Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1978-79

ABSTRACT

Thurman, Jane L., and Ralph T. Roberts. 1989. Hydrologic data for experimental agricultural watersheds in the United States, 1978-79. U.S. Department of Agriculture Miscellaneous Publication No. 1469, 613 pp.

Hydrologic data from 72 agricultural watersheds for calendar years 1978 and 1979 are summarized in this publication. Daily and monthly total precipitation and runoff together with annual maximum peak discharge and maximum runoff for selected time intervals are included. Watershed descriptive information is presented. Maximum and minimum daily temperatures are given for many of the watersheds. This is the 22nd publication in this series.

KEYWORDS: Air temperature, hydrology data, hydrology research, precipitation, rainfall, runoff, streamflow, water data, watersheds

U.S. DEPARTMENT OF AGRICULTURE

Agricultural Research Service

In Cooperation With

State Agricultural Experiment Stations

Beltsville, Maryland 20705

PREFACE

This publication presents basic data on monthly precipitation and runoff; annual maximum discharge and maximum volumes of runoff; daily precipitation and mean daily discharge, with daily air temperature for some areas; and selected runoff events, with associated data on rainfall, land use, and antecedent conditions for agricultural watersheds where research was in progress during 1978-79. It is one of a series of publications on work to process and release hydrologic data of general interest collected cooperatively with other agencies.

The State agricultural experiment stations collaborated in selecting, planning, and conducting these watershed studies. In several studies the U.S. Geological Survey and State and local agencies, such as State water boards and highway departments of local drainage and conservation districts, assisted in the work. The classification and correlation of soils and the evaluation of other watershed characteristics in the descriptions are based mostly on field surveys by the U.S. Department of Agriculture's Soil Conservation Service.

These data were originally collected for specific research objectives, which are still in progress or have been attained. In addition, the data can serve many other purposes. This publication provides information for other Government agencies, university staff members, graduate students, private engineers, and those who need detailed facts concerning agricultural watersheds. High-quality hydrologic data such as these have historic value in addition to providing a basis for research and design and evaluation of projects and programs for conservation and development of the Nation's water resources.

Although the data on which this publication is based were collected in 1978-79 or earlier, the findings are still valid and are used for further research on agricultural watersheds.

Location of experimental agricultural watersheds of the Agricultural Research Service by land resource regions and major land resource areas of the United States	20
Legend for land resource regions and major land resource areas	21
Watershed data by location number and decimal paging (8.002-1 to 74.009-6, a total of 590 data sheets)	24
Table 1.--Description of references 4-22 of "Hydrologic Data for Experimental Agricultural Watersheds in the United States"	2
Table 2.--Index to information on experimental agricultural watersheds included in references 1-22	3
Table 3.--Experimental agricultural watersheds, listed by State, locality, and location number, under study during 1978-79 and included in this publication ..	22
Table 4.—Watersheds, listed by State and locality, for which data were previously included but are not in this publication	22

The decimal system of paging is used to index the watershed data. Pages are numbered at the bottom (center) according to location and watershed number, and the data for each watershed are given on one or more pages. For example, page 10.001-1 is location 10 (Watkinsville, GA), Watershed 1 (W-1 at Watkinsville), and page 1 of the data for that watershed. For convenience in finding items listed in table 3, pages are also numbered consecutively at the bottom (outside corner).

Table 3 is a list of continuing or new watersheds by State, locality, assigned location number, and land resource area, with number of watershed units and selected runoff events reported for 1978-79 in this publication. Table 4 includes similar data on discontinued watersheds.

Copies of this publication may be purchased from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161.

Issued August 1989

Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1978-79

This is the 22d publication in a series on hydrological data by the U.S. Department of Agriculture. The first three volumes are described in the following section and the others are summarized in table 1. The decimal paging system used (see explanation on preceding page) is consistent with that at the bottom of pages in the other 21 publications.

This publication contains selected hydrologic data from 72 watersheds for 1978 and 1979. It includes data on monthly precipitation and runoff for all the watersheds; annual maximum discharge and maximum volumes of runoff for intervals of 1, 2, 6, and 12 hours and 1, 2, and 8 days for 69 watersheds; daily precipitation for 72 watersheds; mean daily discharge for 72 watersheds; applicable daily maximum and minimum air temperatures for 60 watersheds; and detailed information on 1 or more selected typical storm events for 68 watersheds.

Information on selected storm events includes (a) tabular data for antecedent rainfall and runoff, (b) data on rainfall intensity and runoff for the event and on accumulated depth of rainfall and runoff, (c) description of watershed conditions at the time of the selected events, and (d) plottings of runoff hydrographs and rainfall histograms.

Newly established watersheds include descriptions of watershed physical characteristics, instrumentation, land management, graphs, maps, and recommended area of application of the results.

The first 11 publications in this series resulted from the cooperative efforts of several watershed research projects of the Agricultural Research Service and the editing staff in Beltsville, MD. Hydrologic data were summarized, arranged according to standardized formats, recorded on preprinted data sheets, and submitted to the editing office for final review, assemblage, and publication.

A computer-oriented system, designed and developed by the Water Data Laboratory, is now used to produce camera copy for these publications. This is the 11th publication that has been compiled using the computerized system. Hydrologic data submitted from research projects in digital computer form are accepted by the system. The required data analyses, summaries, tabular listings, and plottings are produced by the system. Narrative information is incorporated into the system as uppercase and lowercase alphabetic data using computer-compatible word-processing equipment. The format of the hand-compiled publications (4-11) has been retained where practicable in the computer-compiled publications.

PUBLICATIONS OF EARLIER DATA

Historical hydrologic data on the experimental agricultural watersheds, both terminated and active, have been previously summarized in three looseleaf publications (reprints in bound volumes) by the Agricultural Research Service. They are described in the following three reference summaries. Beginning with the hydrologic data for 1956 through 1979, the types of data previously published separately in these three references are combined in U.S. Department of Agriculture Miscellaneous Publications 945, 994, 1070, 1164, 1194, 1216, 1226, 1262, 1330, 1370, 1380, 1383, 1412, 1420, 1437, 1446, 1451, 1454, and this current publication. These 19 publications are listed in table 1 as references 4-22. These reference numbers have been assigned to simplify citations to them in this and future publications. The first three looseleaf publications and the first eight miscellaneous publications have been recorded on 16-mm microfilm. Copies are available for the cost of the film processing.

Reference 1.—"Monthly Precipitation and Runoff for Small Agricultural Watersheds in the United States," Soil and Water Conservation Research Branch (691 pages, 1957), includes physical descriptions and land use of 334 experimental agricultural watersheds at 60 locations in 27 States from 1923 through 1957. Many of these watersheds were discontinued before 1955.

Reference 2.—"Annual Maximum Flows From Small Agricultural Watersheds in the United States," Soil and Water Conservation Research Division (330 pages, 1958), includes records from 322 watersheds at 59 locations in 27 States from 1923 through 1957. Many of these watersheds were discontinued before 1957.

Reference 3.—"Selected Runoff Events for Small Agricultural Watersheds in the United States," Soil and Water Conservation Research Division (374 pages, 1960), includes a sampling of 1 to 6 typical runoff events from 68 watersheds at 40 locations in 25 States from 1933 through 1959. The publication has maps of each watershed, information on watershed conditions for each event including the 30-day antecedent rainfall and runoff, and tabular as well as graphic data on each storm.

Copies of all these publications have been furnished to the Soil Conservation Service and other Federal, State, and local government agencies. Upon request, they have also been distributed to State agricultural experiment stations, university libraries and engineering departments, private engineers and individuals, and similar foreign institutions and individuals.

Table 2 lists a historical summary of the 22 publications including the designated watershed locations, area, record years of data, and a publication reference number indicating the specific data storage location in the ARS Water Data Base.

Table 3 summarizes the location of each watershed under study and reported in this 22d publication.

Table 4 lists the watershed units where studies were discontinued in 1977.

FORM OF DATA PRESENTATION

The data in this publication are presented for each watershed in the following order: (a) Watershed description, if not previously published; (b) monthly precipitation and runoff; (c) average monthly precipitation and runoff for period of record; (d) annual maximum flows; (e) daily temperature extremes for some watersheds, daily precipitation, and mean daily discharge; (f) selected runoff events; (g) graphs of selected runoff events; and (h) watershed maps, if not previously published or if revised.

Continuing Watersheds

For current watersheds for which the descriptive information has been published in references 1 and 4-20, the tabular data begin at the top of the first page. On each page at the bottom outside corner is a sequential page number, and the decimal paging system is shown at the bottom center.

The geographic location associated with each study, usually a city and State, and the local name and number of the watershed are recorded at the top of the first page for each watershed. This identification is followed by detailed information on the geographic location, including latitude and longitude when available, and the size of the watershed.

In the first table for each watershed appears the heading MONTHLY PRECIPITATION AND RUNOFF (INCHES). To 1

¹ For description of references 1-21, see page 1 and table 1.² * = streamflow data for all or part of record period are stored in ARS Water Data Bank.³ (a) area changed from 63,170 acres (1-1-1967).

(b) area changed from 10,050 acres (1-1-1967).

(c) area changed from 22,656 acres (1-1-1967).

(d) total drainage area.

(e) total study area.

⁴ B = year (19--) record began.

E = year (19--) record ended.

the right of that heading are given the location and watershed number (or designation).

In the table for the current calendar year, the precipitation (P) in inches is given in the monthly columns and the yearly total in the last column, headed annual. In the line below, the corresponding runoff (Q) in inches is similarly given for each month and the total for the year. For some watersheds, data are included for years prior to the current year. Underneath, in two lines, are given the (P) and (Q) station average amounts (STA AV) by months, with average annual total for the period of record.

Usually, the first table for each watershed contains a second heading entitled ANNUAL MAXIMUM DISCHARGE (in/hr) AND MAXIMUM VOLUMES OF RUNOFF (inches) FOR SELECTED TIME INTERVALS. Data are then given for the calendar year listed in the first column. Under the maximum discharge heading, the date column shows the month and day that the instantaneous peak in inches per hour occurred. In computing this rate, corrections were made, where needed, for any significant pondage above the runoff-measuring device. Under the maximum volume heading, the date refers to the month and day on which the interval began; for example, if the interval began August 30 at 2359, the entry in the date column would be 8-30. The depths for 1 hour to 8 days are the annual maximum values recorded, without regard to entire clock hours or days; thus, if the 6-hour interval began at 1332, the interval would end exactly 6 hours later at 1932. The volume given is in inches of average depth over the watershed for each of the seven selected time intervals (1, 2, 6, and 12 hours and 1, 2, and 8 days). In the last section of the table, the maximum discharges and depths for the various periods are given under MAXIMUMS FOR PERIOD OF RECORD.

