# THE MONEY MARKET AND THE PRESENT INFLUENCES UPON IT.

The changes in the value of money during the present year have been somewhat remarkable. On the 1st of January, the Bank rate of discount was 2½ per cent. On the 19th of that month, it advanced to 3; on the 2nd February to 4; on the 29th March to 4½; on the 12th April to 5 per cent. At this rate it continued dill the 10th of Marc on which at on the 29th March to 4‡; on the 12th April to 5 per cent. At this rate it continued till the 10th of May, on which darit was reduced to 4‡, and on the 24th ult to 4 per cent. The rate in Lombard street is rather below than above the Baak rate, and, therefore, it is certain that the value of money, which had doubled during the earlier part of the year, has since declined seriously.

The unfortunate dispute between the bill brokers of Lombard street and the Bank was the cause of a small-but only of a small-part of these fluctuations. It is certain that the attention from 4<sup>±</sup>/<sub>2</sub> to 5 per cent. which was made on the 12th of April, was determined upon partly, if not wholly, in consequence of the withdrawal of a very large sum in Bank notes under circumstances that are now well known ; and as the value of money soon afterwards began to decrease, it is at least doubtful whether the rate of discount would For have risen to 5 per cent. if the bill-brokers and the Bank of England had been upon more friendly terms. Probably it would not have done so. But there is no reason to think that any other part of the fluctuations in the value of money have been perceptibly affected by a circumstance so merely local. They have been caused, not by the altercations of Lombard street, but by the variations in the natural value of capital in England and throughout the world.

In the early part of this year our trade increased, perhaps, more rapidly than most people were aware of. The attenour export trade than to our import trade. It is somewhat more interesting to watch the progress of our own industry, than to watch the results of the industry of others. The best data, too, respecting our import trade are not given to the world so early as those relating to our exports. The real value of our imports is computed in the tables published by the Board of Trade, and the computation necessarily occupies time; while the value of our exports, given by the same authority, is only the value declared by the exporters, and can, therefore, be given without delay. From these causes

our export trade is apt to engross a somewhat undue share of our attention. But, when we are tracing the influences which act upon the money market of Lombard street, our imports are as important as our exports. Speaking gene-rally, England pays cash for all her imports. The amount of capital which is embarked in them at any particular time is, therefore, a most important item in determining what the official tables, giving the real value of our imports for the first three months of this year, and they give us some ex-planation of the tendency in money to rise at that time. We

No. 876

showing an augmentation of five millions and a half as compared with the corresponding period of last year, and ten millions as compared with the corresponding quarter of 1858 The most important item in this augmentation is the great

and this increase, though more rapid during the last three months than before, is not confined to them." The imports The imports of cotton into England from all countries were lbs.

Liverpool is now considerable.

There is no reason to think this amount excessive, but in

comparison with last year it is large. The augmentation in our imports, though more remark-able in cotton than other articles, is not confined to it. During the three months of the respective years the following quantities of various articles have been imported :-

	1858. £		1859. £		1860.	
Tea	945,000		1.110.000		2.001.036	
Wool	694,168		978,992		1,336,111	
Wine	374,266		389,767		788,606	
the set the		In a second		1.1	31. 1	

And though there has been a considerable diminution in the present year in the importation of silk as compared with 1859, and of wheat as compared with 1859 and 1860, and there have been minor fluctuations in other articles, yet the general result is that our import trade was nearly twentyfive per cent. greater in the first quarter of this year than in the first quarter of last year, and fifty per cent. greater than

it was two years ago. We think this great increase explains the rise in the value of money early in the present year. The variation in our export trade was indeed but triffing :--

Exports of all articles during the first three months of 1859 were 30,520,794 1860 - 30,481,907

But, whichever side of the national account we take, whether we increase our imports or our exports, the effect on our money market is to a very considerable extent the same. A great part of our import trade is carried on with our own capital. The importing merchant may not pay cash; he

may be, and he generally is, drawn upon at dates more or less distant, but his bill is discounted in Lombard street, and the goods imported are, therefore, as much purchased with English capital as if he had paid cash for them himself. We do not doubt that this augmentation of our trade was the principal cause of the increased value of money in the early part of the year.

The causes of the last change in the money market, and those which seem likely to affect its future prospects, are both less tangible and less pleasing. It is certain that the market has to some extent been affected by political disquietude—to what extent it is very difficult to say. It is in the nature of anxiety and apprehension to be rather vague, both in their extent and their operation. The place in which we should naturally expect to find most trace of such feelings is our export trade. We should have expected that foreign nations who were uneasy as to the future prospects of the country, as Germany for example, would buy less of us than formerly. We should expect they would be as economical as possible and that economy would be unfavourable to our trades. As yet, however, this cause can only have prevented the natural increase of our export trade. It has not diminished it, though it may, and we think has, tended to prevent its increase. The official figures prove this :—

## Our exports for the four months ending 31st May, 1859, were 41,851,524 1860, - 41,834,347

On the whole, therefore, foreign nations continue as yet to buy of us as well as they ever did. must bear in mind two considerations. First But we First. that it is a long time before a feeling of distrust will show its consequences in these figures. Men of business must look forward; if they do not anticipate a large demand, they do and must reduce their operations. This reduction will tell on the amount of capital they employ, will restrict the amount of bills they discount, and will diminish the value of money. Although, therefore, our actual exports are not diminished, yet there is no doubt that our trade slacker than it was-is much slacker than it was sected to be. Secondly, we must reflect that it is a long is expected to be. time before political distrust affects the ordinary transactions of life. People read the newspapers and express their ap-They talk, and say they are afraid, but they buy and sell as they used to do. Although, therefore, diffused poli-tical apprehension is a material cause of a retarded trade, it is one which operates but slowly. The ordinary consumer is not affected by it. If, as from the diminished value of money appears to be the case, we are now cramped by political considerations, we must expect to continue to be cramped, supposing the grounds upon which those considerations rest to continue. We fear that, to a certain extent, the attitude of France, which is the main source of political disquietude, will continue; and we are in consequence apprehensive that the effect of political circumstances will become more unfavourable as time goes on.

At this moment the French Emperor has produced several very unfavourable effects on the trade of Europe. First, his restless spirit has produced the disquietude we have justspoken of, and of which the effects may we fear augment; next, he has hampered French industry by saying that protection shall last till certain fixed times, at which times the parties interested fear it will cease. In consequence the trade of France is under sentence of alteration, and is, of necessity, impeded and hampered. Thirdly, the treaty which the Emperor has made with us is a nullity as far as our manufactures are concerned, until the degree of protection the French are to enjoy and the nature of it are settled by the Commission now sitting. Our manufacturers are, therefore, in an unpleasant state of suspense. They may have a demand, and they may not. What has occurred may lead to business and may not,—and the result is irritating and depressing. These, however, are transitory matters; but we fear that the general disquietude which the policy of the Emperor produces on the Continent will diminish our trade for a long period. Its effects will be counteracted in part by the effects of the treaty, but not wholly or completely.

Another political circumstance will contribute its effect. The trade with China is rapidly increasing. We showed last week that the value of exports of some of the principal

1	articles	of	trade	with	that	country	had	been	in	the	first	fom

 39,942,504

But it is certain that we cannot expect this increase to continue. The war with China must interfere with it more or less. We fear it must interfere with it greatly. Nor, if we turn to portions of the world unaffected by

political considerations, is the result very cheerful. naturally look for the extension of our trade to countries governed and colonised by the English race. Experience proves that they are our best customers. But, at present, India indicates that we must be cautious in what we do with her, and Australia shows that we must be very cautious. With the United States, indeed, we may hope for a rapidly increasing trade; but with the other two countries in which the Anglo-Saxon race is predominant, we must not look for it. There are few reasons, therefore, for predicting an increase of our export trade at present. And without an increase in it, our import trade cannot long continue to increase. Imports and exports must be equivalent, and one cannot augment without the other. We must anticipate that the increase of our imports on which we have remarked, and to which we have ascribed the rise in the value of money, will not be maintained, unless a material stimulus should be given to our export trade. This stimulus we own we scarcely expect-at least, we cannot be sanguine about it.

The effect of these mercantile causes on the rate of interest is very simple. The cardinal principle of our subject is, that an *increasing trade is necessary to a steady money market*. Our annual savings accumulate year by year, and they must be employed in some way :—until they are employed, they press upon the market and reduce the rate of interest. We must augment the channels of employment as well as the monoy requiring employment, if we wish for an unaltered value of money. Unless, therefore, we see good reason for anticipating a considerable and rapid augmentation in our commerce, we must not expect to see a considerable and rapid rise in the value of money. We may hope for such an ordinary and usual extension of trade as will keep the value of money from falling further, but we should be content with that. To the best of our present judgment, we should not venture to anticipate a result more favourable.

# FRANCE AND ENGLAND; AND THE ITALIAN QUESTION.

In spite of the disclaimers of the *Moniceur*, the vague anxiety which has for some time prevailed as to the aggressive designs of Louis Napoleon is getting gradually more serious and assuming a more definite shape. It is idle to ignore this, and it may be well quietly to consider the bearing of these designs,—supposing them, as we do, to exist,—upon the position of this country: and the course best calculated, as far as England is concerned, to baffle them.

From the date of his elevation to supreme power in France, there could be no doubt that in Louis Napoleon we must have a scheming and not over-scrupulous neighbour; but for some time there was reason to hope that he saw his interest in, and was prepared to base his power upon, the development of the great material resources of France at home, and the peaceful advancement of French objects and legitimate influence abroad, in tolerably faithful alliance with this country. How this hope,—if but half entertained, yet hitherto most honestly acted upon by us,—has been gradually extinguished, it matters not here to examine. Suffice it that it is now clear that while no doubt bent upon cultivating the internal prosperity of France, the Emperor is likewise determined to carry out, and if need be fight for, certain other aggressive ideas of French policy; and that these are, broadly, extension of the boundaries of France,—subordination of the Spanish and Italian Peninsulas to French influence and dictation,—conversion of the Mediteranean into a French sea, and,—with these to aid,—curtailment of the power and influence of this country. Nor are these "ideas"

merely his own :- they have been, are, and will long merely his own the integrated over, are, and will long continue to be, under any form of Government, essentially French. They are ingrained in the passions, the prejudices, and the imagination of the French nation. Hence their danger to Europe and to us. For, although there are undoubtedly in the character and conduct of Louis Napoleon elements of weakness which may be slowly but surely sapping the foundation of the structure he has so strangely and, to a certain extent, so skilfully raised, he un-doubtedly derives an indefinite increase of power from the fact that the policy he has now unmasked embodies the wishes of the very great majority of the French nation. However hateful his Government may be to the higher-minded and more intelligent minority in France, one has but to study the Debats and the Deux Mondes to perceive that, as far as these objects are concerned, all serious internal opposition is for the time in abeyance. French parties-or rather partisans--seem waiting to see whether his dexterous paw can snatch these chestnuts from the bars. Successful or unsuccessful, later, if they get the chance, they may bell the cat. Meanwhile they are watching, and, in spite of them, evidently inwardly applauding the play.

Another source of immediate strength he has in the unavoidable disunion of the other four Great Powers,-a disunion arising from an incompatibility of principle of action rather than of interests. The treaties of 1815 were based on the fears and jealousies of the Governments, not on the real interests of the governed ; and though they served for a time to hold Europe together, as soon as a real strain came they naturally gave way. From the date of their signature, naturally gave way. From the date of their signature, although we have often been drawn, to a certain extent, into community of action with them all in turn, we have never had with any of them any reliable community of feeling or More than once we have contrived to stem their folly and to baffle their egotism, but, as a rule, our better judgment and better purpose have been almost necessarily subordinate throughout. The treaties of 1815 were not a web of our weaving, and we may perhaps be thankful that they are fairly rent asunder. The somer that we realise the fact that, as a weapon, they are to us perfectly useless,-that we must form our judgment of the interests of Europe, and among these of our own, unfettered by their stipulations,-the sooner shall we come to a conclusion as to the only principle of policy which to a conclusion as to the only principle of policy which The can safely lay down or possibly act upon. There we can safely lay down or possibly act upon. is no need to blink it :- from one cause or another we stand to a certain extent isolated in Europe,-isolated at least from its Governments. Russia is unwilling, Austria unable, and Prussia scarcely ready to back us in any overt or combined resistance to Louis Napoleon, should he stiempt to carry further at once the policy of aggrandisement on which he has evidently entered. The position is one, no doubt, of great difficulty—perhaps of no small peril; but one possessing, notwithstanding, some great advantages; one, indeed, requiring caution, but probably best made good by boldness.

If we had but a little of the sense of our real power so evidently entertained by Louis Napoleon, there would be less cause for misgiving. If we will but observe how careful he is to keep us occupied at all points; how anxious to entangle us in a joint action of which we are to reap the principal share of the knocks, he of the profit or glory; how necessary he finds it to conceal and deny his designs until they assume the form of accomplished fact; how careful, indeed, to avoid absolutely to provoke our timely resistance, —we may gather the assurance that that resistance is not so indifferent to him; and that, whatever may be his ulterior intentions, or, indeed, his ability later to avoid it, he is not at present prepared to run the risk of absolute collision with us.

In fact, however much it may suit his game to exhibit us to France and to Europe,—a game into which we have been all too inclined hithertotoplay,—as apparently powerless to hinder him; yet no one better than he knows the real strength of this country, or less desires to see it put forth. His object is clearly rather to make point after point in such a manner as not to give us any opportunity of real resistance. No one we are convinced knows better than he, whatever might be the result to France, how ruinous would be the death-struggle to him :—how many defeats any Government here would rise

from with increased support,-how few would ensure his own downfall.

Now, with regard to the "idea" of extension of frontier, the points of Savoy and Nice have been made. That of the Rhine remains to make. Savoy and Nice having, to out-ward seeming at least, been not unwillingly bartered away by Piedmont, it was neither possible nor desirable for this country to make any serious opposition :---it is very questionable whether it was either dignified or politic to go the length it did in offering objection to that barter. If Germany should in like manner be cajoled into ceding the Rhenish Provinces, it will be equally difficult for this country to inter-fere. But there is some reason to believe that neither Prussia nor Belgium are prepared to acquiesce in the extension of France to its " natural frontier" in this direction; and, if the "idea" should in this case assume the form of invasion, it will be for us to make up our minds at once what it is then our duty to do. There must be no conferencing, no protesting :-entire abstinence from such useless proceeding at least ; or,-the most rapid action. Antwerp and Cherbourg are, after all, no further from the Nore and Portsmouth than these are from them. Sooner than we think, even this contingency may arise, and it will be as well earnestly to contemplate idea No. 1.

But in the present course of events in Italy, the other three "ideas" are immediately and actually involved; and in the carrying out of *these*, the points are far from being all made; and the time for a decided course of action on the part of this country is already come.

If Italy is not for some time to come to be practically promoted to the rank of a French department, the Mediterranean to that of a French lake, now is the time to take up our ground and keep it. Let the Govern-ments of Europe be quietly informed that, in presence of the events which are occurring, and likely to occur, in Italy, we think it well to declare at once that, while reserving to ourselves all freedom of action as to collisions between State and State, as between the Governments of the various States of Italy and their subjects, we shall not only abstain from all interference ourselves, but be prepared to resent it in others. It is said in quarters where there are good means of knowing, that a detachment of Austrian troops will immediately be sent to Naples, unless either England or France put an immediate and firm veto on the proceeding. Now England has certainly the means of preventing this. What may be the case in a few years, if a Murat shall reign at Naples, and possibly Sardinia and Sicily be part of a cordon of French stations, and a Russian fleet cruising in the Adriatic, it may be difficult to predict ; but, as yet, with or without Armstrong or Whitworth guns, our fleet commands the Mediterranean. A few frigates and gunboats at Corfu, and the fleet quietly collected at Malta, would paralyse even the joint action of France and Austria,a contingency far from impossible. No doubt there would, in such a course, still be plenty of room for the active intrigues of both these Governments; but behind such a declaration of principle and such a demonstration on our part, the Italians might be pretty safely left to deal with such intrigues, or even menaces. Naples, whether annexed to Piedmont or constitutionally separate, must virtually secure Italian independence, and in independent Italy we should have an ally as interested as ourselves in the Mediterranean remaining, as we have hitherto kept it, an open sea. Spain has already had a taste in Morocco of the advantage to be derived to it by making itself subordinate to French designs. Germany would be stimulated to show a determined and united front to aggres-sion on the Rhine. The French nation would see that, while anxious, indeed willing, as we have shown ourselves, to make great sacrifices to remain in strict alliance with them as a nation, we are determined to uphold the principle which can alone preserve the real balance of power in Europe and our own legitimate influence. Even Louis Napoleon may learn that, after all, the best interest of himself and his dynasty does lie in peace.

No doubt such a course requires grave consideration. The Government must be sure of its resources abroad and of opinion at home. But if it will but be explicit and bold, of neither can there be any doubt. Of one thing we may rest assured,—the longer we hesitate to decide upon a definite

8

2

-

# THE ECONOMIST.

June 9, 1860.

course of action in these questions, the more difficult will that course become. The country is already exasperated at the indefinite prospect of a war expenditure during a time of so-called peace; and if the Government can come down to the House of Commons and show that, while not going to enter upon any Quixotic interference in the internal affairs of Italy, it is prepared to take a course that will at once best secure free action to a movement which has the hearty sympathies of the whole nation, and be that best calculated to maintain the real balance of power in Europe, and to promote the interests of this country, we have the intimate conviction that it will meet with universal support. It is at least high time for the Government and the country to come to a decision and to announce it.

