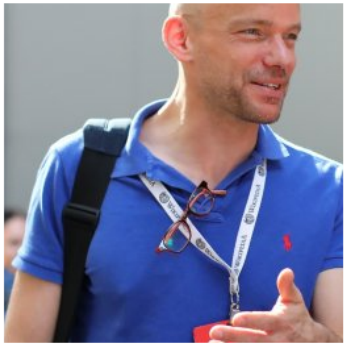
KB, national library of the Netherlands, 6 december 2023

About me

KB national library of the netherlands

Olaf Janssen



Olaf Janssen is open data & Wikimedia coordinator at the KB. He initiates, stimulates and facilitates collaboration between the collections, knowledge, open data and employees of the KB on the one hand and the projects of the Wikimedia movement on the other. Consider, for example, Wikipedia, Wikimedia Commons, Wikidata and Wikibase and the communities that belong to them. Olaf fulfills a national advisory role for other organizations in the field of heritage and knowledge. He is also active as a volunteer within the Wikimedia movement.

What I want to give you…

1. More **understanding & insights** into Wikibase

2. **Examples of** Wikibases, also for manusctipts

3. **Inspiration** to further explore the Wikibase world

What are we going to do?

Wikidata

- Wikidata refreshner
- When is Wikidata not suitable? (for heritage institutions)

Wikibase

- Advantages of Wikibase (compared to Wikidata)
- Downsides of Wikibase
- Examples of institutions/projects using Wikibase

Medieval manuscripts

- Wikibase & medieval manuscripts

Wikidata refreshner

Features, Advantages, Disadvantages

Full overview: *Guide to Wikidata,* 6 june 2023

- https://zenodo.org/record/8006441
- https://commons.wikimedia.org/wiki/File:Wegwijzer_in_Wikidata,_Introductiecurus_Wikidata_-_Koninklijke_Bibliotheek,_6_juni_2023.pdf

Wikidata is one of the largest and most popular LOD platforms in the world (1/2)

- Structured descriptions of 108M things
  People, Animals and plants, Events, Countries, provinces, municipalities, cities, villages, Streets, roads, squares, Buildings, Vehicles, Companies and institutions, Works of art (film, music, paintings etc.), Chemicals , Astromic objects, Genes, Scientific articles.
- Things, not strings (entities, Qs and Ps)
- Centralized, no data silos, 1 data logic and language (GUI, SPARQL, API)

Connected

- Entities are interconnected (triples, Q-P-Q)
- Entities are connected to 8300+ databases worldwide (hub function)
- Entities are connected to Wikimedia infrastructure: Wikipedia, Commons, 700+ Wikimedia platforms

Global

- Global scope, (much) broader than institutional/heritage/national domain
- Multilingual, language independent, 300+ languages

Cooperation

- Collaborative → International community, 25K+ content creators
- Anyone may contribute/edit data, add, improve, delete, merge, translate, etc.

Wikidata is one of the largest and most popular LOD platforms in the world (1/2)

People and machines

- Human readable, human writable → Data available via GUIs in HTML
- Machine readable, machine writable → Data available via APIs in JSON, XML/RDF, CSV etc.

Open & free

- No trackers, no ads
- No copyright or database rights (CC0 license)
- Everyone may reuse data: query, share, copy, process, download, sell, etc.

Durable

- Strongly growing & sustainable, since October 2012

Added value: What can Wikidata add for GLAMs?

1) Increase visibility, findability and reusability of data & collections
- Greater audience reach, worldwide
- Collection data in cross-domain, global, multilingual context → Increasing interoperability of institution with the outside world
- Community: External expertise, skills, tools and enthusiasm to enrich & connect collection data

2) New functionalitities for data (and images)
- Functionalities that institutions do not (or cannot) offer in their own services
- Regarding Search, Data enrichment, - quality control, - visualization and - formats, Image metadata, Machine interactions
- Both for thesauri and (Special) heritage collections
- For humans and machines

3) Toolkit & platform to create and publish LOD
- When no internal tools or workflows are available

4) Developing and sharing knowledge & skills based on LOD
- Both internally and externally
- Strengthening cooperation with external (network) partners via Wikidata/media

In summary:

Wikidata is a

secondary, general, public

knowledge base for the world

What kind of data does Wikidata contain?

Secondary

- Non-original data about
- Notable things (more info)
- Verifiable by means of reliable public sources (more info)

General

- Wide range of subjects/classes
- Relatively basic data, not super specialized

Public

- Public data
- No copyright issues
- No privacy sensitive data (more info)

https://kennisplatform.wikimedia.nl/artikelen/data-delen/wat-zijn-de-criteria-voor-data-op-wikidata/

Needs of heritage institutions for which Wikidata is not suitable

- X Publish domain-specific / specialist / 'esoteric' LOD
- X Publish very large LOD sets (e.g. catalogues, thesauri)
- X Own control over who can add/change data
- X Collaboration with selected partners in a closed, controlled environment
- X Recording of non-public data
- X Own control over IT hosting LOD

KB ONDERZOEKSKRONIEK | Olaf Janssen

WIKIBASE: DE VOORDELEN VAN WIKIDATA, ZONDER DE NADELEN

Olaf Janssen
Wikimedia-coördinator bij de KB
Dit artikel is beschikbaar onder de CC-BY-SA 4.0-licentie

Wikidata is de vrije en gratis database die gestructureerde, linked open data van Wikipedia en overige Wikimedia-projecten centraal opslaat. Wikidata kan gelezen en bewerkt worden door zowel mensen als computers. Iedereen kan zonder beperkingen (want: CC0-licentie) gebruikmaken van de beschikbare gegevens en verbanden, én kan er bovendien zelf aan bijdragen.
De database bestaat inmiddels zeven jaar. In die tijd heeft een actieve community er ruim 62 miljoen personen, plaatsen, gebeurtenissen, organisaties, organismen en andere 'dingen' (entiteiten) in beschreven. Door de sterke koppeling met Wikipedia – sinds jaren in de top-10 van meest geraadpleegde websites – zijn de gegevens in Wikidata bovendien uiterst zichtbaar.
Het uiteindelijke doel is om de hele wereld op een gestructureerde manier te beschrijven, zodat computers ermee overweg kunnen. Vanwege de vrije licentie en de veelgebruikte protocollen (SPARQL, JSON, RDF, XML en, Mediawiki API) wordt de data uit Wikidata ook veelvuldig buiten de Wiki-context hergebruikt, in Google en Amazons Alexa bijvoorbeeld.

