#### TO THE PRESENT EDITION.

THERE cannot be a doubt but that a Book, like this, purposely adapted to the use of young persons of both sexes, copious beyond former examples, singularly various in its contents, selected from writers whose characters are established without controversy, abounding with entertainment and useful information, inculating the purest principles of morality and religion, and displaying excellent models of style and language, must contribute most effectually to the improvement of the RISING GENERATION in knowledge, taste, and virtue. It must form at ence the elegant scholar and the enlightened member of civil society. The public have indeed already felt and acknowledged by the least fallible proof, their general reception of it, its great utility. It has been diffused throughout all the most rescalence, which may one day arrive at maturity, and add to the happiness of the community and of human nature. Insusting virtuous and liveral ideas at the most susceptible age into the minds of a whole nation, its effect must be in the highest degree salutary, on the rising race, and on lute posterity.

What English book similar to this volume, calculated entirely for the use of young students at schools, and under private tuition, was to be found in the days of our sathers? None certainly. The consequence was, that the English Part of education (to many the most important part) was defective even in places most consequence was, that the English Part of education (to many the most important part) was defective even in places most consequence was to classify and write it tolerably, who, from disuse of the want of models for practice, were watchedly qualified to do either in their native language. From this unhappy circumstance, chastical education was brought into some degree of disgrace; and it was certainly preposterous, to study during many of the best years of life, foreign and dead languages, with the most scrupulous accuracy, and at the same time mirely to negligit that mother tongue, which is in daily and hourly requisition; to be well read in Cierca, and a total stranger to Addison; to have Homer and Horace by hours, and to know little more than the names of Milton and Port

Learning, thus defective in a point so obvious to detection, incurred the imputation of pedantry. It was observed to assume great pride, the important air of supergrift, without displaying to the common observer any suft pretensions to it. It was appeared with marks of inferiority when brought into occasional collision with

with well-informed understandings 'cultivated by English diterature alone, but improved in the school of experience. Persons who had never drunk at the classic fountains, but had been confined in their education to English, triumphed over the scholar; and learning often had her head in consustion, when pointed at as pedantry by the singer of a DUNCE.

It became highly expedient therefore to introduce more of English reading into our classical schools; that those who went out into the world with their coffers richly slored with the golden medals of antiquity, might at the same time be furnished with a sufficiency of current coin from the modern mint, for the commerce of daily use that there was no school book, copious and various enough, calculated entirely for this purpose. The Greeian and Roman History, the Spectators, and Plutanch's Lives, were indeed sometimes introduced, and certainly with great advantage. But still, an uniformity of English books in schools, was a desideratum. It was desirable that all the students of the same class, provided with the same book, containing the proper variety, might be enabled to read it together, and thus benefit each other by the emulous sludy of the same subject or composition, at the same time, under the eye of their common master.

For this important purpose, the large collections entitled "ELEGANT EXTRACTS," both in Prose and Verse, were projected and completed by the present Editor. Their reception is the fullest testimony in savour both of the design and its execution. Several editions, consisting of very numerous impressions, have been rapidly circulated, and a new one is now demanded. Public encouragement has not operated on the Editor as a seduction to indosence, but as a spur to fresh exertion, and as the press proceeded, great additions, alterations, and improvements, have been made in every Edition, without regard to encreasing expence or trouble. The advantage has hitherto chiefly redounded to the public; for those who are able to estimate the expence of such works as these, and are acquainted with the embarrassments that sometimes impede their progress, or render them unproductive, will readily believe it may happen, that the reward of the Projector, Editor, and Establisher, shall be little more than the amusement arising from his invention and superintendance.

The labour of a Compiler of a book like this is indeed humble; but its utility is extensive, and he fiels a pride and pleasure in the restection that he has been frozing his country most effectually, in serving the rising generation by such books as this, without facrificing either to avarice or to vanity. The renown attending a public work, is indeed seldom proportioned to its utility. Glitter is not always the most brilliant on the surface of the most valuable substance. The load-siene is plain and unattrastive in its appearance, while the poste on the singer of the beau sparkles with envied hestire. The spade, the plough, the shuttle, have no ernament besieved on them, while the sword is decorated with ribbands, gold, and (VII). Yet REASON, undazzled in her decisions, dares to pronounce, while she holds the scales, that the USEUUL, though little praised, preponderates, and that the shervy and unsubstitutial kicks the team of the balance, while it attrasts the eye of inconsiderate admiration.

Things intrinsically good and valuable have however the advantage of securing permanent esteem, though they may lose the eclat of temporary application. They carry with them to the closet their own letters of recommendation. This volume considerity claims the character of good and valuable, and therefore wants not the passport of praise. Every page speaks in its own favour, in the modest language of merit, which has no occasion to boast, though it cannot renounce its right to just effects. The most valuable woods used in the fine cabinet work of the artisan, require neither paint nor varnish, but appear beautiful by their own variegated veins and colours.

As it is likely that the fludent who reads this volume of Profe with pleafure, may also possess a taste for POETRY, it is right to mention in this place, that there is published by the same Proprietors, a volume of Poetry, similar in size and form; and as he may also wish to improve himself in the very useful art of Letter-Writing, that there is provided a most copious volume of Letters from the best authors, under the title of Elegant Epistles.

This whole Set of Collections, more copious, convenient, and valuable, than any which have preceded it, certainly conduces in a very high degree, to that great national object, the PUBLIC INSTRUCTION.

SEPTEMBER, 1794.

### PREFACE TO THE FIRST EDITION.

'IIIS book derives its origin from a wish expressed by persons who have the conduct of schools, that such a compilation might be published, as by means of a full page, and a fmall, yet very legible type, might contain, in one volume, a little English library for young people who are in the course of their education. A common-fized volume, it was found, was foon perufed, and laid afide for want of novelty; but to supply a large school with a great variety, and constant succession of English books, is too expensive and inconvenient to be generally practicable; fuch a quantity of matter is therefore collected in this volume as must of necessity fill up a good deal of time, and furnish a great number of new ideas before it can be read to fatiety, or entirely exhausted. It may therefore very properly constitute, what it was intended to be, a Library for Learners, from the age of nine or ten to the age at which they leave their school: at the same time it is evident, upon inspection, that it abounds with such extracts as may be read by them at any age with pleasure and improvement. Though it is chiefly and primarily adapted to scholars at school; yet it is certain, that all readers may find it an agreeable companion, and particularly proper to fill up thort intervals of accidental leifure.

As to the Authors from whom the extracts are made, they are those whose characters want no recommendation. The Spectators, Guardians, and Tatlers, have been often gleaned for the purpose of selections; but to have omitted them, in a work like this, for that reason, would have been like rejecting the purest coin of the fullest weight, because it is not quite fresh from the mint, but has been long in circulation. It ought to be remembered, that though the writings of Addison and his coadjutors may no longer have the grace of novelty in the eyes of veteran readers, yet they will always be new to a rising generation.

The greater part of this book, however, confifts of extracts from more modern books, and from some which have not yet been used for the purpose of selections. It is to be presumed that living authors will not be displeased that useful and elegant passages have been borrowed of them for this book; since if they sincerely meant, as they prosess, to reform and improve the age, they must be convinced, that to place their most falutary admonitions and sentences in the hands of young persons, is to contribute most effectually to the accomplishment of their benevolent design. The books themselves at large do not in general fall into the hands of school-boys; they are often too voluminous, too large, and too expensive for general adoption; they are soon torn and disfigured by the rough treatment which they usually meet with in a great school; and indeed, whatever be the cause of it, they seldom are, or can be conveniently introduced: and therefore Extracts are highly expedient, or rather absolutely necessary.

#### ADVERTISEMENT TO THE SECOND EDITION.

THE approbation with which the first edition of this book has been received by the Public, has operated as an encouragement to improve it. It has been judged proper to change the form and fize from a duadecime to an octave; not only for the sake of giving it a more agreeable appearance, but also of adding to the quantity and variety of the contents. Some extracts have indeed been omitted, to make room for new matter; but the additions, upon the whole, are very considerable.

The utility of the collection is obvious. It is calculated for classical schools, and for those in which English only is taught. Young persons cannot read a book, containing so much matter, without acquiring a great improvement in the English Language; together with ideas on many pleasing subjects of Taste and Literature; and, which is of much higher importance, they will imbibe with an increase of knowledge, the purest principles of Virtue and Religion.

The book may be employed in various methods for the use of learners, according to the judgment of various instructors. The pupils may not only read it in private, or in the school at slated times, but write out paragraphs in their copy books; commit passages to memory, and endeavour to recite them with the proper action and pronunciation, for the improvement of their powers of utterance. With respect to the Art of speaking, an excellence in it certainly depends more on practice, under the superintendance of a master, than on written precepts; and this book professes to offer matter for practice, rather than systematic instructions, which may be more advantageously given in a rhetorical treatise or wived wice. To learn the practical part of speaking, or the art of managing the voice and gesture, by written rules alone, is like learning to play upon a musical instrument, with the bare affishance of a book of directions without a master.

The books from which these Extracts are taken, are fit for the young readers libraries, and may be made the companions of their lives; while the present compilation offers itself only as an humble companion at school. In the character of a companion, it has a great deal to say to them; and will probably improve in the power of affording pleasure and instruction, the more its acquaintance is cultivated.

#### ADVERTISEMENT TO THE THIRD AND FOURTH EDITIONS.

DESIRE to render this Book fingularly useful, and to deserve a continuance of that approbation with which it has been already received, has induced the Editors of enlarge and improve it in the present, as well as in every preceding edition.

To the first book a great variety of moral and religious extracts has been added, with a design to surnish a falutary employment for schools and samilies on a day which affords peculiar leisure. In the subsequent books have been inserted Orations, Characters, entertaining Essays on men and manners, pleasing passages on Natural History, a collection of old Proverbs, and other pieces, conducive to the prime purpose of uniting the useful with the agreeable.

The volume thus improved, together with the enlarged edition of ELEGANT EXTRACTS IN VERSE, will, it is hoped, be highly agreeable to young persons in their vacant hours, as well as useful to them in the classes of a school, and under the tuition of a preceptor.

As the book unavoidably became large by fucceffive additions, it was judged proper to infert a Title Page and ornamental Defign, nearly in the middle, that it may be optional to the purchaser to bind the Collection either in one, or in two volumes, as may best correspond with his own ideas of convenience.

## INTRODUCTION

#### O N

### PRONUNCIATION, OR DELIVERY.

#### FROM DR. BLAIR'S LECTURES.

OW much stress was laid upon Pro-nunciation of Dallace nunciation, or Delivery, by the most eloquent of all orators, Demosthenes, appears from a noted faying of his, related both by Cicero and Quinctilian; when being asked, What was the first point in oratory? he answered Delivery; and being asked, What was the second? and afterwards, What was the third? he still answered, Delivery. There is no wonder, that he should have rated this so high, and that for improving himself in it, he should have employed those assiduous and painful labours, which all the Ancients take fo much notice of; for, beyond doubt, nothing is of more importance. To superficial thinkers, the management of the voice and getture, in public speaking, may appear to relate to decoration only, and to be one of the inferior arts of catching an audience. But this is far from being the case. It is intimately connected with what is, or ought to be, the end of all public speaking, Persuasion; and therefore deserves the study of the most grave and serious speakers, as much as of those, whose only aim it is to please.

For, let it be confidered, whenever we address ourselves to others by words, our intention certainly is to make some impression on those to whom we speak; it is to convey to them our own ideas and emotions. Now the tone of our voice, our looks and gestures, interpret our ideas and emotions no less than words do; nay, the impression they make on others, is frequently much stronger than any that words can make. We often see that an expression

five look, or a passionate cry, unaccompanied by words, conveys to others more forcible ideas, and rouses within them stronger passions, than can be communicated by the most eloquent discourse. fignification of our fentiments, made by tones and gestures, has this advantage above that made by words, that it is the language of nature. It is that method of interpreting our mind, which nature has dictated to all, and which is understood by all; whereas, words are only arbitrary, conventional symbols of our ideas; and, by consequence, must make a more feeble impression. So true is this, that, to render words fully fignificant, they must, almost in every case, receive some aid from the manner of Pronunciation and Delivery, and he who, in speaking, should employ bare words, without enforcing them by proper tones and accents, would leave us with a faint and indistinct impression, often with a doubtful and ambiguous conception of what he had delivered. Nay, to close is the connection between certain fentiments and the proper manner of pronouncing them, that he who does not pronounce them after that manner, can never persuade us, that he believes, or feels, the sentiments themselves. His delivery may be such, as to give the lye to all that he When Marcus Callidius accused asserts. one of an attempt to poison him, but enforced his accusation in a languid manner, and without any warmth or earnestness of delivery, Cicero, who pleaded for the ac-cused person, improved this into an argument of the fallity of the charge, "An to, M. Callidi nisi singeres, sic ageres ?" In Shakespear's Richard II. the Dutchess of York thus impeaches the sincerity of her husband:

Pleads he in earnest? Look upon his face, His eyes do drop no tears; his prayers are jeft; His words come from his mouth; ours, from our hieaft:

He prays but faintly, and would be denied; We pray with heart and foul.

- But, I believe it is needless to say any more, in order to shew the high importance of a good Delivery. I proceed, therefore, to such observations as appear to me most useful to be made on this head.

The great objects which every public fpeaker will naturally have in his eye in forming his Delivery, are, first, to speak so as to be fully and easily understood by all who hear him; and next, to speak with grace and force, so as to please and to move his audience. Let us consider what is most important with respect to each of these.\*.

In order to be fully and eafily underflood, the four chief requifites are, A due degree of loudness of voice; Diffunctiness; Slowness; and, Propriety of Pronunciation

The first attention of every public speaker, doubtless, must be, to make himself be heard by all those to whom he speaks. He must endeavour to fill with his voice the fpace occupied by the affembly. This power of voice, it may be thought, is wholly a natural talent. It is so in a good measure; but, however, may receive considerable assistance from art. Much depends for this purpose on the proper pitch, and management of the voice. Every man has three pitches in his voice; the high, the middle, and the low one. The high, is that which he uses in calling aloud to fome one at a distance. The low is, when he approaches to a whisper. The middle is, that which he employs in common conversation, and which he should generally use in public discourse. For it is a great mistake, to imagine that one must take the highest pitch of his voice, in order to be well heard by a great affembly. This is confounding two things which are different, loudness, or strength of found, with the key, or note on which we speak. A

On this whole fubject, Mr. Sheridan's Lecture on Elecution are very worthy of being confuled, and feveral bints are here taken from them. speaker may render his voice louder, without altering the key; and we shall always be able to give most body, most persevering force of found, to that pitch of voice, to which in conversation we are acquitomed. Whereas, by fetting out on our highest pitch or key, we certainly allow ourfelves less compass, and are likely to strain our voice before we have done. We shall fatigue ourselves, and speak with pain; and whenever a man speaks with pain to himfelf, he is always heard with pain by his audience. Give the voice therefore full firength and swell of found; but always pitch it on your ordinary speaking key. Make it a constant rule never to utter a greater quantity of voice, than you can afford without pain to yourselves, and without any extraordinary effort. As long as you keep within thefe bounds, the other organs of speech will be at liberty to discharge their feveral offices with eafe; and you will always have your voice under command. But whenever you transgress these bounds, you give up the reins, and have no longer any management of it. It is an useful rule too, in order to be well heard, to fix our eye on some of the most distant persons in the assembly, and to consider ourselves as speaking to them. We naturally and in chanically utter our words with fuch a degree of strength, as to make ourselves be heard by one to whom we address ourselves, provided he be within the reach of our voice. As this is the case in common conversation, it will hold also in public speaking. But remember, that in public as well as in conversation, it is possible to offend by speaking too loud. This extreme hurts the ear, by making the voice come upon it in rumbling indiffinct masses; besides its giving the speaker the difagreeable appearance of one who endeavours to compel affent, by ment vehemence and force of found."

In the next place, to being well heard, and clearly understood, distinctness of articulation contributes more, than mere loudness of sound. The quantity of sound necessary to fill even a large space, is smaller than is commonly imagined; and with distinct articulation, a man of a weak voice will make it reach farther, than the strongest voice can reach without it. To this, therefore, every public speaker ought to pay great attention. He must give every sound which he utters its due proportion, and make every syllable, and even every letter in the word which he pronounces,

be heard distinctly; without sturring, whispering, or suppressing any of the proper sounds. ever long; and the genius of the language requires the voice to mark that syllable by a stronger percussion, and to pass more

In the third place, in order to articulate distinctly, moderation is requisite with regard to the speed of pronouncing. Precipitancy of speech confounds all articulation, and all meaning. I need scarcely obferve, that there may be also an extreme on the opposite side. It is obvious, that a lifeless, drawling pronunciation, which allows the minds of the hearers to be always outrunning the speaker, must render every discourse insipid and fatiguing. But the extreme of speaking too fast is much more common, and requires the more to be guarded against, because, when it has grown up into a habit, few errors are more difficult to be corrected. To pronounce with a proper degree of flowness, and with full and clear articulation, is the first thing to be fludied by all who begin to speak in public; and cannot be too much recominended to them. Such a pronunciation gives weight and dignity to their discourse. It is a great assistance to the voice, by the paules and rells which it allows it more eafily to make; and it enables the speaker to swell all his sounds, both with more force and more music. It assists him also in preferving a due command of himself; whereas a rapid and hurried manner, is apt to excite that flutter of spirits, which is the greatest enemy to all right execution in the way of oratory. "Promptum fit os," fays Quinctilian, " non præceps, moderatum, non lentum.'

After these fundamental attentions to the pitch and management of the voice. to diffinct articulation, and to a proper degree of flowness of speech, what a public speaker mult, in the fourth place, study, is Propriety of Pronunciation; or the giving to every word, which he utters, that found, which the most polite usage of the language appropriates to it; in opposition to broad, vulgar, or provincial pronunciation. This is requilite, both for spoaking intelligibly, and for speaking with grace or beauty. Instructions concerning this article, can be given by the living voice only. But there is one observation, which it may not be improper here to make. In the English language, every word which confitts of more fyllables than one, has one accented fyllable. The accent refts fometimes on the vowel, fometimes on the confonant. Seldom, or never, is there more than one accented fyllable in any English word, how-

requires the voice to mark that syllable by a stronger percussion, and to pass more flightly over the rest. Now, after we have learned the proper feats of these accents, it is an important rule, to give every word just the same accent in public speaking, as in common discourse. Many persons err in this respect. When they speak in public, and with folemnity, they pronounce the fyllables in a different manner from what they do at other times. They dwell upon them, and protract them; they multiply accents on the same word; from a mistaken notion, that it gives gravity and force to their discourse, and adds to the pomp of public declamation. Whereas, this is one of the greatest faults that can be committed in pronunciation; it makes what is called a theatrical or mouthing manner; and gives an artificial affected air to speech, which detracts greatly both from its agreeableness, and its impression.

I proceed to treat next of those higher parts of Delivery, by studying which, a speaker has fornething farther in view than merely to render himfelf intelligible, and feeks to give grace and force to what he utters. These may be comprised under four heads, Emphasis, Paules, Tones, and Geftures. Let me only premise in general, to what I am to fay concerning them, that attention to these articles of Delivery, is by no means to be confined, as fome might be apt to imagine, to the more elaborate and pathetic parts of a discourle; there is, perhape, as great attention requisite, and as much skill displayed, in adapting emphases, paules, tones, and gestures, properly, to calm and plain speaking: and the effect of a just and graceful delivery will, in every part of a subject, be found of high importance for commanding attention, and enforcing what is spoken.

First, let us consider Emphasis; by this is meant a stronger and fuller found of voice, by which we distinguish the accented (yllable of some word, on which we design to lay particular stress, and to show how it affects the rest of the sentence. Semetimes the emphasic word must be distinguished by a particular tone of voice, as well as by a stronger accent. On the right management of the emphasis, depends the whole life and spirit of every discourse. If no emphasis be placed on any words, not only is discourse rendered heavy and lifelets, but the meaning left often ambiguous. If the emphasis be placed wrong,

we pervert and confound the meaning wholly. To give a common instance; such a simple question as this: " Do you ride to town to-day?" is capable of no fewer than four different acceptations, according as the emphasis is differently placed on the words. If it be pronounced thus: Do you ride to town to-day? the answer may naturally be, No; I fend my fervant in my stead. If thus; Do you ride to town to-day? Answer, No; 1 intend to walk. Do you ride to toron to-day? No; I ride out into the fields. Do you ride to town to-day? No; but I thall to-morrow. In like manner, in folemn discourse, the whole force and beauty of an expression often depend on the accented word; and we may present to the hearers quite different views of the same sentiment, by placing the emphasis differently. In the following words of our Saviour, observe in what different lights the thought is placed, according as the words are pronounced. "Judas, betrayest thou the Son of Man with a kis?" Betrayest thou—makes the reproach turn, on the infamy of treachery. Betrayest thou makes it rest, upon Ju-das's connection with his master. Betrayest thou the Son of Man-rests it, upon our Saviour's personal character and eminence. Betrayest thou the Son of man with a kis? turns it upon his prostituting the signal of peace and friendship, to the purpose of a mark of destruction.

In order to acquire the proper management of the emphasis, the great rule, and indeed the only rule possible to be given, is, that the speaker study to attain a just conception of the force and spirit of those fentiments which he is to pronounce. For to lay the emphasis with exact propriety, is a constant exercise of good sense and attention. It is far from being an inconfiderable attainment. It is one of the greatest trials of a true and just taste; and must arise from feeling delicately ourfelves, and from judging accurately of what is fittest to strike the feelings of others. There is as great a difference between a chapter of the Bible, or any other piece of plain profe, read by one who places the feveral emphases every where with taffe and judgment, and by one who neglects or mistakes them, as there is between the same tune played by the most mafterly hand, or by the most bungling performer.

In all prepared discourses, it would be of great use, if they were read over or

rehearfed in private, with this particular view, to fearch for the proper emphases before they were pronounced in public; marking, at the same time, with a pen, the emphatical words in every fentence, or at least the most weighty and affecting parts of the discourse, and fixing them well in memory. Were this attention oftener bestowed, were this part of pronunciation studied with more exactness, and not left to the moment of delivery, as is commonly done, public speakers would find their care abundantly repaid, by the remarkable effects which it would produce upon their audience. Let me caution, at the same time, against one errof, that of multiplying emphatical words too much. It is only by a prudent referve in the use of them, that we can give them any weight. If they recur too often; if a speaker attempts to render every thing which he fays of high importance, by a multitude of strong emphases, we soon learn to pay little regard to them. To crowd every fentence with emphatical words, is like crowding all the pages of a book with italic characters, which, as to the effect, is just the same with using no fuch distinctions at all.

Next to emphasis, the Pauses in speaking demand attention. These are of two kinds; first, emphatical pauses; and next, fuch as mark the distinctions of seuse. An emphatical pause is made, after something has been faid of peculiar moment, and on which we want to fix the hearer's attention. Sometimes, before such a thing is said, we other it in with a pause of this nature. Such pauses have the same effect as a strong emphasis, and are subject to the fame rules; especially to the caution just now given, of not repeating them too frequently. For, as they excite uncommon attention, and of course raise expectation, if the importance of the matter be not fully answerable to such expectation, they occasion disappointment and disgust.

But the most frequent and the principal use of pauses, is to mark the divisions of the sense, and at the same time to allow the speaker to draw his breath; and the proper and graceful adjustment of such pauses, is one of the most nice and difficult articles in delivery. In all public speaking, the management of the breath requires a good deal of care, so as not to be obliged to divide words from one another, which have so intimate a connection, that they ought to be pronounced with the

fame

fame breath, and without the least separation. Many a fentence is miferably mangled, and the force of the emphasis totally loft, by divitions being made in the wrong place. To avoid this, every one, while he is speaking, should be very careful to provide a full supply of breath for what he is to utter. It is a great mistake to imagine, that the breath must be drawn only at the end of a period, when the voice is allowed to fall. It may easily be gathered at the intervals of the period, when the voice is only suspended for a moment; and, by this management, one may have always a fufficient flock for carrying on the longest fentence, without improper interruptions.

If any one, in public speaking, shall have formed to himself a certain melody or tune, which requires reft and paufes of its own, diffinct from those of the fense, tate, undoubtedly, contracted one of the worn habits into which a public speaker can fall. It is the fenfe which should always rule the paules of the voice; for wherever there is any fenfible fulpenfion of the voice, the hearer is always led to expect fomething corresponding in the meaning. Pauses in public discourse, must be formed upon the manner in which we utter ourselves in ordinary, sensible conversation; and not upon the stiff, artificial manner which we acquire from reading books according to the common punctuation. The general run of punctuation is very arbitrary; often capricious and false; and dictates an uniformity of tone in the pauses, which is extremely disagreeable: for we are to observe, that to render paules graceful and expressive, they must not only be made in the right place, but also be accompanied with a proper tone of voice, by which the nature of these pauses is intimated; much more than by the length of them, which can never be exactly meafured. Sometimes it is only a flight and fumple suspension of voice that is proper; fometimes a degree of cadence in the voice is required; and fometimes that peculiar tone and cadence, which denotes the fentence finished. In all these cases, we are to regulate ourselves, by attending to the manner in which nature teaches us to speak when engaged in real and ensueft difcourse with others.

When we are reading or reciting verse, there is a peculiar difficulty in making the pauses justly. The difficulty ratifes from the melody of verse, which dictates to the

ear paules or relts of its own; and to adjust and compound these properly with the pauses of the sense, so as neither to hurt the ear, nor offend the understanding, is so yery nice a matter, that it is no wonder we fo feldom meet with good readers of poctry. There are two kinds of pauses that belong to the music of verse; one is, the pause at the end of the line; and the other, the caesural pause in the middle of it. With regard to the pause at the end of the line, which marks that strain or werse to be finished, rhyme renders this always fensible, and in some measure compels us to observe it in our pronunciation. In blank verse, where there is a greater liberty permitted of running the lines into one another, fometimes without any fufpension in the sense, it has been made a question, Whether, in reading such verse with propriety, any regard at all should be paid to the close of a line? On the slage, where the appearance of speaking in verse should always be avoided, there can, I think, be no doubt, that the close of such lines as make no paufe in the fenfe, should not be rendered perceptible to the ear. But on other occasions, this were improper: for what is the use of melody, or for what end has the poet composed in verse, if, in reading his lines, we suppress his numbers; and degrade them, by our pronunciation, into mere profe? We ought, therefore, certainly to read blank verse so as to make every line fenfible to the ear. At the same time, in doing so, every appearance of fing-fong and tone must be carefully guarded against. The close of the line, where it makes no pause in the meaning, ought to be marked, not by fuch a tone as is used in finishing a sentence, but without either letting the voice fall or elevating it, it should be marked only by fuch a flight suspension of sound, as may diffinguish the passage from one line to another, without injuring the meaning.

The other kind of musical pause, is that which falls somewhere about the middle of the verse, and divides it into two hemistichs; a pause, not so great as that which belongs to the close of the line, but still sensible to an ordinary ear. This, which is called the casural pause, in the French heroic verse falls uniformly in the middle of the line, in the English, it may fall after the 4th, 5th, 6th, or 7th syllables in the line, and no other. Where the verse is so constructed that this casural pause coincides with the slightest pause or digission in

the sense, the line can be read easily; as in the two first verses of Mr. Pope's Messiah.

Ye nymphs of Solyma! begin the fong; To heavenly themes, fublimer firams belong;

But if it shall happen that words, which have such a strict and intimate connection, as not to bear even a momentary separation, are divided from one another by this cassural pause, we then seel a fort of struggle between the fenfe and the found, which renders it difficult to read such lines gracefully. The rule of proper pronunciation in fuch cases is, to regard only the pause which the sense forms; and to read the line accordingly. The neglect of the cæfural pause may make the line found somewhat unharmoniously; but the effect would be much worfe, if the fense were facrificed to the found. For inflance, in the following line of Milton,

What in me is dark, Illumine; what is low, raife and support.

The fense clearly distates the pause after "illumine," at the end of the third syllable, which, in reading, ought to be made accordingly; though, if the melody only were to be regarded, "illumine" should be connected with what follows, and the pause not made till the 4th or 6th syllable. So in the following line of Mr. Pope's (Epistle to Dr. Arbuthnot):

I fit, with fad civility I read:

The car plainly points out the cassural pause as falling after "fad," the 4th syllable. But it would be very bad reading to make any pause there, so as to separate "fad" and "civility." The sense admits of no other pause than after the second syllable "fit," which therefore must be the only pause made in the reading.

I proceed to treat next of Tones in pronunciation, which are different both from emphasis and pauses; consisting in the modulation of the voice, the notes or variations of sound which we employ in public speaking. How much of the propriety, the force and grace of discourse, must depend on these, will appear from this single consideration; that to almost every sentiment we utter, more especially to every strong emotion, nature hath adapted some peculiar tone of voice; insomuch, that he who should tell another that he was very angry, or much grieved, in a tone which did not suit such

emotions, instead of being believed, would

be laughed at. Sympathy is one of the most powerful principles by which persuafive discourse works its effect. The speaker endeavours to transsise into his hearers his own sentiments and emotions; which he can never be successful in doing, unless he utters them in such a manner as to convince the hearers that he feels them. The proper expression of tones, therefore, deserves to be attentively studied by every one who would be a successful orator.

The greatest and most material instruction which can be given for this purpose is, to form the tones of public speaking upon the tones of fensible and animated converfation. We may observe that every manwhen he is much in earnest in common difcourfe, when he is engaged in speaking on fome subject which interests him nearly, has an eloquent or perfuafive tone and manner. What is the reason of our being often so frigid and unperfualive in public difc by but our departing from the natural tone at fpeaking, and delivering ourselves in an affected, artificial manner? Nothing can be more abfurd than to imagine, that as foon as one mounts a pulpit, or rifes in a public affembly, he is instantly to lay aside the voice with which he expresses himself in private; to assume a new, studied tone, and a ca-dence altogether foreign to his natural manner. This has vitiated all delivery; this has given rife to cant and tedious monotony, in the different kinds of modern public speaking, especially in the pulpit. Mea departed from nature; and fought to give a beauty or force, as they imagined, to their discourse, by substituting certain studied mufical tones, in the room of the genuine expressions of sentiment, which the voice carries in natural discourse. Let every

"" All that paffes in the mind of man may be reduced to two claffes, which I call, Ideas, and Emotions. By Ideas, I mean all thoughts which rife and pafs in fucceffion in the minds By Emotions, all exertions of the mind in arranging, combining, and feparating its ideas; as well as all the effects produced on the mind iffelf by those ideas, from the more violent agitation of the paffions, to the calmer feelings produced by the operation of the intellect and the fancy. In fhort, thought is the object of the one, internal feeling of the other. That which ferves to express the former, I call the Language of Ideas; and the latter, the Language of Emotions. Words arethe figns of the one, tones of the other. Without the use of these two forts of language, it is impossible to communicate through the ear all that passes in the mind of man."

SHERIDAN on the Art of Reading.

public speaker guard against this error. Whether he speak in a private room, or in a great affembly, let him remember that he ftill speaks. Follow nature: consider how she teaches you to utter any sentiment or feeling of your heart. Imagine a subject of debate started in conversation among grave and wife men, and yourfelf bearing a share in it. Think after what manner, with what tones and inflexions of voice, you would on fuch an occasion express yourfelf, when you were most in earnest, and fought most to be listened to. Carry these with you to the bar, to the pulpit, or to any public affembly; let these be the foundation of your manner of pronouncing there; and you will take the furest method of rendering your delivery both agreeable and persuasive.

I have faid, I et these conversation tones be the foundation of public pronunciation; for, on some occasions, sclemu public speaking requires them to be exalted beyond the strain of common discourse. In a formal, fludied oration, the elevation of the style, and the harmony of the fentences, prompt, almost necessarily, a modulation of voice more rounded, and bordering more upon music, than conversation admits. This gives rise to what is called, the Declaiming Manner. But though this mode of pro-nunciation run confiderably beyond ordidinary discourse, yet still it must have, for its basis, the natural tones of grave and dignified conversation. I must observe, at the fame time, that the constant indulgence of a declamatory manner, is not favourable either to good composition, or good delivery; and is in hazard of betraying public fpeakers into that monotony of tone and cadence, which is so generally complained of. Whereas, he who forms the general run of his delivery upon a speaking manner, is not likely ever to become difagreeable through monotony. He will have the fame natural variety in his tones, which a person has in conversation. Indeed, the perfection of delivery requires both these different manrers, that of speaking with liveliness and eafe, and that of declaiming with flateliness and dignity, to be possessed by one man; and to be employed by him, according as the different parts of his discourse require either the one or the other. This is a perfection which is not attained by many; the greatest part of public speakers allowing their delivery to be formed altogether accidentally, according as some turn of voice appears to them most beautiful, or some artificial model has caught their fancy; and

acquiring, by this means, a habit of pronunciation, which they can never vary. But the capital direction, which ought never to be forgotten, is, to copy the proper tones for expressing every sentiment from those which nature distates to us, in converfation with others; to speak always with her voice; and not to form to ourselves a fantastic public manner, from an absurd fancy of its being more beautiful than a natural one \*.

It now remains to treat of Gesture, or what is called Action in public discourse. Some nations animate their words in common conversation, with many more motions of the body than others do. The French and the Italians are, in this respect, much more sprightly than we. But there is no nation, hardly any person so phlegmatic, as not to accompany their words with fome actions and gesticulations, on all occasions, when they are much in earnest. It is therefore unnatural in a public speaker, it is inconfishent with that earnestness and seriousness which he ought to shew in all affairs of moment, to remain quite unmoved in his outward appearance; and to let the words drop from his morth, without any expression of meaning, or warmth in his geflure.

The fundamental rule as to propriety of action, is undoubtedly the same with what I gave as to propriety of tone. Attend to the looks and gestures, in which earnestness, indignation, compassion, or any other emotion, discovers itself to most advantage in the common intercourse of men; and let these be your model. Some of these looks and gestures are common to all me; and there are also certain peculiarities of manner which diffinguish every individual. A public speaker must take that manner which is most natural to himself. For it is here just as in tones. It is not the business of a speaker to form to himself a certain set of motions and gestures, which he thinks most becoming and agreeable, and to practife

<sup>\* &</sup>quot;Loquere," (fays an author of the laft century, who has written a Treatife in Verfe, de Gestu et Voce Oratoris)

<sup>&</sup>quot; Loquere; hoc vitium commune, loquatur "Ut nemo; at tenfa declamatet omnia voce.

<sup>&</sup>quot; Tu loquere, ut mos est hominum; Boat & latrat

<sup>&</sup>quot; lile ululat; rudit hic (fari fitalia dignum eft);
" Non hommem vox ulla fonat ratione loquentem."

JOANNES LUCAS, de Geffu et Voce, Lib. II. Paris 1675. thefe

these in public, without their having any correspondence to the manner which is natural to him in private. His gestures and motions ought all to carry that kind of expression which nature has dictated to him; and, unless this be the case, it is impossible, by means of any study, to avoid their appearing stiff and forced.

However, although nature must be the ground-work, I admit that there is room in this matter for some study and art. For many persons are naturally ungraceful in the motions which they make; and this ungracefulness might, in part at least, be reformed by application and care. The fluly of action in public speaking, confists chiefly in guarding against awkward and difagreeable motions, and in learning to perform such as are natural to the speaker, in the most becoming manner. For this end, it has been advised by writers on this subject, to practife before a mirror, where one may fee, and judge of his own gestures. But I am afraid, perions are not always the best judges of the gracefulness of their own motions: and one may declaim long enough before a mirror, without correcting any of his faults. The judgment of a friend, whose good taste they can trust, will be found of much greater advantage to beginners, than any mirror they can use. With regard to particular rules concerning action and gesticulation, Quinctilian has delivered a great many, in the last chapter of the 11th Book of his Institutions; and all the modern writers on this subject have done little else but translate them. I am not of opinion, that fuch rules, delivered either by the voice or on paper, can be of much use, unless persons saw them exemplified before their eyes \*.

The few following hints only I shall adventure to throw out, in cafe they may be of my fervice. When speaking in public, one should study to preferve as much dignity as possible in the whole attitude of the body. An erect posture is genesally to be chosen: standing firm, so as to have the fullest and freest command of all his motions; any inclination which is used, should be forwards towards the hearers, which is a natural expression of earneffnels. As for the countenance, the chief rule is, that it hould correspond with the nature of the discourse, and when no particular emotion is expressed, a serious and manly look is always the belt. The eyes should never be fixed close on any une object, but move easily round the audience. In the motions made with the hands, confifts the chief part of gesture in speaking. The Ancients condemned all motions performed by the left hand alone; but I am not fentible, that these are always affenfive, though it is natural for the right hand to

I shall only add further on this head that in order to succeed well in delivery, nothing is more necessary than for a speaker to guard against a certain flutter of spirits, which is peculiarly incident to those who begin to speak in public. He must endeavour above all things to be recollected, and master of himself. For this end, he will find nothing of more use to him, than to fludy to become wholly engaged in his subject; to be possessed with a sense of its importance or feriousness; to be concerned much more to perfuade than to pleafe. He will generally please most, when pleasing is not his fole nor chief aim. This is the only rational and proper method of raising one's felf above that timid and bashful regard to an audience, which is fo ready to disconcert a speaker, both as to what he is to fay, and as to his manner of faying it.

I cannot conclude, without an earnest admonition to guard against all affectation, which is the certain ruin of good delivery. Let your manner, whatever it is, be your own; neither imitated from another, nor assumed upon some imaginary model, which is unnatural to you. Whatever is native, even though accompanied with feveral defects, yet is likely to please; because it shows us a man; because it has the appearance of coming from the heart. Whereas, a delivery attended with feveral acquired graces and beauties, if it be not easy and free, if it betray the marks of art and affectation, never fails to disgust. To attain any extremely correct, and perfectly graceful delivery, is what few can expect; so many natural talents being requisite to concur in forming it. But to attain, what as to the effect is very little inferior, a forcible and perfuafive manner, is within the

be more frequently employed. Warm emotions demand the motion of both hands corresponding together. But whether one gesticulates with one or with both hands, it is an important rule, that all his motions should be free and easy. Narrow and itraitened movements are generally ungraceful; for which reason, motions made with the hands are directed to proceed from the shoulder, rather than from the elbow. Perpendicular movements too with the hands, that is, in the Araight line up and down, which Shakespeare, in Hamlet, calls, " fawing the air with the hand," are feldom good. Oblique motions are, in general, the most graceful. Too sudden and nimble nations should be likewise avoided. Earnestness can be fully expressed without them. Shikespeat's directions on this head, are suil of good sense; "use all gently," says he, " and in the very tor-" rent and tempest of passion, acquire a tempe-" rance that may give it imouthers.

cower of most persons; if they will only unlearn false and corrupt habits; if they will allow themselves to follow nature, and will speak in public, as they do in private, when they speak in earnest, and from the heart. If one has naturally any gross defects in his voice or gestures, he begins at the wrong end, if he attempts at reforming them only when he is to speak in public: he should begin with rectifying them in his private manner of speaking; and then carry to the public the right habit he has formed. For when a speaker is engaged in a public diswurse, he should not be then employing his attention about his manner, or thinking of his tones and his gestures. If he be so employed, study and affectation will appear. He ought to be then quite in earnest; wholly occupied with his subject and his fentiments: leaving nature, and previously formed habits, to prompt and fuggeit his manner of delivery.

11.

Means of improving in Eloquence.

I have now treated fully of the different kinds of public speaking, of the composition, and of the delivery of a discourse. Before I finish this subject, it may be of use to suggest some things concerning the properest means of improvement in the art of public speaking, and the most necessary

Audies for that purpole.

To be an eloquent speaker, in the proper fense of the word, is far from being either a common or an easy attainment. Indeed, to compose a florid harangue on some popular topic, and to deliver it so as to amuse an audience, is a matter not very difficult. But though some praise be due to this, yet the idea, which I have endeavoured to give of eloquence, is much higher. It is a great exertion of the human powers. It is the art of being persuasive and commanding; the art, not of pleasing the fancy merely, but of speaking both to the understanding and to the heart; of interesting the hearers in fuch a degree, as to feize and carry them along with us; and to leave them with a deep and itrong impression of what they have heard. How many talents, natural and acquired, must concur for carrying this to perfection! A ftrong, lively, and warm imagination; quick fensibility of heart, joined with folid judgment, good fense, and presence of mind; all improved by great and long attention to flyle and composition;

and supported also by the exterior, yet important qualifications, of a graceful manner, a presence not ungainly, and a full and tuncable voice. How little reason to wonder, that a perfect and accomplished orator should be one of the characters that is most rarely to be found!

Let us not despair, however. Between mediocrity and perfection there is a very wide interval. There are many intermediate space, which may be filled up with honour; and the more rare and difficult that complete perfection is, the greater is the honour of approaching to it, though we do not fully attain it. The number of orators who stand in the highest class is, perhaps, smaller than the number of poets who are foremost in poetic same; but the study of oratory has this advantage above that of poetry, that, in poetry, one must be an eminently good performer, or he is not supportable;

Non homines, non Dî, non concesser columne.

In Eloquence this does not hold. There one may possess a moderate station with dignity. Eloquence admits of a great many different forms; plain and simple, as well as high and pathetic; and a genius that cannot reach the latter, may shine with much reputation and usefulness in the former.

Whether nature or art contribute most to form an orator, is a trifling enquiry. In all attainments whatever, nature must be the prime agent. She must bestow the original talents. She must fow the feeds; but culture is requisite for bringing those seeds to perfection. Nature must always have done somewhat; but a great deal will always be left to be done by art. This is certain, that study and discipline are more necessary for the improvement of natural genius in oratory, than they are in poetry. mean is, that though poetry be capable of receiving affistance from critical art, yet a poet, without any aid from art, by the force of genius alone, can rife higher than a public speaker can do, who has never given at-tention to the rules of style, composition, and delivery. Homer formed himself; Demosthenes and Cicero were formed by the help of much labour, and of many affiftances derived from the labour of others.

• For God and man, and lettered post denies, That poets ever are of middling fige. Factor. After these preliminary observations, let is proceed to the main design of this lecture; to treat of the means to be used for

improvement in eloquence.

In the first place, what stands highest in the order of means, is personal character and disposition. In order to be a truly eloquent or persuasive speaker, nothing is more necessary than to be a virthous man. This was a favourite position among the ancient rhetoricians: "Non posse oratorem essent with virum bonum." To find any such connection between virtue and one of the highest liberal arts, must give pleasure; and it can, I think, be clearly shown, that this is not a mere topic of declamation, but that the connection here alledged, is undoubtedly founded in truth and reason.

For, confider first, Whether any thing contributes more to perfusion, than the opinion which we entertain of the probity, difinterefledness, candour, and other good moral qualities of the perfon who endeavours to persuade? These give weight and sorce to every thing which he utters; nay, they add a beauty to it; they dispose us to listen with attention and pleature; and create a feeret partiality in favour of that fide which he espouses. Whereas, if we entertain a sufpicion of craft and difingenuity, of a corrupt, or a base mind, in the speaker, his eloquence loses all its real effect. It may entertain and amuse; but it is viewed as artifice, as trick, as the play only of fpeech; and, viewed in this light, whom can it perfuade? We even read a book with more pleasure, when we think favourably of its author; but when we have the living speaker before our eyes, addreffing us perfounily on some subject of importance, the opinion we entertain of his character must have a much more powerful effect.

But, left it should be faid, that this relates only to the character of virtue, which one may maintain, without being at bottom a truly worthy man, I must observe farther, that, besides the weight which it adds to character, real virtue operates also in other ways, to the advantage of eloquence.

First, Nothing is to savourable as virtue to the prosecution of honourable studies. It prompts a generous emulation to excel; it inures to industry; it leaves the mind vacant and free, master of itself, diencumbered of those bad passions, and disengaged from those mean pursuits, which have ever been found the greatest enemies to true proficiency. Quintilian has touched this consideration very properly: "Quod si

"agrorum nimia cura, et follicitior rei familiaris diligentia, et venandi voluptas,
et dati spectaculis dies, multum studiis
auferunt, quid putamus sacturas cupiditatem, avaritiam, invidiam? Nihil enim
est tam occupatum, tam multiforme, tot
ac tam variis affectibus concisum, atque
laceratum, quam mala ac improba mens.
Quis inter hec, literis, aut ulli bonze
arti, locus? Non herele magis quam
fiugibus, in terra sentibus ac rubis occupata."

But, befides this confideration, there is another of still higher importance, though I am not fure of its being attended to as much as it deferves; namely, that from the fountain of real and genuine virtue, are drawn those sentiments which will ever be most powerful in affecting the hearts of Bad as the world is, nothing has fo great and universal a command over the minds of men as virtue. No kind of language is fo generally understood, and fo powerfully felt, as the native language of worthy and virtuous feelings. He only, therefore, who possesses these full and strong, can speak properly, and in its own language, to the heart. On all great subjects and occasions, there is a dignity, there is an energy in noble fentiments, which is overcoming and irrefiltible. They give an ardour and a flame to one's discourse. which feldom fails to kindle a like flame in those who hear; and which, more than any other cause, bestows on eloquence that power, for which it is famed, of feizing and transporting an audience. Here art and imitation will not avail. An affumed charaster conveys nothing of this powerful warmth. It is only a native and unaffected glow of feeling, which can transmit the emotion to others. Hence the most renowned orators, such as Cicero and Demosthenes, were no less distinguished for fome of the high virtues, as public spirit and zeal for their country, than for eloquence.

\* "If the management of an effate, if anxious attention to domefric accinomy, a paffin for hunting, or whole days given up to public places and amufements, confume fo much time that is due to ftudy, how much greater watte must be occasioned by heentious defires, avaice, or envy! Nothing is fo much hurried and agrit tated, fo contradictory to itfells or fo violently from and finatered by conflicting paffions, as a bad heart. Amidst the distractions which it produces, what room is left for the cultivation of letters, or the pursuit of any honourable art? "No more, affuredly, than there is for the growth of or ni na field that is over-run with thorns and brambles."

Beyond doubt, to these virtues their eloquence owed much of its effect; and those erations of theirs, in which there breathes most of the virtuous and magnanimous spirit, are those which have most attracted the admiration of ages.

Nothing, therefore, is more necessary for those who would excel in any of the higher kinds of oratory, than to cultivate habits of the feveral virtues, and to refine and improve all their moral feelings. Whenever these become dead, or callous, they may be affured, that on every great occasion, they will speak with less power, and less fuccess. The sentiments and dispositions particularly requifite for them to cultivate, are the following; the love of justice and order, and indignation at infolence and oppression; the love of honesty and truth, and detestation of fraud, meanness, and corsuption; magnanimity of spirit; the love of liberty, of their country and the public; zeal for all great and noble defigns, and reverence for all worthy and heroic characters. A cold and sceptical turn of mind is extremely adverse to eloquence; and no less so, is that cavilling disposition which takes pleasure in depreciating what is great, and ridiculing what is generally admired.

Suen a disposition bespeaks one not very likely to excel in any thing; but least of all in oratory. A true orator should be a person of generous sentiments, of warm feelings, and of a mind turned towards the admiration of all those great and high objects which mankind are naturally formed to admire. Joined with the manly virtues, he should, at the same time, possess strong and tender fensibility to all the injuries, distresses, and forrows, of his fellow-creatures; a heart that can easily relent; that can readily enter into the circumstances of others, and can make their case his own. A proper mixture of courage, and of modefty, must also be studied by every public speaker. Modesty is essential; it is always, and justly, supposed to be a concomitant of merit; and every appearance of it is winning and prepoffessing. But modesty ought not to run into excessive timidity. Every public speaker should be able to rest somewhat on himself; and to assume that air, not of self-complacency, but of firmness, which bespeaks a consciousness of his being thoroughly perfuaded of the truth or justice, of what he delivers; a circumstance of no small consequence for making impression on those who hear.

§ 1. The Vision of Mirza, exhibiting a Picture of Human Life.

N the fifth day of the moon, which. according to the cultom of my forefathers, I always keep holy, after having washed myself, and offered up my morning devotions, I ascended the high hills of Bagdat, in order to pass the rest of the day in meditation and prayer. As I was here airing myself on the tops of the mountains, I fell into a profound con-templation on the vanity of human life; and passing from one thought to another, Surely, find I, man is but a shadow, and life a dream. Whilst I was thus musing, I call my eyes towards the fummit of a rock that was not far from me, where I discovered one in the habit of a shepherd, with a little musical instrument in his hand. I looked upon him, he applied it to his lips, and began to play upon it. The found of it was exceeding fweet, and wrought into a variety of tunes that were inexpressibly melodious, and altogether different from any thing I had ever heard: they put me in mind of those heavenly airs that are played to the departed fouls of good men upon their first arrival in Paradise, to wear out the impressions of the last agonies, and qualify them for the pleasures of that happy place. My heart melted away in secret raptures.

I had been often told, that the rock before me was the haunt of a genius; and hat several had been entertained with that music, who had passed by it, but never leard that the musician had before made simself visible. When he had raised my houghts, by those transporting airs which

he played, to taste the pleasures of his converfation, as I looked upon him like one aftonished, he beckoned to me, and, by the waving of his hand, directed me to approach the place where he fat. I drew near with that reverence which is due to a superior nature; and as my heart was entirely fubdued by the captivating strains I had heard, I fell down at his feet, and wept. The genius fmiled upon me with a look of compassion and affability that familiarized him to my imagination, and at once difpelled all the fears and apprehensions with which I approached him. He lifted me from the ground, and taking me by the hand, Mirza, faid he, I have heard thee in thy foliloquies; follow me.

He then led me to the highest pinnacle of the rock, and placing me on the top of it, Cast thy eyes eastward, said he, and test me what thou feest. I see, said I, a huge valley, and a prodigious tide of water rolling through it. The valley that thou feelt, faid he, is the vale of milery; and the tide of water that thou feest, is part of the great tide of eternity. What is the rea on faid I, that the tide I fee rifes out o a shick mist at one end, and again loses itself in a thick mitt at the other? What thou feeft, faid he, is that portion of eternity which is called Time, measured out by the sun, and reaching from the beginning of the world to its consummation. Examine now, said he, this sea, that is bounded with darkness at both ends, and tell me what thou discoverest in it. I see a bridge, said I, standing in the midst of the tide. The bridge thou feest, said he, is human life; consider . it attentively. Upon a more leisurely sur-

В

vey of it, I found that ir conflict of threescore and ten entire arches, with several broken arches, which, added to those that were entire, made up the number about an hundred. As I was counting the arches, the genius told me that this bridge confift. ed at fi. it of a thousand arches; but that a great flood fwept away the roll, and left the bridge in the rumous condition I now beheld it: but tell me further, faid he, what thou discoverest on it. I see multitudes of people passing over it, said I, and a black cloud hanging on each end of it. As I looked more attentively, I saw several of the passengers dropping through the bridge into the great tide that flowed underneath it; and upon further examination, percrived there were innumerable trap-doors that lay concealed in the bridge, which the paffengers no fooner trod upon, but they fell through them into the tide, and immediately disappeared. These hidden pit-falls were fet very thick at the entrance of the bridge, fo that throngs of people no fooner broke through the cloud, but many of them fell into them. They grew thinner towards the middle, but multiplied and lay closer together towards the end of the arches that were entire.

There were indeed fome persons, but their number was very small, that continued a kind of hobbling march on the broken arches, but fell through one after another, being quite it ed and spent with so long a walk.

I passed some time in the contemplation of this wonderful structure, and the great variety of objects which it prefented. My heart was filled with a deep melancholy, to fee feveral dropping unexpectedly in the midft of mirth and jollity, and catching at every thing that flood by them, to lave themselves. Some were looking up towards the heavens in a thoughtful polture, and, in the midd of a speculation, stumbled and fell out of fight. Multitudes were very buly in the purfuit of bubbles, that glattered in their eyes, and danced before them; but often, when they thought themselves within the reach of them, their footing failed, and down they funk. In this confusion of objects, I observed some with scimitars in their hands, and others with urinals, who ran to and fro upon the bridge, thrusting several persons on trapdoors which did not feem to lie in their way, and which they might have eleaped had they not been thus forced upon them.

The genius feeing me indulge myfelf in this melancholy prospect, told me I had dwelt long enough upon it: Take thine eyes off the bridge, said he, and tell me if thou seef any thing thou dost not comprehend. Upon looking up, What mean, said I, those great slights of birds that are perpetually hovering about the bridge, and settling upon it from time to time? I see vultures, harpies, ravens, cornorants, and, among many other seathered creatures, several little winged boys, that perch in great numbers upon the middle arches. These, said the genius, are envy, avarice, superstituon, despair, love, with the like cares and passions that infest human lite.

I here fetched a deep figh: Alas, faid I, man was made in vain! how is he given away to mifery and mortality! tortured in life, and fwallowed up in death! The genius being moved with compassion towards me, bid me quit fo uncomfortable a prospect. Look no more, said he, on man in the first stage of his existence, in his fetting out for cternity: but cast thine eye on that thick mist into which the tide beats the feveral generations of mortals that fall into it. I directed my fight as I was ordered, and (whether or no the good genius firengthened it with any supernatural force, or diffipated part of the mist that was before too thick for the eye to penetrate) I faw the valley opening at the faither end, and spreading forth into an immense ocean, that had a huge rock of adamant running through the midft of it, and dividing it into two equal parts. The clouds still rested on one half of it, infomuch that I could discover nothing in it: but the other appeared to me a vall ocean, planted with innumerable islands, that were covered with fruits and flowers, and interwoven with a thousand little shining seas that ran among them. I could see persons dresfed in glorious habits, with garlands upon their heads, passing among the trees, lying down by the fides of fountains, or refting on beds of flowers; and could hear a confused harmony of finging birds, falling waters, human voices, and mufical instruments. Gladness grew in me at the discovery of so delightful a scene. I wished for the wings of an eagle, that I might fly away to those happy seats; but the genius told me there was no passage to them, except through the gates of death that I saw opening every moment upon the bridge. The islands, said he, that lie

fo fresh and green before thee, and with which the whole face of the ocean appears footted as far as thou canft fee, are more in number than the fands on the fea-shore; there are myriads of islands behind those which thou here discoverest, reaching further than thine eye, or even thine imagination, can extend itself. These are the mansions of good men after death, who, according to the degree and kinds of virtue in which they excelled, are diffributed among these several islands, which abound with pleasures of different kinds and degrees, tuitable to the relishes and perfections of those who are settled in them; every island is a paradife accommodated to its respective inhabitants. Are not these. O Mirza, habitations worth contending for? Does life appear miserable, that gives thee opportunities of earning such a reward? Is death to be feared, that will convey thee to fo happy an existence? Think not man was made in vain, who has such an overnity reserved for him.-I gazed with inexpressible pleasure on these happy islands. At length, faid I, Shew me now, I befrech thee, the fecrets that lie hid under those dark clouds, which cover the ocean on the other fide of the rock of ad mant. The genius making me no anfuer, I turned about to address myself to him a second time, but I found that he had left me: I then turned again to the vision which I had been fo long contemplating; but instead of the rolling tide, the arched bridge, and the happy islands, I saw nothing but the long hollow valley of Bagdat, with oxen, sheep, and camels, grazing upon the fides of it. Spectator.

#### § 2. The Voyage of Life; an Allegory.

' Life,' says Seneca, 'is a voyage, in he progress of which we are perpetually thanging our scenes: we first leave child-100d behind us, then youth, then the years of ripened manhood, then the better or nore pleasing part of old age.'-The peusal of this passage having excited in me a rain of reflections on the state of man, the ncessant fluctuation of his wishes, the gralual change of his disposition to all external bjects, and the thoughtlessness with which te floats along the stream of time, I sunk nto a slumber amidst my meditations, and, n a sudden, found my ears filled with the umult of labour, the thouts of alacrity, the hricks of alarm, the whiftle of winds, and he dash of waters.

My assonishment for a time repressed

my curiofity; but foon recovering myfelf fo far as to enquire whither we were going, and what was the cause of such clamour and confusion; I was told that they were launching out into the ocean of Life; that we had already passed the streights of Infaney, in which multitudes had perished. fome by the weakness and fragility of their vessels, and more by the folly, perverseness, or negligence of those who undertook to fleer them; and that we were now on the main sea, abandoned to the winds and billows, without any other means of security than the care of the pilot, whom it was always in our power to chuse, among great numbers that offered their direction and affiftance.

I then looked round with anxious eagerness; and, first turning my eyes behind me, saw a stream slowing through slowery slands, which every one that failed along seemed to behold with pleasure; but no sooner touched, than the current, which, though not noisy or turbulent, was yet irressible, bore him away. Beyond these islands, all was darkness; nor could any of the passengers describe the shore at which he first embarked.

Before me, and on either fide was an expanse of waters violently agitated, and covered with so thick a mist, that the most perspicacious eyes could see but alittle way. It appeared to be full of rocks and whirlpools, for many sunk unexpectedly while they were courting the gale with full fails, and insulting those whom they had left behind. So numerous, indeed, were the dangers, and so thick the darkness, that no caution could confer security. Yet there were many, who, by false intelligence, betrayed their followers into whirlpools, or by violence pushed those whom they found in their way against the rocks.

The current was invariable and infurmountable; but though it was impossible to fail against it, or to return to the place that was once passed, yet it was not to violent as to allow no opportunities for dexterity or courage, since, though none could retreat back from danger, yet they might often avoid it by oblique direction.

It was, however, not very common to fteer with much care or prudence; for, by fome univerfal infatuation, every man appeared to think himfelffafe, though he faw his conforts every moment finking round him; and no fooner had the waves closed over them, than their fate and their misconduct were forgotten; the voyage was B 2 pursued

purfued with the fame jocund confidence; every man congratulated himself upon the foundness of his vessel, and believed himfelf able to stem the whirlpool in which his friend was swallowed, or glide over the rocks on which he was dashed: nor was it often observed that the fight of a wreck made any man change his course; if he turned aside for a moment, he soon forgot the rudder, and left himself again to the disposal of chance.

This negligence did not proceed from indifference, or from wearinels of their prefent condition; for not one of those who thus ruthed upon dettruction failed, when he was finking, to call loudly upon his affociates for that help which could not now be given him: and many spent their last moments in cautioning others against the folly by which they were intercepted in the midit of their course. Their benevolence was fometimes praifed, but their admonitions were unregarded.

The veffels in which we had embarked, being confessedly unequal to the turbulence of the stream of life, were visibly impaired in the course of the voyage, so that every paffenger was certain, that how long foever he might, by favourable accidents, or by incessant vigilance, be preserved, he

must fink at last.

This necessity of perishing might have been expected to fadden the gay, and intimidate the daring, at least to keep the melancholy and timorous in perpetual torments, and hinder them from any enjoyment of the varieties and gratifications which nature offered them as the folace of their labours; yet in effect none seemed less to expect destruction than those to whom it was most dreadful; they all had the art of concealing their danger from themselves; and those who knew their inability to bear the fight of the terrors that embarraffed their way, took care never to look forward, but found fome amutement of the prefent moment, and generally entertained then telves by playing with Hope, who was the constant affociate of the vovage of Life.

Vet all that Hope ventured to promise, even to those whom the favoured most, was, not that they should escape, but that they flould fink last; and with this promife every one was fathefied, though he laughed at the rest for seeming to believe Hope, indeed, apparently mocked the credulity of her companions; for, in propartion as their vetlels grew leaky, the

redoubled her affurances of fafety; and none were more bufy in making provisions for a long voyage, than they whom all but themselves saw likely to perish soon by

irreparable decay.

In the midst of the current of Life, was the gulph of Intemperance, a dreadful whirlpool, interspersed with rocks, of which the pointed crags were concealed under water, and the tops covered with herbage, on which Ease spread couches of repole; and with shades, where Pleafure warbled the fong of invitation. Within fight of these rocks, all who failed on the ocean of Life must necessarily pass. Reason indeed was always at hand to steer the passengers through a narrow outlet, by which they might escape; but very sew could, by her entreaties or remonstrances, be induced to put the rudder into her hand, without stipulating that the should approach so near unto the rocks of Pleasure, that they might folace themselves with a short enjoyment of that delicious region, after which they always determined to purfue their course without any other deviation.

Reason was too of en prevailed upon so far by these promises, as to venture her charge within the eddy of the gulph of Intemperance, where, indeed, the circumvolution was weak, but yet interrupted the course of the vessel, and drew it, by infenfible rotations, towards the centre. She then repented her temerity, and with all her force endeavoured to retreat; but the draught of the gulph was generally too flrong to be overcome; and the paffenger, having danced in circles with a pleafing and giddy velocity, was at last overwhelmed and loft. Those few whom Reason was able to extricate, generally suffered so many shocks upon the points which shot out from the rocks of Pleasure, that they were unable to continue their course with the same strength and facility as before, but Hoated along timoroufly and feebly, endangered by every breeze, and fhattered by every ruffle of the water, till they funk, by flow degrees, after long flruggles, and innumerable expedients, always repining at their own folly, and warning others against the first approach of the gulph of Intemperance.

There were artists who professed to repair the breaches and stop the leaks of the vetiels which had been shattered on the locks of Pleafure. Many appeared to have great confidence in their tkill, and some, indeed, were preserved by it 'rem

fluking, who had received only a fingle blow: but I remarked, that few veilels lafted long which had been much repaired, nor was it found that the artifts themfelves continued affort longer than those who had least of their affiliance.

The only advantage which, in the voyage of Life, the cautious had above the negligent, was, that they funk later, and more fuddenly; for they passed forward till they had sometimes seen all those in whose company they had issued from the streights of Infancy, perish in the way, and at last were overset by a cross breeze, without the toil of resistance, or the anguish of expectation. But such as had often fallen against the rocks of Pleasure, commonly subsided by sensible degrees, contended long with the encroaching waters, and harassed themselves by labours that scarce Hope herself could statter with success.

As I was looking upon the various fate of the multitude about me, I was fuddenly alarmed with an admonition from some unknown power, 'Gaze not idly upon others when thou thyself art finking. Whence is this thoughtless tranquillity, when thou and they are equally endangred?' I looked, and seeing the gulph of Intemperance before me, started and awaked.

Rambler.

## § 3. The Journey of a Day, a Pisture of Human Life; the Story of Obidab.

Obidah, the fon of Abenfina, left the travanscra early in the morning, and purted his journey through the plains of Inollan. He was fresh and vigorous with if; he was animated with hope; he was cited by defire; he walked swiftly forard over the vallies, and faw the hills radually rising before him. As he passed ong, his ears were delighted with the orning fong of the bird of paradite, he as fanned by the last flatters of the finkg breeze, and sprinkled with dew by toves of spices; he sometimes contemated the towering height of the oak, mouch of the hills; and fometimes caught e gentle fragrance of the primrofe, eldeft jughter of the spring: all his senses were ratified, and all care was banished from ie heart.

Thus he went on till the sun approached a meridian, and the increasing heat preyupon his strength; he then looked und about him for some more commous path. He saw, on his right hand, grove that seemed to wave its shades as

a fign of invitation; he entered it, and found the coolness and verdure irrefishibly pleafant. He did not however, forget whither he was travelling, but found a narrow way bordered with flowers, which appeared to have the same direction with the main road, and was pleased that, by this happy experiment, he had found means to unite pleasure with business, and to gain the rewards of diligence, without fuffering its fatigues. He, therefore, still continued to walk for a time, without the least remission of his ardour, except that he was fometimes tempted to flop by the music of the birds, whom the heat had affembled in the shade, and sometimes amused himself with plucking the flowers that covered the banks on either fide, or the fruits that hung upon the branches. At last the green path began to decline from its first ten. dency, and to wind among hills and thickets, cooled with fountains, and murmuring with water-falls. Here Obidah paused for a time, and began to confider whether it were longer fafe to forfake the known and common track; but remembering that the heat was now in its greatest violence, and that the plain was dully and uneven, he resolved to pursue the new path, which he supposed only to make a few meanders, in compliance with the varieties of the ground, and to end at last in the common road.

Having thus calmed his folicitude, he renewed his pace, though he suspected that he was not gaining ground. This uncafiness of his mind inclined him to lay hold on every new object, and give way to every fensation that might footh or divert him. He littened to every echo, he mounted every hill for a fresh prospect, he turned afide to every cascade, and pleased himfelf with tracing the course of a gentle river that rolled among the trees, and watered a large region with innumerable circumvolutions. In these amusements the hours passed away uncounted, his deviations had perplexed his memory, and he knew not towards what point to travel. He stood pensive and consused, afraid to go forward lest he should go wrong, yet conscious that the time of loitering was now pail. While he was thus tortured with uncertainty, the fky was overspread with clouds, the day vanished from before him, and a fudden tempest gathered round his head. He was now roused by his danger, to a quick and painful remembrance of his folly; he now faw how happiness is loth, when ease is consulted; he lamented the

**L**inemau

unmanly impatience that prompted him to feek shelter in the grove, and despised the petty curiosity that led him on from trisle to trisle. While he was thus reslecting, the air grew blacker, and a clap of thunder broke his meditation.

He now resolved to do what remained yet in his power; to tread back the ground which he had passed, and try to find some silue where the wood might open into the plain. He prostrated himself on the ground, and commended his life to the Lord of nature. He rose with considence and tranquillity, and pressed on with his sabre in his hand, for the beasts of the desert were in motion, and on every hand were heard the mingled howls of rage and sear, and ravage and expiration; all the horrors of darkness and solitude furrounded him; the winds roared in the woods, and the torrents stumbled from the hills.

Work'd into fudden rage by wint'ry flow'rs, Down the freep hill the rearing torrent pours; The mountain shepherd hears the distant noise.

Thus forlorn and distressed, he wandered through the wild, without knowing whither he was going, or whether he was every moment drawing nearer to fafety or to destruction. At length, not fear, but labour, began to overcome him; his breath grew short, and his knees trembled, and he was on the point of lying down in refignation to his fate, when he beheld through the brambles the glimmer of a taper. He advanced towards the light, and finding that it proceeded from the cottage of a hermit, he called humbly at the door, and obtained admission. The old man fet before him fuch provisions as he had collected for himself, on which Obidah fed with eagearness and gratitude.

When the repast was over, 'Tell me,' faid the hermit, 'by what chance thou hast been brought hither; I have been now twenty years an inhabitant of the wilderness, in which I never faw a man before.' Obidah then related the occurrences of his journey, without any concealment or palliation.

Son, faid the hermit. Let the errors and follies, the dangers and escape of this day, fink deep into thy heart. Remember, my son, that human life is the journey of a day. We rise in the morning of youth, full of vigour, and full of expectations we set forward with spirit and hope, with gaiety and with diligence, and travel on a while in the strait road of piety towards the mansions of rest. In a short time we

remit our fervour, and endeavour to find fome mitigation of our duty, and fome more easy means of obtaining the same end. We then relax our vigour, and refolve no longer to be terrified with crimes at a distance, but rely upon our own constancy, and venture to approach what we resolve never to touch. We thus enter the bowers of ease, and repose in the shades of fecurity. Here the heart foftens, and vigilance subsides: we are then willing to enquire whether another advance cannot be made, and whether we may not, at least, turn our eyes upon the gardens of pleafure. We approach them with feruple and hesitation; we enter them, but enter timorous and trembling, and always hope to pass through them without losing the road of virtue, which we, for a while, keep in our fight, and to which we propose to return. But temptation succeeds temptation, and one compliance prepares us for another; we in time lose the happiness of innocence, and folace our disquiet with fenfual gratifications. By degrees we let fall the remembrance of our original intention, and quit the only adequate object of rational defire. We entangle ourselves in business, immerge ourselves in luxury, and rove through the labyrinths of inconflancy, till the darkness of old age begins to invade us, and difease and axiety obftruct our way. We then look back upon our lives with horror, with forrow, with repentance; and wish, but too often vainly with, that we had not forfaken the ways of virtue. Happy are they, my fon, who shall learn from the example not to despair, but shall remember, that though the day is path, and their strength is wasted, there yet remains one effort to be made; that reformation is never hopeless, nor fincere endeavours ever unassisted; that the wanderer may at length return, after all his errors; and that he who implores strength and courage from above, shall find danger and difficulty give way before him. Go now, my fon, to thy repose; commit thyself to the care of Omnipotence; and when the morning calls again to toil, begin anew thy journey and thy life.' Rambler.

§ 4. The present Life to be considered only as it may conduce to the Happiness of a future one.

A lewd young fellow feeing an aged hermit go by him barefoot, "Father," fays he, "you are in a very miferable condition if there is not another world." "True, for."

fon," faid the hermit: " but what is thy condition if there is?"-Man is a creature defigned for two different states of being, or rather, for two different lives. His first life is short and transient; his second, permanent and lasting. The question we are all concerned in is this, In which of those two lives is it our chief interest to make ourselves happy? or, in other words, whether we should endeavour to secure to ourfelves the pleasures and gratifications of a life which is uncertain and precarious, and, at its utmost length, of a very inconfiderable duration; or to fecure to ourselves the pleasures of a life that is fixed and settled. and will never end? Every man, upon the first hearing of this question, knows very well which fide of it he ought to close with. But however right we are in theory, it is plain that, in practice, we adhere to the wrong fide of the question. We make provisions for this life, as though it were never to have an end; and for the other life, as though it were never to have a beginning.

Should a spirit of superior rank, who is a stranger to human nature, accidentally alight upon the earth, and take a furvey of its inhabitans, what would his notions of us be? Would not he think, that we are a species of beings made for quite different ends and purposes than what we really are? Must not be imagine that we were placed in this world to get riches and honours? Would not he think that it was our duty to toil after wealth, and station, and title? Nay, would not he believe we were forbidden poverty by threats of eternal punishment, and enjoined to purfue our pleafures under pain of damnation? He would certainly imagine, that we were influenced by a scheme of duties quite opposite to those which are indeed prescribed to us. And truly, according to fuch an imagination, he must conclude that we are a species of the most obedient creatures in the universe; that we are constant to our duty; and that we keep a steady eye on the end for which we were fent hither.

But how great would be his affonishment, when he learnt that we were beings not defigned to exist in this world above threescore and ten years; and that the greatest part of this busy species fall short even of that age! How would he be lost in horror and admiration, when he should know that this set of creatures, who lay out all their endeavours for this life, which scarce deserves the name of existence; when, I say, he should know that this set

of creatures are to exist to all eternity in another life, for which they make no preparations? Nothing can be a greater difgrace to reason, than that men, who are persuaded of these two different slates of being, should be perpetually employed in providing for a life of threefcore and ten years, and neglecting to make provision for that which, after many myriads of years, will be still new, and still beginning: especially when we consider that our endeavours for making ourselves great, or rich, or honourable, or whatever elfe we place our happinels in, may, after all, prove unfuccefsful; whereas, if we conflantly and fincerely endeavour to make ourselves happy in the other life, we are fure that our endeavours will fucceed, and that we shall not be disappointed of our hope.

The following question is started by one of the schoolmen. Supposing the whole body of the earth were a great ball or mass of the finest fand, and that a single grain or particle of this fand should be annihilated every thousand years: Supposing then that you had it in your choice to be happy all the while this prodigious mass of fand was confuming by this flow method till there was not a grain of it left, on condition you were to be miserable for ever after; or supposing you might be happy for ever after, on condition you would be miferable till the whole mass of fand were thus annihilated, at the rate of one fand in a thoufand years: which of these two cases would you make your choice?

It must be confessed in this case, so many thousands of years are to the imagination as a kind of eternity, though in reality they do not bear so great a proportion to that duration which is to follow them, as an unit does to the greatest number which you can put together in figures, or as one of those fands to the supposed heap. Reafor therefore tells us, without any manner of hesitation, which would be the better part in this choice. However, as I have before intimated, our reason might in such a cate be so overset by the imagination, as to dispose some persons to fink under the consideration of the great length of the first part of this duration, and of the great distance of that second duration which is to fucceed it. The mind, I fay, might give itself up to that happiness which is at hand, confidering that it is fo very near, and that it would last so very long. But when the choice we actually have before us is this, whether we will chuse to be

ha

Appy for the space of only threescore and ten years, nay, perhaps, of only twenty or ten years, I might say, of only a day or an hour, and miserable to all eternity; or, on the contrary, miserable for this short term of years, and happy for a whole eternity; what words are sufficient to express that folly and want of consideration which in such a case makes a wrong choice!

I here put the case, even at the worst, by supposing (what seldom happens) that a course of virtue makes us misserable in this life; but if we suppose (as it generally happens) that virtue will make us more happy, even in this life, than a contrary course of vice; how can we sufficiently admire the supposition or madness of those persons who are capable of making so absurd a choice!

Every wife man, therefore, will confider this life only as it may conduce to the happiness of the other, and chearfully sacrifice the pleasures of a few years to those of an eternity.

Spectator.

# § 5. The Advantages of a good Education.

I confider an human foul without education like marble in the quarry, which shews none of its inherent beauties, until the skill of the polisher fetches out the colours, make the surface shine, and discovers every ornamental cloud, spot, and vein, that runs through the body of it. Education, after the same manner, when it works upon a noble mind, draws out to view every latent virtue and perfection, which, without such helps, are never able to make their appearance.

If my reader will give me leave to change the allusion so soon upon him, I shall make use of the same instance to illustrate the force of education, which Ariftotle has brought to explain his doctrine of substantial forms, when he tells us that a statue lies hid in a block of marble; and that the art of the statuary only clears away the superfluous matter, and removes the rubbish. The figure is in the stone, and the sculptor only finds it. What sculpture is to a block of marble, education is to an human foul. The philosopher, the faint, or the hero, the wife, the good, or the great man, very often lie hid and concealed in a plebeian, which a proper education might have dif-interred, and have brought to light. I am therefore much delighted with reading the accounts of favage nations, and with contemplating those virtues which are wild and uncultivated at to fee courage exerting itself in fiercenes, resolution in obstinacy, wisdom in cunning, patience in sullenness and despair.

Men's passions operate variously, and appear in different kinds of actions, according as they are more or less rectified and swayed by reason. When one hears of negroes, who upon the death of their mafters, or upon changing their service, hang themselves upon the next tree, as it frequently happens in our American plantations, who can forbear admiring their fidelity, though it expresses itself in so dreadful a manner? What might not that savage greatness of foul, which appears in these poor wretches on many occasions, be raised to, were it rightly cultivated? And what colour of excuse can there be for the contempt with which we treat this part of our species; that we should not put them upon the common foot of humanity; that we should only set an infignificant fine upon the man who murders them; nay, that we should, as much as in us lies, cut them off from the prospects of happiness in another world, as well as in this, and deny them that which we look upon as the proper means for attaining it!

It is therefore an unspeakable bleffing to be born in those parts of the world where wisdom and knowledge slourish; though it must be confessed there are, even in these parts, several poor uninstructed persons, who are but little above the inhabitants of those nations of which I have been here speaking; as those who have had the advantages of a more liberal education, rife above one another by feveral different degrees of perfection. For, to return to our flatue in the block of marble, we fee it fometimes only begun to be chipped, fometimes rough-hewn, and but just sketched into an human figure; sometimes we fee the man appearing distinctly in all his limbs and features; fometimes we find the figure wrought up to great elegarcy; but feldom meet with any to which the hand of a Phidias or a Praxiteles could not give feveral nice touches and Spectator. finishings.

# § 6. The Dijadvantages of a bad Educa-

Sir, I was condemned by fome disaftrous influence to be an only fon, born to the apparent prospect of a large fortune, and allotted to my parents at that time of life when satiety of common diversions at-

low4

lows the mind to indulge parental affection with great intensens. My birth was celebrated by the tenants with seasts, and dances, and bagpipes; congratulations were sent from every samily within ten miles round; and my parents discovered, in my first cries, such tokens of future virtue and understanding, that they declared themselves determined to devote the remaining part of life to my happiness and the encrease of their estate.

The abilities of my father and mother were not perceptibly unequal, and education had given neither much advantage over the other. They had both kept good company, rattled in chariots, glittered in playhouses, and danced at court, and were both expert in the games that were in their times called in as auxiliaries against the

intrusion of thought.

When there is such a parity between two persons associated for life, the dejection which the husband, if he be not completely stupid, must always suffer for want of superiority, finks him to submissioneres. My mamma therefore governed the family without controul; and, except that my father still retained some authority in the stables, and now and then, after a supernumerary bottle, broke a looking-glass or china-dish to prove his sovereignty, the whole course of the year was regulated by her direction, the servants received from her all their orders, and the tenants were continued or dismissed at her discretion.

She therefore thought herfelf entitled to the superintendance of her son's education; and when my father, at the infligation of the parson, faintly proposed that I should be fent to school, very positively told him, that she would not suffer a fine child to be ruined; that she never knew any boys at a grammar-school, that could come into a room without blushing, or sit at the table without some aukward uneasiness; that they were always putting themselves into danger by boiflerous plays, or vitiating their behaviour with mean company; and that, for her part, she would rather follow me to the grave, than see me tear my cloaths, and hang down my head, and fneak about with dirty shoes and blotted fingers, my hair unpowdered, and my hat uncocked.

My father, who had no other end in his propofal than to appear wife and manly, foon acquiefced, fince I was not to live by my learning; for indeed, he had known very few students that had not fome sliff-

ness in their manner. They therefore agreed, that a domestic tutor should be procured; and hired an honest gentleman of mean conversation and narrow sentiments, but whom having passed the common forms of literary education, they implicitly concluded qualified to teach all that was to be learned from a scholar. He thought himself sufficiently exalted by being placed at the same table with his pupil, and had no other view than to perpetuate his felicity by the utmost flexibility of submission to all my mother's opinions and caprices. He frequently took away my book, left I should mope with too much application, charged me never to write without turning up my ruffles, and generally brushed my coat before he dismissed me into the parlour.

He had no occasion to complain of too burthensome an employment: for my mother very judiciously considered, that I was not likely to grow politer in his company, and fuffered me not to pals any more time in his apartment than my lesson When I was fummoned to my required. task, she enjoined me not to get any of my tutor's ways, who was feldom mentioned before me but for practices to be avoided. I was every moment admonished not to lean on my chair, crofs my legs, or fwing my hands like my tutor; and once my mother very feriously deliberated upon his total difinission, because I began, she said; to learn his manner of sticking on my hat, and had his bend in my shoulders, and his

totter in my gait.

Such, however, was her care, that I cleaped all these depravities; and when I was only twelve years old, had rid myself of every appearance of childsh distindence. I was celebrated round the country for the petulance of my remarks, and the quickness of my replies; and many a scholar five years older than myself, have I dashed into consusion by the scadiness of my countenance, silenced by my readiness of repartee, and tortured with envy by the address with which I picked up a fan, presented a snuff-box, or received an empty tea-cup.

At fourteen I was completely skilled in all the niceties of dress, and I could not only enumerate all the variety of silks, and distinguish the product of a French loom, but dart my eye through a numerous company, and observe every deviation from the reigning mode. I was universally skilful in all the changes of

expensive

expensive finery: but as every one, they say, has something to which he is particolarly born, was eminently knowing in Bruffels lace.

The next year faw me advanced to the trust and power of adjusting the ceremonial of an affembly. All received their partners from my hand, and to me every Aranger applied for introduction. heart now disdained the instructions of a tutor; who was rewarded with a fmall anmuity for life, and left me qualified, in my

own opinion, to govern myfelf.

In a short time I came to London, and as my father was well known among the higher classes of life, foon obtained admission to the most splendid assemblies, and most crowded card-tables. Here I found myfelf univerfally careffed and applauded; the ladies praifed the fancy of my clothes, the beauty of my form, and the loftness of my voice; endeavoured in every place to force themselves to my notice; and invited, by a thousand oblique folicitations, my attendance to the playhouse, and my falutations in the Park. was now happy to the utmost extent of my conception; I passed every morning in dress, every afternoon in visits, and every night in some select assemblies, where neither care nor knowledge were fuffered to molest us.

After a few years, however, these delights became familiar, and I had leifure so look round me with more attention. I then found that my a tterers had very little power to relieve the languor of fatiety, or recreate weariness, by varied amusement; and therefore endeavoured to enlarge the sphere of my pleasures, and to try what fatisfaction might be found in the fociety of men. I will not deny the mortification with which I perceived that every man whose name I had heard mentioned with respect, received me with a kind of tenderness nearly bordering on compassion; and that those whose reputation was not well established, thought it necessary to justify their understandings, by treating me with contempt. One of these witlings elevated his creft, by asking me in a full coffee-house the price of patches; and another whilpered, that he wondered Mil's Frifk did not keep me that atternoon to watch her fquirrel.

When I found myself thus hunted from all masculine convertation by those who were themselves barely admitted, I returned to the ladies, and resolved to dedicate my life to their service and their pleasure. But I find that I have now lost my charms. Of those with whom I entered the gay world, some are mar ied, some have retired, and some have so much changed their opinion, that they carcely pay any regard to my civilities, ifth re is any other man in the place. The new flight of beauties, to whom I have made my addresses, fusfer me to pay the treat, and then titter with boys. So that I no v find myfelf welcome only to a few grave ladies, who, unacquainted with all that gives either use or dignity to life, are content to pass their hours between their bed and their cards, without efteem from the old, or reverence from the young.

I cannot but think, Mr. Rambler, that I have reason to complain; for surely the females ought to pay some regard to the age of him whose youth was passed in endeavours to please them. They that encourage folly in the boy, have no right to punish it in the man. Yet I find, that though they lavish their first fonducis upon pertness and gaiety, they foon transfer their regard to other qualities, and ungratefully abandon their adorers to dream out their last years in stupidity and contempt.

I am, &c. Florentulus. Rambler.

§ 7. Omniscience and Omnipresence of the Deity, together with the Immensity of his Works.

I was yesterday, about sun-set, walking in the open fields, ti'l the night intentibly fell upon me. I at hill amuled myleif with all the richness and variety of colours which appeared in the western parts of heaven: in proportion as they faded away and went out, feveral flars and planets appeared one after another, till the whole firmament was in a glow. The blueness of the æther was exceedingly heightened and enlivened by the feafon of the year, and the rays of all those luminaries that passed through it. The galaxy appeared in its most beautiful white. To complete the scene, the full moon rose at length in that clouded majesty which Milton takes notice of, and opened to the eye a new picture of nature, which was more fin ly shaded, and disposed among softer lights, than that which the fun had before discovered to us.

As I was surveying the moon walking in her brightness, and taking her progress among the contiellations, a thought arose

in me, which I believe very often perplexes and disturbs men of serious and contemplative natures. David himself fell into it in that reflection, 'When I confider the heavens the work of thy fingers, the moon and the stars which thou hast ordained, what is man that thou art mindful of him, and the fon of man that thou regardest him!' In the same manner, when I consider that infinite host of stars, or, to speak more philosophically, of suns, which were then shining upon me, with those innumerable sets of planets or worlds, which were moving round their respective funs; when I still enlarged the idea, and supposed another heaven of suns and worlds rifing still above this which we discovered, and these still enlightened by a superior firmament of luminaries, which are planted at fo great a distance, that they may ap-pear to the inhabitants of the former as the stars do to us; in short, while I purfued this thought, I could not but reflect on that little infignificant figure which I myself bore amidst the immensity of God's works.

Were the fun, which enlightens this part of the creation, with all the host of planetary worlds that move about him, utterly extinguished and annihilated, they would not be miffed, more than a grain of fand upon the sca-shore. The space they posses is so exceedingly little in comparison of the whole, it would scarce make a blank in the creation. The chasm would be imperceptible to an eye, that could take in the whole compass of nature, and pass from one end of the creation to the other: as it is possible there may be such a sense in ourselves hereafter, or in creatures which are at prefent more exalted than ourselves. We see many stars by the help of glasses, which we do not discover with our naked eyes; and the finer our telescopes are, the more still are our discoveries. Huygenius carries this thought so far, that he does not think it impossible there may be stars whose light is not yet travelled down to us fince their first creation. There is no question but the universe has certain bounds fet to it; but when we consider that it is the work of infinite power, prompted by infinite goodness, with an infinite space to exert ittelf in, how can our imagination fet any bounds to it?

To return, therefore, to my first thought, I could not but look upon myself with secret horror, as a being that was not worth the smallest regard of one who had so great a work under his care and superinten-

dency. I was afraid of being overlooked amidit the immensity of nature, and lost among that infinite variety of creatures, which in all probability swarm through all these immeasurable regions of matter.

In order to recover myfelf from this mortifying thought, I considered that it took its rife from those narrow conceptions. which we are apt to entertain of the divine nature. We ourselves cannot attend to many different objects at the same time. If we are careful to infeect some thi gs, we must of course neglect others. imperfection which we observe in ourselves. is an imperfection that cleaves in some degree to creatures of the highest capacities, as they are creatures, that is, beings of finite and limited natures. The presence of every created being is confined to a certain measure of space, and consequently his observation is stinted to a certain number of objects. The sphere in which we move, and act, and understand, is of a wider circumference to one creature than another, according as we rife one above another in the scale of existence. But the widest of these our spheres has its circumference. When therefore we reflect on the divine nature, we are so used and accustomed to this imperfection in ourfelves, that we cannot forbear in fome meafure ascribing it to him in whom there is no shadow of imperfection. Our reason indeed affures us, that his attributes are infinite: but the poorness of our conceptions is fuch, that it cannot forbear fetting bounds to every thing it contemplates, till our reason comes again to our succour, and throws down all those little prejudices which rife in us unawares, and are natural to the mind of man.

We shall therefo e utterly extinguish this melancholy thought, of our being overlooked by our Maker in the multiplicity of his works, and the infinity of those objects among which he seems to be incessantly employed, if we consider, in the first place, that he is omnipresent; and in the second, that he is omniscient.

If we confider him in his omnipresence: his being passes through, actuates, and supports to ewhole frame of nature. His creation, and every part of it, is full of him. There is nothing he has made, that is either so distant, to little, or so inconsiderable, which he does not essentially inhabit. His substance is within the substance of every being, whether material or immaterial, and as intimately present to it, as that being is to itself. It would be an imper-

fection in him, were he able to move out of one place into another, or to draw himfelf from any thing he has created, or from any part of that space which he disfused and spread abroad to infinity. In short, to speak of him in the language of the old philosophers, he is a being whose centre is every where, and his circumference no where.

In the second place, he is omniscient as well as omnipresent. His omniscience indeed necessarily and naturally slows from his omnipresence. He cannot but be confcious of every motion that arises in the whole material world, which he thus effentially pervades; and of every thought that is flirring in the intellectual world, to every part of which he is thus intimately united. Several moralits have confidered the creation as the temple of God, which he has built with his own hands, and which is filled with his presence. Others have confidered infinite space as the receptacle, or rather the habitation of the Almighty: but the noblest and most exalted way of considering this infinite space, is that of Sir Islac Newton, who calls it the fenforum of the Brutes and men have their fen-Godhead. foriola, or little fenforiums, by which they apprehend the presence and perceive the actions of a few objects, that lie contiguous to them. Their knowledge and observation turn within a very narrow circle. But as God Almighty cannot but perceive and : know every thing in which he refides, infinite space gives room to infinite knowledge, and is, as it were, an organ to omnifci-

Were the foul separate from the body. and with one glance of thought should flart beyond the bounds of the creation. should it for millions of years continue its progress through infinite space with the same activity, it would still find itself within the embrace of its Creator, and encome passed round with the immensity of the Godhead. While we are in the body he is not less present with us, because he is concealed from us. Oh that I knew where I might find him! (fays Job.) Behold I go forward, but he is not there; and · backward, but I cannot perceive him: on the left hand, where he does work, · but I cannot behold him: he hideth him-· felf on the right hand that I cannot fee In fhort, reason as well as revelation, affures us, that he cannot be absent from us, notwithstanding he is undiscovered by us.

In this confideration of God Almighty's omnipresence and omniscience, every uncomfortable thought vanishes. He cannot but regard every thing that has being, efpecially such of his creatures who fear they are not regarded by him. He is privy to all their thoughts, and to that anxiety of heart in particular, which is apt to trouble them on this occasion; for, as it is impossible he should overlook any of his creatures; fo we may be confident that he regards, with an eye of mercy, those who endeavour to recommend themselves to his notice, and in unfeigned humility of heart think themselves unworthy that he should be mindful of them. Speclator.

#### § 8. Motives to Piety and Virtue, drawn from the Omniference and Omniprefence of the Deity.

In one of your late papers, you had oçcasion to consider the ubiquity of the Godhead, and at the fame time to shew, that as he is present to every thing, he cannot but be attentive to every thing, and privy to all the modes and parts of its existence: or, in other words, that his omnifcience and omnipresence are co-existent, and run together through the whole infinitude of ipace. This confideration might furnish us with many incentives to devotion, and motives to morality; but as this subject has been handled by feveral excellent wiiters, I shall consider it in a light in which I have not feen it placed by others.

First, How disconsolate is the condition of an intellectual being, who is thus present with his Maker, but at the same time receives no extraordinary benefit or advantage from this his presence!

Secondly, How deplorable is the condition of an intellectual being, who feels no other effects from this his prefence, but fuch as proceed from divine wrath and indignation!

Thirdly, How happy is the condition of that intellectual being, who is sensible of his Maker's presence from the secret effects of his mercy and loving-kindness!

First, How disconsolate is the condition of an intellectual being, who is thus prefent with his Maker, but at the same time receives no extraordinary benefit or advantage from this his presence! Every particle of matter is actuated by this Almighty Being which passes through it. The heavens and the earth, the stars and planets, move and gravitate by virtue of this great

principle

principle within them. All the dead parts of nature are invigorated by the presence of their Creator, and made capable of exerting their respective qualities. The feveral instincts, in the brute creation, do likewise operate and work towards the several ends which are agreeable to them, by this divine energy. Man only, who does not co-operate with his holy spirit. and is unattentive to his presence, receives none of these advantages from it, which are perfective of his nature, and necessary to his well-being. The divinity is with him, and in him, and every where about him, but of no advantage to him. It is the fame thing to a man without religion, as if there were no God in the world. It is indeed impossible for an infinite Being to remove himfelf from any of his creatures; but though he cannot withdraw his effence from us, which would argue an imperfection in him, he can withdraw from us all thé joys and confolations of it. His prefence may perhaps be necessary to support us in our existence; but he may leave this our existence to itself, with regard to its happiness or misery. For, in this sense, he may cast us away from his presence, and take his holy spirit from us. This single confideration one would think fufficient to make us open our hearts to all those infufions of joy and gladness which are so near at hand, and ready to be poured in upon us; especially when we consider, Secondly, the deplorable condition of an intellectual being, who feels no other effects from his Maker's presence, but such as proceed from divine wrath and indignation!

We may assure ourselves, that the great Author of nature will not always be as one who is indifferent to any of his creatures. Those who will not feel him in his love, will be fure at length to feel him in his displeasure. And how dreadful is the condition of that creature, who is only sensible of the being of his Creator by what he fuffers from him! He is as essentially prefent in hell as in heaven; but the inhabitants of those accursed places behold him only in his wrath, and shrink within the flames to conceal themselves from him. It is not in the power of imagination to conceive the fearful effects of Omnipotence, incenfed.

But I shall only consider the wretchedne's of an intellectual being, who, in this life, lies under the displeasure of him, that at all times, and in all places, is intimately united with him. He is able to disquiet the foul, and vex it in all its faculties He can hinder any of the greatest comforts of life from refreshing us, and give an edge to every one of its flightest calamities. Who then can bear the thought of being an out-cast from his presence, that is from the comforts of it, or of feeling it only in its terrors? How pathetic is that expostulation of Job, when for the real trial of his patience, he was made to look upon himfelf in this deplorable condition! Why hast thou set me as a mark against thee, fo that I am become a burden to myfelf?' But, thirdly, how happy is the condition of that intellectual being, who is fensible of his Maker's presence from the fecret effects of his mercy and lovingkindness!

The bleffed in heaven behold him face to face, that is, are as fensible of his presence as we are of the presence of any perfon whom we look upon with our eyes. There is doubtless a faculty in spirits, by which they apprehend one another, as our fenses do material objects; and there is no question but our fouls, when they are difembodied, or placed in glorified bodies, will by this faculty, in whatever part of space they reside, be always sensible of the divine presence. We, who have this veil of flesh standing between us and the world of spirits, must be content to know the spirit of God is present with us by the effects which he produceth in us. Our outward senses are too gross to apprehend him; we may however tafte and fee how gracious he is, by his influence upon our minds, by those virtuous thoughts which he awakens in us, by those secret comforts and refreshments which he conveys into our fouls, and by those ravishing joys and inward satisfactions which are perpetually fpringing up, and diffusing themselves among all the thoughts of good men. He is lodged in our very essence, and is as a foul within the foul, to irritate its understanding, rectify its will, purify its passions, and enliven all the powers of man. How happy therefore is an intellectual being, who by prayer and meditation, by virtue and good works, opens this communication between God and his own foul! Though the whole creation frowns upon him, and all nature looks black about him, he has his light and support within him, that are able to cheer his mind, and bear him up in the midst of all those horrors which encompass him. He knows that his helper is at hand, and is always nearer to him than any thing elfa

can be, which is capable of annoying or terrifying him. In the midst of ca umny or contempt, he attends to that Being who whilpers better things within his foul, and whom he looks upon as his defender, his glory, and the lifter-up of his head. In his deepest solitude and retirement, he knows that he is in company with the greatest of beings; and perceives within himself such real sensations of his presence, as are more delightful than any thing that can be met with in the conversation of his creatures. Even in the hour of death, he considers the pains of his dissolution to be nothing elfe but the breaking down of that partition, which stands betwixt his foul, and the fight of that being who is always prefent with him, and is about to manifest itself to him in fulness of joy.