616

# WHAT IS STILL PRACTICABLE FOR CONSTITUTIONAL REFORMERS.

THE practical condition of the Reform Question is much changed by the debate of this week. The end which all sincere constitutional Reformers wish to attain is no longer attainable for this session. Something may yet be done; but the limits within which success is practicable are very narrow. The debate and division of Thursday night, on Sir James Fergusson's motion for indefinite adjournment, defended as it was only on the filmsy plea that the Irish and Scotch Reform Bills ought to proceed *pari passu* with the English Bill, sufficiently prove that the Tory party have made up their minds to admit no compromise; and that they have the *power* to defeat the Bill by delay, no one doubts. Mr Disraeli's reply to Lord Palmerston's able speech indicated this clearly enough; it was quite obvious that he felt, though he could not admit, that Sir Hugh Cairns' objections had been adequately disposed of; and his own objections were based on the general ground that the Bill was one which the Conservative party was determined to resist.

We have now, then, to consider what is still practicable to constitutional Reformers. Immediate legislation is out of the question. A good measure can neither be carried for its own sake; nor can an indifferent compromise be carried for the sake of shelving the question and relieving the country of a wearisome discussion. We are heartily glad that the Tories have rendered the latter alternative impossible. It was a dangerous temptation to weak and timid minds, and would have been not only a discredit to the English constitution, but a certain failure as regards its aim. Justice alone can but a certain failure as regards its aim. While a shadow of injustice is willingly and for the sake of quiet, —disquiet and discontent stop agitation. openly admitted for the sake of quiet, ---disquiet and discontent can be the only result. Thus far, at all events, we go with Mr Bright, that a surer means of exciting popular anger, and just popular anger, cannot be devised, than to admit the equity of a claim which we shrink from conceding. A sham Reform resulting from hasty compromise would have answered the purpose of the Chartists, and no other purpose at all.

It is, however, still possible for the House of Commons, in the debates which still remain, to influence materially the plan of any future Bill, though nothing can be done now. If only the constitutional party would unite to lay down the true principle of Reform, and could show sufficient numbers in its support to satisfy the Liberal leaders that in any measure which is to carry the assent of the House, it must be embodied,—a great step would be gained. All we auticipate, all we hope for Reform during this Session is, that the Constitutionalists may unite in strength to indicate some one guarantee against the encroachments of the democratic principle, which they would be prepared to demand as the condition of extending the suffrage to the most numerous class in the country. Unfortunately for the Conserva-tives, Mr Disraeli has committed himself in his criticisms on Lord John Russell's measure to the absurd doctrine that though it is perfectly constitutional to exclude large masses of men well qualified to vote from the fran-chise altogether, it is in the highest degree unconstitutional to admit them except to an equal individual (and, there-fore, far more than equal *collective*) power with the present electors. In the blindness of his attachment to the letter of our present electoral law, he has entirely failed to catch its spirit, and has done all that in him lay to show that the alternative lies between barring out the working class as a class altogether from the privilege of electing

representatives, and admitting them in such numbers as to swamp every other class. His own measure of last year attempted to meet the difficulty by admitting a certain infusion of working class voters into all the constituencies. without admitting enough in any to ensure them one real spokesman in the House of Commons. And when he is told that such a measure will not satisfy the working classe asserts that there is no middle course between that method and complete democracy ;-simply because he has chosen to patronise the stupid prejudice, -for it is nothing better, -in favour of always deciding by absolute majorities. Butth ough Mr Disraeli has in this respect seriously misled the liberal Con-servatives,----the constitutional Liberals have been for some time steadily approaching the conviction that any true Reform must deny at once this illusory necessity of giving either every-thing or nothing. Mr Black, Mr Massey, Mr Horsman, Sir John Ramsden, Mr Marsh, Mr Warner, and many other Liberal mem-bers, have expressed unmistakeably their conviction that a permanent and solid measure of reform is possible, which should not only give the working classes a substantial influence in all borough elections and the absolute command of many constituencies in this country, but secure the adequate repre-sentation of the educated and less numerous classes against the overwhelming influence of numbers. This can only be done, however, by boldly denying the absolute right of numbers, and insisting that a Reform Bill which first opens the gates to a new and enormous class, shall modify the electoral law so as to diminish the individual power given in some definite proportion to the numbers by which it is to be mul-tiplied. Here, and here alone, can we find any security against the downward path of democratic innovation; and, if some such provision is not solemnly sanctioned in our next Reform Bill, we may be pretty sure it will be hopeless to struggle for it in the next but one.

Now, our only hope from the remaining Reform discu of this Session is, that the Constitutionalists will combine strongly to indicate to the Government where this year's measure must be supplemented before they can hope to com-mand a majority in the House. This it is still possible to do; and if the many different amendments really intended to compass this end could be exchanged for some one resolution ou which all would combine, the whole course of the Reform question might be determined for the future. For it is quite obvious that Mr Disraeli's paradoxical and untenable posi-tion is not adopted by the clearest sighted and most liberal men of his party. If once it became evident that the constitutionalist Liberals were strong enough to influence the Government measure, a very large portion of the moderate Conservatives would unite with them, and enable them easily to defeat the high Tories in combination with the Ultra-Radicals under Mr Bright. Sir E. B. Lytton expressed only the other day his willingness to support any comprehensive measure for including the working classes in the electoral body, if it were balanced by such guarantees as this journal has contended for,—and what Sir E. B. Lytton would do, many other of the more liberal Conservatives have indicated distinctly enough that they would do also. We do not doubt, therefore, the feasibility of carrying such a measure, if once Lord John Russell can be extricated by his own party from that disposition to temporise with de-mocracy which the present Bill unfortunately indicates. All that is wanted is some significant indication that the confidence of the Liberal party at large cannot be gained for any Reform Bill which does not provide for the direct and permanent representation of the educated classes when the floodgates which still shut out the working classes thrown open. Almost any resolution, well supported Committee, which raised and answered this question are in Committee, distinctly would be sufficient,-were it only a resolution in favour of allowing every elector in future either to accumulate his votes on one candidate, or to divide them as he thought best. Such a resolution alone, if strongly supported both by arguments and votes, would indicate cle arly enough to the Government what kind of guarantee is held essential to a measure admitting a large and hom geneous class to the representation. There is yet time for such a step as this; and we earnestly entreat those members of the House of Commons, --either Liberal or Conservative, but especially the former, --who sincerely wish for Reform, but especially the former,-who sincerely wish for Reform, and for a Reform that shall be liberal in the best sense, be-

# THE ECONOMIST.

cause including one class without practically excluding another, to unite on some amendment in Committee which may serve as a sign-post for all future legislation on this subject which no Government can venture to disregard. The time of the House will not have been wasted, if the net result of all these tedious discussions be to establish clearly that a great principle has been ignored by Lord John Russell's Reform Bill which must never be ignored again by any statesman who wishes to bring his proposition to a succ eseful issue.

# WHY IS NO ENGLISH CONSUL SENT TO MOZAMBIQUE P THE SLAVE TRADE IN EASTERN AFRICA.

A morion of some importance will be made by Lord Stratheden, on Thursday, the 14th, in the House of Lords, and shortly repeated, if needful, in the House of Commons, to which we are anxious to invite public attention. The affair of the *Charles et Georges*, and the activity of the slave trade at Mozambique, and, indeed, all along the East Coast of Africa which it revealed, must still be fresh in our readers' mind. On the 18th May, 1858, about six months after the seizure of the Charles et Georges, Mr MacLeod, our Consul at Mozambique, after enduring a six months' course of outrages from the slave-owners and slave-traders of that colony, from which the Governor of the colony, Colonel Almeida, found himself powerless to protect him,-came, in coninnction with the Governor-General of Mozambique, to the conclusion, that "his best course was to retire to Mauri-"tius, or even to England, until such time as arrangements "were made between England and Portugal for the reception " of a British Consul in honour and safety at Mozambique." Since Mr MacLeod's departure in May, 1858, no English Consul has been sent in his place to Mozambique; and it is the object of Lord Stratheden's motion to elicit from the Go-vernment their reasons for this long suspension of our official relations with that coast. Mr MacLeod's position, without an English ship-of-war permanently stationed there to protect him, had become simply intolerable; but, in intimating his departure from Mozambique, he requested telegraphic instructions as to whether Lord Malmesbury wished him to return to his post, --addressed either to the Mauritius or Alexandria, --and in that case, of course, ade-quate protection to render his position endurable. No despatch was sent to direct his return to Mozambique, and he reached home at the crisis of the *Charles* et *Charge* lignute in October 1858. We for the the Georges dispute in October, 1858. We fear that the fact that this important station has been left now for more than two years without any English Consul, is not likely to redound to the credit of the English Government. We will briefly show why it is most important that England should be adequately represented along that coast, and how the gradual withdrawal of our agents there is likely to be interpreted by France, Portugal, and Europe in general.

Those who have read Mr MacLeod's book on Eastern Africa, know that slavery is nowhere more frightfully cruel, that the slave trade was nowhere more actively carried on than in the colony of Mozambique. The Governor-General of Mozambique has no efficient force at his disposal. When, in compliwe with the instructions of the Portuguese Government, he rigorously discourages and punishes the slave-traders, his guards are stoned, he is subjected to all sorts of annoyances, his informers are persecuted, -- the "apprentices," or slaves of the colony, are treated with more horrible cruelty than ever, -- and, in short, every evil of slavery and the slave trade is ag-gravated instead of ameliorated. The only remedy for this, in case the Portuguese Government is too weak to establish its own authority firmly in so distant a colony, is that the Governor-General should be supported firmly by a strong foreign Power really averse to slavery. It was on the supportgiven by H.M.'s Consul at Mozambique that the Governor-General relied when he condemned the Charles et Georges for slave-trading; and, if we are to believe Consul MacLeod's account, it was in consequence of some intimation, express or implied, from the commander of an English ship-of-war (Captain Lyster of H M. ship Castor), to the effect that no sup-port could be given to Portugal by England in any dispute in which the suppression of this trade might involve her, that the tide turned so immediately and so strongly against him. Be this as it may, it is certain that a Governor of Mozambique so

XUM

honest as Colonel Almeida, if supported by an English Consul as sturdy as Consul MacLeod, and an English ship-of-war constantly on the station, would have the power to put down, in great measure at least, the slave trade on th coasts. A very efficient beginning was made in 1857,-but the English Consul was not supported by the English Government, and the countenance then given by France to the slave trade turned the scales effectually against us.

The Emperor of the French has explicity committed himself, by the letter of the 3rd of October, 1858, to his "dear "cousin," to a repression of the slave trade on that coast, and a prohibition of that system of "hiring" labour in Africa for French colonies under the name of which the slave trade has flourished anew. From that engagement it is impossible for him to draw back. And even if it were an honourable reason to give for no longer sending out Consuls to the scene of this traffic, that their reports might involve us in misunderstandings with France and that it is better to shut our eyes to what we do not wish to see,-even if such a reason were admissible for a moment by English statesmen,cannot well suppose that the pledge of the Emperor's letter can be evaded, and this dishonourable traffic still sustained. Anything, therefore, that England can do to to reveal the true state of the case to the Portuguese and French Governments, and to co-operate with them for its suppression, she is under the deepest obligation to do.

Now, what result may have been produced by the commission with which the Emperor intrusted his cousin at the end of 1858, in the way of diminishing or anni-hilating the French slave trade on the East Coast of Africa, we do not yet know, The reports of Her Majesty's consuls and diplomatic agents for the year 1859-60 are not yet published ; and, of course, there could not have been any initiation of an improved system before the summer of 1859. But we do know enough to render it extremely im-portant that active English agents should be appointed wherever possible on that line of coast. We have reports from Zanzibar as late as the autumn of 1858, proving that the French slave trade had never been more active than it was at that time. Captain Rigby, the agent of the East India Company at Zauzibar, reported to the Government of Bombay as late as September, 1858 (nearly a year after the capture of the Charles et Georges), the undisguised slave trade which the French merchants of Réunion were carrying on with the East Coast of Africa. Several cargoes of slaves are specified, and on the 21st September, 1858, Captain Rigby encloses a copy of a letter received by the young Sultan of Zanzibar from a merchant in Réunion, of which the following are extracts :-

# To His Highness Said Majid, Sultan of Zanzibar.

To His Highness Said Majid, Sultan of Zanzibar. After compliments. I was much grieved to hear of the death of your Highness' father, the Imam of Muscat, which took place on the passage from Muscat to Zanzibar, after having arranged the affairs of Muscat and its neighbourhood, and giving tranquillity to those countries. I was anxiously awaiting his arrival in Zanzibar, for I was desir-ous of writing to him on various subjects. I wished to advise him to be supreme in his own territories, and give permission for the shipment of slaves, so that they might labour for wages in any country, and that if the English Consul should oppose this, his Highness should insid. And after the death of his Highness I was unable to write this; and now if I were certain that permis-sion is granted, I should wish that you would send me some slaves, young and strong, to labour in our colonies; and if this can be arranged, send the answer in the ship which conveys this letter to you, viz., the ship named \* , and inform me whether I shall send my ship to your country to convey slaves or not........ And do not pay attention to the words of the English Consul in

And do not pay attention to the words of the English Consul in And do not pay attention to the words of the English Consul in all what he says to you; do all that you see is good for your country and condition; for the English Consul is dwelling in your country solely for his own affairs; he has by no means anything to do with your affairs; for the English would wish to manufacture sugar in their colonies, in Europe and in India, and sell it to foreign countries, and would desire that other countries should not manu-facture any sugar. And the French Government has given permission to all the Governors of their colonies to purchase nd slaves to set them free; for the Government of France desires the hap-piness of all mankind, so that people should convey slaves to Bourbon to be taught labour, in order that they may become wise and cleared and clever.

This letter sufficiently proves both how active is the de-mand for slaves in the French colony of Réunion, and how

\* Illegible in the Arabic lette

# THE ECONOMIST.

[June 9, 1860.

much the influence of the English Consuls in preventing this traffic is felt and feared. We will hope that the Government may be able to assign some adequate reason for the long delay in sending out a new Consul to Mozambique,—and either to hasten arrangements with the Portuguese Government for the adequate protection of our Consul in the faithful discharge of his duty there,—or to make those arrangements on its own account, by the permanent allotment of an English ship-ofwar to the Mozambique station.

# INDIAN FINANCE. [Continued from the letter of April 23rd printed in our last number.] TO THE EDITOR OF THE ECONOMIST. Calcutta, May 3, 1860.

-In my last letter the general state of public opinion SIR. in this country regarding Mr Wilson's financial measures was described, and special reference was made to the protest which had emanated from the Government of Madras, and some of its main arguments were answered. Indeed, the Madras Government protest forms an episode in the great drama, of which the curvain rose on the 18th of February (when Mr Wilson made his financial statement), and of which the first act will have been played when the Bills now before the Legislative Council shall have passed into law. The opinion of the protest has stood at the same point public regarding the during the last fortnight as before. It has found some sup-Bombay. But it is condemned by a part of the Press at both these Presidencies; by almost all the Calcutta Press; by the up-country Press-that is, the newspapers and also in North-West India. The North-West newspapers represent chiefly the opinion of the "services,"—that is, the servants of the State of all classes. The sentiments contained in the protest are not concurred in. And its publication is altogether objected to, as quite unconstitutional, as calculated to injure the prestige of Government, and to excite discontent among the natives against the new measures. The native Press has begun to teem with translations of and comments on the minute of the Madras Governor. And it is evident that though, on the one hand, the natives are much impressed with an idea of the invincible resolution of Government to carry out its declared plans; yet many of them catch at the hope that this unexpected opposition, from so high a quarter as the Madras Government, may cause the evil day of the imposition of new taxes to be postponed. At first every one of them was disposed to accept the measures as a decree of fate, and to submit with stoical apathy. Now they may fancy that a loophole of escape is discertible; and a sort of excitement may begin to ferment in their minds. It is not to be supposed that Mr Wilson is unaware of the several little straws which show in which way the wind of native sentiment is blowing. There was a slight *émeute* at Peshawur, though it turned out to be more ludicrous than serious, and to have arisen from absurd misrepresentations of the intentions of Government. There have been some of the intentions of Government. Interview it appears mysterious pitchers circulated in Jhansee, though it appears. There have been rumours in the Calcutta Bazaar about a disturbance at Delhi, although such rumours are utterly baseless. There has been much discussion in the North-West cities about the taxes, though it related rather to the Madras protest than to the merits of the measures themselves. The native Press in Bengal do certainly write against the new taxes; though they say nothing seditious, and do not breathe a single doubt of the certainty of the measures being introduced. All these things are taken note of. The knowledge of these things, however, should not shake the determination of Government, but only increase its precautionary vigilance. Even in England riots have been known to occur on the imposition of new taxes. If some passing storm of discontent should arise, the Government must face it. Better were it to brave this than to permit the foundation of the Empire to be sapped by an increasing deficit. But, supposing that trouble should break out here and there, —what then? Would it not be instantly put down? There is a good European force well distributed all over the country. The mass of the native army and of the agricultural population are not affected by the new measures. The independent native Princes are not affected either; and their aid might be counted on. European public

opinion is still almost unanimous in favour of Government. The conduct of the European mercantile community continues to be patriotic and disinterested. The civil officers of Government appear to have no doubt of the feasibility of the measures. When will so fair an opportunity again present itself of introducing new taxes? Then, if the principle of the taxes be just: if they affect alike all classes, whether official or non-official, all races, whether European or native: if the taxes be assessed in a judicious and considerate manner, without making any offensive inquisition; without offending any social or religious prejudice; without introducing any oppressive process; — may we not hope that the natives will refrain from serious opposition ? With them it is, indeed, omme ignotum pro mirifico; at first they shrink from taxes they know not of. But if the new taxes be well managed, then there is a good hope that the natives will see them in their true light, divested of all imaginary terrors.