Weinig controle

Hoe geweldig Wikidata ook is, voor kennis- en erfgoedinstellingen kan juist die openheid, schrijfbaarheid en onderwerpsbreedte een nadeel vormen. Dit soort instituten heeft vele decennia geïnvesteerd in het zeer zorgvuldig beheren van gespecialiseerde, diepgaande catalogi en thesauri. Hun angst om deze datasets via Wikidata open te maken is dan ook begrijpelijk. Er is te weinig controle, die overijverige community kan alles zomaar aanpassen en de minutieuze beschrijving van dat heel specifieke collectiestuk past niet goed genoeg in het brede en daardoor soms oppervlakkige datamodel van Wikidata.

De openheid, schrijfbaarheid en onderwerpsbreedte van Wikidata kunnen voor kennis- en erfgoedinstellingen een nadeel zijn. Wie liever meer controle over zijn datasets houdt, zet een eigen Wikibase op.

Beeld: pixabay / geralt

Plaque uit de collectie van het Kunstmuseum Den Haag

Wikibase

Einde oefening voor *LOD-hungry en Wiki-aware* instellingen? Nee, gelukkig kun je de software waar Wikidata op draait – dus Wikidata minus de data – ook op een eigen server installeren en er dan je eigen datamodel en data instoppen. Dan heb je een eigen *Wikibase* opgezet. De Wikibase-software is open source en heeft alle voordelen van Wikidata, minus bovengenoemde nadelen.
Over een eigen Wikibase-instantie heb je een stuk meer controle: je kunt alleen geautoriseerde gebruikers het recht geven om bij te dragen en je kunt er je eigen diepgaande, specialistische data(model) in kwijt. Tegelijkertijd kan iedereen – mensen en software – jouw Wikibase gewoon raadplegen, net als bij Wikidata. En functionaliteit die voor Wikidata ontwikkeld wordt, komt vaak ook terug in Wikibase. SPARQL, Mediawiki API, datavisualisaties, kant-en-klare code *snippets* voor Python en andere talen, alles out of the box.

Ontwikkelingen

De nationale bibliotheken van Duitsland (DNB) en Frankrijk (BnF) doen inmiddels serieuze experimenten met Wikibase om hun thesauri naar de LOD-cloud te krijgen. In Nederland doet het Kunstmuseum Den Haag als een van de eerste instellingen een pilot om de website delftsaardewerk.nl een eigen Wikibase te geven.
Om partijen uit de academische en erfgoedwereld kennis te laten maken met de voor- en nadelen van Wikibase en Wikidata, is de KB van plan begin 2020 een studiedag rondom deze onderwerpen te organiseren.

WIKIBASE

Wikibase is the (open source, free) software that runs Wikidata

Wikibase is essentially a blank copy of Wikidata into which you can put your own structured data.

Source

Wikibase advantages

Wikibase advantages

- It allows you to build & manage your own LOD knowledge base
- Without the downsides of Wikidata
  - Custom data models, domain-specific / specialist / 'esoteric'
  - Large data sets
  - Custom rights management (who is allowed to contribute)
  - Not necessarily public
  - In-house IT hosting
- With all the benefits of Wikidata
  - Focused on collaboration and connection (e.g. Wikidata community)
  - For people and machines
  - User-friendly GUI for structured data (Qs and Ps)
  - Multilingualism support
  - Version history
  - Clear ontology: Items, Properties, Statements etc.
  - Output in various data formats (including JSON, RDF/XML, N3)
  - Search via SPARQL
  - MediaWiki API
  - Support for tools (including OpenRefine)
  - (Documentation…)

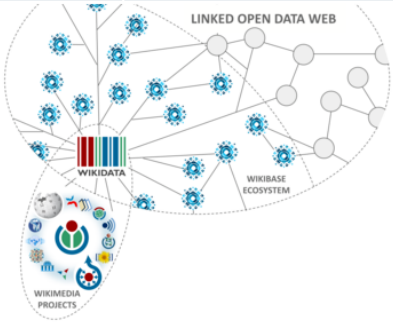
Overview | Joint Vision | Wikidata | Wikibase Ecosystem



Vision

Our vision for our work in Linked Open Data:

> *We work towards a future in which people share the power to collect and organize the data that shapes humanity's understanding of the world.*
>
> *Diverse communities around the world participate in Wikidata and in a network of specialized Wikibases, co-creating an open and free global knowledge graph in a thriving Linked Open Data web.*
>
> *This is the basis upon which people, companies and institutions of all sizes can generate new insights, build new apps and services, and change the world for the better.*

In working towards this vision, we expect a great variety of individuals will be positively impacted:

- **People all over the world** benefit from high-quality, verifiable information that incorporates many perspectives.
- **Communities all over the world** find inspiration and participate in determining how the world's digitized knowledge is organized.
- **Technology creators** of all shapes and sizes rely on the data in our ecosystem, recognizing and utilizing its high quality.
- **Researchers, activists, journalists and other curious minds** gain new insights that have a positive impact on the world.
- **Wikimedia projects and other knowledge curators** collaborate in shared spaces, reducing individual workload.

https://meta.wikimedia.org/wiki/LinkedOpenData/Strategy2021/Wikibase

WIKIBASE

WIKIBASE

Wikibase has a few downsides however...

1) Based on Wikidata

- ‘Wikidata logic’
- You ‘must’ have prior Wikidata knowledge & experience
- Development of Wikibase is (partially) driven by Wikidata agenda and requirements

2) Other data models

Wikibase-specific data model

Wikibase data model (simple)

Wikibase/DataModel/Primer

Page Discussion

< Wikibase | DataModel

Translate this page

Languages: British English **English** français українська

This is a primer to the Wikibase data model. For a more technical specification please check the data model specification.

Summary of the data model [edit]

Wikibase knowledge base content can be summarized as follows:

A Wikibase knowledge base is a collection of Entities. **Entities** are the basic elements of the knowledge base, which can be described and referenced using the Wikibase data model. There are two predefined kinds of Entities: Items and Properties. Wikibase may be extended to support additional types of Entities.

The description of Items and Properties are structured as follows.