Notes and footnotes below the first table for each watershed include (a) a general statement as to watershed conditions and other physical changes for the period covered, (b) publication in which the most recent map may be found, (c) length of precipitation and runoff records, and (d) location of the nearest longtime National Weather Service precipitation station together with the record length.

For some watersheds, tables of daily air temperature (maximum and minimum in degrees Fahrenheit), daily precipitation (inches), and mean daily discharge (cfs) are next, with explanation of the data in footnotes at the end of each table. The multiplier to convert mean daily discharge in cubic feet per second (cfs) to inches per day is given as the first note following the mean daily discharge table.

Cooperating agencies are identified at the bottom of the first page for each watershed just above the index page number.

If no daily tables are given, the tabular data for selected runoff events begin in the remaining space on the first page and are carried forward on continuation sheets (or pages) until completed. In general, the selected runoff events are those in which runoff was produced by a relatively uniform rainfall excess of short duration. The information for each event includes tabulation of (a) antecedent rainfall and runoff that occurred on the day of the event prior to the beginning of the event, (b) rainfall intensities and accumulated amounts for the event, (c) runoff rates and accumulated amounts for the event, and (d) specific watershed conditions at the time of the event.

Simple graphs of rainfall and runoff rates for all events follow the tabular data. Runoff rates expressed in both cubic feet per second (cfs) and inches per hour (in/hr) are shown on the graphs. Some very low runoff rates expressed in in/hr are given in the "E" format, such as 7.25 E-4, which is equal to 0.000725 in/hr.

Maps follow the graphs unless previously published in references 3-20 or unless shown herein on the map of another watershed.

In the notes at the bottom of the first page for runoff events, the multiplier to convert runoff rates in cubic feet per second to inches per hour is given. The notes on continuation pages contain the statement on the multiplier and similar explanations of the data on each page.

New Watersheds

For the watersheds installed in recent years and not reported previously (see table 3), the presentation begins with the watershed description in the upper part of the first page. The explanations and definitions on which the description is based are given in the next section.

The first line, centered at the top of the sheet, indicates the project location, which is the nearest city or town; the number or name of the watershed used locally; and the latitude and longitude of the stream gage. Descriptive information is then given under several of the following 12 major topics: Location, Area, Slopes, Soils, Erosion, Land Capability, Watershed Geology, Surface Drainage, Character of Flow, Instrumentation, Watershed Conditions, and Generally Represents.

After this description, the tabular data are summarized in the first two tables, and data are included as previously described for contributing watersheds. The tabular data for daily air temperature, precipitation, and discharge, if presented, precede the tabular data for SELECTED RUNOFF EVENTS. The rest of the material of this series for this particular watershed follows in the same order as previously indicated.

WATERSHED DESCRIPTIONS

The following definitions and explanations were used in describing watershed location, watershed characteristics, instrumentation, land management, and recommended area of application of the hydrologic data.

LOCATION gives county and State, distance and direction of the runoff gaging station from the nearest city or town, the major river basin in which it lies, and latitude and longitude. When two or more basins are involved, the tributary or subbasin is mentioned first, followed by the major basin.

AREA of watershed is given in acres if less than 640 acres and in both acres and square miles if more than 1 square mile. If areas are revised, additional values are included with notes identifying the date of change.

SLOPES are given in terms of the ranges commonly used in survey work in the locality. The percentages of the watershed lying in each slope class are listed. As an example, "8 percent is in 0-2 percent class" means that 8 percent of the watershed area has slopes ranging from 0 to 2 percent.

SOILS are described briefly, according to definitions from the U.S. Department of Agriculture's "Soil Survey Manual," Agriculture Handbook 18, published in 1951. Soil descriptions are given for the new watersheds. Soil-type name consists of the soil series plus the textural class, determined primarily by the texture of the upper part of the soil profile.

Soil texture refers to the relative proportions of the various size groups (or separates) of individual soil grains in a mass of soil. It refers specifically to the proportions of clay, silt, and sand less than 2 mm in diameter. The various classes of texture in order of increasing percentages of the smaller size groups are (a) sand, (b) loamy sand, (c) sandy loam, (d) loam, (e) silt loam, (f) silt, (g) sandy clay loam, (h) clay loam, (i) silty clay loam, (j) sandy clay, (k) silty clay, and (l) clay. In some of the descriptions, the broader classification of coarse, moderately coarse, medium, moderately fine, or fine has been used. The coarse soils are the sands and the fine soils are the clays.

Soil structure refers to the aggregation of primary soil particles into compound particles, or clusters of primary particles, that are separated from adjoining aggregates by surfaces of weakness. Structure grade, or the durability of the aggregates when subjected to disturbance, is described as structureless, weak, moderate, or strong. For some soils the structureless grade is described as massive if coherent or single grain if noncoherent. The size of the aggregates is reported as very fine, fine, medium, coarse, or very coarse. Structure shape is given as being platy, prismatic, columnar, angular blocky, subangular blocky, granular, or crumb.

Permeability is the quality of a soil that enables it to transmit water or air. This quality is indicated by the terms very slow, slow, moderately slow, moderate, moderately rapid, rapid, or very rapid.

Internal soil drainage is the quality of a soil that permits the downward flow of excess water through it. Internal drainage is reflected in the frequency and duration of periods of saturation with water. It is determined by the texture, structure, and other characteristics of the soil profile and of underlying layers, and by the height of the water table, either permanent or perched, in relation to the water added to the soil. Internal drainage is described as none, very slow, slow, medium, rapid, or very rapid.

Soils may be grouped into soil drainage classes, based on observations and inferences used to obtain classes of runoff, soil permeability, and internal soil drainage. These classes are given in some soil descriptions to identify internal drainage. They are very poorly drained, poorly drained, imperfectly or somewhat poorly drained, moderately well drained, well drained, somewhat excessively drained, or excessively drained.

EROSION conditions on the watershed are described according to the following classification for water and wind erosion, also briefed from Agriculture Handbook 18. The percentage of the watershed in the following erosion classes is given.

Class 1.—The soil has a few rills or places with thin A horizons that give evidence of accelerated erosion, but not to an extent to greatly alter the thickness and character of the A horizon. Except for soils having very thin A horizons (less than 8 inches), the surface soil consists entirely of A horizon throughout nearly all the delineated areas. Up to about 25 percent of the original A horizon, or original plowed layer in soils with thin A horizons, has been removed from most of the area. This class also includes the areas with no erosion.

Class 2.—The soil has been eroded to the extent that ordinary tillage implements reach through the remaining A horizon or well below the depth of the original plowed layer in soils with thin A horizons. Generally the plowed layer consists of a mixture of the original A horizon and the underlying horizons. Mapped areas of eroded soil usually have patches in which the plowed layer consists entirely of the original A horizon and others in which it consists entirely of underlying horizons. Shallow gullies may be present. Approximately 25 to 75 percent of the original A horizon or surface soil may have been lost from most of the area.

Class 3.—The soil has been eroded to the extent that all or practically all the original surface soil, or A horizon, has been removed. The plowed layer consists essentially of materials from the B or other underlying horizons. Patches in which the plowed layer is a mixture of the original A horizon and the B horizon, or other underlying horizons, may be included within mapped areas. Shallow gullies or a few deep ones are common in some soil types. Approximately 75 percent of the A horizon and commonly part or all of the B horizon, or other underlying horizons, have been lost from most of the area.

Class 4.—The land has been eroded until it has an intricate pattern of moderately deep or deep gullies. Soil profiles have been destroyed except in small areas between the gullies. Such land is not useful for crops in its present condition. Reclamation for crop production or for improved pasture is difficult, but it may be practicable if other characteristics of the soil are favorable and erosion can be controlled.

Class +.—Recent alluvial and colluvial deposition.

LAND CAPABILITY is given as classified by Klingebiel and Montgomery in U.S. Department of Agriculture's "Land-Capability Classification," Agriculture Handbook 210, published in 1961. The classification expresses the suitability of land for use without deterioration. The eight land-capability classes are distinguished according to the risk of land damage or difficulty of land use. Classes I-IV are suitable for cultivation and other uses, whereas classes V-VIII are not suitable for cultivation.

Class I.—Very good land for cultivation; nearly level and productive; not subject to erosion; needs only ordinary good farming methods.

Class II.—Good land for cultivation; mostly gently sloping; not more than moderately subject to erosion; some land may be rather wet; can be farmed safely with easily applied practices.

Class III.—Moderately good land for cultivation; mostly moderately sloping; some areas too wet or too dry; can be farmed safely with practical conservation measures carefully applied; usually a combination of two or more measures is needed.

Class IV.—Fairly good land, suitable for occasional cultivation; generally strongly sloping; often shallow or very sandy; often found in dry climate.

Class V.—Land very well suited for grazing or forestry; requires good range or woodland management.

Class VI.—Land well suited for grazing or forestry; steeply sloping land, or stony or shallow soil; eroded, droughty, or wet land; requires careful management.

Class VII.—Land fairly well suited for grazing or forestry; severely limited in use by such factors as very steep slope, shallow or droughty soil, wetness, severe erosion, or excessive salinity; requires very careful management.

Class VIII.—Land not suitable for cultivation, grazing, or forestry; may be useful for wildlife, recreation, or protection of water supplies.

WATERSHED GEOLOGY information, when available, for new watersheds is reported here. The parts of each watershed occupied by various geological formations or series are briefly described, together with strike and dip of the strata, thickness, and relative position, when known. Faults, perched water tables, outcrops (if present), and other details relating to the movement of water within the drainage area or affecting the hydrology of the watershed are described.

SURFACE DRAINAGE refers to the ease with which excess water flows from the watershed area. The length of the principal waterway is the distance from the gaging station to the most remote point on the watershed boundary, measured along the flood plain of the watercourse.

CHARACTER OF FLOW describes the flow of the principal watercourse with respect to permanence and space. The following definitions are from Meinzer's "Outline of Ground-Water Hydrology," U.S. Geological Survey Water-Supply Paper 494, published in 1923. As to permanence, streams may be divided into perennial, intermittent, and ephemeral.

A perennial stream, or stretch of a stream, flows continuously. Perennial streams are generally fed in part by springs, and their upper surfaces usually stand lower than the water table in the localities through which they flow.

Intermittent streams may be divided, with respect to their water source, into spring-fed intermittent streams and surface-fed intermittent streams. They also flow in direct response to precipitation.