Therefore it is to be hoped that Mr Wilson will unhesitatingly persevere with the new taxes, to the successful carrying out of which the credit of the Indian Government has been in a manner pledged, and to abandon which would be most prejudicial to the prestige of British authority. But it will doubtless be in your recollection that the new taxes only form a portion of a comprehensive policy, relating to finance, to commerce, to currency, to material progress, to political security. All these objects are more or less connected together, and form the links of a great chain. In the present letter it will be desirable to sketch the several specific measures designed to accomplish these objects; preserving the order in which it seems probable that they will be carried into execution. In subsequent letters the description of each measure can be expanded into detail, according as the course of events brings it into sharp relief, and as the policy of the Government in respect to it shall be developed.

In this policy, then, the five main points appear to be as follows:—lst. New taxes. 2nd. The establishment of a financial system. 3rd. The introduction of a paper currency. 4th. The formation of an organised police. 5th. The augmentation of productive power by means of British capital. To these there might perhaps be added a sixth, namely, the providing of an agency whereby the people may find a safe and acceptable investment of their savings.

Now, as regards the new taxes, it becomes more and more evident that, although the Government have succeeded in making great reductions of military expenditure; and will shortly bring down the cost of the army to a sum not much exceeding the cost of the old army, notwithstanding that the new army will be chiefly European, while the old army was chiefly native; and although the Government abstain from spending any considerable sum in improvements, material or moral,—still there will for some years be a heavy deficit. There was indeed no deficit in 1857, that is, just before the mutinies; but it is now quite clear that we never can return to the status of 1857. No doubt the revenues have proved more elastic and buoyant than was generally anticipated. But still our expenses have more than proportionately in-creased. Irrespectively of the increase of military expenditure, the civil charges have a tendency to increase as fast as our institutions are developed, and as improvements expand. And then there is the permanent incubus of increased interest on debt, which alone is an item of two millions yearly. Even if perfect peace continued, our income would, without some new taxes, be barely equal to our expenditure, and would allow no margin for improvement. But not only is the continuance of peace the most uncertain thing imaginable, but also, if an average of chances were struck upon cycles of years, all Indian experience shows that we are certain to have wars of some kind. Unless, therefore, we can restore our finances to a sound state during peace, what chance is there of the Government being able to meet war or other trouble with vigour, or dignity, or even safety? The absolute and inevitable necessity of imposing new taxes being clear, there remains the question as to the best mode of imposing them. This point can be dealt with in detail in a subsequent letter. It must suffice here to state in recapitulation that the new imposts are,-lst, a tax on incomes of all kinds; 2nd, a system of licences for arts, trades, and professions; 3rd, a tobacco tax. I shall endeavour to show hereafter that these are, all circumstances considered, less objectionable than any other taxes that could be thought of. When im-

# THE ECONOMIST.

posed, they will probably prove effectual for the object in view, and will yield, perhaps, several millions annually. It is but reasonable to suppose that this much of assistance might be expected from an immense population like that of India, which, if all its circumstances be considered, is really not overtaxed; and has, without doubt, been increasing vastly in numbers and prosperity. The horrors of the two years of rebellion will give an idea of the state to which India would instantly relapse if British rule were weakened or withdrawn. Is the sum of some few millions sterling, to or withdrawn. Is the sum of some lew minitude sterring, to be paid annually for a few years, too great a price for such an immense population to pay for the restoration of such inestimable blessings as peace and protection P With such additional aid, the Government will be able to reduce other imposts which may press unduly upon trade or industry, and to prosecute improvement, both moral and material, during peace; and, in the event of war, it may be able to resist foes from within and from without, avoiding those expedients which embarrass the State and trench upon future resources. Thus, a foundation will be laid not only for political security, but also for material prosperity. The Income Tax Bill has been read twice in the Legislative Council, and has been cousidered in detail by a select committee. Every effort has been made to render the machinery of assessment such as may work smoothly, and to prevent the possibility of the process being inquisitorial. It has been promised that the still shall shortly be presented to the Council for the third reading. In the next letter I may have the means of showing how all the safeguards existing in England have been introduced, and several additional precations taken. Licence Bill is of a simpler kind. It has been read to The Tobacco Tax Bill has not yet been introduced. The It has been read twice.

But while it has been determined to add to the resources of the State, further precautions have been taken to ensure that these resources shall be expended with the utmost economy. Heretofore there has existed nothing in India to be compared to the Budget and audit as they now exist in England. There is in future to be a Budget for the Empire, declaring what the expenditure is to be, and appropriating specific sums for each branch of service. Then there is to be an Imperial Audit branch of service. Then there is to be an Imperial Audit Department, to see that all the accounts of all departments are duly examined and passed, and to try judicially at the end of the year whether the limits of the appropriations fixed in the Budget have been strictly observed. The examination of accounts will be concurrent, so that it can be known month by month how much of the appropriation for each service has been expended. Thus, financial considerations will become really potent elements in the policy of the State. Already rough estimates have been called for from every Local Government and Province in the Empire, so that in the course of June next the Supreme Government may determine its Budget for the official year commencing with May of the present year. By the same time the Audit Department will be brought into play in order to enforce the observance of the Budget. Already the Military Finance Commission, sitting at Calcutta, have been of infinite service, by causing a variety of war charges to be done away with, and by scrutinising every Administrative Department of the Army. Such departments always needs scrutiny after the termination of a war like that lately waged in India. It is probable that this Commission will be invested with various powers for the control of current expenditure. A Central Revenue Board is also to be organised immediately, to introduce uniformity into all fiscal arrangements, and to bring all the scattered information on so important a subject as the State Revenue into one focus.

The Bill for the new paper currency has been read the first time in the Legislative Council. Its second reading is immediately expected. While the income of Government is to be increased on the one hand, and the expenditure to be economised on the other; all commercial operations throughout the country are to be facilitated, the public convenience consulted, and a further addition made to the resources of the State by means of a paper currency. Some slight opposition to the measure has been made by those who advo-cate the intrusting of the paper issue to a Presidency Bank. But the measure is generally well received by the public. A Bill is expected to be introduced shortly for establishing an arranged policy which shell do a large phone of the duty

an organised police, which shall do a large share of the duty heretofore taken by the native army, and shall really be the

right arm of the Civil Power. Such a police will be free from the disadvantages of a native army, and will not be so dangerous to the State. And its formation will justify the extensive reduction of the native army, and diminish the necessity of employing so large an European force at present.

619

The last object, namely, the application of British capital to improving the productive powers of India, is a subject worthy of Mr Wilson's powers. It is to be hoped that he will avail himself of the earliest opportunity of visiting the cotton districts. Such a visit would be productive of schemes that will mutually benefit both England and India .-- I am, R. T. yours truly,

# Agriculture.

SOCIAL AND COMMERCIAL STATUS OF FARMERS. AGRICULTURAL SOCIETIES AND DIPLOMAS.

THE position, social and commercial, of tenant-farmers in England is more unsatisfactory and ill-defined than that of any other class. They are bepraised and petted, flouted and suspected by turns. They are denounced as narrow-minded and non-enterprising, and are restrained and regulated in all that concerns the management of their business lest they should ignorantly or wickedly injure their landlords' land; or they are urged to expend their capital and their energies in the improvement of the farms they hold on the their energies in the improvement of the farms they hold on the most precarious tenures and under the most onerous conditions. In short, all kinds of plans are adopted or suggested for their ad-vancement, save the simple one of letting their farms to them on fair bargains and leaving them alone. Amongst the numerous abortive schemes for inducing agricultural improvement has been one for granting agricultural diplomas. A graduate or doctor in husbandry must sound ludicrous enough to any one who really knows what husbandry is, and who is not misled by fanciful analogies. A degree in classics, mathematics, or any of the various branches of physical science.—a diploma or certificate of proficency in medicine argree in classics, mathematics, or any of the various branches of physical science,—a diploma or certificate of proficiency in medicine, surgery, or law, may operate at once as a stimulus to youth and a test of efficiency in manhood. But farming is essentially a trade, a commercial undertaking, wherein the command of capital, with full liberty to use it advantageously, activity, energy, and the habit of order, with attention to details, are of far more importance than the highest scientific attainments, albeit such scientific knowledge may be more or less applicable to agriculture.

may be more or less applicable to agriculture. Now, let it not be imagined that we in any way undervalue science applicable or applied to husbandry, or that we would dissuade farmers from considering and adopting all or any improve-ments science may suggest. But we know that, as a rule, the practical farmer, who means to make his living by his business, cannot become a highly scientific man, and would wholly misapply his time and attention in attempting it. A good general education must always prove useful to the farmer as to other traders, but a diploma of proficiency would be as useless to the farmer as it would to the manufacturer, the merchant, or the tradesman. Some remarks we lately made on agriculturist, a correspondent of that journal, who signs himself "A Practical Farmer," has penned some rather irate comments thereupon. He assumes we "announce" "that every incentive to a deeper, fuller, and keener study of the laws of nature, of more correct habits of observation,

"announce" that every incentive to a deeper, futler, and keener study of the laws of nature, of more correct habits of observation, of all attempts to keep pace with the advance of knowledge which other professions are making, and of even an acquaintance with the very nomenclature, which chemistry, as applied to agriculture, has been urgently demanding him to make, is utterly and entirely useless to the farmers, and that the rising generation must content themselves with the wisdom of their utterly and entirely useless to the farmers, and that the rising generation must content themselves with the wisdom of their fathers," and much more to the like effect. That the "Practical Farmer" is not in the habit of reading our comments on rural affairs is obvious enough, so we treat the imputation of counselling the farmer to stick to the ways of his forefathers very lightly. Bus it is clear that, in noticing the utter inapplicability of diplomas and the like to the business of practical husbandry, we have run against some pet project or other. And on going through the "Practical Farmer's" letter we think we discern a clue to that project. He says :---" Is there not in the three kingdoms a vast number of land stewards, factors, and estate agents, to whom the possession of a certificate saying that these men have been examined in certain branches of knowledge, and found to be possessed of the specified attainments, will be found valuable?" Is it not as a nursery for land stewards and other employés of the landowner who accepts the highest rent that can be offered for his land," seems to betray the prejudices of a landowner under the guise of "A Practical Farmer." What we have persistently advocated as most for the interest of the owners and occupiers of land is, such a system of management as will afford to the tenant, the most complete command over his land during a term of years and entire security for the capital he invests, and to the landlord, the best rent

# THE ECONOMIST.

# [June 9, 1860.

# 620

the land is capable of producing with security for its regular payment. This will raise the status of the farmer in a social and commercial sense, and will do far more to bring educated and improving men into the business of husbandry than any fanciful scheme of examinations and diplonas. One of the great obstacles to the advancement of agriculture in England is that, as a rule, men of education and independent minds will not submit to the semi-feudal position in which the English farmer is too generally placed.

That the best classes of our farmers are growing somewhat impatient ander their existing trammels and the manner in which they are overborne by landlords is notorious. Something of this feeling found expression at the half-yearly meeting of the Royal Agricultural Society, on the 22nd of May last, when, amongst other business, the election of 25 members of the Council had to be made. The election is effected by means of voting papers, which, by a bylaw—made by the Council—the voting member is to deliver in person to the President. This of course confines the votes to the person present at the meeting. But it is said by many of the members that, in order to render the Council fairly representative of the whole body of members, scattered as they are throughout this country, members ought to be allowed to sign and transmit their voting papers by the day of election. Under the present rule, the members of the Council are elected by the members of the Society who attend the general meetings, and the result has been that the landowning element in the Council has come to preponderate so largely, that the practical farmers complain, and advert to the original constitution of the Council, which was as nearly as possible divided equally into landowning and farming members. But even the general meeting is scarcely allowed fair play in respect of the election of councillors; for the Council, instead of permitting individual names for filling the vacancies occasioned by periodical or absolute retirement to be proposed one by one, arranges a house list which the meeting must vote on in a lump. Consequently, there is no opportunity of selection, and the filling up of all vacancies has virtually fallen into the hands of the Council itself. It has become, in fact, a selfelected body. We need scarcely say this creates much and just disastifaction. Under such circumstances, the acts of the Council, rightly or wrongly, are regarded with little confidence ; and an increasing number of the Society's members feel that so

- ship for the first time when he entered upon his duties as Editor of the 'Journal.'"

To this indictment little defence was offered on behalf of the Council, while many speakers to a certain extent endorsed the accu-sation. Thus, Colonel Higgins said: "It would be as well that the sented.......He wished the mode of election of the Council was somewhat different, and on a future occasion he should certainly move an alteration in that respect." Mr Barrow, M.P., one of the Council, confessed that he had no practical connection with agrical ture, but, "when he joined the Council, it was as the representative ture, but, " when he joined the Council, it was as the representative of a particular class of farmers whose interests he was anxious to protect." What that class is he did not say, and we cannot guess. He was of opinion that "the great value and importance of that Society arose from there being a mixture of landlords and firmers, and he was quite satisfied that it was not the interest of farmers that it should become a farmers' club or a debating society." Nobody denies the benefit of mixing the two classes in the Council; the complaint is that there is too much of the landlord element in the mixture. The reference to a " debating society" points to what in, no doubt, one source of apprehension to the landowners on the Council, that agricultural questions which may bear uncomfortably on the relation of landlord and tenant might be discussed if the farmer element formed anything like an equal and active portion of the Council. Again, MrDent, M.P., said "there certainly was a feeling that the proceedings connected with the selection [of Editor of the 'Journal'] was carried on in a very close manner, and the fact that Mr Streew as not known to the spicultural world tended to increase the general disatisfaction on the subject......Asregarded the election of tative general disatisfaction on the subject......As regarded the election of the Council itself, he thought it would be far better if the candidates were all proposed and seconded in the usual manner." Mr Torr, a furmer and member of the Council, remarked that "with regard to the selection of the Secretary and of the Editor of the 'Journal', he would not say one word against either of those gentlemen; but he certainly thought that one election ought to have been conducted Mr Torr, a he would not say that one election ought to have been conducted on more popular principles......As regarded the manner in which the elections took place at the annual meeting, there was in his opinion room for improvement, and if no one else did so, he should himself bring forward a motion on the subject." The queerest defence of the Council was that put forward by Lord Faversham. He did not suppose it was contended "that those only were practical farmers who were tenant-farmers. He apprehended that an owner of the soil was a practical farmer who, residing for some months in the year in the country, had during that period a tract of land under his daily superintendence, rode frequently over the fields, observed the different kinds of culture which were being carried on. remarked upon any defects, and made inquiries as to neids, observed the different kinds of culture which were being carried on, remarked upon any defects, and made inquiries as to the mode of cultivation, the kind and quantity of seed sown, and the causes of any deficiency which attracted his attention." Such a man, according to his Lordship's notions, "came under the defini-tion of a practical farmer." We have no doubt Lord Faver-sham was really serious. But it would be difficult to make a more clear and precise definition of a present taking much interest clear and precise definition of a person taking much interest in agriculture who is not a practical farmer. Such a man may fairly be deemed qualified for the Council of the Society as a landowner, but certainly not as a practical farmer. Mr Girdwood said "there was an immense deal of disatisfaction expressed throughout the whole country at the present management of the Society," and referred to Mr J. C. Morton, whom the almost unani-mous voice of the practical agriculturists would have named for the Editorship of the "Journal." In the result no counter movement was wede on this result. was made on this occasion, but it is quite obvious the real agriculwas made on this occasin, but it is quite obvious the real agreed turists—the men who live by farming and, usually, are temants—of England will not much longer submit to be represented by land-owners. They are now fully sensible of the truth of Mr Cobden's observation, made during an anti-corn-law debate, "that a land-owner is no more an agriculturist than a shipowner is a sailor."

# Literature.

FLEETS AND NAVZES. BY CAPT. CHARLES HAMLEY, R.M. Orlginally published in "Blackwood's Magazine." W. Blackwood and Sons. 1860.

OF the many brochures of every size and degree which have during the last twelve months been written on the subject of our Navai Defences—or defencelessness—we should rank highest, for clearness, moderation, and practical good sense, this little volume by Captain Hamley. It is distinguished by a precision of statement and coherency of argument which are too generally wanting in its compeers ; it puts clearly and forcibly the main features of the subject, the chief objects to be sought and the chief obstacles to their attainment, without the encumbrance of a cloud of details. And, while the author most distinctly states his opinion that our Navy, at the highest point of efficiency and numbers to which it has been proposed to raise it, would be utterly inadequate to its actual duties and possible dangers, he is not in the true sense of the word an alarmist He is rather inclined to disregard than to overrate the power of the new engines of warfare which are supposed by some to have materially altered our condition for the worse ; and still believes most devoutly in the ability of England

# THE ECONOMIST.

to maintain, if she will, her ancient supremacy at sea. His book is short, because he disregards not only all unimportant matters, but also all those on which his professional knowledge does not especially qualify him to speak. He discusses neither the politics of Europe, which make a navy and a naval superiority necessary to Kngland, nor the folly and weakness of ministers, nor the recklessness of unscrupulous demagogues, which have so deeply imperilled her safety at home. He takes for granted, as all men entitled to public attention do or pretend to do, that England is not safe from attack unless she possesses the sovereignty of the seas; and he proceeds to show what force she must maintain for that purpose. He cannot refrain from an occasional sneer at the politicians whose indifference to honour moves the contempt, and whose blindness and recklessness on the score of national safety excites the indignation, of their sober and thinking countrymen; but he feels that on this point the mation is with him, and he is content to indicate in a few words the method in which the nation may be assured that the Admiralty is doing its duty by the country. His practical suggestions are few, sound, and thoughtful; and, on the whole, his book appears to us to render a national service of considerable moment, and to add greatly to the public knowledge of a most important topic, by stating its leading points in a style and with a brevity suitable to non-professional readers.

