# The New Everblooming GRANDIFLORA ROSES

So many new roses do not fit the classifications already in use, that a new class has been established by rosarians, called Grandifloras.

Merits of both Everblooming Hybrid Teas and Floribundas are combined in Grandifloras, of which those listed on this page are the outstanding examples so far produced.

In size of flower and length of stem, grandifloras surpass floribundas, but both share the delightful habit of bearing flowers in clusters. More and bigger flowers, on taller bushes, reward grandiflora growers. Plants grow tall enough for background use in borders, while stems even in clusters are long enough for flower arrangements.

**BUCCANEER** (Pat. 1119) This moderately fragrant, brilliant flashing yellow has lots of pep and is unfading in the hot summer sun. Healthy dark green foliage. **\$2.50**, 3 for **\$6.75**.

**CARROUSEL** (Pat. 1066) A happy rose with perfect, dark velvety red blooms, long lasting on the bush and also when cut. Extremely resistant to heat, drought, mildew and blackspot. It was recently awarded The Gold Certificate by the American Rose Society. "in recognition of superior performance in American gardens". **\$2.00**; 3 for **\$5.50**.

**DEAN COLLINS** (Pat. 1279) "The Lazy Gardener's Rose." So called because it is a "toughy" and will perform beautifully with a minimum of care. The tall plants produce an abundance of brilliant red buds, opening to full double, luminous rose-opal and carmine blooms. The summer heat does not fade this beautiful rose, but intensifies its coloring. **\$2.00**, 3 for **\$5.50**.

**MONTEZUMA** (Pat. 1383) A remarkably brilliant flower of distinctive scarlet-orange changing to orange-salmon in warm weather. The long tapering buds and the high centered flowers are extremely long lasting when cut. They are borne in profusion on tall free-branching plants. **\$2.75**, 3 for **\$7.50**.

**ROUNDELAY**. (Pat. 1280). The dark red buds open to satiny brilliant red blooms of the best Hybrid Tea form but there will be three times as many. The flowers are produced on long stems, are long lasting and fragrant. **\$2.50**, 3 for **\$6.75**.

**QUEEN ELIZABETH ALL-AMERICAN WINNER 1955** (Pat. 1259) It is truly a Queen, always looks so fresh and has all outstanding qualities. It surpasses every rose we know for performance and we consider it near perfect. The superb pure pink blooms actually grow richer and more beautiful with age and last longer when cut than any other garden rose. The showy, fragrant blooms are majestically set off with heavy dark green foliage. If you have the space to plant 6 or a dozen, you will never be sorry for then you will always have beautiful flowers to cut for whatever that special occasion might be. **\$2.50**, 3 for **\$6.75**.

**JUNE BRIDE** (P.A.F.) The first white Grandiflora. It grows with still greater vigor than other roses in this super class, and it will delight and amaze even the perfectionist gardener. It is disease resistant with holly-like foliage and it produces hundreds of fragrant white blooms throughout the season. The long pointed buds, sometimes tinged with cream, open to large beautifully formed flowers with ample substance. **\$2.50**, 3 for **\$6.75**.

# Now, a Vaughan's Merion Formula Lawn for **LESS** than a Second Best

This is a banner year for lawn making, thanks to lower prices for the best new grasses which turf researchers have developed. When the greater area which these new grasses will cover is considered, they produce the finest of lawns for less cost than a second best.

## Figure Out the Savings You Can Make!

**One pound of Vaughan's Merion Formula, costing \$1.89, will seed an area of 750 to 1,000 sq. ft. It would take 2 to 3 pounds of top grade Kentucky blue grass mixture at a total cost much higher to sow an equal area.**

Three new grasses, products of scientific research, are included in Vaughan's Master Blend® of Merion Formula this year. Each contributes qualities which insure that a Merion Formula lawn will be at once the most beautiful, vigorous, uniform and enduring turf you could grow.

## Why Is a Mixture of Grasses Better?

Because in any lawn area there is seldom to be found complete uniformity of moisture, soil texture and sunlight. The differences are not easily detected before the grass starts to grow. By sowing a mixture of several grasses, each with its own particular likes and dislikes, you make sure that at least one of the team will feel at home in every inch of your area.

Merion Kentucky blue grass, unquestionably the superior lawn grass for the northern states, makes up over 40% of the Formula mixture. More than a million seeds in each pound will insure that wherever it finds favorable conditions in your lawn area, this beautiful and wear resistant turf will dominate.

## New Grass Discovered in Canada

Delta Kentucky blue grass, discovered by turf researchers in Canada, starts growing more quickly than Merion, because of exceptional seedling vigor. It provides a quick cover which helps its companion grasses, and if there are any places that Merion finds unfavorable, Delta takes over permanently.

Pennlawn Fescue, the hybrid grass from Pennsylvania State University, is a third string to your bow, insuring that shady places and patches of dry, sandy soil will not be thinly covered, but as fully clothed in green carpeting as the rest of the lawn.

## Experience Proves Value of Mixtures

For more than a century mixtures have been preferred wherever lawns are grown. Many turf research authorities have proved by experiments that Merion Kentucky blue gives better results when sown with other grasses which will grow thickly in areas where conditions fail to meet Merion's full requirements.

Where your lawn area is favorable, beautiful Merion will take full possession. Where it might otherwise be thin, it will share the space with its partners in the formula, but rarely will such patches be detectable, so dominant is Merion's deep blue-green coloring.

**FOR BENT GRASSES AND OTHER GRASSES SEE PAGE 96**

## Vaughan's Formula Z Kills ALL Lawn Fungi

**S-304** When lawns turn brown in summer, hot weather may not be to blame. Turf researchers now agree that fungus diseases often are responsible. Many different types of these parasitic organisms are known to attack lawn grass, their spores (seeds) always present, awaiting favorable conditions.

How can you tell which of the five is attacking your lawn? It would take a microscopic examination by a trained scientist to make a diagnosis. But Vaughan's now offer a remedy which needs no diagnosis.

Formula Z, is a "broad spectrum" fungicide, a mixture deadly not merely to one fungus, but which prevents and controls BROWN PATCH, DOLLAR SPOT, COPPER

SPOT, RED THREAD (PINK PATCH) AND LEAF BLIGHTS, such as incited by Helminthosporium and Curvularia.

When fungi attack grass leaves they destroy the chlorophyll which makes grass green. This may or may not kill the plant. When Formula Z kills the fungi the living grass roots quickly send up new leaves, and your lawn is soon green again.

Formula Z contains urea, which stimulates this new growth. Its dark green coloring improves the appearance of the grass during its recovery from the attack. Protective spraying with Formula Z prevents fungi from getting a start. 8 oz., treats 2,000 to 4,000 sq. ft., \$3.45; postpaid \$3.75; 5 lbs., \$24.50; postpaid \$24.95.

## See Merion at Chicago Cubs' Ball Park

Supt. Marcantonio says: "For four years Merion has stayed greener and taken more wear than any grass we ever grew. It's beautiful, and TOUGHER, too."

Merion is also used on the playing fields of Purdue, Notre Dame, and Michigan State Universities; West Point Military Academy, Brooklyn's Ebbetts Field, and New York Yankees' Stadium.

**MOIST-RITE SEED STARTER**

**Start Your Plants Early in a Scientific Seed Tray**

**S-1628 MOIST RITE SEED TRAY.** It is fun to start seed in an indoor seed tray. It also permits you to select varieties from the thousands listed in this catalogue, and grow them for a fraction of what seedling plants would cost, even if you could find the varieties you want in the market, which is seldom the case.

The Moist-rite Seed Starter, illustrated, is 2 ft. long, by 1 foot wide, and 3 inches deep. It is moulded of heavy plastic, and firmly upheld by an iron stand to give room for a 2 pint reservoir below it.

Two fibre glass wicks are supplied, which when inserted in two holes provided for this purpose, and spread over the bottom of the starter, will lift water from the reservoir to moisten the soil in which seed is sown, or small plants set out. As long as there is water in the reservoir, the soil will remain moist.

The box can hold 50 2-inch plant bands, which will be watered by the wicks if the bands are set on a cushion of soil covering the bottom of the box.

This box presents an attractive appearance, and will not be out of place in a living or dining room window, which gets winter sunshine, or a north window which enjoys the light reflected by the northern sky. Winter will seem shorter with this indoor garden, and your plants will cost much less than seedlings purchased in the market. Seed Starter without bands. Each, \$4.50 postpaid to the third zone (600 miles). Add 45 cents if beyond the third zone. If desired, package of 50—2 inch plant bands for 85c, postpaid.

**Avoid Transplanting Shock With Plant-A-Pot**

Plant-A-Pot has been used by florists several years with great success in starting seedling plants. Moulded of peat moss, plants growing in them can be set out in the garden without being removed from the pot. The roots, undisturbed by the operation, grow without check, penetrating the pot walls and continuing to grow while the pot disintegrates.

Decayed pot material contributes some plant food value to the plants. Seed may be sown directly in the pots. If they are placed in a shallow pan water can be poured into the pan and will be absorbed through the side of the pots.

**Plastic Bird Feeder will Delight Feathered Friends**

**S-1725 E-Z FIL BIRD FEEDER.**

When this colorful bird restaurant opens for business in a tree near your window the news will spread rapidly among the Cardinals, finches, rose-breasted Grosbeaks, and all the other winter residents of the woods. The entire menu is visible in the transparent plastic seed bin, and customers are assured clean comfort on the open perches. The birds will dine with more confidence if it is sufficiently in the open to allow them to see the approach of unfriendly characters. Convenient refilling through sliding door in roof. Comes in mottled green, brown or red. Each \$1.29; \$1.55 postpaid.

**Multiply Costly Plants**

**S1924 Airwrap Kit.** Costly magnolias, roses, blueberries, azaleas or any woody plants can be induced to form roots on a selected stem by the Airwrap method which inexperienced gardeners can use. Once rooted the stem can be cut off and planted. Airwrap plastic film is wrapped around a ball of sphagnum moss, surrounding a wound which is prepared with a knife, according to directions. The moss is saturated and the film holds the moisture in, while allowing air to penetrate freely. The film contains necessary growth and rooting chemicals. One kit will make 10 new plants. Each, \$1.95; Postpaid for \$2.15.

## Round Pod Wax Bean Wins All America Medal

B-4. Wax Bean Choctaw. 53 days. This bronze-medal winner is a round-pod bean, rare among the yellow tribe, and like all other wax beans it excels in tenderness and flavor. But the merit which most influenced the All America judges was its beautiful golden color and record-breaking yields. It bears the largest crop of any wax bean on its 16 to 18 inch bushes and the color of the pods never has the green tinge common to others. If you are among the home gardeners who esteem wax beans for their quality, this will bring you an abundant supply of your favorite. Pkt., 30c; ½ lb., \$1.10; 1 lb., \$2.00.