A spring-fed intermittent stream, or stretch of a stream, flows only at certain times when it receives water from springs. The intermittent character of streams of this type is generally caused by fluctuations of the water table, whereby the stream channels stand sometimes below the water table and other times above. This is the ordinary type of intermittent stream.

A surface-fed intermittent stream, or stretch of a stream, flows during protracted periods when it receives water from some surface source, generally the gradual and long-continued melting of snow in a mountainous or other cold tributary area. The term may be arbitrarily restricted to streams or stretches of streams that flow continuously during periods of at least 1 month.

An ephemeral stream, or stretch of a stream, flows only in direct response to precipitation. It receives no water from springs and no long-continued supply from melting snow or other surface source. Its stream channel is at all times above the water table. The term may be arbitrarily restricted to streams or stretches of streams that do not flow continuously for as long as 1 month.

With respect to continuity in space, streams may be divided into continuous and interrupted streams. An interrupted stream contains (a) perennial stretches with intervening, intermittent, or ephemeral stretches or (b) intermittent stretches with intervening ephemeral stretches. These two classes of interrupted streams are designated, respectively, perennial interrupted streams and intermittent interrupted streams. A continuous stream does not have interruptions in space. It may be perennial, intermittent, or ephemeral, but it does not habitually have wet and dry stretches.

INSTRUMENTATION describes the type of runoff control or measuring device, number and type of precipitation gages, type of charts used, and snow courses, if used.

WATERSHED CONDITIONS describe the general use and farm, forest, or range practices before the period of record and the conservation measures, crops, yields, and general cultural operations and practices during the period of record. Rotation crops are listed in the order grown. Operations are described with commonly used agricultural terms, and only those that appear to have a significant relationship to the hydrology of the watershed are mentioned.

GENERALLY REPRESENTS gives the broad area of application for which the data of the specific watershed are recommended. The land resource areas named are those delineated on the map titled "Location of Experimental Agricultural Watersheds of the Agricultural Research Service," on pages 20 and 21. Solid circles show the approximate locations of the continuing or new watersheds; open circles show approximate locations of the discontinued studies. For a few studies the circles indicate the locations of the project headquarters instead of the watershed locations. A larger index map with more detail is included in reference 4.

For some studies, the watershed location on the maps apparently contradicts the descriptive information under **Generally Represents**. This is caused by the small scale of maps; it is difficult to show many small local variations in boundaries of the land resources areas. The descriptive statements, instead of the map location, should be the guide to the application of the data.

STANDARD SYMBOLS FOR TABULAR DATA

The following capital letters have been used as standard symbols throughout this publication to designate specific items or meanings:

Symbol	Meaning
E	- value is estimated or partially estimated.
H	- precipitation in form of hail.
L	- precipitation in form of sleet or freezing rain.
M	- mixed precipitation in form of rain, snow, and sleet.
N	- precipitation in form of rain and snow.
NR	- no record, when used in place of value.
P	- monthly or annual precipitation in inches.
Q	- monthly or annual runoff in inches.
RG	- rain gage, generally followed by gage number.
S	- precipitation in form of snow.
STA AV (or AVG)	- station average for period of record.
T	- trace; the value is not large enough to round to the lowest significant digit. In some arrays a trace value is indicated by all zeros, with more than one zero located to the right of the decimal.
Z	- an accurately measured total for a series of days that has been equally divided among coded days.

Time-of-day symbols or designations a, p, m, and n used in previous publications through 1961 have been discontinued, and military time (0001 through 2400) has been substituted in subsequent publications. Unless stated otherwise, time used in tables is Eastern, Central, Mountain, or Pacific standard, whichever applies to the given location.

PERSONNEL RESPONSIBLE FOR DATA PREPARATION

At each research location, many individuals have contributed to the planning and establishment of the watershed and the collection, compilation, and analysis of the data. Some of those who were directly responsible for preparing the data and information for this report are the following:

	Location
C.A. Burroughs, J.M. Sheridan,	
R.G. Williams, P. Yates	8, 74
A.P. Barnett, A.W. Thomas, M. Murphy	10
R.N. Weaver	16
L.A. Kramer, M. Mazzocco	25, 71
J.V. Bonta, V. Dreher	26
F.R. Crow, B. Wilson, W.R. Gwinn	37
C.W. Richardson, D.A. Wright	42
J.K. Mitchell	61
A.L. Huber, S. Stillings	68
B.B. Barnes, A.D. Nicks, R.R. Schoof	69

ADDITIONAL PUBLICATIONS

In references 1 and 4-21 (see pp. 1 and 2), citations to other publications are given at the end of the introduction for many of the locations. The publications present watershed data and interpretations of results in various journals, bulletins, and periodicals. A listing of publications resulting from related work follows. Unless otherwise noted, the publication year is 1978 or 1979. The scope of the selected publications varies from a specific study to an overall program of hydrology.

LOCATION OF EXPERIMENTAL AGRICULTURAL WATERSHEDS OF THE AGRICULTURAL RESEARCH SERVICE

U.S. Department of Agriculture

Land Resource Area delineations as determined by the Soil Conservation Service

**LEGEND FOR LAND RESOURCE REGIONS
AND MAJOR LAND RESOURCE AREAS
(of the 48 conterminous States)**

A	NORTHWESTERN FOREST, FORAGE, AND SPECIALTY CROP REGION	F	NORTHERN GREAT PLAINS SPRING WHEAT REGION
1 Northern Pacific Coast Range and Valleys	52 Brown Glaciated Plain	105 Northern Mississippi Valley Loess Hills	
2 Willamette and Puget Sound Valleys	53 Dark Brown Glaciated Plain	106 Nebraska and Kansas Loess-Drift Hills	
3 Olympic and Water Slope Cascades Mountains	54 Rolling Soft Shale Plain	107 Iowa and Missouri Deep Loess Hills	
4 California Coastal Redwood Belt	55 Black Glaciated Plains	108 Illinois and Iowa Deep Loess and Drift	
5 Siskiyou-Trinity Area	56 Red River Valley of the North	109 Iowa and Missouri Heavy Till Plain	
B	NORTHWESTERN WHEAT AND RANGE REGION	G	WESTERN GREAT PLAINS RANGE AND IRRIGATED REGION
6 Eastern Slope Cascade Mountains	58 Northern Rolling High Plains	113 Central Claypan Area	
7 Columbia Basin	59 Northern Smooth High Plains	114 Southern Illinois and Indiana Thin Loess and Till Plain	
8 Columbia Plateau	60 Pierre Shale Plains and Badlands	115 Central Mississippi Valley Wooded Slopes	
9 Palouse and Nez-Percé Prairie	61 Black Hills Foothslopes	EAST AND CENTRAL GENERAL FARMING AND FOREST REGION	
10 Upper Snake River Lava Plains and Hills	62 Rolling Pierre Shale Plains	116 (See M Above)	
11 Snake River Plains	63 Mixed Sandy and Silty Tableland	117 Boston Mountain	
12 Lost River Valleys and Mountains	64 Nebraska Sand Hills	118 Arkansas Valley and Ridges	
13 Eastern Idaho Plateaus	66 Dakota-Nebaska Eroded Tableland	119 Ouachita Mountains	
C	CALIFORNIA SUBTROPICAL FRUIT, TRUCK, AND SPECIALTY CROP REGION	67 Central High Plains	120 Kentucky and Indiana Sandstone and Shale Hills and Valley
14 Central California Valley	68 Irrigated Upper Platte River Valley	121 Kentucky Bluegrass	
15 Central California Coast Range	69 Upper Arkansas Valley Rolling Plains	122 Highland Rim and Pennyroyal	
16 California Delta	70 Pecos-Canadian Plains and Valley	123 Nashville Basin	
17 Sacramento and San Joaquin Valleys	H	124 Western Allegheny Plateau	
18 Sierra Nevada Foothills	71 Central Nebraska Loess Hills	125 Cumberland Plateau and Mountains	
19 Southern California Coastal Plain	72 Central High Tableland	126 Central Allegany Plateau	
20 Southern California Mountains	73 Rolling Plains and Breaks	127 Eastern Allegheny Plateau and Mountains	
D	WESTERN RANGE AND IRRIGATED REGION	74 Central Kansas Sandstone Hills	128 Southern Appalachian Ridges and Valley
21 Klamath and Shasta Valleys and Basins	75 Central Loess Plains	129 Sand Mountain	
22 Sierr Nevada Range	76 Bluestem Hill	130 Blue Ridge	
23 Malibu High Plateau	77 Southern High Plains	MISISSIPPI DELTA COTTON AND FEED GRAINS REGION	
24 Humboldt Area	78 Central Rolling Red Plains	131 Southern Mississippi Valley Alluvium	
25 Owyhee High Plateau	79 Great Bend Sand Plains	132 Eastern Arkansas Prairies	
26 Caron Basin and Mountains	80 Central Rolling Red Prairies	134 (See P below)	
27 Fallon-Lovelock Area	I	SOUTH ATLANTIC AND GULF SLOPE CASH CROP, FOREST, AND LIVESTOCK REGION	
28 Great Salt Lake Area	81 Edwards Plateau	86 (See J Above)	
29 Sonoran Basin and Range	82 Texas Central Basin	133 Southern Coastal Plain	
30 Sonoran Basin and Range	83 Rio Grande Plain	134 Southern Mississippi Valley Shallow Uplands	
31 Imperial Valley	J	135 Alabama and Mississippi Blackland Prairies	
32 Northern Arizona Desertic Basins	84 Cross Timbers	136 Southern Piedmont	
33 Semiarid Rocky Mountain	85 Grand Prairie	137 Carolina and Georgia Sandhills	
34 Central Deseritic Basins, Mountainous and Plateaus	86 Texas Blackland Prairie	138 North Central Florida Ridge	
35 Colorado and Green Rivers Plateaus	87 Texas Claypan Area	R	
36 New Mexico and Arizona Plateaus and Mesas	88 Northern Minnesota Swamps and Lakes	NORTHEASTERN FORAGE AND FOREST REGION	
37 San Juan River Valley Meas and Plateaus	89 Minnesota Rockland Hills	139 Eastern Ohio Till Plain	
38 Black, Hualapai, and Cerbat Mountains	90 Central Wisconsin and Minnesota Thin Loess and Till	140 Glaciated Allegheny Plateau and Catskill Mountains	
39 Arizona and New Mexico Mountainous Areas	92 Superior Lake Plain	141 Tughill Plateau	
40 Central Arizona Basin and Range	93 Northern Michigan and Wisconsin Stony, Sandy, and Rocky	142 St. Lawrence-Champlain Plain	
41 Southeastern Arizona Basin and Range	Plains and Hills	143 Northeastern Mountains	
42 Southern Desertic Basins, Plains and Mountains	94 Northern Michigan Sandy Drift	144 New England and Eastern New York Upland	
E	ROCKY MOUNTAIN RANGE AND FOREST REGION	145 Connecticut Valley	
43 Northern Rocky Mountains	95 Southeastern Wisconsin Drift Plain	146 Aroostook Area	
44 Northern Rocky Mountain Valleys	96 Western Michigan Fruit Belt	S	
45 Alpine Meadows and Rockland	97 Southwestern Michigan Fruit and Truck Belt	NORTHERN ATLANTIC SLOPE TRUCK, FRUIT, AND POULTRY REGION	
46 Northern Rocky Mountain Foothills	98 Southern Michigan Drift Plain	147 Northern Appalachian Ridges and Valley	
47 Wasatch and Uinta Mountains	99 Erie-Huron Lake Plain	148 Northern Piedmont	
48 Southern Rocky Mountain Foothills	100 Erie Fruit and Truck Area	149 Northern Coastal Plain	
49 San Luis Valley	101 Ontario-Mohawk Plain	T	
50 High Intermountain Valleys	102 Loess, Till, and Sandy Prairies	ATLANTIC AND GULF COAST LOWLANDS, FOREST AND TRUCK CROP REGION	
51 High Intermountain Valleys	103 Central Iowa and Minnesota Till Prairies	150 Gulf Coast Prairies	
	104 Eastern Iowa and Minnesota Till Prairies	151 Gulf Coast Marsh	
		152 Gulf Coast Flatwoods	
		153 Atlantic Coast Flatwoods	
F	CENTRAL FED GRAINS AND LIVESTOCK REGION	U	
105 Northern Mississippi Valley Loess Hills	154 South Central Florida Ridge		
106 Nebraska and Kansas Loess-Drift Hills	155 Southern Florida Flatwoods		
107 Iowa and Missouri Deep Loess Hills	156 Florida Everglades and Associated Areas		