He begins by combating the idea that steam navigation will be found to have neutralised, in future wars, the superior seamanship of British sailors; to which he justly ascribes the past naval victories of their country. No mechanical inventions, he affirms, can destroy or render valueless inherent superiority in the men who have to work them. This may be true enough, as a rule; it is true that superior bravery, and sense, and physical vigour will give an advantage, ceteris paribus, under almost any conditions of conflict. But it is not quite so clear that the advantage formerly given by skill of a particular kind will equally exist under changed conflictors. Now, as formerly, the efficiency of a ship in action depends chiefly on two things; the skill with which he is handled by her crew, and the rapidity and exactness with which her guns are served. In both points British crews were, in former wars, greatly superior to their antagonists. In the latter, the French crews are said, whether truly or not, to have attained by long practice at least equality with our own. In the former, a great change has taken place; the engine and screw have superseded as and wind as motive power and agent. Now, therefore, the handling of a vessel *in action* will depend upon her engineers, not on her sailors ; and seamanship, as such, can hardly be as valuable now as when the ship's position in action, and her rapidity of morement, depended on the skill of the commander, much on the quality of the engineers, much on the valour, activity, and gunnery of the crew; but certainly little, or much less than formerly, on their seamanship properly so called.

On another and less important point —the quality of the vessel herelf—our rivals were formerly superior. Our best vessels were those captured from the French. We are glad to be assured by Captain Hamley that this advantage now rests with the British navy.

Captain Hamley next sets forth the condition and power of the French mavy as compared with our own. In number of vessels the latter is decidedly superior. Of gunboats, corvettes, and so forth, France has few or none. The strength of her navy is adapted rather for great battles, securing a mastery of the home seas, than for cruises off an enemy's coast, or the minor operations for which these small vessels are required. She has built, of late years, only a formidable force of screw ships of the line, nearly equal in number to that possessed by Great Britain; and a force of heavy frigates actually superior to our own. Of her *frégates blindées* the author does not think highly. They will, he says, be too slow and unwieldly to be able to choose their own distance and position, and, except at long ranges, their armour will fail to render them invulmerable. Of the steam-ram which our own Admiralty are building his opinion is almost equally low. She will be faster, and much more effective as a battery; but as a ram she will be so much less mobile than the vessels she is to assail that, unless they were first disabled, she would be liable to have her vulnerable stem and stern knocked to pieces before she could reach them. And when an enemy's ship is disabled, to run her down is sheer waste of life and material. Besides, from certain peculiarities of construction, he inclines to think that the ram will be parilously top-heavy. Putting these new-fangled contrivances out of the question, France has a force of line-of-battle ships and frigates almost equal to our own; while she owes to the *Inscription Maritime* the invaluable advantage that she can man her ships, and we cannot.

This being the case, one thing at least is so clear that Captain Hamley does not think it worth formal statement; that the Ministry which should consent, we do not say to diminish our naval preparations, but to relax the rate of their increase, would be guilty of nothing less than a deliberate sacrifice of the national article.

Our author will not believe that, owing to Armstrong and Whitworth guns, frégates blindées, and the rest of the new engines of destruction, naval battles will henceforth be fought at respectful distances; and, with a preference for defective analogies which

vitiates more than one of his conclusions in the volume, he sites the land battles of the late war in proof of his opinion :--

land battles of the late war in proof of his opinion :--As long as plack and daring are elements of human nature, men will never submit to be mowed down or such at an interval of miles without attempting to close if they have the power. It was said that rifles and rifled cannon would decide military operations at long ranges; and that a close encounter, a hand-to-hand fight, or a bayonet thrust, would be a thing unknown in modern combat; and yet in these late battles the bayonet has done more deadly work than ever, and positions have been carried by the rush of men. Unless therefore the armour-ships have some marvellous speed which enables them to keep their fors at their own distance, there will be closing too in naval actions; and then, in spite of plates and coating, size and broad-ides will cell; the traditions too of boarding still remain, and the iron sides would be little proof against seemen swarming over the nettings, or dropping from the fore yardarm; cutless in hand, as in the time of old. We once heard an anecdote-apocryphal, perhaps, as it was

We once heard an anecdote—apocryphal, perhaps, as it was attributed to the French Emperor himself—illustrative of the difficulties of closing at Magenta and Solferino. On the latter field, it was said, a battalion had set forth to storm an Austrian battery, planted on a hill, which sorely annoyed them. Half-way up the slope there remained but a hundred and fifty men on their feet; five only were hayonetted at the guns. The difficulty of closing at sea is even greater than it would be on land if grape and chain shot could be thrown as far as round shot. For, if it be found that the new artillery can be worked with precision on shipboard, and if it be possible, by concentrating a broadside, to make a hole in the enemy's ship that will sink her at half a mile's distance, closing and boarding will be almost out of the question. On land it is not possible for a battery to destroy a regiment half a mile off even by many volleys; at sea, one crashing broadside of something more than half a ton of metal may be driven through a ship's side at that distance so as to destroy eight hundred men at one blow.

Comparing our available force at sea with that of France, Captain Hamley refers to two occasions on which, as ought to be better known, the weakness to which we had been reduced was exposed in a manner which might easily have cost us a foreign invasion. In 1841 our Government had quarrelled with Louis Philippe about Syria. The French collected 20 sail of the line at Toulon. Their Egyptian allies had 25 in the Levant. We had 16 ships in the Mediterranean, and could man none in the Channel. Attacked by the combined fleets in the Mediterranean, or by that of France on our own shores, we should have been helpless. From that disgraceful dilemma we escaped by the pacific policy of the France and Russia about Greece. At that time " by no efforts could five sail of the line have been collected in the Channel," while the enemy could have mustered ten times that number. And Great Britain only avoided ruin by accepting humiliation.

At present, owing to the change from sails to steam, we are greatly in need of ships, as well as of men. Captain Hamley considers that we ought to have 100 screw line-of-battle ships affoat; a force sufficient to meet any probable combination against us, without leaving either the Channel or our colonies defenceless. England ought at least to be able, without dangerously weakening her forces in distant quarters, to meet at home the combined fleets of France and Russia. While she has not ships enough to do this, we ought not to be satisfied; for ships enough can be built for money, and money for such a purpose will not be refused by Parliament.

But there is another question, not less momentous, but much less easily answered. Given the ships, how are they to be manned? It is useless to build ships to lie empty on the water; and till we know where men are to be found to fill them, it would seem bad economy to incur the immense outlay necessary to build them in the requisite numbers. Here is the real difficulty of the national defence; not the want of ships or material—for all these things the wealth of England, once honestly applied, can create in abundance—but the *want of men*, aggravated by that very wealth, creating as it does a demand for labour in every department of industry. To solve the problem thus presented, Captain Hamley devotes the latter half of his book.

The difficulty arises from two sources. First, men are in demand everywhere, and seamen in especial demand. Second, seamen generally prefer the merchant service to the Queen's

generative preter the merchant service to the Queens. The first of these obstacles to the manning of the navy is one which does not depend upon the Admiralty. Seamen are an article of which the supply is limited, and for which the demand is continual. The merchant service has the preference in the market; the Royal service cannot draw more than a certain very insufficient yearly supply from the regular seafaring population. Captain Hamley's remedy for this evil has the merit of being practicable, and in accordance with the tendency of all the evidence on this subject that is yet before the public: its expense would be the chief objection. Every year 2,000 boys enter the navy—of whom 500 pass through the Government training ships. These 500, as a rule "oventually constitute, from their superior education and training, the most valuable part of the crews of Her Majesty's ships." Those who have entered the service as boys, are far less likely to leave it for the higher wages and looser entered, had acquired the tone of that marine, or the habits of

# THE ECONOMIST.

# [June 9, 1860

T

W

civilians on shore. Captain Hamley suggests that all boys entering the navy should pass through the training-schools, and that the total number recruited should be increased to six or eight thousand, in order to maintain an adequate supply for the large force which he considers necessary. In other words, he proposes that Government should buy the raw material where and when it that Government should buy the raw material where and when it can be had in abundance and at a reasonable price, and manu-facture the complete man-of-war's man in its own training ships. Every man so trained would be an effective—which is not the case with all those entered at a later age. And, as this process would be a slow one, the author proposes an increase pro tempore in the proportionate number of the marine force; for though marines are admittedly of less value than seamen, they can be had in sufficient numbers and essence cannot the seamen of the marine force in the properties of the seame cannot the seamen of the seame cannot the seame cannot be had in sufficient numbers. numbers, and seamen cannot.

To improve the character and increase the popularity of the Royal Navy, Captain Hamley offers several sensible suggestions. On those of detail we shall not enter. The important proposals on which the whole of his plan is based are two—the maintenance of a standing reserve of 10,000 men on shore, and the assimilation of a standing reserve of 10,000 men on snore, and the assimilation of the Navy to the Army, as a permanent service. Every man entered would belong under his system to some special port; would be placed on board a ship having so to speak its depôt in that port; and when returning from a voyage would find his place in a barrack, or his home and family, at the same port, in which only the ship would be paid off. Instead of dismissing a crew after a certain period of service afloat, they would be passed to take their turn in the mean fam which another around be dearm to the ship would be paid off. Instead of dismissing a crew after a certain period of service afloat, they would be passed to take their turn in the reserve, from which another crew would be drawn to fill their place; and thus every man would have his regular period of active service afloat and his turn of duty with the reserve ashore. We think that both these proposals, as well as the minor im-provements suggested in the discipline and organisation of the Navy, deserve careful attention.

# NETLEY HALL ; or, The Wife's Sister.

STEYNE'S GRIEF; or, Losing, Seeking, and Finding. William Tweedie, 337 Strand.

THE WEAVER'S FAMILY. Judd and Glass, New Bridge street. "Fon Heaven's sake, cried the great man," in Goldsmith's "Citizen of the World," " washing his brush in water," as Lieu-Chi-Attangi proposed to relate to him a tale whose moral should " compensate for its stupidity, let us have no morality at present; if we must have a story, let it be without any moral." After reading several tales like those enumerated above, every candid reader will, we think, cordially echo this sentiment of the dilettante Prince, unless perchance he should be especially interested in any of the wrongs therein dilated upon, or have a benevolent eye for the edification of his neighbour (no one dreams of applying such things to himseld) by the morals they severally enforce. We do not mean to say that the merit of a story must be in inverse proportion to its morality ; on the contrary, in the highest order of novels, such, for instance, as Scott's, the moral constitution of the universe is taught in the most effective, because most unstrained and least didactic manner ; the most effective, because most unstrained and least didactic manner; but a set moral purpose is a bore in a work of fiction. If the tale be a good one, it will almost certainly be found to have dropped out of the main story, and only to appear at set places  $pr\delta$  formâ; if only tolerable, it acts as a dead weight, threatening it continually with death by dulness; if bad, it makes it worse. The latter is pretty much the case with the first tale on our list.

Some pretty descriptions of the country round Malvern, and one or two fairly drawn characters, can do nothing against the weight of the moral, or we should perhaps rather say the argument of this book. This turns upon the hardship and injustice of the law which forbids marriage with a deceased wife's sister, illustrated in an exemplary family circle. Of course the writer, like a preacher in his pulpit, has it all his own way; but, as Swedenborg at church heard the angels within him drowning the voice of the churcher with contrast assertions on the spirit of the grader has at children neared the angels within him drowing the voice of the clergyman with contrary assertions, so the spirit of the reader has its own word to say; and, whatever his own views or no views upon the question in hand may be, it throws discredit upon the arguments brought up by interested parties in behalf of a marriage which he sees to have been determined upon from the beginning. upon the question in many may be, is three due to a marriage arguments brought up by interested parties in behalf of a marriage which he aces to have been determined upon from the beginning. Reasons which, in another form, might have considerable weight, lose their force with their impartiality, and a story dull at best becomes positively disagreeable. The love-making that is carried on over a sister's grave is not in itself attractive, nor is it at all improved by the fact, that that sister was to be killed off in the midst of youth, health, and her husband's love by an especial accident, in order that her younger siter may have her turn. "Steyne's Grief" is much superior both as a tale and in the ability of the writing. As a somewhat melodramatic tale it is not amiss. The earlier part among the village gossips of pretty little Stillhaven, and in the orderly peace-ful home of the hero's childhood before it was wrecked by the growing love of drinking in his father, is natural and pleasant. The interest becomes afterwards more exciting and painful, and runs at length beyond the bounds of probability. An author writing with a purpose is somewhat like a lady putting on rouge;

little by little, imperceptibly to herself, she acquires the look of a painted doll more than of a human being. So, in this tale before us, a first part of considerable power and truth to nature is followed by a second whose startling scenes could only be fitly illus-trated in the prints of some of the cheaper serials. After all, one real case of destitution and misery brought on by drunkenness, such as falls under every man's notice at one time or other in his life, is more impressive in its warning than all the grief's it is possible to heap upon the head of an imaginary Steyne.

heap upon the head of an imaginary Steyne. "The Weaver's Family" is not so much a story with a purpose, as a purpose dressed up in the disguise of a story. Those who have met with "Dives and Lazarus," or other of the writer's works, will know that that purpose is to draw attention to the wants and sufferings of the poor in crowded cities, and to suggest some means for their alleviation. The one reform he has particularly at heart is a redistribution of the parish districts, so that the burden of supporting the masses of town poor may fall with greater fairness among the richer and poorer classes. He draws a terrible picture of the state of those parishes where the ratepayers are themselves only one degree removed above the pauperism they relieve, and where the hard-working man or woman who is distrained upon for rates to-day, is added to the parish burdens, a pauper, to-morrow. We are only sorry that the writer should have chosen to clothe his actual experiences in the form of a tale, because, while facts as facts only sorry that the writer should have chosen to clothe his actual experiences in the form of a tale, because, while facts as facts assert their rights to be heard however painful, the mind of the reader, unwilling to be unnecessarily harrowed, takes refuge in the thought that "it is only a fiction" from the too intrusive conviction thought that "it is only a fiction" from the too intrusive conviction that such cases are in reality far from rare. In this story, as in "Dives and Lazarus," the darkness of the picture is lightened by the mutual kindness and helpfulness shown by the very poorest towards each other,—the genuine charity that out of its want gives all that it has,—and by some characters (not unnaturally perfect) which shine out with more clearness from the dark back-memory of imposence and sin . In this too, as in former works period of ignorance and sin. In this too, as in former works, willing testimony is borne to the general kindness and justice of the dispensers of the poor-law relief. Guardians and parish doctors seldom get a hard word from this writer. It is against legislative defects alone that his reforming energies are directed.

THE MANSE GARDEN. By NATHANIEL PATERSON, D.D. London : James Blackwood, Paternoster row.

THE GARDEN THAT PAID THE RENT. London : Chapman and Hall, Piccadilly. 1860.

Or these two little works on gardening, we prefer the former, as being more simple and practical, and we should say a safer guide to the amateur gardener. The book, independently of its technical interest, is very pleasant reading; it is evidently written by one who takes a strong interest in the subject he writes on, and who inderstands that subject. As the title intimates, it is written for the North country, and contains of course some precauti ons, and enjoins some necessary operations, which are not required in our more genial climate, but these are not numerous, and, on the whole, we have never come across a more agreeable and useful manual of gardening. There are some amusing directions worthy attention at the end of the book on the management of that impracticable appendage to a garden-a boy.

"The Garden that Paid the Rent" is, as the name indicates, a much more ambitious book, and is not likely to prove of such general use as the former. We cannot but think that, to produce the requisite amount of forced fruit and vegetables, with even the assistance of a boy, the owner of the garden must devote his whole time to this object—he must, in fact, become a market gardener. This, though a sufficiently agreeable occupation, is not one that is quite compatible with other professions. The directions and information about managing vines and forcing fruit are, no doubt, very good and correct. We only think that they would be found difficult to carry out except under the personal superinten-dence of the author of this book—we mean, of course, with such appliances as Mr Atkin's establishment could boast of. Under these circumstances, we fear the productive gardens would turn out to be annendages of correct and the productive gardens would turn out these circumstances, we fear the productive gardens would turn out to be appendages of certain celebrated *chateaux en Espagne*. Still there is some truth in the general principle of the book, —that, by careful management and superintendence, well-ordered and pro ductive gardens might be enjoyed without the almost ruinous ex pense that is now generally supposed to attend them.

HANDBOOK OF THE MECHANICAL ARTS CONCERNED IN THE CON-STRUCTION AND ARRANGEMENT OF DWELLING HOUSES AND OTHER BUILDINGS. Second Edition. By R. S. BURN. Blackwood and Sons.

THE first edition of this work was chiefly intended for emigrants. It has now been enlarged so as also to be of great assistance to perto persons engaged, either professionally or as amateurs, in constructing small houses and farm buildings. It contains also a great deal o information most useful to farmers and country gentlemen on wellf sinking, draining, road and fence-making, &c.

# THE ECONOMIST.

It is one of the best books which an emigrant can obtain to take the colonies; it will instruct him how to build his cabin, whether a prefers a log hut, shanty, or frame house, and gives ela-orate information about cements, roofing, and all kinds of joinery e prefernd carpentry work.