If we would be thus happy, and thus fenfible of our Maker's presence, from the fecret effects of his mercy and goodness, we must keep such a watch over all our thoughts, that in the language of the scripture, his foul may have pleasure in us. We must take care not to grieve his holy spirit, and endeavour to make the medications of our hearts always acceptable in his fight, that he may delight thus to refide and dwell in us. The light of nature could direct Seneca to this doctrine, in a very remarkable passage among his epistles; Sacer ineft in nobis spiritus, bonorum malorumque custos et observator; et quemadmodum nos illum tractamus, ita et ille nos, 'There is · a holy spirit residing in us, who watches and observes both good and evil men, and will treat us after the same manner . that we treat him.' But I shall conclude this discourse with those more emphatical words in divine revelation; ' If a man love me, he will keep my words; and my · Father will love him, and we will come unto him, and make our abode with · him.' Spectator.

# § 9. On the Immortality of the Soul.

I was yesterday walking alone in one of my friend's woods, and lost myself in it very agreeably, as I was running over in my mind the several arguments that establish this great point, which is the basis of morality, and the source of all the pleasing hopes and secret joys that can arise in the heart of a reasonable creature. I considered those several proofs drawn,

First, from the nature of the foul itself, and particularly its immateriality; which, though not absolutely necessary to the eternity of its duration, has, I think, been evinced to almost a demonstration.

Secondly, from its passions and sentiments, as particularly from its love of existence, its horror of annihilation, and its hopes of immortality, with that secret satisfaction which it finds in the practice of virtue, and that uneasiness which follows in it upon the commission of vice.

Thirdly, from the nature of the Supreme Being, whose justice, goodness, wisdom, and veracity, are all concerned in this

noin

But among these and other excellent arguments for the immortality of the foul. there is one drawn from the perpetual progress of the soul to its perfection, without a possibility of ever arriving at it; which is a hint that I do not remember to have feen opened and improved by others who have written on this subject, though it feems to me to carry a very great weight with it. How can it enter into the thoughts of man, that the foul, which is capable of fuch immense perfections, and of receiving new improvements to all eternity, shall fall away into nothing almost as soon as it is created? Are such abilities made for no purpose? A brute arrives at a point of perfection that he can never pass: in a few years he has all the endowments he is capable of; and were he to live ten thousand more, would be the same thing he is at Were a human foul thus at a present. stand in her accomplishments, were her faculties to be full blown, and incapable of farther enlargements, I could imagine it might fall away infensibly, and drop at once into a state of annihilation. But can we believe a thinking being, that is in a perpetual progress of improvements, and travelling on from perfection to perfection, after having just looked abroad into the works of its Creator, and made a few difcoveries of his infinite goodness, wisdom, and power, must perish at her first setting out, and in the very beginning of her enquiries?

A man, confidered in his present state, seems only sent into the world to propagate his kind. He provides himself with a successor, and immediately quits his post to make room for him.

Hæreden ultirius, velut unde fupervenit undam. Hon. Ep. in l. 2. v. 1750

Heir crowds heir, as in a rolling flood
Wave urges wave.
Canacat.

He does not feem born to enjoy life, but to deliver it down to others. This is not surprizing to consider in animals, which are formed for our use, and can finish their business in a short life. The filk-worm, after having spun her task, lays her eggs and dies. But a man can never have taken in his full measure of knowledge, has not time to subdue his passions, citaolish his foul in virtue, and come up to the perfection of his nature, before he is hurried off the stage. Would an infinitely wife being make such glorious creatures for so mean a purpose? Can he delight in the production of fuch abortive intelligences, such short-lived reasonable beings? Would he give us talents that are not to be exerted? capacities that are never to be gratified? How can we find that wisdom which shines through all his works, in the formation of man, without looking on this world as only a nurfery for the next, and believing that the feveral generations of rational creatures, which rife up and difappear in fuch quick faccessions, are only to receive their first rudiments of existence here, and afterwards to be transplanted into a more friendly climate, where they may spread and flourish to all eternity?

There is not, in my opinion, a more pleasing and triumphant consideration in religion, than this of the perpetual progress which the foul makes towards the perfection of its nature, without ever arriving at a period in it. To look upon the foul as going on from strength to strength, to confider that she is to shine for ever with new accessions of glory, and brighten to all eternity; that she will be still adding virtue to virtue, and knowledge to knowledge; carries in it something wonderfully agreeable to that ambition which is natural to the mind of man. Nay, it must be a prospect pleasing to God himself, to see his creation for ever beautifying in his eyes, and drawing nearer to him, by greater degrees of resemblance.

Methinks this fingle consideration, of the progress of a finite spirit to persection, will be sufficient to extinguish all envy in inserior natures, and all contempt in superior. That cherubim, which now appears as a God to a human soul, knows very well that the period will come about in eternity, when the human soul shall be as persect as he himself now is: nay, when the shall look down upon that degree of persection as much as she now salls short of it. It is true, the higher nature still advances,

and by that means preserves his distance and superiority in the scale of being; but he knows that, how high soever the station is of which he stands possessed at present, the inferior nature will at length mount up to it, and shine forth in the same degree of cory.

With what aftonishment and veneration may we look into our own fouls, where there are fuch hidden stores of virtue and knowledge, fuch inexhaufted fources of perfection! We know not yet what we shall be, nor will it ever enter into the heart of man to conceive the glory that will be always in reserve for him. The soul, considered with its Creator, is like one of those mathematical lines that may draw nearer to another for all eternity without a possibility of touching it: and can there be a thought so transporting as to consider ourfelves in these perpetual approaches to him, who is not only the standard of perfection, but of happiness! Spectator.

# § 10. The Duty of Children to their Parents.

I am the happy father of a very towardly son, in whom I do not only see my life, but also my manner of life renewed. It would be extremely beneficial to 'fociety. if you would frequently resume subjects which serve to bind thele fort of relations faster, and endear the ties of blood with those of good-will, protection, observance, indulgence, and veneration. I would, methinks, have this done after an uncommon method; and do not think any one, who is not capable of writing a good play, fit to undertake a work wherein there will necessarily occur so many secret instincts and biasses of human nature, which would pass unobserved by common eyes. I thank Heaven I have no outrageous offence against my own excellent parents to answer for; but when I am now and then alone, and look back upon my past life, from my earliest infancy to this time, there are many faults which I committed that did not appear to me, even until I myself became a father. I had not until then a notion of the yearnings of heart, which a man has when he fees his child do a laudable thing, or the fudden damp which feizes him when he fears he will act fomething unworthy. It is not to be imagined what a remorfe touched me for a long train of childish negligences of my mother, when I law my wife the other day look out of the window, and turn as pale as after upon feeing my younger

younger boy fliding upon the ice. These flight intimations will give you to under-fland, that there are numberless little crimes, which children take no notice of while they are doing, which, upon reflection, when they shall shemselves become fathers, they will look upon with the utmost forrow and contrition, that they did not regard, before those whom they offended were to be no more feen. How many thousand things do I remember, which would have highly pleased my father, and I omitted for no other reason but that I thought what he proposed the effect of humour and old age, which I am now convinced had reason and good sense in it! I cannot now go into the parlour to him, and make his heart glad with an account of a matter which was of no consequence, but that I told it and acted in it. The good man and woman are long fince in their graves, who used to sit and plot the welfare of us their children, while, perhaps, we were fometimes laughing at the old folks at another end of the house. The truth of it is, were we merely to follow nature in these great duties of life, though we have a strong instinct towards the performing of them, we should be on both fides very deficient. Age is fo unwelcome to the generality of mankind, and growth towards manhood fo defirable to all, that refignation to decay is too difficult a task in the father; and deference, amidst the impulse of gay defires, appears unrea-fonable to the son. There are so few who can grow old with a good grace, and yet fewer who can come flow enough into the world, that a father, were he to be actuated by his defires, and a fon, were he to confult himself only, could neither of them behave himfelf as he ought to the other. But when reason interpoles against instinct, where it would carry either out of the intereils of the other, there arises that happiest intercourse of good offices between those dearest relations of human life. The father, according to the opportunities which are offered to him, is throwing down bleffings on the fon, and the fon endeavouring to appear the worthy offspring of fuch a father. It is after this manner that Camillus and his first-born dwell together. Camillus enjoys a pleasing and indolent old age, in which passion is subdued and rea-fon exalted. He waits the day of his disfoliation with a refignation mixed with delight, and the fon fears the accession of his father's fortune with distidence, left he should not enjoy or become it as well as

his predecessor. Add to this, that the father knows he leaves a friend to the children of his friends, an easy landlord to his tenants, and an agreeable companion to his acquaintance. He believes his fon's behaviour will make him frequently remembered, but never wanted. This commerce is fo well cemented, that without the pomp of faying, Son, be a friend to fuch a one when I am gone; Camillus knows, being in his favour is direction enough to the grateful youth who is to fucceed him, without the admonition of his mentioning it. These gentlemen are honoured in all their neighbourhood, and the same effect which the court has on the manners of a kingdom, their characters have on all who live within the influence of them.

My fon and I are not of fortune to communicate our good actions or intentions to so many as these gentlemen do; but I will be hold to say, my son has, by the applause and approbation which his behaviour towards me has gained him, occasioned that many an old man, besides myself, has rejoiced. Other men's children sollow the example of mine; and I have the inexpressible happiness of overhearing our neighbours, as we ride by, point to their children, and say, with a voice of joy, "There they go."

Spectator.

# § 11. The Strength of parental Affection.

I went the other day to visit Eliza, who, in the perfect bloom of beauty, is the mother of several children. She had a little prating girl upon her lap, who was beging to be very fine, that she might go abroad: and the indulgent mother, at her little daughter's request, had just taken the knots off her own head to adorn the hair of the pretty trisler. A smiling boy was at the same time caressing a lap-dog, which is their mother's favourite, because it pleases the children; and she, with a delight in her looks, which heightened her beauty, so divided her conversation with the two pretty prattlers, as to make them both equally chearful.

As I came in, she said with a blush,

'Mr. Ironside, though you are an old
batchelor, you must not laugh at my tenderness to my children.' I need not tell
my reader what civil things I said in answer
to the lady, whose matron-like behaviour
gave me infinite satisfaction: since I myicle take great pleasure in playing with

children,

enildren, and am feldom unprovided of lums or marbles, to make my court to

uch entertaining companions.

Whence is it, said I to myself when was alone, that the affection of parents is fo intense to their offspring? Is it betause they generally find such resemblantes in what they have produced, as that thereby they think themselves renewed in their children, and are willing to transmit themselves to suture times? or is it be-Laufe they think themfelves obliged by the lictates of humanity to nourish and rear hat is placed so immediately under their rotection; and what by their means is brought into this world, the scene of miery, of necessity? These will not come up to it. Is it not rather the good providence of that Being, who in a supereminent degree protects and cherishes the whole race of mankind, his fons and creatures? How thall we, any other way, account for this natural affection, so signally displayed throughout every species of the animal creation, without which the course of nature would quickly fail, and every various kind be extinct? Instances of tenderness in the most savage brutes are so frequent, that quotations of that kind are altogether unnecessary.

If we, who have no particular concern in them, take a fecret delight in observing the gentle dawn of reason in babes; if our ears are foothed with their half-forming and aiming at articulate founds; if we are charmed with their pretty mimickry, and urprised at the unexpected starts of wit and junning in these miniatures of man: what ransport may we imagine in the breasts of hose, into whom natural instinct hath oured tenderness and fondness for them! jow amiable is fuch a weakness of human lature! or rather, how great a weakness it to give humanity fo reproachful a The bare confideration of palame! ernal affection should, methinks, create a pore grateful tenderness in children tovards their parents, than we generally see; nd the filent whispers of nature be atended to, though the laws of God and man id not call aloud.

These filent whispers of nature have ad a marvellous power, even when eir cause hath been unknown. There e several examples in story, of tender iendships formed betwixt men, who know of their near relation: Such accounts nfi-m me in an opinion I have long entained, that there is a sympathy Letwixt fouls, which cannot be explained by the prejudice of education, the fenfe of duty, or

any other human motive.

The memoirs of a certain French nobleman, which now lie before me, furnish me with a very entertaining inflance of this fecret attraction, implanted by Providence in the human foul. It will be necessary to inform the reader, that the person whose flory I am going to relate, was one, whose roving and romantic temper, joined to a disposition singularly amorous, had led him through a vast variety of gallantries and amours. He had, in his youth, attended a princess of France into Poland, where he had been entertained by the King her hufband, and married the daughter of a grandee. Upon her death he returned into his native country; where his intrigues and other misfortunes having confumed his paternal effate, he now went to take care of the fortune his decoafed wife had left him in Poland. In his journey he was robbed before he reached Warfaw, and lay ill of a fever, when he met with the following adventure; which I shall relate in his own words.

" I had been in this condition for four days, when the counters of Venosta passed that way. She was informed that a ftranger of good fashion lay sick, and her charity led her to see me. I remembered her, for I had often feen her with my wife, to whom the was nearly related; but when I found flie know me not, I thought fit to conceal my name. I told her I was a German; that I had been robbed; and that if she had the charity to fend me to Warfaw, the queen would acknowledge it, I having the honour to be known to her Mijesty. The counters had the good less to take compassion of me, and oldering me to be put in a litter, carried rie to Warlaw, where I was lodged in her houle until my health should allow me to wait on the queen.

"My tever increase I after my journe, was over, and I was confined to my bed for fifteen days. When the counters furt fav me, the had a young lady with her, about eighteen mass of age, who was much taller and better shaped than the Posis women generally are. She was very fare, her fkin exceedingly fine, and her air and shape idex, will be beautiful. I was not fo fick as to liverly in this young beauty; and I felt in my heart a ch emotions at the fi it view, as made me fear that all my misfortunes had not arroad me furficiently agai if

the clarms of the fair fex.

"The amiable creature feemed afflicted at my fickness; and the appeared to have fo much concern and care for me, as raifed in me a great inclination and tenderness for her. She came every day into my chamber to inquire after my health; I a ked who she was, and I was antwered, that she was nicce to the countest of Venoski.

" I verily believe that the conflant fight of this chaiming maid, and the pleasure I received from her careful attendance, contributed more to my recovery than all the medicines the physicians gave me. In short, my fever left me, and I had the fatisfaction to fee the lovely creature overjoyed at my recovery. She came to see me oftener as I grew b tter; and I already felt a flionger and more tender affection for her, than I ever bore to any weman in my life: when I began to perceive that her conflant care of me was only a blind, to give her an opportunity of feeing a young Pole whom I took to be her lover. He seemed to be much about her age, of a brown complex. ion, very tall, but finely shaped. Every time the came to fee me, the young gentleman came to find her out; and they ufually refined to a corner of the chamber, where they feemed to converfe with greatearnestnels. The aspect of the youth pleased me wonderfully; and if I had not suspected that he was my rival, I should have taken delight in his person and friendship.

" They both of them often af-ed me if I were in reality a German? which when I continued to affirm, they feemed very much troubled. One day I took notice that the young helv and gentleman, having retired to a window, were very intent upon a pic ture; and that every now and then they cast their eyes upon me, as if they had found force refemblance betweet that and my features. I could not forbear to ask alle meaning of it; upon which the Indy anfucted that if I had been a Frenchman, the flould have imagined that I was the per on for whom the picture was drawn, beande it exactly refembled me. I defined to fee it. But how great was my furprife, when I found it to be the very painting which I had fent to the queen five years before, and which flie comm. nded me to get drawn to be given to my children! After I had viewed the piece, I cast my eyes upon the young lady, and then upon the gentleman I had thought to be her lover. Ivry heart bear, and I felt a fecret emotion which filled me with wonder. I thought I traced in the two young perfors fome of

my own fratures, and at that moment I faid to myfelf, Are not these my children? The tears came into my eyes, and I was about to run and embrace them; but constraining myself with pain, I asked whose picture it was? The maid, perceiving that I could not speak without tears, fell a weeping. Her tears absolutely confirmed me in my opinion; and falling upon her neck, 'Ah, my dear child,' faid I, 'yes, I am your father!' I could fay no more. The youth feized my hands at the fame time, and killing, bathed them with his tears. Throughout my life, I never felt a joy equal to this; and it must be owned, that nature infpires more lively emotions and pleafing tenderness than the padiens Spellater. can poshbly excite."

# & 12. Remarks on the Swiftness of Time.

The natural advantages which arife from the position of the earth which we inhabit, with respect to the other planets, afford much employment to mathematical speculation, by which it has been discovered, that no other conformation of the system could have given such commodious distributions of light and heat, or imparted fertility and pleasure to so great a part of a revolving sphere.

It may be perhaps observed by the morallit, whith equal reason, that our globe seems particularly fitted for the residence of a Being, placed here only for a short time, whose task is to advance hunself to a higher and happier state of existence, by unremitted vigilance of caution, and

activity of virtue.

The duties required of man are fuch as human nature does not willingly perform, and fuch as those are inclined to delay who yet intend some time to sulfit them. It was therefore necessary that this universal reluctance should be counteracted, and the drowshness of hesitation wakened into relovie; that the danger of procrastination should be always in view, and the sallactes of security he hourly detected.

To this end all the appearances of nature uniformly configire. Whatever we fee on every fide, remireds us of the lapfe of time and the flux of life. The day and night fueceed each other, the rotation of feafons divertifies the year, the fun rifes, attains the meridian, declines and fets; and the moon every night changes its four.

The day has been confidered as an image of the year, and a year as the reprefentation Tentation of life. The morning answers to the spring, and the spring to childhood and youth; the noon corresponds to the summer, and the summer to the strength of manhood. The evening is an emblem of autumn, and autumn of declining life. The night with its silence and darkness shows the winter, in which all the powers for vegetation are benumbed; and the winter points out the time when life shall cease, with its hopes and pleasures.

He that is carried forward, however wiftly, by a motion equable and easy, perreives not the change of place but by the ratiation of objects. If the wheel of life, hich rolls thus filently along, paffed on hrough undistinguishable uniformity, we should never mark its approaches to the end of the course. If one hour were like another; it the passage of the sun did not Thew that the day is wasting; if the change of feafons did not impress upon us the Inght of the year; quantities of duration equal to days and years would glide unob-ferved. If the parts of time were not vapiously coloured, we should never discern their departure or fuccession, but should Dive thoughtless of the past, and careless of the future, without will, and perhaps with-out power to compute the periods of life, or to compare the time which is already tool with that which may probably re-

But the course of time is so visibly marked, that it is even observed by the bassage, and by nations who have raised heir minds very little above animal intensity there are human beings, whose anguage does not supply them with words by which they can number sive, but I have ead of none that have not names for Day and Night, for Summer and Winter.

Yet it is certain that these admonitions of nature, however forcible, however importunate, are too often vain; and that hany who mark with such accuracy the ourse of time, appear to have little sentiality of the decline of life. Every man as something to do which he neglects; very man has faults to conquer which he elays to combat.

clays to combat.

So little do we accustom ourselves to unsider the effects of time, that things nessifary and certain often surprise us like expected contingencies. We leave the auty in her bloom, and, after an absence twenty years, wonder, at our return, to d her saded. We meet those whom we children, and can scarcely persuade

ourselves to treat them as men. The traveller visits in age those countries through which he rambled in his youth, and hopes for merriment at the old place. The man of business, wearied with unfatisfactory prosperity, retires to the town of his nativity, and expects to play away the last years with the companions of his childhood, and recover youth in the fields where he once was young.

From this inattention, fo general and fo mischievous, let it be every man's study to exempt himself. Let him that defires to see others happy, make haste to give while his gift can be enjoyed, and remember, that every moment of delay takes away something from the value of his benefaction. And let him who proposes his own happiness, resleet, that while he forms his purpose the day tolls on, and 'the night cometh, when no man can work.'

Idler.

# § 13. The Fally of mif Spending Time.

An ancient poet, unreasonably discontented at the present state of things, which his system of opinions obliged him to represent in its worst form, has observed of the earth, "That its greater part is covered by the uninhabitable ocean; that of the rest, some is cucumbered with naked mountains, and some lost under barren stands; some scorched with unintermitted heat, and some petrified with perpetual frost; so that only a few regions remain for the production of fruits, the passure of cattle, and the accommod tion of man."

The same observation may be transferred to the time allotted to us in our prefent flate. When we have deducted all that is absorbed in sleep, all that is inevitably appropriated to the demands of nature, or irrefillibly engroffed by the tyranny of cuflom; all that paffes in regulating the superficial decorations of life, or is given up in the reciprocations of civility to the disposal of others; all that is torn from us by the violence of difease, or stolen imperceptibly away by lassitude and languor; we shall find that part of our duration very small of which we can truly call ourselves masters, or which we can fpend wholly at our own choice. Many of our hours are lost in a rotation of petty cares, in a constant recurrence of the same employments, many of our provisions for eafe or happiness are always exhausted by the prefent day; and a great part of our

C 2 existence

existence serves no other purpose, than that of enabling us to enjoy the reft.

Of the few moments which are left in our disposal, it may reasonably be expected, that we should be so frugal, as to let none of them slip from us without some equivalent; and perhaps it might be found, that as the earth, however straitened by rock and waters, is capable of producing more than all its inhabitants are able to confume, our lives, tho' much contracted by incidental distraction, would yet afford us a large space vacant to the exercise of reafon and virtue; that we want not time, but diligence, for great performances;

and that we founder much of our allow-

ance, even while we think it sparing and

infufficient. This natural and necessary comminution of our lives, perhaps, often makes us intenfible of the negligence with which we fuffer them to flice away We never confider ourselves as post-fied at once of time fufficient for any great defign, and there-fore indulge ourselves in fortuitous amusements. We think it unnecessary to take an account of a few supernumerary moments, which, however employed, could have produced little advantage, and which were exposed to a thousand chances of disturbance and interruption.

It is observable, that, either by nature or by habit, our faculties are fitted to images of a certain extent, to which we adjust great things by division, and little things by accumulation. Of extensive furfaces we can only take a furvey, as the parts fucceed one another; and atoms we cannot perceive, till they are united into Thus we break the vast periods maffes. of time into centuries and years; and thus, if we would know the amount of moments, we must agglomerate them into days and weeks.

The proverbial oracles of our parsimonious ancestors have informed us, that the tatal waite of fortune is by fmall expences, by the profusion of sums too little fingly to alarm our caution, and which we never fuffer ourselves to consider together. Of the same kind is the prodigality of life; he that hopes to look back hereafter with fatisfaction upon pall years, must learn to know the present value of fingle minutes, and endeavour to let no particle of time fall utelefs to the ground.

It is usual for those who are advised to the attainment of any new qualifications, to

upon themselves as required to look change the general course of their conduct, to dismiss their business, and exclude pleasure, and to devote their days or nights to a particular attention. But all common degrees of excellence are attainable at a lower price; he that should steadily and resolutely assign to any science or language those interstitial vacancies which intervene in the most crowded variety of diversion or employment, would find every day new irradiations of knowledge, and discover how much more is to be hoped from frequency and perseverance, than from violent efforts and sudden desires: efforts which are foon remitted when they encounter difficulty, and defires which, if they are indulged too often, will shake off the authority of reason, and range capriciously from one object to another.

The disposition to defer every important defign to a time of leifure, and a state of fettled uniformity, proceeds generally frem a false estimate of the human powers. If we except those gigantic and stupendous intelligences who are faid to grasp a systtem by intuition, and hound forward from one feries of conclusions to another, without regular steps through intermediate propositions, the most successful students make their advances in knowledge by fhort flights, between each of which the mind may lie at reft. For every fingle act of progression, a short time is sufficient; and it is only necessary, that whenever that time is afforded, it be well employed.

Few minds will be long confined to fevere and laborious meditation; and when a fuccessful attack on knowledge has been made, the student recreates himself with the contemplation of his conquest, and forbears another incursion till the new acquired truth has becomes familiar, and his curiofity calls upon him for fresh gratifica-Whether the time of intermission is fpent in company, or in folitude, in necesfary butiness, or in voluntary levities, the understanding is equally abstracted from the object of enquiry; but, perhaps, if it be detained by occupations less pleasing, it returns again to fludy with greater alacrity than when it is glutted with ideal pleasure, and furfeited with intemperance of application. He that will not fuffer himself to be discouraged by fancied impossibilities, may fometimes find his abilities invigorated by the necessity of exerting them in fhort intervals, as the force of a current is increased by the contraction of its channel.

From some cause like this, it has probably proceeded, that among those who have contributed to the advancement of learning, many have rifen to eminence, in opposition to all the obstacles which external circumstances could place in their way, amidst the tumult of business, the distresses of poverty, or the diffipations of a wandering and unfettled flate. A great part of the life of Erasmus was one continual peregrination: ill supplied with the gifts of fortune, and led from city to city, and from kingdom to kingdom, by the hopes of patrons and preferment, hopes which always flattered and always deceived him; he yet found means, by unfhaken conflancy, and a vigilant improvement of those hours, which, in the midft of the most restless activity, will remain unengaged, to write more than another in the same condition would have Compelled by want to athoped to read. tendance and folicitation, and fo much versed in common life, that he has transmitted to us the most perfect delineation of the manners of his age, he joined to his knowledge of the world fuch application to books, that he will stand for ever in the first rank of literary heroes. How this proficiency was obtained, he fusiciently difcovers, by informing us, that the Praise of Folly, one of his most celebrated performances, was composed by him on the road to Italy; ne totum illud tempus quo equo fuit insidendum, illiteratis fabulis tererctur, lest the hours which we was obliged to spend on horseback should be tattled away without regard to literature.

An Italian philosopher expressed in his motto, that time was his estate; an estate indeed, which will produce nothing without cultivation, but will always abundantly repay the labours of industry, and satisfy the most extensive desires, if no part of it be suffered to lie waste by negligence, to be over-run with noxious plants, or laid out for shew rather than for use. Rambler.

# § 14. The Importance of Time, and the proper Methods of spending it.

We all of us complain of the shortness of time, saith Seneca, and yet have much more than we know what to do with. Our lives, says he, are spent either in doing nothing at all, or doing nothing to the purpose, or in doing nothing that we ought to do. We are always complaining our days are few, and acting as though there would be no end of them. That noble philosopher has described our inconsistency with

ourselves in this particular by all those various turns of expression and thought which are peculiar in his writings.

I often confider mankind as wholly inconfistent with itself, in a point that bears fome affinity to the former. Though we feem grieved at the shortness of life in general, we are withing every period of it at an end. The minor longs to be at age, then to be a man of business, then to make up an estate, then to arriv at honours, then to retire. Thus, although the whole of life is allowed by every one to be fliort, the feveral divisions of it appear long and tedious. We are for lengthening our span in general, but would fain contract the parts of which it is composed. The usurer would be very well fatisfied to have all the time annihilated that lies between the prefent moment and the next quarter-day. The politician would be contented to lose three years in his life, could he place things in the posture which he fancies they will stand in after such a revolution of The lover would be glad to ftrike out of his existence all the moments that are to pass away before the happy meeting. Thus, as fast as our time runs, we should be very glad, in most parts of our lives, that it ran much faster than it does. Several hours of the day hang upon our hands; nay, we wish away whole years, and travel through time, as through a country filled with many wild and empty waites which we would fain hurry over, that we may arrive at those several little settlements or imaginary points of rest which are disperfed up and down in it.

If we divide the life of most men into twenty parts, we shall find that at least nineteen of them are mere gaps and chasses, which are neither filled with pleasure nor business. I do not however include in this calculation the life of those men who are in a perpetual hurry of affairs, but of those only who are not always engaged in scenes of action; and I hope I shall not do an unacceptable piece of service to these perfons, if I point out to them certain methods for the filling up their empty spaces of life. The methods I shall propose to them are as follow:

The first is the exercise of victue, in the most general acceptation of the word. That particular scheme which comprehends the social virtues, may give employment to the most industrious temper, and find a man business more than the most active station of life. To advise the ignorant,

THE RAMAKRIGHBA MISSION INSTITUTE OF CULTURE LIBRARY

14.078

relieve the needy, comfort the afflicted, are duties that fall in our way almost every day of our lives. A man has frequent opportunities of mitigating the fierceness of a party; of doing justice to the character of a deserving man; of softening the envious, quieting the angry, and rectifying the prejudiced; which are all of them employments suitable to a reasonable nature, and bring great satisfaction to the person who can busy himself in them with discretion.

There is another kind of virtue that may find employment for those retired hours in which we are altogether left to ourselves, and deslitute of company and conversation; I mean that intercourse and communication which every reasonable creature ought to maintain with the great Author of his being. The man who lives under an habitual lenfe of the divine prefence, keeps up a perpetual chearfulness of temper, and enjoys every moment the fatistaction of thinking himfelf in company with his decreit and best of friends. The time never lies heavy upon him: it is impossible for him to be alone. His thoughts and passions are the most busied at such hours when those of other men are the most unactive. He no fooner steps out of the world but his heart burns with devotion, swells with hope, and triumphs in the consciousness of that presence which every where furrounds him; or, on the contrary, pours out its fears, its forrows, its apprehenfions, to the great supporter of its ex-

I have here only confidered the necessity of a man's being victuous, that he may have something to do; but if we consider further, that the exercise of virtue is not only an amusement for the time it lasts, but that its influence extends to these parts of our existence which lie beyond the grave, and that our who ceternity is to take its colour from those hours which we here employ in virtue or in vice, the argument redoubles upon us, for putting in practice this method of passing away our time.

When a man has but a little flock to improve, and has opportunities of turning it all to good account, what shall we think of him if he suffers nineteen parts of it to lie dead, and perhaps caploys even the twentieth to his rum or disadvantage?—But because the mind cannot be always in its fervours, nor strained up to a pitch of virtue, it is necessary to find out proper employments for it, in its retexations.

The next method therefore that I would

propose to fill up our time, should be useful and innocent diversions. I must confefs I think it is below reasonable creatures to be altogether conversant in such diverfions as are merely innocent, and have nothing elfe to recommend them, but that there is no hurt in them. Whether any kind of gaming has even thus much to fay for itself, I shall not determine; but I think it is very wonderful to see persons of the best fense passing away a dozen hours together in shuffling and dividing a pack of cards, with no other conversation but what is made up of a few game phrases, and no other ideas but those of black or red spots ranged together in different figures. Would not a man laugh to hear any one of this fpecies complaining that life is thout?

The stage might be made a perpetual fource of the most noble and uleful entertainments, were it under proper regu-

But the mind never unbends itself so agreeably as in the conversation of a well-chosen friend. There is indeed no bleffing of life that is any way comparable to the enjoyment of a different and virtuous friend. It exics and unloads the mind, clears and improves the understanding, engenders thought and knowledge, animates virtue and good resolution, foothes and allays the passions, and finds employment for most of the vacuat hours of life.

Next to such an intimacy with a particular person, one would endeavour after a more general conversation with such as are capable of edifying and entertaining those with whom they converse, which are qualities that seldom go assunder.

There are many other useful amusements of life, which one would endeavour to multiply, that one might, on all occasions, have recourse to something rather than suffer the mind to lie idle, or run adrift with any passion that chances to rife in it.

A man that has a taste in music, painting, or architecture, is like one that has another sent, when compared with such as have no relish of those arts. The slorist, the planter, the gardener, the husbandman, when they are only as accomplishments to the man of fortune, are great reliefs to a country life, and many ways useful to those who are pointsfed of them.

Spectator.

§ 15. My-spent Time, how punished.

I was yesterday comparing the industry

of man with that of other creatures; in which I could not but observe, that notwithilanding we are obliged by duty to keep ourselves in constant employ, after the time manner as inferior animals are prompted to it by inflinct, we fall very short of them in this particular. We are here the more inexcufable, because there is a greater variety of business to which we may apply ourselves. Reason opens to us a large field of affairs, which other creatures are not capable of. Beatls of prey, and I believe of all other kinds, in their natural state of being, divide their time batween action and roll. They are always at work or afleep. In short, their waking hours are wholly taken up in feeking after their food, or in confuming it. The human species only, to the great reproach of our nature, are filled with complaints, that " The day hangs heavy on them," that "They do not know what to do with themselves," that "They are at a loss how to pass away their time," with many of the like fhameful muriaurs, which we often find in the mouths of those who are shiled reasonable beings. How monstrous are fuch expressions among creatures who have the labours of the mind, as well as those of the body to furnish them with proper employment: who, besides the bufinels of their proper callings and profefhons, can apply themselves to the duties of religion, to meditation, to the reading of nfeful books, to di'courfe; in a word, who may exercise themselves in the unbounded purfuits of knowledge and virtue, and every hour of their lives make themselves wifer or better than they were before!

After having been taken up for some time in this course of thought, I diverted myself with a book, according to my usual custom, in order to unbend my mind before I went to steep. The book I made use of on this occasion was Lucian, where I amufed my thoughts for about an hour among the dialogues of the dead, which in all probability produced the following dream:

I was conveyed, methought, into the entrance of the infernal regions, where I faw Rhadamanthus, one of the judges of the dead, feated on his tibanal. On his left-hand flood the keeper of Erebur, on his right the keeper of Elyfium. I was told he fat upon women that day, there being feveral of the for lately arrived, who had not yet their manifons affigned them. I was in prifed to hear him afk every one of them the fame question, namely, "What they

had been doing?" Upon this question being proposed to the whole assembly, they stared one upon another, as not knowing what to answer. He then interrogated each of them feparately. Madam, Jays he to the first of them, you have been upon the earth about fifty years; what have you been doing there all this while? Doing! fays fhe, really I do not know what I have been doing: I defire I may have time given me to recollect. After about half an hour's pause, the told him that the had been playing at crimp; upon which Rhadamanthus beckoned to the keeper on his left hand, to take her into cuffody. And you, madam, fays the judge, that look with such a foft and languishing air; I think you fet out for this place in your nine-and-twentieth year, what have you been doing all this while? I had a great deal of butiness on my hands, fays flie, being taken up the first twelve years of my life in dreffing a jointed baby, and all the remaining part of it in reading plays and romances. Very well, fays he, you have employed your time to good purpose. Away with her. The next was a plain country-woman: Well, mithrefs, fays Rhadamanthus, and what have you been doing? An't please your worship, says the, I did not live quite forty years; and in that time brought my hulband feven daughters, made him nine thoutand cheefes, and lett my eldeft gul with him, to look after his house in my abfence, and who, I may venture to fay, is as pretty a housewife as any in the country. Rhadamanthus fmild at the fimplicity of the good woman, and ordered the keeper of Elyfium to take her into his care. And you, fair lady, fays he, what have you been doing these five-and-thirty years? I have been doing no hurt, I affure you, or, faid the. That is well, faid he, but what goed have you been doing? The Indy was in great confusion at this question, and not knowing what to answer, the two happers leaped out to feize her at the fame time; the one took her by the hand to convey for to Elyfium, the other caught hold of her to carry her away to Erebus. But Rhadamanthus observing an ingenuous modelly in her countenance and behaviour, bid them both let her loofe, and fet her an le for a reexamination when he was more at leiture. An old woman, of a proud and tour look, preferted herfelf next at the bar, and being arked what the had been doing? Truly, fail the, I lived threefcore-and-ten years in a very wicked world, and was to angry at the behaviour of a parcel of young flirts, C 4 that that I passed most of my last years in con-domning the follies of the times; I was every day blaming the filly conduct of people about me, in order to deter those 1 conversed with from falling into the like errors and miscarriages. Very well, savs Rhadam inthus; but did you keep the fame watchful eye over your own actions? Why truly, fays the, I was fo taken up with publishing the faults of others, that I had no time to confider my own. Madam, fays Rhadamanthus, be pleafed to file off to the left, and make room for the venerable matron that stands behind you. Old gentlewoman, says he, I think you are fourfcore: you have heard the quellion, what have you been doing to long in the world? Ah, Sir! fays fle, I have been doing what I should not have done, but I had made a firm retolution to have changed my life, if I had not been inatched off by an untimely end. Madam, fays he, you will please to follow your leader; and spring another of the fame age, interrogated her in the tame form. To which the matron replied, I have been the wife of a hufhand who was as dear to me in his old age as in li- youth. I have been a mother, and very happy in my children, whom I endeavoured to bring up in every thing that is good. My client fon is bleft by the poor, and beloved by every one that knows him. I lived within my own family, and left it much more wealthy than I found it. Rhadamanthus, who knew the value of the old lady, fmiled upon her in fuch a manner, that the keeper of Elyfium, who knew his office, reached out his hand to her. He ro fooner touched her, but her wrinkles vanished, her eyes sparkled, her cheeks glowed with blushes, and the appeared in full bloom and beauty. A young woman observing that this officer, who conducted the happy to Elyfium, was so great a beautifier, longed to be in his hands; fo that prefling through the crowd, the was the next that appeared at the bar. And being asked what the had been doing the five-and-twenty years that she had passed in the world? I have endeavoured, fivs the, ever fince I came to years of diferetion, to make myfelf lovely, and gain admirers. In order to it, I passed my time in bottling up May-dew, inventing white washes, mixing colours, cutting out patches, consulting my glass, suiting my complexion, tearing off my tucker, sinking my stays .- Rhadamanthus, without hearing her out, gave the fign to take her

off. Upon the approach of the keeper of Erebus, her colour faded, her face was puckered up with wrinkles, and her whole person lost in deformity.

I was then surprised with a distant found of a whole troop of females, that came forward laughing, finging, and dancing. I was very defirous to know the reception they would meet with, and withal was very apprehensive, that Rhadamanthus would spoil their mirth: But at their nearer approach the noise grew so very great that it awakened me.

I lay some time, reslecting in myself on the oddness of this dream, and could not forbear asking my own heart, what I was doing? I answered myself that I was writing Guardians. If my readers make as good a use of this work as I design they thould, I hope it will never be imputed to me as a work that is vain and unprofitable.

I shall conclude this paper with recommending to them the fame thort felf-examination. If every one of them frequently lays his hand upon I is heart, and confiders what he is doing, it will check him in all the idle, or, what is worfe, the vicious moments of life, lift up his mind when it is running on in a feries of indifferent actions, and encomage him when he is engaged in those which are virtuous and lau-dable. In a word, it will very much alleviate that guilt which the best of men have reason to acknowledge in their daily confessions, of 'leaving undone those things which they ought to have done, and of doing thole things which they ought not to have done.' Guardian.

# § 16. A Knowledge of the Use and Value of Time wery important to Youth.

There is nothing which I more wish that you thould know, and which fewer people do know, than the true use and value of time. It is in every body's mouth; but in few people's practice. Every fool who flatterns away his whole time in nothings, utters, however, fome trite common-place fentence, of which there are millions, to prove, at once, the value and the fleetness of time. The fun-dials, likewife, all over Europe, have some ingenious inscription to that effect; fo that nobody fquanders away their time, without hearing and feeing, daily, how necessary it is to employ it well, and how irrecoverable it is if loft. But all these admonitions are useless, where there is not a fund of good fense and reafon

fon to fuggest them, rather than receive them. By the manner in which you now tell me that you employ your time, I flatter myfelf, that you have that fund: that is the fund which will make you rich indeed. I do not, therefore, mean to give you a critical essay upon the use and abuse of time; I will only give you some hints, with regard to the use of one particular period of that long time which, I hope, you have before you; I mean the next two years. Remember then, that whatever knowledge you do not folidly lay the foundation of before you are eighteen, you will never be mafter of while you breathe. Knowledge is a comfortable and necessary ret, eat and shelter for us in an advanced age; and if we do not plant it while young, it will give us no shade when we grow old. I neither require nor expect from you great application to books, after you are once thrown out into the great world. I know it is impossible; and it may even, in forme cases, be improper: this, therefore, is your time, and your only time, for unwe used and uninterrupted application. If you should sometimes think it a little laborious, confider, that labour is the unavoidable fatigue of a necessary journey. The more hours a day you travel, the fooner you will be at your journey's end. The fooner you are qualified for your liberty, the fooner you shall have it; and your manumission will entirely depend upon the manner in which you employ the intermediate time. I think I offer you a very good bargain, when I promife you, upon my word, that, if you will do every thing that I would have you do, till you are eighteen, I will do every thing that you would have me do, ever afterwards.

Lord Chefterfuld.

# § 17. On a lary and trifling Difficultion.

There are two forts of understandings; one of which hinders a man from ever being confiderable, and the other commonly makes him ridiculous; I mean the lazy mind, and the trifling frivolous mind. Yours, I hope, is neither. The lazy mind will not take the trouble of going to the bottom of any thing; but, discouraged by the first difficulties (and every thing worth knowing or having is attended with fome) ftops thort, contents itself with easy, and, confequently, functional knowledge, and, prefers a great degree of ignorence, to a finall degree of trouble. These people either think, or represent, most things as

impossible; whereas few things are so to industry and activity. But difficulties feen. to them impossibilities, or at least they pretend to think them so, by way of excuse for their laziness. An hour's attention to the fame object is too laborious for them; they take every thing in the light in which it at first presents itself, never consider it in all its different views; and, in facit, never think it thorough. The confequence of this-is, that when they come to speak upon these subjects before people who have confidered their with attention, they only discover their own ignorance and laziness. and lay themselves open to answers that

put them in confusion.

Do not then be discouraged by the first difficulties, but contra audentier ito: and refolve to go to the bottom of all those things, which every gentleman ought to know well. Those aits or sciences, which are peculiar to certain professions, need not be deeply known by those who are not intended for those professions. As, for inflance, fortification and navigation; of both which, a superficial and general knowledge, fuch as the common course of conversation. with a very little enquiry on your part, will give you, is fufficient. Though, by the way, a little more knowledge of fortification may be of fome ule to you; as the events of war, in fieges, make many of the terms of that science occur frequently in common convertations; and one would be forry to fay, like the Marquis de Mafcarille, in Moliere's Précieufes Ridicules, when he hears of une demie Lune: Ma fet, c'était bien une Lione toute entiere. But those things which every gentleman, independently of profession, should know, he ought to know well, and dive into all the depths of them. Such are linguages, history, and geography, ancient and modern; philofophy, rational logic, rhetoric; and for you particularly, the conditutions, and the civil and military flate of every country in Europe. This, I confess, is a pretty large circle of knowledge, attended with foine difficulties, and requiring some trouble, which, however, an active and industrious mind will overcome, and be amply repaid.

The trifling and frivolous mind is always busied, but to little purpose; it takes little objects for great ones, and throws away upon trifles that time and attention which only important things deterve. Knickknacks, butterflies, shells, insects, &c. are the objects of their most serious researches. They contemplate the drefs, not the characters, of the company they keep. They attend more to the decorations of a play, than to the fense of it; and to the ceremonies of a court, more than to its politics. Such an employment of time is an absolute that the contemplate of the contemplate that the conte

# § 18. The bad Effects of Indolence.

No other disposition, or turn of mind, so totally unfits a man for all the focial offices of life, as Indolence. An idle man is a mere blank in the creation: he feems made for no end, and lives to no purpose. He cannot engage himfelf in any employment or profession, because he will never have diligence enough to follow it: he can fucceed in no undertaking, for he will never purfue it; he must be a bad husband, father, and relation, for he will not take the least pains to preserve his wife, children, and family, from flarving; and he must be a worthless friend, for he would not draw his hand from his bofom, though to prevent the defluction of the universe. If he is born poor, he will remain to all his life, which he will probably end in a duch, or at the gallows: if he embarks in trade, he will be a bankrupt: and if he is a perfon of fortune, his flewards will acquire immense estates, and he himself perhaps will die in the Flect.

It should be considered, that nature did not bring us into the world in a flate of perfection, but has left us in a capacity of improvement; which should seem to intimate, that we should labour to render ourfelves excellent. Very few are such abfoliate idiots, as not to be able to become at least decent, if not eminent, in their feveral flations, by unwearied and keen application; nor are there any possessed of tuch transcendent genius and abilities, as to render all pains and diligence unneceftary. Perseverance will overcome difficulties, which at first appear insuperable; and it is amazing to confider, how great and numerous obffacles may be removed by a continual attention to any particular point. I will not mention here, the trite example of Demothenes, who got over the greatest natural impedin ents to oratory, but content myfelf with a more modern and familiar inflance. Being at Sadler's Wells a few nights ago, I could not but admire the furprising feats of activity there exhibited; and at the fame time reflected, what incredible pains and labour it must

have cost the performers to arrive at the art of writhing their bodies into such various and unnatural contoitions. But I was most taken with the ingenious artist, who, after fixing two bells to each foot, the same number to each hand, and with great propriety placing a cap and bells on his head, played feveral tunes, and went through as regular triple peals and bobmajors, as the boys of Christ-church Hofpital; all which he effected by the due jerking of his arms and legs, and nodding his head backward and forward. If this artiff had taken equal pains to employ his head in another way, he might perhaps have been as deep a proficient in numbers as Jedediah Buxton, or at least a tolerable modern thymer, of which he is now no bad emblem: and if our fine ladies would use equal diligence, they might fishion their minds as successfully, as Madam Catharina difforts her body.

There is not in the world a more ufcless, idle animal, than he who contents himfelf with being merely a gentleman. He has an chate, therefore he will not endeavour to acquire knowledge: he is not to labour in any vocation, therefore he will do nothing. But the misfortune is, that there is ro fuch thing in nature as a negative virtue, and that absolute idleness is impracticable. He, who does no good, will certainly do mischief; and the mind, if it is not flored with ufeful knowledge, will necessarily become a magazine of nonfente and trides. Wherefore a gentleman, though he is not obliged to rife to open his shop, or work at his trade, should always find fome ways of employing his time to advantage. If he makes no advances in wisdom, he will become more and more a flave to folly; and he that does nothing, because he has nothing to do, will become vicious and abandoned, or, at beit, ridienlous and contemptible.

I do not know a more melancholy object, than a man of an honest heart, and sine natural abilities, whose good qualities are thus destroyed by indolence. Such a person is a constant plague to all his friends and acquaintance, with all the means in his power of adding to their happiness; and suffers himself to take rank among the lowest characters, when he might render himself conspicuous among the highest. Nobody is more universally beloved and more universally avoided, than my friend Carcless. He is an humane man, who never did a benesicent action; and a man

of unshaken integrity, on whom it is impossible to depend. With the best head, and the best heart, he regulates his conduct in the most absurd manner, and frequently injures his friends; for whoever neglects to do justice to himself, must inevitably wrong those with whom he is connected; and it is by no means a true maxim, that an idle man hurts nobody but himself.

Virtue then is not to be considered in the light of mere innocence, or abstaining from harm; but as the exertion of our faculties in doing good: as Titus, when he had let a day slip undistinguished by some act of virtue, cried out, 'I have lost a day.' If we regard our time in this light, how many days shall we look back upon as irretrievably loft! and to how narrow a compass would such a method of calculation frequently reduce the longest life! If we were to number our days, according as we have applied them to virtue, it would occasion itrange revolutions in the manner of reckoning the ages of We should see some few arrived to a good old age in the prime of their youth, and meet with feveral young fellows of fourscore.

Agreeable to this way of thinking, I remember to have met with the epitaph of an aged man four years old; dating his existence from the time of his reformation from evil courfes. The infcriptions on most tomb-flones commemorate no acts of virtue performed by the perfons who lie under them, but only record, that they were born one day, and died another. But I would fain have those people, whose lives have been useless, rendered of some fervice after their deaths, by affording lesions of instruction and morality to those they leave behind them. Wherefore I could wish, that, in every parish, several acres were marked out for a new and spacious burying-ground: in which every person, whose remains are there deposited, should have a small stone laid over them, reckoning their age, according to the manner in which they have improved or abused the time allotted them in their lives. In fuch circumstances, the plate on a costin might be the highest panegyric which the deceased could receive; and a little square stone inscribed with Ob. Ann. Ætat. 80. would be a nobler eulogium, than all the lapidary adulation of modern epitaphs.

Connoisseur.

§ 19. The innocent Pleasures of Childbood.

As it is usual with me to draw a secret unenvied pleasure from a thousand incidents overlooked by other men, I threw myself into a short transport, forgetting my age, and fancying myself a school-boy,

This imagination was strongly favoured by the presence of so many young boys, in whose looks were legible the sprightly passions of that age, which raised in me a fort of sympathy. Warm blood thrilled through every vein; the saded memory of those enjoyments that once gave me pleasure, put on more lively colours, and a thousand gay amusements filled my mind.

It was not without regret, that I was forfaken by this waking dream. The cheapness of puerile delights, the guiltless joy they leave upon the mind, the blooming hopes that lift up the foul in the ascent of life, the pleasure that attends the gradual opening of the imagination, and the dawn of reason, made me think most men found that stage the most agreeable part of their journey.

When men come to riper years, the innocent diversions which exalted the spirits, and produced health of body, indolence of mind, and refreshing slumbers, are too often exchanged for criminal delights, which fill the foul with anguish, and the body with disease. The grateful employment of admiring and railing themselves to an imitation of the polite stile, beautiful images, and noble fentiments of ancient authors, is abandoned for law-latin, the lucubrations of our paltry news-mongers, and that swarm of vile pamphlets which corrupt our taste, and infest the public. The ideas of virtue which the characters of heroes had imprinted on their minds, infenfibly wear out, and they come to be influenced by the nearer examples of a degenerate age.

In the morning of life, when the foul first makes her entrance into the world, all things look fresh and gay; their novelty surprises, and every little glitter or gaudy colour transports the stranger. But by degrees the sense grows callous, and we lose that exquisite relish of trisles, by the time our minds should be supposed ripe for rational entertainments. I cannot make this restection without being touched with a commiseration of that species called beaus, the happiness of those men necessarily ter-

minating

minating with their childhood, who, from a want of knowing other pursuits, continue a fondness for the delights of that age, after the relish of them is decayed.

Providence hath with a bountiful hand prepared a variety of pleafures for the various stages of life. It behoves us not to be wanting to ourselves in forwarding the intention of nature, by the culture of our minds, and a due preparation of each faculty for the enjoyment of those objects it is capable of being affected with.

As our parts open and display by gentle degrees, we rise from the gratifications of sense, to relish those of the mind. In the scale of pleasure, the lowest are sensual delights, which are succeeded by the more enlarged views and gay portraitures of a lively imagination; and these give way to the sublimer pleasures of reason, which discover the causes and designs, the frame, connection, and symmetry of things, and fill the mind with the contemplation of intellectual beauty, order, and truth.

Hence I regard our public schools and universities, not only as nurseries of men for the service of the church and state, but also as places designed to teach mankind the most refined luxury, to raise the mind to its due perfection, and give it a taste for those entertainments which afford the highest transport, without the grossies or remorfe that attend vulgar enjoyments.

In those blessed retreats men enjoy the fiveets of folitude, and yet converie with the greatest genii that have appeared in every age; ,wander through the delightful mazes of every art and science, and as they gradually enlarge their sphere of knowledge, at once rejoice in their prefent possessions, and are animated by the boundless prospect of future discoveries. There, a generous emulation, a noble thirst of same, a love of truth and honourable regards, reign in minds as yet untainted from the world. There, the flock of learning transmitted down from the ancients, is preferved, and receives a daily increase; and it is thence propagated by men, who having finished their studies, go into the world, and spread that general knowledge and good taile throughout the land, which is to distant from the barbarisin of its ancient inhabitants, or the sierce genius of its invaders. And as it is evident that our literature is owing to the schools and universities; so it cannot be

denied, that these are owing to our religion.

It was chiefly, if not altogether, upon religious confiderations that princes, as well as private persons, have erected colleges, and affigned liberal endowments to students and professors. Upon the same account they meet with encouragement and protection from all christian states, as being esteemed a necessary means to have the facred oracles and primitive traditions of christianity preserved and understood. And it is well known, that after a long night of ignorance and superstition, the reformation of the church and that of learning began together, and made proportionable advances, the latter having been the effect of the former, which of course engaged men in the study of the learned languages and of antiquity. Guardian.

#### § 20. On Chearfulness.

I have always preferred chearfulness to mirth. The latter I confider as an act, the former as a habit of the mind. Mirth is short and transient, chearfulness fixed and permanent. Those are often raised into the greatest transports of mirth, who are subject to the greatest depressions of melancholy: on the contrary, chearfulness, though it does not give the mind fuch an exquisite gladness, prevents us from falling into any depths of forrow. Mirth is like a flash of lightning, that breaks through a gloom of clouds, and glitters for a moment; chearfulness keeps up a kind of daylight in the mind, and fills it with a steady and perpetual ferenity.

Men of austern principles look upon mirth as too wanton and dissolute for state of probation, and as filled with a certain triumph and insolence of heart that is inconsistent with a life which is every moment obnoxious to the greatest dangers. Writers of this complexion have observed, that the facred Persen who was the great pattern of persection, was never seen to laugh.

Chearfulness of mind is not liable to any of these exceptions; it is of a serious and composed nature; it does not throw the mind into a condition improper for the present state of humanity, and is very conspicuous in the characters of those who are looked upon as the greatest philosophers among the heathens, as well as among those who have been defervedly esteemed as saints and holy men among Christians.

H

If we consider chearfulness in three lights, with regard to ourselves, to those we converse with, and to the great Author of our being, it will not a little recommend itself on each of these accounts. The man who is possessed of this excellent frame of mind, is not only easy in his thoughts, but a perfect master of all the powers and faculties of the foul: his imagination is always clear, and his judgment undisturbed; his temper is even and unruffled, whether in action or solitude. He comes with a relish to all those goods which nature has provided for him, taftes all the pleatures of the creation which are poured about him, and does not feel the full weight of those accidental evils which may befal him.

If we confider him in relation to the persons whom he converses with, it naturally produces love and good-will towards him. A chearful mind is not only disposed to be affable and obliging, but raises the same good-humour in those who come within its insuce. A man finds himself pleased, he does not know why, with the chearfulness of his companion: it is like a sadden sunshine, that awakens a secret delight in the mind, without her attending to it. The heart rejoices of its own accord, and naturally slows out into friendship and benevolence towards the person who has so kindly an effect upon it.

When I consider this chearful state of mind in its third relation, I cannot but look upon it as a constant habitual gratitude to the great Author of nature. An inward chearfulnes is an implicit praise and thankfgiving to Providence under all its dispensations. It is a kind of acquiescence in the state wherein we are placed, and a serret approbation of the divine will in his conduct towards man.

There are but two things, which, in my opinion, can reasonably deprive us of this chearfulness of heart. The first of these is the sense of vice and impenitence, can have no title to that evenness and tranquillity of mind which is the health of the soul, and the natural effect of virtue and innocence. Chearfulness in an ill man deserves a harder name than language can furnish us with, and is many degrees beyond what we commonly call folly or madness.

Atherim, by which I mean a disbelief of a Supreme Being, and consequently of a surre state, under whatsoever title it shelters itself, may likewise very reasonably deprive a man of this chearfulness of tem-

per. There is fomething so particularly gloomy and offensive to human nature in the prospect of non-existence, that I cannot but wonder, with many excellent writers, how it is possible for a man to outlive the expectation of it. For my own part, I think the being of a God is fo little to be doubted, that it is almost the only truth we are fure of, and fuch a truth as we meet with in every object, in every occurrence, and in every thought. If we look into the characters of this tribe of infidels, we generally find they are made up of pride, spleen, and cavil: it is indeed no wonder, that men, who are uneafy to themselves, should be so to the reit of the world; and how is it possible for a man to be otherwise than uneasy in himself, who is in danger every moment of losing his entire existence, and dropping into nothing?

The vicious man and Atheist have therefore no pretence to chearfulness, and would act very unreasonably, should they endeavour after it. It is impossible for any one to live in good-humour, and enjoy his present existence, who is apprehensive either of torment or of annihilation; of being miserable, or of not being at all.

After having mentioned thefe two great principles, which are destructive of chearfulness in their own nature, as well as in right reason, I cannot think of any other that ought to banish this happy temper from a virtuous mind. Pain and fickness. shame and reproach, poverty and old-age, nay death itself, considering the shortness of their duration, and the advantage we may reap from them, do not deserve the name of evils. A good mind may bear up under them with fortitude, with indolence, and with chearfulness of heart. The toffing of a tempell does not discompose him, which he is fure will bring him to a joyful harbour.

A man, who uses his best endeavours to live according to the distates of virtue and right reason, has two perpetual sources of chearfulness, in the consideration of his own nature, and of that Being on whom he has a dependence. If he looks into himself, he cannot but rejoice in that existence, which is so lately bestowed upon him, and which, after millions of ages, will be still new, and still in its beginning. How many self-congratulations naturally arise in the mind, when it resteed on this its entrance into eternity, when it takes a view of those improveable faculties, which

in a few years, and even as its first fetting out, have made so considerable a progress, and which will be still receiving an increase of perfection, and consequently an increase of happiness! The consciousness of such a being spreads a perpetual diffusion of joy through the foul of a virtuous man, and makes him look upon himself every moment as more happy than he knows how to conceive.

The fecond fource of chearfulness to a good mind is, its confideration of that Being on whom we have our dependence, and in whom, though we behold him as yet but in the first faint discoveries of his perfections, we fee every thing that we can imagine as great, glorious, or amiable. We find ourselves every where upheld by his goodness, and surrounded with an immensity of love and mercy. In short, we depend upon a Being, whose power qualifies him to make us happy by an infinity of means, whose goodness and truth engage him to make those happy who desire it of him, and whose unchangeableness will secure us in this happiness to all eternity.

Such confiderations, which every one should perpetually cherish in his thoughts, will banish from us all that secret heaviness of heart which unthinking men are subject to when they lie under no real affliction, all that anguish which we may feel from any evil that actually oppresses us, to which I may likewife add those little cracklings of mirth and folly, that are apter to betray virtue than support it; and establish in us fuch an even and chearful temper, as makes us pleafing to ourselves, to those with whom we converse, and to him whom Stestator. we are made to pleafe.

# § 21. On the Advantages of a chearful Temper.

Chearfulness is, in the first place, the beil promoter of health. Repinings and fecret murmurs of heart give imperceptible ft. okes to those delicate fibres of which the vital parts are composed, and wear out the machine infenfibly; not to mention those violent ferments which they stir up in the blood, and those irregular disturbed motions, which they raise in the animal spirits. I scarce remember, in my own observation, to have met with many old men, or with fuch, who (to use our English phrase) wear well, that had not at least a certain indolence in their humour, if not

a more than ordinary gaiety and chearfulness of heart. The truth of it is, health and chearfulness mutually beget each other; with this difference, that we feldom meet with a great degree of health which is not attended with a certain chearfulness, but very often see chearfulness where there is no great degree of health.

Chearfulness bears the same friendly regard to the mind as to the body: it banishes all anxious care and discontent, foothes and composes the passions, and keeps the foul in a perpetual calm. But having already touched on this last consideration, I shall here take notice, that the world in which we are placed, is filled with innumerable objects that are proper to raise and keep alive this happy temper of mind.

If we confider the world in its subserviency to man, one would think it was made for our use; but if we consider it in its natural beauty and harmony, one would be apt to conclude it was made for our pleasure, The sun, which is as the great foul of the universe, and produces all the necessaries of life, has a particular influence in chearing the mind of man, and making the heart glad. 19,078

Those several living creatures which are made for our fervice or fustenance, at the fame time either fill the woods with their music, furnish us with game, or raise pleasing ideas in us by the delightfulnots of their appearance. Fountains, lakes, and rivers, are as refreshing to the imagination, as to the foil through which they

There are writers of great distinction, who have made it an argument for Providence, that the whole earth is covered with green, rather than with any other colour, as being such a right mixture of light and shade, that it comforts and fliengthens the eye, inflead of weakening or grieving it. For this reason, several painters have a green cloth hanging near them, to ease the eye upon, after too great an application to their colouring. mous modern philosopher accounts for it in the following manner: All colours that are more luminous, overpower and disfipate the animal spirits which are employed in fight; on the contrary, those that are more obscure do not give the animal spirits a sufficient exercise; whereas, the rays that produce in us the idea of green, fall upon the eye in such a due proportion, that

that they give the animal spirits their proper play, and, by keeping up the flruggle in a just balance, excite a very pleasing and agreeable fensation. Let the cause be what it will, the effect is certain; for which reason, the poets ascribe to this particular

colour the epithet of chearful.

To consider further this double end in the works of nature, and how they are, at the same time, both useful and entertaining, we find that the most important parts in the vegetable world are those which are the most beautiful. These are the seeds by which the feveral races of plants are propagated and continued, and which are always lodged in flowers or bloffoms. Nature feems to hide her principal defign, and to be industrious in making the earth gry and delightful, while the is carrying on her great work, and intent upon her o un prefervation. The hulbandman, after the fame manner, is employed in Living out the whole country into a kind of garden or landskip, and making every thing finile about him, whill, in reality, he thinks of rothing but of the harvest, and increase which is to arife from it.

We may further observe how Previdence has taken care to keep up this chraifulaefs in the mind of man, by having formed it after fuch a manner, as to make it capable of conceiving delight from beveral objects which feem to have very little use in them; as from the wildness of r cas and deferts, and the like grotefque parts of nature. Those who are versed in philosophy may still carry this consideration higher, by observing, that if matter had appeared to us endowed only with those real qualities which it actually posfesses, it would have made but a very joyless and uncomfortable figure; and why h s Providence given it a power of producing in us such imaginary qualities, as tailes and colours, founds and smells, heat and cold, but that man, while he is conversant in the lower stations of nature, might have his mind cheared and delighted with agreeable sensations? In short, the whole universe is a kind of theatre filled with objects that either raise in us pleasure, amusement, or admiration.

The reader's own thoughts will suggest to him the viciflitude of day and night, the change of seasons, with all that variety of scenes which diversify the face of nature, and fill the mind with a perpetual succesfion of beautiful and pleasing images.

I shall not here mention the several en-

tertainments of ait, with the pleasures of friendship, books, convertation, and other accidental diversions of life, because I would only take notice of fuch incitements to a chearful temper, as offer themselves to persons of all ranks and conditions, and which may fufficiently shew us, that Providence did not defign this world should be filled with murmurs and repinings, or that the heart of man should be involved in gloom and melancholy.

I the more inculcate this chearfulness of temper, as it is a virtue in which our countrymen are observed to be more deficient than any other nation. Melancholy is a kind of demon that haunts our illand, and often conveys herfelf to us in an enfterly wind. A celebrated French novelift. in opposition to those who begin their romances with a flowery feafon of the year. enters on his flory thus: 'In the gloomy month of November, when the people of · England hang and drown themselves, a disconsolate lover walked out into the " fields," & c.

Every one ought to fence against the temper of his climate or conflitution, and frequently to indulge in himfelf those confiderations which may give him a ferenity of mind, and enable him to bear up chearfully against those little evils and missoitunes which are common to human nature. and which by a right improvement of them, will produce a fatiety of joy, and an unin-

terrupted happinels.

At the fame time that I would engage my reader to confider the world in its most agreeable lights, I mult own there are many evils which naturally fpring up amidft the entertainments that are provided for us: but these, if rightly considered, should be far from overcalling the mind with forrow, or deflioying that chearfulness of temper which I have been recommending. This interspersion of evil with good, and pain with pleafure, in the works of nature, is very truly atcribed by Mr. Locke, in his Effay upon Human Understanding, to a moral reason, in the following words:

· Beyond all this, we may find another reason why God hath scattered up and down feveral degrees of pleafure and pain, in all the things that environ an I affect us, and blended them together, in almost all that our thoughts and senses have to do with; that we, finding imperfection, diffatisfaction, and want of complete happiness in all the enjoyments which the creatures can afford us, might · be be led to feek it in the enjoyment of him,
 with whom there is fulness of joy, and
 at whose right hand are pleasures for
 evermore.' Speciator.

# § 22. On Truth and Sincerity.

Truth and reality have all the advantages of appearance, and many more. If the show of any thing be good for any thing, I am fure fincerity is better: for why does any man diffemble, or feem to be that which he is not, but because he thinks it good to have fuch a quality as he pretends to? for to counterfeit and deficinble, is to put on the appearance of some real excellency. Now the best way in the world for a man to feem to be any thing, is really to be what we would feem to be. Besides, that ic is many times as troublesome to make good the pretence of a good quality, as to have it; and if a man have it not, it is ten to one but he is discovered to want it, and then, all his pains and labour to feem to have it is loft. There is Tomething unnatural in painting, which a skilful eye will early differn from native beauty and complexion.

It is hard to personate and act a part long; for where truth is not at the bottom, nature will always be endeavouring to return, and will peep out and betray herfelf one time or other. Therefore, if any man think it convenient to feem good, let him be so indeed, and then his goodness will appear to every hody's fatisfaction; fo that, upon all accounts, fincerity is true wildom. Particularly as to the affairs of this world, integrity hath many advantages over all the fine and artificial ways of diffimulation and deceit; it is much the plainer and easier, much the safer and more fecure way of dealing in the world; it has less of trouble and difficulty, of entangle-- ment and perplexity, of danger and harard in it; it is the thortest and nearest way to our end, carrying us thither in a Brait line, and will hold out and last longest. The arts of deceit and cunning do continually grow weaker and less effectual and serviceable to them that use them; whereas integrity gains strength by use; and the more and longer any man practifeth it. the greater fervice it does him, by confirming his reputation, and encouraging those with whom he hath to do to repole the greatest trust and confidence in him. which is an unspeakable advantage in the bufiness and affairs of life.

Truth is always confident with itself,

and needs nothing to help it out; it is always near at hand, and fits upon our lips, and is ready to drop out before we are aware; whereas a lie is troublesome, and fets a man's invention upon the rack, and one trick needs a great many more to make it good. It is like building upon a false foundation, which continually stands in need of props to shore it up, and proves at last more chargeable than to have raised a lubstantial building at first upon a true and solid foundation; for fincerity is firm and fubstantial, and there is nothing hollow or unfound in it, and because it is plain and open, fears no discovery; of which the ciarcy men is always in danger, and when he thinks he walks in the dark, all his pretences are fo transparent that he that runs may read them; he is the last man that finds himfelf to be found out, and whilft he takes it for granted that he makes fools of others, he renders himfelf ridiculous.

Add to all this, that fincerity is the most compendious wildom, and an excellent instrument for the speedy dispatch of businels; it creates confidence in those we have to deal with, faves the labour of many inquiries, and brings things to an issue in few words; it is like travelling in a plain beaten road, which commonly brings a man fooner to his journey's end than bye-ways, in which men often lote themselves. In a word, whatfoever convenience may be thought to be in falshood and distimulation, it is foon over; but the inconvenience of it is perpetual, because it brings a man under an everlasting jealousy and suspicion, so that he is not believed when he speaks truth, nor trufted perhaps when he means honeitly. When a man has once forfeited, the reputation of his integrity, he is fet fast, and nothing will then serve his turn, neither truth nor falshood.

And I have often thought that God hath, in his great wisdom, hid from men of false and dishonest minds the wonderful advantages of truth and integrity to the profperity even of our worldly affairs; these men are so blinded by their covetousness and ambition, that they cannot look beyond a present advantage, nor forbear to feize upon it, though by ways never so indirect; they cannot see so far as to the remote confequences of a fleady integrity, and the vast benefit and advantages which it will bring a man at last. Were but this fort of men wife and clear-fighted enough to differn this, they would be honeft out of very knavery, not out of any love to

honesty

honesty and virtue, but with a crafty defign to promote and advance more effectually their own interests; and therefore. the justice of the divine providence hath hid this truest point of wildom from their eves, that bad men might not be upon equal terms with the just and apright, and ferve their own wicked defigns by honest and lawful means.

Indeed, if a man were only to deal in occasion to converse more with marking, never more need their good opinion or good word, it were then no great matter (speaking as to the concernments of this world) if a man spent his reputation all at once, and ventured it at one throw: but if he be to continue in the world, and would have the advantage of conversation whilst he is in it, let him make use of truth and fincerity in all-his words and actions; for nothing but this will last and hold out to the end: all other arts will fail, but truth and integrity will carry a man through, and bear him out to the last.

Spectator.

# § 23. Rules for the Knowledge of One's Self.

Hypocrify, at the fashionable end of the town, is very different from that in the city. The modifi hypocrite endeavours to appear more vicious than he really is; the other kind of hypocrite more virtuous, The former is afraid of every thing that has the shew of religion in it, and would be thought engaged in many criminal gallantries and amours, which he is not guilty of; the latter assumes a face of fanctity, and covers a multitude of vices under a feeming religious deportment.

But there is another kind of hypocrify which differs from both these, and which intend to make the subject of this paper: mean that hypocrify, by which a man des not only deceive the world, but very often imposes on himself; that hypocrify which conceals his own heart from him, and makes him believe he is more virtuous han he really is, and either not attend to is vices, or mitake even his vices for virues. It is this fatal hypocrify and felfeceit, which is taken notice of in these ords, Who can understand his errors? cleanse thou me from my secret faults.

If the open professors of impiety deserve

he utmost application and endeavours of loral writers, to recover them from vice ad folly, how much more may those lay

a claim to their care and compassion, who are walking in the paths of death, while they fancy themselves engaged in a course of virtue! I shall therefore endeavour to lay down some rules for the discovery of those vices that lurk in the secret corners of the foul; and to show my reader those methods, by which he may arrive at a true and impartial knowledge of himfelf. The usual means prescribed for this purthe world for a day, and should never have spose, are to examine ourselves by the rules which are laid down for our direction in facred writ, and to compare our lives with the life of that person who acted up to the perfection of human nature, and is the flanding example, as well as the great guide and instructor, of those who receive his doctrines. Though there two heads cannot be too much infilled upon, I shalk but just mention them, since they have been handled by many great and eminent writers.

I would therefore propose the following methods to the confideration of fuch as would find out their fecret faults, and make a true estimate of themselves.

In the first place, let them consider well, what are the characters which they bear among their enemies. Our friends very often flatter us as much as our own hearts. They either do not see our faults, or conceal them from us, or fosten them by their representations, after such a manner, that we think them too trivial to be taken notice of. An adverlary, on the contrary, makes a stricter search into us, discovers every flaw and, imperfection in our tempers; and, though his malice may fet them in too strong a light, it has generally some ground for what it advances. A friend exaggerates a mans virtue;a, an enemy inflames his crimes. A wife man should give a just attention to both of them, so far as they may tend to the improvement of the one, and the diminution of the other. Plutarch has written an effay on the benefits which a man may receive from his enemies; and among the good fruits of enmity, mentions this in particular, "that, by the reproaches which it calls upon us, we fee the work fide of ourfelves, and open our eyes to leveral blemishes and defects in our lives and convertations, which we thould not have observed without the help of such ill-natured monitors."

fuch ill-natured monitors."
In order likewise to come to a true knowledge of ourselves, we should confider, on the other hand, how far we may deferve the praises and approbations which the world beflow upon us, whether the actions they celebrate proceed from laudable and worthy motives; and how far we are really possessed of the virtues, which gain us applause among those with whom we converse. Such a reflection is absolutely necessary, if we consider how apt we are either to value or condemn ourselves by the opinion of others, and to facrisce the report of our own hearts to the judgment of the world.

In the next place, that we may not decrive ourselves in a point of so much im-portance, we should not lay too great a stress on any supposed virtues we posses, that are of a doubtful nature: and fuch we may esteem all those in which multitudes of men dissent from us, who are as good and wife as ourselves. We should always act with great cautiousness and circumipection, in points where it is not impossible that we may be deceived. Intemperate zeal, bigotry, and perfecution, for any party or opinion, how praise-worthy foever they may appear to weak men of our own principles, produce infinite cala-mities among mankind, and are highly criminal in their own nature; and yet how many persons, eminent for piety, suffer fuch monstrous and absurd principles of action to take root in their minds under the colour of virtues? For my own part, I mult own, I never yet knew any party so just and ressonable, that a man could follow it in its height and violence, and at the fame time be innocent.

We should likewise be very apprehensive of those actions, which proceed from natural constitution, favourite passions, particular education, or whatever promotes our worldly interest or advantage. In these or the like cases, a man's judgment is casily perverted, and a wrong bias hung upon his mind. These are the inlets of prejudice, the unguarded avenues of the mind, by which a thousand errors and sense of the mind, by which a thousand errors and sense of the mind, by which a thousand errors and sense of the mind, by which a thousand errors and sense of the mind of the sense of the mind of the sense of the mind of the sense of the sen

There is nothing of greater importance to us, than thus diligently to fife our thoughts, and examine all these dark recesses of the mind, if we would establish

our fouls in such a solid and substantial virtue as will turn to account in that great day, when it must stand the test of infinite wisdom and justice.

I shall conclude this essay with observing, that the two kinds of hypocrify I have here spoken of, namely, that of deceiving the world, and that of imposing on ourselves, are touched with wonderful beauty in the hundred thirty-ninth pfalm. The folly of the first kind of hypocrify is there fet forth by reflections on God's omniscience and omnipresence, which are celebrated in as noble strains of poetry as any other I ever met with, either facred or profane. The other kind of hypocrify, where-by a man deceives himself, is intimated in the two last verses, where the psalmist ad-dresses himself to the great searcher of hearts in that emphatical petition; "Try " me, O God, and feek the ground of my "heart; prove me and examine my " thoughts: look well if there be any way " of wickedness in me, and lead me in the " way everlasting." Spectator.

§ 24. No Life pleafing to God, but that achieb is ufeful to Mankind. An Eaftern Spory.

It pleased our mighty sovereign Abbas Carafcan, from whom the kings of the earth derive honour and dominion, to fet Mirza his fervant over the province of Tauris. In the hand of Mirza, the balance of distribution was suspended with impartiality; and under his administration the weak were protected, the learned received honour, and the diligent became rich: Mirza, therefore, was beheld by every eye with complacency, and every tongue pronounced bleffings upon his head. But it was observed that he derived no joy from the benefits which he diffused; he became penfive and melancholy; he spens his leifure in solitude; in his palace he sat motionless upon a fofa; and when he went out, his walk was flow, and his eyes were fixed upon the ground: he applied to the business of state with reluctance; and refolved to relinquith the toil of government of which he could no longer enjoy the re

He, therefore, obtained permission to approach the throne of our lovereign; and being asked what was his request, he mad this reply: "May the Lord of the worl of forgive the flave whom he has honour ed, if Mirza prefume again to lay the bounty of Abbas at his feet. Those has

" given me the dominion of a country, " fruitful as the gardens of Damascus; " and a city glorious above all others, ex-" cept that only which reflects the splen-" dour of thy presence. But the longest " life is a period scarce sufficient to pre-" pare for death : all other business is vain " and trivial, as the toil of emmets in the " path of the traveller, under whose foot " they perish for ever; and all enjoyment " is unsubstantial and evanescent, as the " colours of the bow that appears in the " interval of a storm. Suffer me, there-" fore, to prepare for the approach of " eternity; let me give up my foul to " meditation; let solitude and silence ac-" quaint me with the mysteries of devo-" tion; let me forget the world, and by " the world be forgotten, till the moment " arrives in which the veil of eternity shall " fall, and I shall be found at the bar of " the Almighty." Mirza then bowed himself to the earth, and stood filent,

By the command of Abbas it is recorded, that at these words he trembled upon the throne, at the sootstool of which the world pays homage; he looked round upon his nobles; but every countenance was pale, and every eye was upon the earth. No man opened his mouth; and the king first broke silence, after it had continued near an hour,

" Mirza, terror and doubt are come " upon me. I am alarmed as a man who " fuddenly perceives that he is near the " brink of a precipice, and is urged for-" ward by an irrelistible force: but yet I " know not whether my danger is a rea-& lity or a dream. I am as thou art, a " reptile of the earth: my life is a mo-" ment; and eternity, in which days, and " years, and ages, are nothing, eternity is " before me, for which I also should pre-" pare: but by whom then must the Faith-" ful be governed? by those only, who " have no fear of judgment? By those " only, whose life is brutal, because like brutes they do not consider that they " shall die? Or who, indeed, are the " Faithful? Are the bufy multitudes that " crowd the city in a state of perdition? " and is the cell of the Dervise alone the gate of Paradile? To all, the life of a "Dervise is not possible: to all, there-fore, it eannot be a duty. Depart to " the house which has in this city been prepared for thy residence: I will meditate the reason of thy request; and " may He who illuminates the mind of the

" humble, enable me to determine with wisdom."

Mirza departed, and on the third day, having received no command, he again requeited an audience, and it was granted, When he entered the royal presence, his countenance appeared more chearful: he drew a letter from his bosom, and having kissed it, he presented it with his righthand, "My Lord!" faid he. "I have " learned by this letter, which I received " from Cofrou the Iman, who stands now " before thee, in what manner life may " be best improved. I am enabled to " look back with pleasure, and forward " with hope; and I shall now rejoice still to be the hadow of thy power at Tauris, and to keep those honours which I so " lately wished to refign." The king, who had liftened to Mirza with a mixture of furprize and curiofity, immediately gave the letter to Cofrou, and commanded that it should be read. The eyes of the court were at once turned upon the hoary fage, whose countenance was suffused with an honest blush; and it was not without some hesitation that he read these words.

"To Mirza, whom the wisdom of Abbas our mighty Lord has honoured with
dominion, be everlasting health! When
I heard thy purpose to withdraw the
blessings of thy government from the
thousands of Tauris, my heart was
wounded with the arrow of affliction,
and my eyes became dim with sorrow,
But who shall speak before the king
when he is troubled; and who shall boast
of knowledge, when he is distressed by
doubt? To thee will I relate the events
of my youth, which thou hast renewed
before me; and those truths which they
taught me, may the Prophet multiply to

"Under the instruction of the physician Aluzar, I obtained an early knowledge of his art. To those who were smitten with disease; I could administer plants, which the sun has impregnated with the spirit of health. But the scenes of pain, alagour, and mortality, which were perseptually rising before, me, made me of ten tremble for myself. I saw the grave open at my feet: I determined, therefore, to contemplate only the regions beyond it, and to despise every acquisition which I could not keep. I conceived an opinion, that as there wa romeric but in reductary poverty, and silent meditation, thate who desired mortality and the second in the meditation, that who desired mortality and the second in the second in

upon earth.'

" ney were not proper objects of bounty; " and that by all who were proper objects " of bounty money was despised. I, " therefore, buried mine in the earth: " and renouncing fociety, I wandered into a wild and sequestered part of the " country: my dwelling was a cave by " the fide of a hill; I drank the running " water from the spring, and ate such " fruits and herbs as I could find. " increase the austerity of my life, I fre-" quently watched a'l night, fitting at the " entrance of the cave with my face to " the east, resigning myself to the secret insuences of the Prophet, and expecting " illuminations from above. One morn-" ing after my nocturnal vigil, just as I " perceived the horizon glow at the approach of the fun, the power of fleep " became irrefittible, and I funk under it. " I imagined myfelf still sitting at the " entrance of my cell; that the dawn in-"creased; and that as I looked earnestly " for the first beam of day, a dark spot " appeared to intercept it. I perceived " that it was in motion; it increased in " fize as it drew near, and at length I dif-" covered it to be an eagle. I still kept " my eye fixed fledfaltly upon it, and faw " it alight at a finall distance, where I now " descried a fox whose two fore-legs ap-" peared to be broken. Before this fox the eagle laid part of a kid, which she " had brought in her talons, and then dif-" appeared. When I awaked, I laid my " forehead upon the ground, and bleffed " the Prophet for the instruction of the " morning. I reviewed my dream, and faid thus to myfelf, Cofrou, theu haft " done well to renounce the tumult, the " bufiness, and vanities of life : but thou " hast as yet only done it in part; thou " art ftill every day busied in the search " of food, thy mind is not wholly at rest, se neither is thy trust in Providence com-" plete. What art thou taught by this vision? If thou hast seen an eagle commissioned by Heaven to feed a fox that is lame, shall not the hand of Heaven " also supply thee with food; when that which prevents thee from procuring it " for thyfelf, is not necessity but devotion? " I was now to confident of a miraculous supply, that I negletted to walk out for my repast, which, after the first day, I expected with an impatience that left " me little power of attending to any other " object: this impatience, however, I la-" bourest to suppress, and persisted in my

" resolution; but my eyes at length began " to fail me, and my knees smote each other; I threw myfelf backward, and " hoped my weakness would foon increase " to infensibility. But I was fuddenly " roused by the voice of an invisible being, " who pronounced these words: " Cosrou, I am the angel, who by the command of the Almighty, have registered the thoughts of thy heart, which I am now commissioned to reprove. While thou wall attempting to become wife above that which is revealed, thy folly has perverted the instruction which was vouchfased thee. Art thou disabled as the Fox? hast thou not rather the powers of the Eagle? Arife, let the Eagle be the object of thy emulation. To pain and fickness, be thou again the inchenger of case and health. Virtue is not rest, but action. If thou dost good to man as an evidence of thy love to God. thy virtue will be exalted from moral to divine; and that happiness which is the pledge of Paradife, will be thy reward

" At these words I was not less asto-

" nished than if a mountain had been

" overtuined at my feet. I humbled myfelf in the dust; I returned to the city; " I dug up my treasure; I was liberal, yet I " became rich. My skill in restoring health " to the body gave me frequent opportu-" nities of curing the diseases of the soul. " I put on the sacred vestments; I grew " eminent beyond my merit; and it was " the pleasure of the king that I should stand before him. Now, therefore, be not offended; I boast of no knowledge that I have not received: as the fands " of the defart drink up the drops of rain " or the dew of the morning. to do I " also, who am but dust, imbibe the instructions of the Prophet. Believe then " that it is he who tells thee, all knowledge is prophane, which terminates in thyfelf; and by a life wasted in speculation, little even of this can be gained. " When the gates of Paradife are thrown " open before thee, thy mind shall be irra-" diated in a moment; here thou canst " little more than pile error upon error; " there thou shalt build truth upon truth. " Wait, therefore for the glorious vision; and in the mean time emulate the Ba-" gle. Much is in thy power; and, there" fore much is expected of thee. Though " the ALELGHTY only can give virtue, " yet, as a prince, thou may's simulate " there to beneficence, who act from no

" higher motive than immediate interest : " thou canst not produce the principle, but " may'lt enforce the practice." The re " lief of the poor is equal, whether they " receive it from oftentation, or charity; " and the effect of example is the fame, " whether it be intended to obtain the fa-" vour of God or man. Let thy virtue " be thus diffused; and if thou believest " with reverence, thou shall be accepted " above. Farewell. May the fmile of " Him who resides in the Heaven of Hea-" vens be upon thee! and against thy " name, in the volume of His will, may " Happiness be written!"

The King, whose doubts like those of Mirza, were now removed, looked up with a fmile that communicated the joy of his mind. He difmissed the prince to his government; and commanded these events to be recorded, to the end that posterity may know " that no life is pleafing to " God, but that which is useful to Man-" kind." Adventurer.

# § 25. Providence proved from Animal

Instanct.

I must confess I am infinitely delighted with those speculations of nature which are to be made in a country life; and as my reading has very much lain among books of natural history, I cannot forbear recollecting, upon this occasion, the several remarks which I have met with in authors, and comparing them with what falls under my own observation; the arguments for Providence, drawn from the natural history of animals, being, in my opinion, demonstralive

The make of every kind of animal is different from that of every other kind; and yet there is not the least turn in the muscles or twist in the fibres of any one, which does not render them more proper for that particular animal's way of life, than any other cast or texture of them would have been.

The most violent appetites in all creatures are luft and bunger: the first is a perpetual call upon them to propagate their kind; the latter to preserve themselves.

It is aftonishing to confider the different degrees of care that descend from the parent of the young, fo far as is absolutely necessary for the leaving a posterity. Some creatures cast their eggs as chance directs them, and think of them no farther, as infects and feveral kind of fifti; others, of a nicer frame, find our proper beds to deposit them in, and there leave them, as the ferpent, the crocodile, and offrich; others hatch their eggs and tend the birth, until it is able to shift for itself ..

What can we call the principle which directs every different kind of bird to obferve a particular plan in the structure of its neft, and directs all of the fame species to work after the fame model? It cannot be imitation; for though you hatch a crow under a hen, and never let it see any of the works of its own kind, the nest it makes shall be the same, to the laying of a slick, with all the nests of the same species. It cannot be reason; for were animals endued with it to as great a degree as man, their buildings would be as different as ours, according to the different conveniencies that they would propose to themselves.

Is it not remarkable that the fame temper of weather which raifes this general warmth in animals, should cover the trees with leaves, and the fields with grass, for their fecurity and concealment, and produce fuch infinite swarms of insects for the support and sustenance of their respective broods?

Is it not wonderful, that the love of the parent should be so violent while it lasts, and that it should last no longer than is neceffary for the prefervation of the young?

The violence of this natural love is exemplified by a very barbarous experiment; which I shall quote at length, as I find it in an excellent author, and hope my readers will pardon the mentioning fuch an instance of cruelty, because there is nothing can so effectually shew the strength of that principle in animals of which I am here speaking. " A person, who was well skilled in " diffections, opened a bitch, and as she lay " in the most exquisite torture, offered her one of her young puppies, which she immediately fell a licking; and for the " time seemed insensible of her pain : on " the removal, she kept her eye fixed on it, " and began a wailing fort of cry, which " seemed rather to proceed from the loss " of her young one, than the fense of her " own torments."

But notwithstanding this natural love in brutes is much more violent and intenfo than in rational creatures, Providence has taken care that it should be no longer troublesome to the parent than it is useful to the young; for lo foon as the wants of the latter cease, the mother withdraws her fonducis, and leaves them to provide for themselves: and what is a very remarkable circumstance

circumstance in this part of instinct, we find that the love of the parent may be length-ened out beyond its usual time, if the preservation of the species requires it; as we may fee in birds that drive away their young as foon as they are able to get their livelihood, but continue to feed them if they are tied to the nest, or confined within a cage, or by any other means appear to be out of a condition of supplying their own necessities.

This natural love is not observed in animals to afcend from the young to the parent, which is not at all necessary for the continuance of the species: nor indeed in reasonable creatures does it rise in any proportion, as it spreads itself downwards; for in all family affection, we find protection granted, and favours bestowed, are greater motives to love and tenderness, than safety, benefits, or life received.

One would wonder to hear sceptical men disputing for the reason of animals, and telling us it is only our pride and prejudices that will not allow them the use of

that faculty.

Reason shews itself in all occurrences of life; whereas the brute makes not difcovery of such a talent, but what immediately regards his own prefervation, or the continuance of his species. Animals in their generation are wifer than the fons of men; but their wisdom is confined to a few particulars, and lies in a very narrow compass. Take a brute out of his instinct, and you find him wholly deprived of understanding.-To use an instance that comes often under observation:

With what caution does the hen provide herself a nest in places unfrequented, and free from noise and disturbance! When she has laid her eggs in such a manner that she can cover them, what care does the take in turning them frequently, that all parts may partake of the vital warmth! When she leaves them, to provide for her necessary fuffenance, how punctually does the return before they have time to cool, and become incapable of producing an animal! In the fummer you fee her giving herfelf greater freedoms, and quitting her care for above two hours together; but in winter, when the rigour of the season would chill the principles of life, and deftroy the young one, the grows more affiduous in her attendance, and flays away but half the time. When the birth approaches, with how much nicety and attention does the help the chick ato break its prison! Not to take notice of

her covering it from the injuries of the weather, providing it proper nourithment, and teaching it to help itself; nor to mention her forfaking the nest, if after the usual time of reckoning, the young one does not make its appearance. A chymical operation could not be followed with greater art or diligence, than is seen in the hatching of a chick; though there are many other birds that show an infinitely greater sagacity in all the forementioned particulars.

But at the fame time the hen, that has all this feeming ingenuity (which is indeed abfolutely necessary for the propagation of the species) considered in other respects, is without the least glimmerings of thought or common sense. She mistakes a piece of chalk for an egg, and fits upon it in the same manner: she is insensible of any increase or diminution in the number of those she lays: she does not distinguish between her own and those of another species; and when the birth appears of never fo different a bird, will cherish it for her own. In all these circumstances, which do not carry an immediate regard to the subsistence of herfelf or her species, she is a very idiot.

There is not, in my opinion, any thing more mysterious in nature, than this instinct in animals, which thus rifes above reason, and falls infinitely short of it. It cannot be accounted for by any properties in matter, and at the same time works after so odd a manner, that one cannot think it the faculty of an intellectual being. For my own part, I look upon it as upon the principle of gravitation in bodies, which is not to be explained by any known qualities inherent in the bodies themselves, nor from any laws of mechanism, but, according to the best notions of the greatest philosophers, is an immediate impression from the first Mover, and the divine energy afting in the crea-Spellator. tures.

## § 26. The Necessity of forming religious Principles at an early Age.

As foon as you are capable of reflection, you must perceive that there is a right and wrong in human actions. You lee that those who are born with the same advantages of fortune, are not all equally prosperous in the course of life. While some of them, by wife and fleady conducta attain diffinction in the world, and pass their days with comfort and honour; others of the fame rank, by mean and vicious behavious. forfeit the advantages of their birth, involve themselves in much misery, and end in be-

ing a difgrace to their friends, and a burden on fociety. Early, then, you may learn that it is not on the external condition in which you find yourselves placed, but on the part which you are to act, that your welfare or unhappiness, your honour or infamy, depend. Now, when beginning to act that part, what can be of greater moment, than to regulate your plan of conduct with the most serious attention, before you have yet committed any fatal or irretrievable errors? If, instead of exerting reflection for this valuable purpose, you deliver yourselves up, at so critical a time, to floth and pleasure; if you refuse to listen to any counsellor but humour, or to attend to any pursuit except that of amusement; if you allow yourselves to float loose and careless on the tide of life, ready to receive any direction which the current of fashion may chance to give you; what can you expect to follow from such beginnings? While so many around you are undergoing the fad consequences of a like indiscretion, for what reason shall not these consequences extend to you? Shall you only attain success without that preparation, and escape dangers without that precaution, which is required of others? Shall happiness grow up to you of its own accord, and folicit your acceptance, when, to the rest of mankind, it is the fruit of long cultivation, and the acquisition of labour and care?-Deceive not yourselves with such arrogant hopes. Whatever be your rank, Providence will not, for your sake, reverse its established order. By listening to wise admonitions, and tempering the vivacity of youth with a proper mixture of serious thought, you may ensure chearfulness for the rest of your life; but by delivering yourselves up at present to giddiness and levity, you lay the soundation of lasting heaviness of heart.

\$ 27. The Acquisition of virtuous Despositions and Habits a necessary Part of Education.

When you look forward to those plans of life, which either your circumstances have suggested, or your friends have propoled, you will not helitate to acknowledge, that in order to pursue them with advantage, some previous discipline is requisite. Be assured, that whatever is to be your profession, no education is more necessary to your success, than the acquirement of Virtuous dispositions and habits. This is the universal preparation for every charac-

ter, and every flation in life. Bad as the world is, respect is always paid to virtue. In the usual course of human affairs it will be found, that a plain understanding, joined with acknowledged worth, contributes more to prosperity, than the brightest parts without probity or honour. Whether science, or business, or public life, be your aim, virtue still enters, for a principal share, into all those great departments of society. It is connected with eminence, in every liberal art; with reputation, in every branch of fair and useful business; with distinc-tion, in every public station. The vigour which it gives the mind, and the weight which it adds to character; the generous fentiments which it breathes; the undaunted spirit which it inspires, the ardour of diligence which it quickens, the freedom which it procures from pernicious and difhonourable avocations, are the foundations of all that is high in fame or great in fuc-cess among men. Whatever ornamental or engaging endowments you now possess, virtue is a necessary requisite, in order to their shining with proper lustre. Fe ble, are the attractions of the fairest form, if it be suspected that nothing within correfoonds to the pleasing appearance without. Short are the triumphs of wit, when it is supposed to be the vehicle of malice. By whatever arts you may at first attract the attention, you can hold the esteem and secure the hearts of others only by amiable dispositions and the accomplishments of the mind. These are the qualities whole influence will last, when the lustre of alt that once sparkled and dazzled has passed Ibid.

§ 28. The Happiness and Dignity of Manbood depend upon the Conduct of the youthful Age.

Let not the season of youth be barren of improvements, so effential to your felicity and honour. Your character is now of your own forming; your fate is in some measure put into your own hands. Your nature is as yet pliant and foft. Habits have not established their dominion. judices have not pre-occupied your understanding. The world has not had time to contract and debase your affections. All your powers are more vigorous, difembarraffed and free, than they will be at any future period. Whatever impulse you now give to your defires and passions, the direction is likely to continue. It will form the channel in which your life is to

run; nay, it may determine an everlasting issue. Consider then the employment of this important period as the highest trust which shall ever be committed to you; as, in a great measure, decisive of your happiness, in time and in eternity. As in the succession of the seasons, each, by the invariable laws of nature, affects the productions of what is next in course; so, in human life, every period of our age, according as it is well or ill fpent, influences the happiness of that which is to follow. Virtuous youth gradually brings forward accomplished and flourishing manhood; and such manhood passes of itself, without uneasiness, into respectable and tranquil old age. But when nature is turned out of its regular course, disorder takes place in the moral, just as in the vegetable world. If the fpring put forth no bloffoms, in fummer there will be no beauty, and in autumn no fruit: So, if youth be trifled away without improvement, manhood will be contemptible, and old age miserable.

#### § 29. Piety to God the Foundation of good Morals.

What I shall first recommend is piety to God. With this I begin, both as the foundation of good morals, and as a dispofition particularly graceful and becoming in youth. To be void of it, argues a cold heart, destitute of some of the best affections which belong to that age. Youth is the feafon of warm and generous emotions. The heart should then spontaneously rife Into the admiration of what is great; glow with the love of what is fair and excellent; and melt at the discovery of tenderness and goodness. Where can any object be found. to proper to kindle those affections, as the Father of the universe, and the Author of all felicity? Unmoved by veneration, can you contemplate that grandeur and majetly which his works every where display? Un-touched by gratitude, can you view that profusion of good, which, in this pleasing season of life, his beneficent hand pours around you? Happy in the love and affection of those with whom you are connected, look up to the Supreme Being, as the inspirer of all the friendship which has ever been shewn you by others; himself your best and your first friend; formerly, the supporter of your infancy, and the guide of your childhood; now, the guardian of your youth, and the hope of your coming years. View religious homage as a natural expression of gratitude to him for all

his goodness. Consider it as the service of the God of your fathers; of him to whom your parents devoted you; of him whom in former ages your ancestors honoured; and by whom they are now rewarded and blessed in heaven. Connected with so many tender sensibilities of soul, let religion be with you not the cold and barren offspring of speculation, but the warm and vigorous distate of the heart. Ibid.

