present, accompanied by musical honours. Mr. George then asked Mr. and Mrs. Lescher to accept as a memento of the occasion a silver tea service as coming from the whole of the staff. Mr. Lescher in rising to give thanks on behalf of himself and wife for such a mark of respect, expressed the pleasure it gave to him of having so many round him to enjoy a social evening together. The toast of "the Staff" was proposed by Mr. Lescher, and responded to by Mr. J. T. Collis, and Mr. F. J. Brockies. The Liverpool house (Evans, Sons and Co.), and Montreal house (Evans and Sons, Limited), was proposed by Mr. Harold Webb and responded to by Mr. J. J. Evans, head of the Liverpool house. Mr. D. Rushforth proposed the health of Mr. E. A. Webb, regretting his absence through ill health, his son (Mr. Harold Webb) responding on behalf of his father. The Chairman then proposed the health of Mr. E. Evans, the senior partner of both houses, Mr. J. J. Evans responding on his behalf. Dancing was then indulged in by most of those present, others passing the time away in social conversation, etc. Most of the company remained until the stroke of twelve, thus terminating a most pleasant evening in the firm's history.

LECTURE ON TUBERCULOSIS.—In connection with the opening of a new sanatorium for Huddersfield at Mill Hill, Dalton, on Saturday, October 22, Sir W. H. Broadbent, M.D., who is a native of Longwood, now part of the municipal borough of Huddersfield, and who performed the opening ceremony, after-

wards delivered a lecture in the Lecture Hall of the Technical College, on "The Prevention of Consumption and other forms of Tuberculosis." There was a crowded audience, and the lecture, which was illustrated by means of a lantern manipulated by Messrs. Houghton and Moody, was listened to with great interest throughout. He pointed out that tubercle is not inherent, and showed how consumption is usually contracted and the measures required for the prevention of the disease.

DEATH OF MR. HUGH LEE PATTINSON.—The death is announced of Mr. Hugh Lee Pattinson, who was at one time identified with the extensive chemical works of H. L. Pattinson and Company, Felling. Mr. Pattinson, who was in his sixty-ninth year, died in London, where he has for some years resided, on Friday, October 21. The deceased gentleman was the son of the well-known discoverer of the process of de silverising lead.

FIRE AT A DRUGGIST'S WAREHOUSE.—A fire burst out on Saturday, October 22, about 2 p.m., at 36A, Aldersgate Street, City. The property attacked consisted of a lofty warehouse of six floors. Engines quickly attended from Clerkenwell, Watling Street, Whitefriars, and Holborn. Soon a score of steamers, about 120 firemen, and three extension ladders were on the spot. The odour from the burning scents and drugs could be detected at a considerable distance, the fumes almost overpowering the firemen. When the fire was overcome, about 10 o'clock at night, the upper portions of the warehouse had been practically gutted, and much damage had been caused to the lower floors and the contents by heat, smoke, water, and breakage. The cause of the outbreak has not been ascertained.

LAUDANUM POISONING.—An inquest was held on Tuesday, October 18, at Worsborough Bridge, touching the death of Lynette Bamford, aged 12 months, daughter of a miner, of Henry Street. The evidence of the mother, Harriet Bamford, was that the child had been suffering from diarrhoea for three weeks, and had been under the care of Dr. Sykes. On the previous Friday evening she gave the child a dose of the medicine, as she thought, but found when the child vomited that she had given her laudanum instead of medicine. She at once gave an emetic, and took the child to Dr. Banham, who prescribed. The verdict of the jury was, "Died from diarrhoea, bronchitis, and pneumonia, accelerated by the mother having inadvertently given her a dose of laudanum in mistake for medicine."

BUSINESS CHANGE AT PLYMOUTH.—Mr. Goodwin, M.P.S., has purchased the business of Mr. Towan, chemist and druggist, Mutley Plain.

MR. J. M. FURNESS, chemist and druggist, of Fitzwilliam Street, who has represented St. Philip's ward on the Sheffield City Council for many years, has been returned unopposed this year. The Mayor-Elect of Rotherham this year is Mr. F. Mason, chemist and druggist, of High Street. Mr. Mason has already been returned unopposed for the south ward of that borough.

A CHEMIST'S ASSISTANT AND HIS ANNUITY.—Vice-Chancellor Hall, of the Chancery Court of Lancashire, held at the Assize Courts, Manchester, on Tuesday, had before him the case of *Fawcett v. Fawcett*, in which the plaintiff sought to restrain the defendant, his father, from parting with an annuity of his of £100. Plaintiff is a chemist's assistant living at Rochdale, his father residing at Southport. The serious part of the matter was an allegation by the son that his father took him to an hotel in that town, and after plying him with liquor got him to sign certain papers giving his father possession of the annuity. The Judge granted an injunction over next Monday in the terms prayed for.

EXETER PUBLIC ANALYST.—At a meeting of the Exeter City Council on Wednesday last, the Town Clerk reported that the Sanitary Committee and a Sub-committee from the Albert Memorial Museum Committee had had a Conference upon the subject of the appointment of a public analyst, with a view of securing the services of a gentleman who would also be qualified to lecture at the College, and also upon the subject of the use of the laboratory at the Museum. In the opinion of the Conference it was desirable that advantage should be taken of the vacancy in the office of public analyst to appoint a fully qualified man competent to assist in the educational work of the College. The

Conference recommended that if possible a site for the analyst's laboratory should be found adjoining the present commercial laboratory at the College. The report was adopted.

MR. CHARLES SHAPLEY, Chemist, of Torquay, has retired from therepresentation of the Strand Ward on the Torquay Town Council.

MARKET REPORT.

The quotations here given are in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

OCTOBER 27, 1898.

There has been rather more doing in the drug and chemical markets during the past week. There has, however, at the same time, been no really great activity, while the changes in values which have taken place are practically unimportant. Cardamoms are rather dearer. Ipecacuanha not quite so firm. Cascara Sagrada is dearer. Ergot of Rye has advanced considerably. Borax and Acid Boracic firm. Acid Citric dull. Acid Tartaric and Cream of Tartar quiet. Quicksilver and Mercurials without change. A reduction on part of makers in price of Quicksilver Preparations is, however, stated to have been decided upon for first November. Acetanilide weak. Phenazone, Antipyrine, Sulphonal, and Phenacetine, and Cocaine unchanged. Iodine and Iodides, Bromine and Bromides also without change. Quinine firm, with an advance in price predicted for the not too distant future. Opium, Morphia and Codeia unchanged. Sulphate of Ammonia again lower. The following are prices actually ruling for articles of principal interest:—

ACETANILIDE—Remains weak at 11d. to 1s. 1d. per lb., according to quantity.

ACID BORACIC.—Firm at 24s. per cwt. for *crystals*, and 26s. per cwt. for *powder*.

ACID CARBOLIC—Is in good demand at 6½d. to 6¾d. for 35°-36° C. *ice crystal*, in large bulk packing; *crude*, 60° F., 1s. 11d.; 75° F., 2s. 3d. per gallon; *Liquid*, 95 per cent., of pale straw colour, 1s. 1d. to 1s. 2d. per gallon, in 40 gallon casks.

ACID CITRIC—Is exceedingly dull, and normally quoted 1s. 2d. to 1s. 2¼d. per lb. from second hands.

ACID OXALIC—Firm but unchanged at 3¼d. to 3½d. per lb. for *Crystals*, ¼d. per lb. more for *Powder*.

ACID TARTARIC—Very quiet at 1s. 0½d. to 1s. 1d. per lb. for English *crystals*, on the spot, and 12¼d. to 12½d. per lb. for foreign.

AGAR AGAR—Is very firm, 1s. 6d. per lb. is being asked for sound of fair colour.

ALUM.—Loose lump, £5 7s. 6d. per ton; ground, in bags, £6 per ton.

AMMONIA COMPOUNDS.—*Sulphate* very dull and lower at £9 8s. 9d. per ton for grey prompt, 24 per cent., London; Hull, £9 7s. 6d.; and Leith, £9 8s. 9d. *Carbonate* steady at 3d. to 4d. per lb., according to quantity and package. *Bromide* steady at 2s. 1d. per lb. *Iodide* quiet at 13s. 7d. per lb. *Muriate*: Chemically pure small crystals, 30s. to 32s. per cwt.; free from metals, white, 25s. 6d. to 26s. 6d. per cwt. *Oxalate*, 5¼d. to 5½d. per lb. *Sulphocyanide* quiet at 1s. to 1s. 1d. per lb. *Sal ammoniac*: Sublimed firsts, 35s. per cwt.; seconds, 33s. per cwt.; crushed for batteries, 37s. and 35s. per cwt.; powdered, 38s. and 36s. per cwt. respectively.

ARSENIC—Steady at 18s. per cwt. for best white powder on the spot.

BARBADOES TAR—Is firm at 35s. to 37s. 6d. per cwt. on the spot.

BAYBERRY BARK—Is likely to be scarce this winter, and rather extreme prices are possible; at present 2½d per lb. is quoted.

BLEACHING POWDER.—Firm at £6 10s. to £7 per ton on the spot.

BORAX—Firm at 14s. 3d. to 14s. 9d. per cwt. for lump and 14s. 6d. to 15s. per cwt. for powder.

BROMINE AND BROMIDES—Are without change from last week.

BURGUNDY PITCH.—Good natural is quoted at 22s. 6d. per cwt.

CAMPHOR.—Crude remains very firm, and for arrival 98s. per cwt. *c.i.f.* has been paid for *China*, and 106s. per cwt. for *Japan*. Refined is very firm.

CASCARA SACRADA.—This article has become much firmer and dearer, business in new bark having taken place at 24s. to 25s. per cwt., whilst for old bark 28s. per cwt. is asked. There seems now very little doubt that decidedly higher prices will have to be paid before long.

CHIRETTA—Is very scarce and for ordinary dark 6d. per lb. is sked.

CLOVES.—Privately *Zanzibar* quiet but steady, buyers October to December delivery at 3½d., and sellers January to March at same figure. At auction only 53 cases *Penang*, 1895 import, offered and sold, without reserve, dark unpicked 4½d., fair dull 7d., good 8½d. to 8¾d. Of clove stems 280 bales *Zanzibar* were offered and 80 bales sold at 2d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* commercial 1s. 1½d. to 1s. 3d., pure 2s. to 2s. 3d. per gallon. *Benzole*: 50 per cent. 9d., 90 per cent. 8d. per gallon. *Crude naphtha*: 30 per cent. at 120° C. 3½d. *Solvent naphtha*: 95 per cent. at 160° C. 1s. 6d. per gallon.

COCAINE—Is unchanged at 9s. 9d. for best German brand of the Hydrochlorate in 25 oz. tins, and for 100 oz. lots.

COCA LEAVES—Have been inquired for this week, and a small business has been done at 8d. per lb. for fair green *Trucillo*.

CODEIA—Is still quoted by the makers 12s. 6d. per oz.

COD-LIVER OIL—Remains *in statu quo* at 82s. 6d. to 85s. per barrel for best new non-congealing *Norwegian* oil in tin-lined barrels of 25 gallons.

CREAM TARTAR—Is quiet with prices unchanged. For first white *crystals* on the spot 72s. to 77s. per cwt., and 74s. to 80s. per cwt. for *powder*, both according to quality.

ERGOT—Has been in strong demand for American account, and prices have at last made a decided move upward. Sound *Spanish* is quoted at 1s. 4d. per lb.; weevily ditto, 1s. 1d. per lb. *Russian* has been done at 11d. per lb. The crops are said to be failures.

GENTIAN ROOT.—Is in fairly good demand at 18s. per cwt. for fair.

GINGER.—*Cochin* very slow of sale. Of 483 bags rough, only 81 bags sold: Mouldy rough, 20s.; first-class sea-damaged, 19s. 6d.; 179 cases cut kinds bought in, except 8 cases mouldy native, part cut, which were sold at 42s. 60 bags *African* bought in at 24s. Of 99 barrels *Jamaica*, about half sold at firm rates; common small and dark, 65s. to 68s. 6d.; middling washed, 70s. to 72s.; good middling bright, 76s. to 80s.

GLYCERIN—Is steady but firm at 52s. to 55s. for *English* and 55s. to 65s. per cwt. for best white double-distilled chemically pure 1260° quality in tins and cases.

GOLDEN SEAL ROOT—Is very scarce, both here and in New York. Price is nominally 2s. 2d. per lb.

HONEY.—Californian continues in request, 40s. to 42s. 6d. per cwt. being required.

IODINE AND IODIDES.—Prices remain unchanged.

IPECACUANHA—Remains steady at 10s. to 10s. 1d. per lb. for *Rio*, and 7s. 3d. for *Carthagera*.

ISINGLASS.—At the periodical auctions on Tuesday supplies were on a moderate scale, but only one-half was disposed of. *Saigon* leaf was about 2d. to 3d. per lb. dearer, and *Brazil* lump also sold well at an advance of 1d. per lb. *Para* sold at 3s. 7d. to 3s. 9d. per lb. for first pile.

JALAP.—This tuber is dearer in New York, price there being above our market. There are sellers here at 6½d. per lb.

JAPAN WAX—Is very quiet, good squares on the spot 33s. 6d. per cwt.

MANDRAKE ROOT—Is dearer for autumn dug root at 2½d. per lb.

MENTHOL.—More business has been doing in this article, and prices are firm at 7s. to 7s. 3d. per lb.

MERCURIALS—Are unchanged from last week, it is, however, stated that makers will, on November 1, reduce their prices ½d. per lb. for a large quantity, and 2d. per lb. for small lots, the object

of the reduction being said to be to prevent underselling on part of buyers who book a large quantity at a time. Some people appear still to have to learn the golden principle of "live and let live."

MORPHIA—Remains without change at 4s. per oz. for the *Hydrochlorate* powder in quantity and bulk packing.

NITRATE OF SODA—Is quoted £7 10s. to £7 12s. 6d. for the ordinary quality and £8 to £8 2s. 6d. per ton for the refined.

OILS (ESSENTIAL).—*Peppermint*: American is easier, with sales of H.G.H. at 5s. 4½d. to 5s. 6d. per lb., and Wayne County at 3s. 6d. to 4s. per lb. as to quality. *Japan* quiet at 3s. 3d. per lb. for dementholised. *Star Aniseed* very dull at 6s. 3d. per lb. on the spot. *Cassia* is quiet, with quotations quite nominal. *Citronella* very difficult of sale; drums quoted 12½d. per lb.; tins, 12¼d. to 12½d. per lb. *Cinnamon*: Good realises 1s. 6d. to 2s. 6d. per oz. as to quality. Leaf oil, 2d. per oz. *Lemongrass* slow of sale at 3½d. per oz.

OILS (FINED) AND SPIRITS.—*Linseed*: Owing to the advance in the seed, this has advanced to £17 15s. for spot pipes, London; barrels, £18 2s. 6d. *Rape*: Very firm and rather dearer at £22 5s. for ordinary brown on the spot; refined, £23 15s. *Cotton*: London crude spot, £14; refined spot, £15 5s. to £16, according to make. *Olive*: Green oils £29 to £32 per ton; table oils, 4s. 3d. to 6s. per gallon, as to quality. *Coconut*: Firm but unchanged at £24 10s. for Ceylon on the spot, and £28 for Cochin, same position. *Palm*: Firm at £22 10s. for Lagos on the spot. *Turpentine*: Much dearer, but closing quiet at 26s. 9d. per cwt. for spot American, November to December 26s. 9d., January to April 27s. 3d. per cwt. *Petroleum Oil*: A firm market at 5½d. per gallon for Russian and 6½d. per gallon for American on the spot. *Petroleum Spirit*: Dearer at 7¾d. per gallon for American.

OPIUM—Is quiet and practically without change in value from last week.

PHENACETIN.—3s. 9d. to 4s. 3d. per lb. is still the price of a really reliable article in bulk packing for both *crystals* and *powder*.

PHENAZONE—Without change, same can also be said of *Antipyrine Knorr*.

POTASH PERMANGANATE.—One of the principal makers, with a view to putting a violent end to the underselling which has been going on on the part of the smaller makers, suddenly reduced this price to 48s. per cwt. for *small crystals* for ton lots, at which price he found, however, so many buyers, that perhaps he now rather "feels sorry he spoke." Anyhow, he is not anxious to do further business at the figure, and the position of the article, so far from becoming weaker, has distinctly strengthened.

POTASH COMPOUNDS.—*Chlorate* firm at 4d. to 4¼d. per lb. for early delivery. *Bicarbonate* steady at 30s. to 35s. per cwt., according to brand. *Bromide* firm at 1s. 9½d. per lb. *Iodide* quiet dull at 10s. 3d. per lb. *Prussiate* steady at 6¾d. to 7d. per lb. for the yellow, and 1s. 1d. to 1s. 2d. per lb. for the red. *Cyanide*: The 98 to 100 per cent. white cake is quoted at 1s. to 1s. 1d. per lb. *Bichromate* steady at 3½d. to 3¾d. per lb. *Permanganate* quiet at 50s. per cwt. for small, and 55s. for large crystals. *Oxalate* firm at 5d. per lb. for the neutral.

QUICKSILVER—Steady at £7 5s. from first hands, and £7 4s. from secondhands.

QUININE.—Whilst, owing to a firmer bark market, an advance is thought likely, no special demand has so far set in, and the *Sulphate*, in 100 oz. tins and 1000 oz. lots, can still be obtained at 10d. per oz. for best German brands.

SALICINE—Is in good demand at 10s. 6d. per lb. for fair quantity.

SHELLAC.—The market remains very quiet, with a small business doing in fair *TN orange* at 66s. per cwt. The speculative market is easier, with sales for December delivery at 67s. 6d. per cwt. for *TN orange*.

SODA COMPOUNDS.—*Crystals* steady at 57s. per ton, ex-ship terms. *Ash* firm at £5 to £5 10s. per ton, according to strength. *Bicarbonate*: £7 5s. per ton for the 97 per cent., and 18s. 6d. per cwt. for the fully bicarbonated, chemically pure article. *Hypo-sulphite* quiet at 6s. to 8s. per cwt., according to brand. *Bromide* firm at 2s. per lb. *Iodide* quiet at 11s. 7d. per lb. *Bichromate*: 2¾d. to 3d. per lb. *Nitrate*: £7 12s. 6d. per ton for the ordinary, and £8 2s. 6d. for the refined. *Acetate* steady at 35s. 6d. per cwt. for the chemically pure, and 13s. 6d. per cwt. for the ordinary refined.

SOY.—Good *China* sells on a small scale at 1s. 4½d. per gallon.

SUGAR OF LEAD—Is firm at 31s. per cwt. for *English* and 27s. 6d. per cwt. for *Foreign*.

SPICES (VARIOUS).—*Black Pepper*: only 37 bags damaged Singapore offered and sold, first-class at 4½d. *White Pepper* in slow demand: only 120 bags Singapore sold, ordinary mixed small 7½d. to 7¾d.; fair to good fair, 8d. to 8¾d.; fine bold, 9d. *Cayenne Pepper*: 24 crates containing tins, Nepal, bought in at 1s. 3d. *Chillies* dull: 285 bales, Zanzibar, all bought in at 37s. 6d. to 40s. *Cassia Lignea*: 175 boxes bought in at 56s.; of 250 bales broken, 60 bales sold at 32s. 6d. *Cinnamon Chips*: 12 bags Ceylon sold at 4¾d. *Mace*, quiet: 9 cases Penang sold, middling red, 1s. 9d.; good red, 2s. to 2s. 1d.; 7 packages West India sold at 1s. 3d. to 1s. 5d.; good red, 1s. 9d. *Nutmegs*, dull at about previous rates. *Pimento* in better demand: of 346 bags, 143 bags sold at firmer rates, fair 4¼d. to 4¾d.; one lot exceptionally fine, clean, at 4¾d.

SULPHATE OF COPPER.—Is dearer at £17 10s. to £18 5s. per ton for immediate delivery, according to brand.

SULPHONAL.—Is still obtainable from the makers at 7s. 3d. per lb. in bulk.

SULPHUR.—Remains firm but unchanged. *Roll*: English 7s. 6d. to 8s. per cwt.; Foreign 6s. 6d. per cwt. *Flowers*: English 11s. per cwt.; foreign 7s. per cwt.

TURMERIC.—Prices remain steady, but business is on a small scale. Sellers of fair *Bengal* at 19s. per cwt.; *Coconada* finger, 26s. per cwt.; *Cochin* split bulbs, 10s. 6d. per cwt.

To-day's public sales passed off without any important changes in value. Cardamoms sold well, while Ipecacuanha was hardly quite so firm. Price realised for Cascarella showed an advance. The following are the particulars as far as it has been possible to give same up to time of going to press:—

ALOES.—40 kegs *Socotrine* part sold previously, balance held for 75s. per cwt.; 25 boxes fair livery *Curacao* were taken out at 30s. per cwt., only 16s. per cwt. being bid; 140 boxes *Barbadoes* practically all sold at 30s. to 35s. for fair livery, down to 21s. for dark ditto, and 15s. to 20s. for *Capey*.

ANATTO SEEDS.—26 bags of fair quality bought in at 4d. per lb.

ANISEEDS.—29 bags *Syrian* held for 20s. per cwt.

ANTIMONY.—39 cases *Crude Japan* sold at £22 10s. per ton; 1 cask *English Regulus* fetching £34 per ton.

AMBERGRIS.—1 tin chalky coat, good flavour, grey, held for 65s. per oz., 1 tin mixed, part undeveloped, part doubtful, selling at 10s. per oz., and 1 tin of only fair quality at 70s. per oz.

ASAFETIDA.—85 cases were all bought in at 45s. to 50s. for hard pinky heavy block up to 60s. per cwt. for fair almondy.

BALSAM COPAIBÆ.—29 tins bought in at 1s. 5d. per lb. for rather thin *Bahia*, an offer of 1s. 3d. per lb. for the lot not being entertained. 5 cases *Carthagenia* sold at 1s. 3d., 1 case inferior at 1s. per lb. 1 cask filtered *Maranham* was bought in at 1s. 8½d. per lb.

BALSAM PERU.—4 cases part sold at 8s. 3d. per lb.

BUCHU LEAVES.—Good green rounds were taken out at 6¼d. per lb. (price required being 5¾d.); medium green bought in at 5d., while 2 cases yellow leaves sold at 4½d. per lb., and 4 bales ditto at 3¾d. per lb.

CAMPHOR OIL.—100 cases refined white *Japan* sold without reserve at 16s. per cwt.

CAMPHOR.—6 cases *Refined*, in 1 oz. tablets (in 1 lb. boxes), sold cheaply, without reserve, at 1s. 1d. per lb.

CASCARA SAGRADA.—100 bags last season's shipment from San Francisco, and of fair quality, were held for 25s. per cwt.

CASCARILLA BARK.—46 packages part sold at 47s. to 48s. for fair thin, part bolder, balance being bought in. These figures show an advanced value of the article.

CARDAMOMS.—Were in active demand and the better qualities were fully 2d. per lb. dearer, good bold pale *Mysore* rather shelly realised 3s. 8d. per lb., second size 3s. 4d. per lb., small 2s. 6d. to 2s. 7d. per lb.; *Seeds* were easier at 2s. 11d. to 3s. 1d. per lb.

CASSIA FISTULA.—64 bags poor and very wormy pods sold for account of the Dock Company at 1s. 3d. to 1s. 9d. per cwt.

CINCHONA BARK.—26 bales *crown bark* part sold at 8d. to 10d. per lb., remainder being bought in at 5d. to 7d. per lb., 8 bales of lower quality selling at 4¾d. to 5d. 46 packages *red bark* part sold at 2s. 1d. to 3s., three lots consisting together of 4 packages being held for 5s. 6d. per lb.; inferior quality realised 3¾d. to 8½d. per lb.

COCULUS INDICUS.—2 bags fine quality sold at 9s. per cwt.

COD-LIVER OIL.—25 barrels *Norwegian* held for 80s. per barrel.

COLOCYNTH.—2 cases rather brownish *Turkey* held for 1s. per lb.

COLOMBO ROOT.—191 bags poor sorts were bought in at 13s. per

cwt., 80 bags rather better selling at 18s. 5 bales good washed but rather stemmy, held for 40s.

CROTON SEEDS.—11 bags *China* bought in without mention of price. Other 16 bags of good quality were held for 85s. per cwt.

CORIANDER SEED.—25 bags *Morocco* sold at 7s. per cwt., which shows an advance in value.

CUBEBS.—70 bags held for 24s. per cwt.

CUTTLE FISH.—40 mats small clean bone were held for 2½d. per lb.

DAMIANA LEAVES.—5 bales of fair quality failed to find a buyer,

DILL SEEDS.—83 bags of good quality held for 14s. per cwt.

DRAGON'S BLOOD.—1 case good reeds sold at £10 per cwt., and privately several cases more have been sold at same price, very dull seedy block is held for £6 10s. per cwt.

ERGOT OF RYE.—Fair *Spanish* slightly weevilly sold at 1s. 3d. per lb.

GAMBOGE.—20 cases bought in at £8 10s. to £9 10s. for fair bright pipe, part soft, down to £6 10s. to £6 15s. for pickings.

GENTIAN ROOT.—20 bales fair *French root* held for 18s. per cwt.

GUARANA.—6 packages, quality of which was only fair, were held for 1s. 2d. per lb., there being no demand.

GUM AMMONIACUM.—14 cases sold at 40s. per cwt. for good clean block, down to 29s. to 30s. for fair blocky.

GUM ARABIC.—5 bales medium *Turkey* sorts were bought in at 75s. per cwt., 2 bags *Australian* gum being taken out at 25s. 1 case fair pale grain sold at £6 15s.

GUM BENZOIN.—Medium seconds Sumatra sold at £6 12s. 6d. to £7 per cwt. down to £5 10s. for inferior, good almondy realising £10 10s. to £10 12s. 6d. Medium to bold fair free Siam realised £19 5s. to £20 15s. Small free held for £15 10s., bean size sold at £8 10s., dust and dark almondy at 60s. to 70s. per cwt.

GUM MYRRH.—4 cases rather darkish gum was bought in at £5 10s.; good pale sorts at 90s.; dark at 55s. to 60s.; pea siftings selling at 40s. per cwt.

GUM TRAGACANTH.—4 bags sold without reserve at 35s. per cwt.

HONEY.—50 packages *Jamaica* nearly all sold readily at 18s. to 22s. per cwt., according to quality.

IPECACUANHA.—Holders of *Rio* are still firm in their ideas, and only a few bales of thin wiry root sold below 10s. per lb., good realising 10s. 1d. per lb. For *Carthagenia* the demand was active, and 7s. 2d. was realised for good root.

ISINGLASS.—1 bale *Japan*, very badly sea-damaged, sold at the low price of 4d. per lb., sound *Agar-Agar* being worth 1s. 5d. to 1s. 6d. per lb., according to colour.

JALAP.—17 bales medium to fair *Tampico* held for 6½d. per lb.

KAMALA.—6 cases fair bright held for 9d. to 10d. per lb. price required being 7½d. per lb.

KOLA NUTS.—3 bales were held for 3d. per lb.

LAVENDER FLOWERS.—44 bale of very common quality were taken out at 20s. per cwt., only 8s. per cwt. being offered.

LAVENDER ROOT.—1 bale offered under this name, but which was probably *Cuscuta*, was bought in at 36s. per cwt.

LIME JUICE.—2 firkins bought in at 1s. 3d. per gallon, only 9d. per gallon being bid. One hogshead *Concentrated*, the analysis of which, by G. H. Ogston and Moore, was given as commercial crystallized citric acid 81.90 oz. per gallon, specific gravity 1.2618 at 60°, degree of citrometer 65½ at 60°, sold, subject to approval, at £12 per 108 gallons.

MUSK.—2 caddies fine blue skin *Tonquin* held for 70s. per oz.

NUX VOMICA.—Good bold pale *Cochin* sold at 9s. per cwt. down to 8s. 3d., medium realising 7s. 6d. per cwt.

ESSENTIAL OILS.—4 cases *Cinnamon* bought in at 1s. 8d. per oz., 5 cases *James B. Horner's Oil Sassafras* held for 1s. 6d. per lb., 2 cases *James B. Horner's Oil of Spearmint* for 4s. 2d. per lb., 1 case *James B. Horner's Oil of Wintergreen* for 4s. 6d. per lb., 6 cases *Eucalyptus globulus Platypus* brand, guaranteed to contain 55 per cent. of *Eucalyptol*, and also to answer the requirements of the B.P., 1898, for 2s. 4d. per lb., 10 cases *Cajaputa* of good quality held for 3s. 6d. per lb., 4 cases dementholised *Japan Peppermint* for 3s. 4½d. per lb., 2 cases *West Indian Oil of limes* for 4s. per lb., 1 case of very good quality selling 5s. 7d. per lb., 18 cases *Citronella* bought in at 1s. 1½d. per lb., 2 cases *French Geranium* at 11½d. per lb.

ORANGE PEEL.—13 cases bought in (1 case having been sold previously) at 7d. to 7½d. per lb. for good thin cut, and 4d. per lb. for thick cut.

ORRIS ROOT.—12 serons fair *Mogador* sold at 15s. per cwt.

PATCHOULY LEAVES.—30 bales held for 3½d. per lb.

RHUBARB.—Good round *Canton* pickings were held for 10d. per lb.; good bold round *Canton* for 1s. 2d.; 5 cases round *Canton* medium size good colour selling at 1s. 1d.; 1 case very rough round and flat ditto sold at 10d. per case, rough coated round at 10½d.; 1 case rough horny round *high dried* fetched 7d., good bright ditto realising 10d. to 11d. per lb.; 3 cases good small round *Shensi*, part trimming root was taken out at 3s. 3d. per lb., it being, however, understood, that rather less would have been accepted; 1 case rough flat pickings sold at 10d. per lb.

SARSAPARILLA.—6 bales *Guayaquil* sold at 11d. per lb. for 2 and 3 *CCD*. 2 bales *2CSD* having been sold previously at 9d. 82 bales *Lima* held for 1s. 2d. to 1s. 3d. per lb., 4 bales sea-damaged selling at 8d. to 10d. per lb. 24 bales *Jamaica* sold at 1s. 7d. to 1s. 8d. per lb. for sound, and 1s. 6d. per lb. for 1 *CCD* and 2 *CSD*. 2 bales *red native* sold at 1s. 1d. per lb.

SENNA.—About 500 bales *Tinnevelly* were offered, the whole selling at very full rates, for the finer grades up to 5½d. per lb. the lower and medium qualities, however, were about ¼d. per lb. cheaper. Small spotty leaves sold at 1¼d. to 2d. per lb. Medium spotty to fair green 2¼d. to 3d. *Pods*, fair pale 1½d. per lb., low dark ¾d. per lb. Arrivals are coming in slowly, and offerings in next auction will be small. *Alexandrian leaf* is scarce and wanted, but there is no demand for the lower grades.

SQUILLS.—48 bags of fair quality were held for 3d. per lb.

TAMARINDS.—20 barrels fair *West Indian*, part sold at 9s. 6d. per cwt.

TENEHAKA BARK (for dyeing purposes).—10 tons were offered and bought in at £35 per ton.

TONQUIN BEANS.—5 cases bought in at 10d. for foxy; 1s. 3d. per lb. for medium frosted *Paras*; 10 cases fair *Angostura* taken out at 3s. 6d. per lb.

TURMERIC.—30 cases ground bought in at 18s. per cwt.

VANILLA.—There is a good demand for all sorts, and full to rather dearer prices were paid at to-day's auctions. *Tahiti* are firmly held at 8s. per lb., a cheaper seller being cleared out. *Madagascar* sold well at 19s. 6d. to 22s. per lb., according to length, and 17s. to 19s. 6d. for splits.

VERMILION.—2 cases *China* bought in without mention of price.

WAX.—Medium to fair *Jamaica* sold at £6 10s. to £6 15s. per cwt.; 10 cases fair *Madagascar* realised £5 12s. 6d. good, ditto being held for £6 10s.; 1 case *Spanish* bought in at £6 5s.; 3 cases *East Indian* sold for £5 5s. per cwt.; 5 bags yellow *Carnauba* bought in at 55s. per cwt.; 50 cases good *Japan* taken out at 36s. per cwt.; 10 cases medium quality selling at 32s. 6d.

Newcastle Chemical Report.

OCTOBER 26, 1898.

A shade more is passing in Soda Crystals for the Channel ports; other heavy goods quiet. Quotations keep as follow: Bleaching Powder, £5 10s. to £6, according to markets. Soda Crystals, basis price, 45s. Caustic Soda, 70 per cent., basis, £7 to £7 5s. Soda Ash, £4 5s. Alkali, 52 per cent., £5. Sulphur, £4 15s. to £5 per ton.

Liverpool Market Report.

OCTOBER 26, 1898.

AMMONIA SALTS.—*Carbonate*, 3d. per lb. *Sal ammoniac*, 33s. and 35s. per cwt. *Sulphate* continues flat at £9 12s. 6d. to £9 15s. per ton.

ARSENIC.—Powdered is dearer at £17 per ton. Lump, £30.

BEE SWAX.—Peruvian has been selling at £6 12s. 6d. to £7 per cwt., and *Gambia* at £6 10s.

CANARYSEED.—Continues fairly steady in demand. About 500 bags of *Turkish* sold at prices between 28s. and 28s. 6d. per 464 lbs. ex-quay, and 28s. 6d. ex-store. *Spanish*, ex-store, 32s.

HONEY.—200 barrels of *Peruvian* sold at 20s. 3d. per cwt.

KOLA NUTS.—Dried have been moving off in small amount at 2d. per lb.

LINSEED.—Holders are very extreme in their ideas of the value of *Calcutta*, for which 38s. 9d. has been bid per 416 lbs., and refused. *American* is also unobtainable at even 37s. 6d. per 416 lbs. *Larnaca* has sold at 45s.

OILS (FIXED) AND SPIRITS.—*Castor* is lower in price, and demand is somewhat slack. *Calcutta* is quoted at 3½d.; *Madras*, 2½d.; and *French*, 2½d. to 3d. per lb. *Olive* continues at £29 10s. to £30 per tun for fine *Spanish*. *Linseed* is easier at 18s. 3d. to 19s. per cwt. *Cottonseed* of *Liverpool* refining is quiet at the easier rate of 15s. 6d. to 15s. 9d. *Spirits of Turpentine* has rapidly risen to the high price of 27s. 6d. per cwt., at which figure it is now steady, with a good demand.

SODA SALTS.—*Borax* is higher in price, £14 to £14 10s. per ton. Other salts unaltered from last week.

Manchester Chemical Report.

OCTOBER 25, 1898.

THERE appears to be a fair inquiry for both home and export in heavy chemicals, but the prices for next year, especially for Bleaching Powder, are extremely low. Bleaching Powder is quoted at £4 5s. per ton, softwood casks, on rails. For prompt, the price is £4 15s. to £5 per ton. In other respects, Caustic Soda, Soda Ash and Crystals are unchanged for prompt. The "boom" in Arsenic appears to have subsided, and it is now nominally £17, ex-ship. Brown acetate is moving steadily at £5 5s. to £5 10s., and will, no doubt, advance still further with rising freights. Tar products are weak, with the exception of Creosote. Both Benzols and Naphthas are a turn weaker. Solvent Wood Naphtha varies from 2s. 9d. to 3s., and Miscible 3s. 10d. to 4s. per gallon. Creosote is quoted at 7s. 8d. Sulphate of Copper remains firm at £17 10s. to £18 per ton for prompt, delivered Manchester. Aniline Oil and Salt still rule low.

Announcements.

Monday, October 31.

PHARMACEUTICAL SOCIETY OF IRELAND, 67, Lower Mount Street, Dublin, at 8.15 p.m.—Re-opening of the Society's schools and presentation of the Society's gold and silver medals, followed by an address on "The New Pharmacopoeia," by Professor C. R. Tichborne.

Tuesday, November 1.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION, County Restaurant, Bradford.—Social evening.

Wednesday, November 2.

PHARMACEUTICAL SOCIETY, 17, Bloomsbury Square, W.C.—Meeting of the Council.

Thursday, November 3.

CHEMICAL SOCIETY, Burlington House, W., at 8 p.m.—Papers on various subjects will be read by Messrs. E. Sonstadt, E. H. Bagnall, W. J. Pope, Sydney Young, F. E. Francis, and S. Young, D. H. Jackson and S. Young.

CHEMISTS' ASSISTANTS' ASSOCIATION, 73, Newman Street, W., at 9 p.m.—Short papers by members.

LEICESTER CHEMISTS' SOCIAL UNION, Clarendon Rooms, Granby Street, at 8.30 p.m.—Mr. T. Howard Lloyd will preside at a hot supper and musical entertainment. Tickets 2s. 6d. each.

LINNEAN SOCIETY, Burlington House, W., at 8 p.m.—Papers will be read by Professor H. Marshall Ward, and Miss Dale, and the Rev. T. R. Stebbing. Exhibitions by Professor Howes, Mr. Alan F. Crossman, and Messrs. H. and J. Groves.

MIDLAND PHARMACEUTICAL ASSOCIATION, Grand Hotel, Birmingham, at 8 p.m.—Inaugural meeting and reception by the President, to be followed by a lecture on "The Forest Trees of Great Britain," by Mr. G. Claridge Druce, concluding with a vocal and instrumental concert.

Friday, November 4.

IRISH PHARMACISTS' ASSISTANTS' ASSOCIATION, 67, Lower Mount Street, Dublin.—Address by Mr. Henry Hunt, the new President,

Trade Notes.

IDRIS AND CAMWAL.—A paragraph which appeared in a London evening paper on Tuesday last, with reference to the combination of these two firms is somewhat premature. We learn that though negotiations are in progress, nothing definite has been decided on. Should the amalgamation take place, we understand that as hitherto the sale of the well-known Camwal brand will be restricted to chemists who are shareholders, and that Messrs. Idris will continue the policy of confining their trade to chemists except in such instances as hotels, clubs, etc., where interests do not conflict. It is anticipated that should the proposed amalgamation take place one benefit that will accrue will be a considerable saving in the cost of production.

CHRISTMAS NOVELTIES.—Marshalls, Limited, of Red Lion Square, hit upon a happy idea when it occurred to them to make a new departure in connection with sachets. Instead of the ordinary envelopes (tasteful as many of them are), these perfumed sachets are made in various shapes; the most attractive, perhaps, are those in the form of butterflies. The series comprises about 40 different kinds, including such species as the Red Admiral, Peacock, and other well-known varieties. They are particularly adapted for ornamenting curtains, lamp shades, dresses, and in fact draperies of all kinds. They are supplied in glass top boxes for window or counter display, at 4s. 6d. per dozen, or 48s. per gross. Other series are the poppyland, violet and, for Christmas trade, the plum pudding sachets. Show cards may also be had. The demand at present is in excess of the supply, and orders are being filled in rotation. The same firm makes a specialty of sample sets of perfumes in cases, ranging from 6d. to 4s., at 21s. net, specially sorted for those customers who cannot visit the premises to make their own selection. A commendable feature about this firm's productions is that they are made in England, on their own premises in Red Lion Square.

Partnerships Dissolved.

(From the London Gazette.)

Wm. Fickus, T. W. Courtenay, and James Fickus, St. Dunstan's Buildings, St. Dunstan's Hill, E.C.

J. H. Goodavie and Joseph Goodavie, Chemical Manufacturers, Rastrick Common, Brighouse, York; so far as regards J. H. Goodavie.

H. W. O. Tibbits and T. E. Sugden, Dental Surgeons, Darlington, also carrying on business at Richmond and Northallerton, both in Yorkshire; so far as regards T. E. Sugden.

James Brand and H. G. Bowes, Veterinary Surgeons, Leeds. Debts will be received and paid by H. G. Bowes.

John Gabb and M. Johnston, Physicians and Surgeons, Bewdley. Debts will be received and paid by Dr. Johnstone at Wribben Hall, Bewdley.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

Beresford N. Earle, Physician, 92, Cheesehill Street, Winchester.
Gilbert N. Fitcher, Photographer, 28, North Street, Chichester.

OBITUARY.

VINCENT.—On October 20, Philip Vincent, Chemist and Druggist, Fulham. Aged 49. Mr. Vincent was an Associate of the Pharmaceutical Society.

WILSON.—On October 20, Alexander Greaves Wilson, Chemist and Druggist, Oldham. Aged 55. Mr. Wilson had been a Member of the Pharmaceutical Society since 1892.

DYER.—On October 21, Clarice Emily, daughter of Walter Dyer, Chemist and Druggist, 36, Fore Street, Devonport.

Advertisements.

(Received too late for Classification).

CAPABLE man wanted for interviewing doctors and dentists, and for calling upon chemists; must be young, gentlemanly, smart, energetic, and pushing. Salary about £150. Fullest particulars in confidence to B. S., "Pharm. Journal" Office, 5, Serle St., London, W.C.

ENGAGEMENT wanted as **MANAGER**. Qualified. First-class experience. Practical knowledge mineral-water manufacturing. References. Married. **GALT**, 132, Guildford St., Chertsey, Surrey.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

Miscellaneous.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours post free, 5s.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns, second-hand; triples and binials: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

For Sale.—'Pharmaceutical Journals' from January 30 to July 31, 1897. What offers? Address—A. Pollard, 82, Cambridge Gardens, London, W.

Lancaster's No. 6 Astronomical Telescope, with best object lens, 4 in. clear aperture, 60 in. focus, panoramic eye-piece, magnifying power from 60 to 120, two eye-pieces 85 and 200. Mounted on garden stand, best achromatic finder, and strong steady rod. Not been used. What offer? Cost £25.—Bradshaw, Tickhill, Yorkshire.

Oil of Lemon (superfine).—Advertiser being overstocked will sell cheap; 10 lbs. Copper, 22s. 6d. on rail; sample pound, 3s., delivered free anywhere, cash with order.—Chemist, 34, Avondale Road, Chorley.

For Sale.—Show Jar for window, as Maw's Fig. 1, plain gold cover, total height about 32 inches, with Fig. 2 stand £3, cost over £6.—Hodgson, Chemist, Waterloo, Liverpool.

WANTED.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsell, 9, Derwent Grove, East Dulwich, London, S.E.

Latest edition Green's 'Botany'; state price.—James, 257, Hotwell Road, Bristol.

Preston's 'Heat,' latest edition.—T. H. Flemming, 156, Newgate Street, Newcastle-on-Tyne.

Marked Copies of the following Newspapers, etc., have been received during the week:—Huddersfield Daily Examiner, Newsagents' Chronicle.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Balkwill, Bennett, Blackwell, Blythe, Bostock, Brierley, Browne, Brunt, Burns, Chiger, Churchill, Clarke, Cowley, Davies, Dent, Emary, Ferrall, Fieber, Fitch, Frith, Horner, Houghton, Hyslop, Ince, Ireson, Jones, King, Kinton, Lee, Latham, Lloyd, Lothian, Lunan, Marsden, Maskew, Mitchell, Mumbray, Nicholls, Pass, Passerson, Peniston, Ransom, Raynor, Reynolds, Smith, Spence, Spitta, Sutton, Taylor, Tippetts, Wallace, Wand, Wigginton, Will, Williams, Zeiss.

PRACTICAL PHOTOGRAPHIC NOTES.

FOR THE LAST FORTNIGHT OR SO there have been in the daily papers innumerable announcements with regard to colour photography, or photography in natural colours, the particular process which has been puffed is that discovered (?) by Dr. Selle, of Berlin. We are informed that a large company will shortly be floated, or at least attempts will be made to float a large company to work this process, and in order that readers may have due warning on the subject, it is introduced here. Dr. Selle's process is the old three colour process suggested by Clerk Maxwell in 1861 and Collen in 1865, and elaborated by Ducos du Hauron and Cros in 1869, and perfected by Ives in his well-known "Krömskōp." Dr. Selle holds a patent for the superimposition of three-coloured films for lantern and transparency work. This was specifically suggested by Du Hauron in 1872, and elaborated and perfected by Ives about 1889. But apparently the company is not going to rely upon this, but upon three-colour printing by block and collotype. Considering that such work has been produced in England, Germany, Austria, and America since 1890, and that many of the wrappers of the monthly magazines are printed by this process now, we think that care should be exercised before investing money in such a concern. *Timeo Danaos et dona ferentes.*

ACETONE, IN CONJUNCTION WITH PYRO, is coming to the front just now as a developer, and we note that one or two firms are placing such a developer upon the market. The action of acetone in the developer is practically the same as the ordinary alkalis, that is, it forms a bisulphite compound in the presence of a sulphite and phenol compound. Supposing we take, for instance, hydroquinone, we have the liberation of a nascent caustic alkali in just sufficient quantity to saturate the phenol group of the developing agent, thus—

The advantages of the pyro-acetone developer are that it does not stain the film nor fingers, and does not cause frilling, and may at the same time be used for both over and under exposure. The actual developer is as follows:—

Pyrogallol	40 g.
Sodium Sulphite	200 g.
Distilled Water	1000 C.c.

To develop a whole plate 25 C.c. of this solution should be diluted with 75 C.c. of water, and to this should be added gradually not more than 10 C.c. of acetone.

ANOTHER DEVELOPER, for the suggestion of which we are also indebted to MM. Lumière and Seyewetz, of Lyons, is the following, which is very valuable for copying of line subjects, such as black and white drawings, engravings, etc. For ordinary landscape work it is almost too clean in its action, giving negatives so full of contrast that one cannot obtain good prints from them. The chemical action that goes on here is practically the same as with acetone:—

Hydroquinone	1.5 g.
Sodium Sulphite	1.5 g.
Formaldehyde (commercial 40 per cent. sol.)	2 C.c.
Distilled water	100 C.c.

COLOURED MATT VARNISH is at the present time one of those little adjuncts to practical work which is rather in demand. The usual formula with ether and benzole is by no means so satisfactory as the following:—

Ether	1600 C.c.
Sandarac	100 g.

Dissolve by agitation, filter, and add—

Toluol	375 C.c.
--------------	----------

To stain this about 10 g. of powdered asphalt may be added, or else about the same quantity of aurantia or chrysoidine, according to the depth of colour required.

FRENCH NEWS.

IN VIEW OF THE FREQUENT OCCURRENCE of infanticide, practised by some Frenchwomen with respect to their illegitimate offspring, a Frenchman, Monsieur Lautier by name, has conceived a novel means of punishing those criminals, and forwards a petition to the Chamber of Deputies, the gist of which is as follows: In nine cases out of ten, he thinks, the crime of infanticide would never be resorted to if the young mother, desirous of hiding her shame, had but an opportunity of clandestinely disposing of her offspring in a state institution for abandoned children. Instead of condemning these unfortunates to *travaux forcés* (hard labour), he suggests that they be condemned to *enfants forcés*, and despatched to one of the colonies, and there compelled to produce one, two, or three children whether she likes it or not, thus assisting in the work of colonisation. This suggestion appears to have been taken to heart, inasmuch as the petition has been forwarded to the Minister of the Interior. It reminds one of General Gallieni's scheme for the taxation of all bachelors in Madagascar, or of such of the male population as fail to account for the addition of three little colonials to the population. France is evidently determined by all means, moral or immoral, to force fruit to grow upon all fig rees, promising or unpromising, that cumber the ground of her colonies.

X RAYS AND THE PURITY OF COMBUSTIBLES.—The diamond and wood being permeable to the X rays, whereas silica and the silicates are not, M. H. Couriot presumes that mineral combustibles would allow the rays in question to pass through, and that the silicious matter which forms the ash upon combustion would resist the passage of the rays at the points where they may be grouped, forming an obstacle more or less impermeable in proportion to their abundance. In the experiments he has made with anthracite, lignite, coke, etc., he has always observed in all its details the intimate structure of the mineral portion of the combustible; the smallest fragment of shale, invisible to the naked eye, is revealed upon the screen as a black spot or hazy band. In the cone, for instance, one may observe, appearing in the form of black spots upon the screen, the particles of ferrous sulphide derived from the pyrites. Instead of a chemical analysis of coal being made to ascertain the proportion of coal ash it may yield, it is only necessary, by virtue of the great permeability of coal, to adopt this radioscopic method, which instantly furnishes the mineral skeleton of the block under examination, to form an appreciable idea of its purity and commercial value.

ODOURLESS PARAFFIN.—Despite the introduction of gas and electricity as illuminating media, the paraffin lamp is used to-day perhaps as much as ever. Still, it has its drawbacks, and not the least of them is the insupportable odour alike to the refined as to the common oil. Curiously enough, it is claimed that this drawback may be overcome, and the quality of the light enhanced by placing three or four small pieces of naphthalin in the oil reservoir of an ordinary sized lamp, renewing the supply as required. The odour is said to disappear and the flame to become brighter. If this be correct, the addition of naphthalin thus has a double advantage: (1) Considerable increase of illuminating power; (2) suppression of the objectionable odour.

PROFESSORS OF PHARMACY.—The Minister of Public Instruction and Fine Arts has issued a notice to the effect that a Concours will be opened at Paris in April, 1899, for the nine vacancies of Professor of the Superior School of Pharmacy, and appends a list of the subjects of thèses which the candidates may choose from:—
Physics: 1. Spectroscopy and spectrometry. 2. Luminous radiations. 3. Liquefaction of gases. Chemistry: 1. New methods for the production of metals. 2. Endothermic and exothermic compounds. 3. Terrestrial atmosphere. 4. Constant physics utilised for the determination of molecular weights. 5. Silicon and its artificial combinations. 6. Ptomaines and leucomaines (chemistry and toxicology). 7. Hydrazine and its derivatives. 8. Polysaccharides. 9. Hydro-aromatic compounds. 10. An outline of the progress recently accomplished in the knowledge of the constitution of the vegetable alkaloids. 11. Pyrrol and its derivatives. 12. Oxymmonia--oximes and is trous compounds.

ENGLISH NEWS.

WESTERN CHEMISTS' ASSOCIATION (OF LONDON).—At a Committee meeting held on Wednesday, October 26, the following gentlemen were elected officers for the ensuing year, viz.:—President: J. F. Harrington, 45, High Street, Kensington. Vice-President: A. G. Worsley, 135, Ladbroke Grove, W. Hon. Treasurer: J. H. Mathews, 68, Queen's Gardens, W. Hon. Secs.: Herbert Cracknell, 17, Craven Road, W.; W. J. I. Philp, 34, High Street, Notting Hill, W.

MR. J. VINCE, chemist and druggist, local secretary for Lancaster, has taken into partnership Mr. J. F. Barker, a former pupil, and the business will henceforth be carried on under the name and style of "Vince and Barker."

MR. J. OLDHAM BRAITHWAITE has completely revised and brought up to date the new edition of 'The Pharmaceutical Formulary,' a synopsis of the British, French, German, and United States Pharmacopœias, and of the chief unofficial formularies, being the twelfth edition of Beasley's 'Pocket Formulary.' The work has just emerged from the press, and it will be noticed that it is in accordance with the new Pharmacopœia. The publishers are Messrs. J. and A. Churchill.

POISONING CASES.—An inquest was held at Dover on Monday, October 24, relating to the death of Sarah Heard, wife of a boatman. The evidence was to the effect that the woman had been ill for several days, and on the previous Sunday had accidentally swallowed a quantity of carbolic acid from a bottle which had been placed near to another bottle containing port wine. The acid had been obtained from the Corporation offices for purposes of disinfection. A verdict of "Accidental death" was returned, and the Coroner remarked that this was the second case in which death, to his knowledge, had resulted from carbolic acid distributed by the Corporation. In the other case it was supplied in a wine bottle. In his opinion the poison seemed to be distributed in too lavish a manner.—A verdict that death was due to an accidental overdose of laudanum has been returned in the case of Henry Johnson (45), weaver, of Lane, Holmfirth. It appeared from the evidence that he had been "down in the nerves" for several months and had not been able to sleep well, and on Thursday, October 27, took a dose of laudanum, which proved fatal.

FOOTBALL.—A match was played at Wormholt Farm, Shepherd's Bush, W., on Saturday, October 29, between the teams of the Metropolitan College of Pharmacy and South London School of Pharmacy, resulting in a win for the "Metropolitans" by four goals to none.

THE CARELESS SALE OF POISONS.—Dr. Danford Thomas held an inquest at the Hampstead Dispensary on October 29, with reference to the death of Minnie Baldrey, aged 22, a ward servant at the North Western Fever Hospital, Haverstock Hill. It appeared that the girl drank a quantity of nitric acid set apart for cleaning a sink, and died in spite of the efforts made by the hospital authorities. A sister said the deceased had been very unhappy for some time. She tried to poison herself a year ago, and a fortnight since endeavoured to strangle herself in bed. She then promised the witness that she would not again attempt to commit suicide. A nurse in the hospital said she believed Baldrey was in very low spirits because she had been told at an eye hospital that she would be blind within two years.—The Coroner said that it was always easy to get poison, especially carbolic acid. The other day some was ordered for his house, and it was sent by the oilman in a vinegar bottle covered with vinegar labels. One of his servants used it to fill the vinegar cruet, and it was served at table, where it was only detected by the smell.—The jury returned a verdict of suicide while of unsound mind.

CHEMISTS' ASSISTANTS' ASSOCIATION.—The first Cinderella of the season was held on Thursday, October 27, at the Dorset Hall, Portman Rooms, Baker Street, W. A rather poor attendance was registered, probably owing to the early date at which the series was inaugurated, nevertheless, a very enjoyable evening was spent by those who were present. The duties of M.C. were, as usual, efficiently discharged by Messrs. C. W. Martin and A. J. Solomon.

MESSRS. JOINSON, MATHEY AND Co., Hatton Garden, London, announce, in a recent issue of their catalogue, that "in furtherance of scientific research, professors and recognised scientific investigators will with pleasure be supplied with metals of the platinum group, in moderate quantities, and for periods to be arranged, free of charge, on condition that the precious metals are ultimately returned (in any form), and that the results of the investigations are furnished.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.—A social evening in connection with this Association was held at the County Restaurant on Tuesday, November 1, when a pleasant evening was spent with music and song. Miss Mackay and Mrs. Mitchell sang with taste and feeling. Mr. Russell obliged with a couple of songs, which he sang quite up to his usual standard. Messrs. Hanson, Silson, and Mitchell also rendered songs, and Mrs. Moulson gave pianoforte solos. Mr. Moulson discoursed sweet music upon the banjo. Mr. Pickard proposed a vote of thanks to the visitors who had so kindly aided with songs and solos, and Mr. Mackay seconded. The meeting then terminated.

MR. W. ESSERY, M.P.S., was the successful Conservative candidate for Frankfort Ward, Plymouth County Council election, on Tuesday, November 1.

ADMINISTERING DRUGS TO HORSES.—At Spalding Petty Sessions on Tuesday, November 1, a farm servant named Joseph Plowright was summoned by Ernest William Farrow, farmer, of Spalding, his employer, for administering poisonous drugs to horses. The defendant was horsekeeper to the complainant, and it transpired that he had administered blue vitriol to the horses, four in number, also saltpetre and resin. A claim was made of £10 for damage to the horses, and it was stated that probably they would have been killed but for the matter being discovered in time. As it was it was feared that one of them might be permanently injured. It was stated by the complainant that the £10 claimed would not represent his loss, and he also commented upon the facility with which farm servants could obtain these drugs.—The Court regarded the case as a very serious one, dissolved the contract of service, and ordered the payment of £10 damages, and the costs.

MR. JOHN LAURIE, chemist and druggist, Blackpool, has been elected as one of the Conservative Councillors for the Foxhall Ward of that borough.

THE SOCIETY OF APOTHECARIES.—A conversazione in connection with the London and Middlesex Archaeological Society took place last week, by the kind permission of the Society of Apothecaries, at Apothecaries' Hall, Water Lane, under the presidency of Mr. E. W. Brabrook, C.B., F.S.A. (the Treasurer). The principal item in the evening's programme was the reading of a paper by Mr. Charles Welch, the Hon. Secretary of the Middlesex Archaeological Society, on the history and antiquities of the Society of Apothecaries. Mr. Welch described at some length the ancient ordinances of the company, and the strict manner in which the members formerly enforced them in order to maintain the purity of the drugs sold. Reference was also made to some of the quaint ceremonies performed by the old apothecaries at their hall, and to the examinations which were formerly conducted by them. At the conclusion of the paper, Mr. Welch was accorded a very hearty vote of thanks. The members then adjourned to the Court-room, where many antiquities recently found in London were set out for their inspection.

PROFESSOR WEISS ON DARWIN'S BOTANICAL WORK.—At the Manchester Museum, on Saturday, Professor Weiss delivered the concluding lecture on Darwin's botanical work. He dealt with Darwin's three books on the fertilisation of flowers. In 'The Origin of Species' Darwin had given only general reasons for his belief that it is apparently a universal law of nature that organic beings require an occasional cross with another individual. Having been blamed for propounding this doctrine without giving ample evidence, Darwin set to work to remove this objection by the publication of his book on 'The Fertilisation of Orchids,' in which he gave an account of the wonderful contrivances found in these plants to effect cross-fertilisation of the ovules of one plant with pollen brought by insects from another of the same species. After the publication of this book, Darwin set himself to the task of

examining the difference between the offspring produced by the cross-fertilisation respectively. His extensive and laborious experiments in raising and measuring the seedlings, resulting from two methods of fertilisation, proved conclusively the superiority of the offspring of cross-fertilised plants. After eleven years experimenting, he was sufficiently convinced of this truth to publish in 1876 a work on cross and self-fertilisation in plants, followed in the next year by another on 'The Forms of Flowers.' The first portion of the latter deals with the curious phenomenon of the appearance in certain species of plants of two kinds of flowers of slightly different structure, each one adapted to fertilisation by pollen from a flower of the other kind. Such dimorphism occurs in the primrose, lungwort, flax, etc. In the latter part of the book the distinguished author deals with the curious cleistogamic flowers, such as those of violets. This plant produces, besides the open purple flower, inconspicuous closed flowers, which are not visited by insects, but are regularly self-fertilised. In concluding the lecture, Professor Weiss pointed out that this work of Darwin on the fertilisation of flowers had an important bearing on his theory of the origin of species, for the universality of cross-fertilisation insured a much larger number of variations in the offspring, and therefore a larger number of favourable variations from which the fittest to survive were selected by the competitive struggle for existence.

MR. ALBERT H. HADDON, of Amersham, writes in reference to a circular now being issued by Mr. Thomas Beecham to every chemist and druggist in business, and asks the following question: "Admitting that Mr. Beecham has mainly built up his enormous trade by the assertion that his pills are 'worth a guinea a box,' does he think it would be robbing the public to insist on the minimum price being 1s.? Surely, if Mr. Beecham can present the British public with 20s. in the guinea, he might allow the chemist 2½d. for distribution?"

MESSRS. F. SCHUTZE AND Co. inform us that a most disastrous fire broke out on their premises at 36A, Aldersgate Street, on Saturday, October 22, and has compelled the firm to obtain other premises at 89, Southwark Street, S.E. The firm has at the present moment a large variety of new goods, and as the stock will be completed within the next few days, orders will be executed as usual. Messrs. Schutze and Co. thank their friends for the many kind expressions of sympathy they have received, which it is impossible to acknowledge severally.

THE SCHOOL OF MEMORY TRAINING, founded by the late Professor Alphonse Loiset at 37, New Oxford Street and 200, Regent Street, London, is now being conducted at 70, Berners Street, Oxford Street, W., by the same staff of professors and assistants who were for many years with Professor Loiset. The system and course of procedure followed are on the same principles as formerly, and a special effort is being made to bring the pupils and teachers in close union, in order that the idiosyncrasies of each pupil may be discovered and special help and individual attention given in every instance.

MR. R. A. ROBINSON, chemist and druggist, has been returned as a Councillor for the West Ward of the borough of Tunbridge Wells.

MR. BENJAMIN JOHN, chemist and druggist, of the firm of Messrs. Davies and John, 15, Old Bond Street, Bath, has been elected as one of the representatives of St. Michael's Ward.

THE SALE OF LAUDANUM.—Mr. D. Whittingham, district coroner for East Kirkby, at an inquest touching the death of Emanuel Leivers (56), who committed suicide on Wednesday, October 26, by laudanum poisoning, stated on behalf of the jurors that whilst the chemist who supplied the drug had no doubt acted in accordance with the law as it stands, they were of opinion that the facilities for obtaining laudanum should be better safeguarded than they are at present.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

John Joseph Laws, Chemist and Druggist, 14, Greyhound Lane, Streatham Common, S.W.

Charles Cook, Grocer and Dealer in Drugs, 93, Manor Lane, Shipley, Yorks.

WELSH NEWS.

SWANSEA AND DISTRICT CHEMISTS' AND DRUGGISTS' ASSOCIATION.—The annual meeting of this Association took place at the Cameron Arms Hotel, on Thursday, October 27, when there were present Messrs. J. Hughes (President), J. Dryden (Vice-President), J. Davies (Hon. Sec.), Ll. Thomas (Morrison), J. G. Isaac (Neath), E. Thomas (Castle Street), J. Davies (High Street), and N. M. Grose. Mr. Lloyd (Vice-President) wrote expressing inability to attend, owing to illness, and letters of apology for non-attendance were also read from Mr. Davies and Mr. Yorath. After the usual preliminary formalities, the election of officers was proceeded with, Mr. Hughes being re-elected President, Mr. Dryden Vice-President, and Mr. J. Davies Hon. Sec. The report of the Association and the balance sheet were in every respect reassuring, there being a substantial balance on the right side, and the Association unanimously decided to send one guinea to the Swansea Hospital and the same to the Benevolent Fund of the Pharmaceutical Society.—A discussion was held on two questions on the agenda, the first matter having reference to the official report of the Federation of Local Pharmaceutical Associations' meeting, held at Belfast, at which important resolutions were discussed and approved of, which are now submitted to local associations for discussion and amendment. The second matter was an important communication received from the P.A.T.A., in which valuable suggestions were made for consideration. Both subjects were dealt with very carefully. On the Federation report, however, no definite result was arrived at, and there was no resolution submitted to the meeting. Under these circumstances, therefore, the consideration of both matters was adjourned.

THE ANNUAL DINNER OF THE SWANSEA ASSOCIATION was held on Thursday, October 27, at the close of the annual meeting. Mr. Hughes (the President) presided, and was supported by all the gentlemen who had been present at the annual meeting, together with Messrs. C. S. Marsden, J. S. Mitchell, J. D. Williams, etc. An excellent repast was followed by an exhaustive toast list. The loyal toasts being duly honoured, Mr. David Thomas proposed "Success to the Medical Profession." He pointed out that the Swansea chemists were anxious to co-operate with the members of the medical faculty, and he sincerely trusted that the relationship which now existed between the professions would strengthen in cordiality still more. He coupled with the toast the name of Dr. Edgar Evans. Dr. Evans responded, and acknowledged on the part of the medical profession the thoroughly generous way in which the toast had been given and received. He eulogised the local chemists' association, and said that he considered that as a matter of fact it exercised greater power than even the medical organisation in the town. "The Success of the Swansea and District Chemists' and Druggist' Association" was proposed by Mr. C. S. Martin, and the names of Mr. N. M. Grose and Mr. J. G. Isaacs were coupled with it, after which "The Chairman's Health" was given by Dr. Edgar Evans. This was very enthusiastically received, and the President very felicitously replied. The local Association, he pointed out, had contributed largely to the hospital and to the Pharmaceutical Society's Benevolent Fund. "The Vice-President" (Mr. Dryden) was proposed by Mr. Hughes, and Mr. Dryden having replied, "The Visitors" was given by Mr. J. Davies, the Secretary of the Association. Messrs. Mitchell, Marsden, and Dr. Evans having acknowledged the toast, a very happy reunion was brought to a close.

IRISH NEWS.

THE GUARDIANS OF THE BELMULLET UNION are in a curious dilemma in connection with their dispensary medical officer's vacancy. They advertised for a doctor, and received two replies, each from a female practitioner. They will not appoint a lady doctor, and the salary offered is too small to attract any male candidates.

THE DUBLIN FIELD AND BOTANIC CLUB commenced its fourteenth winter session by a general meeting held in the Royal Irish Academy House. An interesting demonstration of lantern slides was given, and Dr. R. J. McWeeney, of bacteriological fame, lectured on "Fungi," and during the intervals between the lantern exhibits the audience inspected the scientific exhibits, of which there was a large and varied collection.

THE CORK HARBOUR COMMISSIONERS have framed new bye-laws regulating the importing and exporting of carbide of calcium into and out of the port of Cork, and want the Board of Trade to confirm them.

THE POOR LAW GUARDIANS at Skibbereen Union think that their dispensary doctor, who also acts as compounder of medicines, is too old for the double work, and propose to superannuate him, but are willing that he should continue to serve as their chemist. The Local Government Board object to this on the ground that if Dr. Hadden, the individual referred to, is beyond his labour as a doctor he is equally incapacitated as a drug mixer, and decline to pension him in part. Dr. Hadden's view of the case is in course of asking.

THE GOVERNORS OF THE MAYO ASYLUM have accepted the tender of Mr. W. P. Ryan, the Medical Hall, Castlebar, for the supply of medicines and drugs to that institution.

AT DUBLIN, on the 28th ult., Mr. J. Tyrie Turner, M.P.S.I., Vice-President of the Irish Pharmacists' Association, was the recipient of a handsome presentation at his residence, 52, Upper Sackville Street. Mr. Turner is extremely popular with his pharmaceutical colleagues.

THERE WOULD SEEM to be an unusual demand in Dublin for qualified assistants. Possessors of the Society's hall mark of qualification, e.g., "L.P.S.I.," are practically able to make their own terms. One well-known city house recently advertised in the daily newspapers for a senior compounder, and only received one reply, although the salary offered was somewhat above the average and the hours of duty not excessive.

THE TENDER OF MESSRS. HARRINGTON AND SONS, LTD., pharmaceutical chemists, Cork, to supply medicines and medical appliances to the Kinsale Union, has been accepted by the guardians of that institution.

NEW ACADEMICIANS.—The annual general meeting of the Royal Academy of Medicine was held last week at Dublin, when the following were amongst those elected office bearers for the ensuing year:—Sir George F. Duffey, Government Examiner to the Pharmaceutical Society of Ireland, and A. N. Montgomery, L.A.H., to act as members of the Medical Section Council; and as Council to the Section of State Medicine: Sir Charles Cameron, city chemist, and Ninian Falkener, M.D., formerly of Hamilton, Long and Co.'s State Pharmacy, Dublin, and late of the Pharmaceutical Society. The appointments are popular ones.

NOT IN THE PROGRAMME.—At a conversazione held at the Royal University, Dublin, one of the chemical combustions which occurred during the scientific experiments was neither welcome nor in the programme. It was startling at first sight to all, but as most of the audience took it as part of the demonstration a possible panic was averted; a big blaze on the floor of the central hall was the unlooked-for event. The bottom of one of the lamps resting on the ground gave way, with the result that the light and petroleum, mingling together, covered the floor for a considerable space with liquid fire. Several gentlemen who rushed forward to quell the flames had their academic gowns scorched, but happily this was the extent of the damage, and after a short time the lecture was continued.

THREE GUINEAS PER COPY.—In connection with a letter sent by the Athy guardians to the Local Government Board, on the subject of the compounding of medicine, the Local Government Board has replied that a copy of the new British Pharmacopœia may be procured. The guardians now fear that if one doctor gets a copy of the work the other doctors will also want one, and as they believe the book costs about three guineas per copy this will, they think, prove a heavy item of expenditure.

THE "DUBLIN GAZETTE," the official organ of the Government, contains a Privy Council order approving of the appointment of Mr. A. Forbes Watson, B.Sc., of 33, Westmoreland Street, as examiner to conduct the pharmaceutical and general chemistry division of the Licence examination of the Society under the Pharmacy Act, vice Mr. A. L. Doran, M.P.S.I., Bray, resigned.

A LOCAL GOVERNMENT BOARD INQUIRY is proceeding at Macroom, respecting charges made by the dispensary medical officer, Dr. Barrett, against the master and *vice versa*. The evidence shows that both officials have been at variance for some time, and that the matter has been reported at various times to the Local Government Board. The prescribing and supplying of drugs and medicines form an important feature in the inquiry, but the details are too lengthy for report. The result of the inquiry has not yet been made known.

CARBOLICIDE.—At Smithborough, Co. Monaghan, a woman poisoned herself with carbolic acid. The jury attributed the fatality to temporary insanity. One report said that the deceased had been "delirious and depressed," and that she had taken the poison in mistake for a medicine alongside.

IT IS VERY DIFFICULT to decide on some occasions whether a doctor shall offer his services. He has as much right to the privileges of the Habeas Corpus Act as one of the million. The precariousness of payment in many instances acts as a deterrent in volunteering medical aid. The case which occurred some time ago in an Irish village, and which is, unhappily, too true, is new light out of an old window. The medical man, when he had dressed and bandaged a cut head, required the owner thereof to furnish the amount of the fee, but he, not having any money, professed his inability to comply with this very reasonable request. Whereupon the doctor removed the bandage.

WITH THE END OF THE CURRENT YEAR will cease the present system of contracting for the supply of drugs and medicines to the Poor Law Boards of Ireland. On and from the 1st of next January, the professional patriot's occupation will be gone, and no longer will arise the wail of the down-trodden "Patlander," as after the old year has been rung out will be ushered in the new era of local government on laws similar to those obtaining in England. So far as the drug and chemical trade is concerned the change will prove very beneficial indeed, as it will no longer be possible to "Jerrymander" as heretofore the contracts for medical supplies to our workhouses. A fair field and no favour will henceforth rule, and although this may not suit the book of those included in the nomenclature above described, and the influence of the "friend at court," will no longer be valuable, a better condition of affairs than at present exists will arise in the future and work out in the long run to the credit and capital of the guardians and contractors concerned. Of late the *modus operandi* of guardians and certain traders anxious to do a good turn for one another has become little short of a public scandal, and the effect has been to drive off many enterprising contractors who would otherwise have competed for the contracts. A striking example of the contract system was recently given in the Journal, and this is only one of a very large number of similar cases in which the guardians have in many cases openly flouted the Local Government Board and put in their own nominees, or else made it so unpleasant for the objectionable contractor to remain in the field that he generally retired with a good grace to make room for his more favoured successor. In future all drug and medicine contracts will be decided on their merits alone, and none but the most suitable in every respect will, it is expected, be entered into.

THE BELFAST NATURALISTS' FIELD CLUB held its final excursion of the session to the demesne of Holymount, Downpatrick. The marshes which fringe the estate were made to unlock their treasures to botanists and conchologists. There was the marsh-violet (*Hottonia palustris*), the small knot-weed (*Polygonum minus*), and the *Apium inundatum*, the best marsh wort in the vicinity. The woods were white with the guelder-rose (*Verburnum opulus*), and the hedges were sabled with blackberries, but as ill-luck would have it the coleopterists could not discover a sufficiency of beetles. A number of ladies accompanied the excursion, and in justification of their enthusiasm and interest furnished over twelve score botanical and other specimens. At Ballynoe was observed one of the most perfect archaeological stone circles in the county, it appears to have had three concentric rings of stone. The Dun of Screen, the Royal Rath, the Old Cathedral, and the High Cross of Downpatrick lately restored were viewed with veneration as the vestiges of a vanished age.

SCOTTISH NEWS.

THE GOVAN COMBINATION PARISH COUNCIL has decided to order the medicines required for its out-door department from the New Apothecaries' Company, Glasgow, and the same Board has ordered from Messrs. Armour and Co., London, one Winchester of glycerol of pepsin and one gross of two-ounce pots of extract of beef. The work of the dispensary of the Govan Combination Parish Council has been seriously hampered for some time past through the illness of Mr. John Lockhart, the dispenser. At last week's meeting of the Board the matter was considered, and a motion was made that Mr. Lockhart should provide a qualified assistant during his illness. Latterly, however, this motion was withdrawn, and it was agreed to appoint a qualified female dispenser at a salary of £60 per annum, and to allow Mr. Lockhart £60 a year.

PRESENTATION AT GLASGOW.—On Friday, October 28, the employés of Mr. John McMillan, 17, Great Western Road, Glasgow, and a few friends, met in the Bank Restaurant, Queen Street, and presented Mr. James B. Watson with a number of books, including the British Pharmacopœia, Remington's 'Pharmacy,' 'Pharmaceutical Formulas,' 'Extra Pharmacopœia,' etc., on the occasion of his leaving the firm to open a pharmacy at Springboig, Shettleston, a rising suburb. Mr. Watson has been over six years with Mr. McMillan, and was most of the time his senior assistant. Mr. Ballingall, in a few well-chosen remarks, made the presentation, to which Mr. Watson suitably replied. Songs and recitations followed, and a very pleasant evening was spent.

MR. ALEXANDER ALLAN, chemist and druggist, Inverness, intimates that he has disposed of his business at 4, Church Street, to Mr. Thomas Mackenzie, pharmaceutical chemist, late Principal of the Glasgow and West of Scotland School of Pharmacy. Mr. Mackenzie, who formerly served five years with Mr. Allan, and has since been with Messrs. Squire and Sons, Oxford Street, London, will carry on the business under the style of Allan and Mackenzie.

Publications Received.

AN ELEMENTARY TEXT-BOOK OF BOTANY, by SIDNEY H. VINES, M.A., D.Sc., F.R.S. Pp. xv. + 611, with 397 illustrations. Price 9s. London: Swan, Sonnenschein and Co., Ltd. 1898. From the Publishers.

FIRST STAGE INORGANIC CHEMISTRY (PRACTICAL), by FREDERICK BEDDOW, D.Sc., Ph.D. Pp. viii. + 163. Price 1s. London: W. B. Clive, University Correspondence College Press. 1898. From the Publishers.

PRESCRIPTION READING: a Text-book for Pharmaceutical Students, by WILLIAM WATSON WILL. Price 12s. 6d. net. London: The Metropolitan College of Pharmacy. 1898. From the Author.

A MIDDLE ALGEBRA. Based on the Algebra of Radhakrishnan, by WILLIAM BRIGGS, M.A. F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. Pp. vi. + 354. Price 3s. 6d. London: W. B. Clive, University Correspondence College Press, W.C. 1898. From the Publishers.

ON THE STUDY OF THE HAND FOR INDICATIONS OF LOCAL AND GENERAL DISEASE, by EDWARD BLAKE, M.D. Pp. 53. Price 2s. 6d. London: Henry J. Glaisher, 57, Wigmore Street, Cavendish Square, W. 1898. From the Publisher.

CHEMISTRY FOR SCHOOLS. An Introduction to the Practical Study of Chemistry. By G. HAUGHTON GILL. Tenth edition, revised and enlarged by D. HAMILTON JACKSON, B.Sc., Ph.D. (Heid.). Pp. xvi. + 368, with 100 illustrations. Price 4s. 6d. London: Edward Stanford, 20 and 27, Cockspur Street, Charing Cross, S.W. 1898. From the Publisher.

Newcastle Chemical Report.

NOVEMBER 2, 1898.

This market continues to have a quiet tone, which is not unusual at this season of the year now that Baltic shipments of heavy goods are daily lessening. Prices, however, are unchanged and quoted as follow:—Bleaching Powder, according to market, £5 10s. to £6. Soda Crystals, basis, £2 5s. Caustic Soda, 70 per cent. basis, £7 to £7 5s. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5. Sulphur, £4 15s. to £5 per ton.

MARKET REPORT.

London Report.

NOVEMBER 3, 1898.

Trade has been somewhat quiet during the past week, the tension in foreign political affairs having probably hardly tended to encourage business. It is to be hoped, however, now that the apprehensions that it might possibly after all come to a war between England and France have been considerably allayed, that we may see more activity in the drug and chemical markets. Quicksilver was advanced 5s. per bottle to-day, which may very likely mean a rise in the price of Mercurials, as a set-off to the reduction in makers' prices of same, as announced on 1st inst. Oil of Cloves 2d. per lb. lower. Acid Citric and Tartaric and Cream of Tartar quiet. Opium quiet and unchanged, except for soft shipping descriptions, which are rather dearer. Morphia and Codeia quiet and unchanged. Sulphate of Ammonia dearer. Bromides and Iodides unchanged. Chlorate of Potash firm. Cod-liver Oil dull. Glycerin steady. Quinine is firm. Cocaine steady. Sulphonal and Phenacetin unchanged. Acetanilide weak. The following are actual prices of articles of chief interest:—

ACETANILIDE—Is very quiet at 11d. to 1s. 1d. per lb., according to quantity.

ACID BORACIC.—A moderate business doing at 24s. per cwt. for crystals and 26s. per cwt. for powder.

ACID CARBOLIC—Quiet but steady at 6½d. to 6¾d. per lb. accord to make for 35-36°C. *ice crystal* in large bulk packing, other qualities and packing being quoted in proportion. *Crude* unchanged at 1s. 11d. per gallon for the 60° F., and 2s. 3d. per gallon for the 75° F. Liquid, 95 per cent. of pale straw colour 1s. 2d. per gallon in large casks.

ACID CITRIC—Remains quiet at 1s. 2d. to 1s. 2¼d. per lb. for *Crystals*.

ACID OXALIC.—Steady at 3¼d. to 3½d. per lb. for *Crystals*, and 3½d. to 3¾d. per lb. for *Powder*.

ACID TARTARIC.—*English* on the spot is quoted 12¼d. to 1s. 1d. per lb. for *Crystals*, *Foreign* being quiet at 12¼d. to 12½d. per lb.

AMBERGRIS—Is becoming scarcer, and fine grey is quoted 100s. to 110s per oz.

ALUM—Steady at £5 7s. 6d. per ton for loose lump, and £6 per ton for ground in bags.

AMMONIA COMPOUNDS.—*Sulphate* is dearer at £9 12s. 6d. per ton for grey prompt, 24 per cent., London; Hull and Leith, same price. *Carbonate* firm at 3d. to 4d. per lb., according to quantity and package. *Bromide* unchanged at 2s. 1d. per lb. *Iodides* dull at 13s. 7d. per lb. *Muriate*: Chemically pure small crystals, 30s. to 32s. per cwt.; free from metals, white, 25s. 6d. to 26s. 6d. per cwt. *Oxalate*, 5¼d. to 5½d. per lb. *Sulpho-cyanide* quiet at 1s. to 1s. 1d. per lb. *Sal ammoniac* unchanged at 35s. per cwt. for sublimed firsts; seconds, 33s. per cwt.; crushed for batteries, 37s. and 35s. per cwt. respectively.

ARSENIC.—Firm at 18s. per cwt. for best white powder, and 34s. per cwt. for fine white lump.

ATROPIA.—Makers are firm at 15s. 6d. per oz. for the *sulphate P.B.*, and 17s. 10d. per oz. for the *pure*.

BALSAM CANADA.—Whilst demand is slow holders are firm at 1s. 2d. per lb. for good thick in tins.