## MACMILLAN'S MAGAZINE. No. 8. June.

The June number of this magazine is superior to the last ; yet, with the exception of three chapters of "Tom Brown at Oxford," as racy and vigorous as any of their predecessors, there is little of strong interest, or of more than fair ability. Quite the best among the literary articles is a spirit-stirring account of the it Demon the literary articles is a spirit-stirring account of the "Rescue" of nineteen lives from a wreck on the Margate Sands by the crew of nineteen lives from a wreek on the Margate Sands by the crew of the "Ramsgate Life-boat." It is impossible to read without admiration and pride of such deeds as are here recorded,—re-corded not as an uncommon occurrence, or as the work of a picked crew, but as that of men taken at random from numbers emulous of filling the same post of duty and peril. "Shelley in Pall Mall " relates the connection of Shelley with one Stockdale, a publisher in Pall Mall. It is curious, as containing some unpub-lished letters relating to Shelley's first attempts in literature, and to his quarrel with his father, in which Stockdale appears to have meddled to the equal disgust of all the parties concerned. Two political articles call for brief mention. "The Suffrage considered in Reference to the Working Class and to the Professional Class" is a thoughtful exposition of the duty incumbent upon all men, but more particularly upon the educated and professional man, of not only avoiding apathy in the exercise of his own political rights, but of impressing on the minds of less-educated men, by his pen not only avoiding apathy in the exercise of his own political rights, but of impressing on the minds of less-educated men, by his pen and by his example, "that there are other advantages of being a living and governing part of a nation than the outward good things which it procures." The very moderate measure of popularity enjoyed by Mr Bright among them proves that selfish interests are not the sole things to which the working classes look in a reform of the representation. Mr Maurice, whose opinion is entitled to much weight, avers that it is far from being so at present; and that it rests with those who have now the legislative and intellec-tual leading of the nation to open the way to a fair representation of the working classes, secured against the peril of a "self-seeking" in them, not greater than it is in other classes, becoming dangerous by the main force of numbers. "Sir Charles Trevelyan and Mr Wilson" is an attempt to defend the dangerous and impolitic step which occasioned the recall of the Governor of Madras. The defence is insdequate,—for, even supposing that the facts alleged which occasioned the recall of the Governor of Madras. The defence is inadequate,—for, even supposing that the facts alleged are true, that taxes suitable to the North are not so to the South, that "Calcutta centralisation" is a "monstrous folly," that "what India wants is, not four independent Governments indeed, but twenty or thirty,"—all this does not lessen the "indiscretion," to use the reviewer's own term, that at such a time as the present could appeal from the Government to the people, could weaken authority by revealing disminging in its councils. authority by sowing wide the seeds of suspicion, discontent, and country" by sowing revolutionary hopes.

THE COBNHILL MAGAZINE. No. 6. June. Smith, Elder, and Co. The tales of "Framley Parsonage" and "Lovel the Widower" continue to form the chief attractions of this magazine. The The entitude to form the chief attractions of this magazine. The latter, however, comes to an end in this number. It winds up with great spirit, and reminds us, in its broad colouring and plentiful use of back-stairs intrigue, of nothing so much as the genteel comedy of some fifty years ago. The comic concluding scene between Lovel and his "three mothers" would have a great It winds up scene between Lovel and his "three mothers" would have a great success upon the stage. The story is slight and extravagant; the people for the most part either foolish or disagreeable; yet the skill of the narrator carries us along protesting, but amused. The essays on "William Hugarth" are interesting and painstaking researches into the life of the painter, and the manners of the times he painted. They would be improved by greater clearness and less affectation in their style, which is neither pleasing nor good. The present number opens with a plan for the fortification of London by means of forts, half-a-duzen in number, at regular intervals round it, with earthworks between the whole, to be under intervals round it, with earthworks between the whole, to be under the charge of the Volunteer corps, with the assistance of a few regular troops; and concludes with a partly serious, partly jesting, flourish of trumpets over the success of the first volume of the "Cornhill Magazine."

PARIS, Thursday. I have had the opportunity of looking over the report of another sitting of the Superior Council of Commerce and Manufactures, charged to fix the specific duties on English productions imported under the treaty. This sitting was again devoted to the iron question ; and the report seems to me to prove most strongly that the clamour which the French ironmasters are raising for the largest protection possible is perfectly unjustifiable even on their own showing. Thus, a M. Corneau, of the Ardennes, admitted that "for some time past French cast iron has been so good that the use of English cast iron might be dispensed with in France," and that it is about 26f a ton cheaper ; and yet he stands out for exorbitant protection. M. E. Martin, formerly at the head of one of the most important works in France,-that of Fourchambault,-proclaimed that the superior qualities of cast iron made in France are infinitely superior to those made in England, and that if the French would turn their attention more seriously than they have done to the production thereof by means of charcoal, and to the improvement of their processes, they would be able to obtain an extensive market even in England. M. Gouin, a great engine-builder, said that the French can now manufacture locomotives and certain other descriptions of machines as well and about as cheap as the English, though they cannot yet rival them in the making of textile machines. The latter and other witnesses also admitted that of late years French workmen have wonderfully improved,-75 per cent. said one of them. Evidently such admissions as these cut away the ground for protection as regards both cast iron and machinery. It is worthy of note that, though the great majority, in fact all the persons examined, insist on the necessity of protection, they differ greatly as to the amount at which it should be fixed on different objects. It is also worthy of remark that two members of the Council, the Minister of Commerce and M. Michel Chevalier, contrive, by apt questions appropriately put, to show the unreasonableness of most of the pretensions of this iron fraternity. The most recent sittings of the Council have been occupied in inquiries respecting the cutlery, nail, needle, watch-spring, steel pen, and other trades. Some of the persons examined have been English.

examined have been English. Some Chambers of Commerce are petitioning the Government to cause the treaty of commerce to be brought into force at once, instead of waiting for the delays fixed for certain articles. The Chambers of Lyons and Marseilles are amongst those that have done so. On the other hand, a number of ironmasters, who some time ago petitioned that the treaty should come into operation forthwith, now say that they were mistaken, and that they wish the periods named in the treaty to be strictly maintained,—if pos-sible, orolonged. sible, prolonged.

The French Government, as is known, encourages the cod fishery in the neighbourhood of Newfoundland by very liberal pre-miums. A bill has just been presented to the Legislative Body for continuing this encouragement to the 1st July, 1871. This bill continuing this encouragement to the 1st July, 1871. This bill has one good point; it proposes to abolish the duty of 7f the 100 kilogs (nearly 3l per ton) on cod fished by foreigners imported into French colonies.

French colonies. The Government has presented to the Legislative Body a bill for the purchase by the State "for public utility" of eight canals: —those from Arles to Boue, from Orleans to Loing, of the Somme, &c. Many persons applaud this measure, and doubtless reasons not without weight may be urged in favour of it. But it is a step, and a not unimportant one, towards the assumption by the State of commercial enterprises which had better far be left to private hands; and on that account it is liable to serious objections. Hav-ing bought up canals, the Government will hardly be able to op-pose the arguments of those who think that it ought to be the sole possessor of railways; if it takes railways, it cannot evidently obpose the arguments of those who think that it ought to be the sole possessor of railways; if it takes railways, it cannot evidently ob-ject to buy up all the fire and life insurance offices, as many per-sons are recommending it to do; and so it will go on from one thing to another, until at last it will possess everything, do one same to another, until at hist it will possess everything, do everything, and be everything,—the citizens sinking into mere automatons. Already the Government does a great deal more than it ought to do; it breeds race-horses, keeps farms, educates fiddlers, ballet girls, and play actors, supports theatres, &c., in ad-dition to its ordinary legitimate functions; and it would be wise on its part to reduce, instead of extending, its multifarious opera-tions.

The Legislature, at the bidding of the Government, has just adopted a bill of considerable importance, namely, authorising the

1	0		ł

# THE ECONOMIST.

Government to concede to a Company the construction and work-ing of three lines of railway in Algeria,—1, from the sea to Con-tantia; 2, from Algiers to Blidah; and 3, from St Denis du Sig to Oran,—subject to the condition of receiving a subvention of 6,000,000f, a guarantee of interest of 5 per cent. on a capital not exceeding 55,000,000 for 75 years, and the privilege of intro-ducing; free of duty, the waggons, locomotives, and other mate-rials necessary for the construction of the railways. The objection was made that the Government proposed to accord to the Com-pany far more than was just or necessary, but it was of no avail. M. J. E. Horn's Annuaire International du Credit Public pour 1860, which has long been expected, has at last appeared chez Guillaumin and Co. This work contains an account of the debts, budgets, banks, and other establishments of credit, railways, great

Guillaumin and Co. This work contains an account of the debts, budgets, banks, and other establishments of credit, railways, great companies, commerce, &c., &c., of all European and some other nations. This information is drawn from official documents, is ably condensed, and is set forth with great clearness. The book has been prepared with extraordinary care; so that it is perfectly trustworthy,—an all-important matter in publications of the kind. It utility to mercanile men to all who are encaged in financial Its utility to mercantile men, to all who are engaged in financial The wonder is, that in a commercial country like England no work of the kind exists. Among the many chapters it comprises is one on the fluctuations of discount in the principal markets of Europe in the course of last year. From this it appears that in the follow-ing places discount

The neural question and the			300 0	

The usual quarterly return of railways has been published this day, and is as follows. It shows, compared with the corresponding quarter of last year, an increase in the gross receipts, which, from the perturbation and depression that prevailed in commerce could

The following is an account of the markets :-

F. Yestera ality. FLOUR, at Paris, presents a marked advance on last week's quotations. Yesterday, the price was 61f to 66f the anck of 159 kilogs, according to quality. Four marks were for the current month at 64f 50c; July, 65f 25c to 65f 75c; July and August, 66f; August, 66f 50c.

657 25c to 657 75c; July and August, 667; August, 667 50c. WHEAT.-At Paris, yesterday, business was active at 367 50c to 386 50c and 397 the sack of 120 kilogs,—a rise on last week's quota-tions. Of the provincial markets, not fewer than 124 present a rise of from 8c to 2f 10c the bectolitre, whilst only 9 have fallen from 7c to 16 15c. In five markets there has been no change. Corrox.-The sales at Harre, in the week ending Friday, were only 5,528 bales, and the arrivals were 7,278. The closing quotations were 2f for the "very low," and 1f for the "low" of all sorts, below those of the preceding week; other qualities remaining unchanged. Low New Orleans was consequently 87f the 50 kilogrammes, but very ordinary ditto remained at 85f. The stock on the lat was 260,530 bales, which was much larger than that at the corresponding date of preceding years. This wmained at 85f. The stock on the lat was 260,530 bale's, which was nuch larger than that at the corresponding date of preceding years. This reek business has not been very active; low New Orleans was last uoted at 87f.

week business has not been very active; low New Orleans was an quoted at 87f. COFFEE.—At Havre, last week, business was active, especially in India: 1,100 sacks Hayi disposable want at 82f 50c to 83f the 50 kilogs in bond for Port-au-Prince and Jacmel, 84f to 84f 50c for Cape, 84f to 84f 50c Gonaives, 86f St Marc; 3,500 sacks for delivery, Port-au-Prince and Jeremie, 82f to 82f 50c; 100 sacks Santos, 79f; 235 sacks Javs, 114f 50c to 115f duty paid; 1,600 macks Malabar triage for delivery, 110f 45c (new duties); 1,000 ditto ditto, 111f; 2,400 sacks Ceylos triage disposable, 107f 50c to 110f; 1,530 sacks ditto for delivery, 107f 20c to 110f; 900 sacks ordinary Ceylon, 105f 50c to 106f; 74 sacks "pea-berry" ditto, 117f; and various large lots of Ceylon plantation at prices not stated. In addition there were some sales of damaged of different sorts. The strivals were sumportant. The stock on the lst was upwards of 75,000 sacks of different sorts. This week, mies have been inconsiderable: Hayti Jacmel, 82f; Gonaivee, 85f. At Nawtes, 1,156 sacks Ceylon native went at 111f (it is said); 60 bales

# THE ECONOMIST.

Reunion "pointue," 138f; 400 sacks Port-au-Prince, 82f 50c and 83f. This week, some rather large sales of damaged have been made; a lot of Reunion has also been disposed of at prices kept secret. At Bordeaux, sat week, 1,600 sacks Guayra went at 92f to 101f; and various lots of French West India, Singapore, St Domingo, and Malabar, at prices not stated. This week, some Guayra have been sold at 95f to 102f; some French West India at prices kept secret. At Marseilles, last week, 4,400 sacks Rio went at 72f to 76f in bond; 300 sacks Porto Rico, in bond, 95f. Frenc

sacks (10) went at /21 to /of in bold , 500 sacks / ofto /tto, in bold, 505. SUGAR.—The sales at Hayre, in the week ending Friday, consisted of 1,354 hogsheads of French West India, at 47f 50c to 49f the 50 kiloga duty paid ; 365 " usine" dito, 50f ; 1,928 bales Reunion " gros grain," 55f. The arrivals were nearly 3,000 hogsheads. The stock of French West India on the 1st was 9,870 hogsheads. This week, there have been no sales. At Bordcaux, last week, some lots of French West India been no sales. At Bordcaux, last week, some lots of French West India went at 46f to 47f; some at prices kept secret; some Gaadeloupe "usine," 65f; 2,200 bales Reunion, 50f; 853 bales Reunion "gros grain," 56f; some small sales of Musritius and Havana werrs also effected. This week, s small lot of Havana damsged has been sold; and there have been some large sales of refined. At Nandes, last week, only 100 hogsheads of Guadeloupe "usine" were sold a; it is said, 60f. This week, a lot of Reunion has been sold at 57f; ditto, "gros grain," 60f.

grain, out. INDIGO.— The sales at Havre, in the week ending Friday, were 130 cases Bengal at 25c to 75c above the estimates. The stock on the 1st was upwards of 1,800 case. This week, 17 cases Bengal have been sold at prices kept secret. At Bordenus, last week, 175 cases Bengal and Caracca wars sold. The quotation of Bengal was, without duty, 8f to 12f 75c the 4-kilog; Java, ordinary, 8f 50c to 12f 50c; Kurpah, 5f 50c to 10f 50c; Madras, 4f to 6f 80c; Caracca, 5f to 9f 25c. This week, sales have been rather numerous, but prices are not given.

HIDES.—At Havre, in the week ending Friday, 2,300 salted La Plata went at 807 to 85 the 50 kilogs duty paid; 800 Lima drysslted, 85f; 900 horse salted La Plats, part at 1f 5c the kilog, part at 14f each There was a sale by auction in the course of the week of some damaged low, but only a portion of the quantity offered was taken. The stock on the lat, including horse's, was 190,000 bides. This week, a small lot of Monte Video salted has been sold at 85f.

Woot.-The sales at Have, in the week ending Friday, were 184 bales La Plata unwashed at 1f 923c to 2f 80c the kilog; 17 bales ditto washed, 2f 50c to 4f 5c; 104 bales sheepskin, La Plata unwashed, 65c to 1f 123c. The arrivals were nearly 1,500 bales. The stock on the 1st was about 5,000 bales. This week, Buenos Ayres unwashed has been at If 85c ; ditto sheepskins, 911c to 1f 25c.

Tallow.—At Havre, last week, 100 pipes Buenos Avres went at 65f the 50 bilogs duty paid, and a lot of Russian to be delivered in the antumn at prices not stated. The stock on the latwase insignificant. There have been no sales this week. At Paris, yesterday, the 100 kilogs were 130f 75c. At Marseilles, last week, business was not active : Roman was 130f the 100 kilogs; Italian and Russian, 128f to 130f; Maits and Naples, 127f to 128f; Algeris, 132f to 1336.

STIRITS. - At Paris, yesterday, 8-6 of 90 degrees was 107f to 108f the hec-tolitre; Montpellier of Sf degrees, 140f. At Bordeaux, the day before yesterday, 3-6 Languedoc was 135f; beetroot, first quality, 110f.

## BRUSSELS, June 6.

BRUSSELS, June 6. Sometime back I mentioned that a project was set on foot for establishing direct commercial relations between this country and the Southern States of the American Union. This project has re-ceived the unanimous support of Belgian merchants and Ameri-can planters; and a Company for carrying it out is to be formed with a large capital. The belief is that by means of this Company large exports of Belgian manufactures can be made to the States, and that, in return, larger imports from the States can be effected in Belgium. in Belgium.

## VIENNA, May 31.

The report of the Austrian Railway Company has just been published. It states that the net revenue of 1859 was 2,000,000 florins, which was sufficient to allow a dividend of 5 florins, or 10f French money, per share to be distributed. This, added to the interest already paid, makes the total revenue 35f per share. The revenue would have been nearly 50f if the florin had been at par.

# ST. PETERSBURG, May 26.

ST. PERESBURG, May 20. Despotic though the Government of Russia be, it does not throw the slightest obstacle in the way of the teaching of political eco-nomy, which is a science liberal *par excellence*. Several journals and periodicals discuss economic questions with the greatest free-dom, and one of the periodicals exclusively devoted thereto possesses between 6,000 and 7,000 subscribers. The higher classes take the greatest interest in discussions of this kind, and quite re-cently an eminent French economist, M. de Molinari, delivered at Moscow, to crowded audiences, lectures explaining the principles w, to crowded audiences, lectures explaining the principles of the science.