#### § 30. Religion never to be treated with Levity.

Impress your minds with reverence for all that is facred. Let no wantonness of youthful spirits, no compliance with the intemperate mirth of others, ever betray you Besides the guilt into profane fallies. which is thereby incurred, nothing gives a more odious appearance of petulance and prefumption to youth, than the affectation of treating religion with levity. Instead of being an evidence of superior understanding, it discovers a pert and shallow mind; which, vain of the first smatterings of knowledge, prefumes to make light of what the rest of mankind revere. At the same time, you are not to imagine, that when exhorted to be religious, you are called upon to become more formal and folemn in your manners than others of the same years; or to erect yourselves into supercilious re-provers of those around you. The spirit of true religion breathes gentleness and affa-bility. It gives a native unaffected ease to the behaviour. It is focial, kind, and chearful; far removed from that gloomy and illiberal superstition which clouds the brow, sharpens the temper, dejects the fpirit, and teaches men to fit themselves for another world, by neglecting the concerns of this. Let your religion, on the contrary, connect preparation for heaven with an honourable discharge of the duties of active life. Of such religion discover, on every proper occasion, that you are not ashamed; but avoid making any unnecessary oftentation of it before the world. Ibid.

# § 31. Modely and Docility to be joined to Piety.

To piety join modesty and docility, reverence of your parents, and submission to those who are your superiors in knowledge, in station, and in years. Dependence and obedience belong to youth. Modesty is one of its chief ornaments; and has ever been esceemed a presage of rising merit. When entering on the career of

life, it is your part, not to assume the reins as yet into your hands; but to commit yourselves to the guidance of the more experienced, and to become wife by the wildom of those who have gone before you. Of all the follies incident to youth, there are none which either deform its prefent appearance, or blast the prospect of its future prosperity, more than self-conceit, prefumption, and obstinacy. By checking its natural progress in improvement, they fix it in long immaturity: and frequently produce mischiefs which can never be repaired. Yet these are vices too commonly found among the young. Big with enterprize, and elated by hope, they resolve to trust for success to none but themselves. Full of their own abilities, they deride the admonitions which are given them by their friends, as the timorous suggestions of age. Too wife to learn, too impatient to deliberate, too forward to be restrained, they plunge, with precipitant indifcretion, into the midst of all the dangers with which life abounds.

# § 32. Sincerity and Truth recommended.

It is necessary to recommend to you fincerity and truth. This is the basis of every virtue. That darkness of character, where we can see no heart; those foldings of art, through which no native affection is allowed to penetrate, present an object, unamiable in every feafon of life, but particularly odious in youth. If, at an age when the heart is warm, when the emotions are firong, and when nature is expected to flew herself free and open, you can already smile and deceive, what are we to look for, when you shall be longer hackneyed in the ways of men; when interest shall have completed the obduration of your heart, and experience shall have improved you in all the arts of guile? Diffimulation in youth is the forerunner of perfidy in old age. Its first appearance is the fatal omen of growing depravity and future shame. It derades parts and learning; obscures the luftre of every accomplishment; and finks you into contempt with God and man. As you value, therefore, the approbation of Heaven, or the effeem of the world, cultivate the love of truth. In all your proceedings, be direct and confident. Ingenuity and candour possess the most powerful charm; they bespeak universal favour, and carry an apology for almost every failing. The path of truth is a plain and lafe Path; that of falsehood is a perplexing

After the first departure from finmaze. cerity, it is not in your power to stop. One artifice unavoidably leads on to another; till, as the intricacy of the labyrinth increases, you are left entangled in your own fnare. Deceit discovers a little mind, which stops at temporary expedients, without rifing to comprehensive views of conduct. It betrays, at the same time, a dastardly spirit. It is the resource of one who wants courage to avow his defigns, or to rest upon Whereas, openness of character himself. displays that generous boldness, which ought to diffinguish youth. To fet out in the world with no other principle than a crafty attention to interest, betokens one who is destined for creeping through the inferior walks of life: but to give an early preference to honour above gain, when they stand in competition; to despile every advantage, which cannot be attained without dishonest arts; to brook no meanness, and to stoop to no dissimulation; are the indications of a great mind, the presages of future eminence and distinction in life. At the same time this virtuous sincerity is perfectly confistent with the most prudent vigilance and caution. It is opposed to cunning, not to true wildom. It is not the simplicity of a weak and improvident, but the candour of an enlarged and noble mind; of one who scorns deceit, because he accounts it both base and unprofitable; and who feeks no disguise, because he needs Ibid. none to hide him

# § 33. Benevolence and Humanity.

Youth is the proper feason of cultivating the benevolent and humane affections. As a great part of your happiness is to depend on the connections which you form with others, it is of high importance that you acquire betimes the temper and the manners which will render fuch connections comfortable. Let a sense of justice be the foundation of all your focial qualities. In your most early intercourse with the world, and even in your youthful amusements, let no unfairness be found. Engrave on your mind that facred rule, of doing in all things to others, according as you wish that they should do unto you.' For this end, impress yourselves with a deep sense of the original and natural equality of men. Whatever advantages of birth or fortune you possels, never display them with an oftentatious superiority. Leave the subordinations of rank, to regulate the intercourse of more advanced years. At prefent

present it becomes you to act among your companions, as man with man. Remember how unknown to you are the vicifiitudes of the world; and how often they, on whom ignorant and contemptuous young men once looked down with fcorn, have risen to be their superiors in suture years. Compassion is an emotion of which you never ought to be ashamed. Graceful in youth is the tear of sympathy, and the heart that melts at the tale of woe. Let not eafe and indulgence contract your affections, and wrap you up in selfish enjoyment. Accustom yourselves to think of the distresses of human life; of the solitary cottage, the dying parent, and the weeping orphan. Never sport with pain and distress, in any of your amusements; nor treat even the meanest insect with wanton cruelty.

#### § 34. Courtefy and engaging Manners.

In order to render yourselves amiable in fociety, correct every appearance of harshness in behaviour. Let that courtely distinguish your demeanour, which springs not so much from studied politeness, as from a mild and gentle heart. Follow the customs of the world in matters indifferent; but stop when they become finful. Let your manners be simple and natural; and of course they will be engaging, Affectation is certain deformity. By forming vourselves on fantastic models, and vying with one another in every reigning folly, the young begin with being ridiculous, and end in being vicious and immoral.

Ibid.

#### § 35. Temperance in Pleasure recommended.

Let me particularly exhort youth to temperance in pleasure. Let me admonish them, to beware of that rock on which thousands, from race to race, continue to split. The love of pleasure, natural to man in every period of his life, glows at this age with excessive ardour. Novelty adds fresh charms, as yet, to every gratification. The world appears to spread a continual feast; and health, vigour, and high spirits, invite them to partake of it without restraint. In vain we warn them of latent dangers. Religion is accused of insufferable severity, in prohibiting enjoyment; and the old, when they offer their admonition, are upbraided with having forgot that they once were young.—And yet, my friends, to what do the constraints of religion, and the counsels of age, with

### § 36. Whatever violates Nature, cannot afford true Pleasure.

Consult your whole nature. Consider yourselves not only as sensitive, but as rational beings; not only as rational, but focial; not only as focial, but immortal. Whatever violates your nature in any of these respects, cannot afford true pleasure; any more than that which undermines an effential part of the vital fystem, can promote health. For the truth of this conclusion, we appeal not merely to the authority of religion, nor to the testimony of the aged, but to yourselves, and your own experience. We ask, whether you have not found, that in a course of criminal excess, your pleasure was more than compensated by succeeding pain? Whether, if not from every particular inflance, yet from every habit, at least, of unlawful gratification, there did not spring some thorn to wound you; there did not arise fome consequence to make you repent of it in the issue? How long will you repeat the same round of pernicious folly, and tamely expose yourselves to be caught in the same snare? If you have any consideration, or any firmnels left, avoid temptations, for which you have found yourselves unequal, with as much care as you would thun pestilential infection. Break off all connections with the loofe and profligate.

#### § 37. Irregular Pleasures.

By the unhappy excelles of irregular pleasures in youth, how many amiable dispositions are corrupted or destroyed! How many rising capacities and powers are suppressed! How many flattering hopes of parents and friends are totally extinguished! Who but must drop a tear over human nature, when he beholds that morning, which arose so bright, overess.

Ibid.

with such untimely darkness; that goodhumour, which once captivated all hearts, that vivacity which sparkled in every company, those abilities which were fitted for adorning the highest stations, all facrificed at the thrine of low fenfuality; and one who was formed for running the fair career of life in the midst of public esteem, cut off by his vices at the beginning of his course; or funk for the whole of it into infignificancy and contempt !- Thefe, O finful Pleasure, are thy trophies! It is thus that, co-operating with the foe of God and man, thou degradest human honour, and blastest the opening prospects of human felicity!

#### § 38. Industry and Application.

Diligence, industry, and proper improvement of time, are material duties of the young. To no purpose are they endowed with the best abilities, if they want activity for exerting them. Unavailing, in this case, will be every direction that can be given them, either for their temporal or spiritual welfare. In youth, the habits of industry are most easily acquired: in youth the incentives to it are firongest, from ambition and from duty, from emulation and hope, from all the prospects, which the beginning of life affords. If, dead to these calls, you already languish in flothful inaction, what will be able to quicken the more fluggish current of advancing years? Industry is not only the instrument of improvement, but the foundation of pleasure. Nothing is so opposite to the true enjoyment of life, as the relaxed and feeble state of an indolent mind. He who is a stranger to industry, may posses, but he cannot enjoy. For it is labour only which gives the relish to pleafure. It is the appointed vehicle of every good man. It is the indispensible condition of our possessing a found mind in a found body. Sloth is so inconsistent with both, that it is hard to determine, whether it be a greater foe to virtue, or to health and happiness. Inactive as it is in itself, its effects are fatally powerful. Though it appear a flowly-flowing fiream, yet it undermines all that is stable and flourishing. It not only faps the foundation of every virtue, but pours upon you a deluge of crimes and evils. It is like water which first putrefies by stagnation, and then fends up noxious vapours, and fills the atmosphere with death. Fly, therefore, from idlenels,

ruin. And under idleness I conclude, not mere inaction only, but all that circle of trifling occupations, in which too many faunter away their youth; perpetually engaged in frivolous fociety, or public amule-ments; in the labours of drefs, or the oftentation of their persons-Is this the foundation which you lay for future usefulnels and efteem? By such accomplishments do you hope to recommend yourfelves to the thinking part of the world, and to answer the expectations of your friends and your country?-Amusements youth requires: it were vain, it were cruel, to prohibit them. But, though allowable as the relaxation, they are most culpable as the bufiness, of the young. For they then become the gulph of time, and the poison of the mind. They foment bad passions. They weaken the manly powers. They fink the native vigour of youth into contemptible effeminacy.

KELIGIUUS.

#### § 39. The Employment of Time.

Redeeming your time from such dangerous waste, seek to fill it with employments which you may review with fatisfaction. The acquifition of knowledge is one of the most honourable occupations of youth. The defire of it discovers a liberal mind, and is connected with many accomplishments and many virtues. But though your train of life should not lead you to study, the course of education always furnishes proper employments to a well-disposed mind. Whatever you pursue, be emulous to excel. Generous ambition, and fensibility to praise, are, especially at your age, among the marks of virtue. Think not, that any affluence of fortune, or any elevation of rank, exempts you from the duties of application and industry. Industry is the law of our being; it is the demand of nature, of reason, and of God. Remember always, that the years which now pass over your heads, leave permanent memorials behind them. From your thoughtless minds they may escape; but they remain in the remembrance of God. They form an important part of the register of your life. They will hereafter bear teltimony, either for or against you, at that day when, for all your actions, but particularly for the employments of youth, you must give an account to God. Whether your future course is destined to be long or short, after this manner it should comas the certain parent both of guilt and of mence; and, if it continue to be thus conducted. ducted, its conclusion, at what time soever it arrives, will not be inglorious or unhappy.

Blair.

#### § 40. The Necessity of depending for Success on the Blejfing of Heaven.

Let me finish the subject, with recalling your attention to that dependence on the blessing of Heaven, which, amidst all your endeavours after improvement, you ought continually to preferve. It is too common with the young, even when they resolve to tread the path of virtue and honour, to fet out with presumptuous confidence in themselves. Trusting to their own abilities for carrying them successfully through life, they are careless of applying to God, or of deriving any affiftance from what they are apt to reckon the gloomy discipline of religion. Alas! how little do they know the dangers which await them! Neither human wildom, nor human virtue, unsupported by religion, are equal for the trying situations which often occur in life. By the shock of temptation, how frequently have the most virtuous intentions been overthrown! Under the pressure of disafter, how often has the greatest constancy funk! Destitute of the favour of God, you are in no better fituation, with all your boafted abilities, than orphans left to wander in a trackless defart, without any guide to conduct them, or any thelter to cover them from the gathering ftorm. Correct, then, this ill-founded arrogance. Expect not that your happiness can be independent of him who made you. By faith and repentance, apply to the Redeemer of the world. By piety and prayer, feek the protection of the God of Heaven.

### § 41. The Necessity of an early and close Application to Wildom.

It is necessary to habituate our minds, in our younger years, to some employment which may engage our thoughts, and fill the capacity of the foul at a riper age. For, however we may roam in youth from folly to folly, too volatile for rest, too fost and effeminate for industry, ever ambitious to make a splendid figure; yet the time will come when we shall outgrow the relish of childish amusements: and if we are not provided with a tafte for manly fatisfactions to succeed in their room, we must of course become miserable, at an age more difficult to be pleased. While men, however unthinking and unemployed, enjoy an inexhaustible slow of vigorous spi-

rits; a constant succession of gay ideas, which flutter and sport in the brain, makes them pleased with themselves, and with every frolic as trifling as themselves: but, when the ferment of their blood abates. and the freshness of their youth, like the morning dew, passes away, their spirits slag for want of entertainments more fatisfactory in themselves, and more suited to a manly age; and the foul, from a sprightly impertinence, from quick fensations, and florid desires, subsides into a dead calm, and finks into a flat stupidity. The fire of a glowing imagination (the property of youth) may make folly look pleasing, and lend a beauty to objects, which have none inherent in them; just as the fun-beams may paint a cloud, and diversify it with beautiful stains of light, however dark, unsubstantial, and empty in itself. But nothing can shine with undiminished lustre, but religion and knowledge, which are effentially and intrinfically bright. Take it therefore for granted, which you will find by experience, that nothing can be long entertaining, but what is in some measure beneficial; because nothing else will bear a calm and sedate review.

You may be fancied for a while, upon the account of good-nature, the inteparable attendant upon a fluth of fanguine health, and a fulnefs of youthful sprits: but you will find, in process of time, that among the wife and good, useless goodnature is the object of pity, ill-nature of hatred; but nature beautified and improved by an affemblage of moral and intellectual endowments, is the only object of a folid and lafting effect.

#### § 42. The Unhappiness consequent on the Negle& of early improving the Mind.

There is not a greater inlet to mifery and vices of all kinds, than the not knowing how to pais our vacant hours. For what remains to be done; when the first part of their lives, who are not brought up to any manual employment, is sliptaway without an acquired relish for reading, or taste for other rational satisfactions? That they should pursue their pleasures?—But, religion apart, common prudence will warn them to tie up the wheel as they begin to go down the hill of life. Shall they then apply themselves to their studies? Alas! the seed-time is already past: The enterprizing and spirited ardour of youth being over, without having been applied to those valuable purposes for which it was given.

all ambition of excelling upon generous and laudable schemes, quite stagnates. If they have not fome poor expedient to deceive the time, or, to speak more properly, to deceive themselves, the length of a day will feem tedious to them, who, perhaps, have the unreasonableness to complain of the shortness of life in general. When the former part of our life has been nothing but vanity, the latter end of it can be nothing but vexation. In short, we must be miserable, without some employment to fix, or some amusement to disfinate our thoughts: the latter we cannot command in all places, nor relish at all times; and therefore there is an absolute necessity for the former. We may pursue this or that new pleafure; we may be fond for a while of a new acquisition; but when the graces of novelty are worn off, and the briskness of our first desire is over, the transition is very quick and sudden, from an eager fondness to a cool indifference. Hence there is a restless agitation in our minds, still craving something new, still unsatisfied with it, when possessed; till melancholy increases, as we advance in years, like shadows lengthening towards the close

Hence it is, that men of this stamp are continually complaining that the times are altered for the worfe: Because the sprightliness of their youth represented every thing in the most engaging light; and when men are in high good humour with themselves, they are apt to be so with all around; the face of nature brightens up, and the sun shines with a more agreeable luftre: but when old age has cut them off from the enjoyment of false pleasures, and habitual vice has given them a distaste for the only true and lufting delights; when a retrospect of their past lives prefents nothing to view but one wide tract of uncultivated ground; a foul distempered with spleen, remorfe, and an insensibility of each rational satisfaction, darkens and discolours every object; and the change is not in the times, but in them, who have been forfaken by those gratifications which they would not forfake.

How much otherwise is it with those, who have laid up an inexhaustible fund of know-ledge? When a man has been laying out that time in the pursuit of some great and important truth, which others waste in a circle of gay sollies, he is conscious of having acted up to the dignity of his nature; and from that consciousness there re-

fults that serene complacency, which, though not so violent, is much preferable to the pleasures of the animal life. He can travel on from strength to strength; for, in literature as in war, each new conquest which he gains, impowers him to push his conquests still farther, and to enlarge the empire of reason; thus he is ever in a progressive state, still making new acquirements, still animated with hopes of sture discoveries.

# § 43. Great Talents not requisite for the common Duties of Life.

Some may alledge, in bar to what I have faid, as an excuse for their indolence. the want of proper talents to make any progress in learning. To which I answer, that few stations require uncommon abilities to discharge them well; for the ordinary offices of life, that share of apprehension which falls to the bulk of mankind, provided we improve it, will ferve well enough. Bright and fparkling parts are like diamonds, which may adorn the proprietor, but are not necessary for the good of the world: whereas common fense is like current coin; we have every day, in the ordinary occurrences of life, occasion for it; and if we would but call it into action, it would carry us much greater lengths than we feem to be aware of. Men may extol, as much as they please, fine, exalted, and superior sense; yet common sense, if attended with humility and industry, is the best guide to beneficial truth, and the best pre-Servative against any fatal errors in knowledge, and notorious misconducts in life. For none are, in the nature of the thing, more liable to error, than those who have a distaste for plain sober sense and dry reafoning; which yet is the case of those whose warm and elevated imagination, whose uncommon fire and vivacity, make them in love with nothing but what is firiking, marvellous, and dazzling: for great wits, like great beauties, look upon mere esteem as a flat insipid thing; nothing less than admiration will content To gain the good will of mankind, by being useful to them, is in their opinion, a poor, low, grovelling aim; their ambition is, to draw the eyes of the world upon them, by dazzling and furprizing them; a temper which draws them off from the love of truth, and confequently subjects them to gross mistakes: for they will not love truth as such; they will love

it only when it happens to be furprizing and uncommon, which few important truths are. The love of novelty will be the predominant passion; that of truth will only influence them, when it does not interfere with it. Perhaps nothing fooner misleads men out of the road of truth, than to have the wild, dancing light of a bright imagination playing before them. Perhaps they have too much life and spirit to have patience enough to go to the bottom of a subject, and trace up every argument, through a long tedious process, to its original. Perhaps they have that delicacy of make which fits them for a swift and speedy race, but does not enable them to carry a great weight, or to go through any long journey; whereas men of fewer ideas, who lay them in order, compare and examine them, and go on, step by step, in a gradual chain of thinking, make up by industry and caution what they want in quickness of apprehension. Be not difcouraged, if you do not meet with success at first. Observe, (for it lies within the compass of any man's observation) that he who has been long habituated to one kind of knowledge, is utterly at a loss in another, to which he is unaccustomed; till, by repeated efforts, he finds a progressive opening of his faculties; and then he wonders how he could be so long in finding out a connection of ideas, which, to a practifed understanding, is very obvious. But by neglecting to use your faculties, you will, in time, lose the very power of using them.

# § 44. Riches or Fortune no Excuse to exempt any from Study.

Others there are, who plead an exemption from study, because their fortune makes them independent of the world, and they need not be beholden to it for a maintenance-that is, because their situation in life exempts them from the necesfity of spending their time in servile offices and hardships, therefore they may dispose of it just as they please. It is to imagine, because God has empowered them to single out the best means of employing their hours, viz. in reading, meditation: in the highest instances of piety and charity; therefore they may throw them away in a round of impertinence, vanity, and folly. The apostle's rule, that if any man will not work, neither should he eat,' extends to the rich as well as the poor; only (appoing, that there are different kinds of

work assigned to each. The reason is the fame in both cases, viz. that he who will do no good, ought not to receive or enjoy any. As we are all joint traders and partners in life, he forfeits his right to any share in the common stock of happiness, who does not endeavour to contribute his quota or allotted part to it: the public happiness being nothing but the sum total of each individual's contribution to it. An easy fortune does not set men free from labour and industry in general; it only exempts them from some particular kinds of labour: it is not a bleffing, as it gives them liberty to do nothing at all; but as it gives them liberty wifely to chuse, and steadily to protecute, the most ennobling exercises, and the most improving employments, the pursuit of truth, the practice of virtue, the fervice of God who giveth them all things richly to enjoy, in short, the doing and being every thing that is commendable: though nothing merely in order to be commended, That time which others must employ in tilling the ground (which often deceives their expectation) with the sweat of their brow, they may lay out in cultivating the mind, a foil always grateful to the care of the tiller .-The fum of what I would fay, is this: I hat, though you are not confined to any particular calling, yet you have a general one, which is, to watch over your heart, and to improve your head; to make yourfelf matter of all those accomplishmentsan enlarged compais of thought, that flowing humanity and generofity, which are necessary to become a great fortune; and of all those perfections, viz. moderation, humility, and temperance, which are necessary to bear a small one patiently; but especially it is your duty to acquire a taste for those pleasures, which, after they are tailed, go off agreeably, and leave behind them a grateful and delightful flavour on the mind. Ibid.

#### § 45. The Pleasures resulting from a prudent Use of our Faculties.

Happy that man, who, unembarraffed by vulgar cares, matter of himfelf, his time, and fortune, spends his time in making himself wifer, and his fortune in making others (and therefore himself) happier who, as the will and understanding are the two ennobling faculties of the soul, thinks himself not complete, till his under, anding be beautissed with the valuable furniture of knowledge, as well as his will entered the sunders and the sunders an

niched with every virtue: who has furnithed himself with all the advantages to relish solitude and enliven conversation; when ferious, not fullen; and when chearful, not indifcreetly gay; his ambition, not to be admired for a falle glare of greatness. but to be beloved for the gentle and fober lustre of his wisdom and goodness. The greatest minister of state has not more bufiness to do in a public capacity than he, and indeed every man else may find in the retired and still scenes of life. Even in his private walks, every thing that is visible convinceth him there is present a Being invisible. Aided by natural philolophy, he reads plain legible traces of the Divinity in every thing he meets: he fees the Deity in every tree, as well as Mofes did in the burning bush, though not in so glaring a manner: and when he fees him. he adores him with the tribute of a grateful heart.

§ 46. The juftly valuing and daly using the Advantages enjoyed in a Place of Educa-

One considerable advantage is, that regular method of study, too much neglected in other places, which obtains here. Nothing is more common elsewhere, than for persons to plunge, at once, into the very depth of science, (far beyond their own) without having learned the first rudiments: nothing more common, than for fome to pass themselves upon the world for great scholars, by the help of universal Dictionaries, Abridgments, and Indexes; by which means they gain an useless smattering in every branch of literature, just enough to enable them to talk fluently, or rather impertinently, upon most subjects; but not to think juilly and deeply upon any: like those who have a general superficial acquaintance with almost every body. To cultivate an intimate and entire friendfip with one or two worthy persons, would be of more service to them. The true genuine way to make a substantial scholar, is what takes place here,—to begin with those general principles of reasoning, upon which all science depends, and which give a light to every part of literature; to make gradual advances, a short but sure process; to travel gently, with proper guides to direct us, through the most beautiful and fruitful regions of knowledge in general, before we ax ourselves in, and confine ourselves to any particular province of i; it being the great secret of educatio, not to

make a man a complete mafter of any branch of science, but to give his mind that freedom, openness, and extent, which shall empower him to master it, or indeed any other, whenever he shall turn the bent of his studies that way; which is best done, by setting before him, in his earlier years, a general view of the whole intellectual world: whereas, an early and entire attachment to one particular calling, narrows the abilities of the mind to that degree, that he can scarce think out of that track to which he is accustomed.

The next advantage I shall mention is, a direction in the choice of authors upon the most material subjects. For it is perhaps a great truth, that learning might be reduced to a much narrower compass, if one were to read none but original authors, those who write chiefly from their own fund of sense, without treading servilely in the steps of others.

Here, too, a generous emulation quickens our endeavours, and the friend improves the scholar. The tediousness of the way to truth is insensibly beguiled by having fellow-travellers, who keep an even pace with us: each light dispenses a brighter flame, by mixing its focial rays with those of others. Here we live fequestered from noise and hurry, far from the great scene of business, vanity, and idleness; our hours are all our own. Here it is, as in the Athonian torch-race, where a feries of men have fuccessively transmitted from one to another the torch of knowledge; and no sooner has one quitted it, but another equally able takes the lamp, to dispense light to all within its sphero.

### § 47. Descripline of the Place of Education not to be relaxed.

May none of us complain, that the discipline of the place is too strict: may we rather restect, that there needs nothing else to make a man completely miserable, but to let him, in the most dangerous stage of life, carve out an happiness for himsels, without any check upon the salless of youth! Those to whom you have been over indulgent, and perhaps could not have been otherwise, without proceeding to extremities, never to be used but in desperate cases, those have been always the most liberal of their censures and invectives against you: they put one in mind of Adanijah's rebellion against David his father;

-Quali curfores, vita lampada tradunt.

because his father had not displeased him at any time, in saying, Why hast thou done so!—It is a certain sign men want restraints, when they are impatient under any; too headstrong to be governed by authority, too weak to be conducted by reason.

### § 48. Irregularities of a Few, bring Censure on the Whole.

It were to be wished, that they who claim greater indulgences, would ferioufly reflect, that the glaring irregularities of two or three members bring an undistinguishing censure upon a whole body; make a noise in, and alarm the world, as if all fiesh had here corrupted their ways: whereas the fober, modest worth of a much greater number, who here in private attend the duties of the wife and good, must, in the nature of the thing, escape the notice of the world. Notorious disorders, how few foever are concerned, firike upon the senses of some, and affect the passions of many more; by which (their fenfes and passions) the gross of mankind generally judge of things; but it requires some expence of reflection, to which the bulk of mankind will never put themselves to confiller, that great numbers must have spent their time profitably, formed habits of just thinking here, and laid in that stock of knowledge which they have produced into view in a more public sphere; that those vices, which they complain of, may not be the native growth of the place, but imported from irregular and undisciplined families, from schools, and from the worst of ichools, the world at large, when youth are entered into it too foon.

#### § 49. Diffidence of one's Abilities, an Indication of good Senje.

Consider, that it is a sure indication of good fenfe to be diffident of it. We then, and not till then, are growing wife, when we begin to differn how weak and unwife we are. An abiolute perfection of underthanding is impossible: he makes the nearest approaches to it, who has the tenfe to differin, and the humility to acknowledge. ics imperfections. Modelly always fits gracefully upon youth; it covers a multitude of faults, and doubles the lustre of every virtue which it seems to hide: the perfections of men being like those flowers which appear more beautiful when their leaves are a little contracted and folded up, than when they are full blown, and display themselves, without any reserve, to

We are some of us very fond of knowledge, and apt to value ourselves upon any proficiency in the sciences; one science. however, there is, worth more than all the rest, and that is, the science of living well; which shall remain, when, Whether there be tongues, they shall cease; Whether there be knowledge, it shall vanish away.' As to new notions, and new doctrines, of which this age is very fruitful, the time will come, when we shall have no pleasure in them: nay, the time shall come, when they shall be exploded, and would have been forgotten, if they had not been preserved in those excellent books, which contain a confutation of them; like infects preferved for ages in amber, which otherwise would foon have returned to the common mass of things. But a firm belief of Christianity, and a practice fuitable to it, will support and invigorate the mind to the last, and most of all at last, at that important hour, which must decide our hopes and apprehensions: and the wisdom, which, like our Saviour, cometh from above, will, through his merits, bring us thither. And indeed, all our other studies and pursuits, however different, ought to be subservient to, and center in this grand point, the purfuit of eternal happiness, by being good in ourselves, and useful to the world.

### § 50. The Necessity of peculiar Temperance in Places of Education.

From a thorough infight into human nature, with a watchful eye, and kind attention to the vanity, and intemperate heat of youth, with well-weighed measures for the advancement of all useful literature, and the continual support and increase of virtue and piety, have the wife and religious institutors of the rules of conduct and government in places of education, done all that human prudence could do, to promote the most excellent and beneficial design, by the most rational and well-concerted means. They first laid the foundation well, in the discipline and regulation of the appetites. They put them under the restraint of wholesome and frugal rules, to place them out of the reach of intemperance, and to preclude an excess that would ferve only to corrupt, inflame, and torment them. They are fed with food convenient for them; with fimplicity yet susciency; with a kind though cautious hand. By this means, the feeds of vice are flifted in their birth; young persons

persons are here removed from temptations, to which others, from a less happy fituation, are too frequently exposed; and by an early habit of temperance and felfcommand, they may learn either to prevent all irregular folicitations, or with eafe to controul them. Happy are they who, by a thankful enjoyment of these advantages, and a willing compliance with these rules, lay up in store for the rest of their life, virtue, health, and peace! Vain, indeed, would be the expectation of any real progress in intellectual and moralimprovements, were not the foundation thus fail in firict regularity and temperance; were the fenfual appetites to be pampered in youth, or even vitiated with that degice of indulgence which an extravagant world may allow and call elegance, but in a place of education would be downright layury. The tafte of fenfual pleafures must be checked and abated in them, that they may acquire a relish of the more sublune pleafures that refult from reason and religion; that they may purfue them with cleet, and enjoy them without avocation. And have they not in this place every motive, affiftance, and encouragement, to \* 13.1ge them in a virtuous and mor il life, and to animate them in the attainment of uteful learning? What rank or condition of youth is there, that has not daily and h unly opportunities of laying in supplies of knowledge and virtue, that will in every flation of life be equally ferviceable and ornamental to themselves, and beneficial to mankind? And shall any one dure to convert a house of discipline and learning into a house of dissoluteness, extravagance, and riot? With what an aggravation of guilt do they load themselves, who at the fame time that they are purfuing their own unhappiness, sacrilegioully break through all the fences of good older and government, and by their practice, feducement, and example, do what in them lies, to introduce into these schools of frugality, fobriety, and temperance, all the mad vices and vain gaieties of a li-Citious and voluptuous age! What have to to answer for, who, while they prologately squander away that most precious Fat of time, which is the only season of application and improvement, to their own irretrievable loss, encourage one another in an idle and fenfual course of life, and the foreading wide the contagion, reflect a scandal upon, and strive to bring into vable disesteem, the place of their elacation, where industry, literature, virtue, decency, and whatever else is praise-worthy, did for ages flourish and abound? Is this the genuing fruit of the pious care of our ancestors, for the security and propagation of religion and good manners, to the latest posterity? Is this at last the reward of their muniscence? Or does this condust correspond with their views, or with the just expectations and demands of your sitends and your country?

Tottie.

#### § 51. Valuable Opportunities once lost cannot be recalled.

Nor let any one vainly imagine, that the time and valuable opportunities which are now lost, can hereafter be recalled at will: or that he who has run out his youthful days in diffipation and pleature, will have it in his power to slop when he pleases, and make a wifer use of his riper years. Yet this is too generally the fallacious hope that flatters the youth in his fenfual indulgences, and leads him infenfibly on in the treacherous ways of vice, till it is now too late to return. There are few, who at one plunge fo totally immerge in pleasures, as to drown at once all power of reason and conscience: they promise themselves, that they can indulge their appetites to fuch a p int only, and can check and turn them back when they have run their allotted race. I do not indeed fay that there never have been perfons in whom the strong ferment of youthful lufts may have happily fubfided, and who may have brought forth fruits of amendment, and displayed many entirent virtues. God forbid! that even the most licentious vices of youth should be abfolutely incorngible. But I may venture to affirm, that the inflances in this cale have been to rare, that it is very dangerous for any one to truft to the experiment, upon a prelumption that he fliail add to the number. The only fure way to in ke any proficiency in a virtuous life, is to fet o it in it betimes. It is then, when our inchnations are trained up in the way that they should lead us, that custom soon mak s the best habits the most agreeable; the ways of wiflom become the ways of platfantnels, and every step we advance, t'cy grow more casy and more delightfult But, on the contrary, when vicious, headfrong appetites are to be reclaimed, and inviterate habits to be corrected, what fecurity can we give ourselves, that we shall have

either inclination, refolution, or power, to flop and turn back, and recover the right way from which we have so long and so widely wandered, and enter upon a new life, when perhaps our fliength now faileth us, and we know not how mar we may be to our journey's end? There reflections I have fuggefted principally for the take of thofe, who allowing themselves in greater indulgences than are confident with a liberal and virtuous education, give evident proofs that they are not fatherently aware of the dangerous encroachments, and the peculiar deceitfulness of pleafurable fin. Happy for them, would they once ferioully confider their ways! and no time can be nine prop a, then when these to-lemn scalars of recollection and objoins discipline should particularly dispose them to ferioufners and thought. They would then discover, that though they are swhile curried gently and fupinely down the base h Aream of pleafure, yet foon the townt will grow too violent to be flemmed; the waves will mife, and defly them upon rocks, or fink them in whirlpools. It is therefore the part of produce to stop short while they may, and to divert their course into a different channel; which, whitever obffructions and difficulties they may bebour with at first, will every day become more practicable and pleafing, and will admiredly carry them to a ferene and iccure haven.

A 72. The Bright right E. Amb right

Think not, as I am afraid too many do, that because your passions have not hurried you into atrocious deeds, they have therefore wrought no mifchief, and have left no fling be and them. By a contimurd feries of loofe, though apparently trivial gratifications, the heart is often as thoroughly corrupted, as by the commitfion of any one of those enormous crimes which spring from great ambition, or great revenge. Habit gives the passers fliength, while the chience of glining guilt feemingly juffifies them; and, unawavened by remorte, the finner proceeds in his course, till he wax bold in guilt, and become ripe for ruin; for, by gradual and latent steps, the destruction of our virtues advances. Did the evil unveil ittelf at the beginning; did the florm which is to overthrow our peace, discover, as it rofe, all its horrors, precautions would more frequently be taken against it. But we are imperceptibly betrayed; and from one licentious attachment, one criminal paffion, are, by a train of confequences, drawn on to another, till the government of our mirds is irrecoverably loft. The critical area and the odious paffiors are, in this respect, similar in their process; and, though by different roads, conduct at last to the same issue.

Bluir.

### § 53. Order to be observed in Am fe-

Observe order in your amusements; that i, allow them to more than their proper place; fludy to keep them within due Lounder, margle them in a temperate fue codion with ferrous duties, and the higher but n is of life. Human life cannot procod, to advent oe, without tome meature or cells then and entertunment. We re gaine relief from care. We are not formel for a para-tual firetch of ferious th ught. By too interde and continued applied ion, our te ble powers would to m Le worn our. A: the fame time, from our The mility to cale and pleafure, amuseneet proves, among all ranks of men, the will a ingerous for to order; for it tends rise in the to ulurp and encrosed, to wad and tractories, to though itself into the place of more important concerns, and to cooley to dellarb and counts rast the me tural courts of things. One frivolors are toxineat indulged out of feafon, will e on cury perplexity and confusion thre? a long free from of ahairs.

contements, therefore, though they be of an innocent kind, require iteady go varment, to keep them within a due and limited province. But such as are of an magular and vacious nature, require rot to be governed, but to be banished from every orderly fociety. As foon as a man feels his happiness from the gaming-table, the midnight revel, and the other haunts of heestiousness, consulton seizes upon him as its own. There will no longer be order in his family, nor order in his affirs, nor order in his time. The mod important concerns of life are abandoned. Even the order of nature is by fuch perfons inverted; night is changed into day, and day into night. Character, honour, and interest itself, are trampled under foot. You may with certainty prognofficite the ruin of these men to be just at hand. Diforder, arilen to its height, has nearly accomplished its work. The fpots of death are upon them. Let every one who would escape the pestilential con-

tagios,

tagion, fly with haste from their com-

\$ 54. Order to be preserved in your Society.

Preferve order in the arrangement of your fociety; that is, entangle not yourfelves in a perpetual and promifeuous crowd; felect with prudence and propriety, those with whom you chuse to associate; let company and retreat fucceed each other at mentated intervals. There can be no order in his life, who allots not a due thue of his time to retirement and reflection. He can neither prudently airange to he printed interests. He lives not to here's, but to the world. By continual diffication, he is rendered giddy and two tilds. He contracts unavoidably from the world that spirit of disorder and conform which is to prevalent in it.

It is not a fufficient prefervation against this coil, that the circles of fociety in which you me engaged are not of a libertine and victous kind. If they withdraw you tren that attention to yourlelves, and your domettie coaceins, which becomes a good n i, they are tubserfive of order, and a condition with your duty. What is into color mielf, degenerates into a crime, from being carried to excess; and idle, tain g fociety, is nearly a-kin to fuch as a company. One of the full principles of or let is, to learn to be happy at home. It is in domeflic retreat that every wife non hads his chieffatisfaction. It is there to forms the plans which regulate his pube conduct. He who knows not how to jev himfelf when alone, can never be y happy abroad. To his vacant mind, company may afford a temporary relief; but when forced to return to himfelf, he will be to much more oppressed and lanbuil. Whereas, by a due mixture of puband private life, we keep free of the ares of both, and er joy each to greater dantage.

55. A due Rezard to Order necessary in Business, Time, Expense, and Anustrments.

Throughout your affairs, your time, our expense, your amusements, your south, the principle of order must be equally fattle lift you expect to reap any of its appy fruits. For if into any one of those that departments of life you suffer disker to enter, it will spread through all lift reit. In vain, for instance, you pur-

pose to be orderly in the conduct of your affairs, if you be irregular in the distribution of your time. In vain you attempt to regulate your expense, if into your amusements, or your fociety, disorder has crept. You have admitted a principle of confusion which will defeat all your plans, and perplex and entangle what you sought to arrange. Uniformity is above all things necessary to order. If you defire that any thing should proceed according to method and rule, 'let all things be done in order.'

I must also admonish you, that in small, as well as in great affairs, a due regard to order is requifite. I mean not, that you ought to look on those minute attentions, which are apt to occupy frivolous minds, as connected either with virtue or wildom: but I exhort you to remember, that diforder, like other immoralities, frequently takes rife from inconfiderable beginnings. They who, in the lefter transactions of life, are totally negligent of rule, will be in hazard of extending that negligence, by degrees, to such affairs and duties as will render them criminal. Remissincs grows on all who fludy not to guard against it; and it is only by frequent exercise, that the habits of order and punctuality can be thoroughly continued.

# § 56. Idleness as aded by the Observation of Order.

By attending to order, you avoid idlenefs, that most fruitful fource of crimes and evils. Acting upon a plan, meeting every thing in its own place, you constantly find innocent and useful employment for time. You are never at a loss how to dispose of your hours, or to fill up life agreeably. In the course of human action, there are two extremes equally dangerous to virtue; the multiplicity of affairs, and the total want of them. The man of order flands in the middle between these two extremes, and suffers from neither, he is occupied, but not oppressed. Whereas the disorderly, overloading one part of time, and leaving another vacant, are at one period overwhelmed with bufiness, and at another either idle through want of employment, or indolent through perplexity. Those seasons of indolence and idleness, which recur so often in their life, are their most dangerous moments. The mind, unhappy in its fituation, and clinging to every object which can occupy 01 or amuse it, is then aptest to throw itself into the arms of every vice and folly.

Farther; by the prefervation of order, you check inconstancy and levity. Fickle by nature is the human heart. It is fond of change; and perpetually tends to start aside from the straight line of conduct. Hence arises the prop lety of bringing ourselves under subjection to method and rule; which, though at first it may prove con braining, yet by degrees, and from the experience of its happy effects, becomes natural and agreeable. It rectifies those irregularities of temper and manners to which we give the name of caprice; and which are diffinguished characteristics of a disorderly mind. It is the parent of steadiness of conduct. It forms confidency of character. It is the ground of all the confidence we repose in one another. For the disorderly we know not where to find. In him only can we place any truft, who is uniform and regular; who lives by principle, not by humour; who acts upon a plan, and not by defultory motions.

Blair.

### § 57. Order effential to Self-enjoyment and Felicity.

Confider also how important it is to your felf enjoyment and felicity. Order is the fource of peace; and peace is the highest of all temporal bleffings. Order is indeed the only region in which tranquillity dwells. The very mention of confusion imports disturbance and vexation. Is it possible for that man to be happy, who cannot look into the state of his affairs, or the tenor of his conduct, without difcerning all to be embroiled? who is either in the midst of remorfe for what he has neglected to do, or in the midst of hurry to overtake what he finds, too late, was necesfary to have been done? Such as live according to order, may be compared to the celeftial bodies, which move in regular courses, and by stated laws; whose influence is beneficent; whose operations are quiet and tranquil. The disorderly, resemble those tumultuous elements on earth, which, by fudden and violent irrup tions, disturb the course of nature. By milmanagement of affairs, by excels in expence, by irregularity in the indulgence of company and amusement, they are perpetually creating moleflation both to them -. telves and others They depart from their road to feek pleasure; and instead of it, they every where raife up forrows. Being

always found out of their proper place, they of course interfere and jar with others. The disorders which they raise never fail to spread beyond their own line, and to involve many in confusion and distres; whence they necessarily become the authors of tumult and contention, of discord and enmity. Whereas order is the foundation of union. It allows every man to carry on his own affairs without disturbing his neighbour. It is the golden chain which holds together the societies of men in friendship and peace.

Ibid.

### § 58. Care to be taken in suppressing criminal Thoughts.

When criminal thoughts arife, attend to all the proper methods of speedily supprefling them. Take example from the unhappy industry which finners discover in banishing good ones, when a natural fense of religion forces them on their confcience. How anxiously do they fly from themielves! How fludiously do they drown the voice which upbraids them, in the noise of company or diversions! What numerous artifices do they employ, to evade the uneatiness which returns of reflection would produce !-- Were we to u! equal diligence in preventing the entrance of vicious fuggestions, or in repelling them when entered, why should we not be equally successful in a much better cause' -As foon as you are fenfible that any dangerous passion begins to serment, instantly call in other passions, and other ideas, to your aid. Hasten to turn your thoughts into a different direction. Summon up whatever you have found to be of power, for composing and harmonizing your mind. Fly for affittance to ferious fludies, to prayer and devotion; or even fly to business or innocent society, if solitude be in hazard of favouring the feduc--tion. By fuch means you may flop the progress of the growing evil: you may apply an antidote, before the poison has had time to work its full effect.

## § 59. Experience to be anticipated by Reflection.

It is observed, that the young and disignorant are always the most violet is pursuit. The knowledge which is found upon them by longer acquaintance will the world, moderates their impetuosity. Study then to anticipate, by reflection, that knowledge which experience often pursuit.

chases at too dear a price. Inure yourselves to frequent confideration of the emptiness of those pleasures which excite so much thrife and commotion among mankind. Think how much more of true enjoyment is loft by the violence of passion, than by the want of those things which give occasion to that passion. Persuade yourfelves, that the favour of God, and the possession of virtue, form the chief happinels of the rational nature. Let a contented mind, and a peaceful life, hold the next place in your estimation. These are the conclusions which the wife and thinking part of mankind have always formed. To these conclusions, after having run the race of passion, you will probably come at the laft. By forming them betimes, you would make a feafonable escape from that tempethous region, through which none can pals without fuffering milery, contracting guilt, and undergoing fevere remorfe.

Rlaur.

### 9 60. The Biginnings of Passion to be opposed.

Oppose early the beginnings of passion. Avoid particularly all fuch objects as are pt to excite passions which you know to predominate within you. As foon as you find the tempest rising, have recourse to every proper method, either of allaying its violence, or of escaping to a calmer shore. Hasten to call up emotions of an opposite nature. Study to conquer one passion by means of some other which is of less dangerous tendency. Never account any thing fmall or trivial, which is in hazard of introducing diforder into your heart. Never make light of any defire which you feel gaining such progress as to threaten entire dominion. Blandishing it will appear at the first. As a gentle and innocent emotion, it may steal into the heart: but as it advances, is likely to pierce you through with many forrows. What you indulged as a favourite amusement, will shortly become a serious business, and in the end may prove the burden of ) our life. Most of our passions slatter us in their rife: but their beginnings are treacherous; their growth is imperceptible; and the evils which they carry in their train, lie concealed, until their domition is established. What Soloman says one of them, holds true of them all, that their beginning is as when one letteth out water. It issues from a small chink, which once might have been easily stopfed; but being neglected, it is foon widened

by the ffream, till the bank is at last totally thrown down, and the slood is at liberty to deluge the whole plain.

1bid.

#### § 61. The Government of Temper, as included in the Keeping of the Heart.

Passions are quick and strong emotions, which by degrees subside. Temper is the disposition which remains after these emotions are pall, and which forms the habitual propensity of the foul. The one are like the stream when it is swoln by the torrent, and ruffled by the winds; the other refembles it when running within its bed, with its natural force and velocity. The influence of temper is more filent and imperceptible than that of pattien; it operates with less violence; but as its operation is constant, it produces effects no less considerable. It is evident, therefore, that it highly deferves to be confidered in a religious view.

Many, indeed, are averfe to behold it in this light. They place a good temper upon the same footing with a healthy con-stitution of body. They consider it as a natural felicity which some enjoy; but for the want of which, others are not morally culpable, nor accountable to God: and hence the opinion has fometimes prevailed, that a bad temper might be confident with a state of grace. If this were true, it would overturn that whole doctrine, of which the gospel is so full, 'that regeneration, or change of nature, is the effectial characteriffic of a Christian.' It would suppose, that grace might dwell amidst malevolence and rancour, and that heaven might be enjoyed by fuch as are strangers to charity and love.-It will readily be admitted that fome, by the original frame of their mind, are more favourably inclined than others, towards certain good dispositions and habits. But this affords no justification to those who neglect-to oppose the corruptions to which they are prone. Let ro man imagine, that the human heart is a foil altogether unsusceptible of culture! or that the worst temper may not, through the affiltance of grace, be reformed by attention and discipline. Settled depravity of temper is always owing to our own indulgence. If, in place of checking, we nourith that malignity of disposition to which we are inclined, all the confequences will be placed to our account, and every excuse, from natural constitution, be rejected at the tribunal of Heaven.

Ibid.

§ 62. A peaceful Temper and condefeending Manners recommended.

What first presents itself to be recommended, is a peaceable temper; a difposition averse to give offence, and defirous of cultivating harmony, and amicable intercourfe in fociety. This fuppoles yielding and condefcending manners, unwillingness to contend with others about trifles, and, in contells that are unavoidable, proper moderation of spirit Such a temper is the first principle of felf enjoyment; it is the basis of all order and happinels among mankind. The politive and contentious, the rude and quarrellome, are the bane of fociety; they feem deflined to biast the small thate of comfort which nature has here allotted to man, But they cannot diffuib the peace of others, more than they break their own. The hurricane rages first in their own bosom, before it is let forth upon the world. In the tempest which they raise, they are always loft; and frequently it is their lot to perith.

A peaceable temper mult be supported by a candid one, or a difposition to view the conduct of others with fairness and impartiality. This flands opposed to a jealous and suspicious temper; which atcribes every action to the world movive, and throws a black shade over every character. As you would be happy in yourfelves, or in your connections with others, guard against this midignant spirit. Study that charity which thinketh no evil; that temper which, without degree atting into credulity, will dispote y u to be just; and which can allow you to oble ve an error, without imputing it as a crime. Thus you will be kept free from 'that continual 'iritation which imaginary injuries raite in a fulpicious breatl; and will walk among men as your brethren, not your enemies

But to be practable, and to be caudid, is not all that is required of a good man. He must cultivate a kind, generous, and sympathizing temper, which feels for differels wherever it is beheld; which enters into the concerns of his friends with ardour; and to all with whom he has intercourie, is gentle, obiging, and humane. How am doe appears such a disposition, when contrasted with a malicious or envious temper, which wraps itself up in its own narrow interests, looks with an evil eye on the success of others, and with an unnatural taristaction feeds on tacic different and the success of others.

appointments or miferies! How little does he know of the true happiness of life, who is a stranger to that intercourse of good offices and kind affections, which, by a pleasing charm, attach men to one another, and circulate joy from heart to heart!

§ 63. Numerous O cafions offer for the Exertion of a benew elent Temper.

You are not to imagine that a benevolent temper hads no evercife, unless when opportunities offer of performing actions of high generofity, or of extensive utility: these may seldom occur: the condition of the greater part of mankind in a good measure precludes them. But in the ordinary round of human affairs, a thoutand occasions daily prefent themselves of mitigating the vexations which others fuffer, of foothing their minds, of aiding their interest, or promoting their chearraliest, or eafe. Such occations may relate to the finaller incidents of life. But let us remember that of finall incidents, the tystem of human life is chiefly composed. The attentions which respect these, when suggefled by real benignity of tempor, are often mere material to the happiness of those around we, than actions which earry the appearance of greater dignity and fpleadour. No wife or good man ought to account any rules of b havious as belowhis regard, which tend to cement the great brotherheed of mankind in comfortable union.

Perticularly in the course of that familiar intercente which belongs to domeflic life, all the virtues of temper find an ample range. It is very unfortanate, that within that cucle, men too often thank themselves at liberty to give unrestrained vent to the caprice of pattion and humour. Whereas there, on the contrary, more than any where, it concerns them to attend to the government of then heart; to chick what is violent in their tempers, and to toften what is harth in their manners. For there the temper is formed. There the real character displays itself. The forms real character displays itself of the world difguite men when abroad; but within his own family, every man is known to be what he truly is .- In all our intercourfs, then, with others, particularly in that which is closest and most incomate, let us cultivate a peaceable, a candid, a gentle and friendly temper. This is the temper to which, by repeated injunctions, our hely religion to ks to form us. This

404

n:, the temper of Chilft. This is the temper of Heaven.

Blave.

§ 64. A contented Temper the greatest Bleijeng, and mist material Requisite to the proper Discharge of our Duties.

A contented temper is one of the greateft bleffings that can be enjoyed by man, and one of the most material requisites to the proper discharge of the duties of every For a fretful and difcontented temper renders one incapable of performing aright any part in life. It is unthankful and impious towards God; and towards men provoking and unjust. It is a gaiging which preys on the vitals, and inicity the whole conflictation with diffeate and putiefaction. Subdue pride and varaty, and you will take the most effectual method of eradicaling this detenmer. You will no longer b hold the objects around you with jaundiced eyes. You will take or good part the bleffings which Providence is pleafed to below, and the da of fivour which your fellow-cristings Choled to grant you. Are sing you L's a with all your imperfections as I things, in a just light, you will rather be to jud d at y ar enjoying for printy good there's that diffeontented because their me the vanish you want. From an handle . I denterted tomper, will fpring ach irtol one. The, if not in idelf a virte, that lead the carb in which virtue should be dways arrayed. Prety and goodnets or fat never to be marked with that dewhen which formatimes takes like from 'sporthion, but which is the pager parthe culv of our't. At the time time, the curule is belonging to view, is to be Codully did agaithed from that light and old, temper which characteries folly, and is so often found among the ordinated and visious part of mankind. Their g 1 ty owing to a total want of reflection; and be 398 with the the usual confequences of an E tarking habit, flumz, remo. fe, and hery of heart, in the end. The Clear-11 S of a well-fregulated mind, springs Est a good conscience and the favour of iver, and is bounded by temperance a lamon. It makes a man happy in but if, and promotes the happinels of all id nim. It i the clear and c. Im funcot a mind illuminated by piety and Vrue. It crowns all other good diffichthe paradicompositions the peneral effect "-ient'e, caghi to produce ent is heart.

§ 65. The Define of Proofs jubler vient to runy zaha. ble Profes.

To a variety of good purpoles it is fubfervient, and on many occasions co-operotes with the principle of virtue. It awakens us from floth, invigorates activity, and finulates our efforts to excel. It has civen rife to most of the splendid, and to many of the ufeful enterprizes of men. It has an nated the patriot, and fired the here. Magnanimity, generofity, and fortitude, are what all mankind admire, Hence, fuch as were actuated by the dethe of extensive fame, have been prompted to deeds which cither participated of the fpint, or at least carried the appearance, of diffinguished virtue. The defire of praise is generally connected with all the nner fenfibilities of human nature. It affords a ground on which exhortation. countel, and reproof, can work a proper off ct. Whereas, to be entirely defining or this pathon batokens an ignoble mind. on which no moral impression is easily made. Where there is no defire of praite, there will be also no tense of reproach; and if that be extinguiffied, one of the principil guards of virtue is removed, and the meed thrown op n to many opprobitous purlants. He whole countenance never glou ed with thame, and whose heart never heat at the found of polite, is not deflined for any honograble diffinction; is likely to grovel in the fordid qual of gain; or to flumber life away is the indolence of felfith pleatures.

Abiliacted from the fentiments which are connected with it as a principle of action, the effeem of our fellow-creatures is an object which, on account of the advantiges it brin, s, may be lawfully purfued. It is not if by to our fit cels, in every fair and hoself und taking. Not only our private interest, but our public uferulners, depend, in a great measure, upon it. The finde of our influence is contracted or enlarged, in proportion to the degree in which we erjoy the good opinion of the public. Men liften with an unwilling ear to on: whom they do not honour; while Ta refrected character ands weight to example, and authority to countel. To defirst the electron of others for the take of its effects, is not only allowable, but in many cases is que duty; and to be totally inconferent to proute or confure, is fo far from being a vertue, that it is a real dehet in chilafter. Ibid.

L 4

§ 66. Excessive Define of Praise tends to corrupt the Heart, and to disrigard the Admonitions of Conscience.

An excessive love of praise never fails to undermine the regard due to confeience, and to corrupt the heart. It turns off the eye of the mind from the ends which it ought chiefly to keep in view; and fets up a false light for its guide. Its influence is the more dangerous, as the colour which it assumes is often fair; and its garb and appearance are nearly allied to that of virtue. The love of glory, I before admitted, may give birth to actions which are both splendid and useful. At a distance they strike the eye with uncommon brightness; but on a nearer and fluicler furvey, their luftie is often tarnished. They are found to want that faered and venerable dignity which charactenifes true virtue Little pullions and felfish interests entered into the motives of those who performed them. They were jealous of a competitor. They sought to humble a rival. They looked round for spectators to admire them. All is magnanimity, generofity, and courage, to publie view. But the ignoble fource whence these seeming virtues take their rise, is hidden. Without, appears the hero; within, is found the man of dust and clay. Confult such as have been intimately connected with the followers of renown; and feldom or never will you find, that they held them in the same esteem with those who viewed them from afar. There is nothing except simplicity of Intention, and purity of principle, that can fland the tell of near approach and thrick eximination.

§ 67. That Discipline which teaches to moderate the Eagerness of worldly Pessions, and to jointly the Mind with the Principles of Virtue, is more conductive to true Happings than the Pessession of all the Goods of Fortune.

That dikipline which corrects the eagerness of worldly passions, which fortises the heart with virtuous principles, which ilightens the mind with useful know ledge, and furnishes to it matter of enjoyment from within itself, is of more consequence to real selicity, than all the provision which we can make of the goods of fortune. To his let us bend our chief attention. Let keep the heart will all diligence, see-

ing out of it are the issues of life. Let us account our mind the most important province which is committed to our care; and if we cannot rule fortune, study at least to rule ourselves. Let us propose for our object, not worldly success, which it depends not on us to obtain, but that upright and honourable discharge of our duty in every conjuncture, which, through the divine assistance, is always within our power. Let our happiness be sought where our proper praise is found; and that be accounted our only real evil, which is the evil of our nature; not that which is either the appointment of Providence, or which arises from the evil of others.

This

§ 68. Religious Knowledge of great Conjoletion and Relief amidft the Diffresser of Life,

Confider it in the light of confolation; as b loging aid and relief to us, amidit the difficiles of life. Here religion in-contellably triamphs; and its happy eftects in this respect furnish a strong argument to every benevolert mind, for withing them to be farther diffused throughout the world. For, without the belief and hope afforded by divine revelation, the circumfiances of man are extremely forlorn. He finds himfelf placed here as a ftranger in a vast universe, where the powers and operations of nature are very imperfectly known; where both the beginnings and theissues of things are involved in mysterious darkness; where he is unable to discover with any certainty, whence he fprung, or for what purpose he was brought into this flate of existence; whether he be subjected to the government of a mild, or of a wrathful ruler; what construction he is to put on many of the difpentations of his providence; and what his fate is to be when he departs hence. What a disconfolate fituation to a ferious, enquiring mind! The greater degree of virtue it possesses, its sensibility is likely to be the more oppressed by this burden of labouring thought. Even though it were in one's power to banish all uneasy thought, and to all up the hours of life with perpetual amusement; life so filled up would, upon reflection, appear poor and trivial. But there are far from being the terms upon which man is brought into this world. He is confcious that his being is frail and feeble; he sees himself beset with various dangers, and is exposed to many a melancholy

lancholy apprehension, from the evils which he may have to encounter, before he arrives at the close of life. In this distressed condition, to reveal to him fuch discoveries of the Supreme Being as the Christian religion affords, is to reveal to him a fither and a friend; is to let in a ray of the most cheering light upon the darkness of the human estate. He who was before a destitute orphan, wandering in the inhospitable desert, has now gained a shelter from the bitter and inclement blaft. He now knows to whom to pray, and in whom to trust; where to unbosom his fortows; and from what hand to look for rclief.

It is certain, that when the heart bleeds from some wound of recent misfortune. nothing is of equal efficacy with religious comfort. It is of power to enlighten the da kert hour, and to affunge the feverelt woe, by the belief of diving fivour, and the prospect of a blessed immortality. In fach hopes, the mind expatiates with joy; and when bereaved of its earthly friends, foliaces itself with the thoughts of one friend wao will never forfake it. Refined reafone go, concerning the nature of the huir in a adition, and the improvement which padotophy teaches us to make of every event, may entertain the mind when it is at case; may, perhaps, contribute to sooth it, when flightly touched with forrow; but when it is torn with any fore diffrefs, they are cold and feeble, compared with a direst promite from the word of God. This is an anchor to the foul, both fure and fiedfast. This has given consolation and refuge to many a virtuous heart, at a time when the most cogent reasonings would have proved utterly unavailing.

Upon the approach of death especially, when, if a min thinks at all, his anxiety about his future interests must naturally increase, the power of religious consolation is fensibly felt. Then appears, in the most striking light, the high value of the discoveries made by the Gospel; not only life and immortality revealed, but-a Mediator with God discovered; mercy proclumed, through him, to the frailties of the positiont and the humble; and his picferce promised to be with them when they are parting through the valley of the shadow of death, in order to bring them fafe mo unseen habitations of rest and joy. Here is ground for their leaving the world th comfort and peace. But in this fevere and trying period, this labouring hour

of nature, how shall the unhappy man support himself, who knows not, or believes not, the hope of religion? Secretly conscious to himself, that he has not acted his part as he ought to have done, the fins of his past life arise before him in sad remembrance. He wishes to exist after death, and yet dreads that evistence. The Governor of the world is unknown. He cannot tell whether every endeavour to obtain his mercy may not be in vain. All is awful obscurity around him; and in the midst of endless doubts and perplexities. the trembling reluctant foul is forced away from the body. As the misfortunes of life must, to such a man, have been most oppressive; so its end is bitter; his fun fets in a dark cloud; and the night of death closes over his head, full of misery.

#### § 69. Sense of Right and Wrong, independent of Religion.

Mankind certainly have a fense of right and wrong, independent of religious belief; but experience shews, that the all lurements of prefent pleasure, and the impetuofity of passion, are sufficient to prevent men from acting agreeable to this moral sense, unless it be supported by religion, the influence of which upon the imagination and pullions, if properly directed, is extremely powerful. We shall readily acknowledge that many of the geatest enemies of religion have been distinguished for their honour, probity, and good-nature. But it is to be confidered, that many virtues, as well as vices, are conflitutional. A cool and equal temper. a dull imagination, and unfeeling hearts enfure the possession of many virtues, or rather, are a fecurity against many vices. They may produce temperance, chastity, honesty, prudence, and a harmless, inosfensive behaviour. Whereas keen passions, a warm imagination, and great feefibility of heart, lay a natural foundation for prodigality, debauchery, and ambition: attended, however, with the feeds of all the focial and most heroic virtues. Such a temperature of mind carries along with it a check to its constitutional vices, by rendering those possessed of it peculiarly susceptible of religious impression. They often appear indeed to be the greatest enemies to religion, but that is entirely owing to their impatience of its restraints. Its most dangerous enemies have ever been among the temperate and chaste philosophers,

void of passion and sensibility, who had no vicious appetites to be restrained by its instruence, and who were unsusceptible of its terrors or its pleasures.

Gregory.

## § 70. Infidelity owing to Infensibility of Heart.

Abfolute infidelity, or fettled feepticism in religion, we acknowledge, is no proof of want of understanding, or a victous disposition, but is certainly a very strong presumption of the want of imagination and sensibility of heart, and of a perverted understanding. Some philosophers have been infidely; sew men of taile and fentiment. Yet the examples of Lord Bacon, Mr. Locke, and Sir Islae Newton, among many other first names in philosophy, are a sufficient evidence, that a religiou belief is perfectly compatible with the charest and most enlarged understanding.

151da

# § 71. Religion not founded on Weakness of Mead.

Several of those who have surmounted what they call religious prejudices themfelves, affect to trent such as are not athamed to avow their regard to a begin, as men of weak understandings and techle minds: but this thews either want of candour, or great ignorance of human nature. The fundam null articles of 16 light in have been very generally believed by non the most diffirently defeat acuterers and accuracy of judgment. Nav, it is unjult to infor the weakness of a perfen's head on other fubjects, from his attachment even to the fooleries of type flaton. Experience thews, that when the mus quation is heated, and the miscuous deeply interested, they level all dimmetions of unlertlanding; yet this affords no pretumption of a fluillow judement in judgects where the imagination and passions have no influence.

§ 72. Ep. As of Religion, Scopicifin, and Incidents.

Feebleness of mind is a reproach frequently thrown, not only upon tuch as have a tenie of religion, but upon all who possess warm, open, chearful tempers, and hearts peculiarly disposed to love and friendship. But the reproach is it founded. Strength of mind does not consist in a peevish temper, in a hard indexible heart, and in bid-

ding defiance to God Almighty: it confide in an active, resolute spirit; in a spirit that enables a man to act his part in the world with propriety; and to bear the misfortones of life with uniform fortitude and dignity. This is a strength of mind, which neither atheifm nor universal fcepticitm will ever be able to infoire. On the contrary, their tendency will be found to chill all the powers of imagination; to deprefs fprit as well as genius; to four the temper and contract the heart. high it religious fpirit, and veneration for Providence, breatles in the writings of the ancie, tiboics; a feet diffinguithed for producing the most active, in frepid, virtuous m n, that ever did i onour to human na-

Can is be need wheal, that ath ifm or un veral ferfacilin lase any terdency to form lock character? Do the test to intene that magain unit, and decador of mind, test repeat to vitou before different gratification, that is aempt of danger had old wh, when the chair of varie, of librity, or their country, regamed it which diffingerth the chancless of patrocks of heroes? Or is then infune, more to vourable on the lumbler only carles vi-tues of provide and domine life? Do they foft a too book and similar at noise deficited founds of the constant numbels duties and one comerts of a halford, a father, or a nine (17) Do Pay produce that habitual for vity and chemistress of temper, that grid cold hear, which me cas an in blind dies a communeur er co then dilucthe heart with the liberal and genzio a in Gracets, and il at love of the man kind, which we led read a him town of and blered as the pation or depicted merit, the friend of the widow and orplan, the refuge and support of the poet and the unbappy?

The general opinion of mankind, that there is a firmy connection between a religious disposition and a feeling hears appears from the universal distinct which all men have to insidelity in the fact fee. We not only look on it as removing the principal fecurity we have for their virtus, but as the stronged proof of their virtus, but as the stronged proof of their want of that fostness and delicate feusibility of heart, which peculiarly endears them to use and more effectually secures their empire over us, then any quality they can possess.

There are, indeed, fome men who can pe funde themselves, that there is no top prome intelligence who directs the cours of rature; who can fee those they have been connected with by the strongest bonds of nature and friendship gradually disappearing; who are perfuaded, that this separation is final and eternal; and who expect, that they themselves shall soon fink do vn after them into nothing; and yet fuch men appear only and contented. But to a fenfible heart, and particularly to a heart left and by past endearments of love or friend lip, fuch opinions are attended with gloom inexpreshble; they strike a damp into all the pleatures and enjoyments of hir, and cut off those prospect, which flone can comfort the foul under certain didiefles, where all other aid is feeble and moffectual.

Scepticism, or suspense of judgment, as to the truth of the great articles of relicion, is attended with the same state effects. Wherever the associations are deeply interacted, as since estimated is more intelegrable, and more since the cvir which is a conditional association. Great in the state and associated in the same since of the cvir which is a conditional edge.

#### \$ 73. Comfaire of Relig. n.

There are many who have paffed the are Counth and blauty, who have refigned the plantes of that imiling leafon, who Lanton cline into the vale of years, im-I had in their health, depicified in their names, thipt of their friends, their childies, and perhaps still more tender contections. What relouice can this world and them? It presents a dark and the wrafte, through which there dies to the a fingle ray of comfort by ery delivace prospect of an bition is now at an and; long experience of mankind, an evplace very different from what the on and generous foul of youth had To My dicamt of, has rendered the heart dinest i accessible to new friendships. The principal fources of activity are taken (way, when those for whom we abour are ut off from us, to ofe who animated, and there who investence all the tools of life. are then can the feel and refuge, but "The bosom of religion? There she is admitted to those prospects of Provide year I futurity, which alone can warm " bill the heart 1 speak here of such as the the feerings of humanity, whom t. firtunes have fiftened, and perhaps is dered more delicately fensible; not of have as possess that slupid infensibility, Product me are pleased to dignify with the table of pailolop, y.

It should therefore be expected that those philotophers, who stind in no need themselves of the assistance of religion to support their virtue, and who never feel the want of its confolations, would yet have the humanity to confider the very different fituation of the rest of mankind, and not endeavour to deprive them of what habit, at leaft, if they will not allow it to be nature, has made necessary to their morals, and to their happiness.-It might be expected, that humanity would prevent them from breaking into the latt remeat of the unfortunate, who can no longer be objects of their envy or referement, and te ring from them their only remaining comfort. The attempt to ridicule religion may be agreeable to fome, by 10lieving them from refliaint upon their planues, and may render others very mil table, by making them doubt those trath, in which they were most deeply intere 'ed; but it can convey real good and harpiness to no one individual.

§ 74 Cause of Zeal to propagate Infidelity.

To support openly and avowedly the ca ile of infidelity, may be owing, in tome, to the vanity of appearing wifer than the reft of markind; to vanity, that araphibrous palion that feelts for food, not only in the ffectation of every beauty and every virtue that adorn humanity, but of every vice and perversion of the understanding that angrace ir. The zeal of making profelytes to it, may often be attributed to a like varity of possessing a direction and ascendancy over the minds of men; which is a very flattering species of superiority. But therefrems to be some other cause that fecretly influences the condust of fome that reject all religion, who, from the reft of their character, cannot be suspected of vanity, to any ambition of fuch superiority. This we shall attempt to explain.

The very differing in opinion, upon any interesting subject, from all around us, gives a dilagreeable sensation. This must be greatly increased in the present case, as the teeling which attends insidelity or scepticism in religion is certainly a comfortless one, where there is the least degree of sensibility.—Sympathy is much nore sought after by an unhappy mind, that by one chearful and at eate. We require a support in the one case, which in the other is not necessary. A person, therefore, void of religion, feels nims-st as it were alone

in the midft of society; and though, for prudential reasons, he chooses, on some occasions, to disguise his sentiments, and join in some form of religious worship, yet this, to a candid and ingenuous mind, must always be very painful; nor does it abate the disagrecable feeling which a social spirit has in sinding itself alone, and without any friend to sooth and participate its uneasiness. This seems to have a confiderable share in that anxiety which Free-Thinkers generally discover to make profelytes to their opinions; an anxiety much greater than what is shewn by those whose minds are at ease in the enjoyment of happier prospects.

Gregory.

# § 75. Zeal in the Propagation of Infidelity inexcufable.

The excuse which insidel writers plead for their conduct, is a regard for the cause of truth. But this is a very insufficient one. None of them act upon this principle, in its largest extent and application, in common life; nor could any man live in the world, and pretend so to do. In the pursuit of happiness, 'our being's end and aim",' the discovery of truth is far from being the most important object. It is true, the mind receives a high pleasure from the investigation and discovery of truth, in the abstract sciences, in the works of nature and art; but in all subjects, where the imagination and affections are deeply concerned, we regard it only fo far as it is subservient to them. - One of the first principles of fociety, of decency, and of good manners, is, that no man is entithed to fay every thing he thinks true, when it would be injurious or offenfive to his neighbour. If it was not for this principle, all mankind would be in a state of bostility.

Suppose a person to lose an only child, the sole comfort and happiness of his life: When the first overslowings of nature are past, he recollects the infinite goodness and impenetrable wisdom of the Disposer of all events; he is persuaded, that the revolution of a sew years will again unite him to his child, never more to be separated. With these sentiments he acquiesces with a melancholy yet pleasing resignation, to the divine will. Now, supposing all this to be a deception, a pleasing dream, would not the general sense of mankind condemn the philosopher, as barbarous and inhuman, who should attempt to wake him out

of it.—Yet fo far does vanity prevail over good-nature, that we frequently fee men, on other occasions of the most benevolent tempers, labouring to cut off that hope which can alone chear the heart under all the pressures and afflictions of human life, and enable us to resign it with chearfulnes and dignity!

Religion may be confidered in three different views. First, As containing doctrines relating to the being and perfections of God, his moral administration of the world, a suture state of existence, and particular communications to mankind, by an immediate supernatural revelation.—Secondly, As a rule of life and manners.—Thirdly, As the source of certain peculiar affections of the mind, which either give pleasure or pain, according to the particular genius and spirit of the religion that inspires them.

#### § 76. Religion considered as a Science.

In the first of these views, which gives a foundation to all religious belief, and on which the other two depend, Reason is principally concerned. On this subject, the greatest efforts of human genius and application have been exerted, and with the most desirable success, in those great and important articles that feem most immediately to affect the interest and happiness of mankind. But when our enquiries here are pushed to a certain length, we find that Providence has fet bounds to our reason, and even to our capacities of This is particularly the apprehension. case with respect to infinity and the moral economy of the Deity. The objects are here, in a great measure, beyond the reach of our conception; and induction, from experience, on which all our other reasonings are founded, cannot be applied to a subject altogether dissimilar to any thing we are acquainted with.-Many of the fundamental articles of religion are such, that the mind may have the fullest conviction of their truth, but they must be viewed at a distance, and are rather the objects of filent and religious veneration than of metaphylical disquisition. If the mind attempts to bring them to a nearer view, it is confounded with their strangeness and immensity.

When we pursue our enquiries into any part of nature beyond certain bounds, we find ourselves involved in perplexity and darkness. But there is this remarkable difference between these and religious en-

quiries :

quiries: in the investigation of nature, we can always make a progress in knowledge, and approximate to the truth by the proper exertion of genius and observation. But our enquiries into religious subjects are confined within very narrow bounds; nor can any force of reason or application, lead the mind one step beyond that impenetrable gulf, which separates the visible and invisible world.

Though the articles of religious belief, which fall within the comprehension of mankind, and feem effential to their happinels, are few and simple, yet ingenious men have contrived to erect them into most tremendous systems of metaphysical subtlety, which will long remain monuments both of the extent and the weakness of human understanding. The pernicious confequences of such systems, have been various. By attempting to establish too much, they have hurt the foundation of the most interesting principles of religion. -Most men are educated in a belief of the peculiar and distinguishing opinions of fome one religious fect or other. They are taught, that all these are equally founded on divine authority, or the clearest deductions of reason; by which means their fy flem of religion hangs fo much together, that one part cannot be shaken without endangering the whole. But wherever any freedom of enquiry is allowed, the absurdity of some of these opinions, and the uncertain foundation of others, cannot be concealed. This naturally begets a general distrust of the whole, with that fatal lukewarmness in religion, which is its neceffary confequence.

The very habit of frequent reasoning and disputing upon religious subjects, diminishes that reverence with which the mind would otherwise consider them. This feems particularly to be the case, when men prefume to enter into a minute fcrutiny of the views and œconomy of Providence, in the administration of the world; way the Supreme Being made it as it is; the freedom of his actions; and many other fach questions, infinitely beyond our reach. The natural tendency of this, is to lessen that awful veneration with which we ought always to contemplate the Divinity, but which can never be preserved, when men canvals his ways with fuch unwarrantable freedom. Accordingly we find, amongst those sectories where such disquifitions have principally prevailed, that he has been mentioned and even addressed

with the most indecent and shocking familiarity. The truly devotional spirit, whose chief foundation and characteristic is genuine and profound humility, is not to be looked for among fuch persons.

Another bad effect of this speculative theology has been to withdraw people's attention from its practical duties -We usually find, that those who are most distinguished by their excessive zeal for opinions in religion shew great moderation and coolness to its precepts; and their great feverity in this respect, is commonly exerted against a few vices where the heart is but little concerned, and to which their own dispositions preserved them from any

temptation's.

But the worst effects of speculative and controverfial theology, are those which it produces on the temper and affections .--When the mind is kept constantly embarraffed in a perplexed and thorny path, where it can find no fleady light to flow the way, nor foundation to rest on, the temper loses its native chearfulness, and contracts a gloom and feverity, partly from the chagrin of disappointment, and partly from the focial and kind affections being extinguished for want of exercise. When this evil is exafperated by opposition and dispute, the consequences prove very fatal to the peace of fociety; especially when men are perfunded, that their holding certain opinions entitles them to the divine favour; and that those who differ from them, are devoted to eternal destruction. This persuasion breaks at once all the ties of fociety. The toleration of men who hold erroneous opinions, is confidered as conniving at their destroying not only themfelves, but all others who come within the reach of their influence. This produces that cruel and implacable spirit which has fo often difgraced the cause of religion, and dishonoured humanity.

Yet the effects of religious controverly have fometimes proved beneficial to man-That spirit of free enquiry, which incited the first Reformers to shake off the yoke of ecclefiaftical tyranny, naturally begot just sentiments of civil liberty, especially when irritated by perfecution. When fuch fentiments came to be united with that bold enthuliasm, that severity of temper and manners that diftinguished some of the reformed fects, they produced those resolute and inflexible men, who alone were able to affert the cause of liberty, in an age when the Christian world was enervated by luxury or superstition; and to such men we owe that freedom and happy constitution which we at present enjoy.—But these advantages of religious enthusiasm have been but accidental

In general it would appear, that religion, considered as a science, in the manner it has been usually treated, is but little beneficial to mankind, neither tending to enlarge the understanding, fweeten the temper, or mend the heart. At the fame time, the labours of ingenious men, in explaining obscure and difficult pussages of facred writ, have been highly ufeful and necessary. And though it is natural for men to carry their speculations, on a subject that so nearly concerns their present and eternal happinels, farther than reason extends, or than is clearly and expressly revealed; yet these can be followed by no bad confequences, if they are carried on with that modelly and reverence which the subject requires. They become pernicious only when they are formed into festems, to which the same credit and fubmission is required as to Holy Writ itself. Gregory.

### § 77. Religion confidered as a Rule of Life and Manners.

We shall now proceed to consider religion as a rule of life and manners. In this respect, its influence is very extensive and beneficial, even when disfigured by the wildest superstition; as it is able to check and conquer those pathons, which reason and philosophy are too weak to encounter. But it is much to be regretted, that the application of religion to this end, bath not been attended to with that care which the importance of the subject required .-The speculative part of religion seems generally to have engroffed the attention of men of genius. This has been the fate of all the useful and practical arts of life; and the application of religion, to the regulation of life and manners, must be confidered entirely as a practical art.—The causes of this neglect, seem to be these: Men of a philosophical genius have an aversion to all application, where the active powers of their own minds are not immediately employed. But in acquiring any practical art, a philosopher is obliged to spend most of his time in employments where his genius and understanding have no exercife. The fate of the practical arts of medicine and religion have been pretty similar: the object of the one is, to care the difeases of the body; of the other, to cure the diseases of the mind. The ptogress and degrees of persection of both these arts ought to be estimated by no other standard, than their success in the cure of the diseases to which they are severally applied. In medicine, the facts on which the art depends, are so numerous and complicated, fo misrepresented by fraud, credulity, or a heated imagination, that there has hardly ever been found a truly philosophical genius who has attempted the practical part of it. There are, indeed, many obliacles of different kinds, which occur to render any improvement in the practice of p'sysic a matter of the utmost difficulty, at least while the profeffion refts on its present narrow foundation. Almost all physicians who have been men of ingenuity, have amused themselves in forming theories, which gave exercise to their invention, and at the fame time contributed to their reputation. Inflead of being at the trouble of making observations themselves, they called out of the promitcuous multitude already made, fuch as best suited their purpose, and dressed them up in the way their fyllem required. In consequence of this, the history of medicine does not fo much exhibit the hittory of a progressive art, as a history of opinions which prevailed perhaps for twenty or thirty years, and then funk into contempt and oblivion. The case has been nearly fimilar in practical divinity, but this is attended with much greater difficulties than the practical part of medicine; in this last, nothing is required but assiduous and accurate observation, and a good understanding to direct the proper application of fuch observation.

### § 78. How Religion is to be applied to cure the Difeases of the Mind

To cure the diseases of the mind, there is required that intimate knowledge of the human heart, which must be drawn from life ittelf, and which books can never teach; of the various difguifes under which vice recommends herfelf to the imagination; of the artful association of ideas which she forms there; and of the many nameless circumstances that fosten the It is likeheart and render it accessible wife necessary to have a knowledge of the arts of infinuation and perfuasion, of the art of breaking falle and unnatural affociations of ideas, or inducing counter-affociations, and opposing one passion to another; and after all this knowledge is acquired, quired, the successful application of it to practice depends, in a confiderable degree, on powers, which no extent of understand-

ing can confer.

Vice does not depend so much on a perversion of the understanding, as of the inigination and passions, and on habits originally founded on these. A vicious man is generally fensible enough that his conduct is wrong; he knows that vice is contrary both to his duty and to his inte-131; and therefore, all laboured reasoning, to fatisfy his understanding of these trat's, is useless, because the disease does not lie in the understanding. The evil is fe it d in the heart. The imaginations and pathons are engaged on its fide; and to then the one must be applied. Here has been the general deflet of writings and famons, intended to reform mankind. Mary ingenious and fenfible remarks are medion the feveral duties of religion, and very judicious arguments are brought to cifoice them. Such performances may be attacked to with pleasure, by pious and well-dispeted persons, who likewise may d we from thence ut ful inflinction for Then co duct in life. The wicke I and profor a ever books of this fort fall in then way, very readily allow, that what by so tain are great and eternal truths; but the cleave no falling impression. If any thing on roale, it is the power of lively and gathetic description, which traces and has open their hearts through all their "indiags and difguiles, makes them fee and could fe their own characters in all their deformity in I horror, impresses their hearts, and interests their passions by all the motives of love, gratitude, and fear, the prospect of rewards and punishments, and whatever other motives religion or nature may dietate. But to do this effectually, requires very different powers from those of the understanding: a lively and well regulated imagination is effentially requifite.

Gregory.

### § 79. On Public Preaching. .

In public addresses to an audience, the great end of reformation is most effectually promoted; because all the powers of voice and action, all the arts of eloquence, may be brought to give their assistance. But some of those arts depend on gits of nature, and cannot be attained by any strength of genius or understanding; even where nature has been liberal of those necisiary requisites, they must be cultivated

by much practice, before the proper exercise of them can be acquired. Thus, a public speaker may have a voice that is musical and of great compass, but it requires much time and labour to attain its just modulation, and that variety of sexion and tone, which a pathetic discourse requires. The same dissibility attends the acquisition of that propriety of action, that power over the expressive features of the countenance, particularly of the eyes, to need slary to command the hearts and patsions of an audience.

It is usually thought that a preacher, who feels what he is taying himlelf, will naturally speak with that tone of voice and expr flion in his countenance, that best fuits the fubject, and which cannot fail to move his audience: thus it is faid, a person under the influence of fear, anger, or forrow, looks and speaks in the manner naturally expressive of these emotions. This is true in some measure; but it can never be suppoled, that any preacher will be able to enter into his subject with such real warmth upon every occasion. Befides, every prudent man will be a fraid to abandon himfelf to entirely to any imprellion, as he mu't do to produce this effect. Most men, when thoughy affected by any pattion or emotion, have fome peculiarity in their appearance, which does not belong to the natural expression of such an emotion. If this be not properly corrected, a public speaker, who is really warm and animated with his subject, may nevertheless make a very ridiculous and contemptible figure. It is the business of art, to shew nature in her most amiable and graceful forms, and not with those peculiarities in which she appears in particular inflances; and it is this difficulty of properly representing nature, that renders the eloquence and action, both of the pulpit and the stage, acquisitions of fuch difficult attainment.

But, befides those talents inherent in the preacher himself, an intimate knowledge of nature will suggest the necessity of at tending to certain external circumsances, which operate powerfully on the mind, and prepare it for receiving the designed impressions. Such, in particular, is the proper regulation of church-music, and the solemnity and pomp of public worship. Independent of the effect that these particulars have on the imagination, it might be expected, that a just tasse, as fente of decency and propriety, would make them more attended to than we find

they are. We acknowledge that they have been abused, and have occasioned the groffest superstition: but this universal propenfity to carry them to excess, is the ftrongest proof that the attachment to them is deeply rooted in human nature, and confequently that it is the business of good fense to regulate, and not vainly to attempt to extinguish it. Many religious fects, in their infancy, have supported themfelves without any of these external assistances; but when time has abated the fervour of their first zeal, we always find that their public worship has been conducted with the most remarkable coldness and inattention, unless supported by well-regulated ceremonies. In fact, it will be found, that those sects who at the commencement have been mell diflinguished for a religious enthusiasm that despised all forms, and the renius of whose tenets could not admit the use of any, have either been of short duration, or ended in infidelity.

The many difficulties that attended the practical art of making religion influence the manners and lives of mankind, by acquiring a command over the imagination and paffions, have made it too generally neglected, even by the most eminent of the clergy for learning and good fense. Their have rather chosen to confine themfelves to a track, where they were fure to excel by the force of their own genius, than to attempt a road where their fuccess was doubtful, and where they might be outshone by men greatly their inferiors. It has therefore been principally cultivated by men of lively imaginations, possessed of some natural advantages of voice and manner. But as no art can ever become very beneficial to mankind, unless it be under the direction of genius and good sense, it has too often happened, that the art we are now speaking of has become subservient to the wildest fanaticism, sometimes to the gratification of vanity, and fometimes to still more unworthy purposes.

#### § 80. Religion confidered as exciting Dewetton.

The third view of religion confiders it as engaging and interesting the affections, and comprehends the devotional or sentimental part of it.—The devotional spirit is not ome measure constitutional, depending on liveliness of imagination and sensibility of heart, and, like these qualities, prevails more in warmer climates than it

does in ours. What shews its great dependance on the imagination, is the remarkable attachment it has to poetry and music, which Shakespeare calls the food of love, and which may, with equal truth, be called the food of devotion. Music enters into the future paradise of the devout of every sect and of every country. The Deity, viewed by the eye of cool reason, may be faid, with great propriety, to dwell in light inacceffible. The mind, struck with the immensity of his being, and with a sense of its own littleness and unworthinels, admires with that diffant awe and veneration that almost excludes love. viewed by a devout imagination, he may become an object of the warmest affection, and even passion -The philosopher contemplates the Deity in all those marks of wifdom and benignity diffused through the various works of nature. The devout man confines his views rather to his own particular connection with the Deity, the many instances of his goodness he himself has experienced, and the many greater he fill hopes for. This establishes a kind of intercourse, which often interests the heart and passions in the deepest manner.

The devotional tafte, like all other taftes, has had the hard fate to be condemned as a weakness, by all who are strangers to its joys and its influence. Too much and too frequent occasion has been given, to turn this subject into ridicule.- A heated and devout imagination, when not under the direction of a very found understanding, is apt to run very wild, and is at the same time impatient to publish all its follies to the world.-The feelings of a devout heart should be mentioned with great referve and delicacy, as they depend upon private experience, and certain circumstances of mind and fituation, which the world can neither know nor judge of. But devotional writings, executed with judgment and taffe, are not only highly ufeful, but to all, who have a true fente of religion, peculiarly cugaging.

#### § 81. Advantages of Devotion.

The devotional spirit, united to good sense and a chearful temper, gives that steadiness to virtue, which it always wants when produced and supported by good natural dispositions only. It corrects and humanizes those constitutional vices, which it is not able entirely to subdue; and though it too often fails to render men perfectly virtuous, it preferves them from becoming

becoming utterly abandoned. It has, befides, the most favourable influence on all the patlive virtues; it gives a foftness and senlibility to the heart, and a mildness and gentleness to the manners; but above all, it produces an univerfal charity and love to mankind, however different in flation, country, or religion. There is a fublime yet tender melancholy, almost the universal attendant on genius, which is too apt to degenerate into gloom and difguil with the world. Devotion is admirably calculated to foothe this disposition, by infensibly leading the mind. while it feems to indulge it, to those profpects which calm every murmur of dilcontent, and diffuse a chearfulness over the darkeft hours of human life .- Perfons in the pride of high health and spirits, who are keen in the pursuits of pleasure, interest, or ambition, have either no ideas on this subject, or treat it as the enthusiaim of a weak mind. But this really shews great nurownels of understanding; a very little tellection and acquaintance with nature might teach them, on how precarious a foundation their boasted independence on religion is built; the thousand nameless accidents that may destroy it; and that though for some years they should escape thele, yet that time must impair the greatest vigour of health and spirits, and deprive them of all those objects for which, at prefent, they think life only worth enjoying. It should feem, therefore, very necessary to secure some permanent object, some real support to the mind, to chear the foul, when all others shall have lost their influence.-The greatest inconvenience, indeed, that attends devotion, is its taking such a fast hold of the affections, as sometimes threatens the extinguishing of every other active principle of the mind. For when the devotional spirit falls in with a melancholy temper, it is too apt to depress the mind entirely, to fink it to the weakest superstition, and to produce a total retirement and abstraction from the world, and all the duties of life. Gregory.

#### § 82. The Difference between true and false Politeness.

It is evident enough, that the moral and Christian duty, of preferring one another n honour, respects only social peace and tharity, and terminates in the good and dification of our Christian brother. Its ise is, to soften the minds of men, and to Iraw them from that savage russicity, which engenders many vices, and discredits

the virtues themselves. But when men had experienced the benesit of this complying temper, and further saw the ends, not of charity only, but of self-interest, that might be answered by it; they considered no longer its just purpose and application, but stretched it to that officious seldulity, and extreme servility of adulation, which we too often observe and lament in polithed life.

Hence, that infinite attention and confideration, which is so rigidly exacted, and fo duly paid, in the commerce of the world: hence, that proflitution of mind, which leaves a man no will, no fentiment. no principle, no character; all which difappear under the uniform exhibition of good manners: hence, those insidious arts. those studied disguises, those obsequious flatteries, nay, those multiplied and nicelyvaried forms of infinuation and address. the direct aim of which may be to acquire the fame of politeness and good breeding, but the certain effect, to corrupt every virtue, to foothe every vanity, and to inflame every vice of the human heart.

These stated mischiefs introduce themfelves under the pretence and semblance of that humanity, which the scriptures enceurage and enjoin: but the genuine virtue is easily distinguished from the counterfeit, and by the following plain signs.

True politeness is modelt, unpretending, and generous. It appears as little as may be: and when it does a courtefy, world willingly conceal it. It chooses filently to forego its own claims, not officiously to withdraw them. It engages a man to prefer his neighbour to himself, because he really esteems him; because he is tender of his reputation; because he thinks it more manly, more Christian, to descend a little himself than to degrade another. It respects, in a word, the credit and estimation of his neighbour.

The mimic of this amiable virtue, false politeness, is, on the other hand, ambitious, servile, timorous. It affects popularity: is solicitous to please, and to be taken notice of. The man of this character does not offer but obtrude his civilities; because he would merit by this affiduity; because, in despair of winning regard by any worthier qualities, he would be sure to make the most of this; and lastly, because of all things, he would dread, by the omission of any punctilious observance, to give offence. In a word, this fort of politeness respects, for its immediate object, the

favour and confideration of our neighbour.

2. Again; the man who governs himfelf by the spirit of the Apolile's precept, expresses his preserence of another in such a way as is worthy of himself: in all innocent compliances, in all honest civilities, in all decent and manly condescensions.

On the contrary, the man of the world, who rests in the letter of this command, is regardless of the means by which he conducts himself. He respects neither his own dignity, nor that of human nature. Truth, reaton, virtue, all are equally betrayed by this supple impostor. He affents to the errors, though the most pernicious; he applands the follies, though the most ridiculous; he foothes the vices, though the most slagrant, of other men. He never contradicts, though in the foftest form of infinuation; he never disapproves, though by a respectful filence; he never condemns, though it be only by a good ex-In thort, he is folicitous for nothing, but by some studied devices to hide from others, and, if possible, to palliate to himtelf, the grofiness of his illiberal adulation.

Laftly; we may be fure, that the ultrmate ends for which these different objects are pursued, and by so different means, must also lie wide of each others

Accordingly, the true polite man would, by all proper tetimonies of respect, promote the credit and estimation of his neighbour; beaugh to sees that, by this generous consideration of each other, the peace of the world ie, in a good degree, preserved; beaugh he knows that these mutual attentions prevent animostics, soften the servent ness of men's manners, and dispose them to all the offices of be nevolence and charity; beaugh, in a word, the interests of society are best served by this conduct; and beaugh he understands it to be his duty to love his neighbour.

The fallely polit; on the contrary, are anxious, by all means whatever, to procure the favour and confideration of these they converte with; because they regard, ultimately, nothing more than their private interest; because they perceive, that their own selfish designs are best carried on by such practices; in a word, because they love themselves.

Thus we fee, that genuine virtue confults the honour of others by worthy means, and for the nobleft purposes; the counter-

feir folicits their favour by dishonest compliances, and for the basest end.

Hurd.

§ 83. On religious Principles and Behawicur.

Religion is rather a matter of fentiment than reasoning. The important and interesting articles of saith are sufficiently plain. Fix your attention on these, and do not moddle with controversy. If you get into that, you plunge into a chaos, from which you will never be able to extricate your selves. It spoils the temper, and, I suspect, has no good effect on the heart.

Avoid all books, and all convertation, that tend to shake your faith on those great points of religion which should ferve to regulate your conduct, and on which your hopes of duture and eternal happiness depend.

Never indulge yourfelves in ridicule or religious subjects; nor give countenance to it in others, by seeming diverted with what they say. This, to people of good breeding, will be a suscient cheek.

I wish you to go no farther than the Scriptures for your religious opinions. Embrace those you find clearly revealed. Never perplex yourselves about such as you do not understand, but treat them with filent and becoming reverence.

I would advife you to read only fuch religious books as are addressed to the heart, such as infpire pious and devout affection, such as are proper to direct you in your conduct; and not such as tend to entangle you in the endless maze of opinious and systems.

Be punctual in the stated performance of your private devotions, morning and evening. If you have any sensibility or imagination, this will establish such an intercourse between you and the Supreme Being, as will be of infinite consequence to you in life. It will communicate an habitual chearsulanes to your tempers; give a airmness and seadiness to your virue, and chable you to go through all the vicissifueds of human life with prepriety and dignity.

I wish you to be regular in your attendance on public worship, and in receiving the communion. Allow nothing to interrupt your public or private devotions, except the performance of some active duty in life, to which they should always give I lace.—In your behaviour at public worship.

thip, observe an exemplary attention and

gravity.

That extreme strictness which I recommend to you in these duties, will be connedered by many of your acquaintance as a superstitious attachment to forms; but in the advices I give you on this and other subjects, I have an eye to the spirit and manners of the age. There is a levity and dissipation in the present manners, a coldness and littlesses in whatever relates to religion, which cannot fail to infect you, unless you purposely cultivate in your minds a contrary bias, and make the devotional one habitual.

Gregory's Alvice.

