We Make Grass Seed a Leading Specialty

(See page 48 for full list of Grass and Clover Seeds.)

For years we have made Grass Seed mixtures one of special study and are at all times eager and willing to make estimates on your requirements, giving our best advice as to your needs. For Hay and Permanent Pasture, we also have different brands suited to the various climatic conditions. If in doubt, write us before ordering and you will have a reply by return mail.

ELLIOTT'S CENTRAL PARK

For quickly producing a permanent, thick and velvety sward of grass, this brand of Lawn Grass cannot be excelled. It is the best mixture of grasses sold for lawn-making, and will give satisfaction wherever sown. Price, qt. 20 cts., pk. \$1.25, bush. of 20 lbs. \$4.50.

ELLIOTT'S BOWLING GREEN

We have selected for this mixture grasses which will produce a hardy, close turf, permitting of close mowing and much hard wear, yet attaining a rich velvety appearance. Recommended for Croquet Lawns, Bowling Greens and, in fact, all situations where a fine lawn is required to withstand very hard wear. Price, qt. 30 cts., pk. \$1.75, bush. of 20 lbs. \$6.00.

ELLIOTT'S TERRACE MIXTURE

A combination of grasses, producing strong spreading roots suitable for terrace, embankments, etc., withstanding drought, thriving in shallow soils and preventing washing out by heavy rains, yet producing a rich velvety turf throughout the season. Price, qt. 30 cts., pk. \$1.75, bush. of 20 lbs. \$6.00.

ELLIOTT'S SHADY NOOK

Usually it is quite difficult to obtain a satisfactory growth of grass under trees and in shady places; for sowing in such places we recommend the use of this special mixture. It will quickly produce an abundant and even growth of beautiful green grass. The grasses used in making this special mixture are only those that are well adapted for growing in shade. It has been successfully used on some large operations where a green sward was desired on land partially shaded by old trees. Price, qt. 30 cts., pk. \$1.75, bush. of 20 lbs. \$6.00.

ELLIOTT'S EMERALD

Is carefully compounded of grasses which ripen successively, thereby retaining their green appearance. For various soil conditions this mixture is well suited, giving good results, even in small city grass plots, where the soil is generally stiff and heavy. It is also valuable for use on railroad embankments, terraces and exposed lawns, also for renovating old worn-out lawns, and re-seeding bare places. Price, pk. \$1.00, bush. of 16 lbs. \$3.50.

SEED FOR PUTTING GREENS: Price, qt. 25 cts., pk. \$1.50, bush. of 20 lbs. \$5.00.

SEED FOR OUTLYING POINTS: Price, bush. of 20 lbs. \$3.50.

SPECIAL MIXTURE OF GRASSES AND CLOVERS

We have made Farm Seeds a Specialty for many years, during which we have carefully studied the various properties of the different grasses. Pkt. 25c.

Antirrhinum Majus

"Ruby"

A strikingly beautiful new variety and main color of the very popular Tall Snapdragon. The flowers are self-colored, bright ruby red, and of surprising effect. This novelty is at the same time a charming plant for tall beds and groups, and highly valuable as a cut flower. Pkt. 15c.

Antirrhinum

Majus

Defiance

Tall Snapdragon with vermilion scarlet flowers, as bright and effective in color as that of the demi-tall variety of the same name. Pkt. 20c.

Aquilegia

Coerulea Candidissima

Very pretty and graceful new Columbine of the long spurred tribe with large flowers of the purest snow white. Foliage light green. Pkt. 25c.

Begonia Gracilis

"Prima Donna"

The plant is of very sturdy and even habit, growing to about 10 inches, and forming a freely branching bush, 10 to 12 inches across. The characteristic feature is its uncommonly large flowers which are of a limpid rose, shading to carmine toward the center. Extremely early variety and comes true from the seed. Pkt. 20c.

Begonia Gracilis

Luminosa

Large, bright, deep scarlet flowers and magnificent satiny, brownish red foliage. Pkt. 25c.