# COMMERCIAL AND MISCELLANEOUS NEWS.

The latest advices from Buenos Ayres report that the state of the total, 5,095,9231; being a decrease of 105,4764 as compared with markets continued anisactory. Money was eavy, and the bank rate for currency was reduced. Sales of salted ox and cow hides were 67,000, of which 5,000 were at 654 reals, to be delivered in June, and for the reat 63 reals was the price, at which rate the market closed. Dry ox and cow hides had declined 14 real to 2 reals; 20,000 had been taken up for

XLIB

Germany, at from 72 reals to 70 reals, at which rate there were still buyers. For the States prices opened at 62, and declined to 60<sup>3</sup>. Salted horse hides sold at 20 reals, heavy weights, and 17 reals, light weights. Prices of salted matadero hides ranged from 58 to 55. Tailow fetched from 19 reals to 20 reals, last price. Of wool, 55,000 arrobas had come to hand during the month, chiefly medium qualities, the bulk of which was taken up by speculators. Rio advices are to the 9th of May. Owing to the extremely limited supplies of coffee during the month, which hardly reached an average of 2,000 bags per diem, the market had con-tinued to be firmly supported. From the 9th to the 30th of April 58,000 bags changed hands, at the rates quoted by last meil, assortments for the United States having then ruled at 6,350 reis to 6,600 reis per arroba. The following is a statement of the constrince of the United States

The following is a statement of the operations of the United States Branch Mint at New Orleans, for the month of April, 1860 :---

Gold from other sources	dols 3,742 3,368	27

and the stock and assortments now here of these are good. The demand for lumber has been fair, and the market has ruled very firm. Measrs Moran and Co., of Calcutts, writing on the 3rd ult., observe :--Our indigo market is closed, there being no demand whatever for such low descriptions as compose the remaining stock. In Daces, Furreed-pore, and Mymensingh, the plant has of late been greatly refreshed by showers, which, though generally light, have been rather frequent, and manufacturing in one concern commenced about the 20th ultimo, and other factories are now begioning. Appearances in these districts are reported to be very favourable. In Kishnaghur and Jessore there have also been some good showers, and, but for the difficulty with the ryots, the sowings would have been considerably more forward. So far as the weather is concerned there has not been much to complain of. In Maida, Beauleab, Putus, and Rajshye, rain would be very acceptable, but there are as yet few complaints. Purnesh has suffered severely for want of rain, and the prospects of the district are considered certainly unfavourable. Tirhoot and Chaprah have a fine crop of plant, which requires rain to strengthen and bring it on, and to disperse caterpillars which have here and there made their appearance. Rain is also much wanted in the Benares district, to refresh the Khoonties after such an unusually protracted drought. The objection on the part of the ryots to sow indigo still continues in Kishnaghur and in some of the Jessore factories bordering upon it. Exports of indigo from the 1st November, 185, to the evening of the 2nd current, 1860:.--To Great Britain, "18,769 chests; Havre and Bordeaux, 4,929 ; foreign, Europe, 64 ; Americs, 1,340 ; Guif, 1,731 ; sundry ports, 11--total, \*26,844. The following return shows the state of the note circulation in the United Kingdom

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending May 5, 1860, com-pared with the previous month :-n in the

At the corresponding period of the year 1850, it had been announced that the difference between England and France had been settled, and that M. Drouyn de Lhuys would return to his post in London within a few days.

In 1857, notwithstanding enormous shipments of silver to the East, gold was flowing into the Bank, and a reduction in the minimum from 6<sup>1</sup>/<sub>2</sub> to 6 per cent. was coming into prospect. An official statement just made described the position of the Treasury as unexpectedly favourable, enabling Government to pay the sum stipulated for the redemption of the Sound dues without having recourse to any extraordinary financial measures.

In 1858, the rate of discount of the Bank of France ras upon the point of being lowered from 4 to  $3\frac{1}{2}$  per cent., the bullion having increased two millions and three quarters sterling within a month.

In 1859, the Bank of England had just reduced their rate of discount from 3<sup>1</sup>/<sub>2</sub> to 3 per cent. The French and Sardi-nian armies in Italy fully maintained their advantage over the Austrians. The disruption of the Derby Administration was considered imminent, and the general political atmosphere was disturbed.

The amount of the "other" deposits, as compared with e "other" securities, showed, in 1850, a deficiency of the

NOMIST.

June 9, 1860.

816,7771; in 1857, a deficiency of 9,270,3541; in 1858. a deficiency of 871,8371; and in 1859, a deficiency of 3,107,1501. In 1860, the deficiency is 7,282,7421.

There has been no alteration of importance in the money market during the week under notice. It has been easy to get the best bills discounted at a fraction below the Bank of England minimum; but the rate is not below 34 per cent., and some of the largest establishments have asked 4 The supply of money in the open market is still fully equal to all requirements, but its tendency, as usual at this period of the quarter, is rather to diminish than to increase.

To-day, the demand was more active than upon any pr vious day of the week, and the business at the Bank, which latterly had been languid, became brisk.

With the exception of a decline in the rates for bills on Austria, in answer to the movement at Vienna, there is no variation of importance this week in the Continental exchanges.

The Magdalena is expected to take to-morrow nearly 100,000*l*, principally gold, for Brazil. The movements in bullion and in the Indian Government

paper are thus noticed by Messrs Pixley, Abell, and

The movements in bullion and in the Indian Government paper are thus noticed by Messrs Pixley, Abell, and Langley :-Gold.—The gold per City of Manchester, mentioned in our last circular, has been taken for exportation, and we have now to re-port the following additional arrivals :--The Illinois, from New York, with 23,000<sup>2</sup>; the Asia, from New York, with 24,000<sup>1</sup>, and about 60,000<sup>1</sup> in Russian gold coin ; these amounts have also been purchased, and will be sent away. The demand for gold for export is not, however, brisk, the Bank having had about 30,000<sup>1</sup> sent in during the past week. The Shannon takes 18,540<sup>1</sup> to the West Indies. The following ships are now on the way from Australia :-The Omar Pasha, out 95 days, with 61,000<sup>1</sup>; the Southampton, out 89 days, with 77,000<sup>1</sup>; the Dream, out 86 days, with 26,500<sup>1</sup>. The Fulton, has brought about 340,000 dollars from New York, but the species will not reach London until the 8th instant. Silver.—The market for silver is a little more active, and inquiries have been made for bars for the outgoing Bombay steamer ; we quote the pice as 61<sup>§</sup>d to 61<sup>§</sup>d per oz standard, but do not think that any large amount will be sent to the East by the next mail. The Sultan has brought 4,002<sup>1</sup> from the Peninsula, and severat small sums have been imported from the Continent. Mexican Dollars.—Some considerable amounts have been sold at 62<sup>§</sup>d per oz, but the market is now rather quiet. We do not, however, look for a further decline in price, as some orders are ex-pected to be executed for the next China mail. Exchange on India remains unchanged at 2s to 2s 0<sup>§</sup>d for 60 days' sight Bauk bills on Bombay and Calcutta. Madras, 1s 11<sup>§</sup>d to 2s. Bills with documents, 1s 11<sup>§</sup>d. India Government Loan Notes continue unchanged at late quo-tations, viz., 102<sup>§</sup> to 103 for 5<sup>§</sup> per Cents., 97<sup>§</sup> to 98 for 5 per Cents. Transactions in these securities are very limited, but Fires at 98 seem to be preferred. Quotations for Bullion.—Gold—Bar gold, 77s 9d per oz :td ;

Cents. Transactions in these securities are very limited, but Fives at 98 seem to be preferred. Quotations for Bullion.—Gold—Bar gold, 778 9d per oz td; bar gold, fine, 778 9d per oz std; bar gold, refinable, 788 per oz std; Spanish doubloons, 768 6d per oz, last price; South American doubloons, 748 per oz, last price; United States gold coin, 768 3fd per oz, last price. Silver—Bar silver, 5s 1fd to 5s 1fd per oz std; bar silver, containing 5 grs of gold, 5s 1fd to 5s 1fd per oz std; ilver, 5s 6fd per oz; Mexican dollars, 5s 2fd per oz; Spanish dollars (Carolus), 6s 2d per oz, last price; five-franc pieces, 4s 11fd per oz, last price. The stoppage of Messrs E. Bernoulli, Levant merchants

The stoppage of Messrs E. Bernoulli, Levant merchants and exchange dealers, is announced. The amount of the liabilities has not transpired.

The affairs of the Union Bank of London have again attracted a large share of public attention this week. On Wednesday the Committee of the Stock Exchange, published their report upon Pullinger's transactions in that establish-It is as follows :ment.

To THE MEMBERS OF THE STOCK EXCHANGE. Gentlemen-The Committee for General Purposes have already made known to you their several awards of punishment against Mr R. Johnston, Mr S. Sheldon, Mr T. Uzielli, Mr W. A. Bradock, and Messrs R. S., J. S., and C. J. Scrimgeour, for having carried on speculative transactions for W. G. Pullinger, when chief cashier to the Union Bank of London, without communicating with his employers ; and having also recorded their severe censure of the conduct of Messrs Bell and Ball, their duties, under censure of the conduct of Messrs Bell and Ball, their duties, under ordinary circumstances, might have been considered at an end. They think, however, that it should be publicly known that the offence for which the members suspended have been so severely dealt with was a disregard of the warning contained in a rule (No. 58) passed by the committee for the special protection of banking and other interests, and they deem it an act of justice to yourselves to give publicity to the result of a long and careful investigation, which enables them to state, that neither from any data furnished

# THE ECONOMIST.

by the Union Bank, nor by evidence otherwise obtained, have they any knowledge or suspicion that other members of the Stock Exchange are implicated in these unjustifiable transactions. The committee wish to make these facts known as speedily as possible, as they conceive that the Stock Exchange, a body numbering more than 1,000 members, and largely representing the commercial and financial interests of this country, has been suffering too long from a general reproach which, in reality, should only attach to five of its present firms—one of the offending parties, the firm of Messrs Bell and Ball, who carried on by far the largest operations for W. G. Pullinger, being, in consequence of default, in and since April, 1859, beyond the control of the committee. Your committee also consider that some notice should be taken

Your committee also consider that some notice should be taken of the circular issued in April last to the shareholders of the Union of the circular issued in April as to the shareholders of the Onion Bank of London, in which the directors, from the confessions of Pullinger, most hastily adopted by themselves, lead the public to infer that the enormous amount of 263,000<sup>4</sup>, embezzled by the delinquent clerk, had been lost by him in speculations on the Stock

Exchange. Your committee refrain from commenting on the evident laxity of that system of check which has proved itself not only insufficient to prevent the commission of a gigantic fraud, but has allowed it to remain undetected from year to year. Your committee wish distinctly to state, that the only documents possessed by the directors of the Union Bank, upon which they adopted the assertions of Pullinger, were certain brokers' notes and accounts, generally without heading or signature, and representing a triling loss of about 1,2900. Upon this point there can be no doubt, as the committee have seen and examined the whole of these papers; and the directors of the Union Bank admit that they neither had when they issued their circular, nor have since found, any other documents than those referred to. By an account of Bank notes passed and credits given, the Union

By an account of Bank notes passed and credits given, the Union Bank of London have furnished to your committee sufficient evi-Bank of London have furnished to your committee sumcient evi-dence to enable them to carry through a general and scarching in-quiry, including a viva voce examination of the brokers accused of having undertaken speculative business for Pullinger; but in order to obtain a full knowledge of the facts, a sub-committee was speto obtain a full knowledge of the facts, a sub-committee was spe-cially appointed to analyse and report upon each separate account; and, from their investigation, it results that the balance of monies actually paid by W. G. Pullinger, on account of speculative trans-actions, carried on through members of the Stock Exchange (in-cluding Messrs Bell and Ball), from January, 1855, when the de-falcations first commenced, up to April of the present year, amounted to a total of 53,2857. It is but reasonable to suppose that this amount would not have been so large had not Pullinger's opera-tions been greatly facilitated by the extraordinary power which he appears to have possessed in passing entries to the accounts, and in the pass books of those brokers who kept accounts at the Union Bank. Through what channels the immense balance of above 200,0001 has passed it is scarcely a question for Bank. Through what channels the immense balance of above 200,0000 has passed it is searcely a question for this committee to decide. But it appears, in an account furnished by the Union Bank, that the delinquent Pul-linger had passed credits amounting to 57,000l to an in-dividual named Nathan, who is reported to have died lately at Paris, possessed of considerable wealth, and who had, at the time these entries were made, an account with the Union Bank; but as Nathan never was a member of the Stock Exchange, the committee have no knowledge of his transactions. There is also very sufficient evidence that Pullinger was largely interested in the results of horse-racing. horse-racing.

evidence that Pullinger was largely interested in the results of horse-racing. To co-operate with the directors of the Union Bank, and to render them every assistance, has been the constant wish of the committee, and they have much pleasure in knowing that, from information forwarded through them, and by individual members of the Stock Exchange, the directors have been enabled to realise valuable assets, placed by Pullinger in the names of other persons. On the other hand, the directors of the Union Bank rot only fur-nished information leading to the suspension of Messrs Bradock, Johnston, Sheldon, and Uzielli, but, in answer to the earnest re-quests of your committee, promised to forward to them, as soon as obtained, every intelligence as to the participation of other members of the Stock Exchange in speculative transactions for Pullinger. The following facts will enable you to decide whether the promises made by the directors of the Union Bank have been falfilled. Immediately after the discovery of the enormous loss sustained by the Union Bank, Messrs Scrimgeour communicated to the bank, through the manager, Mr W. W. Scrimgeour, that they, the brokers to the Company, had carried on a speculative account for W. G. Pullinger; but the committee regret to say that no communication was made to them on this subject by either manager or directors, and the knowledge of the offence committee was obtained by your committee through an entirely different channel, and at an interval of more than a month after the first manager or directors, and the knowledge of the offence committed was obtained by your committee through an entirely different channel, and at an interval of more than a month after the first communication of Messrs. Scrimgeour to the manager of the Union Bank. Determined as your committee have been to ad-minister strict and impartial justice to all, and believing that the feelings of the directors of the Union Bank of London were entirely in unison with their own, the discovery of this important suppression has caused them considerable pain and surprise. In conclusion, your committee cannot but express regret that even aix firms of the Stock Exchange should have carried on specu-

lations on account of a clerk in a banking establishment; but they trust they have shown that they are determined to enforce obe-dience to a law passed specially to protect the interests of the public; and they feel confident they represent the feeling of the entire body of the Stock Exchange in saying that they deeply deplore the acts of those who, by their misconduct, have compromised the character of the Stock Exchange.—By order of the compromise the committee, Stock Exchange, June 5, 1860. GEORGE LOVELESS, Secretary.

Most of the facts here referred to had transpired previously, but the fact mentioned at the end of the last paragraph but one has provoked great animadversion. The following further communication from the Director

of the Union Bank was forwarded to the journals this evening :-

TO THE SHAREHOLDERS OF THE UNION BANK OF LONDON. The directors feel called upon to advert to a portion of the report recently issued by the committee of the Stock Exchange with reference to the frauds committed by W. G. Pullinger on this bank.

bank. The statement of the committee that the directors have been enabled to realise valuable assets from information obtained through them must have been made under some misapprehension, as the directors have not received any information of which they were not previously in possession from the committee which has led to that result; and the directors have reason to conclude that the information which was furnished by one member of the Stock Exchange was given before the committee commenced their inves-tioration.

The directors have already recovered upwards of 10,000/, and are engaged in inquiries which they trust may result in recovering a further portion of the funds of the bank.

a further portion of the finds of the bank. The directors are able to assure the proprietors that, after the strictest investigation, their first statement, announcing the total amount of loss which has been sustained, has been found correct within 542, and that no other deficiency exists in any department. They have been engaged in a close examination of the system of checks existing in the bank, and have in some departments intro-duced others which they trust will prove effectual safeguards against any repetition of fraud. The nonvietors will also learn with satisfaction that the loss

against any repetition of fraud. The proprietors will also learn with satisfaction that the loss which has been suffered has not affected the general business of the bank, while the number of proprietors has increased from 1,052 to 1,151 since the 19th April, being an addition of 99 partners. The directors consider that the general meeting will afford the most suitable opportunity for noticing some other statements in the report of the Stock Exchange Committee, in the accuracy of which they cannot acquiesce. The directors will then be prepared to give such full information on these and on other points, as they have reason to anticipate will prove satisfactory to the pro-

to give such full information on these and on other points, as they have reason to anticipate will prove satisfactory to the pro-prietors.—By order of the Court of Directors, HEREY NEWMARCH, Secretary. 2, Princes street, Mansion House, 8th June, 1860. Until the meeting referred to the public will do well to suspend their judgment. The particular points in contro-versy between the Directors of the Union Bank and the Committee of the Stock Exchange are of very trifling im-portance. But the credit of the Joint Stock Banks of London is a matter of national concern, and it will be gra-tifying to the public to learn that the "checks" now intro-duced into the system of the Union Bank of London are likely to be effectual. That some were wanted the frauds of Pullinger proves conclusively.

The resolution passed by the Committee of the Stock Ex-change, suspending Messrs Scrimgeour until March next, was posted up in the house on Tuesday morning, and is as fol-

dividends on Thursday; and those for Consols, New 3<sup>‡</sup> per Cents., New 2<sup>‡</sup> per Cents., New 5 per Cents., Annuities (January, 1880), and Indian 5 per Cent. Stock, to-day Friday).

The prospectus of the "Dock Warrants Advance and Discount Company (Limited)" is issued. This company proposes to open an advance and discount account with parties properly introduced, upon the deposit, as collateral security, of dock and wharf warrants, and other convertible securities, representing any and all kinds of merchandise, charging interest at the current discount rates upon the amount advanced, with a small commission for the trouble

# THE ECONOMIST.

# June 9, 1860.

attending the sampling and inspection of the goods; at the | Subjoined is our usual list of the closing prices of the same time affording the owners every facility to sample and effect sales, whereby they may be evabled to redeem any portion, or the whole, at any moment. It is proposed to receive deposits at call, bearing interest. The company's capital is fixed at 200,0001.

At the meeting of the Peninsular and Oriental Steam Navigation Company on Tuesday, the Directors' report, re-commending the usual dividend of 3<sup>1</sup>/<sub>2</sub> per cent. for the halfyear, was adopted.