#### § 84. On the Beauties of the Pfalme.

Greatness confers no exemption from the cares and forrows of life its fnare of them frequently bears a melancholy proportion to its exaltation. This the In a little month chexperienced. He fought to picty, that peace which he could not and in empire, and alleviated the difquictudes of flate, with the exercises of devotion. His invaluable Pfalms convey those comforts to others, which they aborded to bindelf. Composed upon particular occulians, yet defigned for general ufe; delivered out as services for Israelites under the Law, yet no lefs adapted to the Circumilances of Christians under the Gespel; they present religion to us in the most engaging drefs; communicating truths which philosophy could never investigate, in a ftyle which poetry can never equal; while history is made the vehicle of prophecy, and creation lends all its thorms to paint the glories of redemption. Colculated alike to profit and to pleafe, they inform the understanding, elevate the affections, and entertain the imagination. Indited under the influence of Him, to whom all hearts are known, and all events foreknown, they fuit mankind in all fituations, grateful as the manna which deseended from above, and conformed itselfto every palate. The fairest productions of human wit, after a few perusals, like gathered flowers, wither in our hands, and lese their fragrancy: but these unsading Plants of paradife become, as we are ac-surformed to them, still more and more beautiful; their bloom appears to be daily heightened; fresh odours are emitted, and hew sweets extracted from them. He who hath once tafted their excellencies, will defire to talle them yet again . and he

who tastes them oftenest, will relish them best .- And now, could the author slatter himself that any one would take half the pleature in reading his work which he hath taken in writing it, he would not fear the loss of his labour. The employment detached him from the buffle and hurry of life, the din of politics, and the noise of folly; vanity and vexation flew away for a featon, care and disquietude came not near his dwelling. He arose, fresh as the morning, to his mik; the filence of the night invited him to purfue it; and he can truly fay, that food and reft were not preferred before it. Every Pfalm improved infinitely upon his acquaintance with it, and no one gave him uneafiness but the last; for then he grieved that his work was done. Happier hours than those which have been spent in these meditations on the songs of Sion, he never expects to fee in this world. Very pleafantly did they pais, and moved fmoothly and fwiftly along; for when thus engaged, he counted no time. They are gone, but have left a relish and a fragrance upon the mird, and the remembrance of them is fweet.

#### § 85. The Timple of wirthous Love.

The structure on the right hand was (as I afterwards found) confecrated to virtuous Love, and could not be entered, but by fuch as received a ring, or forme other token, from a person who was placed as a guard at the gate of it. He wore a garland of roses and myrtles on his head, and on his thou'ders a robe like an imperial mantle white and unspotted all over, excepting only, that where it was clasped at his breast, there were two golden turtle doves that buttoned it by their bills, which were wrought in rubies: he was called by the name of Hymen, and was feated near the entrance of the temple, in a delicious bower, made up of several trees that were embraced by woodbines, jellamines, and amaranths, which were as fo many emblems of marriage, and ornaments to the trunks that supported them. As I was fingle and unaccompanied, I was not permitted to enter the temple, and for that reason am a stranger to all the mysteries that were performed in it. I had, however, the curiofity to observe, how the several couples that entered were disposed of; which was after the following mann r; there were two great gates on the backfide of the edifice, at which the whole crowd was let out. At one of thele gates

were two women, extremely beautiful, though in a different kind; the one having a very careful and composed air, the other a fort of smile and inestable sweetness in her countenance: the name of the first was Discretion, and of the other Complacency. All who came out of this gate. and put themselves under the direction of these two fisters, were immediately conducted by them into gardens, groves, and meadows, which abounded in delights, and were furnished with every thing that could make them the proper feats of happinels. The fecond gate of this temple let out all the couples that were unhappily married; who came out linked together by chains, which each of them strove to break, but could not. Several of these were fuch as had never been acquainted with each other before they met in the great walk, or had been too well acquainted in the thicket. The entrance to this gate was possessed by three sisters, who joined themselves with these wretches, and occafioned most of their miseries. The youngest of the fifters was known by the name of Levity; who, with the innocence of a virgin, had the diefs and behaviour of a harlot: the name of the fecond was Contention, who bore on her right arm a must made of the skin of a porcupine, and on her left carried a little lap-dog, that barked and fnapped at every one that paffed by her. The eldest of the fisters. who feemed to have an haughty and imperious air, was always accompanied with a tawny Cupid, who generally marched before her with a little mace on his shoulder, the end of which was fashioned into the horns of a flag: her garments were vellow, and her complexion pale: her eyes were piercing, but had odd cafts in them, and that particular distemper which makes persons who are troubled with it see objects double. Upon enquiry, I was informed that her name was Jealoufy.

Tatler.

#### § 86. The Temple of Luft.

Having finished my observations upon this temple, and its votaries, I repaired to that which stood on the left hand, and was called the Temple of Lust. The front of it was raised on Corinthian pillars, with all the meretricious ornaments that accompany that order; whereas that of the other was composed of the chase and marronlike Ionic. The sides of it were adorned with several grotesque sigures of goats,

sparrows, heathen gods, satyrs, and mon. flers, made up of half men, half beaft. The gates were unguarded, and open to all that had a mind to enter. going in, I found the windows were blind. ed, and let in only a kind of twilight, that ferved to discover a prodigious number of dark corners and apartments, into which the whole temple was divided. I was here flunned with a mixed noise of clamour and jollity: on one fide of me I heard finging and dancing; on the other, brawls and clathing of swords: in short, I was so little pleased with the place, that I was going out of it; but found I could not return by the gate where I entered, which was barred against all that were come in, with bolts of iron and locks of adamant: there was no going back from this temple through the paths of pleafure which led to it: all who passed through the ceremonies of the place, went out at an iron wicket, which was kept by a dreadful giant called Remorfe, that held a fcourge of fcorpions in his hand, and drove them into the only outlet from that temple. This was a palfage fo rugged, fo uneven, and choaked with fo many thorns and briars, that it was a melancholy spectacle to behold the pains and difficulties which both fexes fuffered who walked through it: the men, though in the prime of their youth, appeared weak and infeebled with old age: the women wrung their hands, and tore their hair, and feveral lost their limbs, before they could extricate themselves out of the perplexities of the path in which they were engaged.—The remaining part of this vision, and the adventures I met with in the two great roads of Ambition and Avarice, mutt be the subject of another paper.

#### § 87. The Temple of Virtue.

With much labour and difficulty I passed through the first part of my vision, and recovered the centre of the wood from whence I had the prospect of the three great roads. I here joined myself to the middle-aged party of mankind, who marched behind the standard of Ambition. The great road lay in a direct line, and was terminated by the Temple of Virtue. It was planted on each side with laurels, which were intermixed with marble trophies, carved pillars, and statues of lawgivers, heroes, statesmen, philosophers, and poets. The persons who travelled we this great path, were such whose thoughts

were bent upon doing eminent fervices to mankind, or promoting the good of their country. On each fide of this great road, were several paths that were also laid out in firnight lines, and ran parallel with it: these were most of them covered walks, and received into them men of retired virtue, who proposed to themselves the same end of their journey, though they chose to make it in shade and obscurity. The edinces, at the extremity of the walk, were fo contrived, that we could not fee the temple of Honour, by reason of the temple of Virtue, which flood before it: at the gates of this tample, we were met by the goddis er it, who conducted us into that of Honous, which was joined to the other utifice by a beautiful triumphal arch, and had no other entrance into it. When the data of the inner structure had received us, the presented us in a body, to a figure that was placed over the high altar, and can the emblem of leternity. She fat on a the be, in the midfl of a golden zodiac, I lding t'e figure of a fun in one hand, and a moon in the other: her head was wiled, and her feet covered. Our hearts gloved within us as we flood amidst the years of light which this image cast on tier, ide of it. Tatler.

#### & St. The Temple of Vanity.

Having icen all that happened to the I and of adventurers, I repaired to another file of buildings that flood within view of the temple of Honour, and was raised in initiation of it, upon the very same model; but, at my approach to it, I found that the flones were laid together without mortar, and that the whole fabric flood upon lo weak a foundation, that it shook with every wind that blew. This was called the Temple of Vanity. The goddess of it fat in the midst of a great many tapers, that burned day and night, and made her ppear much better than she would have one in open day-light. Her whole art vas to shew herself more beautiful and najestic than she really was. For which cation the had painted her face, and wore i cluster of false jewels upon her breast: out what I more particularly observed, was he breadth of her petticoat, which was nade altogether in the fashion of a modern rdingal. This place was filled with pedants, free-thinkers, and ardingal. rating politicians, with a rabble of those tho have only titles to make them great nen, Female votaries crowded the tem-

ple, choaked up the avenues of it, and were more in number than the fand upon the sea-shore. I made it my business, in my return towards that part of the wood from whence I first set out, to observe the walks which led to this temple; for I met in it several who had begun their journey with the band of virtuous persons, and travelled some time in their company: but, upon examination, I found that there were feveral paths, which led out of the great road into the fides of the wood, and ian into to many crooked turns and windings, that those who travelled through them, often turned their backs upon the temple of Virtue, then croffed the straight road, and fometimes marched in it for a little space, till the crooked path which they were engaged in again led them into the wood. The feveral alleys of thefe wanderers, had their particular ornaments: one of them I could not but take notice of, in the walk of the mischievous pretenders to politics, which had at every turn the figure of a person, whom, by the inscription, I found to be Machiavel, pointing out the way, with an extended finger, like a Mercury,

#### . § 89. The Temple of Avarice.

I was now returned in the same manner as before, with a defign to observe carefully every thing that passed in the region of Avarice, and the occurrences in that affembly, which was made up of perfons of my own age. This body of travellers had not gone far in the third great road, before it led them insensibly into a deep valley, in which they journied feveral days, with great toil and uneafiness, and without the necessary refreshments of food and fleep. The only relief they met with, was in a river that ran through the bottom of the valley on a bed of golden fand: they often drank of this stream, which had fuch a particular quality in it, that though it refreshed them for a time, it rather inflamed than quenched their thirst. On each fide of the river was a range of hills full of precious ore; for where the rains had waihed off the earth, one might fee in feveral parts of them long veins of gold. and rocks that looked like pure filver. We were told that the deity of the place had forbad any of his votaries to dig into the howels of these hills, or convert the treafures they contained to any use, under pain of starving. At the end of the valleythood the Temple of Avarice, made after

the manner of a fortification, and furrounded with a thousand triple-headed dogs, that were placed there to keep off beggars. At our approach they all fell a baiking, and would have much terrified us, had not an old woman, who had called herfelf by the forged name of Competency, offered herfelf for our guide. She carried under her garment a golden bow, which she no sooner held up in her hand, but the dogs lay down, and the gates flew open for our reception. We were led through an hundred iron doors before we cutered the temple. At the upper end of it, fat the god of Avarice, with a long filthy heard, and a meagre starved count nauce, inclosed with heaps of ingots and pyramids of money, but half naked and thivering with cold: on his right hand was a fiend called Rapine, and on his left a particular favourite, to whom he had given the title of Parsimony; the first was his collector, and the other his cashier. There were feveral long tables placed on each fide of the temple, with respective officers attending behind them: fome of their I enquired into: at the first table was kept the office of Corruption. Seeing a folicitor extremely bufy, and whifpering every body that passed by, I kept my eve upon him very attentively, and law him often going up to a person that had a pen in his hand, with a multiplication-table and an almanack before him, which, as I afterwards heard, was all the learning he was master of. The folicitor would often apply himself to his ear, and at the same time convey money into his hand, for which the other would give him out a piece of paper, or parchment, figued and fealed in form. The name of this devictious and successful folicitor was Bribery -At the next table was the office of Extortion: behind it fat a person in a bob-wig, counting over a great fum of me-cy: he gave out little purfes to feveral, who, after a fhort tour, brought him, in roturn, facks full of the fame kind of coin. I fiw, at the fame time, a perion call d Fraud, who fat behind the counter, with falfe skales, light weights, and scanty meviores; by the skillul application of which inflruments, the had got together an immense heap of wealth; it would be endless to name the fiveral officers, or defembe the votacies that attended in this temple: there were many old men, pant-

bags of money; nay many of them ac. tually dying, whose very pangs and convultions (which rendered their purfes use. less to them) only made them grasp them the fafter. There were some tearing with one hand all things, even to the garment and flesh of many misserable persons who flood before them; and with the other hand throwing away what they had feized. to harlots, flatterers, and panders, that flood behind them. On a fudden the whole affembly fell a trembling; and, upon enquiry, I found that the great room we were in was haunted with a spectie, that many times a day appeared to them, and terribed them to diffiaction. In the midfl of their terror and amazement, the apparition entered, which I immediately know to be Poverty. Whether it were be my acquaintance with this phantom, which had rendered the fight of her more familiar to me, or however it was, she did not make to indigent or frightful a figure in my eye, as the god of this loothfome temple. The miscrable votaries of this place were, I found, of another mind: every one fancied himfelf threatened by the apparition as the stalked about the room, and began to lock their coffers, and tie their bags, with the utmost fear and trembling. I must confess, I look upon the passion which I faw in this unhappy people, to be of the fame nature with those unaccountable antipathies which fome perfons are boin with, or rather as a kind of phrenz, not unlike that which throws a man into terrors and agonies at the fight of fo useful and innocent a thing as water. The whole affembly was furprized, when, instead of paying my devotions to the deity whom they all adored, they faw me address myse't to the phantom. "Oh! Poverty! (said 1) my first petition to thee is, that thou wouldest never appear to me hereafter; but, if thou wilt not grant me this, that thou wouldest not bear a form more terrible than that in which thou appearest to me at present. Let not thy threats or menaces betray me to any thing that is ungrateful or unjust. Let me not shut my ears to the cries of the needy. Let me not forget the person that has deserved well of me. Let me not, from any fear of Thee, defert my friend, my principles, or my honour. If Wealth is to vifit me, and come with her usual attendants, Vanity and Avarice, do thou, O Poverty! haften 10 ing and breathle's, repoing their heads on my refene; but bring along with Theo

toy two fifters, in whose company thou art always chearful, Liberty and Innocence." Tailor.

990. The Virtue of Gentleness not to be confounded with artisficial and insincere Politeness.

Gontleness corrects whotever is offensive to our manners; and, by a containt train of humane attention, studies to alleviate the burden of common misery. Its office, therefore, is extensive. It is not, like time of he virtues, called forth only on peculiar energencies; but it is continually it adition, when we are engaged in interference with men. It ought to form our direct, to regulate our speech, and to distinct his over our whole behaviour.

Linut warn you, however, not to confar d this gentle wildom which is from as we, with that art ficial countries, that the I fmoothness of manners, which is I mal in the school of the world. Sech confidments, the mod frivolous and " into may policis. Too often they are to loyed by the artful, as a finale: too Constrolled by the hard and unfeeling, a cover to the bateness of their minds. We cannot, at the fame time, avoid obfaving the homage which, even in fuch thinces, the world is confirmined to pay to viitue. In order to render fociety tytecable, it is found necessary to assume Ismeahat that may at least carry its ap-Privance: Virtue is the universal charm; counts shadow is courted, when the fubframe is wanting; the imitation of its then has been reduced into an art; and, in the commerce of life, the first study of e" she would either gain the effeem, or " I the hearts of others, is to learn the if cen and to adopt the manners of can-Char, gintleness, and humanity; but that Colleges which is the characteristic of a and man, has, like every other virtue, its feat in the heart: and, let me add, nothing except what flows from it, can render even external manners truly pleafing; for ro issumed behaviour can at all times hide the real character. In that unaffected Chaity which fprings from a gentle mind, there is a charm infinitely more powerful the in all the studied manners of the most fin. hed courtier.

5 91. Opportunities for great Asis of Benesicence rare, for Gentleness continual. But, perhaps, it will be pleaded by some,

That this gentleness on which we now infill, regards only those finaller offices of life, which, in their even, are not effential to religion and goodness. Negligent, they confels, on flight occasions, of the government of their temper, or the regulation of their behaviour, they are attentive, as they pretend, to the great duties of bencheence; and ready, whenever the opportunity prefents, to perform important fervices to their fellow-creatures. But let fuch perfons reflect, that the occasions of performing those important good deeds very rarely occur. Perhaps their fituation in life, or the nature of their connections, may, in a great measure, exclude them from such opportunities. Great events give scope for great virtues; but the main tenor of human life is composed of finall occurrences. Within the round of thefe, lie the materials of the happiness of most men; the subjects of their duty, and the trials of their virtue. Virtue must be formed and fupported, not by unfrequent acts, but by drily and repeated exertions. In order to its becoming either vigorous or ufeful, it must be habitually active; not breaking forth occasionally with a transfeat luffre, lik the blaze of the comet; but regular in its returns, like the light of the day; not like the arematic gale, which fometimes fealls the fente; but, like the ordinary breeze, which purifies the air, and renders it healthful.

Years may pass over our heads, without affording any opportunity for acts of high beneficence, or extensive utility. Whereas, not a day passes, but in the common trans-actions of life, and especially in the intercourse of domest concery, gentleness finds place for promoting the happiness of others, and for strengthening in ourselves, the habit of virtue. Nav, by feaforable difcoverles of a humane spirit, we sometimes contribute more materially to the advancement of happiness, than by actions which are more feemingly important. There are fituations, not a few, in human life, where the encouraging reception, the condescending behaviour, as I the look of sympathy. bring greater relief to the heart, thin the most bountiful gift: While, on the other fide, when the hand of liberality is extended to bellow, the want of gentleness is sufficient to frustrate the intention of the benest; we four those whom we meant to oblige; and, by conferring favours with oftentation and harfliness, we convert them into injuries. Can any disposition, then,

¥ 4

be held to possess a low place in the scale of virtue, whose influence is so considerable on the happiness of the world.

Gentleness is, in truth, the great avenue to mutual enjoyment. Amidit the strife of interfering interests, it tempers the violence of contention, and keeps alive the feeds of harmony. It foftens animolities, renews endearments, and renders the countenance of a man, a refreshment to a man. Banish gentleness from the earth; suppose the world to be filled with none but harsh and contentious spirits, and what fort of feciety would remain? the folitude of the defart were preferable to it. The conflict of jarring elements in chaos; the cave, where subterraneous winds contend and roar; the den, where ferpents hifs, and beails of the forest howl; would be the only proper representations of such affemblies of men. Strange! that where men have all one common interest, they should so often absurdly concur in defeating it! His not nature already provided a lufficient quantity of unavoidable evils for the flate of man? As if we did not fuffer enough from the florm which beats upon as without, must we confour alto, in those societies where we assemble, in or ler to find a retreat from that florm, to Lurafs one another?

#### § 92. Gentlenefs recommended on Confiderations of our own Interest.

But if the fense of duty, and of common happinets, be infufficient to recommend the vir ue of gentlenefs, then let me define you to confider your own interest. Whatever ends a good man can be supposed to purfue, gentlenefs will be found to favour them; it prepoffesses, and wins every heart; it perfuades, when every other argument fails; often difarms the fierce, and melts the stubborn. Whereas, barshness confirms the opposition it would subdue; and, of an indifferent perion, creates an enemy. He who could overlook an injury committed in the collision of interests, will long and feverely refent the flights of a contemp-tuous behaviour. To the man of gentlenefs, the world is generally dispoted to ascribe every other good quality. The higher endowments of the mind we admire at a diffance, and when any impropriety of behaviour accompanies them, we admire without love: they are like some of the distant stars, whose beneficial influence reaches not to us. Whereas, of the in-

fluence of gentleness, all in some degree partake, and therefore all love it. The man of this character rises in the world without struggle, and flourishes without crovy. His missortunes are universally lamented; and his failings are easily forgiven.

But whatever may be the effect of this virtue on our external condition, its influence on our internal enjoyment is certain and powerful. That inward tranquillity which it promotes, is the first requifite to every pleafurable feeling. It is the calm and clear atmosphere, the ferenity and funthine of the mind. When benignity and gentleness reign within, we are always leaft in hazard of being ruffled from without; every person, and every occurrence, are beheld in the most favourable light. But let fome clouds of disguit and ill-humour gather on the mad, and immediately the John changes: Naturfeems transformed; and the appearance of all thises is blackened to our view. The gentle mind is like the imooth flierw. which reflects every object in its just proportion, and in its fairest colours. violent spirit, li'te troubled waters, remiera back the images of things difforted and broken; and communicates to them all that difurdered motion which arifes folely from a own agitation.

#### § 93. The Blan of gentle Manners is farperson to freeclous Offences and flight Provocations.

As foon may the waves of the fea ceafe to roll, as provocations to arise from human corruption and frailty. Attacked by great injuries, the man of mild and gentle spirit will feel what human nature feels; and will defend and refent, as his duty allows him. But to those slight provocations, and frivolous offences, which are the most frequent causes of disquiet, he is happily superior. Hence his days flow in a far more placed tenor than those of others; exempted from the numberless discomposures which agitate vulgar minds. Inspired with higher sentiments; taught to regard, with indulgent eye, the frailties of men, the omissions of the careless, the follies of the imprudent, and the levity of the fickle, he retreats into the calmness of his spirit, as into an undiffurhed fanctuary; and quietly allows the usual current of life to hold its course.

# 94. Pride fills the World with Harshness and Severity.

Let me advise you to view your character with an impartial eye; and to learn, from your own failings, to give that indulgence which in your turn you claim. It is pride which fills the world with fo much harshness and severity. In the fulnels of felf-estimation, we forget what we are, we claim attentions to which we are net entitled. We are rigorous to offences, it if we had never offended; unfeeling to diffress, as if we knew not what it was to toffer. From those airy regions of pride and folly, let us descend to our proper level. Let us furvey the natural equality on which Providence has placed man with man, and reflect on the infirmities comfrom to all. If the reflection on natural equality and mutual offences be infutlicient to prompt humanity, let us at least consider what we are in the fight of God. Have we none of that forbearance to give one another, which we all fo carneflly entreat from Heaven? Can we look for clemency 61 centleness from our Judge, when we are fo backward to thew it to our own bictaien?

## § 95. Violence and Contention often caufed by Trifles and imaginary Mifebiefs.

Accustom yourselves, also, to restect on the small moment of those things which are the usual incentives to violence and contention. In the ruffled and angry hour, we view every appearance through a false medium. The most inconsiderable point of interest, or honour, swells into a momentous object; and the flightest attack seems to threaten immediate ruin. But after passion or pride has subsided, we look round in vain for the mighty mischiefs we dreaded: the fabric, which our disturbed imagination had reared, totally disappears. But though the cause of contention has dwindled away, its consequences remain. We have alienated a friend; we have emhittered an enemy; we have fown the feeds of future fuspicion, malevolence, or difguit .- Sufpend your violence, I befeech you, for a moment, when causes of discord occur. Anticipate that period of coolness, which, of itself, will foon arrive. Allow yourselves to think, how little you have any prospect of gaining by sierce contention; but how much of the true happiness of life you are certain of throwing away. Eafily, and from the fmallest chink, the bitter waters of strife are let forth; but their course cannot be foreseen; and he seldom fails of suffering most from the possonous effect, who first allowed them to flow.

Thid

### § 96. Gentlenefs bift promoted by religious Victors.

But gentleness will, most of all, be promoted by frequent views of those great objects which our holy religion prefents. Let the prospects of impostality fill your minds. Look upon this world as a flate of passage. Consider yourselves as engaged in the pursuit of higher interests; as acting now, under the eye of God, an introductory part to a more important scene. Elevated by such sentiments, your minds will become calm and fedate. You will look down, as from a superior station, on the petty disturbances of the world. They are the felfish, the fenfual, and the vain, who are most subject to the impotence of passion. They are linked so closely to the world; by fo many fides they touch every object, and every person around them, that they are perpetually hurt, and perpetually hurting others. But the spirit of true religion removes us to a proper distance from the grating objects of worldly contentions. It leaves us fufficiently connected with the world, for acting our part in it with propriety; but disengages us from it so far, as to weaken its power of disturbing our tranquillity. It inspires magnanimity; and magnanimity always breathes gentleness. It leads us to view the follies of men with pity, not with rancour; and to treat, with the mildness of a superior nature, what in little minds would call forth all the bitterness of passion.

#### § 97. Gentleness to be assumed, as the Ornament of every Age and Station; but to be distinguished from polished or affected Manners.

Aided by such considerations, let us cultivate that gentle wisdom which is, in so many respects, important both to our duty and our happiness. Let us assume it as the ornament of every age, and of every station. Let it temper the petulance of youth, and soften the moroseness of old age. Let it mitigate authority in those who rule, and promote deserence among those who obey. I conclude with repeating the caution, not to mistake for true gentleness, that slimsy imitation of it, called polished manners, which often, among

the men of the world, under a smooth appearance, conceals much asperity. Let yours be native gentleness of heart, flowing from the love of God, and the love of man. Unite this amiable spirit, with a proper zeal for all that is right, and just, and true. Let piety be combined in your character with humanity. Let determined integrity dwell in a mild and gentle breast. A character thus supported, will command more real respect than can be procured by the most shining accomplishments, when separated from virtue.

§ 98. The Stings of Powerty, Difeafe, and Violence, less pangent than those of guilty Paffions.

Affemble all the evils which poverty, difeate, or violence can inflict, and their flings will be found, by far, less pungent than those which guilty passions dart into the heart. Amidst the ordinary calamities of the world, the mind can exert its powers, and fuggett relief; and the mind is properly the man; the fufferer, and his fufferings, can be dulinguished. But those diforders of passion, by seizing directly on the mind, attack human nature in its throng hold, and cut off its last resource. They penetrate to the very feat of fenfation; and convert all the powers of thought into infiruments of torture.

#### § 99. The Balance of Happiness equal.

An extensive contemplation of human affairs, will lead u to this conclusion, that affairs, will lead u to this conclution, that conquerous; but they are, in truth, no among the different conditions and ranks, other than the efforts of difcontent to of men, the balance of happiness is preferved in a great measure equal; and that the high and the low, the rich and the poor, approach, in point of real enjoyment, much nearer to each other, than is commonly imagined. In the lot of man, mutual compensations, both of pleasure and of pain, univerfally take place. Prqvidence never intended, that any state here fhould be either completely happy or entirely miterable. If the feelings of pleafure are more numerous, and more lively, in the higher departments of life, such also are those of pain. If greatness flatters our vanity, it multiplies our dangers. If opulence increases our gratifications, it increases, in the same proportion, our desires and demands. If the poor are confined to a more narrow circle, yet within that circle lie most of those natural satisfactions which. after all the refinements of art, are found

to be the most genuine and true. - In a flate, therefore, where there is neither for much to be coveted on the one hand, nor to be dreaded on the other, as at first anpears, how submissive ought we to be to the disposal of Providence! How tem. perate in our defires and purfuits! How much more attentive to preferve our virtue, and to improve our minds, than to gain the doubtful and equivocal advantages of worldly prosperity! Ibid.

§ 100. The truest Misery arises from the Paylions of Mon in his prejent fallen and disturbed Condition.

From this train of observation, can or: avoid reflecting upon the diforder in which human nature plainly appears at prefer t to he? We behold, in Haman, the picture of that milery, which arises from evil paffions; of that unhappiness, which is incident to the highest prosperity; of that discontent, which is common to every flate. Whether we confider him as a bad man, a prosperous man, or simply as a man, ta every light we behold reason too weak for passion. This is the source of the reigning evil; this is the root of the universal detesfe. The flory of Haman only fliews us, what human nature has too generally appeared to be in every age. Hence, when we read the history of nations, what do we read but the history of the follies and crines of men? We may dignify those 'iccorded transictions, by calling them the intrigues of flatefmen, and the exploits of escape from its misery, and the struggles of contending passions among unhappy men. The history of mankind has ever been a continued tragedy; the world, a great theatre, exhibiting the same repeated scene, of the follies of men shooting forth into guilt, and of their passions fermenting, by a quick process, into misery.

#### Our Nature to be restored by using § 101. the Afiftance of Revelation.

But can we believe, that the nature of man came forth in this flate from the hands of its gracious Creator? Did he frame this world, and store it with inhabitants, folely that it might be replenished with crimes and misfortunes?-In the moral, as well as in the natural world, we may plainly difcern the figns of some violent contunon, which has shattered the original workmanship of the Almighty. Amidst Las wreck of human nature, traces full remain which indicate its author. Those high powers of conscience and reason, that capacity for happiness, that ardour of enterprize, that glow of affection, which often break through the gloom of human vanity and guilt, are like the feattered columns, the bielten arches, and defaced sculptures of tomefallen temple, whose ancient splendour appears amidst its ruins. So conspicuous in human nature are those characters, both of a high origin and of a degraded state, t'at, by many religious fects throughout the earth, they have been feen and coni fed. A tradition feems to have perv. !-! almost all nations, that the human i colord either, through fone offence, fortited, or through fome misfortune, loft, that flation of primoval honour, which they once possessed. Lut while, from this dectrine, ill und rifood, and involved in may fabulous tales, the nations wandering in Pagan darkurfs could draw no con-I quenies that were just; while, totally ignorant of the nature of the difease, they I want in vary for the remedy; the fame sowne revelation, which has informed us in wh t manner our apollacy arole, from the abide of our rational powers, has infructed us alfo how we may be restored to virtue and to happinefs.

Let us, therefore, flady to improve the all lance which this revolution affords, for the redoration of our nature and the recovery of our felicity. With humble and grateful mind, let us apply to those mediand fprings which it hath opened, for curing the diforders of our heart and paftions. In this view, let us, with reverence, lok up to that Divine Personage, who descended into this world, on purpôse to be the light and the life of men: who came, in the fulness of grace and truth, to repair ta: defolations of many generations, to r flore order among the works of God, and to raife up a new earth, and new hea-1. 15, wherein rightcousness should dwell for ever. Under his tuition let us put carfelves; and amidit the florms of passion to which we are here exposed, and the Soppery paths which we are left to tread, never trult presumptuously to our own understanding. Thankful that a heavenly conductor vouchtafes his aid, let us carnelly pray, that from him may descend divine light to guide our steps, and divine frength to ortify our minds. Let us Pray, that his grace may keep us from all intemperate passions, and mistaken purfuits of pleasure; that whether it shall be his will, to give or to deny us earth! profperity, he may bless us with a calm, a found, and well-regulated mind; in my me us moderation in success, and fortite is under disappointment; and may enable us so to take warning from the crimes an i miseries of others, as to escape the snares of guilt.

1bid.

§ 102. The Happiness of every Man cepends more upon the State of his own Mind, than upon any external Circumflance whatever.

While we thus maintain a due dependence on God, let us also exert ourselves with care, in acting our own part. From the whole of what has been faid, this impostant instruction arises, that the happinets of every man depends more upon the state of his own mind, than upon any one external circumstance; nay more than upon all external things put together. We have feen, that inordinate passions are the great disturbers of life; and that unlefs we possets a good conscience, and a well-governed mind, discontent will blast every enjoyment, and the highest prosperity will prove only difguited milery. Fix then this conclusion in your minds, that the destruction of your virtue is the destruction of your peace. Keep thy heart with all diligerce; govern it with the greatest care; for ou of it are the iffues of life. In no station, in no period, think yourfelves fecure from the dangers which fpring four your passions. Every age, and every itation, they befet; from youth to grey hairs, and from the peafant to the panes.

§ 103. At first setting out in Life, beware of scalacing Appearances.

At your first setting out in life especially, when yet unacquainted with the world and its inarcs, when every pleasure enchants with its smile, and every object shines with the gloss of novelty; beware of the seducing appearances which surround you, and recollect what others have suffered from the power of headstrong desire. If you allow any passion, even though it be esteemed innocent, to acquire an absolute ascendant, your inward peace will be impaired. But if any which has the taint of guilt, take early possession of your mind, you may date from that moment the ruin of your tranquillity.—Nor

with the season of youth does the peril end. To the impetuofity of youthful defire, succeed the more sober, but no less dangerous, attachments of advancing years; when the passions which are connected with interest and ambition begin their reign, and too frequently extend their malignant influence, even over those periods of life which ought to be most tranquil. From the first to the last of man's abode on earth, the discipline must never be rehaxed, of guarding the heart from the dominion of passion. Eager passions, and violent desires, were not made for man. They exceed his fphere: they find no adequate objects on earth; and of course can be productive of nothing but mifery. The certain confequence of indulging them is, that there shall come an evil day, when the anguith of disappointment shall drive us to acknowledge, that all which we enjoy availeth us nothing.

Blair.

§ 104. Enthustasin less pervicious to the Mind than Coldness and Indesference in Religion.

But whatever absurdaties may arise from the fincied aidours of enthuliaim, they are much less pernicious than the contraty entreme of coldness and indifference in religion. The spirit of chivalry, though it led to many romantic enterprizes, was neverthelels favourable to true courage, as it excited and nourithed magnanismity and contempt of danger, which, though sometimes we ted in abfurd undertakings, were of the greatest use on real and proper oc-cations. The noblest energies of which we are carable, can fearcely be called out without tome degree of enthuliasm, in whatever cause we are engaged; and those fentiments which tend to the exaltation of human nature, though they may often excite attempts beyond the human powers, will, however, prevent our stopping short of them, and loting, by careless indolence and felf-defertion, the greatest part of that fireigth with which we really are en-

How common is it for those who profess (and perhaps sincerely) to believe with a nire persuation the truth of the gospel, to declare that they do not pretend to frame their lives according to the purity of its moral precepts! "I hope," say they, "I am guilty of no great crimes; but the consons of the world in these times will but act admit of a condust agreeable citter.

" to reason or revelation. I know the " course of life I am in is wrong; I know that I am engrossed by the world-that " I have no time for reflection, nor for " the practice of many duties which I ac-" knowledge to be fuch. But I know not " how it is-I do not find that I can alter " my way of living."-Thus they coolly and contentedly give themselves up to a constant course of dislipation, and a general worthlessness of character, which, I fear, is as little favourable to their happiness here or hereafter, as the occasional commission of crimes at which they would flart and tremble. The habitual neglect of all that is most valuable and important, of children, friends, fervants-of neighbours and dependants-of the poor-of Godand of their own minds, they confider as an excufable levity, and fatisfy themfelves with laying the blame on the manners of the times.

If a modern lady of fullion was to be called to account for the disposition of her time, I imagine her defence would run in this flyle:- 'I can't, you know, be out " of the world, nor act differently from " every body in it. The hours are every " where late-confequently I rife late. I " have scarce breakfalled before morning " vifits begin, or 'tis time to go to an " auction, or a concert, or to take a little " exercise for my health. Dressing my " hair is a long operation, but one can't " appear with a head unlike every body " elfe. One must sometimes go to a play, " or an opera; though I own it hurries " one to death. Then what with neces-" fary vifits-the perpetual engagements " to card-parties at private houles-and " attendance on public affemblies, to " which all people of fashion subscribe, " the evenings, you see, are fully dispos-" ed of. What time then can I possibly " have for what you call domestic duties? -You talk of the offices and enjoy-" ments of friendship-alas! I have no " hours left for friends! I must see them " in a crowd, or not at all. As to culti-" vating the friendship of my husband, we " are very civil when we meet; but we are " both too much engaged to spend much " time with each other. With regard to " my daughters, I have given them a French governess, and proper masters —I cando no more for them. You tell " me, I should instruct my servants-" but I have not time to inform myfelf, " much less can I undertake any thing of " that that fort for them, or even be able to " guess what they do with themselves the " greatest part of the twenty-four hours. "I go to church, if possible, once on a " Sunday, and then some of my servants " attend me; and if they will not mind " what the preacher fays, how can I help " it !- The management of our fortune, . as far as I am concerned, I must leave " to the fleward and housekeeper; for I " find I can barely fnatch a quarter of an " hour just to look over the bill of fare " when I am to have company, that they " may not fend up any thing frightful or old-fashioned-As to the Christian duty " of charity, I affure you I am not ill-" natured; and (confidering that the great " expence of being always dreft for com-" pany, with losses at cards, subscriptions, " and public spectacles, leave me very " little to dispose of) I am ready enough " to give my money when I meet with a "miserable object. You say I should en-" quire out fuch, inform myfelf thoroughly " of their cases, make an acquaintance " with the poor of my neighbourhood in "the country, and plan out the best " methods of relieving the unfortunate " and affilling the industrious. But this " supposes much more time, and much " more money, than I have to bestow .- I " have had hopes indeed that my fummers " would have afforded me more leisure; " but we flay pretty late in town; then we generally pass several weeks at one " or other of the water drinking places, " where every moment is spent in public; " and, for the few months in which we " refide at our own feat, our house is " always full, with a fuccession of com-" pany, to whose amusement one is obliged " to dedicate every hour of the day."

So here ends the account of that time which was given you to prepare and educate yourself for eternity?-Yet you believe the immortality of the foul, and a future state of rewards and punishments. Alk your own heart what rewards you deserve, or what kind of felicity you are fitted to enjoy?-Which of those faculties or affections, which heaven can be supposed to gratify, have you cultivated and improved?--If, in that eternal world, the flores of knowledge should be laid open before you, have you preserved that thirst of knowledge, or that take for truth, which is now to be indulged, with endless information?—If, in the fociety of faints

most cordial love is to constitute your happiness, where is the heart that should enjoy this delightful intercourse of affection? -Has your's been exercised and refined to a proper capacity of it during your state of discipline, by the energies of generous friendship, by the meltings of parental fondness, or by that union or heart and foul, that mixed exertion of perfect friendship and incluble tenderness, which approaches nearest to the full satisfaction of our nature, in the bards of conjugal love ?-Alas! you scarce knew you had a heart, except when you felt it swell with pride, or flutter with vanity !- Has your piety and gratitude, to the Source of all Good, been exercifed and strengthened by constant acts of praise and thanksgiving? Was it nourished by frequent meditation, and filent recollection of all the wonders he hath done for us, till it burft forth in fervent prayer?-I fear it was rather decency than devotion, that carried you once a week to the place of public worship—and for the rest of the week, your thoughts and time were fo very differently filled up, that the idea of a Ruler of the universe could occur but feldom, and then, rather as an object of terror, than of hope and joy. How then shall a foul so dead to divine love, so lost to all but the most childish pursuits, be able to exalt and enlarge itself to a capacity of that bliss which we are allowed to hope for, in a more in-timate perception of the divine presence, in contemplating more nearly the per-fections of our Creator, and in pouring out before his throne our ardent gratitude, love, and adoration?—What kind of training is the life you have passed through, for fuch an immortality?

And dare you look down with contempt on those whom strong temptation from natural passions, or a train of unfortunate circumstances, have funk into the commission of what you call great crimes i-Dare you fpeak peace to your own heart, because by different circumstances you have been preserved from them?-Far be it from me to wish to lessen the horror of crimes; but yet, as the temptations to these occur but seldom, whereas the temptations to neglect, and indifference towards our duty, for ever furround us, it may be necessary to awaken ourselves to some calculation of the proportions between such habitual omission of all that is good, and the commission of more heinous acts of sin; and angels, the purest benevolence and between wasting our own life in what is

falfely called innocent amusement, and disgracing it by faults which would alarm fociety more, though possibly the singur injure it less.

Mrs. Chapone.

§ 105. Of the Difference between the Extreme of Negligence and Regour in Religion.

How amazing is the distance between the extreme of negligence and felf-indulgence in such nominal Christians, and the opposite excels of rigour which some have unhappily thought meritorious! between a Patcal (who dreaded the influence of pleafure fo much, as to wear an iron, which he prefied into his fide whenever he found himfelf taking delight in any object of fense) and those who think life lent them only to be fquandered in fenfeless diverfions, and the frivolous indulgence of va ity!-what a flrange composition is man! ever diverging from the right line -forgetting the true end of his beingor widely mistaking the means that lead to it.

If it were indeed true that the Supreme Being had made it the condition of our future happinels, that we should spend the days of our pilgrimage here on earth in voluntary fuffering and mortification, and a continual opposition to every inclination of nature, it would forely be worth while to conform even to these conditions, however rigorous: and we fee, by numerous examples, that it is not more than human creatures are capable of, when fully perfuaded that their eternal interests demand it. But if, in fact, the laws of God are no other than directions for the better enjoyment of our exidence—if he has forbid us nothing that is not pernicious, and commanded nothing that is not highly adventageous to w-if, like a beneficent parent, he inflicts neither punishment nor confirsint unnecessarily, but makes our good the end of all his injunctions-it will then appear much more extraordinary that we should pervertely go on in constant and acknowledged neglect of those injunc-

Is there a fingle plenfure worthy of a rational being, which is not, within certain limitations, confident with refigion and virtue?—And are not the limits, within which we are permitted to enjoy them, the fame which are preferibed by reason and outure, and which we cannot exceed without manifest hurt to ourselves, or others?—It is not the life of a hermit that is enjoined us:

it is only the life of a rational being, formed for fociety, capable of continual improvement, and confequently of continual advancement in happiness.

Sir Charles and Lady Worthy are neither gloomy afcetics, nor frantic enthufialls; they married from affection on long acquaintance, and perfect esteem; they therefore enjoy the best pleasures of the heart in the highest degree. They concur in a rational scheme of life, which, whilf it makes them always chearful and happy, renders them the friends of human-kind, and the bleffing of all around them. They do not defert their station in the world, nor deny themselves the proper and moderate use of their Jarge fortune; though that portion of it, which is appropriated to the use of others, is that from which they derive their highest gratifications. They spend four or five months of every year in London, where they keep up an intercourse of hospitality and civility with many of the most respectable persons of their own, or of higher rank; but have endeavoured rather at a felect than a nun crous acquaintance; and as they never play at cards, this endeavour has the more cafily fucceeded. Three days in the week, from the hour of dinner, are given up to this intercourse with what may be called the world. Three more are spent in a family way, with a few intimate friends. whose tailes are conformable to their own, and with whom the book and workingtable, or fometimes mufic, supply the intrails of ufeful and a recable conver-In these parties their childen are always pretent, and partake of the improvement that arises from such society, or from the well-cholen pieces which are read The feventh day is always spert aloud. at home, after the due attendance on pubhe worthip; and is peculiarly appropriated to the religious instruction of their childien and leavants, or to other works of charity. As they keep regular hours, and rife early, and as Lady Worthy never pays or admits morning vifits, they have feven or eight hours in every day, free from all interruption from the world, in which the cultivation of their own minds, and their of their children, the due attention to health, to economy, and to the poor, are carried on in the most regular manner.

Thus, even in London, they contrive, without the appearance of quarrelling with the world, or of flutting themselves up from it, to pas the greatest part of their

time in a reasonable and useful, as well as The rest of the an arregable manner. year they found at their family feat in the country, where the happy effects of their er unple, and of their affiduous attention to the good of all around them, are still more observable than in town. Their 1.. 1g hours, their tenants, and the poor, for many miles about them, find in them a fare resource and comfort in calamity, and a ready affiftance to every scheme of is non industry. The young are instructed it their expence, and under their direction, and rendered useful at the earliest period 1 ofbble; the aged and the fick have every comfort administered that their state reg....., the idle and diffolute are kept in are by vigilant inspection; the quarreltome are brought, by a fense of their own start, to live more quietly with their f mil and neighbours, and amicably to 1.11 their disputes to Sir Charles's de-

This amiable pair are not less highly a real by the gented families of their application, who are force of finding in the last houte the most polite and chearful that has, and in them a fund of good is to and good humour, with a constant of goodnot to promote every innocent pleasure. They are particularly the delight of all the young people, who consider them as their patrons and their oracles, to whom to evalways apply for advice and assistance in any kind of distress, or in any scheme of a national.

Sir Chailes and Lady Worthy are felder without some friends in the house by a them during their flay in the country; but, as their methods are known, they are ther Loken in upon by their guells, who druct expect to fee them till dinner-time, the hour of prayer, and of break-In their private walks or rides, they hadaly visit the cottages of the labouring I Cor. with all of whom they are personally acquainted; and by the sweetness and friend incis of their manner, as well as by their beneficent actions, they fo entirely I wife the hearts of these people, that they -to made the confidants of all their family from ances, and the caluifts to fettle all their feruples of conscience or difficulties in anduct. By this method of conversing in I with them, they find out their diffrient characters and capacities, and often wer and apply to their own benefit, well as that of the person they distinguish, talents, which would otherwise have been for ever lost to the public.

From this flight sketch of their manner of living, can it be thought that the practice of virtue costs them any great facrifices? Do they appear to be the fervants of a hard master? - It is true, they have not the amusement of gaming, nor do they curse themselves in bitterness of foul, for lofing the fortune Providence had beflowed upon them: they are not continually in public places, nor slifted in crowded affemblies; nor are their hours confumed in an infinid interchange of unmeaning chat with hundreds of fine people who are perfectly indifferent to them: but then, in return, the Being whom they ferve indulges them in the best pleasures of love, of friendship, of parental and family affection, of divine beneficence, and a piety, which chiefly confifts in joyful acts of love and praise!-act to mention the delights they derive from a tafte uncorrupted and full alive to natural plea fures; from the beauties of nature, and from cultivating those beauties joined with utility in the icenes around them; and above all, from that flow of spirits, which a life of activity, and the conflant exertion of right affections, naturally produce. Compare their countenances with those of the wretched flaves of the world, who are hourly complaining of fatigue, of liftleffness, distaste, and vapours; and who, with faded cheeks and worn-out conflitutions, ftill continue to haunt the feenes where one: their vanity found gratification, but where they now meet only with mortification and difguft; then tell me, which has chosen the happier plan, admitting for a moment that no future penalty was annexed to a wrong choice? Liften to the character that is given of Sir Charles Worthy and his Lady, wherever they are named, and then tell me, whether even your idol, the world, is not more favourable to them than to you.

Perhaps it is vain to think of recalling those whom long habits, and the established tyranny of pride and vanity, have almost precluded from a possibility of initiating such patterns, and in whom the very desire of amendment is extinguished; but for those who are now entering on the slage of life, and who have their parts to choose, how earnestly could I wish for the spirit of persuasion—for such a "warning voice" as should make itelf heard amidst all the

gay bustle that furrounds them! it should cry to them without ceasing, not to be led away by the crowd of fools, without knowing whither they are going—not to exchange real happines for the empty name of pleasure—not to prefer fashion to immortality—and, not to fancy it possible for them to be innocent, and at the same time useles.

Mrs. Chapone.

#### § 106. Virtue Man's true Interest.

I find myfelf existing upon a little spot. furrounded every way by an immense unknown expansion-Where am 1? What fort of place do I inhabit? Is it exactly accommodated, in every instance, to my convenience? Is there no excess of cold, none of heat, to offend me? Am I never annoyed by animals, either of my own kind, or a different? Is every thing subfervient to me, as though I had ordered all myself?-No-nothing like it-the farthest from it possible. The world appears not, then, originally made for the private convenience of me alone ?-It does not .-But is it not possible so to accommodate it, by my own particular industry? If to accommodate man and beaft, heaven and earth, if this be beyond me, 'tis not possible-What consequence then follows? or can there be any other than this-If I feek an interest of my own, detached from that of others, I feek an interest which is chimerical, and can never have existence?

How then must I determine? Have I no interest at all?—If I have not, I am a fool for staying here. 'Tis a smoky house; and the fooner out of it the better .- But why no interest? - Can I be contented with none, but one separated and detached? Is a focial interest, joined with others, such an absurdity as not to be admitted?—'The bee, the heaver, and the tribes of herding animals, are enow to convince me, that the thing is fomewhere at least possible. How, then, am I assured that 'tis not equally true of man?-Admit it; and what follows? If fo, then honour and justice are my interest; then the whole train of moral virtues are my interest; without some portion of which, not even thieves can maintain fociety.

But, farther still—I stop not here—I pursue this social interest, as far as I can trace my several relations. I pass from my own stock, my own neighbourhood, my own nation, to the whole race of mankind, as dispersed throughout the earth.

—Am I not related to them all by the

mutual aids of commerce, by the general intercourse of arts and letters, by that common nature of which we all participate?

Again-I must have food and cloth. ing.-Without a proper genial warmth, I instantly perish .- Am I not related, in this view, to the very earth itself? to the distant sun, from whose beams I derive vigour! to that stupendous course and order of the infinite host of heaven, by which the times and feafons ever uniformly pass on?-Were this order once confounded, I could not probably furvive a moment; so absolutely do I depend on this common general welfare .- What, then, have I to do, but to enlarge virtue into piety? Not only honour and justice, and what I owe to man, is my interest; but gratitude alfo, acquiescence, resignation, adoration, and all I owe to this great polity, and its greater Governor our common Parent.

Harris.

#### § 107. On Gratitude.

There is not a more pleasing exercise of the mind, than gratitude.

It is accompanied with fach inward fatisfaction, that the duty is fufficiently rewarded by the performance. It is not like the practice of many other virtues, difficult and painful, but attended with fo much pleafure, that were there no positive command which enjoined it, nor any recompence laid up for it hereafter—a generous mind would indulge in it, for the natural gratification that accompanies it.

If gratitude is due from man to man-Low much more from man to his Maker? —The Supreme Being does not only confer upon us thofe bounties which proceed more immediately from his hand, but even those benefits which are conveyed to us by others. Every bleffing we enjoy, by what means foever it may be derived upon us, is the gift of Him who is the great Author of good, and Father of mercies.

If gratitude, when exerted towards one another, naturally produces a very pleafing fensation in the mind of a grateful man; it exalts the soul into rapture, when it is employed on this great object of gratitude, on this beneficient Being, who has given us every thing we already possess, and from whom we expect every thing we yet hope for.

Most of the works of the Pagan poets were either direct hymns of their deities, or tended indirectly to the celebration of

theu

their respective attributes and perfections. Those who are acquainted with the works of the Greek and Latin poets which are still extant, will, upon ressection, find this observation so true, that I shall not enlarge upon it. One would wonder that more of our Christian poets have not turned their thoughts this way, especially if we consider, that our idea of the Supreme Being, is not only infinitely more great and noble than could possibly enter into the heart of a heathen, but silled with every thing that can raise the imagination, and give an opportunity for the sublimest thoughts and conceptions.

Plutarch tells us of a heathen who was finging an hymn to Diana, in which he cliebrited her for her delight in human facilities, and other inflances of cruelty and revenge; upon which a poet who was prefent at this piece of devotion, and feems to have had a truer idea of the divine nature, told the votary, by way of reproof, that in recompence for his hymn, he heartily wished he might have a daughter of the fame temper with the goddels he celebrated.—It was indeed impossible to write the praises of one of those false detties, according to the Pagan creed, without a mixture of impertinence and absurdity.

The Jews, who before the time of Christinity were the only people who had the knowledge of the true God, have fer the Christian world an example how they ought to employ this divine talent, of which I am speaking. As that nation produced men of great genius, without considering them as inspired writers, they have transmitted to us many hymns and divine odes, which excel those that are delivered down to us by the ancient Greeks and Romans, in the poetry as much as in the subject to which it is confectated. This, I think, might be easily stewn, if there were occasion for it.

Spectator.

# § 108. Religion the Foundation of Content:

Omar, the hermit of the mountain Aubukabis, which rifes on the east of Mecca, and overlooks the city, found one evening a man sitting pensive and alone, within a few paces of his cell. Omar regarded him with attention, and perceived that his looks were wild and haggard, and that his body was feeble and emaciated: the man also seemed to gaze stedfastly on Omar;

but fuch was the abstraction of his mind, that his eye did not immediately take cognizance of its object. In the moment of recollection he started as from a dream. he covered his face in confusion, and bowed himself to the ground. " Son of affliction," faid Omar, " who art thou, and what is thy diffres?" " My name." replied the stranger, " is Hassan, and I am a native of this city: the Angel of adverfity has laid his hand upon me, and the wretch whom thine eye compassionates, thou canst not deliver." "To deliver thee." faid Omar, "belongs to Him only, from whom we should receive with humility both good and evil: yet hide not thy life from me; for the burthen which I cannot remove, I may at least enable thee to fustain." Hastan fixed his eyes upon the ground, and remained fome time filent; then fetching a deep figh, he looked up at the hermit, and thus complied with his re-

It is now fix years fince our mighty lord the Caliph Almalic, whose memory be bleffed, first came privately to worship in the temple of the holy city. The bleffing which he petitioned of the prophet, as the prophet's vicegerent, he was diligent to dispense: in the intervals of his devotion, therefore, he went about the city relieving distress and restraining oppression: the widow fmiled under his protection, and the weakness of age and infancy was suftained by his bounty. I, who dreaded no evil but fickness, and expected no good beyond the reward of my labour, was finging at my work, when Almalic entered my dwelling. He looked round with a fmile of complacency; perceiving that though it was mean it was neat, and though I was poor I appeared to be content. As his habit was that of a pilgrim, I hastened to receive him with such hospitality as was in my power, and my chearfulness was rather increased than restrained by his presence. After he had accepted some coffee, he asked me many questions; and though by my answers I always endeavoured to excite him to mirth, yet I perceived that he grew thoughtful, and eyed me with a placed but fixed attention. I suspected that he had some knowledge of me, and therefore enquired his country and his name. " Hassan," said he, "I have raised thy curiosity, and it shall be satisfied; he who now talks with thee, is Almalic, the fovereign of the faithful, whose seat is the throne of Medina, and whose commission is from above." These words struck me dumb with allonishment, though I had some doubt of their truth: but Almalic, throwing back his garment, discovered the peculiarity of his vest, and put the royal figuet upon his finger. I then flarted up, and was about to proftrate myfelf before him, but he prevented me: "Hassan," said he, "forbear: thou art greater than I, and from thee I have at once derived humility and wifdom." 4 answered, " Mock not thy fervant, who is but as a worm before thee: life and death are in thy hand, and happiness and milery are the daughters of thy will." " Haffan," he replied, " I can ro otherwife give life or happiness, than by not taking them away: thou art thyfelf I youd the reach of my bounty, and possessed of selicity which I, can reither communicate nor obtain. My influence over others, fills my botom with perpetual folicitude and anxiety; and yet my infuence over others extends only to their vices, whether I would reward or punish. By the Low-string, I can repress violence and fland; and by the delegation of power, I can transfer the infatiable wishes of avoice and ambition from one chieft to another: but with respect to virtue, I am impotent; if I could reward it, I would reward it in thee. Thou art content, and half therefore neither avarize nor ambition: to exalt thee, would destroy the simplicity of thy life, and diminish that happiness which I have no power either to increase or to centinue."

He then rose up, and commanding me not to disclose his sceret, departed.

As foon as I recovered from the confusion and attouishment in which the Caliph left me, I began to tegret that my behaviour had intercepted his bounty; and accused that chearfulness of folly, which was the concomitant of poverty and labour. I now repinedeat the obscurity of my fistion, which my former infenfibility had perpetuated: I neglected my Jabour, because I despised the reward; I fpent the day in idleness, forming romantic projects to recover the advantages which I had loft: and at night, inflead of lofing myfelf in that sweet and refreshing sleep, from which I uted to rife with new health, chearfulnes, and vigour, I dreamt of tplendid habits and a numerous retinue, of gardens, palaces, cunuchs, and women, and waked only to regret the illusions that had vanished. My health was at

length impaired by the inquietude of my mind; I fold all my moveables for subsistence; and referved only a mattrass, upon which I sometimes lay from one night to another.

In the first moon of the following year, the Caliph came again to Mecca, with the fime fecrecy, and for the same purposes, He was willing once more to fee the man, whom he confidered as deriving felicity from himself. But he found me, not finging at my work, ruddy with health, vivid with chearfulness; but pale and dejected, fitting on the ground, and chewing opium, which contributed to substitute the phantoms of imagination for the realities of greatness He entered with a kind of joyful impatience in his countenance, which, the moment he beheld me, was changed to a mixture of wonder and pity. I had often wished for another opportunity to address the Caliph; yet I was confounded at his presence, and, throwing my self at his feet, I laid my hand upon my head, and was speechless. " Hassan," faid he, " what can't thou have loft, whofe wealth was the labour of thine own hand; and what can have made thee fad, the fpring of whose joy was in thy own bosom? What evil hath befallen thee? Speak, and if I can remove it, thou art happy. I was now encouraged to look up, and I replied, " Let my Lord forgive the presumption of his servant, who rather than utter a falfehood, would be dumb for ever-I am become wretched by the loss of that which I never possessed: thou hast raised wishes, which indeed I am not werthy thou shouldst fatisfy; but why should it be thought, that he who was happy in obscurity and indigence, would not have been rendered more happy by eminence and wealth?"

When I had finished this speech, Almalic flood fome moments in suspense, and I continued profliate before him. " Haffan," faid he, "I perceive, not with indignation but regret, that I mistook thy character; I now discover avarice and ambition in thy heart, which lay torpid only because their objects were too remote to rouse them. I cannot therefore invest thee with authority, because I would not subject my people to oppression; and because I would not be compelled to punish thee for crimes which I first enabled thee to commit. But as I have taken from thee that which I cannot restore, I will at least gracify the wishes that I excited, lest

thy heart accuse me of injustice, and thou continue still a stranger to thyself. Arise, therefore, and follow me." - I fprung from the ground as it were with the wings of an eagle; I kissed the hem of his garment in an extaly of gratitude and joy; and when I went out of my house, my heart leaped as if I had escaped from the den of a lion. I followed Almalic to the caravansera in which he lodged; and after he had fulfilled his vows, he took me with him to Medina. He gave me an apartment in the feraglio; I was attended by his own fervants; my provisions were fent from his own table; I received every week a fum from his treafury, which excoded the most romantic of my expectations. But I foon discovered, that no dainty was fo tafteful, as the food to which libour procured an appetite: no flumbers lo facet, as those which weariness invited; and no time fo well enjoyed, as that in which diligence is expecting its reward. I remembered these enjoyments with regie.; and while I was fighing in the midst of inperfluities, which though they encombered life, yet I could not give up, they were fuldenly taken away.

Almalic, in the midfl of the glory of h kingdom, and in the full vigour of his life, expired fuddenly in the bath: fuch thou knowest was the destiny which the Almighty had written upon his head.

His fon Aububekir, who succeeded to the throne, was incenfed against me, by some who regarded me at once with contempt and envy; he fuddenly withdrew my penfion, and commanded that I should b expelled the palace; a command which my enemies executed with fo much rigour. that within twelve hours I found myfelf in the firects of Medina, indigent and friendless, exposed to hunger and derission, with all the habits of luxury, and all the fenfibility of pride. O! let not thy heart despife me, thou whom experience has not taught, that it is mifery to lofe that which it is not happiness to possess. O! that for me this lesson had not been written on the tablets of Providence! I have traveiled from Medina to Mecca; but I cannot fly from myfelf. How different are the states in which I have been placed! The remembrance of both is bitter! for the pleasures of neither can return,-Haf-In having thus ended his story, smote his hands together; and looking upward, barit into tears.

Omar having waited till this agony was

past, went to him, and taking him by the hand, " My fon," faid he, " more is yet in thy power than Almalic could give, or Aububekir take away. The lesson of thy life the prophet has in mercy appointed me

to explain.

Thou wast once content with poverty and labour, only because they were become habitual, and ease and affluence were placed beyond thy hope; for when eafe and affluence approached thee, thou wait content with poverty and labour no more. That which then became the object, was also the bound of thy hope; and he, whose utmost hope is disappointed, must inevitably be wretched. If thy supreme desire had been the delights of paradife, and thou hadft believed that by the tenor of thy life thefe delights had been fecured, as more could not have been given thee. thou wouldit not have regretted that lefs was not offered. The content which was once enjoyed, was but the lethargy of foul; and the diffress which is now suffered, will but quicken it to action. Depart, therefore, and be thankful for all things; put thy trust in Him, who alone can gratity the with of reason, and satisfy thy soul with good; fix thy hope upon that portion, in comparison of which the world is as the diop of the bucket, and the dust of the balance. Return, my fon, to thy labour; thy food shall be again tasteful, and thy rest shall be sweet; to thy content also will be added flability, when it depends not upon that which is possessed upon earth, but upon that which is expected in Heaven."

Hassan, upon whose mind the Angel of instruction impressed the counsel of Omar, hastened to prostrate himself in the temple of the Prophet. Peace dawned upon his mind like the radiance of the morning: he returned to his labour with chearfulness; his devotion became fervent and habitual; and the latter days of Hassan were hap-Adventurer. pier than the first.

§ 109. Bad company—meaning of the phrase -different classes of bad company-ill chosen company—what is meant by keeping bad company—the danger of it, from our apinels to imitate and catch the manners of others-from the great power and force of custom-from our bad inclinations.

" Evil communication," fays the text, corrupts good manners." This affertion is general, and no doubt all people fuffer from fuch communication; but above all, the minds of youth will fuffer; which

are yet unformed, unprincipled, unfurnithed; and ready to receive any impref-

But before we consider the danger of keeping bad company, let us first fee the

meaning of the phrase.

In the phrase of the world, good company means fashionable people. Their stations in life, not their morals, are confidered: and he, who affociates with fuch, though they fet him the example of breaking every commandment of the decalogue, is still said to keep good company .- 1 thould wish you to fix another meaning to the expression; and to consider vice in the same detestable light, in whatever company it is found; nay, to confider all company in which it is found, be their flation what it will, as bad company.

The three following classes will perhaps include the greatest part of those, who

deserve this appellation.
In the first, I should rank all who endeavour to destroy the principles of Christianity-who jest upon Scripture-talk blasphemy-and treat revelation with con-

A second chass of bad company are those. who have a tendency to delitroy in us the principles of common honesty and integrity. Under this head we may rank gamesters of every denomination; and the low and infamous characters of every profellion.

A third class of bad company, and such as are commonly most dangerous to youth, includes the long catalogue of men of pleafure. In whatever way they follow the call of appetite, they have equally a tendency to corrupt the purity of the mind.

Besides these three classes, whom we may call bad company, there are others who come under the denomination of illchoten company: trifling, infipid characters of every kind; who follow no bufiness -are led by no ideas of improvementbut spend their time in dislipation and folly -whose highest praise it is, that they are only not vicious .- With none of thefe, a ferious man would with his fon to keep company.

It may be asked what is meant by keeping bad company? The world abounds with characters of this kind: they meet us in every place; and if we keep company at all, it is impossible to avoid keeping company with fuch persons.

It is true, if we were determined never to have any commerce with bad men, we must, as the apostle remarks, " altogether go out of the world." By keeping bad company, therefore, is not meant a cafual intercourse with them, on occasion of bufinels, or as they accidentally fall in our way; but having an inclination to confort with them-complying with that inclination-feeking their company, when we might avoid it-entering into their parties -and making them the companious of our choice. Mixing with them occasionally, cannot be avoided.

The danger of keeping bad company, arifes principally from our aptness to imitate and catch the manners and fentiments of others-from the power of customfrom our own bad inclinations-and from the pains taken by the bad to corrupt us \*.

In our earliest youth, the contagion of manners is observable. In the boy, yet incapable of having any thing instilled into him, we easily discover from his first actions, and rude attempts at language, the kind of persons with whom he has been brought up: we fee the early spring of a civilized education, or the first wild shoots of rufficity.

As he enters farther into life, his behaviour, manners, and conversation, all take their cast from the company he keeps. Observe the peasant, and the man of education; the difference is striking. And yet God hath beslowed equal talents on each. The only difference is, they have been thrown into different scenes of life; and have had commerce with persons of different flations.

Nor are manners and behaviour more eafily caught, than epinions, and principles. In childhood and youth, we naturally adopt the fentiments of those about us. And as we advance in life, how few of us think for ourselves? How many of us are fatisfied with taking our opinions at fecond hand!

The great power and force of custom forms another argument against keeping bad company. However seriously difpoled we may be; and however shocked at the first approaches of vice; this shocking appearance goes off, upon an intimacy with it. Custom will soon render the med disgustful thing familiar. And this is indeed a kind provision of nature, to render labour, and toil, and danger, which are the lot of man, more easy to him. The raw

<sup>\*</sup> See this subject treated more at large in an anony mous pamphlet, on the employment of time-

foldier, who trembles at the first encounter, becomes a hardy veteran in a few campaigns. Habit renders danger tamiliar, and of course indifferent to him.

But habit, which is intended for our good, may, like other kind appointments of nature, be converted into a mischief. The well-disposed youth, entering first into bad company, is shocked at what he hears. and what he fees. The good principles, which he had imbibed, ring in his ears an alarming lesson against the wickedness of h > companions. But, alas! this fenfibility is but of a day's continuance. The reve jovial meeting makes the horrid pictare of yesterday more casily endured. Virtue is foon thought a fevere rule; the gospel, an inconvenient restraint: a few plags of confcience now and then interrupt his pladules; and whifper to him, that he once had better thoughts; but even thefe by degrees die away; and he who at first us shocked even at the appearance of 1 ce, is formed by cullom into a profligate Lader of vicious pleafures-perhaps into an abandoned tempter to vice. - So caretally should we oppose the first approaches of fin! fo vigilant should we be against fo infe 'ious an enemy!

Our own bad inclinations form another argument against bad company. We have from passions and appetites to govern; in many bad propenfities of different kinds to watch, that, amidst such a variety of enemies within, we ought at least to be on our guard against those without. The breast even of a good man is represented in scripture, and experienced in fact, to be in a flate of warfare. His vicious inclinations are continually drawing him one way; while his virtue is making efforts another. And if the scriptures represent this as the cale even of a good man, whose passions, it may be imagined, are become in some degree cool, and temperate, and who has made some progress in a virtuous course; what may we suppose to be the danger of a raw unexperienced youth, whose passions and appetites are violent and feducing, and whose mind is in a still less confirmed state? It is his part surely to keep out of the way of temptation; and to give his bad inclinations as little room as possible to acquire new strength. Gilpin.

110. Ridicule one of the chief arts of corruption—bad company injures our characters, as well as manners—prefumption the forerunner of ruin—the advantages of good company equal to the disadvantages of had
—cautions in forming intimacies.

These arguments against keeping bad company, will still receive additional ffrength, if we confider farther, the great pains taken by the bad to corrupt others. It is a very time, but lamentable fact, in the history of human nature, that bad men take more pains to corrupt their own species, than virtuous men do to reform them. Hence those specious arts, that show of friendship, that appearance of disinterestedness, with which the profligate feducer endeavours to lure the unwary youth; and at the fame time, yielding to his inclinations, feems to follow rather than to lead him. Many are the arts of these corrupters; but their principal art is ridicule. By this they endeavour to laugh out of countenance all the better principles of their wavering profelyte; and make him think contemptibly of those, whom he formerly respected; by this they slifle the ingenuous blush, and finally destroy all sense of shame. Their cause is below argument. They aim not therefore at reasoning. Raillery is the weapon they employ; and who is there, that hath the steadiness to hear perfons and things, whatever reverence he may have had for them, the subject of continual ridicule, without lofing that reverence by degrees?

Having thus confidered what principally makes bad company dangerous, I shall just add, that even were your morals in rodanger from such intercourse, your characters would infallibly suffer. The world will always judge of you by your companions: and nobody will suppose, that a youth of virtuous principles himself, can possibly form a connection with a profligate.

In reply to the danger supposed to arise from bad company, perhaps the youth may say, he is so firm in his own opinions, so see the supposed in the supposed in his principles, that he thinks himself secure; and need not restrain himself from the most unreserved conversation.

Alas! this security is the very brink of the precipice: nor hath vice in her whole train a more dangerous enemy to you, than presumption: Caution, ever awake to danget, is a guard against it. But security lays every guard asleep. "Let him who thinketh he standeth," faith the apostle, "take heed, less the fall." Even an apostle himself did sall, by thinking that he stood secure. "Though I should die with

thee," faid St. Peter to his master, "yet will I not deny thee." That very night, notwithstanding this boasted security, he repeated the crime three feveral times. And can we suppose, that presumption, which occasioned an apostle's fall, shall not ruin an unexperienced youth? The story is recorded for our instruction: and should be a standing lesson against presuming upon

our own strength.

In conclusion, such as the dangers are, which arise from bad company, such are the advantages which accrue from good. We imitate, and catch the manners and fentiments of good men, as we do of bad. Custom, which renders vice less a deformity, renders virtue more lovely. Good examples have a force beyond instruction. and warm us into emulation beyond precept; while the countenance and conversation of virtuous men encourage, and draw out into action every kindred disposition of our hearts.

Besides, as a sense of thame often prevents our doing a right thing in bad company; it operates in the fame way in preventing our doing a wrong one in good. Our character becomes a pledge; and we cannot, without a kind of dishonour, draw back.

It is not possible, indeed, for a youth, yet unfurnished with knowledge (which fits him for good company) to chuse his companions as he pleases. A youth must have fomething peculiarly atractive, to qualify him for the acquaintance of men of effablished reputation. What he has to do, is, at all events, to avoid bad company; and to endeavour, by improving his mind and morals, to qualify himfelf for the best.

Happy is that youth, who, upon his entrance into the world, can chuse his company with difcretion. There is often in vice, a gaiety, an unreferve, a freedom of minners, which are apt at fight to engage the unwary: while virtue, on the other hand, is often modelt, reterved, diffident, backward, and eafily difconcerted. That freedom of manners, however engaging, may cover a very corrupt heart: and this aukwardness, however unpleasing, may veil a thouland virtues. Suffer not your mind, therefore, to be easily either engaged, or difgusted at first fight. Form your intimacies with referve: and if drawn unawares into an acquaintance you disapprove, immediately retreat. Open not your hearts to every profession of friendship. They, whose friendship is worth accepting, are, as

you ought to be, referved in offering it. Chuse your companions, not merely for the fake of a few outward accomplishments for the idle pleasure of spending an agreeable hour; but mark their disposition to virtue or vice; and, as much as possible, chase those for your companions, whom you see others respect: always remembering, that upon the choice of your company depends in a great measure the success of all you have learned; the hopes of your friends; your future characters in life; and, what you ought above all other things to value, the purity of your hearts.

#### § 111. Religion the best and only Support in Cajes of real Strefs.

There are no principles but those of religion to be depended on in cales of real fliefs; and thefe are able to encounter the worll emergencies; and to bear us up under all the changes and chances to which our life is subject.

Confider then what virtue the very first principle of religion has, and how wonder fully it is conducive to this end: That there is a God, a powerful, a wife and good Being, who first made the world, and continues to govern it ; - by whose goodness all things are defigned-and by whose providence all things are conducted to bring about the greatest and best ends. The forrowful and pensive wretch that was giving way to his misfortunes, and mournfully finking under them, the moment this doctrine comes in to his aid, hushes all his complaints-and thus speaks comfort to his foul,-" It is the Lord, let him do what feemeth him good .- Without his direction, I know that no evil can befal me,-without his permitfion, that no power can hurt me;-it is impossible a Being so wise should mistake my happines-or that a Being so good should contradict it .- If he has denied me riches or other advantages—perhaps he foresees the gratifying my wishes would undo me, and by my own abuse of them be perverted to my ruin.-If he has denied me the request of children-or in his providence has thought fit to take them from me-how can I say whether he has not dealt kindly with me, and only taken that away which he forefaw would embitter and shorten my days?-It does so to thoufands, where the disobedience of a thankless child has brought down the parents grey hairs with forrow to the grave. Has he visited me with sickness, poverty, of other disappointments?—can I say, but these are blessings in disguise?—so many different expressions of his care and concern to disentangle my thoughts from this world, and fix them upon another—inother, a better world beyond this!"—This thought opens a new face of hope and consolidation to the unfortunate:—and as the persuasion of a Providence reconciles him to the evils he has suffered,—this prospect of a future life gives him strength to despite them, and esteem the light afflictions of this life, as they are, not worthy to be compared to what is reserved for him hereafter.

Things are great or fmall by comparison-and he who looks no further than this world, and balances the accounts of his joys and fufferings from that confideration, finds all his forrows enlarged, and at the close of them will be apt to look back, and cast the same sad restection upon the whole, which the Patriarch did to Pharoah, "That few and evil had been the days of his pilgrimage." But let him lift up his eyes towards heaven, and fledfaftly behold the life and immortality of a future flare,-he then wipes away all tears from off his eyes for ever; like the exiled captive, big with the hopes that he is returning home, he feels not the weight of his chains, or counts the days of his captivity: but looks forward with rapture towards the country where his heart is fled before.

These are the aids which religion offers us towards the regulation of our spirit under the evils of life, but like great cordials, they are feldom used but on great occurrences .- In the lesser evils of life, we seem to fland unguarded-and our peace and contentment are overthrown, and our happinels broke in upon, by a little impatience of spirit, under the cross and untoward accidents we meet with. These stand unprovided for, and we neglect them as we do the flighter indispositions of the bodywhich we think not worth treating ferioufly, and so leave them to nature. In good habits of the body, this may do, and I would gladly believe, there are such good habits of the temper, such a complexional eafe and health of heart, as may often fave the patient much medicine.-We are still to confider, that however fuch good frames of mind are got, they are worth preferving by all rules:-Patience and contentment, which like the treasure hid in the field for which a man fold all he had to purchaseis of that price, that it cannot be had at too great a purchase; since without it, the best condition of life cannot make us happy; and with it, it is impossible we should be miserable even in the worst.

Steine's Sermons.

#### § 112. Ridicule dangerous to Morality and Religion.

The unbounded freedom and licentiousness of raillery and ridicule, is become of late years fo fashionable among us, and hath already been attended with fuch fatal and destructive consequences, as to give a reafonable alarm to all friends of virtue. Writers have rose up within this last century, who have endeavoured to blend and confound the colours of good and evil, to laugh us out of our religion, and undermine the very foundations of morality. The character of the Scoffer hath, by an unaccountable favour and indulgence, met not only with pardon, but approbation, and hath therefore been almost universally fought after and admired. Ridicule bath been called (and this for no other reason but because Lord Shaftesbury told us so) the tell of truth, and as fuch, has been applied indifcriminately to every subject.

But in opposition to all the puny followers of Shaftelbury and Bolingbroke, all the laughing moralists of the last age, and all the fneering fatyrifts of this, I shall not scruple to declare, that I look on ridicule as an oppressive and arbitrary tyrant, who like death throws down all distinction; blind to the charms of virtue, and deaf to the complaints of truth; a bloody Moloch, who delights in human (acrifice; who loves to feed on the flesh of the poor, and to drink the tear of the afflicted; who doubles the weight of poverty by scorn and laughter, and throws the poison of contempt into the cup of distress to embitter the draught.

Truth, fay the Shaftesburians, cannot possibly be an object of ridicule, and therefore cannot suffer by it:—to which the answer is extremely obvious; Truth, naked, undisgusfed, cannot, we will acknowledge with them, be ridiculed; but Truth, like every thing else, may be infrepresented; it is the business of ridicule therefore to disgusse her: to dress her up in a strange and fantastic habit; and when this is artifully performed, it is no wonder that the crowd should smile at her deformity.

The noblest philosopher and the best G4 moralist

moralist in the heathen world, the great and immortal Socrates, fell a facrifice to this pernicious talent: ridicule first mifrepresented, and afterwards destroyed him: the deluded multitude condemned him, not for what he was, but for what he appeared to be, an enemy to the religion of his country.

The folly and depravity of mankind will always furnish out a sufficient fund for ridicule; and when we confider how vaft and spacious a field the little scene of human life affords for malice and ill-nature, we shall not so much wonder to see the lover of ridicule rejoicing in it. Here he has always an opportunity of gratifying his pride, and fatiating his malevolence: from the fradities and abfurdities of others, he forms a wreath to adern his own brow; gathers together, with all his art, the failings and imporfections of others, and offers them up a facrifice to felf-love. The loweft and most abandoned of mankind can ridicule the most exalted beings; those who never could boast of their own perfection.

Not raife their thoughts beyond the earth they trend, Even there can cenfure, those can date decide A Bacon's avance, or a Tully's pride.

It were well indeed for mankind, if iidicule would confine itself to the trailties and imperfections of human nature, and not extend its baleful influence over the few good qualities and perfections of it: but there is not perhaps a virtue to be named, which may not, by the medium through which it is feen, be distorted into a vice. The glass of ridicule reflects things not only darkly, but falfely alfo: it always discolours the objects before it ventures to represent them to us. The purest metal, by the mixture of a base alloy, shall seem changed to the meanest. Ridicule, in the fame manner, will cloath prudence in the garb of avarice, call courage rathness, and brand good-nature with the name of prodigality; will laugh at the compassionate man for his weakness, the serious man for his precisencis, and the pious man for his hypocrify.

Modesty is one of virtue's best supports; and it is observable, that wherever this amiable quality is most eminently conspicuous, ridicule is always ready to attack and overthrow it. The man of wit and humour is never so happy as when he can raise the blush of ingenuous merit, or stamp

the marks of deformity and guilt on the features of innocence and beauty. Thus may our perfections conspire to render us both unhappy and contemptible!

The lover of ridicule will, no doubt, plead in the defence of it, that his defign is to reclaim and reform mankind; that he is lifted in the service of Virtue, and engaged in the cause of Truth; -but I will venture to assure him, that the allies he boalls of disclaim his friendship and despile his affiftance. Truth defires no fuch foldier to fight under his banner; Virtue wants no such advocate to plead for her. As it is generally exercised, it is too great a punithment for small faults, too light and inconfiderable for great ones: the little foibles and blemishes of a character defence rather pity than contempt; the more atrocious crimes call for hatred and abhorrence. Thus, we fee, that in one case the medicine operates too powerfully, and in the other is of no effect.

I might take this opportunity to add, that ridicule is not always contented with ravaging and destroying the works of man, but boldly and improufly attacks those of God; enters even into the fanctuary, and prophanes the temple of the Most High. A late noble writer has made use of it to aspecte the characters and deflroy the validity of the writers of both the Old and New Testament; and to change the solemn truths of Christianity into matter of mirth and laughter. The books of Moles are called by him fables and tales, fit only for the aniusement of children: and St. Paul is treated by him as an enthusiast, an idiot, and an avowed enemy to that religion which he professed. One would not furely think that there was any thing in Christianity fo ludicrous as to raise laughter, or to excite contempt; but on the contrary, that the nature of its precepts, and its own intrinsic excellence, would at least have secured it from such indigni-

Nothing gives us a higher opinion of those ancient heathens whom our modern bigots are so apt to despise, than that air of piety and devotion which runs through all their writings; and though the Pagan theology was sull of absurdates and inconsistencies, which the more refined spirits among their poets and philosophers must have doubtless despised, rejected, and contemned; such was their respect and veneration for the established religion of their country, such their regard to decency and feriousness

feriousness, such their modelty and diffidence in affairs of fo much weight and importance, that we very feldom meet with eft or ridicule on subjects which they held thus facred and respectable.

The privilege of publicly laughing at religion, and the profession of it, of makmy the laws of God, and the great concros of eternity, the objects of mirth and , houle, was referred for more enlightened es; and denied the more pious heathens, to reflect differace and ignominy on the

Christian arra,

It hath indeed been the fate of the bed and purell religion in the world, to t come the jest of fools; and not only, with its Divine Founder, to be fcourged and perfecuted, but with him to be macked and frit at, trampled on and despised. that to confider the dreadful confequences et ridicule on this occasion, will better become the drvine than effayift; to him the efore I shall refer it, and conclude this effay by observing, that after all the andeferved encomiums to lavishly bestowed "I this child of wit and malice, fo univerfilly approved and admired, I know of no fervice the pernicious talent of ridicule can toof, unless it be to raise the bluth of molet, and put virtue out of countenance; to enhance the miferies of the wretched, and portion the feath of happiness; to infult man, affront God; to make us, in thort, hateful to our fellow-creatures, uneafy to outsilves, and highly displeasing to the Haighty. Smollet.

## § 113. On Produgality.

It is the fate of almost every passion, hen it has passed the bounds which nature prescribes, to counteract its own purpose. 100 much rage hinders the warrior from circumspection; and too much eagerness of profit hurts the credit of the trader. Too much ardour takes away from the lover that easiness of address with which ladies are delighted. Thus extravagance, though distated by vanity, and incited by voluptwousness, seldom procures ultimately either applause or pleasure.

If praise be justly estimated by the charader of those from whom it is received, little fatisfaction will be given to the spendthrift by the encomiums which he purchases. For who are they that animate him in his Pursuits, but young men, thoughtless and abandoned like himself, unacquainted with all on which the wisdom of nations has impressed the stamp of excellence, and devoid alike of knowledge and of virtu: ? By whom is his profusion praised, but by wretches who confider him as fubservient to their purpofes; Syrens that entice him to shipwreck; and Cyclops that are gaping to devour him?

Every man whose knowledge, or whose virtue, can give value to his opinion, looks with fcorn or pity (neither of which can afford much gratification to pride) on hire whom the panders of luxury have drawn into the circle of their influence, and whom he fees parcelled out among the different ministers of folly, and about to be torn to pieces by tailors and jockies, vintners and attornies; who at once rob and ridicule him, and who are fecretly triumphing over his weakness, when they present new incitements to his appetite, and heighten his defires by counterfeited applause.

Such is the praise that is purchased by prodigality. Even when it is yet not difcovered to be false, it is the praise only of those whom it is reproachful to please, and whose fincerity is corrupted by their interest: men who live by the riots which they encourage, and who know, that whenever their pupil grows wife, they shall lofe their power. Yet with fuch flatteries, if they could last, might the cravings of vanity, which is feldom very delicate, be fa tished: but the time is always haftening forward, when this triumph, poor as it is, shall vanish, and when those who now furround him with obsequiousness and compliments, fawn among his equipage, and animate his riots, shall turn upon him with infolence, and reproach him with the vices promoted by themselves.

And as little pretentions has the man, who fquanders his estate by vain or vicious expences, to greater degrees of pleafure than are obtained by others. To make any happiness fincere, it is necessary that we believe it to be lasting; fince whatever we suppose ourselves in danger of losing, must be enjoyed with solicitude and uneafiness, and the more value we set upon it, the more must the present possession be imbittered. How can he, then, be envied for his felicity, who knows that its continuance cannot be expected, and who is conscious that a very short time will give him up to the gripe of poverty, which will be harder to be borne, as he has given way to more excesses, wantoned in greater abundance, and indulged his appetite with more profuseness.

It appears evident, that frugality is ne-

ceffary even to compleat the pleafure of expence; for it may be generally remarked of those who squander what they know their fortune not sufficient to allow, that in their most jovial expence there always breaks out some proof of discontent and impatience; they either featter with a kind of wild desperation and affected lavishness, as criminals brave the gallows when they cannot escape it; or pay their money with a peevish anxiety, and endeavour at once to fpend idly, and to fave meanly; having neither firmness to deny their passions, nor courage to gratify them, they murmur at their own enjoyments, and poison the bowl of pleasure by reflection on the cost.

Among these men there is often the vociseration of merriment, but very seldom the tranquillity of chearfulness; they inflame their imaginations to a kind of momentary jollity, by the help of wine and not; and consider it as the first business of the night to stupisy recollection, and lay that reason asleep, which disturbs their gaiety, and calls upon them to retreat from

ruın.

But this poor broken fatisfaction is of floot continuance, and must be expiated by a long feries of misery and regret. In a floot time the creditor grows impatient, the last acre is sold, the passions and appetites still continue their tyranny, with incessant calls for their usual gratifications; and the remainder of life passes away in vain repentance, or impotent desire.

Rambler.

#### § 114. On Honour.

Every principle that is a motive to good actions ought to be encouraged, fince men are of fo different a make, that the fame principle does not work equally upon all minds. What fome men are prompted to by confcience, duty, or religion, which are only different names for the fame thing, others are prompted to by honour.

The sense of honour is of so sine and delicate a nature, that it is only to be met with in minds which are naturally noble, or in such as have been cultivated by great examples, or a resined education. This essay therefore is chiefly designed for those, who by means of any of these advantages are, or ought to be, actuated by this glorious principle.

But as nothing is more pernicious than a principle of action, when it is mitunderstood, I shall consider honour with respect to three forts of men. First of all, with regard to those who have a right notion of it. Secondly, with regard to those who have a miltaken notion of it. And thirdly, with regard to those who treat it as chimerical, and turn it into ridicule.

In the first place, true honour, though it be a different principle from religion, is that which produces the same effects. The lines of action, though drawn from different parts, terminate in the same point. Religion embraces virtue as it is enjoined by the laws of God; honour, as it is grace. ful and ornamental to human nature. The religious man fears, the man of honour scorns, to do an ill action. The latter confiders vice as something that is beneath him; the other, as fomething that is offenfive to the Divine Being: the one, as what is unbecoming; the other, as what is forbidden. Thus Seneca speaks in the natural and genuine language of a man of honour, when he declares "that were there no God to see or punish vice, he would not commit it, because it is of so mean, so base, and so vile a nature."

I shall conclude this head with the defcription of honour in the part of young Juba:

Honour's a facred tie, the law of kings, The noble mind's diftinguiffung perfection, That aids and ftrengthens virtue when it meets her,

And imitates her actions where the is not; It ought not to be sported with.

In the second place, we are to consider those, who have mistaken notions of honour. And these are such as establish any thing to themselves for a point of honour, which is contrary either to the laws of God, or of their country; who think it more honourable to revenge, than to forgive an injury; who make no scruple of telling a lye, but would put any man to death that accuses them of it; who are more careful to guard their reputation by their courage than by their virtue. True fortitude is indeed so becoming in human nature, that he who wants it scarce deserves the name of a man; but we find feveral who so much abuse this notion, that they place the whole idea of honour in a kind of brutal courage; by which means we have had many among us, who have called themselves men of honour, that would have been a difgrace 10 a gibbet. In a word, the man who facts fices any duty of a reasonable creature 10 a prevailing mode or fathion; who looks upon any thing as honourable that is dipleasing to his Maker, or destructive to for

ciety; who thinks himself obliged by this principle to the practice of some virtues, and not of others, is by no means to be not coned among true men of honour.

Timogenes was a lively instance of one acteated by false honour. Timogenes would inie at a man's jest who ridiculed his Maker, and at the same time run a man through the body that spoke ill of his friend. Timenes would have fcorned to have betraved a fecret that was intrusted with him, trough the fate of his country depended u, on the discovery of it. Timogenes took away the life of a young fellow in a duel, to having spoken ill of Belinda, a lady whom he tamfelf had feduced in her youth. · Ibetrayedinto want and ignominy. To it to his character, Timogenes, after having ruined feveral poor tradefmen's fami-I is who had trufted him, fold his effate to t isfy his creditors; but, like a man of horoar, disposed of all the money he could that of it, in paying off his play debts, or, to speak in his own language, his debts of L. car.

In the third place, we are to confider tack persons, who that this principle as Concessal, and turn it into ridicule. Men v stare proteffedly of no honour, are of a more profigate and abandoned nature than even those who are actuated by false noto, of it; as there is more hope of an ieratic than of an athicit. These sons of 1 hay confider honour, with old Syphax in the play before-mentioned, as a fine ima-Finary notion that leads aftray young unexperienced men, and draws them into real redchiefs, while they are engaged in the fariut of a shadow. These are generally lettons who, in Shakespeare's phrase, " are worn and hackneyed in the ways of men;" whose imaginations are grown callous, and have lost all those delicate sentiments which ere natural to minds that are innocent and underraved. Such old battered miscreants rid culc every thing as romantic, that comes in competition with their present interest; and treat those persons as visionaries, who uare to fland up, in a corrupt age, for what has not its immediate reward joined to it. I ne talents, interest, or experience of such theo, make them very often useful in all farties, and at all times. But whatever "calth and dignities they may arrive at, Les ought to confider, that every one flands 2 1 plot in the annals of his country, who armes at the temple of honour by any ether way than through that of virtue.

Guardian.

## §. 115. On Modefty.

I know no two words that have been more abused by the different and wrong interpretations which are put upon them, than these two, Modesty and Assurance. To say such a one is a modest man sometimes indeed passes for a good character; but at present is very often used to signify a sheepish, awkward sellow, who has neither good-breeding, politeness, nor any knowledge of the world.

Again: A man of affurance, though at first it only denoted a person of a free and open carriage, is now very usually applied to a profligate wretch, who can break through all the rules of decency and moraller without a blush.

I shall endeavour, therefore, in this effay, to restore these words to their true meaning, to prevent the idea of Modesby from being confounded with that of Sheep-islanes, and to hinder Impudence from passing for Assurance.

If I was put to define Modesty, I would call it, The reslection of an ingenuous mind, either when a man has committed an action for which he centures himself, or fancies that he is exposed to the centure of others.

For this reason a man, truly modest, is as much so when he is alone as in company; and as subject to a blush in his closest as when the eyes of multitudes are upon

I do not remember to have met with any inflance of modefly with which I am fo well pleafed, as that celebrated one of the young Prince, whose father, being a tributary king to the Romans, had several complaints laid against him before the senate, as a tyrant and oppressor of his subjects. The Prince went to Rome to defend his father; but coming into the fenate, and hearing a multitude of crimes proved upon him, was so oppressed when it came to his turn to speak, that he was unable to utter a word. The story tells us, that the fathers were more moved at this fullance of modelly and ingenuity, than they could have been by the most pathetic oration; and, in fnort, pardoned the guilty father for this early promise of virtue in the son.

I take Assurance to be, The faculty of possessing a man's self, or of saying and doing indifferent things without any uneating indifferent in the mind. That which generally gives a man assurance, is a moderate knowledge of the world; but above

all, a mind fixed and determined in itself to do nothing against the rules of honour and decency. An open and affured behaviour is the natural confequence of fuch a resolution. - A man thus armed, if his words or actions are at any time milinterpreted, retires within himself, and from a conscioutnets of his own integrity, assumes force enough to despise the little censures of ignorance or malice.

Every one ought to cherish and encourage in himself the modelty and assurance I have here mentioned.

A man without affurance is liable to be made uneasy by the folly or ill-nature of every one he converses with. A man without modesty is lost to all sense of honour

It is more than probable, that the Prince above-mentioned possessed both those qualifications in a very eminent degree. Without affurance, he would never have undertaken to speak before the most august affembly in the world; without modefty, he would have pleaded the cause he had taken upon him, though it had appeared ever fo scandalous,

From what has been said, it is plain that modesty and assurance are both amiable, and may very well meet in the same perfon. When they are thus mixed and blended together, they compose what we endeayour to express, when we say, a modest asfurance; by which we understand, the just mean between bashfulness and impudence.

I thall conclude with observing, that as the fame man may be both modelt and affured, fo it is also possible for the same perion to be both impudent and hashful.

We have frequent inflances of this odd kind of mixture in people of depraved minds and mean education; who, though they are not able to meet a man's eyes, or pronounce a fentence without confusion, can voluntasily commit the greatest villainies or most indecent actions.

Such a person seems to have made a refolution to do ill, even in spite of himself, and in defiance of all those checks and restraints his temper and complexion feem to have laid in his way.

Upon the whole, I would endeavour to establish this maxim, That the practice of virtue is the most proper method to give a man a becoming affurance in his words and actions. Guilt always feeks to shelter itself in one of the extremes; and is some-Speciator. times attended with both.

## § 116. On difinterested Friendsbip.

I am informed that certain Greek writers (Philosophers, it feems, in the opinion of their countrymen) have advanced fome very extraordinary positions relating to friendship; as, indeed, what subject is there, which these subtle geniuses have not tor-

tured with their fophistry?

The authors to whom I refer, disfuade their disciples from entering into any strong attachments, as unavoidably creating fupernumerary disquietudes to those who engage in them; and, as every man has more than fufficient to call forth his folicitude in the course of his own affairs, it is a weakness they contend, anxiously to involve himself in the concerns of others. They recommend it also, in all connections of this kind, to hold the hands of union extremely loofe; fo as always to have it in one's power to straiten or relax them, as circumstances and fituations shall render most expedient. They add, as a capital article of their doctrine, that " to live exempt from cares, is an effential ingredient to constitute human happiness: but an ingredient, however, which he, who voluntarily diffresses himself with cares in which he has no necessary and personal interest, must never hope to posfefs."

I have been told likewife, that there is another set of pretended philosophers, of the fame country, whole tenets, concerning this subject, are of a still more illiberal and

ungenerous cast.
The proposition they attempt to establish, is, that " friendship is an affair of self-interest entirely, and that the proper motive for engaging in it, is, not in order to gratify the kind and benevolent affections, but for the benefit of that affiftance and support which is to be derived from the connection." Accordingly they affert, that those persons are most disposed to have recourse to auxiliary alliances of this kind, who are least qualified by nature, or fortune, to depend upon their own strength and powers: the weaker fex, for instance, being generally more inclined to engage in friendships, than the male part of our species; and those who are deprest by indigence, or labouring under misfortunes, than the wealthy and the prosperous.

Excellent and obliging fages, these, undoubtedly! To firike out the friendly affections from the moral world, would be like extinguishing the sun in the natural:

each

each of them being the source of the best and most grateful fatisfactions that Heaven has conferred on the fons of men. But I should be glad to know what the real value of this boafted exemption from care, which they promife their disciples, juilly amounts to? an exemption flattering to felf love, I confess; but which, upon many occurrences in human life, should be rejected with the utmost disdain. For nothing, furely, can be more inconfistent with a well-poised and manly spirit, than to decline engaging in any laudable action, or to be discouraged from persevering in it, by an apprehension of the trouble and felicitude with which it may probably be attended. Virtue herself, indeed, ought to be totally renounced, if it be right to avoid every possible means that may be productive of uneafiness: for who, that is actuated by her principles, can obferve the conduct of an opposite character, without being affected with fome degree of fecret diffatisfaction? Are not the just, the brave, and the good, necessarily expoled to the disagreeable emotions of dislike and aversion, when they respectively nect with inflances of fraud, of cowardice, or of villainy? It is an effential property of every well-constituted mind, to be affected with pain, or pleafure, according to the nature of those moral appearances that present themselves to observation.

If fenfibility, therefore, be not incompuble with true wisdom (and it furely is not, unless we suppose that philosophy deadens every finer feeling of our nature) what just reason can be assigned, why the impathetic fufferings which may refult from friendship, should be a sufficient inducement for banishing that generous affection from the human breast? Extinguish all emotions of the heart, and what difference will remain, I do not say between man and brute, but between man and a mere inanimate clod? Away then with those austere philosophers, who re-refent virtue as hardening the soul against ail the foster impressions of humanity! The fact, certainly, is much otherwise: a tally good man is, upon many occasions, extremely sasceptible of tender sentiments; and his heart expands with joy, or shrinks " h forrow, as good or ill fortune accom-Pantes his friend. Upon the whole, then, It may fairly be concluded, that, as in the case of virtue, so in that of friendship, those painful sensations, which may somelimes be produced by the one, as well as by the other, are equally infufficient

grounds for excluding either of them from taking possession of our bosoms.

They who infift " that utility is the first and prevailing motive, which induce mankind to enter into particular friendings" appear to me to diveil the affociation of its most amiable and engaging principle. For, to a mind rightly disposed, it is not so much the benefits received, as the affectionate zeal from which they flow, that gives them their best and most valuable recommendation. It is fo far indeed from being verified by fact, that a fense of our wants is the original cause of forming these amicable alliances; that, on the contrary. it is observable, that none have been more diffinguished in their friendships than those whose power and opulence, but, above all whose superior virtue (a much firmer support) have raifed them above every necessity of having recourse to the assistance of others.