Bidens Atrosanguinea

Hybrida

New hybrids gained by artificial crossing of the velvety blackish crimson Bidens atrosanguinea (Dahlia Zimapanii) with Dahlia Merckii. The colors of the flowers, $1\frac{3}{4}$ to 2 inches across, vary in all shades from rosy-carmine, light and dark crimson to deep blood red. Elegant and decorative border plants. Height about $1\frac{1}{2}$ feet. The cut flowers are greatly prized for vases and bouquets.

Pkt. 25c.

Cosmidium Burridgeanum

Orange Crown

Very handsome new annual, forming elegant, many-branched bushes of $1\frac{1}{2}$ to 2 feet in height. The flower heads, $1\frac{1}{2}$ to $1\frac{3}{4}$ inches in diameter, are carried on long, slender but self-supporting stems well above the graceful linear foliage. Ray florets golden yellow with a broad conspicuous circle of a rich orange around the disc, a pleasing combination of colors. As the plants produce a constant succession of bloom throughout the Summer and the flowers lasting well in water for days, this novelty will prove to be very useful for cutting purposes.

Pkt. 20c.

Dimorphotheca Aurantiaca

A rare and extremely showy annual from South Africa, which will soon become a great favorite on account of its very easy culture and its beautifully colored flowers. The plants, of very neat branching habit, grow about 12 to 15 inches high and are exceedingly profuse in flowering. Its Marguerite-like blossoms, $2\frac{1}{2}$ to $2\frac{3}{4}$ inches in diameter, show a unique glossy rich orange-gold, which brilliant coloring is rendered the more conspicuous by the dark colored disc surrounded by a black zone. This splendid annual is well adapted for groups or borders; it produces its pretty flowers very early after being planted out in the open ground in sunny situations and will continue to flower during the Summer months. A bed in full bloom is a magnificent sight on bright days.

Pkt. 20c.

Delphinium Belladonna

Everblooming Hardy Larkspur

The freest and most continuous blooming Hardy Larkspur, never being out of flower from the end of June until cut down by severe frost. The clear turquoise blue of its flowers is not equaled for delicacy and beauty by any other flower. Seed sown early the coming Spring will produce plants that will bloom freely through the late Summer and Autumn.

Pkt. 15c.

Freesia Hybrida Ragionieri

The beautiful, scented flowers are tinted in the most various shades of pink, rose, purple, blue, violet, orange, sulphur yellow, brown, often delicately spotted and veined. As cut flowers they retain their freshness in water a long time. Of the same easy culture as the old white Freesias, the plants are of strong growth and well adapted for forcing. Seedlings will show bloom 6 to 7 months after the sowing. Pkt. 25c.

Gerbera Jamesonii Hybrida

One of the most interesting introductions of recent years. These distinct and beautiful hybrids embrace the most exquisite and delicate shades of yellow, rose, cherry red, salmon, terra cotta, to crimson and white. This grand race of plants is of easy cultivation and can be grown in any garden in a sheltered position or on a warm border where protection can be given during severe weather. Rudbeckia Bicolor Solfatara

Distinct and very floriferous new annual Rudbeckia, about $2\frac{1}{4}$ feet high, bearing long-stalked flowers 3 to 4 in. across. The sulphur-yellow colored ray florets contrast well with the dark brown disk. **Pkt. 25c.**

Schizanthus Wisetonensis (Butterfly or Fringe Flower)

This variety is now largely used as a pot plant for the house or conservatory. It is remarkably free-flowering, and presents a beautiful appearance with its myriads of blooms, the ground color of which is white, dotted with delicate rose, with a large spot on the upper lip varying in shade between golden yellow, carmine, rose and light brown. **Pkt. 25c.**

This is not new, but is a rare and beautiful hardy perennial. The plant grows about 24 inches high, each bearing from 20 to 30 handsome lavender-blue Cornflower-like blossoms; in bloom from July until frost. Indispensable for cutting. **Pkt. 10c.**

ARTICHOKE

ARTICHAUT. *Alcachofa.* Artischöfe.