B-23 Greenpod Bush Bean Contender, Pkt., 25c

## Best Home Garden Bean

B-23 Green Pod Bush Bean Contender. 49 days. A great introduction for 1950, that was the work of the late Dr. B. L. Wade. This high quality, heavy yielding bean has been setting records in all parts of the country. Amateurs like it because of its fast growth and long, round, tender pods, entirely free from fibre or linen. A continuous supply for the table is assured by sowing every week, three feet of row which will supply abundantly the average family needs. Pkt., 25c; ½ lb., 50c; lb., 95c; 2 lb., \$1.45.

## F1 Hybrid Big Boy Deserves Its Name

T-5. Big Boy. 80 days. Originator's stock. This is the largest F1 hybrid tomato and lives up to its name. It's big, though not the largest you can grow. Well grown fruits average half a pound and some are larger. It has the vigorous growth, heavy yield and uniformity to be expected of an F1 hybrid. Its globe shaped fruits are perfectly smooth with firm scarlet-red skin. Inside the meat has heavy side walls and bright red flesh of mild flavor and excellent quality.

It reaches the peak of production in mid-season but continues to produce many large fruits until cold weather arrives. The plants are very large, semi-upright to spreading with moderately dense dark green foliage which protects the fruits from sun-scald. If grown to a single stem pruning must be constant to keep the growth within bounds since it grows with true F1 hybrid vigor. Pkt., 35 seeds, 50c; ¼ ounce \$7.50.

## Lettuce of Bibb Quality All Summer

L-9. Matchless Lettuce. 55 days. Here is the lettuce both gourmets and home gardeners have dreamed about. It has the quality of Bibb, to which professional salad experts give top rating, yet can be harvested all summer from the home garden without loss of quality. In contrast, Bibb bolts to seed with the first warm weather. Matchless matures quickly and a succession of sowings will keep you supplied from early spring until winter. The picture of Matchless herewith was taken in our trials in August, an exceptionally hot and dry one, yet the plants showed no signs of bolting and quality was superb. It grows into a loose cluster of slender leaves shaped like a deer's tongue, thick and crisp, with a heavy midrib, equalling Bibb quality on all counts. We have never seen its equal and believe it is the finest lettuce yet introduced. Don't fail to try it. Pkt., 25c; oz., \$1.00; ¼ lb., \$3.00.

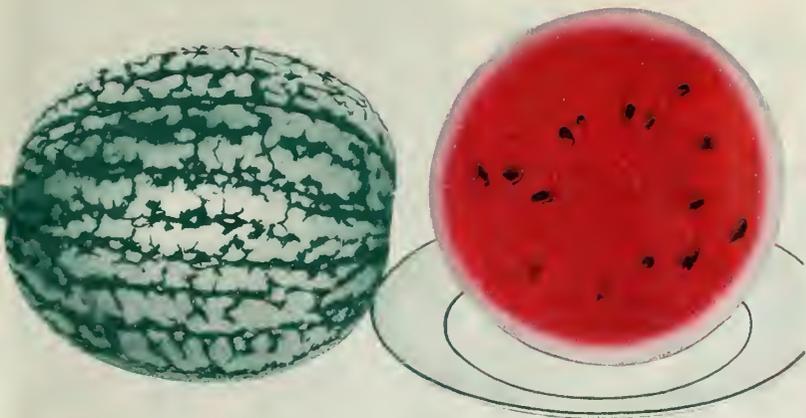

L-9. Matchless Lettuce, Pkt., 25c

## Radish Champion Wins A Medal

R-4 Radish Champion. 25 days. All America Bronze Medal, 1957. The first crop from your vegetable garden should be tasty, bright red, firm-fleshed radishes like these. If they give a long harvest, before they turn pithy, you will rejoice. That is exactly why this prize winning variety won a medal. You can sow longer rows, and enjoy a longer harvest from each sowing. It has all the other desirable qualities found in a fast growing, long standing, top grade radish. The tops are short, the tap root thin, and the color of the clearest. They are larger than Scarlet Globe. 1 pkt., 25c; 1 oz., 50c; 4 oz., \$1.50. Roots can be harvested most of the summer if sowings are made every three weeks from April to June, and from August 1 to Sept. 15. Sow only enough at one time to supply your family for three weeks.

R-4 Radish Champion, pkt., 25c

### Midget Watermelon for Northern Gardens

M-48 New Hampshire Midget. 75 days. All America medal. No sweeter melons ever grew in the deep south, than these midgets, bred for northern summers. This variety is not new, having won an All America award in 1950. Meanwhile it has won acceptance not only by many home gardeners, but by market growers in the north.

As the illustration shows, it is about the size of the largest muskmelons, and so filled with bright red, juicy flesh that the rind is almost paper-thin. Not the least of its merits is its size, which is definitely "ice-box." Keeping it cold is no problem. It is the earliest of the ice-box type to mature. Pkt. 25c; oz., 60c; ¼ lb., \$1.75.

### Giant Tomatoes in 68 Days

T-21 Early Giant. F1 Hybrid 68 days. For the first time the characteristics of early maturity and giant size have been combined in a tomato. It was accomplished by using the F1 hybrid technique, which has been so successful with sweet corn, and many annual flowers.

For home gardeners this triumph means delight, not only when the first tomato of the season is several times the size of the usual early type, but when the vines continue throughout the summer to yield a prolific harvest of similar giant fruits.

The smooth globe shape of Early Giant is shown in the illustration. The fruits are borne in clusters of 5 or 6. The flesh is bright scarlet, moderately acid with few seeds, just the kind that most salad lovers prefer.

If a man were limited to one vegetable only, tucked in among his wife's flowers, this would be the one to grow, insuring vine-ripened fruits for the table for weeks longer than any other variety could grow. Pkt., 50 seeds, 50c; ½ oz., \$6.00.

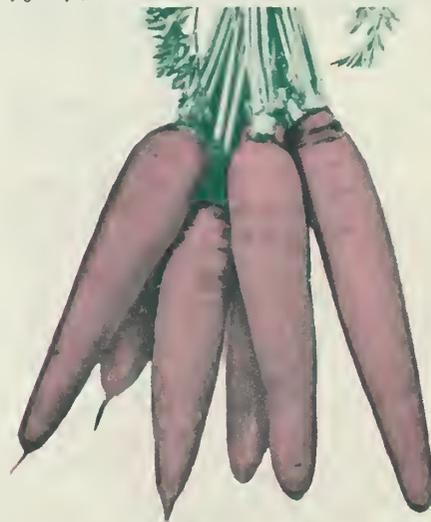

### Hybrid Sweet Corn Bred to Excell in Flavor

C-109 Sweet Corn Honey. 80 days. Veteran home gardeners who still insist that no hybrid sweet corn can equal the flavor of Golden Bantam of prewar days may have to revise their opinion. This one was bred with home gardeners in mind and all other qualities made secondary to tenderness and flavor. To enjoy its sweetness at its height make sowings every 7 days and see that the ears are on the table within an hour after you pick them from the stalk. The plants grow 5 feet tall and bear slender ears 7x1½ inches, each with 12 rows of kernels, topping Golden Bantam by 50%. They are just the right size for a child to handle. Pkt., 25c; ½ lb., 60c; lb., \$1.10; 2 lbs., \$2.10.

### Harvest Peas Through July and August

P-17 Wando Pea. 64 days. Where spring is short and summer hot, peas have so brief a season the harvest is counted by days. But here is a wrinkled pea, of excellent quality, which thrives and bears through the hottest summer months. You can plant them late in June for a harvest in September. Sow every three weeks for crops all summer. Excellent for freezing, also. Pkt., 25c; ½ lb., 45c; lb., 75c; 2 lbs. \$1.35.

### Carrot Sweet as Honey

C-49 Carrot Sweetheart. 70 days. This well named carrot has a core (call it a heart) quite as tender and almost as sweet as the thick outer layer of its root. The deep orange coloring extends through all the flesh. It has a blunt end, slender cylinder shape, averaging 1½ by 6 inches. Pkt., 20c; ½ oz., 40c; oz., 70c; ¼ lb. \$1.95.

### New Cucumber Has A Smooth Skin

C-161 Cucumber Smoothie. 65 days. All America Bronze medal, 1957. Perhaps you never thought about a cucumber's complexion, but now that the All America judges have pinned a medal on this variety, you will probably agree that a smooth, spineless skin adds attraction to a cucumber. Smooth skin is not the only merit of the new variety. It was bred by J. M. Jenkins at the North Carolina Vegetable Research Laboratory, and has long, slender fruits of top table quality, and if you harvest too many to use in salads, they make fine bread and butter pickles, too. Pkt., 35c; ½ oz., 60c; 1 oz., \$1.00.

## Giant Tree Tomato is Still Champion

T-19 Tomato Giant Tree. (Italian Potato Leaved.) 90 days. First offered by us 12 years ago, this was not then a new variety. Its history is obscure but we believe it to have originated in Italy. The interesting fact is that with all the activity among vegetable breeders in recent years, no Fl hybrid or any other new type has ever approached this old variety in the following qualities:

Size, with fruits rarely less than 1 pound, often twice that and many instances of tomatoes weighing over 3 pounds. P. R. Ford of Flint, Mich., in 1950 picked two off one stem, one 3 lbs. 4 ozs., the other 3 lbs., 10 ozs.

Vigor of growth. Our first seed of Giant Tree was obtained from the late Judge Brumley of Flossmoor, Ill., who grew plants that covered an eight foot grape arbor, forming a dense covering over the garden path. Vines 15 feet high have often been reported.

For the average gardener plants of this size are not desirable; but this giant can easily be curbed. When pruned according to standard tomato practice and supported by a stake, Giant Tree will concentrate its vigor on the production of fruits, and keep your table supplied with tomato slices large enough to cover a salad plate.

The fine flavor of Giant Tree attracts as many compliments as its large, smooth fruits. It is definitely non-acid, has very few seeds, and not much juice. It is excellent for canning, if you have cans large enough. The color is classified by tomato fanciers as pink.

If you have grown Giant Tree, there is no need to say more. If you have never grown it, and like tomatoes, don't let another year pass without this interesting experience. Pkt., 50c.

## Potato Eyes for Planting

Instead of handling 100 big seed potatoes, you can plant 100 potato eyes and grow a home garden crop with no more labor than growing beans. Vaughan's sets are cut from the finest certified seed potatoes and treated with Chaogen to eliminate seed borne diseases.

Plant 6 inches deep, 12 inches apart in rows 28 to 36 inches apart. Cultural instructions included. We offer the following varieties of top table quality for April or May shipment.

P-46 Dazoc New Smooth Red Potato—good cooker, quite adaptable. 100 for \$2.50 postpaid.