At the meeting of proprietors of the Bank of British North America, held on Tuesday, the Directors' report, noti-fying the declaration of a half-yearly dividend at the rate of 6 per cent. per annum, free of income tax, payable on the 5th July, was adopted.

The annual meeting of the African Steam-ship Company also took place on Tuesday; the Directors' report, recom-mending a half-yearly dividend at the rate of 7 per cent. 7 per cent. per annum, was agreed to.

We have to announce that a fusion has taken place between the banking firms of Messrs Robarts and Co. and Sir John Lubbock and Co. Mr Weguelin is about to retire from the former establishment; but both Sir John Lubbock and his son will be partners in the new bank. Mr Pollard, of the London Joint Stock Bank, after a ser-

vice of 24 years, has resigned his position; but he will be recommended to join the Board of Directors, in which a vacancy has been caused by the decease of Mr Ormsby Gore.

A general meeting of the Commercial Dock Company was held to-day; the dividend agreed to was  $2\frac{1}{2}$  per cent. for the half-year.

The quotations for shares in new projects this afternoon were as follow :---Ocean Marine Insurance,  $1\frac{7}{5}$  to  $2\frac{1}{5}$  prem.; Universal Marine Insurance,  $\frac{1}{5}$  to  $\frac{3}{4}$  prem.; London and Provincial Marine Insurance,  $\frac{1}{5}$  to  $\frac{1}{4}$  dis.; Thames and Mersey Marine Insurance,  $1\frac{1}{2}$  to  $1\frac{1}{2}$  prem.; and London and South African Bank,  $\frac{1}{2}$  to  $\frac{1}{2}$  dis. The shares of the Thessalian Mining Company were

quoted to-day \$ to \$ prem. The allotment of the shares of the Thames and Mersey

Marine Insurance Company has taken place this week.

At Paris, to-day, the 3 per Cent. Rentes closed at 68.20 ex div. both for money and the account. After allowing for the deduction of the dividend, this quotation is about  $\frac{1}{8}$  per cent. above that current on last Friday.

have been very inactive, The English funds this week and rather dull in character, but prices are fairly sup-ported. The closing quotations of Consols this afternoon were  $94\frac{7}{4}$  to 95 for money, and 951 to  $\frac{4}{5}$  (or equal to  $93\frac{3}{4}$  to  $\frac{7}{4}$  ex div.) for the 10th of July. The settlement just completed showed a considerable supply of floating stock. Subjoined is our usual list of the highest and lowest prices of Consols every day; and the closing prices of the principal English and foreign stocks last Friday and this day:—

COMPARATIVE EXCHANGES. The quotation of gold at Paris is about at par, and the short ex-change on London is 25.12<sup>1</sup>/<sub>2</sub> per 1*l* sterling. On comparing these rates with the English Mint price of 3*l* 17s. 10<sup>3</sup>/<sub>2</sub>d per ounce for standard gold, it appears that gold is about 2-10ths per cent, dearer in Paris than in London. By advices from Hardward the

than in London. By advices from Hamburg the price of gold is 422½ per mark, and the short exchange on Londou is 13.3½ per 12 sterling. Standard gold at the English Mint price is, therefore, about 1-10th per cent. dearer in Hamburg than in London. The course of exchange at New York on London for bills at 60 days' sight is about 109½ per cent., which, when compared with the Mint par between the two countries, shows that the exchange is slightly in favour of England; and, after making allowance for charges of trans-port and difference of interest, the present rate leaves a trifling profit on the importation of gold from the United States.

WEEKLY CORN RETURNS.

## COMMERCIAL EPITOME. FRIDAY NIGHT.

FRIDAY NIGHT. A very limited supply of home grown wheat was on offer at Mark lane to-day, and the whole found buyers, at full quotations. Rather a large business was doing in foreign wheat, at a further improvement in value of from 1s to 2s per quarter. Spring corn moved off freely, at extreme rates, and country flour was held for 1s to 2s' per 280 lbs more money. The imports from abroad amount to 10,570 quarters of wheat; 2,180 barley; 26,230 oats; 3,080 sacks and 760 barrels of flour. At Liverpool, this morning, produce, generally, moved off freely, and prices had an upward tendency. About 500 vessels laden with grain are now on passage from the Mediterranean and Black Seas; but a less proportion than usual of these have cargoes of wheat. At New York, on the 26th ult., large supplies of wheat and flour were on offer, and the demand ruled steady, at previous rates. Advices from Alexandria to the 26th ult. forwarded by Messrs Briggs and Co., state that wheat was selling at from 35s to 37s 6d; beans, 27s to 28s; and barley, 20s 2d to 20s 8d per quarter. quarter.

quarter. The demand in the Liverpool cotton market during the week has been rather limited, the total sales amounting to 48,000 bales, and include 39,000 bales to spinners. 1,000 bales on speculation, and 8,000 bales for export. Quotations are without change since Friday last. To-day the market closes dull; sales 7,000 bales. The tone of the market throughout the week has been very quiet, and, although quotations are not reduced, still lower rates have been accepted to close sales. The stock has now reached its largest proportion, and shows the large figure of 1,358,000 bales, which makes buyers very shy, and sellers glad to realise. The latest prices paid for cotton at Alexandria are 5½ d to 8.77d per lb. The New York cotton market, on the 26th instant, was firm, at full quotations.

per lb. The New York cotton market, on the 20th instant, was firm, at full quotations. The public sales of tea have gone off without much spirit; at about previous rates. Privately, the demand is by no means active, yet prices are supported. Inrost of TEA in London, from Jan. 1 to June 1, 1860, and the Srock on hand on June 1, 1860, compared with the corresponding date in 1859.

# THE ECONOMIST.

# The following report, in reference to the tea and silk markets, is dated Hong Kong, April 25 :--

The following report, in reference to the ten and slik markets, is dated Hong Kong, April 25 :--Tem-Settlements have been very trifling, and confined to gunpowder and scented kinds. No transactions have taken place in congou, the stock of which is five chope. The new Tayahan tess have not yet come to market, the dispute about the inland duties being still unsettled. Sales during the fortaight are-Scented orange pekoe, 2,000 boxes, at 18 to 24 taels for low to medium mixed leaf; scented caper, 1,500 boxes, at 14 to 16 taels, low mixed leaf; gunpowder 2,000 boxes, at 11 to 13 taels, mixed spurious leaf. Amoy advices are to the 21st inst. Little doing in imports. In tes, some contracts have been made for new teas, and the means in expected to be a good one both in quantity and quality. Foe-chow advices are to the 18th. Tea-Transactions have been very insignificant, amounting to only 1,050 chests congou, at 9 taels for low dust to 18 taels for "but middling." Stock is reduced to 3,200 chests, chiefy "very low" to "fair common" kinds. Prices romain un-altered. No departures have taken place, and no vased on the berth. Shanghai advices are to the 17th itst. Silk-Transactions during the fort-night have been small, amounting to only 500 bales at a reduction of 15 to 20 taels for Tastlee, and 10 taels for Tayasama. Quotations were :-Now. 1-2 Tastlee, none; Nos. 1-2 Tayasama, none; No. 3 Tastlee, 390-95 taels; No. 3 Tayasamo; 330 taels; No. 4 Tastlee, 370-75 ta-1s ; No. 4 Tayasams, 315 taels; inferior Tastlee, 340 360 taels; inferior Tayasams 300 310. The total export of silk from China to Europe is 61,079 bale; against 70,330 bales, or a decrease for this season of 9,231 bales. Tea-During the mach fortunist only a vers avail humingen has heen done, at 300 310. The total export of silk from China to Europe is 61,079 bales, against 70,330 bales, or a decrease for this season of 9,251 bales. Tea.— During the past fortnight only a very small business has been done, at former prices. Settlements for the fortnight are :—Congou, Ningchow, 1,000 chests common to fair, at 26 to 29 taels; congou, Shanghai packed, 600 chests, at 15 to 17 taels; pekce, finest, 260 chests, at 40 to 58 taels; green teas, 6,000 half-chests (including 2,000 of Japan). Stock —Black, 5,600 chests; green, 6,000 half-chests, Three vessels, the Con-stantia, Benvoirlich, and Sir George Follock, had left for London, the latter with Japan cargo. The Invincible was loading at 27. Total export of tes from China to Great Britain is 75,043,200 lbs, sginat the same time last year 53,800,900 lbs, or an increase of 21,242,300 lbs for this season. To the United States the export is 30,087,000 lbs, againat 27,491,300 lbs last year, or an increase for 1859-60 of 2,595,700 lbs. In the early part of the week, all raw suczars changed hands

In the early part of the week, all raw sugars changed hands somewhat heavily, at 6d per cwt less money. Since then, however, the demand has improved, and the quotations have shown a har-dening tendency. The refined market has been somewhat steady.

COMPARATIVE STATEMENT of the SHIPMENT of SUGAR from the Mauritius, from the beginning of each Gron to the lat May of each Year

The state of the coffee trade at Colombo to the 11th ult., is thus reported by Messrs A. W. Heale and Co. :

The South-west Monsoon not baving yet commenced, exporters have on enabled to make considerable progress in shipments of coffee, which now stand as follows :--PLANTATION COPPER

To	Great Britain cwts !		against	last year,	owte	246,629
	Foreign Ports	30,391			-	31.820
	Australia and India	6,499	-		-	4,823

The crop of native coffee from the Kaudian country being exhausted, a can do little more than report an almost total cessation of business in searticle. For such small parcels of Ouvah crop as have found their way the article. the article. For such small parcels of Oavah erop as have found their way to market, extreme prices have been paid. We hear of but one transaction in plantation coffee, of which there remains a good deal for shipment on owner' accounte, but very little for sale on the spot. Plantation coffee, low, 11s 3d per bhl; do. mountain, 11s 6d to 11s 9d per bhl. Native coffee, unpicked, 42s per cwt; do. picked and dried, 45s per cwt. Cocoa has moved off heavily at further reduced rates; but there has been an improved inquiry for most descriptions of rice at ex-treme currencies. The saltpetre market has been devoid of ani-mation, and the transactions in wool have been very limited. Messrs Hazard and Co. report the result of the last coloniel wool sale

Hazard and Co. report the result of the last colonial wool sales as under :-

Initial and Co. report the result of the hist colonial wool sates as under :— Port Philip fleece about  $\frac{1}{2}$ d to 1d lower ; scoured the same as in March. Wools in the grease from this quarter realised high rates. Sydney of all descriptions brought fully last sale's prices. Adelaide, as usual, mostly in the grease, was in some instances a triffe easier as to clothing worts only; combing qualities sold fully up to March quotations. Van Die-man's Land, chiefly in first-rate condition, was eagerly competed for, and reali-ed very satisfactory prices. New Zealand, of which description only a very small quantity was offered, sold well at March rates. Swan River was much inquired for, and the small quantity to hand sold at extreme rates. Cape of Good Hope was scarce, and the finer sorts, which were much wanted both for home and foreign con-sumption, sold at last sale's prices: in middling and inferior descriptions we notice a decline of  $\frac{1}{2}$ d to 1d per lb. The great feature of the sales has no doubt been the large quantity taken for export, which is estimated at between 25 and 30,000 bales, consisting of the finet descriptions of all classes of wools. The next series of London colonial sales will take place in July, for which the following quantity has already arrived :— Sydney, 9,192; Port Philip, 13,179; Van Dieman's Land, 7,660; Adelaide, 3,611; New Zealand, 6,472; Swan River, 1,010; Cape of Good Hope, 4,946; total, 46,070 bales.

3,611; New Zealand, 6,472; Swan River, 1,010; Cape of Good Hope, 4,946; total, 46,070 bales.
Owing to the approaching quarterly sales, indigo has moved off s'owly, but without leading to any change in value.
We have no improvement to notice in the demand for hemp, and, in some instances, Manilla qualities have ruled lower. Flax has commanded very little attention.
COMPARATIVE STATEMENT of HEMP and FLAX remaining on hand in the London Warehouses, the Dealers' Stocks included, on the lat of June, 1859 and 1860.

Stock in the hands of the Trading Society for their annual sale (28th June)

of the 23rd ult., "continues light for most goods of domestic manufac-ture, and the market remains without noticeable change. Transactions have been full as heavy as usual at this advanced season of the year, however, and prices are for the most part supported. Stocks year, however, and prices are for the most part supported. Stocks continue fair, and manufacturers are mainly employed on contracts running into the fall months. Extraordinary efforts are being put forth to procure a greater diversity of styles than usual, and many of the patterns now being constructed are entirely new, and re-presented to be unusually attractive. Foreign goods are in fair request for desirable styles, at steady rates. Undesirable goods are selling slowly at about previous prices."

The operations of the trade have not been equal to their consumption, but a fair business continues to be done for export. The supply offering is still excessive, and holders meet the buyer very freely. Prices have been exceedingly irregular. Our quotations are again reduced 1d to 1d per 1b in most current grades of American. Egypt an are nominally without change, but difficult to move. Brazil are languid and depressed. East India alightly lower. The sales to-day are estimated at 7,000 bales. The market remains dull. The reported export amounts to 8,280 bales, con-sisting of 4,560 American, 220 Brazil, and 3,500 East India.

## MARKETS IN THE MANUFACTURING DISTRICTS.

MARKETS IN THE MANUFACTURING DISTRICTS. Although there has been rather an improved feeling in the demand for goods in moet of the manufacturing markets, when compared with last week, export buyers, almost generally, have operated with extreme caution, and no advance has taken place in the quotations. In some instances, stocks have somewhat accumulated; but, for the time of year, they are still very moderate. The home trade may be represented as in a most healthy state. There has been rather more business doing in the iron districts. Coals, however, have ruled dull, at further depressed rates. MANCHENTER, June 7.—Business has scarcely resumed its accus-tomed course since the Whitsuntide holidays, and quotations have been still rather on the decline. Besides, many of the home trade warehouses have been occupied in taking stock. In yarns for export there have been a few trifling orders placed for Germany, and even for Italy. In qualities for India, low offers have been current, in 40°s mule for example, of about Id per lb below the recent highest prices. In shirtings for the same market similar offers have been numerous, but in neither case have sellers generally made up their minds to accept them. The India letters, though discoursging in tone, appear to have brought orders which seem likely to be filled up at present limits, so that to some extent a resumption of purchases is considered not for off. COMPARATIVE STATEMENT OF THE COTION TRADE.

COMPARATIVE STATEMENT OF THE COTTON TRADE.

cloth halls. The transactions in the warehouses show more confidence, and a fair average amount has been done since this day week.——HALI-FAX.—Light goods are the most saleable, but fabrics suitable for autumn are inquired for, and some of the manufacturers are well engaged on orders for the latter. The woollen trade continues active, and, indeed, the same may be said as to the worsted and carpet trades; but though manufacturers are mostly well employed, there is some slackness in the dsmand, and stocks are slightly increasing on their hands. Wools, nob-withstanding this want of briskness in the demand for yarns and fabrics,

XUM

# THE ECONOMIST.

command high prices, and are stiffly held at the topmost of late quota-tions.— ROCHDALE.—Wool—In some cases moderate quantities have been sold at 5s, and in other cases at 10s, in advance of the prices cor-rent last week. The stocks of English wool are not large. Flannel—The demand is still firm. There is a brinker trade in eaxonies and unions. The Yorkshire trade continues good.—LEICESTER.—Manufacturers are keeping down stock as much as possible, and are making principally to order. In the continue good.—LEICESTER.—Manufacturers are he continued high price of wools having mecessitated spinners to make the advance.—BRADFORD. —The assortment of wools offering is by no means good, and prices continue firm. Nolls and brokes are firm. Yarns—There is a disposition on the part of shippers to increase the amount of business, but this is checked by the high prices. Pieces—Where goods are really wanted, manufacturers are getting an advance in price; but this feature is very circumscribed. Merchants who have stocks on hand will not give the advance sought for. Manufacturers are already acting on the defensive, and stopping their looms.—WOLVERHAMPTON.—There basbeen more business doing in mative pig iron, the stocks of manufacturers having been reduced considerably during the past five waeks. The reports from North Staffordshire, the Middlesborough district, Derbyshire; and Lan-cashire, are all favourable. More orders have likewize been received in the North for pige, and the trade on the whole must be reported brisker than it was a week since. The demand for railway bars, howwer, is still languid, and several of the works on the "hills" are turning their at-tention to other kinds of iron. The passing of Mr Morrill's bill through the House of Representatives at Washington, increasing the duties on ron, though the measure is not expected to pass the Upper House, has given rise to much uneasiness here..—GLASOW.—The shipments of iron last month were in succes of these, 1859, by 4,016 tons, which fully confirms the opinion command high prices, and are stiffly held at the topmost of late quotawhich fully confirms the opinions we expressed in our previous reports; and should the price of iron remain at, or under its present value, our home shipments will, for a time, continue as large, if not larger, than these of last year. Shipments in May, 1860: ...Foreign, 20,362; cossi-wise, 45,305; 65,667 tons. In May, 1859:...Foreign, 24,224; coastwise, 45,305; 65,667 tone wise, 37,427; 61,651 tons.