1. **Item**
    1. **Item identifier** (number prefixed with *Q*)
    2. **Fingerprint**, consisting of:
        1. Multilingual **label***
        2. Multilingual **description***
        3. Multilingual **aliases**
    3. **Statements**, each consisting of:
        1. **Claim**, consisting of:
            1. Property
            2. Value
            3. Qualifiers (additional property-value pairs)
        2. **References** (each consisting of one or more property-value pairs)
        3. **Rank**
    4. **Site links**
2. **Property**
    1. **Property identifier** (number prefixed with *P*)

Limitations Wikibase data model

Wikibase as an Infrastructure for Knowledge Graphs: the EU Knowledge Graph

Dennis Diefenbach[1,2][0000−0002−0046−2219], Max De Wilde[3][0000−0002−6834−0250], and Samantha Alipio[4]

[1] The QA Company, Saint-Etienne, France
[2] Université de Lyon, CNRS UMR 5516 Laboratoire Hubert Curien, France
[3] Université libre de Bruxelles, Brussels, Belgium
[4] Wikimedia Deutschland, Berlin, Germany

Abstract

One of the drawbacks of Wikibase is that it does not allow the reuse of external RDF vocabularies. Entities and properties will always be QIDs and PIDs. The only available workaround is to create items and properties in Wikibase, and indicate using a custom property that they are equivalent to some RDF vocabulary. Moreover, the data model of Wikibase is more restrictive than the general RDF data model. For example, blank nodes are not allow
of the object of a property must be defined at creation ti
possible to define a property that has both URIs and lit
data model is also more rigid because it restricts to one s
cation, namely n-ary [5]. This implies that it is not possib
RDF dataset into Wikibase. Additionally, a limitation of
SPARQL endpoint is read-only, making it impossible to
via SPARQL. All data has to be ingested using the APIs

	Classical approach	Wikibase
RDF support	Full support	The information can be dumped as RDF but is not natively in this format. RDF data is hard to ingest.
Reuse of external vocabularies and ontologies	Full support	One cannot use external vocabularies directly, but only align them with new properties in the Wikibase.
Scalability	Depending on the underlying triplestore	Ingesting large datasets is time-consuming but some projects are trying to address this issue[46] [10].
Updating queries	Relying on SPARQL	Not possible over SPARQL, since the endpoint is read-only. Only through the Wikibase APIs.
Data model	Flexible	Rigid. For example, the reification model is fixed but well established.

Diefenbach et al (2021), “Wikibase as an Infrastructure for Knowledge Graphs: the EU Knowledge Graph” - https://hal.science/hal-03353225/document

Limitations Wikibase data model

Analysing and promoting ontology interoperability in Wikibase

Daniil Dobriy, Axel Polleres

Vienna University of Economics and Business, Vienna, AT

Abstract

Wikibase, the open-source software behind Wikidata, increasingly gains popularity among third-party Linked Data publishers. However, the platform's unique data model decreases the degree of interoperability with existing Semantic Web standards and tools that underlie Linked Data as codified by Linked Data principles. In particular, this unique data model of Wikibase also undermines the direct reuse of ontologies and vocabularies, in a manner compliant with Semantic Web standards and Linked Data principles. To this end, firstly, we compare the Wikibase data model to the established RDF data model. Secondly, we enumerate a series of challenges for importing existing ontologies into Wikibase. Thirdly, we present practical solutions to these challenges and introduce a tool for importing and re-using ontologies within Wikibase. Thus, the paper aims to promote ontology interoperability in Wikibase and by doing so hopes to contribute to higher degree of inter-linkage of Wikibase instances with Linked Open Data.

https://wikidataworkshop.github.io/2022/papers/Wikidata_Workshop_2022_paper_9774.pdf

Wikidata'22: Wikidata workshop at ISWC 2022 - daniil.dobriy@wu.ac.at (D.Dobriy); axel.polleres@wu.ac.at (A. Polleres) - © 2022

3) Institutional needs

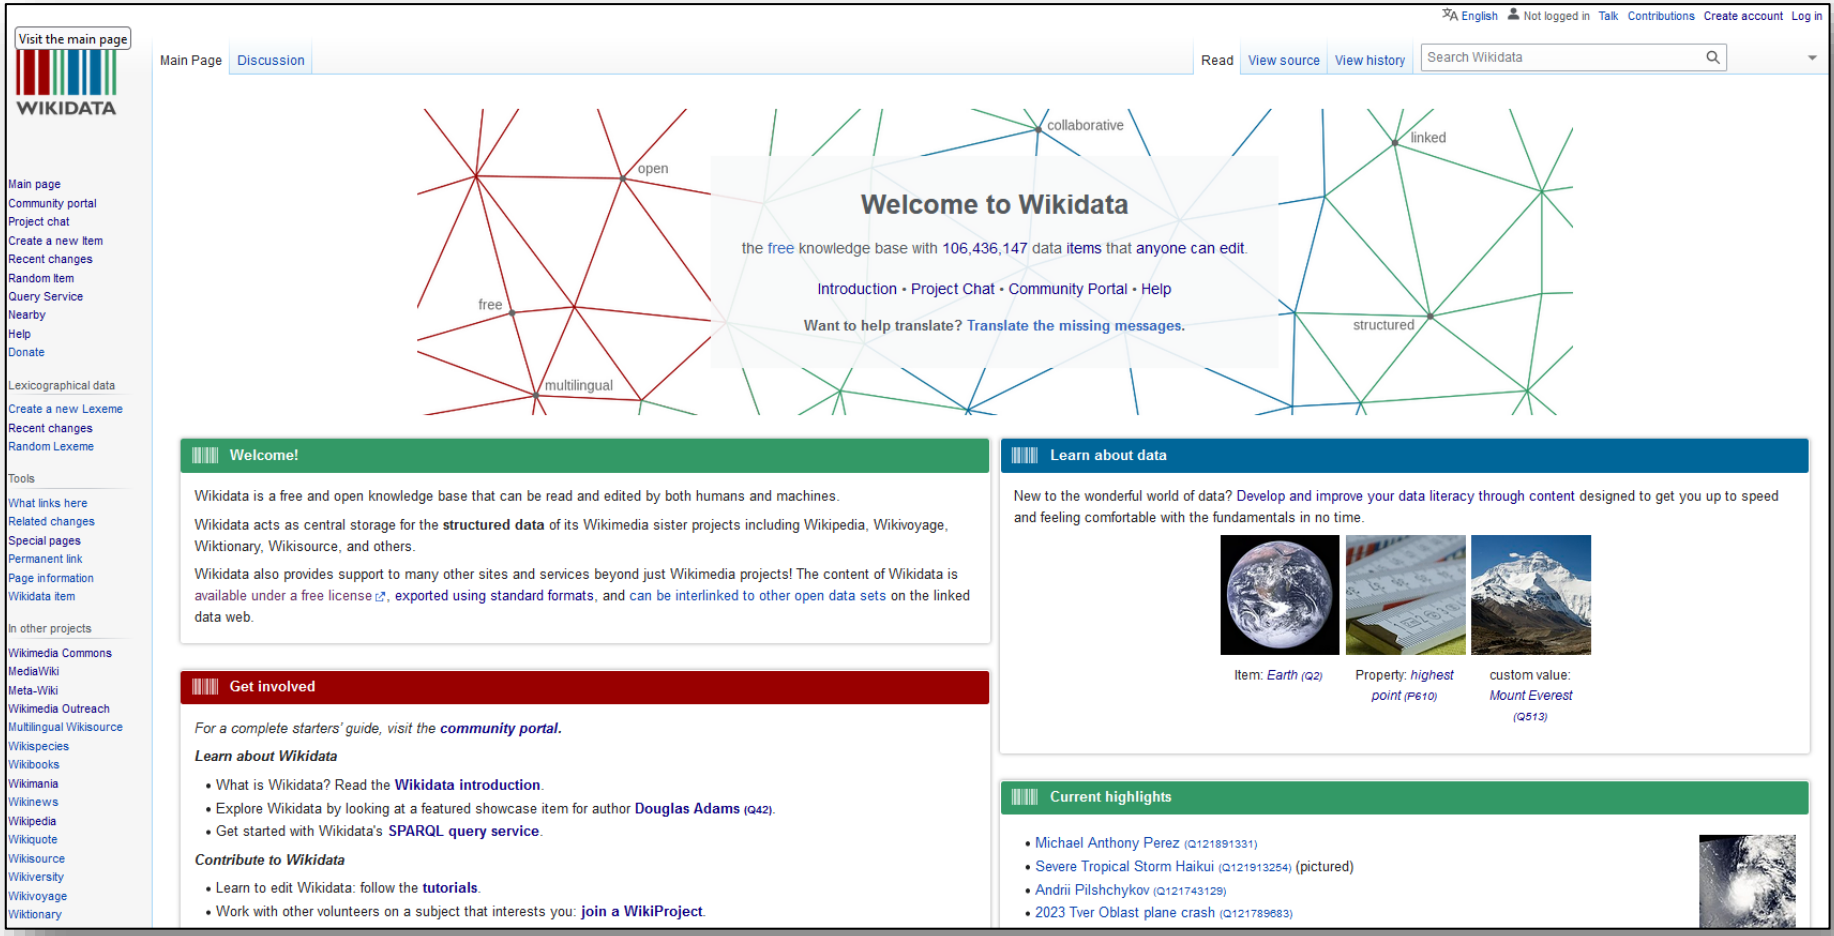
- Not possible to get a service level agreement (SLA) with Wikibase developers & community
- Decentralized ('messy') ecosystem. Where can I find what/who?
- Community and support present, but not specifically focused on institutional needs