Compiled by Morris E. Austin
Information from SCS, State, and other Offices

Table 3.--Experimental agricultural watersheds, listed by State, locality, and location number, under study during 1978-79 and included in this publication

State	Locality	Assigned location number	Major land resource area ¹	Watershed units	Events reported	Pages
Florida	Vero Beach	08	U-155	3	0	24-33
Georgia	Tifton	74	P-133	8	16	562-613
	Watkinsville	10	P-136	1	2	34-39
Idaho	Reynolds	68	D-23, D-25	6	12	285-333

Watershed Conditions: Range & forest, 39%; improved pasture, 47%; cropland, 4%; miscellaneous, 10%.

Maps: Topographic/Hydrologic (revised) - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1971, USDA Misc. Pub. 1383, p. 08.002-3.

Precipitation: Records began July 1955. Thiessen weighted using 7 gages through September 1978, and 8 gages beginning October 1978.

Runoff: Records began July 1955. Data furnished by U.S. Geological Survey.

Long-Term Precipitation: National Weather Service records at Okeechobee Hurricane Gate 6, Florida (gage discontinued Nov. 1971, afterwards use Okeechobee 9 SW).

Conversion Factor: CFS to IN/DAY, multiply by .0003589.

Station Averages: 24 yr beginning July 1, 1955.

Notes: Discharge is combined flow from Williamson Ditch and S-1 structure. Measurements generally made once a week.

Data furnished by the U.S. Geological Survey.

Conversion Factor: CPS to IN/DAY, multiply by .00035589.

Station Averages: 25 yr beginning July 1, 1955.

Notes: Discharge is combined flow from Williamson Ditch and S-1 structure. Measurements generally made once a week.
Data furnished by the U.S. Geological Survey.

VERO BEACH, FLORIDA (TAYLOR CREEK) WATERSHED W-3

LOCATION: Okeechobee County, Florida. Runoff gaging site is approximately 11 mi. (airline) N-NW of City of Okeechobee on State Road #68. Northern reach of Taylor Creek Watershed. Lat. 27 deg. 23 min. 24 sec. N.; Long. 80 deg. 53 min. 42 sec. W.

AREA: 12224.00 acres 19.10 sq. miles

Watershed Conditions: Improved pasture, 59%; range & forest, 30%; cropland, 1%; miscellaneous, 10%.

Maps: Topographic/Hydrologic (revised) - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1971, USDA Misc. Pub. 1383, p. 08.002-3.

Precipitation: Records began July 1955. Thiessen weighted using 2 gages through Dec. 31, 1966; 3 gages beginning Jan. 1, 1967.

Runoff: Records began July 1955. Data furnished by U.S. Geological Survey.

Long-Term Precipitation: National Weather Service records at Okeechobee Hurricane Gate 6, Florida (gage discontinued Nov. 1971, afterwards use Okeechobee 9 SW).

Watershed Conditions: Vegetative cover: Improved pasture - 60%; unimproved pasture and range with little timber - 15%; woodland - 10%; citrus - 5%; marsh-swamp - 5%; urban, roads, etc. - 5%.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1971, OSDA Misc. Pub. 1383, p. 08.002-3.

Precipitation: Records began April 1964. Thiessen weighted using 2 gages from 1965-1975, 3 gages through September 1978, then 4 gages.

Runoff: Records began April 1964. Data furnished by U.S. Geological Survey.

Long-Term Precipitation: National Weather Service records at Okeechobee Hurricane Gate 6, Florida (gage discontinued 1971, afterwards use Okeechobee 9 SW).

Notes: Watershed area was changed, effective Jan. 1976, to reflect physical alterations to the drainage area.

Watershed Conditions: 1978 - Excellent coastal bermudagrass pasture. Fertilized and cut as follows: March 13 applied 2700 lbs. NH4NO3, June 5, 27 rolls of hay cut, mostly weeds, July 18 applied 4000 lbs. NH4NC3, July 25 sprayed with 1 1/2 pts. per acre 2-4-D, Aug. 21, 49 rolls of hay cut, Aug. 28 applied 5000 lbs. NH4NO3, Nov. 20 planted rye. A total of 9,035 cow-days of grazing. 1979 - Common coastal bermudagrass. No record of this pasture being cut in 1979. May 2 applied 2500 lbs. NH4NO3, July 23 applied 3000 lbs. NH4NC3, Sept. 14 applied 20 tons of lime, Oct. 22 applied 2375 lbs. NH4NO3. A total of 7,456 cow-days of grazing.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1956-59, USDA Misc. Pub. 945, p. 10-1-8.

Precipitation: Records began Sept. 1, 1939.

Runoff: Records began Sept. 1, 1939.

Long-Term Precipitation: National Weather Service records at Athens, Ga. (1885-1939) and Southern Piedmont Conservation Research Center (1940 cwndar).

EVENT OF OCTOBER 3 - 4, 1979
KLINGERSTOWN, PENNSYLVANIA WATERSHED WF-38

MCCREDIE, MISSOURI STATION RESERVOIR W-1

LOCATION: Callaway County, Mo.; 1 mi. S.E. of McCredie; Crows Fork Creek, Auxvasse Watershed, Missouri River Basin.
Lat. 38 deg. 56 min. 54 sec. N.; Long. 91 deg. 54 min. 37 sec. W.

AREA: 153.00 acres

1966		1968		1968		1941		1941		1941		1941		1941	

Watershed Conditions: 32% Pasture and meadow; 16% corn; 32% soybeans; 3% wheat; 11% fallow; and 6% roads and farmsteads.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1963, USDA Misc. Pub. 1164, p. 25.1-13.

Precipitation: Records began Jan. 1, 1941. Thiessen average of 3 recording gages and 2 non-recording gages.

Runoff: Records began Jan. 1, 1941. Runoff rates were computed with a constant watershed area of 153 acres, including reservoir surface area.

Long-Term Precipitation: National Weather Service records at Columbia, Missouri beginning 1890.

Watershed Conditions: Pasture with a cover of orchardgrass.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1956-59, USDA Misc. Pub. 945, p. 26.1-4. For geology description and map, see Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1962, USDA Misc. Pub. 1070, pp. 26.1-1 and 26.30-3.

Precipitation: Records began April 1937. Data from rain gage Y101.

Runoff: Records began March 20, 1937. Watershed discontinued Jan. 1, 1947 to Apr. 25, 1957 and Dec. 31, 1957 to March 29, 1960.

Long-Term Precipitation: National Weather Service records at Coshocton, Ohio.

Air Temperature: See temperature table for Watershed 123, p. 26.010-1.

Gaging: Rain gage Y101.

Station Averages: 30 yr beginning 1937 (includes part-year records). Measurements discontinued Jan. 1947-April 1957 and Dec. 1957-March 1960.

Notes: Code 'E' may reflect estimated storm duration rather than estimated rainfall amounts. Code 'Z' indicates that an accurately measured total for a series of days has been equally divided among coded days.

Cooperative Research Project of USDA and Ohio Agricultural Research and Development Center, Wooster, Ohio

Watershed Conditions: Grass pasture.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1956-59, USDA Misc. Pub. 945, p. 26.3-5. For geology description and map, see Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1962, USDA Misc. Pub. 1070, pp. 26.3-1 and 26.30-3.

Precipitation: Records began Sept. 1, 1937. Data from rain gage 100.

Runoff: Records began March 26, 1938. Measurements discontinued June 1972 to March 1974.

Long-Term Precipitation: National Weather Service records at Coshocton, Ohio.

STA AV	2.66	2.33	3.49	3.45	3.69	3.94	4.25	3.07	2.77	2.19	2.45	2.44					

Air Temperature: See temperature table for Watershed 123, F. 26.010-1.

Gaging: Rain gage 100.

Station Averages: 40 yr beginning 1938 (includes part-year records). Gage 100 discontinued June 1972 to March 1974.

Notes: Codes 'E' may reflect estimated storm duration rather than estimated rainfall amount. Code 'Z' indicates that an accurately measured total for a series of days has been equally divided among coded days.

Air Temperature: See temperature table for Watershed 123, p. 26.10-1.

Gaging: Rain gage 100.

Station Averages: 40 yr beginning 1938 (includes part-year records). Gage 100 discontinued June 1972 to March 1974.

Notes: Code 'E' may reflect estimated storm duration rather than estimated rainfall amount. Code 'Z' indicates that an accurately measured total for a series of days has been equally divided among coded days.