P-47 White Cobbler—pure white, nearly round, early. 100 for \$2.50 postpaid.

P-48 Cherokee—a new variety later than the White Cobbler, resistant to blight and scab, 100 for \$2.50 postpaid.

P-49 Red Pontiac—Red skinned with resistance to drought. 100 for \$2.50 postpaid.

S-24 SQUASH BUTTERNUT. Pkt., 15c.

## Squash Fans Agree, This Is the Best

S-24 Squash, Butternut. 100 days. There are several good squashes, so why is this best? First it is easier to grow because of its resistance to stem borer the chief pest of squash. Then it's sweeter, and a better keeper, than even Buttercup, or Acorn; and yields a heavier crop for the space occupied. It has more flesh, less seeds, as you can plainly see; ninety percent of its heavy fruit, which may grow 12 inches long, is exceedingly firm, dry, mealy, delicious orange flesh. Even if you already have a favorite squash, better try this. Pkt., 15c; oz., 45c; ¼ lb., \$1.25.

## New Zucchini Has Small Bush

S-30 Black Beauty Squash. 60 days. All America Award 1957. Of all summer squashes this variety is the earliest and grows on a bush small enough for close planting. From the time the fruits are 1½ inches long they can be served, and excel in taste and tenderness up to a length of 6 inches. Fruits 18 inches long and 4 inches in diameter are still delicious when cooked the Italian way. Flesh is white, finely textured and skin uniformly dark green. Pkt. 30c; ½ oz., 65c; 1 oz., \$1.15.

## Heavy-yielding Early Pepper

P-66 Pepper Wisconsin Lakes. 68 days. Research scientist, O. B. Combs, in Wisconsin bred this early maturing pepper, which can be picked in the green stage a week earlier than California Wonder. The plant grows 18 to 21 inches tall and hold the fruits upright, in an easy-to-pick position. In either heavy or sandy soil it outyields later varieties. Fruits ripen to a bright scarlet. Leaves are medium to small, dark green, and the well branched plants shade the stems enough to prevent sunscald. Pkt., 35c; ½ oz., \$1.00; oz., \$1.85.

C-108 HYBRID SWEET CORN GOLDEN CROSS. Pkt., 20c.

## Hybrid Sweet Corn Team

Plant the four varieties illustrated below at the same time to produce an all season harvest of highest yield and quality. 2 oz. of each variety in separate packets totaling **75¢** pound . . . . .

We offer a top quality hybrid sweet corn team, including our new super-sweet Bouquet, and the popular large eared late hybrid Ioana. The varieties described below represent the finest quality hybrids available. Plant them for a continuous home garden crop excelling in flavor and tenderness as well as large yield.

C-108 Golden Cross. 79 days. Sweet as Golden Bantam, with much larger ear, this is deservedly most popular of hybrids. Ears are 12 to 14 rowed, nearly eight inches long. Highly resistant to Stewart's disease. Pkt., 20c; ½ lb., 55c; lb., 95c; 2 lbs., \$1.80; 5 lb., \$4.25.

C-128 Golden Beauty. 68 days. Silver Medal all America winner 1955. A white silked early large eared hybrid with good quality. Pkt., 25c; ½ lb., 60c; 1 lb., \$1.10.

C-101 Bouquet. 75 days. Extra sweet, second early. The cylindrical ears are long and sweet. Pkt., 25c; ½ lb., 60c; lb., \$1.10; 2 lbs., \$2.10; 5 lbs., \$5.00.

C-115 Ioana. 81 days. Bright yellow Sweet Corn produced by the Iowa Station at Ames, Iowa. It has a larger amount of foliage than most Corn and has an excellent flavor. Very productive, 87 stalks bearing 123 ears, free from smut. Ear 8 by 1¾ inches, carrying 12 to 14 rows of kernels of medium size. Stalk 86 inches in height, ear base 26 to 30 inches. Pkt., 15c; ½ lb., 50c; 1 lb., 90c; 2 lbs., \$1.70; 5 lbs., \$4.00.

You always have a grand Rainbow Collection of Glads. My daughter won 2 blues at a 4H show with flowers from your bulbs.

People walking along the street stopped to admire my flowers from your Rainbow Garden of Gladioli.

The gladioli were wonderful. We had the Rainbow collection, the neighbors said they had never seen so many lovely colors.

## Lovely Pink Lily

LILIUM SPECIOSUM RUBRUM

8-9 INCH, 3 FOR \$1.00

This is most beautiful of pink lilies and is also the easiest to grow. It is seldom attacked by disease, and perfectly hardy, living for years in the coldest sections of the country when planted in a well drained place.

It grows slowly, with sturdy stems reaching a height of 4 feet, and blooms in late August and early September, producing branches of flowers many of which reach 6 inches in diameter. Usually 8 to 12 flowers per plant blooming over a 3 week period.

The frilly petals are white, but so flushed with deep pink that only the margins are clear white; and numerous dots of carmine decorate the petals. These are reflexed, or turned back, while long stamens and pistil project with decorative effect.

Planting instructions are sent with the bulbs.

# Everblooming Hybrid Tea Roses

KARL HERBST

The Roses offered in this catalog are northern grown, from Pacific coast areas which produce the Nation's best plants. They are selected plants which qualify as No. 1 grade, the highest standard established by the American Association of Nurserymen. This grading is done after they have been grown for two years on hardy understock.

You will know the difference between these top grade plants, and lower priced plants, when they begin to grow in your garden, where their abundance of fibrous, flexible roots enable them to become established quickly and bloom early.

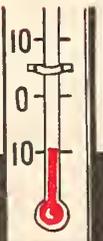

All these Roses, except some climbing varieties, will bloom in your garden this summer, if planted according to simple directions furnished with the plants. Plant dormant Rose bushes as soon as the soil thaws and dries out enough to be prepared properly.

**DELIVERY.** All orders for ROSES which total \$3.00 and over for shipment to one address will be delivered prepaid in the USA. With ROSE orders for less than \$3.00, add 35c postage and handling. (No roses are shipped C.O.D.)

NEW DOUBLE MOCKORANGE

**Everblooming Rose Golden Wings**

**GOLDEN WINGS**, Plant Pat. No. 1419. This is a most unusual rose. Although classed as a hybrid tea it is hardy to the tip, and in a year or two will grow to the proportions of a shrub. Beautiful in the simplicity of its flowers, it is choice as an individual plant, and makes a superb, everblooming hedge or group. 2 year, No. 1 plants \$2.50 each; 3 for \$6.75.

**Euonymus Emerald Leader**

(Plant Pat. No. 881)

**EUONYMUS CORLESSI.**

It is versatile in use, and perfectly hardy where climate prohibits such broadleaf evergreens as holly and boxwood. Perfect for accenting a foundation planting, as a specimen plant or to soften the lines of a conventional evergreen planting. With an ultimate height of about four to five feet, it requires almost no shearing, but responds well to occasional trimming for shape or size. In fall there are bitter-sweet-type clusters of berries to add interest. A wonderful hedge where something choice is desired. We offer 15 to 18 in. bushy plants, abundantly rooted, @ \$4.50 each prepaid, \$12.75 per 3, \$40.00 per 10.

**EUONYMUS CORLESSI**

**Ruby Red Weigela**

**WEIGELA BRISTOL RUBY** (Plant Patent No. 496). The color is a sparkling ruby red, much more intense than the soft color of the pink Weigela so familiar. The flowers are produced in generous quantities in June and early July, then again a fine showing of bloom thru the summer and autumn. Few shrubs flower over so long a period as Bristol Ruby. Grows into a shapely, compact specimen needing very little if any pruning. Hardy even into New England and Canada. Certainly the best red Weigela. 2 to 3 ft. bushy plants \$2.25 each; 3 for \$6.25.

Our small, but healthy and vigorous cuttings grow without a check during favorable summer weather and by flowering time, if properly pinched (pruned) each will make a large, branching plant covered with flowers. Full cultural instructions sent with each order will explain the method of pinching to produce more blooms and control the height and shape.

### PINCHING MUM PLANTS

The first pinch should be made about 10 to 14 days after planting (see illustration). By pinching you make the plant branch, control height, and shape and produce more blooms.

The second pinch should be made 3 weeks after the first pinch. If you desire low bushy plants for the border a third pinch should be made during last week of July. For taller or cut flower purposes make only two pinches, but in no case should the last pinch be made in Northern states later than the last week of July.

# New Flowers and Specialties

## Salmon Pink Petunia Wins All America Medal

**4082 PETUNIA MAYTIME.** (F1 Hybrid.) 12 in. After giving awards for 3 years to red petunias, All America judges broke the spell and pinned a 1958 bronze medal on the lovely salmon pink flower illustrated below. Those to whom pink is the most beautiful color will rejoice at this great improvement. A little deeper than in Petunia Linda, the color is more even. Flowers measure  $3\frac{1}{4}$  to 4 inches, on compact plants 12 inches tall with a spread of 24 to 30 inches. Grow it in borders, beds, planters, pots or window boxes and everywhere it will be charming. As with all F1 hybrids, flowers are abundant and all alike. Pkt. 50c.

4082 Petunia Maytime. F1 hybrid. Pkt. 50c.

## A new type of Zinnia Illustrated on front cover

**5920 ZINNIA MISS UNIVERSE.** Giant flowers on dwarf plants make a combination new to the zinnia race, sure to be welcomed by home gardeners who have so many places suited to low growing plants.

All the flowers are huge, some measuring 7 inches across. Their colors include new tones of gold, red, and orange, pastel pinks, white and cream. There are also striking bicolors never seen in zinnias before, such as pink with red centers, yellow with scarlet centers, buff and apricot with orange, red and lavender.

The low growing habit is due to base branching, new stems growing from the ground level instead of from other stems. This gives you long stems for cut flowers without increasing the height of the plants. Average plants are no more than 2 feet tall, compared to 3 feet or more for other large flowered zinnias. Height is not increased by hot weather, but the plants remain dwarf and attractive in appearance, with giant flowers. You will want to try this distinctly new type while it is still a mixture. It is so rich in novel forms and colors that many selections are sure to be bred to come true in named varieties. You can be the first to introduce the new type to your neighborhood. Pkt. 25c.

## Panorama Snapdragons Include All the Family Colors

**441 SNAPDRAGON PANORAMA.** F2 generation. These are the children of F1 hybrids and among them are not only the colors of the parents, but of their grandparents and more remote ancestors in a mixture guaranteed by Mendel's law to be well balanced.

An F2 generation is a treasure chest in which plant breeders search for and often find colors which they did not know existed. It is the origin of most new varieties. There may be in the packet which you buy colors unknown to the seed catalogues.