BALSAM COPAIBA—Seems to be rather easier, good *Maranhã* can be had at 2s. 1d. to 2s. 2d. per lb., the same being asked for good thin *Para* for distilling.

BALSAM PERU—Is very quiet at 8s. 9d. to 9s. per lb.

BALSAM TOLU.—Demand is slow, quotations 1s. 6d. to 1s. 8d. per lb.

BLEACHING POWDER—Quiet but firm at £6 10s. to £7 per ton.

BORAX—Steady at 14s. 3d. to 14s. 9d. per cwt. for *lump*, and 14s. 6d. to 15s. per cwt. for *powder*.

BROMIDES and BROMINE—Are without change.

CAFFEINE—Is steady at 14s. 4d. per lb. for the *pure*, and 11s. 2d. per lb. for the *citrate P.B.*

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns.

CALUMBA ROOT.—The deliveries have been very heavy during the past month, and prices are decidedly firmer. From 18s. to 22s. per cwt. is asked for ordinary sorts.

CAMPHOR.—The market for *crude* is very firm, but the extreme prices asked by importers prohibit business. An early advance in *refined* is expected.

CASCARA SAGRADA.—25s. per cwt. is now asked for new bark, whilst for old, which is becoming scarce, 27s. to 28s. per cwt. is the price.

CLOVES.—Privately *Zanzibar* quiet, there are sellers, October-December delivery at 3½d., and January-March at 3¾d. At auction 100 cases *Penang* were offered; 52 cases ordinary dark unpicked, sold, without reserve, at 4½d. to 4¼d.; 10 cases good picked at 9½d. to 10¼d., and 2 cases fine bright at 1s.; 1 box *Grenada* also sold at 3¼d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*, commercial 1s. 3d., pure 1s. 9d. to 2s. per gallon. *Benzole*, 50 per cent., 10d., 90 per cent., 9d. per gallon. *Crude naphtha*: 30 per cent. at 120° C., 4d. per gallon. *Solvent naphtha*: 95 per cent., at 160° C., 1s. 7d.; 90 per cent., at 160° C., 1s. 3d.; 90 per cent., at 190° C., 1s. 4d. per gallon.

COCA LEAVES.—There are several inquiries on the market for *Truxillo* but nothing is to be had under 8d. per lb.

COCAINE.—Market is quiet but steady at 9s. 9d. per oz. for the *Hydrochlorate* in 25-oz. tins and in 100 oz. lots for the best brands, makes less in favour being quoted at rather less money.

CODEIA.—Quiet but steady at 12s. 6d. per oz. for the *pure*, the *salts* being 1s. per oz. less.

COD LIVER OIL.—Without change, with, however, but little doing in the article. Quotations are 80s. to 85s. per barrel, *f.o.b.*, according to brand, for good new non-congealing Norwegian oil, in tin-lined barrels of 25 gallons.

CREAM OF TARTAR.—There is not much doing this week and prices are unaltered, first white *crystals* on the spot 72s. to 77s. per cwt., and for *powder* 74s. to 82s. per cwt. according to strength.

DILL SEEDS.—Good *English* are quoted at 45s. per cwt.

ERGOT.—Continues very firm, although not much business has been done since our last report. Quotations are: 1s. 3d. per lb. for *weavily Spanish*, and 1s. per lb. for *Russian* in same condition.

ESERINE (PHYSOSTIGMINE).—Makers' prices remain unchanged at 3s. per gramme for the *pure*, and 2s. per gramme for the *Sulphate* and *Salicylate*.

GINGER.—*Cochin* is firmer. Of 342 bags rough kinds offered, 192 bags sold, chiefly fair bright washed at 23s. to 23s. 6d., one lot cuttings at 14s. Of 78 cases cut kinds, 26 cases ordinary B cut sold at 58s. *Jamaica* in good demand and firm. 115 barrels sold: Common dark Rhatoon, 63s. to 65s.; good common to low middling, 68s. to 74s.; middling plump, 78s.; 4 half-barrels fine also sold at 96s.

GLYCERIN.—Steady at 52s. 6d. to 55s. per cwt. for *English*, and 55s. to 65s. per cwt., according to brand, for *German* white double distilled, chemically pure, 1260° quality, in tins and cases.

GUM TRAGACANTH.—There has been an active demand for most

qualities and extreme prices have been paid. The selection now is very restricted, and as there is very little coming forward, prices will probably be maintained. *Firsts*, £14 10s. per cwt.; *Seconds*, £12 10s.; *Thirds*, £11 15s.; *Fourths* £10 5s., and other qualities down to 40s. per cwt.

IODIDES and IODINE.—Unchanged from last week.

IPECACUANHA.—Is very firm at 10s. 2d. per lb. for *Rio*, and 7s. 6d. per lb. for *Carthagena*. Stocks have been somewhat reduced on the past month.

JAPAN WAX.—Remains quiet at 33s. per cwt. on the spot.

LITHIA.—Is firm, makers still quoting the *carbonate* at 10s. 8d. per lb. in 2 cwt. lots. Price of the *citrate* is also unchanged.

MANNA.—Is dearer. For new seasons *Flake* 3s. per lb. is now the price, *small* 1s. 5d. per lb., and *sorts* 1s. per lb.

MENTHOL.—Remains steady at 7s. to 7s. 3d. per lb. for bulk packing.

MERCURIALS.—The reduction in prices which was advised last week as having been decided upon by makers for November 1, has been duly announced. To-day's advance in price of quicksilver may, however, cause same to be modified again shortly. To-day's prices for 5 to 10 cwt. lots are: *Corrosive sublimate*, 2s. 2d. per lb.; *Calomel*, 2s. 6d. per lb.; *Red Oxide cryst.* or *levigated*, 2s. 10d. per lb.

MORPHIA.—Quiet and unchanged at 5s. (not 4s., as by a slip of the pen erroneously stated last week) for the *Hydrochlorate Powder*.

MUSK.—Is quiet, but no really fine Tonquin pods Pilo I, thin blue skins, are to be had under 70s. to 72s. 6d. per oz.

NITRATE OF SODA.—Is quiet at £7 12s. 6d. to £7 15s. per ton for the commercial and £8 to £8 2s. 6d. for the refined.

OILS (ESSENTIAL).—*Clove* is cheaper at 3s. 1d. per lb. for *English*. *Star Aniseed* is slow of sale at 6s. 6d. per lb. on the spot. *Peppermint*: American H.G.H. without demand, nominal value on the spot 5s. 6d. per lb.; Wayne County easier at 3s. 8d. per lb. for choice, and 3s. 3d. to 3s. 6d. per lb. for lower grades; Japan is also quiet at 3s. 4½d. per lb. for dementholised and 5s. per lb. for 40 per cent. *Cassia* dull of sale and business restricted to arrival sales; 65 to 70 per cent., October to November steamer, at 4s. 3d. per lb., *c.i.f.* *Lemongrass* quiet at 3¾d. per oz.

OILS (FIXED) AND SPIRITS.—*Linseed*: rather easier but without actual change in values. Spot pipes, £17 15s., barrels £18 2s. 6d. *Rape*: ordinary brown on the spot dearer at £22 10s., refined so far unchanged at £23 15s. *Cotton*: lower at £13 10s. for London crude spot. Refined, £15 to £16, according to make. *Olive*: green oils, £29 to £32 per ton; table oils, 4s. 3d. to 6s. per gallon, according to quality. *Coconut*: dearer at £25 for Ceylon on the spot, near at hand £23 10s. *c.i.f.*; *Cochin*, spot, nominally £28. *Palm*: Lagos, on the spot, £22 10s. *Turpentine* has been dearer during the week, but with more pressure to sell closes at last week's price, 26s. 9d. per cwt. for American on the spot. *Petroleum Oil* steady at 5½d. per gallon for Russian and 6½d. per gallon for American; water white 7¼d. per gallon. *Petroleum Spirit* very firm at 7¼d. per gallon for American; deodorised, 8d. per gallon.

OPIUM—Quiet. *Persian* unchanged in price at 11s. 3d. to 11s. 6d. for fair, and 11s. 9d. to 12s. for finest; *soft shipping* good to fine, 13s. to 14s.; seconds, 10s. 9d. to 11s. 9d.; *druggist*, good to fine Smyrna, 11s. 3d. to 11s. 9d.; seconds and manufacturing, 10s. 6d. to 11s. Very little doing, no change, and only small sales from hand to mouth of *druggists'* kinds, but a good business has been done in *soft shipping*, which shows a slight advance on late rates.

PHENACETIN—Quiet and without change at 3s. 9d. to 4s. 3d. per lb. for *crystal* or *powder* in quantity, and for bulk packing. Bayer's phenacetin is still quoted 5s. 6d. per lb.

PHENAZONE—Is without change in value. Same may also be said of *Antipyrine Knorr*.

POTASH COMPOUNDS.—*Chlorate* is firm at 4d. per lb. for crystals, and 4½d. per lb. for powder. *Bicarbonate* unchanged at 30s. to 35s. per cwt., for crystals or powder, according to brand. *Bromide* firm at 1s. 9½d. per lb. *Iodide* dull at 10s. 3d. per lb. *Prussiate* firm at 6¼d. to 7d. per lb. for the yellow, and 1s. 2d. per lb. for the red. *Cyanide*: Orders for this article are eagerly competed for if for good quantities; ordinary lots 1s. to 1s. 1d. per lb., for the 98 to 100 per cent. white cake. *Bichromate* steady at 3½d. to 3¾d. per lb. *Permanganate* continues dull at 50s. for small, and 55s. per cwt. for large crystals. *Oxalate* firm at 5d. per lb. for the neutral.

POTASH PERMANGANATE—Is quiet, there being still sellers at somewhat below 50s. per cwt. for the small crystals in ton lots, the large crystals being quoted 5s. per cwt. more money.

QUICKSILVER.—Importer to-day advanced his price 5s. per bottle to £7 10s. There are, however, sellers from second hand at 1s. per bottle less money.

QUININE.—Best *German* brands continue very quiet, and but little business is doing. Price is 10d. to 10½d. per oz. for large bulk and 1000-oz. lots.

SALICINE.—A fair business doing at 10s. 6d. per lb. in quantity.

SALTPETRE.—*English* refined 20s. to 21s. per cwt., according to package.

SARSAPARILLA.—The stocks of *Honduras* are small, but there are still sellers at 1s. 6d. per lb.; advices from New York report small stocks there also.

SCAMMONY.—*Virgin*: Fine firsts have been sold at 30s. per lb.

SHELLAC.—At the auctions on Tuesday only moderate supplies were catalogued. The demand for *Second Orange* was fairly good, and sales were now and again made at an advance of 1s. per cwt. A total of 884 cases were offered and 577 cases sold. *Second Orange*: of 562 cases 474 sold, strong pale curly at 76s., dull palish at 73s., fair to good bright strong at 67s. to 69s., fair bright reddish at 64s. 6d. to 65s., bronze red at 64s., ordinary reddish 63s. to 64s., flimsy dull at 63s., flat liver at 58s., more or less cakey, good bright red at 64s. to 65s., bronze red at 63s. to 64s., curly red at 62s. to 63s., red hard block at 59s.; Rangoon, claret blocky at 54s. *Garnet*: Of 147 cases 47 sold, partly without reserve, blocky G at 53s., Rangoon blocky at 55s., low blocky at 47s. to 48s. *Button*: Of 175 cases 56 sold, partly without reserve, genuine stamped blocky at 84s., ordinary to fair BL 1 at 72s. to 75s., glassy BL 2 at 66s. to 69s., common dark blocky at 43s., very low 26s. Since the auctions some small business has been done at prices which show some advance on those established there.

SODA COMPOUNDS.—*Ash* is firm at £5 to £5 10s. per ton, according to strength. *Crystals* steady at 57s. per ton, ex-ship terms. *Bicarbonate*: £7 5s. per ton for the 97 per cent., and 18s. 6d. per cwt. for the chemically pure, fully bicarbonated quality. *Bromide* unchanged at 2s. per lb. *Hyposulphite* steady at 6s. to 8s. per cwt., according to brand. *Iodides* unchanged at 11s. 7d. per lb. *Bichromate*: 2¾d. to 3d. per lb. *Nitrate*: £7 15s. per ton for the ordinary, and £8 2s. 6d. per ton for the refined. *Acetate* unchanged at 35s. 6d. per cwt. for the chemically pure, and 13s. 6d. per cwt. for the ordinary refined.

SOY—Remains quiet with small sales on the spot a 1s. 4½d. per gallon.

SPICES (VARIOUS).—*Black Pepper* flat; 100 bags Lampong sold at 4½d., 256 bags Singapore at 4½d. to 5d., and 272 bags Telli-cherry at 4½d. *White Pepper* quiet; 135 bags Penang sold, chiefly without reserve, at 7¼d.; 150 bags Siam bought in at 8d.; of 440 bags Singapore only 40 bags sold, fair 7½d., one lot fine bold 9½d. *Chillies*: 217 bales Zanzibar bought in at 40s., 20 cases good Japan sold at 45s. *Capsicums*: 2 bales Natal sold at 65s. to 70s., also 173 bags small red West Coast African at 29s. to 29s. 6d. *Cinnamon*: 56 bags broken Ceylon sold at 8½d., 80 bags coarse broken bark sold at 5½d., with one lot 4½d. *Mace* quiet; Penang mostly

bought in; pickings 1s. 3d. to 1s. 5d., good bold bright 2s. 4d. to 2s. 5d.; 32 packages West India sold at 1s. 4d. to 1s. 7d., two lots good 1s. 8d. to 1s. 10d. *Pimento* firm, but 255 bags were mostly bought in at 4½d. to 5d.

SUGAR OF LEAD.—*Foreign* is very firm at 27s. 6d. per cwt. on the spot. *English*, 31s. per cwt.

SULPHATE OF COPPER—Is firm at £17 10s. to £18 15s. per ton, according to brand.

SULPHONAL—Is still obtainable from the two principal makers at 7s. 3d. per lb. for both *cryst.* and *powder* in bulk packing.

SULPHUR—Firm. *Roll*: *English*, 7s. 6d. to 8s. per cwt.; foreign, 6s. 6d. per cwt. *Flowers*: *English*, 11s. per cwt.; foreign, 7s. per cwt.

STAR ANISEEDS—Are held on the spot for 125s. per cwt.

Liverpool Market Report.

NOVEMBER 2, 1898.

ARSENIC—Is dearer; powder, £17 per ton; lump, £32 per ton.

BEESEX.—24 packages of Gambia were sold privately, but at fully late rates.

CANARYSEED—Is selling better as regards Turkish, of which 25 bags sold at 29s. per 464 lbs. Some 75 bags of Spanish sold at 32s. per 464 lbs.

CARNAUBA WAX.—2 tons sold at 50s. per cwt. for yellow, and 33s. 6d. to 37s. 6d. for grey.

CHILLIES.—Sierra Leone fruit have changed hands at 37s. 6d. per cwt.

GINGER.—50 bags Sierra Leone found buyers at 19s. 6d. per cwt.

HONEY.—100 barrels Chilian sold at 22s. 6d. per cwt. for Pile 2, 25s. for Pile 1, and 25s. 6d. to 30s. for Pile X.

LINSEED—Continues firm and is still rising; Calcutta is 39s. 3d. per 416 lbs., and North American 39s. per 424 lbs.

OILS (FIXED) AND SPIRITS.—*Castor* is in continuous fair demand. Calcutta sells at 3½d. per lb., French at 2½d. to 3d. per lb. (some 20 tons having been disposed of at the former rate), Madras 2½d. to 2¾d. *Olive* is in somewhat limited demand, Spanish oil being quoted at £29 10s. to £30 per tun. *Linseed* of Liverpool make is steady at 18s. 6d. to 19s. per cwt. *Cottonseed* is 15s. 6d. to 15s. 9d. per cwt. *Spirits of Turpentine* is at the higher price of 28s. per cwt. It has been up to 28s. 3d. but now is firm at 28s.

POTASH SALTS—Unchanged.

SODIUM SALTS.—Borax is extremely firm at £14 to £14 10s. per ton, and higher rates are looked for. Other salts unchanged.

Manchester Chemical Report.

NOVEMBER 2, 1898.

Heavy chemicals are dull, and even in the best informed circles the course of prices in the future is surrounded with doubt. Therefore, people are only buying from "hand to mouth." Prices for prompt are somewhat lower than last week, 77 per cent. White Caustic Soda ranging from £7 12s. 6d. to £7 17s. 6d., and 70 per cent. £6 17s. 6d. to £7 2s. 6d. Ammonia Alkali 58 per cent. is quoted £4 per ton, bags, on rails, and £3 15s. to £3 17s. 6d., next year's delivery. Sulphate of Ammonia is steadier locally, and is £9 3s. 9d. to £9 5s. on rails, Lancashire. Creosote continues firm. Benzols are firmer, and vary from 8d. to 8½d. for 50's, 90's. Sulphate of Copper is about 5s. higher than last week, and for spring delivery £18 10s. to £18 15s. is quoted, best brands, Manchester. Indeed, all metallic salts are improving in price owing to the growing scarcity of copper and tin. White Powdered Arsenic is somewhat lower, £16 15s. to £17. Acetate of Soda is weaker at £12 to £12 10s. per ton spot. Potash Compounds are firm, and there is a strong inquiry for Naphthalene. A fair export business is passing in Lancashire made Green Copperas, but the local demand is dull. Yellow Prussiate is well maintained, and local makers are firm at 6¼d. to 7d. per lb. Aniline Oil and Salt show a downward tendency. The "Phosphor" arrived at this port on Saturday with a full cargo of over one million gallons of Petroleum, and some idea of the extent of the trade here may be gathered from the fact that quite recently the "Elbruz," the "Suram," the "Kasbeck," the "Robert Dickinson," the "Apscheron," and the "Petriana" have discharged their cargoes at the Mode Wheel Tanks, and a workmen's village is being built in Trafford Park to accommodate those engaged in the trade.

Announcements.

Monday, November 7.

SOCIETY OF CHEMICAL INDUSTRY, Burlington House, Piccadilly, W., at 8 p.m.—First meeting of the session. Communications by Messrs. Watson Smith, A. W. Crossley, and H. R. Le Sueur, Oscar Guttman, G. Harris Morris, Harold Harris.

CHEMISTS' BALL COMMITTEE, 16, Bloomsbury Square, W.C., at 2.30 p.m.—General meeting to make preliminary arrangements for the ensuing ball.

DEWSBURY AND DISTRICT CHEMISTS' ASSOCIATION, Town Hall, Dewsbury, at 8 p.m.—Mr. W. S. Glyn-Jones, Secretary of the P.A.T.A., is to reply to the points raised at a recent meeting of the Association by Mr. Beecham's representative.

Tuesday, November 8.

PHARMACEUTICAL SOCIETY, 17, Bloomsbury Square, W.C., at 8 p.m.—Professor William Ramsay will deliver a lecture on "The New Gases of the Atmosphere," illustrated by experiments.

ROYAL PHOTOGRAPHIC SOCIETY, 5A, Pall Mall East, W., at 8 p.m.—General business meeting, followed by the first Traill-Taylor Memorial lecture.

ROYAL COLONIAL INSTITUTE, Whitehall Rooms, Hôtel Métropole, S.W.—A paper on "Western Australia in 1898," with lantern illustrations, will be read by the Hon. E. H. Wittenoom, Agent-General for the Colony.

Wednesday, November 9.

MANCHESTER PHARMACEUTICAL ASSOCIATION, Chemical Club, Victoria Hotel, at 7.30 p.m.—The "Standardization Processes of the B.P." will be dealt with by Mr. J. H. Hoseason, the "Pharmacy of the B.P." by Mr. J. Grier, and the "Vegetable Materia Medica of the B.P." by Mr. W. Kirkby.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, Exchange Rooms, Birmingham.—A paper on "Health and Occupation" will be read by Mr. J. F. Liversedge.

NEWCASTLE-ON-TYNE AND DISTRICT CHEMISTS' ASSOCIATION, Hôtel Métropole, West Clayton Street.—A "Practical Demonstration in Radiography" will be given by Mr. T. Maltby Clague.

Thursday, November 10.

CHEMISTS' ASSISTANTS' ASSOCIATION, 73, Newman Street, W., at 9 p.m.—"The Biology of Yeast" will be the subject of a paper by Professor J. Reynolds Green.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, 94, West Regent Street, Glasgow, at 9 p.m.—Mr. T. Dunlop will open a "Discussion on the Pharmacopœia."

LIVERPOOL CHEMISTS' ASSOCIATION, Royal Institution, at 7 p.m.—Fifth general meeting. Papers by Messrs. R. C. Cowley, J. T. Catford, J. Guttridge (Curator, Liverpool Botanic Gardens), and W. Parry. A number of growing plants of special interest to pharmacists will be exhibited by Mr. Guttridge.

Friday, November 11.

CAMBRIDGE PHARMACEUTICAL ASSOCIATION, at 9.15 p.m.—Annual meeting, to be held at "Dale's."

CHEMICAL SOCIETY, Hôtel Métropole, London, S.W.—Banquet to Past Presidents.

Advertisements.

(Received too late for Classification).

APPRENTICE.—A Major man has a vacancy for an APPRENTICE. Out-door. Address, E. D. F., 50, Bishopsgate St. Within, E.C.

ENGAGEMENT wanted. Qualified. 24. Tall. Eight years' experience. SAL, "Pharm. Journal" Office, 5, Serle St., W.C.

AS branch MANAGER or ASSISTANT. 39. Over 20 years' experience Extractor. Married. Excellent references. IRIDIS "Pharm. Journal" Office, 5, Serle St., W.C.

Birth.

WOKES.—On October 22, at Grassendale, near Liverpool, the wife of T. S. Wokes, pharmaceutical chemist, of a daughter, Doris,

Marriages.

EVELEIGH-GWILLIAM.—On October 25, at St. Paul's Church, Bedminster, Bristol, by the Rev. Charles Griffiths, B. C. Eveleigh, of 2, Cotham Vale End, Bristol, to Elizabeth, eldest daughter of C. Gwilliam, of Coronation Road, Bristol.

BAGNALL—HARDY.—On November 3, at Stalybridge, by the Rev. T. M. Oldfield, M.A., Percy Bagnall, chemist and druggist, to Eva, eldest daughter of Mr. R. Hardy, Stalybridge.

MALLABAND—SHAPTER.—At Christchurch, Ealing, W., on October 31, W. H. Mallaband, pharmaceutical chemist, of Reading, to May, daughter of Mr. W. Shapter, of Rooklands, Newton Abbot, Devon.

Obituary.

DAVIES.—On October 16, Ellis Jones Davies, Chemist and Druggist, late of Seymour Street, London, N.W. Aged 30.

LUND.—On October 24, Thomas Lund, Chemist and Druggist, York. Aged 63. Mr. Lund had been a member of the Pharmaceutical Society since 1892.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, & two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours, post free, 5s.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns, second-hand; triples and binoculars: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Oil of Lemon (superfine).—Advertiser being overstocked will sell cheap; 10 lbs. Copper, 22s. 6d. on rail; sample pound, 3s., delivered free anywhere, cash with order.—Chemist, 34, Avondale Road, Chorley.

For Sale.—Show Jar for window, as Maw's Fig. 1, plain gold cover, total height about 32 inches, with Fig. 2 stand £3, cost over £6.—Hodgson, Chemist, Waterloo, Liverpool.

What Offers?—1 oz. Zymine Fairchild, 1 oz. Orthoform, 1 oz. Lysidine, ½ lb. Bromidia, 1 oz. Piperazin, 2/6 Izal, 1 oz. Celloidin, 1 lb. Formalin, 500 Thyroid Tablets B.W.—C. R., 156, Green Lanes, N.

Books.

For Sale.—Balfour's 'Manual of Botany,' 5th edition, published at 16s.; Newth's 'Inorganic Chemistry,' both new; also Green's 'Manual of Botany,' vol. i. What offers?—Apply, Manager, 11, Briggate, Brighouse, Yorks.

WANTED.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsell, 9, Derwent Grove, East Dulwich, London, S.E.

Wanted.—A second-hand ½-gallon Tincture Press; send price, description, and condition to—Horace Ridley, Chemist, Princes Risborough, Bucks.

Pharmaceutical Journals, Jan. 16, 1897; May 22, 1897; Sept. 25, 1897; Oct. 2, 1897; Dec. 25, 1897. Full price will be paid for clean and complete copies by the Secretary, Pharmaceutical Society, 16, Bloomsbury Square, London, W.C.

Marked Copies of the following Newspapers, etc., have been received during the week:—*Bath Herald, Blackpool Herald, and Fylde Advertiser*

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Alcock, Allan, Armstrong, Barker, Barnes, Beck, Bell, Bennison, Branch, Brodie, Brunt, Campkin, Churchill, Cox, Cracknell, Crosby, Curtis, Dell, Doward, Eldred, Farquhar, Feaver, Garnett, Gibson, Green, Hawthorn, Hill, Jackson, Jesson, Jones, Kimpton, Lewis, Lillard, Lloyd, Mackie, Mason, Matthews, Merson, Mitchell, Morley, Mumbray, O'Halloran, Pollitt, Poppelreuter, Roberts, Savage, Shillinglaw, Smith, Spitta, Swanson, Swinton, Umney, Vince, Watson, Wardleworth, White.

1. TONGUE OF CRICKET $\times 20$. Photo-achro, 1 inch. WRAY.

2. PIECE OF DIATOM. Showing effect of *too great* closing of iris—compare with Fig. 5.
3. WHITE LINE EFFECT around Hairs on Proboscis by using *too small* a cone of light $\times 400$.
4. *CONE THE CORRECT DIAMETER*. Hairs shown sharp and crisp, no diffraction effects $\times 400$.

5. ARACHNOIDISCUS EHRENBERGHII $\times 220$

6. LEG OF BEE. Showing Corbicula $\times 55$

7. HAIR OF PENCIL TAIL $\times 400$.

8. PROBOSCIS OF BLOW-FLY $\times 40$.

10. NAVICULA LYRA $\times 600$. Small N.A. (.65) employed; dots not distinct.

9. FOOT OF MINUTE GARDEN SPIDER $\times 400$.

11. NAVICULA LYRA $\times 600$. High N.A. (1.40) Dots distinctly visible although *same magnification* as Fig. 10.

PHARMACY IN AUSTRALASIA.

PHARMACEUTICAL INTEREST IN VICTORIA is at present centred in the Bill introduced by the Government to amend the Poisons Act, 1890, or, more particularly, the fourteenth section of that Act, the apparently ambiguous construction of which led to so disappointing and unlooked-for a decision in the recent Pink Pills case. So far as it goes, the Bill is admitted to express very clearly the intention of the Legislature as to the application of the proviso "that all such sales be entered in a book, etc.," which, it will be remembered, was held by the Full Court to apply only to sales by wholesale dealers. But it falls very far short indeed of the Bill as it would have appeared had the Government the courage to have adopted in full the suggested amendments of the Pharmacy Board, according to which, apart from proposed alterations in other sections (3 and 5), patent and proprietary medicines, poisoned seed, etc., packets of poisonous mixtures, and fly poison papers would have been totally omitted from the list of exemptions! As it is, the inclusion in the Bill of the provision for the sale of poisoned seed and packets of poisonous mixtures by unqualified persons is regarded by the Council of the Pharmaceutical Society "as a very serious interference with existing safeguards, the indiscriminate sale of the many dangerous poisons for the destruction of vermin by irresponsible persons being likely to lead to fatal results"; and it was resolved at their monthly meeting on September 16 that a meeting of the chemists of the colony be called for Wednesday, September 28, to consider the necessity of steps being taken to obtain an amendment of the clause in accordance with the suggestions already made by the Pharmacy Board to the Government. As the *Australasian Journal of Pharmacy* expresses it, it is to be hoped that the hands of the Board will be so strengthened by that meeting that the Government may, with a reasonable prospect of success, be moved to provide the improved legislation which is so desirable. As reference will, no doubt, be made in the Journal to the various clauses of the Bill in subsequent notes, it may be of advantage to readers to have the text of the two principal sections before them. Accordingly, it is given below. The sub-clause of Clause 2, Section 4, commencing "No person, etc.," is, properly speaking, not in the Bill as originally introduced, but is a proposed amendment, evidently in deference to the representations of the Pharmacy Board by the Chief Secretary, one of the sponsors of the measure:—

13. The *Poisons Act*, 1890, shall not apply to the sale of any poison—

- (a) when made up or compounded as a medicine by a legally qualified medical practitioner or by a registered pharmaceutical chemist according to the prescription of a legally qualified medical practitioner; or
- (b) in the form of homeopathic medicine, unless in the crude state, mother tincture, or of a greater strength than the third decimal potency.

14. (1) The *Poisons Act*, 1890, shall not apply to the sale of—

- (a) patent or proprietary medicines;
- (b) photographic materials for the purpose of photography; or
- (c) medicines dispensed by registered veterinary surgeons for animals under their treatment; or
- (d) poisoned seed for the destruction of vermin (within the meaning of the *Vermin Destruction Act*, 1890); or
- (e) packets of poisonous mixtures for the destruction of vermin other than vermin mentioned in paragraph (d); or
- (f) fly poison papers; or
- (g) poisons by wholesale dealers in the ordinary course of wholesale dealing where an order in writing signed by the purchaser has been given for the supply of the same.

(2) Every sale of any materials or articles mentioned in this section and which consist of or contain any poison shall at the time of sale and before delivery be entered by the person who sells the same or by any employé assistant or apprentice of such person in a book, together with the date of sale the quantity and nature of materials or articles sold and the name and place of abode of the purchaser; and no such materials or articles consisting of or containing any poison shall be sold or delivered unless the bottle or other vessel wrapper or cover box or case immediately containing such materials or articles bears the word "Poison" printed conspicuously thereon, together with the name and address of the seller thereof.

No person shall sell any materials or articles specified in paragraphs (d) and (e) of sub-section (1) of this section if they consist of or contain any poison specified in the First Part of the Second Schedule to the *Poisons Act*, 1890, to any person who is under eighteen years of age or who is unknown to the vendor, unless the sale be made in the presence of some witness who is known to the vendor and to whom the purchaser is known, and unless such witness signs his name together with his place of abode to the required entry before the delivery of the materials or articles to the purchaser.

(3) If in contravention of this section any person sells or delivers any such materials or articles consisting of or containing any poison he shall on conviction therefor be liable to a penalty not exceeding Twenty pounds.

(4) Any person on whose behalf a sale is made shall be deemed to be the person who sells, and every employé assistant or apprentice of such person shall be liable to the like penalties as the person on whose behalf he makes any sale.

(5) In any prosecution for a contravention of this section it shall be sufficient

to prove that materials or articles commonly sold under the same name or description as the particular material or article the subject of the prosecution consist of or contain poison, and the burden of proof that such particular material or article does not contain poison shall lie on the defendant.

AS THE RESULT OF REPRESENTATIONS made to the Government by the Pharmacy Board and the Victorian British Medical Association, a Bill was introduced into the Legislative Council of Victoria on September 1, and passed its second and third reading on September 14, fixing January 1, 1899, as the date on which the new Pharmacopœia should come into recognised operation throughout the colony, notice of which is to be given in the *Government Gazette* immediately after the passing of the Act, and also during the month of January next. Provision is made in the Bill that whenever at any time any alteration is made by and under the direction of the General Council of Medical Education and Registration of the United Kingdom, it shall be lawful for the Governor in Council by notice published in the *Government Gazette* to declare that on and after a date specified in such notice the British Pharmacopœia as so altered shall have force in Victoria, and shall be substituted for the Pharmacopœia theretofore in force in the colony, thus obviating the necessity of any application to the Legislature on the subject in future. Of the few members interested in the measure, the Hon. F. S. Grimwade (Messrs. Felton, Grimwade and Co.) elicited an assurance from the Government representative, Sir Henry Cuthbert, that the sanction accorded was not simply permissive, but mandatory; and when Mr. Grimwade put the question, What would be done to a medical man if, for instance, he made up his prescription under the Pharmacopœia of 1890, without stating that he was doing so? Sir Henry assured him that the medical man would have to take the consequences, and might probably have to answer for it before the coroner. So that, so far as Victoria is concerned, finality is arrived at on this somewhat ticklish question.

A DECISION OF CONSIDERABLE INTEREST to vendors of drugs has recently been given by the Victorian Full Court in the case of a man named John Woodford Hyland, found guilty at the Criminal Sittings of the Supreme Court in July of having supplied to an officer of the police (who had set himself the task of "trapping" his man) certain noxious things, to wit, pills, containing drugs described, well knowing that the same were intended to be unlawfully used and employed with intent to bring about a certain result on a woman unknown. The points presented for the consideration of the Full Court were: (1) Must there be an existing woman? (2) Must there be intent to procure the result as alleged? Counsel for the Crown, in support of his position that it was not necessary there should be an existing woman, read from a judgment of the late Chief Justice Higinbotham, in what is known as the Drake case, in which it was held that the offence was complete if there were belief in the mind of the person supplying the drug that it was intended to unlawfully use it. The offence was the unlawful supplying of the drug, in the belief that it was intended to unlawfully use it, and it was not material whether there was an existing woman or not, upon whom it was intended to use the drugs. As regards the contention for the defence that a "noxious" thing must be capable of producing the result intended, it was submitted by the Crown that it was only necessary that it should be shown that the drugs were injurious. Against this it was argued by the counsel for the defence that, notwithstanding the decision of the court to the contrary in the case of the Queen v. Drake, it was necessary to prove the existence of the woman for whose use the drug was supplied, and it was also necessary to show that there was an intent either on the part of the person who supplied it or the person who received it, that it should be used for an illegal purpose. In this case there was no existent woman, and there was no intent shown. When their Honours delivered their judgments, it was found that three—Mr. Justice Williams, Mr. Justice A. Beckett, and Mr. Justice Hood—were in favour of affirming the conviction, and three—Chief Justice Madden, Mr. Justice Holroyd, and Mr. Justice Hodges—in favour of quashing it. The Chief Justice then announced that the Court being thus equally divided the judgment would, in accordance with the Act, follow his decision, and the conviction would accordingly be quashed. Apparently from the remarks made by Mr. Justice Williams this decision not only upsets the Victorian judgment in the Queen v. Drake, but is also opposed to that in the English case of the Queen v. Hillman. In the latter judgment, according to His Honour, there was no reference to an existing woman, while the intention of any person other than the prisoner was held to be immaterial.

ENGLISH NEWS.

COLONIAL ISSUE.—The *Pharmaceutical Journal* of the 26th inst. will be sent to every wholesale and retail chemist throughout the British Colonies and India in addition to the ordinary subscribers. This is the most comprehensive colonial distribution of any drug journal during the year. Advertisements should be sent without delay to the Publishers, 5, Serle Street, Lincoln's Inn, W.C.

DR. A. P. LUFF, whose book on "Gout" has just been published by Messrs. Cassell and Co., has retired from his medico-legal practice, and is now limiting himself to consulting medical practice in connection with gout and rheumatism.

POISONING BY STRYCHNINE.—On Thursday, November 3, Mr. A. Braxton Hicks resumed his inquest at Kingston, with reference to the death of Arthur Burrowes Sleigh, 39, a retired military officer, who died at 8, Oriel Gardens, New Road, Kingston, on October 3. Dr. J. E. S. Barnett, of Kingston, who was called in to see the deceased, stated that he displayed marked symptoms of lockjaw, the spasms being very violent, accompanied by threatened asphyxia. Witness attended him until he died. In his opinion death was due to asphyxia, through a spasm of the respiratory muscles, resulting from the taking of a poison of the nature of strychnine. Dr. F. Womack, lecturer on pathology at St. Bartholomew's Hospital, said he analysed the contents of the stomach, and found about one-sixth of a grain of strychnine. The smallest ascertained fatal dose of that drug was half a grain in an adult. The jury returned a verdict "that the deceased died from the effects of strychnine poisoning, but how it came to be administered there was not sufficient evidence to show."

SILVER WEDDING.—On Monday, October 31, the silver wedding of Mr. and Mrs. C. Goddard-Clarke, of the firm of Messrs. Potter and Clarke, wholesale chemists, of Artillery Lane, E.C., was celebrated by a dinner at the Surrey Masonic Hall, Brixton. There was a large assemblage of guests, while the list of presents included many valuable articles. On the Thursday evening following, November 3, at the Surrey Masonic Hall, the employes of the firm held a social gathering to celebrate the event, Mr. R. C. Wren presiding. Letters of apology for absence were read from the senior partner, Mr. Potter, and Messrs. Bickerton, W. Thomas, and Turner (country travellers) each containing words of congratulation to Mr. and Mrs. Clarke. The chief item in the programme was the presentation to Mr. and Messrs. Clarke of a handsome onyx (Italian cameo) marble clock supplied by Messrs. Benetfink, of Cheapside. The clock, which was a very handsome one, was adorned with a gold plate, upon which was inscribed the following words:—"Presented to Mr. and Mrs. Goddard Clarke on the occasion of their silver wedding, by the employes of Messrs. Potter and Clarke, as a token of their respect and goodwill, 1873-1898." The presentation was made by Mr. Skuse, who concluded a very appropriate speech by a reference to Mr. Goddard Clarke's successful public career, and remarked that they would not be satisfied until Mr. Clarke had added "M.P." to his name. Mr. Clarke, in suitable terms, thanked them for their handsome present, and said he had been quite overwhelmed with the congratulations of his friends and the many expressions of the goodwill and feeling exhibited by the employes of the firm. Mrs. Clarke also in a happy little speech briefly returned thanks, remarking that it was sweet to see that others loved and esteemed those whom one loved best of all. A capital entertainment was given by members of the company, and a most enjoyable evening was spent.

LIEUT.-COLONEL AND SHERIFF CLIFFORD PROBYN has been appointed to the commission of Lieutenancy of the City of London on the nomination of the Lord Mayor, November 5.

FOOTBALL.—The match between the Pharmaceutical Football Club and Polytechnic F. Team, played last Saturday at Wormholt Farm, resulted in a win for the Square team of 5 goals to nil. P.F.C. team: goal, K. J. Padwick; backs, P. B. Gray, W. Garsed; half-backs, J. Evans, L. Tibbitt, T. J. Stokoe; forwards, T. J. Wild, H. S. Durbin, M. Lloyd, W. Collennette, and W. J. Wilkinson.—The return match of the Metropolitan College of Pharmacy F.C. and "Muter's" F.C. was played at Wormholt Farm, Shepherd's Bush, on Saturday, November 5, the game resulting in a win for the "Metropolitans" by 6 goals to 1.

ROYAL SOCIETY COUNCIL.—The following is a list of those who have been recommended by the President and Council of the Royal Society for election into the Council for the year 1899 at the anniversary meeting on November 30:—President, Lord Lister; Treasurer, Mr. Alfred Bray Kempe; Secretaries, Professor Michael Foster and Professor Arthur William Rücker; Foreign Secretary, Sir Edward Frankland; other members of the Council, Professor Thomas George Bonney, Captain Ettrick William Creak, R.N., Professor Daniel John Cunningham, Professor James Dewar, Professor William Dobinson Halliburton, Professor William Abbott Herdman, Mr. Victor A. H. Horsley, Dr. Joseph Larmor, Professor Nevil Story Maskelyne, Sir Andrew Noble, Professor Edward Bagnall Poulton, Dr. William James Russell, Professor Arthur Schuster, Mr. Dukinfield Henry Scott, Dr. George Johnstone, and Professor Joseph John Thomson.

ROYAL INSTITUTION.—A general monthly meeting of the members of the Royal Institution was held on November 7, Sir James Crichton-Browne, Treasurer and Vice-President, presiding. The special thanks of the members were returned to Mr. J. B. Carrington for his donation of £25, and to Mr. Charles Scott Dickson, Q.C., Solicitor-General for Scotland, for his donation of £100 to the fund for the promotion of experimental research at low temperatures.

SHEFFIELD MICROSCOPICAL SOCIETY.—In his inaugural address to this Society on November 4, Dr. Porter dealt principally with the application of the microscope to medicine, and particularly to bacteriology. He said one of the great advantages of these local societies was that it brought together on common ground those who were interested in microscopical work of every kind—biological, chemical, botanical, mineralogical, or medical. It facilitated the special work of each, and at the same time made those who were engaged in one branch of study acquainted with what others were doing, the use of the microscope being the point of contact. He spoke of the infinite possibilities of the application of the microscope to that infinite science—bacteriology. They were learning to look to the microscope as one hope of averting in the future many of the pestilential scourges of the present day. It was becoming more and more necessary that there should be established in every populous centre a properly equipped State laboratory, under the care of bacteriologists. The importance to the public of the encouragement of medical science was unfortunately only very inadequately recognised in this country. England was a happy hunting ground of faddists of all kinds, and our political system encouraged rather than checked the mischief these people were capable of causing when organised. As a painful instance of this truth he cited the new Vaccination Act.

MESSRS. C. J. HEWLETT AND SON, have now published the third edition of 'Notes on the New British Pharmacopœia, 1898,' compiled by Mr. E. J. Millard. No less than 11,050 copies of these "Notes" have been distributed, copies having been supplied by special request to the students of the materia medica class at Glasgow University, Melbourne University, and other institutions.

DEATH OF A CHILD FROM OPIUM POISONING.—An inquest was held at Winkleigh on November 1, respecting the death of Mary Cordelia Hall, an infant. The father of the child said on October 28 the child was suffering from flatulence, and he gave it three drops of "Bateman's Pectoral Drops," mixed with water and sugar. In the evening the child had a difficulty in breathing. The next morning, as they could not wake it, she was put in a warm bath, and as that had no effect Dr. Norman was fetched. The child died about noon. He had been in the habit of administering the drops to his elder children, with beneficial results. Dr. Norman said the child was in a comatose state and its face was pallid, the symptoms of opium poisoning. The child had been strong and healthy from birth, and was well nourished. He had no doubt death was due to opium poisoning. He sent the bottle of "drops" to Dr. Slade King, who reported opium present in a well-defined quantity. Witness considered it was wrong to give such a preparation to a young child. The jury returned a verdict of "Death from opium poisoning," the opium being inadvertently administered.

COMING OF AGE PRESENTATION.—An interesting ceremony took place on Saturday last, at the establishment of Mr. James Townsend and Son, chemists' printers, in Granby Street, Exeter, the occasion

being a presentation to Mr. Herbert Townsend, son of the senior partner, on his attaining his majority. The presentation took the form of a non-magnetic gold lever watch and a beautifully illuminated address, which bore the following inscription:—"Presented, together with a non-magnetic gold lever watch, to Mr. Herbert Townsend, on the occasion of his coming of age, November 4, 1898, as a token of respect and esteem and best wishes for his future happiness and prosperity of the firm by the undermentioned employes." Then followed the names of 220 subscribers. The counting house staff at Messrs. James Townsend and Son have also presented Mr. Herbert Townsend with a water-colour "View of the Lyd, Dartmoor," by A. J. Couche.

AN UNQUALIFIED SELLER OF LAUDANUM.—At the Heanor Petty Sessions on Monday, November 7, an elderly woman was charged with attempting to commit suicide by taking laudanum on the previous Saturday. In the course of the evidence Mary Ann Slack, who has a shop in Mount Street, Heanor, stated that the defendant came in the shop on the Saturday morning for a pennyworth of laudanum, and she let her have some from her own supply. The name of Mary Ann Slack does not appear in the Register of Chemists and Druggists.

THE PHARMACEUTICAL MAYORS elected this week include the following: Mr. Leonard Parker Chapman, Barrow-in-Furness; Alderman James Floyd, Bury St. Edmunds; Mr. John Coles Coles, Chippenham; Alderman J. Horsley (re-elected), Hartlepool; Mr. John Kinsey Jones (re-elected), Llanidloes; Mr. Frederick Mason, Rotherham; Mr. John Alfred Steward, Worcester.

THE SCIENTIFIC PRESS, LTD., announce that they will shortly publish a new work, by C. J. S. Thompson, author of 'The Mystery and Romance of Alchemy and Pharmacy,' etc., entitled 'Poison Romance and Poison Mysteries.' The book deals with ancient poison lore and the most interesting and notable poison mysteries of mediæval and modern times.

MR. S. R. ANNESS, pharmaceutical chemist, 26, Westgate Street, Ipswich, has disposed of his business to Messrs. Pain and Bayles, of Cornhill, Ipswich. Alderman Anness, who carried on the business for forty-four years, is retiring, and it is understood that Messrs. Pain and Bayles will transfer all the proprietary articles, etc. to their existing establishment.

MANCHESTER PHARMACEUTICAL ASSOCIATION.—The second meeting of the session was held in the rooms of the Chemical Club, Victoria Hotel, on Wednesday evening, when papers were read on the "Standardisation Processes of the B.P.," by Mr. J. H. Hoseason, and "The Pharmacy of the B.P.," by Mr. J. Grier. Mr. G. S. Woolley presided, and there was a good attendance. Messrs. W. Gibbons, E. W. Battle, John Roberts, A. Ogden and T. Burch were elected members of the Association.

LEICESTER CHEMISTS' SOCIAL UNION.—A hot supper was served at the Clarendon Rooms, Granby Street, on Thursday, November 3, at 9 o'clock. Amongst others, the following gentlemen were present:—Mr. T. Howard Lloyd (Chairman), Mr. E. H. Butler (Vice-Chairman), Messrs. Clear, Cleaver, Hampton, Thirlby, Burford, F.C.S., Lewis Ough, F.C.S., Murray, Neale, Tippetts, White, Goodess, Edwards, Elmitt, E. H. Butler, jun., etc., etc. Apologies were received from Messrs. Hurd, W. B. Clark, Elliott, etc. Twenty-five in all sat down to supper, and after a happy speech by the chairman, and valuable suggestions for the coming session from Messrs. Burford and Thirlby, the company adjourned for a most enjoyable concert. The following gentlemen rendered excellent services:—Mr. Gough, pianist; Mr. Audley, who caused immense merriment with his humorous songs; Mr. Thirlby and Mr. E. Goodess, who gave recitations; Mr. Tibbetts, a mandoline solo; songs being given by Messrs. Gough, F. W. Goodess, E. H. Butler, Beale, Cynlais Davies, D.P.A.R.M., S. Cleaver. A hearty vote of thanks was passed to the chairman for presiding.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY.—An audience numbering upwards of eighty assembled at the Kardomah Café, Church Street, Liverpool, on Thursday evening, November 3, to take part in the first social reunion of the above Society for the present session. The Chairman, Mr. R. C. Cowley, assisted by the Treasurer, Mr. Cooke, and the Secretary, Mr. P. C. Jenner, provided a programme of considerable length and excellence, the various

instrumental and vocal items of which were rendered in first-class style by the following members of the Society and their friends: Messrs. Bennington, Bonsell, Bones, Cooke, Hall, Harrod, Hughes, Nicholson, Oxford, Shacklady, Shute, Sutton, Stevenson, Stone, Tinsley, and Dr. Watson. In a vote of thanks to the performers at the close of the "Smoker," Mr. T. H. Wardleworth felicitated Messrs. Jenner and Cooke upon the result of their efforts, and characterised the whole evening's entertainment as an unqualified success and one which would tend to the increase of their Society's roll of membership, and consequently to extend the limits of its usefulness.

SUNDERLAND CHEMISTS' ASSOCIATION.—At a Council meeting of the above Association, the members discussed the new defence scheme as issued by the P.A.T.A., and it was decided to call a special meeting of the Association, to which the chemists in the surrounding district should be invited, so that the Association could report to the promoters of the scheme the decisions of the district and what support they might expect. The date fixed for the meeting is Wednesday, November 23, at 5.30 p.m., in the Grand Hotel, Bridge Street, Sunderland.

FOR SOME TWELVE MONTHS or so there have been rumours in the air as to the flotation of a new company, which should combine the European and American Kodak businesses, the capital being indifferently stated as from two to three millions sterling. Now at last the cat is out of the bag, or the preliminary prospectus of Kodak, Limited. The capital is to be £1,600,000, of which 350,000 £1 six per cent. preference shares at par and 300,000 £1 ordinary shares at 25s. are offered to the public. Considering that the profits for the past half-year are over £103,000, and show an increase of about 27½ per cent. over those in 1897, these shares might be worth touching for those with a little money to spare.

IRISH NEWS.

THE RELATIONS between Boards of Guardians in Ireland and their dispensary officers are daily becoming more strained, and it is not improbable that matters will be brought to a crisis before many weeks. Insufficient salary and excessive hours of duty are the chief elements of dissatisfaction, while cases of autocratic "bumblodm" and tyranny by arrogant P.L.G's. are by no means isolated. The question "Is a strike possible?" has already been asked through the public press.

A NEW SOCIETY, called the Dental Students' Association of Ireland, has just started in Dublin. Its objects are the advancement of dental science amongst students. At the first meeting, held a few evenings ago, an interesting paper on the six-year molar was read by Mr. G. W. Story.

CORK AND THE BRITISH ASSOCIATION.—The members of the medical profession in Cork have assured the British Association a warm welcome should the Association meet in the "southern capital" in the year 1900, and that welcome is cordially seconded by the drug and chemical representatives in Munster. The co-operation of medicine and her handmaiden—pharmacy—would be essential to the success of the visit, and the distinguished body to whom the invitation has been extended can look forward to a stay the success of which is pre-assured. It is not at all improbable that the British Association for the Advancement of Science will accept the unanimous and cordial invitation, and hold its session two years hence in "Cork's own town."

PHARMACEUTICAL SOCIETY OF IRELAND.—The first evening meeting of the session was held at 67, Lower Mount Street, Dublin, on Monday, November 7, the President, Mr. R. J. Downes, in the chair.—A brief address was delivered by Mr. Downes, in which he dealt with the scientific training of educated youth, and concluded his address by expressing a hope that the evening meetings may be the means of preventing the Society working in a low level or travelling in a rut, but that "it may be one of the great intellectual centres of the world."—The election of a new committee was then proceeded with, and the following were chosen for the ensuing session:—Miss Ada Wyatt and Messrs. W. V. Johnston, J. Michie, J. Tyrie Turner, J. Smith, and H. O'Connor. The last-named gentleman was unanimously re-elected honorary secretary. Reporters were appointed as follows:—Section of

pharmacy, Mr. W. V. Johnston; section of chemistry, Mr. Henry Hunt; section of materia medica, Mr. J. Smith. It was stated that it was not improbable the idea of having a library in connection with the evening meetings would be well received by the School Committee. As yet, however, a decision had not been given in the matter. The honorary secretary was directed to write to the Registrar to remind the Council of the matter.

DR. EVERETT, Professor of Natural Philosophy in Queen's College, Belfast, is retiring from a position which he has filled with unexampled ability and honour for thirty years. He is the author of the translation of Deschanel's work on 'Physics,' which has become a standard text-book in Great Britain. The Professor in his farewell remarks referred to the absence of rooms suitable for carrying on the necessary experiments in practical physics.

MR. BENJAMIN MOORE, M.A., First-class Honourman in Science R.U.I., who was lately coadjutor of Professor Schafer, London, has been appointed to the chair of physiology in Yale University, U.S.A. Professor Moore is a Belfast man, and was formerly a student under Mr. Robt. Barklie, F.C.S., and also in Queen's College. He studied for some years at Leipzig. He has genius of a high order, but possesses in an eminent degree its better part, "capacity for taking pains." He has conducted original research in the province of physiology, the results of which were included in the 'British Dictionary of Physiology,' under the sub-heading "The Chemistry of Digestion."

THE RECENT PROCEEDINGS AT DUBLIN of the Health Congress have had an interesting souvenir in the conferring of the diploma of the Apothecaries' Hall on the following gentlemen: Mr. William Robert Smith, Professor of Hygiene, Professor King's College, London, D.Sc., etc.; Dr. Mathew Hay, Professor of Medical Jurisprudence, Aberdeen; and Alexander Crum Brown, Professor of Chemistry, Edinburgh. At the function were present Dr. Raverty (in the chair), Sir Charles Cameron, W. J. Furlong, John Evans, H. Auchinleck, J. A. Johns, J. Knott, C. R. C. Tichborne, C. M. O'Brien, T. D. Rice, A. H. Jacob, T. D. Finucane, J. Shaw, S. M. Thompson, B. Montgomery, etc. Dr. Tichborne made a neat speech on the occasion, and spoke highly of the ability of the distinguished recipients of the grace. Sir Charles Cameron also spoke, and the diplomas were presented amid applause.

THERE ARE A NUMBER OF PERSONS who deem the restrictions upon the sale of poisons to be too stringent. As a rule they do not consider the subject from the standpoint of public safety, but from the inclinations of various sections of their constituencies. Any pharmacist could do a roaring trade in poisons. It is his duty, however, to exercise his intelligence. There are chemists who refuse to sell strychnine or prussic acid in any case. A would-be suicide told how he could get nothing stronger than laudanum, and how exasperated he was when he woke up stiff and benumbed. This was not the lot of Mr. Graham, of Londonderry, who during a bout of heavy drinking purchased some strychnine in a chemist's, which he promptly swallowed, and died after a few hours' agony.

SCOTTISH NEWS.

EDINBURGH DISTRICT CHEMISTS' GOLF CLUB.—The tie to decide the holder of the Gibson Handicap Medal for the year was played off at the Braids last week, and resulted in favour of Mr. W. C. Baker, with the score of 94 less 12=82. This finished the competition for the season.

PRESENTATION AT GLASGOW.—On October 28, at 57, East Howard Street, Glasgow, the employés of Cockburn and Co., presented their laboratory chemist, Mr. Bonnar, A.P.S., with a gold Albert and appendage on the occasion of his leaving to take over on his own account the branch shop at 630, Rutherglen Road, Glasgow, formerly carried on by Mr. Jas. Grant.

THE DISPENSER IN CONNECTION with the City Parish Board of Glasgow has evidently a busy time. During the past month he made up 7358 prescriptions, an average of about 250 a day. This did not, however, altogether meet the requirements of the poor of the parish, as in addition the following prescriptions were made up outside:—Glasgow Apothecaries' Company, 25; J. and R. Rodman, 71; D. P. Walker, 163; and Anderson and Ireland, 21.

FRENCH NEWS.

DEATH OF AN OLD-ESTABLISHED ENGLISH CHEMIST IN PARIS.—It is with the deepest regret that we announce the death of Mr. H. Swann, pharmacien, 12, Rue Castiglione, Paris, which occurred on Tuesday, November 8, at 6.30 p.m. He was one of the oldest established English chemists in France, having established the business in Rue Castiglione in 1850. Prior to that time he was assistant with Messrs. Roberts and Company, then in the Place Vendôme (now Rue de la Paix). His death was by no means sudden, he having been seized a little over twelve months ago with a paralytic stroke. Since then he has been confined to his bed. At times he has been quite conscious, and his end was happily peaceful.

INCREASED DUTIES ON ALCOHOL.—The new tariff of octroi duties on wines and spirits, which came into operation in Paris on the 22nd ult., will either seriously affect the consumption of these luxuries or make a large addition to the revenue. According to information gleaned from a reliable source, the taxation of spirits, which has hitherto amounted to 266f. 5c. per 100 litres, is now 351f. 25c., of which 165f. goes to the city of Paris and 186f. 25c. to the State. This means a tax of 3f. 50c. per litre on pure alcohol as compared with 2f. 66c. under the former tariff, and the charge will most certainly cause a considerable rise in the price of a "drink."

BETAINE IN MARSHMALLOW ROOT.—M. Orloff, having subjected the root of marshmallow to a series of careful analyses, has declared the presence of another principle, which, after purification, he declares to be betaine.

STUDENT'S ESCAPE.—A young pharmaceutical student of one of the Parisian colleges disappeared a few days ago from his parental roof on the Boulevard Malesherbes with one of the housemaids, at the same time lining his pocket with the snug sum of 3000 francs from the family coffers. On Monday afternoon the youth's uncle espied him in the Rue de l'École de Médecine in a cab in company with the lady who had won his youthful affections. On seeing his uncle, the youth urged the jehu to whip up his sleepy steed. The uncle, however, took another cab and followed his fugitive nephew to the Boulevard Arago, where the horse in the latter's cab fell down. Seeing that he was destined to be captured, the lad jumped out and brutally attacked his uncle. He was finally dragged off by some passers-by, and, in company with his lady-love, was handed over to the police.

ANNUAL BANQUET.—The annual banquet of the Société de Prévoyance will be held on Monday, December 5. All members are earnestly invited to assist. The Committee promise, according to their customary habit, to do their utmost to make the event a happy and successful one, the recollection of which they will retain as a pleasant souvenir.

Trade Notes.

IN THE 'DEUTSCHE MEDIZINALE ZEITUNG' appears an important decree by the Imperial Austrian Minister of the Interior with regard to the use of formalin by all the sanitary authorities of the Empire. The order instructs all sanitary officers and inspectors to freely make use of either liquid formalin or of the gas as diffused by means of the "Alformant" lamps as the most efficient and at the same time harmless disinfectant for rooms and wearing apparel. It is noteworthy that this decree follows immediately after the critical test which this new method of disinfection has stood in the recent plague scare at Vienna. It appears that this new disinfectant, which has been under discussion by our own sanitary authorities, is a new departure in the abatement of infectious disease.

MESSRS. BURROUGHS, WELLCOME AND Co., owing to the continued development of their business, have had to make considerable extensions of the offices and warehouses at Snow Hill Buildings. Consequently the six-storied buildings, Nos. 42 and 43, Snow Hill, having a frontage of more than 50 feet, have been recently acquired, and are now undergoing the necessary alterations to adapt them to the requirements of the firm.

MARKET REPORT.

The quotations here are given in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

NOVEMBER 10, 1898.

Business has assumed a somewhat more cheerful tone in the drug and chemical markets during the past week. Chief incidents have been an advance in price of Mercurials, the continued firmness with expected further advance in price of Quinine, and the large advance in price of Sulphonol. Camphor is also up, with a further advance confidently foretold. Mercurials were also advanced in price by the makers. Acid Citric is quiet. Acid Tartaric weak and rather lower, Cream of Tartar, on the other hand, being slightly dearer. Quicksilver is steady. Opium and Morphia quiet. Codeia steady. Cocaine firm, with an advance in price expected. Acetanilide quiet. Phenacetin unchanged. Sulphate of Copper very firm, in sympathy with the metal. Sulphate of Ammonia dearer. Iodides and Iodine, Bromides and Bromine without change. The following are particulars of prices actually ruling:—

ACETANILIDE—Quiet at 11d. to 1s. 1d. per lb.

ACID BORACIC.—Firm at 24s. per cwt. for *crystals* and 26s. per cwt. for *powder*.

ACID CARBOLIC—Is in good demand at the unchanged value for the *refined*. *Crude* is quoted 2s. per gallon for the 60° F., and 2s. 4d. per gallon. For the 75° F. *liquid* 95 per cent. of pale straw colour, 1s. 1d. to 1s. 3d. per gallon.

ACID CITRIC.—Quiet at 1s. 2d. to 1s. 2½d. per lb. for *crystals*.

ACID OXALIC.—Unchanged at 3¼d. to 3½d. per lb. for *crystals* and 3½d. to 3¾d. per lb. for *powder*.

ACID TARTARIC—Slow of sale and rather easier at 12½d. to 12¾d. per lb. for *English crystals*, and 12d. to 12¼d. for *foreign*.

ALUM—Is firm at £5 7s. 6d. per ton for loose lump, and £6 per ton for ground in bags.

AMMONIA COMPOUNDS.—*Sulphate* is again dearer but closes quiet at £10 for grey prompt, 24 per cent., London; same prices being quoted for Hull and Leith. *Carbonate* is very firm at 3d. to 4d. per lb., according to quantity and package. *Bromide* firm at 2s. 1d. per lb. *Iodide* very quiet at 13s. 7d. per lb. *Muriate*: Chemically pure small crystals, 30s. to 32s. per cwt.; free from metals, white, 25s. 6d. to 26s. 6d. per cwt. *Oxalate*, 5¼d. to 5½d. per lb. *Sulpho-cyanide* is steady at 1s. to 1s. 1d. per lb., according to quantity. *Sal ammoniac* firm at 35s. per cwt. for firsts sublimed; seconds, 33s. per cwt.; crushed for batteries, 37s. and 35s. per cwt. respectively.

ARSENIC—Is steady at 18s. per cwt. for powder, and 34s. per cwt. for lump.

BLEACHING POWDER—Steady at £6 10s. to £7 per ton.

BORAX.—Firm at 14s. 3d. to 14s. 9d. per cwt. for lump, and 14s. 6d. to 15s. per cwt. for powder.

BROMIDES AND BROMINE—Steady at unchanged prices from last week.

CAMPHOR.—The market for *crude* continues very firm, and refiners have advanced their prices for bells and tablets 1d. per lb. A further advance is anticipated.

CASCARA SAGRADA.—The market continues strong at 25s. per cwt. for new, and 28s. per cwt. for old bark. It now seems pretty certain that we shall see much higher prices before the next season's bark is gathered.

CINCHONA BARK.—At the London auctions on Tuesday very small supplies were offered, the total of all descriptions amounting to only 931 packages. A very good demand prevailed and the bulk sold at a further slight advance on the last Amsterdam sales.

Ceylon: 122 bales and 3 cases sold, according to analysis, Succirubra, bold quill at 3½d., fair to good natural quilly chips at 3½d. to 3¾d., fair chips at 2¾d., fair renewed ditto at 2½d., good Hybrid stem chips at 4¼d. *East Indian*: 32 bales offered and 7 bales sold, Officialis renewed chips, good at 3½d., shavings at 3¾d. *South American*: 587 bales Bolivian cultivated Calisaya quills offered and about 500 bales sold, fair to good rich at 5d. to 6¼d., 4 bales soft Columbian offered and sold at 2½d. *African*: Of 183 bales 167 sold, fair to good silvery quill at 4½d. to 5d., thin dull quill, part broken, at 2¾d. The following dates have been fixed for the London auctions in 1899: Jan. 24, Feb. 28, March 28, April 25, May 24, June 20, July 18, Aug. 15, Sept. 12, Oct. 10, Nov. 14, and Dec. 19.

CLOVES.—Privately. *Zanzibar* quiet but firm; October to December delivery, 4d.; January to March, 3½d.; March to May, 3¾d. No auction sales of spices this week.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*, commercial, 1s. 3d. pure, 2s. per gallon. *Benzole*, 50 per cent. 10d., 90 per cent. 9d. per gallon. *Crude Naphtha*, 30 per cent. at 120° C., 4d. per gallon. *Solvent Naphtha*, 95 per cent. at 160° C. 1s. 6d. per gallon.

COCAINE—Is nominally without change at 9s. 9d. per oz. for the best brands in 25-oz. tins, and for 100-oz. lots. An advance in value of the article is, however, expected in quarters which are generally well informed as to future movements of such articles.

CODEIA—Steady at 12s. 6d. per oz.

COD-LIVER OIL—Remains very quiet at nominally unchanged values, say 80s. to 85s. per barrel for best new non-congealing *Norwegian* oil.

CREAM OF TARTAR—Is firm at rather dearer rates, 73s. to 78s. per cwt. being now the prices for first white *crystals*, according to strength, and 75s. to 83s. per cwt. for *powder*.

ERGOT OF RYE—Remains firm. The article is evidently scarce, and full prices would have to be paid for really good sound quality, both *Spanish*, *Russian*, and *Continental*.

GLYCERIN—Is very firm at prices quoted last week, say 52s. 6d. to 55s. per cwt. for *English*, and 55s. to 65s. per cwt. for *German* best white double distilled chemically pure 1260° quality in tins and cases.

GOLDEN SEAL ROOT.—The dealers in New York have been waiting for prices to give way, instead of which the country holders have not only been able to hold their own but to exact higher prices. 2s. 3d. per lb., *c.i.f.*, is now the nearest quotation.

GUARANA.—After being so long neglected this article at last seems to have taken a turn, and price has improved to 1s. 6d. per lb.

IODIDES AND IODINE—Quiet and without change.

MERCURIALS.—As anticipated in our last, these have been advanced, prices being now as follows:—Calomel, 2s. 8d. per lb.; hyd. ammon., 3s. 1d. per lb.; hyd. oxid. rub., 3s. per lb.; hyd. perchlor., 2s. 4d. per lb.; hyd. persulph., 2s. 1d. per lb.; hyd. sulph. nig. 2s. per lb.

MORPHIA—Is quiet at 5s. per lb. for the powdered salts.

OILS (ESSENTIAL).—*Peppermint*. Japanese is stronger, and this reacts on American, which, whilst without change, is steadier; HGH on the spot, 5s. 6d. per lb.; Wayne County, 3s. 8d. to 3s. 9d. per lb. on the spot. *Star Aniseed* is very freely offered, but buyers are few; 6s. 3d. per lb. is nearest value on the spot for quantity. *Cassia* is steady at 4s. 6d. to 5s. 6d. per lb., according to analysis. *Citronelle*, 1s. 1½d. to 1s. 2d. per lb. *Lemongrass* quiet at 3¼d. per oz.

OILS (FIXED AND SPIRITS).—*Linseed* is lower at £17 5s. for spot pipes London; barrels £17 15s. *Rape* is offered more freely and prices have receded to £21 15s. for ordinary brown on the spot and £23 5s. for refined on the spot. *Cotton* again lower at £13 for London crude on the spot; refined spot £15 to £16, according to make. *Olive*: Spanish, £29; Levant and Mogador, £29 to £32 per ton. Table oils are quiet at 4s. 3d. to 6s. per gallon. *Coconut* steady at £25 for Ceylon, Cochin nominally £28 5s. £29 on the spot. *Palm*: Lagos on the spot £22 10s. *Turpentine* quiet but steady at 26s. 9d. per cwt. for American on the spot. *Petroleum oil* is quiet at 5½d. per gallon for Russian and 6¼d. per gallon for American both on the spot. *Petroleum spirit* steady at 7¾d. per gallon. Deodorised 8d. per gallon.

OPIUM—Is quiet at unchanged values, and with but little doing. The Smyrna market is rather weaker in consequence of the rains which fell last month having had a favourable influence on the prospects of the later autumn sowings.

PHENAZONE and ANTIPYRINE—Are quiet and without change.

PHENACETINE.—Is steady at 3s. 9d. to 4s. 3d. per lb., according to quantity.

POTASH COMPOUNDS.—*Chlorate* is firm at 4d. per lb. for crystals, and 4½d. per lb. for powder. *Bicarbonate* steady at 30s. to 35s. per cwt., according to make. *Bromide* firm at 1s. 9½d. per lb. *Iodide* quiet at 10s. 3d. per lb. *Prussiate*: Yellow is quiet at 6¾d. to 7d. per lb. for English; red, 1s. 2d. per lb. *Cyanide* quiet at 1s. to 1s. 1d. per lb. for the 98 to 100 per cent. white cake. *Permanganate* slightly firmer, without quotable change; small crystals, 50s. per cwt.; large crystals, 55s. per cwt. *Bichromate* firm at 3¾d. to 3¼d. per lb. *Oxalate*: Neutral firm at 5d. per lb.

QUICKSILVER.—Whilst first hands are firm at £7 10s., holders of second-hand parcels are rather easier at £7 8s. 6d. per bottle.

QUININE.—A decided improvement has taken place in the value of this article. It is said some 50,000 ozs. have been done since the date of our last report at 10d. per oz., but at the moment none of the makers are offering, and second-hand offerings are scarce. It might be possible to get a little at 10½d., but it would be very little. In America the domestic makers have advanced the price to 24 cents, or 1s. per oz. Market remains very firm, little being obtainable from below 11d. per oz., if even at that

SALTPETRE.—English refined in casks 20s. per cwt., kegs 21s. per cwt.

SENEGA ROOT.—A fair business has been done on the spot at 1s. 2½d. per lb., whilst the quotation from New York comes at 1s. 1¼d. per lb., which is equal to about 1s. 3d. per lb. London terms.

SHELLAC—Continues very slow of sale, although prices remain steady. *TN orange* is quoted at 65s. per cwt. basis fair.

SODA COMPOUNDS.—*Ash* is steady at £5 5s. to £5 10s. per ton, according to strength. *Crystals* firm at 57s. 6d. per ton, ex-ship. *Bicarbonate* is in good demand at £7 5s. per ton for the 97 per cent., 18s. 6d. per cwt. for the fully bicarbonated quality. *Bromide* quiet at 2s. per lb. *Iodide* slow of sale at 11s. 7d. per lb. *Hyposulphite* quiet at 6s. to 8s. per cwt., according to brand. *Bichromate* firm at 2¾d. to 3d. per lb.

SPERMACEI.—*American* is very firm at 1s. 2½d. per lb., and it is thought higher prices must rule.

STAR ANISEEDS—Are dearer, 130s. per cwt. having been paid privately.

SUGAR OF LEAD—Firm at the reduced price of 26s. 6d. per cwt. for *foreign*.

SULPHATE OF COPPER—Very firm at £17 10s. to £18 10s. per ton, according to brand. A large business has been done.

SULPHONAL.—The long foretold advance in this article has at last taken place, the two makers having advanced their prices to 17s. per lb. (as against 7s. 3d. per lb., to which the article had been reduced by mutual excessive competition). Holders who secured a stock betimes will therefore have done well. Some little sharp practice has taken place in the market in the direction of catching the unwary, who had not received a hint of the impending advance. The "bitten" are naturally somewhat sore on the subject, while the "biter" will hardly have done himself much good in the long run by his sharp practice.

SULPHUR—Is firm. *English*: Roll 7s. 6d. to 8s. per cwt.; flowers 11s. per cwt. *Foreign*: Roll 6s. 6d. per cwt.; flowers 7s. per cwt.

THYMOL—Is firm at 7s. 6d. to 8s. per lb.

To-days' Drug Auctions passed off somewhat quietly. The demand for Ipecacuanha was slow, and prices showed a decline. One of the chief features was the high price paid for a small parcel of fine Dragon's Blood. The following are the particulars as far as it has been possible to give same up to time of going to press:—

ACONITE ROOT.—10 bags *Japan* were bought in at 27s. 6d. per cwt.

ALOES.—*Cape* were in rather better supply and prices were somewhat lower at 25s. per cwt. for good hard bright down to 18s. 6d. per cwt. for drossy. 15 kegs good *Socrotine* were held for 75s. 2 cases good *Zanzibar* in monkey skins for 95s., 6 cases good hardish ditto in tins selling cheaply at 65s. per cwt.

AMBERGRIS.—1 tin of fair quality and flavour and fairly developed sold at 75s. per oz.; 1 tin of inferior quality being held for 45s. per oz.

ANNATTO SEEDS.—14 bags fair bright were bought in at 4d. per lb.

ASAFETIDA.—Of a new lot of 117 cases about 70 cases sold at lower rates; good grey pinky block, part loose almondy, realising 45s. to 51s. per cwt.; low dark heavy block, 24s. to 25s. per cwt.

BALSAM COPAIBA.—29 tins all bought in at 1s. 4d. per lb., a bid of 1s. 3d. not being entertained.

BALSAM PERU.—4 cases were taken out at 8s. 3d. per lb.

BALSAM TOLU.—8 cases were sold at 1s. 8d. per lb.

BUCHU LEAVES.—27 bales part sold at 5d. to 5½d. per lb. for good green rounds. 2 bales yellowish green were bought in at 5½d. per lb. (only 4¼d. being offered), yellowish selling at 4½d. per lb.

CALUMBA ROOT.—49 bags, small dark to good, bright sorts, parts slightly wormy, sold at 19s. to 20s. 6d.; dark and sea damaged, at 16s. 6d. to 17s. 6d.; 7 bags, fair washed, were taken out at 45s. per cwt.

CAMPHOR.—69 tubs *crude Japan* were held for 105s. per cwt.

CARDAMOMS—Were on the whole slow of sale. Those that passed the hammer showed a firm market, prices being unchanged from last sale.

CASCARA SAGRADA.—100 bags of fair quality were held for 25s. per cwt.

CINCHONA BARK.—57 packages *Crown* and *Grey Bark*, part sold at 4½d. to 8½d. per lb.; 1 case *Red Bark* bought in at 5s. per lb.; 9 bales *Yellow* at 8d. per lb.; 15 cases *Cinchona Bark* held for 9d. per lb.

COD-LIVER OIL.—100 barrels non-freezing *Norwegian*, offered without reserve, sold at 63s. to 64s. 6d. per barrel. Quality appeared to be fair, but the colour slightly yellowish.

COLOCYNTH.—5 cases somewhat inferior and brownish *Turkey* were held for 11d. per lb.

CONCENTRATED LIME JUICE.—3 hogsheads *Dominican* were taken out without mention of price.

CROTON SEED.—6 cases, of rather dull appearance, were taken out at 80s. per cwt.

CUMMIN SEED.—2 bags *Malta* sold cheaply without reserve at 20s. per cwt., really good quality being held for 28s. per cwt.

CUS CUS ROOT.—13 bales, good cleaned, taken out at 55s. per cwt.

CUTTLEFISH BONE.—20 mats good pale fairly bold but part broken sold cheaply at 2½d. per lb.

DAMIANA LEAVES.—5 bales rather yellow in colour were held for 7½d. per lb.

DILL SEED.—22 bags rather darkish in colour were held for 11s. per cwt.

DRAGONS' BLOOD.—6 cases dark slabs, very damp and dull in colour, sold at £5 10s. per cwt., dull reeds being bought in at £10 10s., dull slabs at £9; 5 cases double goat brand, really fine block part false packed, sold at £18 the case; 1 case rampant horse brand bought in at £12, only £9 10s. per cwt. being bid.

ERGOT OF RYE.—Very weevily *Spanish* was taken out at the high price of 2s. per lb. A parcel of fair *Spanish*, sold privately lately at 1s. 7d. per lb., was offered in public sale, and a portion resold at 2s. per lb.

GALLS.—27 bags *Turkey* were bought in at 52s. 6d. per cwt.

GAMBOGE.—Low to mixed to partly fair pickings sold at £5 15s. to £6, good soft ditto being bought in at £8 7s. 6d. and good pipe at £9 per cwt.

GENTIAN ROOT.—30 bales good dry sound root were held for 18s. per cwt.

GUARANA.—1 case was held for 1s. 6d. per lb., which shows a somewhat improved value of this article.

GUM AMMONIACUM.—4 cases held at 35s. for fair blocky, dark ditto selling subject to owner's approval at 15s. per cwt. 8 cases clean seed, part blocky, were bought at 35s., dark ditto at 25s. per cwt.

GUM ARABIC.—26 bales *Aden* gum were bought in at 50s.; 4 cases fair grain at £6 12s. 6d. per cwt.

GUM BENJAMIN.—Medium to fair *Sumatra* was sold at £6 to £6 2s. 6d. per cwt., lower ditto at £4 10s. to £5 5s., good at £7 2s. 6d.

GUM GALBANUM.—3 bags of fair quality were bought in at 10d. per lb.

GUM GUAIACUM.—5 barrels good glassy block sold at 1s. 6d. per lb. 22 barrels low drossy only realised 1d. to 1¼d. per lb.

GUM KINO.—Two tins genuine were taken out at 12s. per lb.; 2 cases *African* were held for 3s.

GUM MASTIC.—Good pale was bought in at 2s., yellow at 1s. 9d. per lb.

GUM MYRRH.—7 casks native picked were held for £5. 1 cask good pickings for 40s. per cwt.

GUM TRAGACANTH.—7 cakes had been part sold previously at price which did not transpire, balance being bought in at £13 10s. per cwt. for good firsts.

HONEY.—6 barrels medium, *Jamaica*, sold at 21s. per cwt.; 20 kegs *Irish*, which were catalogued, were not offered.

IGNATIUS BEANS.—5 bags good held for 3d. per lb., a bid of 2d. per lb. being refused.

IPECACUANHA.—The demand was slow, and only a few bales *Rio* sold at about steady prices, 9s. 9d. to 9s. 10d. per lb. for fair thin. For *Carthagen* there was no bidding, but holders declined to sell below 7s. 6d. per lb.

JALAP.—40 bales fairly heavy tubers were bought in. Price required was apparently 6½d. per lb.

KAMALA.—4 cases good bright were taken out at 9d. per lb.

KOLA NUTS.—4 packages dull West Indian sold at 4d. per lb.

LIQUORICE JUICE.—50 cases *Italian* were bought in at 60s. per cwt.

MENTHOL.—8 cases good Japan crystals, *Kobayashi* brand were bought in, 7s. per lb. being the price required.

NUX VOMICA.—100 bags small dull sold very cheaply at 3s. 6d. per cwt.

OILS (ESSENTIAL).—13 cases Japan *Peppermint*, guaranteed to contain about 40 per cent. of crystallisable menthol, were taken out at 4s. 9d. per lb., dementholised ditto being bought in at 3s. 7½d. per lb. 10 cases *Cajeputa*, of good quality, held for 3s. 6d. per bottle. 2 cases *Cinnamon Oil*, of good quality, taken out at 1s. 9d. per oz. 3 cases *Cinnamon Leaf Oil* at 5d. per oz. 2 packages West Indian *Bay Oil* sold at 6s. 3d. per lb. 7 cases *Cassia Oil*, containing 84 per cent. of cinnamic aldehyde, sold at 4s. 8d. per lb. 13 cases *Oil Citronella* bought in at 1s. 1½d. per lb., and 3 drums ditto at 12½d. 10 cases *Star Aniseed Oil* sold cheaply at 6s. per lb., a *do* fine of 2d. per lb. on last sales. case *Eucalyptus Globulus* was held for 1s. 9d. per lb.; 11 cases commercial ditto for 11½d. to 1s. 3d. per lb. 2 cases *Bergamot* for 9s. 3d. per lb. 3 cases *Lemon* for 3s. per lb.

OIL OF CAMPHOR.—10 cases white *Japan* were bought in at 20s. per cwt.

OPIUM.—4 cases rough *Turkey* were bought in at 9s. 6d. per lb. 8 tins, each 20 lbs. nett, powdered opium (powdered by Stafford, Allen & Co., and testing according to Mr. R. A. Cripps' analysis, 11.45 per cent. morphia) were taken out at 12s. per lb.

ORANGE PEEL.—Fair, new, thin cut, was held for 7½d. per lb., old ditto for 6d. per lb.

OTTO OF ROSES.—13 vases, offered without reserve, sold at 8s. to 9s. 6d. per oz. (*Turkish*).

QUILLAYA BARK.—10 bales of fair quality were held for 24s. per cwt.

RHATANIA ROOT.—12 bales were held for 6½d. per lb.

RHUBARB.—10 cases rough horny high dried were bought at 7d. per lb.

ROSE OIL.—5 pots *Japan* were bought in at 4d. per oz., 1 lot of settlings selling at 1d. per oz.

SARSAPARILLA.—5 bales red and grey *native* were held for 10d. to 1s. 2d. per lb., according to quality. 18 bales *Lima* bought in at 1s. 1d. to 1s. 4d., the damaged selling at 10d. per lb.