The true distinction, then, in this question is, that "although freindship is certainly productive of utility, yet utility is not the primary motive of friendship." Those selfish sensualits, therefore, who, bulled in the lap of luxury, presume to maintain the reverse, have surely no claim to attention: as they are neither qualified by resection, nor experience, to be competent judges of the subject.

Good Gods! is there a man upon the face of the earth, who would deliberately accept of all the wealth and all the affluence this world can beflow, if offered to him upon the severe terms of his being unconnected with a single mortal whom he could love, or by whom he should be beloved? This would be to lead the wretched life of a detested tyrant, who, amidst perpetual suspicions and alarms, passes his miserable days a stranger to every tender fentiment, and utterly precluded from the heart-felt satisfactions of friendship.

Melmoth's Translation of Cicero's Lalius.

### § 117. The Art of Happiness.

Almost every object that attracts our notice has its bright and its dark side. He who habituates himself to look at the displeasing side, will sour his disposition, and consequently impair his happiness; while he, who constantly beholds it on the bright side, insensibly meliorates his temper, and, in consequence of it, improves his own happiness, and the happiness of all about him.

Arachne and Melissa are two friends.
They

They are, both of them, women in years, and alike in birth, fortune, education, and accomplishments. They were originally alike in temper too; but, by different management, are grown the reverse of each other. Arachne has accultomed herfelf to look only on the dark fide of every object. If a new poem or play makes its appearance, with a thousand brilliancies, and but one or two blemishes, she slightly skims over the passages that should give her pleafare, and dwells upon those only that fill her with diflike .- If you shew her a very excellent portrait, the looks at fome part of the drapery which has been neglected. or to a hand or finger which has been left unfinished. - Her garden is a very beautiful one, and kept with great neatners and elegancy; but if you take a walk with her m it, the talks to you of nothing but blights and storms, of fnails and caterpillars, and how impossible it is to keep it from the litter of falling leaves and worm-call .-If you fit down in one of her temples, to enjoy a delightful prospect, she observes to you, that there is too much wood, or too little water; that the day is too funny, or too glooniy; that it is fultry, or windy; and finishes with a long harangue upon the wretchedness of our climate.-When you return with her to the company, in hope of a little chearful conversation, the casts a gloom over all, by giving you the history of her own bad health, or of some melancholy accident that has befallen one of her daughter's children. Thus she insenfibly finks her own spirits, and the spirus of all around her; and, at last, difcovers, the knows not why, that her friends are grave.

Melissa is the reverse of all this. By constantly habituating herfelf to look only on the bright fide of objects, the preferves a perpetual chearfulness in herself, which, by a kind of happy contagion, the communicates, to all about her. If any miffortune has befallen her, the confiders it might have been worfe, and is thankful to Providence for an escape. She rejoices in folitude, as it gives her an opportunity of knowing herself; and in society, becaule the can communicate the happiness the enjoys. She oppoles every man's virtue to his failings, and can find out fomethis g to cherish and applaud in the very worst of her acquaintance. She opens every book with a defire to be entertained er instructed, and therefore seldom misses what the looks for, Walk with her.

though it be on a heath or a common, and the will discover numberless beauties, un. observed before, in the hills, the dales, the brooms, brakes, and the variegated flowers of weeds and poppies. She enjoys every change of weather and of feafon, as bring. ing with it fomething of health or convenience. In conversation, it is a rule with her, never to flart a subject that leads to any thing gloomy or difagrecable. You therefore never hear her repeating her own grievances, or those of her neigh. bours; or, (what is worst of all) their faulte and imperfections. If any thing of the latter kind be mentioned in her hearing, the has the address to turn it into entertainment, by changing the most odious railing into a pleasant raillery. Melissa, like the bee, gathers honey from every weed; while Arachne, like the fpider, fucks poifon from the fairest flowers. The confequence is, that, of two tempers once very nearly allied, the one is ever four and diffationed, the other always gav and chearful; the one spreads an univerfal gloom, the other a continual funfhine.

There is nothing more worthy of our attention, than this art of happiness. In convertation, as well as life, happinels very often depends upon the flightest incidents. The taking notice of the badness of the weather, a north-east wind, the approach of winter, or any trifling circumstance of the difagreeable kind, shall infensibly rob a whole company of its good-humour, and fling every member of it into the vapours, If, therefore, we would be happy in ourfelves, and are defirous of communicating that happiness to all about us, these minutiæ of conversation ought carefully to be attended to. The brightness of the sky. the lengthening of the day, the increasing verdure of the spring, the arrival of any little piece of good news, or whatever carries with it the most distant glimpse of joy, shall frequently be the parent of a focial and happy conversation. Goodmanners exact from us this regard to our company. The clown may repine at the funthine that ripens the harvest, because his turnips are burnt up by it; but the man of refinement will extract pleasure from the thunder-storm to which he is exposed, by remarking on the plenty and refreshment which may be expected from the fucceeding shower.

Thus does politenels, as well as good fense, direct us to look at every object on

the bright side; and, by thus acting, we cherish and improve both. By this practice it is that Melissa is become the wisest and best-bred woman living; and by this practice, may every person arrive at that agreeableness of temper, of which the natural and never-failing fruit is Happiness.

#### § 118. Happiness is founded in Restitude of Condust.

All men pursue Good, and would be nappy, if they knew how: not happy for minutes, and miserable for hours; but happy, if possible, through every part of th it existence. Either, therefore, there is a good of this Heady, durable kind, or there is none. If none, then all good must be transient and uncertain; and if so, an object of the lowest value, which can little deleave either our attention or inquiry. But if there be a better good, fuch a good to we are feeking; like every other thing, it must be derived from some cause; and that cause must either be external, internal, or mixed; in as much as, except these Now a three, there is no other possible. fiely, durable good cannot be derived he in an external cause; by reason, all demed from externals mult fluctuate as they flatuate. By the same rule, not from a musture of the two; because the part which is external will proportionably destroy its essence. What then remains but the cause internal; the very cause which we have supposed when we place the Sovereign Good in Mind-in Rectitude of Conduct?

## 119. The Choice of Hercules.

When Hercules was in that part of his youth, in which it was natural for him to confider what course of life he ought to purfue, he one day retired into a desert, where the filence and folitude of the place very much favoured his meditations. As he was musing on his present condition, thate of life he should chuse, he saw two women, of a larger flature than ordinary, approaching towards him. One of them had a very noble air, and graceful deportment; her beauty was natural and easy, her person clean and unspotted, her eyes call towards the ground with an agreeable referve, her motion and behaviour full of n defly, and her raiment as white as snow. The other had a great deal of health and so idness in her countenance, which she

had helped with an artificial white and red; and she endeavoured to appear more graceful than ordinary in her mien, by 2 mixture of affectation in all her gestures. She had a wonderful confidence and affurance in her looks, and all the variety of colours in her dress, that she thought were the most proper to shew her complexion to advantage. She cail her eyes upon herfelf, then turned them on those that were present, to see how they liked her, and often looked on the figure she made in her own shadow. Upon her nearer approach to Hercules, she stepped before the other lady, who came forward with a regular, composed carriage, and running up to him, accosted him after the following manner:

"My dear Hercules," fays she, "I find you are very much divided in your thoughts upon the way of life that you ought to chuse: be my friend, and follow me; I will lead you into the possession of pleasure, and out of the reach of pain, and remove you from all the noise and disquietude of business. The affairs of either war or peace shall have no power to disturb you. Your whole employment shall be to make your life easy, and to entertain every fense with its proper gratifications. Sumptuous tables, beds of roses, clouds of persumes, concerts of inusic, crowds of beauties, are all in readiness to receive you. Come along with me into this region of delights, this world of pleasure, and bid farewel for ever to care, to pain, to business." Hercules hearing the lady talk after this manner, defired to know her name: to which she answered, "My friends, and those who are well acquainted with me, call me Happiness; but my enemies, and those who would injure my reputation, have given me the name of Pleasure."

By this time the other lady was come up, who addressed herself to the young hero in a very different manner:—" Hercules," says she, " I offer myself to you, because I know you are descended from the Gods, and give proofs of that descent, by your love to virtue and application to the studies proper for your age. This makes me hope you will gain, both for yourself and me, an immortal reputation. But before I invite you into my society and friendship, I will be open and sincere with you; and must lay this down as an established truth, that there is nothing tally valuable, which can be purchased

without

without pains and labour. The Gods have fet a price upon every real and noble pleafure. If you would gain the favour of the Deity, you must be at the pains of worshipping him; if the friendship of good men, you must study to oblige them; if you would be honoured by your country, you must take care to serve it: in short, if you would be eminent in war or peace, you must become master of all the qualifications that can make you fo. These are the only terms and conditions upon which

I can propose happiness."

The Goddess of Pleasure here broke in upon her discourie: "You see," said she, "Hercules, by her own confession, the way to her pleasures is long and difficult; whereas that which I propose is short and eafy." " Alas!" faid the other lady, whose visage glowed with passion, made up of scotn and pity, "what are the plea-fures you propose? To cat before you are hungry, drink before you are athirft, fleep before you are tired; to gratify appetites before they are raifed, and raife fuch appetites as nature never planted. You never heard the most delicious music, which is the praise of one's-felf; nor faw the most beautiful object, which is the work of one's own hands. Your votaries pass away their youth in a dream of mistaken pleasures; while they are hoarding up anguish, torment, and remorfe, for old

" As for me, I am the friend of Gods, and of good men; an agrecable companion to the artizan; an houshold guardian to the fathers of families; a patron and protector of servants; an associate in all true and generous friendships. The banquets of my votaries are never costly, but always delicious; for none cat or drink at them, who are not invited by hunger and thirst. Their slumbers are found, and their wakings chearful. My young men have the p'easure of hearing themselves praised by those who are in years; and those who are in years of being honoured. by those who are young. In a word, my followers are favoured by the Gods, beloved by their acquaintance, effeemed by their country, and, after the close of their

labours, honoured by posterity."
We know, by the life of this memorable hero, to which of these two ladies he gave up his heart; and, I believe, every one who reads this, will do him the justice to approve his thoice. Tatler.

Letters on the Choice of Company.

§ 120. LETTER I.

Sir,

As you are now no longer under the eye of either a parent, or a governor, but wholly at liberty to act according to your own inclinations; your friends cannot be without their fears, on your account; they cannot but have some uncasy apprehenfions, left the very bad men, with whom you may converfe, should be able to efface those principles, which so much care was taken at first to imprint, and has been since to preferve, in you.

The intimacy, in which I have, for many years, lived with your family, ferfers me not to be otherwise than a thank of their concern, on this occasion; and you will permit me, as fuch, to lay before you those considerations, which, while they shew you your danger, and excite your caution, may not be without their use in

promoting your fafety.
That it should be the endeavour of our parents, to give us jull apprehensions of things, as foon as we are capable of receiving them; and, in our earlier year. to flock our minds with uleful truths-to accustom us to the use of our reason, the reflraint of our appetites, and the govern ment of our passions, is a point, on which, I believe, all are agreed, whose opinions about it you would think of any confequence.

From a neglect in these particulars, you fee so many of one fex, as much Girls at Sixty, as they were at Sixteen-their follies only varied-their pursuits, though differently, yet equally, trifling; and you thence, likewise, find near as many of the other fex, Boys in their advanced yearsas fond of feathers and toys in their riper age, as they were in their childhood-living as little to any of the purposes of Reafon, when it has gained its full strength, as they did when it was weakeft. And, in-deed, from the same source all those vices proceed, which most disturb and distress the world.

When no pains are taken to correct our bad inclinations, before they become confirmed and fixed in us; they acquire, at length, that power over us, from which we have the worst to fear-we give way to them in the inflances where we see plaines, how grievously we must suffer by our com-

pliance-

pliance-we know not how to refift them, notwithstanding the obvious ruin which will be the confequence of our yielding to

I don't fay that a right education will be 25 beneficial, as a wrong one is hurtful: the very best may be disappointed of its proper effects.

Though the tree you fet be put into an excellent foil, and trained and pruned by the kilfullest hand; you are not, however, fore of its thriving: vermin may deflioy all your hopes from it.

When the utmost care has been taken to fend a young man into the world well principled, and fully apprifed of the reasonallenets of a religious and virtuous life; he is, yet, far from being temptation proof -he even then may fall, may fall into t'e word both of principles and practices; ar I he is very likely to do fo, in the place where you are, if he will affociate with those who speak as ficely as they act; and y to from to think, that their underslandis a would be less advantageously shewn, were they not to use it in defence of their

I at we may be known by our compan., is a truth become proverbial. The e have to ferve may, indeed, occaion us to be often with the person, whom who he no means refemble; or, the place, in which we are fettled, keeping us at a great distance from others, if we will converife at all, it must be with some, whose manners we least approve. But when we I we our choice—when no valuable interest is promoted by affociating with the cor-inpt—when, if we like the company of the wife and confiderate, we may have it; that we then court the one, and thun the other, seems as full a proof, as we can well give, that, if we avoid vice, it is not from the fense we have of the amiableness of virt e.

Had I a large collection of books, and never looked into any that treated on grave and useful subjects, that would contribute to make me wifer or better; but took those frequently, and those only, into my hands, that would raife my laughter, or that would merely amuse me, or that would give me loofe and impure ideas, or that inculcated atheistical or sceptical notions, or that were filled with scurrility and invective, and therefore could only ferve to gratify my spleen and ill-nature; they, who knew this to be my practice, muit,

certainly, form a very unfavourable oninion of my capacity, or of my morals. If nature had given me a good understanding, and much of my time passed in reading: were I to read nothing but what was tiifling, it would spoil that understanding, it would make me a Trifler: and though formed with commendable dispositions, or with none very blameable; yet if my favourite authors were-juch as encouraged me to make the most of the prejent hour; not to look beyond it, to talke every pleafure that offered itself, to forego no advantage, that I could obtain-fuch as gave. vice nothing to fear, nor virtue any thing to hope, in a future flate; you would not, I am face, pronounce otherwise of those writers, than that they would hurt my natural difficution, and carry me lengths of gult, which I should not have gone, without this encouragement to it.

Nor can it be allowed, that reading wrong things would thus affect me, but it must be admitted, that bearing them would not do it lefs. Both fall under the head of Conversation; we fitly apply that term alike to both: and we may be faid, with equal propriety, to converte with books, and to converse with men. The impresfion, indeed, made on us by what we hear, is, usually, much stronger thin that received by us from what we read. That which passes in our usual intercourse is listened to, without fatiguing us: each, then, taking his turn in speaking, our attention is kept awake: we mind throughout what is faid, while we are at liberty to express our own sentiments of it, to confirm it, or to improve upon it, or to object to it, or to hear any part of it repeated, or to ask what questions we please concerning it.

Discourse is an application to our eyes, as well as ears; and the one organ is here fo far assistant to the other, that it greatly increases the force of what is transmitted to our minds by it. The air and action of the speaker gives no small importance to his words: the very tone of his voice adds weight to his reasoning; and occasions that to be attended to throughout, which, had it come to us from the pen or the prefs, we should have been asleep, before we had read half of it.

That bad companions will make us as When bad as themselves, I don't affirm. we are not kept from their vices by our principles, we may be so by our constitution; we may be less profligate than they are, by being more cowardly; but what I advance as certain is, That we cannot be said among them—that they will, in some degree, and may in a very great one, but our morals. You may not, perhaps, be unwilling to have a distinct view of the reason, upon which I affert this.

I will enter upon them in my next,

I was going to write adieu, when it came into my thoughts, that though you may not be a firanger to the much cenfured doctrine of our countryman Pelagins—a firanger to his having denied original fin; you may, perhaps, have never heard how he accounted for the depravity, so manifest in the whole of our race—He ascended it to instation. Had he said, that imitation makes some of us very bad, and most of us worse than we otherwise should have been; I think he would not have passed for an heretic.

Dean Bolton.

#### § 121. LETTER II.

Sir.

I promifed you, that you should have the reasons, why I think that there is great danger of your being hurt by vitious acquaintance. The first thing I have here to propose to your consideration is, what I just mentioned at the close of my last—our aptness to imitate.

For many years of our life we are forming ourfelves upon what we observe in those about us. We do not only learn their phrase, but their manners. You perceive among whom we were educated, not more plainly by our idiom, than by our behaviour. The cottage offers you a brood, with all the rufficity and favageness of its grown inhabitants. The civility and courtefy, which, in a well-ordered family, are constantly seen by its younger members, fail not to influence their deportment; and will, whatever their natural brutality may be, dispose them to check its appearance, and express an averleness from what is rude and difgusting. Let the descendant of the meanest be placed, from his infancy, where he perceives every one mindful of decorum; the marks uf his extraction are from obliterated; at least, his carriage does not discover it: and were the heir of his Grace to be continually in the kitchen or stables, you would foon only know the young Lord by his cloaths and title: in other respects, you would judge him the fon of the groom or the fcullion.

Nor is the disposition to imitate consined to our childhood; when this is past, and the man is to shew himself, he takes his colours, if I may so speak, from those he is near—he copies their appearance—he seldom is, what the use of his reason, or what his own inclinations, would make him.

Are the opinions of the generality, in most points, any other, than what they hear advanced by this or that person high in their esteem, and whose judgment they will not allow themselves to question? You well know, that one could not lately go into company, but the first thing said was -You have, undoubtedly, read-What an excellent performance it is! The fine imagination of its noble author discovers ttself in every line. As soon as this noble author ferroully difowned it, all the admiration of it was at an end. Its merit, with those who had most commended it, appeared to be wholly the name of its fupposed writer. Thus we find it throughout. It is not what is written, or faid, or acted, that we examine; and approve or condemn, as it is, in itself, good or bad: Our concern is, who writes, who favs, or does it; and we, accordingly, regard, or diffiegard it.

Look round the kingdom. There is, perhaps, scarce a village in it, where the seriousness or dissoluteness of the Squire, if not quite a driveller, is not more or less feen in the manners of the rest of its inhabitants. And he, who is thus a pattern, takes his pattern—fashions himfelf by some or other of a better estate, or higher rank, with whose character he is pleased, or to whom he seeks to recommend himself.

In what a fhort space is a whole nation metamorphosed! Fancy yourself in the middle of the last century. What grave faces do you every where behold! The most dissolutely inclined suffers not a libertine expression to escape him. He who least regards the practice of virtue, assumes its appearance.

None claim, from their stations, a privilege for their vices. The greatest strangers to the influence of religion observe its form. The foldier not only forbears an oath, but reproces it; he may possibly make free with your goods, as having more grace than you, and, therefore, a better title to them; but you have nothing to fear from his lewdness, or drunkenness.

The Royal Brothers at length land-

The monarchy is restored. How foon then is a grave aspect denominated a puritanical; decorum, preciseness; seriousnels, fanaticism! He, who cannot extingub in himself all sense of religion, is indutrious to conceal his having any-appears worse than he is-would be thought to fayour the crime, that he dares not commit. The lewdest conversation is the politest. No representation pleases, in which decency is confulted. Eve. y favourite drama has its hero or libertine-introduces the magistrate, only to expose him as a knave. or reackold; and the prieft, only to detembe him a profligate or hypocrite.

How much greater the power of fathion is, than that of any laws, by whatfoever penalties enforced, the experience of all ages and nations concurs in teaching us. We readily imitate, where we cannot be confliated to obey; and become by example, what our rulers feek in vain to make us.

Sofar we may be all truly flyled players, as we all perio ate—borrow our character—eprefent fome other—act a put—exhibit those who have been most under our notice, or whom we seek to please, or with whom we are pleased.

As the Chameleon, who is known to have no colours of his own. But borrows from his neighbour's bue Ho, whate or black, his given or blue; An Librars as much in ready light, Which credit gives him upon fight, And the rambow were in tail Set ded on him, and his heirs mile: Sittle young Squite, when first he comes From country school to Wid's or Too's; And equally, in truth, is fit In be a flatefman, or a wit; Without one notion of his own, He faunters wildfy up and down; Till tome acquaintance, good or bad, Takes notice of a ftoring lad, Admits him in among the gang; They jest, reply, dispute, has angue: He acts and talks as they befriend him, Smear'd with the colours which they lend him. Thus, merely, as his fortune chances, His merit or his vice advances. Dean Bolton.

§ 122. LETTER III.

Sir.

My last endeavoured to shew you, how apt we are to imitate. Let me now desire you to consider the disposition you will be under to recommend yourself to those, whose company you desire, or would not decline.

Conversation, like marriage, must have consent of parties. There is no being intimate with him, who will not be so with you; and in order to contrast or support an intimacy, you must give the pleasure, which you would receive. This is a truth, that every man's experience must force him to acknowledge: we are sure to seek in vain a familiarity with any, who have no interest to serve by us, if we difregard their humour.

In courts, indeed, where the art of pleafing is more fludied than it is elfewhere, you fee people more devteroufly accommodating themfelves to the turn of those, for whose favour they with; but, wherever you go, you almost constantly perceive the same ond pur ued by the same means, though there may not be the same administers in applying them. What a proof have you in your own neighbourshood, how effectual these means are t

Did you ever hear Charle - hill a good flory-make a flirewd observation-drop an expression, which bordered either on wit or humour? Yet he is welcome to all tables-he is much with those, who have wit, who have humour, who are, scally, men of abilities. Whence is this, but from the approbation he shews of whatever prifes? A flory he cannot tell, but he has a laugh in readincis for every one he lears: by his admiration of wit, he supplies the want of it; and they, who have capacity, find no objection to the meanness of his, whilst he appears always to think as they do. Few have their looks and tempers fo much at command as this man: and few, therefore, are to happy in recommending themselves; but as in his way of doing it, there is, obviously, the greatest likelihood of fuccefs, we may be fure that it will be the way generally taken.

Some, I grant, you meet with, who by their endeavours, on all occasions, to shew a superior discernment, may seem to think, that to gain the favour of any one, he must be brought to their sentiments, rather than they adopt his; but I fear these persons will be found only giving too clear a proof, either how absurdly self-conceit sometimes operates, or, how much knowledge there may be, where there is very little common

Did I, in describing the creature called Man, represent him as having, in proportion to his bulk, more brains than any other animal we know of; I should not think this description false, though it could

be proved that four of the species had

fearce any brains at all.

Even where favour is not particularly fought, the very civility, in which be, who would be regarded as a well bred man, is never wanting, must render him unwilling to array the most just disapprobation of what his companions agree in acting, or commending. He is by no means to give ditg of, and, therefore, when he hears the will principles vindicated, and the best ri coied; or when he fees what ought to In matter of the greatest shame, done without any; he is to acquiefce, he is to shew no teller, that what pades is at all effenfive to him.

Confider yourfelf then in either of thefe fituations-defirous to engage the favour of the bad man, into whole company you are admitted-or, only unwilling to be thought by him deficient in good manners; and, I think, you will plainly fee the danger you should apprehend from him-the likelihood there is, that you should at length lofe the abharrence of his crimes, which, when with him, you never ex-

Will you ask me, why it is not as prehable-thit you should reform your vitious acquaintance, as that they should corrupt you? Or, why may I not as well suppose -that they will avoid speaking and acting what will give you offence, as that you will be averfe from giving them any-that they will confult your inclinations, as that you will theirs?

To avoid the length, which will be equal-Iv difagrecable to both of us, I will only answer-Do you know any inflance, which can induce you to think this probable? Are not you appriled of many inflances, that greatly weaken the probability of

The vast disproportion, which there is between the numbers of the ferious and the dissolute, is so notorious, as to render it unquellionable-that the influence of the latter far exceeds the influence of the former-that a vitious man is much more likely to corrupt a virtuous, than to be reformed by him.

An answer of the same kind I should have judged fatisfactory; if, with respect to what I had urged in my former letter, you questioned me-why the readiness to imitate those, with whom we are much conversant, might not as justly encourage you to beer, when you affociated with the less fober, that they might be won to vone regularity, as occasion you to fear, that you should be brought to join in their excesses? The good have been for so long a space losing ground among us, and the bad gaining it; and thefe are now become fuch a prodigious multitude; that it is undeniable, how much more apt we are to form ourselves on the manners of those, who diffegard their duty, than on their, who are attentive to it.

You will here be pleased to remark, that I do not confider you as fetting out with any reforming views-as conversing with the inmeral, in order to dispose them to reaforable purfuits; but that I only apply to you, as induced to affociate with them from the cafiness of their temper, or the pleafantry of their humour, or your common literary purtuits, or their fall in fome of your favourite amusements, or on some fuch-like account: and then, what I have oblerved may not appear a weak argument, that they are much more I kely to hurt you, than you are to benefit them.

I will close my argument and my letter, with a passage from a very good historian, which will flaw you the tenfe of one of the ableft of the ancient legislators on my pre-

fert inbject.

This writer, mentioning the laws which Charendas give the Thorians, says,—"He " enacted a law with reference to an earl, " on which former lawgivers had not ani-" madverted, that of keeping bad compa-" ny. As he conceived that the morals " of the good were fometimes quite ruin-" ed by their diffelete acquaintance-that " vice was apt, like an infectious difeafe, " to ipread itfelf, and to extend its contagion even to the belt dispoled of our " species. In order to prevent this mis-" chief, he expressly enjoined, that none " thould engage in any intimacy or fami-" liarity with immoral persons-he ap-" pointed that an acculation might he " exhibited for keeping bad company, " and laid a heavy the on such as were " convicted of it."

Remember Charondas, when you are difposed to censure the caution suggested by, Dear Sir,

ours, &c. Dean Bolton.

§ 123. LETTER IV.

SIR. Sir Francis Walfingliam, in a letter to Mr.

Mr. Anthony Bacon, then a very young min, and on his travels, expresses himself thus-" The danger is great that we are " fubject to, in Tying in the company of the worfer fort. In natural bodies, evil " airs are avoided, and infection shunned " of them, that have any regard to their " health. There is not so probable a reao in for the corruptions, that may grow " Little mind of one, from the mind of ana con r, but the danger is far greater, and " the Acts, we see, more frequent. for " the number of evil-dispoted in mind is " greater than the number of fick in bo-" dr..... Though the well-disposed will " 1 m in fone good space without corrup-" tion, yet 1 me, I know not how, worketh " a wound rato him. . . . . Which weakness " of a scould leved, and eafinels of nature, " apt to be deceived, looked into; they do " best procide for themselves, that feparate . " Hompelves as far as they can, from the " bal, and draw as nigh to the good, as " by any possibility they can attain to."

To what I have already faid, in proof th t we should thus separate ourselves, I full now add two further reasons for our doing it. 1. The wrong inclinations, the parte of to violate fome or other part of our duty, which we all find in ourselves. 2. Tay power which cultom hath, to reconcile us to what we, at fift, most

dreade L

Need I tell you, that our natural depravity has not only been the theme of chriftian writers; but that the most eminent heathen authors, poets, historians, philosophers, join in confessing it?

Where, alas! is the man, who has not his wrong tendencies to lament? Whom do you know able to conceal them, to prevent a clear discovery of them in his prac-

According as we are liable to act amis, we, certainly, must be in more or less dang r from affociating with those, who either will feek to draw us into guilt—or will countenance us in it—or will diminish our abhorrence of it. - Some danger from such company there must be even to him, whose inclinations are least faulty; fince they may be made worse—they may produce bad actions, the repetition of which would form bad habits; and nothing could be fo likely to heighten any depravity of dispofition, and carry it to the most fatal lengths of misconduct, as a familiarity with those who have no dread of guilt, or none that

restrains them from complying with the temptations they meet with to guilt.

You may, perhaps, think, that you could be in no danger from any companion, to whose excesses you found not in yourself the least propensity: but believe me, my friend, this would by no means warrant your fatery.

Though fuch a companion might not induce you to offend in the very fame way, that he dotn, he would, probably, make you the orender, that you otherwise never would have been. If he did not bring you to conform to his practice, would be not be likely to infinuate his principles? His diffegard to his duty would tend to render you in lifferent to yours: and, while he lefiened your general regard to virtue, he might make you a very bad man, thoug't you should continue wholly to avoid ms particular crimes.

The unconcernedness, with which he gave his word inclinations their fcope, could hardly be day after day observed, without making you less folicitous to restrain your own wrong tendencies, and strongly urging you to a compliance with

them.

2. The danger there is in converfing with the immoral will be yet more apparent; if you will, next, attend to the power of cuffom in reconciling us to that, which

we, at mit, most dreaded.

Whence is it, that veteran troops face an enemy, with almost as little concern as they perform their exercise? The man of the greatest courage among them felt, probably, in the first battle wherein he was, a terror that required all his courage to furmount. Nor was this terror, afterwards, overcome by him, but by degrees; every fucceeding engagement abated it: the oftener he fought, the less he feared: by being habituated to danger, he learned, at length, to despise it.

An ordinary swell of the ocean alarms the youth who has never before been upon it: but he, whoic fears are now raifed, when there is nothing that ought to excite them, becomes foon without any, even when in a fituation, that might juilly difmay him; he is calm, when the storm is most violent; and discovers no uneasy apprehensions, while the vessel, in which he

fails, is barely not finking.

You cannot, I am persuaded, visit an hospital-survey the variety of distress there-hear the complaints of the fick-

H 3

ing yourfelt in pain, and a thater of their " make a proficiency therein."

fulrerings.

The conflant attendants on these poor wretches have no fuch concern: with difpolitions not less humane than yours, they do not feel the emotions, that you would be under, at this feene of mitery; their frequent view of it has reconciled them to it-has been the cause, that their minds are no otherwise affected by it, than yours is by the objects ordinarily before you.

From how many other inflances might is be thewn, that the things, which, at their for appearance, flike us with the greatest terior, no fooner become familia, than they cerfe to discompose us? Let, thereto.c. our education have been the carefulleft and wifeft; let there have been used therein all the means likeliefl to fix in us an abhorrence of vice; we, vet, cannot be frequently among those, who allow themt lves in it, and have as few (cruples about the concealment of any crime they are difpoted to, as about its commission, without bely Adapt is with abundantly lets uncafinefs than its first view occasioned us.

When it is fo beheld; when what is very vicing so more thecks us-is to longer la, mly one afive to us; the natural and necanary progrets is to a flill farth a abatem at clear aversion from it: and what is of tope enough to conquer a flrong dillike, 1) iv be reatonably concluded well able to clest force degree of approbation. How ta this thall proceed, will, indeed, depend, in a good measure, upon our temper, upon our constitutional tendencies, upon our circumilances: but furely we are become bad enough, when it is not the confideration of what is amils in any practice, that withholds us from it-when we only avoid it, because it is not agreeable to our humour; or, because the law punishes it; or because it interferes with fome other criminal gratification, which better pleafes us.

I begun this with an extract from a letter of Wallingbam: I will end it with one from a letter of Gretius, when ambathdor in France, to his brother, concerning his fon, whom he had recommended to that gentleman's care.

After having expressed his wishes, that the young man might be formed a complete advocate, he concludes thus-" Above all " things I intrest you to cultivate those " feeds of knowledge, fown by me in him, " which are productive of piety; and to " recommend to him, for companions,

fee the fores of the wounded, without be- " fuch persons as are themselves careful to

GROT. Ep. 426. Dean Bolton.

§ 124. LETTER V.

When I ended my laft, I continued in my chair, thinking of the objections which might be made to what I had written to you. The following then occurred to me.

That, when we are in postession of truth, from fair examination and full evidence, there can be very little danger of our being induced to quit it, either by repeatedly hearing the weak objections of any to it, or by remarking them to act as wrongly as they argue-That, as in mathematics the proposition, which we had once demonffrated, would always have our affent, whomfoever we heard cavilling at it, or ridiculing our judgment concerning it: to. in morals, when once a due confideration of the effential and unchangeable differences of things hith rendered us certain of what is right and our duty; we can never be made lefs certain thereof, whatever errors, in judgment or practice, we may daily chferve in our affociates, or daily hear them abfurd enough to defend-That, when we not only plainly perceive the practice of virtue to be most becoming us-to be what the nature and reason of things require of u; but actually fiel, likewife, the facisfaction which it affords, the tolid pleafure which is its inteparable attendant; there can be no more ground to suffoje, that our having continually before us the follies and vices of any would lead us to depart from what we know to be fittest, and have experienced to be best for us, than there can be to believe, that a man in his wits would leave the food, which his judgment approved and his palate relished, for another fort, which he faw, indeed, pleafing to his companions, but which he was certain would poifon them.

How little weight there is in this kind of arguing, I think every one might be convinced, who would attend to his own practice, who would consider the numerous instances in which he cannot but condemn it -in which he cannot but acknowledge it contrary to what his present welfare requires it should be.

Let us think the most justly of our duty, and thun, with the greatest care, all who would countenance us in a departure from it; we still shall find that departure too freentert-we shall experience it so, even when it is truly lamented; and when, to avoid it. 15 both our wish and our endeavour. And if the influence of truth may receive such hindrance from our natural depravity, tom this depravity, even when we have kept out of the way of all, who would encourage us to favour it, there, furely, must be an high degree of probability, that we fall be less mindful of our obligations, when we are not only prompted by our oun appetites to violate them, but moved thereto by the counfel and example of those whose conversation best pleases us; and whose opinions and actions will, therefore, come with a more than ordinary recommendation to us.

The aftent, which we give, upon sufficient evidence, to moral truths, could no more be unsettled by ridicule and sophistry, than that which we give to mathematical truths, did our minds always retain the same disposition with respect to the one, that they do, as to the other.

With regard to the latter, we are never willing to be deceived-we always fland alike affected towards them: our convictea about them was obtained, at first, upon fich grounds, as must alreads remain our laducements to preferve it: no luft could be greathed, no interest served, by its acting less to cably upon us: in its defence the credit of our understanding is greatly cono med. And how vain must ridicule and to, inflry be necessarily thought, where then only aim is, that we should acknowledge a superior discernment in those perfons, whose opposition increases our contempt of their ignorance, by making a plainer discovery of it?

As for moral truths, they are often difagreeable to us-When we have had the fullest evidence of them, we want not, eccasionally, the inclination to overlook it: It, under jome circumstances, we are ready to acknowledge its force; there are others, waen we will not give it any attention. line fancy and hope interpole: a govern-1 ? Pallion allows us only a faint view of, or wholly diverts our notice from, whatever should be our inducement to restrain it; and fuffers us to dwell on nothing but what "ill justify, or excuse, us in giving way to 11. Our reluctance to admit, that we have not judged as we ought to have done, is strangely abated, when we thereby are fet at liberty to act as we please.

When the endeavour is to laugh us, or to argue us, out of those principles that

we, with much felf-denial adhere to; we shall but feebly oppose its success. Iie has a strong party on his fide within our bofoms, who feeks to make us quit opinions, which are fill controlling our after ons. If we are not fecure from acting contrary to our day, what cogent proofs loever we have of its being fuch, and what inti-faction foever we have had in its discharge; we are highly concerned to avoid every temptation to offend: and it, undoubtedly, is a very flrong one, to bear continually what is likelieft to remove the tear of indulging our appetites; and continually to fie, that they who apply to us ast as they advifi-allow themselves in the liberties, they would have us to take; and are under none of the checks, which they prompt us to throw off.

Though what we did not relish, and what we thought would speedily dellroy us, we might not ent, when our companions shewed themselves fond of it, and pressed us to talle it; yet, if we apprehended no immediate danger from their meal-if we were eye-witnesses of its being attended with no re-if they were continually expecifing their high delight in it, and repeating their affurances, that all, either our mostference towards, or diffelish of it, was only from prejudice and prepostession; we, very probably, should at length yield, and quit both our difguit of their repail, and our dread of its consequences. And if this might enfue, when we were invited to partake of that, which was lefs agreeable to our palates, what should be feared, when our company tempted us to that, which we could be pleafed with, and were only withheld from by fuch an apprehention of danger, as nothing could fooner remove, than our observing those, with whom we most conversed, to be without it?

Reason is, certainly, always on the side of duty. Nor is there, perhaps, any man, who, when he feriously considers what is best for him to do, will not purpose to co that, which is right. But, fince we can act without confideration in the most important articles, and nothing is less likely to be confidered, that what we find quite customary with others-what we see them act without remorfe or scruple; when we are, day after day, eye-witnesles of our affociates allowing themselves in a wrong practice, perfifting in it without expr fling the least dread of its consequences; it is as absurd to think, that our moral seering should not be injured thereby, as it is to

H 4 suppose.

fuppose, that our hands would preserve the same softness, when they had been for years accustomed to the oar, which they had when they first took it up; or, that hard labour would affect us as much when intred to it, as when we entered upon it.

I will, for the prefent, take my leave of you with an *Italia*: proverb, and an *English* one exactly answerable to it—

Dimen con the two a paper that the fai. Tell me with whom thou goest, and I'll tell thee what thou doest.

Dean Eclton.

§ 125. LETTER VI. Sir.

I know not what I can add on the prefent subject of our correspondence, that may be of greater fervice to you than the following fhort relation .- I may not, indeed, be exact in every particular of it, because I was not at all acquainted with the gentlemut, whom it concerns; and because many years have passed since I received an account of him: but as my information came from perions, on whose verecity I could depend, and as what they told me much anceled me when I heard it, and has, fince, been very often in my thoughts; I fear that the melancholy description, which you will here have of human frailty, is but too true in every thing material therein.

At the first appearance of \_\_\_\_\_\_\_ in town, nothing, perhaps, was more the topic of conversation, than his merit. He had read much: what he had read, as it was on the most useful tubjects, so he was thoroughly master of it; gave an exact account of it, and made very wife reflections upon it. During his long residence at a distance from our metropolis, he had met with f w, to whom he was not greatly superior, both in capacity and attranments: yet this had not in the least disposed him to dictate, to be positive and alluming, to treat any with contempt or neglect.

He was obliging to all, who came near him; talked on the subjects which they belt understood, and which would be likehest to induce them to take their full share of the conversation.

They, who had fpent every winter near the court, fiw nothing in his behaviour, that thew'd how far he had lived from it nothing which was lefs fuitable to any civility, that could be learned in it.

His manners were only less courtly, in their simplicity and purity. He did not,

often, directly reprove the libertine discourse of his equals; but would recommend himself to none, by expressing the slightest approbation of such discourse: He show'd it did not please him, though he declined saying so.

He forbore that invective against the manners of the age, which could only irritate; and thought that, at his years, the fittest consure he could pass on them, would be to avoid them. It seemed, indeed, his particular care, that he might not be represented either as a bigot, or a cynic; but yet, as he knew how to defend his principles, so he shew'd himself, on every proper occasion, neither afraid nor athamed to engage in their defence.

His convertation was among perfon of his own rank, only to fir as decorum required it thould be: their favourite topics were to little to his taffe, that his leifure hours, where he could have his choice, were paffed among those, who had the most learning and virtue, and, whether diffinguished, or not, by their ancellers worth, would be so by their own.

He had high notions of his duty to his country; but having feen what felf irrerefledness, at length, thew'd itieli, where he had heard the strongest professions of patriotism, it made him very cautious, with whom he engaged, and utterly averse from determining of any as friends to the public, merely because they were opposes of the court.

No one judged more rightly of the hurt that must ensue, from irreligion spreading itself among the common people; and, therefore, where his example was most remarked, and could be most efficacious, he took particular care, that it should promote a just reverence of the Deity.

Thus did ./. A. tet out in the world, and thus behaved, for fome years, notwithstanding the bad examples he had every where before him, among those of his own flation. In one of the accomplishments of a gentleman (though, furely, one of the very meanest of them) he was thought 10 excels and many fine speeches were made him upon that account. They were but too much regarded by him; and, gradually, drew him often into the company that he would have despised, had he heard less of his own praise in it. The complimen's to repeatedly paid him by the frivolous reconciled him, at length, to them. As his attachment to them got ground, his feriousness lost it. The patriot was no

more

more—The zeal he had for the morals of his countrymen abated.—

The tragical conclusion of his story, let table tell you, who would not feel that concern at the relation of it which I should do. this you certainly may learn from it what, as the constant dropping of water wears away the hardest stone, so the continual phartation of the vitious are not to be wishfeed by the firmest mind—All, who are in the way of them, will be hurt by them—Wheresoever they are used, they will make an impression—He only is secure from their force, who will not hazard its being tred upon him.

In what you have hitherto received from m., I have at gued wholly from your own anotenium, and endeavoured to thew you, from the nee, the danger of having bad companions. See now your danger from the dappetitions. And, firth, let these persons be considered, only, in general, as patted to their notions and practices, and

eager to defend them.

Whatever our perfuation or conduct is, we are ufually favourable to it; we have our plea for it; very few of us can bear, with my patience, that it should be judged macoral: The approbation of it is a compliment to our understanding, that we receive with pleafure; and to cenfure it, is fuch a disparagement of us, as doth not fall to ditguit us. I will not fay, there are r to be found, that give themselves little or no concern who thinks or acts as they do; but it is certain, that, ordinarily, we are denious to be joined in the cause we espouse -we are folicitous to vindicate and spread our opinions, and to have others take the fame courfes with us. Should I allow you to be as intent on this, as any of your acquantance are; yet, pray, consider what you may expect, when you fland alone, or when a majority is against you-when each of them relieves the other in an attack upon you-when this attack is, day after day, repeated—when your numerous opponents join in applauding, or threngthening, or colivening their feveral objections to your featiments; and in treating whatever you can urge in your defence, as abfurd, or week and impertinent-when your peace can only be purchased by your silencewhen you find, that there is no hope of bringing those you delight to be with into your opinions, that they confirm each other in opposition to you, and that you can only be agrecable to them, by adopting their maxims, and conforming to their manners.

It is next to be confidered, what you

may fear from an intimacy with the immoral, when they must look upon themfelves to be repreached by fuch of their acquaintance, as will not concur with them in their excesses. They cannot but do this; because all who feek either to make themalter their manners, or to weaken their influence upon others, charge them with what is, really, the highest repreach to them; and because they are sensible that the arguments likelieft to be used by any one for his not complying with them, are grounded on the mychief of their conduct, or on its folly. Regard then yourfelf, as in their Reflect how you would behave towards the man whose opinion of you was, that you acted either a very criminal, or a very improdent part: reflect, I fay, how you would believe towards the person this judging of you, if you wished to priferve a familiarity with him, but xt was refolved to perfift in your notions You, certainly, world and practice. try every method to remove his fiftaile of them; you would colour uem as agreeably as you possibly could: you would spar no pains to weaken every objection he could have to them-you would, in your turn, attack his maxims and nanners; you would feek to convince him upon what flight grounds he preferred them to yours-you would apply to every artifice, that could give them the apparance of being less defensible, or the could incline him to overlook what nght be urged in their defence.

And if this might naturally boupposed the part you would act toward others; you ought to expect that they, i the fame circumstances, would behave alic towards you. But can you think it pruent to let them try, with what successthey may proceed? Would not caution k your most effectual security? Would into be the wisest method of providing soyour safety, to keep out of the way of dasser?

You are, further, to lookupon those, from associating with whor! would dissuade you, as extremely sicitous to be kept in countenance. The vitious well know, to how many objectons their conduct is liable: they are saible, to what esteem good morals are entied, what praise they claim, and what the, in the most corrupt times, receive.

Virtue is so much se the interest of mankind, that there camever be a general agreement, to deny all anner of applause to the practice of it: uch numbers are made sufferers by a eparture from its

rules.

rules, that there are few crimes, which meet not with an extensive censure.

You have long finer ham'd it to be the

language of pagamin i.felt, that

" All, who act contrary to what the " reason of things requires -who do what " is limitful to themselves or others, must " fland felt-condemned;" and you cannot want to be informed, in what light they are from by thise who do not share their gullt. The investour, therefore, of fuch men, while they are without any purpofe of amendment, will, unquestionably, be, to make their cause as specious as possible, by engaging mary mits defence; and to filence centure, by the danger, that would arife from the numbers it would provoke. motives to this endeavous, when duly reflected on, will fully fatisfy us, with what seal it must be accompanied; and it may vell, therefore, alarm all, on whom its power is likely to be tried-may well indice them to confider feriously, what they have to fear from it, how much their vitue may fuffer by it.

will conclude this with a fhort flory of the Poet Dance, for which Bayle quotes Peturch. Among other vilits made by Dare, after his banishment from Plaren e, one was to the then much-famed Can,

Prine of Verona.

Ca treated him, at first, with great civilie; but this did not last; and by the little omplaifance at length shewn the Poet, e plainly perceived that he ceased

to be a acceptable gueft.

Schoirs, it feems, were not Can's favourite:-he liked those much better, who fludied a divert him: and ribaldry was by no mans the discourse that least pleased him. Sipecting that this did not raise Dante's oinion of him, he one day took occasion ) single out the most obnoxious of the libetine crew, that he entertained; and, afterhigh praises given the man, turning to lante, he said, I awonder how it is, that thimad fellow is beloved by us all, as giving u the pleasure which, really, we do not find 1 your company, wife as you are thought , be.

Sir, answed the Poet, you would not wander at this if you confidered, that our love of any poceeds from their manners being suitable, nd their dispositions similar, to our own. Dean Bolton.

#### § 126. LETTER VII.

Sir,

I have but or thing more to propole to your confiderson, as a diffusifive from the mockery, with which they treat it,

affociating with the vitious; and it is-The way, in which they, ordinarily, feek to corrupt those, with whom they converte.

The logic of the immoral contributes but little to increase their numbers, in comparison of what they effect by raillers and reducate. This is their strength; they are fenfiele of its being fo; and you may be affored that it will be exerted against you. There is nothing that cannot be jested with; and there is nothing that we, universally, bear worse, than to be made

the jell of any.

What reasoning on moral subjects may not have its force evaded by a man of wit and humour; and receive a turn, thir shall induce the less considerate to shant it, as weak and inconclusive? The moll becoming practice—that which is mottour duty, and the importance of which to our prefent welfare is most evident, a lively fancy eafily places in a ridiculous view. and thereby brings it into an utter neglect.

That reverence of the Deity, which the best both ancient and modern writers have fo throughy recommended-which the worthick men in every age have fo carefully exprehed-which any observation of nature, any attention to our own frame, fails not to inculcate, is yet, by being represented under the garb of superstition or fanticism, seen among us to such disadvantage, that many, our military gentlemen especially, appear to take a pride in shewing themselves divested of it.

Conjugal fidelity, though of fuch moment to the peace of families-to their interest-to the prosperity of the commonwealth, that, by the laws of the wifeft and beit regulated states, the severest punishment has been inslicted on the violation of it, is, nevertheless, by the levity, with which some have treated it, so much, at present, slighted, that the adulterer is well received: Women, who would think it the groffest affront to have their virtue questioned, who affect the character of the strictest observers of decorum, shun him not-flew bim the utmost complaisance. Whatever dishonour, in this case, falls on any, it accrues wholly to the injured person.

Can you affign a better reason, why the intemperate, among the meaner people, have to prodigiously increased their numbers, than the banter they use towards such as they meet with disposed to sobriety,-

the

the fongs and catches, with which they are to plentifully provided, in derifion of it?

I cannot give you the very terms of Lord Shafteft sty, as I have not his works; but I think I may be certain that there is an observation in them to this effect— That, a had the enemies to Christianity exposed its first profession, not to wild beasts, but to indicate, their endeavours to stop its a prespects might have had very different to make its from what they experienced."

Halt tewit of man been only concerned in the friending that religion, I believe the co-include well founded. But this fucceis could no more have affected the truth of that riky on, than it leffens the worth of a piblic fpilit, of honeity, of temperatice, that so many have been laughed out of them—that the jeft made of them has eccasioned their being so rare among us.

The author of the Beggar's Opena gives the true character of his Newgate tribe, wen he exhibits them ludicious on all presones to virtue, and thus hardening can other in their crimes. It was the mid effectual means to kneep up their finits well rear guilt, and may well be judged to be test method of bringing others to have u.

" The Duke of Buckingham," fays a late writer, " had the art of turning per-" lons or things into ridicule, beyond any " m n of the age. He possessed the young " King [Charles II ] with very ill prin-" ciples, both as to religion and morality, " and with a very mean opinion of his " father, whose sliffness was, with him, a " subject of raillery." It is elsewhere observed, that, to make way for the ruin of the Lord Clarendon, " He often acted " and mimicked him in the King's pre-" sence, walking stately with a pair of " hellows before him, for the purie, and " Colonel Titus carrying a fire-thovel on " his shoulder, for the mace; with which " fort of banter and farce the King was " too much delighted."

Such are the impressions, to the disparagement of the best things, and of the left men, that may be made by burlesque and bustoonery: They can destroy the efficey of the wisest precepts, and the noblest examples.

The Monarch here spoken of may, perhaps, be thought as ill-disposed as the worst of his favourites; and rather humoured, than corrupted, by the sport they made with all that is, ordinarily, held serious. Were this admitted to be true of

him-Were we to suppose his natural depravity not heightened by any thing faid or done before him, in derifion of virtue or the virtuous; yet the effects of his being accustomed to such representations may be looked upon as extremely mitchievous; when we may, so probably, attribute to them the loofe he gave to his natural depravity—the little decorum he observed -that utter carelessness to fave appearances, whence fo much built enfued to the morals of his people, and whereby he occationed fuch di traction in his affairs, fo weakened his authority, fo entirely loft the affections of the bed of his subjects: and whence that he dil not experience full worfe confequences, may be afcribed to a concurrence of circumitances, in which his prudence had no thare.

The weakness of an argument may be clearly shown—The arts of the sophister may be detected, and the fallacy of his reasoning demonstrated—To the most subtile objections there may be given fatisfactory answers: but there is no confuting raillery—the acutely logician would be silenced by a Merry Andrew.

It is to no manner of purpose that we have reason on our fide, when the laugh is against us: and how easy is it, by playing with our word.—by a quibble—by the lowest just, to excite that laugh!

When the company is ditposed to attack your principles with drollery, no plea for them is attended to; the more serious you show yourfulf in their defence, the more scope you give to the mirth of your opponents.

How well foever we have informed ourselves of the motives to a right conduct, these motives are not attended to, as often as we act: our ordinary practice is founded on the impression, that a former consideration of them has made; which impression is very liable to be weakened—wants frequently to be renewed in the same way, that it was at first produced.

When we continually hear our virtue banter'd as mere prejudice, and our notions of honour and decorum treated, as the sole effects of our pride being dexterously flattered.—When our piety is frequently subjecting us to be deriled as childishly timorous, or absurdly superstitious; we soon know not how to persuade ourselves, that we are not more scrupulous than we need to be; we begin to question, whether, in settling the extent of our obligations, we have sufficiently consulted the

imperfections

imperfections of our nature—whether our judgment is without its bias from our fears.

Let our feriousness be exhibited to us in that odd figure, which wit and humour can easily give it; we shall be insensibly led to judge of it, according to its appearance, as thus overcharge l; and under the disadvantage, in which its shown us; we shall, first, team in concerned at the greater liberties that others take, and, by degrees, proceed to take the very time outselves.

The person, whom we not highly and justly honoured, if the buffoonery of our componions were constantly levelled at him, would soon have his worth overlooked by us; and, though we might not be brought to think of him as contemptibly, as they appeared to do, our reverence of him would certainly, at length abate, and both his advice and example have much less influence upon us.

Of this you shall have an instance in my

I will here only add what Jaml'tchus mentions as practifed by Pyth germ, before he admitted any into his fehool—He enquired, "Who were their intimates"—juffly concluding, that they, who could like bad companions, would not be much profited by his influctions.

Dean Bolton.

#### § 127. LETTER VIII.

SIR,

What follows will discharge the promise, which I made you at the conclusion of my last.

S. was the oracle of his county; to whatever point he turned his thoughts, he foon made himself master of it. He entered, indeed, so early upon business, that he had little time for books; but he had read those, which best deterved his perusal, and his memory was the faithful repository of their contents.

The helps, that he had not received from reading, he had abundantly supplied the want of, by observation and conversation.

The compass of his knowledge was amazing. There was scarce any thing, of which one in his station ought to be informed, wherein he appeared to be ignorant. Long experience, great sugacity, a ready apprehension, a retentive memory, the result to him of all forts of people, from whom any thing could be learned, and an intimacy with some of the worthiest persons of every profession, enabled him to

fpeak on most points with such justness and copiousness, as might induce you to conclude, upon sirst being with him, that the topic, on which his discourse turned, was what he had particularly and principally wattended to. Though he owned himself never to have so much as look'd into the writings of athesils or deaths; yet, from the promiseuous company he had been obliged to keep, and the freedom, with which all spoke that sentiments to him, there was not, perhaps, a material objection to the christian schoin, of which he was not approach, and which he had not well considered.

S while of his fireight, and ever defirous to use it in the best of causes - in it e for vice of that muth, which operates on near's practice, and would, it attended to, recht. it throughout; he did not discourage tre most tree tpeakers; he calmly and willingly heard what they could lay against his faith, while they used reason and argument; but drollers, and jeft he failed not, though with great good-humour, to reprove, as a fpecies of milreprefentation-as a fure evidence, that truth was not fought—as an artifice, to which none would apply, who we e not confeiour of their weaknofs, who did not despair of supporting their notions by rational proofs.

Virtue and true religion had not, perhaps, an abler advocate than this gentleman; but whatever fervice his tongue might do them, his manners, certainly, did them far greater: he convinced you fenfes their excellency, by exhibiting to your fenfes their effects—he left you no room to question how amiable they were, when it was from their influence upon him, that he so much engaged your esteem and affection; he proved undeniably, how much they should be our care, by being him est an instance, how much they contributed to our happiness.

Never, cerainly, did piety fit eafier upon any man—Never, perhaps, was any man more escemed by the very persons, between whose practice and his there was the widest difference.

The fuperior talents he discover'd, and his readiness to employ them for the benefit of all, who applied to him, engaged alike their admiration and their love.

The obligations, conferred by bim, obtained the height of complaisance towards his fon. Invitations were made the youth from all quarters; and there was not a young man of any figure near him, who

Wal

, not introduced to him, and directed to pay him particular civility. They, who forth to attach him closest to them by in his humour, were never without tacir arguments for licenfing it. " True it a way, this or that projuit might not be to " tac tate of his father; but neither did " it fut his years-When he was a young " , an, he, undoubtedly, acted as one; he " took the divertions, allowed himfelf in " the gratifications, to which youth in-" choes; no wonder that he should now " ce, the what he could not relish-that one flould condemn the draught, which . '1, had could not bear, and be indiffe-" rent to the features, which he could not " dalinguish without his spectacles."

When this kind of language had abated t'e reverence due to fo excellent an infirm tor, the buffoon interposed still further toweaken his influence; gave an air of afis a tion to his decorum—of hypocrity to 1. termalnefs—of timoroufness to his prudence-of avarice to his wife economybuildfound the adone, that he might be fuppoled to give, the arguments with which he was likely to support it, and the reproof " would naturally use, when he did not

fee a disposition to follow it.

Soon as the young man had attained the age, at which the law fuppofes us jufficienth afteret, he expressed a most earnest de-112 to have an opportunity of appearing 1. Repeated promifes were made, that if a proper allowance was fettled on him, and base given him to chuse a place of abode, there should not be the least mismanagement; t'e income affigned him thould antwer every article of expence.

The fon's importunity was feconded by the fold mother's, and their joint folicitations prevailed. The youth was now accollible, at all times, to the most profligate of his acquaintance: and one part of their entertainment usually was, to fet his excellent father's maxims and manners in the most disadvantageous light. This failed rot to bring on a difregard to both-so entire a difregard to them, that the whore and the card-table took up all the hours, which the bottle relieved not.

Thus fell the heir of one of the worthiest of our countrymen ! - It was to no purpole, that fuch an admirable example had been fet him by the person, he was most likely to regard-that such particular care had been taken to reason him into a discharge of his duty-that he had been present, when the most subtile advocates for irre-

ligion either were filenced, or induced to acknowledge their principles to be much less defensible, than they had hith ro thought them. None of the impressions of what had been done for him, or faid to him, or had passed before him, could hold out against ridicule; it effaced every trace of them, and prepared him to be as bad, as his worst companions could be inclined to make him. How great a neglect of him enfued! They who had laugh'd him out of the reverence due to his parent's worth, rendered him foon despised by all, whose esteem could profit or credit him; and he died in the 70th year of his confliction. when but in the 25th of his age.

Dean Bolton.

#### 6 128. LETTER IX.

SIR,

My last gave you a melancholy inflance of the hurt, done by ridicule to the heir of a most worthy man, not many miles from you. What influence it had towards the condemnation of him, to whom the epithet of divine might, perhaps, be more properly applied, than to any one, who ever lived under the fole guidance of reason, has long, you know, been matter of dispute. I will only obferve, concerning the comic writer's 11dicule of Socrates-

1. That, when fuch a representation could be made of fo excellent a perfon, it demonstrates, that no degree of warth can fecure any perfon from an attempt to destroy his credit; and that they, whose capacities fully enable them to differen this worth, may be its spitefullest enemies, and bend their wits to disparage it-

2. That, when such a representation could be made by a man of good parts, with any confidence of fuccess, it is, further, an evidence of the probability, that the righetl and most just reputation may suffer from ridicule, and that it may bring into contempt what is emitted to the greatest efleem and honour-

3. That if the Athenians were to well pleafed with the means used to lesten the character of this ornament, not only to his country, but his species, as to render the interpolition of a powerful party in the flate necessary, to prevent the poet's abuse from meeting with all the fuccess, he promifed himself in it; we are fully taught, what may be the pernicious effects of ingenious drollery-how much it may weaken the force of any instruction, or any example.

Where violent methods are purfued, in order to withdraw us from any religious practice or opinion; they who thus oppose it thewile thereby, that they look upon it as fomewhat of great importance, teach us to do the same; and often increase our attachinent to it-render us more earnest about it, than we, otherwise should have been. But where such practice or opinion is treated as a matter of jell-where it meets with all the flight, that footling and laughter can expicts, we fearcely know how to preferve our regard to it, as a thing of much confequence; and from effectiing it of little moment, we eafily proceed to judge it of none at all.

The force that is offered us, on account of our perfuation, either occasions such an aversion from him, who applies to it, as prevents his having any influence upon us; or engages us in to careful an attention to the grounds, upon which we formed our judgment, as fixes us in the resolution not to alter it. But when all passes under the appearance of good humour-when only muth and pleafantry are exerted against us, we neither contract that hatred tow nels those, by whom we are thus treated, which will be our fecurity from any bad impresfions they can make upon us; nor are we excited to any examination of our principles, that can confirm us in them. The freedom which our companions use, in sporting with what we have hitherto reverenced, will tempt us to conclude, that its importance is far from being obvious; nor, indeed, can it fail, unless our minds have a more than ordinary firmness, to raite at length fome doubt in us, whether we have not been too fanciful or too credulous. And as

" The woman, who deliberates, is loft," we may fear the man will be to likewife, who fuffers himself to question, how well founded his feriousness is, merely because his affociates are continually deriding it.

Would you not, industriously, keep out of the way of those, who had power to torture you, and whom you knew ready to do it; if you would not be guided by them, but was determined to think and act, as your own reason should direct? Believe me, Sir, the scoffer should be as much flunned by the friend to virtue, as the inquilitor by the friend of truth. Whoever would attain or preserve a just sense of his duty, should have as little intercourse as

possible with those who would discourage fincerity-who would oppose it, either by the faggot, or the fair, \* of Smithfield. A very uncommon resolution is required to be fleady to the principles, from avowing which we must expect to be the heroes in a farce; though we need not apprehend that it will make us victims to the flames.

What your temper may be, I cannot affirm ; but I really think that, with great numbers, drollery is not only a species of perfecution, but the most dangerous kind ct it: they would as foon be fcourged, as mocked; be burthened with the cross, as h .bited with the purple. You can fearcely be enough aware of the risk you run from being jested with, as a visionary or a bigot-as one of much whim, or very little penetration:

But enough of the inducements, that vitious companions would be under to corrupt you, and the means they would ule to

The care you should take, in the choice of your company, will be the subject of but one letter more from Dean Bolton.

#### § 129. LETTER

All I have to add, on what has lately heen the subject of my correspondence with you, will be contained in this letter. I will not lengthen it, by apologizing for

Might I suppose you so fortified by a right disposition, a wife education, good finse, and a thorough knowledge of the reasonableness of the practice enjoined by your religion, that every attempt to corrupt your morals would miscarry; this huit, however, you would be fure to find from being much in the company of viticus men, that you would be less careful to become eminently virtuous-you would be less careful to sulfil your obligations, than you otherwise would be. While you faw others so much worse than yourself; you would not confider, how much better you ought to be, than you at present are-While their gross faults were avoided, you would not confider, how much there is in you, that ought to be amended.

We measure what is, in any way, commendable, by comparing our share of it with that of our neighbour: we do not re-

<sup>·</sup> Bartle lower fair, during which plays and faces were formerly, from morning to night, the entertainment of the populace.

gand in what degree, as to itself, we possess the good, but in how greater a degree it is good did by us, than by others.

Among a very ignorant people, a scholer of the lowest form will pass, both in their and his own judgment, for an adept.

You would, I am fure, pronounce of any gentleman, who kept mean company, there was little hope of his ever acting a put, which would greatly credit him: while he loved to be chiefly with those, who would own, and do homage to, his faperiority; you would think him by no means likely to cultivate much real worth. And were it to be faid, that you should make such a judgment of him, not because of ar, impression he would receive from his companiens, but because of the disposition he thewed in the choice of them; I should be glad to know, how that man mu't be thought affected towards religion and virtue, who could be willingly prefent, where he was fure, that they would be grossly depreciated. Whoever could bear a disparagement of them, must have so litthe fenfe of their worth, that we must justly concli le him ill prepared for refifting the attempt, to deprive them wholly of their refluence upon him. And, therefore, we 1 av as fully determine, from the disposition evidenced by him who keeps bud company, what his morals will at length b, is we can determine from the turn of rand, discovered by one who keeps mean company, what his figure in the world is hiely to be.

Those among us, whose capacities qualife them for the most considerable attainment-who might raife themselves to an equality with the heroes in literature of the last century, sit down contented with the superiority they have over their contemporaries-acquiesce in furnishing a here specimen of what they could do, if their genius were roused, if they were to exert their abilities. They regard only the advantage they possess over the idle and illiterate, by whom they are furrounded; and give way to their eafe, when they may take it; and yet appear as confiderable in their times, as the learned men, we most admire, did in their respective ages.

How many could I mention, to whom nature has been most liberal of her endowments, who are barely in the list of authors, who have only writ enough to shew much honour they would have done their country, had their application been called out, and if their names must have

been no better known than those of their acquaintance, unless their diligence had equalled their capacity.

What is thus notoriously true of literary desert, is equally so of moral: the persons, to whom we allot a greater share of it, than has long been found in any in their stations, how have they their sense of right with-held from exerting itself, by the sew they meet with disposed to animate them to any endeavour towards correcting the general depravity—by the connections they have with such numbers, whose rule is their inclination—by that utter disregard to duty, which they see in most of those, with whom they have an intercourse.

Alas! in the very best of us, a conviction of what becomes us goes but a little way in exciting us to practife it. Solicitations to be less observant of it are, from some or other quarter, perpetually offering themselves; and are by no means likely to be withstood, if our resolutions are not strengthened by the wise counsels and correspondent examples of our associates.

"Behold! young man—You live in an age when it is requisite to fortify the mind by examples of constancy."

This *Tecinis* mentions as the speech of the admirable *Ibrajca* to the quastor, sent to tell him, he must die; and by whom Le would have it remarked, with what composure he died.

Nor is it only when our virtue endangers our life, as was then the cate, that such examples are wanted. Wherever there is a prevailing corruption of manners; they who would ac, throughout the becoming part, must be animated to it by what they hear from, and fee in, others, by the patterns of integrity, which they have before them.

We are easily induced to judge some deviation from our rule very excusable; and to allow outselves in it: when our thoughts are not called off from our own weakness and the general guilt: but while we are conversant with those, whose conduct is as unsuitable, as our own, to that of the multitude; we are kept awake to a sense of our obligations—our spirits are supported—we fiel the courage that we bebold—we see what can be done by such as thate our frail nature; and are as share our frail nature; and are as shared to waver, where they persever.

Arificile confiders friendship as of three kinds; one arifing from virtue, another from pleasure, and another from interest; but justly determines, that there can be no

true friendship, which is not founded in virtue.

The friendship contracted from pleasure, or profit, regards only the pleasure or profit obtained thereby; and ceafes, when these precarious motives to it fail: but that, to which virtue gives birth, not having any accidental cause-being without any dependence on humour or neterellarifing wholly from intrinsic worth, from what we are in ourselves, never sluctuates, operates fleadily and uniformly, remains firm and uninterrupted, is lasting as our lives. That which is the effected andification of a friend, should be the chief recommendation in a companion. If. indeed, we have any concern for real worth; with whom should we be more desirous to converse, than with those, who would accompany us, and encourage us, in the purfuit of it.

The fame writer, mentioning the use, that filends are of to us in every part of life, remarks the benefit, which young men find from them to be—" That they keep " them in their duty."

Had he thought, that any thing could have been urged more in behalf of friend-fhip; he, undoubtedly, would have observed it. And when such is the language of to able an instruction, and of one who guided himself in his instructions only by the certain, the present advantage, that would attend a conformity to them; the lesson we have here for the choice of company mad appear worthy the notice even of those, who will have no other guides, but reason and nature.

If to keep us fleady to our duty be the b. fl office, that can be done us—If they, who are our friends, will be thus ferviceable to us—If the virtuous alone can be our friends, our converfation flould be chiefly with the virtuous; all familiarity with the virtuous flould be avoided; we flould confider those, who would deftor our virtue, as our enemies—our very world enemies, whilft endeavouring to deprive upof the greatest blessing, that it is in our power to obtain.

Dean Bolton.

### § 130. On Intemperance in Eating. SECT. I.

This respects the quantity of our food, or the kind of it: if, in either of these, we have no regard to the hurt it may do us, we are guilty of intemperance.

From transgressing in the quantity of our food, a speedier mischief ensues, than

from doing so in the quality of it; and therein we never can transgress, without being directly admonished of it, by our very constitution. Our meal is never too large, but heaviness comes on—the load on our stomach is our instant tormentor; and every repetition of our fault a caution to us, that we do not any more thus offend. A caution, alas, how unheeded by us!—Grammed like an Englishman, was, I find, a proverbial expression in Erasmu's days—above two hundred years ago.

An error birely in the kind of our aliment gives us, frequently, no prefert alarm; and, perhaps, but a very flight one, after we have, for fome years, continued in it. In the vigour of youth, fearce any thing we cat appears to difagree with us; we gratify our palate with whatever pleafes it; feeling no ill confequence, and therefore fearing none. The inconveniences, that we do not yet find, we hope we flall always escape; or we then propose to ourfelves a restraint upon our appetite, when we experience the bad essents of indulging it.

With respect to the quantity of our food; that may be no exacts in one man, which may be the most blameable in another: what would be the height of gluttony in us, if of a weak and tender frame, may be, to perions of much fironger conflitution, a quite temperate meal. The fame proportions of food can, likewife, never fuit fuch, as have in them dispositions to particular difeafes, and fuch, as have no evils of that nature to guard against: nor can they, further, fuit those, who are emp'oyed in hard labour, and those, who live wholly at their ease-those, who are frequently stirring and in action, and those, whose life is fedentary and inactive. The fame man may, also, in the very same quantity, be free from, or guilty of, excelas he is young or old-healthy or discased - is he accultoms his body to fatigue, or to repose.

The influence that our food has upon our health, its tendency to preferve or to impair our confliction, is the measure of its

temperance or excess.

It may, indeed, so happen, that our diet shall be, generally, very sparing, without allowing us any claim to the virtue of temperance; as when we are more desirous to save our money, than to please our palates, and, therefore, deny ourselves at our own table, what we eat with greediness, when we feed at the charge of others, as,

likewife, when our circumstances not permitting us, ordinarily, to indulge our appetite, we yet fet no bounds to it when we have an opportunity of gratifying it.

He is the temperate man, whose health directs his appetite—who is best pleased with what best agrees with him-who ests not to gratify his tafte, but to preterve his life-who is the same at every tible as at his own-who, when he featls, 1, not cloyed; and fees all the delicacies before him, that luxury can accumulate, vet preferves a due abstinence amidst

The rules of temperance not only oblige us to abhain from what now does, or what we are fure joon well, hurt us: we offend agual them, when we avoid not whatever has a probability of being huntful to us .-They are, further, transgressed by too great nicety about our food-by much folicitude and eagerness to procure what we most relish-by frequently eating to sati-

We have a letter remaining of an heathen, who was one of the most eminent persons in an age distinguished by the great men it produced, in which he expresses how uneasy it made him, to be among those, who placed no small part of their happiness in an elegant table, and who filled themselves twice a day.

In thus describing temperance, let me not be understood to censure, as a failure therein, all regard to the food that best Pleafes us, when it is equally wholesome with other kinds-when its price is neither unfurtable to our circumstances, nor very great-when it may be conveniently procured-when we are not anxious about itwhen we do not frequently feek after itwhen we are always moderate in its use.

To govern our appetite is necessary; but, in order to this, there is no necessity, that we should always mortify it—that we should, upon every occasion, consider what is least

agreeable to us.

Life is no more to be passed in a confluit self-denial, than in a round of sensual enjoyments. We should endeavour, that it may not be, at any time, painful to us to deny ourselves what is improper for us; and, on that as well as other accounts, it is most fitting that we should frequently practice self-denial-that we should often forego what would delight us. But to do this continually, I cannot suppose required et us; because it doth not seem reasonable to think that it should be our duty wholly to debar ourselves of that food which our palate is formed to relish, and which we are fure may be used without any prejudice to our virtue, or our health.

Thus much may funce to inform us, when we incur the guilt of eating inten . perately.

The diffustives from it, that appear of

greatest weight, are these: It is the groffest abuse of the gifts of

Providence. It is the vilest debasement of ourselves.

Our bedies owe to it the most painful difeafes, and, generally, a speedy decay.

. It frequently interrupts the use of our nobler faculties, and is ture, at length, greatly to enfecble them.

The straits to which it often reduces us, occasion our falling into crimes, which would, otherwise, have been our utter abhorrence. Dean Bolton.

## § 131. On Intemperance in Eating. Sест. II.

To confider, first, excess in our food as the groffest abuse of the gifts of Providence.

The vast variety of creatures with which God has replenished the earth-the abundant provision which he has made for many of them-the care which he has taken that each species of them should be preferved-the numerous conveniences they administer to us-the p'casing change of food they afford us-the fuitable food that we find, among their different kinds, to different climates, to our different ways of life, ages, constitutions, distempers, are, certainly, the most awakening call to the highest admiration, and the gratefullest fense of the divine wisdom and goodness. This sense is properly expressed, by the due application of what is to graciously afforded us-by the application of it to those purpoles, for which it was manifestly intended. But how contrary hereto is his practice, who lives as it were but to cat, and confiders the liberality of Providence only as catering for his luxury! What mischief this luxury doth us will be prefently considered; and, in whatsoever degree it hurts us, we to such a degree abuse our Maker's bounty, which muft defign our good-which, certainly, is directed to our welfare. Were we, by indulging our appetites, only to make ourselves less fit for any of the offices of life, only to become less capable of discharging any of the duties of our station, it may be made evident,

that, in this respect likewise, our use of the Divine beneficence is quite contrary to what it requires. He who has appointed us our busness here—who, by our peculiar capacities, has signified to us our proper employments, thereby discovers to us how far merely to please ourselves is allowed us; and that, if we do so, to the hindrance of a nobler work, it is opposing his intention; it is descating the end of life, by those very gifts, which were bestowed to carry us on more chearfully towards it.

When my palate has a large scope for its innocent choice-when I have at hand what may most agreeably recruit my strength, and what is most effectual to preserve it; how great ingratitude and baseness shew themselves in the excess. which perverts the aim of so much kindnefs, and makes that to be the cause of my forgetting with what view I was created, which ought to keep me ever mindful of it! As the bounty of Heaven is one of the strongest motives to a reasonable life, how guilty are we if we abuse it to the purposes of a fenfual! Our crime must be highly aggravated, when the more conveniences our Maker has provided for us, we are fo much the more unmindful of the task he has enjoined us-when by his granting us what may fatisfy our appetite, we are induced wholly to confult it, and make ourfelves flaves to it.

Let intemperance in our food be next confidered, as the shamefullest debasement of ourselves.

Life, as we have been wifely taught to confider it, is more than meat. Man could not be fent into the world but for quite different purpoles, than merely to indulge his palate. He has an understanding given him, which he may greatly improve; . many are the perfections, which he is qualined to attain; much good to his fellowcreatures he has abilities to do: and all this may be truly faid of all mankind; all of us may improve our reason, may proceed in virtue, may be useful to our fel-low-creatures. There are none, therefore, towhom it is not the foulest reproach, that their belly is their God-that they are more folicitous to favour, and thereby to strengthen, the importunity of their appetite, than to weaken and master it, by frequent refistance and restraint. The reasonable being is to be always under the influence of reason; it is his excellence, his prerogative, to be so: whatever is an hindrance to this degrades him, reflects on him difgrace and contempt. And as our

reason and appetite are in a constant oppofition to each other, there is no indusging the latter, without lessening the power of the former: If our appetite is not governed by, it will govern, our reason, and make its most prudent suggestions, its wiselt counsels, to be unheeded and slighted.

The fewer the wants of any being are, we must consider it as so much the more persect; since thereby it is less dependent, and has less of its happiness without itself. When we raise our thoughts to the Beings above us, we cannot but attribute to the higher orders of them, still farther removes from our own weakness and indigence, till we reach God himself, and exempt him from wants of every kind.

Knowing thus what must be ascribed to natures superior to ours, we cannot be ignorant, what is our own best recommendation; by what our nature is raised; where-

in its worth is diffinguished.

To be without any wants is the Divine prerogative; our praise is, that we add not to the number of those, to which we were appointed—that we have none we can avoid—that we have none from our own miscondust. In this we attain the utnost degree of perfection within our reach.

On the other hand, when fancy has multiplied our neceffities—when we owe I know not how many to ourfelves—when our eafe is made dependent on delicacies, to which our Maker never subjected it—when the cravings of our luxury bear no proportion to those of our natural hunger, what a degenerate race do we become! What do we but fink our rank in the creation.

He whose voraciousness prevents his being fatisfied, till he is loaded to the full of what he is able to bear, who eats to the utmost extent of what he can eat, is a mere brute, and one of the lowest kind of brutes; the generality of them observing a just moderation in their food-when duly relieved seeking no more, and forbearing even what is before them. But below any brute is he, who, by indulging himfelf, has contracted wants, from which nature exempted him; who must be made hungry by art, must have his food undergo the most unwholesome preparations, before he can be inclined to tafte it; only relishing what is ruinous to his health; his life supported by what necessarily shortens it. part this, which, when acted by him, who has reason, reflection, foresight given him, wants a name to represent it in the full of its deformity. With privileges fo far be-

yon

sand those of the creatures below us, how great is our baseness, our guilt, if those endowments are so far abused, that they ferve us but to find out the means of more gofsly corrupting ourselves!

I cannot quit this head, without remarking it to be no flight argument of the difhonour we incur by gluttony, that nothing is more carefully avoided in all well-bred company, nothing would be thought by such more brutal and rude, than the difcovery of any marks of our having eat intemperately-of our having exceeded that proportion of food, which is proper for our nourithment.

Dean Bolton.

## § 112. On Intemperance in Eating. SECT. III.

To confider, further, excess in our food as hastening our death, and bringing on

as the most prinful diseases.

It is evident, that nothing contributes nore to the preservation of life, than tem-

Experience proves it to be actually so; and the structure of the human body shews that it must be so.

They who describe the golden age, or the age of innocence, and near a thousand years of life, represent the customary food cf it, as the plained and most simple.

Whether animal food was at all used before the flood, is questioned: we certainly and, long after it, that Lat's making a feath is described by his baking unleavened

Abraham entertained those, whom he confidered of such eminence, as that, to use the words of scripture, "he ran to " meet them from the tent door, and bowed " himself to the ground;" Abraham's entertainment, I fay, of persons thus honoured by him, was only with a calf, with cakes of meal, with butter and milk.

G.deon's hospitality towards the most illustrious of guests shewed itself in killing a kid of the goats; and we read that Jeffe looked upon this to be a present, which his Prince would not disdain.

Perhaps my reader would rather take a meal with some of the worthies of profane history, than with those, whom the sacred has recorded.

I will be his introducer. He shall be a guest at an entertainment, which was, certainly, designed to be a splendid one; since it was made by Achilles for three such considerable persons, as Phanix, Ajax, and Unffer; persons, whom he himself repre-

fents as being, of all the Grecian chief. those whom he most honours.

He will eafily be believed herein; for this declaration is fcarce fooner out of his mouth, than he and his friends, Patrollus and Automidon, severally employ themselves in making up the fire-chopping the meat, and putting it into the pot-Or, if Mr. Pope be allowed to describe their tasks on this occasion.

-Patroclus o'er the blazing fire Heaps in a brazen vale three crimes intile : The brazen vale Automedon fuftams, Which flift of porket, fleep, and gout contains : Adulles at the genial feast profides, The parts transfixes, and with fkill divides. Mean while Patroches (weats the fire to raife; The tent is brighten'd with the rifing blize.

But who is dressing the fish and fowled This feath, alas! furnithes neither. The poet is fo very bad a catarer, that he provides nothing of that kind for his h-roes on this occasion; or, on another, even for the luxurious Phwacians. Such famples thefe of Homer's entertainments, as will gain entire credit to what is faid of them in Plutarch, "that we must rise almost hungry " from them." Symp. Lib. II. Qu. 10.

Should the blind bard be confidered as a stroller-keeping low company, and therefore, in the feafts he makes for the great, likely more to regard the quantity of the food which he provides for them, than the kind of it: would you rather be one of Firgu's guels, as he lived in an age when good eating was understoodconverfed with people of rank-knew what dishes they liked, and would therefore not fail to place fuch before them?

You shall then be the guest of the Roman poet-Do you chuse beef or muttonwould you be helped to pork, or do you prefer goat's flesh? You have no flomach for fuch fort of diet. He has nothing elfe for you, unless Polyphemus will spare you a leg or an arm of one of the poor Greeks ho is eating; or unless you will join the halfdrowned crew, and take a bit of the stags, which are dreffed as foon as killed; or unless you are a great lover of bread and apples, and in order to fatisfy your hunger, will, in the language of Afcanius, cat your table.

Dido, indeed, gives Aneas and his companions a most spleudid entertainment, as far as numerous attendants conflitute one; but the poet mentions nothing, that the heroes had to eat, except bread; whatever else was got for them he includes in the general term Daper; which, in other parts of the Aneid, is applied to all the coarfe

fare already mentioned

As the luxury of mankind increased, their lives shortened: The half of Alva-ham's age became regarded as a stretch, for beyond the customary period. So in profane history we find, that when the arts of luxury were unknown in Rome, its seven kings reigned a longer term, than, afterwards, upon the prevalency of those arts, was compleated by its first twenty emperiors.

Such perfons, indeed, among the ancients, whose precepts and practice most recommended temperance in diet, were eminent instances of the benefit accruing from it, in the health preserved, and long

life attained by it.

Gurgias lived 107 years.

Hippocrates reached, according to some writers, his 104th year, according to others

his rooth.

Pythogoras, of whom it was observed, that he was never known to cat to satiety, lived to near 100 years; if Jamblicus may be credited. D. Laertius says, that according to most writers he was, when he lost his life, in his 90th year. Out of his school came Empedocles, who lived, as some say, to 109; and Xenophilus, who lived to above 105.

Zeno lived to 98: his disciple and suc-

ceffor Cleanthes to 99.

Diegenes, when he died, was about 90.

Plato reached his 81st year; and his fol-

lower Xenocrates his 84th.

Lycurgus, the lawgiver of the Lacedamonians, who, when they obeyed his laws, were not less diffinguished by their absterniousness than by their fortitude, lived to 85; and their King Agastans took pay of Tachos at 80; afterwards attisted Neciangles; and, having established him in his kingdom, died, on his return to Sparta, at 84.

Cato, the Cenfor, is introduced by Tally representing himself as, when in his 84th year, able to affish in the senate—to speak in the assembly of the people, and to give his friends and dependents, the assistance

which they might want from him.

Lucian introduces his account of longlived persons, with the observation, that it might be of use, as shewing that they, who took the most care of their bodies and minds, lived the longest, and enjoyed the best health.

To come nearer to our own times; the discovery of a new world has confirmed the

observations furnished by the old; that in those countries, where the greatest simplicity of diet has been used, the greatest

length of life has been attained.

Of the ancient inhabitants of Virginia we are told, "That their chief dish was mara, and that they drank only water: That their chiefses were few, and chiefly proceeded from excessive heats or colds." Asl. Geog. vol. v. p. 711. "Some of them lived to upwards of 200 years." Purchas. vol. v. p. 946. "The sobrlety of the ancient inhabitants of Florida lengthened their lives in such fort, that one of their kings, says Morgues, told me, he was three hundred years old; and his father, whom he then shewed me alive, was fifty years older than himself." Purchas. vol. v. p. 961.

And if we now fearch after particular inflances of persons reaching to extreme old age, it is certain that we must not resort for them to courts and palaces; to the dwellings of the great or the wealthy; but to the cells of the religious, or to cottages; to the habitations of such, whose hunger is their sauce, and to whom a wholesome meal is a sufficiently delicate

one.

Martha Waterhouse, of the township of North Bierley in Yorkshire, died about the year 1711, in the 104th year of her age; her maiden sister, Hister Jager, of the same place, died in 1713, in the 107th year of her age. They had both of them relast from the township of Bierley nigh sisty years. Abridgement of Phil. Trans. by Jones, vol. it. p. 2. 115.

Dr. Harvey, in his anatomical account of T. Pair, who died in the 153d year of his age, tay—that, if he had not changed that and air, he might, perhaps, have lived a good while longer. His diet was old cheese, milk, coarse bread, small beer,

and whey

Dr. T. Robinson says of H. Jenkins the fisherman, who lived 169 years, that his

diet was coarle and four.

Dr. M. Lifter, having mentioned feveral old persons of Craves in Yorkspire, lays—The food of all this mountainous country is exceeding coarse. Abr. of Phil. Trasp by Isowi HORP, vol. iii. p. 307, &c.

Buchanan speaks of a fisherman in his

Buchanan speaks of a sisherman in pu own time, who married at 100, went off in his little sishing boat in the roughest weather at 140, and at last did not die of any painful difference, but merely wors out by age. Rev. Scot. Hist. lib. is ad finPlutarch mentions our countrymen is

in his time, growing old at 120. To account for this, as he does, from their climate, teems less rational than to ascribe it to their way of living, as related by Diotions Seculus, who tells us—that their diet was simple, and that they were utter strangers to the delicate fare of the wealthy.

In our feveral neighbourhoods we all of us fee, that they who least confult their appetite, who least give way to its wantonnet, or voraciousness, attain, generally, to years far exceeding theirs, who deny inemselves nothing they can relish, and concentrally procure.

Haman life, indeed, being exposed to so many thourand accidents, its end being halened by such a prodigious diversity of means, there is no care we can take of turishes, in any one respect, that will be our effectual preservative; but, allowing low catualties and difference in constitutions, we every where perceive, that the age at those, who neglect the rules of tempeture, is of a much thorter date than buts, by whom these rules are carefully belowed.

Ind if we attend to our structure, it ad thence be evident that it cannot be activate.

Dean Bolton.

# § 133. On Intemperance in Eating. S & C T. IV.

The human body may be confidered as emposed of a great variety of tubes, in such their proper fluid is in a perpetual boton. Our health is according to the endition, in which these vessels and this unities.

The ruptured, or too relaxed, or too rid flate of the one; and the redundancy of deficiency, the refolved or viseid, the excent or the puttefcent slate of the other, a disorder in our frame. Whether our tees be in the quantity or quality of alient, we must suffer by it, in some or other slates again.

By the flomach being frequently loaded, at fulness of the vessels ensues, by which e fibres are weakened—the circulation comes languid—perspiration is lessened obstructions are formed—the humours come visited and soon putrid.

In the progress to this last state, different seafes take place, according to the geneI strength or weakness of the solids, or cording to the debility of some particular gan; according to the constitution of the search according to our rest or motion; aciding to the warmth in which we keep, or

the cold to which we expose ourselves,

Excess may be in the quantity of our food, not only when we eat so as to burthen the stomach; but, likewise, when our meals bear not a just proportion to our labour or exercise.

We are tempted to exceed in the quantity of our food, by the feafoning of it, or by the variety of it.

The flimulus of fauce ferves but to excite a false appetite—to make us ent much more than we should do, if our diet were quite simple.

The effect is the fame, when our meal is composed of feveral kinds of food: their differentialities are so many provocations to ear beyond what will fairly our natural want.

And thus, tho' we were never to touch a difli, which had its relith from any the leaft unwholefome ingredient; tho' our diet were the plained, and nothing came ever before us, that had any other elegance than from the feafon, in which it was brought to our table, or the place in which it appeared there; we yet might greatly fluit ourfelves; we might be as intemperate, and as fpeedily deflroy ourfelves by our intemperance with roals and boiled meat, as with fricasfees and ragouts.

The quality of our aliment may be mischievous to us, either as universally prejudicial to the human confitution, or as unsuitable to our own;—unsuitable to the weakness of our whole frame, or to some defect in the formation of a part of it, or to that taint we have in us, from the diseases or vices of our parents.

We may be greatly prejudiced by the kind of our food, in many other ways; and we, ordinarily, are so, by not regarding what agrees with the climate in which we are—what with the country we inhabit—what with the manner of life we lead.

From the great heat that spices occasion, and from the length of time they continue it, we may truly say, that their copious and daily use in sood must be injurious to all constitutions.

So for falted meats, the hurt that may be feared from them, when they are our conflant meals, is easily collected, from the irritation they must cause in their passage thro' the body—from the injury that must hence ensue to its siner membranes—from the numerous acrid particles that must hereby be lodged in the pores of the skin, the obstructions which this must produce, and

I 3 th

the large quantity of perspirable matters which will, therefore, be detained in, and, confequently, greatly foul the blood --from the dreadful symptoms, that attend a high degree of the feury; the relief of which by vegetable, by fresh meat, by liquids fittest to remove the effects of a marinic cause, plainly shows them to be owing to tuch a caute.

Whatever has the haut-gout may be looked upon as confiling of fuch active particle, as cannot but in the our frequent eating of it very dangerous -- as mult render it much fitter to be used as physic,

than as food.

From a mixture of meats, each of them wholefome in its kind, a bid chyle may be formed; and the rule in physic is, that an citor in the first digestion will not be mended in the fecons.

A delicate conditution is, speedily, either quite deflroyed, or interoverably difordered, when the diet is not exactly adapted to it-is not fuch as lead uritates, as leaft beats, as is most easily concocted, as foonest passes out of the body, and leaves the fewest impurities behind it there.

The weakness, or the wrong form tion, of a part of our frame is generally, a call to the nimoit circ about our food; and as our observing this may extend out life, even under either of those circumstances, as far as we could have hoped it would have been prolonged, if we had been without any fuch defect; fo our failure therein may, in a very thort time, be fatal to us.

The most simple aliment will, perhaps, be unable to hinder our feeling, in some degree, the bad consequences of the discales, or irregularities of our parents: but how far they thall affect us, depends, very often, in a great measure, upon ourselves.

They may neither much contract the term, nor much interrupt the comfort, of life, if we will make hunger our fauce, and, in every meal we eat, regard the diftempers we inherit; but early, alas! and heavy will our lufferings be, our years few and full of uneafiness, when, without any fuch regard, our taste is directed by that of the found and athletic-when the folicitations of appetite lead us to forget the reafons we have to restrain it.

In this climate and country, where, for fo many months in the year, the cuticular discharges are so small-where the air so often, To suddenly, and to so great a degree, varies its equilibrium, and where our

vessels, therefore, are as frequently, as ful. denly, and as greatly contracted or expan. ded-where fogs fo much abound, and fo much contribute to impair the elasticity of our fibres-to hinder the proper both fecretions and excretions-to destroy the due texture of the blood, and vitiate our whole habit, it must be obvious, what we have to fear, when our aliment hurts us in the fame way with our air-when the one heightens the diforder, to which we are exposed by the other.

An inattention to the nutriment fit for us, when we feldom use any exercite, or, always, very gentle-when our life is te. dentary, either from the bufiness by which we maintain outletves, or from our love of case, or from our literary pursuits, is per haps as fatal to us, as almost any instance of wrong conduct, with which we can be chargeable. By high feeding and little or no exercise, we are not only exposed to the most dangerous diseases, but we make all difeates dangerous: we make those fo, which would, otherwife, be flight ar! eafily removed-we do not only fully d ourtelves to the particular maladies, which have their tife wholly from luxury, but t render ourselves more liable to those, which have no connexion with it. We, then, are among the first, who are feized with the diffempers, which the conflitution of the air occasions-We are most apt to receive all those of the insectious kind-We take cold whence we might leaft fear it; and find its immediate confequence, a maignant or an inflammatory fever, or iome other disease equally to be dreaded.

A writer in physic of the first rank afferts that our diet is the chief cause of all our difeafes-that other causes only take effect from the disposition of our body, and to flate of its humours.

There is, I am perfuaded, much truth in this affertion. For, as in countries, where the inhabitants greatly indulge themselves few die of old age; fo where a strict temperance is observed, few die but of old age We find, likewife, persons, as Socrater of instance, who, by their regular living, hare, preserved themselves from the infection of a difease, that has made the cruellest havock around them. We perceive, also, the no storers of health usually attempting its recovery by some or other discharge, by drain ing the body in some way or other. evacuation is the cure of our disorders, may justly think, that repletion is their me

general cause. But if this may admit of a dispute, which, I think, it hardly can do; yet is it on all hands agreedthere are feveral distempers, to which few are subject but for want of felf-denial in themselves, or their ancestors-that most of these distempers are of the painfullest fort, and that some of them are such as we for years lament, without the least hope, of recovery, and under an absolute certainty,. that the longer they continue upon us the more grievously they will distress us; the acuteness of our sufferings from them will be constantly increasing. Dean Bolton.

# § 134. On Intemperance in Eating. Sect. V.

Let me, also, consider intemperance in what we eat, as frequently interrupting the use of our nobler faculties; and sare, at length, greatly to enseeble them. How long is it before we are really ourselves, atterour stomach has received its full load! Under it, our senses are dulled, our memory clouded, heaviness and stupidity posses, atterour stomach has seeived in self-toward, the wind that its full vigour. The man is not seen to advantage, his real abilities are not to be discovered, till the effects of his gluttony are temoved, till his constitution has thrown off the weight that oppressed it.

The hours preceding a plentiful meal, or those, which succeed its entire digestion, are, we all find, such, in which we are fittest to transact our affairs, in which all the acts of the understanding are best exerted.

How small a part of his time is, therefore, the luvarious man himself! What between the length of his repasts—the space during which he is, as it were, stupised by his excess in them—the many hours of steep that he wants to refresh, and of exercise to strengthen him; within how small a compass is that portion of his life brought, in which his rational powers are fitly displayed!

In the vigour of youth, in the full firength of manhood, an uncontrouled gratification of appetite allows only short intervals of clear apprehension, of close attention, and the free use of our judgment: but if either through an uncommonly firm constitution, or by spending all those hours in exercise, which are not passed at our tables or in our beds, we are enabled notwithstanding such gratification, to reach a more advanced age; what a melancholy

spectacle do, we then frequently afford! our memory, gur wit, our sense almost wholly destroyed—there remains scarce allowing a conjecture to be formed thence, what they have been—the ruins of the man hardly furnishing a trace of his former ornaments.

AND RELIGIOUS:

Most of those diseases, which luxury brings upon our bodies are, indeed, a gradual impairing of our intellectual faculties: the mind shares the disorder of its companion, acts as that permits, discover a greater or less capacity, according to the other's moreor less perfect state. And as the body, when dead, is totally unfit to be acted upon by the foul; so the nearer it is brought to death by our gluttony, the more we increase its unstructs to display, by how noble a principle it is actuated—what the extent of those abilities is, which the bounty of our infinitely good and powerful Greator has afforded us.

It only remains that I confider, how ruinous the excess I am censuring is to our fortune; and to what a mean dependence, to what vile dishonest practices, it often reduces us.

There are few estates, that can bear the expence, into which what is called an elegant table will draw us. It is not only the price of what is set before us, that we are here to regard, but the waste that the ministers to our luxury occasion—their rapine—the example they set to all, who are concerned in our affairs, and the disqualissication, under which we put ourselves to look into them.

He who is determined to please his palate at any price, infects not only those about him with his extravagant turn; but gives them opportunities of defrauding him, which are seldom neglected. His house is the resort of the worst of mankind; for such they always are, whom a well-spread table assembles; and who, by applauding the profuseness that seeds them by extolling; as proofs of a refined understanding, what are the sures marks of a weak one, or rather of the total want of one, hurry on the ruin, that was, otherwise, with too much speed advancing.

But small is their number, whom it concerns to be told, how a large fortune may be reduced: how the making any nust be hindered, is the argument, in which the generality are interested. This hindrance is the fure, the undeniable confequence of giving way to our appetite. I have already observed, what hurt our very capacity often receives from it—to what a degree

our intellect is at length impaired by it: I may, further, truly represent it as always indisposing us to that diligence, to that application, without which no science is to be mastered, no art learned, no business well conducted, no valuable accomplishment, of any kind, obtained.

Let us have our support, and seek the increase of our store, from our trasfick, or from our labour; it is plain, that he who indulges himself less than we do, as he needs less to maintain him than we do, so he can fell, or can work, cheaper, and must, therefore, make those advantages, which we are not to expect; must by his leffer gains be, at length, enriched, while we, with our larger, shall be in a constant poverty.