# CORN.

# AMERICAN GRAIN AND FLOUR MARKETS.

AMERICAN GRAIN AND FLOUR MARKETS. NEW YORK, May 23.—FLOUR AND MEAL.—The market for State and Western flour has been heavy for the most part, and prices tonded in favour of the purchaser. The sales have been to a fair extent, however, both for consumption and shipment, though comparatively little has been exported since our last issue. Transactions for the three days comprise 40,000 bbls, including 11,400 bbls yesterday, closing heavily at a decline of 5 cents per bbl on the poorer grades, to which we conform our quotations. Canada flour is in limited request, and prices are somewhat lower. The sales are 1,550 bbls, including 550 bbls yester-days. Southern flour has been duil and heavy, and prices have declined somewhat, with still a downward tendency at the close. The sales aggre-gate 3,800 bbls, including 1,400 bbls yesterday, at 6.75 dols for Brandy-wine, 6.70 dols to 7.65 dols for Richencnd city, 5.85 dols to 7 dols for Ba-timore. Other kinds are quiet and unchanged. Export of wheat flour timore. Other kinds are quiet and unchanged. Export of wheat flour from 1st to 22nd May, 65,702 bbls, against 44,003 in 1859.

# LONDON MARKETS.

# STATE OF THE CORN TRADE FOR THE WEEK.

MARK LANE, FRIDAY EVENING. The arrivals of English wheat up to our market, this week, have been on a very moderate scale, but, on the whole, in fair saleable condition. Both red and white qualities have changed hands somewhat freely, at an improvement in value of from 1s to 2s per quarter. There has been an improvement in value of from 1s to 2s per quarter. There has been an improved inquiry for foreign wheat, at 2s advance; but the transactions have not been to say extensive, owing to the high pretensions of im-porters. Most descriptions of barley have commanded fully previous rates, and there has been rather more doing in mail, especially fine parcels. The imports of foreign oats, though tolerably extensive, have gone off freely, at previous currencies. Beans have risen is per quarter; but no advance has taken place in the value of peas. The flour trade has been somewhat firm, and the quotations have advanced is per 280 lbs.

somewhat nrm, and the quotations have advanced is per 280 lbs. Advices from most parts of the country are decidedly unfavourable as regards the general appearance of the wheat crop. In several districts it has assumed a yellow tinge, and not a few of the growers apprehend a de-cided falling off in this year's yield. It is, of course, too early to form a conclusive opinion on so important a matter; but, unquestionably, pre-ment appearances do not favour a large return. As regards barley, oats, beans, and peas, however, the accounts are, on the whole, satisfactory. The leading country markets have conclused to be exemptive annulad

The leading country markets have continued to be scantily applied with wheat, and the trade has been somewhat firm at 1s to 2s per gr more money. This advance, however, has not been generally paid. In the value of spring corn no change of importance has taken place, but the

value of flour has somewhat improved. In some parts of Scotland, wheat has sold at slightly enhanced rates; but the demand has been by no means active. Other produce has combut the demand has been by no means active. Other produce has com-manded very fall prices. The shipments to the South have fallen off to orte

The Irish markets have been somewhat firm. Fine wheat, oats, and four have realised prices against buyers; but the business done has not

Hour nave reason prices against ouyers; out the business done has not been to say extensive. Only a limited supply of English wheat was on sale to-day, and it was mostly cleared off at Monday's currency. Foreign wheat moved off briskly, at 1 a to 2s per quarter more money. There was a steady sale for all spring corn, at extreme rates. Country flour was held at 2s more money. Mo Ed Dairboad between the dair so the dair of the set of the set. Mr Ed. Rainford states that 47 vessels laden with grain have arrived off coast since the 31st ult., and that there has been an active demand

for floating cargoes, at very full prices.

COLONIAL AND FOREIGN PRODUCE MARKETS. TRANSACTIONS OF THE WEEK. FOR REFORE OF THIS DAY'S MARKETS, AEE "POSTSCHTP." MINCING LANK, FRIDAY MORNING. SUGAR.—The public sales have gone off without animation, fine qualities brely supporting their former value, while low to middling occasionally sold at from 6d to 1s under last week's rates, and the general tone of the market remains without improvement. Floating cargoes have found dury on easier terms. Crystallised Mauritius has been taken freely by the grocers. 529 casks Barbadees were about half disposed of at 38s to 43b for low to very gond vallow. and 35s 6d to 37s 6d for hown : also some grocers. 529 casks Barbadoen were about half disposed of at 38s to 43n for low to very good yellow, and 35s 6d to 37s 6d for brown; also some Jamaica at 37s to 40s per cwt for brown and grey. Nearly 10,000 mms were landed last week, and, notwithstanding the large delivery, the stock showed a further increase, and now amounts to 65,000 tons, against 50,000 tons in 1859. The stock in Great Britain is about 110,000 tons. *Mauritius*.—Of 16,603 bags, a large proportion found buyers: grey and yellow, 37s 6d to 40s 6d; grainy, 39s to 45s 6d; crystallised, 41s 6d to 46s 6d; hrown, 31s to 37s mer cwt for years low derive to some

and yendow, 5/8 od to 405 od; grainy, 598 to 458 od; crystalized, 418 6d to 465 6d; brown, 31s to 37s per cwt for very low dark to good. Bengal.-2,300 bags about half sold: good to fine Bally, 44s 6d to 45s 6d; syrups, 40s 6d per cwt. Peneng.-623 bags found buyers as follows: brown, 34s 6d to 36s 6d; grey and soft yellow, 37s 6d to 41s per cwt. Madras.-3,534 bags partly sold at 31s 6d to 36s per cwt for native brown and yellow.

brown and yellew. Foreion.-5,295 bags Chins, by auction, were about half disposed of: soft white, 44s to 44s 6d; low brown, 30s 6d to 31s; soft greyish yellew bought in at 36s 6d to 38s. 10,961 bags Manilia were withdrawn, but since chiefly sold at 36s to 36s 6d for clayed. 320 casks 150 barrels Porto Rico sold at 38s to 44s 6d. 1,299 boxes Havana were taken in shigh prices. Two floating cargoes of Havana, Nos. 11 to 12, have sold at 26s 9d for export; and one, No. 115, at 27s Sd for the United Kingdom; also a landed cargo, Nos. 105 to 11, at 40s 6d per cwt duty mid raid.

id. Refined.—The market is quiet, but sales are only occasionally made at err prices. Crushed keeps in steady demand. Common dry goods lower prices.

Notes prices. Construction of the second sec 17s 6d per cwt for muscovado kind.

The appearance of the Government contract for 100,000 gallons has not improved the demand. Yesterday, 200 puns Leewards sold at 18 7d per proof gallon.

improved the demand. Yesterday, 200 puns Leewards sold at 1s 7d per proof gallon. Cocoa.—The market is liberally supplied, and prices of Trinidad have declined about 2s; but 1,335 bags by auction only partly sold : grey for superior red, 70s to 86s; a few lots very fine, 95s to 97s 6d. 725 bags Gre-nada found buyers on easier terms : grey and red, 60s to 66s; bright red, 68s to 71s. 202 bags Gaayaquil were withdrawn at 72s 6d per ext. Tra — Although the market continues from it hes not heap at all

red, 68s to 71s. 202 bags Guayaquil were withdrawn at 72s 6d per ext. Tra.—Although the market continues firm, it has not been at all active since the close of last week. General quotations have, however, been maintained. Several public sales will be held to-day. The stock in Loodon is 60,000,000 lbs, against 62,500,000 lbs last year. Correx.—The improved fieling which characterised the market last week has continued, and prices of plantation coffee generally are rather higher, especially for coloury kinds. 774 casks 192 barrels 310 bags, by auction, went off with spirit, the range of quotations being chiefly fine 66s to 74s 6d for fine fine ordinary small berry to good middling, with a small portion of amperior quality at 78s 6d to 79s. 93 casks 1,466 barrels and bags native realised 60s to 62s for good ordinary to good bold picked. 40 half-bales Mochs, good garbled short berry, 115s. 100 bags pale and duil Costa Rica, 63s to 63s 6d per ewt. RICE.—A large business has been done, and, in some instances, at rather higher prices, transactions including white Bengal at 9s 10jd

Rich.—A large dusiness has been done, and, in some initiances, it rather higher prices, transactions including white Bengal at 98 10 jd to 10s 6d for the lower kinds, and 11s to 14s 6d for low middling to fine white; low to good Rangoon, 8s 4jd to 9s 6d; Necrancie Arrasen, 9s to 9s 9d; low Moulmein, 8s 9d. By auction, 688 bags Bengal realised 11s to 11s 6d per cwt for low middling to middling white.

Deliveries iait week 160 tons. METALS.—The market still presents a quiet appearance, but within the past few days there has been rather more business done in some kinds. Scotch pig iron, after receding to 49s 6d, closes at 50s 6d per ton. Forsign tin is inactive: Banca, 136s to 137s; Straits, 129s to 130s. The former has sold to arrive at equal to 136s per cwt laid down here. English copper now meets with more incurry. Several contract here here made copper now meets with more inquiry. Several contracts have been m in spelter at 20/2s 6d to 20/7s 6d on the spot and to arrive.

ıt

# THE ECONOMIST.

Hamp. - 625 bales Manilia, by anction, partly sold at 21/10s for com-men quality, but there are not further sellers at that reduction. The jus sales held on Wednesday went off well, and 6,600 bales mostly sold at very fell prices, low to fine quality ranging from 14/2s to 21/5s per ton. Privately, a considerable inquiry prevails. The stock on the 1st instant had increased to 13,500 tons, but the quantity afloat is much n last year. aller the

smaller than last year. OILS.-Olive has been almost neglected. 100 tuns colonial sperm have changed hands at the recent decline, viz., at 92l per tan. Coccos-nut is inthe dearer: Cochin, 45s 6d; Ceylon, 43s to 44s; to arrive, at the latter price. Palm remains firm at 45s, with buyers. The linseed market has been very steady at 28s on the spot; 28s 3d is now demanded, and 29s 6d for delivery in the last four months of the year. The unfavourable where for the continuat rapeased erons has continued. Foreign the 29s 6d for delivery in the last four months of the year. The unfavourable wanther for the continental rapesed crops has continued. Foreign re-fand is quoted 42s 6d to 43s; 45s 6d to 46s for delivery in the last four months; brown, 40s 6d and 43s per cwt respectively. Taktow.—The market has again become quiet, and prices slightly favourthe buyers : St Petersburg sort Y. C. on the spot, 52s to 52s 3d; for forward deliveries, 51s 9d per cwt. The clearances last week showed a meterial increase.

terial increase.

# POSTSCRIPT.

POSTSCRIPT. FRIDAT EVENTIG. SUGAR.—The market was rather firmer to-day. 980 casks West India found buyers, making the week's business 3,119 casks. 2,613 bags Mauritus by auction realised the previous value. 1,197 bags native Madras were chiefly bought in. 227 casks 58 barrels Cuba sold at 361 to 406 6d. 637 boxes Havana, 408 to 475 for yellow and florettes. Corres.—300 casks 124 barrels and bags plantation sold steadily at 67s to 76s. 30 casks 124 barrels and bags plantation sold steadily at 67s to 76s. 30 casks 390 bags native, 60s to 61s. 120 packages East India, 62s 6d to 64s 6d per cwt. TEA.—The sales commenced to-day, and went off flatly. 8,500 packages passed, and 5,460 packages sold. Congous barely maintained their previous value.

FRIDAY EVENING.

the duty.

value.

SPICES.--150 to the set of a 8d per lb. 201 Darrets Journels Journ

to 358 6d per cwr. Olls.-By suction, Ceylon brought 43s to 44s; Cochin, 45s to 46s; Sydney, 37s to 43s 9d per cwt, being dearer. TALLOW.-Foreign unaltered. 208 pipes South American, by auction, pertail at 52s 6d to 52s 9d. 107 casks Australian, 48s 3d to 52s 6d. part sold at 52s 6d to . Town, 53s 6d per cwt.

## ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar has been very quiet this week, without any material alteration in prices. Nothing doing for export. Some few sales have been made in Dutch crushed, fash in Holland, viz., 50 tons of V. O. in tierces, at 31s; and 50 tons of W.& Z., at 30s 3d hogeheads. Some few other parcels, not werk conting. with quoting.

with quoting. GRENN FRUIT.—A good demand for all kinds. Oranges have im-proved in price; some parcels of Lisbon, sold by Keeling and Hunt at public sale, went at an advance of 3s to 5s. per package. Lemons of good quality in request. Shipments from Palermo have ceased, owing to the political state of affairs. Nuts have a moderate sale.

political state of affairs. Nuts have a moderate sale. Day FRUIT.-Five public sales took place on the 6th instant. Of about 500 tons currants offered, only the damaged portion were sold at a decline of 2s; but sound fruit remains unaltered in quotations, but market depressed. Valentia raisins are selling for export at 22s; good Chesmes in boxes done at 26s to 27s. Clearances of fruit are barely equal to those of last year at this period. ENGLISH WOOL.-Market quiet; prices firm. COLONIAL WOOL.-The market remains firm. FLAX unaltered.

FLAX unaltered.

Construct. Wool. — Ine market remains firm. Frax usalkered. HEMP quiet, and very few transactions have taken place this week. CORTON. — Sales of cotton wool from Friday, lat June, to Thursday, 7th, inclassive: - 700 bales Surat at 3d to 4Å1 for ordinary to fully fair, and 4Åd to 4Åd for fair to good fair sawginned; 700 bales Madras, 4Åd to 5Åd for middling fair to good fair Tinnevelly, and 3Åd for fair Western. The market has been dull and prices irregular, although a fair amount of businees has been transacted. The lower qualities of Surat have declined fully Åd per 1b, whilst the better sorts are unchanged. Sawgianed is heavy of sale, and may be quoted Åd per 1b lower during the fortnight. Madras has realised previous rates. SIEK.—Market continues active ; prices firm. LEATHER AND HIDES.—At Leadenhall this week, the supplies were small, and a very limited amount of businees was done without alteration of prices. In South American bides also a very small amount of businees has been transacted. The arrival of the Brazi mail shows that a considerable number of hides from the River Plate are preparing for shipment, as well as about 130,000 now aftoat, so that the stock may

for shipment, as well as about 130,000 now afloat, so that the stock may shortly be considerably increased. There has been no public sale of shortly be consid-hides this week.

METALS.—There is little to remark upon metals, the market continuing inanimate. Copper has been sold largely under the market quotations of English, but in foreign little has been done, as holders are unwilling to yield to buyers' ideas of price. Iron is uniformly flat in demand. Tin keeps steady for all descriptions. Spelter has rallied a little, and is in demand at the improved rates. Lead is a trifle easier to buy. Tin plates measurible to have:

were without change. TALLOW.—Official market letter issued this evening:—Town tallow, 53s 6d; fat by do., 2s 9½ d; Yellow Russian, 53s 6d; molted staff, 53s 6d; rough do., 22s 6d; greaves, 16s; good dregs, 7s. Imports this week 3,202

## PROVISIONS.

Bacon market, though steady, shows some signs of improvement: good shipments 71s f.o.b. Higher prices are looked for. Grass Friesland 100s, quality good. Very little doing in hams, owing, no doubt, to the lateness of the season.

## METROPOLITAN CATTLE MARKET.

METROPOLITAN CATTLE MARKET. THURSDAY, June 7.—A very limited supply of beasts, chiefly in middling condition, was on sale is to-day's market. All breeds moved off readily, at fully Monday's quotations, and the primest Scots would have realised 5s 8d per 8 lbs. Although the show of sheep was by no means extensive, the mutton trade was heavy, at 2d per 8 lbs less money. We have to report a dull easle for lambs, at a fall in value from 2d to 4d per 8 lbs. The veal trade was very inactive, and prices gave way 2d per 8 lbs. There was very little business doing either in pigs or milch cows, and quotations were barely supported. Per 5 lbs to sink the offal.

HOP MARKET. FRIDAY, June 8.—The trade is steady, at late prices. Nothing doing on

COAL MARKET. FRIDAY, June 8.—Small supplies have caused a further rise; best Wall's" end, 18s 3d down to 16s per ton; Hartley's, 15s 6d to 16s 6d; Mannfacturers, 13s 3d to 15s 6d. Ships at market, 20, all sold; at sea, 115.

# LIVERPOOL MARKETS.

# WOOL.

(FROM OUR OWN CORRESPONDENT.) FEIDAY, June 8.-There has been rather more inquiry this week than for some time past, and the transactions are to a moderate extent at very steady prices, with very light stocks of all nseful kinds now on hand. CORN.

CORN. (FROM OUE OWN CORRESPONDENT.) FRIDAY, June 8.—A good consumptive demand for wheat at rather better prices than were obtainable on Tuesday. Flour in fair request, at a slight advance. All other articles remain quiet.

# METALS.

METALS. (FROM OUR OWN CORRESPONDENT.) FRIDAY, June 8.—There is little change to report in the market for manufactured iron, and the prices of the better descriptions have been pretty well supported during the past week. In Socich pig iron there has been more steadiness in price during the week, with a fair business doing. The demand for copper at present quotations has been almost entirely con-fined to consumptive requirements. Lead continues dull. Most other metals are without alteration.

# The Gasette.

# HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zine Paint is cheaper than White Lead. It is most durable and beautiful paint known, and does not stain or discolour with the London atmos-

The Billing of the set of the set of this Paint, with six gallons of Oil, covers as much surface CHARFERS. — Two hundred-weight of this Paint, with six gallons of Oil, covers as much surface at three hundred-weight of White Lead and twelve gallons of Oil. It is cheaper in the first instance, at well as desirable on every consideration. ADULTREATIONS. — Prejudice is caused by some Paint Grinders selling Zinc Paint adulterated with Sulphate of Barytes, some even to the extent of thirty per cost. Whether this is sold under the name of "Improved Zinc Paint," or is candidly sold as Number Two or Three qualities, no Painter can produce good work with it. He naturally condemns Zinc Paint allogether. That Painters have never seen the best Zinc Paint is evident, or they would not use any other site for their best work. To prevent the prejudice which the inferior article must produce, each Oak of Pure White Zinc is stamped "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET.