SCAMMONY.—13 cases were all bought in at 18s. to 30s. per lb. according to quality.

SENEKA ROOT.—5 bales of good quality were held for 1s. 2½d. per lb.

SENNA.—*Tinnevelly* was in small supply, only about 110 bales being offered from first hands. Prices were firm to rather dearer. Small leaf, 2d. to 2½d. per lb., medium bold up to 3½d. per lb. Pods 1½d. per lb. In next sale about 400 bales will be offered. *Alexandrian* 100 packages offered, but not a single one sold. quality not being what is at present wanted.

SQUILLS.—28 bags of good quality were held for 3d. per lb.

STROPHANTHUS SEEDS.—7 bags fair *Kombé* were taken out at 3s. per lb.

TONQUIN BEANS.—15 packages good frosted *Paras* sold at 2s. per lb., chiefly black foxy and mixed, were taken out at 9d. per lb.

VANILLA.—In all 545 tins were offered, but this large quantity was strongly competed for at an advance of 2s. per lb. Fine *Seychelles*, 7 to 7½ inch, realised 27s. 6d. per lb.; 6½ inch, 24s. 6d. per lb.; 5½ to 6 inch, 22s. per lb.

WAX.—28 cases *Benguela* were bought in at £6 7s. 6d.; 7 cases *Zanzibar* at £6 5s.; 3 casks fair *Jamaica* sold at £6 12s. 6d.; 25 bales fair *Italian* taken out at £5 10s.

Liverpool Market Report.

NOVEMBER 9, 1898.

AMMONIUM SALTS.—*Carbonate*: 3d. per lb. *Sal ammoniac*: 33s. to 35s. per cwt. *Sulphate*: £10 per ton.

ARSENIC.—Lump, £32 per ton. Powder, £17.

BEESWAX.—About 5 tons of *Sierra Leone* sold privately.

BLEACHING POWDER.—£5 5s. to £5 15s. per ton.

COPPERAS.—37s. to 39s. per ton.

COPPER SULPHATE.—Continues firm on the spot at £17 10s. to £17 12s. 6d., for forward delivery £18 5s. per ton.

FENUGREC.—140 bags of bulked *Syrian* were cleared from the quay at 8s. per cwt.

GINGER.—*Java* has sold at 8s. 9d. to 9s. per cwt., and *Sierra Leone* at 19s. 6d.

HONEY.—24 barrels *Valencia* changed hands at 20s. 6d., ex store.

KOLA NUTS.—16 bags dried fetched 1½d. per lb.

LINSEED.—Is idle, without any disposition for business; *Calcutta* and *North American* for forward delivery are both quoted at 39s. per 416 lbs. *Turkish* has been sold in small amount at 42s.

OILS (FIXED) AND SPIRITS.—*Castor* is selling steadily at 3¼d. per lb. for *Calcutta*, 2¼d. to 2½d. per lb. for *Madras*, and 2½d. to 3d. for *French 1st pressure*, of which latter about 15 tons have changed hands at the former rate. *Olive* is slow of sale, but steady at recent quotations. *Linseed* has receded slightly, and is quoted here at 18s. 3d. to 19s. per cwt. for *Liverpool pressed oil*. *Cottonseed* unchanged at 15s. 6d. to 15s. 9d. *Spirits of Turpentine* has dropped to 27s. 6d. per cwt., where it remains firm.

POTASH SALTS.—*Bicarbonate*: 30s. per cwt. *Bichromate*: 3½d. per lb. *Chlorate*: 3¾d. to 4d. per lb. *Cream of Tartar* is steady and in somewhat short supply at 75s. per cwt.; 6 bags of *Patras* were sold privately from store. *Pearlashes* are nominal at 34s. to 35s. per cwt. *Potashes* are quiet at 23s. per cwt. *Prussiate*: 6¾d. per lb. *Saltpetre* is scarce at 21s. 6d. per cwt.; *Kurrachee* 5 per cent. has been sold from the quay here at 16s. per cwt., and 16s. 6d. is now asked.

SODA SALTS.—*Bicarbonate*: £6 13s. per ton. *Borax* is very firm and a good deal of business has been done at £14 to £14 10s. per ton. *Caustic*: 76 to 77 per cent., £7 12s. 6d. to £7 15s. per ton; 70 per cent., £7 per ton. *Crystals*: £3 per ton. *Nitrate* is in moderate demand at 7s. 7½d. to 7s. 9d. per cwt.

Manchester Chemical Report.

NOVEMBER 8, 1898.

So far as the export trade is concerned, the outlook for heavy chemicals is not bright. Taking the Board of Trade returns, a sort of commercial chronometer of fair standard as things go, we find the decrease in Alkalies, etc., of a continuous character. The imports of chemicals, etc., show only a trifling decrease in comparison with the same month last year, exactly 5 per cent., and the exports of chemicals and chemical and medicinal preparations are nearly the same, showing this to be fairly steady. The decrease in the exports of Alkali is 22.5 per cent., and in Bleaching materials 18.3, but there is some encouragement in the fact that the bulk of the decrease is due to the continued decline in exports to the United States. In this respect the decrease of exports to the States is marked, being only 52,757 cwt. of Alkali for this month, as against 137,953 cwt. the same month last year, and Bleaching materials 60,869 cwt., as against 75,618 cwt. There is, however, a very satisfactory feature in that home consumption is increasing. There is no diminution in prices of heavy Alkalies. In miscellaneous chemicals, on the other hand, there is a fair improvement. A great feature is the advance in Sulphate of Copper, which is now quoted £19 per ton, for prompt delivery, best brands, *Manchester*. *Brown Acetate of Lime* is a point higher at £5 7s. 6d., to £5 10s. per ton., *Welsh and American, Manchester*. *Aniline Oil and Salt* are down to 4d. and 4½d. respectively, a low figure indeed. *Tar products* are about the same.

Newcastle Chemical Report.

Shipping orders for heavy goods are slackening down for the near *Baltic* ports. Home shipments for *Channel* ports, however, are better, mostly for *Soda Crystals*. Prices are:—*Bleaching Powder*, £5 10s. to £6. *Soda Crystals*, 45s., according to market. *Alkali*, 50 per cent. £5 5s. *Soda Ash*, 70 per cent., £7 5s. *Sulphur*, £5 per ton.

Announcements.

Monday, November 14.

PHARMACEUTICAL SOCIETY OF IRELAND, 67, Lower Mount Street, Dublin.—Lecture on "Plants and Insects," illustrated by lime-light, by F. W. Moore, of the Royal Botanic Gardens.

Tuesday, November 15.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION, County Restaurant, Bradford.—Dr. C. E. Waddington will lecture on "Nerves," with lantern illustrations.

ROYAL PHOTOGRAPHIC SOCIETY, 12, Hanover Square, London, W., at 8 p.m.—Papers will be read "On Rapid Dry Plates for Process Work, Combined Screen and Colour Negatives for Three-Colour Printing," by A. A. K. Tallent, and "On the Melting and Setting Points of Gelatin Solutions and Their Modification," by R. Child Bayley.

Wednesday, November 16.

ROYAL MICROSCOPICAL SOCIETY, 20, Hanover Square, London, W., at 7.30 p.m.—Exhibition of Thum's slides of diatoms mounted in high refractive media.

WESTERN CHEMISTS' ASSOCIATION (OF LONDON), Café Royal, 68, Regent Street, W., at 7 p.m. Eighth annual dinner. Mr. J. H. Mathews, the retiring President, in the chair.

Thursday, November 17.

CHEMICAL SOCIETY, Burlington House, Piccadilly, London, W., at 8 p.m. Several papers will be read by Messrs. E. Divers and T. Haga.

CHEMISTS' ASSISTANTS' ASSOCIATION, 73, Newman Street, London, W. Discussion on "Advertising in Pharmacy," opened by W. Anderson.

LINNEAN SOCIETY OF LONDON, Burlington House, Piccadilly, W., at 8 p.m. Evening meeting, when papers will be read "On some Spiders from Chili and Peru," by F. O. Pickard, Cambridge; and "The Botanical Results of a Journey into the Interior of Western Australia," by Spences Moore.

MIDLAND PHARMACEUTICAL ASSOCIATION, Mason University College, Birmingham, at 8.30 p.m.—Mr. John Barclay, will open a "Discussion on the 1898 B.P." by reading a paper on the "New Standards."

THE NORTH-EAST LANCASHIRE CHEMISTS' ASSOCIATION, White Bull Hotel, Blackburn, at 8 p.m.—Annual meeting.

NORTH STAFFORDSHIRE AND DISTRICT CHEMISTS' ASSOCIATION, Copeland Arms Hotel, Stoke, at 6.30 p.m.—A general meeting will be held, when a paper on "Emulsions" will be read by Mr. W. B. Allison. The Secretary will also move an important resolution urging chemists to join the Pharmaceutical Society.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY, Bird's Restaurant Co., Ltd., Surrey Street, Sheffield, at 7.30 p.m.—A smoking concert will be held. Admission by ticket only: Members and friends, 1s. each; assistant and apprentices free.

Friday, November 18.

IRISH PHARMACISTS' ASSISTANTS' ASSOCIATION, 67, Lower Mount Street, Dublin.—Impromptu discussions.

Obituary.

CORNER.—On November 7, Thomas B. Corner, Chemist and Druggist, Whitby. Aged 52.

HODDY.—On November 2, Benjamin Hoddy, Chemist and Druggist, Halstead, Essex. Aged 75.

SANDERSON.—On November 2, Henry Sanderson, Chemist and Druggist, Birmingham. Aged 59.

MORRIS.—On November 3, Sarjeant Witton Morris, Chemist and Druggist, late of Edmonton, Middlesex. Aged 63.

HORSLEY.—On November 6, Thomas Wood Horsley, Pharmaceutical Chemist, Notting Hill, London, W. Aged 56. Mr. Horsley had been a pharmaceutical chemist member of the Society since 1871, and was divisional secretary for N. Kensington. He was particularly active in the recent parliamentary campaign which resulted in the passing of the Pharmacy Acts Amendment Act, 1898, and the overthrow of the Privy Council's Poisons Bill. Mr. Horsley was a type of the loyal and zealous worker which pharmacy can ill afford to lose.

Advertisement.

(Received too late for Classification.)

WANTED an ASSISTANT (unqualified), or LOCUM. REED, St. James's Hotel, Harrogate.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours, post free, 5s.—Edward Peck, East Dereham, Norfolk.

For Sale.—Show Jar for window, as Maw's Fig. 1, plain gold cover, total height about 32 inches, with Fig. 2 stand £3, cost over £6.—Hodgson, Chemist, Waterloo, Liverpool.

Valuable Herbarium for Sale, containing 217 British plants, each mounted on cartridge paper, 15 inches by 11, collected this year, accurately named; price £2 2s.—T. T. Cocking, Ashgate Road, Sheffield.

Magic Lanterns, second-hand; triples and binials: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Four—6- or 8-gallon pear-shape carboys, cut stoppers, mahogany stands; dispensing balance as Maw's, Fig. 10; counter scales as Fig. 2, without drawer. What offers?—Smith, Chemist, Weston-Super-Mare.

For Sale.—Twenty-two volumes 'Pharmaceutical Transactions,' volumes 1 to 22, 1842 to 1862; well bound, good condition. What offers?—Cripps, Chemist, Berkhamsted.

Leath-Ross show-case and medicines; window-fittings, glass shelves, specie-jars; Holloway's coca-wine; Holloway's Liebig's wine. Particulars, Williams, Chemist, Bournemouth.

What Offers?—Two 2-gall. show-carboys, height, 24 in.; two glass show-jars, with handsome gilt glass covers, height, 22 in.; American tincture-press. All worth buying.—T., 31, Taplow Street, City Road, N.

Show Jar, 21 in., as Maw, fig. 1, gilt metal cover and 2 in. imitation ebony stand, 30s. Mahogany window show stand, mirrored similar Maw's, fig. 9, 50s. Three 6 gall. pear-shape carboys, cut stoppers, and 2 in. stands, 12s. 6d. each. Packing free.—Shipman, Chemist, Hastings.

For Sale.—Field Camera, 3-plate; rapid rectilinear lens; extra dark slide; tripod and satchel. What offers? Apply, G. T., 6, McDowall Road, Camberwell, S.E.

WANTED.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsell, 9, Derwent Grove, East Dulwich, London, S.E.

New Books for Minor; exchange guitar to 30s.—Barker, Pharmacy, Melksham.

Best Cash Offers, 100-oz. original tin Howards' quinine.—Endle, Chemist, Boscombe.

Wanted.—Maisch's 'Materia Medica'; Ince's 'Grammar'; and Green's 'Botany' vol. 2; latest editions, state price or will exchange for Martindale, 8th ed., and other books.—W. B., 416, Bury New Road, Manchester.

Camera, 1/2 plate, second-hand, with quarter-plate carrier, good condition.—State maker's name and lowest price to—R. O. Hayes, Chemist, Hayward's Heath.

Partnerships Dissolved.

(From the London Gazette)

John S. McArthur and A. James, Consulting Chemists, 56, New Broad Street, E.C., and 45, Renfield Street, Glasgow.

C. K. C. Herapath and G. T. Myles, Surgeons, Physicians, 3, Portland Square, Bristol.

C. Lammiman and G. V. Worthington, Physicians and Surgeons, Tunbridge Wells.

Marked Copies of the following Newspapers, etc., have been received during the week:—Cork Daily Herald, Brixtonian.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Barlow, Barues, Barr, Bayley, Bell, Bessant, Blackmore, Branch, Brunt, Burroughs, Butterworth, Churchill, Daubeny, Dent, Dowzard, Fitch, Gifford, Gilder, Gill, Goodess, Guthrie, Hadden, Harper, Hart, Hebb, Henderson, Hewitt, Hewlett, Hogg, Horsfield, Hunt, Jones, Kirkpatrick, Livening, Lloyd, Mason, Michie, Moore, Morley, Mumbray, Nunn, Palmer, Pater, Railton, Reid, Reynolds, Roberts, Rowell, Smith, Sutton, Thompson, Wingfield.

NORTH-EAST LANCASHIRE CHEMISTS' ASSOCIATION.

At the annual meeting of the North-East Lancashire Chemists' Association, held at the White Bull Hotel, Blackburn, on Thursday night, Councillor CRITCHLEY in the chair, Mr. R. LORD GIFFORD, Hon. Secretary, read the following

Report of the Committee.

Our last annual meeting, held, like this one, late in the year, was characterised by evidence of a growing feeling that we must make our work more systematic, and the incoming committee were ordered to meet at least once a month for six months, and twice in the summer months. It was also held to be desirable to invite a prominent person in pharmacy to our annual dinner in order to bring about a more effective reunion of the trade. These were the features of the meeting last year. A parting of the ways, as it were, seems to have resulted, probably given direction to by what has happened since in pharmaceutical politics. We think here it is due to our esteemed friend Mr. Whitehead, who has done so much for us, to say that in bringing Mr. Edward Evans, jun., J.P., from Liverpool, and in bringing together a combination of forty-five to meet him, he started a work from which handsome results must come to the profession he has so much at heart. We are glad to notice that our brethren in Morcambe have elected him their local secretary, and we hope they will utilise the excellent acquisition to their ranks. We also recommend the good folks of Lancaster to acquire his services. This has been an eventful year, and the visit of some of the Committee to the splendid banquet the Manchester Pharmaceutical Association gave to the Lord Mayor (Mr. Alderman Gibson) may have had something to do with the stirring up of our fighting ardour. It may be presumptuous, but it is a fact that we remarked, on listening to Mr. Hills at Manchester, what a grand thing it would be for pharmacy if we could get our calmly judicial and learned President of the Pharmaceutical Society into line with the rank and file! If this splendid product of pharmacy could hold out his hand and grip the multitude of his humble brethren, what a difference it would make; if he could be brought to feel with, to speak and act for us, what a hopeful outlook for pharmacy would be opened. We have had considerable communication during the past year with the President, Mr. Rymer Young, and Dr. Symes, and we judge there can be no question but that these gentlemen have the interests of the rank and file deeply at heart. At the same time they are unable to convince the every-day chemist of this, and up to now they have been quite incapable of adding to the Pharmaceutical Society the very people they most wish to get. We hope before this meeting closes to make it clear how the great mass of chemists may be brought into line and form a Pharmaceutical Society with a momentum which nothing can withstand.

THE PHARMACY ACTS AMENDMENT BILL.

On February 20 a special meeting was held to discuss this Bill. The feeling was, it must be recorded, that the Bill was trivial, but it was felt that the only reasonable expectation of benefit to ourselves lay in unanimity, and we were assured by so sound an authority as Mr. G. S. Woolley, of Manchester, that this Bill could not interfere with any future legislation. It had been felt, by the way, that this small Bill would be considered an act of legislation by the Legislature, and thus stand in the way of future efforts. We had come to think we needed not pettifogging legislation, but serious effort to grapple with the overwhelming difficulties which beset us.

ELECTION OF COUNCIL.

In this spirit we worked until April 26, when we were called together to consider the Council elections, and it was resolved

That this Association as a body thinks that the retiring members of the Pharmaceutical Council should define their position, and show that in future they intend to pursue a more progressive policy.

The response to this confirmed us in what we knew, that the members of Council generally were actuated by an earnest desire for the welfare of the profession. A few naively asked us to define a more progressive policy; others explained and proved to their own satisfaction that the Council was always, and always would be, the model of progressiveness. On June 28 a special meeting was held on the Poisonous Substances Bill, introduced into the House of

Lords by the Duke of Devonshire. An admirable address on the subject was given by Mr. TAYLOR, of Bolton, who in a very lucid manner exposed the fallacies and the injustice of the measure. Resolutions were passed and sent to the Members of Parliament, petitions ordered to be prepared, and the district roused on the matter. The meeting was most enthusiastic, and was the high-water mark of our local association's effort. This Bill and the Pharmacy Act Amendment Bill serve as object-lessons to pharmacists if they will take the trouble to read between the lines. It is very likely that if the opposition could have acted with the same quiet discretion that our leaders displayed the little Bill would never have passed at all; but the moment the attention of Parliament was arrested by the noise of opposition, the sympathy of the House was assured to the Bill and its passage made simple.

PUBLICITY—GOOD OR BAD?

We think the history of these two Bills also serves as an illustration of the value of publicity. The majority of the chemists in this country live by trade almost pure and simple. There are no properly defined duties according to law. Yet when the Legislature imposed upon the chemist certain qualifications for the exercise of his profession, it must have been that, in the public interest it was thought necessary those qualifications should exist. Well, for twenty years we have sought with becoming humility for trivial extensions of our rights and privileges, but not until our action had aroused the loud-voiced protestations of the parasites of the profession did the true nature of our grievances dawn upon the legislative mind. Even now the popular conception of the chemist's qualifications is that it is a certificate to his dishonest tendencies.

A NEW PHARMACY BILL WANTED.

We are constantly charged with dealing too much in generalisations, and we are asked to deal with specific questions. Well, all we can say is that our critics have been dealing with definite points for the last twenty years, with the result that the topics for discussion have increased twenty-fold, and to-day we have in this country something like five hundred large establishments legally practising illegitimate pharmacy, and thousands of persons exercising the functions of the pharmacist illegally. We conclude, then, that this discussion of particular points is fallacious, and in its place we urge our much-abused generalisations. Our first is, the Pharmacy Act of 1868 has totally failed in bringing about the manifest intention of the Act; our second, that we want a new and adequate Pharmacy Act, one in harmony with the spirit of the age, defining and giving reasonable functions to the person willing to fulfil its demands and undergo its conditions. Our third is, there is room for a profession of pharmacy, and that this profession should consist in the handling and distribution of all powerful herbs, drugs, and chemicals. We say that the publication in the papers of large advertisements which are nothing but falsehoods made to appear to the ordinary mind as truths, and that positively harmful quack remedies are valued by the million pounds sterling are facts which are a disgrace to the professions charged with the protection of the public. Now let us get an appreciation of what we aim at, and then we will promptly discuss particulars. But first we ask, where do we stand? You must settle the principles before you come to details. We have editorial, in this week's *Pharmaceutical Journal* and *Chemist and Druggist* both of which, to our minds, express sentiments which at previous time would have been combatted by each editor. Still we think they might further improve. We are asked, "What is desirable and feasible?" We think the Council should tell us that. We think it is the duty of leaders to lead, and of rank and file to discuss the pronouncements of the leaders. But we have absolutely no pronouncements of policy to lay before you from our leaders. "The Council of the Pharmaceutical Society cannot be expected to draft any measure." But we do ask the Council to draft a measure. Not only so, but we say it is the bounden duty of the Council to do so, and we think to talk of opposition from inside is merely to indulge in meaningless phraseology, as is also the statement that "due regard must be paid to what is practical under existing circumstances." How can we know what is practical? We can only surmise and have convictions. Our perspicuous friend, the editor of the *Chemist and Druggist*, hovers round a variety of subjects, showing the power of association, etc., but we think he should distinguish better the

position of the Council in relation to the body politic. We must see clearly that the Council can have no trade function, and, therefore, would not receive a hearing from any other than a professional standpoint. It does seem strange that it should be necessary to say that we do not expect any feeding-bottle treatment from the Pharmaceutical Council. We expect to attend to our trade ourselves, and we say that it is the business of the Pharmaceutical Council to attend to the profession of pharmacy solely, and its duty is to widen and perfect the profession by every means in its power.

MEDICAL JOTTINGS.

DR. WILLIAM MURRELL, F.R.C.P., has been appointed Physician to the Westminster Hospital in succession to Dr. H. B. Donkin, who has resigned in consequence of having been appointed a Commissioner of Prisons for England and Wales. Dr. Murrell is the author of several well-known works on pharmacology, therapeutics, bronchitis, etc.; one of his most popular books is the little pocket volume 'What to Do in Cases of Poisoning,' which has run into eight editions.

A MEDICAL CONTEMPORARY, when replying recently to a query of a correspondent, suggested that a difficulty which had been experienced might be solved by applying to the Royal Pharmaceutical Society. Has our contemporary the gift of prophecy?

DR. ALLAN C. SYM, of Edinburgh, writes to the *British Medical Journal* to point out that *Primula obconica* is not the only primula which sets up irritation, but that *Primula sibbaldii* certainly does so also; he has been informed by gardeners that there are other varieties of primula which are noxious, but that *Primula obconica* is the most virulent. He adds that in his experience nothing relieves the intense irritation of the skin so much as frequent bathing with a weak solution of creolin.

THE RESIGNATION BY MR. TREVES of his post as Surgeon to the London Hospital is attributed to a difference of opinion between the governing body and himself respecting the grant hitherto made in aid of physiological research at the laboratory attached to the medical school. Mr. Treves' sympathy had been enlisted in favour of withdrawing this grant, on account of the alleged practice of vivisection, and he induced the committee to adopt his view, but on appeal the governing body rescinded this decision and confirmed the grant.

PROFESSOR VIRCHOW has again been returned by one of the electoral districts of Berlin as deputy to the Prussian Parliament. The great pathologist, who is a Radical in politics, received 1358 votes against 782 polled by his Conservative opponent, and nearly 200 more votes than he polled at the 1893 election.

THE FIRST NUMBER of the *Medical and Surgical Review of Reviews* appeared last month. It is a monthly magazine on the plan of Mr. Stead's well known publication, but dealing, as its name implies, exclusively with medical and kindred subjects, and somewhat on the same lines as the late Mr. Ernest Hart's *London Medical Record*, long since defunct.

AN ITALIAN MEDICAL JOURNAL records the successful treatment of a case of tetanus by hypodermic injections of carbolic acid, as suggested by Professor Baccelli. Not the slightest symptom of poisoning was produced, though the injections were continued for three weeks, the administrator being a member of the patient's family. In fifty days the patient, a farmer, twenty-one years old, was quite well.

AT THE LAST MEETING OF THE CLINICAL SOCIETY, Mr. Watson Cheyne, the well-known surgeon, showed a case in which freshly removed rabbit bone had been used to replace large portions of nasal bone which had been lost by the patient eight years before in consequence of an accidental injury. Last January Mr. Cheyne

performed the operation. He first raised a flap of skin from the right side of the nose, going down to and freely exposing the periosteum. He then removed the femur from the rabbit, split it into several pieces, and laid these on the exposed periosteum, replacing the flap so as to cover them in. The wound healed without suppuration, and the result was excellent.

UNDER THE HEADING OF "HOSPITAL ASIDES," the *Medical Press* is publishing a series of amusing sketches portraying the matron, secretary, and other hospital officials. Last week's number contains a fancy delineation of "Mr. Wigglesworth the Dispenser," who has been a faithful servant at the hospital for fifty years. He is hale, hearty, and fresh, though the oldest officer in the place, and if he has earned a name as one given to grumbling and unnecessary complaining, yet his influence renders the other officers' tasks lighter. The few cheeky probationers and the self-superior nurses that there are receive a snub now and then at his hands that does them inestimable good. Sometimes he will send a message to a young resident medical officer to the effect that his prescription is quite undecipherable. As the purport of the message happens to be a positive fact, it follows that the sender of it scores. It may be that he will be at the hospital for a long time yet, for he does his work as well as it can be done, and there is an impression in some quarters that rather than retire and ask for a pension he will work on and on and add to such savings as he has, until the sum is large enough to meet all his likely needs.

DR. WILLIAM ORD, physician to St. Thomas's Hospital, was the Bradshaw Lecturer this year. The subject of this lecture, which was delivered last week before the Royal College of Physicians, was "Myxœdema and Allied Disorders." Under the head of treatment, Dr. Ord stated that until the introduction by Dr. Murray of the practice of making hypodermic injection of a glycerin extract of the thyroid gland, no remedies could be spoken of as effective. Afterwards Dr. Hector Mackenzie found that the internal administration of the gland or its preparations brought about as marked an improvement and progress to cure as had been effected by the hypodermic injection, and the internal administration of the thyroid gland in one way or another is the method of treatment now usually adopted. It would appear that the administration of the thyroid gland itself when it can be carefully and regularly maintained in the most appropriate form of treatment. The gland may be finely minced and administered raw with sugar or salt or may be lightly cooked. The size of the gland, mainly obtained from sheep, varies a good deal, and such variation is to some extent a justification of the administration of an extract obtained from a number of glands so as to get something like an average. In one case still under his occasional notice an affectionate husband has been at the trouble to procure regularly thyroid glands from sheep and to prepare them in a raw state for administration to his wife. The original quantity administered was one gland a week, but as the patient has improved the frequency of administration has been diminished, but it still goes on as it has gone on for some years, and at the present moment the woman presents no signs whatever of the disease. It is possible to give the thyroid gland too frequently. When the knowledge of its efficacy as administered internally first became known, Dr. Ord gave to a patient, who was so ill as hardly to present any chance of maintaining life, one gland a day for four days in succession. At the end of that time she suffered from violent headache, vomiting, and pains in the limbs with a rise of temperature amounting to 6° F. With such a lesson the gland was administered at longer intervals—namely, of from a week to ten days—with ultimately the greatest benefit. But to procure fresh and healthy glands and to prepare them in the proper way involves a great deal of trouble, and their use may be replaced by the administration of Dr. Murray's glycerin extract in doses varying from ten to thirty drops a day, or every second or third day, according to the effects produced and to the patient's power of bearing the influence of what we may call now the drug. Still more convenient and not ineffective are the preparations in the form of tabloids now in common use. Some of these contain the dried and crushed gland, others extracts of it, such as the excellent powders devised by Mr. Edmund White, B.Sc., the therapist of St. Thomas's Hospital. On the whole Dr. Ord prefers the extracts of the whole gland to any kind of principle derived from it by chemical processes. Perhaps the next best form is the dried and powdered gland of the *Pharmacopœia*.

SCOTTISH NEWS.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION.—This Association has arranged with the St. Andrew's Ambulance Association for the formation of an ambulance class for its members, and the first meeting took place in the Pharmaceutical Society's house, on Monday, November 14, at 8.45 p.m. The Lecturer, Dr. Edmund Price, in opening the class, said he knew no class of men to whom instruction in first aid to the injured was more likely to be useful than pharmacists. It was to the chemist in most instances that injured persons were first handed over by the police. That they needed some such instruction he had on several occasions been made aware. On one occasion he was consulted by a man whose forehead was swollen to about twice the usual size. He had sustained a cut over the brow, and this had been very neatly hermetically sealed by a chemist with adhesive plaster. On removing the plaster, there was an abundant escape of pus from the wound, which explained the swelling. Had this chemist had ambulance instruction he would have known that the edges of a wound should be brought together with strips of plaster, at right angle to the cut, and with sufficient intervals for the free escape of any effete matters. It was, perhaps, hardly necessary for him to say that this course of lectures would not qualify them for becoming prescribing chemists. He did not think they were likely to fall into that mistake, for such was, he was glad to say, not the tendency of Edinburgh chemists. They had no temptation to do so in Edinburgh, for the reason that there was no such thing as dispensing doctor. That was just as it should be, and he felt sure that so long as the doctors left dispensing to the chemists they would leave the prescribing to the doctors. The lecturer then proceeded to sketch the general anatomy of the human body and demonstrated the various uses of the triangular bandage. The class meets every Monday night at 8.45 and any wishing to join should communicate at once with the Secretary, Mr. Harley, 4, North Bridge.

PROPOSAL TO APPOINT A CORPORATION CHEMIST.—At a meeting of the Glasgow City Council on Monday a proposal was brought forward by a special committee that the City should appoint a chemist under the Sale of Food and Drugs Acts to devote his whole time to the work. After a long discussion the matter was sent back to the committee for further information by a large majority.

DECLINE IN CHEMICAL INDUSTRY.—The decline in the chemical industry in the west of Scotland has resulted in the closing of the Irvine Works of the United Alkali Company. For some months past the works have really been standing idle, and the Eglinton Works, at Irvine, belonging to the same firm, have also been idle, with the exception of the sulphuric acid branch.

ENGLISH NEWS.

A PRESENTATION is to be made to Mr. Richard Bannister, late of the Government Laboratory, Somerset House, on Tuesday next, November 22. The presentation will be made at the Drill Hall, Somerset House, by Dr. Thorpe.

FOREIGN CHEMICAL PATENTS IN THIS COUNTRY.—Chemical processes are frequently protected by patents in Great Britain for several years after the foreign patents have expired. The Manchester Chamber of Commerce has now decided to raise the question in the next session of Parliament. It is thought that a short Bill will be introduced for the simultaneous expiry of home and foreign patents.

THE RELATIONSHIP BETWEEN RAIN AND PLANTS.—Mr. Charles Turner, Director of the Manchester College of Pharmacy, on Saturday evening last delivered an address on the above subject to the members of the Field Naturalists and Archaeologists' Society, at the City Art Gallery, Mosley Street. Sir W. H. Bailey presided, and there was a large attendance. Mr. Turner's address, which was illustrated with limelight views, dealt with the subject from a popular standpoint, illustrative of rain regarded as both "meat and drink" for plants, and the remarkable development which takes place under its influence. Mr. Turner received a cordial vote of thanks at the close of his interesting lecture.

LAUDANUM POISONING.—At an inquest on Friday, November 11, at Hanham, on the body of the infant son of George and Florrie Cook, to whom five drops of laudanum had been administered, the mother stated that the child had been weakly since birth, and she had scarcely had a night's rest since it was born. Dr. Norman had attended it, and advised her to give it a little weak brandy. A friend advised her to give the child a few drops of laudanum, and she gave it five drops. It seemed more peaceful afterwards, but grew worse next day, and died a few hours after the doctor arrived. Dr. J. Norman detailed the post-mortem results, and said he observed no other cause for the child's death but the laudanum. A verdict was returned to the effect that the child died from the effects of some laudanum given it by its mother, who was ignorant of the poisonous effects of the drug.

THE ROYAL SOCIETY'S MEDALS have this year been adjudicated as follows:—Copley Medal, Sir William Huggins, F.R.S.; Royal Medals, Rev. John Kerr, F.R.S., Mr. Walter Gardiner, F.R.S.; Rumford Medal, Professor Oliver Lodge, F.R.S.; Davy Medal, Professor Johannes Wislicenus, For. Mem. R.S.; Darwin Medal, Professor Karl Pearson, F.R.S.

FOOD AND DRUGS ACT PROSECUTION.—James Edward Bush, chemist and druggist, was summoned at the Melksham Petty Sessions, on November 3, for selling 4 ozs. of oil of almonds, which the county analyst certified was adulterated with other oil to the extent of 25 per cent.—The defendant admitted that the oil supplied to the inspector contained 25 per cent. of peach kernel oil, and consequently did not come up to the standard as laid down by the British Pharmacopœia, 1898. In previous editions no standard was laid down, and the oil in question was purchased before the publication of the Pharmacopœia in May last. Mr. Bush acknowledged that a technical offence had been committed, but said there was no intention at all to defraud, and no moral offence.—The magistrates said they were unanimously of opinion that there was no intention to defraud, but it was the defendant's duty to see his goods were in accordance with the requirements, and they were bound to take notice of it.—A fine of £1, including costs, was imposed.

ADULTERATED BORAX.—In his quarterly report the Medical Officer of Health for Birmingham (Dr. Alfred Hill) states that of four samples of borax taken only one was found to be genuine. Two were adulterated with 35 per cent. of sodium carbonate and the fourth with 25 per cent. of the same substance. A fine of 5s. was inflicted in each case.

MR. JOHN PATTISON GIBSON, chemist and druggist, local secretary of the Pharmaceutical Society for Hexham, delivered a lecture at the Church Institute, Newcastle, on Monday, November 14, on "The Northumbrian Sea Coast." Mr. Gibson, who is a well-known photographer, antiquarian, and historian, treated his subject in a manner at once masterly and interesting. A capital series of limelight views illustrated the lecture.

THE OLD-ESTABLISHED BUSINESS of Mr. Alfred Allchin, pharmaceutical chemist, of England Lane, has been registered under the Companies Act, and will now be known as Alfred Allchin, Ltd.

DEATH CAUSED BY LAVENDER FLOWERS.—At Chelsea, on Thursday, November 10, Mr. Drew held an inquest on the body of Violet Gibson, aged seven and a half months, of 6, Eatley Buildings, Manor Street, Chelsea.—On Friday, November 4, the child got hold of a muslin bag of lavender flowers and sucked it. The next day it was seized with sickness and died on Monday. The bag of muslin, it was stated, had been made at least two years.—Dr. Flood, who had made a post-mortem, said the organs were all healthy, except the stomach, which was congested, and the intestines, gangrenous from intersusception following vomiting. He had never known a case of lavender poisoning, but it would cause irritation. The flower, however, might have been decayed. Death was due to the irritation set up by sucking a bag of lavender.—The jury returned a verdict of "Accidental death."

CRICKET CHAMPIONSHIP IN THE DRUG TRADE.—At a preliminary meeting held on Friday, November 11, at the offices of Messrs. Burgoyne, Burbidges and Co., Mr. C. A. Hill presiding, it was resolved to form a league amongst the wholesale druggists and manufacturing chemists to compete for a cricket challenge cup.

It was further resolved that only *bond-fide* present employes and principals of firms be allowed to take part in the championship matches, and that this rule be strictly adhered to. It is not yet known what firms will compete for the cup; the matter is still in progress. The following firms were represented: Messrs. Allen and Hanburys; Burroughs, Wellcome and Co.; Davy, Hill and Co.; Hewlett and Son; Howards and Sons.

MR. A. URWIN, chemist and druggist, of Lanchester, has taken over the chemist's business at 114, Westgate Road, Newcastle-on-Tyne, formerly carried on by Mr. James Davidson.

FOOTBALL.—The following association match was played at Lake Side Farm, Southfields, on Saturday last, between the Metropolitan College of Pharmacy F.C. and Kensington Rangers Reserves, the game finally resulting in a draw, the score being three all.—This match, between Pharmaceutical Football Club v. London Hospital second XI., played at Wormholt Farm on Saturday last, resulted in a draw, the teams scoring two goals each. P.F.C. team: W. J. Wilkinson, W. Owen, M. Lloyd, T. J. Wild, F. E. Buckingham, L. Tibbitt, J. Evans, T. J. Stokoe, P. B. Gray, W. Garsed, K. Padwick.—On Saturday, November 12, at Homerton, a team from the Westminster College of Pharmacy beat the representatives of the South London College of Pharmacy by one goal to *nil*.

THE SACCHARIN PATENTS LITIGATION.—On November 16, the case of the Saccharin Corporation, Limited, v. Chemicals and Drugs Company, Limited, came before the Court of Appeal (the Master of the Rolls and Lords Justices Chitty and Williams), from the refusal of Mr. Justice North, sitting in chambers, to order that the question of infringement should be tried before the rest of the action. Mr. Swinfen Eady, Q.C. (with him Lord Robert Cecil), said this was an application by the defendants that the question whether they had infringed the letters patent, or any of them, might be set down and tried before the question of validity was dealt with. The action was a peculiar one. The plaintiffs sued the defendants for infringing twelve patents for the production of saccharin, which was a derivative product from coal tar. The saccharin was not manufactured by the defendants, but was imported by them from abroad. Plaintiffs had been ordered to deliver particulars of infringement with a view of showing what portions of the specifications they alleged the defendants had infringed, and they had simply stated that defendants had infringed all the patents and every line of each patent. This, of course, raised a tremendous question for the trial. Defendants did not know by what process the saccharin was manufactured, and as they had furnished plaintiffs with the names of the persons from whom they obtained it in Paris, they ought not to be compelled to fight the question of the validity of the patents until the question of infringement had been disposed of.—Mr. Moulton, Q.C., M.P., and Mr. Graham for the plaintiffs, were not called upon.—Their lordships dismissed the appeal with costs, considering that it was for the learned judge who had to try the case to say what was the most expeditious way of disposing of the question between the parties.

AN INQUEST was held at Kingston-on-Thames on Thursday, November 10, concerning the death of John Markey, 33, an engineer's turner, who died in the Tolworth Isolation Hospital from an overdose of opium while suffering from typhoid fever.—Miss Homewood, the matron, said that Dr. Ackerly, the medical officer, prescribed an injection of six ounces of starch and half a drachm of tincture of opium. Next morning the patient showed symptoms of narcotic poisoning, and he died soon afterwards. Witness learned that Nurse Rice had mistaken the doctor's prescription and administered half an ounce of opium instead of half a drachm. Strictly speaking, witness should have measured the opium, but she sometimes trusted to experienced nurses.—Phoebe Rice, the nurse, said she had been taught nursing at schools and in hospitals, but she did not know that half an ounce of opium was dangerous.—The Coroner: Then you ought to have been taught that.—The jury, in recording their verdict, expressed the opinion that greater care should be taken in dispensing poisonous drugs.

THE KEEPING OF DANGEROUS CHEMICALS.—Messrs. Mack, Bryan and Co., Old Haymarket, Liverpool, were summoned at the Liverpool Police Court, on November 15, for having on their premises 11 lbs. of carbide of calcium without a licence, the limit allowed by

law being 5 lbs. The offence was admitted, but ignorance of the law was pleaded. It was stated that since the inspector called the firm had divided the carbide into 4 lb. drums.—Mr. Stubbs (magistrate's clerk) said that was not the law. If the defendants had more than 5 lbs. on the premises without a licence they were liable to a penalty of £20 a day.—Defendants said that they would take out a licence at once. The material was for an acetelyne gas generator, and the firm, as agents, had not yet received their full instructions.—The Bench imposed a penalty of 5s. and costs.

FRENCH NEWS.

MR. SWANN'S DEATH.—Below is a photograph of Mr. H. H. Swann, pharmacien de 1er classe, Paris, whose death we announced in our last issue. The deceased gentleman was born at Peterborough in 1823. He was, for a short period, assistant in an Oxford Street pharmacy, London, but having a desire to extend his knowledge, he came to Paris, where he engaged with the well-known firm of Roberts and Co., at that time in the Place Vendôme. His primary object was to become a doctor, to which end he studied at the School of Medicine in company with many of those who were once the leading lights in the medical world. Later, however, he abandoned his object (due, no doubt, to the influence of his great friend, the illustrious expert Professor Orfila), and devoted all his energies to the pursuit of chemistry and pharmacy, for which he had a remarkable aptitude. He finally took his degree, and in 1850 founded the house in the Rue de Castiglione which bears his name. His ability and kindly manner soon enabled him to form a *clientele*, which increased so rapidly that he was

obliged to enlarge his pharmacy by removing the partition wall and taking in the neighbouring shop. He was always to be found in the front ranks of his profession, was a thoroughly up-to-date pharmacien, and ever ready to assist with his store of scientific knowledge those who stood in need of it. He was connected for thirty-five years with the business of Churchill's Hydrophosphites, of which he was the maker and representative for the Continent. He, moreover, rendered Dr. Churchill incalculable assistance in perfecting his preparations. Amiable, unostentatious, and exceedingly charitable, he was liked and respected by all with whom he came in contact. His death will certainly be regretted by all who had the pleasure of knowing him. He was a member of the British Chamber of Commerce of Paris, and took a deep interest in all

matters pertaining to the welfare of the old country. The deceased gentleman was 75 years of age, and up to the day of his last illness took a very active part in the management of his own affairs. The interment took place on Saturday, November 12, at the cemetery of St. Germain-en-Laye, in the outskirts of Paris. He leaves a widow and one son, Mr. Alfred Swann.

INTERNATIONAL PHARMACEUTICAL CONGRESS, 1900.—The Committee of Organisation in connection with the above has just been formed, and consists of the following gentlemen, to whom the various offices connected therewith have been allotted. M. Planchon, Professor at the School of Pharmacy, Paris, has been appointed President, whilst M. Petit (former President of the General Association of Pharmaciens of France), and M. Dupuy, Professor at the School of Pharmacy, of Toulouse, together discharge the duties of Vice-Presidents. Monsieur Bourquelot, Professor at the School of Pharmacy, Paris, acts as General Secretary, and Messrs. Labelonye and Leroy, pharmaciens, perform the functions of Treasurers.

CONCOURS.—A Concours will be opened on May 3, 1899, at the Superior School of Pharmacy of the University of Nancy, to fill the vacancy for the Chair of Pharmacy and Materia Medica in connection with the Preparatory School of Medicine and Pharmacy, of Besançon.

WHY PHARMACIENS CANNOT REAP the incalculable benefits accruing from the observance of the seventh day as a day of rest from the trials and worries of the preceding six has long been an unsolved problem in France. Candidly, there is no more necessity for all pharmacies to keep open all day Sunday on this side the Channel than there is for it on your side. To Bordeaux, however, must the palm be given for the happy consummation of a proposal by its pharmaciens to observe the Sabbath day, not from any religious motives by the way, but rather from a conviction of the necessity for repose and recreation. The *modus operandi* is as follows:—The pharmaciens having agreed as to the order in which each shall take his turn to keep open, their clients are duly notified during the week by means of a printed announcement placed in evidence in the pharmacy and bearing the name of the pharmacien whose turn it is to be on duty the following Sunday. In this manner the public are forewarned, and in the event of cases of emergency, lose no time in uselessly ringing peals upon all the pharmacy bells *en route*. Whereas our Bordelaise *confrères* have only agreed to close from mid-day, our fellow-craftsmen at Rheims do still better, by closing at 10 a.m. The scheme appears to work admirably, and the public, in nowise inconvenienced by its adoption, seem to appreciate the efforts of the pharmaciens, and help them by making their purchases early, as is evidenced by the animated appearance of the pharmacies in the morning. It is pleasant to hear and read that pharmacists can agree to work harmoniously together, and that by putting aside those petty jealousies so peculiar to the craft, much may be done to ameliorate their hard and none too happy lot. This is but the thin end of the wedge, and may possibly lead to the accomplishment of other aims which can only be attained by union and oneness of thought and action. Let us hope their scheme may be productive of much good to themselves and be an example for others, especially their Parisian *confrères*, to follow.

IRISH NEWS.

THE IRISH YACHT "SHAMROCK," is to be constructed of wolframium, an alloy of wolfram, copper, and aluminium. The latter is the principal constituent, and is obtained from bauxite, an Irish product mined in Glenavel, County Antrim, and made into alumina at Larne by Bayer's process. The pure aluminium oxide is afterwards reduced by Heroult's process to the metal, at Foyer's, on Loch Ness, Scotland. The predominant partner contributes her quota to the general "get-up" in the rolling mills of Milton, Staffordshire. Aluminium has come to the front slowly. It was first prepared pure in 1827 by Wöhler. It was exhibited by Deville at the Paris Exhibition, 1855, as "silver made from clay." Owing to the expense of production then it was only used in the manufacture of opera glasses and physical apparatus where lightness and strength were a *sine qua non*. Twenty years ago it cost £200 per cwt, to-day the British Aluminium Company supplies it at the rate of £7 10s, per cwt,

THE PRODUCTION OF ALUMINA, as conducted at the works of the British Aluminium Company at Larne, is as follows:—The bauxite having been ground and calcined, is placed in a kier along with a certain proportion of strong caustic soda, and by means of a steam jacket the temperature is increased and maintained until the alumina is held in solution by the soda. The mixture is then blown out by the pressure in the kiers into tanks, where it is diluted. To separate the liquid aluminate of soda from the refuse matter, the mixture is passed through filter presses, which retain the solid impurities but allow the liquid to run off into storage tanks. This liquid is then run off as required into decomposing cylinders, in which the soda separates from the alumina. The hydrate of alumina is now filtered and washed to remove any soda which remains, and is afterwards dried and heated in a furnace fired by Dowson gas to about 2000° F., when it becomes crystalline, ready to be converted into metal.

A POISON BOTTLE blue, fluted, and hexagonal is quite as necessary as a poison-label, as is evident by the mistake made by M. Auguste Van Biene, the popular artiste, in Dublin. During an illness he mistook, owing to the dim light, a bottle of liniment for an internal medicine. An emetic produced the desired effect. Perhaps in emulation of this example an old woman in Larne Union purloined from the medicine cupboard of a nurse, something which she may have expected to stay the "drooth"—it was liniment! A stomach pump was the agent of recovery in this instance.

AT AN INQUEST upon the body of an infant in Belfast the jury found that "death had been accelerated by an overdose of laudanum." A number of doctors had been attending the child, but the mother "gave it two drops of laudanum" for its good. It seems to be a pretty general practice to go behind the medical man's back and administer some quack's cordial or elixir, and when the patient is thus killed the doctor gets the blame.

THE EPIDEMIC IN BELFAST has caused the *British Medical Journal* and *Lancet* to forego their wonted professional calm and impartiality. The assertion of the latter organ that the typhoid mortality rate was in the first nine months of last year equal to 0.965 per million is without the slightest foundation. The total deaths from enteric in 1897, were 154; on the Registrar-General's estimate (304,000). This gives 506 per million, or less than 400 for nine months. But taking the population of the city at 350,000 (which can be easily shown since the extension of the boundaries to be the accurate one), the annual death-rate from typhoid per million would be 440 or 330 for nine months. The investigations of Professor Lorraine Smith, not yet concluded, may threaten the existence of some theories and hypotheses. It is said that Professor Smith has been unable to detect the typhoid germ as the cause of the epidemic, but has discovered in the sputum of patients Gertner's bacillus, which he has also found in his bacteriological examination to be present in the drinking-water.

Announcements.

Tuesday, November 22.

ROYAL PHOTOGRAPHIC SOCIETY, 12, Hanover Square, W., at 8 p.m., Mr. W. J. Russell will read a paper on "The Action of Certain Substances on a Photographic Plate in the Dark."

Wednesday, November 23.

PHARMACEUTICAL SOCIETY (North British Branch), 36, York Place, Edinburgh at 8.30 p.m. Evening meeting, at which Prof. Ralph Stockman will deliver an address on "Arrow and Ordeal Poisons: Their History, Sources, and Constituents."

SUNDERLAND CHEMISTS' ASSOCIATION, Grand Hotel, Bridge Street, at 5.30 p.m. Special meeting to discuss the new defence scheme as issued by the P.A.T.A.

Thursday, November 24.

CHEMISTS' ASSISTANTS' ASSOCIATION, Grand Hall, Freemasons' Tavern, Great Queen Street, W.C., at 8 p.m. The Annual Reunion (Smoking Concert). Mr. R. A. Robinson, L.C.C., in the chair.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, Annual dinner.

MARKET REPORT.

The quotations here are given in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

NOVEMBER 17.

Business in Drugs and Chemicals, without being very active, has nevertheless, somewhat improved during the past few days, due probably to the rather improved political outlook, combined with the advent of the busier season of the year. Quinine remains firm, with a further advance in price confidently anticipated. Cocaine is also very firm, and looks as if the long-predicted rise in price would soon, at last, take place. Quicksilver and Mercurials, Iodine and Iodides, Bromine and Bromides unchanged. Acid Citric and Acid Tartaric dull. Borax and Boracic Acid quiet. Permanganate of Potash slightly firmer. Opium, Morphia, and Codeia steady. In Sulphonal the advance in makers' prices has not yet fully come into force in consequence of offers from second-hand, a possible improvement is predicted in Phenacetin and Acetanilide. Sulphate of Ammonia dearer again. Acid Carbolic in fair demand at steady prices. Glycerin quiet. Cod Liver Oil rather dull. The following are the prices actually ruling for some of the articles of principal interest:—

ACETANILIDE.—The prospect of a combination amongst the makers, with a view to an advance on present very low prices, is freely spoken of. It must not, however, be overlooked that, besides the keen competition between the makers, the actual very low price of benzole may have something to do with the reduction in price of acetanilide. At present makers still quote 11d. up to 1s. 1d. per lb., according to quantity.

ACID ACETIC.—A fair business passing, and quotations are firm at 14s. 3d. per cwt. for 1 to 7, 15s. 6d. per cwt. for B.P., 40 per cent., 18s. per cwt.; 50 per cent., 21s. 6d. per cwt.; 60 per cent., 25s.; 70 per cent., 28s. 9d.; 74 per cent., 30s.; 80 per cent., 32s. 3d.; 85 per cent., 34s.; 90 per cent., 35s. 9d.; 95 per cent., 37s. 9d.; and glacial 39s. 6d. per cwt., with special quotations for half-ton lots and upwards.

ACID BORACIC.—Steady at 24s. per cwt. for *crystals* and 26s. per cwt. for *powder*.

ACID CARBOLIC.—Is in fair demand at 6½d. to 6¾d. per lb. for 35 to 36° C. *ice crystal* in large drums and overcasks, 39 to 40° C., 7¼d. to 7½d., 39 to 40° C. *detached crystals*, 8¼d. to 8½d. per lb. *Crude*, 60° F., 1s. 11d. per gallon; 75° F., 2s. 3d. per gallon. *Liquid*, 95 per cent. of pale straw colour, 1s. 2d. to 1s. 3s. per gallon, in 40 gallon casks.

ACID CHRYSOPHANIC.—Is quiet at 8s. 6d. per lb.

ACID CITRIC.—Is very quiet at 1s. 1¼d. to 1s. 2d. per lb. on the spot.

ACID OXALIC.—*Crystals* are steady at 3¼d. to 3½d. per lb., with *Powder* ¼d. per lb. more.

ACID TARTARIC.—Dull at 1s. 0½d. to 1s. 0¾d. per lb. for English crystals and 1s. to 1s. 0¼d. per lb. for foreign.

ALUM.—Unchanged at £5 7s. 6d. per ton for loose lump and £6 per ton for ground in bags.

ALOES.—*Curacao* are reported to be very firm from New York both for gourds and boxes. *Socotrine*: Sales of good kegs at 75s. per cwt.

AMMONIA COMPOUNDS.—*Sulphate* is dearer, closing steady. Grey prompt, 24 per cent., London, £10 2s. 6d. per ton; Hull, £10; Leith, £10 1s. 3d. per ton. *Carbonate* steady at 3d. to 4d. per lb., according to quantity and package. *Bromide* unchanged at 2s. 1d. per lb. *Iodide* steady at 13s. 7d. per lb. *Muriate*,

chemically pure, small crystals, 30s. to 32s. per cwt.; free from metals, white, 25s. 6d. to 26s. 6d. per cwt. *Oxalate*, 5¼d. to 5½d. per lb. *Sulpho-cyanide* quiet at 1s. to 1s. 1d. per lb., according to quantity. *Sal ammoniac* firm at 35s. per cwt. for firsts sublimed; seconds, 33s. per cwt.; crushed, 37s. and 35s. per cwt.

APOMORPHIA.—Is quoted at 17s. 9d. to 18s. 6d. per oz., according to quantity and make.

ARSENIC.—Remains steady at 18s. per cwt. for white *powder* and 34s. per cwt. for *lump*.

ATROPIA.—Makers are very firm in their prices, which are 15s. 6d. per oz. for the *Sulphate*, B.P., and 17s. 11d. per oz. for the *Alkaloid*.

BELLADONNA ROOT.—Is very firm, good quality being held for 45s. per cwt.

BLEACHING POWDER.—Quiet at £6 5s. to £6 15s. per ton on the spot.

BORAX.—Steady at 14s. 3d. to 14s. 9d. per cwt. for *lump*, and 14s. 6d. to 15s. per cwt. for *powder*.

BROMIDES AND BROMINE.—Are unchanged at 1s. 11d. per lb. for *Bromine* in 20-case lots, 1s. 9½d. per lb. for *Potass. Bromide*, 2s. 1d. per lb. for *Ammon. Bromide*, and 2s. 0½d. per lb. for *Sodii Bromide*.

BUCHU LEAVES.—The lower prices accepted in last sale stimulated the demand, and all the *ex* sale lots were cleared. Fair green rounds are now quoted 6d. to 7d. per lb. as to quality. No arrivals have taken place.

CAMPHOR.—The market for *crude* is somewhat higher and very firm. Business is reported in China, November to December steamer, at 96s. *c.i.f.*, importers now quoting 101s. per cwt. *c.i.f.*, and for Japan 110s. per cwt. *c.i.f.* German *refined* is ½d. per lb. dearer.

CASCARA SAGRADA.—Is in good inquiry, and several parcels have changed hands at full prices. The price for new bark in New York is 26s. per cwt. *c.i.f.*, London or Liverpool, but such can still be obtained on the spot at 25s. per cwt., and old bark at 27s. 6d. to 28s. per cwt.; latter grade is, however, scarce.

CLOVES.—Privately, *Zanzibar* steady business done in October to December delivery at 4d., and March to May at 3½d. At auction, 102 cases *Penang* sold without reserve, ordinary dark unpicked at 4¼d. to 4½d., and fair to good fair picked at 6¼d. to 7½d. 7 boxes ordinary *Java* sold, without reserve, at 4½d. 5 bags *Seychelles* sold at 4¼d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*, pure, 1s. 6d. to 1s. 9d. per gallon; commercial, 1s. 1d. to 1s. 2d. per gallon. *Benzole*, 50 per cent. 9d., 90 per cent. 8¼d. per gallon. *Crude Naphtha*, 30 per cent. at 120° C., 3½d. to 4d. per gallon. *Solvent Naphtha*, 95 per cent. at 160° C. 1s. 5d. per gallon; 90 per cent. at 160° C. 1s. 1d. per gallon; 90 per cent. at 190° C. 1s. 2d. per gallon.

COCAINE.—Is firm, a tangible advance in makers' prices being confidently anticipated in the near future. This predicted advance is ascribed to two causes: First, the continued advance in price of the crude material, it being also stated that the crop of leaves has suffered considerably, there is also, however, the fact that price of the manufactured article has been unduly cut, owing to excessive competition between the principal makers. Prices remain nominally 9s. 9d. per oz. for the *Hydrochlorate* in 25 oz. tins and 100 oz. tins, makers of the brands chiefly in favour decline, however, to book orders at the moment in view of the prospective advance in prices.

CODEIA.—Is in good demand, makers' price remaining unchanged at 12s. 6d. per oz. for the *pure*, and 1s. per oz. less for the salts.

COD-LIVER OIL.—The continued mildness of the season appears to be checking the demand for this article, in which there is not very much doing at the moment. Price of best non-congealing *Norwegian* oil in tin-lined barrels of 25 gallons each remaining nominally 80s. to 85s. per barrel, according to quantity and brand.

CREAM OF TARTAR.—Continues firm, although quiet; 73s. to 78s. per cwt. is quoted for *crystals* of first white quality, and 75s. to 83s. per cwt. for *powder*, according to analysis.

ERGOT.—*Russian* is quoted at 1s. 6d. per lb., and weevily *Spanis* at same price to 2s. per lb., according to condition.

GINGER.—*Cochin* dull; 470 bags rough kinds all bought in at 23s. to 28s.; also 209 cases cut kinds, native small 46s., B cut 62s. 6d., and A at 86s. to 90s. 265 bags limed *Japan* sold at 17s. to 18s. *Jamaica* quiet but firm, and mostly bought in, only about 15 packages being sold, low middling at 70s., fine 105s.

GLYCERIN.—Has been rather quiet at £50 to £55 per ton fo

English, and £55 to £62 10s. per ton for German best white double-distilled chemically pure 1260 quality in tins and cases.

GOLDEN SEAL ROOT—Has become dearer in New York and with a good demand, and small receipts from the country. Price is fully 2s. 6d. per lb. there.

GUM BENJAMIN.—*Sumatra Thirds* are becoming scarce, and more money is now asked. Some business has been done this week at from 75s. to 85s. per cwt.

IODIDES AND IODINE—Unchanged at 10s. 3d. per lb. for *Potass. Iodide*, 11s. 7d. per lb. for *Sodii Iodide*, 13s. 7d. per lb. for *Ammon. Iodide*, 13s. 7d. per lb. for *Iodoform cryst. powder* or *precipitated*, and 10s. 6d. per lb. for *Iodine resublimed*. *Crude Iodine* is quoted 7½d. per oz.

IPECACUANHA.—There has been very little doing in this article since our last. *Rio* is steady at 9s. 10d. to 10s. 2d. per lb., according to quality. *Carthagenia* firm at 7s. 6d. per lb.

JAPAN WAX—Is steady at 33s. per cwt. for good squares.

LITHIA—Is without change at 10s. 8d. for the *Carbonate*, 6s. 5½d. for the *Citrate cryst.*, and 6s. 11d. per lb. for the *Citrate powder* in 2-cwt. lots.

MENTHOL.—The price for forward delivery comes dearer, and the spot price is consequently firmer at 7s. 3d. to 7s. 6d. per lb., as to quantity.

MERCURIALS.—There has been no change in makers' prices during the week.

MORPHIA—Quiet and unchanged at 5s. per oz. for the *Hydrochlorate salt in powder*, price of *hydrochlorate crystals* being 2d. per oz. more.

NITRATE OF SODA.—Commercial is quoted £7 12s. 6d. to £7 15s. per ton; pure, £8 to £8 2s. 6d.

OILS (ESSENTIAL).—*Star Aniseed*: Cheap sales have been made this week, but buyers coming forward freely the market is firmer, 6s. 3d. per lb. being again the quotation. *Peppermint*, American H.G.H., is quiet at 5s. 6d. per lb. on the spot. *Wayne County*, 3s. 6d. to 3s. 8d. per lb. on the spot according to quality. *Japanese* is firm for arrival at 3s. 7½d., *c.i.f.* for dementholised and 4s. 7½d. per lb. *c.i.f.* for 40 per cent. *Cassia* is quiet on the spot but steady for arrival. *Lemongrass* quiet at 3½d. per lb.

OILS (FIXED) AND SPIRITS.—*Linseed*: Values have given way, but the market closes steady at the decline; on the spot, pipes, London, £16 12s. 6d.; barrels, £17 2s. 6d. *Rape* lower; ordinary brown, on the spot, £21 5s.; refined, spot, £22 15s. *Cotton* continues to fall in value; London crude spot, £12 12s. 6d.; refined spot, £14 10s. to £15 10s., according to make. *Coconut* very firm; Ceylon, £25; Cochin, £29. *Palm*: Lagos on spot, £22 10s. *Turpentine* firm at 26s. 9d. per cwt. for American on the spot. *Petroleum Oil* is quiet at 5½d. per gallon for Russian, and 5½d. to 6½d. per gallon for American; water white, 7½d. per gallon. *Petroleum Spirit*: American, 7¾d. per gallon; deodorised, 8d. per gallon.

OPIUM.—Market remains quiet but fairly steady, there being, however, but little doing in the article. Quotations are nominally unchanged at 11s. 3d. to 12s. per lb. for fair to finest *Persian*, 13s. to 14s. for good to fine *soft shipping* kinds, and 10s. 9d. to 11s. 9d. lb. for seconds, 11s. 3d. to 11s. 9d. for fine *druggists*, and 10s. 6d. to 11s. for good seconds and manufacturing kinds.

ORRIS ROOT—Is quiet but steady, best *selected Florentine* being quoted 42s. 6d. to 45s. per cwt., according to quantity and seller, the ideas as to what really is best selected root varying somewhat.

PERMANGANATE OF POTASH.—There is a better feeling in this article, several of the makers refusing to follow the decline in price. There are, however, still sellers of *small crystals* in 1 cwt. kegs, and for a quantity at 50s. per cwt., price of *large crystals* being 5s. per cwt. more.

PHENACETIN.—There is talk of the possibility of an advance in makers' price of this article; good quality, both *crystal* and *powder*, is, however, still obtainable at 3s. 9d. to 4s. 3d. per lb., according to quantity for bulk packing.

POTASH COMPOUNDS.—*Chlorate* continues firm at 3¾d. to 4d. per lb. for crystals, and 4¼d. per lb. for powder. *Bicarbonate* unchanged at 30s. to 35s. per cwt., according to make. *Bromide* firm at 1s. 9½d. per lb. *Bichromate* is quoted at 3¾d. to 3¼d. per lb. *Prussiate*: Yellow remains firm at 6¾d. per lb. for English; red, 1s. 2d. per lb. *Cyanide* firm at 1s. to 1s. 1d. per lb. for the 98 to 100 per cent. white cake. *Permanganate* steady at 50s. per cwt. for small crystals, and 5s. per cwt. more for large crystals. *Oxalate* steady at 5d. per lb. for the neutral.

QUICKSILVER—Remains unchanged at last week's prices; £7 10s. per bottle from importers, and £7 8s. 6d. from second hands.

QUININE.—The market for this article is very firm, and an advance in price is fully expected. Same remains nominally 11d. per oz. for best brands of *German sulphate* in 100-oz. tins and for 1000-oz. lots, which price has also been paid to second hand, there being, however, but little offering, while makers either refuse to sell at all, stating that they have none to offer at the moment, or will only book orders for quite limited quantities.

SALTPETRE.—English *refined* in kegs 21s. per cwt., casks 20s. per cwt.

SARSAPARILLA.—*Honduras* comes dearer from the other side, and holders here are inclined to ask more money. There seems very little to be had now at 1s. 5d. per lb., the last price paid in auction, 1s. 6d. per lb. being generally asked.

SHELLAC.—Business this week has been exceedingly slow, and at the auctions on Tuesday only a very small supply was offered. The demand was fair, and of a total of 358 cases 219 cases sold at steady rates for *Second Orange*. Fair bright realised 65s. 6d. per cwt., flat liver at 61s. to 62s. per cwt., ordinary red blocky at 61s. per cwt.

SODA COMPOUNDS.—*Crystals* remains at 57s. 6d. per ton, ex ship "Thames." *Ash* £5 to £5 10s. per ton here, according to strength and package. *Bicarbonate* steady at £7 5s. to £7 10s. per ton. *Caustic*, 70 per cent., £8 per ton; 60 per cent., £7 per ton.

SPICES (VARIOUS).—*Black Pepper*: 16 bags Singapore sold at 4¾d., and 12 bags Penang at 4¾d. *Tellicherry* bought in at 4¾d. to 5d. *White Pepper*: 10 bags Penang sold at 7½d.; 65 bags Singapore sold at 8¾d.; inferior, 7¾d. to 8¾d.; and 17 cases fine bold at 9½d. *Chillies*: 25 bales Zanzibar bought in at 38s., also 33 cases fine Japan at 45s. to 47s. 6d. *Capsicums*: 278 bags small West Coast African bought in at 34s. *Cassia Lignea*: 250 boxes bought in at 52s.; 100 bales chips partly sold at 45s. *Cassia Vera*: 149 baskets bought in at 36s. *Cinnamon*: 10 bales Ceylon, ordinary fifth sort, sold at 7d.; of 425 bags Ceylon chips, 61 bags sold at 4¾d. to 4¾d. *Mace*: 23 cases Penang sold, chiefly without reserve; pickings, 1s. 2¾d.; ordinary, 1s. 5d.; good middling red, 1s. 10d. to 1s. 11d.; good bold palish, 2s. 2d. to 2s. 3d.; 45 packages West India sold at 1s. 3d. to 1s. 7d.; good fair, 1s. 9d. *Pimento* mostly bought in at 4¾d. to 5d.

SUGAR OF LEAD—Is without change at 26s. 6d. for *Foreign* and 31s. per cwt. for *English*.

SULPHATE OF COPPER—Continues to be a very firm market at £17 10s. to £18 10s. per ton, according to brand. A very considerable business has been done.

SULPHONAL.—There are sellers from second-hand at somewhat lower prices than 17s. per lb., which the two principal makers now quote. It now remains to be seen how much of the article is in second-hands, as until this stock be exhausted full maker's prices are not likely to rule. Buyers who laid in a good stock of the article betimes as so often suggested in this Journal have cause to congratulate themselves.

SULPHUR—Unchanged at 7s. 6d. to 8s. per cwt. for *English roll*, and 11s. per cwt. for *flowers*. *Foreign*: *Roll*, 6s. 6d. per cwt.; *flowers*, 7s. per cwt.

TURMERIC—Is firm but quiet. Fair *China* fingers, 19s. per cwt., bulby ditto, 17s. per cwt. *Bengal* finger, 19s. per cwt. *Cochin*; finger, 21s. 6d. per cwt.; split bulby, 10s. 6d. per cwt.

Newcastle Chemical Report.

NOVEMBER 16, 1898.

Home orders for Soda Crystals are more showy, principally for the Channel ports, the cheaper water carriage from this district telling against railway routes. Heavy goods moves lowly. Prices are:—Soda Crystals, basis, 45s. Bleaching Powder, £5 10s. to £6, according to markets. Alkali, 50 per cent. £5 5s. Soda Ash, 70 per cent., £7 5s. Sulphur, £5 per ton.

Liverpool Market Report.

NOVEMBER 16, 1898.

Though a few articles in regular demand are at present somewhat slack, and in some cases down in price, a firm and healthy tone is generally noticeable. African produce has been selling at good rates, and so has Madras. Turmeric oils are not occupying any large share of attention just at present, and in the case of Castor, Linseed, and Cottonseed oils slight falls in price are the result. Spirits of Turpentine keep very firm, and Spanish Olive

Oils are likely to become dearer. Good brisk business has been done in heavy chemicals. Borax is very scarce, and rises have been experienced in Sulphate of Copper and Sulphate of Ammonia.

AMMONIA SALTS.—*Carbonate*, 3d. per lb.; *Sal ammoniac*, 33s. to 35s. per cwt.; *Sulphate*, £10 5s. per ton.

CANARYSEED.—Turkish seed continues steady at 28s. 6d. to 30s. per 464 lbs. About 400 bags have been sold at 28s. 6d. to 29s.

CHILLIES.—Fine Sierra Leone have found buyers at 36s. per cwt.

COPPER SULPHATE—Is very strong at £18 per ton for prompt delivery, and £18 10s. to £19 forward.

GINGER.—Sierra Leone has been moving off to some extent at 19s. 6d. per cwt. About 50 bags changed hands at this figure ex store.

LINSEED.—Calcutta forward is easier by 3d. per 416 lbs., and sells at 38s. for November to December, and 37s. 9d. for December to January. North American for spot delivery is 36s. 6d. per 424 lbs. *c.i.f.*

OILS (FIXED) AND SPIRITS.—*Castor* is very flat indeed, Calcutta selling at 3½d. per lb.; French, 2½d.; and Madras at 2¼d. per lb. *Olive* has advanced to £30 per ton for Spanish for shipment, owing to a fall in the rate of exchange; spot price £29 10s. for Malaga. *Linseed* has changed in buyers' favour, to 18s. and 19s. per cwt. *Cottonseed* is flat at 15s. to 15s. 6d. per cwt. *Spirits of Turpentine* continues firm at 27s. 6d. per cwt.

POTASH SALTS.—*Cream of Tartar*, Spanish, has been selling at 72s. per cwt., and 73s. is now asked for it. *Potashes* are very scarce at 24s. per cwt. *Saltpetre*, under 5 per cent. *Kurrachee*, has been selling from store at 16s. 6d. per cwt., for the small amount remaining, 17s. is asked.

SODA SALTS.—*Borax* is very firm and scarce at £14 to £15 per ton.

TURMERIC.—*Madras* "figer" 43 bags went for 28s. per cwt.

Manchester Chemical Report.

NOVEMBER 16, 1898.

There is a rather quieter tone prevalent all round, although generally, especially in drysalteries, a fair amount of business is passing locally. In Alkalies there is a somewhat lower tendency all round. Ammonia Alkali is quoted £4 to £4 2s. 6d. for 58 per cent. on rails. Bleaching Powder for prompt £4 10s., softwood casks, and over next year £4 to £4 2s. 6d. per ton on rails, makers' works. Contracts for Caustic Soda are being booked, but makers, while accepting lower figures for prompt delivery, are still disinclined to quote forward except at full rates. There is, however, great competition amongst producers in this department. Sulphate of Copper is the turn easier, and varies from £18 10s. to £19 per ton, best brands, delivered Manchester. Brown Acetate continues steady at £5 5s. to £5 10s. for Welsh and American at Manchester. Naphthas continue scarce, especially solvent wood. Benzoles are practically unchanged, but Aniline Oil and Salt are fractionally higher. Acetate of Soda firmer at £12 10s. per ton, spot. White Powdered Arsenic, £16 10s. to £17 per ton. The direct oil trade continues large. The "Barjom" and the "Rock-light" have left Batoum with cargoes, amounting in the aggregate to two million gallons of refined petroleum.

Partnerships Dissolved.

ENGAGEMENT wanted as TRAVELLER. Drugs or Sundries. First-class retail experience. ALBUS, "Pharm. Journal" Office, 5, Serle St., W.C.

Publications Received.

HOW TO MAKE LANTERN SLIDES, by S. L. COULTHURST. Pp. 81. Price (cloth) 1s. net. London: Dawbarn and Ward, Ltd., 6, Farringdon Avenue, E.C. 1898. From the Publishers.

CREMATION: THE RATIONALE OF IT, by "LENNOX." Pp. 23. Price 6d. London: L. Peirson, 3B, Blenheim Mansions, Stafford Street, N.W. 1898. From the Author.

TANNIGENO E TANNALBINA, pel DOTT. FRANCESCO CORLETTI. Pp. 29. Bologna: Dottor Vittorio Dall'olio, Editore. 1898. From the Publisher.

GOUT: ITS PATHOLOGY AND TREATMENT. By ARTHUR P. LUFF, M.D. Lond., B.Sc., F.R.C.P. Pp. viii. + 248. Price 5s. London, Cassell and Company, Ltd. 1897. From the Publishers.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours, post free, 5s.—Edward Peck, East Dereham, Norfolk.

For Sale.—Field Camera, ½-plate; rapid rectilinear lens; extra dark slide; tripod and satchel. What offers? Apply, G. T., 6, McDowall Road, Camberwell, S.E.

Formula, Straw Hat Polish, black; sells like magic. Formula for many colours. Recipe, 2s.—Huntley, Chemist, Kidderminster.

Two large mahogany cases, plate-glass front, sides, top, mirror doors, 50 in. by 26 by 28; also mahogany case, glass front, sides, door, and top, containing 4 plate-glass shelves; 2 8-gall. carboys, pear-shaped; 2 2-gall. ditto; what offers?—Kitching, Oakengates, Salop.

Best Cash Offers, 100-oz. original tin Howards' quinine.—Endle, Chemist, Boscombe.

Magic Lanterns, second-hand; triples and biunials: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Pamphlet on the Manufacturing of all kinds of Household, Toilet, Dog Soaps, Bleaching Fats, Oils, making Cloudy Ammoniated Solution, Soda, etc., 1s. 6d.—Garforth, Chemist, Sheffield.

Two Shaped Marble Slabs, 4 feet long and cased in mahogany, on supports; mahogany counter case, 9½ feet long, and 2½ feet wide; also two small glass cases and old window casing. What offers?—John Wild, 307, Oxford Street, Manchester.

Books.

The Journals 'Pharmaceutical' and 'Chemist and Druggist,' clean and unbound, from 1878 to date (few exceptions); any price to clear.—Brodrigg, 344, Mare Street, Hackney.

Squire's 'London Hospitals,' 1869, 9d.; Pereira's 'Materia Medica,' 3 vols., cloth, 6s. 6d.; Cassell's 'Family Physician,' 2 vols., half-calf, 15s.—W. Pemberton, 34, Church Street, Preston.

Roscoe's 'Chemistry,' 1894, 2s.; Wills' 'Pharmacy,' 2s.; 'Fruits and Flowers,' 2s., and 'Analysis,' 1s. 3d.; Attfield's 'Chemistry,' eleventh edition, 1885, 2s. 6d.; Bentley's 'Manual of Botany,' latest edition, 1887, 4s.; Newth's 'Practical Chemistry,' 1897, 1s. 6d.; all in good condition.—A. W., 372, London Road, Thornton Heath.

WANTED.

A Complete Set of 'Pharmaceutical Journals,' bound; state lowest price for cash.—"Journals," care of Thomas Kerfoot and Co., Bardsley Vale Mills, Ashton-under-Lyne.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsell, 9, Derwent Grove, East Dulwich, London, S.E.

Marked Copies of the following Newspapers, have been received during the week:—*Grimsby News*, *Newcastle Daily Journal*.

COMMUNICATIONS, LETTERS, etc., have been received from Messrs. Acton, Andrews, Ball, Barrass, Branch, Brown, Browne, Campkin, Carter, Cowley, Daniel, Dixon, Duncan, Dyson, Evans, Fairley, Fassett, Foster, Gadd, Gerrish, Gifford, Hasselby, Hickling, Hill, Howitt, Johnson, King, Kirkby, Lescher, Merson, Oppenheimer, Pater, Pemberton, Ransom, Reynolds, Roberts, Robinson, Saunders, Smith, Sproston, Stanford, Summers, Treacher, Urwin, Valentine, Warren, Wilson.

PHARMACY IN AUSTRALASIA.

VICTORIAN PHARMACISTS CONSIDER that they have strong grounds of complaint as regards the system on which the Friendly Societies' dispensaries are conducted at present, as there appears to be little doubt "from information received" that they are practically available, without any pretence of restriction, to the general public, as well as to members. The matter is at present in the hands of the Pharmacy Board, and legal opinion is being taken.

A VETERINARY DENTIST, holding the certificate of Sayre and Drake's Veterinary Dental College, Chicago, U.S., was recently fined £2, with £3 3s. costs, at the Melbourne District Court for exhibiting the words "Veterinary Dentist" on his brass plate. The defendant apparently laboured under the delusion that American certificates were recognised in Victoria, and had accordingly omitted to obtain the necessary registration under the Veterinary Board of Victoria.

THE VICTORIAN DENTAL BOARD recently interviewed the Chief Secretary on the subject of the long-delayed Amended Dental Bill, and secured a promise that a measure would be introduced this session in time to be finally disposed of. The deputation expressed the strong objection to a proposed clause prohibiting any member of the Board from being an officer, lecturer, examiner, or member of the Council or Committee of any dental college or hospital, on the ground that many of the best known and most experienced dentists of Melbourne were connected in one or other of those capacities with a dental college or hospital, and the clause would mean their withdrawal from either the Board or the institution, with consequent loss and injury to one or the other. The Chief Secretary promised to place these representations under the consideration of the Cabinet.

A REGISTERED DENTIST NAMED FREDERICK MASTIN, carrying on business under the style of the Melbourne Dental Company, was recently sued in the County Court for £99 damages, under the following circumstances. Plaintiff stated that, on April 26 last, he called on defendant to have a tooth extracted, and, before submitting to the operation, asked what preparation was intended to be used to deaden the pain. Defendant said he used a preparation of his own, the component parts of which he would not disclose for £500, and assured him that it would have no injurious after effects. Plaintiff then consented to have the tooth extracted. Next morning his tongue was very much swollen, and three days later the gums commenced to bleed. A medical man plugged the cavity in the gum, but it became worse, and he was unable to do anything for six weeks. Medical evidence for the plaintiff was directed to show that the injury might have been due to impurity in the preparation, or to the use of a syringe that had not been properly sterilised. For the defence one medical man asserted that the symptoms experienced might have followed the extraction of a tooth where no solution had been used, and another that the symptoms might have arisen from the state of the gums. Judgment was eventually given for defendant with costs.

LATEST REPORTS FROM NEW ZEALAND are not very sanguine as to the prospects of the Pharmacy Bill being passed this session. The Pharmacy Board was arranging a deputation to wait upon members of the legislature and enlist their sympathies. Acting on the advice of Mr. Justice Edwards, efforts are to be made to introduce a clause exempting chemists from jury service.

A VERY SAD DENTAL MISHAP is reported from Adelaide, South Australia. In June last a young lady named Maud Catchlove had two teeth extracted by Mr. B. Thomson, dentist, of King William Street. The operation was followed by coughing and symptoms of chest irritation, and subsequently abscess developed on the lung. Medical attendance was secured, but the patient gradually became worse, and died on July 28. A post-mortem examination revealed a tooth in the first division of the left bronchus, and at the close of the inquiry the jury found that death was caused by the tooth found in the bronchus, and added a rider to the effect that Mr. Thomson should be more careful in extracting teeth. Evidence was given at the inquest that after the dental operation Mr. Thomson requested the friend of the patient who accompanied her to leave the room, and that he then inverted the patient and tapped her on the back. Mr. Thomson, however, denied that he had

any suspicion that a tooth had gone down, and in explanation of the inversion said that he feared some pus from the abscess at the root of the tooth had gone down into the lung, and did this to get rid of it. Had information been given at once as to the probability of a tooth having been swallowed, an operation might, according to the medical evidence, have saved the patient's life.