A ftill worse effect of our luxurious turn I reckon those mean and base practices, to which it tempts us. When the plain meal, that our feanty circumstances, after a liberal and expensive education, furnish, cannot content us; and we must either live at another's table, or provide a chargeable entertainment at our own; we descend to the vileit flattery, the most fervile complaifance; every generous fentiment is extinguithed in us; we foon become fully convinced, that he, who will often eat at another's cost, must be subject to another's humours, must countenance him in his follies - and comply with him in his

Let his favour at length exempt us from so dishonourable an attendance, by furnishing us with the means of having plenty at home: yet what is plenty to the luxurious? His wantonnels increases with his income; and, always needy, he is always dependent. Hence no sense of his birth or education, of honour or conscience, is any check upon him; he is the mean drudge, the abandoned tool of his feeder, of whoever will be at the charge of gratifying his palate.

So, if our trade be our maintenance, as no fair gains can answer the expence, which what is called good eating occasions, we are foon led to indirect artifices, to fraudulent dealing, to the most tricking and

knavith practices.

In a word, neither our health nor life, neither our credit nor fortune, neither our virtue nor understanding, have any security but from our temperance. The greatest bleffings, which are here enjoyed by us, have it for their fource.

Hence it is that we have the fullest use of our faculties, and the longest.

Hence it is, that we fear not to be poor, and are fure to be independent.

Hence discaso and pain are removed from us, our decay advances infenfibly, and the approaches of death are as gentle as those of fle p.

Hence it is we free ourselves from all temptations to a bate or ungenerous ac-

Hence it is that our passions are calmed, or lufts subdued, the purity of our heart. preferved, and a virtuous conduct through. out, made easy to us.

When it is made fo-when by the eate, which we find in the practice of virtue, we become confirmed therein-render it habitual to us; we have then that qualification for happinels in a future state, which, as the best title to it, affords us the best grounds to expect it. Dean Bolton.

### § 135. On Intemperance in Drinking. SECI 1.

The arguments against drunkenness, which the common reason of mankind suggeils, are thefe-

The contemptible figure which it gives

The hindrance it is to any confidence being repoted in ut, to far as our fecreey is concerned:

The dangerous advantage, which it affords the crafty and the knavish over us:

The bad effects, which it hath on our

The projudice, which our minds receive from it:

Its disposing us to many crimes, and preparoig us for the greatest:

The contemptible figure, which drunkennels gives us, is no weak argument for

avoiding it. Every reader has found the Spartans mentioned, as inculcating fobriety on their children, by exposing to their notice the behaviour of their flaves in a drunken fit. They thought, that were they to apply wholly to the reason of the youths, it might be to little purpole: as the force of the arguments, which they used, might not be fufficiently apprehended, or the impreffion thereof might be foon effaced: but when they made them frequently eye-witnesses of all the madness and absurdities, and at length the perfect senselessincis, which the immoderate draught occasioned;

the idea of the wile change would be so fixed in the minds of its beholders, as to render them utterly averse from its cause.

And may we not juttly conclude it to be from hence, that the offspring of the pertons who are accustomed thus to disguise themselves, often prove remarkably sober? They avoid, in their riper years, their paread's crime, from the detellation of it, which they contracted in their earlier. As to most other vices, their debasing circumbances are not fully known to us, till we have attained a maturity of age, nor can be then, till they have been duly attended to but in our very childhood, at our first behelding the effects of drunkenness, we are throck with aftonishment, that a reasonable being should be thus changed-should be induced to make himfelf fuch an object of contempt and fcorn. And, indeed, we must have the man in the utmost contempt, whom we hear and fee in his progress to excef; at first, teazing you with his contentiousness or impertmence-millaking your meaning, and hardly knowing his own-then, faultering in his speechenable to get through an entire fentencehis hands trembling—his eyes fwimming his lega too feeble to support him; till, at higth, you only know the human creature by his thape.

I cannot but add, that were one of any fende to have a just notion of all the filly things he fays or does, of the wretched appearance which he makes in a drunken fit, he could not want a more powerful argument against repeating his crime.

But as none of us are inclined to think all of ourfelves, we none of us will know, how far our vices expose us; we allow them excuses, which they meet not with from any but ourselves.

This is the case of all; it is particularly so with the drunken; many of whom their shame would undoubtedly reform, could they be brought to conceive, how much they did to be assamed of.

Nor is it improbable, that it is this very confideration, how much drunkenness contributes to make a man the contempt of his wife—his children—his servants—of all his sober beholders, which has been the cause, that it has never been the reigning vice among a people of any refinement of manners, No, it has only prevailed among the rudeand savage, among those of groffer understandings, and less delicacy of sentiment. Crimes, as there are in all men, there must be in all nation; but the more

civilized have perceived drunkenness to be fuch an offence against common decency. fuch an abandoning one's felf to the ridicule and feoffs of the meanest, that, in whatever elfe they might transgress, they would not do it in this particular; but less e a vice of such a nature to the wild and oncultivated-to the flopid and undiffinguish ing part of mankind-to those, who had no notion of propriety of character, and decency of conduct. How late this vice became the reproach of our countrymen. we find in Mr. Camden's Annals. Under the year 1581, he has this observation-" The English, who hitherto had, of all the northern nations, thewn themselves the " least addicted to immoderate drinking, " and been commended for their fobriety. " first learned, in these wars in the Ne-" therlands, to swallow a large quantity " of intoxicating liquor, and to destroy " their own health, by drinking that of " others."

Some trace of our ancient regard to sobriety, we may seem still to retain, in our use of the term for ! which carries with it as great reproach among us, as Ono agus did among the Greeks.

There is a flort flory, in Rerefler's Memoirs, very proper to be mentioned under this head.

The Lord Chancellor (Jeffries) had now like to have died of a fit of the stone; which he virtually brought upon himself, by a furious debauch of wine, at Mr. Alderman Duncomb's; where he, the Lord Treasurer, and others, drank themselves into that height of frenzy, that, among friends, it was whispered, they had stripped into their shirts; and that, had not an accident prevented them, they had got upon a sign-post to drink the King's health; which was the subject of much derision, to say no worse.

Dean Bolton.

§ 136. On Intemperance in Drinking. SECT. II.

A fecond objection to drunkennels is, that it hinders any confidence being repoled in us, so far as our fecrefy is concerned.

Who can trust the man, that is not matter of himself? Wine, as it lesses out cartion, so it prompts us to speak our thoughts without reserve: when it has susticiently inflamed us, all the suggestions of prudence pass for the apprehensions of cowardice; we are regardless of consequences: our foresight is gone, and our fear with it.

Hete

Here then the artful person properly introducing the subject, urging us to enter upon it—and, after that, praising, or blaming, or contradicting, or questioning us, is soon able to draw from us whatever information he desires to obtain.

Our diferction never outlasts our sobriety. Failings which it most concerns us to conceal, and which, when we are ourselves, we do most industriously conceal, we usually publish, when we have drank to excels. The man is then clearly feen, with all the ill nature and bad qualities, from which his behaviour in his cooler hours, had induced hir most intimate friends to believe him wholly free. We must be lost to reflection, to thought, when we can thus far throw off our disguise. And what is it, but our thought and reflection, that can engage our fecrecy in any instance—that can ever be a proper check upon our discourse-that enables us to distinguish what we may ipeak, and on what we ought to be filent? Do we cease to be in a condition to hide the deformities in ourselves, which we most wish to have concealed? On what point, then, is it likely that we should be reserved? Whose secrets can be keep, who so foully betrays his own?

It may, thirdly, he alledged against drunkenness, that it gives the crafty and knavith the most dangerous advantage over us.

This vice puts us into the very circumflances, in which every one would wish us to be, who had a view to impole upon us, to over-reach us, or in any way to gain his ends of us. When the repeated draught has disordered us, it is then, that only by complying with our humour, and joining, to appearance, in our madness, we may be deluded into measures the most prejudicial to us, into fuch as are our own and our families utter undoing. It is then that our purse is wholly at the mercy of our company! we spend-we give-we lend-we What unhappy marriages have been concluded! What ruinous conveythen concluded! ances have been then made! How fecure foever we may apprehend ourselves from impositions of so very pernicious a nature; yet more or fewer we must have to fear from drunkenness, as the opportunities, which it gives, will conftantly be watched by all, who have any defign upon us: and if we are known frequently to disorder ourfelves, all in our neighbourhood, or among our acquaintance, who are of any terioulness and decency, will be fure to

avoid us, and leave us wholly to those, who find their account in affociating with us; who, while they can make us their property, will be, as often as we please, our companions.

A fourth argument against drunkenness is its bad effects upon our health. Every act of it is a fever for a time: and whence have we more reason to applehend one of a longer continuance, and of the worst confequence? Our blood thus stied, none can be sure where the disorder raised in it will be quieted, whether its inflammatory state will admit of a remedy: in several thousands it has been found incapable of any; and what has so frequently happened to others, may justly be considered as likely to befal us. By the same absurd reliance on a good constitution, through which they were deceived, we may be so likewise.

But supposing the mere fever fit wearing off with the drunken one; how fatal would it prove to be then seized with a distemper of the infectious kind, that was at all malignant! This has often been the case; and when it has been so, the applications of the most skilful have been entirely vann.

Let our intemperance have nothing inflantly to dread; for how thort a space can it be in such security? The young de bauchee soon experiences the issue of his misconduct—soon finds his food distrelished, his stomach weakened, his thrength decayed, his body wasted. In the flower of his youth, he often feels all the infirmities of extreme old age; and when not yet in the middle of human life, is got to the end of his own.

If we have attained to manhood, to our full vigour, before we run into the excess, from which I am diffuading; we may, indeed, possibly be many years in breaking a good constitution; but then, if a sudden flroke dispatch us not; if we are not cut off without the least leifure given us to implore the mercy of heaven; to how much uneafiness are we, generally, reservedwhat a variety of painful diffempers threat-All of them there is very little en us! probability we should escape; and under which foever of them we may labour, we shall experience its cure hopeless, and its severity the saddest lesson, how dear the purchase was of our former mirth.

There are, I grant, instances, where a long-continued intemperance has not prevented the attainment of a very advanced age, free from disorders of every kind. But then it is to be considered how rare

thefe

these instances are; that it is not perhaps, one in a thousand, who escapes thus; that of those, who do thus escape, the far greater part owe their prefervation to hard working, or to an exercise as fatiguing, as any of the more laborious employments. So that if either our frame be not of an unufual firmness, or we do not labour for our bread, and will not for our health; we cannot be of their number, who have fo much as a chance, that they will not shorten their lives by their excess. And when we have this chance, we are to remember, how very little we can promife ourselves from it. We are liable to all the difeates, which, in the ordinary course of things, are connected with intemperance; and we are liable to all those, from which even tobriety exempts not; but in this latter case, we have, by no means, the fame to hope with the fober, who are eafily recovered of what proves mortal to the intemperate.

Dean Bolton.

# 5 137. On Intemperance in Drinking. Secr. III.

To confider, fftkly, the unhappy effect of drunkenness upon our minds.

Every time we offend in it, we are full madmen, and then idiots: we first fav and do, a thousand the most ridiculous and extravagant things, and then appear quite void of fense. By annexing these constant inconveniences to drinking immoderately, it feems the defign of a wife Providence to teach us, what we may fear from a habit of it-to give us a foretalte of the miseries, which it will at length bring upon us, not for a few hours alone, but for the whole remainder of our lives. What numbers have, by hard drinking, fallen into an incurable diftraction! And who was ever for many years a fot, without destroying the quickness of his apprehension, and the strength of his memory? What mere drivellers have fome of the best capacities become, after a long course of excess!

As we drink to raise our spirits, but, by thus raising, we weaken them; so whatever fresh vigour our parts may seem to derive from our wine, it is a vigour which wastes them; which, by being often thus called out, destroys its source, our natural sancy and understanding, "Tis like a man's spending upon his principal: he may, for a season, make a sigure much superior to bis, who supports himself upon the interest of his fortune; but is sure to be undone, when the other is unhurt.

We meet with, as I have already obferved, inflances, where an extraordinary happinets of conflication has prevented as entire rain, even from a course of drunk ennels of many years continuance; but I much quellion, whether there are any inflances, that fuch a courle has not been remarkably prejudicial to a good capacity. From all the observations, which we can make on the human frame, it may be fairly supposed, that there are no sech inflances—that it is not reasonable to think we can be, for many years inflaming our brams, without injuring them-be continually difordering the most delicate parts of our machine, without impairing them. A lively imagination, a quick apprehension, a retentive memory, depend upon parts in our fliucture, which are much more eafily hurt, than fuch, whose found state is necessary for the preservation of mere life: and therefore we perceive those several ficulties often entirely loft, long before the body drops. The man is very frequently feen to fur vive himfelf-to continue a living creature, after he has, for fome years, ceafed to be a rational one. And to this deplorable state nothing is more likely to bring us, than a habit of drunkenness; as there is no vice, that more immediately affects those organs, by the help of which we apprehend, reason, remember, and perform the like acts.

What, fixthly, ought to raife in us the utmost abhorence of drunkenness is, the consideration of the many crimes, to which it disposes us. He, through whose veins the inflaming potion has spread itself, must be under a greater temptation to lewdness, than you can think him in any other circumstances: and from the little reasoning, of which he is then capable, as to the difference of the two crimes, would hesitate no more at adultery than fornication.

Thus, also, for immoderate anger, contention, fcurrility and abuse, acts of violence, and the most injurious treatment of others; they are all offences, into which diunkenness is most apt to betray us; so apt to do it, that you will scarcely find a company drinking to excess, without many provoking speeches and actions passing in it-without more or less strife, before it We even perceive the most separates. gentle and peaceable, the most humane and civilized, when they are fober, no fooner intoxicated, than they put off all those commendable qualities, and assume, as it were, a new nature-a nature as different from their former, as the most untractable and siercest of the brute kind are, from the most accomplished and amiable of our own.

To some vices drunkenness disposes us; and.

Lafly, lays us open to more, and certainly to the greatest. It lays us, indeed, open to most vices—by the power which it gives all torts of temptations over us: and by putting us into a condition, in which the rash and permicious suggestions of others have an especial influence upon us—in which, a profligate companion is enabled to direct us almost as he pleates.

It gives all forts of temptations power over us, by disqualifying us for confideration; and by extinguishing in us all regard to the motives of prudence and caution.

It makes us ready to follow the raftest counsels of our companions; because, not allowing us to reason upon them, and incapacitating us for the government of our felves, it, of course, leaves us to the guidance of those, with whom we are most pleased—of those, who give into our excelles.

It, certainly, lays us open to the greatest crimes; because, when we are thoroughly heated by the spirituous draught, we then like what is daring and extravagant—we are then tuined to bold and desperate un-

dertakings; and that, which is most licedatious, carries then with it the appearance of an attempt, fuiting a courageous and undaunted mind. Hence rapes, murthers, acts of the utmost inhumanity and barbariatts have been their acts; who, when sober, would have detested themselves, if such crimes could have entered their thoughts.

It may, perhaps, be of use to observe here, what centure has been passed on drunkenness by those, who had only the light of reason for their guide.

It was the faying of one of the wifer Heathen, That a wife man would drink wine, but would be fure never to be made drunk by it. Another of them condemns wine, as betraying even the prudent into imprudence. The advice of a third is, avoid drinking company: If you accidentally come into it, leave it before you cease to be sober; for, when that happens, the mind is like a chartot, whose driver is thrown off. as it is then fure to be hurried away at random, fo are we, when our reafon is gone, fure to be drawn into much , guilt. We have one calling drunkenness the fludy of me inejs; another, a columna v madness. He who was asked, how a person might be brought to a diflike of wine? answered, by beholding the indecencies of the drunken. \*

The

\* I have, in the former trad, taken notice of the coarse fure which Homer provides for his heroes: It may not be amiss to remark here, from Askenzu, what lessons of sobiety he formshes—what here are is, to distinct from drinking to excess. This, indeed, may appear deserving to be more patticularly infifted upon, fince from the praises which he gives wine he was thought not to have been aparing in the oile of it.

The boaft that Alm n, heated by liquor, had made of his willinguess to fight with Akhiller, was urged to engage him in a combat, which would have been fatal to him, but that—

The King of Ocean to the fight defcends, Thro all the whilting darts his courfe he bends; Swift interpos'd between theswarnors flies, And eafts thick darkness o'er Abiliei' eyes.

ILLIAD, Book XX.

In the Third Book of the  $Ga_{i}\mathcal{F}_{i}$ , the discord of the Greek, at a Council called to deliberate about their return, the Poet alcohols to their drunkenness,

Sour with debauch a reeling tribe they came, With ireful taunts each other they oppose, Till in loud turnult all the Greek arete, Now diff'tent counsels every breast divide, Each burns with rancour to the adverse side.

In Book the Ninth of the Onyss. Polyphemu is represented as having his fight destroyed, when he was drunk, by a few of those, whose joint force was not, with respect to his, that of a child.

He greedy grafp'd the heavy how!,
Thrice drain'd, and pour'd the debuge on his foul.

Then nodding with the formes of wino
Dropt his huge head, and finoring lay fupine.

Then forth the vengeful inftrument 1 bring;

135

The discountenance, which drunkenness received among the Romans, will be hereafter taken notice of.

Among the Greeks, by a law of Solon, if a chief magistrate made himself drunk, he was to be put to death. By a law of Putacus, a double punishment was institted upon such who, when drunk, had committed any other crime. They were those, by whose laws he, who drank any greater quantity of wine than was really necessary for his health, suffered death.

Thus much as to their sentiments on drinking to excess, who had only the light of Nature to shew them its guilt.

Dean Bolton.

### § 138. On Intemperance in Drinking. SECT. IV.

Let me, in the next place, fuggest such cautions, as ought to be observed by him, whose defire it is to avoil drunkenness.

Carefully shun the company that is addicted to it.

Do not fit long among those, who are in the progress towards excess. If you have often lost the command of yourself, when a certain quantity of liquor has been exceeded, you should be sure to keep yourself always much within that quantity.

Make not strong liquor necessary to your refreshment.

Never apply to it for ease, under cares, and troubles of any kind.

Know always how to employ yourfelf usefully, or innocently to amuse yourfelf, that your time may never be a burden upon you.

In the first place, Do not associate with those who are addicted to drunkenness. This I lay down as a rule, from which it is scarce possible to depart, and keep our sobriety. No man, not the steadiest and wifest of men, is proof against a bad example continually before him. By frequently feeing what is wrong, we, first, lose our abhorrence of it, and, then, are castly prevailed with to do it. Where we like our company we are insensibly led into their manners. It is natural to think we should endeavour to make ourselves agreeable to

Urg'd by force prefent God, they fwift let fall. The pointed torment on the virial ball-

In Book the Tenth, The felf-denial of *Furthebus* preferved him from the yile transformation, to which the intemperature of his companions subjected them.

Soon in the luftious feaft themfolves they loft. And drank oblision of themative coaft. Inflant her circling wand the Goddefs waves, To logs it ansforms them, and the fly receives.

In the same Book the tragical end of Elpenor is thus described:

A vulgar foul,
Born but to barquet, and to drain the bowl.
He, hot and carelefs, on a turret's height
With fleep repair'd the long debauch of night:
The fudden tumult firr'd him where he lay,
And down he haten'd, but forgot his way;
Full headlong from the roof the fleeper fell,
And fnapp'd the spinal joint, and wak'd in Hell.

The drunkenness of Emytion, one of the Centaras, is fatal to him, and to the whole race. On B. XXL

The great Emption when this frenzy flung, Partham' roofs with frantic riot rung; Its nofe they fhorten'd, and his ears they flit, And tent him fober'd home, with better wit. Hence with long war the double race was curs'd, Fatal to all, but to the aggreffor first.

Assesser, who had repreached  $U/\sqrt{f_{0}}$  as made infolent by wine, dies himself with the intoxicating buyl at his hand. On Book XXII.

High in his hands he rear'd the golden bowl, Ev'n then to dram it lengthen'd out his breath; Chang'd to the deep, the bitter draught of death. Full thro' his throat Ulyfist' weapon paft, And piere'd the neck. He falls, and breathes his laft. the persons with whom we much converse: and you can never make yourself more agreeable to any, at least as a companion, than when you countenance their conduct by imitating it. He who affociates with the intemperate, and yet refuses to join in their excesses, will soon find, that he is looked upon as condemning their practice; and therefore, that he has no way of continging them his friends, but by going into the fame irregularity, in which they allow themselves. It his chearfulness, his facetiousness, or wit, endear him to them, and render them unwilling to quit an intercourfe with one fo qualified to amuse them; all their hearts will be tried to corrupt his fobriefy; where he lies most open to tempt. tion will be carefully watched; and no method left unattempted, that can appear likely to make him regardless of his duty. But who can reckon himself safe, when so much pains will be used to ensnare him? Whose virtue is secure, amidst the earnest endeayours of his conflant companions to undermine it?

Another caution which I have laid down is, Never fit long among those, who are in the progress towards excess. The expediency of this advice will be acknowledged. if we consider how difficult it is to be long upon our guard-how apt we are to forget ourselves, and then to be betrayed into the guilt, against which we had most firmly refolved.

In the cagerness of our own discourse, or in our attention to that of others, or in the pleafure we receive from the good humour of our companions, or in the thate we take of their mirth, we may very naturally be supposed unobserving, how much we have drank-how near we are got to the utmost tounds of sobriety: these, under the circumstances I have mentioned, may easily be passed by us, without the least suspicion of it-before we are under any apprehenfion of our danger.

As in disputes, one unadvised expression brings on another, and after a few arguments both fides grow warm, from warmth advance to anger, are by anger spurred on to abuse, and thence, often, go to those extremities, to which they would have thought themselves incapable of proceeding: fo is it when we fit long, where what gives the most frequent occasion to difrutes is before us-where the intexicating draught is circulating; one invites us to more-our spirits nisc-our wariness de-

clines-from chearfulnels we pals to noils mirth-our mirth flops not long short of folly-our folly hurries us to a madness. that we never could have imagined likely to have been our reproach.

If you have often loft the command of yourfelf, where a certain quantity of liquor hath been exceeded; you should be fure never to approach that quantity-you flould confine yourfelf to what is much short of it. Where we find that a reliance upon our wariness, upon the Readiness and firmnels of our general refolutions, has deceived us, we thould trutt them no more; we should confide no more in those precautuns, which have already proved an in-fushcient check upon us. When I cannot refull a temptation, I have nothing left for my fecurity but to fly it. If I know that I am apt to yield, when I am tempted; the part I have then to act is, to take care that I may not be tempted. Thus only I thew myfelf in earnest; hereby alone I evidence, that my duty is really my care.

We have experienced, that we cannot withdraw from the company we like, exactly at such a point of time-we have experienced, that we fometimes do not perceive, when we have got to the utmost bounds of temperance-we have unhappily experienced, that when it has been known to us, how fmall an addition of liquor would ditorder us, we then have fo far loft the power over ourselves, as not to be able to refrain from what we thus fully knew would be prejudicial to us. In these circumstances, no way remains of securing our sobriety, if we will refort to any place where it is at all hazarded, but either having our flint at once before us, or confining ourselves to that certain number of meafured draughts, from whence we are fure we can have nothing to fear. And he, who will not take this method-he who will rest in a general intention of sobriety, when he has feen how often that intention has been in vain, how often he has mifcarried, notwithstanding it, can never be considered as truly concerned for his past failings, as having seriously resolved not to repeat them. So far as I omit any due precaution against a crime, into which I know myself apt to be drawn, so far I may justly be regarded as indifferent towards it; and so far all my declarations, of being forry for and determined to leave it, must be considered as insin-

§ 139. On

§ 139. On Intemperance in Drinking. Sест. V.

Never make any quantity of strong liquor necessary to your refreshment. What occasions this to be a fit caution is, That if the quantity we cannot be without is, in the beginning, a very moderate one, it will, probably, foon increase, and become, at length, to great as must give us the worst to fear. The reason, why it is thus likely to be increased, is, that a small draught, by the habitual use of it, will cease to raise our fpirits; and therefore, when the defign of our drinking is in order to raife them, we shall at length seek to do it by a much larger quantity of liquor, than what was wanted for that purpose at first.

It feems to be, further, proper advice on this subject. That we should never apply to strong liquor for ease under cares or troubles of any kind. From fears, from dilappointments, and a variety of uneafinefles, none are exempt. The inconfiderate are impatient for a speedy relief; which, as the spirituous draught affords, they are

tempted to feek it from thence.

But how very imprudent they must be, who would by fuch means quiet their minds, i most evident. For, is any real ground of trouble removed, by not attending to it -by diverting our thoughts from it? In many cafes, the evil we would remedy by not thinking upon it is, by that very courfe, made much more diffresting, than it otherwife would have been; nay, fometimes, quite remediless. In all cafes, the less heated our brain is, and the greater calmness we preferve, the fitter we are to help ourselves; the fitter we are to encounter difficulties, to prevent our being involved in them; or, if that cannot be, to extricate ourselves speedily from them.

The case, which liquor gives, is but that of a dream: when we awake, we are again curselves; we are in the same situation as before, or, perhaps, in a worle. What then 15 to be the next step? Soon as the stupihing effects of one draught are gone off, another must be taken; the sure consequence of which is, that fuch a habit of drinking will be contracted, as we shall vainly endeavour to conquer, though the original inducement to it should no longer fubfilt. To guard against this, as it is of the utmost importance to all of us, so the only certain way is, by stopping in the vely first instance; by never seeking, either under care or pain, relief from what we criminal; then, indeed, and only then, can

drink, but from those helps, which reason and religion furnish; the only ones, indeed. to which we can wifely refort in any ftraits: and which are often found capable of extricating us, when our condition feetns the most desperate.

A prudent man should never desert himfelf. Where his own efforts avail him no. the care of an over-ruling Providence may interpose, and deliver him. But to borrow support against our troubles from liquor, is an entire defertion of ourselves; it is giving up our state, as an undone one-it is abandoning our own discretion, and relinquishing all hopes of the DEITY's affidance.

Lallly, Know always, how you may usefully employ, or innocently amuse yourself. When time is a burden upon us, when we are at a loss how to pass it, our chearfulness of course abates, our spirits flag, we are reffless and uneasy: here then we are in the fittest disposition, and under the strongest inducements, to resort to what we know will enliven us, and make our hours glide away infenfibly. Befides, when we cannot tell what to do with ourselves, it is natural we should seek for those, who are as idle as ourselves; and when such company meet, it is easy to see what will keep them together; that drinking must be their entertainment, fince they are fo ill qualified for any other.

Idleness has been not unfitly termed, the parent of all vices; but none it more frequently produces than drunkenness; as no vice can make a greater waste of our time, the chief thing about which the idle are folicitous. On the other hand, he who can profitably bufy, or innocently divert himfelf, has a fure refort in all humours-he has his spirits seldom depressed, or when they are so, he can, without any hazard, recruit them-he is fo far from feeking a correspondence with fuch, as are always in a readiness to engage in schemes of intemperance and riot, that he shuns them; his amuscments, quite different from theirs, occasion him to be feldom with them, and fecure him from being corrupted by them.

This we may lay down as a most certain

truth, that our virtue is never fafe, but when we have proper diversions. Unbent we fometimes must be; and when we know not how to be so in an innocent way, we foon shall be in a guilty. But if we can find full entertainment in what is free from all reproach, in what neither has any thing criminal in it, nor can lead us into what is

we be thought in little danger, and not likely to yield to the bad examples furrounding up.

### § 140. On Intemperance in Drinking. SECT. VI.

But let me consider what the intemperate · fay in their excuse.

That any should frequently put themselves into a condition, in which they are incapable of taking the least care of them-Telves-in which they are quite stupid and helples-in which, whatever danger threatons them, they can contribute nothing towards its removal-in which they may be drawn into the most shocking crimes-in which all they hold dear is at the mercy of their companions; the excess, I say, which causes us to be in such a situation, none feem disposed to defend: but what leads to it, you find numbers thus vindicating, or exculing.

They must converse-They must have their hours of chearfulness and mirth-When they are difordered, it happens before they are aware of it-A small quantity of liquor has this unhappy effect upon them-If they will keep up their interest, it must be by complying with the intemperate humour of their neighbours-Their way of life, their hufinefs, obliges them to drink with fuch numbers, that it is fearcely possible they should not be some-

times guilty of excels.

To all which it may be faid, that, bad as the world is, we may every where, if we feek after them, find those, whose company will rather confirm us in our fobriety, than endanger it. Whatever our rank, station, profession or employment may be, fuitable companions for us there are; with whom we may be perfectly fafe, and free from every temptation to excels. If these are not in all respects to our minds, we must bear with them, as we do with our condition in this world; which every prudent person makes the best of; since, let what will be the change in it, still it will be liable to fome objection, and never entirely, as he would with it. In both cases we are to confider, not how we shall rid ourselves of all inconveniences, but where are likely to be the fewest: and we should judge that fet of acquaintance, as well as that flate of life, the most eligible, in which we have the least to fear, from which our ease and innocence are likely to meet with the fewest interruptions.

But mirth, you lay, must sometimes be con-

fulted. Let it be fo. I would no more dissuade you from it, than I would from feriousness. Each should have its featon, and its measure: and as it would be thought by all very proper advice, with respect to feriousness, " Let it not proceed to me-" lancholy, to moroseness, or to censorious. " nefs;" it is equally fit advice, with regard to mirth, "Let wildom accompany it: Let it not transport you to riot or in-" temperance: Do not think you can be " called merry, when you are ceasing to " be reasonable."

Good humour, chearfulness, facetiousness, which are the proper ingredients of mirth, do not want to be called out by the repeated draught: it will rather damp them, from the apprehension of the disorder it may foon produce. Whenever we depart from, or endanger our innocence, we are laying a foundation for uneafiness and grief; nor can we, in such circumflances, be merry, if we are not void of all thought and reflection: and this is, undoubtedly, the most melancholy fituation, in which we can be conceived, except when we are undergoing the punishment of our folly. The joy, the elevation of spirits proper to be fought after by us, is that alone, which can never be a subject of remorfe, or which never will embitter more of our hours than it relieves. And when this may be obtained in such a variety of ways, we must be lost to all common prudence, if we will apply to none of them; if we can only find mirth in a departure from fobriety.

You are, it feems, overtaken, before you are aware of it. This may be an allowable excuse for three or four times, in a man's life; oftener, I think, it cannot be. What you are sensible may easily happen, and must be extremely prejudicial to you, when it does happen, you should be always aware of. No one's virtue is any farther his praise, than from the care he takes to pre-ferve it. If he is at no trouble and pains on that account, his innocence has nothing in it, that can entitle him to a reward. If you are truly concerned for a fault, you will necessarily keep out of the way of repeating it; and the more frequent your repetitions of it have been, so much the greater caution you will use for the future.

Many we bear excusing their drunkennes. by the small quantity which occasions it. more triffing excuse for it could not be made. For if you know how small a quartity of liquor will have that unhappy effect. you should forbear that quantity. It is as much

much your duty to do fo, as it is his duty to forbear a greater quantity, who fuffers the fame from it, which you do from a lester. When you know that it is a crime to be drunk, and know likewise what will make you fo; the more or less, which will do this, is nothing to the purpose-alters not your guilt. If you will not refrain from two or three draughts, when you are fure that drunkenness will be the consequence of them; it cannot be thought, that any mere regard to fobriety keeps you from drinking the largest quantity whatsoever. Had fich a regard an influence upon you, it would have an equal one; it would keep wa from every step, by which your fo-Lacty could fuffer.

As to supporting an interest, promoting a title, advantageoully burgaining for our selected, when the most part, only the poor ecotions of the insincere, of those who are willing to lay the blame of their misconduction any thing, rather than on what alone deferees it—rather than on their bad incil

1.3116D.s.

Civility and courtefy, kind offices, acts of charity and liberality will both raife us more friends, and keep those we have namer to us, than any quantities of liquor, which we can either diffribute or drink: and as for mens trade or their bargains, let them always act fairly—let them, whether they buy or fell, shew that they abhor all ticking and imposition—all little and mean returnes; and I'll slake my life, they shall never have reason to object, that, if they will always preferve their salvery, they mast lessen their gains.

But were it true, that, if we will resolve never to hazard intoxicating ourselves, we must iose our friends, and forego our present advantage; they are inconveniences, which in such a case, we should chearfully submit to. Some pains must be taken, some difficulties must be here encountered; if we will have any reasonable ground to expect happiness in a suture state. Of this

even common sense must satisfy us.

Credulous as we are, I think it impossible, that any man in his wits would believe me, if I were to tell him, that he might mils no opportunity of bettering his fortune—that he might remove any ewil he had to fear, by whatsoever method he thought proper—that he might throughout follow his inclinations, and gratify his appearance; and yet rest assured, that his death would be but the passage to great and end-less joys. I know not, to whom such an

affertion would not appear extremely abfurd: notwithstanding which, we certainly do not act, as if there were any abfurd ty in it, when we make what is evidently our duty give way to our convenience; and rather confider, how profitable this or that practice is than how right. That, therefore, fobriety, added to other parts of a virtuous conduct, may entitle us to the formuch hoped-for reward, we must be sober, under all forts of discouragements. It rarely, indeed, happens, that we meet with any; but to reful the greateft must be our resolution, if we will recommend ourselves to the Governor of the universe-if we will hope for his fa-Dean Bolton.

# § 141. On Intemperance in Drinking. SECT. VII.

Thus much with regard to drunkennels, so far as it is committed by intusticating ourselves—by drinking, 'till our reason is gone: but as there is yet another way, in which we may offend in it, vie. by drinking more than is proper for our refeshment; I must on this likewise bestow a few observations.

When we drink more than fuffices to recruit our spirits, our passions are heightened, and we cease to be under the influence of that calm temper, which is our only fafe countellor. The next advance beyond refreshment is to that mirth, which both draws many unguarded speeches from us, and carries us to many indifferent actions -which wastes our time, not barely while we are in the act of drinking, but as it unsettles our heads, and indisposes us to attention to business,-to a close application in any way. Soon as our spirits are raised beyond their just pitch, we are for schemes of diversion and pleasure; we are unsit for ferious affairs, and therefore cannot entertain a thought of being employed in them. ..

Befides, as according to the rife of our fpirits, their fall will afterward be; it is most probable, that when we find them thus sunk, we shall again refort to what we have experienced the remedy of such a complaint; and thereby be betrayed, if not into the excesses, which deprives us of our reason, yet into such a habit of drinking, as occasions the loss of many precious hours—impairs our health—is a great misapplication of our fortone, and a most ruinous example to our observers. But, indeed, whence is it to be feared, that we shall become downright sots—that we shall ton-

1

tract a habit of drinking to the most difguising excess; whence, I say, is this to be seared, if not from accustoming ourselves to the frequent draughts, which neither our thirst—nor fatigue—nor constitution requires? by frequently using them, our inclination to them is strengthened; till at length we cannot prevail upon ourselves to leave our cup, while we are in a condition to lift it.

These are objections, in which all are concerned, whose refreshment, from what they drink, is not their rule in it; but to men of moderate fortunes, or who are to make their fortunes, other arguments are to be used: these persons are to consider, that even the lesser degree of intemperance, now cenfured, is generally their utter undoing, thro' that neglect of their affairs, which is its necessary consequence. When we mind not our own bulinels, whom can we think likely tomind it for us? Very few, certainly, will be met with, disposed and able to do it; and not to be both, is much the fame, as to be neither. While we are passing our time with our chearful companions, we are not only losing the advantages, which care and industry, either in inspecting our affairs, or pursuing our employment, would have-afforded us; but we are actually consuming our fortune-we are habituating ourselves to a most expensive idleness-we are con-. tracting a difinclination to fatigue and confin ment, even when we most become fensi-ble of their necessity, when our affairs must run into the utmost confusion without them. And we, in fact, perceive that, as foon as the scholar, or trader, or artificer, or whoeveritis, that has the whole of his maintenance to gain, or has not much to fpend, addicts himself only to this lower degree of intemperance - accustoms himself to fit long at his wine, and to exceed that quantity of it which his relief demands, he becomes worthless in a double sense, as deserving nothing, and, if a care greater than his own fave him not, as having nothing.

Add to all this, that the very same diseases, which may be apprehended from often intoxicating ourselves, are the usual attendants not only of frequenty drinking to the full of what we can conveniently hear, but even of doing it in a large quantity: The only difference is, that such diseases come more speedily on as from the former, than the latter cause; and, perhaps, destroy us sooner. But how desirable it is to be long struggling with any of the differencers, which our

excesses occasion, they can best determine who labour under them.

The inconveniences which attend our more freely using the least hurtful of any spirituous liquors have so evidently appeared—have shewn themselves so many and so great, as even to call for a remedy from the law itself; which, therefore, punishes both those, who loiter away their time at their cups, and those, who suffer it to be done in their houses.

A great part of the world, a much greater than all the parts added together, in which the Christian religion is professed, are forbidden all manner of liquors, which can cause drunkenness; they are not allowed the smalless quantity of them; and it would be an offence which would receive the most rigorous chastisement, if they were known to use any; their lawgiver has, in this particular, been thought to have acted according to the rules of good policy; and the governors of those countries, in which this law is in force, have, from its first reception among ft them, found it of fuch benefit, as to allow no relaxation of I do not mention such a practice as any rule for us: difference of climates makes quite different ways of living necessary: I only mention it as a lesson to us, that, if to great a part of mankind fubmit to a tool abilinence from wine and strong drink, w should use them sparingly, with caution and moderation; which is, certuinly, necessary to our welfare, whatever may be the effect of entirely forbearing them on theirs.

In the most admired of all the western governments, a strict sobriety was requi ed of their women, under the very severel penalties: the punishment of a departure from it was nothing less than capital: and the custom of saluting women, we are told, was introduced in order to discover whether any spirituous liquor had been drank by them.

In this commonwealth, the men were prohibited to drink wine 'till they had attained thirty years.

The whole body of foldiery, among this people, had no other draught to enable them to bear the greatest satigue—to raise their courage, and animate them to encounter the most terrifying difficulties and dangers, but water sharpened with vinegar. And what was the consequence of such strict so briety, observed by both sexes? What was the consequence of being born of parents so exactly temperate, and of boing trained up in a habit of the utmost abstemionances.

What, I fay, followed upon this, but the attainment of fuch a firmness of body and mind—of such an indifference to all the emasculating pleasures—of such vigour and fearlesiness, that the people, thus born and educated, soon made all opposition fall before them, experienced no enemy a match for them—were conquerors, wherever they carried their arms.

By these remarks on the temperance of the antient Romans, I am not for recalling customs so quite the reverse of those, in which we were brought up; but some change in our manners I could heartily wish they might effect: and if not induce us to the same sobriety, which was practised by these heathens, yet to a much greater than is practised by the practice by the practice by the practice of the practice by the practice b

§ 142. On Phafure.

SECT. I.

To the Honourable

While you are constantly engaged in the pursuit of knowledge, or in making what you have required of use to your fellow creatures—while information is your amusement, and to become wifer has much your aim, in all the company you keep, as in all the book, you read; may I not justly think it matter of assonithment to you, that such numbers of your species should be quite unmindful of all rational improvement—folely intent on schemes of mirth and diversion—passing their lives in a round of sporting and trifling.

Hevery age has its madness, and one is diffinguished by its warlike humour, a second by its enthusiasm, a third by its party and political rage; the distraction of the present may truly be pronounced, its turn to pleasure, so fadly possessing those of each sex and of all ages—those of every profession and employment—the several ranks and orders of men; that they, who are strangers to the sudden changes in human dispositions, are apt to think, that all seriousness and application—all the valuable attainments, which are the reward only of our pains, mut, inevitably, be soon lost among us.

I am not out of hopes, that what thus threatens, in the opinion of some, our speedy rain, and has its very great mischief denied by none, who give it the least attention, will one day receive as remarkable an opposition from your sen, as it now does a discouragement from your example.

Let, in the mean time, a sincere well-

wisher to his countrymen interpose his mean endeavours to serve them—offer to their consideration some, perhaps not wholly contemptible, arguments against the pursuit, to which they are so blameably attached—shew them pleasure in that true light, in which they are unwilling to see it—teach them, not that it should be always declined, but that they should never be enslaved to it—represent the dangers to which itexposes them, yet point out how far it may be enjoyed withinnocenceand safety.

Every man feems to be fo far free, as he can dispuse of himself-as he can maintain a due subordination in the parts of his frame, use the deliberation proper to acquaint him with what is most for his advantage, and, according to the refult thereof, proceed to action. I confider each hindrance to the knowledge of our true happiness, or to its pursuit, as, according to its degree, an abridgment of our liberty; and 1 think that he may be truly stiled a slave to pleasure, who follows it, wheresoever direfled to it by appetite, passion, or fancy. When we liften to their fungestions in the choice of good, we allow them an authority, that our Creator never intended they should have; and when their directions in that choice are actually complied with, a lawless sway ensues-the use of our nobler faculties becomes obstructed—our ability to deliberate, as we ought, on our conduct, gradually fails, and to alter it, at length wholly ceases.

Our sensual and rational parts are almost in continual opposition: we add to the power of the former, by a thoughtless, idle, voluptuous life; and to that of the latter by resection, industry, continence.

As you cannot give way to appetite, but you increase its reftlessness, you multiply its demands, and become less able to refift them; so the very same holds true of every principle that opposes reason; if capable to influence you in one instance, it will more easily do it in a second, gaining ground, 'till its dominion over you becomes absolute.

When the question concerns our angry passions, all are ready to acknowledge the danger of not restraining them, the terrible subjection to which such remissions some poses us. These falling more under the general notice, from the apparency of the differer, and extent of the mischief which they occasion, a better judgment is ordinarily made of them, than of affections less tumultuous, less dangerous to our associates: but there can be no reason imaginates:

able why anger, if less carefully watched and resisted, should exercise, at length, the most unhappy tyranny over us, which will not hold as to any passion or lust whatsoever. And as with respect to violent resentment, we are ready to gratify it, whatever it costs us; so let what will be the passion or lust that governs us, no prudential considerations are a counterposite for it.

With regard to pleasure, the fallacy of our reasoning upon it lies here; we always look upon the enjoyment of it as a fingle act, as a compliance with our liking in this or that inflance: the repetition of that indulgence is not feen under a dependence on any former, or under the least connexion with any future. That fuch a pursuit should engage us feems to be wholly from our choice; and this choice is thought to be as free, at the second time of our making it as at the first, and at the twentieth, as at the fecond. Inclination is never beheld as possible to become constraint-is, I mean, never regarded as capable of being indulged, 'till it cannot be refisted. No man ever took the road of pleafure, but he apprehended that he could cafily leave it: had he considered his whole life likely to be passed in its windings, the preference of the ways of virtue would have been indisputable.

But as fenfual pursuits could not engage fo many, if something very delightful were not expected in them; it will be proper to shew, how unlikely they are to answer such an expectation—what there is to discourage us from attaching ourselves to them.

Confider sensual pleasure under the highest possible advantages, it will yet be found

liable to thele objections.

First. That its enjoyment is fleeting, expires foon, extends not beyond a few moments: our spirits sink instantly under it, if in a higher degree; nor are they long without being depressed, when it less powerfully affects them. A review here affords me no comfort: I have here nothing delightful to expect from Resoction. The gratifications, in which I have allowed myiels, have made me neither wifer nor better. The fruit was relished while upon my tongue, but when passed thence I icarcely retain the idea of its shavour.

How transitory our pleasures are, we cannot but acknowledge, when we consider, how many we, in different parts of our lives, eagerly pursue, and then wholly decline.

That, which is the high entertainment of

our infancy, doth not afford us the leaft, when this state is passed; what then delights us much in our youth, is quite tasteles to us, as we approach manhood; and our engagements at this period give way to some others, as we advance in age.

Nor do our pleasures thus pass only with our years, but, really, those which best suit our time of life, and on the pursuit of which we are most intent, must be inter-

rupted in order to be enjoyed.

We can no more long bear pleasure, than we can long endure fatigue; or, rather, what we call pleasure, after some continuance, becomes fatigue.

We want relief in our diversions, as well

as in our most terious employments.

When Secrater had observed, "of how unaccountable a nature that thing is, which men call Pleasure, fince, though it may appear to be contrary to Pain, as never being with it in the iame person, yet they so closely follow each other, that they may seem linked, as it were, together." He then adds—"If Aipp had attended to this, he would, I think, have given us a fable, in which the Divinity, willing to reconcile these two enemies, but yet unable to do it, had, nevertheless, so connected them in their extremities, that where the one comes, the other shall be fure to succeed it."

From the excess of joy, how usual is the transition to that of dejection! Laughter, as well as grief, calls for tears to ease us under it; and it may be even more dangerous to my life to be immoderately delighted, than to be severely afflicted.

Our pleasures then soon pass; and, secondly, their repetition certainly cloys.

As the cafiness of posture and agreeableness of place wear off by a very thort continuance in either; it is the same with any sensual gratifications which we can pursue, and with every enjoyment of that kind, to which we can apply. What so delights our palate, that we thould relish it, if it were our constant food? What juice has nature furnished, that, after being a frequent, continues to be a pleasing, draught? Sounds, how artfully so ever blended or succellive, tire at length the ear; and odours, at first the most grateful, soon either cease to recreate us, or become offensive to us-The finest prospect gives no entertainment to the eye that has been long accustomed to it. The pile, that strikes with admiration each calual beholder, affords its 10yal inhabitant inhabitant no comfort, but what the peafant has in his cottage.

That love of variety and change, to which none of our kind are strangers, might be a ledon to us, where our expectations are ill grounded, whe e they must necessarily be disappointed; for if no man ever yet lived, who could fay of any of the pleasures of tente-On this I repose myself-it quite anivers my hopes from it-my wishes rove not beyond it: if none could ever affirm trus, it is most evident, that we in vain tearch after permanent delight, from any of the objects with which we are now convertint-that the only difference between the latisfactions we purfue, and those we quit, is, that we are already ti cd of the on, and shall foon be of the other.

Hear the language of him, who had tried the extent of every fenfual pleafure, and must have found the uncloying, had any fuch existed: "I said in my heart, Go to " now, I will prove thee with mirth. I " gave myself to wine, I made me great " works, I builded me houses, I planted " me vineyards, I made me gardens, I " planted trees in them of all kinds of I made me pools of water, I " amaffed gold and filver, I had possessions, " above all that were in Jerujalem before I tried what love, what mufic, " what all the delights of the fons of men " could effect; whitioever mine eves de-" fixed I kept not from them, I with-held " not my heart from any joy. Then I " looked on all my works, on all my pur-" fuits, and behold! all was vanity and " vexation of spirit."

Tully mentions Xerxes as having proposed a reward to the man, who could make known to him some new pleasure. The monarch of the East, it seems, met with nothing within the bounds of his mighty empire that could fix his inclinations. The most voluptuous people on earth had discovered no delight, that their sovereign could acknowledge otherwise than superficial. Happy! had it been a lesson to their prince, or could it be one to us, where our good should be sought—what pursuits were likely to bring us blessings certain to improve, as well as endure.

#### § 143. On Pleasure.

#### SECT. II.

A third disadvantage ensuing to us from our attachment to the delights, which appetite and fancy purvey, is, that it indispoics us for useful inquiries, for every endeavour worthy of our nature, and fuiting the relations in which we are placed.

The disappointment which the Persian Emperor met with in all his schemes of the voluptuous kind, did not put him on applying to those of a different one. Experience shewed him his folly, but could not teach him wisdom—It could not, when it had convinced him of the vanity of his pursuits, induce him to relinquish them.

We find a Solomon, indeed, discovering his error, acknowledging that he had erred, and bearing testimony to religion and virtue as alone productive of true happiness; but where are we to look for another among the votaries to sensually, thus affected, thus changed?

As some have observed of courts, that fuch who live in them are always uneafy there, yet always unwilling to retreat; the very tame holds true of the licentious practice, which they too generally countenance: fully convinced of its vanity and folly, we continue to our last moments attached to it -averse from altering the conduct, which we cannot but disapprove. Our faculties are, indeed, fo constituted, that our capacity for many enjoyments extends not beyond fuch a period in our being: if we will not quit them, they will us-will depart, whatever our eagernels may be for their continuance. But let us not deceive ourselves : when they are gone as to their fenfe, they are not as to their power. He who fays to his youth, eat, drink, and be merry-who thinks of nothing elfe at that feafon, will hanker after delicacies, when he has neither teeth to chew, nor palate to diflinguish them; will want the cup, which he cannot lift; and feek for mirth, when he will thereby become the object of it. The habit operates, when none of the inducements for our contracting it remain; and when the days of pleafure are past, those of wifdom and virtue are not the nearer. Our dispositions do not decay with our strength. The prudence, which should attend grey hairs, doth not necessarily come to us with them. The young rake is a lascivious obscene wretch, when he owes his warmth to his stannel; delights in the filthy tale, when his hearers are almost poisoned by the breath with which he utters it; and when least able to offend in act, he does it in

That the humour for highling or racing, or whatever inclination governed us in this world, accompanies us to the other, is not an entire fiction of the poet, but, affuredly,

K 3

has thus much truth in it, that whatever humour we indulge, it accompanies us to the close of life. There is a time, when our manners are pliant, when the counfels of the fober operate upon us as successfully, as the infinuations of the corrupt; but when that time is passed, our customs are, daily, working themselves into our constitution, and want not many years to become carce distinguishable from it. God, I am perfuaded, has formed us all with fuch apprehensions of what is right, as, if a proper care were taken to preferve and improve them, would have the happiest influence upon our practice; but when the scason for extending this care to them has been neglected, they are in most of us greatly impaired, and in some appear almost wholly lost.

Let the understanding remain uninformed, 'till half the age of man is past, and what improvement is the best then likely to make? How irksome would it seem to be put upon any? It is with our will the very fame; turned for half or three parts of our life to floth and wantonness, to riot and excess, any correction of it, any alteration to the pursuits becoming us, may seem quite hope-While we are devoting ourselves to pleafure, we are weakening every principle, whereby virtue can engage us, we are extinguishing within us all fense of true defert-fulduing conscience-diveiling ourfelves of shame—corrupting our natural notions of good and evil; and so indisposing ourselves for consideration, that our conflant endeavour will be to decline it. Thus when our fellies are a burden to us, their correction feems a greater; and we try what eafe may be found by varying, rather than feek any from quitting, them.

Fourthly, The larger our thare is of outward enjoyments, and the dearer they are to us; so much the more afflicting our concern will be to leave this sene of them—so much the greater terror and torment shall we receive from the apprehension, how soon we may be obliged to do it.

Let the man of pleasure colour it the most agreeably, place it in the fairest point of view, his objection will remain in its full strength against him: "You are not master of the continuance of the good, of which you boast; and can you avoid thinking of its removal, or bear the thoughts "thereof, with any calmness and compositore: But what kind of happiness is that, which we are in hourly fears of losing, and which, when lost, is gone for ever?

If I am only here for a few days, the part I ought to act is, certainly, that of a traveller on his journey, making use, indeed, of such conveniences as the road as, upon his road—never so incumbring himself that he shall be unwilling to advance, when he knows hemust do it—never so diverting himself at any resting place, that it shall be painful to him to depart thence.

When we are accustomed to derive all our comforts from sense, we come to want the very idea of any other: this momentary part of our existence is the sull extent we give to our joys; and we have the mottifying reflection continually before us, that their conclusion is nearer every hour we are here, and may possibly take place the very next. Thus each accession of delight will really be but a new fource of affliction, become an additional motive for complaint of the short space allowed for itenjoyment.

The mind of man is so disposed to look forward, so fitted to extend its views, that as much as it is contracted by fenfuality, it cannot be fixed thereby to the instant moment: we can never, like the beatls, be so far engrossed by the satisfaction before us, but the thoughts will occur, how often may we hope to repeat it-how many diftant hours it is likely to relieve-how much of our duration can it advantage? and the feanty continuance which our most fanguine hopes can affign it, must therefore be in fome degree its abatement-must be an ingredient in our draught fure to embitter the many pleasing ones which compound it. And what a wife part are we then acting. when we are taking the brutes portion for ours, and cannot have all the benefits even of that! cannot remove the inconveniences of reason, when we forego its comforts!

These are some of the many disadvantages inseparable from pleasure, and from the expectation of which none of its votaties are exempt. We cannot attach ourselves to any of the delights, which appetite or fancy provides, but we shall be set to find them quickly passing—when repeated, cloying—indisposing us for worthy pursuits—rendering us averie from quitting the world, and uneasy as often as it occur to our thoughts, how soon our summors may be to depart.

§ 144

## § 144. On Pleasure. Sect. III.

But what, you'll fay, must all then commence philosophers? Must every gay amusement be banished the world? Must those of each fex and of all ages have their looks ever in form, and their manners under the regulation of the severest wildom? Has nature given us propenfities only to be refifted? Have we cars to diffinguish harmony, and are we never to delight them with it? Is the food which our palate best sclisses, to be therefore denied it? Can ciouis recreate our brain, beauty pleafe our eve, and the defign of their ftructure be, that we faculd exclude all agrecable fenfation from either? Are not natural inclinations nature's commands; are they not its declinations whence we may obtain our good, and its injunctions to feek it thence? Is any thing more evident, than that ferious applications cannot long be full fined—that we must fink under their weight-that they foon flupify or distract us? The exercise of ou, intellectual part is the fatigue of our corporeal, and cannot be carried on, but by allowing us intervals of relaxation and mirth. Deny us pleafure, and you unfit us for bufiness; and destroy the man, while you thus feek to perfect him.

A fall answer might, I should think, be even to whatever is here alledged, by enlarging on the following observations.

t. Pleasure is only so far censured, as it costs us more than it is worth—as it brings on a degree of uneafiness, for which it doth not compensate.

2. It is granted, that we are licenfed to take all that pleasure, which there is no reason for our declining. So much true pleasure, or so much pleasure, as is not counterbalanced by any inconveniences attending it, is so much stappiness accruing to him who takes it, and a part of that general good, which our Creator designed us.

3. As the inclinations with which mankind were originally formed, were certainly very different from those, which guilt has since propagated; many refraints mast, therefore, be necessary, which would not have been so, had our primitive rectitude been preserved.

4. Bad education, bad example, increase greatly our natural depravity, before we come to reason at all upon it; and give the appearance of good to many things, which would be seen in a quite different

light, under a different education and intercourfe.

These particulars let it suffice barely to mention; since, as it is here admitted, that when there is no reason for our declining any pleasure, there is one for our taking it, I am more especially concerned to shew, when there is a reason, why pleasure should be declined—what those limits are, which ought to be prescribed to our pleasures, and which, when any, in themselves the most innocent, pass, they necessarily become immoral and culpable. A minute discussion of this point is not here proposed: such observations only will be made upon it, as appear to be of more general use, and of greatest importance.

What I would, first, consider as rendering any pleasure blameable is,

When it raises our Passions.

As our greatest danger is from them, their regulation claims our conffant attention and care. Human laws confider them in their effect, but the divine law in their aim and intention. To render me obnoxious to men, it is necessary that my impure lust be gratified, or an attempt be made to gratify it; that my anger operate by violence, my covetoufness by knavery: but my duty is violated, when my heart is impure, when my rage extends not beyond my looks and my wifnes, when I invade my reighbour's property but in defire. The man is guilty the moment his affections become fo, the inflant that any difhonest thought finds him approving and indulging it.

The enquiry, therefore, what is a fit amusement, should always be preceded by the confideration of what is our disposition. For it is not greater madness to suppose, that equal quantities of food or liquor may be taken by all with equal temperatue, than to affert, that the fame pleasure may be used by all with the same innocence. As in the former case, what barely satisfies the flomach of one, would be a load insupportable to that of another; and the draught that intoxicates me, may scarcely refresh my companion : fo in the latter, an amusement perfectly warrantable to this fort of conflicution, will to a different become the moft criminal. What liberties are allowable to the calm, that must not be thought of by the choleric! How securely may the cold still phlegmatic roam, where he, who has greater warmth and fensibility, should not approach! What fafety attends the contemnet of gain, where the most fatal

K 4

fnares await the avaritious! Some les joweinable paffion is to be found in them, whose resolution is steadiest, and virtue firmest: 'upon that a constant guard must be kept; by any relaxation, any indulgence, it may be able to gain that strength, which we shall afterwards finitlessly oppose. When all is quiet and composed within us, the discharge of our duty puts us to little trouble; the performance thereof is not the heavy task, that so many are willing to represent it: but to restore order and peace is a work very different from preferving them, and is often with the utmost difficulty effected. It is with the natural body, as with the politic; rebellion in the members is much easier prevented than que led; confusion once entered, none can foresee to what lengths it may proceed, or of how wide a ruin it may be productive.

What, likewise, renders any pleasure culpable, is its making a large, or an unfeafonable, demand upon our time.

No one is to live to himself, and much less to confine his care to but one and that the worst, part of himself. Man's proper employment is to cultivate right dispositions in his own breaft, and to benefit his species-to perfect himself, and to be of as much use in the world, as his faculties and opportunities will permit. The fatisfactions of fense are never to be pursued for their own take: their enjoyment is none of our end, is not the purpose, for which God created us; amuse, refresh us it may, but when it busies, when it chiefly engages us, we act directly contrary to the defign for which we were formed; making that our care, which was only intended to be our relief.

Some, deflitute of the necessaries, others. of the conveniences of life, are eatled to labour, to commerce, to literary application, in order to obtain them; and any reniffnets of these persons, in their respective employments or professions, any pursuit inconsistent with a due regard to their maintenance, meets ever with the harshest censure, is universally branded, as a failure in common prudence and diferetion; but what is this animal life, in comparison with that to which we are raifed by following the dictates of reason and conscience? How despicable may the man continue, when all the affluence to which his wishes aspire, is obtained?

"Can it then be fo indifereet a part, to follow pleasure, when we should mind our fertione? do all to clearly fee the blame of

this? And may we doubt how guilty that attachment to it is, which lays walte our understanding-vhich entails on us ignorance and error-which renders us even more useless than the beings, whom instinct alone directs? All capacity for improve. ment is evidently a call to it. The neglect of our powers is their abuse; and the slight of them is that of their giver. Whatever talents we have received, we are to account for: and it is not from revelation alone that we learn this: no moral truth commands more strongly our assent, than that the qualifications bestowed upon us, are afforded us, in order to our cultivating them-to our obtaining from them the advantages they can yield us; and that foregoing such advantages, we become obnoxious to him, who defigned us them, as we misapply his gift, and knowingly oppose his will. For, the furest token we can have that any perfections ought to be purfued, is, that they may be attained: our ability to acquire them is the voice of God within us to endeavour after them. And would we but ask ourselves the question, Did the Creator raise us above the hard, and doth he allow us to have no sims nobler than those of the herd-to make its engagements the whole of ours? we could not possibly millake in the answer. All, who have reason given them, know that they may and ought to improve it, ought to cultivate it at fome featons, and ever to conform to it.

Greater privileges call us but to more important cares. You are not placed above your fellow-creatures, you have not the leifure, which they want, that you may be more idle and worthless, may devote more of your time to vanity and folly, but that you may become more eminent in the perfections you acquire, and the good you do. He, who has all his hours at command, is to consider himself as favoured with those opportunities to increase in wifdom and virtue, which are vouchfafed to few; if no good effect follows; if having them, he only misapplies them; his guilt is, according to what his advantage might have been.

The dispensations of heaven are not so unequal, as that some are appointed to the heaviest toil for their support, and others left to the free, unconstrained enjoyment of whatever gratifications their fancy fuggests. The diffinction between us is not that of much business and none at all; it is not, that I may live as I can, and you as you

please;

please; a different employment constitutes it. The mechanic has his part affigned him, the scholar his, the wealthy and powerful treirs, each has his task to perform, his talent to improve,—has barely so much time for his pleasure, as is necessary for recruiting himself—as is consistent with habitual seriousness, and may rather qualify than interrupt it.

We are furnished with numerous arguments, why the graver occupations should be remitted—why the humour for gaiety and minth should be allowed its place; and so man in his right mind ever taught the contrary. Let the delights of sense have their frason, but let them stand confined to it; the same absurdity follows the excels on either side, our never using, and our rever galitting them.

Be not over wife, is an excellent rule; but it is a rule full as good, and much more wanted.—That fome wiften should be fought.—That drefs and diversion should rot take up all our hours.—That more time mould not be spent in adorning our persons, than in improving our minds.—That the heatisted separate retends ince, much shew and ornament without, and within nothing but stench and rott marks.—That barely to pass our time should not be all the account we make of it, but that some profit should be consusted, as well as some delight.

# § 145. On Pleasure. Secr. IV.

Again, no pleasure can be inhocent from which our health is a sufferer. You are no more to shorten your days, than acuth one shield to end them; and we are suicides but in a different way, if wantonness and luxury be our gradual destruction, or despatr our instant. It is self-murder, to take from our continuance here any part of that term, to which the due care of ourselves would have extended it; and our life, probably, salls a more criminal facristice to our reluguousness, than to our impatience.

When we throw off the load, which Providence has thought fit to lay upon us, we fail greatly in a proper deference to its wistom; in a due submission to its will; but then we have to plead, sufferings too grievous to be sustained——a distress too mighty to be contended with; a plea, which can by no means justify us; yet how preferable to any, that he can alledge, who, in the midst of all things that can give a relish to his being, neglects the preservation

of it-who abuses the conveniences of life to its waste, and turns its very comforts to its ruin ? Or, could we suppose our pleasures disordering our constitution, after a manner not likely to contribute to its decay, they would not even then be exempted from guilt: to preserve yourself should not folely be your concern, but to maintain your most perfect state: every part and every power of your frame claims your regard; and it is great ingratitude towards him, who gave us our faculties, when we in any wife obstruct their free use. The proper thankfulness to God for our life is to be expressed by our care about it; both by keeping it, 'till he pleafes to require it; and by fo preferving it, that it may be fit for all those purposes to which he has appointed it.

Further, the pleasure is, undoubtedly, criminal, which is not adapted to our fortun:—which either impairs it, or hinders as application of it to what has the principal claim upon it.

If actions, otherwise the most commendable, lose their merit, when they disqualify us for continuing them—if generosity changes its name, when it suits not our circumstances; and even alms are culpable, when by bestowing them we come to want them—if the very best afes, to which we can put our wealth, are not so to draw off, as to dry the stream; we can by no means suppose, that our amusements are not to be limited, as by other considerations, so by this in particular—the expence which they create: we cannot imagine, that the restraints should not be upon our wantonness, which lie upon our beneficence.

Be our possessions the largest, it is but a very small part of them, that we have to dispose of as we think the on what conduces solely to our mirth and diversion. Great assumement, whatever we may account it, is really but a greater trust; the means committed to us of a more extensive provision for the necessities of our fellow-creatures; and when our maintenance—our convections—our management of the mains is the claim of others, of our family, our friends our neighbours, of those who are most in need of us, and whom we are most obliged to assist.

In the figure we make, in our attendants, table, habit, there may be a very culpable parlimony; but in the expense which has nothing but self-gratification in view, our thrift can never transgress; here oue abilioence

ablinence is the most generous and commendable, as it at once qualifies us to relieve the wants of others, and lessens our own—as it sets us above the world, at the time that it enables us to be a blessing to it.

There is not a nobler quality to distinguish us, than that of an indifference to ourselves—a readiness to forego our own liking for the ease and advantage of our fellow-creatures. And it is but justice, indeed, that the conveniences of many should prescribe to those of one: whatever his fortune may be, as he owes all the service he has from it to the concurrence of numbers, he ought to make it of benefit to them, and by no means to conclude, that what they are not to take from him, they are not to thare.

Nor should it be unremarked, that the gratifications, best suited to nature, are of all the cheapest: she, like a wise parent, has not made those things needful to the well-being of any of us, which are prejudicial to the interests of the rest. We have a large field for enjoyment, at little or no charge, and may very allowably exceed the bounds of this; but we should always remember, that the verge of right is the entrance upon wrong—that the indulgence, which goes to the full extent of a lawful expence, approaches too near a criminal one, to be wholly clear from it.

Again, care should be taken that our

pleasures be in character.

The flation of some, the profession of others, and an advanced age in all, require that we should decline many, pleasures allowable to those of an inferior rank—of a different profession—of much younger years.

Do your decisions constitute the lawdocs your bonour balance the plebeian's setb? How very fitting is it that you should never be seen eager on trifles—intent on boyish sports—unbent to the lowest amusements of the populace—folicitous after gratifications, which may shew, that neither your fagacity is greater, nor your struptes sewer, than what are sound in the very meanest of the community!

Am I fet apart to recommend a reasonable and useful life—to represent the world as a seens of vanity and folly, and propose the things above as only proper to engage our affections? how ungraceful a figure do I then make, when I join in all the common amusements—when the world seems to delight me full as much as my hearers,

and the only difference between us is, that their words and actions correspond, and mine are utterly inconsistent!

Have you attained the years, which extinguish the relish of many enjoyments—which bid you expect the speedy conclusion of the sew remaining, and ought to instruct you in the emptiness of all those of the sensual kind? We expect you should leave them to such who can taste them better, and who know them less. The massy vestment ill becomes you, when you sink under its weight; the gay affembly, when your dim eyes cannot distinguish the persons composing it: your seet scarcely support you: attend not, therefore, where the contest is, whose motions are the gracefullest: fly the representation designed to raise the mirth of the spectators, when you can only remind them of their cossins.

Laftly, every pleasure should be avoided, that is an offence to the scrupulous, or a snare to the indiscreet. I ought to have nothing more at heart than my brother's innocence, except my own; and when there are so many ways of entertaining ourselves, which admit or no misconstruction, why should I chuse such as afford occasion for any?

To be able greatly to benefit our fellowcreatures is the happiness of few, but not to hurt them is in the power of all: and when we cannot do the world much good, we must be very unthinking indeed if we endeavour not to do it the least possible mischief,

How this action will appear, to what interpretation it is liable, ought to be our confideration in whatever we engage. We are here so much interested in each other's morals, that, if we looked not beyond our present being, it should never be a point indifferent to us, what notions our conduct may propagate, and for what corruptions it may be made the plea: but profeshing the doctrine of Christ as our rule, we can in nothing more directly oppose it, than in taking those liberties, by which the virtue of any is endangered. Which of our pleafures have this pernicious tendency, it will be more proper for my readers to recollect, than for me to describe. To those who are in earnest I have said enough; to the infincere more would be fruitlels. What has been said deserves, I think, some confideration, and that it may have a ferious one, is the most earnest with of,

Dear Sir,

146. A Letter to a young Nobleman, foon after bis leaving School.

Sir,

The obligations I have to your family, cannot but make me folicitous for the welfare of every member of it, and for that of yourfelf in particular, on whom its honours are to descend.

Such infructions and fuch examples, as it has been your happiness to find, must, recessivity, raise great expectations of you, and will not allow you any praise for a common degree of merit. You will not be thought to have worth, if you have not

a diffinguished worth, and what may suit the concurrence of so many extraordinary advantages.

In low life, our good or bad qualities are known to few—to those only who are related to us, who converse with, or live near, u. In your station, you are exposed to the notice of a kingdom. The excellencies or defects of a youth of quality make a part of polite conversation—are a topic agreeable to all who have been liberally educated; to all who are not amongst the meanest of the people.

Should I, in any company, begin a chatafter of my friend with the hard name, whom I hope you left well at—, they would naturally ask me, What relation he bore to the Emperor's minister? When I answered, That I had never heard of his bearing any; that all I knew of him was his being the son of a German merchant, sent into this kingdom for education; I, probably, should be thought impertinent, for introducing such a subject; and I, certainly, should soon be obliged to drop it, or be wholly disregarded, were I unwise enough to continue it.

But if, upon a proper occasion, I meationed, that I had known the Honourable—from his infancy, and that I had made such observations on his capacity, his application, his attainments, and his general conduct, as induced me to conclude, he would one day be an eminent ornament, and a very great blefing, to his country, I should have an hundred questions asked me about him—my narrative would apear of consequence to all who heard it, and would not fail to engage their attention.

I have I must own, often wondered, that the consideration of the numbers, who are continually remarking the behaviour of the Persons of rank among us, has had so little influence upon them—has not produced a quite different effect from what, alas! we every where fadly experience.

Negligere quid de se quisque sentiat, non solum arrogantis est, sed etiam omnius disseluti. I need not tell you where the remark is: it has, indeed, so much obvious truth, that it wants no support from authority. Every generous principle must be extinct in him, who knows that it is faid of him. or that it justly may be faid of him-How different is this young man from his noble father! the latter took every course that could engage the public efteem: the former is as industrious to forfeit it. The Sire was a pattern of religion, virtue, and every commendable quality: his descendant is an impious, ignorant, profligate wretch: raifed above others, but to have his folly more public-high in his rank, only to extend his infamy.

A thirst after fame may have its inconveniences, but which are by no means equal to those that attend a contempt of it. Our cannestness in its pursuit may possibly shacken our pursuit of true desert; but indifferent we cannot be to reputation, without being so to virtue.

In these remarks you, Sir, are no farther concerned, than as you must, sometimes, converse with the persons to whom they may be applied, and your detestation of whom one cannot do too much to increase. Bad examples may justly raise our fears even for him, who has been the most wisely educated, acd is the most happily disposed: no caution against them is superstudies in the place, in which you are at present, you will meet with them in

all thapes. Under whatever disadvantages I offer you my advice, I am thus far qualified for giving it, that I have experienced some of the dangers which will be your trial, and had furticient opportunity of observing others. The observations I have made, that are at all likely to be of fervice to you, either from their own weight, or the hints they may afford for your improving upon them, I cannot conceal from you. What comes from him who wishes you so well, and so much esteems you, will be fufficiently recommended by its motives; and may, therefore, possibly be read with a partiality in its favour, that shall make it of more use than it could be of from any intrinsic worth.

But, without farther preface or apology, let me proceed to the points that I think deserving your more particular confidera-

tion :

tion; and begin with what, certainly, should, above all other things, be considered-RE-LICION. It is, indeed, what every man fays he has more or less considered; and by this, every man acknowledges its importance: yet, when we enquire into the confideration that has been given it, we can hardly perfuade ourselves, that a point of the least consequence could be so treated. To our examination here we usually fit down resolved, how far our conviction shall extend.

In the pursuit of natural or mathematical knowledge we engage, disposed to take things as we find them-to let our assent be directed by the evidence we meet with: but the doctrines of religion each inspects, not in order to inform himself what he ought to believe and practife; but to reconcile them with his present faith and way of life-with the passions he favours-with

the habits he has contracted.

And that this is, really, the case, is evident, from the little alteration there is in the manners of any, when they know as much of religion as they ever intend to know. You fee them the same persons as formerly; they are only furnished with arguments or excuses, they had not before thought of; or with objections to any rules of life differing from those by which they guide themselves; which objections they often judge the only defence their own practice often flands in need of.

I am fure, Sir, that to one of your understanding, the absurdity of such a way of proceeding can want no proof; and that your bare attention to it is your sufficient

guard against it.

Religion is either wholly founded on the fears or fancies of mankind, or it is, of all natters, the most ferious, the weightiest, the most worthy of our regard. There is no mean. Is it a dream, and no more? Let the human race abandon, then, all pretences to reason. What we call such is but the more exquisite sense of upright, unclad, two-legged brutes; and that is the best you can say of us. We then are brutes, and so much more wretched than other brutes, as deflined to the mileries they feel not, and deprived of the happiness they enjoy; by our forefight anticipating our calamities, by our reflection recalling them .--Our being is without an aim; we can have ro purpole, no defign, but what we ourselves must sooner or later despite. We are termed either to drudge for a life, that, ujon fuch a condition, is not worth our

preserving; or to run a circle of enjoyments, the centure of all which is, that we cannot long be pleased with any one of them. Difinterestedness, generosity, public spirit, are idle, empty founds; terms, which imply no more, than that we should neglect our own happiness to promote that of others.

What Tully has observed on the connexion there is between religion, and the virtues which are the chief support of society, is, I am perfuaded, well known to

A proper regard to focial duties wholly depends on the influence that religion has upon us. Destroy, in mankind, all hopes and fears, respecting any future state; you inflantly let them loofe to all the methods likely to promote their immediate convenience. They, who think they have only the present hour to trust to, will not be with-held by any refined confiderations, from doing what appears to them certain to make it pais with greater fatisfaction.

Now, methinks, a calm and impartial enquirer could never determine that to be a visionary scheme, the full persuasion of the truth of which approves our existence a wife defign-gives order and regularity to our life-places an end in our view, confessedly the noblest that can engage it-raises our nature-exempts us from a fervitude to our passions, equally debasing and tormenting us-assords us the truest enjoyment of ourselves-puts us on the due improvement of our facultiescorrects our selfishness-calls us to be of use to our fellow-creatures, to become publie bleffings-infpires us with true courage, with fentiments of real honour and generosity-inclines us to be such, in every relation, as fuits the peace and prosperity of fociety-derives an uniformity to our whole conduct, and makes satisfaction its inseparable attendant-directs us to a course of action pleafing when it employs us, and equally pleasing when we either look back upon it, or attend to the expectations we entertain from it.

If the source of so many and such vast advantages, can be supposed a dream of the funerititious, or an invention of the crafty. we may take our leave of certainty; we may suppose every thing, within and with. out us, conspiring to deceive us.

That there should be difficulties in any scheme of religion which can be offered us, is no more than what a thorough acquaintance quaintance with our limited capacities would induce us to expect, were we ftrangers to the feveral religions that prevailed in the world, and purpofed, upon enquiry into their respective merits, to embrace that which came best recommended to our belief.

But all objections of difficulties must be highly absurd in either of these cases—

When the creed you oppose, on account of its difficulties, is attended with fewer than that which you would advance in its slead; or——

When the whole of the practical doctrines of a religion are such, as, undeniably, contribute to the happiness of mankind, in whatever state, or under whatsoever relations, you can consider them.

To reject a religion thus circumflanced, for fome points in its scheme less level to our apprehension, appears to me, I confess, quite as unreasonable, as it would be to abtima from our food, till we could be satisfied about the origin, insertion, and action of the muscles that enable us to swallow it.

I would, in no case, have you rest upon mere authority; yet as authority will have its weight, allow me to take notice, that men of the greatest penetration, the acutest reasoning, and the most folid judgment, have been on the side of christianity—have expressed the simmest persuasion of its truth.

I cannot forgive myself, for having so long overlooked Lord Bacon's Philosophical Works. It was but lately I began to read them; and one part of them I laid down, when I took my pen to write this. The more I know of that extraordinary man, the more I admire him; and cannot but think his understanding as much of a size beyond that of the rest of mankind, as Virgil makes the stature of Musicus, with respect to that of the multitude surrounding him—

Hunc habet, atque humeris extantem suspicitaltis. En. L. v1. 667, 8.

or as Homer represents Diana's height, among the nymphs sporting with her—

Hariar d' unig the nage les tide pirana. Ou. L. vt. 107.

Throughout his writings there runs a vein of piety: you can hardly open them, but you find fome or other testimony of the full conviction entertained by him, that christianity had an especial claim to our regard.

He, who so clearly saw the defects in every science—saw from whence they proceeded, and had such amazing sagacity as to discover how they might be remedied, and to point out those very methods, the pursuit of which has been the remedy of many of them—He who could discern thus much, left it to the witlings of the following age, to discover any weakness in the foundation of religion.

To him and Sir Isaac Newton I might add many others, of eminent both natural and acquired endowments, the most unfuspected favourers of the christian religion; but those two, as they may be confidered standing at the head of mankind, would really be dishonoured, were we to seek for any weight, from mere authority, to the opinions they had jointly patronized, to the opinions they had maintained, after the strictestenquiry what ground there was forthem.

That the grounds of christianity were thus enquired into by them, is certain: for the one appears, by the quotations from the bible interspersed throughout his works, to have read it with an uncommon care; and it is well known, that the other made it his chief sludy, in the latter part of his life.

It may, indeed, appear very idle, to produce authorities on one fide, when there are none who deferve the name of fuch on the other. Whatever else may have rendered the writers in favour of infidelity remarkable, they, certainly, have not been fo for their fagacity, or science-for any superior either natural, or acquired, endowments. And I cannot but think, that he who takes up his pen, in order to deprive the world of the advantages which would accrue to it were the christian religion generally received, shews so wrong a head in the very defign of his work, as would leave no room for doubt, how little credit he could gain by the conduct of it.

Is there a just foundation for our affent to the christian doctrine? Nothing should then be more carefully considered by us, or have a more immediate and extensive influence upon our practice.

Shall I be told that if this were a right confequence, there is a profession, in which quite different persons would be found, than we at present meet with?

I have too many failings myself to be willing to censure others; and too much love for truth, to attempt an excuse for what admits of none. But let me say, that consequences are not the less true, for their

trati

truth being difregarded, Lucian's description of the philosophers of his age is more edious, than can belong to any set of men in our time: and as it was never thought, that the precepts of philosophy ought to be flighted, because they who inculcated, difgraced them; neither can it be any ressection on nobler rules, that they are recommended by persons who do not observe them.

Of this I am as certain as I can be of any thing, That our practice is no in-Callible test of our principles; and that we may do religion no injury by our speculations, when we do it a great deal by our manners. I should be very unwillingly to rely on the strength of my own virthe in fo many instances, that it exceedingly mortifies me to reflect on their number: yet, in whichfoever of them I offended, it would not be for want of conviction, how excellent a precept, or precepts, I had sranfgressed-it would not be because I did not think, that a life throughout agrecable to the commands of the religion I profess, ought to be conflantly my care,

How frequently we act contrary to the obligations which we readily admit ourselves to be under, can scarcely be other-wise than matter of every one's notice; and if none of us infer from those pursuits, which tend to destroy our health, or our understanding, or our reputation, that he, who engages in them, is persuaded that disease, or infamy, or a second childhood, deserves his choice; neither should it be taken for granted, that he is not inwardly convinced of the worth of religion, who appears, at some times, very different from what a due regard thereto ought to make him.

Inconfistency is, through the whole compass of our acting, so much our reproach, that it would be great injustice towards us, to charge each defect in our morals, upon corrupt and bad principles. For a proof of the injustice of such a charge, I am confident, none need look beyond themselves. Each will shot the complaint of Meda in the poet, very proper to be made his own — I fee and approve of what is right, at the jume time that I do what is surong.

Don't think, that I would justify the faults of any, and much less theirs, who, professing themselves set apart to promote the interests of religion and writter, and having a large revenue assigned them, both that they may be more at lossure for so noble a work, and that their pains in it

may be properly recompensed, are, certainly extremely blameable, not only when they countenance the immoral and irreligious; but even, when they take no care to reform them.

All I aim at, is, That the cause may not fusifier by its advocates.—That you may be just to it, whatever you may dislike in them—That their failures may have the allowance to which the frailty of human nature is entitled—That you may not, by their manners, when worst, be prejudiced against their Dastrine; as you would not consure philosophy, for the faults of philosophy.

The prevalency of any practice cannot make it to be either fafe, or prudent; and I would fain have your's and mine fuch, as may alike credit our religion, and underflanding: without the great reproach of both, we cannot profess to believe that rule of life to be from God, which, yet, we model to our passions and interests.

Whether such a particular is my duty, ought to be the first consideration; and when it is found so, common sense suggests the next—How it may be performed.

But I must not proceed. A letter of two sheets! How can I expect, that you should give it the reading? If you can perfuade yourself to do it, from the conviction of the fincere affection towards you, that has drawn me into this length; I promise you, never again to make such a demand on your patience.-- I will never again give you to troublesome a proof of my friendthip. I have here begun a subject, which I am very defirous to profecute; and every letter, you may bereafter receive from me upon it, whatever other recommendation it may want, shall, certainly, not be without that of brevity. Dean Bolton.

§ 147. Three Estays on the Employment of Time.

#### PREFACE.

The effays I here publish, though at first penned for the benest of some of the author's neighbours in the country, may, it is hoped, from the alterations since made in them, be of more general use. The subject of them is, in itself, of the highest importance, and could, therefore, never be unseasonably considered; but the general practice, at present, more especially entitles it to our notice. The principles on which their argumentative part proceeds, are denied by none whose conviction is consultant. Such as regard the baman frame as only

in its mechanism excelling that of beasts—such as would deprive man's breast of social affections, exempt him from all apprehensions of a deity, and consine his hopes to his present existence, are not the persons whom any thing here said proposes to affect. They are not, I mean, directly applied to in this work; but even their benefit it may be said consequentially to intend, as it would certainly contribute thereto, could it properly operate on those whose advantage is its immediate aim.

We have been told, by very good judges of human nature, how engaging virtue would be, if it came under the notice of fense. And what is a right practice, but virtue made, in some measure, the object of our sense? What is a man ever acting reasonably, but, if I may so speak, impersonated virtue—Virtue in a visible shape, brought into view, presenting itself to the sight, and through the sight as much affecting the mind, as it could be affected by any elegance of form, by any of the beauties of colouring or proportion.

The notions most dishonourable to the deaty, and to the buman species, are often, I supect, first taken up, and always, certainly, confirmed by remarking how they act whose speculations express the greatest ho-

nou, towards both.

When the strongest sense of an all-powerful and wise, a most holy and just Governor of the world, is professed by those who show not the least concern to please him—When reason, choice, civil obligations, a suture recompence, have for their advocates such as are governed by humour, passion, appetite; or who deny themselves no present pleasure or advantage, for any thing that an hereaster promises; it naturally leads others, first, to think it of little moment which side is taken on these points, and then, to take that which suits the manners of them who, in their declarations, are the warmest opposers.

Whereas were the apprehensions that do justice to a superintending providence—
an immaterial principle in man—his liberty—his duties in society—his hopes at his dissolution, to be universally evidenced by a suitable practice; the great and manischt advantage arising from them would be capable of suppressing every doubs of their truth, would prevent the entrance of any, or would soon remove it.

As, indeed, all that we are capable of knowing in our present state, appears either immediately to regard its wants, or to be connected with what regards them, it is by no means a flight confirmation of the truth of a doctrine, That the perfuaion thereof is of the utmost confequence to our present well-being. And thus the great advantages that are in this life derivable from the belief of a future retribution——that are here the proper fruits of such a belief, may be considered as evidencing how well it is sounded——how reasonably it is entertained. On this it may be of some use more largely to insist.

What engagements correspond to the conviction, that the state in which we now are is but the passage to a better, is considered in the last of these essays; and that, when so engaged, we are acting the passabetion it has from our calmest hours, our most serious deliberation and freest judgment, and likewise on account of the testimony it rejeives even from them who act a quite contrary one. What they conform not to, they applaud; they acknowledge their failures to be such; they admire the worth, which they cannot bring themselves to cultivate.

If we look into the writers who supposed all the pleasures of man to be those of his body, and all his views limited to his prefent existence; we find them, in the rule of life they gave, deferting the necessary confequences of their fupposition, and prescrib-ing a morality utterly inconsistent with is. Even when they taught that what was good or wil was to be determined by our feeling only-that right or wrong was according to the pleasure or pain that would enfue to us during the continuance of our present frame, since after its dissolution we have nothing to hope or fear; their practical directions were, however, that we ought to be firicily just, severely abstinent, true to our friendships, steady in the pursuit of honour and virtue, attentive to the public welfare, and willing to part with our lives in its defence.

Such they admitted man ought to befuch they exhorted him to be, and, therefore, when they would allow him to act only upon metieus utterly incongruous to his being this person, it followed either that these were wrongly assigned, or that a conduct was required from him unsuitable to his nature.

That his obligations were rightly flated was on all hands agreed. The mistake was in the inducements alledged for discharging

While the Epicureans admitted justice to be prefetable to injustice—— a public spirit, to private selfish views; while they acknowledged it more fitting that we should sacrifice life to the good of our country, than preferve it by describing the common welfare; they must, I think, be regarded as authorising a preference of the principles which will make man just and public-spirited, to those which will dispose him to be unjust, and wholly attentive to his own lattle interests.

Let us fee, then, what will be the practical confequences of adopting or rejecting the Epicarean tenet of our having nothing to hope for beyond the grave.

The value we fet on life is shown by what we do to preferve it, and what we fuller rather than part with it. We support ourselves by the hardest labour, the severest drudgery, and we think death a much greater evil, than to firuggle for years with oifeafe and pain, despairing of cure, and even of any long intervals of eafe. Such, erdinarily, is our love of life. And this defire to keep it cannot but be greatly increafed, when we are induced to think that once loft it is so for ever. To be without all hope of again enjoying the blesling we thus highly prize, must naturally difficuline us to hazard it, and indispose us for what will endanger its continuance. He who is perfunded that corporeal pleasure is all he has to expect, and that it is confined to his present existence, must, of be ads agreeably to fuch a perfuation, be wholly intent on the parfuit of that pleature, and dread nothing more than its coming to an end, or being interrupted. Hence, if his term of lite would be thorter, or any greater diffress would accrue to him by adhering to truth and justice, than by departing from them if he were to be at present more a lofer by affilting his friend, than by forfaking him-if he could promise himself a larger share of sensual gratifications from betraying his country, than from ferving it taithfully, he would be falle and unjust, he would be perfictious to his friend, and a traitor to his country. All those sentiments and actions that express an entire attach-

ment to the delights of fense, and the strongest reluctance to forego them, are strictly in character when we look not beyond them—when we acknowledge not any higher failfaitiens, and behold these as expiring with us, and sure never to be again tasted.

Whereas the prospect of a returning life. and of enjoyments in it far superior to any we now experience, or promife curfelves, has a necessary tendency to lessen our folicitude about the existence here appointed We cannot well be reconciled to the he of our being, but are easily so to its change; and death confidered as only its change, as the paffage from a less to a more defirable state, will certainly have the terror of its appearance much abated. The conviction that there is a greater good in referve for us than any pleasure which earth can afford, and that there is something far more to be feared by us than at y pain we can now be made to fuffer, will, in proportion to its ftrength, render us indifterent to the delights and conveniences of our abode on earth, and dispose us to qualify ourselves for obtaining that greater good, and avoiding that so much more to be dreaded evil. In these considerations of life and death, of happiness and mifery, virtue has its proper support. We are by them brought to judge rightly of the part becoming us, and to adhere to it immoveably: they furnish sufficient inducements to avoid fallchood and injustice, of whatever immediate advantage we may be thereby deprived --- they encourage us to ferve our friends and country with the utmost fidelity, notwithstanding all the inconvenierces that can be supposed to attend it -they are, indeed, proper incitements to prefer the public welfare to our own fafety, while they represent to us how much our gain thereby would overbalance our lois.

Brutes in our end and expectations, how can we be otherwise in our pursuits? But if the reasoning principle in us be an incorpuptible one, and its right or wrong application in this embodied state affect the whole of our square existence; we have, in that apprehension, the most powerful motive to act throughout in conformity to our rational nature, or, which is the same thing in other words, never to swerve from virtue—to despise aske danger and pleasure when standing in competition with our duty.

Thus, when Secretes, in Plate's Pheden, has proved the immortality of our foul, he

confiders it as a necessary confequence of the telief thereof, " That we should be em-" p! yed in the culture of our minds-" in such care of them as shall not only " regard that term, to which we give the " name of life, but the whole which fol-"lows it-in making ourfelves as wife " and good as may be, fince on it our fafe-" ty entirely depends, the foul carrying " hence nothing with it, but its good or " had actions, its virtues or vices, and these " condituting its happiness or milery to all " eternity."

So, when the elder Sciplo is introduced by Tally, apprifing the younger, " That what is called our life, may be more " properly fivled our death-that we " truly live, when we are freed from the " fitters of our body;" he preceeds to o's erve, how much it then concerned him " to be just --- to promote the public wel-' fire-to make true plony his aim, " doing what is right without regard to " my advantage it will now yield him. " delpiting popular opinion, adhering to " viitue for its real worth." And the youth thus indructed, profedes, "Tingof-" ter fuch information arto what flate be " is to pak, he would not be writing to " himself: unmindful he had not been of his ancestor's worth, but to copy it " should now be his more especial care, " fince encouraged thereto by fo great a " reward,"

Lucan, representing the inhabitants of this part of Europe as perfunded that the foul furvived the diffolution of the body, congratulates them, indeed, only on the I appliness they enjoyed in an opinion that freed them from the most tormenting of all fears, the dread of death-that made tirm act with so much bravery and intrepidity. But when he admits a contempt of death to be the proper effect of this epirun, he must be considered as allowing it all that practical influence which as naturaily refults from it, as fuch an indifference to life doth, and has the fame connexion with it.

If, therefore, the persuasion that death renders us utterly insensible, be a persuafrom that unmans us quite-that disposes to a course of action most unworthy of as -that is extremely prejudicial to society. and tends, in every way, to our own greatcil hurt or debasement, we may well suppole it an erroneous one; fince it is in the highest dagree improbable, that there should

which so far operates to the prejudice of mankind o necessarily contributes to introduce a general diforder.

On the other hand, if, from the conviction that there is a recompence for us beyoud the grave, we derive featuments most becoming us—if from it the worthiest actions proceed—if it be the source of the greatest both private and public good -if with it be connected the due difcharge of our duty in the feveral relations in which we are placed--if it alone can lead us to perfict our nature, and can furwith our flate with fatisfactory enjoyments: there may feem fufficient grounds to conclude that there is fuch a recompence; the pertuation thereof, thus affecting us, may well appear most reasonably entertained.

When all those principles, of whose truth we have the greatest certainty, conduct us to happiness, it is natural to think, that the influence of any principle upon our happiness should be no improper tell of its truth.

If there be no furer token of a right practice, than its tendency to promote the common good, can we but judge that to be a right opinion, which has undeniably, in an eminent degree, fuch a tendency?

When the difficulties that under a general corruption, attend our adherence to virtue, are only to be furmounted by the prospect of future reward; one knows not how to believe that the proper inducement to our acting a part to becoming us --- fo much our praise, should be no other than a chimerical view, a romantic and utie.ly vain expectation.

When error is manifeltly the cause of whatever ill we do or fuffer, it is extremely improbable, that to an erroneous notion we must stand indebted for the best use of life, and its most solid satisfactions.

But it may be asked ---- where does this opinion produce these boated effects? Among them who profess it their himett belief that there is a fature recompence, how few do we find better men for itmore regular in their manners, or more useful to the world, than they would have been without any fuch perfusion?

How far any truth shall operate upon us -how far it shall influence us, d pends upon our application of it, upon our attention to it. Experience furnishes the utmost certainty of a vast variety of particulars highly interching our present welfare, which yet we overlook, we give ourfelves little or no conbe any truth in a notion, the reception of cern about, tho' we thereby make ourselves

the feverest sufferers; and may be almost as fure as we can be of any thing, that our unconcernedness about them must be attended with confequences thus fatal to us. The feveral rules which regard the lengthening of life—the prefervation of health—the enjoyment of ease, though they carry with them the clearest evidence of their importance, how very little weight have they with the generality of mankind-how unheeded are they when opposing an eager appetite, a strong inclination! While yet these rules are acknowledged to remain as true, as worthy of our notice, as certain in their falutary effects when observed, as if all that practical regard to which they are entitled, was paid them; and we may be as justly thought endowed with a capacity of discovering those effects in order to their profiting us, as if they universally took place.

What benefit was intended in qualifying us for the discernment of any truth, is by no means to be inferred from what ordinarily enfues to us when discerning it. A just inference as to this can only be made from regarding the dictates of reason upon such a truth being differned by us; or, what ufe of its discernment reason directs us to make. When we are less wicked than very had principles prompt us to be, which is often the case; these are, nevertheless, full as blameable as they would be if we were to act confittently with them. That they are not purfued, is, as to them, quite an accidental point; in reason and nature they should be, and therefore are fitly chargeable with all the consequences that acting according to them would produce.

So, on the other hand, tho' it must be confessed, that, with the best principles, our course of life is, frequently, very faulty; the objection must lye not to the nature or kind of their influence, but to a weakness

of it, which is our crime, and not their defects. We will not let them act upon us, as they are qualified to do. Their worth is to be estimated by the worth they are suited to produce. And it would be full as absurd, when we will not mind our way, to deny that the light can be of any help to us in seeing it, as to deny the service-ableness of any principle, because we fail in its application.

Nor is it, indeed, only our unhappiness that we are inattentive to what the belief of u future recompence requires from ue; religion itself, is, alas! every where abused to the obstructing the proper effects of this belief. I mean, that whatever religion is any where professed, some or other rite or doctrine of it dives favour, as in Paganism and Mohammedism; or is so construed, as in judaifm and Christianity, that it is made to favour a departure from the practice which fuits the perfuation of a future reward, The reproach that belonged to the Jews in our Saviour's time, they have, as far as appears, deserved ever since; that by their scrupulous regard to the lesser points of their law, they think they make amends for the groffest neglect of its most impor-And with respect to us tant precepts, Christians , whence is it, that there is so little virtue among us—that we are throughout so corrupt, but from taking sanctuary for our crimes in our very religion, from perverting its most holy insti-tutions and doctrines, to be our full security whatfoever are our vices +?

Thus, we are either of a church in which we can be absolved of all our fins; or we are of the number of the elect, and cannot commit any; or the merits of Christ atone for our not having the merit even of honesty and sincerity; or a right saith makes amends for our most corrupt practice;

\* Sir Isaac Newson having observed, That the peopletics concerning Christ's fish coming were for setting up the Confluing velging, adds, subschool all nations have fine corrupted, &c. Observ. upon the Proph. of Dan. &c. p. 252.

By our zeal in our opinions we grow cool in our piety and practical cuties. Fpif. Dedicat, prefixed to the Di cauje of Liberty of Front. We

The general and great defer in those that profess the Christian faith is, that they hope for life eternal, without per sorming those conditions, whereupon it is promised in the Gospel, namely, repentance and reformation.—They will frust to a finitely, back it faith, or to some penances, and finishermon, and communication made with God, doing what he hath not required instead of what he hath commanded. No persuasions shall prevail to move and excite them to do this, no reasons, arguments, or demonstration, no not the express words of God, that it is necessary to be done; or to sorbear to consure them as Excited to the Grace of God, who do with clear and express Scripture show the absolute necessity of the Court, and Samens, p. 166, 167.

as Exemin to the tree express weaves or One, that it is necessary to be done; or to foreset to centure to some as Exemin to the Grace of G-d, who do with clear and express Scripture show the absolute necessity of the One of the Company, Scripture, 166, 167.