Solutions (sort of):

- Professional external Consultants & Support Providers
- Wikibase Stakeholder Group

Examples of institutions/projects using Wikibase

1) Wikidata



https://www.wikidata.org/wiki/Wikidata:Main_Page , 30-8-2023

2) Rhizome Artbase

- Rhizome = art organization in NYC.
- Artbase = archive of born-digital art 1983-present.
- First Wikibase instance outside of Wikimedia projects.

RHIZOME / ArtBase

About Browse Query FAQ User Guide

Welcome to the Rhizome ArtBase

This is an archive of born-digital artworks from 1983 to the present day. A small sample of artwo
shown below; you can also browse the archive by date or by artist name.

Some entries in this archive include external links to artworks maintained by artists or others. So
contain archived copies, hosted on Rhizome infrastructure. All of these, as well as forms of
documentation, are called *variants*—distinct manifestations of the artwork, all accessible via the main
artwork page.

Welcome!

on the FactGrid database, a project of the Gotha Research Centre operated by the data lab of the University of Erfurt. With the support of Wikimedia Germany we are using a MediaWiki with Wikidata's "wikibase" extension. Our main product are data which we collect on "items" such as these:

- Adam Weishaupt
- Paris

You will need to be logged in to see the "add statement" link with which you can add information in the form of triple based machine readable claims — which everyone can now explore with the SPARQL data mining language, at our Query Service. All FactGrid data are CC0-licensed. You can download any search in various data formats with the aim to explore FactGrid data in other software environments or visualise searches with various tools on our site.

Visit our

- FactGrid FAQ for more information on why you might love to use FactGrid as your research platform
- Help Section for further assistance
- Terms of Service if you want to have an account on FactGrid
- Project Section to take a look at work done on the collective platform

The FactGrid database is an open collaborative and multilingual project organised by — as of March 2023 — 312 participants from all over the world. If you are looking for a site to present research data and keep them in the process of further research — the FactGrid database might be a cool candidate. For more information and account details contact:

Dr. Olaf Simons
Gotha Research Centre at the University of Erfurt

FactGrid
a database for historians

Jour fixe

It has been proposed to have a weekly jour fixe on Thursdays 21:30 CET (a time equally (in)convenient to all our teams around the world). FactGrid has an open web channel for such purposes that can be used without further passwords and software downloads. Contact olaf.simons@pierre-marteau.com for link details.

Paris to download

PARIS TO DOWNLOAD comes with a double purpose: it is first designed to provide a dataset for historians to download with one simple click. Click the image below and a SPARQL query will bring the addresses of Paris c. 1830 onto a modern map.

Paris to download (click on the map) / link for the direct table download TSV formatted

On the right hand side you will be able to activate the menu that allows you to download the raw data behind this visualisation to your computer. TSV or CSV are the practical formats here. TSV (table separated) data can be copied and pasted into any spreadsheet. The download will come with the geographic coordinates and the address names, CCo-licensed and ready to use in any software environment of your choice...

5) Aviation Safety Network

AVIATION SAFETY NETW

AN EXCLUSIVE SERVICE OF FLIGHT SAFETY FOUNDATION

Home | Database | Investigation | Statistics | Contact us | About |

About ASN

The Flight Safety Foundation's Aviation Safety Network (ASN) provides up-to-date, complete reliable authoritative information on airliner accidents and safety issues.

ASN consists of three accident/incident databases:

The *ASN accident database* is updated daily and contains descriptions of over 23,000 airliner (aircraft originally certified to carry 12 or more passengers), military transport category aircraft, and corporate jet aircraft accidents dating back to 1919. The information is primarily derived from official governmental agencies, such as air accident investigation boards and civil aviation authorities.

The *ASN Wikibase* is updated regularly by a large user community and contains descriptions of more than 258,000 accidents involving light aircraft, military aircraft, helicopters, gyroplanes, gliders, hot air balloons and UAVs, as well as the accidents contained in the ASN accident database.