IN NEW SOUTH WALES the Pharmacy Board—of which, by the way, Mr. L. Williams has been elected President—still continues to have a good deal of its time occupied in considering applications for registration. Amongst those recently dealt with was that of a Mr. W. J. Graburn Morris, of Dubbo, who claimed to have the "Major" qualification of Great Britain. In reply to a letter from the Board, demanding his personal application, and that he should be examined on oath, Mr. Morris wrote that it was not convenient for him to proceed to Sydney and comply with the wishes of the Board; and so the matter rests for the present. [No such name appears either in the Register of Pharmaceutical Chemists or the Register of Chemists and Druggists for 1898.—Ed. P. J.] The report of the proceedings at the September meeting of the Board reveals the fact that there seems to be a regrettable disposition, on the part of one of its members at least, to look upon the Council of the Pharmaceutical Society as a somewhat too forward child, meddling with matters which should be left in the hands of their wiser seniors. The occasion for the display arose out of a letter from the Council requesting the Board to acknowledge the course of lectures and examinations proposed by the authorities of the Sydney University. Mr. Bellemey on this remarked that it was a very strange proceeding on the part of the Council to usurp the functions of the Board by writing to the Registrar of the Sydney University, and stating that they (the Council) accepted the curriculum suggested by them, and he characterised the business as most improper. Mr. Brothwood and the President claimed, on the other hand, that the Pharmaceutical Society was the proper body to attend to the education of young pharmacists, and also that the deputation which waited upon the University professors in June last was from the Council of the Society, and the Board was only invited to accompany them. Mr. Bellemey replied that even at the time referred to he realised that the members of the Council, in taking such a step as projecting a deputation to the University, were exceeding their functions, and, in conclusion, most strenuously objected to the Pharmaceutical Society being permitted to transact the business of the Board with the University or any other body. Mr. Bellemey, it may be added, has not apparently forgotten or forgiven his defeat in connection with the alteration of the rules of the Society a few months ago, and although he now admits the legality of the vote then taken, he still objects to the alterations, and recently announced that he intended to sever his connection with the Society at the end of the financial year, and would take no further active part in its management.

IN CONNECTION WITH THE NEW PHARMACOPŒIA, the following notice was sent by the Pharmacy Board to the Secretary of the New Zealand Branch of the British Medical Association:—"The Pharmacy Board intends publicly to recommend the adoption of the 1898 edition of the Pharmacopœia, for use on and after January 1, 1899, and suggests the propriety of the medical faculty adopting the same course, and further, that medical men wishing to use the new formulæ before that date should insert the words 'B.P., 1898,' in connection with the preparation ordered." A notification of the action taken by the Board has also been posted to all the registered chemists in the colony.

AN ACTION BROUGHT BY THE WIDOW of the late Dr. Samuel Irvine Williams—the circumstances in connection with whose sad death were described in previous notes—to recover £3000 from Mr. James Christopher, Chemist, Clifton Hill, father and employer of the assistant who was presumed to have made the fatal mistake in dispensing, has, after a trial of six days in the Melbourne County Court, ended in a verdict for the defendant. Briefly put, it was alleged by the plaintiff that on March 6 last, defendant, by his son, negligently, carelessly, and improperly supplied her husband, the deceased, with a poison known as atropine, instead of morphine as ordered, and that Dr. Williams died from the effects of the drug. The order given by deceased was for cocaine hydrochlorate and morphine sulphate. Atropine sulphate was unfortunately supplied instead of morphine sulphate, and the cocaine hydrochlorate was inadvertently

labelled morphine sulphate, but deceased was informed of that fact before he left the pharmacy. For the defence it was urged among other things that although it was admitted a mistake was made, and that the deceased had been in the habit of injecting morphine, he had, as was proved, endeavoured to break himself of the morphine habit by injecting cocaine, and that he, therefore, probably prepared the cocaine solution specially for his own use in his patient's room, and used that cocaine solution. Several well-known medical authorities, including Mr. Sidney Plowman, F.R.C.S., gave evidence to the fact that the symptoms exhibited by the deceased did not point specifically to atropine as the cause of death, that they were, in fact, unable to say that death was due to atropine poisoning; while Mr. Blackett, the Government analytical chemist, stated that he had been unable to discover any atropine in the deceased's system. The frank attitude adopted by both father and son from the moment of their discovery of the mistake made a very favourable impression on the public mind, and there seems to be a feeling of relief that they have escaped a heavy monetary penalty in addition to the mental anguish which the unfortunate mischance has entailed upon them during the past six months.

AT WELLINGTON, Mr. W. C. Fitzgerald, chemist, was recently sued for £500 damages, for alleged unskillful treatment in vaccinating an infant. Counsel for the plaintiff claimed that Fitzgerald failed to take any of the usual antiseptic precautions to prevent poisonous matter getting into the vaccinal sores. Defendant denied negligence, and said he vaccinated the child under and by virtue of the Public Health Act. He further claimed that a loathsome disease which subsequently developed in the child was the result of unclean and insanitary surroundings. The case was decided in favour of the defendant, who is now petitioning the Government for return of the expenses he has been put to in the case, and claims £735.

ENGLISH EXPORTERS OF CERTAIN SPECIALTIES should note the fact that it may be necessary to revise the accompanying "literature" before forwarding the goods to South Australia, where the recently adopted Indecent Advertisements Act may prove a severe censor. The following paragraph from the report of the September meeting of the S.A. Society will illustrate my hint:—"Messrs. Bickford and Sons wrote informing the Council of advices from their London agents intimating that the circular sent out by Mr. Beecham with his pills had been revised to comply with the Indecent Advertisements Act of this colony, and that each packet of one dozen boxes of pills would contain a notice to that effect." *Verb sap.*

FRENCH NEWS.

GROCCERS AND CHEMISTS.—In France, as in England, the grocer is no mean opponent of the pharmacien, retailing, as he does, at cut prices, anything and everything pharmaceutical which does not bring him within the pale of the pharmacy laws. Recently, however, the grocers of the northern provinces seem to have been having anything but a rosy time at the hands of the pharmaceutical bodies, councils of hygiene, etc., whom they think labour under a mistaken idea of the extent of the powers with which they are vested. Their cup of sorrow, already full, has been brought to the point of overflowing by the action of the aforesaid societies in prohibiting the sale of cinnamon by any but qualified chemists. Indignant with the chemists for arrogating to themselves the monopoly of simple and harmless commodities in everyday use, they threaten to petition the Minister of Commerce to define their rights and obtain for them justice. One of the trade organs, whilst citing the above prohibition, sarcastically adds: "This is carrying the game too far; in the near future we shall probably be forbidden to sell candles because some people with colds make use of them to grease their noses"; also "May we expect to see gherkins placed upon the 'prohibited' list, because these Cucurbitaceæ when ripe are used to make cucumber pomade?"

INFECTION FROM PASTEURISED MILK.—Whatever the merits or demerits of the discoveries of the late illustrious Pasteur, his method of pasteurising milk appears to leave much to be desired. M. Koplik takes exception to this milk for the nourishment of infants. In the milk of model farms, germs are always found.

The milk sold in large towns for the nourishment of young children, though exempt from infectious bacteria like those of tuberculosis, diphtheria, typhoid fever, or scarlatina, still contains germs peculiar to milk, which are always recognisable. And those are the bacteria which are the cause of the gastro-intestinal troubles of children. These deleterious organisms are not destroyed by the method of "pasteurisation" as generally practised. In certain subjects nourished by this pasteurised milk a series of symptoms, sometimes very pronounced, is developed, which Monsieur Koplik denominates "milk poisoning." More often it is an intestinal breakdown which is the first symptom. The child has five or six evacuations instead of one; these are at first yellowish, clotted, and of an acrid disagreeable odour, or they are greenish with an offensive smell. The child is restless and peevish, and has colic and is at times feverish. In other cases the child apparently enjoys good health, with three or four normal evacuations daily, then it will suddenly have a great number, of a greenish colour with a disagreeably acrid odour, which, after the administration of a dose of castor oil, assume their normal condition. In still other cases the child will have three or four normal evacuations and the following day semi-fluid, acrid motions. In all cases, however, extreme exhaustion is evident, and the evacuations more liquid and disagreeable in odour than they should be. The temperature rises and the child does not seem to thrive as it ought. Monsieur Koplik thinks that the remedy lies in substituting "sterilised" for "pasteurised" milk, and recommends the following treatment of the milk, which may be practised in the home. The milk is placed in a steriliser and raised to 100° C., and maintained at that temperature for ten minutes. It is then allowed to cool, and placed on ice, or in a refrigerator, and kept at a temperature under 20° C. until required for use. These remarks are worthy of the serious attention of all who have the treatment of infantile complaints, the above symptoms being a common every-day occurrence, and if, as M. Koplik thinks, the mischief lies in the method of treating the milk, then his suggestions, so simple and easy of accomplishment, are certainly worthy of a trial.

CHEAP DRUGS.—*La Revue Médicale*, a French medical journal, waxes warm over a case which has recently been brought to light respecting the shady practices of a certain Parisian pharmacien. It appears that a newly-fledged chemist not long ago bought a good "going" pharmacy in a populous quarter of the north-east of Paris. No sooner had he established himself than he found, to his dismay, that in retailing his pharmaceutical products according to his predecessor's tariff he was on the high road to ruin. Still, to raise his prices in order to ensure a living profit would lead to the loss of his *clientèle*, and to continue to sell at list prices meant bankruptcy ere long. Beset on all sides with difficulties, he set about considering as to the means employed by his predecessor. To this end he examined the books, sought information from his employés and neighbouring *confrères*, and finally succeeded in discovering the *pot aux roses*. The *modus operandi*, according to the medical paper quoted, was as follows:—When prescriptions were brought in to be dispensed many artful dodges were resorted to in order to ensure a good margin of profit for this pharmacien, whilst charging the patient a very nominal fee. Sometimes he would substitute an inferior article for that prescribed; sometimes only dispense half the quantity. At other times (in cachets, for instance) he would substitute an innocuous powder, and so on. Although, according to French law, the pharmacien is bound to enter a copy of all prescriptions in a book for that purpose, our *confrère* was in no wise disposed to contravene this law; in all cases he complied with it *in toto*, but he had an ingenious device, which consisted of a number of signs and abbreviations, of which he had the key and which he placed in the margin opposite the drug he had perhaps omitted or substituted for. Taking, for instance, antipyrine in cachet, he would use a sign in the margin which to him meant soda bicarb., and thus he was enabled to redispense the prescription when required to be repeated. Many doctors in the vicinity, the journalist goes on to say, were astounded at the inefficacy of their prescriptions; they now know the reason why. If this little incident be a plea to endow medical men with powers to do their own dispensing it is to be feared such shady practices as the above will be frequent occurrence.

EXPOSITION UNIVERSELLE, 1900.—The Sub-Commission No. 5 of the Committee of Admission of Class 87 (group xiv.) of the Paris Exposition, 1900, is about to organise a "Musée Retrospectif" of

the history of chemistry. In this museum will be exhibited such objects as bear relation to scientific discoveries and industrial improvements, viz.: (1) Laboratory apparatus; (2) books of experiments; (3) correspondence; (4) reports upon discoveries; (5) portraits of inventors, *savants*, or manufacturers; (6) descriptions of processes; (7) drawings, plans, models in relief; (8) products obtained by the inventors, or in the scientific laboratories—in short, all such as will clearly and concisely convey to visitors an idea of the successive stages of the progress accomplished in chemical industry, and the importance of the discoveries made by French *savants*. Industrial museums, faculties, schools or private individuals desirous to take part in this exhibition should formulate a separate demand, giving the nomenclature and value of such objects as they purpose exposing. The Administration undertakes to defray part, or the whole, of the expenses entailed by this retrospective exhibition, and will insure the exhibits of which it may be composed.

Trade Notes.

MESSRS. ALLEN AND HANBURYS have opened a special food manufactory at Ware, in Hertfordshire. It is desired, in order to deal with the largely increased sale of their infants' food to draw the attention of the trade to the changed title and design of label of the firm's Malted Infants' Food. On and after December 1 next it will be known and labelled as "Allenburys" Malted Food (No. 3), thus bringing the title into harmony with the "Allenburys" Milk Foods (Nos. 1 and 2), and completing the series of the "Allenburys" Foods, which offer a succession adapted to the progressive development of the child from birth upwards. No change is made in the composition of the malted food. The firm will be glad if chemists will make this alteration of title in all future

issues of their price-lists.

MR. VINCENT WOOD, of Albion Place, Blackfriars, S.E., sends a copy of his new wholesale price-list of surgical appliances. He will shortly issue a similar list with retail prices attached, and in addition one with illustrations and particulars, but without any prices, so that his customers can fix their own prices.

MESSRS. CADETT AND NEALL, of Ashted, Surrey, intimate that in six years they have secured the largest home sale for their photographic plates, and that they are now devoting their attention to secure a foreign trade, and are manufacturing plates suitable for this. They also state that they will shortly be advertising their printing out papers.

D. C. L. MALT EXTRACT.—The D. C. L. malt extract, manufactured by the Distillers' Company, Limited, Edinburgh, maintains its high quality for diastasic power, as referred to in the *P. J.*, lviii., 464a. Examination of a sample just submitted showed that it will convert its own weight of starch into maltose and dextrin in six minutes at 100° F. It is of good colour and consistency, and free from candied sugar. In addition to the malt extract, the Distillers' Company supply a preparation of malt extract and cod-liver oil. It was found to contain the D. C. L. malt extract, combined with a good proportion of cod-liver oil. It forms an emulsion with water, possessing a very agreeable flavour.

EUGOL: A NEW ANTISEPTIC.—Eugol is an antiseptic solution having a faint odour of wintergreen, and containing β -naphthol, extract of hamamelis, eucalyptol, salol, menthol, boric acid, and a small percentage of formaldehyde. As none of the ingredients possess poisonous or irritating properties, in proportions used, the solution should find wide application as an antiseptic, germicide, and deodorant. It is extremely pleasant to use, is quite colourless, and may safely be trusted in the hands of unskilled persons. Eugol tooth powder possesses decided antiseptic and stimulating

properties, and it is also slightly astringent. It should, therefore, prove extremely useful in keeping the teeth and gums in a firm and healthy condition. The powder is free from grit, delicately perfumed, and can be cordially recommended as being all that a tooth powder should be. It is manufactured by Messrs. Bayard, Sons, and Bayard, 26, Bridle Lane, Golden Square, London, and sent out in dainty boxes of attractive appearance.

SANITARY POLISH AND CLEANSER.—"Ronuk" is a sanitary polish and cleanser, manufactured by the firm of Ronuk, Ltd., 83, Upper Thames Street, E.C. It is intended for use on linoleum, parquets, stained floors, furniture, etc., etc. Ronuk has an agreeable odour and is pleasant to use, and has already found favour in some of the large hospitals, on account of its sanitary properties. Other preparations of this firm are boot polishes (both brown and black), and a waterproof

composition polish for harness.

DR. HOMMEL'S HÆMATOGEN is a solution containing pure hæmoglobin, all the salts of fresh blood, and serum albumin, in a concentrated, purified, and non-decomposed form. It is intended for use as a dietetic article and as a natural substitute for ordinary iron preparations, peptone, and cod-liver oil. The solution, which is highly spoken of by leading medical practitioners, is supplied in bottles containing 250 grammes. Messrs. Nicolay and Co., 36 & 36A, St. Andrew's Hill, E.C., are the British agents.

A NOVELTY IN DISPENSING BOTTLES.—The Surgical Supply Association, Ltd., 35, Market Street, Manchester, has introduced on the market dispensing bottles, the necks of which are uniform in size, so that only one size of cork is required to fit all sizes of bottles from 1 drachm to 40 ozs. The outside diameter of the neck is kept perfectly symmetrical with the size of the bottle, so that the necks of large bottles are very much strengthened. The inventor, Mr. S. Thistlethwaite, has applied for a patent.

MESSRS. JEWSBURY AND BROWN, of Manchester, have received the Lord Steward's warrant of appointment as purveyors of mineral waters to the Queen.

MR. E. J. REID, of 11, Dunedin House, Basinghall Street, E.C., has been appointed the British agent for the sale of Phenalgin, an ammoniated synthetic coal tar product with antipyretic and analgesic properties.

THE VITÆ ORE COMPANY, LTD., of 30, Temple Chambers, E.C., has submitted samples of its specialty together with a certificate of analysis from Messrs. Newlands Brothers, of St. Dunstan's Hill, E.C., in which the results are stated to be as follows:—

	Per Cent.	
Insoluble in Water	Insoluble Silicious Matter	69.64
	Bisulphide of Iron	3.62
	Sulphur	0.97
Soluble in Water	Protosulphate of Iron	3.04
	Persulphate of Iron	13.67
	Sulphate of Alumina	1.17
	Sulphate of Magnesia	0.20
	Sulphate of Soda	0.54
	Moisture at 212° Fah.	2.60
	Water of Crystallisation	4.55
	100.00	

Vitæ ore, as taken from the mine, is a very hard, black, magnetic mineral, much the same as iron pyrites. When exposed to the air it becomes oxidised, and after being kept in a damp even temperature of about 60° for some time is converted into a dry ash-coloured powder, 20 per cent. of which is soluble in water, forming a chalybeate mineral water. The therapeutic value is solely in this portion, and the iron, which forms so considerable a proportion, is in a form unusually easy of

assimilation. The Vitæ Ore Co. only supplies specially appointed agents, who must be registered chemists, and the material can only be obtained direct from the firm, and not through the "patent" medicine houses. The Somerset House officials have decided that it is not subject to stamp duty.

SYLVIA'S DIAMOND FROST is one of Messrs. Ayrton and Saunder's (of Liverpool) novelties for the Christmas season. It is intended for decorative purposes and is capable of producing pleasing effects on texts, mottoes, Christmas trees, etc., etc.

ST. RAPHAËL QUINQUINA TONIC WINE is prepared from a fruity wine of Burgundy type, and contains a suitable proportion of quinine. The flavour of the mixture is decidedly piquant, and it is not surprising to find that in Paris this is the most widely sold tonic wine. It may be mixed with mineral waters as a beverage, or taken alone before or during meals as an appetiser. The London agents for the wine are Messrs. Bowen and McKechnie, Cross Street, Finsbury.

THE VALENTINE EXTRACT COMPANY, LTD., sends samples of Valentine Meat Globules and Flavour Peloids. The globules are made of specially treated gelatin, and contain extract of meat made by a modification of Liebig's process. This extract, which must not be confused with Valentine's meat juice—a totally different preparation—is not flavoured in any way, but by using the Flavour Peloids, almost any desired flavour can be obtained.

"CARNOSE" is a meat substitute, said to be prepared from yeast. It is manufactured at the Tower Brewery, Grimsby, in the form of jelly and extract. The extract is sent out without any added flavouring or colouring matter, and it is claimed that no butcher's meat is used in the process. But one teaspoonful is said to make the equivalent of a cup of good beef tea. Carnose is of a rich ruby colour, agreeable odour, and not unpleasant taste.

X RAYS IN WARFARE.—During recent Volunteer manœuvres at Wardend, near Birmingham, an interesting demonstration of the application of Röntgen rays in warfare was given by the ambulance section of the 1st V.B. Royal Warwick Regiment. Bullet and bayonet wounds were assumed, and, after being bandaged on the field, the "wounded" were placed in an ambulance wagon and driven to the hospital tent. Here Dr. Hall Edwards, provided with a portable coil specially made and designed to stand rough usage and any kind of climate by Messrs. H. W. Cox, Ltd., 10, 11, and 28, Cursitor Street, Chancery Lane, London, was in readiness to locate the bullets, in cases of bullet wounds. Several patients were dealt with, spent bullets having previously been inserted within the bandages. The Crookes' tube was brought over the injured part, and a black envelope, containing a film, was placed underneath, and the electric current switched on for two and a half minutes. The film was then developed, with satisfactory results. Before carrying out the experiments the apparatus was carried to the ground in an ambulance wagon, and in order to give it a good jolting was driven over two fields; nevertheless, it worked perfectly. Dr. Hall Edwards was congratulated upon the success of his experiments by the surgeons present, and it was unanimously agreed that the application of X-rays to military surgery had been demonstrated possible and of the greatest usefulness.

CHRISTMAS NOVELTIES, ETC.

MESSRS. MAW, SON AND THOMPSON.—Those chemists who are able to call at Messrs. Maw, Son and Thompson's, in Aldersgate Street, London, to select their stock of Christmas goods, certainly cannot complain of lack of variety, the abundance of it is somewhat bewildering. There is a good display of Roger and Gallet's perfumery, put up in various styles at once neat and effective. One line in cases, contains two cut glass bottles, with globe stoppers, satin lined, in assorted colours with celluloid medallions at 60s. per dozen. Another variety comprises globular toilet bottles, with cut stoppers, filled with perfumes, each in an elegant box, at from 70s. to 84s. per dozen. Tapered cut bottles in harp-shaped boxes, assorted colours, are sold at from 21s. to 33s. per dozen, also square cut bottles in plush cases, satin lined, at 30s. per dozen. The pot pourri caskets of burnished brass, said to be untarnishable, are new and attractive; they are extremely pretty and very suitable for presents,

the prices range from 50s. to 102s. per dozen. There is also a large variety of perfumery in boxes from 8s. to 84s. per dozen. With regard to sprays, there have been so many improvements of late that one might be inclined to think perfection had been attained in design and delicacy of tint long since, but on looking over a splendid selection of these dainty articles, several new designs caught the eye that were not to be seen previously. One series (No. 0382) consists of five different tints at the popular price of 5s. per dozen. A very neat article in clear, cane cut glass is a puff-box and spray combined to sell at 3s. 6d. No. 2779 is a very attractive, delicate, green-tinted spray, sold at 30s. per dozen, and is decidedly pretty. There is also a series of thistle sprays at the same price, and white flint and tinted sprays in various cuttings from 18s. to 21s. per dozen; also elegant white flints in different cuttings, to sell at 3s. 6d. each. A series of eau de Cologne flasks, in five different tints, at 5s., 6s. and 8s., are very suitable for Christmas presents, while there is a cheap line of silver-collar salt jars at 14s. per dozen. A new toilet article is a white bone shaving brush, with a stick of soap let into the handle, it is extremely handy and should sell well. The firm has a very good line of white celluloid hair brushes, with mirror backs, at 36s. per dozen. A very useful article for the nursery is the "New Baby Companion Thermometer," marked with Dr. Bland's specifications for infants and children, at 6s. 6d. per dozen; while the "Nursery Thermometer," after the same style as the clinical, is sold at 12s. per dozen. In view of the requirements of the new B.P., Messrs. Maw, Son, and Thompson have a good stock of alcohol percentage tubes, by means of which the various strengths required may be easily and accurately obtained; these are sold at 2s. 6d. They have also a large assortment of metric weights and measures.

MESSRS. FRANCIS NEWBURY AND SONS.—This firm is offering some capital lines in the "St. Paul's" Perfumes. These include 2s. 6d. Dome perfumes, boxed in quarter dozens, at 16s. per dozen bottles. The 1s. Christmas souvenir in a padded lid case is excellent value at 8s. 6d. per dozen, as is also the G series of perfumes in English stoppered bottles at 27s. per dozen. This G series has already taken well, and as the cases range from 18s. per dozen upwards, all classes of customers can be satisfied. Other 1s. Christmas souvenirs can be obtained at 8s. and 9s. per dozen. The 2d. and 3d. perfumes supplied by the firm still maintain their position, the high quality of the perfume being strictly maintained. Parma violet, Russian violet, lily of the valley, and white violet perfumes are supplied in 6d. bottles, with the appropriate flowers attached, at 3s. 9d. per dozen. These should sell at sight. The price-list of the firm shows that it can meet all requirements in the way of silk-lined cases and spray producers for the coming festive season, and every reader is advised to apply for a copy forthwith.

MESSRS. EVANS, LESCHER, AND WEBB.—If on the lookout for Christmas specialties, chemists will do well, when in London, to visit the firm of Messrs. Evans, Lescher, and Webb, 60, Bartholomew Close, E.C. It will give them an opportunity of viewing the model pharmacy and new showroom, recently established on the premises, which owing to the great strides the firm's sundry trade has taken within the last few years have been considerably extended. The fixtures have been designed by an eminent architect, in fine English oak and Spanish mahogany, and are certainly a credit to the firm's Liverpool shop-fitting staff. The fittings are very elegant and such as the firm is prepared to reproduce to suit any sized shop. Chemists about to open a business should not fail to see this model pharmacy. A complete series of Hawley's counter adjuncts is exhibited, comprising over 300 different articles. Every adjunct is shown, with its different sizes and styles, the artistic labels giving a rich tone to the whole. The labels are a speciality, and are designed by artists who have made a study of this class of work. Moreover, the name and address of any particular chemist is printed on the labels free if an order for three dozen and upwards is given. The side cases are stocked with sundries, including rubber goods, fancy glass, brushes, combs, and all toilet and household requisites, Margerison's and Savar's well-known soaps, and a fine collection of perfumes, put up in plush-covered cases and in bottles of pretty design, very suitable for presents. In the centre of this show-room

is an interesting case, occupied by samples from the firm's stock of crude drugs, oils, essences, and other fine galenical preparations. There is a good assortment of winter requisites—including hot-water bottles, bronchitis kettles, footwarmers, inhalers, cough elixirs, balsams, lozenges, etc., etc. Of sachets in butterfly series, etc., sprays, puffs, and boxes there is a goodly array in many designs, suitable for all sorts and conditions of people. Many other articles are shown which, on account of space, cannot be mentioned here, but there are one or two chemists' requisites which deserve notice; for instance, the firm are prepared to supply a set of metric weights up to 100 grammes, which for cheapness and quality cannot be beaten, the price being 5s.; then for 2s. 3d. one may become the possessor of an alcohol percentage tube for diluting to the various strengths of the new B.P. There is also a good line of real horn spatulas and scopes; chemist-dentists can also obtain here a selection of dental instruments. Those who wish to change the old-fashioned window carboys for something more elegant should see the new patterns of carboys exhibited in the model pharmacy, one, a triple carboy, being especially neat, novel, and attractive. The firm's new registered shield shaped recess labels are a great improvement on the old style; they are a clear white, and show up very distinctly. It may be said with confidence that a visit to Messrs. Evans, Lescher and Webb's show-room will not be time wasted if one is on the lookout for novelties and for points worth noting.

MESSRS. EVANS, GADD AND Co. are not behind any other firm doing business with chemists and druggists in the variety and attractiveness of the bottles of perfumery, toilet preparations, etc., they offer for the present season. The fancy bottles filled with perfumes range in price from 6s. per dozen upwards, and there is a unique special line—eau de Cologne and lilas de France, in long wedge shaped bottles—which should readily attract the attention of purchasers of Christmas gifts. The toilet and winter requisites include Victoria violet powder, Victoria violets soap, eucalyptus oil, glycerin, glycerin and cucumber, ammoniated tincture of quinine, etc. Exonia malt extract is supplied in large bottles, to retail at 1s. 6d. each. Ambrosia is now sent out in white opal glass bottles, enclosed in handsome cardboard cases. The chemical food and compound syrup of hypophosphites supplied by this firm are excellent specimens of pharmaceutical preparations; they seem specially suited for export, and the same may be said of the Food Preservative, a fine white granular preparation, packed in air-tight tins.

ENGLISH NEWS.

ROYAL INSTITUTION.—The Christmas course of lectures, specially adapted to young people, at the Royal Institution, will be delivered this year by Sir Robert Stawell Ball, LL.D., F.R.S., Lowndean Professor of Astronomy and Geometry in the University of Cambridge. The subject will be "Astronomy," and the lectures (which will be illustrated by models and the optical lantern) will deal with the sun, the moon, the inner planets, the great planets, shooting stars, and new methods. The first lecture will be delivered on Tuesday, December 27, at three o'clock, and the remaining lectures on December 29 and 31, 1898., and on January 3, 5 and 7, 1899.

MR. ANDREW THOMPSON, of Lowther Street, Carlisle, has been appointed an Alderman of the Borough. Mr. Thompson has been a pharmaceutical chemist member of the Pharmaceutical Society since 1846.

ALDERMAN MAUD, J.P., chemist and druggist, of Pontefract, was heartily thanked by the Corporation on November 9 for his services as Mayor both in Committee and on the Council, and in appreciation of his services the newly-elected Mayor appointed him as his deputy. Earlier in the week Alderman Maud was publicly thanked for the manner in which he had administered justice as chief magistrate.

ALDERMAN WM. MOUNT, of Canterbury, after twenty-seven years' public service on the Town Council in various capacities, holding the office of Mayor three times, has been compelled to resign his seat as an Alderman on account of ill-health. His resignation was received with great regret by the Mayor and

Corporation, who bore high testimony to his long and honourable record of public service. Alderman Mount has been connected with the Pharmaceutical Society as a pharmaceutical chemist member since 1853.

INLAND REVENUE PROSECUTIONS.—George William Nicoll, described as a hair dye manufacturer; Frederick Rowe, a clerk; and Harry Mobsby, an advertising agent, were charged, at West London Police Court on November 11, with being concerned in vending and exposing medicines liable to stamp duty, and for other offences alleged to have been committed under the Revenue Acts.—Mr. Hawkins prosecuted on behalf of the Board of Inland Revenue.—It was stated that the business was carried on in the names of Mrs. Rose and Mrs. King entirely through the post-offices in Dawes Road, Fulham, and Cambridge Road, Chiswick, orders being received for medicine and posted. Some of the contents of bottles were analysed, and found to contain methylated spirits.—Mr. H. Davis a Government analyst, said the medicine did not contain spirits of wine.—Mr. Hanson, for the defendants, said the prisoner Nicoll never purchased methylated spirits. He always purchased spirits of wine.—Mr. Rose (magistrate), having decided to adopt Mr. Hanson's suggestion, asked what was known of Nicoll.—Mr. Hawkins said he had been known for five years in a number of names and at eight different addresses. On one occasion the prisoner was fined £10 for selling medicine without stamps.—Mr. Hanson read a form of declaration which the prisoner had made, and said he was under the impression that he was not liable if he supplied the authorities with the names of the drugs used in the medicines.—In convicting the prisoner Mr. Rose said he had carried on an extensive and lucrative business in violation of three Revenue Acts. He then inflicted penalties on Nicoll amounting to £115, with £5 costs, and discharged Rowe and Mobsby.

CARBOLIC ACID POISONING.—An inquest was held at Norwich on Friday, November 11, concerning the death of Henrietta Nicholls (23), which was caused by taking carbolic acid on the previous Wednesday. The poison was supplied to the girl at the establishment of Messrs. Jesse Boot, Ltd., and the Coroner, in examining the manager of the shop, said he should be glad if it were made compulsory for chemists to give directions as to use when selling such dangerous ingredients. He did not impute any blame to the manager, but he hoped it would be made obligatory for instructions to be given at the sale of carbolic acid in pure liquid form. The jury expressed its approval of the Coroner's remarks.

PUBLIC DISPENSERS' ASSOCIATION.—There will be a meeting of the Association at 46, Clarendon Square, King's Cross, on Tuesday, November 29, at 7.30 p.m., when Mr. Donnan will give a paper on "Urine and Its Analysis," with pathological, physiological, and microscopic notes; also a discussion on the new pharmaceutical Bye-laws.

COUNCILLOR JOHN MACHIN FURNESS, chemist and druggist, 51, Milton Street, Sheffield, has been appointed Chairman of the Highways Committee of the Sheffield City Council.

MR. F. ORCHARD, chemist and druggist, of Bridgwater, has taken over the business recently carried on at Highbridge by Mr. S. F. S. Carpenter, of Burnham.

SUCCESS OF BLOOMSBURY STUDENTS.—At the Final B.Sc. Examination, London University, Mr. Charles Edmund Ashby, who was a Bell Scholar in 1893, passed in the first division, and Mr. Ernest Goulding, Bell Scholar in 1892, in the second division.

THE ANNUAL SMOKING CONCERT of the Football Club of the School of Pharmacy will be held on Thursday, December 1, at the Crown Room, Holborn Restaurant, when Professor Greenish is expected to take the chair. Mr. J. Evans, 17, Bloomsbury Square, is the Hon. Secretary, and he will be glad to receive applications for tickets, price 1s. 6d. each, as early as possible. A strong company of professional artistes has been engaged, and it is hoped that many old students, as well as others, will turn up.

WAREHOUSE FIRE.—The premises owned and occupied by Messrs. H. Gilbert-on and Sons (Limited), wholesale dealers in "druggists' sundries," at 9 and 11, St. Andrew Street, City, E.C., were the scene of an outbreak of fire on Saturday morning, November 19.

Just before 10 o'clock dense volumes of smoke began to roll out of the warehouse numbered 11, which is a structure five floors high, and extending about 45ft. in one direction and 25ft. in another. The news was sent from floor to floor to the various employes, and in a short time the fire had extended from the basement to the ground floor. The flames were so vigorously attacked by the first of the firemen to arrive that they were speedily checked. By half-past 10 o'clock three hose carts, twenty-five steam engines, two horsed escapes, three long ladders, and 165 men had been concentrated at the scene from all parts of the metropolis; but, happily, the aid of this large force was not required, and the engines and men were ordered back to their stations. The cause of the fire has not been ascertained. The damage to the contents of the premises is covered by insurance in the Sun and other offices, and that to the building by insurance in the Hand in Hand.

ACCIDENT TO A CHEMIST.—On Thursday, the 17th inst., Mr. A. E. Hobbs, pharmaceutical chemist, of 33, Mount Pleasant, Tunbridge Wells, met with a serious accident. A lady, accompanied by her son, wished to purchase some metallic sodium for the lad to experiment with. Mr. Hobbs, foreseeing the danger of the experiment, refused to supply it, but offered to show them some burning sodium. Placing a mortar filled with warm water on the floor, he put a small piece of sodium in it, and was standing upright some three feet from the mortar. For some reason the sodium failed at first to ignite as usual, but suddenly it exploded and was projected on Mr. Hobbs' face, several pieces alighting in and around his eyes. Medical assistance was immediately obtained, owing to the prompt action of a nurse who was in the pharmacy at the time of the accident. At first it was feared that the sight of the right eye was permanently injured, the left eye not being quite so badly hurt, but greater hopes are now entertained that the eyesight may be saved. Mr. Hobbs' condition, however, is still very grave. The sympathy of the entire trade in Tunbridge Wells and district is with Mr. Hobbs in this distressing misfortune, and in consequence of which it has been decided to postpone the reception and dance which the Tunbridge Wells and District Chemists' Association intended to hold on December 8.

PRESENTATION TO MR. J. A. DEWHIRST.—At a meeting of students of the School of Pharmacy on Thursday, Nov. 17, a presentation of a handsome dressing case was made to Mr. J. A. Dewhirst, Demonstrator of Practical Chemistry, on the occasion of his leaving the School. Mr. H. Payne took the chair, and having alluded to the fact that Mr. Dewhirst had been long connected with the School, first as student then as demonstrator, asked him to believe how sorry they all were that he was leaving, and on behalf of the students asked him to accept the dressing case as a small token of their esteem. Mr. Dewhirst thanked the students for their kindness, and said he should value the present as a token of their goodwill, and he referred to the pleasant time he had had in connection with the "Square." He wished the students every success. Mr. Evans said that as a Minor student last session he had derived much benefit from Mr. Dewhirst's help. Mr. Wild spoke in a similar strain, and Mr. Finnemore, on behalf of the Minor students, said that although they had known Mr. Dewhirst for such a short time they were all extremely sorry he was leaving. The proceedings then terminated.

FOOTBALL.—Owens College Pharmaceuticals *versus* Clayton's Northern College of Pharmacy. Played on Tuesday, the 22nd, on the ground of the former. A pleasant game ended in a draw of 3 goals each. Teams—Owens College: goal, Newton; backs, Woolley and Oldfield; half-backs, Stephens, Morton, Pickup; forwards; Drummond, Higson, Patchett, Ryder, Kerfoot. Northern College team: goal, Harrison; backs, Billington and Dalton; half-backs, McIntyre, Crook, Harem; forwards, Patison, Smithson, Hadfield, Phillips, Hughes.—The following Association teams met together at Hackney Marshes, Homerton, on Saturday, November 19:—Metropolitan College of Pharmacy and Westminster College of Pharmacy, the game resulting in a win for the "Metros" by two goals to nil.—The match between the Pharmaceutical Football Club and the Ealing B team, played at Ealing on Saturday last, resulted in a win for Ealing of five goals to nil.

PEARS' ANNUAL for 1898, is the usual "picture gallery for a shilling" that it is wont to be, and excellent value for the money. The three supplements accompanying the number are reproduc-

tions in colours of the late Mr. Calderon's "Captain of the Eleven"; Mr. Albert W. Holden's "Naughty Polly"; and Mr. W. S. Coleman's "The Sunny South." The literary contents of the number consist of an original novelette, entitled, "Who Fears to Speak of '98?" being a story by Mr. R. E. Francillon of the Irish Rebellion. The story is illustrated by thirty-two pictures, after the drawings in black and white, by Mr. Frank Dadd.

POLICE PROSECUTION UNDER THE PHARMACY ACTS.—At the Heanor Petty Sessions on Monday, November 21, Miss Mary Ann Slack, shopkeeper, residing at No. 1, Mount Street, Heanor, was summoned by the police authorities for unlawfully selling a certain quantity of laudanum, to wit one pennyworth, to Louisa Vickerstaffe without properly labelling the bottle "Poison," on the 5th inst.—Defendant acknowledged letting the person have it, but denied selling it.—Louise Vickerstaffe, in answer to questions put by Supt. Daybell, who prosecuted, stated that on November 5 last she took a bottle to the defendant's shop and asked for a pennyworth of laudanum. There was no label on the bottle.—Supt. Daybell stated that witness was the person who was brought up before the magistrates at the last court and charged with attempting to commit suicide by taking laudanum, which was purchased at defendant's shop (see *ante* p. 514c). There was a quantity of laudanum kept in the shop not labelled.—The defendant stated that Mrs. Vickerstaffe, who used to be a neighbour, came to her shop and asked for a pennyworth of laudanum. She told her that she did not keep it for sale, but for her own private use in making white oils. She had been an assistant to the late Miss Roscoe. She never charged Mrs. Vickerstaffe for it, but on going out she threw the penny on the counter. She thought the laudanum was wanted for external purpose, or she would not have let her have it.—Mr. Huish, the magistrates' clerk, said that was the first case they had had before them for many years.—Defendant was fined 1s. and 12s. costs.

MR. PERCIVAL SIDNEY CAMPKIN, son of Mr. A. Sidney Campkin, J.P., M.P.S., of Cambridge, was one of the successful candidates at the recent dental examination held in London, qualifying as L.D.S.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY.—A very enjoyable and successful smoking concert, organised by the above Society, was held on Thursday evening in last week, at Bird's Hotel, Mr. G. Squire, President of the Society, took the chair, and the entertainment was provided by Messrs. Hardcastle, Honey, Newton, Percival, Brown, and Hull. There was a good attendance.

MEDICAL, SURGICAL, AND HYGIENIC EXHIBITORS' ASSOCIATION.—The members and executive of this Association will hold their third annual dinner at the Café Royal, Regent Street, on Saturday, November 26, at 6.30 p.m.

SCOTTISH NEWS.

LAUDANUM POISONING.—A hawker named John McIntosh (27), residing in School Street Lane, Fraserburgh, had suffered acutely for some few days from toothache, and was unable to sleep. He was, it appears, in the habit of taking laudanum, and in order to get an increased quantity from the chemist, he made out that he required it for a horse. He sent his cousin to the chemist for another supply, and it is supposed took the whole of it. On Sunday, November 13, he was noticed to be breathing heavily, and Dr. Beddie was called in. The usual restorative measures were employed for over five hours, but without effect.

A CHEMIST PARISH COUNCILLOR.—Mr. David Watson, chemist, 558, Cathcart Road, Glasgow, contested one of the vacancies of the Govan Parish Council on Tuesday, and in his own ward was returned at the head of the poll. Mr. Watson is Secretary of the Glasgow and West of Scotland Pharmaceutical Association, and a popular man in his district, as the result of the contest shows. Among his brother pharmacists his return was very popular, but he is not the only member of the Association who gives part of their time to the work of a public board. Mr. J. A. Russell, one of the Vice-Presidents of the Association, having held office in the City Parish Council for some years, and being at the present time one of the candidates for a seat at the newly constituted combined council for the City of Glasgow.

MARKET REPORT.

The quotations here are given in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

NOVEMBER 24.

Business has been quiet during the past few days. There are, however, some changes to report. First, prices of Iodides have been suddenly and rather unexpectedly advanced 3d. per lb. Cocaine is also dearer, while there has also been a further advance in makers' price of refined Camphor, due to the continued firmness in the price of Crude Bromides, Mercurials and Quicksilver unchanged. Borax and Acid Boracic quiet. Cream of Tartar firm. Acid Citric and Tartaric dull and weak. Morphia, Opium, and Codeia without change. Cod Liver Oil rather weaker for new oil, 1896 import being also lower in price. Glycerin quiet. Sulphonal, Phenacetin, and Acetanilide unchanged. Quinine quiet, and somewhat unsettled. The following are particulars of prices actually ruling for articles of principal interest:—

ACETANILIDE—Is being offered below makers' Convention price of 11d. per lb. for 5 cwt. lots. The quality of these cheap offerings is, however, hardly to be considered as satisfactory.

ACID BORACIC—Unchanged at 24s. per cwt. for *crystals*, and 26s. per cwt. for *powder*.

ACID CHRYSOPHANIC—Is quiet, but makers are firm at 8s. 6d. per lb., in view of the position of the crude article.

ACID CITRIC—Moves off in a small way at 1s. 1½d. to 1s. 1¾d. per lb. for *crystals*.

ACID OXALIC—Unchanged at 3¼d. to 3½d. per lb. for *crystals*, and 3¼d. to 3½d. per lb. for *powder*.

ACID TARTARIC—Is very quiet, and but little business is passing in the article. *English crystals* are quoted 12¼d. to 12¾d., and about ¼d. per lb. less for the *foreign* article.

ALUM—Is quiet but steady at £5 7s. 6d. per ton for loose lump, and £6 per ton for ground in bags *ex store*.

AMMONIA COMPOUNDS.—*Sulphate* dull and slightly lower at £10 for grey, prompt, 24 per cent. London, Hull, or Leith. *Carbonate* firm at 3d. to 4d. per lb., according to package and quantity. *Bromide* firm at 2s. 1d. per lb. *Iodide* dull at 13s. 7d. per lb. *Oxalate* firm at 5¼d. to 5½d. per lb. *Sulphocyanide* unchanged at 1s. to 1s. 1d. per lb., according to quantity. *Sal ammoniac*: Sublimed firsts are steady at 35s. per cwt.; seconds, 33s. per cwt.; crushed, for batteries, 37s. and 35s. per cwt. respectively.

ARSENIC—Without change at 18s. per cwt. for white *powder*, and 34s. per cwt. for *lump*.

BLEACHING POWDER.—Unchanged at £6 5s. to £6 15s. per ton on the spot.

BORAX.—Firmer at 14s. 6d. to 14s. 9d. per cwt. for *lump*, and 15s. to 15s. 3d. per cwt. for *powder*.

BROMIDES—Are unchanged at prices quoted in our last number.

CAMPHOR.—Makers again advanced their prices. *Refined* this week, 1d. per lb., present quotations being: Bells, 1s. 5½d. per lb.; flowers in 5 and 10-lb. boxes, 1s. 5½d.; blocks, 1 lb., ½ lb., and ¼ lb., 1s. 5½d.; other sizes in proportion. In view of the firmness of the *crude* article, a further advance in price of *refined* is considered not improbable. Owing to the large purchases of *crude* for America the market is exceedingly strong, 107s. 6d. per cwt., *c.i.f.*, being to-day's quotation from *China*, whilst *Japan* is not quoted.

CASCARA SAGRADA.—This article continues very firm, and from the other side very little old bark is offered at all, and that little at 26s. per cwt. *c.i.f.*, which at present is above our market. Here,

at the spot, new bark is still to be had at 25s. per cwt., but old bark is dearer at 27s. 6d. to 30s. per cwt., according to quality and holder. There is very little about and higher prices seem certain.

CHAMOMILES—Are very firm but the demand is slack, owing to the high prices asked. Quotations range from 67s. 6d. to 72s. 6d. per cwt., according to quality.

CHAULMOOGRA OIL.—In original cases this is quoted 2s. 3d. per lb. for good pale quality.

CLOVES.—Privately, *Zanzibar* quiet but steady, October to December delivery 3½d.; and January to March, 3¼d. to 3½d. At auction only 7 cases picked *Penang* offered and bought in at 10d.

COCAINE.—Makers advanced price to 10s. 3d. per oz. for the best brands of *Hydrochlorate* for 100-oz. lots in 25-oz. tins, it being stated that, in view of the position of the raw material, a further advance is probable.

CODEIA.—Is still quoted by the makers at 12s. 6d. per oz.

COD LIVER OIL.—The value of old *Norwegian* has declined several shillings per barrel this week, probably owing to pressure to sell on part of holders. New *Norwegian* is nominally without change at 80s. to 85s. per barrel, according to brand.

CREAM OF TARTAR.—This is a very firm market, and a good business has been done this week. *Crystals* of first white quality are quoted 73s. 6d. to 78s. 6d. per cwt.; and *powder*, 75s. 6d. to 83s. 6d. per cwt., according to strength.

DAMIANA LEAVES—Rather easier at 7d. per lb. on the spot. Demand is very quiet.

ERGOT.—This article has changed hands this week at again dearer rates, 2s. 3d. per lb. having been paid for *Spanish*, and 1s. 6d. per lb. for *Russian*.

GINGER.—Only small supplies of *Cochin* offered. Of 433 bags, rough kinds, only 40 bags, ordinary washed rough, sold at 22s. to 22s. 6d.; of 62 cases, cut, 52 cases, B cut, sold at 61s. to 61s. 6d.

GLYCERINE.—Market is quiet at about late rates.

GOLDEN SEAL ROOT.—The high prices asked keep buyers back, but a good business is reported from New York on the basis of 2s. 6d. per lb. here.

IODIDES.—At the moment of going to press we learn that prices have been advanced 3d. per lb.; full particulars will be given in our next week's issue.

JAPAN WAX—Moves off slowly at 33s. per cwt. for good squares.

KAVA KAVA—Is very scarce both in New York and San Francisco, at present rates on the other side the article costs 10d. per lb. to import.

MENTHOL—Is exceedingly firm, and again comes dearer from Japan. Price on spot is still 7s. 3d. to 7s. 6d. per lb. according to quantity.

MERCURIALS—Are unchanged, the following being makers' present prices: *Calomel*, 2s. 8d. per lb.; *Corrosive sublimate*, 2s. 4d. per lb. *Red oxide, B.P.*, 3s. per lb. *Yellow oxide, B.P.*, 3s. 1d. per lb. *Ammoniated, B.P.*: 3s. 1d. per lb.

MORPHIA.—The price of the *Hydrochlorate powder* is 5s. per oz. for quantity and bulk packing, *crystals* costing 2d. per oz. more.

OILS (ESSENTIAL).—*Peppermint*: American HGH steady at 5s. 6d. per lb. on the spot. Wayne County firmer at 3s. 9d. to 4s. per lb. for fine quality. Japan is firmer, and from the other side more money is asked. *Star Aniseed* is steady at 6s. 3d. per lb. *Cassia*, 4s. 9d. to 5s. 6d. per lb., as to quality. *Citronelle*, 1s. 1d. to 1s. 2d. per lb., as to package. *Spearmint*, 4s. per lb. *Wintergreen*, 6s. 3d. to 7s. per lb. *Sassafras*, 1s. 7d. to 1s. 8d. per lb.

OILS (FIXED) AND SPIRITS.—*Linseed* is again lower with the decline in the value of seed. Pipes, on the spot, £16 5s., barrels £16 15s. *Rape* is steady at £21 5s. for ordinary brown on the spot, refined spot £22 15s. *Cotton* steady; London crude spot £11 15s., refined spot £14 to £15, according to make. *Coconut* again dearer, closing very firm at £26 for Ceylon on the spot, and £30 nominally for *Cochin*. *Palm*: Lagos on the spot £22 10s. *Turpentine* much dearer, closing a firm market, American spot 28s. 3d. per cwt. *Petroleum oil* quiet at 5½d. per gallon for Russian, and 6½d. per gallon for American. *Petroleum Spirit*, American 7¼d. per gallon, deodorised 8d. per gallon.

OPIUM.—Quiet and unchanged from last week.

PARAFFIN WAX.—*Refined*: 2½d. to 3½d. per lb., according to quality.

PHENACETIN—Is unchanged at 3s. 9d. to 4s. 3d. per lb. for both *crystal* and *powder*, in quantity and bulk packing.

POTASH COMPOUNDS.—*Chlorate* steady at 3¼d. to 4d. for *crystals*, and 4d. to 4¼d. per lb. for *powder*. *Prussiate*: Yellow, 6¼d. per

lb. for English; red, 1s. 2d. per lb. *Bicarbonate* steady at 30s. to 35s. per cwt. for crystals or powder, according to brand. *Bromide* firm at 1s. 9½d. per lb. *Bichromate* steady at 3½d. to 3¾d. per lb. *Oxalate* firm at 5d. per lb. for the neutral. *Permanganate* firm at 50s. per cwt. for small crystals, and 55s. per cwt. for large crystals. QUICKSILVER—Is firm at £7 10s. per bottle from importers and 1s. less from second hands.

QUININE—Market is somewhat undecided. Makers of best *German* brands stating that their price is nominally 11d. per lb., but that they are sold out and have none to offer at the moment. A little is obtainable from second hands slightly below alone figure.

SAFFRON.—It is said that the crop has been damaged by early frosts, and quotations from Spain come rather dearer. Finest *Valencia* is quoted 33s. 6d. to 35s. per lb., whilst *Alicante* is steady at 22s. 6d. to 25s. per lb.

SALTPETRE.—English, *refined*, in kegs, 21s. per cwt.; casks, 20s. per cwt.

SHELLAC.—The demand on the spot is very slow, with only retail sales of *TN Orange*, basis fair, at 65s. per cwt., and *AC Garnet* at 65s. to 67s. per cwt. for cakey to good free. Both the arrival and speculative markets are quiet.

SODA COMPOUNDS.—Crystals are steady at 57s. 6d. per ton, ex ship in the Thames. *Ash*, £5 to £5 10s. per ton on the spot, according to strength and package. *Bicarbonate* quiet at £7 2s. 6d. to £7 7s. 6d. per ton for the 97 per cent., and 18s. 6d. per cwt. for the fully bicarbonated quality. *Bromide* quiet at 2s. per lb. *Iodide* unchanged at 11s. 7d. per lb. *Bichromate* unchanged at 2¾d. to 3d. per lb. *Hyposulphite* dull at 6s. to 8s. per cwt., according to brand. *Caustic*, 70 per cent., white, £8 per ton; 60 per cent., £1 per ton less.

SPICES (VARIOUS).—*Black Pepper* all bought in, Singapore at 4¾d., and *Tellicherry* at 4¾d. *White Pepper* also almost all bought in, Penang at 7½d., Siam at 8d., Singapore, fair to fine, 8¾d. to 9½d. *Capsicums*: 278 bags West Coast African sold, without reserve, at 27s. 6d. *Cinnamon*: 39 bales Ceylon sold, without reserve, at 7d. to 7¾d. *Mace*: 54 cases Penang, nearly all bought in, pickings 1s. 3d., middling to good 1s. 9d. to 2s. 2d.; 1 box West India sold at 1s. 3d. *Nutmegs*: Dull and mostly bought in. *Pimento*: Firm but quiet, 153 bags sold, fair to good 4¾d., one lot 4¾d.

STROPHANTHUS SEEDS.—Green *Kombé*, the official kind in this country, are firm at 3s. 6d. to 4s. per lb., according to quantity, whilst the brown kind have been taken this week in good quantity for the Continent at 10d. to 1s. per lb.

SUGAR OF LEAD—Is quiet, but quotations are firm at 26s. 6d. per cwt. for *Foreign* and 31s. per cwt. for *English*.

SULPHONAL.—Buyers who failed to secure a stock at late low prices are now looking round for anything which is procurable from second hand below makers' present price of 17s. per lb. It is believed, however, that the quantity thus available from second hand is limited.

SULPHUR—Is firm, with a fair business passing. *English*: Roll, 7s. 6d. to 8s. per cwt.; flowers, 10s. per cwt. *Foreign*: Roll, 6s. 6d. per cwt.; flowers, 7s. per cwt.

SULPHATE OF COPPER—Is strong at £18 to £19 per ton, according to brand.

TURMERIC.—All kinds are extremely slow of sale, still holders are firm. *Bengal finger* 19s. per cwt., *Cochin finger* 21s. per cwt., *China finger* 19s. per cwt., split *Cochin bulbs* 10s. 6d. per cwt.

To-day's drug auctions passed off somewhat quietly, a considerable number of the lots offered being bought in. Chief alterations were weaker prices for *Ipecacuanha* and *Buchu Leaves*, and a decline in value of *Rhubarb*. It has been decided that the first drug sale of the New Year will take place on January 19, and this will mean an interval of six weeks, assuming the Christmas week auction is, as usual, passed over. The sales of March 31 and August 3, 1899, will also be passed over. The following are the particulars of to-day's sales:—

ALOES.—15 boxes dark to good livery *Curacoa* were bought in, bids of 21s. and 21s. 6d. per cwt. not being entertained. 8 kegs *Socotrine* of good quality taken out at 80s. per cwt.

AMBERGRIS.—Under this name 1 tin of evil-smelling stuff, of a whitish colour, was shown. An authority stated that it was the "brain of a whale." The brokers offered it without giving it a name, but no bid was made.

ANISEEDS.—44 bags fair, *Russian*, part sold at 19s. per cwt.

ANTIMONY.—40 cases *crude Japan* bought in at £22 10s. per ton. ARGOL.—17 bags *Cape* sold at 56s. per cwt.

BALSAM COPAIBÆ.—2 casks good thick *Muranham* bought in at 1s. 8d. per lb.

BALSAM TOLU.—17 cases good fair bought in at 1s. 7d. per lb.

BUCHU LEAVES.—12 bales good green rounds realised 5½d. to 5¾d. per lb., yellowish green selling at 4¾d. per lb.

CALUMBA ROOT.—160 bags low dark sorts sold at 12s. per cwt.; 213 bags sold at 20s. 6d. to 23s. 6d. per cwt. for fair bright sorts up to 75s. 6d. per cwt. for good, part slightly dull.

CAMPHOR.—10 cases, each 112 lbs. in 1-oz. tablets, *Japan refined*, were taken out at 1s. 4d. per lb., 30 cases selling without reserve at 1s. 2d. per lb. for 1-oz. tablets, and 1s. 3¾d. for ½-oz. tablets.

CARDAMOMS.—About 230 cases were catalogued, all selling at full prices. One lot of fine bold bleached Ceylon *Mysore* were held for 4s. 2d. per lb., 4s. being refused. Good realised 3s. 3d. to 3s. 9d. per lb. Seeds 3s. per lb.

CASTOR OIL.—25 cases medium *Calcutta firsts* were taken out at 4¾d. per lb.

CINCHONA BARK.—10 cases *red Guayaquil* bought in at 8s. per lb. for 3CCD. 11 cases ditto, but of different quality, sold at 1s. 7d. per lb. down to 4d. per lb. for inferior 3CCD.

COCOA LEAVES.—5 bales fair *Truxillo* were held for 7d. per lb.

COD LIVER OIL.—25 barrels fair Norwegian of 1896 import, slightly darkish in colour, sold without reserve at 50s. to 57s. per barrel, which shows a considerable reduction in value, same quality realising 65s. per barrel in previous public sale.

COLOCYNTH.—9 casks fair pale *Turkish*, part broken sold cheaply at 11½d. per lb.

CROTON SEED.—34 bags fair quality held for 75s. per cwt.

CUBEBS.—15 bags of fair quality sold at 24s. per cwt.

CUTTLE FISH BONE.—20 mats fair, pale broken, held for 2½d. per lb.

DAMIANA LEAVES.—5 bales, rather yellow in colour were taken out at 7d. per lb.

DILL SEEDS.—100 bags fair pale were taken out at 15s. per cwt., a bid of 12s. being declined.

DRAGON'S BLOOD.—One case of good bright but damp saucers realised £11 per cwt., other lots being bought in. Reeds are held for £12.

ERGOT OF RYE.—7 bags *Spanish*, of which no sample was forthcoming, were bought in at 2s. 6d. per lb., 15 bags small weevily *Russian* at 2s. per lb., 10 cases very weevily ditto at 1s. 5d. per lb. less would, however, probably be accepted to clear.

ESSENTIAL OILS.—9 cases *Japan Peppermint* of good quality and guaranteed to contain about 40 per cent. menthol were taken out at 5s. 3d. per lb. 20 cases fair *Citronella* at 1s. 2d. per oz. 2 cases *Essence Neroli*, *Bigarade*, were held for 3s. per oz. 4 cases distilled West Indian *Lime Oil* part sold at 2s. 6d. to 3s. per lb., subject to approval. 1 box *Bay Oil* sold at 6s. per lb.

GALANGAL ROOT.—10 bales of fair quality were taken out, 22s. 6d. per cwt. being price required.

GAMBOGE.—6 cases fair, bright pipe, part somewhat rough, sold at £7 10s. per cwt. 12 cases bought in at £7 5s., for fair bright, softish, down to £6 12s. 6d. per cwt. for very mixed pipe.

GUM AMMONIACUM.—5 cases fair fair pale part blocky were taken out at 40s. per cwt.

GUM ARABIC.—4 cases pale grains were bought in at £6 12s. 6d., 3 cases picked grains selling at £5 per cwt., 20 serons good soft sorts taken out at 90s.

GUM ASAFETIDA.—40 cases, which had previously been offered in public sale on the 10th inst., were again bought in at 40s. to 52s. 6d. per cwt. for very heavy brown to dark blocky, part slightly almondy, down to 30s. per cwt. for inferior quality. Of 63 cases shown for the first time, 2 cases good grey broken block, part loose almonds, sold at 50s. per cwt., and 22 cases common heavy brown block at 25s. to 27s.

GUM BENJAMIN.—*Sumatra*, very good almondy block, well packed, was bought in at £11 per cwt., fair ditto for £10, fair to medium seconds at £6 to £6 10s. 29 cases small to medium, free *Siam*, part slightly blocky, were taken out at £18 per cwt., dark blocky seed at 55s. per cwt.

GUM GUAIAACUM.—1 cask good glassy block was held for 1s. 6d. per lb.

GUM KINO.—3 cases fair *African*, part dark and blocky, were taken out at 2s. 6d. (only 1s. 2d. being bid), 1 case good bright *African* being bought at 8s. 11 packages genuine were taken at 10s. per lb.

GUM MYRRH.—5 cases good sorts bought in at 70s. per cwt., a

bid of 65s. being refused. 5 casks medium sorts taken out at 50s., 9 casks bought in at 100s. per cwt. for good bright pale sorts, and 50s. per cwt. for pickings.

GUINEA GRAINS.—2 bags of fair quality were held for 65s. per cwt.

HONEY.—20 packages medium *Jamaica* sold at 20s. per cwt., down to 18s. 6d. per cwt. for slightly inferior.

IPECACUANHA.—44 bales *Rio* and 18 bags *Carthagera* were offered of these part of the latter sold at 7s. per lb., whilst only one bale of the former sold at 9s. 10d. per lb., a decline of 2d. per lb. on this quality. Demand generally is very slow.

KAMALA.—8 cases fair bright were bought in without mention of price.

KOLA NUTS.—10 bags of fair quality taken out at 3d. per lb.

MATICO LEAVES.—9 bags, fair green, part broken, were taken out at 6d. per lb.

MUSK.—1 caddy, net, about 24 ozs., old-fashioned, small to bold, thin skin and some few slightly damp, bought in at 50s., good pile 3 small to bold at 26s. per oz.

NUX VOMICA.—479 pockets, each about 56 lbs., small dull were held for 5s. 6d. per cwt., 1 bag fair bright small selling cheaply at 4s. per cwt. 40 bags good bright *Cochin* bought in at 9s. 6d. per cwt.

ORANGE PEEL.—7 cases old thick cut held for 5d. per lb.

QUININE.—2 cases, each 1000 ozs., *Sulphate Taillandier's* make were held for 10½d. per oz.

RHUBARB.—Sold at somewhat lower rates. 27 cases very common rough round horny high-dried sold at 4½d. per lb., bold flat realising 10½d., rather smaller ditto 10d. per lb., dull ditto selling cheaply at 9d. per lb. Very bold round *Canton*, fair colour, part rough, was bought in at 1s. 2d. per lb., flat ditto at 1s. 3d. per lb., medium round and flat ditto at 1s. Bold flat *Shensi*, grey and pinky fracture, sold at 1s. 6d. per lb., medium ditto at 1s. 3d. per lb., bold round at 2s. 4d. per lb., fair small round trimming root at 2s. 9d. per lb., pickings at 9½d. per lb.

SARSAPARILLA.—10 serons good *Honduras* were bought in at 1s. 6d. per lb.

SENNA.—450 packages in all were catalogued, 409 bales *Tinnevelly*, 14 packages *Alexandrian*, and 27 bales *Mecca*. Of the *Tinnevelly*, the bulk being in importers' hands, sold with strong competition; good green bold leaf at 5d. per lb.; medium grades, 2½d. to 4d. per lb., and small leaf, 2d. to 2½d. per lb. *Pods* were dearer at 2½d. per lb. No *Alexandrian* sold, quality being undesirable. The *Mecca* was also bought in.

STAR ANISEED.—1 case of fair quality was bought in at £7 10s. per cwt.

SQUILLS.—8 bags realised 2¼d. per lb.

TAMARINDS.—50 barrels black *Calcutta* were bought in at 17s. per cwt.

TONQUIN BEANS.—3 cases good *Angostura* were held for 2s. 9d. per lb. 2 cases *Para* bought in at 1s.

TURMERIC.—53 bags *China* bought in at 26s. per cwt.; 10 cases *China* turmeric powder sold without reserve at 12s. 6d. per cwt.

VANILLA.—Over 300 tins were offered. The lower qualities of Bourbons and Madagascar sold very well at higher prices. Fine qualities were full up to 2s. per lb. dearer on last auctions. *Tahiti's* sold well at 7s. 6d. to 8s. per lb.

VERMILION.—For 3 cases *China* price required was 2s. 1d. per lb.

WAX.—45 cases *Japan* held for 32s. 6d. per cwt. 72 packages fair *Madagascar* bought in at £5 17s. 6d., a bid of £5 15s. per cwt. being declined. 20 bales *Gambia* were taken out at £6 10s. per cwt. 7 bales *Spanish* at £8 5s. 22 packages *Jamaica* sold at £6 7s. 6d. to £6 15s. per cwt. 4 packages *East Indian* at £5 5s. 2 cases *Australian* were taken out at £6 per cwt. 5 bags *Zanzibar* sold at £6 5s. subject to approval.

Manchester Chemical Report.

NOVEMBER 23, 1898.

There is little movement in heavy chemicals, especially for export, and prices tend downward generally. There is more doing in drysalteries and anilines, owing to a greater demand in the dyeing and printing industries, though how long this will continue is problematical. Aniline Oil and Salt are a fraction higher than last week, but values are still low. Sulphate of Copper continues active, and about £19 is the figure for best brands, delivered Manchester. In Glycerin there is not so much doing, and prices are

somewhat easier. In all probability we shall witness a substantial reduction in this article at an early date. Benzols are unchanged, but Pitch and Creosote continue firm. Alum is rather lower, loose lump being quoted £4 15s. per ton, on rails, Manchester, packages and ground extra. Yellow Prussiate is exceedingly firm at 6½d. to 7d. per lb. best Lancashire make. Green Copperas unchanged.

Newcastle Chemical Report.

NOVEMBER 22, 1898.

Not much change in heavy chemicals. Sulphur scarce and is the turn dearer. Soda Crystals are a trifle in more request for the Channel ports. Prices are: Bleaching Powder, £5 10s. to £6; Soda Crystals, basis, 45s.; Sulphur, £4 15s. to £5; Alkali, 52 per cent. £5 5s.; Caustic Soda, 70 per cent. basis, £7; Soda Ash, 52 per cent., £4 5s. per ton.

Liverpool Market Report.

NOVEMBER 23, 1898.

Business has been fairly good during the week and several good transactions in oils have taken place at full prices. Carnauba Wax has attracted some attention, selling in good quantity, whilst Spirits of Turpentine has run rapidly up to 29s. per cwt., in consequence of large deals in American. Chemicals have been moderately brisk, Borax, Sulphate of Ammonia, and Sulphate of Copper continuing very strong.

AMMONIA SULPHATE.—£10 2s. 6d. to £10 per ton.

BORAX.—Firm and still in short supply at £14 10s. to £15 per ton.

CANARY SEED.—Turkish is quoted at 28s. 6d. to 30s. per 464 lbs., but there have been no sales upon which to base a price. 180 bags of Spanish have been sold on private terms.

CARNAUBA WAX.—290 bags changed hands at 34s. to 52s. 6d. per cwt.

CHILLIES.—35 bags of Sierra Leone sold at 23s. 6d. to 34s. per cwt.

COPPERAS.—Is firm, Lancashire at 39s. per ton and Welsh at 37s.

COPPER SULPHATE.—Is very firm at £18 10s. per ton for immediate delivery and £19 in the spring.

GINGER.—25 bags of Sierra Leone, off quality, sold at 18s. 6d. per cwt. *ex store*.

LINSEED.—Is firmer in tone, though sales are not of much account. *Calcutta* seed, December-January delivery, offers at 37s. 6d. per 416 lbs., River Plate at 35s. 6d.; 100 bags "feeding" Turkish went for 41s. to 43s. per 416 lbs.

OILS (FIXED) AND SPIRITS.—*Castor* is commanding more attention; sales of 650 cases of *Calcutta* at 3½d. per ton, *ex store*, are reported, as well as 600 cases "to arrive" on private terms; French, 1st pressure, 2½d. per lb.; and Madras, 2¼d. 31 barrels sold privately after auction. *Olive* commands only a moderate consumptive demand at £29 to £29 10s. per ton on the spot for Spanish. For shipment, Malaga is quoted at £30 per ton, "cost and freight." *Linseed* is quietly moving off at 18s. to 19s. per cwt. for Liverpool pressed, in export casks. *Cottonseed* is flat at 15s. to 15s. 6d. per cwt. *Spirits of Turpentine* has become 1s. 6d. per cwt. dearer than last week, and is now held for 29s. per cwt.

POTASH SALTS.—*Bichromate*: 3½d. per lb. *Chlorate*: 3½d. to 4d. per lb. *Cream of Tartar* is firm at 75s. per cwt. *Pearlashes* are slow of sale at 34s. to 35s. per cwt. *Potashes* are very firmly held at 25s. per cwt., sales of Montreal having been effected at 24s. 6d. *Saltpetre* scarce at 22s. per cwt.

SODA SALTS.—*Bicarbonate*: £6 15s. per ton. *Caustic*: 76 to 77 per cent., £7 12s. 6d. per ton. *Crystals*: £3. *Nitrate*: 7s. 7½d. to 7s. 9d. per cwt.

Publications Received.

YEAR-BOOK OF PHARMACY, 1898, with the transactions of the British Pharmaceutical Conference at the thirty-fifth annual meeting held at Belfast, August, 1898. Pp. 536. London: J. and A. Churchill, 7, Great Marlborough Street. 1898. From the Publishers,

Calendar for Next Week.

Sunday, November 27. Sun rises 7.40; sets 3.56.

Monday, November 28.—O 4.39 M. Sun rises 7.41; sets 3.55.

PHARMACEUTICAL SOCIETY OF IRELAND, 67, Lower Mount Street, Dublin. Dr. J. C. McWalter will contribute a paper on "The Pharmacy of the Organoids."

ROYAL GEOGRAPHICAL SOCIETY, University of London, Burlington Gardens, W., at 8.30 p.m. Lecture on "A Year on Christmas Island," by Chas. W. Andrews.

Tuesday, November 29. Sun rises 7.43; sets 3.54.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION, County Restaurant, Bradford. Musical evening, arranged by A. Hanson.

PUBLIC DISPENSERS' ASSOCIATION, 46, Clarendon Square, King's Cross, N.W., at 7.30 p.m. S. B. Donnan will read a paper on "Urine and its Analysis," which will be followed by a discussion on the new Pharmaceutical Bye-laws.

Wednesday, November 30. Sun rises 7.44, sets 3.53.

MANCHESTER PHARMACEUTICAL ASSOCIATION, Chemical Club, Victoria Hotel, at 8 p.m. Special meeting to discuss the resolutions submitted by the Federation of Local Associations.

WESTERN CHEMISTS' ASSOCIATION (of London), Westbourne Restaurant, 1, Craven Road, W., at 9 p.m. A special general meeting for the purpose of considering the question of Compulsory Poison Regulations.

Thursday, December 1. Sun rises 7.46; sets 3.53.

CHEMICAL SOCIETY, Burlington House, W., at 8 p.m. Paper to be read on "The Oxidation of Polyhydric Alcohols in Presence of Iron," by H. J. H. Fenton and H. Jackson, followed by a ballot for the election of Fellows.

CHEMISTS' ASSISTANTS' ASSOCIATION, 73, Newman Street, London, W., at 9 p.m. Demonstration of Röntgen rays.

LINNEAN SOCIETY OF LONDON, Burlington House, Piccadilly, W., at 8 p.m. Papers on "The Biology of Agaricus Velutipes, Curt.," by R. H. Biffen," and on "The Gastric Glands of the Marsupialia," by Jas. Johnstone.

MIDLAND PHARMACEUTICAL ASSOCIATION, Mason University College (Medical Theatre), Birmingham, at 8.30 p.m. Lecture by Dr. Hall Edwards on "The Practical Application of the X-Rays," with lantern slide illustrations.

SCHOOL OF PHARMACY, Crown Room, Holborn Restaurant, London, W.C., at 8 p.m. Annual Smoking Concert of the Football Club. Professor Greenish in the chair.

Friday, December 2. Sun rises 7.47; sets 3.52.

CAMBRIDGE PHARMACEUTICAL ASSOCIATION, Dale's Assembly Rooms, at 9.15 p.m. Smoking concert.

IRISH PHARMACISTS' ASSISTANTS' ASSOCIATION, 67, Lower Mount Street, Dublin. Debate.

Saturday, December 3. Sun rises 7.48; sets 3.52.

Obituary.

KERRY.—On November 14, Thomas Kerry, Chemist and Druggist, Dewsbury. Aged 67.

LUMSDEN.—On November 18, David Lumsden, Chemist and Druggist, Aberdeen. Aged 81.

Receiving Orders in Bankruptcy.

(From the London Gazette.)

William J. Wilson, Chemists' Manager, 496, Moseley Road, Moseley, Wores.

Alfred Toyer, Drysalter, 65, High Town Road, Luton.

Henry Taylor, Photographer, Watton, Norfolk.

Partnerships Dissolved.

(From the London Gazette.)

J. W. Traini and W. Crowthers (trading as the National Teeth and Optical Co.), Artificial Teeth Manufacturers and Opticians, South Shields and Jarrow.

Dr. G. Andrew and G. M. Winter, Medical Practitioners and Apothecaries, Torquay and St. Mary Church, Devon.

F. W. Smith and G. F. Dickinson, Physicians and Surgeons, Leamington, so far as regards F. W. Smith.

Llewellyn Davies and J. H. Wilson, Chemists, Ordnance Road, Enfield Wash.

Advertisement.

(Received too late for Classification.)

ENGAGEMENT wanted as ASSISTANT. 26. Qualified. London preferred. 10 years' good experience, town and country. WILLIAMS, 24, Great Russell St, W.C.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Six Pieces Perfume Ribbon, each 36 yards long (216 yards), assorted colours, post free, 5s.—Edward Peck, East Dereham, Norfolk.

Magic Lanterns, second-hand; triples and binoculars; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewer House, 82, Mortimer Road, Kingsland, N.

All New, unsoiled, bought before advance, hot water bottles, best quality. Maroon plush covers (detachable) included, 10 by 6, 4s.; 12 by 8, 5s. 10d.; 12 by 10, 6s. 6d.; 14 by 10, 7s. Sponge bags, best quality, silk cords and bindings, full sizes, as Maw's, eight dozen, assorted, Nos. 2, 4s. 6d.; 3, 6s.; 4, 7s. 6d.; 5, 9s.; 6, 10s. 6d. Tooth stopping wrapped pink paper, as Stevens', gross box, 2s. 6d.; 3 dozen 3d. sticks, 2s. 6d. Hypodermic syringe, complete, cased, 1s. 6d. Post free 10s. lots. Cash returned if sold.—Warnes, Chemist, 333, Gray's Inn Road, W.C.

Fletcher's Gas Stove for heating shop or bedroom, with copper reflector, seven hot-air tubes, giving pure warm air without deleterious gas products, 7s. 6d.—Chemist, 34, Avondale Road, Chorley.

Offer wanted for 'Pharmaceutical Journal,' posted every Saturday.—Eastman, Forest Lane, Stratford.

What offers? 1 oz. each Orthoform, Piperazin, Celloidin, Protargol, Zymine Fairchild, 3x2/6 1zal, 2x1 lb. Formalin Schering, 1x500 Tabloid Thyroid, B. W. and Co., together or separate.—C. R., 156, Green Lanes, Stoke Newington, N.

What offers? Eastman's Kodak, double back, and 4 doz. Film Holder.—Wilbourne, Wycombe House, Coventry.

A Handsome globe-lamp and bracket for sale, ruby flashed glass, richly gilded, perfectly new, splendid advertisement for any chemist, £3 10s., worth double.—Humphrey, 121, Charing Cross Road, London.

WANTED.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsell, 9, Derwent Grove, East Dulwich, London, S.E.

A Complete Set of 'Pharmaceutical Journals,' bound; state lowest price for cash.—'Journals,' c/o Thomas Kerfoot and Co., Bardsley Vale Mills, Ashton-under-Lyne.

Balance. Second-hand Sartorius, Becker (Brussels), or Oertling. Send fullest particulars to—E. L., 35, Hayter Road, London, S.W.

Photographic Apparatus, 1/2-plate, complete. Offered in exchange, 'Old England,' in two folio volumes (rare), Cruikshank's 'Comic Almanack,' in 2 vols. (20 years), and 'Verdant Green' (1856 edition).—Chalmers, Chemist, Eastville, Bristol.

COMMUNICATIONS, LETTERS, NEWSPAPERS, etc., have been received from Messrs. Austin, Bacon, Barrass, Baxter, Blau, Bound, Branch, Brown, Brunt, Butler, Campkin, Cracknoll, Curtis, Davidson, Dawney, Dawson, Dunlop, Emary, Evans, Forster, Gough, Hardwick, Harper, Hill, Jackson, Keen, Lockyer, McClumpha, Mumbray, Newbery, Orton, Owen, Sewell, Sharpe, Stewart, Thomas, Tirard, Tonkin, Walker, Wamsley, Wass.—Dudley Express and Star.

EXTRACTS FROM CONSULAR REPORTS.

THE PRACTICAL RESULTS of a sound commercial education at the Higher Institute of Commerce, Antwerp, are well illustrated by the following interesting figures, which show the use to which old students have turned the knowledge acquired by them at the establishment:—Two hundred and forty-nine are principals or managers of large mercantile houses in Belgium, 218 are bank managers or commission merchants, 6 are Belgian Consuls-General, 32 are Consuls or Vice-Consuls, and a late student is Home Secretary of the Congo Free State. Others, again, have become professors at foreign establishments of a similar nature to that of the Antwerp Institute. The fees paid by the students amount to £8 for the first year, and £10 for the second and third years. The instruction in all branches is thoroughly practical, that in science being limited to such branches thereof as may prove of use in industrial and mercantile pursuits. Attention is bestowed upon chemistry, mineralogy, natural history, etc., but these studies are only pursued with a view to their practical utility in manufacturing and commercial callings. The number of students now attending the Institute is 249, of whom 163 are Belgians and 86 foreigners.

A NEW USE FOR KEROSENE, according to Consul Hopkins, has been adopted in the district around Chefoo, China. He states that with such crops as are sown in drills the farmers, at the time of sowing, allow a few drops of kerosene to fall on the seed as it lies in the drill, and they assert that the oil acts as a strong protection against certain insects that are accustomed to feed on the plants at that early stage.

SOME OF THE PRINCIPAL REGULATIONS with respect to the manufacture and sale of margarine in Belgium are to the effect that (1) margarine intended for sale shall not contain more than 5 per cent. of butter—this stipulation is made in view of the difficulty of distinguishing between pure butter and margarine when the latter contains a large proportion of the cream product; (2) margarine shall not be exposed for sale in the same place (shop, stall, etc.) as butter, nor shall producers or vendors of cream butter keep margarine, even for their own consumption, in the same place as butter intended for sale. Other regulations stipulate that pats of margarine shall always be made in the form of cubes; that margarine must not contain preservatives of any kind nor be coloured except with such matters and to such a degree as authorised by the Minister of Agriculture. There are some fifteen factories for the manufacture of margarine in the neighbourhood of Antwerp, with an output of upwards of 22,000,000 lbs.

THE ACUTE DISTRESS which followed a recent failure of the wheat and rice crop in certain provinces of China is attributed in a great measure to the large increase in the areas of land now under poppy cultivation that were formerly planted with wheat and rice. The imports of foreign opium continue to decrease considerably, while the native drug is taking the place of the imported article, hence the reduction in the wheat and rice area and the increase of that under poppy cultivation.

THE IMPORTATION OF DRUGS AND MEDICINES into Persia during last year was greatly influenced by influenza and fevers which were very rife in the interior, notably at Shiraz. There was an increased demand for drugs and medicines, and the trade is reported to have been very lucrative, profits of 10 per cent. to 15 per cent. being recorded. The condition of the market at the close of the year, however, was somewhat unfavourable.

IN THE QUALITY OF JAPANESE CAMPHOR exported from Hiogo and Osaka in 1897 there was, according to the report of Mr. J. C. Hall, a manifest falling-off. This deterioration, however, was not observable in Formosan camphor, consequently the latter was preferred for the European market, whilst the American market, evidently less discriminating, took of the Japanese article more than double the export of 1896. India takes an increasing proportion of refined camphor, Europe and America of crude.

THE FOREIGN OPIUM imported into Amoy, China, in 1897 was valued at £329,566, against £318,153 the previous year. Native opium imported amounted to £40,238 against £43,938 in 1896. The greater part of the opium imported into Amoy is re-exported to Formosa.

PRACTICAL PHOTOGRAPHIC NOTES.

MM. LUMIÈRE, the well-known firm in Lyons, have just introduced on to the English market under the name of "vitrose rigide," a film for which they claim absolute immunity for six months at least from any deleterious action of the support; further, they state that the transparency and rigidity of the support is superior to celluloid. From a brief examination we should say that they are celluloid films, at least the support is soluble in the solvents of ordinary celluloid, and burns like that substance. It is, however, extremely transparent and very flat. The chief point about these new films, however, is the cardboard sheaths, which consist of a sheet of black card and a thin metal frame, the two being bound together by black paper. They form a very convenient and neat film carrier. The price of the films is high, namely, 2s. 6d. per doz. $\frac{1}{4}$ plates. Our English makers would probably stare if they were told that their films would only be guaranteed for six months.

