SUBJECT: Damage to Allocated Equipment

TO: General Headquarters

1. Attention invited to the inclosed communication from the Osaka Finance Office reporting loss of the shaft and pumping unit of a deep well pump, inventory number 32-32-3223, and damage to a switchboard, inventory number 32-32-5293, incurred in the course of dismantling and crating operations. Both items were allocated to the Phillipines by Allocation Notice 3-60 (pp 12 and 13, resp).

2. The shaft and pumping unit dropped to the bottom of the well in which the pump was installed while the contractor was attempting to remove it. The top of the shaft is 210 ft. below ground level. Repeated attempts to retrieve the shaft have been unsuccessful. The shaft can be retrieved, but the cost will be prohibitive and will be several times the value of the pump. The pump driving motor is intact and available. This headquarters has instructed the Osaka Finance Office to abandon efforts to retrieve the shaft pending further instructions.

3. The switchboard was damaged when the box in which it was crated dropped from a crane in the course of transposition. The marble switchboard plate was cracked in several places. It is beyond economical repair and is considered as scrap.

4. It is concluded from investigation that:

a. Dropping of the deep well pump shaft could have been avoided if the contractor had exercised better judgement in calculating risks involved in removing the shaft from the well, but is not attributed to actual negligence by the contractor.

b. The crate containing the switchboard was dropped due to a defective crane cable. The accident was beyond the control of the individuals moving the crate.

Report on accidents Happened
During Packaging Operation

1. Recipient Nation and Allocation Notice Number:

   Philippines 3 - 60

2. Name of Contractor: Asamura Gumi, Ltd.

3. Schedule of Operation:

   From August 12 thru September 20.

4. Regarding to the Shaft for Deep-well Pump (See attached sketch No.1)

   (1) Inventory Number: 32 - 32 - 3223

   (2) Date Accidents Occurred: September 2.

   (3) Details of Accident:

The operation was started with the taking off of the pump at first, then tried to pull up the shaft but failed because the connecting coupling was fastened with rust. Therefore anchor bolt and coupling were taken away. At this moment the wire (3/4") fastened to prevent the shaft's falling into the well snapped and the shaft was fell into the 300-feet deep-well. The length of the shaft is approximately 90 feet.

Switch Board

(1) Inventory Number: 32 - 32 - 5293

(2) Date Accidents Happened: September 25.

(3) Details of Accident:

This item was completely packaged and approved by the Philippines' representative and Mr. Welch on September 24. At the time of transportation with a ten-ton crane from the packaging spot to storage yard the wire rope (dia. 20 mm) was cut off and the package fell down to the ground from two meters above. Inspection of the package dropped revealed that the marble plate of the switch board was damaged at several points. This accident was immediately reported to Mr. Welch, field inspector.

This package is sheathed crate of 1610 kg. of weight. Packaging number is 209.

Just before the accident was happened the wire of the crane was in good condition and pulled up and transported a package of more than 6 tons.

Name of Machine: Transformer
Date of Inspected passed: 25th Sept. 1949

Weight: 1,610 KG
Size of Broken wire: 19 mm Dia.
Fact

While piling the crate that has been passed the inspecting we pulled up the above crate with the 10 Ton crane the wire has been broken and dropped the crate from 15 Ft. above the ground and damaged to the above item. We imediately contacted to the Japanese Government Inspector andewhen Mr. Welch, the Scap Inspector came, He told us to leave it alone until words from him.

We have loaded 8 Ton crate just before that and many crate during that day.

Tennoji-ku, Osaka
9th Sept. 1949

To: Chief of the Reparation Section
Financial Department
Osaka

1. Machine Inventory No: 32-32-3223
2. Name of Item: Deep Well Pump Shaft
3. Date of Work Start: 30th Aug. 1949
4. Date of Shaft Dropped: 2nd Sept. 1949
5. Condition of the Work at that time:

We tied the wire from the beam to the center of the pump and hang the shaft to the both corner of the building. We have prepared to take the pump first and secondly the shaft liked removing the parts of the roof and above , but the coupling that connected the pump and shafthas been rusted and was unable the turn, so We loosen the anchor bolts and finally made it to turn. We slowly took the coupling off, the whole weight of the shaft went to the wire and suddenly the wire had broken at the both sides and the shaft dropped.
As We think that the expert has had difficulties in calculating the weight of the shaft and the pressure of the water inside. The Well exactly so by tooking at the weight from the list as 1 Ton which was given by the Reparation Office. We used the wire(Dia. 3/4") calculating 3, 4 times from the Government estimated weight.

6. Preparation of Pulling up Job:

Soon as the shaft dropped we removed the pump and the expert has calculated the deepness and the shaft of the end of the shaft, we found the following :

Deepness of the well: 308 ft.
Distanceto the shaft: 210 Ft.
Shape:

We have prepared the tools and machine.

7. Condition of Pulling up Job:

We have from 3rd Sept. to 8th Sept. to catch the end tried by the machine , but was in vain.
Again we called 3 expert from Nippon Underground Water Association and let them inspected the well butthey said it difficult job and they could not take that job, because it is 95 % useless job.