One ounce will sow 100 ft. of row, and produce about 500 plants.

A deep, rich, sandy loam is best adapted for this plant. The seed should be sown thinly in drills $1\frac{1}{2}$ inches deep and one foot apart. When large enough, transplant to permanent rows 3 feet apart, allowing two feet between the plants. They reach maturity the second year, and in the northern States should be protected in winter by a covering of leaves or coarse manure. A bed will continue in bearing for several years.

Improved Large Green Globe. Heads large, fleshy, and of rich flavor. Pkt. 5 cts., oz. 30 cts., lb. \$3.00.

Jerusalem. Distinct from the above. Grown for the tubers, which resemble potatoes, and are cultivated in a similar manner, but the rows should be at least four feet apart. Qt. 20 cts., pk. \$1.25, bush. \$4.00; 2 lbs., by mail, 50 cts.

ASPARAGUS

ASPERGE. *Esparrago.* Spargel.

One ounce will sow 50 ft. of row, and produce about 1,200 plants.

Sow the seed as early in spring as the soil can be worked, in drills 12 to 14 inches apart, and when well started thin out to three inches apart. When one or two years old, transplant into permanent beds, thoroughly trenched, two feet or more in depth. Set the plants in rows two feet apart and not less than 18 inches apart in the row. Care should be taken that the roots are well spread, and set at a depth of six inches below the level of the bed. Cover only two or three inches, and fill in gradually as the plants grow. Very little, if any, should be cut the first year after transplanting, but a fair crop can be cut the second year. Every fall after the tops have been cut down apply a dressing of coarse manure, and in the spring fork it in. An occasional top dressing of salt at the rate of one-half pound per square yard is also beneficial, and keeps down the weeds.

Columbian Mammoth White. The stalks are very large, clear white, and remain so as long as fit for use. Pkt. 5 cts., oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb. 60 cts.

Conover's Colossal. The standard variety. Pkt. 5 cts., oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb. 50 cts.

Palmetto. A large early variety, of a deep green color. More regular and even in size than any other variety. Pkt. 5 cts., oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb. 50 cts.

ASPARAGUS ROOTS

A saving of one or two years is effected by planting roots. A bed 12 by 40 feet, requiring about 100 roots, should give a sufficient supply for an ordinary family. If planted in rows three feet apart and two feet between the plants, 7,260 roots will plant an acre. As nothing is gained by using one-year-old plants, we offer only strong two-year-old roots. If ordered by mail, postage must be added at the rate of 50 cts. per 100 to the following prices:

All Roots are Two Years Old

Columbia Mammoth White. Per 50 50 cts., 100 \$1.00, 1000 \$7.00.

Conover's Colossal. Per 50 45 cts., 100 80 cts., 1000 \$6.00.

Special prices on larger lots on application

Asparagus Palmetto

Asparagus Culture Full details of the best methods employed in England and France. Price, 50 cts., postpaid.

One ounce will sow 50 feet of drill; 5 to 6 pounds required to an acre.

Well-enriched, light soil is best adapted to this crop. Sow in drills about a foot apart, covering the seeds about an inch, pressing the soil firmly over the seeds, which is important to secure good germination. When the young plants are two or three inches in height they should be thinned to stand six to eight inches apart. A good time to make the first sowing is when the trees are starting to leaf, and continue successive plantings every three or four weeks until end of July, so that a constant supply of fresh, tender roots may be had throughout the season.

If to be forwarded by mail, add at the rate of 8 cents per pound for postage.

CARROTS

CAROTTE.

Zanahoria.

Möhren.

One ounce will sow 100 feet of row; 2 to 3 pounds required for an acre.

Improved Long Orange Carrot

Avoid sowing on newly manured ground, which has a tendency to produce forked roots; the land should, therefore, be manured the previous season. For early crops sow as soon as the ground can be worked, and for later crops from the beginning until the end of May, in rows 15 inches apart and $\frac{1}{2}$ inch deep. Thin out the young plants to 5 inches, and keep the surface open by a frequent use of the hoe.