A NEW TONING BATH was recently suggested at one of the London photographic societies for gelatino-chloride paper, the great advantage of which, it was said, was the avoidance of all double toning. It is an open question whether it can actually be called a toning bath in the strictly accepted reading of the words. We have always hitherto accepted as a definition of the word toning the replacement of part of the silver image by gold reduced from the toning solution by the double decomposition of the aurous chloride formed in the bath by the action of the alkaline salt on the auric chloride. In the new bath, which, by the bye, will not keep, the gold is deposited from the bath by the action of the salt formate of soda, and there is no double decomposition. The actual formula recommended is—

Sodium Formate	3.5 Gm.
Gold Chloride	0.25 Gm.
Distilled Water	1000 C.c.

or

Platinum Perchloride	0.25 Gm.
Sodium Formate	7.0 Gm.
Formic Acid	1.75 C.c.
Distilled Water	1000 C.c.

The prints must be immersed for five minutes in a 5 per cent. solution of salt and then transferred direct to the toning bath.

EVERY PHOTOGRAPHIC DEALER probably throughout the country has heard of Velox paper. If anyone has not we should strongly commend it for sale during the winter months. It is stated to be a chloro-bromide of silver emulsion paper, and it has the enormous advantage that, although slow, it can be manipulated in candle or gas-light, without a ruby lamp. The special developer recommended for it is—

Water	1000 C.c.
Metol	1.5 Gm.
Sodium Sulphite	50 Gm.
" Carbonate, Anhydrous	60 Gm.
Potassium Bromide.....	0.15 Gm.

This developer should be applied with a brush, the exposed paper being held face upwards on a sheet of glass. The best fixing bath is an acid one, and this is easily made as follows:—

Citric Acid	10 Gm.
Sodium Sulphite	50 Gm.
Water	200 C.c.

Dissolve and add to—

Sodium Hyposulphite	250 Gm.
Water	1000 C.c.

Velox paper can be obtained with several varieties of surface, and some artistic show-cards can be obtained from the agents, Messrs. J. J. Griffin and Co., Sardinia Street, W.C.

SOLUTIONS FOR STRIPPING THE FILM from negatives, the glass of which may happen to be accidentally broken, are often wanted by amateurs. The following is effective and will strip a film without enlarging it, which is just what is wanted:—

Distilled Water	500 C.c.
Alcohol	500 C.c.
Glycerin	40 C.c.
Hydrofluoric Acid.....	80 C.c.

In this the negative should be placed till it begins to lift at the corners, then it should be transferred to a dish of clean water, when

it can be readily coaxed from the glass with a soft brush, and transferred to a clean glass coated with gelatin. An almost better way is to simply leave the negative in the solution till it begins to lift well at the corners, then remove, squeegee a piece of clean writing paper down on to it, and in a very short time the paper may be lifted and with it the film, and the two squeegeed to a clean glass coated with gelatin, when the paper may be lifted. If the alcohol be omitted from the above, a solution is obtained which is very similar to that put up as a proprietary article for enlarging negatives by extension of the film. If a powder of similar action is required one may use a mixture of—

Sodium Fluoride	120 Gm.
Citric Acid	240 Gm.

directing this to be dissolved in 1000 C.c. of water. It is, of course, needless to point out that as the solution given above must be stored in an indiarubber bottle, or one well coated inside with paraffin wax.

PHARMACEUTICAL MAYORS.

Although pharmacy has at present no direct representative in the great law-making assembly of the United Kingdom, it is well represented on the various local governing bodies of the country, and in many cases pharmacists occupying the honourable and responsible position at the head of municipal affairs. Below is a list of pharmaceutical mayors, elected or re-elected to that position during the present month, together with a few brief particulars of their careers.

ALDERMAN JOHN BOWER, Mayor of Macclesfield, Cheshire, commenced his municipal work in 1873, when he was elected as a Liberal to the Town Council, but latterly he has supported the Conservative party. He is one of the oldest members of the Corporation, and is also Chairman of the House Committee of the Board of Guardians, of which body he has been a member for seventeen years. He was born in Wimslow in 1837. His connection with pharmacy dates from the year 1850, when, being then thirteen years of age, he was apprenticed for seven years to Mr. Hadfield, chemist and druggist, of Macclesfield. He subsequently founded the chemist and druggist's business in Mill Lane, which has been carried on for the last forty years. One of his sons at one time held the position of medical officer of health for the district, and another is a qualified partner in the business.

MR. LEONARD PARKER CHAPMAN, chemist and dentist, Mayor of Barrow-in-Furness, is the son of Dr. Chapman, J.P., of Garstang (Lancs.), and was born in 1853. He was educated at the Royal Grammar School, Lancaster, and afterwards at the Westminster College of Pharmacy. He was apprenticed to the late Alderman Edward Taylor, of Rochdale, and commenced in business at Barrow-in-Furness in 1878. He was elected to the Town Council in 1890. Mr. Chapman is a Conservative in politics. For many years he has been an Associate of the Pharmaceutical Society and Local Secretary for Barrow-in-Furness.

MR. JOHN COLES COLES, Mayor of Chippenham (Wilts), has been a pharmaceutical chemist member of the Society since 1870. This is not the first occasion on which Mr. Coles has occupied the civic chair of the borough, having been elected to that position in 1891. As Chairman of the District Technical Education Committee, his election this year is specially associated with the scheme for building secondary and technical schools. Two other chemists are also active members of this Committee, viz., Councillor Edgar Neale, A.P.S., and Mr. A. B. Turpin. Mr. Coles politically is a Liberal.

ALDERMAN JAMES FLOYD, Mayor of Bury St. Edmunds (Suffolk), joined the Pharmaceutical Society as a chemist and druggist member in 1869. He retired about two years ago from the firm of Messrs. James Floyd and Co., chemists and wholesale druggists, Bury St. Edmunds. Mr. Floyd served the borough as Mayor in 1880, and has devoted much time to philanthropic and public work, especially in relation to improved sewerage works and water works, in which his special knowledge has been of great value.

ALDERMAN T. SCOTT FOSTER, L.D.S., J.P., Mayor of Portsmouth, for many years carried on the business of a chemist at 99, Fratton Street, Landport, but of late years has relinquished it, in order to devote his whole attention to dentistry. He was first elected to the Town Council in 1876, was appointed Mayor in 1891, and an Alderman the following year. It was during his mayoralty in 1891 that the Portsmouth Building Society failed, thus causing much distress, in the relieving of which he took a prominent part. The Sanitary Congress of 1892 was also held at Portsmouth during his term of office. Alderman Foster has held many public honours, having served on the Portsmouth School Board (1883-86), as Chairman of the Board of Guardians (1885), to which body he was elected in 1880; then he has served for many years as one of the Governors of the Grammar School, and has held the office of overseer. The British Medical Association is to meet in Portsmouth during his term of office, and he is desirous of raising £3000 to furnish the new wards of the hospital.

MR. JOHN GILLING, Deputy-Mayor of Saffron Walden (Essex), was elected Mayor of the Borough in 1895, re-elected in 1896, and Deputy-Mayor the following year, being re-elected to the same office for 1899 owing to the absence from the town of the late Mayor, who early this year went to reside at Brighton. Mr. Gilling has been a pharmaceutical chemist member of the Pharmaceutical Society since 1867.

ALDERMAN JOHN HORSLEY, Mayor of Hartlepool (Durham), has previously served in this capacity during the years 1881, 1882, 1883, 1884, and was re-elected on November 9, after again serving as Mayor last year. Mr. Horsley is an Alderman of the County of Durham and a Justice of the Peace for the Borough of Hartlepool. He has been a chemist and druggist member of the Pharmaceutical Society since 1869.

MR. J. KINSEY JONES (re-elected), Mayor of Llanidloes (Montgomery), is the youngest son (aged 33) of the late Mr. William Jones, who in 1850 established the chemist's business now known as Jones and Sons, Llanidloes. He received his early education at the local Board School, and subsequently at the Northern Institute, Liverpool, and at the Aberystwith Grammar School. His pharmaceutical training began with his apprenticeship to Mr. E. Owen, chemist, of Newtown, and was continued at the Westminster College of Pharmacy. After qualifying as a chemist he took over the management of that branch of the business of the firm at Llanidloes. He was first elected to the Town Council in 1889, while in other ways he has taken an active part in public life, being a Liberal in politics.

MR. FREDERICK MASON, Mayor of Rotherham (Yorks) was apprenticed to the late Mr. T. Outwin, Church Street, Rotherham, whose business he afterwards purchased and merged with his own in High Street. He has taken an active part in the municipal work of the town, having served on the Council since 1883, doing good work as Chairman of the Public Health Committee. Mr. Mason is a Freemason and an honorary member of the Phoenix Lodge of Oddfellows; he is also a life governor of the Boys and Girls' Masonic Charities. Politically he is a Liberal.

DR. JAMES SOUTTER, Mayor of Hedon (Yorks) for the third year in succession, although not a pharmacist, is the son of Mr. J. S. Soutter, chemist and druggist, of that town. Mr. Soutter has been the Borough Treasurer for thirty-eight years, his family having supplied four mayors to the town during the present century.

MR. JOHN ALFRED STEWARD, Mayor of Worcester, was born in 1845, at Tenbury, and was apprenticed to the business of a chemist and druggist at Leominster. He afterwards acted as assistant to Mr. S. Betty, and with Messrs. Savory and Moore, Lancaster Gate, London, subsequently serving for several years in the Pharmacie Béal, Paris. In 1876, he acquired the business of the late Mr. Woods, at 27, High Street, Worcester, which was established in 1776. The "Mr. Featherstonhaugh," of Mrs. Henry Wood's novels was at one time owner of this business. Mr. Steward was first elected to the City Council in 1887, and last year filled the office of High Sheriff. He is a Conservative, and is W.M. of the Worcester Lodge of Freemasons.

IRISH NEWS.

THERE HAS BEEN MUCH ANALYSING of the various water supplies throughout Ireland lately. The Downpatrick people have been put to much expense and trouble, owing to the Tannaghmore stream not proving to be a good drinking water. During the period in which the cause and cure of its deficiency was much debated, the county court judge arrived to conduct the assizes. On the Bench he remarked that he could not but sympathise with those who objected to the water, for he certainly never tasted worse in his life. The point and absolute impartiality of this judgment will be better appreciated when it is said that the water which supplied the mansion at which the judge stopped was not from Tannaghmore, but a private well.

AT A RECENT MEETING of the Board of Governors of the Adelaide Hospital, Peter Street, Dublin, Mr. Henry Hunt, M.P.S.I., manager of the Harcourt Medical Hall, Charlemont Street, was unanimously elected resident staff apothecary and demonstrator in pharmacy and materia medica to the institution, *vice* Mr. Alexander F. Allen, M.P.S.I. Mr. Hunt is President of the Irish Pharmacists' Association, and is eminently qualified to fill with credit the important position for which, out of a large number of candidates, he has been selected.

THE GUARDIANS OF THE SOUTH DUBLIN UNION are about to elect a pharmaceutical chemist for their Grand Canal Street Dispensary, *vice* Mr. W. Barker, M.P.S.I., resigned. The position is a coveted one, and carries with it a salary of £125 per annum, together with quarters, fire, and light. The competition is already very keen.

THE LOCAL GOVERNMENT BOARD insists that all drugs supplied to the Irish dispensaries shall be found in the list of drugs in the new B.P. Nevertheless, the Board refuses to allow the Guardians of the Poor Law Unions to buy a copy of the work for the guidance of their medical officers, being apparently of opinion that these officials should pay for it out of their own pockets.

THE SCHOOL OF PHARMACY, BELFAST, promotes the only classes in that city for preparation for the final examination. They are under the principal-ship of Mr. Templeton, whose lectures are ornate in style, delivered with true Irish eloquence and verve. It is this form of instruction which Lord Dufferin recently highly commended as an innovation which sought out "the best means of imparting knowledge." To be versatile and vivacious in the class-room used to be a discount on erudition; it is now a gift. Huxley, Tyndall, Roscoe, and others have rescued science from its dry-as-dust associations. The laboratory at the School of Pharmacy is a model of neatness. The chemico-architectural design and arrangement of benches, bottles, apparatus, etc., are no doubt intended to play their part in tempting the unwary amateur into the mysteries of alchemy. Associated with Mr. Templeton are Mr. Harper, L.P.S.I., and Mr. Rice, B.A. The latter is in charge of botany; the former presides over the materia medica class, of which subject he has a thorough grasp.

THE MEDICAL SUPERINTENDENT OF THE BELFAST LUNATIC ASYLUM was over-ruled by His Honour the Recorder of Belfast for refusing an affidavit, for less than three guineas, upon the state of health of a patient in the asylum. His Honour laid down the inflexible regulation that as a servant of the Government it was his duty to render such a declaration without charge, which was the rule followed by his predecessor, Dr. Merrick.

MESSRS. HAYES, CONNYNGHAM, AND ROBINSON, Dublin, who entered an action against the Pharmaceutical Society to compel the latter body to accept their certificates, contended that although a limited company, (1) the directors are all pharmacists, (2) the shareholders are only holders of debenture stock, thus not coming into the same category as shareholders who share all the risks incidental to the company. The subtle dividing lines of pharmacy laws in Ireland bid fair to rival even the close distinctive convergencies of the lines in the solar spectrum.

THE ULSTER PHARMACEUTICAL ASSOCIATION, which has lain dormant for a period, is making a further attempt to stimulate among chemists a desire to communc and collaborate. Such a body, if vigorous and representative, would prove vastly serviceable to chemists in the province.

THE PHARMACY OF MR. WHITLA, of Monaghan, possesses an ancient and unique style of mortar. This is an old church bell of a fairish size, its cubic capacity being about half-a-gallon. It bears upon it the year 1771, and an inscription which has not yet been deciphered. When this bell-mortar is struck it responds with a tone of great harmony, so that the chemists' not least muscular performance of pounding drugs can be varied by a little hand-bell ringing. Several offers of purchase have been made to Mr. Whitla in vain. This suggests that perhaps the British Pharmaceutical Society should inaugurate a "curiosity shop," for the reception of *Æsculapian* treasures. An autographic prescription of Hippocrates and a medicine bottle of Galen would be rare curios—if they could be got.

MESSRS. LESLIE AND Co., wholesale druggists, Dublin, have been appointed medicine contractors to the Mill Street, County Cork, Board of Guardians. Three firms competed, and the contract was given to the lowest tender.

IN THE LECTURE THEATRE OF THE ROYAL DUBLIN SOCIETY, Mr. Hugh Ramage, of the Royal College of Science, delivered an interesting lecture on the chemical properties and constitution of matter. In the course of his lecture, which was illustrated with numerous experiments and limelight views, Mr. Ramage dealt with the early history of iron, its occurrence as a metal and in combination. He explained some of the ancient and modern processes for the extraction of iron from its ores, and the forms in which the metal was used. Iron was present in meteorites, also in the sun and some of the stars. Native iron was found in basaltic rocks, but only in very small quantities. He dealt with the rusting of iron, and explained the methods which had been employed to protect iron from rust. He referred to the value of a theoretical as well as a practical knowledge of chemistry. The subject, he added, was so extensive that it could not be properly learned by any one person during his lifetime.

THE DEATH HAS OCCURRED of Mr. William Savage, Chemist, who came home recently from Cape Town to Ireland for the benefit of his health. Mr. Savage was well known and very popular in Dublin, and much regret is felt at his early demise.

A MEETING of the Irish Branch of the British Dental Association has been held at Dublin. Mr. G. J. Goldie read a paper on "Some Practical Considerations in Crown Work," in the discussion of which many tributes were paid to its instructive character. A vote of thanks was accorded to the essayist.

IN THE RECORDER'S COURT, BELFAST, a curious point of law arose recently in an action brought by Messrs. Cantrell and Cochrane, chemists and mineral water manufacturers, against the Belfast Steamship Company to recover the sum of £2 damages occasioned by defendants allowing two casks of ginger ale to fall into the sea and get destroyed while in transit to Liverpool. His Honour said there was no ground for action in the case; the defendants only contracted to carry the goods from quay to quay, and wilful negligence had not been proved against them. It was a most difficult task to educate the trading public into the difference that existed between sea and land carrying companies, but there was a vast difference. He dismissed the action.

AN IRISH PRESCRIPTION.—Some amusement was created recently at the Ballinacasha dispensary district by the reading of a prescription signed "R. Morgan, M.D.," in which it was stated that the patient was suffering from an abscess on the front side of the neck. A pint of milk a day, and one bottle of port wine, and one pint of whiskey were ordered.

SEVERAL SHOPKEEPERS HAVE BEEN SUMMONED at Dublin under the Sale of Food and Drug Act for selling linseed meal which was not of the substance and quality of the article asked for. A trader named Murray, in Cork Street, was fined £1 for selling as linseed meal ground linseed cake from which nearly all the oil had been extracted, and Walter Murphy, of North King Street, was mulcted in a penalty of 10s. for vending linseed meal which contained only 24.4 per cent. of linseed oil instead of 30 per cent.; the shrinkage was caused by the article being kept too long in stock.

MR. JAMES HOGG, of York Street, Belfast, has been informed by the Lord Lieutenant that he has been pleased to reduce the fine of £5 recently imposed upon him to £2. Mr. Hogg had submitted an influential memorial to the Lord Lieutenant on the subject, signed by several medical men in Belfast.

PHARMACEUTICAL SOCIETY OF IRELAND.—At Dublin, on Monday, November 28, the usual fortnightly evening meeting of this Society was held at 67, Lower Mount Street, Dr. J. A. Walsh, M.C.P.S.I., presiding in the absence of the President, Mr. Robert J. Downes. Some routine business having been disposed of, Dr. McWalter proceeded to read a paper on "The Pharmacy of the Organoids."—At the conclusion of the paper there was much applause.—The paper was criticised in a friendly spirit by Messrs. Smith, O'Connor, Dr. Walsh, and others.—Mr. Smith did not pose as a specialist on the organoids. To be an adept in that science would to his mind suggest a preliminary visit to a slaughter-house. He spoke of the activity of the thyroid glands as being due to iodine, and agreed with the essayist as to the inadequacy of the B.P. test for pepsin. He gave an account of a test which he himself applied, but it was not according to the B.P. formula. He followed step by step the various points made by Dr. McWalter, and spoke at some length on their merits and demerits.—Mr. O'Connor gave his experience of the pharmacy of the organoids, and referred to the recent Pharmaceutical Conference, and to Mr. Stanford's (of Glasgow) remarks in relation to the subject.—Dr. Walsh said the paper suggested an important point—the necessity for the up-to-date and advanced pharmacist having a knowledge of histology and physiology; without an acquaintance with these subjects it was very hard to keep abreast of the times. This pointed to the institution of a post-graduate course in pharmacy, and if time permitted the pharmacist to go beyond the Licence examination, he would prove a valuable help to the physician. Medical men had very little time to devote to things outside their own immediate calling, and if the chemist could take up additional threads of knowledge he would not only be enhancing the esteem with which he is already regarded, but would be assuring his right position. The public, moreover, would have more reliance in the pharmacist who could answer the numerous questions put by them daily. He hoped that a research laboratory would be established by the Society in the near future. He differed from the essayist in regard to the superiority of solutions over tabloids; the latter were more convenient for chemists, and generally more advantageous.—Dr. McWalter having replied to the speakers, and a vote of thanks to the essayist having been passed by acclamation, the proceedings terminated.

AN ECHO OF THE CONFERENCE.—In connection with the proposed erection in Belfast of a statue of Her Majesty the Queen, an interesting retrospect of the Pharmaceutical Conference held recently in that city took place at a meeting of local merchants and traders held last week. Reference was made to the garden party given by the Lord Mayor in honour of the Chemical Congress, the sumptuous character of the reception, to which 3000 invitations had been issued, and the excellence of the whole arrangements left, it was thought, nothing to be desired. It was trusted that the English visitors took away with them a good impression of Irish hospitality in general, and of that of the Lord and Lady Mayoress in particular.

SCOTTISH NEWS.

MONT BLANC AND THE MATTERHORN.—These majestic mountains and the wide expanse of Alpine territory, in France, Italy, and Switzerland, that lies between, were the subject of a fascinating lecture, beautifully illustrated, which was given by Mr. W. L. Howie, F.C.S., London, in the Town Hall, Inverness, on November 27. The hall was well filled by a highly appreciative audience. Mr. Howie was accompanied to the platform by Provost Macbean, who occupied the chair, and Mr. John Fraser, President of the Inverness Chemists' Association, under whose auspices the lecture was given, the proceeds being devoted to the fund of the local branch of the Jubilee Nurses' Institute. The Chairman, in introducing Mr. Howie, referred to the deserving object of the lecture and to the good work of the Chemists' Association which kept the members in touch with the latest scientific developments in connection with their profession, with which was bound up the physical well-being of the community. The delightful character

of the lecture was subsequently dwelt upon by Dr. F. M. Mackenzie, in moving a vote of thanks to Mr. Howie. That gentleman acknowledged the compliment, which had been warmly paid by the audience, and he complimented Mr. Ogston upon his excellent manipulation of the limelight views. Mr. L. MacLeod, secretary to the Chemists' Association, thanked the audience for their attendance, and a vote of thanks was passed to the Chairman, or the motion of Dr. Moir.

GLASGOW AND WEST OF SCOTLAND SCHOOL OF PHARMACY.—The first of an arranged series of visits to the chief chemical works of Glasgow was made on Saturday last by students of the Glasgow and West of Scotland School of Pharmacy under the care of their Principal, Mr. Barrie. Messrs. Hope Bros.' Works was the place visited, where immense quantities of sulphuric acid, nitric and marine acids are turned out annually. Considerable interest was aroused by the method employed of removing arsenic from crude sulphuric acid, by causing the latter to fall in spray down a tower up which a steady stream of sulphuretted hydrogen was passing.

MR. BOA has been appointed Convener of the Committee to arrange the Annual Ball of the Edinburgh District Chemists' Trade Association, which takes place on Thursday, January 19, 1899.

WELSH NEWS.

MR. GWILYM EVANS, D.L., J.P., pharmaceutical chemist, of Llanely, occupied the first place on the list of those nominated for the office of High Sheriff of Carmarthenshire. Mr. Evans at one time was a member of Council of the Pharmaceutical Society, and was in business as a chemist at Llanely, afterwards as managing director of the Quinine Bitters Manufacturing Company. Since his retirement from business about nine years ago he has taken a deep interest in public affairs. He has acted as Chairman of the Carmarthenshire County Council and of the Technical Instruction Committee, and as President of the local Chamber of Commerce. He is a governor of Aberystwith and Cardiff University Colleges, and is largely interested in several commercial undertakings in the neighbourhood of Llanely. Until recently Mr. Evans was the Liberal parliamentary candidate for Carmarthen, but retired on account of the numerous calls made upon him by his constituents.

JURY AND PRESCRIBING CHEMIST.—At an inquest held at Dowlais on the body of Herbert L. Evans (ten months), who it was found died from bronchial pneumonia, the mother stated that until a fortnight previously Dr. Thomas had attended deceased. Then she took the child to Mr. Rees, chemist, who examined it and made up some medicine for it. The Jury expressed disapproval of Mr. Rees' action in prescribing.

FRENCH NEWS.

PARIS DOCTORS ARE now in an uneasy state of mind consequent upon a new law respecting the library of the Faculty of Medicine, which quite recently took effect. Hitherto the library has been free to every doctor and medical and pharmaceutical student, but the new rule lays it down that persons using it will have to pay an annual subscription of 30 francs. The medical societies are bent on protesting against this injustice, and their efforts, it is understood, will be seconded by the General Union of Medical Syndicates. The doyen of the Faculty, Professor Brouardel, is said to be hostile to this new departure, and has given his promise to do his utmost to render it ineffective, so that the library will in the future as in the past be free to doctors and students alike.

EXERCISE OF PHARMACY BY COLONIALS IN FRANCE.—Pharmacists who have qualified in the French Colonies do not enjoy the same privileges and advantages as their *confrères* who possess the diploma granted by the Minister of Public Instruction, in the name of the French Government, to such as have passed the examinations prescribed by the State Pharmaceutical Body; they have not the right to exercise their profession in France. However, such qualified colonials as desire to establish themselves in the Metropolis are eligible for the diploma of *Pharmacien de 2^{me} Classe*, provided they pass the three probatory examinations. In this case they dispense with the certificate of studies, of apprenticeship, of the three years' university course and examinations at

the end of the year, for the privilege of escaping which all colonia aspirants will no doubt be devoutly grateful.

DEATH OF AN ENGLISH DOCTOR AT PARIS.—We regret to announce the untimely death of Dr. Harold Faure Miller, aged 34, son of Dr. J. Faure Miller, of Paris. Dr. Harold had been for some time in poor health, but intended returning shortly to his practice at Cannes if death had not occurred. He died at his parents' residence, 28, Rue Matignon.

ENGLISH NEWS.

THE FEDERATION OF LOCAL PHARMACEUTICAL ASSOCIATIONS is issuing a circular letter to the federated associations, in which it is pointed out that there is at present a decided tendency on the part of registered chemists to assert their rights and call for an improved Pharmacy Act. The 1868 Act, it is contended, has failed to protect both chemists and the general public in whose interest the Act was framed. As the present time seems opportune for demanding that the public should be protected from illegitimate traders, it is suggested that local pharmaceutical associations should, without delay, consider the following points:—(1) The desirability of seeking to make the word "person" in the Pharmacy Act, 1868, include any corporate body; (2) the feasibility of a Clause compelling men to register as students three years before entering for the Minor examination; (3) The desirability of adopting regulations for the keeping, dispensing, and selling of poisons, in accordance with Section 1 of the Pharmacy Act, 1868; (4) Whether the Pharmaceutical Council should ask for power to strike off the Register the names of chemists and druggists who are guilty of "covering" or other conduct "infamous" from a professional point of view.

MESSRS. C. J. HEWLETT AND SON'S cricket club commemorated the first season of its existence by a supper and smoking concert at Kohler's Restaurant, Wool Exchange, E.C., on Saturday evening, November 26. The chair was occupied by Mr. E. J. Millard, F.C.S., and over fifty members were present. After the usual loyal toast had been honoured, the Chairman proposed "Success to the Club," and expressed his pleasure at the position it had already attained, as it was only last year that he had suggested its formation, and, thanks to the liberal assistance of the firm and enthusiasm of the members, they were already a strong club. Their record for the past season was very good, and he believed that the promotion of a challenge shield amongst the drug trade clubs would increase the friendly rivalry, and it would enhance their prospects now that it was decided to limit it to those actually connected with the various firms, Mr. A. Trussell (Captain) and Mr. H. Gillard (Hon. Sec.) responded. The smoking concert was most successful, songs by Messrs. T. B. Fieking, A. Street, and J. Chanee, and the comic songs of Messrs. E. Thompson, and D. C. Charsley, calling for special mention. Violin solos by Mr. H. Gillard and pianoforte solo of Master Bertie Loosley were also warmly applauded. The accompanist was Mr. Walter Kellerd. At the conclusion the usual votes of thanks to the Chairman and Vice chairman (Mr. E. J. Tucker) were suitably acknowledged, and the company dispersed at about 11 p.m.

PHARMACY STUDENTS DESCEND A COAL MINE.—On Friday last, November 25, the students of the Sheffield College of Pharmacy, accompanied by the Principal, Mr. J. W. J. Turner, had a novel experience. Through the kindness of the proprietors, permission was given to visit the new pit of the Birley collieries. Each student was provided with a safety lamp, and under the guidance of the under manager, Mr. Gray, were accompanied to the workings, where coal was being got out, and the whole system explained. The shaft was 200 feet deep. A thousand men and boys are employed. Over 1400 tons are brought up daily. Everything was in perfect order. An excellent tea was given by Mr. Cutts, one of the colliery officials, and the party returned by wagonette at 6.30.

MR. ERNEST MASON, son of Mr. A. J. Mason, of Bexley Heath Kent, was one of the successful candidates at the recent dental examination held in London, and has obtained the L.D.S. diploma of the Royal College of Surgeons.

ACCIDENTAL POISONING CASES.—An inquest was held at St. Alfege Mission Room, Greenwich, on Thursday, November 24, on the body of John Carr (47), of 60, Blackwall Lane, East Greenwich.—Deceased had been a great sufferer from dyspepsia, and on the previous Sunday morning he went to get a drink and got hold of the wrong bottle, there being two bottles exactly alike near to each other, one containing spirits of ammonia and the other gin and ginger beer. A doctor was sent for, who administered antidotes and used the stomach pump, and the man was afterwards removed to the Seamen's Hospital.—Dr. Earnshaw, house physician at that institution, said that deceased was admitted on Sunday morning at half-past ten, but died at a quarter to six on Wednesday morning from pneumonia, due to the action of the ammonia on the lungs.—The jury returned a verdict of "Death by misadventure."

AN ALDERMAN POISONED.—Alderman Cory Wright, chairman of the Hornsey District Council, was indisposed, and on Friday, November 25, took what he thought was some medicine. The substance, however, turned out to be a poison. Medical aid was quickly obtained, with the result that the alderman is progressing favourably.

CHEMISTS' ASSISTANTS' ASSOCIATION "CINDERELLA."—The second "Cinderella" dance of the season in connection with this Association will be held in the Dorset Hall, Portman Rooms, Baker Street, W., on Thursday, December 8, dancing to commence at 7.30 p.m. Tickets may be procured from Mr. Charles Morley, 3, Bueklersbury, E.C., or Mr. H. H. Robins, 113, Ridley Road, Forest Gate, E.

CHEMISTS' ASSISTANTS' UNION OF GREAT BRITAIN.—The first smoking concert under the auspices of this Union will be held at the Horse Shoe Hotel, Tottenham Court Road, W.C., on Tuesday, December 6, Dr. Henry Dutch in the chair.

FOOTBALL.—In the match played at Shepherd's Bush on Saturday, November 26, between the South London School of Pharmacy and Westminster College, play was stopped six minutes before time on account of darkness, the former team having scored 3 goals and the latter 1 goal.—The match between the Pharmaceutical Football Club and Central Technical College, Chelsea, played at Shepherd's Bush, W., on Saturday, November 26, resulted in a loss for the Square of no goals against 2.

MEDICAL, SURGICAL, AND HYGIENIC EXHIBITORS' ASSOCIATION.—The third annual dinner of this Association took place at the Café Royal last Saturday evening. The chair was taken by Mr. F. Weiss, the President, who was supported by Mr. F. J. Rebman, the Treasurer, and Mr. H. Blau, the Hon. Secretary. The toast of the evening was proposed by the President, and responded to by Mr. Albert Cooper. A capital programme of vocal and instrumental music was interspersed with the speeches. The most successful item, perhaps, was the topical song composed and admirably rendered by Mr. Arthur, a member of the Association, which humorously recapitulated the history and progress of the undertaking. The Hon. Secretary, Mr. H. Blau, in a witty speech brought down the house by alluding to himself as the *enfant terrible* of the Association.

MORPHINE POISONING.—On Friday, November 25, Mr. T. Taylor held an inquest at the White Horse Inn, Gomersal, on the body of Thomas Thornton (35), brass finisher, of Church Lane. It appeared from the evidence that he had been troubled with asthma, and, to relieve his pain, morphine was injected according to a doctor's instructions. Recently, however, he had taken a few drops of morphine on sugar, although the doctor disapproved of the practice. The man went to bed on the previous Wednesday night, remained in bed, and died the next afternoon.—The inquest was adjourned so that a post-mortem examination could be made.

CHLORAL POISONING.—At an inquest at New Penshaw, on Monday, November 28, touching the death of Dr. Edward McGarity, whose body was found in bed early on Sunday, the jury returned a verdict of "Death from an overdose of chloral, taken to procure sleep, but with no intention to destroy life."

THE EXAMINATION OF BLOODSTAINS will be the subject of an illustrated lecture which, we are requested to state, will be delivered at a special meeting of the Society of Public Analysts to be held on Wednesday evening next, December 7, by Mr. A. H. Allen, F.I.C., of Sheffield. The title of the lecture is "The Use of the Micro-Spectroscope and the Methods of Detecting Blood in Chemical-Legal Investigations." Any persons who may be interested in the subject are invited by the Council of the Society of Public Analysts to attend. Intending visitors who will not be introduced by members of the Society are requested to apply for tickets to Mr. E. J. Bevan, Hon. Secretary, 4, New Court, Lincoln's Inn, London, W.C.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.—A most enjoyable musical evening was spent at the County Restaurant on November 29. The entire programme was arranged by Mr. Hanson and was of a superior order. Songs were rendered by Miss Hanson and Miss Roberts. Miss Hanson and Mr. Stott gave a pianoforte duet, and Mr. Stott gave a pianoforte solo. Master Mortimer gave a clever violin solo, and showed great promise. Mr. Foster in his best style gave "Dollars and Dimes," and in response to an encore gave "How Bill Adams Won the Battle of Waterloo." Songs were also rendered by Messrs. Calverley, Waddington, and Hanson. Mr. Sibson proposed a vote of thanks to the friends who had so kindly favoured the Association with their services. Mr. Moulson seconded, and it was carried very heartily.

MERCURY POISONING.—The Hull City Coroner held an inquest on Tuesday, November 29, with respect to the death of Emily Darlow (43), of Cogan Street.—It was stated in evidence that on November 11 Mrs. Darlow got some liquid disinfectant, said to be obtained from tabloids containing chloride of mercury, in a cup ready for washing an instrument and some soda water in another cup of similar size and appearance, and that she had taken up the wrong cup and drunk its contents. She was taken ill and died on Monday, November 28, from poisoning by mercury.—A verdict of "Death by misadventure" was returned.

METROPOLITAN COLLEGE OF PHARMACY.—The fifth annual dinner of the students was held in the Royal Venetian Chamber, Holborn Restaurant, on Saturday, November 26. There were considerably over two hundred persons present including many well-known pharmacists and old students. After an excellent dinner and the usual loyal toast, the Chairman, Dr. Frederick B. Power, F.C.S., proposed "The Metropolitan College of Pharmacy." The Principal of the College, Mr. W. Watson Will, replied, and the distribution of medals and certificates to the successful students then took place. "The Student Past and Present" was proposed by Mr. Thomas Mason and responded to by Mr. A. Tate (past) and Mr. H. J. Kluge (present). "The Visitors" was given by Mr. W. Watson Will, and responded to by Captain David Peters. The last toast, that of "The Chairman," was ably proposed by Mr. Thomas Tyrer, F.I.C., F.C.S. The Vice-Chairmen of tables were Messrs. W. Burnett, A. Tate, F. Filmer de Morgan, G. T. Branch, H. Lucas, W. S. Carver, and J. H. Allon. A very good musical programme had been arranged and was successfully carried out, a most enjoyable evening terminating with the hearty chorus of "Auld Lang Syne."

DEATH OF PROFESSOR G. J. ALLMAN.—We regret to announce the death of Professor George James Allman, M.D., F.R.S., which took place at Ardmore, Parkstone, Dorset, on Thursday, November 24. Professor Allman was born in Cork in 1812, and was educated at the Belfast Academical Institution. He graduated in arts and medicine in the University of Dublin in 1844, and in the same year he was appointed Regius Professor of Botany in the University. In 1854 he was elected a Fellow of the Royal Society, and in 1855 was appointed Regius Professor of Natural History and Keeper of the Natural History Museum in the University of Edinburgh. This post he held until 1870, and shortly afterwards the honorary degree of LL.D. was conferred upon him by the Edinburgh University. Professor Allman devoted the greater part of his life to investigating the lower organisms of the animal kingdom, the result of which he has published in various forms from time to time. For his researches in this branch of biology he received in 1872 the Brisbane Prize from the Royal Society of Edinburgh; in the following year a Royal medal was awarded to him by the Royal

Society of London, and in 1878 he received the Cunningham gold medal from the Irish Royal Academy. When Mr. Bentham resigned the presidency of the Linnean Society, Professor Allman was elected, and he retained the position until 1883, when he resigned in favour of Sir John Lubbock. He was President of the British Association for the Advancement of Science in 1879. Professor Allman has served on the Councils of the Royal Societies of London and Edinburgh and of the Royal Irish Academy, and has filled the post of Examiner in Natural History for the Queen's University of Ireland, the University of London, the Army and Navy and Indian Medical Services, and for the Indian Civil Service.

PRACTICAL PHOTOGRAPHIC NOTES.

FASHION IS NOT UNKNOWN in photography, and at the present time there is a small craze for enlargements made through what is known as milling or bolting silk, which is used by millers for the sifting of flour. This can be obtained from Bryan Corcoran, 31, Mark Lane, E.C., and if a novelty is required, we should recommend a few examples to be prepared. The silk is placed at varying distances from the sensitive paper, and it breaks the image up, giving a peculiar soft result, which is extremely effective for broad effects, and the silk being translucent and being placed a little distance from the paper, no actual white lines are produced because diffraction effects are obtained, the result being that the slight deposit formed by the diffraction fringes softens the white lines and gives extra softness to the print.

FREIHERR VON HÜBL, a well-known authority on photographic matters, has recently published a book on development, and he strongly recommends a developer of the following composition:—

Hot Water	40 C.c.
Sodium Sulphite	25 g.
Glycine	10 g.
Potassium Carbonate	50 g.

The ingredients must be added to the water in the above order and the potash added gradually, as the glycine is acid and the solution effervesces. Actually a solution is not formed, but a thick paste, which must be shaken well before dilution for use. For normal exposure 1 part of the above should be diluted with 15 parts of water; for under-exposure 1 part should be diluted with 33 parts of water; for over-exposure use 25 parts of water and add bromide. These ingredients, if mixed together dry, will form a good powder developer.

Trade Notes.

THE CANADIAN PATENT LAW prohibits the importation into Canada of goods protected by Canadian patents. Burroughs, Wellcome and Co. have secured Letters Patent for processes and apparatus in connection with the manufacture of suppositories in Canada, and the introduction of these goods into the Dominion has been prohibited accordingly. They have, therefore, appointed Charles E. Scarff, of 2262, St. Catharine Street, Montreal, sole licensee for the manufacture in the Dominion of suppositories made under these patents, and to him all orders should be referred. It is important that any wholesaler who receives an order for B., W. and Co.'s patent suppositories should decline to supply the goods, as the discovery of the consignment by the Customs Authorities would subject the importer to the liability of a fine and the confiscation of the goods.

MESSRS. SOUTHALL BROTHERS AND BARCLAY, of Birmingham, offer chemists in business a free box of samples of their new towel for obstetrical purposes, in order that they may be shown to members of the medical profession and other customers.

Partnerships Dissolved.

(From the London Gazette.)

John Roberts and James Huskie, General Medical Practitioners, Chester, so far as regards James Huskie.

E. J. Caley, S. A. Caley, and F. W. Caley (trading as A. J. Caley and Son), Mineral Water Manufacturers and Chocolate Manufacturers, Chapel Field, Norwich. The business has been converted into a limited company under the style of A. J. Caley and Son, Limited.

James Anderson, M.D., and Percy C. Low, M.D., General Medical Practitioners, Tunbridge Wells.

MARKET REPORT.

The quotations here are given in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

DECEMBER 1.

Business appears to have taken a decided turn for the better in the drug and chemical trades during the past few days. Not only has a fair amount of business been passing, but also people are beginning to take a more hopeful view of the prospects of the trade during the coming winter and spring. No doubt the various advances in makers' prices, such as have taken place in Quinine Iodides, Bromides, Cocaine, Sulphonal, Camphor, etc., have tended to foster this feeling, and holders who took the opportunity of the low prices to secure stocks, are, while thankful for past mercies, like Oliver Twist, if not asking, at least hoping for more, this more especially applies to Quinine, in price of which, provided next week's Amsterdam Bark sales do not disappoint expectations, we may probably see a further decided advance. Camphor is very firm, and expected to be dearer, the same may be said of Cocaine, Mercurials, Iodides, and Bromides are firm at the late advance, while the rise in price of Sulphonal also appears to have "come to stay." Phenacetin and Acetanilide are somewhat weak, partly owing to cheap offers of discredited makes. Acid Citric and Tartaric are quiet. Cream of Tartar firm. Borax and Acid Boracic steady. Cascara Sagrada dearer. Opium, Morphia, and Codeia without change. Glycerin and Cod Liver Oil quiet and weak. Sulphate of Ammonia steady. The following are prices actually ruling for articles of chief interest:—

ACETANILIDE—Is quiet and weak, the efforts on the part of makers of an inferior quality to press sales almost *à tout prix* only tending to defeat their own object in making buyers afraid to touch the article at all. A really reliable article is not obtainable below 11d. to 1s. per lb., according to quantity for bulk lots.

ACID BORACIC—Steady at 24s. 6d. per cwt. for *crystals*, and 26s. 6d. per cwt. for *powder*.

ACID CABOLIC—Is firm at 6¾d. per lb. for best make of 36-36° C. *ice crystals* in 2½ cwt. drums and overcasks, 39-40° C. ditto, 7½d. per lb., 39-40° C. detached crystals 8d. per lb. *Crude* 60° F. 1s. 11d. per gallon, 75° F. 2s. 3d. per gallon. *Liquid* 95 to 97 per cent. of pale straw colour in 40 gallon casks, 1s. 2d. per gallon.

ACID CITRIC—Is very quiet at 1s. 1¼d. per lb. on the spot.

ACID OXALIC—Is quiet at 3d. to 3¾d. per lb. nett, delivered free, London.

ACID TARTARIC—Quiet at 12¼d. per lb. for *English* and 12d. to 12¼d. for *foreign*.

AMMONIA COMPOUNDS.—*Sulphate* steady at £10 per ton for grey prompt 24 per cent., London, Hull, and Leith, and £9 17s. 6d. per ton, Beckton terms. *Carbonate* quiet at 3d. to 4d. per lb. according to quantity and package. *Bromide* firm at the late advance of 2s. 2d. per lb. *Iodide* steady at 13s. 10d. per lb., being 3d. dearer. *Muriate*: Chemically pure, small crystals, 30s. to 32s. 6d. per cwt.; white free from metals 25s. 6d. to 27s. 6d. per cwt. *Oxalate*: 5¼d. to 5½d. per lb. *Sulphocyanide*: 1s. to 1s. 2d. per lb., according to quantity. *Sal ammoniac*: Steady at 35s. per cwt. for sublimed firsts and 33s. per cwt. for seconds, crushed for batteries being quoted 2s. per cwt. dearer.

ANTIMONY.—*Regulus* is quoted £36 15s. to £37 15s. per ton, and *crude* £22 to £24 per ton.

ARECA NUTS—Are scarce, and holders ask 30s. to 32s. per cwt.

ATROPINE—Is very firm at makers' prices, viz., 15s. 6d. per oz.

for the *Sulphate B.P.*, and 17s. 10d. per oz. for the *pure*. Suitable raw material remains exceedingly scarce and dear, and in some quarters the possibility of a further advance in makers' price for *Atropine* is being discussed.

BALSAM TOLU—Is in demand, good quality being held for 1s. 8d. per lb.

BELLADONNA ROOT.—Really good quality is scarce and dear. Quotations vary from 38s. to 46s. per cwt., the latter figure being asked for really good quality free from chumps.

BLEACHING POWDER (CHLORIDE OF LIME).—*English* is quoted £6 per ton.

BORAX—Is steady, with a hardening tendency. *Crystals* are quoted 15s. per cwt., *powder* 15s. 6d. per cwt.

BROMIDES.—Makers advanced their prices towards the end of last week 1d. per lb., their quotations being now *Potassii bromid.* 1s. 10½d., *Sodii bromid.* 2s. 1½d., *Ammon. bromid.* 2s. 2d. per lb. *Bromine* is unchanged at 2s. 1d. per lb., in cases of 60 lbs.

CAFFEINE—Is firm at 14s. 4d. per lb. for the *Pure*, and 11s. 2d. for the *Citrate B.P.*

CASCARA SAGRADA—Is firmer. From New York the price is reported to be 31s. per cwt., *c.i.f.* Here, however, it is still possible to buy new bark at 24s. to 25s. per cwt., while for old bark tangibly higher prices, say, 28s. to 30s., are asked.

CASTOR OIL—Quiet. Belgian first pressing, spot, £26 10s.; December, £25 10s.; January to December, 1899, £24; second pressing, spot, £25. Hull manufactured, 26s. to 27s. per cwt. in barrels, 2½d. to 3½d. per lb. in cases, *f.o.b.*, Hull. London manufactured, 26s. 6d. per cwt. in barrels.

CAUSTIC SODA.—70 per cent. white is quoted £7 10s. per ton, and 60 per cent. £6 10s.

CHIRETTA—Is scarce and dearer at 9d. to 9½d. per lb.

CINCHONA BARK.—In view of the present interesting position of Quinine, the following statistics respecting the bark will probably be of interest to our readers:—

Statement of the movements of all sorts of Medicinal Bark in London in each month during the past two years.

Month.	Landed.		Delivered.		Stock.	
	1897.	1896.	1897.	1896.	1897.	1896.

Total year	—	24,674	—	23,435

CINNAMON.—The last auctions of the year were held on Monday, when 3925 bales *Ceylon* were offered, against 1517 bales in the previous series, and 3093 bales in November, 1897. Owing to the large supply a dull tone prevailed, but as most holders met the market the large proportion of 2,650 bales found buyers. Prices were irregular, good to fine kinds declining 1d. to 1½d., ordinary and medium firsts and seconds 1d., and thirds and fourths steady to ½d. down; the following are the particulars:—*Worked.*—Firsts, superior 1s. 6d., good to fine 1s. 2d. to 1s. 4d., middling to good fair 10d. to 1s.; seconds, superior 1s. 3d. to 1s. 5d., good to fine 11d. to 1s. 2d., middling to good fair 8½d. to 10d.; thirds, superior 1s. 1d. to 1s. 3d., good to fine 10d. to 1s., middling to good fair 8¼d. to 9d.; fourths, good to fine 9d. to 10½d., middling to fair 7½d. to 8½d. *Unworked.*—Firsts, good to fine 11d. to 1s. 1d., middling 10d. to 10½d., common 7½d. to 8d.; seconds, middling 9d. to 10d., common 7d. to 7½d.; thirds 6d. to 9d.; fourths 5½d. to 8½d. per lb. *Chips*: 850 bags only partly sold, quillings and cuttings 6d. to 9d., ordinary fair chips 3¼d. to 4½d., coarse bark 3d. to 4d. per lb.

CLOVES.—Privately the market for *Zanzibar* has fluctuated somewhat, but closes steady, with fair business passing, including October-December delivery at 3¼d., January-March, 3½d. to 3¾d., and March-May 3¾d. to 3½d. In auction, of 56 bales *Zanzibar*, 44 bales sold at 4¼d. to 4½d.; 49 cases *Penang*, 1895 import, sold without reserve, fair picked at 6¾d., good fair 7¼d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: pure 1s. 6d. commercial, 1s. 1d. per lb. *Crude naphtha*: 30 per cent., at 120° C., 3½d. per gallon. *Solvent naphtha*: 95 per cent., at 160° C., 1s. 5d.; 90 per cent., at 160° C., 1s. 2d.; 90 per cent. at 190° C., 1s. 2d. per gallon. *Pitch*: 25s. per ton, *f.o.b.* *Tar*: Refined, 12s. per barrel, 1½d. per gallon; crude, 12s. per barrel, 1½d. per gallon. *Benzole* 50 per cent. 9d. per gallon, 90 per cent. 9d. per gallon.

COCAINE.—Market is again firmer, some makers quoting 10s. 9d. per oz. for the *Hydrochlorate* in 25-oz. tins and for 100-oz. lots. One specially favoured brand is still quoted nominally 10s. 3d., but makers state that they are sold out. It is possible to buy from second-hand at somewhat below these figures, but there are not many sellers in view of the fact that a further advance in makers' prices is considered as by no means improbable.

CODEIA.—Is steady at 12s. 6d. per oz. for the pure and 1s. per oz. less for the *Phosphate* and *Hydrochlorate* salts.

COD LIVER OIL.—The continued mildness of the season appears to have checked the demand for this article, to the disappointment of holders, who quite anticipated an advance ere this, rather than a decline. Best new season non-congealing *Norwegian* oil, in tinned barrels, is quoted nominally 80s. to 85s. per barrel, according to brand, while 1897 oil has been sold as low as 55s. to 60s. per barrel, which figure must show a very smart loss to the holders, as against original cost price at time of shipment.

CREAM OF TARTAR.—Is firmer at 73s. 6d. for first white *crystals* on the spot, and 75s. 6d. to 76s. for *powder*.

ESERINE (PHYSOSTIGMINE).—Makers' prices are 2s. per gramme for the *Sulphate* and *Salicylate*, and 3s. per gramme for the pure.

GENTIAN ROOT.—Quotations vary from 14s. 6d. to 18s. 6d. per cwt. *c.i.f.* according to quality, the latter price would have to be paid for really good sound red root.

GLYCERIN.—The market for *crude* has become somewhat quiet

with a rather weaker tendency, and this has in turn affected the *refined* article, which is quoted £50 to £55 per ton for *English*, and £53 to £60 per ton for *German*, according to quantity and brand, for the best white double-distilled chemically pure 1260° quality in tins and cases.

GINGER.—*Cochin* quiet; of 876 bags rough, only 280 bags sold, chiefly without reserve, consisting of shrivelled pickings, partly wormy, cuttings, and ordinary dusty, at 13s. to 14s. washed bought it at 24s. to 25s.; of cut kinds B bought in at 58s. to 63s. 6d., and A at 87s. 6d. 225 bags limed *Japan* bought in at 18s. to 19s. Of *Jamaica* 18 barrels sold, middling washed at 79s. 6d.

HYPOPHOSPHITES.—Makers' prices remain unchanged at 3s. 6d. per lb. for the *Lime Soda* and *Potash Salts*.

IODIDES.—While price of iodine remains unchanged at 7½d. per oz., the members of the iodine preparations convention have advanced prices 3d. per lb., they now quote Potassii Iodid., 10s. 6d. per lb.; Sodii Iodid., 11s. 10d. per lb.; Ammon. Iodid., 13s. 10d.; Iodoform *cryst powder and percep*; 13s. 7d. per lb. Iodine Resubl., 12s. per lb., the reason given for the advance in price is understood to be that the makers did not consider that profit previously shown on the manufacture of iodine preparations was commensurate to the labour and capital required, together with the risk incurred in handling so ticklish an article as Iodine, which, as our readers will be aware, is constantly threatened with a serious drop in value.

LITHIA.—Makers' prices are unchanged at 11s. 1d. per lb. for the *Carbonate*, 6s. 8d. per lb. for the *citrate crystal*, and 7s. 2d. per lb. for the *citrate powder*.

MENTHOL.—Market is firm at 7s. 6d. to 7s. 9d. per lb. for really good dry white crystals in 5 lb. tins.

MERCURIALS.—Manufacturers quote as follows:—Mercury chloride B.P. (calomel), 2s. 8d. per lb.; mercury bichloride (corrosive subl.), 2s. 4d. per lb.; mercury red oxide B.P. (red precipitate), 3s. per lb.; mercury ammoniated B.P. (white precip.), 3s. 1d. per lb.; mercury yellow oxide B.P., 3s. 1d. per lb.

MORPHIA.—Without change at 5s. per oz. for the *powdered salts* and 5s. 2d. per oz. for the *crystal*.

OILS (FIXED) AND SPIRITS.—*Linseed* is quiet, spot pipes (London) £16 5s., barrels, £16 15s. January-April £16 15s.; May-August, £16 10s. *Rape* steady, ordinary brown, spot £21 10s., December, £21 5s., January-April, £21 5s., refined, £23. *Ravison* naked, spot, £17 10s., December, £17 10s., January-April, £17 10s. *Cotton* easier, London crude spot, £12 7s. 6d.; December to April, £12 7s. 6d. Refined spot, £13 17s. 6d. to £14 10s., according to make. *Olive Oils*: Spanish, £29; Levant and Mogador, £29 to £32. *Cocanut Oil* firm; Ceylon spot, £26; near at hand, £25; Nov.-Dec., £24 10s.; Jan.-March, £24 *c.i.f.* *Cochin* spot nominally £31; afloat, £27; Nov.-Dec., £26 7s. 6d.; Jan.-March, £25 15s. to £26 *c.i.f.* *Turpentine*: Market is strong and active, American spot 28s., December, 28s. 9d., January-April, 29s. 3d. to 29s. 4½d., July-December, 24s. *Petroleum oil* firm; Russian spot 5¾d., December 5¾d., American spot 6¾d. to 6¼d., December, 6¼d., water-white, 7¼d. to 7¾d. per gallon. *Petroleum Spirit*, American, 7¼d., deodorised, 7¾d. to 8d. per gallon.

NITRATE OF SODA.—Price of the ordinary is £7 12s. 6d. to £7 15s., and of the refined £8 to £8 2s. 6d. per ton.

OPIUM.—Market remains exceedingly quiet, there being practically nothing whatever doing in the article. Quotations are nominally without change, 11s. 3d. to 11s. 9d. per lb. for fine *Druggists*, 10s. 6d. to 11s. per lb. for good second^s and manufacturing kinds, 13s. to 14s. for good to fine *soft shipping*, 10s. 6d. to 11s. 6d. for seconds. *Persian* is quoted 12s. 9d. to 14s. per lb. according to quality.

ORRIS ROOT.—Is quiet but steady at 37s. 6d. to 45s. per cwt. for fair to best selected *Florentine*, and 25s. to 27s. 6d. per cwt. for *Verona*.

PHENACETINE.—Has not so far shared in the improvement which has taken place in some other chemicals, although there is still talk of a possible combination of the makers of the article with a view to obtaining a better price for same. A good quality can, however, still be bought at 3s. 9d. to 4s. 3d. per lb. according to quantity and packing.

PERMANGANATE OF POTASH.—Is weak at 50s. per cwt. for *small crystals*, and 55s. per cwt. for *large crystals*. Manufacturers appear to be pressing sales at even lower figures for delivery over next year.

PILOCARPINE.—Is in only limited demand at 1s. 4d. per gramme for the *Nitrate* and *Muriate Salt*.

POTASH COMPOUNDS.—*Chlorate* is steady on the spot at 3¾d. per

lb. for crystals, and 4d. per lb. for powder. *Bichromate* 3½d. per lb. *Prussiate Yellow* is quoted 6¼d. per lb. for *English*. *Red* quiet at 1s. 2d. to 1s. 3d. per lb. *Bicarbonate* steady, both crystals and powder being quoted at 30s. to 35s. per cwt., according to quantity and brand. *Oxalate neutral* is steady at 5d. per lb. Bromide higher at 1s. 10¼d. per lb. *Permanganate* quiet and weak at 50s. per cwt. for small crystals, and 5s. per cwt. more for large crystals.

QUICKSILVER—Is quoted £7 10s. per bottle from first hand, but is obtainable at 1s. per bottle less from second-hand holders.

QUININE—Is quiet and unsettled, the makers quoting various prices from 10d. to 11d. per oz. for 1000-oz. lots in 100-oz. tins. Some makers, however, state that they are sold out, and that their quotation must be considered as nominal. The future course of the article appears now to depend much upon the course of the bark sales which take place this day week in Amsterdam. From second hand there have been a few sales from weak holders at 10¼d. to 10¾d. per oz. for 1000 oz. lots.

RESORCIN—Is quoted 6s. 6d. per lb. for best makes.

SALICYLATES.—Manufacturers' prices are: *Acid cryst.*, 2s. per lb.; *powder*, 1s. 10d. per lb.; *Physiologically pure cryst.*, 3s. 10d. per lb.; *Soda cryst.*, 2s. 6d.; *powder*, 2s.; *Physiologically pure cryst.*, 3s. 6d. per lb.

SALICINE.—The British makers still quote 10s. per lb. for cwt. lots, and the article is stated to be firm at this figure. A firm of German manufacturers, anxious to steal a march on its British confreres, lately sent out a list, quoting salicine 9s. 9d. per lb. for cwt. lots, in spite of the fact of it having been understood that 10s. should be the very lowest price. The "cutters" were promptly "called over the coals," and will hardly have added to their reputation for straightforwardness. We understand that they now also quote 10s. per lb. as very lowest price for 1 cwt., and "are sorry they spoke."

SALOL.—It is rumoured that makers are proposing to advance the price of this article, but so far nothing definite has transpired and price remains nominally 3s. 2d. per lb. Makers are, however, we understand, declining to book orders at the old price pending developments.

SANTONINE.—The agents for the Turkestan factory, which practically controls the market for this article, to-day reduced price from 4s. 11d. to 4s. 8d. per lb., a reduction which, in view of the already very low price of the article, has come rather unexpectedly, in fact, it was confidently anticipated that any alteration would be in an upward direction. Object of the reduction will probably have been to crush some smaller makers and to force them to fall into line, after which consumers will very possibly be called upon to pay much higher prices. At present figure the article should be worth stocking.

SODA COMPOUNDS.—*Crystals*, 52s. 6d. per ton in bags, and 55s. per cwt. in barrels, ex-ship Thames. *Ash*, £5 to £5 10s. per ton, according to quantity, strength, and package. *Bicarbonate* steady at £7 5s. to £7 15s. per ton for the 97 per cent., and 18s. 6d. per cwt. for the fully bicarbonated quality. *Caustic*: 70 per cent., £7 10s.; 60 per cent., £6 10s. per ton. *Nitrate*: Commercial, £7 12s. 6d.; refined, £8 2s. 6d. per ton. *Bichromate*, 2¾d. per lb. *Bromide*, 2s. 1½d. per lb. *Iodide*, 11s. 10d. per lb. *Hyposulphite* dull at 6s. 6d. to 8s. per cwt., according to quantity and make.

SODA CRYSTALS—Are quoted 52s. 6d. per ton in bags, and 55s. per ton in barrels.

SPICES (VARIOUS).—*Black Pepper* all bought in, Singapore at 4¾d., and *Tellicherry* at 4¾d. *White Pepper* mostly bought in, Penang 7¾d., Siam 8¾d., and Singapore 8¾d. to 9d., except 25 bags sold at 8d. to 8¼d. *Chillies*: 87 bales Zanzibar bought in at 36s. to 41s.; 3 cases sold, without reserve, slightly mouldy, at 36s. *Cinnamon*: 2 barrels West India, coarse bark, sold at 5d. *Mace*: Of 27 cases Penang, only 1 case good bold, sold at 2s. 3d.; 10 cases Singapore bought in at 1s. 5d.; 17 packages West India sold at 1s. 4d. to 1s. 7d., with two lots good and fine 1s. 10d. and 2s. 1d. *Pimento*: of 517 bags only 52 bags, good, sold at 4¾d.

SUGAR OF LEAD—Is quiet at 26s. 6d. to 27s. 6d. per cwt. for *foreign*, and 31s. to 32s. 6d. for *English*, according to quantity and make.

SULPHATE OF COPPER—Is quiet at £18 to £19 per ton on the spot.

SULPHONAL.—Price is maintained at 17s. per lb. by the makers for both *crystals* and *powder*. There are, however, sellers from second hand below this figure.

THYMOL—Is rising, there being few sellers below 8s. 6d. per lb., while higher figures are predicted. It must not be overlooked

that even present figure is extremely low compared with the price which formerly ruled for the article.

Newcastle Chemical Report.

NOVEMBER 30, 1898.

Contracts for heavy goods over next year are in progress. Despite the fact of a higher cost for production, there is a difficulty to move present quotations upwards. Sulphur keeps scarce. Prices keep as follow:—Soda Crystals, basis, 45s. Bleaching Powder, £5 10s. to £6. Soda Ash, 48 per cent., £4 to £4 10s. Caustic Soda, 70 per cent., £7 5s. Sulphur, £5 per ton.

Liverpool Market Report.

NOVEMBER 30, 1898.

Quotations are practically unchanged from last week, and the only articles exhibiting a tendency to fluctuate are Spirits of Turpentine and Cream of Tartar. Good sales of Brazilian Gum Acacia have been made at fair rates.

AMMONIA SALTS.—Sulphate is a little easier—£10 to £10 2s. 6d. per ton.

BEE SWAX.—17 bags of Chilian sold at £6 10s. per cwt.

BORAX—Is very firm at £14 10s. to £15 per ton.

CANARYSEED—Continues steady at 28s. 6d. to 29s. 6d. per 464 lbs. for Turkish, but transactious have been "nil."

CARNAUBA WAX.—30 bags of grey changed hands at 35s. to 36s. per cwt.

CHILLIES.—Common Sierra Leone fruit, ex store, sold at 35s. per cwt.

COPPERAS—37s. to 39s. per ton.

COPPER SULPHATE.—£18 10s. per ton. £19 per ton spring delivery.

CREAM OF TARTAR.—72s. per cwt. is asked for Spanish, and 73s. per cwt. for finest French cream.

GUM ARABIC.—One ton of Brazilian sold at 23s. 6d. per cwt.

OILS (FIXED) AND SPIRITS.—*Castor* is generally quieter in tone; Calcutta, 3d. to 3½d. per lb.; French, 2½d. per lb.; and Madras, 2¾d. per lb. *Olive* is selling steadily, and finest Spanish has changed hands at £29 10s. and £30 per tun. *Linseed*, of Liverpool make, is quiet at 17s. 9d. to 18s. 6d. per cwt. *Cottonseed* is flat at 15s. to 15s. 6d. per cwt. *Spirits of Turpentine* rose to 30s. per cwt. early in the week, but is now selling steadily at 29s. 6d.

PEARLASHES—Are nominal at 34s. 6d. per cwt.

POTASHES—Are scarce at 25s. per cwt.

Manchester Chemical Report.

NOVEMBER 30, 1898.

In the heavy Alkali trade business continues far from brisk, although in many minor articles the improvement is very marked. Caustic Soda is unchanged nominally, but there is every disposition on the part of producers to accept orders at low rates. Bleaching Powder is dull but unchanged. At a meeting held recently of representatives of the English Glycerine Combine, it was decided that the price, naked, should be £47 10s. per ton, in 10 ton lots, and for chemically pure £51 per ton, tins and cases, less 2½ per cent. discount, delivered in Manchester and Liverpool district. Sulphate of Copper continues to improve on account of the state of affairs in the metal market, and may be said to be £19 per ton, best brands, delivered Manchester, with £19 10s. for spring delivery. Tin Salts are also firm, White Sugar of Lead, although offered at lower prices, is easy. For prompt delivery, Chlorates of Soda and Potash are rather dull, but for next year's delivery prices are fairly firm at somewhat under current rates. Coal Tar products are on the whole very dull, except, perhaps, Creosote. Anthracene is a shade lower, being quoted 3¾d. A, and 2¾d. to 3d. for B quality. Naphthas and Benzols remain quiet. Acetate of Soda is about 10s. per ton higher. Green Copperas is in demand for export. Yellow Prussiate for prompt is fractionally higher—6¾d. to 7¼d. The s.s. "Petriana" has arrived at Manchester with 2500 gallons of American oil, chiefly for the Manchester Corporation for gas enrichment.

NOTICES TO CORRESPONDENTS.

All Communications for the 'Pharmaceutical Journal' must be Addressed to the Editor, 17, Bloomsbury Square, London, W.C., and not in any case to individuals supposed to be connected with the Editorial Staff; no responsibility can be accepted unless this rule be observed. Communications for the Current Week's Journal should reach the Office not later than Wednesday, but news can be Received by Telegraph until 4 p.m. on Thursday.

ADVERTISEMENTS AND ORDERS for copies of the 'PHARMACEUTICAL JOURNAL' must be addressed to the Publishers, 5, Serle Street, Lincoln's Inn, London, W.C. Cheques and money orders should be made payable to "Street Brothers.

ARTICLES AND REPORTS sent for the Editor's approval should be accompanied by stamped directed envelopes, otherwise no guarantee can be given that they will be returned if not found suitable.

CORRESPONDENTS should write in ink, on one side of the paper only, and must authenticate the matter sent with their names and addresses—of course not necessarily for publication. No notice can be taken of anonymous communications.

DRAWINGS FOR ILLUSTRATIONS should be executed twice the desired size; clean sharp lines being drawn with a pen and liquid Chinese ink. Shading by washes is inadmissible. Photographs can be utilised in certain cases.

NAMES AND FORMULÆ should be written with extra care, all systematic names of plants and animals being underlined, and capital letters used to commence generic but not specific names.

QUERIES addressed to the Editor will be replied to in the Journal as early as possible after receipt, though not necessarily in the next issue. Replies cannot be sent by post, even though stamped envelopes accompany the queries.

Calendar for Next Week.

Sunday, December 4. 2nd in Advt. Sun rises 7.49; sets 3.51.

Monday, December 5. Sun rises 7.51; sets 3.51.

SOCIETY OF CHEMICAL INDUSTRY, Burlington House, Piccadilly, W., at 8 p.m. Colonel W. J. Engledue, R.E., will read a paper on "Oxone and its Commercial Applications, while Mr. Arthur Marshall will deal with (1) "An Improved Apparatus for the Estimation of Carbonic Acid in Minerals, etc." (2) "The Preparation of Standard Solutions of Sulphuric Acid."

Tuesday, December 6. (10.6 M. Sun rises 7.52; sets 3.50.

CHEMISTS' ASSISTANTS' UNION OF GREAT BRITAIN, Horse Shoe Hotel, Tottenham Court Road, W., at 9 p.m. The first smoking concert, Dr. Henry Dutch in the chair.

ROYAL COLONIAL INSTITUTE, Whitehall Rooms, Hôtel Métropole, Whitehall Place, S.W., at 8 p.m. Dr. Alfred P. Hellier will read a paper on "The Native Races of South Africa."

Wednesday, December 7. Sun rises 7.53, sets 3.50.

NEWCASTLE-ON-TYNE AND DISTRICT CHEMISTS' ASSOCIATION. Smoking concert.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN, 17, Bloomsbury Square, W.C. Meeting of Council.

PHARMACY CLUB.—Dinner at the Café Royal, 68, Regent Street, W., at 6.45 p.m.

SOCIETY OF PUBLIC ANALYSTS, Burlington House, Piccadilly, W., at 8 p.m. An illustrated lecture by Mr. A. H. Allen on "The Use of the Micro-Spectroscope, and the Methods of Detecting Blood in Chemical-Legal Investigations."

Thursday, December 8. Sun rises 7.54; sets 3.49.

CHEMISTS' ASSISTANTS' ASSOCIATION, Dorset Hall, Portman Rooms, Baker Street, W. Second Cinderella Dance of the season.

Friday, December 9. Sun rises 7.56; sets 3.49.

Saturday, December 10. Sun rises 7.57; sets 3.49.

Obituary.

JONES.—On November 21, Enoch Henry Jones, Chemist and Druggist, Bristol. Aged 54. Mr. Jones was an Associate of the Pharmaceutical Society.

SHORT.—On November 24, Edward Curteis, Chemist and Druggist, Bushey Heath (Herts). Aged 51.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Miscellaneous.

Magic Lanterns, second-hand; triples and binoculars: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s. —Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Sulplus Stock.—12 1-gallon tins Izal, 96s. dozen; 23 lbs. cochineal, 1s. 6d. lb.; 1 cwt. oxide of zinc, 50s.; 30 lbs. oil of sassafras, 2s. 5d. lb.; 6 lbs. essence of bergamott, 5s. 6d. lb.—Sowerby, North Street, Middlesbro'.

Wholesale and Retail Druggist: Advertiser is overstocked with superfine oil of lemon in 10-lb. coppers, and solicits offers; 1-lb. sample delivered free 2s. 9d.—Moss, 34, Avondale Road, Chorley.

All New, unsoiled, bought before advance, hot water bottles, best quality. Maroon plush covers (detachable) included, 10 by 6, 4s.; 12 by 8, 5s. 10d.; 12 by 10, 6s. 6d.; 14 by 10, 7s. Sponge bags, best quality, silk cords and bindings, full sizes, as Maw's, eight dozen, assorted, Nos. 2, 4s. 6d.; 3, 6s.; 4, 7s. 6d.; 5, 9s.; 6, 10s. 6d. Tooth stopping wrapped pink paper, as Stevens', gross box, 2s. 6d.; 3 dozen 3l. sticks, 2s. 6d. Hypodermic syringe, complete, cased, 1s. 6d. Post free 10s. lots. Cash returned if sold.—Warnes, Chemist, 333, Gray's Inn Road, W.C.

Leath-Ross show-case and medicines, specie-jars and stands, cheap; *Chemist and Druggist*, unbound, from beginning; cheap to clear; Stern's Narissa and Pumliline.—Williams, Bournemouth.

White Oils: Acetic Embrocation, cheap creamy permanent emulsion, formula, 1s.—Chemist, 68, West Street, Stoke-on-Trent.

Operating Chair, with movable back, rising and falling head-rest, adjustable footstool, stained walnut, freshly upholstered in best morocco, £8 10s.; with brass bracket holding glass, spittoon, and table, £4 10s.; N.O. gas apparatus; a number of new nickel-plated forceps, 4s. each; send stamp for list; might exchange for good balance or microscope.—A. Peake, Queen Street, Earlestown.

A Bargain.—Large Triple Optical Lantern, by Steward, Strand; good condition; cash price £20.—Adams, Chemist, Market Harboro'.

Surplus Stock.—5 doz. Imperial Hand Fire Grenades, in 1 doz. cases, unopened; what offers for whole or portion?—Adams, Chemist, Market Harboro'.

No. 2 Frena. $\frac{1}{4}$ plate, with set of four magnifiers, bamboo stand, waterproof case, complete, good as new, cost £10, price £5; also Lancaster's $\frac{1}{4}$ -plate instantograph stand camera with case, price 30s.—Chambers, 82, Cambridge Gardens, Notting Hill, London. W.

Shop-soiled only, 12s. 6d., Tylar's Titbit camera, with extra slide, 11s. 6d. New $\frac{1}{2}$ -plate camera, rectilinear lens, stand, 3 dark slides, 3 carriers, £3 12s. 6d., for £3.—Cocker, Luton.

For Sale.—Pereira's 'Materia Medica,' 3 vols., 7s. 6d., paid; Wills' 'Materia Medica,' 2s., post paid. Cassell's 'Family Physician,' last edition, 4 vols. in 2, 16s., paid.—W. Pemberton, 34, Church Street, Preston.

A Handsome globe-lamp and bracket for sale, ruby flashed glass, richly gilded, perfectly new, splendid advertisement for any chemist, £3 10s., worth double.—Humphrey, 121, Charing Cross Road, London.

Erasmic Herb Soap, and Premier Vinolia Soap, and Daisy Powders. Carriage paid. State quantity and price.—Eastman, Forest Lane, Stratford.

WANTED.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsoll, 9, Derwent Grove, East Dulwich, London, S.E.

A good Optician's Trial Case.—Jellings, 70, High Street, Stockton-on-Tees.

Camwal Shares.—Any number from one to a hundred. Say lowest price.—Thornley, Chemist, Ilfracombe.

'Pharmaceutical Journal,' January 15, 1898. Full price will be paid for clean and complete copies by the Publishers, 5, Serle Street, London, W.C.

COMMUNICATIONS, LETTERS, NEWSPAPERS, etc., have been received from Messrs. Atkinson, Bailey, Bainbridge, Breeze, Brisby, Buhner, Burroughs, Campkin, Cherry, Clarke, Cowley, Critchley, Currie, Daniel, Dent, Dyer, Dulau, Evans, Floyd, Fothergill, Gair, Gillard, Graham, Green, Hill, Hogg, Idris, Jameson, Jones, Keen, Lewis, Ling, Macleod, Marriott, Mason, Mitchell, Morgan, Morley, Park, Penty, Pitt, Roberts, Robins, Scott, Sellock, Slinn, Smith, Snell, Spitta, Stead, Tayler, Thompson, Thorp, Turner, Turney, Waites, Wall, Williamson, Wood, Woolley.

SCHOOL OF PHARMACY NEWS.

AS THE YEARS ROLL BY the list of "old Squarmen" steadily swells, until it is not too much to say that no county or large town is without a pharmacist who was trained in the Bloomsbury Square School. In this column it is proposed not only to chronicle the more important events of each session, but also personal notes of general interest concerning the alumni of past sessions. It is thought that the interest which is yearly taken in the Old Boys' football match will be extended to the endeavour to keep fresh in the mind of each past student the memory of his *alma mater*, and bring back to all, whether at home or abroad, pleasant recollections of student days when life, if no less real and earnest, was certainly less serious. Communications for this column will therefore be welcomed, whether from present or past students of the School. They should be sent in by Wednesday in each week.

MEMBERS OF THE FOOTBALL TEAM are looking forward to the match on Saturday with Muter's College on P.F.C. ground at Wormholt Farm, Shepherd's Bush. Old "Squarmen" are invited to be present. Kick-off at 2.30.

THE ANNUAL SMOKING CONCERT, held under the auspices of the Pharmaceutical Football and Cricket Club, was well attended on Thursday, December 1, when chemists, wholesale and retail, principals and assistants, together with students past and present, to the number of about 200, assembled in the Crown Room, Holborn Restaurant. Professor H. G. Greenish, F.I.C., F.L.S., occupied the chair, and amongst those present were Messrs. W. Hills (President of the Pharmaceutical Society), M. Carteighe, T. Edward Greenish, E. W. Lucas, E. N. Butt, E. J. Eastes, J. O. Braithwaite, R. Bremridge (Secretary of the Pharmaceutical Society), Professor J. Norman Collie, Dr. Lapworth, and many others. There was an excellent programme, all the items in which were well rendered, and everything passed off most pleasantly, thanks to the endeavours of Messrs. John Evans, D. P. Gray and T. J. Wild, who were responsible for the arrangements. It included songs, recitations, a pianoforte solo, and ventriloquial sketches by many well-known artistes, among whom were Harry Hall, Fred Russell, W. Cheeseman, Will Edwards, etc.

PROFESSOR GREENISH, who was supported by Mr. E. J. Eastes, in taking the chair, remarked that there was little chance of the doom in store "for those who have no music in their soul" falling on pharmaceutical students. A little before the interval the Chairman proposed the health of the Captain of the Football and Cricket Club. This toast was drunk with musical honours. In his reply, the Captain, Mr. Will, thanked the Chairman and the assembled company for their good wishes, and briefly referred to the team of the present session. They had had some tough fights, and one of their best games ended in a draw with the London Hospital. There was every prospect of a good season, and one of the coming events, a match with the Honourable Artillery Company, should prove interesting, since twice last year the game ended in a draw. Later in the evening, Mr. J. Edward Lescher gave the toast of "The Smoking Concert Committee," and complimented Messrs. Evans, Gray, and Wild on the conspicuous success that had attended their efforts. Mr. John Evans' reply took the form of thanks to those present for contributing to the success of the undertaking, and especially to the members of the Pharmacy Club and the wholesale trade for their support and interest. At the conclusion of the programme, Mr. Herbert Payne proposed the health of the Chairman, Professor Greenish. This was drunk with musical honours, and, after suitably responding, the Professor terminated the meeting by calling for "Auld Lang Syne" and "God Save the Queen."

FRIDAY DECEMBER 9, is to be a field-day at the Students' Association, as the oratorical ability of present students will be tested at a discussion on "The Proposed Division of the Minor Examination." Mr. P. B. Gray is expected to move in favour of the division, and the opposition is in the able hands of Mr. Herbert Payne. A full meeting is anticipated, but room will be found for all old students who can find it convenient to attend. It will be held in the lecture theatre at 5.30 p.m.

MR. H. E. MATTHEWS, who took such an interest in all work connected with his fellow-students during the last two sessions, has gone into business at Clifton. It is hoped that Mr. Matthews will be as successful in the future as he has been in the past.

SCOTTISH NEWS.

DEATH FROM LAUDANUM POISONING.—On Saturday afternoon, December 3, a man, having the appearance of belonging to the labouring class, was found lying in a helpless condition by two constables on duty in Regent Road, Edinburgh. He was removed in a cab to the Royal Infirmary, and on examination he was found to be suffering from an overdose of laudanum, from which he died on the 4th inst. The deceased has been identified as Thomas Beveridge, residing in Shoemakers' Lane, Canongate, Edinburgh.

THE EDINBURGH PHARMACY ATHLETIC CLUB held its seventh annual smoking concert in the West End Café, Princes Street, Edinburgh, on Tuesday evening, December 6. Mr. J. Rutherford Hill, Honorary President, occupied the chair, and among those present were Councillor Richard Clark, J.P., Chairman of the Edinburgh Parish Council; Parish Councillor David McLaren, President of the Edinburgh District Chemists' Trade Association. D. B. Dott; F.I.C., G. Coull, B.Sc., etc.; Councillor Clark proposed the toast of "The Edinburgh Pharmacy Athletic Club," coupled with the names of Mr. Rutherford Hill and Mr. George Somerville, President of the Club, who suitably replied. Mr. Hill expressed the deep gratitude of the club to Mr. A. S. Birnie, who retires from the Honorary Treasurership after six years' service. An excellent programme of vocal and instrumental music and recitations made the evening pass very pleasantly, and much credit is due to the Honorary Secretary, Mr. J. P. Gibb, who had charge of the arrangements. Parish Councillor McLaren moved a vote of thanks to the Chairman, which was cordially awarded.

FRENCH NEWS.

MONUMENT CHARCOT.—The inauguration of the monument raised to the memory of Professor Charcot was held on Sunday, December 4, and presided at by M. Leygues, Minister of Public Instruction.

ONE OF THE RESULTS of the Franco-Italian Treaty of Commerce, which has just recently been ratified, is the revision of the Customs Tariffs relative to the entry of Pharmaceutical products into each of these countries. Compound medicaments, non-denominated, such as pilules, granules, pastilles, and capsules pay a duty of 100 francs per 100 kilos; wines, syrups, and elixirs, 40 francs per 100 kilos; other medicaments (not specified) 60 francs per 100 kilos. Preparations inscribed in the French Pharmacopœia, or such as are approved by the Académie de Médecine, will be admitted under the same conditions as those appearing in the Italian Pharmacopœia. Hitherto much annoyance and inconvenience has been experienced by pharmacists in both countries, on account of the whimsical interpretation of the former and inefficient tariffs by the Customs authorities. In consequence, this new and definite order of things will be highly appreciated by pharmaciens on both sides of the Alps.

CHAMBRE SYNDICALE DES PHARMACIENS DE PARIS.—At a meeting of the Tariff Commission, presided over by M. Collin, it was proposed to introduce the following modification in the existing tariff. Upon the proposition of M. Mazurier, of Boulogne, the Council decided that the new tariff should bear the announcement of a sur-tax of 1 franc 50 centimes for night duty, and that cardboard boxes for pills and powders should be charged for at a uniform rate of 10 centimes each. In reference to a letter received by M. Collin from the President of the Commission of Customs, as to the advisability of taxing the importation of powdered pyrethrum, the Council unanimously voted for the suppression of such a tax and requested M. Collin to reply to that effect.