I health with, that by public authority it were so ordered, that no man should ever preach or pint this dockrine, That Faith alone justifies, unless he joins this together with it, That universal obedience is necessary to salvation. Collinguosith's R sig. of Prot. p. 362.

We have prayers, facraments, fasts, that are never thought of to improve us in virtue, but to supply the want of it----to quiet our confeiences under the most culpable gratification of our lufts.

How the belief of a future recompence fhould, in reason, affect our practicewhat its proper and natural influence is, folely concerns the prefent argument. feems enough, in the case before us, that no one can be confiltent with himfelf, but, if he has any hope of happiness in another world, his conduct will be regular, becoming, rational: and, that where we find th to hopes entertained on mature confid rath n, juffly reasoned upon, duly attraded to, there we certainly find great parity of morals, a strict regard to the put befitting a reatonable cleature, and the other advantage attribed to them. If 1 anot be allowed to infer from hence that to v are well founded, they have flill for ther support all those arguments in favour of a final retribution, with which I have n t at all meddled, nor in the least weakevel by any thing I may have less pertinently observed. The subject of the third neath observed. The sabject of the third or the following essays led me to the remaks here made; and to me they appear not immaterial. I cannot, indeed, bring myfelf to think, but that the hopes which induce me to act most agreeably to my Creator's will, he has formed me to entertain; and will not let me be difappointed in them.

Of one thing I am fure, that they who fuller the permation of a future happiness to operate, as it ought, on their practice, conflantly experience their practice adding thrength to their persuasion; the better they become by their belief, the more confirmed they become in it. This is a great deal to fay on its behalf. What weightier recommendation to our affent can any doctrine have, than that, as it tends to improve us in virtue, fo the more virtuous we are, the more firmly we affent to it; or, the better judges we are of truth, the fuller assurance we have of its truth?

§ 148. On the Employment of Time. RESAY THE PIRST.

Tune demum intelliget, quid faciendum tiri, quid vitandum fit, cum didiceres quid natura trae debeas. SEN. Ep. 121.

" Amazing! that a creature, fo warm in " the pursuit of her pleasures, should never " cail one thoughttowards her happiness." A reflection this, made indeed by a comic writer, but not unworthy the most ferious.

To be intent on pleasure, yet negligent of happiness, is to be careful for what will case us a few moments of our life, and yet without any regard to what will diffress us

for many years of it.
When I study my happiness, I consult the fatisfaction of the whole continuance of my being-I endeavour, that throughout it I may fuffer as little, and enjoy myle fas much, as my nature and fituation will a !-Happiness is latting pleasure; its pursuit is, really, that of pleasure, with as small an allay as possible of pain. We cannot, therefore, provide for our happiness, without taking our share of pleasure; tho', as is every where but too evident, our eagerness after pleasure may plunge us into the mifery we are unable to support.

Nothing, indeed, is more specious than the general term Pleasure. It carries with it the idea of fomething which must be permitted us by our Maker; fince we know not how to suppose him forbidding us to tatle what he has disposed us to relish. His having formed us to receive pleafure, is our licence to take it. This I will admit to be true, under proper restrictions.

It is true, that from our nature and constitution we may collect wherein we act agreeably to our Creator's will, and where in we act contrary to it; but the mischief is, we commonly mistake our nature, we miscal it; we call that it which is but a part of it, or the corruption of it; and we thence make conclusions, by which when we govern our practice, we foon find ourfelves in great difficulties and diffress.

For instance, we call our passions our nature; then infer, that, in gratifying them, we follow nature; and, being thus convinced that their gratification must be quite lawful, we allow ourselves in it, and are undone by it. Whereas, the body is as much the man, as his passions are his nature; a part of it, indeed, they are, but the lowest part; and which, if more regarded than the higher and nobler, it must be as fatal to us, as to be guided rather by what is agreeable to our appetite, than conducive to our health. Of this more hereafter.

The call of nature being the favourite topic of all the men of pleasure-of all who act the most in contradiction to nature, I will confine the whole of the following essay to the consideration of it, sc far as it relates to the employment of our time: and show how our time should be employed, if we have a just regard to our nature—if what it requires be confulted by us.

L 3

That man is the work of a wife agent, is in the clearest manner discovered by the marks of wisdom that shew themselves in his frame—by the contrivance and skill, that each part of it expresses—by the exact proportion and fuitable disposition, that the several parts of it have to each other, and by their respective structs to promote the well-being of the whole.

When we must thus acknowledge the great wistom exerted in our structure; when we are so capable of discerning its beauties and advantages, and so fully know their preservation and improvement to depend upon ourselves, upon our own end-avours, care and pains: we cannot pessibly be at a loss to discover what our wise Maker must, in this particular, expect from us. The duty of man is as certainly known from his nature—what he ought to do for himself is as tully understood from what he can do, as the uses of any machine are understood by a thorough acquaintance with its powers.

I can no more doubt for what I am intended—what must be required of me, when I see plainly what I am able to cfiest, than I can question for what purposes a watch or clock is designed, when I am duly apprised how the different parts of it act upon each other, to what they all con-

cur, and to what only.

We want no reasoning to convince us, that a frame to curious as the human, must be made in order to its continuance, as long as the materials composing it will admit; and that we ourfelves must give it such continuance: how this is thortened, how it is prolonged, we are likewite all of us fully I ulible. There is no man but perceives , what will haften his diffelution, and what will probably retard it; by what management of himfelf he is fure to pass but few years in the world, and by what he is likely to be upheld in it for many. Here then our rale is obvious; these notices afforded us to make it for when we are taught, that the support of our life must be agreeable to him from whom we received it, and that we are appointed to give it this fupport, that it must come from our filees. from what are do in order to it; we are at the same time instructed to regard all thing; contributing to it as engined us, and all things detrimental to, and inconfifent with it, as forbilden us; we have it foggefted to us, that we are properly employed when we confult the due p elevation of life, and that the engagements are improper, are blam cable, that hinder it,

Thus, to spend our time well, we must give our bodies such exercise, such rest, and other rest chments, as their subsistence demands; and we misspend it, when we are lazy and slothful, when we are less sobe, chalte, and temperate; when we proceed to excesses of any kind, when we let our passions and appetites direct us: every thing in this way tends to halten our dissolution; and therefore must be criminal, as opposing that continuance here, which our very composition shews our Maker to have designed us.

But that our frame should be barely upheld, cannot be all we are to do for it; we must preserve it in its most perfect state, in a state in which its several powers

can be best exerted.

To take this care about it, is evidently required of us. Any unfitness for the functions of life is a partial death. I don't fee of what we can well be more certain, than that all the health and flrength, of which our constitution admits, were intended us in it; and they mull, therefore, be as becoming our concern, as it is to hinder the ruin of our constitution; we know not how fufficiently to lament the loss of them, even from the advantage of which they are to us in themselves, not only from their preventing the uncafinels, the pains, and the numerous inconveniences with which the fickly and infirm have to flruggle, but likewife from the fatisfaction they give us in our being, from what we feel, when our blood flows regularly, our nerves have their due tone, and our vigour is entire.

Yet these are but the least of the benefits we have from them.

We confilt of two parts, of two very different parts; the one inert, passive, utterly incapable of directing itself, barely ministerial to the other, moved, animated by it. When our body has its full health and strength, the mind is so far assisted thereby, that it can bear a closer and longer application, our apprehension is readier, our imagination is livelier, we can better enlarge our compass of thought, we can examine our perceptions more fluidly, and compare them more exactly: by which means we are enabled to form a truer judgment of thing ---- to remove more effectually the naflakes into which we have been led by a wrong education, by pailion, inattention, custom, example—to have a clearer view of what is best for us, of what is most for our interest, and thence determine ourselves more readily to its purfuit, and perfift therein with greater refo-

The foundness of the body can be thus ferviceable to the mind, and when made so, may in its turn be as much profited by it.

The poet's observation is no less true of them, than it is of nature and art, each the so it, to our receiving so fervice they can effect, wants, each helps the other;

As what is corpore:

" Mutually they need each other's a d."
Roscom

The mind, when not restrained by any thing deficient in its companion, and having from it all the affiftance it is adapted to afford, can with much greater facility prevent that discomposure and trouble, by which our bodily health is ever injured, and preferve in us that quiet and peace, by which it is always promoted. Hence we are to conclude, that we should forbear, not only what necessarily brings on difease and decay, but whatever contributes to enfeeble and enervate us: not only what has a direct tendency to haften our end, but likewife what leffers our activity, what abates of our vigous and spirit. That we should also avoid whatever is in any wife prejudicial to a due confideration of things, and a right judgment of them; what ver can hinder the understanding from properly informing itfelf, and the will from a ready compliance with its directions, We must be intent on fuch a discipline of ourselves as will procure us the fullest use of our frame, as will capacitate us to receive from it the whole of the advantage it is capable, of yielding us; so exercising the members of our body, co ulting its conveniences, supplying its wants, that it may be the least burthensome to us, may give us the least uneafiness ---that rone of its motions may, through any fault of ours, be obstructed, none of its parts injured that it may be kept' in as unimpaired, as athletic a flate as our endeavours can procure, and all its functions performed with the utmost exactness and readiness; so guarding, likewise, against the impressions of lense, and delufiveness of fancy, so composing our minds, puritying them, divesting them of all corrupt prejudices, that they may be in a disposition equally favourable to them, and to our bodies-that they may not be betrayed into mistakes dangerous to the welfare of either-that they may be in a condition to difcern what is becoming us, what is fittest for us; desirous of discovering it, and preparing to be influenced by it.

We are thus to feek our most perfect state, such as allows us the freest use of our several powers a full liberty for the due application of them. And the ability thus to apply them, must be in order to our doing it, to our receiving from them whatever service they can effect.

As what is corporeal in us is of least excellence and value, our case in general about it, should been a proportion to the little worth it has in itself—should chiesly regard the reference it has to our understanding, the assidance that it may afford our intellectual faculties.

Merely to preferve our bring—to poficis our reembers entire—to have our tendes perfect—to be free from pain—to enjoy health, ftrength, beauty, are but very low aims for human creatures. The most perfect state of animal life can never becomingly engross the concern of a rational nature; fitted for much nobler and worthier attainments, we are by that fitteds for them called to pursue them.

Ask those of either fex, who rate highest the recommendation of features, complexion, and thape-who are most intent on adorning their perions-who fludy most the accomplishments of an outward appearance; ask them, I say, which they think their chief endowment, and what it is that does them the highest honour? You will find them with one confent pronouncing it their reasen. With all their folly they will not defend it as such: with their little fense, they will prefer that little to their every other fancied perfection. The finest woman in the world would rather make deformity her choice than idiocy, would rather have ugliness than incapacity her reproach.

Thus, likewise, whom do we perceive so fond of life, so desirous of reaching its longest term, that he would be willing to survive his understanding; that he would chuse to live after he ceased to reason? The health and ease, the vigour and chearfulness, that are often the lunatic's portion, would not induce the most infirm, siekly, and complaining among us, to with himself in his stead; to wish an exchange of his own distempered body, for the other's disordered mind:

Nor does the mind only claim our chief regard, as it is thus univerfaily acknowledged, and as it really is the principal, the most excellent, the presiding part of us, but as our well-being is necessarily connected with giving it this preserence, with L 3 bestowing

bestowing the most of our care and pains

upon it.

What is best for the body, what is best for the whole man, can only be discovered and provided for, by our rational faculties, by them assiduously cultivated, diligently exerted, and thence ilrengthened

and enlarged.

Our well-being wholly depends upon the fufficient information of our understanding, upon the light in which we fee things, upon the knowledge we have how far they can profit or hurt us, how the benefit they can be of to us may be derived from them, and how the hurt they can do us

may be escaped.

If I think that to be good, or that to be evil, which is not such-or if I know not that to be good, or that to be evil, which is really such-or if I think there is more or less good, or more or less evil in any thing than there really is or if what, by a proper application, might be made of very great advantage to me, I am ignorant how to make of any, or of as much as it would yield me-or if I am ignorant how to render that very little, or not at all hurtful to me, which might have its evil either greatly lessened or wholly avoided: in all these instances, my wellbeing must of necessity be a sufferer; my ignorance must greatly abate of the satisfaction of my life, and heighten its unealinets.

No one is prejudiced by his not defining what he conceives to be good, by his dif. inclination towards it, by his unwillingness to embrace it. So far is this from being our cafe, that we are always purfuing it. The fource of all our motions, the defign of all our endeavours, is to better ourselves, to remove from us that which is really, or comparatively evil.

What alone hurts us is our misapprehenfion of good, our miltakes about, our ignorance of it. Let us fully understand ithave just conception of it, we then shall never deferve the blame of its being less earnestly fought after, and therefore unattrined by us. The excels of our earnestness after it is, indeed, usually the occasion of missing it. Our folicitude, our eagersels and impatience are here to great, that they won't allow us time to examine appuarances-to diffinguish between them

against what is present-to deliberate whether we do not forego a much greater advantage hereafter, by closing with that which immediately offers; or shall not have it abundantly overbalanced, by its mifchievous consequences.

We want not to be put on the pursuit of happiness, but we want very much to have that pursuit rightly directed; and as this must be done by the improvement of our rational powers, we can be interested in nothing more than in improving them, than in fuch an application of them, as will con-

tribute most to perfect them.

We are so placed, that there are very few of the objects furrounding us, which may not be serviceable or hurtful to us; nor is that fervice to be obtained, or detriment avoided, otherwise than by our acquaintance with them and with ourselves: the .more exact our knowledge of this kind is, the more we lessen the calamities, and add to the comforts of life: and it certainly must be as much the intention of our Creator, that we should attain the utmost good which we are capable of procuring ourselves, as that we should attain any for which he has qualified us.

Nor is the benefit arifing to us from an enlarged understanding rendered less certain, by the uneafiness that we find to be the share of the studious, the contemplative, and learned-of them whose intellectual

attainments we chiefly admire.

The philosopher's observation to his friend on books, that it fignifies nothing beau many, but what he had, is applicable to the knowledge they communicate: what it is, and not how various, is the thing that concerns us. It may extend to a prodigious number of particulars of no moment, or of very little; and that extent of it gain us all the extravagance of applause, though we have the ignorance of the vulgar, where it must be of the worst consequence.

Crowding our memory is no more improving our understanding, than filling our coffers with pebbles is enriching ourfelves": and what is commonly the name of learning, what usually denominates us very learned is, really, no more than our memory heavily and uselessly burthened.

How high is the defert, in the more east, era parts, of him who can but read and write the language of his country? A life and realities --- to weigh what is future spent in the study of it alone shall be there

judged

<sup>\*</sup> There is nothing almost has done more harm to men dedicated to letters, than giving the name of thidy to reading, and making a man of great reading to be the time with a man of great knowledge. Last of the Candell of the Understanding.

judged an exercise of reason most worthy of applause. And are we in these so enlightened regions, in this school of science, as we are apt to fancy it, at all more just to rational improvements! We have, indeed. n) encomiums for him who is not at a loss for the meaning of any word that his native tongue furnishes; but he who is well skilled in two or three ancient ones, will have the highest applause for that skill, and be confidered as among them, who have diffinguilhed themselves, by a right application of their capacities. In this number we, likewife, generally agree to place fuch as have passed years in only qualifying themfelves either to cavil and dispute, or to difguite their ignorance on any subject, or to colour strongly, and command the passions of the hearers. We are equally favourable to them, who bufy their minds on difcoveries that have no foundation but in fancy and credulity-or whose whole endeavour it has been to learn what this or that man has determined on a point, wherein he was as ill qualified as themselves to make a right determination,--or who amuse themselves with theories, with trifling and vain speculations.

Let a just allowance be made for these, and such like persons, whose reputation for learning is only built on the generality miscalling it, on the prevailing mistakes about it, and who have really hurt their understandings by what is thus falsely esteemed improving them; we shall have proceeded a great way in removing the objection to the pursuit of knowledge, from the little service it is of, to such whose attainments in it we concur in acknowledging and admiring.

When our intellectual pursuits are useful, they are often limited to what is of least use. How few of us are prompted to our refearches from the consideration of the degree or extent of the good derivable from them? It is humour, tancy, or fordid gain alone, that ordinarily gives rise to the very inquiries which are of advantage to the world; they seldom are made from a regard to their proper worth, from the instruence they can have upon our own or other's hap piness.

That the better our understanding is informed, the better it can direct us, must be

as evident to all, as that we want to be directed by it. The mind of man is as much affifted by knowledge, as his eye by light. Whatever his intellectual powers may be in themselves, they are to him according to his application of them: as the advantage he receives from his sight is according to the use he makes of it. That ignorance of his good which he might, but will not, remove, deprives him of it as certainly as an utter inability to acquaint himself with it.

In what is the improvement of our understandings, we may, indeed, be mittaken, as we may in what constitutes our true happiness: but in each case we must be wilfully so, we must be so by refusing to attend, to consider.

Could we by inflined discover our own good, as the brute distinguishes its good, all concern on our part to increase our discernment might be needless; but the endeavour after this must be in the highest degree necessary, when the more clearly we discern things, the more we are benefited, and the less hurt by them. Where is the man who is not made happier by inquiries that are rightly directed, and when he can say with the poet,

The fearch of truth And moral decency hath fill'd my breaft: Hath every thought and faculty possest?

Of knowledge as diffinet from true wifdom, it may be not unjustly observed, that the increase of it is only, the increase of forrow; but of that knowledge, the pursuit of which expresses our wisdom, we may confidently affert, that our fatisfaction must advance with it. All will admit it a proof of wildom, to judge rightly of what is most for our interest, and take such measures as fuit it: and as we are qualified for this by our knowledge, by the knowledge of our own nature, and of the properties of the things without us, so far as they can contribute to our better or worse state; in the degree we are thus knowing we can only be wife, determine rightly of what is best, and use the fittest means to procure it. Attainments that serve not to this purpose may be flighted; but for fuch as are requifite to it, if they principally deferve not our concern. I see not what can have any title to it \*.

<sup>•</sup> Since our faculties plainly discover to us the being of a God, and the knowledge of ourselves, enough to lead us into a sull and clear discovery of our duty, and great concernment; it will become us, as rational creatures, to employ those faculties we have, about what they are most adapted to, and sellow the direction of nature, where it seems to point us out the way. F. Its rational to conclude.

We are, indeed, flartled at the very term, easy under their ignorance and milakes. of deliberating, weighing, confidering, comparing; we have affixed fuch ideas to them, to make them appear rather hindering the true enjoyment of ourselves than promoting it: but if we would not thare the unealiness that so many of our fellowcreatures lament, we must not adopt their prejudices. In every point of confequence we use more or less confideration; and in all the pleasures that allure, in all the trifles that amuse us, we are still making comparisons, preferring one to the other, pronouncing this less, and that more worthy of our choice. Tho' none, if the philotopher may be believed, deliberate on the whole of life, a'l do on the parts of it: and if we fail not to compare and reason upon our lower enjoyments, I fee not what there can be forbidding in the advice to attend ferioully, to examine fairly, and to delay our choice till we have gained the inflruction requifite to determine it, when the object thereof is what can be melt for our eafe and fatisfaction.

But it is not, perhaps, all exercise of our reaton, in a way fo well deferving it, that difguils us: it is the degree of application required from us, that we relish not.

- 1. We know not how to be reconciled to fo much trouble about enlarging our difcernment, and refining our judgment.
- 2. We do not fee how fuch a task can suit them, whose whole provision for the day is from the labour of it,
  - 3. We find no small part of mankind fo

that they will not advance a step to remove them; and what greater recomme idation can there be of any fituation, than that they who are in it are entirely fatisfied with it?

1. The pains that we are to take in order to an advantage that must infinitely overbalance them, we can have no excuse for omitting, and we are called to no pains for the improvement of our reason, but fuch as cannot be declined without leffening our happiness-without incurring some evil we should otherwise have escaped, or wanting some good we should otherwise have obtained: whatever has its neglect attended with these consequences, must be expected from us ..

z. That they are to feek knowledge who are to get their bread, might feem a harsh lesson, if the endeavour to insorm, hindered them to maintain themselves; if the knowhalge they were to feck was any other but of awhat is hift for them, of what can give them all the happiness that creatures so conflituted can receive. For this every one must have leifure; it should be judged our of lef buffacts; it duedts us to that very em-I loyment from which we have our support -is carried on with it-affifts us in itgives it every confideration that can make it cafy and facisfactory to us. The peafant or mechanic is not advised to spend fewer hours at labour, that he may have more for fludy, for reading and contemplating -to leave his spade or his tools for a pen

that our proper employment lies in thefe enquiries, and in this fort of knowledge which is most furted to our natural capacities, and convex in it our greatest naturest, the conductor of our eternal state. Hence, I think, I may conclude that metall y is the proper torance and bufinets of mankind in generate I say Effices Haran Und offer has

How men, whose plentful fortune allow them ledge to improve their underfloadings, can fatisty themselves with a bizy ignorance, I cannot tell; but methods they have a low opinion of their fouls, who live out all their incomes in providion for the body, and employ none of it to procure the mous and helps of knowledge; who take great care to appear always maneat and ipleaded outlide, and would think themselves interable in coarse cluthes, or a patched cost, and yet contentedly suffer their names to appear abroad ma pre-bald livery of confepatches, and borrowed fireds, such as it has pleased chance or their country taylor (I mean the common opinion of those they have converted with) to clothe them in. I will not here mention how unreasonable this is for monthal ever think of a futine thie, and their concern nent in it, which no intional man can avoid to do fometimes. Lock's

Eff., on the interference. B. iv. Ch. 20.

Are the greatest part of numbered, by the necessity of their condition, subjected to unavoidable i nora ce in these thin's which are of greatest inportance to them? Have the bulk of mankind no other guide but accolent and blind chance, to conduct them to their happiness or milery 2-God has for nihed men with faculties fufficient to direct them in the way they thould take, if they will but fe-Londy couple, them that way, when their ordinary vocations allow them the letters. No man is for wholly then up with the attendance on the means of living, as to have no spare time to think at all of his to I, and inform himfelf in matters of Religion. Were men as intent on this, as they are on things of I was conce nater, there are none for enlayed to the necessities of life, who might not find many was not setted might be husbanded to this advantage of their knowledge. Lake Effoy on Eman Und off saling.

or a book. No, the advice to him is, obzerve what paffes, and what good or hurt

accompanies or follows it.

R mark what it is that pleases you only fer a few moments, and then either brings inunc diate uncafinels, or lays a foundation for tome future.

You find feveral things of fervice to you, olf ive which is of most, which has no fort of inconvenience attending it, or very little in comparison of its advantage; and, if there are none of them without some inconveniences, which has the fewest-which does you good in a higher degree, or for a longer teim.

You are continually with those of the fame nature with yourfelf; take notice what is ferviceable or prejudicial to them; you may learn from their experience what your own teaches you not. Every day will femily fome or other occurrence that may be a prefitable lesson to you, make it such; . overlook nothing that affects your wellbeing; attend chiefly to what concerns it.

Go over frequently in your thoughts the observations you have made on what will more or less benefit you; let them be to deerly imprinted upon your mind, make them to familiar to yourfell, that the offer ot a lefs good may never furprife and betray you into the neglect, and, by that means, the loss of a greater.

You are at all times at liberty to confider your own nature, be acquainted with it, fee what you can do for yourfelf, what thateof your happiness has no dependence on the things without you; what bleffings may be secured to you by your own dispositions.

You necessarily shun evil: don't mistake it; be fure of what is fo; be apprifed of the degrees of it; be thoroughly instructed in thefe, that a defire to escape what you could eafily bear, may never occasion you a diffress which you would pronounce insupportable. Endeavour to inform yourfelf what evil you cannot too industriously avoid -what you should readily submit to-what you may change into good.

He, to whose situation terms like these would be unsuitable, must have reason to feek, as well as a livelibood. Our natural understanding fits all of us for a task like this; nor can it be inconfident with any the hardest labour to which our support will

oblige us.

'I he whole of this fo severe a lesson is this brief one; Do your belt for yourfelf; be as happy as the right use of the abilities God has given yeu can make you.

2. As for the urconcernedness of so great a part of our species at their ignorance and errors—the entire fatisfaction they express under them: with regard to this, let it be confidered, that we are no more to judge of good from the practice of numbers, than of truth from their opinions.

They thoroughly enjoy themselves, you fay, with their little knowledge, and many

mistakes.

And are any of us in our younger years better pleased than when we are suffered to sport away our time-to pass it without the least controll and instruction? But because we are thus pleased, are we nightly fo? Could worse befal us, than to be permitted to continue thus agreeably unr. ftrained and uninftructed?

The man in a lethargy defires you would let him dose on; he apprehends no danger. when you fee the greateft: you grieve and vex him, when you attempt to cure him.

Dees any one who has more fente than the bulk of his fellow-creatures, with for their dulness, that he might share their diversions-with for their thoughtlessness, that he might join in their mirth?

Could the neglect of our rational faculties be accompanied, throughout our coitinuance in being, with the fatisfaction at present expressed by so many under it, this indeed might be something in its favour; but this is by no means the cafe. He who gave us these faculties, and the ability to improve them, must intend that we should improve them: by fruilrating his intention, we incur his displeasure; if we incur it, we may jully expect, fooner or later, to feel the effects thereof.

Nor is it to be thought that the neglect of our reason is, from the good we hereby forego, its own fufficient punishment, and therefore not likely to expose us to any other. We cannot rightly think thus, because of the extensive mischief occasioned by this neglect. It is very far from term'nating in ourtelves, from making us the only sufferers. Were it so confined, some pretence there might be for confidering our mere crime as our ample punishment. fuch it cannot appear, when it does infinite hurt to others-to our neghbourheod-to our friends-to our family-to the who e community of which we are members.

What is enough for myielf, what I can do without, thould be the least of my cencern. My duty is to reflect what I can do for others; how I may make myfelf of greatest use. We stand all largely indebted

to our fellow-creatures; and, owing them formuch, if we neglect to qualify ourfelves for ferving them, we greatly injure them. But as this is not the place for purfuing these resections, I will now only remark, of what deplorable consequence it is to our children (whose title to our endeavours for their benefit all acknowledge) that the culture of our minds is so little our care—that we slight the rational improvements, with a capacity for which our Creator has so graciously savoured us.

Unapprehensive of the mischief our offforing must necessarily receive from our floth, our intemperance, and other criminal gratifications, we impair their frame before it is yet compleated; we entail on them

mifery, before we give them life.

Their reason seems to be watched in its appearance, only that it may be applied to for its speedier corruption. Every thing they are at first taught to value, is what they cannot enough despise; and all the pains that should be taken to keep their minds from vain fears, are employed to introduce them.

The chief of what our memory receives in our childhood, is what our maturer age

most wishes to forget.

While we are ignorant how hurtful it is to be governed by our passions, our wise directors permit them to govern us, and thereby give them a strength which we astrewards stuitlessly lament and oppose. To save our tears, we are to have our will; and, for a few moments of present quiet, be condemned to years of distress. Imaginary evils we are bid to regard as the principal real ones; and what we should most avoid, we are, by examples of greatest weight with us, encouraged to practise.

How much indeed both the bodies and minds of children fuffer from the ill-informed understanding of their parents, is fearcely to be conceived-what advantages they lose by it-what misery they feel: and therefore, as they are the immediate objects of our care—as nature has made them fuch, and all the prejudice they receive from any failure of ours, from any neglect on our part in qualifying ourselves to affift them in the way we ought to do it, is really an injury done them by us; we cannot think, that if we won't endeavour to have just notions of things, we are sufficiently punished by being without themwe can with no probability suppose, that if we are content to be losers ourselves, it will be fatisfaction enough for any diffress

that our carelessness or supineness brings on others, even on them whose welfare we ought most to consult.

Of what advantage it is to both fexes that the parent, under whose guidance they are in their tender years, should not have confined her thoughts to the recommendations of apparel, furniture, equipage-to the amulements in fashion-to the forms of good breeding-to the low topics of female conversation; we have the most remarkable instances in the family of Emilia. She has for many years been the wife of one, whole rank is the least part of his merit: made by him the mother of a numerous offspring, and having from his important and uninterrupted avocations, their education left entirely to her, 'till they were qualified for a more extensive instruction; it was her study how she might be of the greatest use to them: they were ever under her eye: her attention to forming their manners could be diverted by none of the pleasures, by none of the engagements that claim so many of the hours of a woman of quality. She did not awe, but reason her children into their duty; they shewed themselves to practise it not from constraint but conviction. When they were abient from her-when they were in company, where they might have been as free as they pleafed, I have, with aftonishment, obferved them as much influenced by what their wife mother had advised, as they could have been by any thing she would have faid had she been then present. In her conversation with them she was perpetually inculcating useful truths; she talked them into more knowledge, by the time that they were fix or feven years old, than is usually attained at, perhaps, twice

Let me indulge my imagination, and, by its aid, give a sample of her instructions; first, to one of the females of her family, and then, to one of the males. Leonera, her eldeft deughter, has, among her many accomplishments, great skill in painting. When her mother and the stood viewing the pictures, that crouded each fide of the room in which they were, Emilia defired to hear what the pupil of fo eminent a master had to observe on the works before Leonera began; praised the bold and animated manner in this piece, the foftness and delicacy of that, Nothing could be more graceful than the attitude of this figure; the expression in that was fo

happy

ktepy, the colouring fo beautiful, that one might truly say of it, to make it alive. for chalone is wanted; nor would you think eventhat wanting, were you to trust wholly to tour eyes. Here she admired the skilful distribution of light and shade: there the perspective was so wonderfully exact, that in the great number of objects prefented to the eye, it could fix on none but what had its proper place, and just dimenfign. How free is that drapery? what a variety is there in it, yet how well adjusted is the whole to the feveral figures in the piece? Does not that groupe extremely please your ladyship? the disposition is quite fine, the affociation of the figures admirable; I know not which you could pitch upon to have absent or altered. Leonora purfaing this strain, Emilia interrupted her: Have we nothing, child, but exactness here? Is every thing before us quite finished and fultless? You will be pleased, Madam, to reflect on what you have fo often inculcated, That one would always chuse to be fracing in centure, and liberal of praise— That commendation, freely bestowed on what deferves it, credits alike our temper and our understanding.

This I would have you never forget. But I'm here a learner; in that light you are now to confider me; and as your French mafter taught you pronunciation, not only by using a right, but by imitating your wrong one; making you by that means more funfible where the difference lay; fo to qualify me for a judge in painting, it will not fuffice to tell me where the artist his fucceeded, if you observe not, likewise, where he has miscarried.

Leonora then proceeded to shew where the drawing was incorrect—the attitude ungraceful—the custume ill preserved—the ordonnance irregular-the contours harsh -the light too drong-the shade too deep; extending her remarks in this way to a great number of pieces in the collection. You have been thus far, interposed Emilia, my instructor, let me now be yours. Suppose your own portrait here. In the same manner that you would examine it, fudge of the original. This you ought to do, since it will be done by uthers; and the more blemishes you discover, the fewer you will probably leave for them to reproach you with. The faults in the picture may be known to him who drew it, and yet befuffered to appear, from his inability to correct them; but when you difcern what as faulty in yourself, if you cannot amend,

you can, often, conceal it. Here you have the advantage of the painter; in another respect he has it greatly of you. Not one in a thousand is a judge of the failures in his performance; and therefore even when many may be objected to him, he shall pais, in common esteem, for an excellent artist. But let the woman, unconscious of her imperfections, be at no pains to remedy or hide them, all who converse with her are judges of them; when the permits them to be seen, they are certain to be cenfured.

You have sufficiently convinced me, to how many things the painter must attend—against what various mistakes he has to guard: each of your criticisms on him may be a lesson to yourself; every blemish or beauty in any part of his works has something correspondent to it in human life.

The defign is faulty, not only when the end we propose to ourselves is consessed criminal, but when it is low and mean; when, likewise, we let our time pass ax random, without any concern for what reason and duty require, but as caprice, or humour, or passion suggests.

We offend against proportion, when we arrogate to ourielves the desert we want, or over-rate what may be allowed us—when we hate not what is really evil; or when our affections are placed on what is not our proper good. You remember the dissection of a semale heart in the Spectator; I reser you to it, that I may spare my own resections, on what would surnish copions matter for no very pleasing ones.

Your ladyship will pardon me for interrupting you; but I can't help thinking, that the head and heart of a beau or country 'fquire would furnish as much folly and corruption, as the head and heart of any woman in the kingdom.

We shall never, child, become better, by thinking who are worse than ourselves. If the charge upon us be just, we should consider how to get clear of it, and not who are liable to one equally reproachful. Were I to bid you wash your face, would you think yourself justised in not doing it, because you could shew me a woman of rank with a dirtier? But to the purpose.

That expression, any failure in which you would, as a judge of painting, treat without mercy, is, in morals, violated by whatever is out of character. All inconfilency in practice—in profession and practice; every thing unbecoming your securities;

your education—your capacity—your flation, deferves the fame centure that the pencil meets with, when it errs in expreftion.

Skill in the distribution of light and shade, or the clair-obscure, as, I think, the term of artis, I should apprehend refembled by prudence; which teaches us to shew ourselves in the most advantageous point of view-brings forward and brightens our good qualities, but throws back and obscures our defects—suffers nothing to distinguish itself that will be to our disparagement, nor shades any thing that will credit us.

By ordonnance is meant, I apprehend, the manner of placing the feveral objects in a piece, or the disposition of them with respect to the whole composure. And what can be fitter for us, than to confider where we are, and to appear accordingly? The civilities that are lefs decently thewn in the church, it would be a great indecorum to neglect in the drawing-100m. freedom that will gain you the hearts of your inferiors, shall, if used towards those of a higher rank, make you be thought the world-bred woman in the world. Let the feafon for it be difregarded, your chearfulness shall be offensive, your gravity feem ridiculous-your wit bring your fente into question, and your very friendliest interpolition be thought not so much a proof of your affection as of your impertinence. 'Tis the right placing of things that shews our diferetion-that keeps us clear of difficulties-that raises our credit-that principally contributes to give any or our defigns fucceis.

To beauty in colouring corresponds, perhaps, good nature improved by good breeding. And, certainly, as the canvals could furnish no design so well fancied, no draught so correct, but what would yet fail to please, and would even disgust you, were the colours of it ill-united-not fustained by each other-void of their due harn ony; so both sense and virtue go but a little way in our recommendation, if they appear not to their proper advantage in an c. finess of behaviour-in foft and gentle manners, and with all the graces of affability, courtely and complaifance. I fee, by your fmiling, you are fatisfied you cannot be accused of being a bad colourist. Believe me, you have then gained a very material point; and the more concerns you have in the world, the more proofs you will find of its importance. I'll drop this subject when

I have faid to you, That if to make a good picture is fuch a complicated talk, requires to much attention, such extensive observation-if an error in any of the principal parts of painting fo offends, takes off to greatly from the merit of the piece if he, who is truly an artiff, overlooks nothing that would be at all a blemish to his performance, and would call each trivial indecorum a fault: think, child, what care about the original ought to equal this for the portrait-of what infinitely greater consequence it must be, to have every thing right within ourselves, than to give a just appearance to the things without us; and how much less pardonably any violation of decorum would be charged on your life, than on your pencil.

The most finished representation only pleases by its correspondence to what it repretents, as nature well imitated; and if judnets in more repretentation and imitation can have the chaims you find in it, you may cafily conceive the flill greater delight that must arise from beholding the beauties of nature itself; such, particularly, as the pencil cannot imitate—the becauses of rational nature, those which the posletter gives herfelf-which are of ten thousand times the moment of any in her outward fymmetry-which, how highly foever they may adoin her, profit her still more; and are not only to her own advantage, but to that of the age in which the lives, and, polfibly, of remotest generations.

My concern to fee you this fair unblemilded original makes me strangely unmindful on what topic I am got. There, surely, can be no proof wanting, how much a wife and good woman excels any portrot, or any woman, who has but the merit of a portroit, a fine appearance.

In this way Enilia takes each oppoliumity to form the manners of her daughter—to give her throughout just and reasonable feutiments, and dispose her to the exact discharge of her duty in every relation.

Lence a, thus educated, has the fools and the follies of the age in their due contempt—judges wifely—afts prudently—is ever usefully or innecently employed—can pass her evenings very chearfully without a card in her hard—can be perfectly in humour when the is at home, and all her acquaintance at the aftembly; and seems likely to borrow no credit from her family, which the will not fully repay.

We will diffinis the daughter, and represent Emilia parting with her son in terms terms like thefe. I am now to take my leave of you, for one campaign at least. It is the first you ever ferved, let me advise, and do you act, as if it would be your last: the dangers to which you will be exposed, give both of us reason to fear it: if it please God that it should be so, may you not be found unprepared, nor I unrefigued! This I am the less likely to be, when you have had my bost counsel, and I your promise to reflect upon it. He bowing, and affuring her, that whatever she should be pleased to fay to him, it would be carefully rememb red; the proceeded-I could never conceive, what induced the foldier to think that he might take greater liberties than the rest of mankind. He is, 'tis true, occallo ally subjected to greater hardships, and he runs greater hazards; but by a led and sicious life, he makes these hardtheys abundantly more grievous than they or erwite would be-he disquilifies himself to bear them. What would you think of his wits, who, because he is to be much in t woold, fits, as often as he can, close to the fire? An habitual fobriety and regularity of manners is, certainly, the best preferrative of that vigorous contitution, which makes it least uneasy to endure fitigue and cold, hunger and thielt.

The dangers to which the foldier is exposed, are to far from excusing his licenti ulnels, when he has no enemy near him, that they ought to be confidered as the flrongest motive to conform himself, at all times, to the rules of reason and religion. A practice agreeable to them is the best support of his spirits, and the surest provifion for his fafety-It will effectually remove his fears, and can alone encourage his hopes: nothing but it can give him any comfortable expectation, if what threatens him should befal him. He who is so much in danger, ought to be properly armed against it, and this he can never be by reflecting on the women he has corrupted -on his hours of intemperance, or on any other of his extravagancies. You won't perhaps allow that he wants the armour I would provide him, because he never knows the apprenentions that require it. But I am confidering what his apprehensions ought to be, not what they are The pature of things will not be altered by our epinion about them.

It is granted, that a foldier's life is, frequently, in the utmost kazard; and the question is not, how a thoughtless, supid, abfurd creature should behave in such a

fituation, but what should be done in it by a man of prudence and fense? I say, he will attend to the value of what he bazards -to the confequence of its less; and, if found of very great, he will so act, that the loss thereof may be, if possible, some or other way made up to him, or accompanied with the fewelt inconveniences. Infensibility of danger is the merit of a bull-True courage sees danger, but despises it only from rational motivesfrom the confiderations of duty. There can be no virtue in exposing life, where there is no notion of its value; you are a brave man, when you fully understand its worth, and yet in a good cause difregard death.

If thus to be ready to die is commend. able, wholly from the cause that makes us fo, which is, unquestionably, the cate; I don't see how such an indifference to life, when honour calls you to risk it, can confift with paffing it, at any featon, immorally

and diffolutely.

Here is a gallant officer who will rather be killed than quit his post-than be wanting in the defence of his country! Is not this a fine resolution in one who, by his excesses, makes himself every day less able to serve his country; or who sets an example, which, if followed, would do his country as much mischief as it could have to fear from its most determined enemy?

The inconfiderate and thoughtless may laugh at vice-may give foft terms to very bad actions, or speak of them as if they were rather matter of jest than abhorrence: but whoever will reflect whence all the mifery of mankind arifes-what the fource is of all the evils we lament; he cannot but own, that if any thing ought to make us ferious-if we ought to deteil any thing, it should be that, from which such terrible effects are derived.

For the very same reason that we prefer health to fickness, ease to pain, we must prefer virtue to vice. Moral evil feems to me to have a necessary connexion with natural. According to my notion of things, there is no crime but what creates pain, or has a tendency to create it to others or ourselves: every criminal is such, by doing fomething that is directly, or in its confequences, hurtful to himfelf, or to a fellowcreature.

Is not here a foundation of religion that no objections can affect? Deprive us of it, you deprive us of the only effectual restraint from those practices, which are most detrimental to the world-you deprive us

of virtue, and thereby of all the true hap,

piness we have here to expect. To charge religion with the mischief occasioned by mistakes about it, I think full as impertinent, as to decry reason for the wrong use that has been made of it; or government, for the bad administration of every kind of it, in every part of the world. What shall prove to the advantage of mankind, will, in all cases, depend upon themselves: that which is, confessedly, most for it, in every instance you can think of, you fee, occasionally, abused; and by that abuse becoming as hurtful, as it would, otherwise, have been benesicial. Controversy I hate; and to read books of it as ill fuits my leisure as my inclination: yet I do not profess a religion, the grounds of which I have never considered. And upon the very same grounds that I am convinced of the truth of religion in general, I am so of the truth of christianity. The good of the world is greatly promoted by it. If we would take christianity for our guide throughout, we could not have a better we could not have a furer to all the happiness of which our present state admits. Its simplicity may have been disguisedits intention perverted—its doctrines mifrepresented, and conclusions drawn, fuiting rather the interest or ambition of the expositor, than the directions of the text: but when I refort to the rule itself; -when I find it afferting, that the whole of my duty is to love God above all things, and my neighbour as myfelf-to live always mindful by whom I am fent into, and preferved in, the world, and always disposed to do in it the utmost good in my power; I can no more doubt, whether this is the voice of my Creator, than I can doubt; whether it must be his will, that, when he has made me a reasonable creature, I should act like one. But I will drop a topic, on which I ara fure your father must have sufficiently enlarged: I can only speak to it more generally: difficulties and objections 1 must leave him to obviate; yet thus much confidently affirming, that if you won't adopt an irreligious scheme, till you find one clear of them, you will continue as good a christian, as it has been our joint care to make you. I pray God you may do fo. He that would corrupt your principles, is the enemy you have most to fear; an enemy who means you worfe, than any you will draw your fword against.

When you are told, that the foldier's religion is his honour, observe the practice of

them from whom you hear it; you'll foon then have proof enough, they mean little more by honour, than what is requifite to keep or advance their commissions-that they are still in their own opinion men of nice honour, though abandoned to the groffest fensuality and excess - though chargeable with acts of the foulest perfidy and injunice-that the honour by which they govern themselves differs as widely from what is truly fuch, as humour from reason. True honour is to virtue what good breeding is to good nature, the polishing, the refinement of it. And the more you think of christianity, the more firmly you will be perfuaded, than in its precepts the strictest rules of bonour are contained. By these I certainly would have you always guided, and on that very account, have reminded you of the religion, which not only shows you them, but propoles the reward likelieft to attach you to them. I have done. Take care of yourfelf. You won't fly danger, don't court it. If the one would bring your courage into question, the other will your fense. The raft is as ill-qualified for command, as the coward. May every bleffing attend you! And to fecure your happines, live always attentive to your duty; reverence and obey Him to whom you owe your being, and from whom must come whatever good you can hope for in it. Adieu. I can't fay it would fufficiently comfort me for your lofs, that you died with honour; but it would infinitely less afflict me to hear of you among the dead, than among the profligate.

What has been the issue of instructions like these from both parents? Scipio, for so we will call the worthy man, from the time he received his commission, has alike distinguished himself by his courage and conduct. The greatest dangers have not terrified, the worst examples have not terrified, the worst examples have not corrupted him. He has approved himself disdaining by cowardice to keep life, and abhoring to shorten it by excess the bravery with which he has hazarded it, is equalled by the prudence with which he tables it.

# § 149. On the Employment of Time. ESSAY THE SECOND.

Cum animus, cognitis percertifque virtut bus, à corports oblequio, indul entraque difenferits voluptatemque, ficut labem aliquam decorts opprefient, omnemque mortis doiorique innoticm effugerit, focictateraque caratus courit en control of the con

cum fuis, omnesque natura conjunctos, suos duxent, cultumque deorum, & puram rel gionem sufceperti—quid eo, dici aut excogitari potent beatius? Till. de Legibur.

Among the Indians there is an excellent fet of men called Gymnosophists: these I gically admire, not as skilled in propagating the vine-in the arts of grafting or agriculture. They apply not themselves -to fearch after gold to till the ground--- to break the horse--- to tame the ba'l-to shear or feed sheep or goats. What is it then that engages them? One turng preferable to all their. Wisdom is the pursuit as well of the old men, the teach rs, as of the young, their disciples. Nor is there any thing among them that Lib much praise, as their aversion to sloth and ilienels.

When the tables are spread, before the rest is set on them, all the youth, assembling to their meal, are asked by their masters—to what useful task they have been employed from sun-rising to that time.—One represents himself as having been chosen an arbitrator, and succeeded by his predent management in compessing a difference—in making them triends who were at variance. A second had been paying obedience to his parents commands. A third had made some discovery by his own application, or learned something by another's instruction. The rest give an account of themselves in the same way.

He who has done nothing to deferve a dinger, is turned out of doors without one.

Dipping into Apaleias for my afternoon's amusement, the foregoing passage was the lat I read, before I fell into a slumber, which exhibited to me a vast concourse of the fashionable people at the court-end of the town, under the examination of a G. mnosophist how they had passed their morning. He begun with the men.

Many of them acknowledged, that the morning, properly fpeaking, was near gone, before their eyes were opened.

Many of them had only rifen to drefs to vifit—to amufe themselves at the drawing-room or coffee-house.

Some had by riding or walking been confulting that health at the beginning of the day, which the close of it would wholly pass in impairing.

Some from the time they had got on their own cloaths, had been engaged in feeing others put on theirs—in attending levees—in endeavouring to procure

by their importunity, what they had difqualified themselves for by their idleness.

. Some had been early out of their beds, but it was because they could not, from their ill-luck the preceding evening, rell in them; and when risen, as they had no spirits, they could not reconcile themselves to any sort of application.

Some had not had it in their power to do what was of much confequence; in the former part of the morning, they wanted to fpeak with their tradefmen; and in the latter, they could not be denied to their friends.

Others, truly, had been reading, but reading what could make them neither wifer nor better, what was not worth their remembering, or what they should wish to forget.

It grieved me to hear so many of eminent rank, both in the sea and land service, giving an account of themselves that levelled them with the meanest under their command.

Several appeared with an air expressing the fullest considence that what they had to say for themselves would be to the philosopher's entire satisfaction. They had been employed as Virtuosi should be—had been exercising their skill in the liberal arts, and encouraging the artists. Medals, pictures, statues, had undergone their examination, and been their purchase. They had been enquiring what the literati of France, Germany, staly, had of late published; and they had bought what suited their respective tastes.

When it appeared, that the compleating a Roman feries had been their concern, who had never read over, in their own language, a Latin historian — that they who grudged no expence for originals, knew them only by hearfay from their worst copies —that the very persons who had paid fo much for the labour of Rysbrack, upon Sir Andrew's judgment, would, if they had followed their own, have paid the same sum for that of Bird's-1 hat the book-buyers had not laid out their money on what they ever proposed to read, but on what they had heard commended, and what they wanted to fit a shelf, and fill a library that only ferved them for a breakfast-room; this class of men the Sage pronounced the idlest of all idle people, and doubly blameable, as wasting alike their time and their fortune,

The follies of one fex had so tired the

philosopher, that he would suffer no account to be given him of those of the other. It was easy for him to guess how the females must have been employed, where such were the examples in those they were to bonour

and obey.

For a thort space there was a general filence. The Gymno'ophi'l at length expreffed himfelf to this effect: You have been represented to me as a people who would use your own reason-who would think for yourselves-who would freely inquire, from your opinions on evidence. and adopt no man's fentiments merely because they were his. A character, to which, for aught I can find, you are as ill entitled as, perhaps, most nations in the universe. The freedom with which great names are opposed, and received opinions queflioned by fome among you, is, probably, no other than what is used by some of every country in which liberal inquiries are pur-fued. The difference is, you fafely publish your fentiments on every fibjet; to the mit would be penal to avow any notions that agree not with those of their superiors. But when you thus pass you days, as if you thought not at all, have you any pretence to freedom of thought? Can they be faid to love truth, who thun confideration? When it feems your fludy to be ufelefs, to be of no fervice to others or yburfelves-when you treat your time as a burthen, to be eased of which is your whole concern-when that figuation, those circumstances of life are accounted the happiest, which most tempt you to be idle and infignificant; human nature is as much diffiounded by you, as it is by any of those people, whole lavageness or inperflition you have in the greatest contempt.

Let me not be told, how well you approve your reason by your arguments or your feutiments. The proper ale of reason, is to ast reasonably. When you so grossly fail in this, all the just apprehensions you may entertain, all the right things you may say, only prove with what abilities you are formed, and with what guilt you

mitapply them.

The Sage here raising his arm with his voice, I concluded it adviceable not to stand quite so near him. In attempting to remove I anoke, and haltened to commit to writing a dream that had so much truth in it, and therefore expressed how seasonable it will be to consider to what use of our time we are directed.

First, By our present state and condition;

Secondly, By the relation we bear to each other;

Thirdly, By that in which we fland towards the Deity,

If we are raifed above the brute--if we are undeniably of a more excellent kind, we must be made for a different purpose: we cannot have the faculties they want, but in order to a life different from theirs; and when our life is not fuch-when it is but a round of eating, drinking, and fleeping, as theirs is --- when, by our i lenels and inattention, we are almost on a level with them, both as to all fense of duty and al' useful knowledge that we perffelt, our time must have been grievonily mitemployed; there is no furer token of its having been fo, than that we have done fo little to advance ourselves above the herd. when our Creator had vouchfafed us to far fuperior a capacity.

The creatures below us are whol'y intent on the pleafures of fenfe, because they are capable of no other; but as man is capable of much higher and nobler, he must have this privilege, that his pursuits may be accordingle——that his better nature should

be better employed.

Were we born only to fatisfy the appetites we have in common with the brute kind, we should, like it, have no higher principle to direct us—to turnish us with other delights. All the diffinction between us that this principle can make, was, undoubtedly, intended by our Creator to be made; and the less any appears, our abuse of this principle, and consequently our opposition to our Maker's will, is the more notorious and biameable,

It may feem then plain, that there are advantages to be purfued, and a certain degree of excellence to be attained by us, according to the powers that we have, and the creatures below us want. How industrious we should be to improve every opportunity for this, we may learn by attending, in the next place, to our uncertain, and, at all events, bort continuance on earth.

We are fully apprifed, that by the pains of a few hours or days no progress can be made in any thing, that has the flightest pretence to commendation. Those accomplishments, that are confined to our finger's ends, what months, whit years of application do they coil us! And, alas! what titles are the most admired of them.

in comparison of a great number of others for which we are qualified; and which, as they are fo infinitely preferable to these, ought to be fo much the more earneally fought! When, therefore, the whole term allowed for gaining and using them, is thus precarious and short, we can have but a very small portion of it to dispose of as we please-to pass entirely as mere fancy or humour suggests. If much is to be done in a very thort time, the good hulbandry of it must be consulted: and there is no one, who confiders what we, univerfally, may effect-in how many particulars we may be of fervice to ourselves-how much depends upon our endeavourshov necessary they are for our attaining what should be most valued by us, what is of greatest consequence to us; there is, I to acone, who confiders these things, but must admit, that we have much to do, and, therefore, that the feanty term we have for it ought to be carefu'ly managed --- can col. by a prudent management fuffice for the dispatch of such a talk.

And our opportunities, for making atthaments thus definable, should be so much to more diligently watched and realily endraced, as they meet with many unavoidable interruptions even in our short life.

Hov great a part of our time is necessar-If lo i to us \_\_\_\_ is confumed by, that shorter death, our ileep! We are really better cecon mills than ordinary in this inflance, if only a third part of our life thus pastes: and on the rest of it what a large demand is made by our meals --- by our justifiable ne reations -- by the forms and civilities, to which a proper correspondence with our follow-creatures obliges us? Add to these necessary deductions, the many casual ones with which we all, unavoidably, meet, and it will foon appear, what an exceeding small part of our short continuance on earth, we have to bestow on such purposes of living, as alone can be of credit to us.

We are further to reflect, that in the small part of our life, in which we can be employed like reasonable creatures, opportunities, for doing what may be of greatest moment, do not always serve us: and with some of them, if lost we never again meet.

We depend very much on things without us, and over which we have no fort of command. There may be an extraordi: ary advantage derived to us from them; but if the first offer of this be neglected, we may never have a second.

Nor is it only the dependance we have on things without us, that requires us so carefully to watch our opportunities; we have a fill more awakening call, if possible, to this from within ourselves—from the restraints to which the exercise of our powers is subjected. We cannot use these when and as we please—we cannot chuse the time of life wherein to avail ourselves of our natural endownents, and to reap all the advantage designed us in them.

When we are in our youth, our bodies easily receive whatever mien or motion can recommend us: where is the found so difficult, which our tongue cannot be then tought to expres? To what speed may our feet then be brought, and our hands to what devterity? But if we are advanced to manhood before the forming us in any of these ways is attempted, all enderwour after it will then either be quite fruitles, or, probably, less successful than it would have been in our earlier years; and whatever its success be, a much greater might have formerly been obtained with half the pains.

The very fame is it with our understanding, with our will and our passions. There is a certain feafon when our minds may be enlarged -- when a vast stock of useful truths may be acquired --- when our paffions will readily fabrit to the government of reason-when right principles may be fo fixed in us, as to influence every important action of our future lives; but the feafon for this extends neither to the whole, nor to any confiderable length of our continuance upon earth; it is limited to a few years of our term; and, if throughout thefe we neglect it, error or ignorance are, according to the ordinary course of things, entailed upon us. Our will becomes our law-our lufts gain a strength that we afterwards vainly oppofe-wrong inclinations become fo confirmed in us, that they defeat all our endeavours to correct

11. Let me proceed to consider what directions are furnished us for the employment of our time, by the relation we bear to each other.

Society is manifeftly upheld by a circulation of kindness: we are all of us, in some way or other, wanting affishance, and in like manner, qualified to give it. None are in a state of independency on their fellow-creatures. The most stendard per down are not a mere burthen on their kind; even they can contribute their share to the

con, mon

М

common good, and may be to the political body, what those parts of us, in which we least pride ourselves, are to the natural, not greatly indeed its ornaments, but much for its real use.

We learn what are juffly our mutual claims, from this mutual dependency: that on its account, as well as for other reasons, our life is not to pass in a round of pleasure or idleness, or according to the suggestions of mere humour and sancy, or in lordid or selfish pursuits.

There can be nothing more evidently my duty than that I should return the kindness I receive—than that, if many are employed in promoting my interest, I should be as intent on furthering theirs.

All men are by nature equal. Their common passions and affections, their common infirmities, their common wants, give such constant remembrances of this equality, even to them who are most disposed to forget it, that they cannot, with all their endeavours, render themselves wholly unmindful thereof—they cannot become insensible, how unwilling soever they may be to consider, that their debt is as large as their demands—that they owe to others, as much as they can reasonably expect from them.

But are all then upon a level—must those distinctions be thrown down, which, being the chief support of the order and peace of society, are such of its happines; and which nature herself may be judged to appoint, by the very dispositions and abilities with which the forms us; qualifying some for sub, and fitting some for subjection?

That, in many inflances, we are all upon a level, none can deny, who regard the materials of our bodies—the disease and pain to which we are subject—our entrance into the world—the means of preserving us in ti—the length of our continuance therein—our passage out of it. But then as it will not follow, that, because we are made of the same materials—are liable to the same accidents and end, we, therefore, are the same throughout; neither is it a just conclusion, that, because we are levelled in our dependance, we should be so in our employments.

Superiority will remain—diffinctions will be preferved, though all of us must ferve each other, while that fervice is differently performed.

Superiority has no fort of connection with idleness and uselessiness: it may exempt us from the bodily satigue of our in-

feriors, from their confinement and hard-fhips—it may entitle fome to the deference, and submission of those about them; but it by no means exempts any of us from all endeavours to promote it—by no neans does it entitle any of us to live, like so many drones, on the industry of others, to reap all the benefit we can from them, and be of none to them.

The diffinctions of prince and subjectnoble and vulgar—rich and poor, consistent in this, that the one has a great deal to
do, and the other nothing—that the one
must be always busied, and the other may
be always taking his pleasure, or enjoying
his case. No, in this they consist, that thele
feveral persons are differently busied—assist
each other in different ways.

The fovereign acquaints himfelf with the true state of his kingdom-directs the evecution of its laws-provides for the exact administration of justice-fecures the properties of his people - preferves their peace. These are his cares; and that they may be the more affured of fuccefs, and have their weight more easily supported, his commands find the readiest obedience-a large revenue is assigned him-the highest honours are paid him. It is not, in any of these instances, the man who is regarded, but the head of the community; and that for the brackt of the community-for the fecurity of its quiet, and the furtherance of its prosperity.

The nobility have it their task, to qualify themselves for executing the more honourable and important offices of the commonwealth, and to execute these offices with diligence and sidelity. The very station, to which they are advanced, is supposed either the recompence of great service done the public, or of the merit of an uncommon capacity to serve it.

The rich members of the flate, as they have all the helps that education can give them—as in their riper age they have all the opportunity they can wish for to improve upon these helps—as their circumflances exempt them from the temptations to which poverty is exposed; to them is committed the discharge of those offices in the commonwealth, which are next to the highest, and sometimes even of these—they either concur in making laws for the society, or are chiesly concerned in executing them—commerce, arts, science, liberty, virtue, whatever can be for the credit and peace—for the ease and prosperity of a nae

tion,

tion, depends on the part they act-on their conduct.

Let them be a supine, indolent race: overfe to rational inquiries-to all ferious application-let it be their bufiness to divert themselves, to give a loose to fancy and appetite-let all their schemes be those of felf-indulgence, and their life a round of vanity and fenfuality; fad must be the condition of the nation to which they belong! throughout it must be disorder and confusion-it must have the worst to fear from its more powerful neighbours.

And as, in all countries, they who are diftinguished by their rank or forture, have their post, their duty, their task, for the common good-as to discharge this requires many accomplishments, the attainment of which is matter of much attention and pains, requires an improved understanding, command of passions, an integrity and refolution, which only can be preferved by an habitual feriousness and reflection-as they cannot fail in their parts, cannot misemploy that leifure, and unfit themselves for, or be negligent in the fervice appointed them, but thur country must suffer grievously in its most valuable interests; the diliger ce they should use, the little time they have to tritle away is evident: it is most evident under what obligations they are, not to abandon themselves to merely animal gratifications, and the pleasures of fense-to sloth and inactivity.

Nor is it only from the omission of what they ought to perform, that the public will in this case suffer, but from the example they fet. An infenfibility that they are to hie to any useful purposes-a thoughtlessness of their having any thing to mind but their humour and liking-a gross carelessnels how their days pale, cannot appear amongst those of higher rank, but the infection will spread itself among those of a lower; these will defire to be as lazy and worthless as their superiors-to have the fame share of mirth and jollity-to be of as little consequence to the public.

That this will be the case, is as certain, as experience can make any thing. It has been, and is, every where, found, that where they, who have the wealth, and are therefore supposed, though very unreasonably, to have the sense of a nation, treat their time as of no account, only think of making it subservient to their exceiles, their anity, or their sports; the same wrong notions foon spread among their

inferiors.

The populace, indeed, cannot be quite for diffolute—they cannot be fo immerfed in floth and fenfuality, as the richer part of a nation, because their circumstances permit it not: their maintenance must cost them fome care and pains, but they will take as little as they can—they will, as far as is in their power, have their fill of what their betters teach them to be the comforts of life, the enjoyments proper for reasonable creatures-they cannot debauch themselves in the more elegant and expensive ways, but they will in those which suit their education and condition—they cannot be wholly useless, but if they make themselves of any fervice, it shall only be, because they are paid for it, because they cannot be supported without it.

And how can we expect that things should be otherwise? It is not, upon the lowest computation, one in a hundred who forms his manners upon the principles of reason. Example, customary practice, govern us. And, as they, who are more efpecially dependent upon others, have it taught them, from their very infancy, to respect those on whom they depend-to observe them-to be directed by them; no wonder that they should be fond of imitating them, as far as their fituation admits; no wonder that they should copy their follies, fince that they can do most easily, and that most suits their natural depravity. But to him, whose industry is his support, I would observe: he should not think, that if they, who enjoy the plenty he wants, are prodigal of their time-mifemploy it-walte it; their abuse of it will at all excuse bis. He cannot possibly be ignorant how unfitting such a waste of time is -how much good it hinders-how much evil it occasions-and how much a greater sufferer he will be from it, than those who are in more plentiful circumstances.

And let it be confidered, by both high and low, rich and poor, that there can be nothing so becoming them, there can be nothing that will give them fo folid, fo lasting a fatisfaction, as to be employed in ferving mankind-in furthering their happinels. What thought can we entertain more honourable with respect to God himfelf, than that " his mercy is over all his " works"-that his goodness is continually displaying itself through the whole extent of being-that the unthankful and the evil he not only forbears, but still feeks to awaken to a due acknowledgment of him-to a just sense of their true interest,

by persevering in his kindness towards them, by continuing to them the bleffings

they to ill deferve?

And if the confideration of the univerfal Creator as thus acting be really that which makes him appear most amiable to uswhich affects us with the most profound veneration of him, and chiefly renders it pleafing to us to contemplate his other perfections; what worth do we evidence, how highly do we recommend ourselves, when employed either in qualifying ourfelves for doing good, or in doing itwhen we have the common advantage our con a parfuit—when we feek for pleatime to making ourselves of use, and feel happiness in the degree in which we communicate it?

III. What employment of our time the relation in which we fland to God fuggefls

to us, I am next to shew.

Every one who reads this, I may juffly suppose sensible that there is a nature superior to his own, and even possessed of the highest excellencies-that to it we owe our exiltence, owe the endowments which place us at the head of all the cicatures upon earth, owe whatever can make us defire to have our existence continued to us -that by this superior nature alone, many of our wants can be supplied-that on it we entirely depend—that from its favour the whole of our increasing happiness can be expected.

From what we thus know of God and ourselves, there must arise certain duties towards him, the performance of which will have its demand on our time. His perfections require our highest veneration; this cannot be exercised or preserved without our ferious attention to and recollection of them. His mercies demand our most humble and grateful acknowledgments; proper acts of thankfgiving are therefore what we should be blameable to omit; they daily become us, and should be made with all the folemnity and fervour, that fuit the kindness vouchsafed us, and the majesty of him to whom we address ourselves . A

due fense of our weakness and wants is a constant admonition to us to look up to that Being whose power and goodness are infinite, and to cherish such dispositions as are most likely to recommend us to him: hence it is evident what stress we should lay upon those awful invocations of the divine interpolition in our favour, and upon that devout confession of our unworthiness of it, which have a natural tendency to keep the Deity present to our remembrance, and to purify our hearts.

Public acknowledgments of the goodness of God, and application for his blesfings, contribute to give a whole community fuitable apprehensions of him; and thefe, is it be my duty to entertain, it is equally my duty to propagate; both as the regard I pay the divine excellencies is hereby fitly expressed, and as the same advantage, that I receive from such apprehention, will be received by all whom they affect in the fame manner with me. Hence it is clearly our duty to join in the public worship-to premote by our regular attendance upon it, a like regularity re-

These observations will, I hope, I: thought fufficient proofs, that from the relation we bear to God, a certain portion of our time is his claim-ought to be fet apart for meditation upon him, for prayer to him, and for fuch other exercise of our reason as more immediately respects him, and fuits our obligations towards him.

Dean Bolton.

### 5 150. On the Employment of Time. FSSAY THE THIRD.

· Since all things are uncertain, favour vourfelf.' Where have I met with it? Whosesfeever the advice is, it proceeds upon a supposition absolutely false, That there is an uncertainty in all things: and were the supposition true, the inference would be wrong; did we allow, that there was fuch an uncertainty in all things, it would be wrongly concluded from thence, that we thould tayour ourselves.

 Never to acknowledge the enjoyments and privileges we have received, and hold, of God, is in effect to desy that we received them from him; not to pply to him for a supply of our wants, is to dray, other our wants, or his power of helping us. Release of Nature admenda p. 121.

If I should never pray to God, or worship him at all, such a total ountion would be equivalent to

this affection, There is no God, who governs the world, to be adered; which, if there is fuch a Being. this affection. There is no God, who governs the world, to be addred; which, if there is fuch a Being, must be contrary to truth. Also govern's and recomply to neglect the duty, though not always, will favour, if not directly proclaim, the fame untruth. For certainly to worthip God after this manner, Is only to worthip him accidentally, which is to deckare it agreat accident that he is worthipped at all, and this approaches as near as possible to a total neglect. Bendes, such a spaning and infrequent worthipper of the Deity, betrays such an habitual diffregard of him, as will render every religious act infigurational and null. It, p. 18. Firft.

First, there is not the uncertainty here supposed. With regard to those things, which call us to thoughts very different from that of favouring ourselves-which should withdraw our attention from our own will, our own liking-which fuggeft to us quite other confiderations than of taking our eafe, and indulging our appetites -which should make the animal life the least of our concern-which should render us only folicitous to purify ourselves, and be uteful to our fellow-creatures; with regard to these things, I say, we have either abilitie certainty, or the highest degree of probability.

To have produced fo much beauty and order, as every where discover themselves, ralligence was not only require, but The beneficial great witdom and power. clecks naturally refulting from the things thas beautifully folded and orderly difpoted, demonficate the goodness, as well as the wisdom and power of their author.

That the benefits he defigned, should conflantly take place, ruft, as he is a good bling, be agreeable to bis will; and whatever binders their taking effect, mift be Precable to it.

We cannot have a furer mark of what r'cafes him, than its being productive of happiness; and whatever has misery accompanying it, carries with it the clearest proof of its displeasing him.

A virtuous practice greatly furthering the happiness of mankind, must be pleasing to their Maker; a vicious one must displease him, as it necessarily obstructs their happinels.

If from any accidental indisposition of things, as from the number of the criminal, virtue should bere miss its reward, there is great likelihood that it will eljewhere receive it; and if vice, by a like accident, should, in particular instances, not carry with it those marks of its offending the Governor of the world, which it in most enses bears, there is the bigbest probability that it will have its punishment in some future state. There is that probability in favour of virtue, not only from what our 1 asonings on the justice and goodness of God induce us to think it has to expect f.om him, but also from the visible manner in which he fignifies his approbation of 11. He has impressed a sense of its worth on the minds of all mankind-he has made fatisfaction inseparable from a conformity to 11—he has appointed many advantages,

in the ordinary course of things, its attendants; which feem concurring affurances, that to whatfoever disadvantages it may now, occasionally, expose us, they will be at length fully recompensed. And there is the probability I have mentioned, that the guilty will not be always without punishment adequate to their crimes, not only from the apprehensions we may firly entertain of a just Governor of the universe; but also from the manner in which he, to the notice of all men, expresses his abhorrence of vice: annexing to many crimes immediate inconveniences—giving others a very fhort respite from the severest diftrefs, the painfulleft difeafes-allowing none to have our reason and conference on their fide, to be approved by us in our hours of feriousness and calm reflec-

Virtue is, evidently, preferved and promoted by frequent confideration-by diligence and application-by the denial of our appetites-by the restraint of our inclinations—by a constant watchfulness over our passion, - by cherithing in ourfelves fentiments of humanity and benevolence. Vice is, as marifefly, produced, and confirmed by inattention-by supincness and carelessness—by favouring on appetites—by consulting rather which we are disposed to, than what is best for u, rather what inclination, than what readed fuggefls-by an attachment to the fatisfaction of the present moment, to our immediate profit or convenience—by adopting narro v, felfith principles.

Thus it will appear, that there is by no means an uncertainty in all things. Most certain it is from whence virtue has its fecerity and improvement. Equally certain is it how we become bad, and how we are made worfe. Virtue has, in the nature of things, a reward of which it cannot be deprived, and vice as fure a punishment. All those accidents which obstruct either the advantages suiting a virtuous practice, or the fufferings that a vicious one ought to feel, may filly carry our thoughts to some future state, when each will have its full defert from that Being, who has fo clearly expressed as well his approbation of virtue, as his abhorrence of vice; and whose goodness, wisdom and power, as they admit of demonstration, to they cannot but be believed to concur in bestowing those rewards and punishments, which will be most for the welfare

M 3

welfare of the noblest part of the creation,

the intelligent part of it.

But if there were the uncertainty that is not; the right confequence would not be, Favour yourself: it would be, Secure yourself: Provide against the worst. Let your present enjoyments be directed by the influence they may have on your future happiness: consider the whole possible extent of your existence, and forego the satisfaction of a few moments, rather than hazard the loss of a good that may continue for endless ages.

Such feem the proper inferences in this case; and the security of ourselves is very unlikely to be effected by favouring ourselves: the result of this, in a remoter period, may, with the highest degree of probability, be conjectured from what

is every day experienced.

Bear and forbear, is the lesson for him who merely seeks to give his present life all the comfort in his power. Great inconveniences we cannot even here avoid, but by submitting to lesser.

Freedom from pain is the price of the enjoyments wedeny ourfelves; and ilrength of body purchased by the exercise that so

severely fatigues it.

To what fleepless nights would he be condemned, whose ease throughout the day was to have no interruption? How little relish should we have of our food, were we to know nothing of the disquiet of hunger? The man who would most taste the gratifications of sense, must be the most sparing in his application to them; thene it is they not only are heightened, but continued to us. It feems the condition of our being, that we should have no pleasure gratis—that we should have no pleasure gratis—that we should pay for each, before or after its enjoyment. To decline whatever we could be less pleased with, is the furest way to increase both the number of our sufferings, and their weight.

What can be more precarious than the continuance of human life? Who in his twentieth year acknowledges not, how uncertain it is whether he thall fee his fortieth? Yet no one of common prudente feeks barely to crowd as much fatisfaction into his lite, as can confult with his reaching that period: there is no prudent man but denies himself many things, in hopes

of attaining a much longer term.

We must unusually fail in the love of our children, if we would not pursue their welfare, in the same way by which we judge

our own best consulted. But where is the advocate for "Favour yourself, since all "things are uncertain," who, if discretion makes any part of his character, governs himself by that principle in their education—who does not restrain them in a thousand instances? while yet the uneafines it gives, and the tears it costs them, may probably never find that very small recompence, which must be the utmost he can propose from it. I say this recompence may, probably, never be found; a late eminent mathematician having, upon an exact calculation, observed, that one half of those that are born, are dead in seventeen years time.

Some claim to a public spirit, to a love of their country, we find made by the generality of us, even in this very profligate age. But from him, whose rule it is to favour himself, the public can have nothing to expect. Were this the prevailing principle among us, 'tis obvious how little regard would be shewn to the com-

mon welfare.

All of the learned professions would regulate their application, by its subserviency to their maintenance, and think they had nothing so much to study, as how to make their fortune.

Soldier and failor would have no notion of any honour diffinct from their advantage—of any obligation they could be under, when their pay might be fafe, to endanger

their persons.

The people would judge none fo fit to represent them, as they who had been at the greatest expense in corrupting them; and the representatives of the people would see no reason why the whole of what was to be gained should go to their constituents.

In short, nothing but supmeness and sloth—an attachment to their ease, and the gratification of their sense—low, unmanly views—pursuits throughout the most scient and sordiac could prevail, among all orders and degrees of men, in any country, where the received doctrine was, fa-

wour yourfelf.

Hence certainly is it, that not only the better constituted governments, but even the nations of a lets refined policy, have encouraged so much an indifference to the teanty portion of life here allotted us—to the continuance, the ease, the conveniences of it; exciting, by various methods, each member of the community, to have chiefly at heart the public interest—to be ever di-

ligent

ligent and active in promoting it-to fubmit to any dimculties for the fervice of his country, and to despise death in its defence.

Nor do we univerfally effect any characters more, than those of the persons who have diffinguished themselves by their disinterestedness-by their zeal for the commongood-by their flighting all private advantages that came in competition with it.

What has been the language of the more generous Heathen, but the very reverse of Favour thyself? Plato advises his friend Archytas to confider " that we are " not born for ourfelves alone-that our " country, our parents, our friends have " their respective claims upon us." Epift.

ix. p. 358. vol. 3.

Articile, in lettling the true difference between the lawful and culpable love of ourselves, observes, that such love of ourselves is, undoubtedly, blameable, as induces us to feek as large a share as may be, of wealth, honour, and fenfual pleafure. He, afterwards, confiders a life of scason and virtue, as the proper life of a m n, and pronounces him the true lover of kimi, who makes fach a life his cue.

ie goes on, " When all are intent on " the mactice of what is right, and each " hys himfelf out on the worthieft actions, " the public welfare will, thereby, be ef-" fectually provided for, and every private " person consult his own greatest happi-" nets. It is most truly said of the good " man, that he will ferve his friends and " his country-will do it, even at the expence of his life. For, as to wealth, " honour, and all those other goods about " which there is so much slir in the world, " he will have no regard to them, when " they come into competition with the dif-" charge of his duty. He will rather chuse " to live one year well, than many at ran-" dom. He is justly thought the good man, " who has nothing so much at heart, as how to act rightly."

To mention another Greek writer;

We are born, fays the excellent emperor Antoninus, to affift each other. 1. 2. 5. 1. His counsel is, "Whatsoever you " do, do it with a view to your being a good man; good, not in the ordinary, " but in the strict and proper sense of the " word," l. iv. §. 10. In this delight, in this repose yourself, in passing from one useful action to another; still mindful of " the Deity." 1, vi. §. 7.

"Whatsoever I do, says he, by myself. " or the assistance of others, ought wholly " to be directed by what the common ad-

" vantage requires." l. vii. §. 5.

He, elsewhere, censures every action of ours, that has no reference either immediately, or more remotely, to the duties of focial life. l. ix. §. 23. To despise, says Tully, and make no account of pleasure, life, wealth, in comparison of the public welfare, is the part of a great and generous mind.-A life of toil and trouble in order to promote, if poslible, the good of all mankind, would be much more agreeable to nature, than to pass one's days in folitude, not only without any care, but enjoying the greatest pleasures, and having every thing could be wanted at command. De Off. 1. iii. 283, 284.

We are all, according to Seneca, members of one great body. Ep. 95. We must confult the happiness of others, if we would our own. In his treatise of a Happy Life. mentioning what the man must be, who may hope to pass hence to the abodes of the celestial beings; part of his description of him is, " That he lives as if he knew himself born for others-consults in all he does the approbation of his conscienceregulates his every action by confidering " it as well known to the public, as it is to himself-treats the whole world as his country-regards the gods as present " wherever he is, and as remarking what-

" ever he acts and speaks." True happiness is, throughout this author's works, confidered as derived from virtue-from the fleady pursuit of what is

right and our duty.

These reflections will, I hope, appear not improperly introducing the confideration of the part we have to act as expectanes of happiness in a future state; the subject of the following essay.

This expectation does not indeed furnish any employment of our time, that would not be comprehended under the heads on which I have already enlarged: but it is the strongest possible enforcement of what

they teach us.

Can I suppose, that beyond the grave there is any happiness prepared for me, if I live unmindful of the privileges here vouchsafed me-if, when I am placed above the beafts, I will put myself upon a level with them-if that spiritual part of me, which makes me a fit subject for this M + happines. happiness, be neglected, and all my care and pains laid out on ny body, on what was earth fo lately, and must so speedily be earth again?

Are there certain dispositions which prepare us for, and which, by being perficted, probably conflicte the happiness of another life; and may we hope to obtain it, when our parants contributed to suppress these empetitions, or when we are wholly regardless of cultivating them?

Whatever I hope for in a future abode, I ought to think the reward of fomething here done by me; and when the time for action here is fo thort, even in its longest continuance-when likewife our opportunities are fo few, and to irrecoverably loft, we must conclude it mest fitting, in order to the fuccefs of our hopes, to embrace the opportunity before us; not to neglect it from a pretemption of finding others which perhaps may naver come, or, if they do come, may be less favourable to us than the present; but to derive from this every advantage it is capable of yielding us.

Further, if according to the greater or lefs afe of which we make ourfelves to our fellow-creatures, we more or lefs answer the end of our creation, we must conceive this to be a point, our special regard to which will be the necessary confequence of the views we have beyond the grave. The blis we then promife outlelves cannot be thought a likelier reward of any practice, than of that whice air at the node extenfive good; nor can one of common fame think such happiness I factly to be our portion, after a life ipent as unprofitable, as that of those greature , the whole of whose fatisfactions we all confine to those they at present enjoy—to their present existence. Hence our hopes after destrivial be perpetually urging us to what we can do most for the good of mankind, and must be a mptive to it of the greated weight.

Thus, likewife, when I contemplate a more defireable thate of being, then what I am now granted, awareing me at my departine hence; as it is impossible that I thould not at the fame time take into my confideration, to whom I must one this bleffing, from whom it in be recited; I mult hereby be peccelarily led to a mean define of pleafing him from whom it is to come, and therefore to all fred applies-tion to him, and adversed denier to fails excellencies, as can be largued and from

and required of a c.

To all the feveral tasks I have mentioned, we are thus particularly directed by attending to the happiness reserved for us; the confideration of it thus strongly enforces their performance.

How far it must in general contribute to the best employment of our time, the following observations may, I hope, fully con-

vince us.

If we furvey the things, on the value of which we are univerfally agreed, we shall perceive few, if any, of them obtained or fecured without more or less care on our part, and fome of them only the recompence of our painfullest endeavour. The long enjoyment of health is in vain expected, if we wholly decline the farigue of exercise, and the uneafiness of self-devial. The greatest estate must at length be wasted by him, who will be at no trouble in the management of it, who cannot torment his brains with examining accounts, and regulating the various articles of a lune expince. Whose pover is so established, that the preservation of it costs him not muc't folicitude-many anxious thoughts; and compels him not to mortity hindelt in numerous inflance it This is the case of them whom we effect the mod fortunite of their kind. As to the generality, how difficult do they find the acquisition of the meanest of these advantages? What years of diligence does it coft them to raile but a moderate fortune? Vall numbers we find floughing throughout their lives for a bare tapport.

The chief blellings of lile-the poods most worthy our pursuit, are not only fir the mill on the bet altegether, the fruits of Ingard anneared to havours. Set them. Visite is the very unful are that can be learned without a cline and tedious application-that we can prize my tolerable progret in, before many of our days are paffed? How much, and what no attentive experience-what repeat d obse vations, and how exact a reasoning upon them, are necessary to form us to any degree of wifdoin? Duly to a gulate car puffions-to have them under comman!--rightly dineeted, and more or less warm proportionably to the influence their object has upon car tappiness, will cost u , as every obe is femalle, a watchfale to and care of tuch continuance, as is fubmitted to by few, even of those who hest know how far it would be overpaid by the good it purchales.

If then we pay so dear for every satis-

faction we now enjoy—if there be nothing definable on earth but what has its price of labour fet upon it, and, what is most desirable comes to us by the most labour; who an his wits can believe that happiness far exceeding the utmost in our present state, will at length be our portion without any folicitude we need be at about it—without any qualifications we have to acquire in order to it—without any pains we are to take after it? Nothing in Paganism or Malommedyin, nothing in Paganism or Malommedyin, nothing in Paganism defined as this supposition.

There is an uniformity in all the proceedings of God. As they are all grounded on an un ming wildom, they must teltily their correspondence to it, by what this have to each other: and fo we find they do in all cates wherein we can fathom them. We know not, indred, in what year w are to be made happy in another life; but with that our being to is connectedon what it must depend, we are fusicient. ly inflirated. The means of making ourfelics thus happy waich are put in our power, plainly teach, that by their use it mul be elileted. Leffer goods, derived to a only by our care and industry, de-11. Chaef bledings, that are now within our reach, being never vouchfated but to cer cottagedinary efforts-to our most carnell endeavours to gain them, lead us to the follest conviction, that the same must be the condition of whatever enjoyments we can promise ourselves after our death -that they will coly be the reward of the diligence with which they have been fought-of the difficulties their purfait has occationed us.

The Athers himself-he who having no views beyond this world, gives his fulls their fun range in it, acts with abundantly more fente and confidency, than he who, full of the hopes of immortality, yet confults his humour or his cate, his pleature or his profit, regardless of any understanding he has to implore, or any progress in virtue he has to make. Nor is there any thing that fo much confirms the irreligious man in his bad principles, as his obfixing this conduct in them who profets to believe a God and another life. He thinks, and I must own but too justly, that it is the same thing not to be influenced by such a belief, and not to have it—that it is even much more reasonable to give up all expectations of future happiness, than to expect it, and yet do nothing in order to it-do nothing that can appear at all qualifying us for, or entitling us to it: in a word, he rightly thinks that, supposing there be a God of that perfect justice and wisdom which he is represented, he cannot make any difference hereafter between them who have abiolitely denied his justice-his wisdom-nay his very being, and them who, with all their acknowledgments of him and his perfections, would yet never facrfice any of their inclinations to him-would not be at any pains to know his will, or, if they did know it, would only fo far obey it, as it was agreeable to their own.

I hardly can quit this ful ject. So great is the danger—so certain, I may say, is the mischief of persuading ourselves, that an eternal happiness will recompence the little we do to secure it, that I scarcely know when I have said enough to evince what conduct alone it can reward.

As the vifible world is the only univerful guide to our conjectures on the invifible, and therein, as I have observed, the method of Providence in dispensing its blessing, is manifest to every eye; all those which can most engage our wishes depending wholly on what we do to obtain them: as, likewise, whether we consider the wisdom of God, or his ruth, or his justice, they all concur in teaching us this lesson, that an ever-continuing selicity can only be prepared for a dissinguished virtue.

As things, I say, are thus, may it not properly be asked, What can it be that so strangely infatuates us—that possesses with hopes so extravagantly absurd—that makes a pursuit so lazy and remiss, which ought to be so vigorous and uninterrupted? I know not what this possibly can be, but, either the numbers that countenance our practice, or, the reliance we have on the Deity's unbounded goodness.

As to the former, how little stress we should lay on numbers, will be evident from these four considerations.

First, They, who in every age are most commended for their wisdom and prudence, never take the multitude for their pattern; but, on the other hand, constantly live in a direct opposition to its practices, and disfunde all, to whom they are well-wishers, from them.

Secondly, Those follies and vices, which are the reproach of numbers, are not therefore the less mischievous in their consequences. sequences. The encreasing multitudes of she lewd and drunken do not, in any inflance, occasion lewdness and drunkenness to have more favourable circumstances atsending them, either with respect to the persons, or the posterity of the guilty: and God be, in no instance, more favourable to the vicious in this world, because of their numbers; we have hence too fad a proof that they have not the least ground to expect he should be so in the next.

Thirdly, What we call great numbers, are, probably in respect of the whole creation of rational beings, extremely few; perhaps no more than lome few grains of fund, in comparison of those amazing heaps that spread the defarts of the earth, and shores of the ocean. Supposing, therefore, all offenders among the human kind, pumished by God according to their deferts; that punishment might be making examples of a very small, of the very smallest part of his creatures, for the good of the refl-for preferving innumerable millions -an infinite race in their due obedience.

Fourthly, An established order taking place in all the works of God that we are acquainted with; every thing in the natural world being subjected to certain laws; and in the moral world, good having still a tendency to produce good, nor ever failing to do it, unless from some accidental hindrances; and evil, when things are in their proper course, producing evil; we have very strong reason to believe, that an unchangeable God-he whose wisdom uniformly displays itself-has fixed things thus, that thus they will proceed to all eternity; good following from good, evil from evil; with this difference alone, with respect to us, in another state, that all hindrances of the natural confequences of things will there be removed-nothing will prevent the virtuous man's reaping the fruits of his virtue, nor will any thing hinder the whole of the difinal effects of vice from being felt by them, who have here allowed themselves in it. And, if this be the case, than which nothing is note probable, it is then quite clear, that all the hopes of the guilty from their numhers must be utterly vain-that it would he full as reasonable to think a plaque could not be a dangerous distemper, because it is so infectious an one; as to think that we shall be fafe ann lit our crimes, because of the multitude that share them.

With regard to the goodness of God,

how groundless our reliance must be upon it, when we act contrary to the ends for which we were made-when we neglect our opportunities, and abuse our capa-cities, will, I hope, be sufficiently plain to us, if we attend to the following thort remarks.

1. We ascribe goodness to God as a perfection; but nothing can be a perfection in him which has, morally fpeaking, a necessary tendency to make his creatures less perfect-less careful to answer the ends of their creation; and this the divine goodness would certainly do if it were indeed fuch as allowed us nothing to fear. tho' we neglected to afe rightly the abilities and opportunities afforded us.

2. As God is the Governor of the world is acknowledged for by all who own his being; we must, therefore, consider his goodness, as that of a governor, or as confiftent with, and agreeable to, a wife government: but can this be faid of his goodness, if it exempt from all punishment our wilful and continued disobedience to his laws, and thereby encourage us to disobey them?

3. One attribute or perfection of the Deity cannot clash with another: his goodness, for instance, with his justice: but the punishment of evil is as much a part of justice, as the rewarding of good. To treat evil, as if it were not evil, can neither be agreeable to justice or truth; and this would be the case-evil would be regarded as if it were not evil, did the goodness of God so favour the wilful offender, that his crimes would never receive their defert.

4. To restrain evil, to obstruct its progress, must be the care of a good Governor, nay, would be the furest proof of his goodness. To punish, therefore, such as act contrary to the law of their nature -contrary to the well-being of fociety, and therein contrary to their own and the common happiness, is not only a part of justice, but even of goodness itself. We could not consider God as good, had he not properly guarded against his creatures corrupting themselves, and against that corruption extending itself; and what are the discouragements to this, but in the way of punishment-but by the sufferings the guilty have to fear? The more there are who act in defiance of these sufferings, the more necessary it becomes to inflict them; and offenders can have no reason reason to think that the mercy of God will spare them, when the greatest mercy is shewn in obvinting the mischief of such examples, by treating them according to what they have deserved.

Let us behold the goodness of God in this light, and this is that in which we ought to see it—this is its true representation; and thus seen, it cannot but convince us how impossible it is that we should have any thing to hope after a life unprofitably, vainly spent—how much such a life has necessarily to fear.

Dean Bolton.

#### CATECHETICAL LECTURES.

§ 151. Introduction to the Catechifm.

The Catechifm begins with a recital of our baptifmal vow, as a kind of preface to the whole. It then lays down the great chirdian principle of faith: and leaving all mysteri as inquiries, in which this subject is involved, it passes on to the rules of practice. Having briefly recited these, it concludes with a simple, and very intelligible explanation of Baptism, and the Lord's Supper.

The catechism then begins very properly, with a recital of our baptismal vow, as the best preface to that belief, and those rules of practice, in which that vow engaged us—But before we examine the vow itself, two appendages of it require explanation—the use of sponsors—and the addition of a name.

With regard to the sponsors, the church probably imitates the appointment of the legal guardian, making the best provision it can for the pious education of orphans, and deferted children. The temporal and the spiritual guardian may equally betray their trust: both are culpable: both accountable: but surely the latter breaks the more sacred engagement.

As to promifing and vowing in the name of another (which feems to carry fo harsh a found) the sponsor only engages for the child, as any one would engage for another, in a matter which is manifestly for his advantage: and on a supposition, that the child hereafter will see it to be so that is, he promises, as he takes it for granted, the child itself would have promised, if it had been able.

With regard to the name, it is no part of the facrament; nor pretends to scriptural authority. It rests merely on ancient usage. A custom had generally obtained,

of giving a new name, upon adopting a new member into a family. We find it common among the Greeks, the Romans, and the Jews; nay, we read that even God himself, when he received Abram into covenant, giving an early fanction to this usage, changed his name to Abraham. In imitation of this common practice, the old christians gave baptismal names to their children, which were intended to point out their heavenly adoption, as their surnames distinguished their temporal alliance.

From confidering the use of sponsors, and of the name in baptism, we proceed next to the vow itself, which is thus expressed. "My godfathers did promise three things in my name: 1st, That I should renounce the devil, and all his works, the pomps and vanities of this wicked world, and all the sinful lusts of the steel the steel that the sinful lusts of the steel that the sinful lusts of all the articles of the christian faith; and all the articles of the christian faith; and will and commandments, and walk in the same all the days of my life."

"the fame all the days of my life."
First then, we promise to "renounce
the devil, and all his works, the pomps
and vanities of this wicked world, and
all the sinful lusts of the sless." "The
devil, the world, and the sless," is a
comprehensive mode of expressing every
species of sin, however distinguished; and
from whatever source derived: all which
we not only engage to renounce as far as
we are able, but also to take pains in
tracing the labyrinths of our own hearts,
and in removing the glosses of self-deceit.
Without this, all renunciation of sin is pretence.

Being thus enjoined to renounce our grols, habitual fins, and those bad inclinations which lead us into them: we are required next to "believe all the articles" of the christian faith." This is a natural progression. When we are thoroughly convinced of the malignity of fin, we in course wish to avoid the ill consequences of it; and are prepared to give a fair hearing to the evidence of religion. There is a close connection between vice and infidelity. They mutually support each other. The same connection subsists between a well-disposed mind, and the truths of religion: and faith perhaps is not fo involuntary an act, as many of our modern. philosophers would perfuade us.

After "believing the articles of the christian faith," we are last enjoined to keep God's holy will and command-

" Merica."

ments." Here too is the same natural progression. As the renunciation of fin prepares the way for faith, so does faith lead directly to obedience. They seem related to each other, as the mean and the end. "The end of the commandment," faith the apostle, "is charity, out of a pure heart, and good conscience, and faith " unfeigned." Faith (which is the act of believing upon rational evidence) is the great fountain from which all greater virtues spring. No man will obey a law, till he hath informed himfelf whether it be properly authorized: or, in other words, till he believe in the jurisdiction that en. acted it .- If our faith in Christ doth not lead us to obey him; it is what the ferip tures call a dead faith, in opposition to a taving one.

To this inseparable connection between faith and obedience, St. Paul's doctrine may be objected, where he feems to lay the whole firefs on faith, in opposition to works .- But it is plain, that St. Paul's argument requires him to mean by faith, the whole fystem of the christian religion (which is indeed the meaning of the word in many other parts of scripture); and by works, which he fets in opposition to it, the moral law. So that in fact, the apoftle's argument relates not to the prefent question; but tends only to establish the superiority of christianity. The moral law, argues the apostle, which claimed on the righteousness of works, makes no provision for the deficiencies of man. Christianity alone, by opening a door of mercy, gave him hopes of that falvacion, which the other could not pretend to give.

Upon renouncing fin, believing the articles of the christian faith, and keeping God's holy commundments, as far as fintal man can keep them, we are entitled by promife to all the privileges of the gospel. We "become members of Christ, children of God, and inheritors of the kingdom of heaven." We are redeemed through the merits of Christ; pardoned through the merits of God; and rewarded with a blessed immortality.

This account of our baptifinal vow concludes with a qualtion, leading us to acknowledge the necessity of observing this vow; and to declare our belief, that our only hope of keeping it rests upon the assistance of God. Gibin. § 152. On the Creed—the Belief of God.

The creed begins with a profession of our belief in "God the Father almighty,

maker of heaven and earth."

The being of a God is one of these truths, which scarce require proof. A proof seems rather an injury, as it supposes doubt. However, as young minds, though not sceptical, are uninformed, it may not be improper to select out of the variety of arguments, which evince this great truth, two or three of the most simple.

The existence of a Deity, we prove from the light of nature. For his attributes, at least in any perfection, we must

look into scripture.

A few plain and fimple arguments drawn from the creation of the world—the prefervation of it—and the general confent of mankind, firike us with more conviction than all the fubtilities of metaphytical deduction.

We prove the being of a God first from

the creation of the world.

The world must have been produced either by design, or by chance. No other mode of origin can be supposed. Let us see then with which of these characters it is

imprefied.

The characteristic of the works of defign, is a relation of parts, in order to produce an end.—The characteristic of the works of chance is just the reverie,—When we see stones, answering each other, laid in the form of a regular building, we immediately say, they were put together by design: but when we see them thrown about in a disorderly heap, we say as comfidently, they have been thrown so by chance.

Now, in the world, and all its appendages, there is plainly this appearance of delign. One part relates to another; and the whole together produces an end. The fun, for influee, is connected with the earth, by warming it into a proper heat, for the production of its fruits; and furnishing it with rain and dew. The earth again is connected with all the vegetables which it produces, by providing them with proper foils and juices for their noutifimment. These again are connected with animals, by supplying them with food. And the whole together produces the great

<sup>\*</sup> See Rum. i.i 18. and indeed great part of the epiftle.

end of fustaining the lives of innumerable

Nor is defign shewn only in the grand fabric of the world, and all its relative appendages: it is equally shewn in every part. It is seen in every animal, adapted in all its peculiarities to its proper mode of life. It is seen in every vegetable, furnished with parts exactly suited to its situation. In the least, as well as in the greatest of nature's productions, it is every where apparent. The little creeper upon the wall, extending its tenacious sibres, draws rourishment from the crannies of the stones; and slourishes where no other plant could live.

If then the world, and every part of it, are thus marked with the characters of defign, there can be no difficulty in acknowledging the author of fuch defign—
of fuch amazing contrivance and variety, to be a being of infinite wisdom and power. We call a man ingenious, who makes even a common globe, with all the parts of the earth delineated upon it. What shall we say then of the author of the great original itself, in all its grandly, and furnished with all its various inhabitants?

The argument drawn from the prefervation of the world, is indeed rather the laft argument advanced a step faither.

If chance could be supposed to produce a regular form, yet it is certainly beyond the highest degree of credulity, to suppose, it could continue this regularity for any time. But we find it has been continued: we find that near 6000 years have made n) change in the order and harmony of the world. The fun's action upon the earth hath ever been regular. The production of trees, plants, and herbs, hath ever been uniform. Every feed produces row the same fruit it ever did. Every species of animal life is still the same. Could chance continue this regular arrangement? Could any thing continue it, but the hand of an omnipotent God?