Gaging: Rain gage Y103.

Station Averages: 40 yr beginning 1939.

Notes: Code 'E' may reflect estimated storm duration rather than estimated rainfall amounts. Code 'Z' indicates that an accurately measured total for a series of days has been equally divided among coded days.

Gaging: Rain gage Y103.

Station Averages: 41 yr beginning 1939.

Notes: Code 'E' may reflect estimated storm duration rather than estimated rainfall amounts. Code 'Z' indicates that an accurately measured total for a series of days has been equally divided among coded days.

EVENT OF JANUARY 1 - 2, 1979
COCSHOCTON, OHIO WATERSHED 123

COSHOCTON, OHIO WATERSHED 109

LOCATION: Coshocton Co., Ohio; 10 mi. NE of Coshocton; Tuscarawas River, Muskingum River Basin. Lat. 40 deg. 22 min. 11 sec. N.; Long. 81 deg. 47 min. 39 sec. W.

AREA: 1.69 acres

Watershed Conditions: 1978 - Meadow with a stand of orchardgrass and alfalfa. 1979 - No-till corn.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1956-59, OSDA Misc. Pub. 945, p. 26.13-4. For geology description and map, see Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1962, USDA Misc. Pub. 1070, pp. 26.13-1 and 26.30-3.

Precipitation: Records began May 9, 1937. Data from rain gage Y102.

Runoff: Records began Nov. 1938. Watershed out of operation Mar. 30-May 1, 1978 and May 18-May 30, 1978.

Long-Term Precipitation: National Weather Service records at Coshocton, Ohio.

Watershed Conditions: Pasture.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1956-59, OSDA Misc. Pub. 945, p. 26-20-5. For geology description and map, see Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1962, USDA Misc. Pub. 1070, pp. 26.19-1 and 26.30-3.

Precipitation: Records began March 20, 1939. Data from rain gage 113.

Runoff: Records began April 1939. Measurements discontinued March 1970 to April 1972 and Nov. 1972 to April 1974.

Long-Term Precipitation: National Weather Service records at Coshocton, Ohio.

Air Temperature: See table for Watershed 123, p. 26.010-1.

Gaging: Rain gage 113.

Station Averages: 40 yr beginning 1939. Includes part-year records.

Notes: Code 'T' indicates an accurately measured total for a series of days has been equally divided among coded days. Code 'P' may reflect estimated storm duration rather than estimated rainfall amounts.

Air Temperature: See table for Watershed 123, p. 26.010-1.

Gaging: Rain gage 113.

Station Averages: 41 yr beginning 1939. Includes part-year records.

Notes: Code 'Z' indicates an accurately measured total for a series of days has been equally divided among coded days. Code 'E' may reflect estimated storm duration rather than estimated rainfall amounts.

Watershed Conditions: Meadow and pasture with a cover of fescue.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1956-59, DSDA Misc. Pub. 945, p. 26.20-5. For geology description and map, see Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1962, USDA Misc. Pub. 1070, pp. 26.20-1 and 26.30-3.

Precipitation: Records began Dec. 30, 1937. Data from rain gage 113.

Runoff: Records began March 24, 1939. Measurements discontinued Nov. 1972 to April 1974.

Long-Term Precipitation: National Weather Service records at Coshocton, Ohio.

STA AV	2.56	2.07	3.20	3.27	3.57	3.97	4.24	2.96	2.85	2.21	2.44	2.36			

Air Temperature: See table for Watershed 123, p. 26.010-1.

Gaging: Rain gage 113.

Station Averages: 40 yr beginning 1939 (includes part-year records).

Notes: Codes 'E' may reflect estimated storm duration rather than estimated rainfall amount. Code 'Z' indicates that an accurately measured total for a series of days has been equally divided among coded days.

Cooperative Research Project of USDA and Ohio Agricultural Research and Development Center, Wooster, Ohio

Air Temperature: See table for Watershed 123, p. 26.010-1.

Gaging: Rain gage 108.

Station Averages: 42 yr beginning 1937 (part-year records included).

Notes: Codes 'E' may reflect estimated storm duration rather than estimated rainfall amounts. Code 'Z' indicates that an accurately measured total for a series of days has been equally divided among coded days.

Watershed Conditions (approximate percentages): Cover of 15% hardwoods, 2% reforested, 67% grassland, 16% miscellaneous, watershed in improved practice.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1960-61, USDA Misc. Rpt. 994, p. 26.30-4. For geology description and map, see Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1962, USDA Misc. Rpt. 1070, pp. 26.38-1 and 26.30-3.

Recipitation: Records began June 1960. Data from rain gage 107.

Runoff: Records began June 1960. Station discontinued May 1977 to July 1979.

Long-Term Precipitation: National Weather Service records at Coshocton, Ohio.

STA AV	2.28	2.12	3.50	3.46	3.12	3.08	4.14	3.06	3.35	2.67	2.76	2.57					

Air Temperature: See table for Watershed 123, p. 26.010-1.

Gaging: Rain gage 107. For 1978 daily precipitation values see table for watershed 110, p. 26.015-1.

Station Averages: 20 yr beginning 1960 (includes part-year records).

Notes: Codes 'T' may reflect estimated storm duration rather than estimated rainfall amounts.

Code 'Z' indicates accurately measured total for a series of days has been equally divided among coded days.

Cooperative Research Project of USDA and Ohio Agricultural Research and Development Center, Wooster, Ohio

Air Temperature: See table for Watershed 123, p. 26.010-1.

Gaging: Rain gage 107. For 1978 daily precipitation values see table for watershed 110, p. 26.015-1.

Station Averages: 20 yr beginning 1960.

Notes: Codes 'E' may reflect estimated storm duration rather than estimated rainfall amounts. Code 'Z' indicates that an accurately measured total for a series of days has been equally divided among coded days.

Cooperative Research Project of USDA and Ohio Agricultural Research and Development Center, Wooster, Ohio

Air Temperature: See table for Watershed 123, p. 26.010-1.

Gaging: Rain gage 119.

Station Averages: 15 yr beginning 1964.

Notes: Code 'E' may reflect estimated storm duration rather than estimated rainfall amounts. Code 'Z' indicates that an accurately measured total for a series of days has been equally divided among coded days.

STA AV	2.57	2.19	3.34	3.32	3.69	3.82	4.22	3.01	2.84	2.14	2.43	2.44

Air Temperature: See table for Watershed 123, p. 26.010-1.

Gaging: Rain gage 103. Reporting gage changed 1976, but averages not recomputed.

Station Averages: 37 yr beginning 1940 (includes part-year records).

Notes: Code 'E' may reflect estimated storm duration rather than estimated rainfall amount. Code 'Z' indicates that an accurately measured total fcr a series of days has been equally divided among coded days.

Cooperative Research Project of USDA and Ohio Agricultural Research and Development Center, Wooster, Ohio.

Watershed Conditions: All native grass pasture located in region (H-80) of the Central Rolling Red Prairies land resource area.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1964, USDA Misc. Pub. 1194, p. 37.1-7 (revised).

Precipitation: Records began July 1951. Data from R-1 rain gage. Data from R-3 rain gage through 1964 combined with data from R-1 from 1965 onward. Station averages include part-year records.

Runoff: Records began July 1951. Station averages include part-year records.

Long-Term Precipitation: National Weather Service records at Stillwater, Oklahoma.

Notes: Station operated by Oklahoma Agricultural Experiment Station since March 30, 1973.

Watershed Conditions: All native grass cover, 32% in hay meadow and 68% in pasture. The pasture was grazed using normal procedures for the year.

Maps: Topographic/Hydrologic - Selected Runoff Events for Small Agricultural Watersheds in the United States, DSDA, ABS, Jan. 1960, p. 37-2-6.

Precipitation: Records began July 1951. Data from rain gage R-3. Station averages include part-year records.

Runoff: Records began July 1951. Station averages include part-year records.

Long-Term Precipitation: National Weather Service records at Stillwater, Oklahoma.

Notes: Station operated by Oklahoma Agricultural Experiment Station since March 30, 1973.

Watershed Conditions: 1978 - 66% pasture; 23% row grain sorghum; 3% fall planted oats; 2% gravel and paved roads; 6% other. Approximately 90% of other is Johnsongrass and weeds in conservation reserve, but neither tilled nor grazed. 1979 - 69% pasture; 19% row grain sorghum; 7% fall planted oats; 2% gravel and paved roads; 3% other. Approximately 90% of other is Johnsongrass and weeds in conservation reserve, but neither tilled nor grazed.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1956-59, DSDA Misc. Pub. 945, p. 424-6.

Precipitation: Records began Feb. 1938. Data from Thiessen weighted method using rain gages 5, 14, 20.

Runoff: Records began Feb. 1938. Station not in operation July 1943 to March 1, 1949.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

Watershed Conditions: 1978 - 46% pasture; 5% cotton; 3% corn; 20% fall planted small grain, largely oats; 22% sorghum; 2% gravel and paved roads; 2% other. Approximately 90% of other is Johnsongrass and weeds in conservation reserve, but neither tilled nor grazed.

1979 - 40% pasture; 1% cotton; 1% corn; 31% fall planted small grain, largely oats; 21% sorghum; 2% gravel and paved roads; 4% other. Approximately 90% of other is Johnsongrass and weeds in conservation reserve, but neither tilled nor grazed.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1956-59, USDA Misc. Pub. 945, F. 42.4-6.

Precipitation: Records began Jan. 1938. Data from Thiessen weighted method using rain gages 5, 14, 20, 26A, 30A, 43A, 48A, 56A, 65A, 70, 74A, 84A, and 89.

Runoff: Records began 1938. Station not in operation July 1943 to July 1, 1957. Part-year records not included in averages.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

EVENT OF APRIL 1 - 2, 1979
RIESEL (WACO), TEXAS WATERSHED G

RIESEL (WACO), TEXAS WATERSHED W-1

LOCATION: Falls Co., Texas; 19 mi. SE of Waco; Brazos River Basin. Lat. 31 deg. 27 min. 27 sec. N.; Long. 96 deg. 52 min. 48 sec. W.

AREA: 174.00 acres

Watershed Conditions: 12% sorghum; 86% pasture; 2% roads.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1963, USDA Misc. Pub. 1164, p. 42.6-6 (revised).

Precipitation: Records began July 1937. Data from Thiessen weighted method using rain gages 75A, 89, W-2, W-2A, and W-5A.

Runoff: Records began July 1937. Part-year records not included in station averages.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

Watershed Conditions: 95% pasture; 5% gravel and paved roads.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1963, USDA Misc. Pub. 1164, p. 42.7-5 (Revised).