HIGH PRICE FOR A FREE CONSULTATION.—That the facilities afforded to the poor and needy for free consultations at either hospitals or private clinics are taken advantage of by the well-to-do classes is a well-known fact, notwithstanding the opposition of the medical officers and their endeavour to impress upon this latter class that their place is not amongst their less fortunate fellow-creatures. The following incident, which occurred a few days ago, is, happily, rare, but will no doubt have a deterrent effect upon the gentry who continually hanker after all they can get for nothing. A lady known to be in exceedingly good

circumstances drove up to the Quinze-Vingt Clinique to have a *consultation gratuite*, but, before entering, took care to remove the outward sign of wealth in the shape of a pair of diamond earrings, valued at 4000 francs, and stow them away in her pocket. Having obtained her consultation "pass" she placed this also in her pocket and betook herself to the "salle d'attente" to await her turn. Whether someone had seen her remove her earrings or not is hard to say. The fact, nevertheless, remains that on putting her hand in her pocket to withdraw her consultation card she discovered that her earrings had disappeared. Her chagrin can be more easily imagined than described, especially when one considers she had indirectly paid 4000 francs for advice she had hoped to obtain for nothing. Her handsome reward of 20 francs (price of a consultation) has failed to bring to justice the wrong-doer. No doubt however, remains that her pocket had been picked by a patient at the Clinique.

THE OLD OLD STORY.—The Parisian police are looking for an ingenious gang of swindlers, who have just victimised a number of chemists by means of a trick not lacking originality. The gang hired an apartment at 140, Rue St. Martin, and started the firm of "Ceguïn and Company, Chemical Agents." Several well-dressed ladies were then employed to visit all the important Parisian chemists and asked for a bottle of Dr. Baumont's specific elixir. If the chemist stated that he did not stock the article, the lady would invariably express her surprise. She would then inform the chemist of the address of the agent of the elixir and ask that a bottle might be procured for her and delivered at her hotel. Full of confidence, the chemist sent to Ceguïn and Company, and purchased at wholesale price sufficient to fill their order. Others, in order to meet future commands, took several bottles, and in this way the gang made a big haul, as the bottles in question apparently contained nothing but water. The gang managed to decamp before the police were put on their tract.

PARIS BRITISH CHAMBER OF COMMERCE.—A meeting of the British Chamber of Commerce was held on Friday, December 2. The following gentlemen attended:—Messrs. G. D. Sturrock in the chair, J. L. Pollock, T. Longhurst, F. W. F. Clark, John Manby, John G. Pilter, W. H. Hewson, and J. G. Colclough, secretary. Among the subjects under consideration were Customs difficulties, consular fees for *visa* on certificates of origin, and resolutions to be proposed at the annual meeting of the Association of Chambers of Commerce of the United Kingdom. A letter was received from the Board of Trade stating that the suggestions made by the Chamber in October, 1897, in connection with the improvement of the method followed for the compilation of trade statistics, had been adopted by the committee for the revision of trade accounts. A notice to shippers has been issued by the Comptroller-General of Customs, giving instructions as to the way goods should be declared in order that the final destination of goods should be given instead of the intermediary port through which they are shipped. In so far as pharmaceutical products and specialties of British origin are concerned, all efforts to entice makers to adopt some method of uniformity in volume or weight respecting their specialties, to facilitate the declaration of the same, have hitherto failed; and signs are still wanting of their willingness to toe the line of consistency. That the result of this apparent apathy on their part will eventually recoil upon themselves goes without saying. Bovril, Limited, 30, Farringdon Street, London, and 4, Rue de la Tacherie, Paris, were elected members of the Chamber.

ENGLISH NEWS.

EVENING MEETING IN LONDON.—At an Evening Meeting of the Pharmaceutical Society on Tuesday next, at 8 p.m., Mr. W. Merton Holmes will lecture on "Deep Sea Deposits." The lecture will be illustrated by lantern slides.

IDRIS AND Co., LTD.—A general meeting of this company was held on Thursday, December 1, when the directors submitted the annual report and balance-sheet for the year ending September 30, 1898. All the directors were present, together with a large number of shareholders. The Chairman, Mr. T. H. W. Idris, J.P., L.C.C., presented the report, which stated that although the season this year had not proved a satisfactory one, still the total sales for the year show a considerable increase. Reference was made to the delay in the issuing of the balance-sheet, caused by the additional business done during the closing

months of the financial year, and the directors propose that in future the annual accounts and balance-sheet shall be made up a month later than has hitherto been the case, viz., to October 31; thus the accounts for the coming year will include thirteen months' trading. Since the last report Mr. James Bradford, of "Oaklands," Haywards Heath, has been appointed an additional director of the Company, and the then existing mortgage and 5 per cent. debentures have been paid off. To do this and to provide additional capital for the extension of the business an issue of £70,000 4 per cent. debenture stock has been made at par, for which the Stock Exchange has granted an official quotation, and also for 50,000 A preference shares issued in July, 1897. The profit for the year, after charging interest on the mortgage and debentures recently paid off, and on debenture stock recently issued, and also after writing off depreciations, is £14,013 18s., which, with £1168 16s 5d. brought forward from 1897, makes a total of £15,182 14s. 5d. This sum the directors recommended to be appropriated as follows:—To the payment of dividends and interest on the various classes of shares, £10,530 15s. 11d.—at the rate of 6 per cent. for the year on the original issue of A preference shares; 6 per cent. per annum on the 1897 issue on instalments accrued due from date of payment, and interest at 3 per cent. per annum on instalments paid in advance; 7 per cent. on the B preference; 10 per cent. on the A and B ordinary, and 5 per cent. on the founders'. The balance (4651 18s. 6d.) to be applied as follows:—Premium of conversion of debentures, £1488 11s. 7d.; Reserve Fund (which will then stand at £26,500), £1500; Profit-sharing and Benevolent Funds, £500; carried forward to next account, £1163 6s. 11d. The report went on to state that arrangements have been made for an extension of the leases at Camden Town on favourable terms for 999 years from September 29 last. The new factory at Southampton is now erected and in working order, while the Liverpool branch continues to make steady progress. The report and balance-sheet were unanimously adopted, and the auditors, Messrs. A. J. Hill, Vellacott & Co., having been thanked for their services and re-elected, a vote of thanks was accorded to the directors.

VALENTINE'S MEAT EXTRACT.—On Friday, December 2, the action of The Valentine Meat Juice Co. v. Valentine's Meat Extract Co., Limited, was before Mr. Justice Stirling in the Chancery Division of the High Court of Justice. The plaintiffs sought an injunction restraining defendants from carrying on business as manufacturers or vendors of any preparation of extract of meat, or meat juice, under any name or title of which "Valentine" or "Valentine's" formed part, without clearly distinguishing. It was stated that there was a good deal of evidence, and the hearing would occupy some time, and under these circumstances his Lordship was asked to accelerate the trial, so as to avoid a double hearing. The defendants, who said they had a perfectly good answer to the action, concurred in the application, and his Lordship, who was unable to fix a day for the trial then, directed that the parties should apply early in the next sittings, when he would see what could be done. Mr. Moulton, Q.C., M.P., Mr. Swinfen Eady, Q.C., and Mr. Sebastian appeared for the plaintiffs; Mr. Upjohn and Mr. Arthur Sims represented the defendants.

MR. J. W. T. MORRISON, A.P.S., has opened a first-class pharmacy opposite the Post Office, Tring, Herts.

MR. T. KNIGHT, A.P.S., has succeeded to the old-established business formerly carried on by the late Mr. F. Satchell at "The Pharmacy," Crowthorne, Berkshire. The shop and dispensing department and to be refitted and fully equipped with all the modern improvements. A complete darkroom will be available for the use of amateur photographers, and a full stock of photographic materials and chemicals kept.

MESSRS. JAS. WOOLLEY, SONS AND Co., LTD., MANCHESTER.—The staff of this firm recently held their twentieth annual dinner and smoking concert at the Mosley Hotel, Piccadilly, Mr. William Lane occupying the chair. The guests present were Mr. G. S. Woolley, (Managing Director), Mr. C. A. Johnstone (Director), Mr. E. Stanmore Bishop (Honorary Surgeon to the Ancoats Hospital), Dr. Webster and Dr. Booth. After dinner the chairman proposed the usual loyal toast, which was followed by a long list of toasts and an excellent musical programme arranged by the Committee, with Mr. Howard as Secretary, each item being listened to with enthusiastic appreciation.

MR. FRED REYNOLDS, of Leeds, the well-known pharmaceutical caricaturist, is the author of a sketch in the *Daily Graphic* of Monday, December 5, entitled "In Memory of Gordon." The picture refers to the proposed college at Khartoum, and represents a hansom cab driven by a native Soudanese, who is accosted by another native, presumably a student, carrying a book under his arm. "Where to?" asks the cabby. "To the Gordon College," is the reply.

PLYMOUTH, DEVONPORT, STONEHOUSE, AND DISTRICT CHEMISTS ASSOCIATION (TRADE SECTION).—At the annual meeting of the above, Mr. James Cocks was elected President and Mr. R. F. Roper Hon. Secretary. A satisfactory balance in hand was reported. Votes of thanks to the retiring officers (Messrs. Roper and Park) were passed.

FOOTBALL.—In a match on Saturday last at Homerton the Westminster College of Pharmacy beat South London College of Pharmacy by two goals to nil, after a most pleasant game.

CHEMISTS' ASSISTANTS' UNION.—The first smoking concert of the Chemists' Assistants' Union was held at the concert hall of the Horse Shoe Hotel, Tottenham Court Road, W.C., on Tuesday evening, the 6th inst. Notwithstanding the unpropitious state of the weather, a goodly company of close upon a hundred chemists' assistants and their friends assembled at this the inaugural concert. Dr. Dutch occupied the chair, and was ably supported by Mr. Carpenter, L.D.S., Dr. Henson, Mr. Salter, Mr. Chilwell, and other well-known gentlemen connected with the craft, amongst them Mr. Whineray, the Chairman of the Union. In opening the proceedings, the Chairman said that this gathering of chemists' assistants from all parts of the metropolis, with a liberal sprinkling from the provinces, was one essentially of pleasure, and it was not his wish or intention to bore the company by any lengthy speech. He then called upon Mr. Cyril Davis to open the proceedings with an overture. This Mr. Davis executed in an able and business-like manner, and the company settled down to a thoroughly enjoyable evening. Mr. Bewsher raised uproarious laughter and considerable enthusiasm by his ventriloquial and imitative entertainment, an additional flavour being given by his allusions by means of his figure to a few of the current topics of pharmacy, e.g., Mr. Glyn-Jones of the P.A.T.A., and Mr. Beecham, of pill fame, etc. Mr. Sydney Bryant gave an exceptionally fine rendering of his "one man" pantomime rehearsal; this with his laughable "Gipsy Countess" duet completely brought down the house. The respective efforts of Mr. J. O. Evans, Mr. Wilkinson, Mr. Martin, Dr. C. Taylor, and Mr. Mortimer were thoroughly appreciated, the choruses going with considerable *verve*. During the evening the Chairman of the C.A.U., in a short speech, touched superficially on the policy of the Union, the respective points of which, published in the *Pharmaceutical Journal* of the 12th ult., were received with great enthusiasm. Many new members were enrolled, so that the Union has now assumed considerable proportions, and bids fair to take its place as a power in the world of pharmacy. Dr. Carpenter, in a pithy, well-turned speech, compared the C.A.U. to the Medical Defence Association, and wished the Union every success. He said that only by unanimity and perseverance could the status of the chemists' assistant be raised to that point which his scholastic expenditure, and intellectual ability, fitted him for. A vote of thanks to the Chairman was given with acclamation. Dr. Dutch briefly responded, and a most enjoyable evening's entertainment terminated on the stroke of midnight with the singing of the National Anthem.

SUNDERLAND CHEMISTS' ASSOCIATION.—The annual dinner of this Association was held on Wednesday, November 30, in the Grand Hall, Bridge Street. The President, Councillor L. Thompson, in the chair. Mr. G. P. Fairman (Vice-President) and Mr. R. H. Bell (Secretary) filled the vice chairs. A large company was present, including Messrs. G. F. Merson (Secretary Newcastle Association), W. Kerse, Gilderdale, J. Harrison, Dr. Scurfield, etc. A telegram was received from Mr. Schofield, President of the Newcastle Association, regretting he had lost the train. After the removal of the cloth the Royal toasts were given, then followed the Pharmaceutical Society by Mr. W.

Kerse, responded to by Alderman Harrison; the Sunderland Chemists' and Newcastle and District Association, given by Alderman Burns, responded to by the President and Mr. Merson; the Visitors, proposed by Mr. Robinson, responded to by Dr. Scurfield and Mr. Gilderdale. The musical part was given by the Bevan Quartette, Messrs. Purse, Percival, Craig, Harry White, and Hurley (of the People's Palace), and C. Donkin. Eleven o'clock brought a most enjoyable evening to a close.

MANCHESTER PHARMACEUTICAL ASSOCIATION.—The Council of the above Association offers for competition among the apprentices and assistants of Manchester two prizes of a guinea each, the gifts of Mr. G. S. Woolley and Mr. J. Rymer Young, and two prizes of half-a-guinea each, given by the Association. Two examinations will be held in the first week in March, 1899—one for apprentices and assistants under 21 years of age, and one for assistants over 21 years of age, who have not passed the Minor examination. Intending competitors must send their names to Mr. J. Woodruff Walton, 427, Higher Broughton, not later than February 20 next.

MR. JOHN BILLINGTON, of Manchester, has disposed of his business at 230, Cheetham Hill Road, to Mr. Samuel Taylor, of Bradford, Yorks. The transfer was effected by Messrs. Thos. Tomlinson and Son, Manchester.

CAMBRIDGE PHARMACEUTICAL ASSOCIATION.—The members of this Association held a most enjoyable smoking concert at the Alexandra Assembly Rooms, Cambridge, on Friday evening, December 2. Mr. Alderman Deck, F.C.S., presided, and there was a fairly large attendance. This was the first concert of the season, and the success which attended it augurs well for the future gatherings which it is proposed to hold. Mr. B. S. Campkin who had the task of organising the concert did the work entrusted to him well. An excellent array of talent sustained the programme, and there was not a dull moment from the commencement to the time of singing "Auld Lang Syne."

FOOD AND DRUGS ACT PROSECUTION.—At the Burnley Borough Police Court, on Thursday, December 1, Nehemiah Tomlinson, chemist and druggist, was summoned for selling milk of sulphur containing 7 per cent. of calcium sulphate.—The defendant pleaded that he had sold the article in the condition in which he had received it, and in consideration of the fact of the recent issue of the new Pharmacopœia, the Bench dismissed the case on payment of costs.

Partnerships Dissolved.

(From the London Gazette.)

Joseph J. Clarke and F. A. Baldwin, Surgeons, Physicians, etc., Connaught House, Markhouse Road, Walthamstow. So far as regards F. A. Baldwin.

Arthur Elliot and Stanley W. Marshall, Manufacturers of Dental and Surgical Requisites, 2, Vere Street, London, W. Debts will be received and paid by Stanley W. Marshall, who will continue the business.

John Copeland and Geo. Wilson, Mineral and Aerated Water Manufacturers, Portland Works, Jasper Street, Hanley.

Trade Notes.

UROTOPINE is the name given to the white crystalline solid which is formed by the inter-action of formic aldehyde and ammonia, namely, hexamethylene tetramine, $C_6H_{12}N_4$. It was first introduced to the medical profession by Professor Nicolaier as a solvent of uric acid concretions, and for preventing the development of bacteria in the urine. In the hands of Dr Gordon Kelly urotropine has been found the most thoroughly reliable urinary antiseptic and astringent, and the one nearest approaching to a specific for cystitis and allied affections. Urotropine is non-toxic and non irritating, and dissolves in 1 to 2 parts of water to a faintly alkaline solution. The dosage is 0.5 gramme in one-quarter litre of water or aerated water. In prescribing urotropine the reaction of the urine should be noted, and if acid a little citrate or acetate of potash or, if very alkaline, a small quantity of mineral acid should be given in addition. It can be obtained from Messrs. A. and M. Zimmerman, 9 and 10, St. Mary-at-Hill, the agents for the manufacturers, Chemische Fabrik auf Actien (Vorm. E. Schering), of Berlin.

CREOSOTAL, DUOTAL, HEROIN.—Creosotal is a mixture of the phenol carbonates of creosote in the form of a transparent viscous liquid of a slightly bitter taste and nearly inodorous. It is not soluble in water, but can be mixed with ether and with alcohol, and is soluble in fatty oils. It is administered in doses of half a drachm in wine, brandy, or cod-liver oil in the treatment of tuberculosis. Duotal (guaiacolum carbonas puriss) has the formula $(C_6H_4OCH_3)_2CO_2$. It is in the form of a white crystalline powder, which is inodorous, tasteless, and insoluble in water. It has the advantage over creosote or guaiacol of having no irritating action on the mucous membrane. Both creosotal and duotal are said to have given good results in the treatment of tuberculosis and of other affections of the respiratory organs. Heroin, the di-aesthetic ester of morphine, is suggested as a substitute for morphine salts, as being free from secondary effects peculiar to morphine and some other narcotics. Heroin does not cause constipation and can be tolerated by a patient with a weak heart, in addition to which it has the advantage over codeine in being less toxic. It is a white crystalline powder, melting at $171-172^\circ C.$, almost insoluble in water, but easily soluble in alcohol. Creosotal, duotal, and heroin are the products of the Elberfeld Farben-Fabriken Co., Ltd., 19, St. Dunstan's Hill, E.C.

MESSRS. CHARLES SOUTHWELL AND Co., Jacob Street, Dockhead, London, S.E., are large importers of oranges and in a particularly favourable position for supplying the rind of the Seville orange, either dried or in a fresh condition, for making Tinct. Aurant. B. P. 1898. They ask us to state that they will be in a position to supply the fresh peel, in either small or large quantities during December, January and February. The peel will be cut by a special process in small shreds, 1 in. by $\frac{1}{2}$ in., as free as possible from pith, and will answer in every respect the requirements of the new B. P. The peel will be despatched a few hours after it has been cut, and with the present facilities for rapid delivery by parcels post, it can be supplied in a fresh condition ready for treatment in the spirit immediately on delivery. Small quantities will be sent out in 1 lb. parchment lined bags, and larger quantities of 5 lb. or 10 lb. in parchment-lined boxes—packages free. A sample of the peel submitted for examination was found to be in excellent condition.

MESSRS. F. NEWBERRY AND SONS, King Edward Street, London, intimate that they have arranged to close their establishments on Monday and Tuesday, 26th and 27th inst., as well as on Friday and Saturday, 30th and 31st inst. (for stocktaking).

MESSRS B. G. LENNON AND Co., LTD., 75, Leadenhall Street, London, E.C., having branches in Cape Colony, Orange Free State, South African Republic, Rhodesia, and Natal, are about to refloat the company with a share capital of £600,000, it being thought desirable to acquire more capital to provide for the growth and extension of the business. A prospectus has been issued, offering an issue of 15,000 five per cent. cumulative preference shares of £10 each and 30,000 ordinary shares of £10 each. There will be no alteration in the management of the business, the old shareholders taking shares in the new company in exchange for their holdings.

MESSRS. SOUTHALL BROS. AND BARCLAY, LTD., Birmingham, have prepared sample boxes of "sanitary towels," intended for chemists to keep by them, in order that they may be able readily to show physicians the various sizes of towels made by the firm. Each box contains all the varieties manufactured, and inside the lid are full particulars of each size. It often happens in a retail business that a customer or doctor requires to see the "towels" before ordering, and the case now offered will render it unnecessary for chemists to break open a packet on such occasions. Among other samples is one of the latest variety, the "Blue" towel, specially intended for accouchement purposes. It is faced with a layer of alembroth wool, the use of which, when the towels are applied to lacerated or abraded surfaces, reduces the risk of septic absorption to a minimum. The boxes of samples are offered free to all registered chemists in business who may apply for them.

THE SANITAS COMPANY, LTD., Letchford's Buildings, Three Colt Lane, Bethnal Green, London, E., announce that its offices and factory will be closed from Saturday, the 24th inst., until Wednesday morning, the 28th inst.

PRACTICAL PHOTOGRAPHIC NOTES.

MARION AND Co., of 22, Soho Square, have introduced a little novelty which ought to be a good line for amateurs and ladies in particular. It is called Panak, and is a single solution which may be applied to any paper or card with a brush, and can then be dried in the dark in about twenty minutes, and on exposure under a negative an image is obtained. Printing should be carried rather deeper than the finished print is required to be, and the card or paper is then washed in water and immersed for a minute or two in a ten per cent. solution of hyposulphite of soda and then thoroughly washed and dried. The colour of the finished print is a very pretty sepia, and it may be toned with gold or platinum, although this is unnecessary. If a hot flat iron be passed over the print deep black tones are obtained.

FOR THE LAST TWO YEARS the photographic world has been on the tenterhooks of curiosity as to a process of photography in natural colours, which, it was stated, had been invented by Mr. Wallace Bennetto, of Newquay, Cornwall. Several enigmatical statements have been made about this, and the only definite information obtainable was that a syndicate of American financiers had purchased all rights for £50,000. It now appears from the published patent specification that it is nothing more than the three colour process and the superimposition of three colour transparencies, which, as we have already pointed out, has been known for nearly thirty years.

MESSRS. PENROSE AND Co., of 8A, Upper Baker Street, W.C., have just introduced a washed collodion emulsion in the form of a dry powder, which merely requires dissolving in equal quantities of absolute alcohol and 0.720 ether, in the proportion of 1 to 20, to form the emulsion. For many years collodion emulsion was considered the *non plus ultra* for lantern-slide making, but it has been now replaced by the gelatin dry plates. Collodion transparencies, when properly made, however, have a sparkle and brilliancy, combined with a transparency in the shadows, which is hard to excel.

AN EASY METHOD OF WRITING ON GLASS which has been used in photographic circles, may be useful for labelling bottles. Fluor spar or calcium fluoride in a powder is made into a stiff paste with strong sulphuric acid in a dish or vessel coated with paraffin wax or a leaden vessel, and then applied to the glass with a piece of lead pointed like a pencil; after about fifteen minutes the paste should be washed off with dilute solution of caustic potash, and the bottle thoroughly washed. The etched letters may easily be filled in if required with a little Brunswick black.

A NEW PHOTOGRAPHIC DEVELOPING DISH has just been introduced by Taylor, Tunnicliffe and Co., Ltd., of Eastwood, Hanley. The material is their well-known acid-proof granitine with a very hard porcelain glaze, and the novelty is the protrusion from the base of the dish of two ledges, on which the dish readily rocks. This should find favour with amateurs, and it is worth while stocking.

MARKET REPORT

The quotations here are given in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

DECEMBER 8.

Business has been somewhat quieter during past week, while the advances in value of any importance have been limited to two small rises in price of Quicksilver, which took place on two successive days. Citric very quiet. Tartaric and Cream of Tartar steady. Glycerin and Cod-liver Oil weak. Borax and Acid Boracic firm. Mercurials unchanged, in spite of the two advances in price of Quicksilver. Acetanilide weak. Sulphonal and Phenacetin steady. Cocaine very firm and expected to be dearer. The report just in of result of to-day's Bark auction in Amsterdam does not appear to have caused any great surprise, in fact, many people appear to have expected what has actually happened; it now remains to be seen what the further developments in the Quinine market will be. Camphor remains very firm both for crude and for refined in spite of the fact that price of the latter it reported somewhat lower from Hamburg. The following are particulars of prices actually ruling for articles of chief interest:—

ACETANILIDE—Is quiet at 11d. to 1s. 1d. per lb., according to quantity and make.

ACID BORACIC—Is firm at 24s. 6d. per cwt. for crystals and 26s. 6d. per cwt. for powder.

ACID CARBOLIC—Is quiet but steady at prices quoted in our last.

ACID CITRIC—Remains dull of sale, nominal value 1s. 1¼d. per lb.

ACID OXALIC—Steady at 3½d. to 3¾d. per lb., delivered free London.

ACID TARTARIC—Very slow of sale, English crystals are quoted 12½d. per lb. on the spot; Foreign 12d. to 12¼d. per lb.

ALUM—Loose lump is firm at £5 7s. 6d. per ton, ground in bags £6 5s. per ton.

AMMONIA COMPOUNDS—Quiet and unchanged at £9 18s. 9d. to £10 per ton for grey prompt, 24 per cent., London. *Carbonate*, 3d. to 4d. per lb., according to packing. *Bromide*, 2s. 2d. per lb. *Iodide*, 13s. 10d. per lb. *Muriate*, 30s. to 32s. 6d. for chemically pure in small crystals, and 26s. to 28s. per cwt. for the white, free from metals quality. *Oxalate*, 5½d. per lb. *Sal Ammoniac* steady at 35s. and 33s. per cwt. for sublimed firsts and seconds, and 35s. and 37s. respectively for same qualities crushed for batteries. *Solphocyanide*, 1s. 1d. per lb.

ARSENIC—Is unchanged at 18s. per cwt. for powder, and 34s. per cwt. for lump.

ASAFETIDA—Fair sales have been made privately since the auctions at 45s. to 50s. per cwt. for good, and 37s. per cwt. for medium.

BLEACHING POWDER—Is unchanged at £6 per cwt. for English.

BORAX—Supplies are scarce and market is very strong. *Crystals* are quoted 15s. 6d. to 15s. 9d. per cwt.; *powder*, 16s. to 16s. 3d. per cwt.

BROMIDES—Are steady and without change.

CAMPHOR—The market for *crude* whilst quiet is very firm, holders keeping ahead of buyers' ideas of value. *China* nominally 105s. and *Japan* 110s. per cwt., *c.i.f.* terms. *Refined* is unchanged but very firm.

CLOVES—Privately the market for *Zanzibar* is depressed, only small business passing, October to December at 3½d. to 3¾d., January to March at 3¾d. to 3¼d., and March to May at 3¾d. At auction of 160 bales *Zanzibar* 60 bales middling sold at 3¾d. 11 bags *Amboyna* sold at 5d.

COCOA BUTTER.—At the monthly auctions, on Tuesday, 55 tons Cadbury's sold at an average price of 1s. 1d. per lb., as against 1s. 1½d. per lb. in November.

COAL TAR DISTILLATION PRODUCTS.—There are practically no changes in value to report.

COCAINE—Is very firm, makers quote 10s. 9d. per oz. for the *Hydrochlorate* in 100-oz. lots, they state, however, that they will probably have to advance their price still further before very long.

CODEIA.—Makers quote 12s. 6d. per oz. for the *pure*, and 1s. per oz. less for the *salts*.

COD LIVER OIL—Is quiet and weak, prices being nominally unchanged at 80s. per barrel for this year's non-congealing *Norwegian* oil.

GALLS.—This market is very strong, and quotations from abroad come higher. *Blues* are held for 57s. 6d. per cwt.; *Green* are scarce at 50s. per cwt.; *White* 45s. per cwt., and in demand, but supply is practically exhausted.

GINGER.—*Cochin* dull: Of 220 bags rough only 65 bags D lean rough small and ends sold at 19s.: of 141 cases cut kinds, only 10 cases medium limed native chiefly cut sold at 52s., and case bold A cut at 80s.; the remainder bought in, B at 62s. 6d. to 65s., C at 40s.; of *Jamaica* only 12 barrels offered and bought in at 88s.

GLYCERIN—Is rather weaker at 50s. to 52s. 6d. for *English*, and 52s. 6d. to 60s. per cwt. for *German*, according to brand, etc.

GUM MASTIC.—There has been good enquiry, but no business has resulted. Clean pale tear is held for 2s per lb.

GUM TRAGACANTH.—Supplies are falling off and stocks are diminishing. "Firsts" are quoted £14 10s. per cwt.; "seconds," £12 10s. per cwt.; "thirds," £11 10s. per cwt., and other qualities down to £6 per cwt.

IODIDES—Are steady at late advance of 3d. per lb., as reported last week.

JAPAN WAX—Quiet at 32s. 6d. per cwt. for good squares.

MERCURIALS.—In spite of two successive rises of 2s. 6d. per flask each in price of *Quicksilver*, makers of *Mercurials* have not been able to agree upon an advance in same. Prices, therefore, remain unchanged from last week.

MORPHIA—Quiet at 5s. per oz. for the *Hydrochlorate powder*.

OILS (ESSENTIAL).—*Star Aniseed* is firm on the spot at 6s. 2d. per lb. *Cassia* steady at 4s. 3d. to 5s. per lb., according to quality. *Peppermint*, American *H.G.H.* quiet, 5s. 6d. per lb.; Wayne county, 3s. 3d. to 3s. 10d. per lb. *Citronelle*, 1s. 1d. per lb. *Wintergreen*, 6s. 3d. to 7s. per lb. *Eucalyptus*, 1s. to 2s. 6d. per lb., according to quality. *Cajaput* firm at 4s. per bottle. *Lemon-grass* steady at 3¼d. per oz.

OILS (FIXED) AND SPIRITS.—*Linseed*: The market is again lower; on the spot, pipes, London, £16, barrels, £16 10s. *Rape*: slightly easier, with but little doing; ordinary brown on the spot, £21 5s. to £21 10s.; refined, spot, £23. *Cotton*: very quiet, but unchanged in value; London crude, spot, £12 7s. 6d.; refined, spot, £13 17s. 6d. to £14 10s., according to make. *Olive*: green oils steady at £29 to £32 per tun. *Coconut* in active demand; Ceylon, on the spot, £26 10s.; *Cochin*, spot, nominally £31. *Turpentine* again dearer, with a strong feeling; American, on the spot, 28s. 9d. to 29s. per cwt. *Petroleum* dearer; Russian, spot, 5¼d. per gallon; American, spot, 6¾d. gallon; water white, 7½d. per gallon. *Petroleum Spirit*: American, 7¾d. gallon; deodorised, 8d. per gallon.

OPIUM—Is quiet and practically without change in prices, which are, however, if anything, a trifle weaker.

PHENACETIN—Is quiet at 3s. 9d. to 4s. 3d. per lb. for best makes, either *crystals* or *powder*.

POTASH COMPOUNDS.—*Bichromate*: 3½d. per lb. *Bicarbonate*: 30s. to 35s. per cwt., according to quantity, for crystals or powder. *Bromide*: 1s. 10½d. per lb. *Chlorate*: 3¾d. to 4d. per lb. *Oxalate*: Neutral, 5d. per lb. *Iodide*: 10s. 6d. per lb. *Permanganate*: Large crystals, 55s. per cwt., small crystals being quoted 5s. per cwt. less.

QUICKSILVER.—There have been two successive advances of 2s. 6d. per bottle in this article during the week. Importers' price is now £7 15s., while second hand as usual offers at a slightly lower figure.

QUININE.—It is reported that the bark sales held to-day in Amsterdam went at about 5 per cent. higher prices, and it is stated that some of the German makers quote *Sulphate of Quinine* 10½d. per oz. for 1000-oz. lots, without engagement, however.

SCAMMONY.—*Virgin*: stocks increasing, but demand is slow. "Firsts" are held for 30s. per lb. *Resin* in fair demand, 6s. 6d.

to 6s. 9d. per lb. *Roots*: holders are firm and decline reasonable bids.

SENNA (ALEXANDRIAN).—The new crop which is now coming in slowly sells readily at 4½d. to 7d. per lb. for broken to fair leaf. The large stocks of old crop cannot be moved, although holders are very pressing for bids.

SODA COMPOUNDS.—*Crystals* are steady at 55s. per ton, ex-ship "Thames." *Ash*. £5 to £5 10s. per ton here, according to strength and packages. *Bicarbonate* quiet at £7 5s. per ton for the 97 per cent., and 18s. 6d. per cwt. for the fully bicarbonated quality. *Bromide* steady at 2s. 1½d. per lb. *Bichromate* 2¾d. per lb.; *Caustic*, 70 per cent., £7 10s.; 60 per cent., £6 10s. per ton. *Hyposulphite*, 6s. 6d. to 8s. per cwt. *Iodide* unchanged at 11s. 10d. per lb. *Nitrate* commercial £7 12s. 6d., *refined* £8 per ton.

SPICES (VARIOUS). *Black Pepper*: All bought in; Singapore at 4¾d.; Aleppy, 4½d. *White Pepper* mostly bought in; 10 bags Penang sold at 7¾d.; Siam bought in at 8d., and Singapore at 8d. to 9d. *Chillies* lower; 220 bags Zanzibar sold at 33s.; 9 cases Japan sold at 36s. *Capsicums*: 1 bale Natal sold without reserve at 60s.; 40 bales West Coast African bought in at 29s. *Cassia Lignea*: 414 boxes bought in at 51s. to 56s.; also 476 bales broken at 35s. to 40s. *Mace*: Penang bought in at 1s. 7d. to 2s. 3d.; 31 packages West India sold at 1s. 4d. to 1s. 6d. *Pimento* dull and bought in at 4¾d.

SUGAR OF LEAD.—*English* is still quoted 31s. per cwt., whilst *foreign* is firm at 26s. 6d. per cwt.

SULPHATE OF COPPER.—Is very firm at £18 5s. to £19 5s. per ton, according to brand.

SULPHONAL.—Makers' price is 17s. per lb., there bring still some sellers from second-hand at a lower figure.

SULPHUR.—*Firm*. *English*: Roll 7s. 6d. to 8s. per cwt., flowers 10s. per cwt. *Foreign*: Roll 6s. 6d. per cwt., flowers 7s. per cwt.

To-day's drug sales passed off very quietly, a considerable number of the lots offered being bought in. The following are particulars of prices ruling and obtained. Next drug auctions will not take place until January 19.

ALOES.—5 cases of very low quality and very heavy sold at 10s. per cwt. 4 cases fair *Cape* taken out at 23s. per cwt. 18 kegs fair *Socotrine* at 75s. per cwt.

AMMONIACUM.—28 cases all sold at 45s. per cwt. for good clean block, some loose; 32s. to 33s. for fair block, slightly dark, and 23s. to 24s. per cwt. for dark.

ANATTO SEEDS.—3 bags dullish were held for 2¾d. per lb.

ANTIMONY.—50 cases *Japan* crude bought in at £23 per ton.

ARECA NUTS.—5 bags of medium quality, slightly wormy, were taken out at nominally 35s. per cwt.; a bid of 26s. would, however, probably have been accepted.

BALSAM COPAIBÆ.—Of 5 cases 2 cases sold at 1s. 7d. per lb., balance being taken out at 1s. 9d. per lb.

CANELLA ALBA.—3 bales were bought in at 65s. per cwt.

CARDAMOMS.—Good pale *Malabar* part sold at 2s. 5d. per lb., subject to approval. 2 cases fair *wild* were bought in, a bid of 1s. 6d. per lb. not being entertained. 2 cases fair seed sold at 2s. 11d. per lb., subject to approval.

CASCARA SAGRADA.—118 bags thick bark were taken out at 30s. per cwt.

CASTOR OIL.—25 cases medium seconds East Indian were held for 3¾d. per lb.

CASTOREUM.—1 tin nett 4 lbs. 2 oz., held for 65s. per lb.

CINCHONA BARK.—80 bales thick *Yellow Bark* partly sold at 8d. per lb., hard flat ditto being taken out at 1s. 1d. per lb. 37 bales *Carthagena* were held for 5½d. per lb.; 5 bales *Maracaiho* for 5d. per lb.

COCA LEAVES.—28 bales *Ceylon Huanoco* were held for 1s. 3d. per lb. *Truxillo* for 10d. per lb.

COD LIVER OIL.—2 casks *Norwegian*, per "land carriage," 1898, were bought in at 70s. per barrel.

COLOCYNTH.—6 cases dark *Turkey*, partly broken, were held for 1s. per lb.

COLOMBO ROOT.—60 bags were bought in at 40s. per cwt. for fair washed down to 20s. for pickings.

CROTON SEEDS.—12 bags were bought in, 80s. per cwt. for good.

ESSENTIAL OILS.—4 tins *Essence Neroli Portugal* sold at 3½d. to 4d. per oz. *Eucalyptus*: 11 case, commercial, held for 1s. 2d. per lb. 4 cases *Globulus* bought in at 2s. 2d. Dodge and Olcott's *Clove*, at 2s. 9d. per lb. Dodge and Olcott's *Sassafras*, at 1s. 8d. per lb. 4 cases *Cedarwood* held for 1s. 1d. per lb. 20 coppers,

each 25 lb., *Oil of Lemon*, good fair quality, sold cheaply at 2s. per lb. nett. 11 cases *Cassia* (50 to 55 per cent. *Cinnamic Aldehyde*), sold at 3s. 11d. per lb., with exception of last case, which fetched 4s. per lb.

CUTTLE FISH BONE.—9 boxes small, partly broken, were held at 2d. per lb.

DAMIANA LEAVES.—5 bales rather yellow were bought in at 7½d. per lb.

DILL SEEDS.—20 bags were taken out at 15s. per cwt.

DRAGONS' BLOOD.—2 cases from the Continent, of which ¼ dull seedy, ¾ fair bright lump, were bought in at £10 per cwt.

ERGOT OF RYE.—10 cases fair sound Spanish were taken out at 2s. 9d. per lb.; rather less, however, would probably have been accepted; 4 bags good bold ditto, slightly weevily, sold at 2s. 10d. per lb., small ditto being held for 1s. 8d., while 20 bags weevily (sifted June 6, 1897), sold without reserve at 1s. per lb.

GAMBOGE.—Of 10 cases only 4 cases sold at £6 to £6 10s. per cwt. for fair part dull.

GENTIAN.—25 bales fair dry root, part sold previously, balance held for 17s. 6d. per cwt.

GUINEA GRAINS.—Of 10 bags of fair quality part sold prior to auction, balance being held for 65s. per cwt.

GUM ARABIC.—4 cases pale grain *Turkish* were held for £6 15s. per cwt.; 2 cases picked gum for £6; 10 serons good sorts selling for 80s. per cwt., 10 bags siftings held for 30s. per cwt.

GUM BENJAMIN.—Medium to low seconds *Sumatra* sold at £5 17s. 6d. down to £5 2s. 6d. Two cases *Siam*, part dust, part bold, and part blocky bought in at £15 per cwt.

GUM OLIBANUM.—15 bags were taken out at 20s. per cwt.

GUM THUS.—13 barrels of fair quality bought in at 16s. per cwt.

HONEY.—21 cases *Californian* were held for 37s. per cwt.; 32 packages *Jamaica* part sold at 19s. 6d. to 20s.

IPECACUANHA.—Of the quantity offered practically none was sold, *Rio* being bought in at 9s. 9d. per lb. up to 10s. 3d., while *Carthagena* was variously held for 6s. 10d. up to 7s. 6d., and even for 8s. per lb. for fine bold picked. The market appears to be somewhat weak, and the advent of 50 bales just arrived has not tended to strengthen prices.

JALAP.—3 bales, sample of which was not available, were held for 7d. per lb.

KAMALA.—6 cases good bright were bought in at 7d. per lb.

KOLA NUTS.—14 bags good bold nuts, but slightly mouldy, were bought in at 6d. per lb.; 15 bags also bought in at 5d. per lb. for good bold, and 3d. per lb. for cut.

MUSK.—7 caddies *Tonquin* were bought in at 72s. 6d. per oz.

ORANGE PEEL.—Fair thin cut was held for 7d. per lb.; thick for 3d.

ORRIS ROOT.—7 bags medium *Verona* sold without reserve at 23s. per cwt.; 13 bags fair *Florentine* being held for 39s.

OTTO OF ROSES.—2 vases, each about 25 oz nett, sold without reserve at 15s. per oz. (*Turkish*).

QUININE SULPHATE.—1 case containing 10 cases, each 100 ozs., *Taillander* brand, were bought in at 10d. per oz.

PEACH KERNELS.—7 bags, which were offered as *Bitter Almonds*, were held for 40s. per cwt.

RHATANIA ROOT.—6 bales were held for 6½d. per lb.

RHUBARB.—Good medium flat high dried was held for 1s. per lb., small ditto for 10d. Small trimming root round *Canton*, grey and pinky fracture, for 1s. 4d., small pickings of rather better colour selling at 1s. per lb. Good flat held for 1s. 8d., medium round fair colour part dull for 1s. 1d. to 1s. 3d. per lb. Very rough and slightly wormy round *Shensi* sold at 1s. 1d. per lb., good bold round trimming root held for 3s., ditto flat rather rough for 1s. 9d. per lb.

SARSAPARILLA.—16 bales good *Jamaica* all sold readily at 1s. 7d. per lb. for sound, down to 1s. 5d. per lb. for 2CSD. 10 bales *Lima* part sold at 1s. per lb. for 1 and 2CCD. 1 bale *Guayaquil* sold at 1s. 1d. per lb. for 2CCD.

SENEKA ROOT.—5 bales of fair quality were held for 1s. 3d. per lb.

SENNA.—About 150 bales *Tinnevelly* offered, quality being very inferior on the whole. Common dark small leaf sold 1½d. per lb.; small spotty ditto, 2d. to 2½d. per lb.; medium leaf, 3d. to 3½d. per lb. Arrivals are coming in very slowly, but probably by the next auctions on January 19 an accumulation will have taken place. No sales of *Alexandrian* leaf were effected in the auctions. 27 bales *Mecca* were bought in at ¾d. per lb.

SQUILLS.—61 bags of fair quality held for 3d. per lb.

THYME SEED.—2 bags sold at 6s. per cwt.

TONQUIN BEANS.—5 cases *Paras* were bought in at 1s. 3d. per lb.

TURMERIC.—1 bag sold very cheaply at 8s. per cwt. 48 bags *China* were taken out at 22s. per cwt.; 26 bags *Madras* finger at 33s. per cwt.

VERMILION.—5 cases *China* were bought in at 2s. 1d. per lb.

WAX.—73 packets *Madagascar*, part sold, at £5 15s. to £6 per cwt. 13 bales *Spanish* bought in at £6 12s. 6d. 16 cases fair *East Indian*, part sold at £6 12s. 6d. per cwt.

Newcastle Chemical Report.

DECEMBER 7, 1898.

This market continues quiet and shipments of heavy goods decreased, owing to the higher Baltic navigation being now about closed. Quotations are:—Bleaching Powder, according to market, £5 to £5 10s. Soda Crystals, basis price, 45s. Caustic Soda, 70 per cent., £7. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur, £4 15s. to £5 per ton.

Liverpool Market Report.

DECEMBER 7, 1898.

AMMONIA SALTS.—Carbonate, 3d. per lb. Sal Ammoniac, 33s. to 35s. per cwt. Sulphate, £10 2s. 6d. per ton. All ammonia salts are very firm.

BEEWAX.—32 packages *Gambia* sold at £6 11s. 3d. per cwt. and 46 packages *Sierra Leone* at £5 12s. 6d. to £6 per cwt.

CANARYSEED.—Enjoys a fair inquiry, but sales are small. 500 bags of *Turkish* sold at 28s. per 464 lbs. The price is from 28s. to 29s. 6d.

COPPERAS.—Is quiet but firm at 37s. to 39s. per ton.

COPPER SULPHATE.—Remains firm at £18 per ton; £19 spring delivery.

KOLA NUTS.—183 packages of good dried were disposed of at 2d. per lb. ex store.

LINSEED.—Is dull, prices are high, and crushers well supplied, so that sales are small; 150 bags of *Turkish* "feeding" sold at 41s. to 41s. 6d. per 416 lbs. ex store, and small sales of *Bombay* from the quay at 40s. 6d. per 416 lbs.

OILS (FIXED) AND SPIRITS.—*Castor* is easier and quiet. *Calcutta* "good seconds," 2½d. per lb., at which price some 1000 cases to arrive during the first quarter of next year have been sold. *French*, 1st pressure, 2¼d. to 2½d.; and *Madras*, 2¾d. per lb. *Olive* is steady, but business done does not amount to much; *Spanish* oil is £29 to £30 per tun. *Linseed*, of *Liverpool* make in export casks, is quiet at 17s. 9d. to 18s. 6d. per cwt. *Cottonseed*: *Liverpool* refined sell slowly at 15s. to 15s. 6d. per cwt. *Spirits of Turpentine* is firm at 29s. 9d. per cwt., with a fair to moderate demand.

SODA SALTS.—*Bicarbonate*: £6 15s. per ton. *Borax*: £15 to £15 10s. per ton. *Caustic Alkali*: 76 to 77 per cent., £7 12s. 6d. per ton; 70 per cent., £6 18s. 9d. *Crystals*: £3 per ton. *Nitrate* continues quiet at 7s. 6d. to 7s. 7½d. per cwt.

POTASH SALTS.—*Chlorate*: 3¾d. to 4d. per lb. *Cream of Tartar*: Sales of *Spanish* at 72s. per cwt.; *French* offered at 73s. *Pearl-ashes* slack at 34s. 6d. to 35s. per cwt. *Potashes* offering at 25s. to 25s. 6d. per cwt. *Saltpetre*: 22s. per cwt.; 20 bags of *Karachi* sold at 17s. per cwt.

Manchester Chemical Report.

DECEMBER 6, 1898.

The course of affairs locally is in the direction of some activity, although Caustic Soda is still a doubtful quantity. In regard to heavy chemicals there is no change generally, though in miscellaneous articles there is still an upward tendency. Sulphate of Copper is unchanged, and there is no change in Brown Acetate, which closes steady at £5 5s. to £5 10s. Yellow Prussiate of Lancashire make is scarce, and varies from 6¾d. to 7½d. Green Copperas is in demand for export, but without change in price. Acids are dull. During the past week no less than 2,500,000 gallons of Petroleum have been received at this port of Manchester. This is a record consigned to one company at Manchester;

ITEMS OF INTEREST.

COLOURING ANTISEPTIC SOLUTIONS.—In order to minimise, as far as possible, the risk of misadventure the *Zeitschrift für Krankenpflege* proposes that poisonous antiseptic solutions should be thus coloured:—Sublimate solution, with methyl violet, malachite green, Nicholson's blue or with indigo carmine. Phenol, with fuchsin, eosin or safranin. Mercury oxycyanide, with the same colours as with sublimate or with helianthine acid, or aniline orange. Silver nitrate with fluorescin.—*Pharm. Post*, xxi., 320.

PRUSSIC ACID IN CHERRY LAUREL LEAVES.—Ven has experimented on the amount of prussic acid contained in *Folia lauro-cerasi* during the different stages of development. In the month of March, when the new buds have not yet developed, the last year's leaves contained 0.01 to 1.17 per cent., the twigs 0.49 to 0.53 per cent. In May the last year's leaves gave only 0.27 per cent., while shortly before the new leaf-buds developed they indicated 0.9 per cent. The new leaves were found correspondingly richer in prussic acid shortly before they unfolded. The leaf-buds contain 1.98 per cent. and the new unfolded leaves in May 1.9, and in the beginning of June even 2.4 per cent. of prussic acid.—*Pharm. Zeit.*, xlii., 562.

URETHANE AS A SOLVENT FOR QUININE.—The presence of urethane greatly increases the solubility of salts of quinine. Thus 1 gramme of either quinine hydrobromide or hydrochloride may be dissolved in 1 C.c. of hot water by adding half a gramme of urethane. The solution is permanent, neutral, and perfectly non-irritant. As urethane does not influence the action of quinine in any way, concentrated solutions of quinine salts may be prepared by its aid.—*Bull. Com.*, xxvi., 374, after *Répert.*

DECOMPOSITION OF IODOFORM SOLUTION.—It is generally considered that the decomposition of iodoform is due solely to the actinic rays. J. Bougault states, however, that it is a simple process of oxidation. If an ethereal solution of iodoform be hermetically sealed in a flask containing some air and a dilute solution of sodium thiosulphate, iodine will be liberated, which may be washed out from the ethereal layer by agitation as it is formed. At last, however, a point is reached (when all the oxygen in the confined air has been used up) when no further decomposition of the iodoform takes place. If mercury be substituted for the thiosulphate the ethereal solution of iodoform may be removed from contact with the metal as soon as the iodoform ceases to decompose, and it then remains perfectly stable as long as contact with air is avoided. It is found that on washing with water an ethereal solution of iodoform which has undergone decomposition, and removing the free iodine from these washings by agitation with mercury, the presence of formic acid in considerable quantity may be demonstrated.—*Journ. Pharm. Chem.* [6], viii., 213.

IODINE ABSORPTION NUMBER OF OILS.—In order to shorten the process of iodine absorption by the well-known Hubl-Waller method, J. Nijs substitutes a chloroiodine solution in acetic acid for the reagent generally employed. This is prepared as follows: Thirteen grammes of iodine are dissolved and 1 litre of 95 per cent. acetic acid. This solution is standardised against thiosulphate in the ordinary way, and then pure chlorine gas is passed through it until its titre is just doubled. The method employed in determining the iodine absorption is similar to that of Hubl, but the reaction is complete in a much shorter time, from five to ten minutes, contact giving results which, when checked on pure substances of known composition, give an iodine figure nearer to the theoretical requirements than the more prolonged standing in the original Hubl's process.—*Pharm. Cent.*, xxxix., 571.

Receiving Order in Bankruptcy.

(From the London Gazette.)

William S. Adamson, Chemist and Druggist, High Street, Burford, Oxford.

Calendar for Next Week.

Sunday, December 11. 3rd in Advt. Sun rises 7.58; sets 3.49.

Monday, December 12. Sun rises 7.59; sets 3.49.
PHARMACEUTICAL SOCIETY OF IRELAND, 67, Lower Mount Street, Dublin.—Illustrated lecture on "The Chemistry of Incompatibility and Some of its Lessons," by Professor Walter G. Smith.

Tuesday, December 13. Sun rises 8; sets 3.49.
BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION, County Restaurant.—Children's evening, 7 to 9.30.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, 94, West Regent Street, at 9 p.m.—The discussion on the Pharmacopœia, opened by Mr. T. Dunlop on November 10, will be continued.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN, 17, Bloomsbury Square, W.C., at 12 noon. Meeting for the election of four Annuitants on the Benevolent Fund. An illustrated lecture on "Deep Sea Deposits" will be given by Mr. W. Murton Holmes, at 8 p.m.

Wednesday, Dec. 14. ● 11.43 M. Sun rises 8.1, sets 3.49.
EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, 36, York Place, at 9.15 p.m.—Mr. George Coull will deal with "The Latinity of the New Pharmacopœia."

FORFARSHIRE CHEMISTS' ASSOCIATION, Queen's Hotel, Dundee, at 4 p.m.—Important meeting.

MANCHESTER PHARMACEUTICAL ASSOCIATION, Chemical Club, Victoria Hotel, at 7.30 p.m.—"The Pharmacy Act and its Literal Interpretation" is the title of a paper to be read by Mr. J. Rymer Young, member of the Council of the Pharmaceutical Society,

NEWCASTLE-ON-TYNE AND DISTRICT CHEMISTS' ASSOCIATION, Métropole Hotel, at 8 p.m. Annual smoking concert, the President, Mr. F. E. Schofield, in the chair.

NOTTINGHAM AND NOTTS CHEMISTS' ASSOCIATION, Albert Hotel, at 9 p.m. Paper by Mr. Eberlin, entitled, "Some Brief Notes on the More Important Preparations of the New B.P., more especially in their Relationship to the Food and Drugs Act."

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION. Meeting to discuss the present condition of the craft or trade and the proposed reforms.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY, New Surrey Street. "Company Pharmacy" will be dealt with by Mr. George Squire (President).

Thursday, December 15. Sun rises 8.2; sets 3.49.

BRISTOL PHARMACEUTICAL ASSOCIATION, Grand Hotel, Broad Street, at 9 p.m.—Meeting to consider the position and prospects of the retail trade.

CHEMICAL SOCIETY, Burlington House, Piccadilly, London, W., at 8 p.m. Papers to be read on "The Interaction of Ethylic Sodiomalonnate and Mesityl Oxide," by A. W. Crossley; on "Derivatives of Camphoric Acid, Part III.," by F. S. Kipping; and on the "Synthesis of a $\beta\beta$ Trimethylglutaric Acid," by W. H. Perkin, jun., and J. F. Thorpe.

CHEMISTS' ASSISTANTS' ASSOCIATION, 73, Newman Street, London, W., at 9 p.m. Musical and Social Evening.

Friday, December 16. Sun rises 8.2; sets 3.49.

CAMBRIDGE PHARMACEUTICAL ASSOCIATION, Dale's Assembly Rooms, Alexandra Street, at 9.15 p.m. Mr. A. Sidney Campkin will deliver an address on "Pharmaceutical Politics."

Saturday, December 17. Sun rises 8.3; sets 3.49.

Obituary.

LESLIE.—On November 28, Joseph Blackburn Leslie, Chemist and Druggist, Leeds. Aged 52.

PLUMBLY.—On November 29, Walter Plumbly, Chemist and Druggist, Beccles. Aged 46. Mr. Plumbly, who was an Associate of the Pharmaceutical Society, had carried on business in the town as a Chemist and Druggist for nearly ten years, and was highly respected. The funeral took place on Friday, December 2, amid general marks of sympathy and esteem. He was followed to the grave by members of the "Apollo" Lodge of Freemasons, of which he was elected Worshipful Master last July.

WARD.—On November 29, David Ward, Chemist and Druggist, Chipping Ongar. Aged 77.

Advertisements.

(Received too late for Classification)

ASSISTANT wanted, early in January, 1899, qualified, as Dispenser. Apply, stating full particulars of previous experience and stating height to ROBERTS & Co., 76, New Bond St., W.

ENGAGEMENT wanted as Qualified MANAGER or ASSISTANT. Age 50. Married. Out-door or management of branch, J. S., 15, Cherson Ter., Wood Green.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Magic Lanterns, second-hand; triples and binials; oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s. —Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Wholesale and Retail Druggists: Advertiser is overstocked with superfine oil of lemon in 10-lb. coppers, and solicits offers; 1-lb. sample delivered free 2s. 9d. —Moss, 34, Avondale Road, Chorley.

For Sale.—Overstocked: 3 doz. 2-oz., 12s. 9d., 2 doz. 4-oz. 16s. 6d. Helm Cocoa; 10 2-oz. 6s. 3d., 9 4-oz. 10s. 6d. Altermarkt Cologne; unsoiled.—7, Church Hill, Walthamstow.

All New, unsoiled, bought before advance, hot water bottles, best quality. Maroon plush covers (detachable) included, 10 by 6, 4s.; 12 by 8, 5s. 10d.; 12 by 10, 6s. 6d.; 14 by 10, 7s. Sponge bags, best quality, silk cords and bindings, full sizes, as Maw's, eight dozen, assorted, Nos. 2, 4s. 6d.; 3, 6s.; 4, 7s. 6d.; 5, 9s.; 6, 10s. 6d. Tooth stopping wrapped pink paper, as Stevens', gross box, 2s. 6d.; 3 dozen 3d. sticks, 2s. 6d. Hypodermic syringe, complete, 'cased', 1s. 6d. Post free 10s. lots. Cash returned if sold.—Warnes, Chemist, 333, Gray's Inn Road, W.C.

Manufacturer's Stock.—Hospital clinicals, English guaranteed, in cases, 1s. each, post free; 30-second ditto, 2s. each; approval.—Howard, 3, Church Road, Wimbledon, Surrey.

4 doz. 1s. 1½d. Nurse Powell's pills, 6s. 6d. doz.; also several doz. 1s. Hay's infants' food, Oppenheimers' palatinoids, ovaline soap 1s. syrup of figs, 3s. 6d. doz.; new stock and in good condition. What offers?—Bailey, Chemist, Lichfield.

One Barr's Ear Trumpet, see Bailey's list, never used, cost 21s., will take 12s. 6d.—Meyler, Chemist, Milford Haven.

Artificial Pin Leg, India-rubber Female Urinal, and Spinal Jacket, 10s. the lot.—Chemicus, 88, Sussex Road, Holloway, N.

Wills' 'Mat. Med.' (new), 3s. 8d.; Attfield's 'Chemistry' (1893), 8s.; Vines 'Botany' (4th edition), 4s.; Roscoe's 'Chemistry' (1892), 2s. Also various matriculation books, good condition. Post free.—Beeny, 47, Ashchurch Grove, W.

Valuable herbarium for sale, containing 200 typical British plants, all correctly named, mounted on stiff cardboard, in excellent preservation, price £2 5s. carriage paid.—Exell, 27, High Street, Sheffield.

Quantity of chemicals for laboratory, all in bottles, for sale, half price; also Fletcher's furnaces, gas generator, etc.—Holden, 69, Avenell Road, Highbury.

Nelson's Aplanatic Bull's-Eye, cost 30s., will sell for £1; also Microscopic Lamp, cost 10s., will sell for 5s., both in good condition.—W., Lynton House, Redruth.

Robert H. Clarke's Specialties.—Lantern, with 4 in. condensers and 3 wick lamps, 17s. 6d.; with 4 wick lamps, 18s. 6d. Slides, sale or hire, Conquest of Soudan, Spanish American War. Catalogue free.—Robt. H. Clark, Royston, Herts.

50,000 Choicest Microscopical Objects, bargains. Catalogue free. New and second-hand Microscopes, Cabinets, Mounting Materials, etc. Microscopes and collections purchased.—Richard Suter, 10, Highweek Road, South Tottenham, Middlesex.

WANTED.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsell, 9, Derwent Grove, East Dulwich, London, S.E.

Erasmic Herb Soap, and Premier Violina Soap, and Daisy Powders Carriage paid. State quantity and price.—Eastman, Forest Lane, Stratford.

Oxygen cylinders, subject to examination, by Manchester Oxygen Co.—Whitfield, Chemist, Scarborough.

COMMUNICATIONS, LETTERS, NEWSPAPERS, etc., have been received from Messrs. Adams, Allen, Attfield, Batley, Bell, Boyd, Burnett, Clague, Clay, Cornwell, Cowley, Cross, Davies, Delves, Donnan, Dunstan, Floyd, Gamble, Gifford, Glaisher, Green, Harley, Barrison, Howitt, Jones, Keen, Kesterton, Lee, Letch, Lennon, McAllister, McWalter, Merson, Metcalf, Minchin, Pickard, Proctor, Reynolds, Saunders, Sharman, Sharp, Shaw, Spottiswoode, Thomson, Toone, Walker, Wheeler, White, Williams, Wokes, Young.

1. BACILLUS TUBERCULOSIS
Sputum X 1000.

2. BACILLUS COLI COMMUNIS X 1000

3. STREPTOCOCCUS PYOGENES X 1000

5. PLEUROSIGMA ANGU-
LATUM X 1000.
"White pearl dot" and
"Black dot."

4. AMPHIPLEURA PELLUCIDA KÜTZ X 3365. Taken direct.

6. COSCINODISCUS ASTEROMPHALUS
X 1000. Secondary markings.

7. EOSINOPHYLL CELL (Frog's Blood)
X 850.

8. NAVICULA RHOMBOIDES X 1200.
Enlarged from 1000 diameters.

10. PLEUROSIGMA ANGULATUM X 2000.
Enlarged from 1200 diameters.

9. SURIRELLA GEMMA X 2000. Taken direct.

11. A PORTION OF FIG. 12 ENLARGED TO SHOW DETAILS
OF "NOTE" X 2500.

12. PODURA SCALE X 1000.

SCHOOL OF PHARMACY NEWS.

THE STUDENTS' ASSOCIATION cannot be altogether congratulated on the result of the meeting on Friday week (see p. 654). As ably pointed out by Mr. Payne, division of the Minor examination would be disastrous to the best interests of pharmacy. It would entail increased expense, and it is very certain that chemists cannot afford to pay their assistants more than they do to-day; for if they paid better salaries they must extract this increase from the pockets of the public, and they would by such means only drive the public to the stores, or to the grocers, who, having smaller expenses, would be able to sell miscellaneous articles at lower prices than the chemist. Since the business of a chemist consists, at the present time, in dealing in many articles which any tradesman might sell, there is good reason to think that anything tending to increase expenses would be inimical to the welfare of the trade at large throughout the country.

THE ASSOCIATION is now numerically strong; the increasing number of students in the Society's School, year by year, has resulted in an increased membership, and there are now over seventy names on the books, including a dozen ladies.

THE NEXT MEETING will be after the vacation, on Friday, January 14, when Mr. T. E. Wallis will read a paper on "A Materia Medica Cabinet." Mr. Chapman, the holder of the Burroughs' Research Scholarship, will read a communication on January 28, entitled "Photography and the Chemistry Relating to the Principal Processes connected therewith."

THE ADDRESSES of all the members are not in the books, and any members who do not receive notices of meetings are invited to send their addresses to the Secretaries.

IT IS UNDERSTOOD that one of the students is engaged in experiments on the emulsification of lard. His fellow students heartily wish him success, and hope he will embody his results in a practical paper for the benefit of the Association.

THE FIRST INTER-PHARMACEUTICAL MATCH of the season was played at Shepherd's Bush, on Saturday, when a strong team from the Square was opposed by one from the South London School of Pharmacy. The first half of the game was very keenly contested, resulting in a goal for the Square, from a very good shot by Lloyd. Shortly after crossing over this was equalised by a rush of Muter's men, now reinforced by the arrival of a missing player, but from this point to the end of the game the Square had decidedly the best of it, three more goals being scored, of which one was disallowed by the referee, Lloyd and Warren being responsible for the two additions. Several alterations were made with regard to the positions of the men in the team, which seem to have worked out with good results, and augur well for the future. Next Saturday the Royal Artillery Company's ground at Finsbury will be the scene of what promises to be one of the most interesting matches of the season, since both games last year were drawn. It is therefore hoped that Squaremen will turn up in great force.

THE FOOTBALL CLUB's re-arrangement of the field may interest some readers. Padwick remains in goal, and Gray keeps at back; the latter is joined by Stokoe, whose weight should be of more service in that part of the field. Durbin, Evans, and Collenette should prove a useful trio as "halves." Garsed is the new centre forward, Wild (Captain) and Wilkinson play right forward, Lloyd and Warren on the left.

LAST SATURDAY there was something wrong about the ground. The usual plot had been allotted to others, consequently the accommodation available as a dressing-room for visitors was little better than a cowshed. Sincere apologies are offered.

"A MERRY CHRISTMAS" will shortly be the correct form of greeting, and the opportunity may be taken to advise students not to work too hard during the vacation, even though they may not have done so well as they could have wished at the Christmas revisions, which, from a student's point of view, are a great hindrance to the enjoyment of the coming festive season.

SCOTTISH NEWS.

EDINBURGH ROYAL DISPENSARY SCHOOL.—The eleventh annual supper of the students attending this school took place at the Imperial Hotel on Friday, December 9. Mr. William Duncan, Principal, occupied the chair, and Messrs. W. G. Mackenzie and C. M. German, Demonstrators, acted as principal croupiers. Among others present were J. Laidlaw Ewing, J.P., Peter Boa, C. A. Macpherson, George Coull, B.Sc., J. Rutherford Hill, etc. The Chairman, in proposing "The Pharmaceutical Society and Boards of Examiners," said students were naturally ready to air grievances against the Board of Examiners, and those grievances, real or imaginary, were usually charged against the Pharmaceutical Society, but that was an entire mistake. He thought they should all support the Society. Loyalty to the Society did not necessarily mean support of the present Council any more than loyalty to one's country meant support of the present Government. They were quite entitled to join the Society, and if they thought necessary to turn out the present Council and fill their places with men who were in sympathy with their wishes.—Mr. J. Laidlaw Ewing in acknowledging the toast, said they might take it from him that examiners were anxious to be fair and just to every candidate, and he would much rather give a man the handshake of congratulation on his success than send him away. He was glad Mr. Duncan had spoken as he did of the Pharmaceutical Society. It was the only body they could join with any prospect of benefiting their craft. He would direct their attention very specially to the recent extension of the pharmaceutical franchise, which opened up all the privileges of full membership to every registered chemist, and he would strongly urge them all to join the ranks so as to make the Society a large and powerful body that would be thoroughly representative of the whole craft of pharmacy.—Mr. Rutherford Hill, in proposing "The Pharmacy Students," said the arrival of the Gay Gordons in the city that night reminded them of what could be done by resolute and determined men in carrying to success a difficult task. The military exploits of the Sirdar were also fresh in every mind, and much might be learned from that campaign that was of value to the pharmacy student. Lord Kitchener had a definite purpose, and in the desert of Dongola, as in the pharmacy school, he diligently made complete preparation. In the battle of Atbara, as in the Minor examination, he proved his fitness to command the crowning victory of Omdurman, which symbolised the battle of life. Many made the fatal mistake of regarding the Minor examination as the goal; it was only Atbara, and the battle of life was the pharmacist's Omdurman.—Mr. Hird replied.—Other toasts were "The Ladies," by Mr. Petrie, reply by Mr. Hird; and "The Chairman and Croupiers," by Mr. A. Anderson. Several members of the Carl Rosa Opera Company were present, and took part in the musical programme. There was a large attendance, and the proceedings were carried through with great enthusiasm.

MASONIC.—Brother John Strachan, chemist, Jedburgh, was last week installed R. W. M. of Lodge St. John, No. 164.

GLASGOW SCHOOL OF PHARMACY.—On Monday, December 12, the students of this school, under the guidance of Mr. John Lothian, Principal, visited the City Glass Works of Messrs. Couper and Co. Flint glass is exclusively used in those works, the ingredients being silver sand (from Fontainebleau), red lead, sodium carbonate, and a small proportion of potassium nitrate. These are fused up with "cullet" in fire clay "pots." The furnaces in which twelve "pots" are heated are fired from underneath and go on continuously for about ten years. The ruby glass is coloured with purple of Cassius. Great care has to be taken to keep the pots from the direct action of the flame, and some interesting effects of the oxidation and reduction of coloured glass were shown by the manager. The party was treated to an interesting demonstration in glass-blowing, glass flasks, fancy lamp shades of different colours and designs, all made by hand. On Tuesday the St. Rollox Chemical Works of the United Alkali Company were visited. The manufacture of vitriol, muriatic acid, bleaching powder, and soda crystals was practically demonstrated in a terse and fascinating manner by one of the chemical staff. A commencement was made at the vitriol plant, which comprises about thirty condensing chambers and eight each Gay Lussac and Glover towers, an enormous amount of vitriol being turned out there. After

precipitating the arsenic from the crude acid, it is concentrated in platinum vessels, the total value of which is about £40,000. The manufacture of hydrochloric acid was next witnessed by the action of vitriol on rock salt and the gas condensed in towers. The hydrochloric acid is treated with pyrolusite in the chlorine stills and the chlorine passed into slaked lime to form bleaching powder. The manganese dioxide is regenerated from the still liquor by the "Dunlop" process. Chalk is ground into a thin cream with water and mixed in large cylinders by means of mechanical stirrers. The mixture is subjected to a steam pressure of 40 lbs. The manganous carbonate resulting from the double decomposition is placed on trays and heated to a temperature between 600° and 700°, when the CO₂ is driven off and it is oxidised into manganese dioxide. This is in the form of a very fine powder, and is of more than double the value of the original pyrolusite. The company manufacture their own gas, and the proceedings terminated by an inspection of the gasworks and the famous "stalk."

FRENCH NEWS.

CONGRESS.—Amongst the many congresses for the Exposition of 1900 relative to medicine and the allied sciences, our homœopathic *confrères* have apparently no intention to be outdone, for a homœopathic congress has recently been authorised.

HIS CONFRÈRES THE GROCERS.—A somewhat amusing though withal troublesome incident occurred a few days ago, in which a Nice pharmacien figured. A parcel post expedition of medicated bougies being addressed to him, he was notified by the Nice Octroi or Town Customs authorities of its arrival, at the same time requesting him to furnish a declaration of its contents. This he accordingly did, declaring them as "bougies." But, unfortunately for him, these minions of the law were only acquainted with one kind of "bougie," which, in French, means "candle" (the duty upon which, whether they be wax or stearine, is outrageously high), and in consequence assessed the lot as candles and presented him with the toll bill. On remarking to the officer that he had never paid such a rate of duty upon previous consignments of bougies, he was almost floored by the observation "that he must pay the same duty as the rest of his *confrères* the grocers." To be reduced to the level of a grocer was indeed too much for the dignified pharmacien, and explanations followed, as a result of which the officer learned that there were "bougies" and "bougies," and accordingly fixed a price agreeable to our *confrère*.

A CASE which, in the near future, may prove of no little importance to the pharmacien, *vis-à-vis* the doctor, has recently been brought to the notice of the Minister of the Interior for advice, in consequence of the blank refusal of certain pharmaciens to supply drugs, etc., at prices in accordance with the laws relative to the "Assistance Medicale Gratuite."

AS THE LAW at present stands, any impecunious French citizen requiring medical aid may obtain the same free, and such medicines as the doctor may deem appropriate to the case are prescribed, and the prescriptions taken to and dispensed by a pharmacien in the quarter, who, according to the laws for such special cases, must charge to the Local Government Board prices according to the tariff. The system is analogous to the English "parish relief." Since it is expressly stipulated by the law that "pure drugs, etc.," shall be dispensed and "full weight and measure given," several pharmaciens have kicked over the traces, and declared that the conditions of the tariff cannot be conscientiously complied with except at a loss to the pharmacien, and seeing that no man could be honestly expected to work at a loss to himself, they consider themselves justified in resisting the enforcement of the law in so far as it applies to them. Here the doctors intervene with the assurance that such an important office as public dispenser must be filled, and where the pharmaciens refuse to fill it they offer to replace them, and supply both advice and medicine, and charge same according to tariff. This news has the effect of a thunderbolt amongst the rebellious pharmaciens, who foresee the possibility of doctors extending their good (?) offices in dispensing their own prescriptions for patients who do not visit them under the auspices of the "Assistance Medicale Gratuite."

IN THIS, AS IN MANY OTHER CASES in France at present, a little light is needed, and possibly the kind doctors who seldom do something for nothing, will be requested to explain how, in the face of the pharmaciens' arguments to the contrary, they can conscientiously supply drugs, carefully dispensed, at prices in accordance with the tariff. The Council in their own defence say the pharmaciens should have lodged their complaints long ago, and not have fulfilled the offices of dispensers to the poor since 1893, if, to do so conscientiously, were to work at a loss to themselves. If, however, as Dr. Jeanne points out, these pharmaciens oppose the law for no other motive than that of endeavouring to grab more than a reasonable profit, then they should be severely dealt with. Otherwise he considers that they have every right to refuse to perform that public office, and "the doctor who proffers to solve the problem by supplanting the pharmacien should be regarded with suspicion." Dr. Jeanne has hit the nail right on the head.

ENGLISH NEWS.

CARBOLIC ACID POISONING.—On Sunday, December 4, a silk winder, named Margaret Heaver, died at Macclesfield from the effects of drinking carbolic acid, under the belief that it was vinegar, which she had been taking for bronchitis.

C.A.M.W.A.L.—A general meeting of the shareholders of the Chemists' Aerated Mineral Waters Association, Limited, will be held at Anderton's Hotel, 162, Fleet Street, London, E.C., on Tuesday, December 20, at 3 p.m., when the balance sheet will be presented. The report states that, considering the very unfavourable weather experienced from the beginning of the past summer up to August, the shareholders have every reason to be congratulated on the results shown in the 20th annual balance sheet. Manchester shows a fair profit on the fifteen months' trading, while the nine months' trading at Birmingham shows a small loss, but it is confidently expected that better results will be shown at both centres in future years. Mention is made of the fact that the Sanitary Institution, at the Birmingham Congress, awarded a medal for the "Camwal" Waters in syphons and bottles. To meet the demands from the two new factories, in February last the directors issued £5000 five per cent. debentures, being the balance of the issue of £25,000. They also raised temporary loans amounting to £5500. In accordance with an arrangement made some years since with the managers, 1000 shares at par have been allotted to them in consideration of their services. The directors have also handed the £50 voted to them at the last meeting to the Benevolent Fund of the Pharmaceutical Society. There has been an increase of 287 shareholders during the past year, making the total number of members 4555. It is proposed to pay the dividends on December 31, the amounts of which will be placed to the credit of open accounts, unless applied for before December 16. It is proposed to give the employés a liberal bonus, as hitherto. A dividend of 10 per cent. is recommended, and a bonus of 2½ per cent., free of Income Tax. This absorbs £5100, with a balance carried forward of £954 7s. 2d., making a total net profit of £6054 7s. 2d. Messrs. J. H. Wilson and H. Kemp, who retire from office, will offer themselves for re-election at this meeting.—In view of the contemplated amalgamation of Idris, Limited, with the Chemists' Aerated and Mineral Waters Association, Limited, the *Westminster Gazette* thinks the new report of the latter company is of interest. "Camwal has completed its twentieth year. It has a share capital of £50,000, of which £40,396 has been issued, and the debentures have been brought up to £25,000 by the recent issue of a balance of £5000. This year also temporary loans have been raised, amounting to £5500. The membership now numbers 4555. The gross profits are £17,310, and the net profits £6054. Out of the latter a dividend of 10 per cent. and a bonus of 2½ per cent. is declared on the ordinary shares, carrying forward £954."

MANCHESTER COLLEGE OF PHARMACY.—Through the kindness of Messrs. Evans, Sons and Co., of Liverpool, the students of the M. C. P. had the pleasure of seeing their warehouses and works. On Thursday afternoon, December 8, a saloon carriage reserved for the party left Manchester at 1.30. About three hours were most enjoyably and instructively spent in the premises at Hanover

Street and Fleet Street. The large specimens of ambergris, musk, and other expensive drugs were of much interest, and the cellars stored with almost numberless casks of cod-liver oil afforded a sight most of the visitors had not before seen. The party was then conducted upstairs, and spent much time in inspecting the "materia medica" in original packages, and the preparation of seidlitz powders, etc., for home consumption and export trade attracted much attention. Perhaps the works in Fleet Street excited the most admiration. Six large stills of the newest pattern were at work preparing various volatile oils. The manager in charge of this department most courteously described the construction of these and other pharmaceutical apparatus. The manufacture of coated pills was most interesting, and the drug mills, filtration of oils, preparation of thyroid extract, mercurial ointment, etc., were seen to perfection. After leaving the works the visitors were provided with a splendid tea by the firm, and then visited the docks and looked round the city. The return journey was brightened by the recitations given by Messrs. Stowells and Boothroyd. The former describing the effect of the cataplasmata of the 1885 B.P., and the latter giving an account of a botanical excursion. Votes of thanks to Messrs. Evans, Son and Co., and to Mr. Charles Turner concluded a most enjoyable day.

DEATH FROM A SLEEPING DRAUGHT.—An inquest was held at Keighley on Thursday, December 8, touching the death of Frank Sharpe, illegitimate son of Eva Sharpe, of Worth village. The evidence showed that a doctor sent three bottles of medicine for the child's mother. The grandmother, thinking that a small bottle, which contained a sleeping draught, was for the child, gave it half a teaspoonful, death being the result. The jury found that the child died from the effects of the draught administered in mistake.

FOOTBALL.—A match was played on Saturday, December 10, at Wormholt Farm, Shepherd's Bush, between the Metropolitan College of Pharmacy and Westminster College, the game resulting in a draw—1 all.

LAUDANUM POISONING.—An inquest was held at Leicester, on Saturday, December 3, with respect to the death of Lionel H. M. C. Chambers (22), a commercial traveller. From the evidence it appeared that deceased had been in the habit of taking laudanum to produce sleep, and on the previous Thursday had taken an overdose. A verdict was returned that death was due to an overdose of poison taken by misadventure.

AT THE SMOKING CONCERT which followed the reading of Mr. Young's paper at Manchester, on Wednesday last, there was a host of talent, including a pianoforte selection by Mr. Pontefract, humorous songs by Mr. Garry, Mr. Wingfield, Mr. E. Hastings, songs by Mr. Hankinson, Mr. Franklin, Mr. Woodruff, Mr. Rawsthorne, Mr. Crowe, and a recitation by Mr. Stanley Greenwood. Those gentlemen were also enthusiastically thanked for their valuable services in the passing of a pleasant as well as an instructive evening. The proceedings closed with a hearty vote of thanks to the Chairman, which was received with "For He's a Jolly Good Fellow." This concluded a splendid evening's enjoyment.

BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION.—The Council of the above gave a very pleasant children's party to the younger members of the families connected with the Association, at the County Restaurant, on Tuesday evening, December 13. There was a gathering of between thirty and forty children, who, through the efforts of their seniors to amuse them, were enabled to spend a very enjoyable evening with games, magic lantern exhibition, and other amusements. Mr. A. H. Waddington (President), Mr. J. A. Mitchell (Secretary), and other of the officials, as well as their wives and other lady relatives, devoted themselves assiduously to the work of keeping the little ones busy. Mr. R. W. Tilson acted in full costume as Santa Claus for the distribution of toys. The President and his wife gave each child a picture book. A flash-light photograph of Santa Claus surrounded by the children was taken. After a hearty supper the children gave three cheers for the President and for Santa Claus.

ABERDEEN PHARMACEUTICAL ASSOCIATION.—A meeting of this Association was held in Gordon's College on Tuesday evening, the 13th inst., Mr. Jas. Clark, President, in the chair. Some discussion arose anent a circular from the Western Chemists' Association

(of London), and one from the Federation of Local Associations, suggesting consideration of the proposed new Pharmacy Bill. Ultimately it was resolved to call a special meeting at an early date, and a committee was appointed to draw resolutions embodying suggestions suitable for a new Pharmacy Bill. After the ordinary business of the evening was transacted, Mr. Ellis, pharmacy teacher, conducted the members through the new pharmaceutical department. The laboratory looked very bright under the electric light, and the new recess-labelled reagent bottles contributed to enhance the appearance of the room. The dispensing department is also fitted up with recess-labelled bottles and jars. Branching off from the laboratory is the balance room, which is well stocked with Sartorius and other balances. On the floor above is the large lecture room and museum, also lighted with electricity, and containing a very complete collection of materia medica specimens. The members were also pleased to hear that so far the classes were being well attended; the numbers are already considerably in excess of what was anticipated.

OWENS COLLEGE, PHARMACY DEPARTMENT.—On Wednesday afternoon a large number of chemists journeyed from Wigan in response to an invitation to Manchester, for the purpose of inspecting the pharmaceutical department at Owens College. They were met by Messrs. Woolley and Kemp, representing the Manchester Pharmaceutical Association, and under the guidance of Messrs. Kirkby and Grier, they at once commenced a tour of the buildings. After completing the inspection of the laboratories, lecture theatres, etc., they were then conducted over the rest of the college buildings, including the medical and anatomical museums, physical and engineering laboratories, the natural history museum, and Christie library, finishing with the materia medica museum, where the visitors, at the invitation of Professor Leech, partook of afternoon tea. When all had been refreshed, Dr. Leech expressed his pleasure at seeing the visitors, and trusted the inspection of the college had been both interesting and instructive to them. He briefly narrated the changes which had occurred in the institution since he was first connected with the professorial staff, and especially referred to the desire which he and others had that the education of the pharmacists should be advanced, and that all education should be thorough. Mr. Phillips and Mr. Dawson briefly thanked Professor Leech for his hospitality, and Messrs. Kirkby and Grier for their kind offices as conductors.