Colors which you can be sure of include velvety red, canary yellow, soft orchid and rose pink. Plants will grow from 24 to 32 inches tall. All the plants inherit exceptional vigor and were bred to withstand the summer weather of the east and middle west. You will enjoy the robust, healthy, free blooming plants and acquire an improved opinion of snapdragons. Pkt. 35c.

## A Group of Dwarf Marigolds All Named Petite

This is the first time an All America bronze medal has been given to a group of three varieties which differ from each other in color and form but are alike in habit of growth, which is emphatically DWARF. The introducer has now added a fourth color "Petite Yellow" to complete the group.

All four varieties were bred especially for uniform dwarfness, early flowering and abundant bloom, the qualities most valuable for borders and mass effects.

They are so early the plants blossom in flats, when started under protection. They are 6-inches tall and 10-inches wide at maturity. The fully double flowers are borne all summer in profusion, as many as 50 blooms at a time on one plant.

You can buy the 4 varieties separately or as a mixture. The color and form of each variety are easily recognized in the illustration.

### Two-toned Petunia For Contrast

**4029 PETUNIA GLITTERS.** F-1 hybrid. All America bronze medal, 1957. If you like two-tone effects you will love this red and white petunia, the first of its color with F1 hybrid vigor and uniformity. As botanists say, it is nana compacta type, meaning small and compact. Eight inches tall, with 2 inch flowers, it is covered from spring to fall with blossoms of Fire Chief red and purest white. For edging or low growing beds and borders it is an ideal subject. Pkt. 50c.

### Twinkle, Little Star Phlox

**4180 PHLOX TWINKLE DWARF STAR MIXED.** (ALL AMERICA BRONZE MEDAL 1957) This name just fits these little flowers, which cover plants that grow 8 inches high and are slightly flattened on top. The tiny flowers have pointed petals, some zoned with contrasting colors, others with colorful eyes. Colors range from light pink through salmon, rose, rose-pink, mauve, white, wine-red, cerise and crimson in dazzling combinations. This is a flower for edging beds and borders, or planting in masses in front of taller beauties. It decorates pots and window boxes brilliantly. Pkt. 35c.

### Stocks for Hot Summers

**4930 TRYSONIC 7 WEEK STOCKS.** Wherever spring is late and short and summers hot, beautiful double stocks have been difficult if not impossible to flower in gardens. Plant breeding magic has changed this with Trysonic Stocks. Trysonic means that three genes in the organs of inheritance concentrate on producing double flowers. In addition, the characteristic of early flowering, possessed by the parent Ten Week Stocks, has been strengthened to give flowers in seven weeks after sowing. In our Chicago trials last summer these stocks were in bloom exactly seven weeks from planting. They have a brilliant color range from white through pink, rose, deep crimson, dark blue and purple. Plants are bushy and branching, 12 to 15 inches tall. Pkt., 35c.

4930 TRYSONIC 7 WEEK STOCKS. Pkt., 35c.

### New Red Petunia

**4028 PETUNIA RED SATIN.** (F-1 hybrid) 10-12 in. (ALL AMERICA BRONZE MEDAL 1957) Its compact globe-shaped plants hold their form through the summer, never becoming straggly. Vivid, shining, scarlet-red flowers, 2 1/2 to 3 inches across, are borne in abundance throughout the season. You can expect 30 blooms open at once on every plant. Sun does not fade the color, or dry heat reduce the flowers. It is admirably suited to low beds or borders, or for generously blooming pot plants. Pkt. 50c.

**4034 PETUNIA PINK SATIN.** The color, a rich brilliant rose pink is relieved by the spot of white deep in the throat. Flower size, plant habit and freedom of bloom are identical with that of Red Satin. Pkt., 50c.

4180 PHLOX TWINKLE DWARF STAR MIXED. Pkt., 35c.

### Dwarf Rose Periwinkle

**5780 VINCA LITTLE PINKIE.** A new dwarf selection of Periwinkle in a rich rose color. Plants are dwarf and compact. Very free flowering. Holds up well under heat and sun; equally good in shade. Suggest seed be sown indoors and small plants set out after danger of frost. Seeds may be sown in February or March in living room temperature. As soon as the seedlings are large enough to handle they should be transplanted into plant bands or small pots and kept in the house until all danger of frost is over. This is a tender perennial from Madagascar, usually treated as a tender annual. It flowers all season until killed by frost. Pkt., 25c.

5780 VINCA LITTLE PINKIE. Pkt., 25c.

3183 MARIGOLD DAINTY MARIETTA. Pkt., 25c.

### Dainty Dwarf Single

**3183 MARIGOLD DAINTY MARIETTA.** With all the charm of popular Naughty Marietta, which it resembles, this petite cousin differs most attractively in size and coloring. Its more compact growth and 10 inch height make it ideal for ribbon planting, yet the stems are long enough for cut flowers. Soft golden yellow blossoms 2 inches across have a maroon blotch at the base of each petal. The crested center can best be described as a small yellow tuft of closely packed wax-like petals with a generous sprinkling of black pepper. In our trials it was in full flower in early July and still gay in late September. Pkt. 25c.

**5740 VERBENA DWARF DELIGHT.** Clear coral pink suffused salmon. A distinct new color in this Verbena group. In habit and freedom of bloom it is identical with Sparkle and Crystal. The soft color lends itself readily to the color scheme in the garden border where mass effect is desired. 6 to 7 in. Pkt., 35c.

5740 VERBENA DWARF DELIGHT. Pkt., 35c.

4024 PETUNIA SKY CHIEF. Pkt., 25c.

**4024 PETUNIA SKY CHIEF.** The soft color of Heavenly Blue and the dwarf compact, free flowering qualities of Snowball Improved are combined to make this one of the most interesting Petunia varieties for the coming season. The pale blue color shows less inclination to fade under warm weather conditions than others in this color group. Pkt., 25c.

### Tetraploid Ageratum

**225 AGERATUM DWARF GIANT BLUE TETRA.** (*Blue Mink*) 10 in. A true "tetra" with unusually large flowers, borne on stiff stems that hold them well above the foliage. Grown from seed, the plants are uniform and compact, comparing favorably with the varieties Riverside and Cardinal Mundelein which are propagated from cuttings. A row of this in our Western Springs Trials was a sheet of true Ageratum-blue. While the stems rise well above the foliage, they are not conspicuous, still are long enough to permit cutting for use in low bowls and flower arrangements. Pkt., 35c.

225 AGERATUM DWARF GIANT BLUE TETRA, Pkt., 35c.

### Pink and White "Spider Plant"

**1803 CLEOME PINK QUEEN.** 4 ft. Huge heads of delightful and refreshing true pink. Well branched, airy foliage, blooming from June until frost. Excellent background subject. Pkt., 25c.

**1804 CLEOME HELEN CAMPBELL.** Large glistening pure white flowers on tall, vigorous, light green stems. A sport from Pink Queen, coming into bloom slightly earlier and with larger flower-heads. 4 ft. Pkt., 25c.

1803 CLEOME PINK QUEEN, Pkt., 25c.

**Pink Morning Glory**

**2945 MORNING GLORY CANDY PINK.** The first pure pink Morning Glory. Large 4 inch flowers of the brightest rose-pink coloring, clear and sparkling. The bright and cheerful flowers last but one day, though each morning masses of new flowers are born and continuing thus throughout the Summer and until frost. Planted alone, or as a companion to Heavenly Blue Morning Glory this lovely flower will provide a spectacular display when grown on a trellis, or allowed to trail from a planting box or the top of a pillar. Pkt., 25c.

**Rosy Bachelor Buttons**

**1515 CENTAUREA CYANUS DOUBLE ROSIE.**  
Pkt., 25c.

**1515 CENTAUREA CYANUS DOUBLE ROSIE.** Large fully double flowers of rich rose with a salmon overcast. A new color and welcome addition to the Super Giant Cornflowers. Pkt., 25c.

**2112 ANGEL'S TRUMPET IVORY KING**

**Triple Angel's Trumpet**

**2112 ANGEL'S TRUMPET IVORY KING (DATURA).** "Crown-in-crown" flowers of that enchanting rich Golden ivory coloring one finds in antique ivory chessmen, which blends perfectly with all other colors. Ivory King is a vigorous growing annual that is in bloom from mid-July until frost. Plants about 30 in. tall, as broad as they are tall. Pkt., 35c

**CAUTION:** Seeds of the **Castor Bean (Ricinus)** and **Angel's Trumpet (Datura)** are poisonous and every care should be taken to keep them away from children who are attracted to them by their bright appearance.

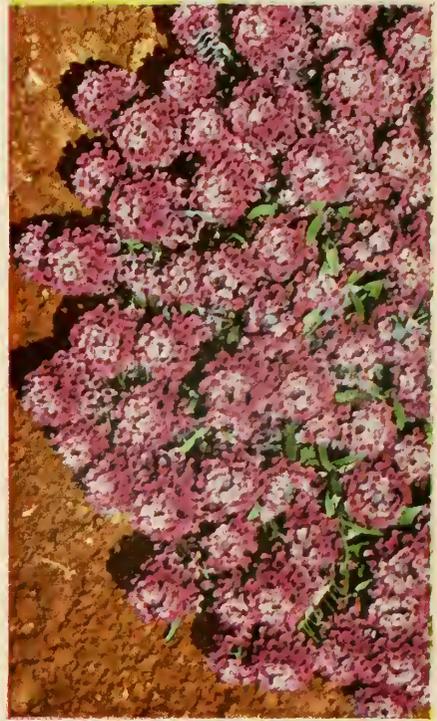

**Scotch Violas**

**8582 SUPER LARGE FLOWERING SCOTCH.** Preferred by specialists, Scotch Violas are much larger than Jersey Gen type, all two-toned in lovely clear colors without blotches. In continuous bloom under good culture; sturdy compact growth, outstanding bedding material. Pkt., 25c.

**1443 CELOSIA TOREADOR, Pkt., 25c.**

**1443 CELOSIA TOREADOR.** 18 in. Large velvety combs up to 12 inches across, of lustrous bright red with scarlet highlights. Stems are stiff and sturdy with luxurious bright green foliage. Most plants produce but one stem with one enormous comb, the balance having two or three base-branching stems each with a large comb. Excellent as a bedding plant or for cutting. Holds color well when dried, if stored in a cool dry place away from sun. We suggest combining with Marigold Cupid Primrose (3196), for an unusual effect. Pkt. 25c.

**Alyssum Spreads a Violet Carpet**

**265 ALYSSUM ROYAL CARPET.** 4 in. All America Silver Medal, 1953. A rich violet-purple of compact spreading habit. Remarkably uniform in color and growth, the perfect companion to Carpet of Snow (Vaughan's Little Gem). Coming into flower very quickly and lasting throughout the entire season. Pkt., 25c; 1/4 oz., 75c.