For field culture, sow in drills from 20 to 30 inches apart, and when plants are 1 to 2 inches high, thin out to from 4 to 8 inches apart in the rows. An important feature in sowing carrots, as in all other seeds, is firming the seed in the soil; this may be done with foot or spade.

If to be forwarded by mail, add at the rate of 8 cts. per lb. for postage.

Earliest French Forcing. Earliest of all varieties, and especially adapted for forcing; delicate, fine grained, and remarkably fine flavored. Pkt. 5 cts., oz. 15 cts., $\frac{1}{4}$ lb. 35 cts., lb. \$1.25.

CAULIFLOWER

CHOU-FLEUR.

Coliflor.

Blumenkohl.

One ounce will sow a bed of 40 square feet, producing 2,000 plants.

This crop will grow in any soil that suits cabbage. Sow the seed in a hotbed in January or February, and when the plants are large enough transplant 3 inches apart in boxes or hotbeds until time to plant out. If hardened off they are seldom injured by planting out as early as the ground can be properly prepared. Set in rows 2 feet apart and 2 feet between the rows. Keep them well hoed, and bring the earth gradually up to the stems, watering freely in dry weather, and especially when they begin to head. Cauliflower will not head in hot, dry weather, therefore planting should be regulated so that it will head early in summer or autumn.

Elliott's Early Snowball Cauliflower

WATER CRESS

Water Cress may be grown in any moist situation, but more successfully by the edge of a running brook. The seed may be sown in May, on the ground where it is intended to be grown, and the thinnings transplanted. The plants should be set not less than a foot apart. The cress will be fit for gathering the second year. Pkt. 10 cts., oz. 30 cts., $\frac{1}{4}$ lb. \$1.00, lb. \$3.00.

CELERY

CELERRI.

Apio.

Sellerie.

One ounce will sow about 300 feet of a row and produces about 5,000 plants.

Sow in the open border early in April in rich ground, pressing the seed down rather than covering with soil. When the plants are 3 inches high, transplant 4 inches apart into temporary beds of soft, rich soil until they acquire sufficient strength for planting out. If they grow too quickly before needed for planting out, shear the tops off when about 4 inches in height, and they will grow more stocky. Plant in rows 3 feet apart, and set 8 inches apart in the rows. After the planting is completed, nothing further is necessary for 6 or 7 weeks, except running through between the rows with the cultivator or hoe, and freeing the plants from weeds. About the middle of August earthing up is necessary for blanching and whitening of that which is wanted for early use. After the soil has been drawn up against the plant with the hoe, it is further pressed close around each plant by the hand, firm enough to keep the leaves upright and prevent them from spreading, using care to prevent the soil falling into the heart of the plant.

Schumacher. Immense size; solid and crisp, firm golden yellow heart; an excellent keeper. Pkt. 10 cts., oz. 25 cts., $\frac{1}{4}$ lb. 75 cts.

LETTUCE

LAIQUE.

Lechuga.

Salat.

One ounce will sow 300 feet of row; 3 pounds will plant one acre in rows 3 feet apart.

For early plants, the seed may be sown in September, and transplanted into cold frames for protection during the winter; or sow in February or March in hotbeds with a moderate bottom heat, cover lightly, and thin sufficiently to prevent crowding; gradually harden by exposure. Transplant in the open ground in a sheltered location in April; set in rows a foot apart, and 6 inches apart in the row. When heads begin to form, thin out by using alternate plants in the rows. For succession sow in prepared beds as soon as the ground can be worked, and at intervals of two weeks during the summer. MELON, MUSK

MELON MUSCACE. *Melon Muscatel.* Cantalupe.

One ounce will plant 80 hills; three pounds is required for one acre.