THE WORSHIPFUL COMPANY OF SPECTACLE MAKERS' DIPLOMA, copies of which will be received by successful candidates at the Company's examinations, is printed from an etched and engraved copper plate on straw-coloured paper in brown ink, and framed in a moulded oak and gold frame, surmounted with the arms of the Company in gold. The border is of bold ornamental scroll work with the City arms and supporters at the top and the arms of the Company at the bottom. The top corners of the design encompass two scrolls on each side. That on the left illustrates the microscope, past and present; for the past a Hooke's minocular (date 1665), and the present by a Powell and Leyland binocular. On the right the scrolls illustrate physics by J. Browning's spectroscope, Crookes' radiometer, and a Röntgen rays tube; and navigation by Captain Cook's sextant and a "Davis" quadrant. Astronomy, past and present, is represented by quaint shields right and left, bearing the Great Pyramid and Oxford University Observatory. Medallions are introduced left and right of the Company's arms, at the bottom with a view of a Huyghen's aerial telescope, seventeenth century, in a field with Ursa Major pictorially represented in the heavens, whilst the opposite corner shows the great strides made in the telescope—a modern equatorial telescope, and showing the interior of an observatory of modern date. The diploma has been designed and carried out by James B. Sly, engraver, of 9, Rathbone Place, London. Should a copy of this be required, application should be made to the above graver.

SHEFFIELD COLLEGE OF PHARMACY.—The students of the College had for their practical outdoor object lesson this week a visit to the Sheffield Oxide Works; one of the partners, Mr. T. Dobb, Ph.C., kindly acted as guide. The varnishhouse was first visited, where copal and oak varnish and terebene were being manufactured by the heat of closed fires. The gum room was very interesting, samples of kauri, animi, dammar resins being compared, also the differences between the better varieties of Sumatra benzoin and Palembang. The colour house next occupied attention. Precipi

tation, filtration, pressing, drying of chromes, greens, and blues were seen in their various stages. The paint mill was interesting, showing the use of horizontal burr stones, edge runners, rollers, and steel mills for grinding the white lead, ochres, etc., also for manganese ore, reducing it to different degrees of fineness by grinding and sifting for the local steel trade. The drug department concluded a very interesting practical lesson.

CHEMISTS' ASSISTANTS' ASSOCIATION.—The second of the fourth series of Cinderella dances in connection with this Association, held in the Dorset Hall, Portman Rooms, Baker Street, W., on Thursday, December 8, was a decided success. There were about one hundred persons present, Mr. and Mrs. J. C. Umney being amongst the number, together with all the members of the Committee: Messrs F. W. Gamble (President), E. W. Hill, Geo. Pearson, C. E. Robinson, C. J. Strother, T. M. Taylor, and the Hon. Secretaries (Messrs. C. Morley and H. H. Robins). The duties of M.C.'s were efficiently performed by Messrs. C. W. Martin and A. H. Solomon. The next dance will be held on Wednesday, January 4, 1899, when a full attendance is expected, and, to avoid disappointment, applications for tickets should be made at once.

THE SALE OF POISON BY STORES.—In the course of an inquest held on Wednesday, at Shoreditch, on the body of an old woman who had died from a shock arising from a fractured hip, a little girl said that she went to a drug store, and asked for something for "an old lady who has pains in her limbs and can't walk across the room." The "chemist" gave her a bottle wrapped in paper for which she paid a shilling.—John Hill, who admitted that he was not a registered chemist, said he remembered the child coming into his shop and asking for some medicine for an old lady. He did not know either the little girl or the deceased. Witness quickly made up a six-ounce bottle, which contained bicarbonate of potash, chloroform water, and a little burnt sugar colouring matter. The mixture was perfectly harmless, and there was no possible fear that an overdose could have caused death.—The Coroner: By the regulations you ought to have had a qualified man in the shop.—Witness: Only for dispensing poison, and we never sell them because there is no sale for such things in the neighbourhood. Continuing, witness said that in nearly all the large drug stores scattered about London the same rule was observed. A properly qualified man served poison, and other things were sold by ordinary assistants.—The jury requested the Coroner to report the matter to the Pharmaceutical Society, Apothecaries' Hall, and the General Medical Council.

AN OVERDOSE OF CHLORAL.—At Ebury Bridge, on Wednesday, Mr. John Troutbeck inquired into the circumstances surrounding the death of Mrs. Maud Sabara Lawrence, of Stafford Street, Old Bond Street, who on Monday was found dead in her bedroom.—John Robert Lawrence, deceased's son, said that on Monday afternoon his mother, not having come down as was her custom at 11 o'clock, he became suspicious. He forced open her bedroom door, and found her on the floor dead. On the washstand was a bottle partially filled with chloral. His mother had been in the habit of taking this drug, although she had denied it, and quarrelled with them on that account. She had obtained it at the Junior Army and Navy Stores, on a prescription given her husband, who died five years ago.—John Fuller, chemist at the Junior Army and Navy Stores, said deceased had a 12 oz. bottle a month.—Dr. Finsey said death was due to an overdose of chloral.—The Coroner commented upon the fact that the assistants at the Junior Army and Navy Stores had not made more inquiries.—One juror thought the Stores ought to be censured, but the jury were divided in opinion, and finally returned a verdict of accidental death.

THE DEATH OF SIR WILLIAM JENNER, Her Majesty's Physician for upwards of thirty years, took place on Sunday, December 11, at Greenwood, Bishop's Waltham, Hampshire, at the age of 83 years. He was born in 1815 at Chatham, his father being an inn-keeper in a small way of business. He was educated at University College, obtained the licence of the Society of Apothecaries in 1837, graduated as M.D. in the University of London in 1844, and in 1848 became a member of the Royal College of Physicians, when he was appointed Professor of Pathological Anatomy to University College and Assistant-Physician to University College Hospital. From that time onward his rise in the profession was very rapid,

and in 1861 he was selected by Sir James Clarke to fill the office of Physician Extraordinary to Her Majesty, subsequently as Physician-in-Ordinary to Her Majesty and to the Prince of Wales. He was created a baronet in 1868, K.C.B. in January, 1872, and G.C.B. in 1889. He held many other prominent appointments, including that of President of the Royal College of Physicians from 1881 to 1888.

IRISH NEWS.

AT NEWRY, on Friday morning last, a very destructive fire broke out on the premises owned by the Ulster Chemists' Company, Limited, The Mall and Hill Street, and resulted in the total destruction of the stores and their valuable contents. The fire raged for over four hours, consuming all before it, notwithstanding the efforts of the brigade. At one time the fire threatened to extend to the whole block of buildings surrounding the stores, where it originated, but the firemen managed to prevent it spreading, and about 11 o'clock all danger was past.

AN EXHIBITION AT THE ROYAL COLLEGE OF SCIENCE, Dublin, worth £50 per annum, has become vacant within the last few days. Any past student who has taken his diploma as Associate of the College, and who desires to pursue a course of scientific research, may apply for the vacant exhibition.

THE PHARMACEUTICAL SOCIETY OF IRELAND—JANUARY EXAMINATIONS.—The last days for lodging applications will be:—For the Preliminary examination, Tuesday, December 20; for the Pharmaceutical Assistants' and Registered Druggists' examinations, Tuesday, December 27; Pharmaceutical Licence examinations, Wednesday, December 28.

THE PHARMACEUTICAL SOCIETY OF IRELAND was privileged at its evening meeting on Monday last to hear a lecture by Professor Walter G. Smith, M.D., King's Lecturer in Materia Medica, Dublin University, on "The Chemistry of Incompatibility, and Some of its Lessons." The lecturer said that most of the inconvenience caused to dispensers by the prescribing of incompatible substances was due to the fact that prescribers had no intimate acquaintance with pharmacy. The subject of incompatibilities was one which was slurred over in most text books of materia medica or pharmacy. The matter could, however, be reduced to simple general principles. In the language of the British Pharmacopœia, incompatibility was any change which affected the elegance, safety, or usefulness of a prescription. The subject was practically endless, the number of possible combinations being infinite, and no rules could be made that would provide against all possible ones. Moreover, new drugs brought with them new problems, and some of the recent synthetic preparations did not readily lend themselves to general rules. The simple fundamental rule to be observed by prescribers was that there should be the least possible chemical action amongst the ingredients of a prescription, unless the contrary was intended.

Partnerships Dissolved.

(From the London Gazette.)

O. G. Dixey, A. G. Gray, and J. M. P. Furlonge (trading as Gray and Dixey), Mineral Water Manufacturers, 21A, Pemells Place, Peckham, S.E. Debts will be received and paid by J. M. P. Furlonge, who will carry on the business.

F. R. Cresswell, E. J. J. Cresswell, A. G. Cresswell, and Theodore Schmitz (trading as Cresswell Brothers and Schmitz), Sponge Importers, Red Lion Square, W.C. So far as regards F. R. Cresswell.

Frank Holmes and H. A. Holmes, Physicians and Surgeons, practising at Hardwick, West Gorton and Gorton, Manchester.

E. H. Swete and Raymond St. George Ross, Analytical and Consulting Chemists, Worcester.

Obituary.

FARR.—On December 7, James Farr, Chemist and Druggist, Halifax. Aged 70.

BIRD.—On December 8, William Bird, Chemist and Druggist, Monkswearmouth. Aged 84.

MARKET REPORT

London Report.

DECEMBER 15.

Business in drugs and chemicals has been extremely restricted during past week, and people appear to have made up their minds that we must not now expect any renewed activity until the turn of the year. The only changes have been an advance in price of Borax and Acid Boracic and in value of Cinchona Bark, which latter at Tuesday's auctions sold at a further advance of 15 per cent., this should mean dearer quinine, but so far there has been no movement on part of makers. Iodides and Bromides are steady and without change. Same applies to Quicksilver and Mercurials. Cascara Sagrada very quiet. Acid Citric, Acid Tartaric, and Cream of Tartar remain without animation. Sulphate of Ammonia is steady. Cod-Liver Oil weak and declining, owing no doubt chiefly to decreased consumption in consequence of the continued mildness of the season, which has probably also had a depressing influence upon Glycerin. Acid Carbolic steady. The following are particulars of values ruling for articles of chief interest:—

ACETANILIDE.—The lowest price ruling for a really reliable article is 11d. per lb. for 5-cwt. lots. There are cheaper offers in the market, but most buyers prefer a good article even at a somewhat higher price.

ACID ACETIC.—Continues firm at Convention rates, which are as follows:—30 per cent., or 1.7, 14s. 3d. per cwt.; 33 per cent., which is the B.P. strength, 15s. 6d.; 40 per cent., 18s.; 50 per cent., 21s. 6d.; 60 per cent., 25s.; 70 per cent., 28s. 9d.; 74 per cent., 30s.; 80 per cent., 32s. 3d.; 85 per cent., 34s.; 90 per cent., 35s. 9d.; 95 per cent., 37s. 9d.; 98-100 per cent., or *glacial*, 39s. 6d. per cwt., all in carboys of 132 lbs.

ACID CARBOLIC.—Is quiet and unchanged at 6½d. per lb. for best 35-36° C., *ice crystal*, in 2½-cwt. drums and overcasks, other packing being charged in proportion; 30-40° C., *ice crystal*, 7½d. to 7½d. per lb.; and 39-40° C., *detached crystals*, 8½d. to 8½d. per lb. *Crude*: 60° F., 1s. 11d. per gallon; 75° F., 2s. 3d. *Liquid*: 95 to 97 per cent. of pale straw colour, 1s. 1d. to 1s. 2d. per gallon in 40-gallon casks.

ACID CITRIC.—Is very quiet, makers asking 1s. 1¼d. to 1s. 1½d. per lb.

ACID OXALIC.—Quiet at 3d. to 3½d. per lb. delivered free London.

ACID TARTARIC.—*English* on the spot is quoted 1s. 0½d. per lb., while *Foreign* is nominally worth 12d. to 12¼d. per lb.

AMMONIA COMPOUNDS.—*Sulphate* is steady. Grey, prompt, London, Hull, Leith, and Beckton, £9 18s. 9d. to £10 per ton; Beckton terms, £9 15s. *Carbonate* unchanged at 3d. to 4d. per lb. *Bromide*: 2s. 2d. *Iodide*: 13s. 10d. per lb. *Sal ammoniac* steady at 33s. to 35s. per cwt. for sublimed; crushed, for batteries, costing 2s. per cwt. more. *Muriate*: 25s. to 27s. 6d. per cwt. for white, free from metals, and 30s. to 32s. 6d. for chemically pure small crystals. *Oxalate*: 5½d. *Sulphocyanide*: 1s. 1d. per lb.

ANTIMONY.—*Regulus* is quoted £36 15s. to £37 5s. per ton. *Crude (Black oxide)* being worth £22 10s. to £23 per ton, landed terms.

ANTIPYRINE "KNORR"—Is unchanged. Same can be also said of the "Star" brand of *Phenazone*, which is now most in favour with buyers of the cheaper article.

BELLADONNA ROOT.—38s. to 40s. per cwt. *c.i.f.* is now the price of good to fine root.

BLEACHING POWDER.—Is quoted £6 per ton for *English*.

BORACIC ACID.—Firm at the higher prices, viz., *crystals* 26s., *powder* 28s. per cwt.

BORAX.—Firm at the advance, *crystals* being now quoted 16s. and *powder* 16s. 6d. per cwt.

BROMIDES.—Are firm at the late advance. Makers' quotations are: *Potassii bromid.*, 1s. 10½d.; *Sodii bromid.*, 2s. 1½d.; *Ammon. bromid.*, 2s. 2d. per lb.; *Bromine* is steady at 2s. 1d. per lb., in 60-lb. cases.

CANTHARIDES.—*Russian*, are steady at 1s. 7½d. to 1s. 9d. per lb., but *Chinese* are scarce and wanted.

CASCARA SAGRADA.—The market is quiet and unchanged at £25 and £30 per ton for old and new bark respectively.

CASTOR OIL.—Quiet; *Belgian* first pressing, spot, £26; January to December, 1899, £24; second pressing, spot, £24 10s., ex-wharf. Hull manufactured, 25s. to 26s. per cwt., in barrels, 3½d. to 3½d. per lb. in cases, *f.o.r.* or *f.o.b.*, steamer, Hull. London manufactured 26s. per cwt. in barrels.

CINCHONA BARK.—In auction on Tuesday there was a good demand, prices realised showing an advance of 15 per cent. on the figures of late sale in Amsterdam, the price of the unit being fully 1d. per lb. The following are the particulars:—*Calisaya*: 381 bales offered and sold; medium to bold quill, 4½d. to 7d. *African*: 218 bales offered and sold; fair quill, 4½d. to 4½d.; chips, 4½d. to 4½d. *Ceylon*: 138 bales offered and sold, red broken quill and chips 2½d. to 2½d., chips 2½d. *East Indian*: 762 bales offered and 587 sold. Crown, stem and chips 2½d. to 3½d., shaving 2½d. to 3d.; red, chips renewed 4½d. to 6½d., stem and chips 3½d. to 4½d., chips 2½d. to 5½d., shavings 4d., fair quill 4d.; *Ledgeriana*, stem and chips 3½d., chips 2½d. *Java*: 352 bales offered and 217 sold, dusty chips 2½d. to 4d. *Red*: 10 packages offered and sold, dull trunk quill, mixed quills, 1s. 11d., more quilly 1s. 3d. It now remains to be seen what the effect will be on price of *Quinine*.

CLOVES.—Privately the market for *Zanzibar* shows a somewhat downward tendency owing to free offers for arrival; business done comprises March to May delivery at 3½d. down to 3½d., with further sellers. At auction of 242 bales *Zanibar*, 31 bales middling, sold at 3½d.

COAL TAR DISTILLATION PRODUCTS.—*Toluol*: Commercial, 1s. 1d.; pure, 1s. 6d. per gallon. *Benzole*: 50 per cent., 9d.; 90 per cent., 8½d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C., 4d. *Solvent Naphtha*: 95 per cent. at 160° C., 1s. 7d.; 90 per cent. at 160° C., 1s. 3d.; 90 per cent. at 190° C., 1s. 3d. per gallon. *Pitch*, 25s. per ton, *f.o.b.* *Tar*: Refined and crude, 12s. per barrel, 1½d. per gallon.

COCAINE.—One of the makers, who lately stated that his price was 10s. 9d. per oz., and that he had none to sell, is reported to have been offering 100 oz. lots to favoured (?) friends at 10s. 3d. per oz., without, however, finding a buyer. Makers of the brands most in favour are firm at 10s. 9d., it being stated that prospects of both *crude* and *leaves* are decidedly in favour of higher prices prevailing for same in the near future.

CODEIA.—Makers are firm at 12s. 6d. per oz. for the pure, and 1s. per oz. less for the salts.

COD-LIVER OIL.—The market appears to be in a somewhat unsettled condition, and it would probably be possible to buy good non-freezing *Norwegian* oil of 1898 import at 75s. to 80s. per barrel of 25 gallons.

CREAM OF TARTAR.—Unchanged at 73s. 6d. per cwt. for first *white crystals* and 75s. 6d. to 77s. per cwt. for *powder*, on the spot.

GENTIAN ROOT.—Fair quality is quoted from Marseilles, 14s. per cwt., *c.i.f.*, for 5 ton lots.

GINGER.—*Cochin* is quiet and rather easier; of 334 bags rough 190 bags sold, washed rough 21s. to 22s., brown rough 23s. to 23s. 6d.; 40 bales cuttings sold at 13s.; of 195 cases cut kinds, 55 cases sold, chiefly without reserve, C at 35s., B at 58s. 6d. to 59s. 6d., A at 83s.

GLYCERIN.—*Crude* is quiet, but without any particular change. Refined *English* is quoted 50s. to 52s. 6d.; *German*, 52s. 6d. to 60s., according to brands, for best white chemically pure double-distilled 1260° quality, in tins and cases.

GUM TRAGACANTH.—Business in this article has been rather quiet lately, prices remain, however, nominally unchanged at £13 15s. to £14 10s. per cwt. for firsts, £12 15s. to £13 for seconds, and £11 to £11 10s. for thirds, down to £4 15s. to £5 per cwt. for lower quality.

IODIDES AND IODINE.—Are in fair demand at 10s. 6d. per lb. for *Potassii Iodid.*; 11s. 10d. for *Sodii Iodid.*; 13s. 10d. for *Ammon. Iodid.*; 13s. 7d. for *Iodoform Cryst.*, *Powd.*, and *Precip.*; and 12s. per lb. for *Iodine Resubl.* Price of *Crude Iodine* remaining unchanged at 7½d. per oz.

IPECACUANHA.—No business has been reported in the article during the past week. Quotations for *Rio* are nominally easier at 9s. 7d. to 9s. 9d. per lb., *Carthageria* appears to be in better supply, and could probably be bought at 7s. per lb.

LYCOPodium.—Is somewhat cheaper at 1s. 1d. per lb., *f.o.b.*, Hamburg, for sifted in 5 case lots.

MENTHOL.—Is firmer at 7s. 6d. to 7s. 9d. per lb. for best dry *White*

The stocks of camphor, oils of aniseed and cassia are incomplete, some warehouses not making returns.

Crystals on the spot, while the *c.i.f.* price comes even higher from the other side.

MERCURIALS.—Notwithstanding late two advances of 2s. 6d. per bottle each in price of *Quicksilver*, makers' prices remain unchanged at 2s. 8d. per lb. for *Mercury Chloride B. P. (Calomel)*; 2s. 4d. for *Mercury bichloride (corrosive sublimate)*; 3s. per lb. for *Mercury red oxide B. P. (red precipitate)*; and 3s. 1d. per lb. for *Mercury ammoniated B. P. (white precipitate)*, and for *Mercury yellow oxide B. P.* It is stated that some of the makers are desirous of advancing the price of these preparations somewhat in proportion to the rise in *Quicksilver*, but so far they have not been able to come to an understanding on the subject.

MORPHIA.—Makers' price is unchanged at 5s. per oz. for the *Hydrochlorate powder*.

NITRATE OF SODA.—Is quiet and unchanged at £7 15s. per ton for ordinary and £8 per ton for refined, on the spot.

NUX VOMICA.—There has been fair inquiry for these, and small rather dull have been sold at 6s. per cwt.

OILS (ESSENTIAL).—*Cinnamon*: There is a good steady demand for genuine oil and good quality has been sold privately at 1s. 6d. to 1s. 8d. per oz. *Cajeputa* steady at 4s. per bottle. *Cassia*: There is more inquiry for the lower grades. Quotations range from 4s. 3d. to 5s. per lb., according to quality. *Citronelle*: Slow of sale at 1s. 1d. per lb. *Lemongrass*, dull, value being nominally 3d. to 3½d. per oz. *Peppermint*, American H.G.H. is dull at 5s. 4½d. to 5s. 6d. per lb. *Wayne County* being quoted 3s. 3d. to 4s. per lb., according to quality. *Japanese*, 40 per cent., 4s. 10½d. to 5s. per lb. *Dementholised*, 3s. 6d. per lb. *Star Aniseed* is steady at 6s. 2d. per lb. on the spot.

OILS (FIXED) AND SPIRITS.—*Linseed*: a steadier feeling prevails. On the spot, London pipes are quoted £16 to £16 2s. 6d., barrels, £16 10s. to £16 12s. 6d.; January-April, £16 10s. to £16 12s. 6d.; May-August, £16 7s. 6d.; Hull, spot, naked, £15; January-April and May-August, £15 *Rape* quiet; ordinary brown, spot, and January-April, £21 5s.; refined, spot, £22 10s.; Ravison, naked, spot, £17; January-April, £17 5s. *Cotton*: dearer, and very firm. London, *crude*, spot, £12 12s. 6d. to £12 15s.; December-April, £12 12s. 6d.; refined, spot, £14 5s. to £15, according to make; Hull, naked refined, spot, £12 12s. 6d. to £12 15s.; January-April, £12 15s.; May-August, £13 10s., *crude*, spot; and January-April, £11 12s. 6d., May-August, £12 5s. *Olive*: Spanish, £29; Levant and Mogador, £29 to £32. *Coconut*: Ckylon firm, spot, £26 10s.; near at hand, £24 15s. January-March shipment, £24 10s. *c.i.f.* Cochin spot, £31; just arrived, £30 *c.i.f.*; December shipment, £27 to £27 10s.; January-March, £26 10s. to £26 15s. *Palm*: Lagos spot, £22. *Lubricating oil*, pale American spot, 5s. 6d. to 7s.; black, 4s. 9d. to 5s. 6d.; pale Russian, 7s. to 8s.; black, 4s. 6d. to 5s. *Turpentine* firmer. American spot, 29s.; January-April, 29s. 6d.; July-December, 24s. per cwt. *Petroleum Oil* firm. Russian spot, 5½d. to 5¾d.; American spot, 6¼d. to 6¾d. per gallon; water white, 7¾d. to 7½d. *Petroleum Spirit* dearer: American, 8d.; deodorised, 8½d. per gallon.

OPIUM.—Prices are nominally unchanged. The business passing

has been of most unimportant character. A few retail sales have taken place of both *druggists'* and *manufacturing* kinds, as also of a few cases of *soft shipping*, while there has also been a small business done in *Persian*. Present values are as follows: Fine *druggists'* 11s. 3d. to 11s. 9d. per lb., good seconds and manufacturing kinds 10s. 6d. to 11s., good to fine *soft shipping* 13s. to 14s., seconds 10s. 6d. to 11s. 6d., *Persian* 11s. to 12s. per lb., according to quality.

PERMANGANATE OF POTASH.—There is pressure to sell on part of the makers at 47s. 6d. per cwt. for 5-10 ton lots of small crystals, deliverable in equal proportion during next year. In view, however, of past experience they are not finding buyers so anxious to again run the risk of burning their fingers as they have done with their purchases during past twelve months. Until the present excessive competition on part of makers comes to an end there would appear to be but little hope of an improvement in the value of this article.

PHENACETIN.—Is quiet at 3s. 9d. to 4s. 3d. per lb., according to quantity and packing, for *crystals* or *powder*. Bayer's make is still quoted 5s. 6d. and Riedel's 5s. 5d. per lb., in 1 lb. bottles.

POTASH COMPOUNDS.—*Chlorate* crystals 3¾d., powder 4d. per lb. spot, London. *Bichromate*, 3¾d. per lb. *Prussiate*, yellow, English, 6¼d.; red, 1s. 1d. to 1s. 2d. per lb. *Bicarbonate*, 30s. to 35s. per cwt. for crystals or powder, according to quantity and brand. *Oxalate* neutral, 5½d. per lb. *Permanganate* quiet at 50s. per cwt. for small crystals, and 55s. per cwt. for large crystals in 1 cwt. kegs.

QUICKSILVER.—The importers quote £7 15s. per bottle, the second hand offering at 1s. per bottle less money.

QUININE.—Position of this article remains unchanged in spite of the further considerable advance in bark prices. The general opinion is that makers will certainly advance their price, but when and to what extent is a point on which opinions vary considerably. We think buyers who have not already secured a supply should do so before the expected advance takes place.

ROSIN.—Strained; on the spot, 4s. 4½d. per cwt.; January to March and March to May shipment, per sailing vessel, 4s. 0½d. per cwt., *c.i.f.*

SAFFRON.—Is in good demand, and prices close firm at 35s. to 37s. 6d. for good to best genuine *Valencia*, and 25s. to 28s. per lb. for *Alicante*.

SENNA.—There is some little demand for *Tinnivelly*, but holders are so stiff in their ideas as to price, that little or no business has resulted. *Alexandrian* leaf remains dull of sale.

SODA COMPOUNDS. *Crystals*: barrels, 55s.; bags, 52s. 6d. per cwt., ex ship, Thames. *Ash*: £5 to £5 10s. per ton, according to strength, quantity and packing. *Bicarbonate*: £7 10s. to £8 for the 97 per cent, and 18s. 6d. per cwt. for fully bicarbonated. *Caustic*: 70 per cent., white, £7 10s.; 60 per cent., £6 10s. per ton. *Nitrate*: commercial, £7 15s.; refined, £8. *Bichromate*, 2¾d. per lb. *Bromide*, 2s. 1½d. per lb. *Iodide*, 11s. 10d. per lb. *Hyphosulphite*, 6s. 6d. to 8s. per cwt., according to make, quantity and packing.

SODA CRYSTALS.—Makers quote 55s. and 52s. 6d. per cwt. for barrels and bags respectively, ex-ship Thames.

SPICES (VARIOUS).—*Black Pepper*: Only 49 bags, offered without reserve, sold as follows:—Singapore at 4½d.; Aleppy, 4½d.; Penang, 3¾d. *White Pepper*: 151 bags Singapore bought in at 8½d. *Chillies*: 10 cases good Japan bought in at 47s. *Capsicums*: 30 bags West Coast African bought in. *Cassia Lignea*: 91 bales chips bought in. *Mace* is dull. Of 41 cases Penang only 6 cases sold, without reserve; pickings, 1s. 1½d.; ordinary, 1s. 5d.; fine bold pale, 2s. 4d. 8 packages West India sold at 1s. 8d. to 1s. 9d.; good and fine pale, 2s. and 2s. 4d. *Nutmegs* dull. Of 35 cases Penang only 5 cases sold, without reserve, 110's at 1s. 2d. *Pimento*: Of 140 bags only 16 bags fair sold at 4¾d.

SULPHATE OF COPPER.—Is firm at £18 to £19 10s. per ton, on the spot, according to quantity and make.

SULPHONAL.—Makers' price is 17s. per lb., there is, however, still a little obtainable from second hands at somewhat below above figure.

Newcastle Chemical Report.

DECEMBER 14, 1898.

This market remains on the quiet side. Shipments are light, except parcels of Soda Crystals for the English Channel ports. Sulphur keeps scarce. General prices are: Bleaching Powder, according to market, £5 to £5 10s.; Soda Crystals, basis price, 45s.; Caustic Soda, 70 per cent., basis price, £7; Soda Ash, 52 per cent., £4 5s.; Alkali, 52 per cent., £5; Sulphur, £4 15s. to £5 per ton.

Manchester Chemical Report.

DECEMBER 14, 1898.

The past week's business has been characterised by quietude, both on home and export account. The Board of Trade returns for the past month are again far from encouraging, especially to the United States, which, so far as Alkali is concerned, shows a diminution of nearly 50 per cent. as compared with last year, although Bleaching Materials are not quite so marked, being about 20 per cent. of a decrease. Generally speaking, in Alkali the decrease in November over the corresponding month last year is 29.6 per cent. in quantity and 27.7 in value, and in Bleaching Materials 15.8 per cent. in quantity and 26.6 in value. The exports of chemicals and medicinal preparations amount to £690,973, as against £753,840 in 1897, a decrease of 8.3 per cent. The imports of chemicals, dye stuffs, etc., on the other hand, show an increase of 5.9. In this market prices are well maintained. Ammonia Alkali, 58 per cent., may be quoted at £3 17s. 6d. per ton in bags on rails, but Caustic Soda is again ruling lower, owing to the competition amongst makers. Soda Crystals and Bicarbonate of Soda are without change. Chlorate of Potash and Glycerine are both easier. Brown Acetate of Lime is steady at £5 7s. 6d. to £5 10s., Welsh and American, delivered Manchester. White Sugar of Lead is dull at £25 per ton, Manchester. Acetate of Soda is firm at £12 5s to £12 10s. per ton, spot. Arsenic is quiet at £16 to £16 10s. per ton, ex ship Garston. Sulphate of Copper is unchanged on last week, but Green Copperas is dull locally, although shipments continue fair. Aniline Oil is quoted 3d., and Salt 4½d. Benzols are firmer, and liquid Carbolic rather dearer. Yellow Prussiate remains firm at 6¾d. to 7½d. for best Lancashire make.

Liverpool Market Report.

DECEMBER 14, 1898.

AMMONIA SALTS.—*Carbonate* is firm at 3d. per lb. *Sal ammoniac*: 33s. and 35s. per cwt. *Sulphate*: £10 to £10 2s. 6d. per ton. BEESWAX.—73 packages Bissao at £6 7s. 6d. per cwt., and Chilian, about 30 bags, at £6 12s. 6d. to £6 15s. per cwt.

CANARYSEED.—Turkish is quiet, and about 200 bags have been sold at 28s. per 464 lbs. 100 bags of Spanish found buyers at 31s. per 464 lbs., as well as a considerable amount sold privately.

CARNAUBA WAX.—23 bags of good grey sold for 35s. per cwt.

CHILLIES.—64 bags of medium Sierra Leone sold at 25s. to 30s. cwt.

COCHINEAL.—Good black Teneriffe is in fair demand, and stocks are held for 9d. to 9½d. per lb.

COPPER SULPHATE.—Easier at £18 5s. to £18 10s. spot, forward £18 10s. to £19 per ton.

(GINGER.—140 bags of fair washed rough Cochin sold at 25s. 6d. per cwt. ex store.

HONEY.—Chilian Pile X has changed hands at 29s. per cwt.; Pile 1 at 25s. and Pile 2 at 23s. per cwt.

OILS (FIXED) AND SPIRITS.—*Castor* is showing more life. Calcutta, good seconds, has been cleared from the quay at 2½d., and 2½d. per lb. is now asked for the little in store; for forward delivery prices are very firm; French 1st pressure, 2¾d. to 2½d.; Madras, 2½d. *Olive* is steady, but without any alteration in the spot quotation, 30 tons have been sold at recent rates. The price for shipment has advanced. *Linseed* is quiet at the easier rate of 17s. 3d. to 18s. 6d. per cwt. *Cottonseed* is firm at an advance of 3d. per cwt., and now sells at 15s. 3d. to 15s. 9d. per cwt. *Spirits of Turpentine* enjoys a moderate inquiry at the firm and slightly dearer rate of 30s. per cwt.

Trade Notes.

CHRISTMAS HOLIDAYS.—The Publishing Offices of the *Pharmaceutical Journal* will be closed from Saturday afternoon, the 24th inst., to Wednesday morning, the 28th inst.

MESSRS. JEWsbury AND BROWN, Ardwick Green, Manchester, send a specimen showcard, advertising their Oriental Tooth Paste. If to attract attention is the chief duty of a showcard, this production of Messrs. Jewsbury and Brown does its duty well. It depicts the face of a beautiful English girl, with a background of growing primroses and dark foliage. Chemists will be supplied with a copy of the proof on application to the firm.

MESSRS. EVANS, SONS AND Co., of Liverpool, have acquired the sole right to manufacture thyroglandin by the process patented by Mr. E. C. C. Stanford, and are now able to supply thyroglandin in powder. The special advantages of the article produced by Stanford's process is that it does not putrefy, but retains the whole of the active principles of the thyroid gland in an unaltered and changeable uncondition. Dr. William MacLennan, of Glasgow, has made many experiments with thyroglandin in the treatment of obesity with remarkable success. It is administered in capsules or in tablets and in doses of 3 to 5 grains, equal to half a gland of average size and weight.

MR. PEDER DEVOLD, of Aalesund, Norway, has appointed Messrs. Linton, Hubbard and Co., of 27, Leadenhall Street, E.C., sole agents for the sale of his cod-liver oil.

MR. LIONEL LAURANCE, of 1, Vernon Place, Bloomsbury, W.C., is about to commence a postal course of instruction for the modified examination of the Spectacle Makers' Company.

MOST CHEMISTS ARE AWARE that in future the Local Government Board will furnish their vaccination officers throughout the country with glycerinated calf lymph prepared in accordance with the method devised by Dr. Copeman. For those medical men who require for their private practice lymph prepared with similar precautions, Messrs. Maw, Son, and Thompson are able to supply the "pure culture" brand, which is guaranteed to be active and free from disease germs. Special precautions are taken in the first instance to ensure that the animal is free from disease, any extraneous germs are killed in the subsequent culture process, which in itself increases the strength of the vaccine.

MESSRS. BURROUGHS, WELLCOME AND Co., Snow Hill Buildings, London, E.C., intimate that their offices, warehouses, and laboratories will be closed from the afternoon of Saturday, December 24, until the morning of Wednesday, December 28.

MESSRS. TAYLOR, TAYLOR AND HOBSON, of Leicester, send particulars of a recent development of the Cooke lens—the Cooke portrait lens. The instruments in the new series work at F/4.5 and are designed more especially for the use of professional photographers. At this aperture they give either that needle-like definition, which is one characteristic of all Cooke lenses; or by means of a simple adjustment, spherical aberration may be introduced evenly over the plate.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Magic Lanterns, second-hand; triples and binoculars; oxyhydrogen microscope; marvellous pampengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Fallowfield's Facile ¼-plate Hand Camera, 5 by 4, R. R. lens, rotating stops, thorough working condition, cost £5 5s., price 45s.—Thorp, Chichester.

Good Student's Microscope, ½, ¾, and 1-inch dividing objective, rack-work adjustment, excellent definition, complete in mahogany case, drawer for slides, etc., bargain, 30s.—Reade, 7, R.N. Hospital, Plymouth.

Four doz. 1s. 1½d. Nurse Powell's pills, at 6s. 6d.; 3 doz. 2s. 9d. ditto, at 18s.; 33 doz. 1s. Barrow-Evans' hair restorer, at 5s. 9d.; 20 doz. 1s. 1½d. Dr. Weir's plasters, at 6s.; carriage not paid.—Thompson, 192, Manchester Street, Oldham.

50,000 Choicest Microscopical Objects, bargains. Catalogue free. New and second-hand Microscopes, Cabinets, Mounting Materials, etc. Microscopes and collections purchased.—Richard Suter, 10, Highweek Road, South Tottenham, Middlesex.

For Sale.—Pereira's 'Materia Medica,' 3 vols., 7s. 6d., paid; Wills' 'Materia Medica,' 2s., post paid.—W. Pemberton, 34, Church Street, Preston.

Robert H. Clarke's Specialties.—Lantern, with 4 in. condensers and 3 wick lamps, 17s. 6d.; with 4 wick lamps, 18s. 6d. Slides, sale or hire, Conquest of Soudan, Spanish American War. Catalogue free.—Robt. H. Clarke, Royston, Herts.

What Offers for 5½ gross No. 4 X and 5 gross No. 2 X Este's Patent Wooden Bottles; also 1 gross 2 dr., 1 gross ¼ oz., 15 doz. 1 oz., 9 doz. 2 oz., Este's Almada Boxes; also for ½ gall. displacement apparatus, as Maw's Fig. 53 minus tap; also shop rounds, gold labels, good condition, and 10 lbs. Eucalyptus Oil (Wyley's).—Priestley, Newark.

All New, unsoiled, bought before advance, hot water bottles, best quality. Maroon plush covers (detachable) included, 10 by 6, 4s.; 12 by 8, 5s. 10d.; 12 by 10, 6s. 6d.; 14 by 10, 7s. Sponge bags, best quality, silk cords and bindings, full sizes, as Maw's, eight dozen, assorted, Nos. 2, 4s. 6d.; 3, 6s.; 4, 7s. 6d.; 5, 9s.; 6, 10s. 6d. Tooth stopping wrapped pink paper, as Stevens', gross box, 2s. 6d.; 3 dozen 3d. sticks, 2s. 6d. Hypodermic syringe, complete, cased, 1s. 6d. Post free 10s. lots. Cash returned if sold.—Warnes, Chemist, 333, Gray's Inn Road, W.C.

Two "Camwal" Debentures for sale, £55 each net.—Davy, Witney, Oxon.

Complete Mineral-Water Plant, including 2-h.p. Stockport gas-engine and all accessories; can be seen at work any time; great bargain. Engine can be had separately.—Smith, Chemist, Fareham.

Wholesale and Retail Druggists: Advertiser is overstocked with superfine oil of lemon in 10-lb. coppers, and solicits offers; 1-lb. sample delivered free 2s. 9d.—Moss, 34, Avondale Road, Chorley.

Surplus Stock.—Sprinklers, various sizes, white metal, best make and finish, assorted lots to clear, 10 gross at 5s. 6d. gross, cash with order, samples free on application.—Davis, 411, Mare Street, N.E.

Honey.—56 lbs. best English Honey for sale, 1898 crop, good colour and quality, 30s. cash.—F. C., 19, St. Andrew's Street, Cambridge.

WANTED.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsell, 9, Derwent Grove, East Dulwich, London, S.E.

Marriage.

GORDON—ALEXANDER.—At the Imperial Hotel, Edinburgh, on the 8th inst., by the Rev. Dr. Hastings, Palmerston Place U.P. Church, John Alexander Gordon, Chemist, Stirling, to Marion Alexander or Brydon, daughter of John Alexander, Burnside, Skirling Biggar.

Advertisement.

(Received too late for Classification).

SOUTHAMPTON.—A steady and reliable Junior ASSISTANT required in dispensing and light retail business. State experience, age, height, reference, salary required, enclosing photo if possible, to H. JEWELL, 55, Above Bar, Southampton.

Calendar for the Week.

Sunday, December 18, 4th in Adv. Sun rises 8.4; sun sets 3.50.

Monday, December 19. Sun rises 8.5; sun sets 3.50.

Tuesday, December 20. 3.22 M. Sun rises 8.5; sun sets 3.50.

CHEMISTS' AERATED MINERAL WATERS ASSOCIATION, LIMITED, Anderton's Hotel, 162, Fleet Street, E.C., at 3 p.m.—General meeting of shareholders for the passing of the balance sheet and other business.

ROYAL PHOTOGRAPHIC SOCIETY, 12, Hanover Square, W., at 8 p.m.—Paper on "Some Colloid Printing Methods," by E. Sanger Shepherd.

Wednesday, December 21. Sun rises 8.6; sets 3.50.

BRITISH PHARMACEUTICAL CONFERENCE, 17, Bloomsbury Square, W.C., at 4.30 p.m. Meeting of the Executive Committee.

PHARMACEUTICAL SOCIETY (North British Branch), 36, York Place, Edinburgh, at 8.30 p.m. Evening meeting, when the following papers will be read: "Notes on Lime as a Preservative for Chloroform," by David Brown; "Criticism of Some Chemical Matters in the New Pharmacopœia," by Leonard Dobbin; "Volumetric Operations of the New Pharmacopœia," by John Lothian.

ROYAL MICROSCOPICAL SOCIETY, 20, Hanover Square, W., at 7.30 p.m.—Exhibition of Binocular Microscopes.

WESTERN CHEMISTS' ASSOCIATION (of London), Westbourne Restaurant, Craven Road, Paddington, W., at 9 p.m.—Inaugural address by the President, Mr. J. F. Harrington, followed by a discussion of the Federation proposals.

Thursday, December 22. Sun rises 8.6, sets 3.51.

Friday, December 23. Sun rises 8.7, sets 3.51.

GLASGOW SCHOOL OF PHARMACY, North British Station Hotel, at 9 p.m.—Annual supper, Mr. J. Lothian in the chair.

Saturday, December 24. Sun rises 8.7, sets 3.52.

COMMUNICATIONS, LETTERS, NEWSPAPERS, etc. have been received from Messrs. Bailey, Barrett, Bartlett, Bayley Bellamy, Branch, Brierley, Burroughs, Butler, Buttershaw, Cowley, Cracknell, Cummings, Elsdon, Ewell, Fairley, Ferrall, Goodess, Griffiths, Hinde, Horner, Hulme, Lothian, Maitland, Marsden, Milns, Perkins, Reid, Reiss, Reynolds, Robins, Rouse, Saunders, Shaw, Smith, Snell, Stratton, Tankard, Taylor, Thompson, Turner, Warren.

FRENCH NEWS.

ANNUAL DINNER.—On Friday last, the 16th inst., the Rev. J. Frère Langford, the popular vicar of the English Church, gave his annual dinner to all the English employés of Nice. The idea is a most excellent and praiseworthy one, for it brings together all the young English pharmacists having employment on the Riviera, and enables them to make acquaintance with their fellow-countrymen. Moreover, Mr. Langford always seizes the occasion to make a thoroughly homely little speech, in which he does his best to identify himself with his guests and make them feel that he is a friend to whom they can go for advice in case of need. The dinner took place at the National Restaurant, Avenue de la Gare, covers being laid for thirty-five guests, and all the expense being borne by the good vicar. After the dinner the usual speeches were indulged in; then the guests were free to amuse themselves. This event, like all the preceding ones, was quite a success.

BUVEURS DE PETROLE.—Truly there is no accounting for taste. We are aware of the fact that individuals do exist who "to keep their spirits up" do so "by pouring spirits (rectified and methylated) down," also that others have a partiality for ether to "pick-'em-up," but it is to Paris we must grant the palm for the vilest "taste" in the choice of a stimulant. A Parisian journal informs us on good authority that there exist in this gay capital what are called "Buveurs de Petrole" or "petroleum drinkers." True the baneful and disgusting habit is only peculiar to the Bastille quarter as yet, still it is spreading with alarming rapidity, and is an additional and unforeseen monster to the list which the temperance societies will have to deal with. When the discovery was made it was thought the habit was the direct result of the increased tariff on alcohol which had lately been imposed, and which, of course, in proportion affected the price of even the labourer's cheap and nasty "petit-verre," but it transpires that such is not the case, inasmuch as the habit existed long before the sur-tax on alcohol was thought of. Moreover, it appears that these "petrolics" have a marked preference for this illuminating medium, possibly because, as it is asserted, "There is no headache in the bottle," nevertheless it is an "acquired taste," like that for tomatoes. The species of intoxication produced by this new drink somewhat differs from that of ordinary alcoholic beverages, in that the "petrolic" is exceedingly morose, although less inclined to brutality. His sleep is calm and natural, and upon awakening he seems none the worse for his little tipple, apparently enjoying his usual health. As to its ultimate effects upon the system, doctors, in this as in all other cases, agree to differ. Some declare it to be harmless if used in moderation, it being a capital vermifuge and antispasmodic, whilst others say that in all proportions it is dangerous, for it is fatally conducive to derangements in the organism, and creates the germs of mortal maladies. This new problem is, however, sufficiently interesting to merit profound study.

ATTEMPTED ASSASSINATION OF A CHEMIST.—From Ostend comes the news of the attempted assassination of Monsieur Louis Maryssael, a well-known and exceedingly benevolent pharmacien, practising in the Chaussée du Thouront, Ostend. It appears that he had for some time been gratuitously treating a native for an affection of the eyes and rheumatism. But the patient, experiencing little good from the treatment, entered M. Maryssael's pharmacy the other day and roundly abused him for his incompetence to afford him much relief, and demanded a soporific, for he suffered also from insomnia. This the pharmacien refused to give him, explaining that the law forbade him to supply such without a prescription. "But," said he, "I will write you a note, which you will take to my benevolent friend, Dr. Pleyn, and whatever he may prescribe I will supply to you, as heretofore, gratuitously." Little affected by this kind utterance, the would-be assassin became more insolent and accused the pharmacien of wishing to poison him. Angered by the man's ungratefulness, M. Maryssael essayed to snatch the note from him, at the same time ejecting him from the pharmacy, whereupon the man drew his knife and plunged it deep into the poor pharmacien's thigh, severing an artery. M. Maryssael followed him a short distance crying "à l'assassin, à l'assassin," which was echoed by the crowd. In the meantime the poor pharmacien managed to drag himself as far as Dr. Pleyn's surgery, and fainted in this doorway, having lost almost all his blood. The doctor paid his friend every atten-

tion, and with the aid of another medical man succeeded in arresting the hemorrhage, and then, to save their patient, who was almost bloodless, resorted to injections of "liqueur physiologique." The dastardly assassin was subsequently captured, and awaits trial. The pharmacien lies in a critical state and is not expected to recover.

CHEMISTS v. GROCERS.—Apropos of an article appearing in a recent issue under the above heading, it might not be out of order to give the result of the petitioning of the Minister of the Interior, which the grocers threatened to do in the event of the pharmacists continuing to harass them. From all accounts, it would appear that the pharmaciens and the health societies had good reason to wage war, inasmuch as the majority of the grocers not only sold large quantities of cod-liver oil, quinine, boric acid, phosphorus paste, santonine lozenges, paregoric, spices, etc., but, wherever it was possible to do so, these goods were adulterated to an alarming extent. The public happily are beginning to find out that their interests are better served in patronising the pharmacien, so, between an angry public and a harassing health committee, let us wish the grocer the good time his shady practices merit. The result of the actions against the grocers, which came on for trial at the Tribunal Correctionnel of Guingamp, in the north, was a decided victory for the pharmaciens.

SCHOOL OF PHARMACY NEWS.

ON ACCOUNT OF THE INCREASED NUMBER of students now working at the Square, changes have been made this session in the arrangements of the various laboratories. The present Research Department has taken over the Upper Octagon Room, formerly used as the Pharmacy Laboratory, to provide bench accommodation for Major men. The Pharmacy Laboratory has been moved into the other building just above the Examination Hall. The new quarters for practical pharmacy are, from a student's point of view, considerably more commodious for work than the old ones. The room, although not much larger, is oblong in shape, and the bench, in the centre of the room, is not half so bulky as the corresponding bench in the old "lab," though it affords accommodation for as many students. The arrangements otherwise are pretty much the same as formerly. Another advantage that the new quarters possess is that it gives students who are would-be athletes an opportunity of training, the room being situated at the very top of the building.

FOOTBALL.—What has been referred to in this column as *the* match of the season took place last Saturday between the P.F.C. and the Honourable Artillery Company, on the ground of the latter, at Finsbury Pavement, E.C. Quite a large number of Square men, past and present, had assembled, and even some of the lady students had recognised the importance of the match, and were interested observers. It is to be regretted that our special commissioner lost his notes during the exciting game, so that we are unable to give as full an account as might be wished; it is understood, however, that the Square team lost the match, but our reporter does not take any responsibility for this statement, because the match was so exciting and the shouts of the pharmaceutical onlookers so distracting that, as he has since been telling everyone, it is a wonder he is alive to tell the tale. He seemed to be under the impression that the Square goal-keeper was busy. It has since been stated that a report of the match appeared in the *Referee*, but, as our reporter does not read Sunday papers, he cannot confirm this statement. Nevertheless, if his impressions are to be depended on, and the Square lost, all we can say is that we hope they will take their defeat philosophically, and endeavour in the return match to regain their former reputation.

LOOKERS-ON SEE MOST OF THE GAME—true, and if that looker-on is a player himself, many are the wrinkles he can learn by watching the play of others, and these he may put into practice himself when next appearing on the football field. He can see in what special tactics certain players are successful and even brilliant, or where others are lacking from various reasons which may not be known to the players themselves, but are immediately seen by a critical observer of the game. He sees especially in the forward rank a desire on the part of certain players for individual efforts, which occasionally prove successful, but the best results

are achieved when all the forwards combine their play with unselfishness. In the half-back line he sees that players require keen tackling powers and an unlimited amount of pluck and stamina, whether backing up their forwards or assisting in the defence. Too many players are apt to think that constant practice is the only way in which they can perfect themselves, but it is not too much to say that by watching one good game they might learn more than in many practices. In the coming vacation the members of the football team may have opportunities of watching the play of some of the best players in Britain. By imitating the masters of the game there will then be some prospect next term of raising the present team to a higher state of efficiency.

IRISH NEWS.

IRISH PHARMACISTS' ASSISTANTS' ASSOCIATION.—At Dublin, on December 14, the third annual concert of this Association was held in the Ancient Concert Hall. Upwards of 400 persons were present. The programme was a large one, and consisted of eighteen items, exclusive of encores. Solos, part songs, recitations, character sketches, etc., were rendered by the following artistes: Miss Patterson, Mrs. Watson, Miss Florrie Laird, and Messrs. McClelland, Dalgliesh, Farquhar, Tinsler, Dyas, Cochrane, and Doran. A feature of the entertainment was a conjuring demonstration by Mr. Dyas. Mr. Doran's extracts from Othello and Trilby evoked frequent outbursts of applause. Mr. Henry Hunt, President of the Association, had charge of the arrangements, and was ably assisted by Messrs. Savage, Jessop, Williams, Yoxall, and others. To Messrs. Turner and Williams is due the credit of bringing the entertainment to such a successful issue.

CHRISTMAS AMONGST THE CHEMISTS.—With the near approach of Christmas most of the Dublin pharmacies have invoked the aid of the window dresser, with the result that shop fronts are gaily decked with the thousand and one drug sundries which are luxuries as well as necessities. Chief amongst pretty windows may be mentioned that of Mr. W. F. Wells, 20, Upper Baggot Street. Amber-coloured silk forms the foreground, and scattered thereon in tasteful profusion are flagons of perfumery interspersed with sprays of holly, the red berries on which lend a warmth to the surroundings. Carboys of cut glass are placed at intervals, and on tiers of crystal are seen some of the choice products of this firm. Inside the establishment the same good taste is observed, strict order and neatness in every detail prevailing, but without stiffness of design. Next in the degree of merit may be mentioned Messrs. Boileau and Boyd's drug and chemical store in Mary Street, which is a triumph of good taste. Mr. Edmondson, of Rathmines, is not less deserving of notice, his pharmacy being very prettily laid out. The several medical halls owned by Dr. J. C. McWalter are well in keeping with the season, while Dr. J. A. Walsh's State pharmacy in Westmoreland Street reflects credit on the up-to-date ideas of its popular proprietor. Messrs. Hayes, Conyngham, and Robinson's city and suburban establishments are deserving of high commendation, their window displays being well up to the best in Dublin.

IRISH PHARMACISTS' ASSISTANTS' ASSOCIATION.—At the usual fortnightly meeting of this Association, held last week, Mr. F. Maxwell read a paper on "The Pricing of Prescriptions," in which he suggested the use of a private mark on prescriptions indicating the price charged when first dispensed. Subsequently, Mr. Beardwell, manager of the Edison Phonograph Company, gave an interesting demonstration of the powers of the phonograph, and reproduced from the instrument a high-class concert, which all present greatly enjoyed.

THE WINTER SHOW AT BALLS BRIDGE of the Royal Dublin Society has this year been well up to previous similar exhibitions. The drug and chemical trade was represented by the following firms:—Messrs. Paul and Vincent, linseed and cotton cakes, oil, etc.; Messrs. Day, Son, and Hewitt, London, stock-breeders' medicine chests, gaseous fluid, red drench, etc.; the Bovine Company, London, Messrs. J. Thorley, Limited, spices and powders; Messrs. H. M. Leask and Co., Dublin, linseed of all kinds; the Phoenix Dill Mill Company, Limited, ditto; Lawes' Chemical Company, Limited, fluid dip and cattle ointments; Messrs. J. Leonard and Co., pharmacists, North Earl Street, Dublin, perfumery and chemicals generally. The exhibition was well attended.

MESSRS. S. CONNOR AND SONS, pharmaceutical chemists, Newry, are opening a branch medical hall at the corner of Upper Mill Street and Hill Street, in the same town. Extensive internal structural alterations are in active progress.

PHARMACY IN AUSTRALASIA.

IT WILL NOT BE THE FAULT of Victorian pharmacists if the Government is not induced to considerably modify, in the direction suggested by the Pharmacy Board, the Poisons Bill Amendment Act, now before Parliament. At a meeting of chemists and druggists held at the College of Pharmacy on September 28, it was unanimously resolved that the chemists throughout the colony should be requested to place themselves in communication with the members of Parliament for their district, and to urge upon them the desirability of supporting the proposals of the Pharmacy Board, on the grounds that the section, as submitted by the latter, was framed directly in the interests of the public, and insured a minimum of risk by restricting the sale of poisons or dangerous preparations to qualified persons; whereas the Government measure was inimical to public safety, inasmuch as, if carried, patent and proprietary articles containing poison, such as chlorodyne, etc., might be sold by anyone, so long as the entry of such sale be made by the vendor in a book and labelled as the Act requires. These arguments have already been brought under the attention of a large number of the members of the House; provision has been made for the desired alterations to be moved when the proper moment arrives, and it is believed that a very satisfactory support for them may be confidently reckoned on. In addition to this, a deputation consisting of Messrs. Witt, Tompsitt, and Shillinglaw have explained the unsatisfactory nature of the Government proposals to the Attorney-General, who has promised to give the subject his best consideration.

THE DENTAL BOARD OF VICTORIA are also wooing the sympathies of our legislators in connection with their own "little bill," and a few days ago a considerable number of them, headed by the Chief Secretary, by invitation, paid a visit of inspection to the Melbourne Dental Hospital and Australian College of Dentistry, and expressed themselves as highly delighted with the skilfulness of the work they saw performed, and the valuable tuition afforded to the students. The opportunity was, of course, taken advantage of by the hosts to contrast the hospital methods with the injury and suffering caused by the unskilful operations of "quacks," who, under the present dental laws, were permitted to practise as dentists in the colony, and to urge the necessity of paving the long-delayed Dental Bill passed without further delay. The Chief Secretary expressed himself as highly pleased with what he had seen; said that he was greatly impressed with the importance of the Bill, and promised that he would use every effort in his power to further its progress—remarks which were heartily endorsed by his fellow visitors.

ACCORDING TO LATEST ADVICES from New Zealand, the Pharmacy Bill had passed through the Legislative Council, and had been read a second time in the Lower House. The Premier had further promised that the Bill would be brought finally before the House, as soon as one or two policy measures had been disposed of; so that there now appears every prospect of its becoming law this session.

THE VITALITY OF THE MELBOURNE COLLEGE of Pharmacy has been further illustrated by a very important suggestion which has recently been submitted by the Council to the Government in connection with the important dairying industry. Strange to say, although a very considerable amount of money is annually spent by the Department of Agriculture in disseminating scientific information among dairymen and butter and cheese manufacturers, by means of peripatetic lecturers and experts, publications, etc., it is only of late that the authorities have become impressed with the necessity of establishing a recognised school or college providing organised instruction and examination in the various subjects with which it is necessary that the successful dairyman of the future should make himself familiar. Recognising this want, the Council of the College have placed its resources at the command of the Government and offer to establish a comprehensive course of lectures and demonstrations, by lecturers and examiners to be approved of by the Department, without entailing one penny of expense to the Government. The

carrying out of such classes independently would naturally involve very considerable expense, as no facilities exist elsewhere than at the College for such work, and there is every prospect that the proposal will recommend itself for acceptance, and that the College will, ere long, enter upon a new era of usefulness. The following is the syllabus of twelve lectures and demonstrations, of two hours or more each, which has been submitted for the consideration of the Department:—

1. Composition of milk, cream, butter, and cheese. Fermentation of milk. Aeration. Pasteurising. Preparation of pure cultures. Condensing. Quick method of detecting beistings.
2. Preparing samples for testing. Composite samples. Composition of various preservatives for composite tests. Quick method of restoring curdled samples.
3. Errors in the estimation of butter fat values. Speed of tester. Strength of acid. Calibrating flasks.
4. How to obtain perfect fat tests with the Babcock. No black or white curds.
5. The lactometer—its proper use. Table for analysis of milk. The thermometer, creamometer and hydrometer. The hygrometer. The thermomter and temperature.
6. How to detect watered milk or skimmed milk.
7. Cream, skim milk and butter milk testing. Various flasks used.
8. How to estimate water and fat in cheese and butter.
9. How to estimate the amount of salt in butter and cheese.
10. Demonstration of the acid test. How to prove the value of preservatives.
11. Chemical methods of analysing milk. How to value butter colours. Payment by results.
12. Practical examination for certificate.

AT THE SEPTEMBER MEETING of the Pharmaceutical Society of New South Wales it was decided that the following circular should be sent to each pharmacist who had been registered under Clause 11, Section D:—"This Society, having adopted the rule that only those persons can become members of the Society who either have passed a qualifying examination or have been a member of the Society before January 1, 1898, it is evident that the membership of this Society is a guarantee towards the public that a person has passed either a qualifying examination or has been registered many years ago under the Poisons Act as a chemist in New South Wales. To be a member of the Society is, therefore, distinctly an advantage to a chemist of New South Wales. The Pharmacy Board of New South Wales had to register under the Pharmacy Act many chemists who have not passed an examination, and, as the Pharmacy Act does not supply an examination for these pharmacists, they have no chance to prove their efficiency by an examination. To remedy this, the Pharmaceutical Society of New South Wales is now prepared to supply this want by holding a modified examination (as was done in Great Britain and Victoria). The Council have been striving hard to get this into the Pharmacy Act. Those pharmacists who pass this examination are eligible for the membership of the Society. They will then have the right to call themselves M.P.S. by Exam., and the public will have the guarantee that in dealing with such members of the Society they are dealing with pharmacists who have proved their qualifications by examinations. The object of this circular is to draw your attention to the advantage of being a member of the Society and to suggest to you eventually to come up for examination."

AT THE SAME MEETING the report of the Sub-Committee appointed to draw up a synopsis of subjects for examination was read and approved of. The principal clause (8) runs as follows:—

The examination shall be a *viva-voce* one to extend over one day only. The candidate may be examined in the following subjects:—Reading prescriptions without abbreviations, and translating literally as well as appropriately; detecting unusual doses, incompatibilities, etc. Compounding mixtures, pills, plasters, emulsions, suppositories, etc. Weighing, measuring, labelling, handwriting and finishing off. Posology, poisons and antidotes. Incompatibles. Ordinary and metric weights and measures. Recognition and estimation of purity by taste, odour and appearance, etc., of drugs and chemicals having well-marked characteristics; description and proportions of active ingredients. Use, sources of, and best means of preserving drugs and chemicals. Composition of decoctions, extracts, infusions, liquors, compound powders, pill masses, solutions, tinctures, ointments and other mechanical mixtures of the Pharmacopœia and processes of manufacture.

AT A RECENT COMBINED MEETING of the Pharmacy Board and Council of the Pharmaceutical Association of South Australia it was resolved "that it be a recommendation to the Board that candidates for examination who present University certificates that they have passed in the subjects of inorganic chemistry, botany, and organic chemistry of the B.Sc. course be allowed a pass in these subjects at the qualifying examination." Practically this means that the students may devote the first year to certain subjects, the second to others, and in the event of their obtaining pass certifi-

cates in both years' courses they will present them at the final examination of the Board, and will be further examined only in practical pharmacy and dispensing. The tendency of this system, it is considered, will be to bring about a more thorough grasp of the knowledge imparted and to practically ensure a curriculum. It has been further resolved to do away with the present "pharmacy" special class, and substitute for it one in pharmaceutical chemistry.

ENGLISH NEWS.

CHEMISTS AS JURORS.—On behalf of the Three Towns and District Chemists' Association, Mr. T. W. Ginn applied to Judge Woodfall, at Plymouth County Court, last week, to strike the name of Mr. R. F. Roper, chemist, Tavistock Road, Plymouth, off the jury list—His Honour said undoubtedly chemists were entitled to exemption; but they must take steps to get their names removed from the list.—Mr. Ginn remarked that no lists of jurymen had been posted on the church doors, as required by Statute, for the last two years, and consequently chemists lost their opportunities of getting their names removed.—His Honour: I cannot give directions for the exhibition of the lists. They are not in my jurisdiction.—Mr. Ginn observed that the chemists had no one but his Honour to apply to.—His Honour said he could only express the opinion that the lists ought to be exhibited at the church doors, and that chemists should be exempt from serving on juries.—With that expression of opinion Mr. Ginn expressed himself satisfied.

LIVERPOOL SCHOOL OF PHARMACY.—On Thursday last the students of the School journeyed to Widnes to visit Muspratt's works of the United Alkali Company. On reaching the works, they were divided up into parties, and were shown the manufacturing processes for a number of chemicals, including sulphuric acid, sodium carbonate, caustic soda, potassium and sodium chlorate, etc., also Chance's recovery process and Weldon's process. Each process was shown from the beginning; sulphuric acid, being the starting-point for the formation of most chemicals, was shown first. The process was followed and minutely described by Mr. Hedley, the courteous manager, and his equally courteous assistant chemists, from the burning of the pyrites to the finished article. The salt-cake process for the manufacture of sodium carbonate was next shown. First, the decomposing pans and the HCl condensers, the special furnace used in Muspratt's works for finishing the reaction, and finally the extraction of the black ash by water and the evaporation of the solution. The emptying out of the molten contents of the revolvers into the bogies was a sight not likely to be forgotten by the visitors, and a peep into the inside of them when the furnace was in action excited many comments. The purification of the soda ash completed the product. Chance's recovery process excited considerable interest. The visitors were shown the decomposition of the "cream," formed by mixing the alkali waste with water, by CO_2 , pumped through it from the top of a lime-kiln by powerful engines. The H_2S was conducted along into reservoirs, from which it was drawn and mixed with the requisite amount of air to burn out the hydrogen, then passed into a Claus' kiln, where, on coming into contact with the lining of FeS_2 , kept hot by chemical action, was at once ignited, depositing sulphur in the liquid form. It was pointed out that the sulphur thus obtained was 99.99 per cent. pure, but was liable to smell of H_2S for some time. The formation of caustic soda was next shown; the mother liquor from the soda ash was largely used for this purpose, and decomposed by lime. In connection with the evaporation of this, the guides remarked that an experienced workman could tell closely the degree of concentration by spitting into it, a test that was promptly applied by several of the visitors. The special feature in the manufacture of chlorates in these works is the employment of magnesia instead of lime for absorbing the chlorine, the effect of which, in the formation of KClO_3 was to produce crystals resembling thin plates of mica and which crystallised on sticks in a very pretty way. The NaClO_3 crystals excited remark, because of their beautiful quadratic form and from the fact that they affected polarised light. The Weldon recovery process was also described, and the decomposing tanks examined. The visitors were extremely interested to be shown the almost entire absence of waste, how one substance was used up in the manufacture of others, and before the finished article was reached a remark was overheard inquiring, what did they sell;

After leaving the works the students were invited to a tea provided for them at the Central Hotel, and eventually returned to Liverpool, having thoroughly enjoyed the visit, and feeling they knew something more about alkali manufacture than when they set out.

BRITISH PHARMACEUTICAL CONFERENCE.—The meeting at Plymouth next year will be held during the last week in July, the reception being held on Monday, July 24, and the Sessions of Conference commencing on the following day. Further particulars will be published in due course.

FOOTBALL.—The South London School of Pharmacy met the Walton-on-Thames team on the latter's ground on Saturday last. Marchant scored the first goal for Muter's, the half-time score being one to none in favour of the Kennington team. Two more goals were added in the second half, and a very good game was won by three goals to *nil*.

CHEMISTS' ASSISTANTS' ASSOCIATION.—The last meeting of the C.A.A. this year took the form of a musical and social evening, on Thursday, December 15. The President (Mr. F. W. Gamble) was in the chair. An excellent programme was contributed by Messrs. Morley Taylor, Marcus, Latreille, Leconfield, Strother, Hymans, and others. The next meeting of members will be at the Portman Rooms, on Wednesday, January 4, for the third Cinderella of the season, when a large company is expected. The regular sessional work will recommence on January 27, of which due notice will be given.

CRICKET CHAMPIONSHIP IN THE DRUG TRADE.—The combined efforts of Mr. C. A. Hill, of Davy, Hill and Co., and Mr. G. R. Moxon, of Burgoyne, Burbidges and Co., to inaugurate a cricket championship in the drug trade have been attended with distinct success. Several firms who have cricket clubs have been unable to raise teams consisting entirely of their own men, but it is hoped that these may be able to enter the league in a year or two. The six firms competing this year are as follows:—Burgoyne, Burbidges; Burroughs, Wellcome; Davy, Hill and Co.; Hewlett and Son; Howards and Sons; Stevenson and Howell. The cup is provided by the generosity of several leading firms, who are subscribing in the interests of sport and cricket. In addition to those above enumerated, several firms who are unable at present to take an active part in the competition have promised a donation of two guineas, to which amount subscriptions are limited. The hon. secretaries (C. A. Hill and G. H. Moxon) will be glad to receive the donations of those firms willing to give their support in the course of the next fortnight. A general meeting was held at the offices of Messrs. Burgoyne, Burbidges and Co., on Tuesday last, 20th inst., Mr. C. A. Hill in the chair. The title of "Wholesale Chemists' and Druggists' Cricket Championship" was agreed upon, and the general rules relating to the league were arranged. A small annual entrance fee for each club will render the league self-supporting, and it is satisfactory to note that a committee of management has been appointed (consisting of one delegate from each club), to whom all questions that may arise shall be referred, and whose decision shall in all cases be final.

MR. E. E. EVANS, M.P.S., of Penrose House, Abergavenny, Monmouthshire, late senior with Messrs. Decastor, Watson and Richards, has bought the business till recently owned and carried on by Mr. Watkin J. Thomas, chemist and druggist, at Victoria Square, Aberdare.

SPECTACLE MAKERS COMPANY.—Over two hundred craftsmen are now members of this Guild, and more than thirty of them are also Liverymen.

NEWCASTLE-ON-TYNE AND DISTRICT CHEMISTS' ASSOCIATION.—The second annual smoking concert of this Association was held in the Metropole Hotel on Wednesday evening, December 14, at 8 o'clock. Mr. F. E. Schofield (Morpeth), President, occupied the chair. There was a large attendance and everything passed off with *éclat*. Contributors were: Accompanist, Mr. J. Bloor (Newburn); humorous address, Mr. T. Maltby Clague; recitations, Messrs. Geo. Duncan and A. Rathbone; violin, Mr. Swales (Leeds); violin and pianoforte, the Masters Duncan; songs, Messrs. L. Baff (comic) and Harbron (Gosforth), Gibson (Hexham), Gray (Gateshead), Moncrieff and Brand (Wallsend), Cole, Erring-

ton, and Harwood. Messrs. Biggins, piano, and Raine, mandoline (Blaydon), contributed an admirable duet. Mr. Gibson (Morpeth), a member of the international team in England *v.* Scotland Indian club competition, gave a first-rate exhibition of club exercises. At 11 p.m. there was sufficient talent in hand to repeat the performance. The singing of "Auld Lang Syne" ended a very enjoyable evening.

LIVERPOOL PHARMACISTS will be pleased to hear that Mr. Theodore H. Wardleworth, the well-known secretary of the Liverpool Chemists' Association, has just been elected a Fellow of the Linnean Society, an honour rightly bestowed, for the recipient is not only a good practical botanist, but also a pharmacologist of wide experience.

MR. O. A. READE, pharmaceutical chemist (Vice-President of the Plymouth, Devonport, Stonehouse, and District Chemists' Association), has also been elected a Fellow of the Linnean Society.

CHARGE OF ATTEMPTED POISONING.—A remarkable charge of attempted murder, heard before the Halesworth County Bench, is reported by the *Daily Telegraph*. A young woman, named Elizabeth Walford, a domestic servant, was accused of administering strychnine to her mistress, Elizabeth Sophia Marlar, wife of John Marlar, chemist, of Halstead. Mrs. Marlar could not appear, but her husband stated that prisoner took a cup of tea and some toast to her mistress in her bedroom, an unusual thing for her to do, but it was understood to have been done out of goodwill. Immediately Mrs. Marlar tasted the toast she called out that she was poisoned. Her husband examined the toast, and observed some white grains upon the toast, which he found to be strychnine. He asked accused what she had done, and she replied, "Nothing." He had, he explained, some strychnine laid about with flour to poison mice. Dr. Roberts, who examined the toast, said he found two pieces sprinkled over with strychnine, and on one, the piece that had been bitten, the powder was thickly laid. He could not say without further investigation whether there was sufficient of the poison to cause death. When prisoner was arrested she made no answer to the charge, and the magistrates remanded her pending an examination of the toast by an expert analytical chemist.

FOOD AND DRUGS ACT PROSECUTIONS.—The *Times* reports that at the Clerkenwell Police Court on Wednesday, December 21, Mr. Bros was engaged for some time in hearing a summons against Parkes' Drug Stores (Limited), of 1, Electric Avenue, Brixton, for having sold at premises in Holloway Road, on November 10, sweet spirits of nitre which was deficient in ethyl nitrite to the extent of 31 per cent. of the proper minimum amount prescribed by the British Pharmacopœia. Dr. White prosecuted on behalf of the Islington Vestry; and Mr. Hoddinott appeared for the defendant company. Three ounces of spirits of nitre were purchased by Inspector Cowling, appointed under the Sale of Food and Drugs Act. It was divided into three parts, each part being placed in a 3-oz. bottle. An analysis of one of the samples by Dr. Teed showed a deficiency in ethyl nitrite of 31 per cent. For the defence Mr. Hoddinott argued that ethyl nitrite was of an extremely volatile character, and the fact that 1 oz. was placed in a 3-oz. bottle encouraged evaporation. Evidence was given by Mr. Lorrimer, manufacturing chemist, that the spirits of nitre was supplied by him to the defendant company, and was made up to the maximum strength mentioned in the Pharmacopœia. It was extremely difficult to keep it up to the standard. A fine of £1 and £2 2s. costs was imposed.—Albert Honiatt, of 35, Junction Road, Holloway, was fined 20s. and 12s. 6d. costs for selling spirits of nitre deficient in 36 per cent. of ethyl nitrite.—William Blackburn, of 675, Holloway Road, was fined 40s. and 12s. 6d. costs for selling spirits of nitre deficient in 62 per cent. of ethyl nitrite.

POISONING BY CHLORAL.—Mr. Braxton Hicks held an inquest at Battersea, on Monday, December 19, on the body of Charles Leopold Field (43), an analytical chemist, of Hawthorne Road, Battersea, who died on Friday, December 16.—The evidence showed that deceased, who suffered recently from insomnia, had been in the habit of taking chloral, and that on the previous Friday he was found dead in bed, a bottle containing chloral being discovered on the dressing table.—Dr. Pollard, divisional surgeon, said he had frequently attended Mr. Field, and had pre-

scribed sleeping draughts for him. When he was called to see the deceased on Friday afternoon he found that he was dead, and showed symptoms of narcotic poisoning. The witness discovered a bottle containing chloral hydrate, the quantity being enough to poison twenty men. Evidently this had been administered in a reckless manner.—The jury returned a verdict of "Death from misadventure."—The Coroner: It is another warning against the reckless use of deadly drugs. It is a great pity people are not more careful.

BEECHAM'S PILLS.—In connection with the case of *Beecham v. Flintoff*, decided in the Chancery Court, on Saturday, December 10—when a perpetual injunction was granted to restrain James William Flintoff, described as a chemist, carrying on business as a druggist and patent medicine vendor at Blackburn, from selling or offering for sale as Beecham's pills any pills not manufactured by the plaintiff—the North-East Lancashire Chemists' Association has intimated to the local Press that the defendant Flintoff is not a chemist, his name not being on the Register of Chemists and Druggists.

THE LECTURES ON BOTANY at the Storey Institute Classes, Lancaster, delivered by Mr. William Wyatt, pharmaceutical chemist, have, according to the Principal's report at the annual distribution of prizes, been much appreciated, and freely taken advantage of by young pharmacists and others, to whom the subject is of great interest and importance.

SCOTTISH NEWS.

EXTENSION OF PREMISES AT GLASGOW.—Messrs. Fraser and Green, the well-known chemists and druggists, of Buchanan Street, Glasgow, have recently extended the aerated water manufactory in connection with their works, by the installation of an entirely new plant, supplied by Messrs. Bratby and Hunchliffe, Limited, Glasgow. The apparatus has been specially designed to meet the requirements of Messrs. Fraser and Green's large trade in mineral waters, and have extra large cylinders for the filling of large quantities of syphons. The apparatus is working most satisfactorily, and Messrs. Fraser and Green anticipate that through its agency they will be able to keep pace with the demand for their waters, which have a large sale in Glasgow. Great care, it may be stated, is exercised in the manufacture, Loch Katrine water, filtered by means of a Berkefeld filter, being used.

INVERNESS CHEMISTS' ASSOCIATION.—On the evening of Friday, December 16, in the Waverley Hotel, a lecture entitled "Ptomaines and Food Poisons" was delivered before the members of this Association, by Dr. Munro Moir. Mr. John Fraser, President, occupied the chair, and there was a good attendance. Dr. Moir treated his subject in a very able and interesting manner, and was followed with close attention by his audience. The various ways in which food becomes tainted with disease were explained thoroughly and illustrated by many graphic instances which had come under the notice of the lecturer. The discussion which followed was free and suggestive, the importance of the subject being recognised by all. Milk, tinned meats, water supplies, and sanitary matters generally received candid attention. Among the speakers were Messrs. Fraser, Ogston, Junor, Bethune, Mackenzie, Mitchell, Macleod, Mason, and Gair.—In the name of the Association, Mr. Fraser thanked Dr. Moir for his admirable lecture, and after coffee and smoking had been indulged in, the meeting terminated with a vote of thanks to the Chairman.

Partnerships Dissolved.

(From the London Gazette.)

Cornelius Robbins and William May, Dental Surgeons, 32, Oxford Road, Kilburn, N.W.

G. F. Underwood and F. Gillespie (trading as Underwood Brothers) Manufacturers of Grocers' and Chemists' Sundries, Fairford Works, Lower Kennington Lane, S.E.

T. and H. Smith and Co., Wholesale Druggists, Edinburgh, so far as regards John E. Bryant on his resignation of office as trustee and executor of the late Peter Shanklin Smith.

MARKET REPORT.

The quotations here are given in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

DECEMBER 22.

Business in Drugs and Chemicals has been extremely restricted during the past week, and, in view of the fact that immediately after Christmas stock-taking will commence, there is no prospect of a revival of activity until after the commencement of the New Year. There are practically no changes of any importance to record. We take this opportunity of wishing our readers "A Merry Christmas and a Happy and Prosperous New Year." Below we give a few particulars which may prove of interest:—

ACETANILIDE.—Price for a really reliable quality is 1s. 3d. per lb. down to 11d. for 5 cwt. lots, in bulk packing.

ACID CARBOLIC.—There is no change to report from last week.

ACID CITRIC.—*English* is quoted 1s. 1d. per lb. for spot, while *foreign* makers ask the same price *c.i.f.*

ACID TARTARIC.—*English* is quoted 1s. 0 $\frac{3}{4}$ d. per lb., and *foreign*, 1s. 0 $\frac{1}{4}$ d.

AMMONIA COMPOUNDS.—Are without change, with the exception that the *Sulphate* is dearer at £10 2s. 6d. per ton for gray prompt 24 per cent., London, and at £10 5s. per ton, Beckton, January-June.

ANTIMONY.—*Regulus* is quoted 36s. 9d. to 37s. 3d. per cwt., while *Japan Crude* is rather easier at 22s. per cwt. on spot, landed terms, and 20s. 6d. per cwt. *c.i.f.*, to arrive.

ASAFETIDA.—Has been inquired for this week, but only retail sales are reported at 40s. per cwt. for medium quality. The first arrivals of the season from the Persian Gulf, consisting of 93 cases, will be offered in the next drug auctions, which take place on January 19.

BLEACHING POWDER (CHLORIDE OF LIME).—Is unchanged at £6 per ton for *English*.

BORAX.—Firm at late advance, *Crystals* being quoted 16s. 6d. and *Powder* 17s. per cwt.

BROMIDES AND BROMINE.—Are without change.

CAMPHOR.—Is quiet, *Crude* being quoted 99s. per cwt., *c.i.f.*, for China, and 106s. per cwt., *c.i.f.*, for Japan. *Refined* without change at 1s. 5 $\frac{1}{2}$ d. per cwt. for bells and flowers, squares being quoted in proportion, according to size.

CANNABIS INDICA.—17 packages just arrived will probably meet with good competition in next public sale, the article having lately been in very short supply.

CASCARA SAGRADA.—There continue to be many inquiries in this market from the United States, and various cheaper lots have found buyers. Further business has, however, been checked for the moment by the firmness of holders, who ask 30s. per cwt. for old bark and 26s. to 28s., according to quality, for new. It would appear more than probable that we shall see higher prices ruling for this article after the commencement of the New Year.

CASTOR OIL.—Is rather firmer at £26 for $\frac{3}{4}$ *Belgian* first pressing on the spot; Jan.-Dec. 1899, £25.

CHIRETTA.—20 bales of this article (which had become rather scarce) have just arrived, and will be offered in public sale on 19th prox.

CLOVES.—Privately *Zanzibar* are active at steady prices, sales comprising January to March at 3 $\frac{1}{4}$ d., March to May, 3 $\frac{1}{2}$ d. At auction only 110 bales *Zanzibar* were offered and bought in at 3 $\frac{1}{2}$ d.

COAL TAR DISTILLATION PRODUCTS.—Are without change in value, except that *Benzole* is a shade dearer at 9d. per gallon, for both the 50 per cent. and the 90 per cent.

COCAINE.—Makers of the best brands are very firm at 10s. 9d. per oz. for 100 oz. lots in 25-oz. tins.

CODEIA—Is in good demand at unchanged price, viz., 12s. 6d. per oz.