3147 MARIGOLD CRACKERJACK, Pkt., 35c

## New Giants

**3147 MARIGOLD CRACKERJACK.** Giant blooms, all of which exceed 5 inches in diameter in a full range of Marigold colors—primrose through yellow to gold and brilliant orange. The compact plants attain a height of 30 to 36 inches and carry the giant blooms in full view above the foliage. Flowers well in advance of Early Sunset Giants. A noticeable lack of single flowers, earliness and freedom of bloom combine to make this new Giant Marigold a popular addition to the garden where it can be used for background as well as cutting. Pkt., 35c.

3137 MARIGOLD GLITTERS. Pkt., 25c.

## Big Flower, Small Bush

**3137 GLITTERS.** All America Bronze Medal 1951. It has large clear yellow double chrysanthemum flowered blooms, bushy erect plants, 2½ ft. tall with long cutting stems. Foliage dark green, rich background for the 3 to 4 inch flowers of clear yellow with fringed outer petals. Pkt., 25c.

## A Gem for Cutting and Edging

3157 VAUGHAN'S SPECIAL MIXTURE SMALL FLOWERED SORTS. Pkt., 25c.

## All the Dwarf Marigolds

A delightful group of highly decorative small flowered marigolds has been developed in the last few years. The increased color range extends from bright yellow to darkest maroon, with many attractive blends of yellow, red and orange. Their great variety lends interest to bowl arrangements and there is no better subject for the cutting garden than a mixture of small flowered marigolds.

**3157 VAUGHAN'S SPECIAL MIXTURE** of small flowered marigolds, including Gnome, Red Head, Naughty Marietta, Royal Scot, Harmony, Melody, Yellow Pigmy, Scarlet Glow, Robert Beist and others Pkt., 25c.

## Pure Gold Celosia

**1451 GOLDEN FLEECE.** A pure gold with tremendous plumes for garden and cutting. Easily grown, thrives in all locations and does exceptionally well in hot summers. Pkt., 25c.

For the difficult spot in your garden, try Coleus Vaughan's Rainbow Mixture. Does well in shaded and semi-shaded locations where protection from the bright sun brings out the rich colors. Take a few cuttings from your plants to grow on in the house for winter flowering.

**3172 MARIGOLD PRIMROSE GEM.** A cool, fresh primrose yellow—like captured spring sunshine. Fully double flowers smother the round compact plants. One of the earliest Marigolds to flower, yet was still in bloom when frost came. Plants are about 10 inches tall, perfect for a medium-low edging. Delightful with Blue Ageratum. Equally fine for cutting, as flowers measure 2 to 2½ inches across. Pkt., 25c.

3910 PANSY COLOR CARNIVAL, Pkt., 35c.

## One of the Largest, a Pink Pansy

### 3901 PANSY SWISS GIANTS RASPBERRY ROSE.

Pink is a rare color among pansies. This lovely variety is a Swiss Giant, of which the blossoms can be grown to exceed 6 inches in diameter. The color is well reproduced by the illustration; the experts call it raspberry rose. Edges of the petals have a lighter tone, and this, together with the dark velvety blotches on the petals, enhances the charm of the flower. A solid bed of this variety, planted in the shade, can be kept blooming all summer, if the faded flowers are kept picked off. Pkt., 35c.

## American Giant Pansies

3910 PANSY COLOR CARNIVAL. An American bred strain with its hybrid vigor that far surpasses the Swiss Giants in size of flower, depth of color and plant habit. A good range of color including many reds and scarlets, all flowers blotched, giving a brilliancy and depth most satisfying to all. Pkt., 35c.

## PETUNIA F-2 COLORAMA (Nana Compacta Mixed) Home Gardeners Love This Petunia

4033 PETUNIA COLORAMA. Home Gardeners have showed us that they are fussy about colors in mixed flower seed. In the past, they have not liked mixtures of separate varieties of F-1 Petunias because the individual items stand out and don't form a harmonious blend.

Colorama is a blend grown to give a complete color range, without clashing contrasts, with all the good qualities of F-1 Hybrids.

Uniform in height, early flowering and vigorous in growth, Colorama produces 2½ to 3 inch flowers ranging from pure white to light and medium salmon, warm scarlet, scarlet-salmon, fiery red, light and medium pink and rose. Some have gold or topaz throats, yet harmonize perfectly with the clear colors. Shades of blue, starred and various bicolor shades are also produced, yet do not seem out of place with other colors.

We consider this to be the outstanding Petunia mixture to date. Pkt., 35c.

3949 PETUNIA Colossal Shades of Rose. Pkt., \$1.00.

## Best All-Double Pink

Beauty Phlox has the largest flowers of any. It grows round compact bushes 6 to 8 in. in height, covered with large blooms which are almost twice the size of the older strains. The colors are clear and soft, many pure self colors. Sow the seeds directly where they are to grow. Seeds germinate in 20 days.

4171 SCARLET BEAUTY 4173 WHITE BEAUTY

4174 BEAUTY MIXED. A formula blend, including all colors shown in our illustration.

Each of the above, pkt., 25c.

## New Giant Cactus Flowered Zinnias

This new strain of zinnias, whose giant flowers, 5 inches or more across, have charmingly irregular petal formations and arrangement, becomes increasingly important with the selection of more single colors which come true from seed, and have a special soft but brilliant pigmentation.

The petals of these flowers resemble those of dahlias of the cactus and semi-cactus classes. Some petals are attractively quilled, others gracefully curled, and all are different from the rather stiff formality prevailing in zinnias of older strains.

Our Color Illustration of Zinnia Blaze is representative of flower type.

5880 BLAZE. Brilliant mandarin-red flowers which soften to scarlet-orange as flowers attain size. Pkt., 35c.

6039 ESKIMO. Opens creamy white, changing to pure white. Pkt., 25c.

6038 RIVERSIDE BEAUTY. Warm azalea-pink. Pkt., 25c.

6040 SUNNY BOY. Rich butter-cup yellow. Pkt., 25c.

6035 CACTUS FLOWERED MIXED (Giant Burpee Hybrids). A truly outstanding blend which includes color never before found in Zinnias. Many lovely pastels, all with irregular petal formations, some quilled, others curled but all lend themselves gracefully to flower arrangement. Pkt., 25c.

5880 ZINNIA BLAZE. Pkt., 35c.

4669 SALVIA ST. JOHN'S FIRE. Pkt., 35c

## Reddest of all Salvias

**4669 SALVIA ST. JOHN'S FIRE.** Our own reselected strain coming into flower early, while the plants are but a few inches tall, and remaining in bloom until frost. The bright scarlet spikes stand densely and rigidly upright above the foliage on the uniformly compact plants. Pkt., 35c.

Salvias are easily grown from seed started in a cold frame, electric-heated hot-bed, or an indoor seed box in a sunny window. Varieties of the species splendens, to which St. John's Fire belongs, are tender and should not be set out in the garden until danger of frost is over. An excellent way to grow the plants is in plant bands, in which seed are sown, or seedlings are transplanted from the seed box as soon as they have made true leaves. Seed germinate in 15-20 days. Start seed in the house four weeks before the sale date to move outdoors, six weeks before this date if grown in an electric hot-bed.

## Gay Candy Striped Zinnias

**6180 ZINNIA PEPPERMINT STICK MIXED.** An interesting new development in the popular striata or striped type, reselected for a wider color range, including red and white, red and yellow, pink and white, orange and white and purple and white. Plants are somewhat taller than the Pumila type, flowers are medium sized. Early to flower, they are produced in profusion until frost if kept picked. Pkt., 25c.

Left to right: BLACK KNIGHT, GUINEVERE, GALAHAD, SUMMER SKIES, KING ARTHUR.

# GIANT Delphiniums

Culture: B, D or E, Page 57

Because of superiority to other strains, in many important points, Pacific Hybrid delphiniums have become by far the most popular in this country. We offer its named varieties with the assurance that they come so true from seed, you may count upon plants with little if any variation from the variety description. Plants are 60 to 65% mildew resistant. The stems are straight, strong and whippy, not easily broken by wind. Flowers are enormous, and set close together forming lovely plumes of color. Hybrid delphiniums dominate the garden in late June. In deep, rich soil they grow six feet or more tall, with long spikes of vivid color, or clear white. Besides the Pacific Giant hybrids we offer others which in our opinion are the best available in the world. Seeds germinate in 20 days

## Chinese Larkspur and Sweet William

Illustrated on the left is a charming combination planting of the navy blue Chinese larkspur Blue Mirror and a new annual sweet william Wee Willie. Both blossom from seed the first year.

Wee Willie is a distinctly new strain of annual sweet william which is extra dwarf and compact in habit, making it an ideal edging plant. It has single flowers 3-4 inches in diameter, borne in clusters of 4 to 6 flowers. There are self, zoned and edged flowers in combinations of crimson, ruby, deep rose pink and white. The first flowers open when the plants are about 2 inches tall. Flowers reach their peak 7 to 8 weeks after sowing. Plants are 4 to 6 inches in height, 4 inches across. Their bright colors are enhanced by the deep navy blue flowers of Blue Mirror.

2240 ANNUAL SWEET WILLIAM WEE WILLIE. Pkt. 35c.

7523 CHINESE LARKSPUR BLUE MIRROR. One of the few true navy blue flowers. Pkt. 35c.

## Other Chinese Larkspur

Though Chinese larkspur (Delphinium) blooms from seed the first year if sown early it is a hardy perennial which will live for many years. Its flowers are borne on numerous stems which grow 2 to 3 feet tall and new buds mature throughout the summer and fall. Their pure tones of light and dark blue are not only beautiful in themselves but lend added charm to other colors for which they furnish a background. They are also used in mass plantings in formal beds with borders of harmonious colors. Their strong stems rarely need staking.

# Selections that Belong in Every Garden

In the following color pages, we have concentrated the best of America's most popular annuals. These are flowers that belong in every garden. Easy to grow, lovely to look at, annuals that produce their flowers in one short season from seed.

These have been selected from our listings of flower seed, the largest list in the world today.

To the advanced gardener, and to the beginner with a venturesome mind, we also recommend the following section (see page 43) which includes many of the less well-known items. Although many of these may be more difficult for the beginner to grow, they include some of the world's loveliest annuals and provide a challenge to the gardener who desires something really different.

Because of dual listings, we suggest that in looking for an annual of which the name is known, you consult the index.

# Wilt Resistant Asters

Culture A, B, D or E, Page 57

If planted in the garden among other plants, Asters do not seem as susceptible to disease as when planted in solid blocks. Wilt Resistant varieties are resistant to most of the Wilts that cause the seedlings to sag suddenly and die before they can bloom.