Melons should be planted on a rather light, rich, sandy loam. The middle of May is early enough for planting in open ground. Make hills about six feet apart each way, put in each a good shovelful of well-composted manure; press it down and cover with earth. Upon each hill plant six to twelve seeds about ½-inch deep. When up, and all danger of insects has passed, pull out all but three plants. Cultivate until the vines cover the ground, and pinch the ends off the growing shoots to induce early fruiting. Slug shot or tobacco dust is excellent to sift over the young plants when the dew is on to prevent attacks of insects. A few hills for early use may be had by sowing in hotbed on pieces of sod or in pots. The seed may also be started outdoors under hand-frames or glasses.

If to be forwarded by mail, add at the rate of 8 cts. per pound for postage.

ELLIOTT'S SURE-CROP MUSHROOM SPAWN

Ten pounds will spawn about 10 feet square.

Mushroom beds may be made in a warm, dry cellar, or in any building where the frost does not penetrate, and in the open air during the summer and fall months. Having procured the spawn, the next thing to be attended to is to make preparations for the beds. About a fortnight or three weeks before the beds are to be made, collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the fiery heat has become exhausted, which will require from ten to fourteen days' time. When the manure is in a condition to be made up, lay out your bed according to your requirements, say three feet wide, ten feet long, and from two to three feet deep; beat it well down with the back of the spade as the process of building goes on. When the bed has been made some time, say a week or thereabouts, and the heat sufficiently declined to a temperature of 65 or 75 degrees, the spawn may be put into it. Break the spawn in pieces two inches square, and put them six inches apart all over the bed, then cover the bed with two inches of rich soil. When the soil looks dry, give a gentle watering with tepid water, using a rose on the watering-pot.

ONIONS

OIGNON.

Cebolla.

Zwiebel.

One ounce will sow 100 feet of row; 5 pounds is required for one acre.

For Onion culture the ground should be prepared the previous autumn by plowing or spading deeply, using plenty of well-rotted barnyard manure. A rather strong, deep, rich loamy soil is considered most suitable, although we have seen splendid crops raised from a stiff clay soil, which was well under-drained. Sow the seed as early in spring as practicable, in shallow drills 1 foot apart, covering with fine soil, which should be pressed down by the use of a light roller or the back of a spade. When the young plants are strong enough thin out to 4 inches apart. Keep the surface of the ground open and free from weeds by hoeing frequently.

If to be forwarded by mail, add at the rate of 8 cents per pound for postage.

One ounce will sow 150 feet of row.

The seed is very slow to germinate, and usually three or four weeks elapse after sowing before the plants make an appearance. To hasten germination soak seed a few hours in tepid water and sow thickly in shallow drills a foot apart. Cover lightly, and later thin the plants to 5 or 6 inches apart in the row. For winter use, protect in coldframes or a light cellar. Hamburg Parsley is cultivated for its roots, and treated in the same manner as carrots.

Sow as early in spring as the weather will permit, in drills 15 to 18 inches apart, covering with fine soil to the depth of half an inch. The soil should be rich and deep, manured, if possible, the previous autumn. Thin out the young plants to about 6 inches apart; and keep the surface of the ground open, and free from weeds. One quart will plant 100 ft. of row; two bushels will plant one acre in rows 3 ft. apart.

Peas luxuriate in a free, light, rather rich soil, abounding with vegetable matter. For first-early crop sow in March or April, according as the ground can be worked, and at intervals of two weeks for succession. For private gardens they are generally sown in single or double rows 2 inches deep and from 3 to 4 feet apart, according to the height of the variety and strength of the soil. Those growing over 2½ feet in height should be supported with brush. After the end of May sowing should be discontinued until beginning of August, when a profitable crop may be secured by planting the extra-early varieties.

Market gardeners will be supplied by the bushel at low rates. Large consumers will please write for prices.

If to be forwarded by mail, add 15 cts. per quart for postage.

Herbs for Culinary and Medicinal Use

Herbs should have a place in every garden. Any good housekeeper knows the value of the little patch of herbs upon which she makes daily drafts in the summer, and which furnishes such a nice collection of dried herbs for winter seasoning, while as domestic medicines several kinds are held in high repute. The culture is very simple; the best way is to make a little seed-bed in the early spring, and set the plants out in a bed as soon as large enough. They should be harvested on a dry day, just before the blossom develops, dried quickly and bottled, or closely packed in dry boxes with the air entirely excluded.