The *ASN Drone database* is updated at least four times a year and contains reports of over 15,000 unmanned aircraft or drone sightings from pilots and reported airprox occurrences. The information is primarily derived from official governmental agencies, such as air accident investigation boards and civil aviation authorities.

The Aviation Safety Network is an exclusive service provided by:

ASN Aviation Safety WikiBase

WikiBase - Add and edit accidents yourself

Yes, you can add accidents and incidents to the ASN WikiBase yourself! Or you can correct or update existing accidents. You can add any aviation accident or incident you like: general aviation, military, helicopters etc. As long as they are not covered in the main ASN Safety Database.

Every entry or correction is being reviewed before it appears online.

>>Add an accident.

This information is added by users of ASN. ASN nor the Flight Safety Foundation are responsible for the completeness or correctness of this information.

Search for specific accidents or view accidents by year:

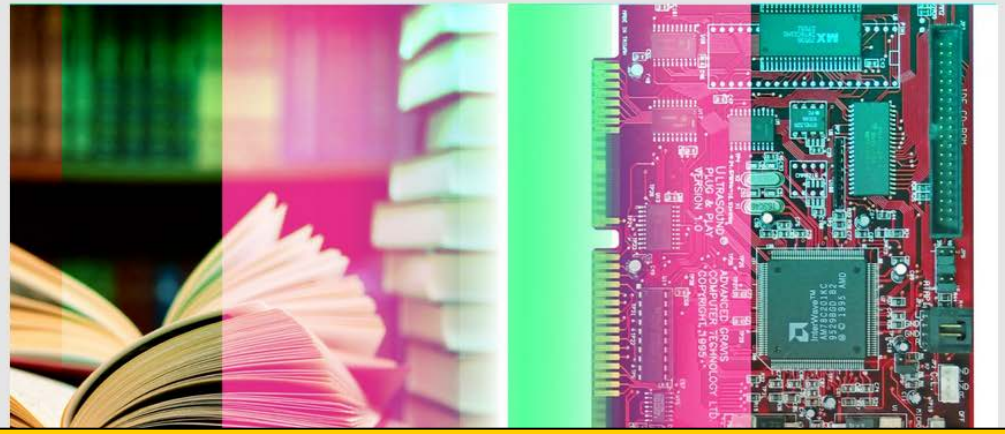
Technical Wikibase

4. March 2020
Barbara Fischer
Jens Ohlig

Could you wikify an authority file? Wikibase has been evaluated for the Integrated Authority File (GND)



Wikibase as a second home for the GND
To collaboratively edit and maintain authority records for the entire GLAM field and digital humanities.

https://tech-news.wikimedia.de/en/2020/03/04/wikibase-and-gnd/

DNB/GND

The second home of the GND

In the world of libraries, the GND has long served as a referencing and rationalisation tool, as did the four authority files that preceded it. It is integrated into certain frameworks and proprietary software structures that are, however, relatively inaccessible to users from outside the world of libraries. We believe that we can use Wikibase to make it easier for some of these target groups to collaborate on the GND.

To this end, we wish to import all the existing GND data records and their corresponding links into a Wikibase entity in 2021. This may sound like a simple task. However, Wikibase's importation interfaces are still very much aligned with the needs of Wikidata. For this reason, we have sought professional support from a Wikibase specialist, who is assisting us as a service provider in the transfer of the database infrastructure, the data importation and the creation of user-friendly input screens. In the next step, we will then invite experienced and new GND users to test the data-entry and search processes in the new environment so that we can further improve these.

During the second half of 2021, we are planning a technical workflow for synchronising the GND Wikibase entity with the CBS system[7]. The plan is to enable new and existing users without any WinIBW[8] access to enter their data as a suggestion in the Wikibase entity.

One long-term goal is to offer a user-friendly and supportive data-recording environment for the GND. The *GND web forms*[9] represent a first step in this direction, as they are considerably more user-friendly than the data-entry systems used by libraries. The web forms currently can be used to record people and corporations. However, this currently envisaged approach is not flexible enough. In addition to the two aforementioned GND record types, there are four more. These six record types unite approximately 50 entity codes,[10] each with specific properties via which the respective entities can be recorded as GND data records. These would require a dynamic entry form that adapts to the entity type or usage context chosen, offers necessary and typical entry elements, highlights useful entries and thus guides the user through the entry process. It remains to be seen whether Wikibase represents the right platform for this in the medium term. At present, Wikibase lacks such features. For now, no update to the generic entry interface is planned "ex works". There is also no option of limiting the offering to fundamental elements