Aster Yellows are somewhat more difficult to control. Spraying with Lindane or D.D.T. to control leaf hoppers helps somewhat. Best preventative is to grow Asters inside a screen or cloth house such as is used for Dahlias. Plants in the open garden are subject to constant attack, so persistent, regular spraying is needed to kill the leaf hoppers that carry the disease. Aster seeds germinate in 8-10 days.

# Small Flowering Petunias for Color and Cutting

There are small, large single, and double flowered. Petunias make good cut flower material. We supply a leaflet on culture if asked for with order. Seeds are very tiny and germinate in 20 days.

## ALL DOUBLE DWARF SMALL FLOWERING

**3932 AMERICA IMPROVED.** 1 ft. One of the first All Doubles produced in America. Flowers of carnation form and size, 100% double, compact plants. Flowers average 2 1/4 inches. Pkt. (100 seeds), 50c; 1,000 seeds, \$3.50.

## Annuals for Cutting

**1400** The forty or more varieties in this blend are chosen for their value as cut flowers. They are the long stemmed brightly colored flowers that go so well in vases and baskets. This will produce a glorious variety of flowers for cutting. We suggest planting in rows in the vegetable garden where the plants may be cultivated. For a continued succession of bloom, make two sowings, the first in early spring just as soon as the soil can be worked and a second when late tulips are in flower and peony buds showing color. 1 oz., 50c; 1/2 oz., 30c; pkt., 15c.

4828 Strawberry Baron Solemacher. Pkt., 25c

## Alpine Strawberry

**4828 BARON SOLEMACHER.** This wonderful novelty has the largest berries in this strain. It makes no runners; flowers in eight weeks and produces quantities of fruit. ### THUNBERGIA

Culture: D or E, Page 57

**5640 ALATA MIXED.** An interesting climber. Makes a dense growth and produces an abundance of flowers in shades of yellow, buff and orange, all with black centers. Pkt., 25c.

Mixtures of Annuals containing many different species, such as our Surprise Garden Mixture and Annuals for Cutflower Mixture, should be sown in two lots. Some species grow best under cool conditions, while others do best in warmer soil.

We recommend sowing the first lot as soon as the ground can be worked in Spring. The second should be sown when late Tulips are in flower, or when peony buds are showing color. This double sowing will give a much wider range of Annuals from a single packet.

# Newest Garden Snapdragons

Culture: A, B, D or E, Page 57

## Tetra Snapdragons

These unique flowers were created by science with an amazing treatment which changed the cell structure of the plants. "Tetra-snaps" are probably the most conspicuous success this method has so far attained.

Every merit which snapdragons have as a garden flower is magnified. They have greater vigor, a longer flowering season, darker green, glossier foliage, stronger stems, and their flowers have more and larger florets, with ruffled petals and brighter colors.

**358 MASTER BLEND.** A new strain of Snapdragon bred to overcome the disappointment of late flowering in the "Tetra" varieties, yet with the same large bloom and fine plant habit. Very free flowering, they come in quite early, before heat of Summer can injure the flower spike. A good range of color; unexcelled for the garden border or cutting. Pkt., 35c.

**433 CANDLELIGHT.** Clear bright yellow.

**438 CRIMSON.** A deep yet bright velvety crimson.

**429 ORCHID.** Rich orchid-purple with yellow blotch.

**435 SHADES OF ROSE AND PINK.** Ranging from lightest pink to the deeper tones of rose. Especially fine for the cutting garden.

**430 WHITE.** Creamy white changing to pure white as flower ages. The primrose throat adds to the attractiveness of the large beautifully formed flowers.

**428 YELLOW.** A rich clear color.

Each of the above, except as noted, pkt., 25c.

## SNAPDRAGONS IN MIXTURE

Our mixtures are "Formula-Made" to insure your receiving the most complete color range.

**444 COLOSSAL MIXTURE.** A strain of tremendous vigor producing in the outdoor garden strong spikes 3 ft. tall, filled with large florets. A well balanced color range that includes crimson, orange shades, pinks, white and clearest yellow. Pkt., 25c.

## Gold-veined Salpiglossis

Culture: A or B, Page 57

One of the easiest of annuals to grow, the Salpiglossis is rich in deep color tones rare in the floral world, which are set off by veins of gold, marking every flower so noted. Its blossoms, similar in shape to a Petunia, on strong stems are borne profusely until frosts kill the plants. Seeds germinate in 8 days.

**4630 VAUGHAN'S SPECIAL MIXTURE.** Our mixture is formula-made and includes many self-colored as well as brightly veined flowers. An easy-to-grow annual that will provide a bright spot in the garden as well as interesting cutflowers throughout the Summer. ¼ oz. 40c; Pkt., 15c.

**4620 DWARF GIANT FLOWERED MIXED.** Giant flowers of all the delightful colors of this gold-veined trumpet flower are borne on low growing plants of compact habit, and will cover the bed or border with glowing color. Many consider this the best of all summer cut flowers. Pkt. 15c.

Last year I planted your new Trysomic Stocks. Long ago I gave up trying to raise Stocks in this area. This new variety was beautiful, even in the extremely hot dry weather we had. They blossomed all summer until frozen. As cutflowers they kept indefinitely. Mrs. S.—Iowa.

## Rust-Resistant

If you have found Snapdragons difficult to grow, rust is probably responsible. Rust is a widespread disease which discolors the leaves and saps the vitality. Growing the Rust-resistant strain, difficulties disappear. Seeds germinate better, plants are more vigorous, the foliage clean, flowers large and of fine color and the flowering season prolonged. Seeds germinate in 20 days.

4735 SCABIOSA Super Crown Imperial Giant. Pkt., 25c.

# Sweet Peas that Flower in Hot Weather

**CUTHBERTSON FLORIBUNDA SWEET PEAS.** The fact that they continue blooming long after hot weather comes, and other sweet peas have died, is not the only merit of this splendid strain. They are the true Spencer, orchid flowering type, and have exceptional vigor. Their colors are bright and clear, stems long, flowers large and deliciously fragrant. The most widely used for outdoor growing, particularly under Middle-West conditions.

For better results, Sweet Pea seed should be inoculated with nitrogen before planting. Garden size packet, 25c.

5265 CUTHBERTSON FLORIBUNDA Sweet Peas, Mixture. Pkt., 25c.

5265 **MIXED.** A brilliant well-balanced blend. Pkt 25c; 1/2 oz., 65c; oz., \$1.00.

Under open ground culture the plants are in bloom by middle of June and flower until October. Excellent for cutting. To get an even and quick germination, keep seed in refrigerator two weeks. Mixtures of Annuals containing many different species, such as our Surprise Garden Mixture and Annuals for Cutflower Mixture, should be sown in two lots. Some species grow best under cool conditions, while others do best in warmer soil.

We recommend sowing the first lot as soon as the ground can be worked in Spring. The second should be sown when late Tulips are in flower, or when peony buds are showing color. This double sowing will give a much wider range of Annuals from a single packet.

# Flower Seed Cultures—How to Sow

**I**N FIVE paragraphs below, designated A,B,C,D, and E we cover in considerable detail the methods of starting flower seeds which are available to the amateur without a greenhouse, and which cover well the needs of an outdoor garden. In the flower seed section in the case of each flower listed, information is given as to the cultural methods which can be used for that subject.

**A Sow in the bed, border or row where the plants are to grow.** The soil should be loamy, with well pulverized surface. With heavy soil inclined to cake and crack, it is usually best to grow plants in a seed bed (B) and transplant to the permanent place. Loosen the soil where seeds are to be sown, with the trowel, or hoe, several inches deep. Rake smooth. Broadcast small seeds and cover them lightly four or five times their diameter. Very small seeds may be merely pressed in. Larger seeds may be planted singly, well covered, but more thickly than plants are wanted. Firm the soil well over the seed. Watering now becomes of great importance. At no time should the soil be allowed to become hard and dry, yet excessive watering may cause the seeds to rot, sour the soil, or cause "damping off." When the plants appear, thin them out, allowing each to grow singly, without crowding. The distance between them is governed by their ultimate size and spread. Excess plants may usually be moved to a new location.

**B Sow in outdoor seed bed, to be transplanted.** The seed bed in the open should be of loose, mellow loam, raised slightly above the surrounding surface, and preferably surrounded by a wooden curb, to prevent rain washing across it. It should not be wider than four feet, so it can be worked easily. Shelter from high winds is valuable, but damp and shady corners are not desirable. Full sun is advisable when seedlings are up, while shade when needed, as in mid-summer for perennial seedlings, is best supplied by a lath or cloth canopy, which can be removed in damp and cloudy weather. Sow the seeds in rows which may be as close as five inches. Sowing and watering are the same as described in "A" above. Seedlings may be transplanted when they make true leaves, the second pair of leaves to appear; or they may be left until larger before being moved to their permanent location. Perennials should be moved from the seed bed to a nursery row, to grow until fall before being moved to the border.

**C Sow in flat, pot or pan outdoors or in a cold frame.** This method is applicable to slow germinating subjects, some of which may take a year to germinate. Fill the receptacle with potting soil as described in "D", firm the soil and broadcast the seed, covering four or five times their diameter. Place the receptacle in a shaded location, where there is free air circulation. During the spring, summer and fall, water often enough to prevent soil from drying out. A mulch

of peat moss will help retain moisture. In winter, place in a protected place outdoors and cover with leaves. Have patience with slow germinating subjects; do not disturb too quickly. Any live seed will eventually grow if given time enough, provided soil, moisture supply, etc., are right. When seedlings appear and make true leaves, transplant to pots, nursery row or permanent location. If moss forms on soil surface, sprinkle fresh earth over top.

**D Sow indoors in a box, pot or pan.** This method may be followed where there is a window facing south, enjoying sunlight most of the day. Use a standard florists' pot or pan (shallow pot) or a "flat," which is a shallow box, with holes bored in the bottom for drainage. Cover the drainage holes in pot or box with broken pottery; fill with potting soil. This is a mixture of half sand and half black loam. It may be obtained from florists. Firm the soil, and sow the seeds in rows, marking each row to identify the sowing. Water by setting the box or pot in water, so that it soaks up from below, or use a fine spray which does not wash the soil. Place in a dark place, covered with a wet newspaper blanket until the seeds sprout. As soon as sprouts appear bring into full light. Cover the box or pot with glass to check evaporation, but when moisture collects on glass wipe it off, and prop up one end of the glass to allow air to circulate during the sunny part of the day. A temperature not below 50 degrees at night, or 75 degrees by day, is best. Do not allow the soil to dry out. When the seedlings have made true leaves (the second set), they should be transplanted to other flats, giving at least two inches of space apart; or they may be moved to small pots or to an outdoor seed bed or border.