COD-LIVER OIL—Quiet and unchanged. Holders are hoping that the colder weather may bring an increased demand, and consequently better prices.

CREAM OF TARTAR—Is quiet and unchanged at 73s. 6d. per cwt. for first white crystals, on the spot, powder being quoted 75s. 6d. to 77s. per cwt.

GALLS—Continue to be a very strong market, while the quotations from abroad also come dearer. *Blues* have been done at 57s. 6d. per cwt. Stocks are small, and crop is reported to be short. *Green* are in small supply, and are held for extreme rates. Supply of *White* exhausted. There is no business to report in *China*, but the arrival price comes dearer at 55s. per cwt. *c.i.f.*

GINGER.—Only small supplies of *Cochin* offered, and all bought in, washed rough at 23s. 6d. 65 cases also bought in, native cut, small, 35s.; medium, 48s.

GLYCERIN.—Market is quiet at nominally unchanged prices for both the *crude* and the *refined* article.

GUM TRAGACANTH.—The new arrivals are now being offered and are meeting with a good demand, especially for the higher grades, in which a fair business has been done at very full rates, while a larger business could have been done had importers been willing to accept a little less than the shippers' limits; they, however, remain very firm in their ideas as to value. Quotations are: *Firsts*, £14 to £14 10s. per cwt.; *Seconds*, £12 10s.; and *Thirds*, £11 5s.

HYPOPHOSPHITES—Makers quote 3s. 6d. per lb. for the *Lime Soda*, and *Potash Salts*.

IODIDES AND IODINE—Are unchanged from last week.

MENTHOL.—There has been some buying on part of people who are generally well informed, and who have practically cleared the market of all really good brands offering at 7s. 6d. per lb. Very little is now obtainable at this price, and then not of best makes, while the *c.i.f.* price comes at a higher parity.

MERCURIALS—Are firm, but without change, at prices quoted last week, say 2s. 8d. per lb. for *Calomel*, and 2s. 4d. per lb. for *Corrosive Sublimite*.

MORPHIA—Is unchanged at 5s. per oz. for the *Hydrochlorate powder*.

OILS (ESSENTIAL).—Business in these is very quiet, and there are no changes of any importance to record. *Star Aniseed* is still quoted 6s. 2d. to 6s. 3d. per lb. on the spot. For *Cassia* there is some inquiry, prices ranging from 4s. 3d. to 5s. per lb., according to quality. *Citronelle* is very dull, and a shade easier in price at 1s. 0 $\frac{3}{4}$ d. per lb. in tins and $\frac{1}{4}$ d. per lb. less in drums. *Cinnamon*: A small business has been done in leaf oil at 2d. per oz. *Lemongrass* quiet at 3d. per oz. *Peppermint*, American H G H, is slow of sale at 5s. 6d. per lb. on the spot. Wayne County, 3s. 4d. to 4s. per lb., according to quality. *Japanese*, 40 per cent. is quoted 5s. per lb., while dementholised has been done at 3s. 6d. per lb. *Eucalyptus*: There has been some inquiry from America, in consequence of the influenza epidemic which is raging there; so far, however, prices remain unchanged at 2s. to 2s. 6d. per lb. for *Globulus*, and 1s. to 1s. 9d. per lb. for fair to good commercial quality.

OILS (FIXED) AND SPIRITS.—Prices are practically unchanged from last week, with the exception of *Turpentine*, which is again dearer at 31s. 3d. to 31s. 6d. per cwt. for spot, American, while Jan.-April is quoted 31s. 7 $\frac{1}{2}$ d., May-June 30s., July-Dec. 24s. 7 $\frac{1}{2}$ d. per cwt.

OPIUM.—There has been an improved demand, with some sales of both *manufacturing* and *druggists'* kinds at steady rates; there have been also one or two transactions in *soft shipping*, in which, however, business has been somewhat checked by the extreme prices required by holders. *Persian* quiet, with practically nothing doing, prices remaining nominally unchanged.

PERMANGANATE OF POTASH.—It is stated that one maker has stopped selling. Several others will have to do the same before we can hope to see any real improvement in the position of the article.

PHENACETIN—Is unchanged at 3s. 9d. to 4s. 3d. per lb., according to quantity and packing for a good commercial article, while *Bayer's* is quoted at 5s. 6d. and *Riedel's* 5s. 5d. per lb., in 1 lb. bottles.

POTASH COMPOUNDS. There are no changes to report, with the exception that *Yellow Prussiate* is slightly dearer at 6 $\frac{3}{4}$ d. to 7d. per lb.

QUICKSILVER—Is firm at £7 15s. per bottle from first hand, and £7 14s. from second hand.

QUININE—Has shared in the general dulness. The best German makes of *Sulphate* being quoted nominally 10 $\frac{1}{2}$ d. per oz. for 1000-oz. lots in 100-oz. tins. The manufacturers are, however, by no means free sellers at this figure.

ROSIN—Is quoted 4s. 4 $\frac{1}{2}$ d. per cwt. ex-wharf for strained on the spot, and 4s. 1d. per cwt. *c.i.f.* for January-March, and March-May sailer shipment.

SODA COMPOUNDS.—There are no changes to report.

SPICES (VARIOUS).—*Black Pepper*: 327 bags Singapore bought in at 4 $\frac{1}{4}$ d. to 4 $\frac{1}{2}$ d. *White Pepper* mostly bought in; Penang at 7 $\frac{1}{2}$ d. and Singapore at 8 $\frac{1}{2}$ d. to 9 $\frac{1}{2}$ d., except 40 bags which sold at 8 $\frac{1}{2}$ d. to 8 $\frac{3}{4}$ d. *Sweet Red Pepper*: 4 casks Spanish bought in at 70s. *Chillies*: 53 bales Zanzibar bought in at 38s.; 1 bag from Chinde sold at 31s. *Cinnamon*: 12 bales Ceylon sold, first sort 8 $\frac{1}{2}$ d., second 7 $\frac{1}{2}$ d., third 6d., fourth 5 $\frac{1}{4}$ d. *Mace*: 10 cases Penang sold, good heavy bold pale 2s. 4d., good middling red 1s. 9d., ordinary pickings 1s. 2d.; 6 packages West India sold at 1s. 3d. to 1s. 7d. *Pimento*: only 40 bags sold at 4 $\frac{1}{2}$ d., the rest being bought in at 4 $\frac{3}{4}$ d. to 4 $\frac{1}{2}$ d.

SULPHATE OF COPPER—Unchanged at £18 to £19 10s. per ton on the spot, according to make.

SULPHONAL.—Makers' price is 17s. per lb. for both *crystals* and *powder*. There are, however, sellers from second hand below this figure.

THYMOL—Is firm at 8s. to 8s. 9d. per lb., according to make, quantity, and packing.

TURMERIC.—Business in most descriptions has been on a small scale, but prices are very firm. *Bengal* is quoted 19s. per cwt. fair bright; *Madras* finger, 30s.; *Cochin* finger, 21s. to 21s. 6d.; split bulbs, 11s.; fair *China*, finger sold at 21s. per cwt.

Newcastle Chemical Report.

DECEMBER 21, 1898.

This market is not by any means animated with anything like a changed prospect. In fact, in view of the approaching Christmas holidays, business is if anything on the side of quietness. Prices, however, remain unchanged, and are quoted as follows:—Bleaching Powder, according to market, £5 to £5 10s. Soda Crystals, basis price, 45s. Caustic Soda, 70 per cent. basis price, £7. Soda Ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5 5s. Sulphur: £4 15s. to £5 per ton.

Liverpool Market Report.

DECEMBER 21, 1898.

Exclusive of considerable sales of Castor Oil, both on the spot and forward, transactions do not offer much of interest. About 150 sacks of Chilian Beeswax changed hands during the week at good rates, and refined Chilian Spermaceiti also commanded a good figure. The rise in the price of Turpentine still continues, and it has now reached 31s. 6d. per cwt. In chemicals there had been but little doing, except in Borax, and that at slightly higher rates.

AMMONIA SALTS.—*Carbonate* continues very firm at 3d. per lb. *Sal ammoniac*: 35s. and 33s. per cwt. *Sulphate*: £10 2s. 6d. per ton.

BEESWAX.—Good business is reported, both for home and export in Chilian, of which 150 sacks have been sold at £6 12s. 6d. to £6 17s. 6d. per cwt.

CANARYSEED.—100 bags of Turkish have been disposed of at 28s. per 464 lbs.

COPPERAS—Is firm; 39s. and 37s. per ton.

COPPER SULPHATE—Is quiet at £18 7s. 6d. to £18 10s. per ton.

GUM.—Brazilian Arabic has been sold at 22s. per cwt., and Niger at 47s. 6d.

OILS (FIXED) AND SPIRITS.—*Castor* has been engaging some attention, and good amounts for both immediate and forward delivery have changed hands. Calcutta is 2 $\frac{1}{2}$ d. to 2 $\frac{3}{4}$ d. per lb., to arrive shortly; 100 cases sold at 2 $\frac{1}{2}$ d., and 1000 cases, deliverable February to June, at 2 $\frac{1}{2}$ d.; French, 2 $\frac{3}{4}$ d. to 2 $\frac{1}{2}$ d. per lb. Bombay: 100 drums sold at 2 $\frac{1}{2}$ d.; Madras, 2 $\frac{3}{4}$ d. *Olive* is getting firmer, and some holders have withdrawn in expectation of higher rates; Malaga has sold at £30 per tun. *Linseed* has risen a shade, and

Liverpool makes are quoted at 17s. 6d. to 18s. 6d. per cwt. Cottonseed is unchanged at 15s. 3d. to 15s. 9d. per cwt. for Liverpool refined oils. *Spirits of Turpentine* is exceedingly firm at 31s. 6d. per cwt.

POTASH SALTS.—*Chlorate* 3½d. to 3¾d. per lb. *Cream of Tartar*: Spanish sells at 72s. per cwt., French at 73s. per cwt. *Pearlashes* are nominal at 34s. 6d. to 35s. per cwt. *Potashes* are quiet at 25s. to 25s. 6d. per cwt. *Saltpetre*: Karachi from store has been selling at 17s. per cwt.; refined is scarce at 23s. per cwt.

SODA SALTS.—*Bicarbonate*, £6 15s. per ton. *Caustic*, 76 to 77 per cent., £7 12s. 6d. per ton. *Borax*, £16 to £16 10s. per ton. *Soda Crystals*, £3 per ton. *Nitrate* is in good demand at 7s. 6d. to 7s. 9d. per cwt.

SPERMACETI.—30 cases of *Chilian*, refined, sold at 1s. 1½d. per lb.

Manchester Chemical Report.

DECEMBER 21, 1898.

The market has again been very quiet, and there are few changes to report. Caustic Soda continues quiet, but some makes of Bleaching Powder are scarce, and more business is reported for delivery over next year. Ammonia Alkali, 58 per cent., has also been in fair request, and the figure quoted next year is £3 17s. 6d. per ton, on rails. Coal Tar products are somewhat dull. Carbohc Acid is quiet, but Benzols are somewhat firmer at 8½d. to 9d. for 50's to 90's. Anthracene is dull at 3¾d. for A quality, and 2¾d. to 3d. B. Pitch promises a better business for next year, and exports from the Ship Canal here have been, comparatively speaking, heavy. Holders are firm at about 21s. *f.a.s.* here. Brown Acetate of Lime is unchanged and steady. Arsenic remains dull at £16 to £16 10s. *ex ship*. Aniline Oil and Salt are in good demand at the recent advance. Chlorate of Potash is dull. Yellow Prussiate is firm at 6¾d. to 7½d. Green Copperas continues in demand for export, but quiet locally. The oil trade by the Ship Canal is advancing by leaps and bounds, and promises to become a big source of traffic.

EXTRACTS FROM CONSULAR REPORTS.

THE IMPORT RETURNS for the United Kingdom during the month ending October 31, for chemicals, dye-stuffs, and tanning substances show a decrease when compared with the same period last year of £16,581, while the exports of chemicals and chemical and medicinal preparations decreased £35,016. For the ten months ending with October the value of the imports is £522,518 less than for 1897, there being also a reduction in the value of the exports of £218,338.

THE NUMBER OF PRESCRIPTIONS COMPOUNDED at the dispensary of the St. Andrew's District Hospital, Grenada (Windward Islands), during 1897 was 7484, as against 5686 the preceding year. At the Carriacou Hospital, 4714 prescriptions were made up at the dispensary, as compared with 3081 in 1896.

THE MANUFACTURE OF CITRIC ACID is advocated by Vice-Consul Pignatorre, as a possible paying industry in Sicily. He gives two reasons why it should, at any rate, have a fair trial; one is that Sicily is the greatest orange and lemon producer in Europe, and the other, that it is almost the sole sulphur producer. Those who are opposed to the planting of this new industry do so on the ground that an undertaking of that kind must fail in Sicily or it would have been attempted before. As the Vice-Consul points out, this line of argument was taken by those who were adverse to the production of citrate of lime on the ground that it would not be profitable. He thinks that the numerous manufactories which have of late arisen in many parts of the island are a triumphant refutation of this assumption.

REPORTING ON THE TRADE AND COMMERCE OF ANCONA (Italy) for the year 1897, Vice-Consul A. P. Tomassini remarks that the imports of sulphates, acids and oxides from Great Britain largely increase every year. The quantity imported last year amounted to 1500 tons, while in 1896 it was only 926 tons. The total imports of chemicals amounted to 3622 tons, Austria-Hungary, Germany and Belgium sending 2122 tons, and the remainder from Great Britain.

PRACTICAL PHOTOGRAPHIC NOTES.

IT FREQUENTLY HAPPENS that it is desirable to use for illustration purposes a line drawing when the only available method of printing will not allow of the now common half-tone or screen block being used. A ready means of preparing line drawings from an ordinary silver print may, therefore, be useful, and the results are so pleasing, either as line drawings, that many may like to try their hands at it. Any silver print may be used, but the old albumin or bromide papers give the best results. The print need not be deeply printed or toned, all that is necessary is to obtain a distinct image. The lines of any building or object in the print may now be inked over with a fine drawing pen, using either Higgins' waterproof black ink or Windsor and Newton's process black. The drawing should be allowed to dry and then the silver image bleached out in the following:—

Iodine	10 g.
Potassium Iodide	40 g.
Cyanide	40 g.
Distilled Water to	1000 g.

A short wash after the image has disappeared will leave the line drawing intact.

FOR MAKING DIAGRAMMATIC LANTERN SLIDES, when it is not considered worth while to photograph them, ground glass is frequently used, but a better thing even than this is to coat a lantern glass with the following matt varnish:—

Sandarac	20 g.
Mastic	20 g.
Methylated Ether	1000 C.c.
Benzole	200 C.c.

and to draw the diagram on this with a good black-lead pencil when dry, and then varnish with the following, which makes the glass again quite clear:—

Sandarac	30 g.
Mastic	30 g.
Methylated Ether	1000 C.c.

TO CHEMISTS OF AN EXPERIMENTAL TURN OF MIND there is a field of research open which is likely to lead to considerable repayment—namely, in the manufacture of a celluloid film which is non-inflammable. Several accidents of late with kinematographs have induced the London County Council to impose such restrictions upon their use that the business has seriously suffered. To those who wish to experiment, the best way to set to work is to obtain a positive film, and treat this with something that shall render it non-inflammable or, at least, less inflammable than it is at the present time. Now the heat of the electric arc or limelight condensed on the film for fifteen seconds is sufficient to set the whole thing in a blaze. Whatever is used must not prejudice the transparency of the film, nor cause the gelatin to be sticky, nor cause the film to cockle. It is a subject well worth attention.

Obituary.

BENTLEY.—On December 14, John Thomas Bentley, Chemist and Druggist, Haworth. Aged 27.

HARDY.—On December 19, at Queens' College, Cambridge, Edward Croft Hardy, eldest son of Samuel Croft Hardy, Pharmaceutical Chemist, of Wandsworth Common, S.W., aged 22.

KANTHACK.—On December 21, Professor Alfredo Antunes Kanthack, Professor of Pathology in Cambridge University. He was elected Professor of Pathology on November 6, 1897, after the death of Professor Roy, which took place in the preceding October, and was subsequently elected to a professorial fellowship at King's College, Cambridge. He was a native of Brazil, and was born on March 4, 1863, being the second son of Emilio Kanthack, at one time British Consul at Para.

Receiving Order in Bankruptcy.

(From the London Gazette.)

Edward Whitmarsh (trading as Whitmarsh and Son), Aerated Water Manufacturer, 27, Salisbury Road, Plymouth.

Calendar for the Week.

Sunday, December 25. Christmas Day. Sun rises 8.8; sets 3.53.

Monday, December 26. Sun rises 8.8; sets 3.54.

Tuesday, December 27. 11.39 A. Sun rises 8.8; sets 3.54.

ROYAL INSTITUTION OF GREAT BRITAIN, Albemarle Street, London, W., at 3 p.m.—First of the series of Christmas lectures, adapted for young people, when Sir Robert Stawell Ball will lecture on "Astronomy."

Wednesday, December 28. Sun rises 8.8; sets 3.55.

Thursday, December 29. Sun rises 8.8; sets 3.56.

ROYAL INSTITUTION, at 3 p.m.—Second lecture on "Astronomy" by Sir R. S. Ball.

Friday, December 30. Sun rises 8.8; sets 3.57.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, Bon-Accord Hotel, Aberdeen.—Cinderella Dance.

Saturday, December 31. Sun rises 8.9; sets 3.58.

ROYAL INSTITUTION, at 3 p.m.—Third lecture on Astronomy by Sir R. S. Ball.

Trade Notes.

CHRISTMAS HOLIDAYS, 1898.—The Vinolia Co., Limited, Malden Crescent, London, N.W., intimate that its offices, warehouses, factories, and showrooms will be closed from Friday evening, December 23, until Wednesday morning, December 28.

MESSRS. C. J. HEWLETT & SON, 40, 41 and 42, Charlotte Street, London, E.C., announce that their establishment will be closed on Friday and Saturday, December 30 and 31, for the purpose of stock taking.

Publications Received.

ROUSE'S SYNONYMS FOR THE USE OF CHEMISTS, THEIR ASSISTANTS AND APPRENTICES. Pp. 226. Price 1s. London: Rouse Bros., 61, Charlotte Street, W. From the Publishers.

FORMULAIRE DES MÉDICAMENTS NOUVEAUX, POUR 1899 Pp. lxxv. + 334. Price 3 fr. Paris: J. B. Baillièrre et fils, 19, rue Hautefeuille. 1899. From the Publishers.

ON SO-CALLED SPASMODIC ASTHMA (considered from an entirely new standpoint with regard to its radical cure). By ERNEST KINGSCOTE, M.B., C.M., L.R.C.S. Edin. Pp. 18. Price 1s. net. London: H. J. Glaisher, 57, Wigmore Street, Cavendish Square, W. 1899. From the Publisher.

THE BRITISH JOURNAL PHOTOGRAPHIC ALMANAC AND PHOTOGRAPHER'S DAILY COMPANION, 1899. Edited by Thomas Bedding, F.R.P.S. Pp. 1508. Price, Crown 8vo., 1s. Cloth, gilt lettered, 1s. 6d. London: 'The British Journal of Photography,' 24, Wellington Street, Strand, W.C.

VITALITY: AN APPEAL, AN APOLOGY, AND A CHALLENGE, by LIONEL S. BEALE. Pp. 75. Price 6d. Reprinted from the *Lancet*. London: J. and A. Churchill, 7, Great Marlborough Street, W. 1898. From the Publishers.

DIGEST OF CRITICISMS ON THE UNITED STATES PHARMACOPOEIA: Seventh Decennial Revision (1890). Part II. Pp. vii. + 146. New York: The Committee of Revision and Publication of the Pharmacopœia of the United States of America (1890-1900). From the Publishers.

Advertisements.

(Received too late for Classification.)

VACANCY for Minor Student. Residential. Apply, F. E. J CRIDLAND, 192, Palmerston Buildings, E.C.

QUALIFIED ASSISTANT wanted. WOOD, Chemist, Aylesbury.

NOTICES TO CORRESPONDENTS.

All Communications for the 'Pharmaceutical Journal' must be Addressed to the Editor, 17, Bloomsbury Square, London W.C., and not in any case to individuals supposed to be connected with the Editorial Staff; no responsibility can be accepted unless this rule be observed. Communications for the Current Week's Journal should reach the Office not later than Wednesday, but news can be Received by Telegraph until 4 p.m. on Thursday.

ADVERTISEMENTS AND ORDERS for copies of the 'PHARMACEUTICAL JOURNAL' must be addressed to the Publishers, 5, Serle Street, Lincoln's Inn, London, W.C. Cheques and money orders should be made payable to "Street Brothers."

ARTICLES AND REPORTS sent for the Editor's approval should be accompanied by stamped directed envelopes, otherwise no guarantee can be given that they will be returned if not found suitable.

CORRESPONDENTS should write in ink, on one side of the paper only, and must authenticate the matter sent with their names and addresses—of course not necessarily for publication. No notice can be taken of anonymous communications.

DRAWINGS FOR ILLUSTRATIONS should be executed twice the desired size; clean sharp lines being drawn with a pen and liquid Chinese ink. Shading by washes is inadmissible. Photographs can be utilised in certain cases.

NAMES AND FORMULÆ should be written with extra care, all systematic names of plants and animals being underlined, and capital letters used to commence generic but not specific names.

QUERIES addressed to the Editor will be replied to in the Journal as early as possible after receipt, though not necessarily in the next issue. Replies cannot be sent by post, even though stamped envelopes accompany the queries.

EXCHANGE.

Prepaid Notices not exceeding thirty words are inserted at a fee of Sixpence, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, count as one word. The fee for use of Serle Street address is Sixpence. All communications should reach "PHARMACEUTICAL JOURNAL" Office, 5, Serle Street, Lincoln's Inn, W.C., not later than 10 a.m. on Thursdays.

OFFERED.

Robert H. Clarke's Specialties.—Lantern, with 4 in. condensers and 3 wicklamps, 17s 6d.; with 4 wick lamps, 18s 6d. Slides, sale or hire, Conquest of Soudan, Spanish American War. Catalogue free.—Robt. H. Clarke, Royston, Herts.

Wholesale and Retail Druggists: Advertiser is overstocked with superfine oil of lemon in 10-lb. coppers, and solicits offers; 1-lb. sample delivered free 2s. 9d.—Moss, 34, Avondale Road, Chorley.

Magic Lanterns, second-hand; triples and binoculars: oxyhydrogen microscope; marvellous pamphengos oil; lantern gives 14-ft. picture; 60,000 slides and effects; 4-in. 4-wick lanterns, 18s. 6d. each, bargains; illustrated list post free, 2d. Animated photographs: A splendid machine for £9 9s.—Hughes, Brewster House, 82, Mortimer Road, Kingsland, N.

Pharmaceutical Journal from January, 1881, to December, 1896, unbound, clean, and in good condition. What offer?—J. R., Pharm. Journal Office, 5, Serle Street, London, W.C.

Overstocked.—Twelve doz. Tetlow's Swansdown Powder, 6d., 3s. doz.; 3 doz. 1s. Gossamer Powder, 6s. doz.; 3 doz. 1s. Tressolia, 7s. 6d. doz., 2s. 6d. size 20s. doz.—Delves (Ltd.), 310, Stretford Road, Manchester.

Microscope by Joseph Long, monocular, two eye-pieces, 1 in., $\frac{1}{2}$, and $\frac{1}{4}$ objectives, coarse and fine adjustments, polariscope, live box, condenser, etc., in solid mahogany case, 5 guineas; also Mahogany Cabinet to hold 500 slides, 1 guinea.—Jackson, Crediton.

WANTED.

'Health and Disease,' by the late Dr. Benjamin Ridge. State price to—J. Spencer Palmer, Thornbury, Glos.

Microscope, Leitz or Leis, complete, for bacteriological work, with 1/12th oil immersion objective (approval necessary).—Johnson, Chemist, Hetton-le-hole.

Old Electric Lamps and Scrap Platinum for prompt cash.—P. Rowsell 9, Derwent Grove, East Dulwich, London, S.E.

COMMUNICATIONS, LETTERS, NEWSPAPERS, etc. have been received from Messrs. Andrew, Averill, Bailey, Brisley, Brown, Campkin, Cowley, Crosby, Dent, Doveaux, Dunning, Ferrall, Haasenstein, Hewlett, Hill, Holt, Jesson, Jones, Keen, Lawson, Marguarett, May, Park, Potter, Reynolds, Robinson, Rowell, Saver, Snell, Stanford, Stewart, Summers, Toone, Wall, Warren, Woolley, Young.

FRENCH NEWS.

[From our Paris Correspondent.]

THE CHRISTMAS DINNER offered by the English tradesmen of Paris to their English and French employés took place on Saturday night last. Amongst the speeches at dessert was one from Mr. Robertson, ex-President of the British Chamber of Commerce, in which the announcement was made that it could be taken as certain that the Queen would visit the Riviera next March, "a visit which would be a proof of the settlement of all diplomatic differences and the recommencement of the cordial relations which ought never to cease between the two neighbouring nations."

THE COUNCIL OF A CHEMISTS' ASSISTANTS' LITERARY ORGAN, called 'La Prévoyance Pharmaceutique,' having the welfare of chemists' assistants at heart, has just founded an association, the praiseworthy objects of which are to ameliorate and raise the position of pharmaceutical assistants and to create unity and solidity amongst its members; to form a clique of trustworthy and capable workers; to inculcate in its members habits of order, sobriety, economy, and frugality; in short, to bring it about that the title "Member of the Prévoyance Pharmaceutique" shall carry with it a guarantee of morality, and fit the holder of such for the honourable position he is called upon to take up in his profession. And whilst elevating the standard of the assistant, the Association also aims to draw more closely together the bonds of union between employer and employé, and to bridge over that gulf which unfortunately, though for no conceivable reason, appears to divide the two. The Council, moreover, formulates an appeal to the employers, urging them to come to the aid of their none too happy and fortunate assistants, and not remain insensible to any means capable of opening up a way whereby they may enjoy the consideration which they unquestionably merit. This, the Council point out, can only be realised by union and a give-and-take policy. But "union" amongst the assistants is the first essential to the realisation of their common aims, and with a warning "woe to the isolated," admonishes all assistants to become members of the association without delay. The Council makes it clearly understood that "union of members," in this as in other cases, is the magic means to the end, and it would be well for the English readers of this article (who bewail the onslaught of the illicit competition by which they are assailed, through lack of union amongst themselves) to accept this fact and endeavour to recruit new members for the Pharmaceutical Society, for, if all assistants and employers in Great Britain became members of the Pharmaceutical Society, and so consolidate interests and strengthen the hands of the Society, much might be done to obtain the legislation which the craft so sorely needs.

SUPPRESSION OF SPECIALTIES.—Messieurs Denize and Maréchal have obtained the adoption of the following proposition successively by the General Association and by the Congress held at Paris, November 18, "That the pharmacien, being essentially responsible, should not deliver to the public any medicament (serum and mineral waters excepted) other than such as bear his label and are given under his own seal. Moreover, any advertisement or announcement bearing indications as to medical treatment is strictly forbidden."

TREATMENT OF CHLOROSIS BY FERRUGINOUS SUBCUTANEOUS INJECTIONS.—Monsieur Birgelen has recently employed in four test cases of chlorosis and anæmia subcutaneous injections of 40 centigrammes of a 10 per cent. aqueous solution of oxy-citrate and ammonio-citrate of iron. The injections were made, with full aseptic precautions, in the arm, and, to avoid any untoward results, solutions less than a week old were used. The local reaction following the injection was generally fairly marked, a pimply tumefaction often being produced, which resembled a hard nut, and was painfully sensible to pressure. In one instance, after an injection of the oxy-citrate of iron, intense inflammation ensued, which culminated in an abscess. In two other cases exceedingly satisfactory results were obtained, and a rapid amelioration characterised by an augmentation in the number of and the richness in hæmoglobin. A fourth case might be regarded as unsuccessful, inasmuch as the patient was so affected by the irritation which ensued that the treatment had to be discontinued. In conclusion, the results obtained in these cases are not so

favourable as might have been hoped, still the author considers the injections might nevertheless be employed with advantage where the administration of iron by the stomach is contra-indicated. In such cases, the ammonio-citrate of iron (which, however, is not beyond reproach), should for preference be employed.

MUSHROOM JUICE AS A VACCINE AGAINST VIPER VENOM.—We have hitherto been wont to regard the humble mushroom only in the light of a fitting adjunct to beef steaks, etc., but we now learn that tickling the palate is the meanest of the rôles which this succulent agaric is destined to play in the affairs of man, for Monsieur Phisalix informs us that the juice of the mushroom has been employed by him in no less than 200 experiments as vaccine, producing the same symptoms as the venom of viper bites. He prepares the vaccine in the following simple manner:—Having cleaned the mushrooms as well as possible in several washings of water, he cuts them up into small pieces and macerates them in their own weight of chloroform water for twenty-four hours. The liquor is then drawn off and filtered through chemically pure filter paper. It has a neutral reaction, a pleasant and agreeable odour, and an insipid taste. In colour it is at first brown, but quickly deepens, until it finally assumes an inky blackness. It keeps well in stoppered bottles if a drop or two of chloroform be added. Respecting its physiological action, the author assures us that it is not so inoffensive as one might believe, *à priori*. A dose of 10 cubic centimetres inoculated under the skin of a guinea-pig's thigh produces an œdematous swelling, which disappears in five or six days. At the same time the temperature rises from $\frac{1}{2}$ to 1 degree. If a stronger dose (20 to 25 C.c.) be employed, the local action becomes more pronounced, the œdema spreads to the abdomen, and sloughing sometimes supervenes. The temperature falls gradually (1 to 2 degrees) only to rise again rapidly. The general phenomena are more accented when the maceration is injected warm into the peritoneum, the animal being often seized with nausea, and falls on its hind-quarters. The temperature falls four or five degrees, and remains so for twenty-four hours, the stomach is hard and sensitive to the touch. If, however, injected into the veins of a rabbit, the liquid produces, even whilst injecting it, violent shocks, which intensify in proportion as the dose is increased. Generally 15 to 20 C.c. suffice to produce death. The animal falls on its flanks, agitated by convulsions, and asphyxia ensues in a few seconds. If the thorax be at once opened, the heart will be found to be distended with blood, immobile, and all the veins swollen. The blood is black and coagulates rapidly. In the ventricles, small clots are already observed. Allowing a few minutes to elapse before making the autopsy, the coagulation will be completed in the vessels, and one can withdraw from the heart clots which reach into the aorta and pulmonary artery.

THE MAINTENANCE OF A HIGH TEMPERATURE (120° C.) for twenty minutes does not completely destroy the toxic properties of the juice; for if this heated juice be injected whilst still warm into the peritoneum the temperature falls, whereas if injected under the skin it, on the contrary, rises. As to its vaccinating properties, a guinea-pig which has received a 5 to 20 C.c. injection under the skin can, after a lapse of a few days, support a dose of deadly viper venom. This immunity, already great, is capable of being increased, and if after twenty or fifteen days the animal be submitted to two or three inoculations of the juice, the dose of viper venom may be increased one-fifth without any toxic effect whatever being produced. The duration of this immunity is from two to four weeks. Notwithstanding all the antiseptic precautions taken, the juice often produces a mortification of tissue, followed by a suppurating wound. Sometimes graver affections are developed (tetanus, etc.), followed by death. This was thought due to a microbic growth rather than to the juice, which was subsequently proved. However, all fear of microbic infection is got rid of by heating the juice to boiling point, which not only destroys the microbe without diminishing the efficacy of the vaccine, but rather seems to increase it. It would be interesting to separate and know what are the toxic and vaccinating substances contained in the juice of the mushroom, and since one reads in the *Pharmaceutical Journal* so much concerning arrow poisons, perhaps some clever seeker after knowledge may turn his time and brains to the development of this interesting subject, and inform us more fully as to the rôle which mushrooms might play in the question of immunity.

IRISH NEWS.

[From our Belfast Correspondent.]

WHETHER "WATER-FINDING" can be considered a justifiable extension of the physician's prescriptive power of tapping for water is open to question. It appears, however, that the medical superintendent of Armagh Asylum advised the governors to employ a diviner whose fee was £5. The Local Government Board, considering that the services of a so-called "water-finder" could not be legally paid from public funds, surcharged the amount to three governors; but the doctor signalled his devotion to the divining-rod by indemnifying the signatories.

'THE BRITISH MEDICAL JOURNAL' AND 'LANCET' have laboured very assiduously to promote their view of the telluric origin of the epidemic in Belfast. The latter's Commissioner has indeed ransacked the medical literature of Europe to discover the causation of an epidemic which lowered the general death-rate. His first report announced that there was "comparatively little sickness" amongst the ship-building portion of the community, and he explained this by a theory akin to Sadler's 'Law of Population.' He now chronicles that "typhoid fever has been rife" in that very district. A gentleman who says and unsays so dogmatically is certainly worthy of all credence. The former journal objects to the "water-borne" theory because the exemption of some districts from the disease is against it, and the fact that the jail and asylum have escaped the contagion. It was recently stated that six cases have occurred in those institutions, and the "unequal distribution" of the disease might be explained by the fact that it is the Stoneyford — not the Woodburn — water supply against which Professor Lorrain Smith's indictment is directed. The statement of Alderman Dr. Bigger,

who suspected the water from the first, is opposed to endemicity. The examination of the water has indeed caused some divergence of judgment amongst specialists. The presence of the *B. coli communis* is, however, not disputed, the crux being whether it is concerned in the infection of typhoid. But the various high authorities invoked on each side forcibly remind one that medical science is still in some respects conjectural. Dr. Hodges and Mr. Barklie, F.I.C., after a very painstaking examination, conclude respectively that the "water is not polluted with animal matters," and that "it is at present purer than at any previous period." Professor Letts, "on the result of repeated analyses" during the past twenty years, considers the water below the standard of purity. The "albuminoid ammonia" has often risen above 0.02, when it should not exceed 0.01, the "oxygen absorbed" (0.3-0.4) and the organic nitrogen (above 0.02) are excessive.

THE ULSTER MEDICAL HALL (late Messrs. Davidson and Leslie), after being refurbished, has opened as Davidson and Hardy. The

firm is under the management of Mr. Hardy, who hails from Dublin. This is a further proof that in Ireland business men tend northwards as professional men travel south, though some would not be prepared to admit the latter inference whilst the commercial capital boasts a Sinclair and M'Keown.

A CASE OF POISONING by drinking a belladonna and ammonia liniment from a whisky bottle occurred in Londonderry (Christmas Day). Happily a fatality was averted, but this again points to the desirability of having a poison bottle in general use.

THE DEATH OF MR. WALTER C. JAGO, Belfast, has just taken place. Deceased was a well-known dentist, and had an extensive practice.

MR. JAMES HOGG, whose establishment antedates the 1875 Act, and his son, Mr. Samuel Hogg, L.P.S.I., Belfast, have amalgamated into a limited company.

MR. J. TOWNSEND FRENCH, the gentleman who possessed the wonderful epileptic "cure" has been compelled to enter the bankruptcy court.

This is a significant sign of the times. It is evident that the public cannot be so easily gulled as heretofore. The nation has bought and is buying its experience dearly, but perhaps in the long run it is better thus than legislating against a crop of hydra-headed villainies, which spring up like mushrooms and spread like weeds. The patent vendor (of the quack variety), by repeating himself so often and in so many infallible forms, has impressed the British public unfavourably. It requires such enormous sums in advertising (the pharmacist indeed can gauge to a nicety when a particular district is being regaled with the wonderful "narratives") and

Seen During Christmas Week.

Errand boy found at a quiet game of billiards in the drug cellar, having constructed the edge and pockets of pil. hyd. mass, the cue being a glass stirring rod, and the balls pearl-coated dog balls.

in meeting the tactics of ambitious and unscrupulous rivals, that it proves the old maxim that "excess is its own cure." To intending vendors of specifics it should be mentioned that a disease should be selected which is fairly common. Epilepsy, being confined to a small part of the population, necessarily yields but a small number of purchasing victims.

THE ULSTER AMATEUR PHOTOGRAPHIC SOCIETY at a recent meeting were treated to a dissertation by Mr. Nahum Lubosch, of Messrs. J. J. Griffin and Sons, Ltd., London, upon the new paper called Velox. Its possessing in gaslight what was usually considered the distinctive feature of the dark-room, and its superiority to ordinary bromide platinotype in preserving the image directly on the surface of the medium were referred to.

THE SALARY OF DR. HODGES, F.I.C., city analyst of Belfast, has, owing to the extended boundary, been increased from £250 to £300.

SCOTTISH NEWS.

GLASGOW SCHOOL OF PHARMACY.—The second annual supper of the above School was held on Friday, December 23, at the North British Station Hotel, Glasgow. Mr. John Lothian, Principal, occupied the chair. Messrs. Gilmour and Macbride acted as croupiers. There was an attendance of nearly one hundred, including Messrs. W. L. Currie (President of the Glasgow Pharmaceutical Association), James Robb, and Kidson Hunter (Principal, Otago College of Pharmacy, Dunedin, N.Z., etc. Mr. Gilmour proposed the toast of "The Pharmaceutical Society," and remarked that students were apt to form an erroneous conception of the Society because it was an examining body. It would be to the best interests of everyone, on receiving the qualification, to avail themselves of the privileges of membership. Mr. Currie replied, and in an eloquent and convincing speech defined the aims of the Society and said that it was worthy of their fullest confidence and support. The toasts of "Mr. Lothian" and "The Glasgow School of Pharmacy" were proposed by Messrs. Robb and Taylor, and received with extraordinary enthusiasm. Mr. Lothian suitably replied. Mr. Kidson Hunter spoke of the condition of pharmacy in New Zealand, and gave the students some words of advice. Other toasts were: "The Students," proposed by Mr. Cockburn and acknowledged by Mr. Boyd; "The Croupiers," proposed by Mr. Riddell and replied to by Mr. Macbride. An excellent musical programme was contributed by the students and their friends.

GLASGOW AND WEST OF SCOTLAND SCHOOL OF PHARMACY.—On Tuesday last the students of this school visited, with their Principal (Mr. Thomas S. Barrie), the Rockville Oil Mills of Messrs. Pearson, Beckett and Co. Mr. Pearson himself very kindly conducted the party over the works and explained in graphic style the various stages from the raw to the finished product. Taking linseed for example, the seed (imported preferably from India) is thrown into a hopper and thence allowed to fall between steel rollers, arranged one above another, where it is crushed, forming *linum contusum* B.P. The meal is then warmed in a steam jacketed "kettle," spread in a thin layer on sack-cloth, and transferred to an hydraulic press. The pressure to which it is submitted is enormous—a ton and a half to the square inch—and under it the oil runs away from the seed like a river, collected and pumped into storage tanks capable of holding 150 tons of oil at one time. The residue is "linseed cake," and is used for feeding cattle. Pure linseed oil, newly expressed, is a clear, light brown coloured liquid, sweet as cream, with the characteristic taste and odour of the seed. It is largely used in the paint trade when boiled with litharge or other dryers. The extraction of cottonseed oil was afterwards shown and found to be similar to that of linseed oil, except that the hard seeds have to be further crushed under heavy revolving stones before being warmed. Cottonseed oil as expressed is a bright red liquid, which is refined to produce the ordinary oil of the shops. It is used to adulterate olive oil, and bulks largely in the composition of such foodstuffs as margarine. The visit was unanimously regarded as a "rare treat," and the students left the mills laden with specimens.

ENGLISH NEWS.

MR. ALFRED WALTER SIKES, B.S., B.Sc., chemist and druggist, was recently successful in passing the M.D. examination of the University of London.

FORMALIN AND MILK.—At the Liverpool Police Court, on Wednesday, December 21, Samuel Wainwright, a milk dealer, was summoned for having sold separated milk which was not of the nature, substance, and quality demanded. The defendant, it was stated, was asked for separated milk, and supplied a mixture of that with formalin. The use of formalin, it was explained, enabled stale milk to be sold as fresh and tended to obviate the necessity of cleanliness in the dairy. It also rendered milk indigestible with an irritant action on the mucous membrane, especially where young and delicate children were concerned. Mr. M. Collingwood Williams, public analyst, and Professor Boyce, Professor of Pathology at the University College, said that

formalin was quite unnecessary and most objectionable when used in milk. Though it was not as yet very common, its use was increasing in Liverpool. On the other side, Mr. Davies, analyst, and Dr. Barrow were called to prove that the proportion of formalin stated to have been used in the milk was not injurious to health. The magistrate declared himself on the side of the cow against the chemist. He thought formalin was injurious to health, and ought not to be put into milk. A fine of £5 and costs was imposed. Notice of appeal was given.

DEFICIENT BELLADONNA PLASTERS.—At Lambeth Police Court, on December 22, Edward Thomas Pritchard, secretary to Day's Metropolitan Drug Company, residing in St. Lawrence Road, Southampton, was summoned at the instance of the Camberwell Vestry for selling, to the prejudice of the purchaser, belladonna plaster which was not of the nature, substance, and quality of the article demanded by the purchaser. Dr. F. Teed, public analyst for Camberwell, had given a certificate showing that the plaster was only 40 per cent. of the strength laid down in the British Pharmacopœia. For the defence it was stated that the company bought the goods with a warranty from the makers that they were up to the standard of the British Pharmacopœia, and the magistrate, after going through the correspondence, said he had come to the conclusion that he ought to dismiss the summons upon the question of the guarantee. He could not help thinking that the defendant company, having bought an article about which they were by no means certain, pressed the American manufacturers and their agents to give them something to protect them on this side of the Atlantic from a prosecution under the Sale of Food and Drugs Act. There came a time when it could not be denied that they got a guarantee that the article was within the terms of the British Pharmacopœia. He dismissed the summons all the more willingly because, after this case and after the evidence which had been given, neither this company nor any other company would be able to say that these American belladonna plasters were of the strength prescribed by the British Pharmacopœia. Perhaps the effect of the publicity which would be given to the case would be to stop the sale in this country of those particular belladonna plasters.

LAUDANUM POISONING.—William Smith (54), a ship's steward, of Canning Town, died on Saturday, December 24, from the effects of an overdose of opium. It appeared at the inquest that he suffered with his heart, also from insomnia, and was in the habit of taking laudanum to procure sleep. The jury returned a verdict of "Death from misadventure."

AMMONIA FOR ANISEED.—A bottle labelled "Children's Cough Syrup" cannot be considered a proper receptacle for poison, yet the wife of a railway goods clerk named Clayton, of Peckham, appears to have used a bottle so labelled for ammonia, and, moreover, kept it on a shelf together with a bottle of aniseed water. As a result a woman who had temporary charge of Clayton's three-months-old child took the wrong bottle and gave the child a dose of ammonia in mistake for aniseed water, death afterwards occurring from suffocation. An inquest was held, and a verdict of "Accidental death" returned.

FATAL NEGLIGENCE TO SHAKE THE BOTTLE.—An inquest was held at the Royal Lancaster Infirmary, on Wednesday, December 21, with respect to the death of a child aged five years, the daughter of a porter at the Infirmary. From the evidence it appeared that the father applied to the dispenser of the establishment for some medicine for whooping cough, and was supplied with a mixture of bromoform, mucilage, and water, the bromoform being in the proportion of three minims to a dose. The medical evidence was to the effect that this was a proper medicine for the complaint, but the directions to "shake the bottle violently before using" had evidently been neglected. A verdict of "death by misadventure" was returned.

OVERDOSE OF PRUSSIC ACID.—At the resumed inquest, held at All Saints' Mission Room, Blackheath, on December 15, on the body of Guy John Edward Castell (32), assistant to Mr. Bloodworth, chemist, until recently of 28, Montpelier Vale, Blackheath, Dr. F. Womack, Toxicological Analyst to the London County Council, said that he had examined the contents of the stomach. He found therein a small quantity of prussic acid, but not sufficient to cause

death. He was of opinion that some of it had evaporated. It was not an uncommon thing for a person who understood the properties of prussic acid to take it in small quantities, or prescribe it for others.—Mr. Batsford, a brother-in-law, said that deceased was of a cheerful disposition. He had told him on several occasions that he was in the habit of taking drugs in small quantities in draughts as a stimulant. He was about giving up chemistry and going to practise dentistry.—Dr. Miller having stated in evidence that deceased's lungs were very consumptive, the jury returned a verdict of "Death by misadventure from having taken an overdose of prussic acid."

OPIUM POISONING.—An inquest was held at the Happy Home Temperance Hall, Bury, on Monday, December 12, on the body of Joseph Brierley (66), an iron dresser, of Bury, who died on Saturday, December 10. Dr. Johnson said he had attended the deceased during his lifetime for rheumatism and sciatica. He had never complained of sleeplessness, but had appeared to be depressed in spirits since his wife died. He had examined the body since death, and found that there were symptoms of opium poisoning. The bottle produced had apparently contained diluted laudanum; but witness could not say to what extent it had been diluted. After a short conversation, during which it was suggested that the deceased had been in the habit of taking laudanum to promote sleep, and that he had taken an overdose, the jury returned a verdict to the effect that death was due to an overdose of opium taken by misadventure.

POISONING BY COCAINE.—Mr. E. L. Corlyon held an inquest at Trefusis, Flushing, on Tuesday, December 20, concerning the death of George Price Pizey, a gentleman of eccentric habits, found dead on Monday by his gardener, a bottle of cocaine, three-parts full, being found by his side. It was stated that deceased was in the habit of taking cocaine to deaden pain. Dr. Knuthsen made a post-mortem examination and found deceased was fairly healthy, there being no organic disease. Death was due to an overdose of cocaine. A verdict in accordance with the medical evidence was returned.

CHLORODYNE POISONING.—On Wednesday, December 14, at the Newington Coroner's Court, Mr. G. P. Wyatt held an inquest on the body of Harry Woodland (29), a tailor's cutter, of Walworth. The mother said that deceased suffered from insomnia and was in the habit of taking sleeping draughts. Shortly before 11 o'clock on the previous Saturday night he told her he had taken a dose of chlorodyne. She picked up the bottle, and, noticing that the greater part of the contents was gone, at once sent for a medical man, but death took place early the following morning. The bottle, a 4-oz. one, was produced, and, seeing how little was left of the contents, the Coroner remarked that he had taken it wholesale, and that the inscription on the bottle said that it was perfectly safe, but poison. He further remarked that the compound ought to be labelled the same as other poisons. A verdict of "Death from misadventure" was returned.

PHARMACEUTICAL SOCIETY.

MAJOR EXAMINATION QUESTIONS.

PHYSICS.

Wednesday, December 28, 1898.—Time allowed, from 10 to 1.

[Six questions only are to be attempted.]

1. What do you understand by the relative weight (specific gravity) of a body? How would you determine the specific gravity of (a) a piece of cork, and (b) a lump of sugar?
2. Describe the construction of three different forms of galvanic batteries and explain in shortly the chemical changes which occur during their action?
3. Explain what is meant by conduction, radiation, and convection of heat. Describe an experiment showing the difference between conduction and convection.
4. The co-efficient of the expansion of air is 0.003665. Explain the meaning of this and find what the volume of 273 cubic feet of air measured at 0° C. would be if heated to 100° C.
5. You are given a voltaic cell in a closed box, but with the terminals exposed. How would you determine which was the positive and which the negative electrode?

6. Describe two forms of hydrometer and explain the methods of their use.
7. Describe an experiment to show that water is a bad conductor of heat.
8. Describe the effects of difference in pressure on the boiling point of a liquid. State how you would show this effect experimentally with (a) water, (b) ether.
9. A current of electricity is passed through three separate solutions of (a) copper sulphate; (b) silver nitrate; (c) potassium chloride; describe accurately what changes will take place in each case.

CHEMISTRY.

Wednesday, December 28, 1898.—Time allowed, from 2 to 5 p.m.

[Six questions only are to be attempted.]

1. The equivalent of magnesium is 12. Explain clearly what is meant by this statement and describe two methods by which the equivalent of this metal could be determined. Sketch the apparatus you would employ.
2. How is hydrogen peroxide prepared and what are its properties? What impurities might be present in the commercial solution of this substance and how would you detect them; how would you estimate the quantity of peroxide in a given sample?
3. 0.75 gram. of crystallised ferrous sulphate reduces 20 C.c. of a solution of potassium permanganate in presence of dilute sulphuric acid. What weight of permanganate is contained in 1 C.c. of the solution, and how much water should be added to 50 C.c. in order to obtain a decinormal solution?
4. Point out the more important differences between "yellow" and "red" phosphorus, and explain the relation between these two substances. What are the principal uses of "red" phosphorus, and why is it often employed in preference to the yellow variety?
5. What is the principal ore of mercury? How is the metal extracted from this ore and how is it purified? Starting with the metal, how would you prepare, and purify, samples of (a) mercurous chloride, (b) mercuric chloride, (c) mercuric oxide, (d) mercuric iodide?
6. Write an account of the process you would use for the preparation of about 10 C.c. of acetaldehyde or of anhydrous formic acid; sketch the apparatus you would use.
7. Give the names and formulæ, and describe the properties of three organic bases, one of which belongs to the fatty series; give equations showing how each of these bases behaves when treated with (a) nitrous acid, (b) acetyl chloride, (c) a mixture of chloroform and alcoholic potash.
8. Write the constitutional or graphic formulæ of malic, tartaric, and succinic acids; describe reactions by which these compounds may be converted into one another, and indicate a process by which succinic acid could be built up from its elements.
9. What are the methods generally employed for the conversion of aromatic hydrocarbons into their halogen derivatives? Compare and contrast the behaviour of ethyl bromide, bromo-benzene, and benzyl bromide.

BOTANY AND MATERIA MEDICA.

Thursday, December 29, 1898.—Time allowed, 10 a.m. to 1 p.m.

BOTANY.

1. Give an account of the structure and mode of development of the sporangium of any Fern. What variations in the structure and development of sporangia are known to you among vascular Cryptogams?
2. Describe fully the structure of the Bark in any plant with which you are familiar.
3. Write an illustrative account of the relationships of form in the higher plants to external stimuli such as light and gravity.

MATERIA MEDICA.

1. What are the geographical sources of Coca Leaves? Name the official varieties and state any differences by which you could distinguish them, either by the aid of a lens or by means of the microscope.
2. By what means would you ascertain whether samples of the following were of the quality and variety official in the B.P.: viz., Oil of almonds, oil eucalyptus, powdered jalap, and Barbados aloes?

PRACTICAL BOTANY AND MATERIA MEDICA.

Thursday December 29, 1898.—Time allowed, from 2 to 5 p.m.

BOTANY.

1. Describe the external morphological characters of the specimens A and B. Refer the plants C and D to their natural orders, giving reasons for your references.
2. Make one transverse section of E. From what group of plants and what part of the plant is it derived? Sketch your preparation and give explanatory references to your drawing.

MATERIA MEDICA.

1. Prepare transverse and longitudinal sections of the Bark provided, and leave one of each for inspection, with a sketch and full description of the same.
2. Is this powdered Cinchona Bark genuine or adulterated? State your reasons for the opinion expressed.

Obituary.

HORN.—On December 20, David Horn, Chemist and Druggist, Rhynie, Aberdeenshire. Aged 86.

LANGMAN.—On December 22, Peter Langman, Pharmaceutical Chemist, Chatteris. Aged 67.

WELLS.—On December 16, at Cardiff Road, Norwich, Frederick George Rising Wells, late Dispenser to Dr. Muriel, of that city. Aged 26.

PRACTICAL PHOTOGRAPHIC NOTES.

WITH REGARD TO AMMONIO-CITRATE OF IRON, Valenta, of Vienna, last year tested the ordinary brown scale, and found its composition to be $4\text{FeC}_6\text{H}_5\text{O}_7 \cdot 3(\text{NH}_4)_3\text{C}_6\text{H}_5\text{O}_7 \cdot 3\text{Fe}(\text{HO})_3$, and he states that it is, therefore, a basic salt. Merck, of Darmstadt, has introduced a green salt, which is a mixture of neutral ammonium ferric citrate, acid ammonium ferric citrate, and ferric citrate, and has the formula $5\text{FeC}_6\text{H}_5\text{O}_7 \cdot 2(\text{NH}_4)_3\text{C}_6\text{H}_5\text{O}_7 \cdot \text{NH}_4\text{C}_7\text{H}_7\text{O}_7 \cdot 2\text{H}_2\text{O}$. The advantage of the green salt is that it gives a paper eight times as sensitive as the brown, it keeps better, and the sensitising solution also keeps better. So far as we know, this form cannot be obtained in England. If this green salt be used the proportion of potassium ferridcyanide must be reduced, the best formula being—

A.	
Green Ammonio-citrate of Iron	12.5 g.
Distilled Water.....	50 C.c.
B.	
Potassium Ferridcyanide	4.5 g.
Distilled Water.....	50 C.c.

Mix in equal quantities.

IT MAY POSSIBLY BE WORTH WHILE to place on the market a solution for sensitising paper and other materials, such as has been lately put out commercially, and this may be readily done by dissolving silver nitrate and citrate, carbonate, tartrate, or phosphate in liq. ammonia fort. The following formulæ will be found to yield satisfactory results:—

Silver Nitrate	170 g.
Citric Acid	21 g.
Ammonium Chloride	25 g.
Distilled Water	500 C.c.

Dissolve the silver in half the water, and the acid and chloride in the remainder, and mix the two solutions, and then add liq. ammonia fort. 0.880, till, on stirring, the whole of the precipitate is dissolved, and then dilute with sufficient water to make 1700 C.c.:—

Silver Nitrate	170 g.
Tartaric Acid	18 g.
Ammonium Chloride	25 g.
Distilled Water	500 C.c.

or

Silver Nitrate	170 g.
Sodium Phosphate	35 g.
Ammonium Chloride	25 g.
Distilled Water	500 C.c.

The procedure of making is precisely the same as in the case of the citrate.

DURING THE WINTER MONTHS the attention of amateurs is more generally attracted towards the making of enlargements and lantern slides and developers for bromide papers, and lantern slides should find ready sale. A formula which has given every satisfaction for enlargements is the following:—

A.	
Mctol	10 g.
Sodium Sulphite	100 g.
Potassium Bromide	1.25 g.
Distilled Water	to 1000 C.c.
B.	
Potassium Carbonate	100 g.
Distilled Water	to 1000 C.c.

For use mix 3 parts of A and 1 part of B. This may be used also for lantern work.

ANOTHER very satisfactory one is—

A.	
Eikonogen	12 g.
Sodium Sulphite	250 g.
Distilled Water	1000 C.c.
B.	
Potassium Carbonate	80 g.
Potassium Bromide	2 g.
Distilled Water	1000 C.c.

For use mix 3 parts of A to 1 part of B.

MARKET REPORT.

The quotations here are given in all cases the lowest cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.

London Report.

DECEMBER 29.

As might have been expected, business has been practically at a total standstill during the past few days, and no revival can be looked for until the commencement of the New Year, after the completion of the annual stock-taking. With the exception of an advance of 1d. per lb. in price of Sweet Oil of Almonds, and an advance in price of one of the less favourably known makers of Cocaine Hydrochlorate, and the continued advance in value of Cascara Sagrada, there are no changes of any importance, or, in fact, any changes at all to report, the situation may be summed up in the short words, "nothing whatever doing." We give some particulars of prices as follows, and wish our readers "A Happy and Prosperous New Year."

ACETANILIDE.—Is quiet, price of the combined makers being 11d per lb. for 5-cwt lots, smaller quantity being quoted at a proportionately higher figure.

ACID CARBOLIC.—This article, in common with so many others at the moment, is exceedingly quiet at 6½d. to 6¾d. per lb., according to quantity and make for 35.36° C. *Ice Crystals* in 2½ cwt. drums and overcasks; 39-40° *Ice Crystals*, 7d. to 7¼d.; 39-40° *Detached Crystals*, 8d. to 8¼d. for bulk packing. *Crude* is rather dearer at 2s. per gallon for the 60° F. and 2s. 4d. for 75° F. *Liquid*, 95 per cent. of pale straw colour, 1s. 1d. to 1s. 3d. per gallon in 40-gallon casks.

ACID CITRIC.—Is quiet at 1s. 1d. per lb. on the spot for English and 12¼d. per lb. for foreign, *c.i.f* terms.

ACID OXALIC.—Is quiet at 3d. to 3½d. per lb., delivered in London.

ACID TARTARIC.—Weak at 1s. 0½d. per lb. for English and 12d. per lb. for foreign.

ALMOND OIL.—Makers of the sweet oil of almonds advanced their price to 1s. 5d. per lb., in consequence of the continued scarcity and dearness of the raw material.

ALUM.—Loose lump is unchanged in value, being quoted £5 10s. per ton, while for ground in bags £6 2s. 6d. per ton is asked.

AMMONIA COMPOUNDS.—*Bromide* steady at late advance to 2s. 2d. per lb. *Carbonate* without change at 3d. to 4d. per lb, according to quantity and packing. *Muriate* is quoted 25s. to 27s. 6d. per cwt. for the white, free from metals quality, and 30s. to 32s. 6d. per cwt. for the chemically pure, small crystals. *Iodide* steady at the late advance of 3d. to 13s. 10d. per lb. *Oxalate*: Price is unchanged at 5½d. per lb. *Sal ammoniac*: Quiet at 33s. to 35s. per cwt. for the sublimed and 35s. to 37s. 6d. for the crushed, for batteries. *Sulphate* steady, grey prompt 24 per cent., London, Hull, and Leith £10 2s. 6d. per ton; Beckton, Jan.-June, £10 5s.; Beckton terms £10 per ton. *Sulphocyanide*: 1s. to 1s. 2d. per lb., according to quantity.

ANTIPYRINE.—*Dr. Knorr's* article is unchanged in price, the cutting, however, in *Phenazone* continues and some very low quotations have been reported; the *Star* brand, however, continues to hold its ground.

ARSENIC.—Is quoted 18s. per cwt. for powder and 34s. per cwt. for lump.

BLEACHING POWDER (CHLORIDE OF LIME)—Steady at £6 per ton for English make.

BORACIC ACID.—Firm at 26s. per cwt. for *crystals* and 28s. per cwt. for *powder*.

BORAX.—Unchanged at 16s. 6d. per cwt. for *crystals*, and 17s.

per cwt. for *powder*, market being firm in consequence of the scarcity of supplies and the firmness of the makers.

BROMIDES—Are firm at late advance to 1s. 10½d. per lb. for *Potassii Bromide*, 2s. 1½d. per lb. for *Sodii Bromid.*, and 2s. 2d. per lb. for *Ammon. Bromid.* *Bromine* unchanged at 2s. 1d. per lb. in 60-lb. cases.

CASCARA SAGRADA.—Market is very firm, the few parcels which were offering at 25s. per cwt. having been bought up, holders now ask 26s. to 27s. for new bark, and 2s. 6d. to 5s. per cwt. more for old bark. As far as can be judged, the article is likely to go dearer, present price being comparatively speaking still quite moderate.

CHLORATE OF POTASH.—*Crystals* are quoted at 3¾d. per lb. spot London, *powder* 4d. per lb.

COAL TAR DISTILLATION PRODUCTS.—*Toluol* is lower at 1s. per gallon for commercial and 1s. 6d. for pure. *Benzole* is slightly dearer at 9½d. per gallon for 50 per cent. and 9d. for 90 per cent. *Crude Naphtha*: 30 per cent. at 120° C., 4d. per gallon. *Solvent Naphtha*, 95 per cent. at 160° C., 1s. 7d. per gallon; 90 per cent. at 160° C., 1s. 3d.; 90 per cent. at 190° C., 1s. 3d. per gallon; *Pitch*: 25s. per ton, *f.o.b.* *Tar*: refined, 12s. per barrel, 1¾d. per gallon; crude, 12s. per barrel, 1¾d. per gallon.

COCAINE—Is very firm, it being reported that one maker has advanced his price to 11s. per oz. for 100-oz. lots in 25-oz. tins, and in view of the position and prospects of the *crude* drug it would appear probable that a further general advance in price is more than possible. Even at 11s. per oz. the article is still cheap as compared with prices which formerly ruled, and people who are generally right in their views have not failed to take advantage of late low price to secure and lay by a good stock.

CODEIA—Unchanged, makers still quoting 12s. 6d. per oz. for the *pure*, and 11s. 6d. per oz. for the *Phosphate* and *Sulphate* salts.

CREAM OF TARTAR.—First white *crystals* on the spot are quoted 73s. 6d. per cwt.; *powder*, 75s. 6d. to 77s. per cwt.

COD-LIVER OIL.—Nothing doing; price nominally 75s. to 80s. per barrel, according to brand, for best non-congealing Norwegian oil of last season's catch.

ESERINE (PHYSOSTIGMINE).—Makers' prices are 2s. per gramme for the *Sulphate* and *Salicylate* salts, and 3s. per gramme for the pure alkaloid.

GENTIAN ROOT—Is still quoted 14s. per cwt. *c.i.f.* for fair quality.

GLYCERIN.—Market is quiet but fairly steady at 50s. to 52s. 6d. per cwt. for *English* and 53s. to 60s. per cwt., according to brand, for *German* best white chemically pure double distilled 1260° quality in 2 cwt. cases (each case 4 × 56 lb. tins).

IODIDES.—Steady at the late advance of 3d. per lb. to 10s. 6d. per lb. for *Potass. Iodid*, 11s. 10d. per lb. for *Sodii. Iodid.*, 13s. 10d. per lb. for *Ammon. Iodid.*, 13s. 10d. per lb. for *Iodoform powder, precip., or cryst.*, and 12s. per lb. for *Iodine* resublimed. *Crude Iodine* remains at the old price of 7¾d. per oz.

LITHIA.—Makers are firm in their price of 10s. 8d. per lb. for the *Carbonate*, 6s. 5¾d. for the *Citrate crystals*, and 6s. 11¾d. for the *powder*, in 2 cwt. lots, while for smaller quantities higher prices are asked.

MENTHOL—Is very firm at 7s. 6d. per lb. for good dry white crystals on the spot, and 7s. 9d. to 7s. 10½d. per lb. to arrive, *c.i.f.* terms.

MERCURIALS.—Makers' prices are 2s. 8d. per lb. for *Calomel*, 2s. 4d. per lb. for *Corrosive Sublimate*, and 3s. per lb. for *Red Precipitate*.

MORPHIA.—Makers' prices remain at 5s. per oz. for the powdered salts, and 2d. per oz. more for the crystal salts.

OILS (FIXED) AND SPIRITS.—*Linseed* unchanged, spot pipes, London, £16 10s., barrels, £16 17s. 6d. to £17. Hull, spot naked, £15 2s. 6d. *Rape* quiet, ordinary brown on the spot is quoted at £20 15s. to £21, January-June £20 15s. Refined, spot, £22 5s. to £22 10s. *Ravison*, naked spot, £16 15s. *Cotton* steady, London, crude spot, £12 15s.; refined spot, £14 10s. to £14 15s., according to make. Hull, naked refined, £12 15s. *Crude*, spot, £11 5s. *Olive*: So far without change. Spanish, £29; Levant and Mogador, £29 to £32. *Cocanut* quiet. Ceylon spot, £26, landed near, £24. January-March, £23 10s., *c.i.f.* *Cochin*: Spot nominally, £31, landed; afloat, £27 15s.; December-January, £26; January-March, £25 17s. 6d., *c.i.f.* *Palm*: Lagos spot, £22. *Lubricating Oil*: In spite of the season of the year the activity in Christmas-boxes has so far been without effect on prices of these

two articles. *Turpentine*: Market is strong and advancing; American spot, 32s. to 32s. 6d.; Jan.-April, 32s. 6d. paid; May-June is quoted 30s. 10½d. to 31s.; July-Dec., 24s. 10½d. to 25s. *Petroleum Oil* steady. Russian spot, 5½d. to 5¾d.; American spot, 6¾d. to 6¾d.; water white, 7¾d. to 7¾d. per gallon. *Petroleum Spirit*: American, 8d.; deodorised, 8¾d. per gallon.

OLIVE OIL.—Reports from Italy state that whilst at first the crops promised well, the warm, damp weather favoured the development of the worm, which attacked the entire crops in the districts of Puglia, Bori, and surrounding neighbourhood, resulting in a yield of oil which is said to barely reach one-fourth of what was previously expected. The damage has extended to Sicily, Central Italy and Tuscany, all of which have also suffered considerably. Towards the middle of November a cyclone played havoc with the olive crop in Tunis, it being reported that more than 15,000 olive trees were uprooted. In Sardinia this cyclone caused extensive floods, which also did considerable damage. Finally, on November 26 and 27 last another cyclone of great violence visited the Riviera, it being estimated that there fully two-thirds of the olives which were ripening on the trees were either blown down by the wind or knocked off by the hail. These windfall olives, not being ripe, will only yield one-third of the oil which a similar quantity of ripe fruit would produce. On the whole it is anticipated that the quality of the new olive oil will be good, but the yield is certain to be very short, and higher prices will no doubt have to be paid.

OPIUM.—There has been nothing doing in the article during the past week, and prices remain nominally unchanged at 11s. 3d. to 11s. 9d. per lb. for fine druggists', 10s. 6d. to 11s. 6d. per lb. for good seconds and manufacturing kinds, 13s. to 14s. per lb. for good to fine soft shipping, 10s. 6d. to 11s. 6d. for seconds ditto, 11s. to 12s. per lb. for Persian.

PHENACETIN—Unchanged at 3s. 9d. to 4s. 3d. per lb., according to quantity, for both crystals and powder.

PILOCARPINE.—The *Nitrate* and *Muriate* salts, which are those chiefly, in fact, almost exclusively, in demand, are quoted 1s. 4d. per gramme.

POTASH COMPOUNDS.—*Bicarbonate* 30s. to 35s. per cwt. for both crystals and powder, according to quantity and brand. *Chlorate*: Crystals 3¾d., powder 4d. per lb. spot, London. *Oxalate*: Neutral 5½d. per lb. *Permanganate* quiet at nominally 50s. per cwt. for small crystals, and 55s. per cwt. for large crystals in 1 cwt. kegs. *Prussiate*: yellow English is quoted 7d. per lb., while the red is also unchanged at 1s. to 1s. 3d. per lb. *Bichromate*: 3¾d. per lb. *Bromide* is unchanged at late advance to 1s. 10½d. per lb.

QUICKSILVER—Remains at £7 15s. per bottle from the importer, and 1s. per bottle less from second hand.

QUININE.—There has been nothing doing in the article this week. Makers' prices remain nominally 10½d. per oz. for best German brands of *Sulphate* for 1000-oz. lots in 100-oz. tins, there being very little offering from second hand at or below this figure. On the resumption of business in the drug and chemical line, after the commencement of the new year, it is fully expected that we shall see a revival of demand for, and very probably an improvement in price of, this article, and those of our friends who have not already done so will, we think, do well to secure a moderate stock at present price, which, it should be remembered, is still very low.

SODA COMPOUNDS.—*Crystals*: barrels, 55s. per ton; bags 52s. 6d. per ton, ex ship "Thames." *Ash* is quoted £5 to £5 10s. per ton, according to strength, packing, and quantity. *Bicarbonate* is quoted £7 10s. to £8 10s. per ton for the 97 per cent., and 18s. 6d. per cwt. for the fully bicarbonated quality. *Bichromate* unchanged at 2½d. per lb. *Bromide* firm at late advance to 2s. 1½d. per lb. *Caustic*: White 70 per cent., £7 10s. per ton; 60 per cent., £6 10s. per ton. *Hyposulphite* is quoted 6s. 6d. to 8s. per cwt., according to make, quantity, and packing. *Iodide* steady at late advance of 3d. per lb. to 11s. 10d. per lb. *Nitrate*: Commercial is still quoted £7 15s. per ton, and refined £8 to £8 2s. 6d. per ton, according to quantity.

SUGAR OF LEAD—Is firm at 31s. per cwt. for English and 27s. to 27s. 6d. per cwt. for foreign.

SULPHATE OF COPPER—Is quoted £18 to £19 10s. per ton on the spot, according to quantity and make.

SULPHONAL.—Makers' price remains at 17s. per lb., to which it was lately advanced, there being, apparently, the full prospect that price will be maintained at this figure. There are, however still sellers at a somewhat lower price from second hands.

SULPHUR—Is very firm; English roll is quoted 7s. 6d. to 8s. per cwt.; flowers, 10s. per cwt.; foreign roll, 6s. 6d.; flowers, 7s. 6d. per cwt.

THYMOL—Is firm at 8s. to 8s. 6d. per lb., according to make, quantity, and packing.

TONQUIN BEANS—Are in better demand, with an improvement all round in values. *Angosturas* after having been sold at 3s. per lb. have since realised 4s. to 5s. per lb., according to quality. *Paras* are somewhat scarce, and 1s. 9d. to 2s. per lb. is asked for good frosted beans of this description.

Newcastle Chemical Report.

DECEMBER 28, 1898.

This market is purely of a holiday nature. The works being closed for stock-taking and repairs, little or nothing is now doing. Prices are unchanged, as follows:—Soda Crystals, basis price, 45s.; Bleaching Powder, according to markets, £5 to £5 10s.; Caustic Soda, 70 per cent., basis price, £7; Soda Ash, 52 per cent., £4 5s.; Alkali, 52 per cent., £5 5s.; Sulphur, £4 15s. to £5 per ton.

Liverpool Market Report.

DECEMBER 28, 1898.

In view of the holidays business has been quiet, and the only alterations in price are higher rates for Spirits of Turpentine and Castor Oil.

AMMONIA SALTS.—The only change is in sulphate, which is now £10 5s. per ton, a rise of 2s. 6d.

BEEWAX.—10 packages of Gambia sold at £6 10s. per cwt.

CANARYSEED.—Turkish is quiet but firm at 28s. to 29s. per 464 lbs.

CARNAUBA WAX.—30 bags of yellow sold at 50s. per cwt.

COPPERAS—Sells steadily at the firm price of 39s. per ton for Lancashire and 37s. for Welsh.

COPPER SULPHATE—Is a turn dearer at £18 12s. 6d. per ton, spot, £18 15s. to £19 per ton forward.

OILS (FIXED) AND SPIRITS.—*Castor Oils* have been selling well, 500 cases of Calcutta for delivery during March and April went for 2½d. per lb.; spot lots, 2½d. store (about 150 cases sold), and 2½d. per lb. *quay*; French, first pressure, 2¾d. to 2½d.; Madras, 2½d. and Bombay, 2½d. to 2½d. per lb. *Olive Oils* continue to sell in small amount, but at full and steady prices. *Linseed Oil* of Liverpool make is steady at 17s. 6d. to 18s. 6d. per cwt. in export casks. *Cottonseed Oil* is quiet at 15s. 3d. to 15s. 9d. per cwt. *Spirits of Turpentine* have again risen considerably, and now are at 32s. 9d. per cwt., at which price a fair trade is doing.

POTASH AND SODA SALTS.—Unchanged from last.

Manchester Chemical Report.

DECEMBER 28, 1898.

There was a marked absence of business men at the market today. Amongst those present there was a fairly hopeful feeling for next year, which will, it is to be hoped, be justified by the course of business. It is evident that prices of heavy chemicals are at a low ebb, and in all probability there will be a considerable diminution in the production of Caustic Soda, of which large stocks remain on hand at the close of the year. There has been a sharp advance in Acetate of Soda, which ranges from £15 to £16 spot, and as the article is scarce it is not unlikely the advance may continue. In other miscellaneous articles Sulphate of Copper again shows an upward tendency, but at present there is no change here. Sulphate of Ammonia is from £9 18s. 9d. to £10 on rails, Lancashire, having gone up a little during the past few days. Green Copperas continues dull locally, but for shipment there is no change.

NOTICES TO CORRESPONDENTS.

All Communications for the 'Pharmaceutical Journal' must be Addressed to the Editor, 17, Bloomsbury Square, London, W.C., and not in any case to individuals supposed to be connected with the Editorial Staff; no responsibility can be accepted unless this rule be observed. Communications for the Current Week's Journal should reach the Office not later than Wednesday, but news can be Received by Telegraph until 4 p.m. on Thursday.

ADVERTISEMENTS AND ORDERS for copies of the 'PHARMACEUTICAL JOURNAL' must be addressed to the Publishers, 5, Serle Street, Lincoln's Inn, London, W.C. Cheques and money orders should be made payable to "Street Brothers."

ARTICLES AND REPORTS sent for the Editor's approval should be accompanied by stamped directed envelopes, otherwise no guarantee can be given that they will be returned if not found suitable.

CORRESPONDENTS should write in ink, on one side of the paper only, and must authenticate the matter sent with their names and addresses—of course not necessarily for publication. No notice can be taken of anonymous communications.

DRAWINGS FOR ILLUSTRATIONS should be executed twice the desired size; clean sharp lines being drawn with a pen and liquid Chinese ink. Shading by washes is inadmissible. Photographs can be utilised in certain cases.

NAMES AND FORMULÆ should be written with extra care, all systematic names of plants and animals being underlined, and capital letters used to commence generic but not specific names.

QUERIES addressed to the Editor will be replied to in the Journal as early as possible after receipt, though not necessarily in the next issue. Replies cannot be sent by post, even though stamped envelopes accompany the queries.

Trade Notes.

MR. S. WAND, of Leicester, submits specimens of his new varnished pills. They are perfectly coated, most attractive in appearance, and freely soluble.

MESSRS. EVANS, GADD AND Co., of Exeter and Bristol, send a copy of their useful calendar for 1899, and ask us to intimate that they will be happy to send a copy free to any chemist who may write for one and mention the *Pharmaceutical Journal*.

MESSRS. JOHN WRIGHT AND Co., of Bristol, have produced a new "Case Paper" for the use of medical practitioners. It has been suggested by Drs. Couch and Lancaster, has a number of anatomical diagrams printed at the back, and offers advantages over most case papers now in use. The price of the new papers is 15s. per 100 and 26s. per 1000, or bound in books of 250 copies, indexed and numbered, at 11s. each.

MESSRS. R. ELLIS & SON, of Ruthin, manufacture a new syphon for aerated waters, the head of which considerably differs in appearance from the more familiar shapes. The outlet valve usually found at the top is here turned into a horizontal position and placed upon the outlet spout, with the lever upright. The new arrangement greatly facilitates the emptying of the syphon, as the valve can be controlled to a nicety with the thumb of either hand. The valve having thus been removed from the top of the head, the orifice for refilling is here provided, and is automatically closed with a cone-shaped plug. When filled this opening is protected with a little screw cover, and the general appearance of the new syphon, after the first impression of novelty has passed, is pleasing. The valves may easily be repaired without the expense and loss of time incurred in dismantling the head, which must be done in the case of the ordinary form of syphon. Another advantage which will appeal to the consumer is the fact that not only is the syphon easier to open, and not likely to splutter the contents out of the glass, but, owing to the arrangement of the inner chambers, less friction is caused during the process of drawing the contents, and consequently the gas does not separate itself from the water in the same degree as in the old head, the result being that a fresher, sharper aerated water is obtained for drinking.

"SANITAS" EMBROICATION

In Bottles to Retail at **8d., 1s., and 2s. 6d.**

"SANITAS"

AND OTHER

DISINFECTANTS

SULPHUR FUMIGATING CANDLES (Kingzett's Patents), 6d., 9d., and 1s. each.

PRESERVED PEROXIDE OF HYDROGEN (Kingzett's Patent).

WEED DESTROYER, &c., &c.

THE "SANITAS" CO., Ltd., BETHNAL GREEN, LONDON,
AND 636-642, W. 55 STREET, NEW YORK.

Calendar for the Week.

Sunday, January 1. 1st after Christmas. Sun rises 8.8; sets 4.0.

Monday, January 2. Sun rises 8.8; sets 4.1.
SOCIETY OF CHEMICAL INDUSTRY, Burlington House, Piccadilly, W., at 8 p.m.—A paper by Mr. Oscar Guthmann on "Safety Explosives" will be read and discussed.

Tuesday, January 3. Sun rises 8.8; sets 4.2.
BRADFORD AND DISTRICT CHEMISTS' ASSOCIATION, County Restaurant.—Mr. W. West will deliver a lecture entitled "Plant Gossip."
ROYAL INSTITUTION, Albemarle Street, W., at 3 p.m.—The fourth of the series of Christmas Lectures for Young People on Astronomy, by Sir Robert S. Ball.

Wednesday, January 4. Sun rises 8.8; sets 4.3.
CHEMISTS' ASSISTANTS' ASSOCIATION, Dorset Hall, Portman Rooms, Baker Street, W., at 7.30 p.m.—The third of the series of Cinderella dances.
MIDLAND PHARMACEUTICAL ASSOCIATION, Mason College, Birmingham, at 8 p.m.—Discussion on the new B.P., to be opened by Mr. F. H. Alcock.

Thursday, January 5. (3.22 M. Sun rises 8.8; sets 4.4.
ROYAL INSTITUTION, Albemarle Street, W., at 3 p.m.—Sir Robert S. Ball will deliver the fifth of the series of Lectures on Astronomy.

Friday, January 6. Epiphany. Sun rises 8.8; sets 4.5.

Saturday, January 7. Sun rises 8.7; sets 4.6.
ROYAL INSTITUTION, Albemarle Street, W., at 3 p.m.—The last of the Christmas Lectures on Astronomy, by Sir R. S. Ball.

Publications Received.

THE TREATMENT OF DISEASE BY PHYSICAL METHODS. By THOMAS STRETCH DOWSE, M.D. Abd., F.R.C.P. Ed. Pp. xi. + 412. Price 7s. 6d. net. Bristol: J. Wright & Co., 1898. From the Publishers.

FALLOWFIELD'S PHOTOGRAPHIC ANNUAL, 1898-99. Pp. 852. Price 1s. 6d., post free. London: Jonathan Fallowfield, 146, Charing Cross Road, W. From the Publisher.

Receiving Order in Bankruptcy.

(From the London Gazette.)

Edwin Mann, Chemist and Druggist, 31, West Derby Road, Liverpool.

Advertisements.

(Received too late for Classification).

WANTED, a GENERAL MANAGER for a Chemical Manufactory abroad, employing about fifty workmen, producing Fine Chemicals (organic). Must be experienced in the control of workmen, capable of applying the results of research Laboratory to Industrial Productions, and have good knowledge of French. Apply, fully stating previous experience, nature of testimonials, and salary expected, to A. B. C., care of Street & Co., 30, Cornhill, E.C.

TO CHEMISTS AND DRUGGISTS.—Wanted, in a Wholesale Druggists' Sundries House, a good SALESMAN. One who has a knowledge of French preferred. From 25 to 30 years of age, well educated, of gentlemanly appearance, and good address. Applications, by letter only, stating age, whether married or single, and full particulars of previous engagements, to be addressed MELBOURNE (93/68), office of this paper.