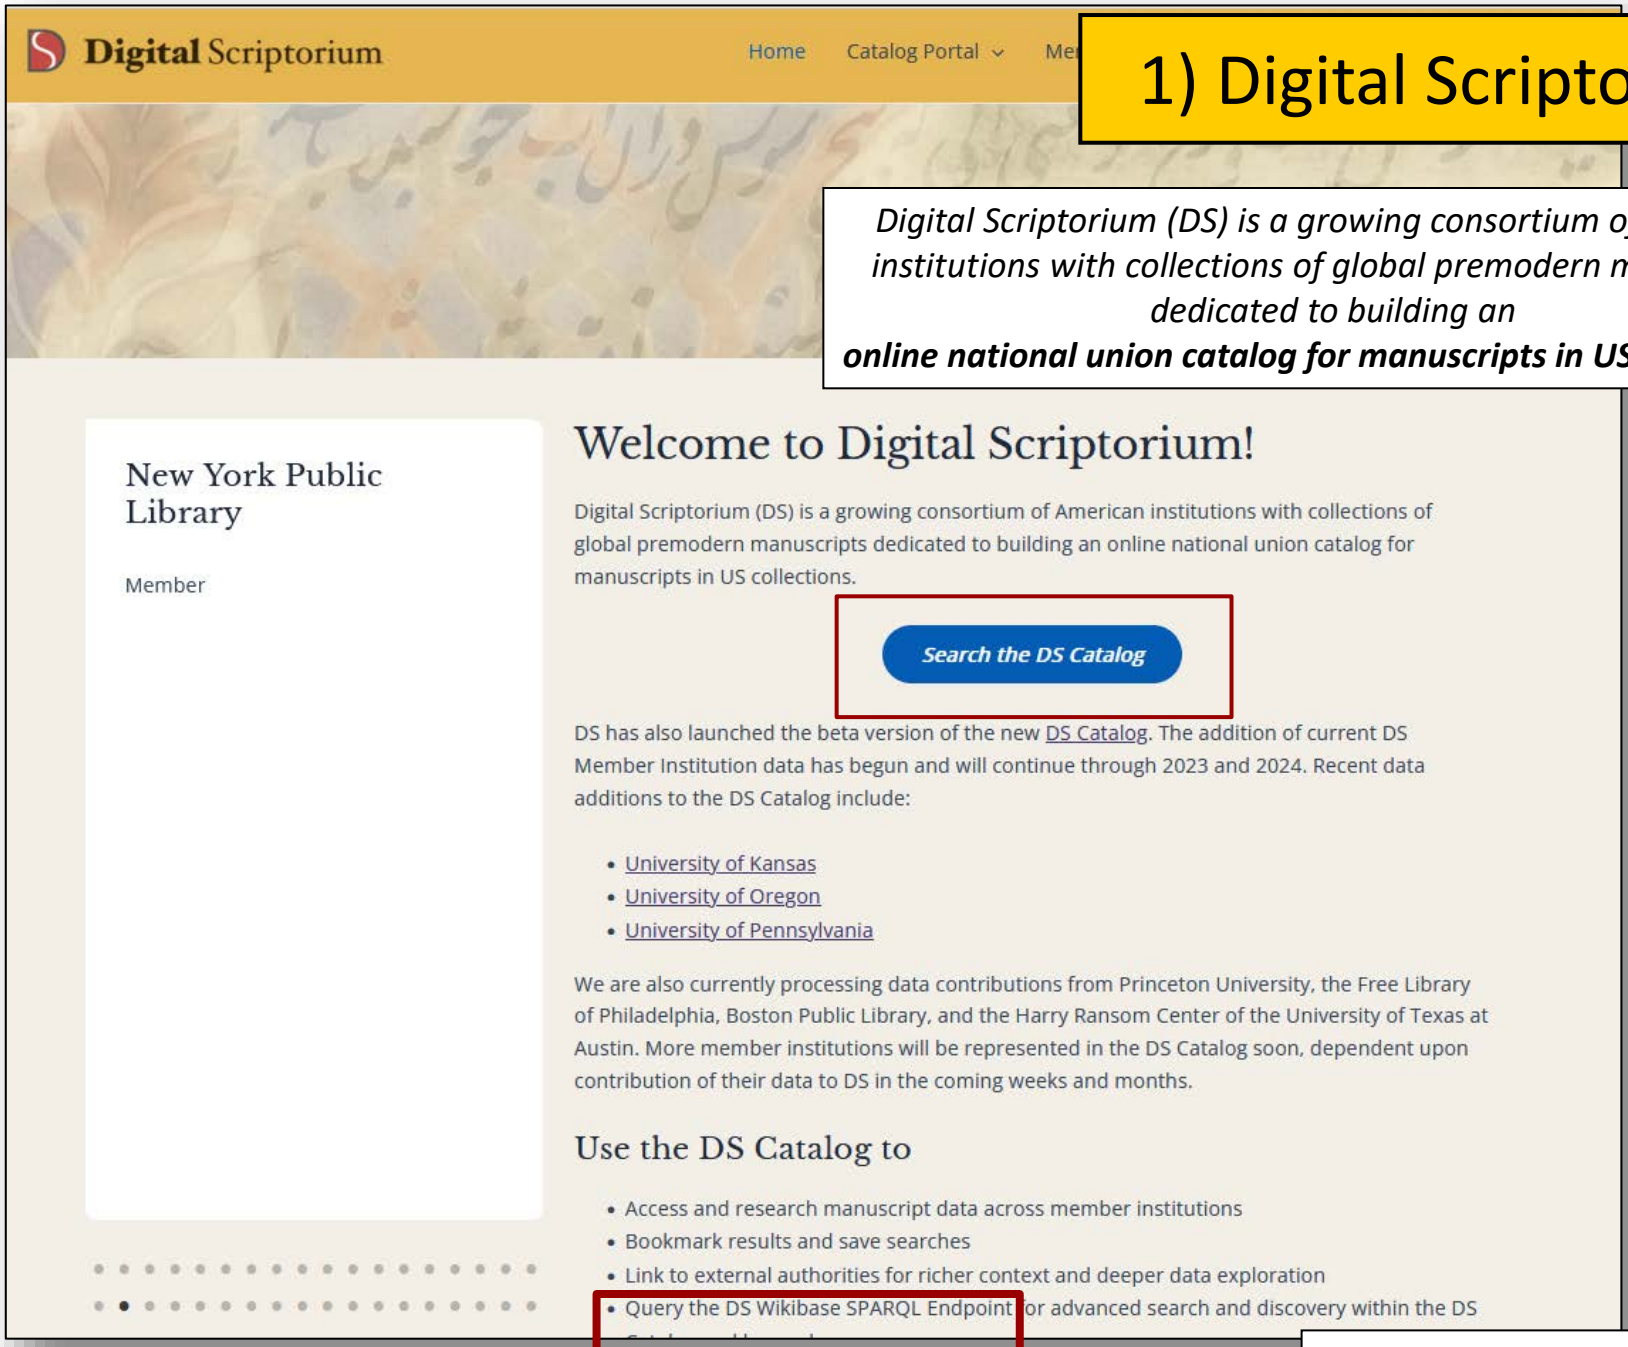
WIKIBASE

Wikibase &
medieval manuscripts

1) Digital Scriptorium

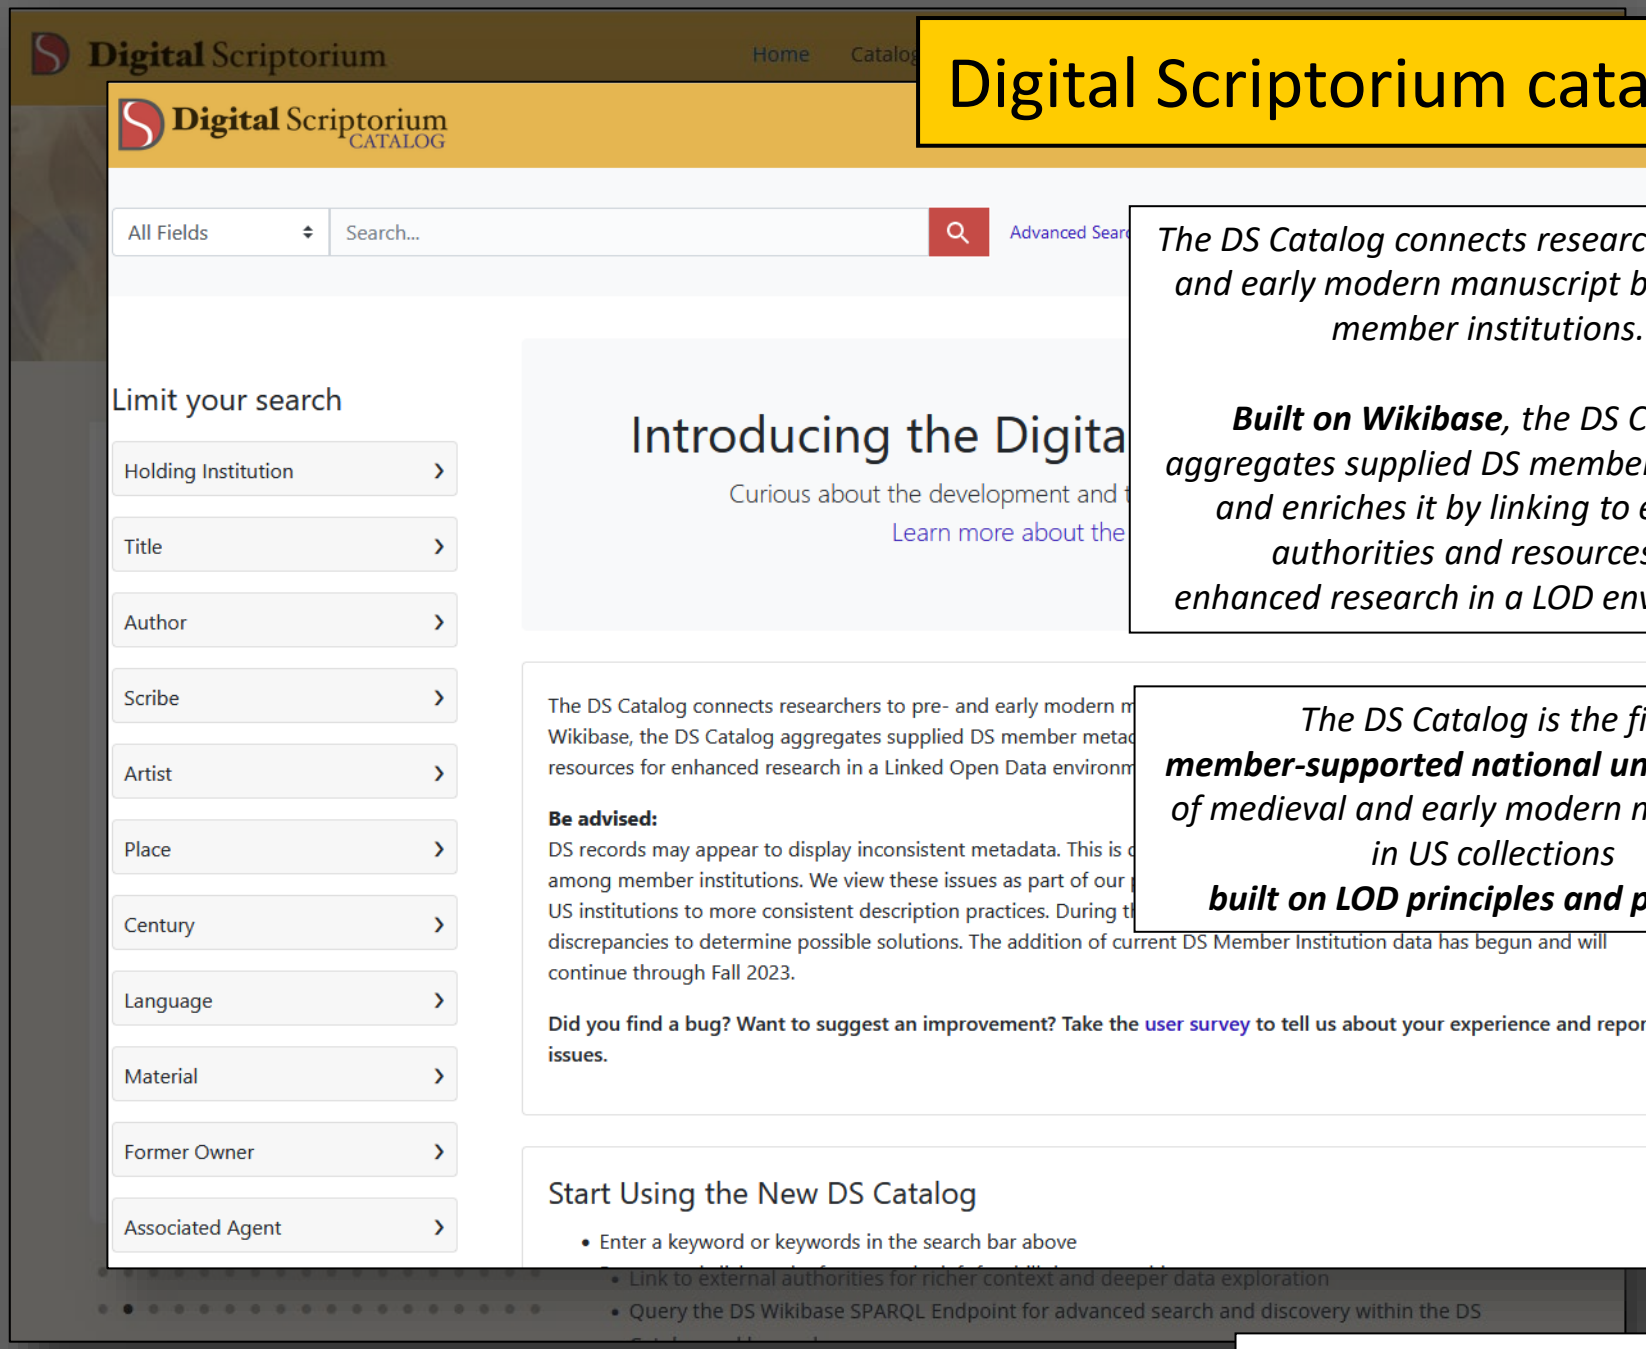
1) Digital Scriptorium

Digital Scriptorium (DS) is a growing consortium of American institutions with collections of global premodern manuscripts dedicated to building an
online national union catalog for manuscripts in US collections.



https://digital-scriptorium.org

Digital Scriptorium catalogus



The DS Catalog connects researchers to pre- and early modern manuscript books in DS member institutions.