**E Sow in a hotbed or cold frame.** A cold frame or a hotbed heated by manure or other means may be used. The best method with flower seeds is to sow seeds in flats, which are placed in the frame. With manure heated beds, seeds should not be sown until the temperature of the newly made bed has dropped to 90 degrees. Watering and ventilation are important. On sunny spring days, always prop up one end of the sash to prevent overheating which may occur quickly and cause spindly growth. Do not allow the soil to dry out. When the seedlings have made true leaves, they should be transplanted to other flats, spaced two inches apart each way; or to the soil in the hotbed, or to an outdoor location, if late enough.

### For Your Children's Garden

Young children can easily acquire an interest in gardening which will last all their lives, if they are encouraged to plant vegetables which appeal to their active imaginations.

The varieties listed below should have appeal because of their small size and appropriate names. They will also contribute to the family food supply, and help you maintain an adequate vitamin intake by the youngsters.

**C-110 SWEET CORN GOLDEN MIDGET. 70 DAYS.** On stalks 2½ to 3 ft. tall, this dwarf sweet corn bears 8 row ears unsurpassed for flavor. 1 pkt., 25c; ½ lb., 60c; 1 lb., \$1.10.

Fruits are borne in clusters, bright red, ¾ to 1 inch across; fine flavored. Very colorful when potted or grown in window boxes. 1 pkt., 25c.

**M-52 WATERMELON SUGAR BABY.** A new variety, larger than New Hampshire Baby but small enough to fit in the icebox. Averaging 8 inches in diameter, weight 8 to 10 lbs., the fruits are round, dark green with darker striping. It has been rated better than other small melons for flavor, texture and less seed. 1 pkt., 25c; ½ oz., 60c; oz., \$1.00.

**QUALITY** in beans is measured by stringlessness, by tenderness, or the absence of fiber or "linen" in the pod; by ability to produce well under favorable or adverse conditions and by the length and shape of pod. Round-pod beans are considered of superior quality, due to superior stringlessness and less fiber. Flat pod varieties rate high in yield and flavor.

One week before frost proof date, sow bush beans two inches deep, 2-4 inches apart, pole beans, 4-6 inches apart. Harvest pods before seeds form. If picked clean, plants will bear until frost; but young plants yield best and succession plantings are advised.

### S-437 NITRAGIN

#### Inoculate Your Beans and Peas

The roots of legumes, which include peas and beans, are the hosts of bacteria which secrete nitrogen from the air. This is concentrated in nodules on the roots. The nitrogen becomes available to the soil, and stimulates the growth of the plant. This process is speeded up by applying a bacterial culture to the seed before planting. Nitragin is the original legume inoculation culture. S-437 Garden Size for peas, sweet peas, garden and lima beans. Pkt. 25c, postpaid 30c. Each packet treats 5 lbs. of seed.

Plants kept picked clean will bear until frost.

# Table Quality Beets

**B-77 BEET PERFECTED DETROIT.** Pkt., 15c; ½ oz., 25c

**QUALITY** in beets is measured by an even, globular shape, uniformity in size, bright, even color, flavor, fine texture and tenderness. Here, as with all vegetables, the difference between a fine and a mediocre strain of one variety may be as great as between different varieties.

Our best seed is grown only from transplanted roots, which are taken up in the fall, carefully graded, and transplanted again to produce seed. Only beets which conform to the highest quality standards are planted for seed.

All beets keep well in winter when properly stored. A special sowing should be made in midsummer to produce the storage crop.

As soon as soil can be worked in the spring, sow one seed to the inch, in drill half inch deep. Firm soil well over seed and water well if required. Thin when roots begin to make globes, to stand 4 inches apart in row. Cook discards with their tops.

Quantity needed to sow: 15 ft. row, 1 pkt.; 60 ft. row, 1 oz.; acre, 7 lbs. (Rows 18 in. apart).

# Yellows Resistant and Standard Cabbage

WHEREVER the temperature of the soil rises to 85 degrees and remains for several days, there is danger of the yellows disease, and when it strikes, a crop failure may result.

In the great cabbage growing district centering around Racine and Kenosha, Wisconsin, an industry has been saved by developing strains of cabbage resistant to yellows. We offer seed of these strains, which have been developed by years of scientific work, and actual growing tests. The uniformity and yield of resistant strains have greatly improved. We recommend their use wherever danger of yellows may exist. If the disease strikes, resistant strains will show slight loss, where non-resistant types would probably be destroyed.

**Cabbage Culture:** After frost proof date, set out plants for early crop. Late varieties may be sown outdoors in June. Space small early types 12 inches apart, medium 18 inches, large late 2 feet. Water well and protect from worms and aphids.

# Slender, Tender Carrots

# Endive

C-51 CARROT, TOUCHON. Pkt., 20c

CARROTS have been improved in quality at the same time their value as a health food has been gaining wider recognition. In addition to color, size, shape, tops and season of maturity, our special strains are selected for sweetness, and the tenderness and even texture of the flesh, especially for a minimum of "core." Scientists say the brighter the color, the more Vitamin A in carrots.

Sow as soon as soil can be prepared, in shallow drills, 5 seeds to the inch. Thin out when of finger size, and serve discards. Carrots will mature well growing close enough to touch, and remain delicious all season; but many prefer them young, and make several sowings.

**C-43 IMPERIDA.** 77 Days. A very long slender root with a short strong top. The roots are a deep orange and from 7 to 8" long.  
Pkt., 20c; ½ oz., 40c; oz., 70c; ¼ lb., \$1.95

**C-49 SWEETHEART.** 70 Days. A very fine strain of Nantes type. The top is short and the root is a bright orange with the least core of any variety grown. See page 7.  
Pkt., 20c; ½ oz., 40c; oz., 70c ¼ lb., \$1.95

**C-51 TOUCHON.** 70 Days. From the time it is finger size and thinned out of the row in early spring, until it reaches full growth in the autumn, this variety excels in flavor, tenderness, even in yield, for home gardens. Its slender shape permits growing closer than thicker types and decreases the core which all carrots have even though you may not see it. Its flesh is fine grained, sweet and has bright orange coloring.  
Pkt., 20c; ½ oz., 40c; oz., 70c; ¼ lb., \$1.95

**C-48 RED HEART.** (Red Core Chantenay). 70 Days. It has no visible core, but its rich red coloring is even throughout the flesh. The top is very strong, hence ideal for hunching. The root is of medium length, blunt, smooth and easily prepared for serving.  
Pkt., 15c; ½ oz., 40c; oz., 70c; ¼ lb., \$1.95

**C-50 TABLE QUEEN.** 70 Days. Half-long type, rich red, tender, crisp and one of the sweetest we know.

Pkt., 15c; ½ oz., 40c; oz., 70c; ¼ lb., \$1.95

Although carrots stand crowding in the row better than most plants they always need thinning out. If sown thinly, this can be done when the roots are as large as your little finger. At this stage they make a delicious dish.

# Onion Sets

BECAUSE of the long growing season required by all onions grown from seed, most amateur gardeners use onion sets for producing both green onions, and mature bulbs. "Bottom sets," so-called to distinguish them from top sets, produced by some varieties of onions instead of seed, are onion bulbs artificially dwarfed by being sown thickly in rows, and stored over winter to be planted the next spring for a speedier harvest than seed would produce. Succession plantings can be made as long as the sets remain in good condition. For growing mature onions in home gardens we recommend Golden Globe sets.

Use large sets planted 2 in. deep for green onions, smaller 1 in. deep for mature onions; space the first one inch apart, the second 3 to 4 inches. Plant with the earliest crops.

Green onions will be ready in three weeks, mature onions in three months from the planting date. The use of sets thus shortens by many weeks the time it would take to grow either green or mature onions from seed.

Onion sets prices postpaid.

# Plant Peas Early

### Tall Peas

**T**HE gardener who takes pride in his peas and whose space is unlimited will find the tall-growing sorts unequalled for length of season, heavy yielding and high quality. Support should be given and they should be planted with plenty of room. Liberal fertilizing will be well repaid.

**P-9 IMPROVED TELEPHONE.** 74 Days. Of the tall-growing varieties of late peas, "Vaughan's Improved Telephone" is regarded by experienced and successful growers as the best sort for general purposes. Uniformly large pods, 5 inches or more long, filled with 8 to 9 delicious peas. Grows 4 feet high; is a main crop variety, and a heavy yielder. Pkt., 15c; ½ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

### MEDIUM HEIGHT

**A** HEAVIER yield without sacrificing quality is obtained from the varieties of peas which require some support. The varieties listed below grow to three feet high and should be given support of chicken wire or brush between companion rows. The smooth podded sorts may be sown first, and if not allowed to mature too much, will be found to be of good table quality.

**P-15 WORLD'S RECORD OR IMPROVED GRADUS.** 57 Days. Gradus is the greatest of the wrinkled peas; it is large early, and in flavor equal to the best wrinkled kinds. It is tender and should be planted in the warmest spot in the garden. Vines 30 inches, pods 4 inches long, beautiful green color, with 7 to 8 or more rich, tender peas in each. Pkt., 15c; ½ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

**P-14 THOMAS LAXTON.** About 62 Days. The best pea for freezing. This is a selection of Gradus. The season is identical, but the pods are square at the end and deeper green. Vines are 3 to 3½ feet high. A better yielder than Gradus. Pkt., 15c; ½ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

### EDIBLE POD PEAS

#### Cooked Like String Beans

**P-4 DWARF GRAY SUGAR.** About 65 Days. The pods, not the seed of this variety are eaten. They are borne on vines 16 inches tall, and should be picked before seeds form. At this stage they are: stringless, brittle and succulent. Pkt., 15c; ½ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

### S-437 NITRAGIN

#### Inoculate Your Beans and Peas

The roots of legumes, which include peas and beans, are the hosts of bacteria which secrete nitrogen from the air. This process is speeded up by applying Nitragin, the original legume inoculation culture. S-437 Garden Size for peas, sweet peas, garden and lima beans. Pkt. 25c, postpaid 30c. Each packet treats 5 lbs. of seed.

**P**EAS are rich in sugar, which begins to turn to starch when they are picked; thus home gardeners alone can enjoy this crop at its best.

Where hot dry summer weather cuts short the crop, the problem is to get the heavy yield, large size and sugar content of the late sorts into early yielding varieties which will bear a crop before the summer's drought arrives. Our strains are selected for these qualities. Quantity needed for 100 ft., 1 lb.

Sow smooth seeded with earliest crops, wrinkled peas two weeks before frost proof date. Sow 2 inches deep, two inches apart in row, or in twin rows, 6 inches apart, with support between. Crop must mature before hot weather.