ASTERS

The Aster's vigor and ease of culture are important factors of its popularity. Plants from seed sown in the open ground in May bloom finely in September and October, when the flowers are seen at their best. For July and August flowers sow in March or April, in coldframe, spent hotbed, or pots or boxes in the house. Cover the seed about half an inch deep with rich, light soil, and when the plants have three or four leaves transplant about 18 inches apart each way into well-prepared beds. Manures too fresh or used in too large quantities sometimes induce disease in Asters. When used they should be thoroughly well decayed and mixed with the soil.

New Miniature Asters, Walderssee MANY-FLOWERED

This new type forms compact globular bushes eight to ten inches high by eight to ten inches in diameter. They branch densely, are well furnished with small, deep green foliage, and resemble, before flowering, little mounds of well-kept box, thus rendering them of exceptional value for garden edgings even before blooming; but when in flower the effect is truly beautiful. When grown in pots they make pretty specimens. Rose-pink edged bluish. Pkt. 10c.

NASTURTIUMS

TOM THUMB, OR DWARF VARIETIES

A marvelous range of new colors has been developed in this favorite flower, which for three or four months of the season makes a better display than almost any other plant. No other annual will produce such a lavish profusion of flowers for so long a time with the same small outlay of time and labor. The maximum of bloom is produced in thin soils, and never flags through the hottest weather. In soils too rich leaves predominate, and the plants are apt to rot off in wet weather, especially if standing too close. Plant the seeds an inch deep, and thin seedlings to 10 or 12 inches apart.

ELLIOTT'S SUPERB SWEET PEAS

A deep, rich, moist soil is best suited to Sweet Peas. They are usually grown in double rows, with a wire trellis or a row of brush between. For each double row make the drills about five inches deep, and nine or ten inches apart. Sow plentifully, covering about two inches deep, and by degrees, as the vines grow up, fill the trenches with soil. Spring sowings should be made just as early as the ground can be prepared; frost does not hurt the little seedlings. The earliest flowers are from seed sown in the Fall, preferably in a dry situation, and four or five inches deep, giving them level culture. As fertilizer, a liberal use of bone meal worked into the soil will give excellent results.

Prices for all named varieties, except where noted: Pkt. 5 cts., oz. 10 cts., $\frac{1}{4}$ lb. 25 cts., postpaid.

If sown by itself for pasturage, about 45 pounds per acre will be required. (14 lbs. per bus.) Lb. 35 cts., 100 lbs. \$28, bus. \$4.75.

MEADOW FESCUE, or ENGLISH BLUE GRASS (*Festuca pratensis*). This is an excellent grass, of great value in mixtures for permanent pastures; productive and nutritious. (22 lbs. per bus.) Lb. 25 cts., 100 lbs. \$20, bus. \$5.00.

ROUGH-STALKED MEADOW GRASS (*Poa trivialis*). A spreading, thickly matting, stoloniferous-rooted species, forming a fine turf, and well adapted for the more shaded portions of lawns. WOOD MEADOW GRASS (*Poa nemoralis*). Specially adapted for shaded positions in lawns or under trees. Much relished by cattle, and highly nutritious; produces a thick growth, and should be included in mixtures for permanent pastures. (14 lbs. per bus.) Lb. 70 cts., 100 lbs. \$60, bus. \$9.

Elliott's Finest Mixtures of Grass Seeds for Hay and Permanent Pasture

We prepare special mixtures containing only the most suitable grasses for permanent pastures and meadow lands, such as Orchard Grass, Meadow Foxtail, Sheep's Fescue, Rhode Island Bent, Meadow Fescue, English Rye Grass, Perennial Sweet Vernal and Red Top in such proportions as will insure the most satisfactory results, producing the heaviest possible crops of hay, far superior to seeding with Timothy and Clover alone, and for permanent pastures allowing of the closest grazing without injury. On ordinary fertile soil sow three bushels per acre; where the soil is poor larger quantities are required.