Precipitation: Records began July 1937. Data from Thiessen weighted method using rain gages W-2, W-4, W-5A, and W-6. Early part-year records not included in averages.

Runoff: Records began July 1937. Station not in operation Jan. 1976 - April 1978. Part-year records included in station averages.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

MAXIMUMS FOR PERIOD OF RECORD															
1957	1957	1957	1957	1957	1957	1957	1957	1957	1965	1940	1940	1940	1957	1957	1957

Watershed Conditions: 1978 - 76% pasture; 6% cotton; 5% fall plowed small grain, largely oats; 10% row grain sorghum; 1% gravel and paved roads; 2% other. Cropland terraced, contour cultivation. No change in conservation practices.

1979 - 76% pasture; 6% fall planted small grain, largely oats; 10% row grain sorghum; 1% gravel and paved roads; 7% other. Cropland terraced, contour cultivation. No change in conservation practices.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1964, USDA Misc. Pub. 1194, p. 42.11-5 (revised).

Precipitation: Records began May 1937. Data from Thiessen weighted method using rain gages 69, 69E, 70, 75A, 84A, 89, and W-2A.

Runoff: Records began May 1937. Station not in operation July 1943 to May 1, 1946. Part-year records not included in station averages.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

Conversion Factor: CPS to IN/HR, multiply by 0.0032095.

EVENT CP APRIL 1, 1979
RIESPL (WACO), TEXAS WATERSHED Y

RIESEL (WACO), TEXAS WATERSHED Y-2

LOCATION: Falls Co., Texas; 18 mi. SE Waco; Brazos River Basin. Lat. 31 deg. 28 min. 30 sec. N.; Long. 96 deg. 52 min. 46 sec. W.

AREA: 132.00 acres

Watershed Conditions: 1978 - 13% cotton; 12% fall planted small grain, largely oats; 15% row grain sorghum; 59% pasture; 1% gravel and paved roads. Cropland terraced, contour cultivation, conservation treatment since 1942.

1979 - 15% fall planted small grain, largely oats; 13% rcv grain sorghum; 59% pasture; 12% other; 1% gravel and paved roads. Cropland terraced, contour cultivation, conservation treatment since 1942.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1964, USDA Misc. Pub. 1194, p. 42.11-5 (revised).

Precipitation: Records began Jan. 1, 1939. Data from Thiessen weighted method using rain gages 69, 69B, 70, 75A, and 84A.

Runoff: Records began Jan. 1, 1939.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

Watershed Conditions: 1978 - 94% fall planted oats; 4% other; 2% gravel roads. Cropland terraced and contour tilled; no change in conservation practices.

1979 - 94% idle cropland; 4% other; 2% gravel roads. Cropland terraced and contour tilled; no change in conservation practices.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1964, USDA Misc. Pub. 1194, p. 42.11-5 (revised).

Precipitation: Records began Jan. 1939. Data from Thiessen weighted method using rain gages 69B and 75A.

Runoff: Records began Jan. 1939. Station not in operation July 1943 to May 1, 1947. Part-year records not included in station averages.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

Watershed Conditions: 1978 - 94% cotton; 3% gravel roads; 3% other. Cropland terraced and contour tilled; no change in conservation practices.

1979 - 94% sorghum; 3% gravel roads; 3% other. Cropland terraced and contour tilled; no change in conservation practices.

Maps: Topographic/Bryd logic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1964,
USDA Misc. Pkt. 1194, Pt. 42-11-5 (revised).

Precipitation: Records began July 1, 1938. Data from Thiessen weighted method using rain gages 69 and 69E.

Bunoff: Records began July 1, 1938. Station not in operation July 1943 to May 1, 1946. Part-year records not included in station averages.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

Watershed Conditions: 1978 - 98% summer hay crop and fall planted oats; 2% roads.
1979 - 98% pasture; 2% roads.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1969, USDA Misc. Pub. 1370, p. 42.023-5.

Precipitation: Records began March 1938. Data from rain gage 89.

Runoff: Records began March 1938. Station discontinued July 1943, reestablished July 1, 1969, and not in operation during 1976. Part-year records included in station averages.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

Watershed Conditions: 100% Bermudagrass pasture.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1956-59, USDA Misc. Pub. 945, p. 42.28-5.

Precipitation: Records began Feb. 1, 1939. Data obtained from rain gage W-2.

Rainfall: Records began Feb. 1, 1939. Station not in operation July 1943 to Jan. 1, 1948. Part-year records not included in station averages.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

Watershed Conditions: 97% sorghum; 3% grassed waterway. Cropland planted on graded furrows.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1969, USDA Misc. Pub. 1370, p. 42.039-3.

Precipitation: Data from rain gage W1E.

Runoff: Records began October 1, 1969. Part-year records are included in station averages.

Long-Term Precipitation: National Weather Service records at Waco, Texas.

Watershed Conditions: With the exception of a small portion (3.8%) devoted to roads and 14.7% in permanent pasture, the entire area is used for cropping activities.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1974, USDA Misc. Pub. 1437, p. 61.001-23.

precipitation: Records began August 1949. Data from R-1 gage, located about 400 ft. east of streamgaging station IA.

Runoff: Records began August 1949.

Long-Term Precipitation: National Weather Service records at Decatur, Illinois.

MAXIMUMS FOR PERIOD OF RECORD																	
6-6	1.212	6-6	0.673	6-6	1.233	6-6	1.799	6-6	2.029	6-6	2.039	6-5	2.040	5-14	2.381		
1973		1973		1973		1973		1973		1973		1973		1974			

Watershed Conditions: 99% cropping activities; 1% grass.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1974,

USDA Misc. Pub. 1437, p. 61.001-23.

Precipitation: Records began August 1949. Data from R-1 gage, located about 300 ft. west of streamgaging station IB.

Runoff: Records began August 1949.

Long-Term Precipitation: National Weather Service records at Decatur, Illinois.

EVENT OF APRIL 21, 1979
MONTICELLO, ILLINOIS (ALLERTON) WATERSHED IB

REYNOLDS, IDAHO WATERSHED W-1 (036068)

LOCATION: Owyhee County, Idaho; about 24 miles southeast ofampa; north flowing tributary to the Snake River.
Lat. 43 deg. 15 min. 49 sec. N.; Long. 116 deg. 45 min. 10 sec. W.

AREA: 57700.00 acres 90.20 sq. miles

Watershed Conditions: Predominantly sagebrush rangeland, 95%; small stands of forest, 2%; permanent fields of flood irrigated alfalfa, 3%.
Maps: Topographic/Hydrologic (revised) - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1968, USDA Misc. Pub. 1330, page 68-1-6.
Precipitation: Records began 1963. 'Computed Actual' amounts from rain gage 116X91. STA AV values based on 12 yr beginning 1966.
Runoff: Records began 1963. STA AV values based on 17 yr beginning 1963.
Long-Term Precipitation: National Weather Service records at Boise, Idaho; 50 miles N.E. of watershed.

Gaging: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded). 'Actual' amounts were computed as per relationship developed by W. R. Hamon, "Computing Actual Precipitation", Proceedings of WMO-IAGS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log_e (O/A) = \log_e (O/S) \times 1.80$, where O = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

station Averages: -11 yr beginning 1968.

Gaging: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded). 'Actual' amounts were computed as per relationship developed by W. R. Hamon, "Computing Actual Precipitation", Proceedings of WMO-IHHS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log_e (U/A) = \log_e (U/S) \times 1.80$, where U = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 12 yr beginning 1968.

Watershed Conditions: Predominantly sagebrush rangeland, 59%; irrigated pasture and hay crops, 1%.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1965, USDA Misc. Pub. 1216, p. 68-2-7.

Precipitation: Records began 1963. 'Computed Actual' amounts from rain gage 023X01. STA AV values based on 12 yr beginning 1968.

Runoff: Records began 1963. STA AV values based on 15 yr beginning 1965.

Long-Term Precipitation: National Weather Service Records at Boise, Idaho; 50 miles N.E. of watershed.

Air Temperature: See table for Watershed 68.001.

Gaging: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded). 'Actual' amounts were computed as per relationship developed by W. R. Hamon, "Computing Actual Precipitation", Proceedings IAHS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log_e (U/A) = \log_e (U/S) \times 1.80$, where U = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 11 yr beginning 1968.

Cooperative Research Project of USDA and USDI and Idaho Agricultural Experiment Station

Air Temperature: See table for Watershed 68.001.
Gaging: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded). 'Actual' amounts were computed as per relationship developed by W. R. Haron, "Computing Actual Precipitation", Proceedings WMO-IHRS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log_e(U/A) = \log_e(U/S) \times 1.80$, where U = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 12 yr beginning 1968.

EVENT OF JANUARY 10 - 13, 1979
REYNOLDS, IDAHO SALMON CREEK WATERSHED (046017)

REYNOLDS, IDAHO MACKS CREEK WATERSHED (046084)

LOCATION: Owyhee County, Idaho; about 25 miles southwest of Nampa; east flowing tributary to Reynolds Creek, Snake River Basin. Lat. 43 deg. 14 min. 42 sec. N.; long. 116 deg. 45 min. 30 sec. W.

AREA: 7846.00 acres 12.26 sq. miles

Watershed Conditions: The watershed topography is steep, except in the lower valley, with numerous basalt outcrops at the higher elevations. 98% is sagebrush rangeland with a varying cover of sagebrush, bitterbrush, mountain mahogany, and willow with a fair cover of forage plants such as cheatgrass, bluebunch wheatgrass, and Idaho fescue. 35% of the area has a vegetative cover of 0-25%, 33% of the area has a vegetative cover of 26-50%, 18% of the area has a vegetative cover of 51-75%, and 12% of the area has a vegetative cover of 76-100%. 2% of the area, in pasture and haycrops, receives limited irrigation.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1966, OSDA Misc. Pub. 1226, page 68-3-4.

Precipitation: Records began 1963. 'Computed Actual' amounts from rain gage 053X93. STA AV values based on 12 yr beginning 1966.

Runoff: Records began 1963. STA AV values based on 17 yr beginning 1963.

Long-Term Precipitation: National Weather Service records at Ecise, Idaho; 50 miles N.E. of watershed.

STA AV	2.41	1.58	2.03	1.83	1.08	1.67	0.50	0.82	1.06	1.42	2.02	2.11											

Air Temperature: See table for Watershed 68.001.