Very productive, hardy, luscious and sugary. Vine 18 inches, pod dark green, well filled. Pkt., 15c; ½ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

**P-7 GIANT STRIDE.** 74 Days. Pea height is a wilt affecting peas when they are planted too often in the same ground. You will find Giant Stride nearly 100% resistant, as well as of top quality and a heavy yielder. Pkt., 15c; ½ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

**P-12 NOTT'S EXCELSIOR.** In 60 Days. Almost as early as the round seeded varieties, but far superior to them in quality. Vines about 16 inches high, pods about 3 inches long, each containing 5 to 7 peas of good size, tender and delicious. Pkt., 15c; ½ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

**P-13 PREMIUM GEM.** 60 Days. An extra early old type garden pea that could well be replaced by Nott's Excelsior or Little Marvel, as they are superior. Pkt., 15c; ½ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

**P-10 LAXTON'S PROGRESS.** 62 Days. The earliest and by far the best of the large-podded, large fruited wrinkled peas. Of all the varieties producing peas of equal quality, this is the heaviest yielding. It bears long pods, averaging one more pea to the pod than Hundredfold. Pkt., 15c; ½ lb., 40c; lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

# Radishes for All Season

**R**ADISHES from April to December are possible for the home gardener who sows early, midseason, summer and winter types.

Radishes supply, in a 2 oz. portion, 61U of Vitamin B-1; 11 milligrams of Vitamin C, 0.01 milligram of Vitamin B2.

Our strains are grown with the greatest care, which involves considerably increased cost, but the additional cost is small compared with the great difference in your crop.

Quick growth is the secret of success. A rich, light soil is required. The globe and olive varieties grow faster than the long type, and turn pithy sooner. The long types grow more slowly and are slower to turn pithy, so they endure heat better. Winter radishes should be sown in June or later and allowed to develop in the cool moist fall weather. Quantity needed for 15 to 20 ft., 1 pkt.; 75 ft., 1 oz.

Sow with earliest crops, ½ inch drill, 5 seeds to the inch. Sow early types one week's supply at a time, of weekly intervals. Mix with parsnips, parsley and carrots, to make the row. Harvest when large enough to eat. Summer and winter types have longer harvest.

## Spinach

SPINACH demands cool, moist weather. Seed should be sown at the earliest possible moment in spring in rows one foot apart and thinned to six inches in the row. It matures in 45 to 50 days and quickly runs to seed in warm weather. The Antvorskov variety listed below, is most free from this tendency.

Home gardeners have generally adopted Swiss Chard and New Zealand Spinach as a greens crop, as both may be cut many times and will produce a continuous crop all summer and until freezing weather in the fall. A fall crop of spinach may be sown in late July or August and will find the cool, moist autumn weather favorable for growth. New Zealand Spinach, however, is better sown in early spring as soon as the ground may be worked. The value of spinach in the diet has been scientifically established by the vitamin investigation.

**S-10 HYBRID SPINACH #7.** 42 days. Plant upright and semi-compact in habit. Foliage dark green, medium savoyed, resistant to Blue mold and mosaic. Especially adapted for early Spring or Fall.

Sow as soon as the garden is prepared in rows 3 feet apart and thin the plants to stand 2 feet apart in the rows. Soak the seed before sowing.

Pkt., 15c; oz., 35c; ¼ lb., \$1.00

## GARDEN SORREL

**PROPAGATION OF PLANTS.** By Kains and McQuesten. Left to right in rear: New Italian Marrow, light green; next, dark green strain; Prolific Straightneck; Giant Summer Crookneck, Cocazelle, Vegetable Marrow. In front, Mammoth White Bush.

## Improved Squash

GROWING popularity of squash as both summer and winter vegetable is due to the improvement in flavor, and texture of the flesh, and to the new methods in cooking, which bring the squash to the table with its taste unimpaired. For summer, bush squash and vegetable marrows are best suited to the home garden, the latter being delicious at all stages, from infancy to maturity. The new winter varieties Buttercup and Butternut, have rapidly become rivals of the older types in popularity. Butternut has perhaps the best texture and flavor and is also resistant to stem borer. If there is room for only one squash in your garden plant Butternut.

Sow one inch deep, in light soil, sunny location. Space bush types 3 feet apart in row, vine types in hills six feet apart, 3 plants to hill. Use summer squash at any size, delicious in baby stage.

All bulbs prepaid at listed prices. Six bulbs at half the dozen rate.

## ACHIMENES

This is closely related to the gloxinia. Plant 6 to 7 bulbs in a 5-inch pot, or 9 to 10 in a 6-inch pot. The soil used for potting should be rich in humus and of an open, porous nature, allowing perfect drainage. A good mixture to use is equal parts of loam, leaf mold and sand. About one-third of the depth of the pots or pans should be occupied with drainage. After the young growth appears, great care should be taken to keep the soil moist, for a single severe drying will ruin the plant. Blooming time 8 to 10 weeks after planting. Mixed colors 3 for 60c; doz., \$2.00; 100, \$15.00.

## Good Growing Tips

As soon as received, soak the roots of Roses in a pail of water for 24 hours. Experiments at the University of Minn. show they will give more bloom if soaked. Then, when pruned and planted, hill them up with 3 or 4 inches of moist soil. This keeps the wind from drying the plants and helps them to leaf out more quickly. Remove soil gradually as plants begin growing.

Dust or Spray Regularly with "VAUGHAN'S ROSE AND PLANT DUST" (see page 4) and you will have few, if any, rose troubles. Fertilize with "VAUGHAN'S GROGANIC ROSE FOOD" (see page 86).

## VAUGHAN'S SPECIAL PURPOSE MIXTURES

We recommend our lawn mixtures, composed of suitable varieties of grass seed, because results are more satisfactory from a correct combination of grasses than from a variety sown alone. Our grass seed division has long been known as an authority on growing fine turf, and for the guidance of our customers we send our booklet on lawn-making upon request and without charge. A copy of this booklet is enclosed in every cartan and bag of Vaughan's lawn seed mixtures.

**For Your Protection**—Always remember that we neither buy nor sell seeds that are not tested in our own officially recognized laboratory for purity, germination, identity and freedom from weeds.

### VAUGHAN'S "COLUMBIAN"

## BENT LAWNS FROM CERTIFIED SEED

Ask for Our Bent Leaflet

Bent grasses are increasingly popular for lawns, especially in cities where lawns are small in area and extra care is not burdensome.

Seed at the rate of 3 to 4 lbs. per 1,000 sq. ft.

**ASTORIA BENT.** Astoria Bent is identified by its numerous root-stocks which spread underground and throw up new shoots, making a very thick turf, and by the presence of runners above ground in the early stages of development. This Bent has a good color and is excellent as both a lawn and putting green grass. It does not require as much cutting as Creeping Bent.

**SEASIDE BENT.** This is a true unmixed Creeping Bent grass seed which spreads by surface runners instead of by the underground root stalks which characterize the Astoria Bent.

## VAUGHAN'S FORMULA Z KILLS ALL LAWNS FUNGI

**5-304** When lawns turn brown, turf researchers now agree that fungus diseases often are responsible. Five different types of these parasitic organisms are known to attack lawn grass. Prevents and controls BROWN PATCH, DOLLAR SPOT, COPPER SPOT, RED THREAD (PINK PATCH) AND LEAF BLIGHTS, such as incited by Helminthosporium and Curvularia. Formula Z is a "broad spectrum" fungicide, a mixture deadly not merely to one fungus, but which kills them all. Whatever type is disfiguring your lawn, Formula Z will prevent its spores from developing, and kill all parasites that have developed.

Formula Z contains urea, which stimulates the new growth. Its dark green coloring improves the appearance of the grass during its recovery from the attack. Protective spraying with Formula Z prevents fungi from getting a start. 8 oz. treats 2,000 to 4,000 sq. ft., \$3.45, postpaid \$3.75; 5 lbs., \$24.50; postpaid \$24.95.

# GLAMOROUS BEGONIAS

Collection of Garden Types Everyone Can Grow \$2.00  
20 Imported Tubers—4 Each of 5 Colors PRE-PAID

## THESE ARE THE COLORS:

**Red, White, Pink, Orange, Yellow**

**All Tubers  $1\frac{1}{4}$ - $1\frac{1}{2}$  Inches in Diameter  
Each Color Separately Bagged and Labeled**

Tuberous rooted begonias thrive in the shade and reward the gardener not with a single flower of great beauty, as do most summer bulbs, but with a succession of magnificent blossoms all season long.

No wonder they have become in recent years one of the most widely grown flowers in this country, rivaling the gladiolus, if not surpassing it in popularity.

With their great beauty, they combine ease of culture when their basic needs are understood and supplied. Their liking for shade has helped make them popular, since a majority of home owners have shady spots for which it is often difficult to find attractive plants.

Begonias thrive on porches, where they can be grown in planters or large pots; in the shade of oak trees, and on the north side of buildings, where they get a few hours of morning or afternoon sun.

They are among the easiest flowers for an amateur to start growing under protection in the early spring, to be moved outdoors as soon as the danger of frost is over. Complete instructions on starting and transplanting them are sent with every order.

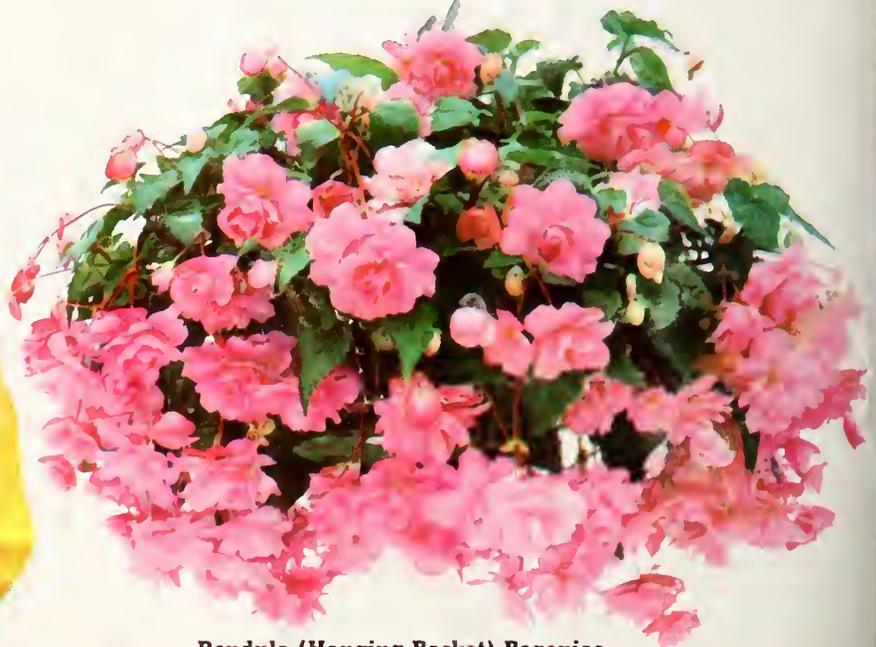

Special Offer, 7 Mixed for \$1.00