\$2.75 PER BUSHEL

With the above should be sown ten pounds of mixed Clovers per acre (which cost about 15 cts. per pound). On account of the greater weight of Clovers they should be sown separately and only in the Spring, as they are inclined to winter-kill unless well established.

SUMMER-FLOWERING BULBS AND PLANTS

HOW TO GROW GLADIOLI

They succeed in any ordinary garden soil and will repay any care in cultivation bestowed on them. The ground should be liberally enriched and dug over to a depth of fifteen to eighteen inches. Plant in the open garden from April until June, setting the bulbs seven or eight inches apart and about four inches deep. By planting at intervals up to the first of July, bloom can be had all through the Summer and Fall. About the end of October, when the leaves begin to wither, the bulbs should be taken up, dried in the open air and stored in a dry place, free from frost, until planting time the next season.

ELLIOTT'S VICTORY BALL-BEARING LAWN MOWER

The Most Perfectly Constructed and Easiest Running Machine Made

This mower is fitted with **Ball-Bearings**, which reduce the friction astonishingly—even more in a mower than in a bicycle—rendering it easier to operate a 24-inch of this machine than a 16-inch fitted with the old parallel bearings. The gear is entirely enclosed, so that no dirt or cut grass can find its way into the pinions and clog them. The frame cannot be twisted or jarred out of parallel, being bound tightly together by two steel bolts, which make the most rigid frame ever built, and permit of the mower being readily taken apart. The cutter bar is easily removed for sharpening without disturbing the frame. The slight wear of the cones, balls and cases is perfectly compensated for by two screws, while with the parallel bearing six to ten screws are required. The double ratchet is lightning-like in action, consequently the knives cut the instant the mower is moved. The material of which these mowers are constructed is the very best, and only skilled labor and the most approved machinery are employed. **Ball-bearings, 10-inch wheels, triple gear, four-bladed reel.**

The Townsend Horse Lawn Mower

THE TOWNSEND HORSE LAWN MOWER

We consider this the most perfectly constructed Horse Lawn Mower on the market. Triple rolls with triple pawls in each roll, making the most powerful and instantaneous driving mechanism ever put in a Lawn Mower. Unlike other mowers, the motion of the blades is maintained even when turning sharp corners. The height of cut and motion of knives is under perfect control of the driver from his seat, and the large rolls (15 inches in diameter) insure great power and ease of movement. The self-aligning journal boxes will be found in this mower only, and prevent cramping, a very common fault in Horse Lawn Mowers.

All machines are fitted complete with Tool Box, Seat, Handles, Shafts and Side-bar Attachment, which keeps the horse on the cut grass.

LAWN, OR TOP DRESSING

Odorless, convenient, quick acting. A food for lawns and golf links. ASHES, UNLEACHED (Canada Hardwood)

Contain all fertilizing elements except nitrogen. They drive away insects, and are indispensable for all crops requiring potash. They are very beneficial for garden and field crops, and are of high value for cabbage, potatoes, onions, strawberries, fruit trees, grass-lands and lawns. NITRATE OF SODA

This is valuable solely for the nitrogen it contains, equal to 20 per cent. of ammonia. It is very quick in action and hastens the maturity of crops fully two weeks. Being extremely soluble, it should not be applied until the plants are above ground, when 100 to 500 pounds per acre, mixed with wood ashes or land plaster, for convenience in applying, are generally used. Price per 5 lb. package, 40 cts.; 10 lb. package, 60 cts.; per 100 lbs., \$5.00.

BLOOD AND BONE

A very concentrated source of nitrogen, yielding ammonia, etc., by gradual decomposition, and, in consequence, is superior for immediate as well as for prolonged results; it is of exceptional value for garden crops, root crops, corn, grain, grasses, fruit trees, small fruits, grape-vines, and, in fact, all kinds of vegetation. Quantity required: When broadcasted and harrowed in, from ½ to 1 ton per acre.