***Built on Wikibase**, the DS Catalog aggregates supplied DS member metadata and enriches it by linking to external authorities and resources for enhanced research in a LOD environment.*

*The DS Catalog is the first **member-supported national union catalog** of medieval and early modern manuscripts in US collections **built on LOD principles and practices**.*

Article | Talk | Read | Edit | View history | Tools

From Wikipedia, the free encyclopedia

Coordinates: 40.7639°N 73.96995°W

The **Grolier Club** is a private club and society of bibliophiles in New York City. Founded in January 1884, it is the oldest existing bibliophilic club in North America. The club is named after Jean Grolier de Servières, Viscount d'Aguisy, Treasurer General of France, whose library was famous; his motto, "*Io. Grolierii et amicorum*" [of or belonging to Jean Grolier and his friends], suggested his generosity in sharing books.[1] The Club's stated objective is "the literary study of the arts pertaining to the production of books, including the occasional publication of books designed to illustrate, promote and encourage these arts; and the acquisition, furnishing and maintenance of a suitable club building for the safekeeping of its property, wherein meetings, lectures and exhibitions shall take place from time to time ..."[2]

The Grolier Club's home at 47 East 60th Street

Collections and programs [edit]

The Grolier Club maintains a research library specializing in books, bibliography and bibliophily, printing (especially the history of printing and examples of fine printing), binding, illustration and bookselling. The Grolier Club has one of the more extensive collections of book auction and bookseller catalogs in North America.[3][4][5] The Library has the archives of a number of prominent bibliophiles such as Sir Thomas Phillipps,[6] and of bibliophile and print collecting groups, such as the Hroswitha Club of women book collectors (1944–c. 1999)[7][a] and the Society of Iconophiles.[8]

Digital Scriptorium, integrated MediaWiki API

MediaWiki API help

This is an auto-generated MediaWiki API documentation page.

Documentation and examples: https://www.mediawiki.org/wiki/Special:MyLanguage/API:Main_page

Main module

[Documentation · Etiquette & usage guidelines · FAQ · Mailing list · API Announcements · Bugs & requests]

- Source: MediaWiki
- License: GPL-2.0-or-later

Status: The MediaWiki API is a mature and stable interface that is actively supported and improved. While we try to avoid it, we may occasionally need to make breaking changes; subscribe to the mediawiki-api-announce mailing list for notice of updates.

Erroneous requests: When erroneous requests are sent to the API, an HTTP header will be sent with the key "MediaWiki-API-Error" and then both the value of the header and the error code sent back will be set to the same value. For more information see API: Errors and warnings.

Testing: For ease of testing API requests, see Special:ApiSandbox.

Specific parameters:

action: Which action to perform.

- **block:** Block a user.
- **changeauthenticationdata:** Change authentication data for the current user.
- **changecontentmodel:** Change the content model of a page
- **checktoken:** Check the validity of a token from `action=query&meta=tokens`.
- **cirrus-config-dump:** Dump of CirrusSearch configuration.
- **cirrus-mapping-dump:** Dump of CirrusSearch mapping for this wiki.
- **cirrus-profiles-dump:** Dump of CirrusSearch profiles for this wiki.
- **cirrus-settings-dump:** Dump of CirrusSearch settings for this wiki.
- **clearhasmsg:** Clears the `hasmsg` flag for the current user.
- **clientlogin:** Log in to the wiki using the interactive flow.
- **compare:** Get the difference between two pages.
- **createaccount:** Create a new user account.
- **delete:** Delete a page.
- **echomarkread:** Mark notifications as read for the current user.
- **echomarkseen:** Mark notifications as seen for the current user.

Excerpta ex operibus Sancti Augustini...(DS501)

described manuscript — DS501

P3

0 references

https://catalog.digital-scriptorium.org/wiki/Item:Q2465#P3

title as recorded — Excerpta ex operibus Sancti Augustini

P10

0 references

Quod unigentius dei filius propter formam servi minor patri dicatur qui informa dei aequalis est patri ex eodem de trinitate libro primo titulo viii.

standard title — Unigenitus Dei Filius

0 references

Florigelium

standard title — Florilegium

0 references

https://catalog.digital-scriptorium.org/wiki/Item:Q2465#P10

production date as recorded — s. IX(2/4); 825-850

P23

century — 9. century

production century in authority file — ninth century (dates CE)

earliest date — 825 *Gregorian*

latest date — 850 *Gregorian*

0 references

https://catalog.digital-scriptorium.org/wiki/Item:Q2465#P23

production place as recorded — Germany, Rhineland, upper

P27

place in authority file — Germany

Rhineland

0 references

BIBLISSIMA+ Project Organisation Community Resources Calls for Projects

Biblissima+

Observatory of Written Cultures, from Cl

Biblissima+ is a multi-site digital infrastructure for research and service dedicated to the history of the transm
Renaissance, in the West and in the East.

*Biblissima+ is a French **multi-site digital infrastructure** for research and service dedicated to the history of the transmission of **ancient texts**, from Antiquity to the Renaissance, in the West and in the East.*

From Biblissima to Biblissima+

The Biblissima+ infrastructure (2021-2029) is structured around **7 areas of expertise or "clusters"** bringing together researchers, curators and engineers. They form centres of expertise on a national scale around the study of ancient texts and their transmission through History...

Interface de données liées (RDF)

Chaque entité ou propriété au sein de la plateforme est identifiée dans le Web de données par une **URI** construite sous la forme suivante :

```
https://data.biblissima.fr/entity/Q{id}
```

Exemple : https://data.biblissima.fr/entity/Q2785

Les données brutes d'une entité individuelle sont disponibles au format **JSON** et dans différentes sérialisations de **RDF** : RDF/XML, N-Triples, Turtle et N3.

Elles sont accessibles de deux façons :

1. par le mécanisme de négociation de contenu
2. par l'URL Special:EntityData, en suffixant l'extension correspondant au format souhaité (`.json` , `.rdf` , `.ttl` ou `.nt`) :

```
https://data.biblissima.fr/w/Spécial:EntityData/Q{id}.ext
```

Exemple : https://data.biblissima.fr/w/Spécial:EntityData/Q2785.json

3) Wikibase Knowlegde Group Netherlands (WBGNL)

The aim of this group is to bundle and exchange knowledge & experiences about the use of Wikibase, to learn from each other, and to keep each other informed about the (international) developments and opportunities surrounding Wikibase. Membership is open to everyone in the Netherlands who already works with Wikibase, wants to work with, or is otherwise interested in this software. Mainly for - but certainly not limited to - professionals from Dutch heritage and knowledge institutions, and related organizations and companies.