Gaging: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded). 'Actual' amounts were computed as per relationship developed by W. R. Hancin, "Computing Actual Precipitation", Proceedings of WMC-IABS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log(O/A) = \log(W/S) \times 1.80$, where O = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 11 yr beginning 1966.

Cooperative Research Project of OSDA and OSPI and Idaho Agricultural Experiment Station

Air Temperature: See table for Watershed 68.001.

Gaging: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded). 'Actual' amounts were computed as per relationship developed by W. R. Hamon, "Computing Actual Precipitation", Proceedings of WMC-IAHS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log_e(U/A) = \log_e(U/S) \times 1.80$, where U = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 12 yr beginning 1966.

EVENT OF JANUARY 10 - 13, 1979
REYNOLDS, IDAHO MACKS CREEK WATERSHED (046084)

REYNOLDS, IDAHO TOLLGATE WATERSHED (116083)

LOCATION: Owyhee County, Idaho; about 33 miles southwest of Nampa; main stem of Reynolds Creek which is tributary to the Snake River. Lat. 43 deg. 8 min. 33 sec. N.; long. 116 deg. 45 min. 42 sec. W.

AREA: 13453.00 acres 21.02 sq. miles

Watershed Conditions: Watershed is generally sagebrush rangeland except for scattered stands of Douglas fir, aspen, and mountain meadows. The topography is steep with numerous rock outcrops on the ridges. The watershed is used mainly for cattle grazing except during the winter when snow blankets most of the area. Vegetation consists predominantly of big sagebrush, little sagebrush, rabbitbrush, snowberry, blue bunch wheatgrass, Idaho fescue, and squirreltail grass. 25% of the area has a vegetative cover of 0-25%, 15% of the area has a vegetative cover of 26-50%, 15% of the area has a vegetative cover of 51-75%, and 45% of the area has a vegetative cover of 76-100%.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1967, USDA Misc. Pub. 1262, page 68-4-6.

Precipitation: Records began 1963. 'Computed Actual' amounts from rain gage 155X07. STA AV values are based on 12 yr beginning 1968.

Runoff: Records began 1967. STA AV values based on 13 yr beginning 1967.

Long-Term Precipitation: National Weather Service records at Boise, Idaho; 50 miles N.E. of watershed.

STA AV	4.35	2.79	3.02	2.30	1.31	1.69	0.68	1.16	1.10	1.97	3.25	3.77												

Air Temperature: See table for Watersheds 68.001 and 68.014.
 Gaging: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded). 'Actual' amounts were computed as per relationship developed by W. R. Hamon, "Computing Actual Precipitation", Proceedings of WMC-IARS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log(U/A) = \log(U/S) \times 1.80$, where U = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 11 yr beginning 1968.

Cooperative Research Project of USDA and USDI and Idaho Agricultural Experiment Station

Sizing: Values are 1/2 month amounts from a pair of recording

Gajing: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded). 'Actual' amounts were computed as per relationship developed by W. R. Hamon, "Computing Actual Precipitation", Proceedings of WMO-IAHS Symposium, Gelo, Norway, August, 1972. The equation used is: $\log(U/A) = \log(M/S) \times 1.80$, where U = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 12 yr beginning 1968.

Sagebrush rangeland and scattered stands of Douglas fir, aspen, and mountain meadows. Topography is steep with numerous rock outcrops on the ridges.											
Watershed mainly used for cattle grazing except during winter when snow blankets most of the area. Vegetation consists of big sagebrush, little sagebrush, rabbitbrush, snowberry, blue bunch wheatgrass, Idaho fescue, and squirreltail grass. 25% has a vegetative cover of 0-25%, 15% has a cover of 26-50%, 15% has a cover of 51-75%, and 45% has a cover of 76-100%.

EVENT CP JANUARY 10 - 13, 1979
REYNOLDS, IDAHO TAILGATE WATERSHED (116083)

REYNOLDS, IDAHO REYNOLDS MOUNTAIN WATERSHED (166076)

LOCATION: Owyhee County, Idaho; about 37 miles southwest of Nampa, north flowing tributary to the east fork of Reynolds Creek, Snake River Basin. Lat. 43 deg. 4 min. 16 sec. N.; Long. 116 deg. 45 min. 27 sec. W.

AREA: 100.00 acres

Watershed Conditions: Rangeland watershed with seasonal grazing of cattle and sheep. Scrub aspen, willow, scattered douglas fir, and sagebrush with natural mountain meadows. Vegetative cover varies with annual precipitation. Type of cover is 32% shrub and brush, 17% grass and forbes, and 9% rock and rock fragments. Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1966, USDA Misc. Pub. 1226, page 68.13-4. Precipitation: Records began 1963. 'Computed Actual' amounts from rain gage 176X07. STA AV values based on 12 yr beginning 1966. Runoff: Records began 1966. STA AV values based on 14 yr beginning 1966. Long-Term Precipitation: National Weather Service records at Ecise, Idaho, 50 miles N.E. of watershed.

Gaging: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded) at Station 176X07.

"Actual" amounts were computed as per relationship developed by W. R. Hamon, "Computing Actual Precipitation", Proceedings of WMO-IAHS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log(U/A) = \log(0/S) + 1.80$, where U = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 11 yr beginning 1968.

Gaging: Values are "Actual" amounts from a pair of recording gages (shielded and unshielded) at Station 17607.

'Actual' amounts were computed as per relationship developed by W. R. Hamon, "Computing Actual Precipitation", Proceedings of WMO-IHRS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log_e (U/A) = \log_e (0/S) \times 1.80$, where U = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 12 yr beginning 1968.

Watershed Conditions: Watershed is entirely sagebrush rangeland used almost exclusively for cattle grazing.

Vegetation consists of bluebunch wheatgrass, Sandberg bluegrass, cheatgrass, yarrow, and little sagebrush. 90% of the area has a vegetative cover of 0-25% and 10% of the area has a vegetative cover of 26-50%.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1967,

USDA Misc. Pub. 1262, page 68.014-6.

Precipitation: Records began 1963. 'Computed Actual' amounts from rain gage 127X07. STA AV values based on 12 yr beginning 1966.

Runoff: Records began 1967. STA AV values based on 13 yr beginning 1967.

Long-Term Precipitation: National Weather Service records at Boise, Idaho, 50 miles N.E. of watershed.

Gaging: Values are 'Actual' amounts from a pair of recording gages (shielded and unshielded) 127X07. 'Actual' amounts were computed as per relationship developed by W. R. Hamon, "Computing Actual Precipitation", Proceedings of WMO-IAHS Symposium, Geilo, Norway, August, 1972. The equation used is: $\log_e (U/A) = \log_e (U/S) \times 1.80$, where U = unshielded catchment, S = shielded catchment, and A = actual amount of precipitation.

Station Averages: 12 yr beginning 1968.

Station Averages: 12 yr beginning 1968.

Watershed Conditions: From a revised 1974 survey; sowed crop - 15%; row crop - 2%; alfalfa - 1%; pasture and range - 66%; and miscellaneous - 16%.

Maps: Topographic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1963, USDA Misc. Pub. 1164, page 69-15-4. Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1965, USDA Misc. Pub. 1216, page 69-7-21.

Precipitation: Records began Oct. 1961. Thiessen weighted average of 36 gages.

Runoff: Records began April 1963.

Long-Term Precipitation: National Weather Service records at Chickasha, Okla.

MAXIMUMS FOR PERIOD OF RECORD

5-24 0.352	5-24 0.349	5-24 0.686	5-24 1.296	5-24 1.373	5-24 1.453	5-24 1.495	5-24 2.075
1973	1973	1973	1973	1973	1973	1973	1973

Watershed Conditions: 4% crop land is in alfalfa, small grains, and row crop rotation. The remaining 96% is used for pasture or range. Approximately 43% is thin steep land that has been overgrazed.

Maps: "Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1967, USDA Misc. Pub. 1262, page 69-21-6. Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1965, USDA Misc. Pub. 1216, page 69-7-21.

Precipitation: Records began Jan. 1967. Thiessen weighted average of 22 rain gages for 1967-74 and 19 gages for 1975 onward.

Runoff: Records began May 1967. STA AV values based on 11 yr beginning 1967.

Long-Term Precipitation: National Weather Service records at Chickasha, Oklahoma.

Cooperative Research Project of USDA and Oklahoma Agricultural Experiment Station

	1973		1973		1973		1973		1973		1973		1973		1973														

Watershed Conditions: 100% used for pasture or range. Approximately 40% is thin steep land that has been grazed heavily. Tall, intermediate, and short grasses are prevalent. There are 23 farm ponds in this watershed.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1967, USDA Misc. Pub. 1262, page 69-21-6. Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1965, USDA Misc. Pub. 1216, page 69-7-21.

Precipitation: Records began Jan. 1967. Thiessen weighted average of 17 rain gages for 1967-74 and 14 rain gages for 1975 onward.

Runoff: Records began Jan. 1967. STA AV values based on 11 yr beginning 1967.

Long-Term Precipitation: National Weather Service records at Chickasha, Oklahoma.

Cooperative Research Project of USDA and Oklahoma Agricultural Experiment Station

Watershed Conditions: 100% of the watershed is used for pasture. There are 12 farm ponds in this watershed.

Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1967, USDA Misc. Pub. 1262, page 69.21-6. Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1965, USDA Misc. Pub. 1216, page 69.7-21.

Precipitation: Records began Jan. 1967. Thiessen weighted average of 9 rain gages for 1967-74 and 8 rain gages for 1975 onward.

Runoff: Records began Jan. 1967. STA AV values based on 11 yr beginning 1967.

Long-Term Precipitation: National Weather Service records at Chickasha, Oklahoma.

Cooperative Research Project of USDA and Oklahoma Agricultural Experiment Station

MAXIMUMS FOR PERIOD OF RECORD
5-24 0.640
1973 1973

Watershed Conditions: 100% is pasture or range. There are 6 farm ponds.
 Maps: Topographic/Hydrologic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1967, USDA Misc. Pub. 1262, page 69-21-6. Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1965, USDA Misc. Pub. 1216, page 69-7-21.
 Precipitation: Records began Jan. 1967. Thiessen weighted average of 6 rain gages.
 Runoff: Records began Jan. 1967. STA AV values based on 11 yr beginning 1967.
 Long-Term Precipitation: National Weather Service records at Chickasha, Oklahoma.

Cooperative Research Project of DSDA and Oklahoma Agricultural Experiment Station

69.028- 7

LOCATION: Watershed 526 lies on the Little Washita River above the county road south of Cement, in Comanche County, Okla.; tributary to Washita River; Red River Basin. GAGING STATION--N° 1/4 sec. 10, T. 4 N., R. 9 E., Lat. 34 deg. 50 min. 17 sec.; Long. 98 deg. 7 min. 26 sec., 7 miles south of Cement, Okla. at county road bridge over the Little Washita River approximately 4 miles upstream from Rocky Ford town site and confluence with McCarty Creek.

AREA: 39644.00 acres 61.94 sq. miles

SLOPES: Slope-Percent 0-1 1-3 3-5 5-8 8-12 >12
Percent of area 1% 20 24 24 1% 2

SOILS: The soils are mostly deep, well drained, moderately permeable reddish prairie uplands developed from a mixture of Permian age sandstones, siltstones, and shales.

SERIES OR TYPE (TEXTURE)	Per- Cent of area	Avg. depth (in.)	TOPSOIL		SUBSOIL		SUBSTRATEUM		
			Structure	Perme- ability	Structure	Perme- ability	Avg. depth to (in.)	Perme- ability	
Grant-Pond Creek-Lucien-Minco	78	9	weak, fine, & granular	0.63-2.0	medium granular	.63-2.0	40+	.6-2.0	well drained
Port-Pulaski-Gracemont	6	57	medium granular	0.63-2.0	weak, medium subangular blocky structure	.63-2.0	72		well drained
Zonawa-Dougherty-Zufaula	7	6	loose, very friable	2.0-6.3	moderate, prismatic	.63-2.0	54	2.0-6.0	well drained
Cobb	9	8	weak, fine granular	0.63-2.0	weak, coarse, prismatic	.63-2.0	30		well drained
Nash-Lucien-Stephenville	1	8	weak, very fine granular	0.6-2.0	very fine granular		30		well drained

Note: Descriptions are for the first soil in each association.

EROSION: Erosion Class + 1 2 3 4 5
Percent of Area 0.0 20.0 40.0 7.0 0.0 0.0

LAND CAPABILITY: Class I II III IV V VI VII VIII
Percent of Area 8.0 20.0 20.0 5.0 0.0 1.0 0.0 0.0

GEOLGY: The geologic formations and their exposed surface area in percent are: alluvium, 6; cloud chief, 56; Rush Springs, 38. The Cloud Chief formation contains soluble gypsum and other evaporite minerals that contribute to the mineral content of the ground water which thus raises the mineral content of the stream base flow. See description of hydrogeology and the general geology map in Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1962, USDA Misc. Pub. 1070, pp. 69.7-8 and 9. Source of data: Oklahoma Geological Survey, Norman, Okla., Bulletin 73, 87, and Circular 61.

SYSTEM	Formation and percent of area		Description
Quaternary	Alluvium	6	silt, clay, fine sand, and some gravel. Unconsolidated deposits.
	Cloud Chief	56	Gypsum and interbedded shale. Contains very little water; well drained by underlying permeable Rush Springs sandstone.
Permian	Rush Springs	38	Fine-grained sandstone; cross bedded and even bedded. Most productive aquifer in the area.

SURFACE DRAINAGE: Good, length of principal waterway is 12 miles. For topographic map see Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1963, USDA Misc. Pub. 1164, pp. 69.15-4.

CHARACTER OF FLOW: Perennial, continuous.

INSTRUMENTATION: PRECIPITATION: Weather Bureau substations plus recording weighing type gages installed on 3-mile square grid. Grid pattern oriented in north-northwest direction and consists of 14 gages with primarily 24-hour time scales. RUNOFF: Tape down from reference point on downstream rail. Stevens A-35 recorder and bubble gage serve manometer on right bank with 9.6 in. per day time scale datum 1183.00 ft. above m.s.l. elevation by 1929 adjustment.

WATERSHED CONDITIONS: Thirteen floodwater retarding structures control runoff from 66 percent of the drainage area. Land use according to a 1984 survey (approximate percentages): 37.5% range, 21% poor range, 28.1% winter wheat, 2.5% summer crops, .1% bare soil, .6% water, 9.9% timber, .5% quarry/impermeous.

GENERALLY REPRESENTS: Mixed tributary watersheds of the Central Great Plains Winter Wheat and Range Region, specifically the Central Rolling Red Plains and the Central Rolling Red Prairies; and the Southwestern Prairies Cotton and Forage Region, specifically the Cross Timbers; land resource areas (H-78, 8 and J-89) in Kansas, Oklahoma, and Texas.

Watershed Conditions: Land use according to a 1984 survey (approximate percentages): 37.5% range, 21% forest range, 28.1% winter wheat, 2.5% summer crops, .1% bare soil, .6% water, 9.9% timber, .3% quarry/impervious.

Maps: Topographic/Hydrologic - See page 69.029-8 of this publication.

Precipitation: Records began Oct. 1961. Thiessen weighted average from 14 gages on the watershed.

Runoff: Records began April, 1979. STA AV values based on 1 yr beginning 1979.

Long-Term Precipitation: National Weather Service records at Chickasha, Oklahoma.

Watershed Conditions: 95% contoured corn; 5% gullies and grassed waterways.
Maps: Topographic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1964, USDA Misc. Pub. 1194, page 71-2-5.

Precipitation: Records began January 1, 1964. From rain gage 117 during winter months; Thiessen weighted average of gages 115, 116, and 118 for remainder of year.

Runoff: Records began February 3, 1964. Jan. 1-Feb. 3, 1964 runoff estimated and included in station averages.

Long-Term Precipitation: National Weather Service records at Omaha, Nebraska.

Watershed Conditions: 86% corn, conservation tillage; 14% grassed waterway, roads and farmstead.
Maps: Topographic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1964, USDA Misc. Pub. 1194, page 71-3-4.

Precipitation: Records began January 1, 1964. Arithmetic average of雨gages 113 and 114 during winter months; Thiessen weighted average of雨gages 112, 113 and 114 for remainder of year.

Runoff: Records began January 2, 1964. Jan. 1, 1964 runoff estimated and included in station averages.

Long-Term Precipitation: National Weather Service records at Omaha, Nebraska.

		1972		1971		1972		1972		1972		1972		1979

Watershed Conditions: 73% contoured corn above level terraces which have a capacity of 2 inches of runoff; 23% contoured corn below the bottom terraces; 3% grassed terrace backslopes; 1% gully.

Maps: Topographic - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1972, USDA Misc. Pub. 1412, page 71-4-4.

Precipitation: Records began January 1, 1964. From gage 113 during winter months; Thiessen weighted average of gauges 111, 112, and 113 for remainder of year.

Runoff: Records began February 27, 1964. Jan. 1-Feb. 27, 1964 runoff estimated and included in station averages.

Long-Term Precipitation: National Weather Service records at Omaha, Nebraska.

Watershed Conditions: Residential, 1.0%; forest, 39.7%; commercial, 0.4%; water, 1.9%; crops, 35.8%; wetland, 2.5%; pasture, 17.8%; roads, 0.9%.

Maps: Topographic/Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1975, USDA Misc. Pub. 1446, pages 74.002-21 and 74.002-22.

Precipitation: Records began January 1968. Values are weighted using the Reciprocal Distance Squared Method from 28 recording gages. STA AV values are based on 9 yr beginning 1971.

Runoff: Records began November 25, 1971. Station averages include part-year records.

Long-Term Precipitation: National Weather Service records at Tifton, Georgia.

MAXIMUMS FOR PERIOD OF RECORD

Watershed Conditions: Residential, 1.7%; water, 2.1%; crops, 46.7%; wetland, 0.2%; pasture, 17.3%; roads, 0.9%; forest, 31.1%.

Maps: Topographic/Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1975, USGS Misc. Pub. 1446; pages 74.003-21 and 74.002-22.

Precipitation: Records began January 1968. Values are weighted using the Reciprocal Distance Squared Method from 9 recording gages. STA AV values are based on 10 yr beginning 1970.

Bunoff: Records began November 1, 1970. STA AV include part-year records.

Long-Term Precipitation: National Weather Service records at Tifton, Georgia.

EVENT OF APRIL 23 - MAY 3, 1979
TIPTON, GEORGIA LITTLE RIVER WATERSHED N

TIPTON, GEORGIA LITTLE RIVER WATERSHED C

LOCATION: Tift County, Georgia; approximately 2.5 miles northwest of Tifton on County Road S1179; Mill Creek, Little River Watershed, Withlacoochee River Sub-basin, Suwannee River Basin. Lat. 31 deg. 29 min. 36 sec., long. 83 deg. 34 min. 04 sec.

AREA: 3936.00 acres 6.15 sq. miles

Watershed Conditions: Residential, 1.6%; water, 2.9%; crops, 29.6%; pasture, 31.7%; roads, 1.3%; forest, 32.9%.

Maps: Topographic/Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1975, USDA Misc. Pub. 1446, pages 74.004-29 and 74.C02-22.

Precipitation: Records began January 1968. Values are weighted using the Reciprocal Distance Squared Method from 9 recording gages. STA AV values are based on 12 yr beginning 1968.

Runoff: Records began December 1, 1968. STA AV include part-year records.

Long-Term Precipitation: National Weather Service records at Tifton, Georgia.

Watershed Conditions: Residential, 1.8%; forest, 43.7%; commercial, 1.1%; water, 1.8%; cropland, 32.3%; wetland, 1.4%; pasture, 17.1%; roads, 0.8%.

Maps: Topographic/Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1975, USDA Misc. Pub. 1446, pages 74.005-33 and 74.002-22.

Precipitation: Records began January 1968. Values are weighted using the Reciprocal Distance Squared Method from 17 recording gages. STA AV values are based on 11 yr beginning 1969.

Runoff: Records began January 1, 1969.

Long-Term Precipitation: National Weather Service records at Tifton, Georgia.

MAXIMUMS FOR PERIOD OF RECORD																								
2-24 Date Vol. 1975 2-24 Date Vol. 1979																								

Watershed Conditions: Residential, 0.3%; water, 0.8%; crops, 26.3%; wetland, 0.1%; pasture, 15.5%; roads, 0.9%; forest, 56.1%.

Maps: Topographic/Composite - Hydrologic Data for Experimental Agricultural Watersheds in the United States, 1975, USDA Misc. Pub. 1446, pages 74.007-31 and 74.002-22.

Precipitation: Records began January 1968. Values are weighted using the Reciprocal Distance Squared Method from 15 recording gages. STA AV values are based on 12 yr beginning 1968.

Runoff: Records began January 1, 1968.

Long-Term Precipitation: National Weather Service records at Tifton, Georgia.