Lattly, we see this great truth, the being of a God, witnessed by the general consent of mankind. This general consent must arise either from tradition, or it must be the result of men's own reasoning. Upon either supposition, it is an argument equally strong. If the first supposition be allowed, it will be difficult to assign any source of this tradition, but God himself. If the second, it can scarce be supposed that all mankind, in different parts of the

world, should agree in the belief of a thing, which never existed. For though doubts have arisen concerning this general belief, yet it is now pretty well ascertained, from the accounts of travelers, that no nation hath yet been discovered, among whom some traces of religious worship have not been found.

Be it fo, fays the objector; yet fill we find fingle perfons, even in civilized countries, and fome of them men of enlarged capacities, who have not only had their doubts on this subject; but have proclaimed aloud

their difbelief of a divine being.

We answer, that it is more than probable, no man's insidelity on this head was ever thoroughly settled. Bad men, rather endeavour to convince themselves, than are really convinced.—But even on a supposition, that a few such persons could be found, what is their testimony against so great a majority, as the rest of mankind? The light of the sun is universally acknowledged, though it happens, that, now and then, a man may be born blind.

But fince; it feems, there are difficulties in supposing a divine creator, and preserver of the world, what system of things does the atheit suppose attented with sewer? He sees the world produced before him. He sees it hath been created, and is preserved. Some account of this matter must be given. If ours displease him; let us have his.

The experiment both been tried. We have had many atheidical creeds: none of which hath thood the test of being handed down with any degree of credit into future times.

The atheist's great argument indeed against a Deity, is levelled at the apparent injustice of his government. It was an objection of ancient date; and might have had its weight in heathen times: but it is one of the bleffings, which attends chriftianity, that it fatisfies all our doubts on this head; and gives us a rational and easy solution of this poignant objection. What if we observe an inaccurate distribution of the things of this world? What if virtue be depressed, and vice triumphant? It is nothing, fays the voice of religion, to him, who believes this life to be an inconfiderable part of his being ; a point only in the expanse of eternity: who believes he is fent into this world, merely to prepare himself for a better. This world, he knows, is intended neither for reward, nor panillment. Happinels unquestionably attends virtue even here, and misery, vice: but it is not the happines of a splendid station, but of a peaceful mind; nor is it the misery of low circumstances, but of a guilty conscience. The things of this world are not, in their own nature, connected either with happiness or misery. Attended sometimes by one, and sometimes by the other, they are merely the means of trial. One man is tempted with riches, and another with poverty; but God intends neither an elevated, nor a depressed fituation, as the ultimate completion of his will.

Besides, if worldly prosperity even was the indication of God's favour, yet good men may have failings and imprudencies enough about them to deserve missortune; and bad men virtues which may deserve fuccess. Why should imprudence, though joined with virtue, partake of its reward? Or the generous purpose share in the punishment, though connected with vice?

Thus then we see the being of a God is the universal creed of nature. But though nature could investigate the simple truth, she could not preserve it from error. Nature merely takes her notions from what she sees, and what she hears, and hath ever moulded her gods in the likeness of things in heaven, and things on earth. Hence every part of the creation, animate and inanimate, hath, by turns, been an object of worship. And even the most reaned nations, we know, had gross conceptions on this head. The wifest of them indeed, by observing the wonders of creation, could clothe the Deity with wisdom and power: but they could go no farther. The virtues of their heroes afforded them the highest ideas of perfection: and with thefe they arrayed their gods; mixing also with their virtues, such vices as are found in the characters of the best of

For just notions of the Deity, we must have recourse then to revelation alone. Revelation removes all these absurdities. It dispels the clouds of ignorance; and unveils the divine majestly, as far as it can be the object of human contemplation. The lax notions of libertinism, on one hand, which make the Deity an inobservant governor; and the gloomy ideas of superstition, on the other, which suppose him to be a dark maligrant being, are equally exposed. Here we are informed of the omniscience and omnipresence of Gcd. Here we learn, that his wisdom and power

are equalled by his goodness; and that his mercy is over all his works. In short, we learn from revelation, that we are in the hands of a being, whose knowledge we cannot evade, and whose power we cannot resist; who is merciful and good to all his creatures; and will be ever ready to assist and reward those, who endeavour to conform themselves to his will: but whose justice, at the same time, accompanying his mercy, will, punish the bold and careless sinner in proportion to his guilt.

Gilpin

## § 153. On the Creed continued—the Belief of Jesus Christ.

After professing our belief in God, the creed proceeds with a profession of our belief " in Jesus Christ, his son, our Lord"

A perion celebrated as Jefus Christ was, we may suppose, would naturally find a place in the profane history of his times. It may not be amis, therefore, to collect, with the testimony of some of the more eminent of the heathen writers, who have mentioned him. They will at least inform us, that such a person lived at the time we affert; and that he was the author of a new religion.—I shall quote only Suctonius, Tacitus, and Pinoy.

Succonius\*, tells us, that " the emperor Claudius drove all the Jews from Rome, who, at the infligation of one Chrift, were continually making diffurbances."

Tacitus+, speaking of the persecution of christians, tells us, "that the author of that name was Christ, who was put to death by Pontius Pilate, in the reign of Tiberius."

Pliny's t testimony is more large. It is contained in a letter, written to the emperor Trajan, desiring his instructions with regard to christians. He blames their obstinacy in refusing to facrifice to the Roman deities-but from their own confession can draw nothing, but that they assemble, on a certain day, before sun-rise -that they pay divine honours to Christ as a God—that they bind themselves by a facrament not to steal, nor to commit adultery, nor to deceive-and that, after the performance of these rites, they join in one common meal. Nay, he examined, he fays, two of them by torture: yet still he finds nothing obnoxious in their behaviour except their abfurd superstitions. He thinks, however, the matter should be inquired into: for christianity had brought religion into great disuse. The markets were crowded with vistims; and scarce a

purchaser came near them.

These writers afford us sufficient testimony, that Jesus Christ lived at the time we assert; and that he was the author of a new religion. They had opportunities of being well informed; could have no interest in falsisying; were no converts to the new sect; but talk of Christ, only as they would of any singular person, whom they had occasion to mention. Their testimony therefore is beyond cavil.

Let us now proceed a flep farther, and examine the feripture evidence of Christ, which proves not only his existence; but that he is our Loid, or the Meshah—and not only that he was the author of a new religion; but that this religion is true.

Upon examining the grand fcripture evidence on this head, we find the greatest firefs laid upon miracles and prophecies; both of which are direct appeals to God, by a claim to supernatural power. And though both these modes of evidence are calculated as well for us who live in remoter times, as for those who lived in the earlieft; yet the evidence from miracles feems more particularly addressed to them; as that from prophecy is to us. They were the eye-witnesses of the miracles of the gospel, of which we have only the evidence at fecond-hand. Whereas prophecy is a mode of evidence, which increases through every age. The early christians had it in part; but to us this amazing web is still more unfolded; and more of its wonderful texture displayed .-Let us examine each in its order.

Among the eye-witnesses of the gespel miracles, were many learned men, as well as unlearned. The former had opportunity and abilities to examine the works before them; to trace out fraud, if any such were latent; and did unquestionably receive them with all that circumspection which was due to such wonderful exhibitions, before they embraced the christian faith: while the most ignorant spectator was a competent judge of matter of sact; and many of our Saviour's miracles were such as could not possibly, from the nature of the facts themselves, be coloured with fraud.

It had a firange found to the prejudices of mankind, that a crucified malefactor was the Saviour of the world; and we

cannot suppose, that any man, much less that a multitude of men, would embrace fuch a belief without clear conviction: especially as no worldly advantage lay on the fide of this belief; and the convert even renounced the world, and embraced a life of perfecution.-Let us consider the fingle miracle of Christ's resurrection. Jesus had frequently mentioned it before his death; and the thing was fo far in general credited, that the sepulchre was fealed, and an armed guard appointed to watch it. We may well suppose, therefore, that his favourers would naturally, upon this occasion, reason thus: " Jesus hath now put his pretentions upon a fair issue. He hath told us, he will arise from the dead on the third day :- here then let us suspend our judgment, and wait the re-Three days will determine whether he be an impostor, or the real Messiah." -It is very natural to suppose, that the favourers of Jesus would reason, after his death, in a minner like this: and it is beyond credibility, that any of them would have continued his disciples, had they found him falfifying in this point. But we know they did continue his disciples after the. We know also that many profelytes, convinced by this very event, embraced the christian religion. - We have all the reason in the world therefore to believe, that they were fully fatisfied. His miracles were to them a fufficient proof of his pretentions. All candid men would have acquiefced, as they did; and in their belief we have a very strong foundation for our own.

Again, with regard to prophecy, we observe, that the writers of the Old Teflament feem, in various parts, to characterize fome extraordinary person, who was in process of time to make his appearance in the world. The marks are peculiar, and can neither be mistaken nor misapplied. " He was to be born of a virgin-he was to turn the hearts of the disobedient to the wisdom of the just-though dignified with the characters of a prince, he was to be a man of forrows, and acquainted with grief-though described to be without fin. he was to be numbered with transgressors -his hands and his feet were to be pierced—he was to be made an offering for fin—and was never to fee corruption." -These prophecies were published many hundred years before the birth of Christs and had been all along in the hands, not only of the Jews, but of all men of letters. The

The Old Testament had been early translated into the Greek language; and received into the politest libraries of those times.

With these ideas, let us open the New · Testament, and it is obvious that no picture can be more like its original, than thefe prophecies of Christ in one Testament, are to his history in the other. Here we see that extraordinary virgin-birth unravelled. -Here we see a life spent in turning the hearts of the disobedient to the wisdom of the just-Here we find the prince of his people, a man of forrows, and acquainted with grief .- Here we fee the Lord of righteousness numbered with transgressors-we see his hands and his feet pierced-we fee him made an offering for fin-and we fee realized that extraordinary idea of death without corruption.

It were an easy matter to carry this comparison through a more minute detail of circumstances: but I mean only to trace the outlines of this great resemblance. To compleat the picture would be a co-

pious work.

Befides these predictions, which related immediately to the life and death of Christ: there were many others which deserve notice. Among these two great leading prophecies were those of the celling of the Gentiles, and of the dispersion of

the lews.

The calling of the Gentiles was one of the earliest prophecies of the Old Testament. The lews were diffinguished in appearance, as the favourite people of God; and they were fufficiently elated upon that diffinction. But if they had attended closely to their prophets, they might have discovered, that all the prophecies, which described the happy state of the church, had evidently a more distant profpeck, than to them. Those early promises, in particular, which were repeated to the patriarchs, were not merely confined to their polterity; but included " all the nations of the earth "."-And when the later prophets, as the great event approached, ipoke a plainer, and a more intelligible language, the whole nation might have understood, as Simeon, and some of the wifelt and most intelligible of them did understand, that " a light was fprung up to lighten the Gentiles."

The prophecy of the dispersion of the Jewish nation is also very antient, being attributed by Moles to the patriarch Jacob. " The sceptre shall not depart from Judah, until Shiloh come." Whatever may be the precise meaning of the word 'sceptre' in the original; and though it may not perhaps properly fignify that idea of regal power, which it conveys to our cars; yet it certainly means some badge of authority, that implies a formed and fettled goverrment. And as to the word 'Shiloh,' all commentators, jewish as well as christian, explain it to mean the Messiah-The fense therefore of the prophecy is plainly this—that the Jews should continue in the form of a fociety, till the time of the Meffiah. Accordingly we find that foon after Christ's death, the sceptre did depart from Judah: the Jews loft all form of a political fociety; and are a fingular inflance of a people, scattered over the whole earth, preserved to this day separate from all other people, and yet without a fettlement any where.

Our Saviour's prophecy of the growth of his church, is likewise among the more remarkable predictions. He told his difcepies, that "his religion was like a grain of mustard-feed, which was the least of all feeds; but when it grew up, it should become a great tree, and the fowls of the air should lodge in the branches of it." He told them also, that "the gates of hell should never prevail against it."

The Je vidi religion was centinually enforced by the idea of a jealous God, watching tower it, and threatening judgments from heaven upon every tranfgression. The divine authority was samped openly upon it. The people trembled,

and worshipped.

When the imposser Mahomet set up for a reformer, he could not indeed enforce his religion by divine judgments; but he did it by temporal. He drew his sword, and held it to the breasts of his opposers; while he promised to the obedient a sulf gratification of their passions.

But in the christian religion, nothing of this kind appeared. No temporal judgments threatened on one hand: no fensual indulgences allured on the other. A few defponding ignorant mechanics, the difciples of a perion crucified as a common malefactor, were all the parade with which this religion was ushered into the world; and all the human affiftance which it had to beaft .- And yet this religion, which opposed the strongest prejudices, and was opposed by the greatest princes, made its way in a few years, from a remote corner, through the whole Roman empire. Thus was our Saviour's prophecy, in oppelition to all human calculition, evactly fulfilled. The leaft of all feeds became a ipresting tree; and a church was offiblifted which could not be deftroyed by all the powers of hell.

But although the church of Christ could not be deflioved, it was corrupted; and in a course of years fell from its genuine purity. This corrupt flate of it-the delusions of popery-the efforts of reformation, and various other circumstances relating to it, are not unreasonably subpoied to be held forth, in the prophetic parts of the New Testament.

But I forbear to dwell upon prophecies, which are not obvious enough to carry general conviction; though many of them have been well explained by those \*, who a everfed in the hillories to which they allale. Future times will, in all probability, red & a fl. enger light upon them. Some G the great prophecies, which we have just confidered, shone but with a sceble tay, during the times they were fulfilling, though they now ftrike us in fo forcible a Gil; in.

### \$ 154. The Creed continued-Conception and Buth of Chrift, &c.

We have now flewn upon what foundui in we believe the fecond article of our creed; let us next confider the remaining articles-the history of Christ, as delivered in scripture, and the benefits which he procured for us-the affiliance of the Holy Spirit—the remission of our lins—and ever-

lalling life.

First, then, we believe that Christ was " conceived of the Holy Ghost, and born of the virgin Mary." The manner of this miraculous conception we inquire not into. It is a point not only beyond the limits of human inquiry; but to us at least a point very unimportant. We believe just the Scripture-account of it, and affure our-

felves, that if it had concerned us, it would have been more plainly revealed. - One thing, however, we may observe on this head, that nothing is faid in Scripture of paying divine honours to the virgin Mary. Those rites are totally of porish origin.

We farther believe, that Christ " fuffered under Pontius Pilate, was crucified. dead, and buried; and that he defeended into he'l,"--that is, we declare our behel of the Scripture-account of the circumflances and the reality of Christ's

To make an action clear, it is necessary, first, to establish its date. This is usually done by ranging it under the magificate who then prefided, the time of whofe go. vernment is always registered in force public record .- Thus we believe that Christ's death happened when Pontins Pilate was governor of Judea. We believe also, with regard to the manner of his death, that he was crucified; that he died as really as any mortal ever did; and that he was buried in the tomb of Joseph of Arimathea +.

The "defcent into he'l" is undoubtedly a more obscure expression than might be wished in a cried, and was not indee ladded till many ages after the creed was first But as creeds are human composed t. compositions, we believe this, and every other difficulty, only as confident with Scripture. Now the fenfe which frems most agreeable to Scripture, is, that his foul remained till his returrection in that place (whatever that place is) where the fpirits of the bleffed reft; and the expresfion feems to have been added, only that we may the more strongly express our belief of the reality of his death. This we do, when we express our belief of the fensration of his foul and body. " He was buried," - and " descended into hell." The first expression relates to his body, which was laid in the grave; the fecond to his foul, which passed into the place of departed fpirits.

We farther believe, that " on the third day he role again from the dead." The refurrection of Christ from the dead is a point of the utmost importance to chris-

\* See Bishop Newton's Differtations; and Bishop Hurd's sermons on propliccy.

<sup>†</sup> thanh foretold he should " make his grave with the rich." And St. Matthew tells us, that etiac promine, ubber arteur wonder. Matt. xxvii. 57. Ifaiah liii. 9. Sce Bingham's Antiquities, vol. m. c. 3.

tians. On the certainty of Christ's refurrection depend all hopes of our own. On this article, therefore, we shall be more

large

And, in the first place, what is there in it that need shock our reason? It was a wonderful event, but is not nature full of When we seriously wonderful events? weigh the matter, is it less strange, that a grain of to:n thrown into the ground should die, and rife again with new vegetation, than that a human body, in the fame circumstances, should assume new The commonnels of the former makes it familiar to us, but not in any degice less unaccountable. Are we at all more acquainted with the manner in which grain germinates, than with the manner in which a body is raifed from the dead? And is it not obviously flriking, that the fame power which can effect the one, may effect the other alfo?-But analogy, though it tend to convince, is no proof. Let us proceed then to matter of fielt.

That the hody was dead, and fafely lodged in the tomb, and afterwards conveyed out of it, was agreed on, both by those who opposed, and by those who tayoured the refurrection. In the circumstances of the latter fact, they differ

widdy.

The diciples tell their flory—a very plain and simple one—that, scarce expecting the event, notwithstanding their matter had himself forestold it, they were surprised with an account that the body was gone—that they found afterwards to their great attonishment, that their master was again alive—that they had been several times with him; and appealed for the truth of what they faid to great numbers, who, as well as themselves, had seen him after his resurrection.

The chief priefts, on the other side, declared the whole to be a forgery; afferting, that the plain matter of fact was, the disciples came by night, and stole the body

away, while the foldiers flept.

Such a tale, unsupported by evidence, would be listened to in no court of justice. It has not even the air of probability. Can it be supposed, that the disciples, who had fled with terror when they might have rejected their master's life; would venture, in the face of an armed guard, to carry off is dead body?—Or is it more probable, it they found the whole guard assep; it we know, that the vigilance of cen-

tinels is secured by the strictest discipline? -Befrles, what advantage could arife from fuch an attempt? If they miscarried, it was certain min, both to them and their cause. If they succeeded, it is difficult to fay what use they could make of their fucces. Unless they could have produced then dead body alive, the fecond error would be worfe than the first. Their matter's prophecy of his own refurrection was an unhappy circomflance; yet fill it was wrapped in a veil of obscurity. But if his disciples endeavoured to prove its completion, it was their bufiness to look well to the event. A detection would be fuch a comment upon beir mafter's text, as would never be forgotten.-When a cause depends on falsehood, every body knows, the less it is moved the better.

This was the cafe of the other fide. Obscurity there was wanted. If the chief priefly had any proof, why did they not produce it? Why were not the disciples taken up, and examined upon the fact? They never abfoonded. Why were they not judicially tried? Why was not the trial mide public? and why were not authentic memorials of the fraud handed down to pollertly; as authentic mer-ort. b. were of the fact, recorded at the very time, and place, where it happened? Christianity never wanted enemics to propagate its disparagement.—But nothing of this kind was done. No proof was attempted-except indeed the tellimony of men afleep. The disciples were never questioned upon the fact; and the chief priefts refled fatisfied with spreading an inconfiltent rumour among the people, impressed merely by their own autho-

Whatever records of heathen origin remain, evince the truth of the refurrection. One is very remarkable. Pontius Pilate fent the emperor Tiberius a relation of the death and refurrection of Christ; which were recorded at Rome, as usual, among other provincial matters. This intelligence made fo great an impression, it feems, upon the emperor, that he referred it to the senate, whether Jesus Christ of Judea should not be taken into the number of the Roman gods?-Our belief of this fact is chiefly founded upon the testimony of Justin Martyr, and Tertullian, two learned heathens, in the age succeeding Christ, who became christians from this very evidence, among others, in favour of christianity.

4

christianity. In their apologies , still extant, one of which was made to the senate of Rome, the other to a Roman governor, they both appeal to these records of Pontius Pilate, as then generally known; which we cannot conceive such able apologists would have done, if no such records had ever existed +.

Having seen what was of old objected to the resurrection of Christ, it may be proper also to see the objections of modern disbelievers.

And, first, we have the stale objection, that nothing is more common among the propagators of every new religion, than to delude their ignorant proselytes with idle stories. What a variety of inconsistent tales did the votaries of heathenism believe! What absurdities are adopted into the Mahometan creed! To what strange saits do the vulgar papists give credit! And can we suppose better of the refurrection of Christ, than that it was one of those pious frauds, intended merely to impose upon the people, and advance the credit of the new sect?

This is just as easily said, as that his disciples stole him away, while the guard stop. Both are affections without proof.

Others have objected Christ's partial discovery of himself, after his resurrection. It he had boldly shewn himself to the chief priests; or publicly to all the peop'e; we might have had a more rational foundation for our belief. But as he had only for his witnesses, upon this occasion, a tew of his chosen companions, the thing has certainly a more secret appearance than might be wished.

This infinuation is founded upon a paffage in the Acts of the Apostles, in which it is faid, that "God shewed him openly, not to all the people, but unto witnesses chosen before of God." The question is, what is meant by witnesses chosen before of God? Certainly nothing more than persons expressly, and by particular designation, intended to be the witnesses of this event. Others might see him if they

pleased; but these were not the people, to whom God shewed him openly: this particular designation was confined to the "chosen witnesses."—And is there any thing more in this, than we see daily in all legal proceedings? Does not every body wish to have the fact, about which he is concerned, authenticated by indubitable records; or by living testimony, if it can be had? Do we not procure the hands of witnesses, appointed to this purpose, in all our deeds and writings?—Let us not, however, answer the objection by an arbitrary explanation of the text; but let us compare this explanation with the matter of fact.

On the morning of the refurrection, the apoilles, who ran to the sepulchie to make themselves acquainted with what they had heard, received a message from their malter, injoining them to meet him in Galilee. It does not appear, that this meffage was conveyed with any fecrecy: it is rather probable it was not; and that the disciples told it to as many as they met. The women, it is expressly faid, told it " to the eleven and all the reit." Who the reit were, does not appear: but it is plain, from the fequel, that the thing was generally known; and that as many as chose either to fatisfy their faith, or gratify their curiofity, repaired for that purpose to Gililee. And thus we find St. Peter making a diffinction between the voluntary and the chofen witnes-betwen those "who had companied with the apostles all the time that the Lord Jesus went in and out among them, from his baptism till his ascension, and those who " were ordained to be the witheffes of his refurrection 1.'

St. Paul goes farther, and in express words tells us, that Christ was seen § "after his resurrection of above five hundred brethren at once:" and it is probable, from the expression, "at once," that he was seen, at different times, by many more.

If then Christ thus appeared in Galilee to as many as chose to see him; or even

Iuft Mart. Apol. ad Anton. P .-- Tortull. Apol. cap. 15.

<sup>†</sup> The acts of Pilate, as they are called, are often treated with contempt; for no reason that I know. I never met with any thing against them of more actionity than a fineer. Probable they cutainly were; and a bare probability, when nothing opposes it, has its weight. But here the probability is strengthened by no small degree of positive evidence; which, if the reader withis to fee collected in one point of view, I refer him to the article of "Christ's suffering under Pontius Pilate," in Bishop Pearson's expossing of the Cneed.

Among other authorities, that of the learned commentator on Eufebius, is worth remarking: "Fuere genuina Pilati acta; ad quæ provocabant primi christiani, tanquam ad certislima sidei monumenta."

<sup>1</sup> Acle i. 21.

if he appeared only to five hundred people, or whom St. Paul tells us the preatest part were still alive, when he wrot: this epistle, there can firely be no reafonable cause of off mee at his appearing, besid s these, to a few of his chosen companions, who attended by express appointment, as persons designed to record the event.

In fact, if the fame method be pursued in this inquiry, which is usual in all others, the evidence of these chosen companious is all that is necessary. Here are twelve men produced (in general three or four men are thought fushcient) on whose evidence the fact depends. Are they competent witnesses? Have they those marks about them, which characterise men of integrity? Can they be challenged on any one ground of rational exception? If not, their evidence is as flrictly legal, as full, and as fatisfactory, as any reafonable man can require. But in this great conf-, we fee the evidence is carried still further. Here are five hundred perfons waiting without, ready to add their teffimony, if any one should require it, to what Las alrea ly been more than legally proved. So that the argument even addrastes itself to that abfurd aidinction, which we often and in the cavils of infidelity, between cem cortant, and rem certiff mam.

Upon the whole, then, we may affirm boldly, that this great event of the refurrecurn of Christ is founded up in evidence equal to the naportance of it. If we expect th'l more, our answer is upon record: " If ve believe not Mofes and the prophets." God's ordinary means of falvation, " neither will ye be perfuaded, though one rofe from the dead. '- There must be bounds in all human evidence; and he who will believe nothing, unless he have every posfible mode of proof, mult be an infidel in almost every transaction of life. With such persons there is no reasoning. They who are not fatisfied, because Christ did not appear in open parade at Jerufalem; would further have asked, if he had appeared in the manner they expected, why did he not appear to every nation upon earth? Or, perhaps, why he did not shew himfelf to every individual?

To these objections may be added a feruple, taken from a passage of Scripture, in which it is said that "Christ should lie three days and three nights in

the heart of the earth?" whereas, in fact, he only lay two nights, one whole day, and a page of two others.

But no figure in speech is more comroon than that of patting a part for the vhole. In the Hebrew Luguage perhaps too here ee is more admissible, than in any other. A day and a night complete one whole day; and a correst vious lay in the ground a part of every one of these three portures of tare, he might be faild, by an easily liberty of speech, to have lain the whole.

Gilpin.

§ 155. Cr. ! continued —Clr.fl's Afrenfion — B. haf rathe Hely Ghoft.

We believe faither, that Christ " afcended into heaven and intell on the right hand of God."

Chill's attention into heaven reas on the same kind of proof, as his refurreetion. Both of them are events, which the apostles were " ordained to witness." But though their tellimony in this cife, as well as in the refurrection, is certainly the most logal, and authentic proof, and faily futficent for any realonable man; vet this does not exclude the voluntary tedancold of others. It is evident, that the apollles were not the tole exe-witnesses of this event: for when St. Peter called together the first aslembly of the church to cause a fuccessor to Judas Iscariot, he tells them, they mult necessarily chuse one, out of those men, who had been witnesses of all that Christ did, from his baptism " till his afcention:" and we find, there were in that meeting an hundred and twenty perfons , thus qualified.

Be it however as it will, if this article should reft on a less formal proof, than the refurrection, it is of no great consequence; for if the refurrection be fully proved, nobody can well deny the a cension. If the testimony of the evangelist be allowed to prove the one; their word may be taken to establish the other.

With regard to " the right hand of God," it is a feriptural expression, used merely in conformity to our gross conceptions; and is not intended to imply any distinction of parts, but merely the idea of pre-eminence.

We believe farther, that " Christ shall come to judge the quick and the dead."

This article contains the most ferious

truth, that ever was revealed to mankind. In part it was an article of the heathen creed. To unenlightened nature it seemed probable, that, as we had reason given us for a guide, we should hereafter be accountable for its abuse: and the poets, who were the prophets of carifer days, and durif deliver those truths under the veil of fable, which the philosopher kept more to himself, give us many traits of the popular belief on this subject. But the gospel alone threw a full light upon this awful truth.

In examining this great article, the cuniosity of human nature, ever delighting to explore unbeaten regions, hath often been tempted, beyond its limits, into fruitless inquiries; fernitizing the time of this event; and fettling, with vain precision, the circumstances of it. All curiosity of this kind is idle at least, if not prefumptions. When the Almighty hith thrown a veil over any part of his dispensation, it is the felly of man to endeavour to draw it asset.

Let us then leave all fruitles enquiries about this great event; and employ our thoughts chiefly upon such circumstances of it as most concern us.—Let us animate our hopes with the soothing reslection, that we have our sentence, in a manner, in our own power,—that the same gracious gospel, which directs our lives, shall direct the judgment we receive,—that the same gracious person shall be our judge, who died for our sins—and that his goodness, we are assured, will still operate towards us; and make the kindest allowances for all our instructions.

But left our hopes should be too buovent, let us confider, on the other hand, what an awful detail against us will then appear. The subject of that grand inquiry will be all our transgressions of known duty-all our omissions of knowing better-our secret intentions-our indulged evil thoughtsthe bad motives, which often accompany our most plausible actions-and, we are told, even our idle words .- "He that hath cars to hear, let him hear,"-Then shall it be known, whether we have answered the great ends of life?-Whether we have made this world subservient to a better? -Whether we have prepared ourselves for a state of happiness in heaven, by endeavouring to communicate happiness to our fellow-creatures upon earth? Whether we have reftrained our appetites and paffons; and reduced them within the bounds of reason and religion? Or, whether we have given ourfelves up to pleasure, gain, or ambition; and formed such attachments to this world, as fit us for nothing elfe; and leave us no hopes either of gaining, or of enjoying a better? It will be happy for us, if on all these heads of inquiry, we c in answer without difm iy - Worldly diftinctions, we know, will then be of no avail. The proudest of them will be then confounded. "Naked came we into the world; and naked muß we return." We can carry nothing beyond the grave, but our virtues, and our vices.

I shall conclude what hath been said on the last judgment with a collection of passages on this head from Scripture; where only our ideas of it can be obtained. And though most of these passages are figurative; yet as figures are intended to illustrate realities, and are indeed the only illustrations of which this subject is capable, we may take it for gravited, that these figurative expressions are intended to convey a just idea of the truth.—With a view to make the more impression upon you, I shall place these passages in a regular feries, though collected from various

"The lord himfelf shall descend from heaven with his holy angels-The trumpet shall found; and all that are in the grave shall hear his voice, and come forth-Then shall he fit upon the throne of his glory; and all nations thall be gathered before him-the books shall be opened; and men shall be judged according to their works .- They who have finned without law, thall periff, (that is, be judged) without law; and they who have finned in the law, shall be judged by the law .- Unto whomfoever much is given, of him shall be much required.-Then shall he say to them on his right hand, Come, ye, bleffed, inherit the kingdom prepared for you. And to them on his left, Depart from me, ye curfed, into everlasting fire, prepared for the devil and his angels -Then shall the righteous thine forth in the presence of their Father; while the wicked shall go into everlasting punishment: there shall be wailing and gnashing of teeth .- What manner of persons ought we then to be in all holy conversation, and godliness? looking for, and hastening unto, the day of our

Lord: when the heavens being on fire, shall be diffolved, and the elements shall melt with fervent heat .- Wherefore, beloved, seeing that we look for such things, let us be diligent, that we may be found of him in peace, without foot, and blamelefs: that each of us may receive that bleffed fentence, "Well done, thou good and faithful fervant: thou haft been faithful over a little, enter thou into the joy of thy Lord."

We believe, farther, in "the Holy Ghost;" that is, we believe every thing which the Scriptures tell us of the Holy Spirit of God.-We inquire not into the nature of its union with the Godhead. We take it for granted, that the Father, the Son, and the Holy Ghoft, have fome Lind of union, and some kind of distinction: because both this union and this distinction are plainly pointed out in Scripture; but how they exist we inquire not: concluding here, as in other points of difficulty, that if a clearer information had been necessary, it would have been afforded.

With regard to the operations of the Holy Spirit of God, (belides which, little more on this head is revealed) we believe, that it directed the apostles, and enabled them to propagate the gospel-and that it will assist all good men in the conscientious

discharge of a pious life.

The Scripture doctrine, with regard to the affifiance we receive from the Holy Spirit of God (which is the most effential part of this article) is briefly this:

Our beit endeavours are insufficient. We are unprofitable servants, after all; and cannot please God, unless sanctified, and affifted by his Holy Spirit. Hence the life of a good man hath been sometimes called a flanding miracle: tomething beyond the common course of nature. To attain any degree of goodness, we must be supernaturally assisted.

At the same time, we are assured of this affistance, if we strive to obtain it by fervent prayer, and a pious life. If we trust in ourselves, we shall fail. If we trust in God, without doing all we can ourselves, we shall fail likewise. And if we continue obstinate in our perverseness, we may at length totally incapacitate ourselves from being the temples of the Holy Ghoft.

And indeed what is there in all this, which common life does not daily illustrate? Is any thing more common, than for the intellect of one man to affift that of another? Is not the whole scheme of

education an infusion of knowledge and virtue not our own? Is it not evident too, that nothing of this kind can be communic.ted without application on the part of the learner? Are not the efforts of the teacher in a manner necessarily proportioned to this application? If the learner becomes languid in his pursuits, are not the endeavours of the teacher of course discouraged? And will they not at length wholly fail, if it be found in the end they answer no purpose?-In a manner analogous to this, the Holy Spirit of God cooperates with the endeavours of man. Our endeavours are necessary to obtain God's affiltance: and the more earneftly these endeavours are exerted, the measure of this grace will of course be greater. But, on the other hand, if these endeavours languish, the assistance of Heaven will leffen in proportion; and if we behave with obstinate perverseness, it will by degrees wholly fail. It will not always strive with man; but will leave him a melancholy prey to his own vicious inclinations.

As to the manner, in which this spiritual assistance is conveyed, we make no inquiry. We can as little comprehend it, as we can the action of our fouls upon our bodies. We are sensible, that our souls do act upon our bodies; and it is a belief equally confonant to reason, that the divine influence may act upon our fouls. The advocate for natural religion need not be reminded, that among the heathens a divine influence was a received opinion. 'I he priests of every oracle were supposed to be infined by their gods; and the heroes of antiquity were univerfally believed to act under the influence of a fupernatural affiftance; by which it was conceived they performed actions beyond human power .- This shews, at least, that there is nothing in this doctrine repugnant Gilpin. to reason.

§ 156. Creed continued .- The Holy Catholic Church, &c.

We believe, farther, in the "holy catholic church," and the "communion of faints."

" I believe in the holy catholic church," is certainly a very obscure expression to a protestant; as it is very capable of a popish construction, implying our trust in the infallibility of the church; whereas we attribute infallibility to no church upon earth. The most obvious sense, therefore,

in which it can be confidered as a protestant article of our belief, is this, that we call no particular society of christians a boly catholic church; but believe, that all true and sincere christians, of whatever communion, or particular opinion, shall be the objects of God's mercy. The patriarchal covenant was confined to a few. The Jewish church stood also on a very narrow basis. But the christian church, we believe, is truly catholic: its gracious offers are made to all mankind; and God trrough Christ will take out of every nation such as shall be saved.

The "communion of faints," is an expedion equally obfcure: and whatever might have been the original meaning of it, it certainly does not refolve itself into a very obvious one to us. If we fay we mean by it, that good chissians living together on earth, should exercise all offices of charity among themselves, no one will contradict the article; but many perhaps may ask, Why is it made an article of tatth? It relates not so much to faith, as to practice: and the ten commandments might just as well be introduced as articles of our belief.

To this I can only fuggest, that it may have a place among the articles of our creed, as a test of our enlarged ideas of christianity, and as opposed to the narrowmindedness of some christians, who harbour very uncharitable opinions against all who are not of their own church; and scruple not to shew their opinions by uncharitable actions. The papills particularly deny falvation to any but those of their own communion, and perfecute those of other persuasions where they have the power.-In opposition to this, we profess our belief of the great christian law of charity. We believe we ought to think charitably of good christians of all denominations; and ought to practife a free and unrestrained communion of charitable offices towards them.

In this light the fecond part of the article depends upon the first. By the "holy catholic church," we mean all sincere christians, of whatever church, or peculiarity of opinion: and by "the com-

munion of faints," a kind and charitable behaviour towards them.

Though it is probable this was not the original meaning of the atticle, yet as the reformers of the liturgy did not think it proper to make any alteration, we are led to feek fuch a fenfe as appears most confident with fe ipture.—We are affured, that this article, as well as the "defeent into nell," is not of the fame antiquity as the rest of the creed.

We profess our belief farther in the "forgiveness of fins."—The Scripture-doctrine of fin, and of the guilt, which arises from it, is this:

Man was originally created in a flate of innocence, yet liable to fall. Had he perfevered in his obedience, he might have enjoyed that happinefs, which is the confequence of perfect virtue. But when this happy flate was loft, his paffions and appetites became difordered, and prone to evil. Since that time we have all been, more or lefs, involved in fin, and are all therefore, in the Scripture-language, "under the curfe;" that i, we are naturally in a flate of unpardoned guilt.

In this mounful exigence, what was to be done? In a flate of nature, it is true, we might be forry for our fins. Nature too might dictate repentance. But forrow and repentance, though they may put us on our guard for the future, can make no atonement for fins already committed. A refolution to run no more into debt may make us cautious; but can never dicharge a debt already contracted.

In this diffress of nature, Jesus Christ came into the world. He threw a light upon the gloom that surrounded us—He shewed us, that in this world we were lost—that the law of nature could not save us—that the tenor-of that law was persect obedience, with which we could not comply—but that God—thro' his mediation, offered us a method of regaining happiness—that he came to make that atonement for us, which we could not make for our selves—and to redeem us from that guilt, which would otherwise overwhelm us—that faith and obedience were, on our parts, the conditions required in this gracious co-

See Ringham's Antiquities, vol. iv. chap. 3.

<sup>†</sup> Thus Mr. Jenyos exprettes the fame thing: "The punishment of vice is a debt due to justice, which cannot be remitted without compensation: It may change a wicked man's dispositions, and prevent his offending for the future; but can lay no claim to pardon for what is past. If any one by profligac; and extravagance contracts a debt, repentance may make him wifer, and hinder him from running into farther distrettes, but can never pay of him old bonds, for which he must be ever accountable, unless they are discharged by himtelf, or some ether in his stead."

View of the Intern. Evid. p. 112.

venant—and that God promifed us, on hir, the pardon of our fins, and everlaiting life—that we were first therefore to be made hely through the gospel of Christ, and then we might expect salvation through his death: "Us, who were dead in tretpasses and fins, would be quicken. Christ would redeem us from the curse of the law. By grace we should be faved thro' faith; and that not of ourselves: it was the gift of God. Net of works, left any man should boath."

## § 157. Creed continued.—Refureestion of the Boy.

We believe farther "in the referrection of the body."—This article prefumes our belief in the immortality of the foul

What that principle of life is which we call the foul; how it is diffinguished from mere annual life; how it is conneeled with the body; and in what state it fubfills, when its bodily functions ceafe: are among those inditioluble questions, with which nature every where abounds. But notwithstanding the dishculties, which attend the discussion of these questions, the truth ittelf hath in all ages of the world been the popular creed. Men believed their fouls were immortal from their own feelings, fo imprefled with an expectation of immortality-from observing the progreffive flate of the foul, capable, even after the body had attained its full fliength, of still higher improvements both in knowledge, and in habits of virtue-from the analogy of all nature, dying and reviving in every part-from their fituation here is apparently incomplete in ittelf; and from a variety of other topics, which the reaton of man was able to tuggeth.-But though nature could obscurely suggest this great truth; yet Christianity alone threw a clear light upon it, and imprefied it with a full degree of conviction upon ou minds.

But the article before us proceeds a flep fatther. It not only implies the immortative of the foul; but afferts the refurrection of the body.—Nor was this doctrine wholly new to nature. In its conceptions of a sutu e hie, we always find the foul in an imbolied slate. It was airy indeed, and bloo less; but fill it had the parts of a numer body, and could perfer a il its operations.

In these particulars the Scripture does not grantly our curiofity. From various gaslages we are led to believe, that the body shall certainly rife again: but in what manner, or of what substance, we pretend not to examine. We learn "that it is sown in corruption, and raised in incorruption; that it is sown in dishonour, and raise it in glory; that it is sown a natural body, and raised a spiritual body;" from all which we gather, that whatever sameness our bodies may have, they will hereafter take a more spiritualized nature; and will not be subject to those infirmities, to which they were subject on earth. Farther on this head, it behoves us not to inquire.

Inflead, therefore, of entering into any metaphyfical disquisitions of identity, or any other curious points in which this deep subject might engage us, all which, as they are founded upon uncertainty, must end in doubt, it is better to draw this doctrine, as well as all others, into practical use and the use we ought to make of it is, to pay that regard to our bodies, which is due to them-no, vamly to , doin net luxuriously to pamper them; but to keep them as much as possible from the pollutions of the wor'd; and to lay them down in the grave undefiled, there to be fealed up in expectation of a bleffed refurrection.

Lailly, we believe "in the life everlafting." in which article we express our faith in the eternity of a future flate of rewards and purufaments.

This article is nearly related to the laft, and is involved in the tame obscurity. In what the reward of the virtuous will confift, after death, our reason gives us no information. Conjecture indeed it will, in a matter water to nearly concerns us, and it hath conjectured in all ages; but information it hath none, except from the word of God: and even there, our limited capacities can receive it only in general and figurative expressions. We are told, " there will then reign fulness of joy, and pleasures for evermore—that the righteous shall have an inheritance incorruptible, undefiled, that fadeth not away-where they shall shine forth, as the sun, in the presence of their father-where er.or, and fin, and mifery shall be no more-where shall be affembled an innumerable company of angels, the general assembly of the church, the spirits of just men made perfect—that they shall neither hunger, nor thirst any more-that all tears shall be wiped from their eyes-that there shall be neither death, nor forrow, nor pain."

From

From these, and such expressions as there, though we cannot collect the entire nature of a future state of happiness, yet we can easily gather a few circumstances, which muil of course attend it; as, that it will be very great-that it will last for ever-that it will be of a nature entirely different from the happiness of this world -that, as in this world, our pattions and appetites prevail; in the next, reason and virtue will have the fuperiority-" hunger and thirst, tears and forrow," we read, " will be no more"—that is, all unealy rullions and appetites will then be annihilated-all vain kars will be then removed - ill anxious and intruding cares-and we thall feel ourfelves compleat and perfect; and our happiness, not dependent, as here, upon a thouland precarious circumstances, both within and without ourselves, but confident, uniform, and stable.

On the other hand, we pretend not to inquire in what the punithment of the wicked confifts. In the Scripture we find many expressions, from which we gather, that it will be very great. It is there called, "an everlasting fire, prepared for the devil and his angels—where the worm dieth not, and the fire is never quenched—where shall be weeping, and gnashing of teeth—where the wicked shall drink of the wrath of God, poured without mixture into the cup of his indignation—where they shall have no rest, neither by day nor right."

Though it becomes us certainly to put our interpretations with the greatest caution and humility upon such passinges as tacke; yet "the worm that never dieth," and "the fire that is never quenched," are strong expressions, and hardly to be evaded by any refinements of verbal criticism. Let the deist bravely argue down his fears, by demonstrating the absurdity of contuming a spirit in material fire. Let him fully explain the nature of suture punishment; and convince us, that where it connot reform, it must be unjust.—But let us, with more modesty, lay our hands humbly upon our breasts, confess our igno-

rance; revere the appointments of God, whatever they may be; and prepare to meet them with holy hope, and trembling joy, and awful (ubmission to his righteous will.

To the unenlightened heathen the eternity of future punishments appeared no fuch unreasonable doctrine. Their flate of the damned was of eternal duration. A volture for ever tore those entrails, which were for ever renewed \*.

Of one thing, however, we may be well affined (which may fet us entirely at reft in all our inquiries on this deep fubjed, that every thing will, to the end, be right—that a jult and mere ful God must act agreeably to jultice and mere y—and that the fust of these attributes will most affine by be tempered with the latter.

From the destrine of future rewards and punishments, the great and most convincing practical truth which arises, is, that we cannot exert too much pains in qualifying ourselves for the happiness of a future world. As this happiness will last for ever, how beneficial will be the exchange—this world, "which is but for a moment, for that everlassing weight of glory which fadeth not away!"

Vice, on the other hand, receives the greatest discouragement from this doctrine, as every fin we commit in this world may be considered as an addition to an everlasting account in the next. Gilpin.

### § 158. On the Ten Commandments.

Having confidered the articles of our faith, we proceed to the ru's of our practice. Thefe, we know, are of such importance, that, let our faith be what it will, unless it influence our lives, it is of no value. At the same time, if it be what it ought to be, it will certainly have this influence.

On this head, the ten commandments are first placed before us: from which the composers of the catechilm, as well as many other divines, have drawn a compleat system of christian duties. But thus is perhaps rather too much †. Both Monager

 Roftroque immanis vultur obunco Immortale je, ur tundens, fæcundaque pænis Vifcera.

 Sedet, eternumque fedebit

Æn. vi. 596.

Infelix Thefeis — 1b. 616.

† In the fourth volume of Bithop Warbuiton's commentary on Pope's works, in the fecond fittee of Dr. Donne, are thefe lines:

Of whole ftrange crimes no canonift can tell
In which commandment's large contents they dwell,
"The original!" frys the bribop, "Is more humerous.
In which commandment's large receipt they dwell;

les, in the law, and Christ in the gospel, feem to have inlarged greatly on morals: and each of them, especially the latter, to have added many practical rules, which do not obviously fall under any of the commandments.

But though we cannot call the decalogue a compleat rule of duty, we accept it with the utmost reverence, as the first great written law that ever God communicated to man. We consider it as an eternal monument, inscribed by the finger of God himfelf, with a few flrong, indelible characters; not defining the minutiæ of morals, but injoining those great duties only which have the most particular influence upon the happiness of society; and prohibiting those enormous crimes, which are the greatest sources of its distress.

The ten commandments are divided into two parts, from their being originally written upon two tables. From hence one table is supposed to contain our duty to God; the other our duty to man. this feems to be an unauthorized division: and hath a tendency to a verbal missake: as if some duties were owing to God; and others to man: whereas in fact we know that all duties are equally owing to God.—However, if we avoid this misconception, the division into our duty to God, and our duty to man, may be a convenient one.-The four first commandments are contained in the first table : the remaining fix in the fecond.

At the head of them stands a prohibition to acknowledge more than one God.

The fecond commandment bears a near relation to the first. The former forbids polytheism; the latter idolatry: and with this belief, and practice, which generally accompanied each other, all the nations of the earth were tainted, when these commandments were given: especially those nations, by whom the Jews were furrounded.

The third commandment injoins reverence to God's name. This is a strong religious restraint in private life: and as a folemn oath is the firitest obligation among men, nothing can be of greater fervice to fociety, than to hold it in general respect.

The fourth commands the observance

of the fabbath; as one of the best means of preserving a sense of God, and of religion in the minds of men.

The fecond table begins with injoining obedience to parents; a duty in a peculiar manner adapted to the Jewish state, before any regular government was erected. The temporal promise, which guards it, and which can relate only to the Jews, may either mean a promise of long life to each individual, who observed the precept: or, of flability to the whole nation upon the general observance of it: which is perhaps a better interpretation.

The five next commandments are prohibitions of the most capital crimes, which pollute the heart of man, and injure the peace of fociety.

The first of them forbids murder, which is the greatest injury that one man can de another; as of all crimes the damage in this is the most irreparable.

The feventh commandment forbids adultery. The black infidelity, and injury which accompany this crime; the confufion in families, which often fucceeds it; and the general tendency it hath to destroy all the domestic happiness of society, stain it with a very high degree of guilt.

The security of our property is the object of the eighth commandment.

The security of our characters, is the object of the ninth.

The tenth restrains us not only from the actual commission of sin; but from those bad inclinations, which give it birth.

After the commandments follows a commentary upon them, intitled, " our duty to God," and " our duty to our neighbour;" the latter of which might more properly be intitled, " Our duty to our neighbour and ourselves."-These feem intended as an explanation of the commandments upon Christian principles; with the addition of other duties, which do not properly fall under any of them. On thele we shall be more large.

The first part of our duty to God, is, " to " believe in him;" which is the foundation of all religion, and therefore offers itfelf first to our consideration. But this great point hath been already confidered. The next branch of our duty to God, is to fear him. The fear of God is im-

pressed equally upon the righteous man,

" they are called, who include all moral and religious duties within them,

and

<sup>&</sup>quot; as if the ten commandments were fo wide, as to fland ready to receive every thing, which either "the law of nature, or the gofpel commands. A just ridicule on those practical commentators, 21

and the finner. But the fear of the finner confifts only in the dread of punishment. It is the necessary consequence of guilt; and is not that fear, which we consider as a duty. The fear of God here meant, confitts in that reverential awe, that conflant apprehension of his presence, which fecures us from offending him .- When we are before our superiors, we naturally feel a respect, which prevents our doing any thing indecent in their fight. Such (only in a higher degree) should be our reverence of God, in whose fight, we know, we always stand. If a sense of the divine preience hath fuch an influence over us, as to check the bad tendency of our thoughts, words, and actions; we may properly be faid to be impressed with the fear of God. -If not, we neglect one of the best means of checking vice, which the whole circle of religious restraint affords.

Some people go a step farther; and say, that as every degree of light behaviour, though short of an indecency, is improper before our superious; so is it likewise in the presence of Almighty God, who is so much superior to every thing that can be called great on earth.

But this is the language of supersition. Mirth, within the bounds of innocence, called the offensive to God. He is offended only with vice. Vice in the lowest degree, is hateful to him: but a formal set behaviour can be necessary only to preserve human distinctions.

The next duty to God is that of love, which is founded upon his goodness to his creatures. Even this world, mixed as it is with evil, exhibits various marks of the goodness of the Deity. Most men indeed place their affections too much upon it, and rate it at too high a value: but in the opinion even of wife men, it deferves some ellimation. The acquisition of knowledge, in all its branches; the intercourse of society; the contemplation of the wonderful works of God, and all the beauteous scenes of nature; nay, even the low inclinations of animal life, when indulged with fobriety and moderation, furnish various modes of pleasure and enjoyment.

Let this world however go for little. In contemplating a future life, the enjoyments of this are lost. It is in the contemplation of futurity, that the christian views the goodness of God in the fullest light. When he fees the Deity engaging himtelf by covenant to make our short abode here a preparation for our evernal happiness

hereafter—when he is affured that this happines is not only eternal, but of the purest and most perfect kind—when he sees God, as a father, opening all his stores of love and kindness, to bring back to himself a race of creatures fallen from their original perfection, and totally lost through their own folly, perverseness, and wickedness; then it is that the evils of life seem as atoms in the sun-beam; the divine nature appears overslowing with goodness to mankind, and calls forth every exertion of our graduate and love.

That the enjoyments of a fature flate, in whatever those enjoyments consist, are the gift of God, is sufficiently obvious: but with regard to the government of this world, there is often among men a fort of insidelity, which ascribes all events to their own prudence and industry. Things appear to run in a stated course; and the singer of God, which acts unicen, is never

supposed. And, no doubt, our own industry and prudence have a great share in procuring for us the bleflings of life. God hath annexed them as the reward of fuch exer-But can we suppose, that such exertions will be of any fervice to us, unless the providence of God throw opportunities in our way? All the means of worldly happiness are surely no other than the means of his government. Motes faw among the fews a kind of infidelity like this, when he forbad the people to fay in their hearts, " My power, and the might of my hands hath gotten me this wealth:" whereas, he adds, they ought to remember, " That it is the Lord who giveth power to get wealth."

Others again have objected to the goodnels of God, his permission of evil. A good God, say they, would have prevented it; and have placed his creatures in a situation beyond the distresses of life.

With regard to man, there feems to be no great difficulty in this matter. It is enough, furely, that God has put the means of comfort in our power. In the natural world, he hath given us remedies against hunger, cold, and disease; and in the moral world, against the mischief of sin. Even death itself, the last great evil, he hath shewn us how we may change into the most consummate blessing. A state of trial, therefore, and a future world, feem easily to fet things to rights on this head.

The misery of the brute creation is indeed more unaccountable. But have we not the modely to suppose, that this difficulty may be owing to our ignorance? And thaton the strength of what we know of the wisdom of God, we may venture to trust him for those parts which we cannot completend?

One truth, after all, is very appoient, that if we should argue ourselves into atheim, by the untractableness of these tubjects, we should be so far from getting rid of our dishculties, that, if we reason justly, ten thousand greater would arise, either from considering the world under no ruler, or under one of our own imagining.

There remains one firther confideration with regard to the love of God, and that is, the measure of it. We are told we ought to love him "with all our heart, with all our foul, and with all our ftrength." These are strong expressions, and seem to imply a greater warmth of affection, than many people may perhaps find they can The affections of some are naturally cool, and little excited by any objects. The guilty person, is he, whose affections are warm in every thing but religion .--The obvious meaning therefore of the evpression is, that whether our affections are cool or warm, we should make God our chief good-that we should fet our affections more upon him, than upon any thing elic-and that, for his fake, and for the take of his laws, we should be ready to refirm every thing we have, and even life itfelf. So that the words feem nearly of the fame import with those of the apostle, " Set your affections on things above, and not on things on the earth."

#### \$ 159. Werthip and Honour of God.

Our next duty to God is, to worship him, to give him thanks, to put our whole trust in him, and to call upon him.

Since the observance of the sabbath is founded upon many wise and just reasons, what have they to answer for, who not only neglect this institution themselves, but bring it by their example into contempt with others? I speak not to those who make it a day of commen diversion; who, laying assed all decency, and breaking through all civil and religious regulations; spend it in the most licentious amusements: such people are past all reproof: but I speak to those, who in other things profess themselves to be serious people; and, one might hope, would act right, when they were convinced what was so.

But our prayers, whether in public or in private, are only an idle parade, unless we put our trust in God

By putting our trust in God, is meant depending upon him, as our happiness, and our refuge.

Human nature is always endeavouring either to remove pain; or. if case he obtained, to acquire happiness. And those things are certainly the most eligible, which in thefe respects are the most effectual. The world, it is true, makes us flattering promifes: but who can fay that it will keep them? We confift of two parts, a body, and a foul. Both of these want the mean, of happiness, as well as the removal of evil. But the world cannot even afford them to the body. Its means of happinefs, to those who depend upon them as fuch, are, in a thousand inflances, untatiffying. Even, at bell, they will fail us in the cad. While pain, diseases, and death, fliew us, that the world can afford no refuge against bodily diffrefs. A.d if it cannot afford the means of happinels, and of fecurity, to the body, how much lefs can we suppose it able to afford them to the foul?

Nothing then, we fee, in this world, is a fufficient foundation for trutt: nor indeed can any thing be but Almighty God, who affords us the only means of happiness, and is our only real refuge in diffress. On him, the more we truft, the greater we shall feel our fecurity; and that man who has, on just religious motives, confirmed in himself this trust, wants nothing else to secure his happiness. The world may wear what aspect it will: it is not on it that he depends. As far as prudence goes, he endervours to avoid the evils of life; but when they fall to his there (as fooner or later we must all share them) he resigns himself into the hands of that God who made him, and who knows best how to dispose of him. On him he thoroughly depends, and with him he has a constant intercourse by prayer; trusting, that whatever happens is agreeable to that just government, which God has established; and that, of consequence, it must be best.

We are enjoined next " to honour God's holy name."

The name of God is accompanied with fuch ideas of greatness and reverence, that it should never pass our lips without suggesting those ideas. Indeed it should never be mentioned, but with a kind of awful hesitation, and on the most solemn oc-

calions;

enfions; either in ferious discourse, or, when we invoke God in prayer, or when we fact by his name.

In this last light we are here particularly injoined to nonour the name of God. Collian oath is an appeal to God limite's and is intitled to our utmost respect, were it only in a political light; as in all human concerns it is the strongest test of veracity; and has been approved as such by the wisdom of all nations.

Some religionists have disapproved the use of oatic, under the idea of prophaneress. The language of the facred writers caves a different idea. One of them tyse, "An oath for confirmation is an end trail strife;" another, "I take God for record upon my foul; and a third, "God

is my withefs."

To the use of oaths, others have objected, that they are nugatory. The good ran will speak the truth without an oath; and the bad man cannot be held by one. And this would be true, if mankind were can did into good and bad; but as they are generally of a mixed character, we truy well suppose, that many would venture a simple fallehood, who would yet be started at the idea of perjury.

As an eath therefore taken in a folomination, and on a proper occasion, may be tendered as one of the highest acts of religion; for perjury, or falle swearing, is extently one of the highest acts of imports; and the greatest dishonour we can possibly shew to the name of God. It is in effect, either denying our belief in a God, or his power to punish. Other times wish to escape the notice of hearing, this is daring the Almighty to his face.

After perjury, the name of God is most dishonoured by the horrid practice of curfing. Its effects in society, it is true, are not so mischievous as those of perjury; nor is it so deliberate an act: but yet it conveys a still more horrid idea. Indeed if there be one wicked practice more peculiarly diabolical than another, it is this; for no employment can be conceived more suitable to infernal spirits, than that of spending their rage and impotence in curses and executions. If this shocking vice were not so dreadfully familiar to our ears, it could not fail to strike us with the utmost horror.

We next confider common swearing; a sin so universally practised, that one would imagine some great advantage, in the way either of pleasure or profit, attended it. The wages of iniquity afford some temptation: but to commit sin without any wages, is a strange species of infatuation.

—May we then ask the common swearer, what the advantages are which arise from this practice?

It will be difficult to point out one.—Perhaps it may be faid, that it adds firength to an affirmation. But if a man commonly firengthen his affirmations in this way, we may venture to affert, that the practice will tend rather to leffen, than confirm his credit. It flews plainly what he himfelf thinks of his own veracity. We never prop a building, till it becomes ruinous.

Some forward youth may think, that an otth adds an air and fpirit to his difcourie; that it is manly and important; and gives him confequence. We may whifper one feeret in his ear, which he may be aftered is a truth—Thefe airs of manlinefs give him confequence with those only, whose commendation is difgrace; others he only convinces, at how early an age he wishes to be thought profligate.

Perhaps he may imagine, that an oath gives force and terror to his threatnings—In this he may be right; and the more horribly wicked he grows, the greater object of terror he may make himself. On this plan, the devil affords him a complete

pattern for imitation.

Paltry as these apologies are, I should suppose, the practice of common swearing has little more to say for itself.—Those, however, who can argue in favour of this sin, I should fear there is little chance to reclaim.—But it is probable, that the greater part of such as are addicted to it, act rather from habit than principle. To deter such persons from indulging so pernicious a habit, and to shew them, that it is worth their while to be at some pains to conquer it, let us now see what arguments may be produced on the other side.

In the first place, common swearing leads to perjury. He who is addicted to swear on every trifling occasion, gannot but often, I had almost said unavoidably, give the fanction of an oath to an untruth. And though I should hope such perjury is not a sin of so heinous a nature, as what, in

They who attend our courts of justice, often see instances among the common people of their afferting roundly what they will either refuse to swear; or, when swern, will not affert judicial

judicial matters, is called wilful and corrupt; yet it is certainly stained with a very

great degree of guilt.

But, fecondly, common fiveating is a large firide towards wilful and corrupt perjury, inafinuch as it makes a folemn eath to be received with lefs reverence. If nobody dared to take an oath, but on proper occasions, an oath would be received with respect; but when we are accust med to hear swearing the common language of our streets, it is no wonder that people make light of oaths on every occasion; and that judicial, commercial, and official oaths, are all treated with so much indifference.

Thirdly, common swearing may be considered as an act of great irreverence to God; and, as such, implying also a great indifference to religion. If it would difference a chief magnitrate to suffer appeals on every trilling, or ludicrous occasion; we may at least think it as diffespectful to the Almighty.—If we lose our reverence for God, it is impossible we can retain it for his laws. You scarce remember a common swearer, who was in other respects an exact christian.

But, above all, we should be deterred from common fivearing by the politive command of our Saviour, which is founded unquestionably upon the wickedness of the practice: "You have heard," faith Chr.it, " that it bath been faid by them of old time, thou shalt not forswear thyself: but I tay unto you, fwear not at all; neither by heaven, for it is God's throne, neither by the earth, for it is his footstool: but let your communication" (that is, your ordinary conversation) " be yea, yea, nay, nay; for whatsoever is more than these cometh of evil."-St. James also, with great emphasis pressing his master's words, fays, "Above all things, my brethren, swear not : neither by heaven, neither by the earth, neither by any other oath; but let your yea be yea, and your nay, nay, left you fall into condemnation."

I shall just add, before I conclude this subject, that two things are to be avoided, which are very nearly allied to swearing.

The first is, the use of light exclamations, and invocations upon God, on every trivial occasion. We cannot have much reverence for God himself, when we treat his name in so familiar a manner; and may assure ourselves, that we are indulging a practice, which must weaken impressions, that ought to be preserved as strong as possible.

Secondly, such light expressions, and wanton phrases, as sound like swearing, are to be avoided; and are often therefore indulged by silly people, for the sake of the sound; who think (if they think at all) that they add to their discourse the spirit of swearing without the guilt of it. Such people had better lay aside, together with swearing, every appearance of it. These appearances may both offend and missed others; and with regard to themselves, may end in realities. At least, they show an inclination to swearing: and an inclination to vice indulged, is really vice.

Gilpin.

§ 160. Honour due to God's Word—what it is to serve God truly, &c.

As we are injoined to honour God's holy name, fo are we injoined also " to honour his holy word."

By God's holy word we mean, the Old Testament and the New.

The books of the Old Testament open with the earliest accounts of 'time, earlier than any human records reach; and yet, in many instances, they are strengthened by human records. The heathen mythology is often grounded upon remnants of the facred story, and many of the Bible events are recorded, however imperfectly, in prophase history. The very face of nature bears witness to the deluge.

In the history of the patriarchs is exhibited a most beautiful picture of the simplicity of antient mauners; and of genuine nature unadorned indeed by science, but impressed strongly with a sense of religion. This gives an air of greatness and dignity to all the sentiments and actions of these exalted characters.

The patriarchal history is followed by the Jewish. Here we have the principal events of that peculiar nation, which lived under a theocracy, and was set apart to preserve and propagate the knowledge of the true God through those ages of ignotance antecedent to Christ. Here too we find those types, and representations, which the apossile to the Hebrews calls the shadows of good things to come.

To those books, which contain the le-

<sup>\*</sup> See the fabject very learnedly treated in one of the first chapters of Jenkins's Reafonableness of Christianity.

gillation and history of the Jews, succeed the prophetic writings. As the time of the promise drew still nearer, the notices of its approach became stronger. The kingdom of the Messiah, which was but obscurely shadowed by the ceremonies of the Jewish law, was marked in stronger lines by the prophets, and proclaimed in a more intelhaible language. The office of the Mefmah, his ministry, his life, his actions, his death, and his refurrection, are all very didinctly held out. It is true, the Jews, explaining the warm figures of the prophatic linguage too literally, and applying to a temporal dominion those expressions, which were intended only as deferiptive of a initial, were offended at the meanness of Christ's appearance on earth; and weild not own him for that Messiah, whom taeir prophets had foretold; though thefe very prophets, when they used a less figurative language, had described him, as he really was, a man of forrows, and acquainted with grief.

To these books are added several others, I excel and moral, which adminisher much indruction, and matter of meditation to

devout minds.

The New Testament contains first the simple history of Christ, as recorded in the four gospels. In this history also are delivered those excellent instructions, which our Saviour occasionally gave his disciples; the precepts and the example blended together.

To the gospels succeeds an account of the lives and actions of some of the principal apostles; together with the early slate

of the christian church.

The epities of feveral of the aposites, particularly of St. Paul, to some of the new established churches, make another part. Our Saviour had promised to endow his disciples with power from on high to complete the great work of publishing the gospel: and in the epistles that work is completed. The truths and doctrines of the christian religion are here still more unfolded, and inforced: as the great scheme of our redemption was now finished by the death of Christ.

The facred volume is concluded with the revelations of St. John; which are supposed to contain a prophetic description of the future state of the church. Some of these prophecies, it is thought on very good grounds, are already fulfilled; and others, which now, as sublime descriptions only, amuse the imagination, will probably, in the future ages of the church, be the objects of the understanding also."

The last part of our duty to God is, "to ferve him truly all the days of our life"

"To ferve God truly all the days of our life," implies two things: first, the mode of this fervice; and fecondly, the term of it.

First, we must serve God truly. We must not rest satisfied with the outward action; but must take care that every action be founded on a proper motive. It is the motive alone that makes an action acceptable to God. The hypocrite " may fall twice in the week, and give alms of all that he possesses:" nay, he may fast the whole week, if he be able, and give all he has in alms: but if his fails and his alms are intended as matter of offcut tion only. neither the one, nor the other, is that true fervice which God requires. God requires the heart: he requires that an earnest defire of acting agreeably to his will, should be the general spring of our actions; and this will give even an indifferent action a value in his fight.

As we are injoined to ferve God truly, fo are we injoined to serve him " all the days of our life." As far as human frailties will permit, we should persevere in a confirmt tenor of obedience. That lackehaviour, which inflead of making a fleady progress, is continually relapsing into former errors, and running the same round of finning and repenting, is rather the life of an irrefolute finner, than of a pious chrif-Human errors, and frailties, we know. God will not treat with too severe an eye; but he who, in the general tenor of his life, does not keep advancing towards christian perfection; but suffers himself, at intervals, entirely to lose fight of his calling, cannot be really serious in his profession: he is at a great distance from serving God truly all the days of his life; and has no scriptural ground to hope much from the mercy of God.

That man, whether placed in high cftate, or low, has reached the summit of human happiness, who is truly serious in the service of his great Master. The things of this world may engage, but cannot engross, his attention; its sorrows and its joys may affect, but cannot disconcert him. No man, he knows, can faithfully serve two masters. He hath hired himself to one—that great Master, whose commands he reveres, whose savour he seeks, whose displeasure alone is the real object of his sears;

and whose rewards alone are the real objects of his hope. Every thing else is trivial in his fight. The world may sooth; or it may the aten him: he perfeveres steadily in the fervice of his God; and in that perfever nee feels his happiness every day the more established.

Gilpin.

5 161. Dates owing to particular perjons—duty of children to parent—respect and obtdience—in what the firmer confish—in what the later—juctouring a furent—britherly and trun—obtdience to law—france to the advantages of faciety.

From the two grand principles of "loving our neighbour as ourlelver; and of doing to others, as we would have them do to us," which regulate our focial intercourse in general, we proceed to those more confined duties, which arise from particular relations, connections, and stations in life.

Among these, we are first taught, as indeed the order of nature directs, to consider the great daty of children to parents.

The two points to be infifted on, are refped and obldience. Both these should naturally spring from love; to which parents have the highest claim. And indeed principles, in general, behave to their childen, in a manner both to deserve and to obtain their love.

But if the kindness of the parent be not such as to work upon the affections of the child, yet fill the parent has a title to respect and obedience, on the principle of duty; a principle, which the voice of nature defeates; which reason inculcates; which human laws, and human customs, all join to inforce; and which the word of God frietly commands.

The child will show respect to his parent, by treating him, at all times, with deference. He will consult his parent's inclination, and show a readines, in a thoughind nameless trilles, to conform hims. If to it. He will never preceifully contradict his parent; and when he offers a contrary opinion, he will offer it modestly. Respect will teach him also, not only to put the best colouring upon the infirmities of his parent; but even if those infirmities be great, it will soften and screen them, as much as possible, from the public eye.

Obedience goes a step further, and supposes a positive command. In things unlawful indeed, the parental authority cannot bind: but this is a case that rarely happens. The great danger is on the other fide, that children, through obfinacy or fullenness, should refuse their parents' lawful commands; to the observance of all which, however inconvenient to themselves, they are tied by various motives; and, above all, by the command of God, who in his facred denunciations against sin, rinks disobedience to parents among the worll.

They are farther bound, not only to obey the commands of their parents; but to obey them chearfully. He does but half his duty, who does it not from his heart.

There remains fill a third part of flial dury, which reculiarly belongs to children, when grown up. This the catechifin calls fuccouring or administering to the necessities of the parent; either in the way of managing his affairs, when he is lefs able to manage them himfelt; or in supplying his wants, thould be need athitance in that way. And this the child should do, on the united principles of love, duty, and gratitude. The hypocritical Jew would fometimes evade this duty, by dedicating to facred uses what should have been expended in affifting his parent. Our Savious sharply rebukes this pervertion of duty; and gives him to understand, that ro pretence of farring God can cover the neglect of affilling a parent. And it no pretence of ferving God can do it, furely every other pretence must still be more unnatural.

Under this head also we may confider that attention, and love, which are due to other relations, especially that mutual affection which should subfist between brothers. The name of brother expresses the highest degree of tenderness; and is generally used in scripture, as a term of pecultir endeatment, to call men to the practice of focial virtue. It reminds them of every kindness, which man can show to man. If then we ought to treat all mankind with the affection of brothers, in what light must they appear, who, being really fuch, are ever at variance with each other; continually doing spiteful actions, and shewing, upon every occasion, not only a want of brotherly kindness, but even of common

The next part of our duty is "to honour and obey the king, and all that are put in authority under him."

By the "king, and all that are put in authority under him," is meant the various parts of the government we live under, of which the king is the head and the manning of the precept is, that we ought to live in Jutiful (ubmirlion to legal authority.

Government and fociety are united. We cannot have one without the o her: and we fulmit to the inconvenience, for the fake of the advantages.

The end of faciety is mutual fafety and commune co. Without it, even fafety could a no degree be obtained: the good would become a prey to the had; na,, the year human species to the beats of the field.

Still less could we obtain the convenicie's of life; which cannot be had without the libour of many. If every man depended upon himfelf for what he enjoyed, has deflitte would be the lituation of human affairs!

But even fiftity and convenience are not the only fronts of fociety. Man, living reciely by hintelf, would be an ignorant, anythered fronts. It is the intercourse of fociety which cultivates the human timel. One man's knowledge and expensions built upon another's; and for the government and political life is it it did.

Fo enjoy these advantages, therefore, men joined in society; and hence it became n ceffery, that government should be ell-lished. Mandates were created; has made; takes in mittel to; and every one, induced of righting himself (except in in me stiff-defence) is injoined to appeal to the laws he lives an ler, as the both security of his life and property.

Giffin.

5 162. Duty to our teachers and infractors
—niting from it give inportance of
knowledge and religion—and the great
we fits of gunny bubits of attention,
and if virtue in our south—analogy of
yith and manhood to this world and the

We are next injoined "to Comit ourfelves Call our governors, to televes, fpuited parlors, and mafters." Here another species of government is pointed out. The laws of society are meant to govern our softr years: the inductions of our teachtis, spuired parlors, and maders, are the out to guide our youth.

By our "teachers, spiritual pastors, and moless," are meant all those who have the core of our education, and of our instruction in religion; whom we are to obey, and blee to, with humility and attention,

as the means of our advancement in know-ledge and religion. The infractions we recive from them are unquestionably subject to our own it lyment in status life; for by his own juagment every man and should refall. But ouring our countries, highly proper for us to pay a dutable subject to move the imposted to have for and any juagment of an even. At that early agent thought our endeavour to acquire knowledge, and of enwards unprejudiced to form our opinions.

The duty which young people over, their infiructors, cannot be thewn bute, than in the effect which the infructional tray receive have upon them. They would do we'l, therefore, to confider the advantages of an early attention to thefe two things, both of great importance, knewledge and religion.

The great use of knowledge in all its various branches (to which the learned Languages are generally considered as an introduction) is to sie the mind from the projudices of ignorance; and to good the justices of ignorance; and to good the projudices of ignorance, and to good the projudices of ignorance, and to good the matter and more enlarged conceptions, than are the mere growth of sude nature. By reading, you add the experience of others to your own. It is the improvement of the mird chiefly, that makes the difference between man and man; and gives one man a real superiority over another.

Befries, the mind must be employed. The lower orde s of men have their attention much engroffed by those employment, in which the necessities of life engage them: and it is happy that they have. Labour fleids in the room of education; and fills up those vacancies of mind, which, in a flate of illenes, would be incroked by vice. And if they, who have more le fare, do not substitute so nothing in the room of this, their min I, also will be om: the prey of vice; and the more to, as they have the means to indulge it more in the r power. A vacint maid is exactly that house me tipaed in the gospel, which the devil found empty. In he entered; and taking with him feven other spirits more wicked then himfelf, they took possession, It is an undoubted truth, i at one vice indulg d, introduces others; and that each focceeding vice becomes more depraved .-If then the mild mud be employed, what can fil up its vacuities more rationally than the acquintion of knowledge? Let as therefore thank God for the opportunities

Q

he hath afforded us; and not turn into a carfe those means of leifure, which might

become so great a blessing.

But however necessary to us knowledge may be, religion, we know, is infinitely more so. The one adorns a man, and gives him, it is true, superiority, and rank in life; but the other is absolutely essential to his happiness.

In the midst of youth, health, and abundance, the world is apt to appear a very gay and pleafing feene; it engages our deares; and in a degree fatisfies them alfo. But it is wisdom to consider, that a time will come, when youth, health, and fortune, will all fail us: and if disapointment and vexation do not four our talle for pleasure, at least sickness and insirmities will destroy it. In these gloomy seafons, and, above all, at the approach of death, what will become of us without religion? When this world fails, where shall we fly, if we expect me refuge in another? Without holy hope to God, and refignation to his will, and trust in him for deliverance, what is there that can secure us against the evils of life?

The great utility therefore of knowledge and religion being thus apparent, it is highly incumbent upon us to pay a studious attention to them in our youth. If we do not, it is more than probable that we shall never do it: that we shall grow old in ignorance, by neglecting the one; and old in vice by neglecting the other.

For improvement in knowledge, youth is certainly the fittest season. The mind is then ready to receive any impression. It is free from all that care and attention which, in riper age, the affairs of life bring with them. The memory too is the stronger and better able to acquire the rudiments of knowledge; and as the mind is then void of ideas, it is more suited to those parts of learning which are conversant in words. Besides, there is sometimes in youth a modesty and ductility, which in advanced years, if those years especially have been left a prey to ignorance, become felf-fufficiency and prejudice; and these effectually har up all the inlets to knowledge .- But, above all, unlefs habits of attention and application are early gained, we shall scarce acquire them afterwards -The inconfiderate youth feldom reflects upon this; nor knows his lofs, till he knows also that it cannot be retrieved.

knowledge, than to form religious habits. It is a great point to get habit on the fide of virtue, It will make every thing smooth and easy. The earliest principles are generally the most lasting; and those of a religious cast are feldom wholly lost, Though the temptations of the world may. now and then, draw the well-principled youth afide: yet his principles being continually at war with his practice, there is hope, that in the end the better part may overcome the worle, and bring on a reformation. Whereas he, who has fuffered habits of vice to get possession of his youth, has little chance of being brought back to a fense of religion. In a common course of things it can rarely happen. Some calamity must rouse him. He must be awakened by a floim, or fleep for ever .--How much better is it then to make that eafy to us, which we know is bell? And to form those habits now, which hereaster we shall wish we had formed?

There are, who would restrain youth from imbibing any religious principles, till they can judge for themselves; left they flould imbibe prejudice for thath. But why thould not the fime caution be used in science offo; and the minds of youth left void of all impressions? The experiment, I fear, in both cases would be dangerous. If the mind were left uncultivated during fo long a period, though nothing elfe should find entrance, vice cartainly would: and it would make the larger shoots, as the foil would be vacant. A boy had better receive knowledge and religion mixed with error, than none at all. For when the mind is fet a thinking, it may deposit its prejudices by degrees, and get right at last: but in a state of flagnation it will infallibly become foul.

To conclude, our youth bears the fame proportion to our more advanced life, as this world does to the next. In this life we must form and cultivate those habits of virtue, which must qualify us for t better state, If we neglect them here, and contract habits of an opposite kind, instead of gaining that exalted flate, which is promiled to our improvement, we shall of course sink into that state, which is adapted to the habits we have formed.

Exactly thus is youth introductory to manhood: to which it is, properly speaking, a state of preparation. During this scason we must qualify ourselves for the parts we are to act hereafter. In manhood Nor is youth more the season to acquire we bear the fruit, which has in youth been planted. planted. If we have fauntered away our south, we must expect to be ignorant men. If indolence and inattention have taken an early possession of us, they will probably increase as we advance in life; and make us a burden to ourselves, and useless to society. If again, we fuffer ourselves to be milled by vicious inclinations, they will daily get new strength, and end in dissolute lives. But if we cultivate our minds in our youth, attain habits of attention and industry, of virtue and sobriety, we shall find ourselves well prepared to act our future parts of life; and what above all things ought to be our care, by gaining this command over ourfelves, we shall be more able as we get forward in the world, to relift every new temptation, as t ariles. Gilpin.

### § 163. Behaviour to superiors.

We are next injoined "to order ourfelves lowly and reverently to all our better:."

By our betters are meant they who are in a fuperior flation of life to our own; and by "ordering ourfelves lowly and reverently towards them," is meant paying them that respect which is due to their flation.

The word 'betters' indeed includes two kinds of persons, to whom our respect is due—those who have a natural claim to it; and those who have an acquired one; that is, a claim arising from some particular situation m life.

Among the first, are all our superior relations; not only parents, but all other relations who are in a line above us. All these have a natural claim to our respect.

There is a respect also due from youth to age; which is always becoming, and tends to keep youth within the bounds of modesty.

To others respect is due from those particular stations which arise from society and government. Fear God, says the text; and it adds, "honour the king."

It is due also from many other situations in life. Employments, honours, and even wealth, will exact it; and all may jully exact it, in a proper degree.

But it may here perhaps be inquired, why God thould permit this latter diffinction among men? That fome should have more authority than others, we can easily see, is absolutely necessary in government; but among men, who are all born equal,

why flould the goods of life be distributed in so unequal a proportion?

To this inquiry, it may be answered, that, in the first place, we see nothing in this, but what is common in all the works of God. A gradation is every where observable. Beauty, strength, fivifuets, and other qualities, are varied through the creation in numberless degrees. In the same manner likewise are varied the gifts of fortune, as they are called. Way therefore should one man's being richer than another, surprize us more than his being stronger than another, or more prudent?

Though we can but very inadequately trace the wildom of God in his work, yet very wife reasons appear for this warrety in the pifts of fortune. It feems necedury both in a civil, and in a moral light.

In a civil light, it is the necessary accompaniment of various employments; on which depend all the advantages of fociety. Like the none of a regular building, fome must range higher, and fome lower; forme must support, and others be supported; some will form the strength of the building, and others its ornament, but all unite in producing one regular and proportioned whole. If then different employments are necessary, of course different degrees of wealth, honour, and consequence, must follow; a variety of diffirent ranks and a subordination, must take place.

Again, in a moral light, the disproportion of wealth, and other worldly adjuncts, gives a range to the more extensive exercise of virtue. Some virtues could but faintly exist upon the plan of an equality. If some did not abound, there were little room for temperance: if some did not fusfer need, there were as little for patience. Other virtues again could nardly exist at all. Who could practise generonty, where there was no object of it? Who humility, where all ambitious desires were excluded?

Since then Providence, in feattering these various gifts, proposes ultimately the good of man, it is our duty to acquieste in this order, and " to behave ourselves lowly and reverently" (not with servity, but with a decent respect) to all our superiors."

Before I conclude this fully &, it may

be proper to observe, in vindication of the ways of Providence, that we are not to suppose happiness and misery necessarily connected with riches and poverty. Fach condition hath its particular fources both of pleafure and pain, unknown to the other. Those in elevated stations have a thousand latent pangs, of which their inferiors have no idea; while their inferiors again have as many pleafures, which the others cannot tafte. I fpeak only of fuch modes of happinets or mifery as arife immediately from different flations. Of mifery, indeed, from a variety of other causes, all men of every flation are equal heirs; either when God lays his hand upon us in fickness, or misfortune; or when, by our own follies and vices, we become the minifters of our own diffiefs.

Who then would build his happiness uron an elevated flation? Or who would envy the possession of such happiness in another? We know not with what various difficiles that station, which is the object of our envy, may be attended .- Besides, as we are accountable for all we possess, it may be happy for us that we possels so little. The means of happiness, as far as flation can procure them, are commonly in our own power, if we are not wanting

to ourselves.

Let each of us then do his duty in that flation which Providence has affigued him; ever remembering, that the next world will foon deflroy all earthly diffinctions .-One distinction only will remain among the fons of men at that time-the diffinction between good and bad; and this diffinetion it is worth all our pains and all our ambition to acquire.

#### § 164. Against acronging our neightour by injursous vords.

We are next instructed "to hurt nobody by word or deed-to be true and just in all our dealings-to bear no malice nor hatred in our hearts-to keep our hind from picking and flealing-our toagues from evil speaking, lying, and flander-

The duties comprehended in these words are a little transposed. What should class under one head is brought under another. "To hurt nobody by word or deed," is the general proposition. The under parts flould follow: Find, " to keep the tongue from evil focaking, lying, and flandering;" which is, " to hurt nobody b. word." Secondly, "to be true and jud

in all our dealings:" and " to keep our hands from picking and stealing;" which is, "to hurt nobody by deed" the injunction, "to bear no malice nor hatred in our hearts." it belongs properly to neither of these heads; but it is a distinct one by itself. The duties being thus separated, I shall proceed to explain

And, first, of injuring our neighbour by our "word," This may be done, we find, in three ways; by "evil speaking,

by lying, and by flandering."

By "evil-speaking," is meant speaking ill of our neighbour; but upon a supposition, that this ill is the truth, In fome circumflances it is certainly right to fpeak ill of our neighbour: as when we are called upon in a court of juffice to give our evidence; or, when we can fet any one right in his opinion of a person, in whom he is about to put an improper confidence. Nor can there be any harm in speaking of a bad action, which has been determined in a court of juffice, or is otherwise become notorious.

But on the other hand, it is highly difallowable to speak wantonly of the characters of others from common fame; because in a thousand instances, we find that flories, which have no better foundation, are missepresented. They are perhaps only half-told-they have been heard through the medium of malice or envyfome favourable circumstance hath been omitted-fome foreign circumstance hath been added-fome triffing circumftance hath been exaggerated—the motive, the provocation, or perhaps the reparation, hath been concealed - in short, the reprefentation of the fact is, some way or other, totally different from the fact itself.

But even when we have the best evidence of a bad action, with all its circumflances before us, we furely indulge a very ill-natured p'cafure in spreading the fhame of an offending brother. We can do no good; and we may do harm: we may weaken his good refulutions by expoint him: we may harden him against the world. Perhaps it may be his first bad action. Perhaps nobody is privy to it but omtelves. Let us give him at least one trial. Let us not cast the first stone. Which of our lives could fland fo strict a terntiny? He only who is without fin himself, can have any excuso for treating his brother with feverity.

Let us next confider "lying;" which

is an intention to deceive by falsehood in our words.—To warn us against lying, we should do well to consider the folly, the meanners, and the wickedners of it.

The folly of lying confifts in its defeating its own purpose. A habit of lying is generally in the end detected; and after detection, the lyar, instead of deceiving, will not even be believed when he happens to speak the truth. Nay, every fingle lye is attended with such a variety of circumstances, which lead to a detection, that it is often discovered. The use generally made of a lye, is to cover a fault; but as the end is seldom answered, we only aggravate what we wish to conceal. In point even of prudence, an honest consession would ferve us better.

The meanness of lying arises from the cowardice which it implies. We dare not boldly and nobly speak the truth; but have recourse to low subterfuges, which always argue a fordid and disingenuous mind. Hence it is, that in the fathionable world, the world lyar is always considered

as a term of peculiar reproach.

The wickedness of lying confish in its perverting one of the great of bleffings of God, the use of speech, in making that a mischief to mankind, which was intended for a benefit. Truth is the great bond of besety. Falsehood, of course, tends to its dissolution. If one man may lye, why not another? Amd if there is no mutual trust among men, there is an end of all intercourse and dealing.

An equivocation is nearly related to a lye. It is an intention to deceive under words of a double meaning, or words which, literally speaking, are true; and is equally criminal with the most downright breach of truth. When St. Peter asked Sappaira (in the 5th chapter of the Acts) "whether her husband had sold the land for so much?" She answered, he had: and literally she spoke the truth; for he had sold it for that sum, included in a larger. But having an intention to deceive, we find the apostle considered the equivocation as a lye.

In short, it is the intention to deceive, which is criminal: the mode of deception, like the vehicle in which poison is conveyed, is of no consequence. A nod, or sign, may convey a lye as effectually as the most described.

decenful language.

Under the head of lying may be mentioned a breach of promife. While a refolution remains in our own breafts, it is subjest to our own review: but when we make another person a party with us, an engagement is made; and every engagement, though only of the slightest kind, should be punctually observed. If we have added to this engagement a solemn promise, the obligation is so much the stronger: and he who does not think himself bound by such an obligation, has no pretensions to the character of an honest man. A breach of promise is still worse than a lye. A lye is simply a breach of truth; but a breach of promise is a breach both of truth and trust.

Forgetfulness is a weak execute: it only shows how little we are affected by so solution an engagement. Should we sorget to call for a sum of money, of which we were in want, at an appointed time? Or do we think a solution promite of less value

than a fum of money?

Having confidered evil speaking and lying, let us next confider flandering. By flandering, we mean, injuring our neighbour's char cler by faltehood. Here we still rife higher in the scale of injurious words. Slandering our neighbour, is the greatest injury which words can do him; and is, therefore, worle than either evilfpeaking or lying. The mifchief of this fin depends on the value of our characters. All m n, unless they be past feeling, defire naturally to be thought well of by their fellow-creatures: a good character is one of the principal means of being ferviceable either to ourselves or others; and among numbers, the very bread they eat depends upon it. What aggravated injury, therefore, do we bring upon every man, whose name we flander? And, what is flul worfe, the injury is irreparable. If you defraud a man; restore what you took, and the injury is repaired. But, if you flander him, it is not in your power to flut up all the cars, and all the mouths, to which your tale may have accefs. The evil spreads, like the winged feeds of some noxious plants, which featter mischief on a breath of air, and disperse it on every side and beyond prevention.

Before we conclude this subject, it may just be mentioned, that a flander may be spread, as a lye may be told, in various ways. We may do it by an infinuation, as well as in a direct manner; we may spread it in a secret; or propagate it under the

colour of friendship.

I may add also, that it is a species of slander, and often a very malignant one, to lessen the merits or enaggerate the O 3

failings of others; as it is likewise to omit defending a mifrepresented character, or to let others bear the blame of our offen-Gilpin.

6 165. Against avronging our neighbour by injurious actions.

Having thus confidered injurious words, let us next confider injurious actions. On this head we are injoined " to keep our hands from picking and sterling, and to be

true and just in all our dealings.

As to theft, it is a crime of fo odious and vile a nature, that one would imagine , no person, who hath had the least tineture of a virtuous education, even though driven to necessity, could be led into it .-I shall not, therefore, enter into a dissuafive from this crime; but go on with the explanation of the other part of the injunction, and fee what it is to be true and juit in all our dealings.

luttice is even still more, if possible, the support of society, than truth: inasmuch as a man may be more injurious by his actions, than by his words. It is for this reason that the whole soice of human law is bent to restrain injustice; and the happinels of every tociety will increase in pro-

portion to this restraint.

We very much eir, however, if we suppofe that every thing within the bounds of law is juttice. The law was intended only for bad men; and it is impossible to make the mellics of it fo flrait, but that many very great enormities will escape. well-meaning man, therefore, knowing that the law was not made for him, confults a better guide-his own contcience, informed by religion. And, indeed, the great difference between the good and the bad man confits in this; the good man will do nothing but what his confeience will allow; the bad man will do any thing which the Law cannot reach.

It would, indeed, be endless to describe the various ways, in which a man may be dithonest within the limits of law. They are as various as our intercourse with mankind. Some of the most obvious of them I shall curforily mention.

In matters of commerce the knave has many opportunities. The different qualities of the fame commodity-he different modes of adulteration—the specious arts (1 vending-the frequent ignorance in purchaing; and a variety of other cheumthances, open an endlets field to the ingenuity of fraud. The honest fair dealer,

in the mean time, has only one rule, which is, that all arts, however common in bufiness, which are intended to deceive, are utterly unlawful. It may be added, upon this head, that if any one, confcious of having been a transgressor, is desirous of repairing his fault, rellitution is by all means necessary: till that be done, he continues in a course of injustice.

Again, in matters of contract, a man has many open mittes of being dishonest within the beards of law. He may be firith in draining the letter of an agreement, when the equitable meaning requires a laxer interpretation: or, he can take the laxer interpretation, when it ferves his purpose; and at the loop-hole of some ambiguous expression exclude the literal meaning, though it be undoubtedly the

true one,

The same iniquity appears in withholding from another his just right; or in put. ting him to expence in recovering it. The movements of the law are flew; and in many cases cannot be otherwise; but he who takes the advantage of this to injure his neighbour, proves himself an undoubted knave.

It is a species of the same kind of injuffice to withhold a debt, when we have ability to pay; or to run into debt, when we have not that ability. The former can proceed only from a bad disposition; the latter, from fuffering our defires to exceed our station. Some are excused, on this head, as men of generous principles, which they cannot confine, But what is their generofity? They affift one man by injuring another. And what good arises to feciety from hence? Such persons cannot act on principle; and we need not hefitate to rank them with those, who run into debt to gratify their own felfish inclinations. One man defines the elegancies of life; another defires what he thinks an equal good, the reputation of generefity.

Oppression is another species of injustice; by which, in a thousand ways, under the cover of law, we may take the advantage of the superiority of our power, either to crush an inferior, or humble him

to our deligne.

Ingratitude is another. A loan, we I won, claims a legal return. And is the ination lefs, if, instead of a loan, you ree a kindnets? The law, indeed, fays nothing on this point of immorality; but an honest conscience will be very loud in the condemnation of it.

We may be unjust also in our resentment; by carrying it beyond what reason

and religion prescribe.

But it would be endless to describe the various ways, in which injustice discovers itself. In truth, almost every omission of duty may be resolved into injustice.

The next precept is, "to bear no malice

nor hatred in our hearts."

The malice and hatred of our hearts arife, in the first place, from injurious treatment; and furely no man, when he is injured, can at first help feeling that he is But Christianity requires, that we should subdue these feelings, as foon as possible; "and not suffer the sun to go down upon our wrath." Various are the pathages of feripture, which inculcate the forgiveness of injuries. Indeed, no point is more laboured than this; and with reaion, because no temper is more productive of evil, both to ourselves and others, than a malicious one, The fenfations of a mind burning with revenge are beyond description; and as we are at these seasons very unable to judge coolly, and of course liable to carry our refentment too far, the confequence is, that, in our rage, we may do a thousand things, which can never be atoned for, and of which we may repent as long as we live.

Befides, one act draws on another; and The retaliation keeps the quarrel alive. gospel, therefore, ever gracious and kind to man, in all its precepts enjoins us to check all those violent emotions, and to leave our cause in the hands of God. " Vengeance is mine, I will repay, faith the Lord;" and he who, in opposition to this precept, takes vengeance into his own hands, and cherishes the malice and hatred of his heart, may affure himfelf that he has not yet learned to be a Christian. These precepts, perhaps, may not entirely giee with modern principles of honour: but let the man of honour see to that. The maxims of the world cannot change the truth of the gospel.

Nay, even in recovering our just right, or in pursuing a criminal to justice, we should take care that it be not done in the spirit of retaliation and revenge. If these be our motives, though we make the law our instrument, we are equally guilty.

But besides injurious treatment, the malice and hatred of our hearts have often another source, and that is envy: and thus in the litany; "envy, malice, and hatred," are all joined together with great proprie-

The emotions of envy are generally cooler, and less violent, than those which arile from the refentment of injury; so that envy is feldom so mischievous in its effect; as revenge: but with regard to ourfelves, it is altogether as bad, and full as deflructive of the spirit of christianity. Wh t is the religion of that man, who, inflead of thanking Heaven for the bleffings he receives, is fretting himself continually with a disagreeable comparison between himself and some other, He cannot enjoy what he has, because another has more wealth, a fairer fame, or perhaps more merit, than himself. He is miserable, because others are happy.

But to omit the wickedness of envy, how absurd and foolish is it, in a world where we must necessarily expect much real misery, to be perniciously inventive in

producing it!

Befides, what ignorance! We fee only the glaring outfide of things. Under all that envied glare, many unfeen difficiles may lurk, from which our flation may be free: for our merciful Creator feems to have bestowed happiness, as far as station is concerned, with great equality among all his creatures.

In conclusion, therefore, let it be tho great object of our attention, and the fubject of our prayers, to rid our minds of all this curfed intrufion of evil thought whether they proceed from malice, or from an envious temper. Let all our malicious thoughts foften into charity and benevolence; and let us "forgive one another, as God, for Christ's fake, has forgiven us." As for our envious thoughts, as far as they relate to externals, let them fublide in humility, acquiescence, and submission to the will of God. And when we are tempted to envy the good qualities of others, let us spurn so base a conception, and change it into a generous emulationinto an endeavour to raife ourlely as to an equality with our rival, not to deprets him to a level with us. G.lpin.

#### § 166. Duties to our felices.

Thus far the duties we have confidered, come most properly under the head of those which we over to our neighbour; what follows, relates rather to correct to On this head, we are instructed "to seep our bodies in temperance, soberness, and chastity."

Though our fouls should be our great concern, yet, as they are nearly connected

O 4 with

with our bodies, and as the impurity of the one contaminates the other, a great degree or moral attention is, of course, due to our bodies also.

As our first flation is in this world, to which our bodies particularly belong, they are formed with such appears as are requifite to our commodion living a it; and the rule given uses, "to use the veril to as not to abuse it". St. Pau, by a besutiful adulion, calls our bootes the "temples of the Holy Ghoft." by which he means to imprefe us with a firing idea of the dignity; and to deter us from deban g, by low pleafures, what should be the teat of wo much purity. To youth toth cautions are above meabach echary, because their pathons and opportion a c fliere; their real n and judgment weak. They are prone to pleature, and void of refliction. How, th retore, in the young adventures in tife may belt their their course, and ale this finful world to as not to abute a, is a confideration well worth their attention. Let us then see on er what regulations their appetites mould be referenced.

By keeping over bodies in temperance is meant avoiding exects in catting, with regard both to the quantity and qualty of our food. We should neither eat more than our stomachs can well bear; nor be

nice and delicate in our cating.

To preferve the body in lealth is the end of cating; and they who regulate themfelves merely by this end, who cat without choice or diffinction, paying no regard to the pleafure of eating, observe p thaps the best rule of temperance. They go rather indeed beyond temperance, and may be called abstemicus. A man may be temperance, and yet allow himself a little mere indul server. Great care, however, is here necessary; and the more, as perhaps no precise rule can be affixed, after we have passed the first great limit, and let the palate loose among variety. Our own discretion must be our guide, which should be constantly kept awake by

confidering the many bad consequences which attend a breach of temperance.—Young men, in the full vigour of health, do not consider these things; but as age comes or, and different maladies begin to appear, they may perhaps repent they did not a little earlier practise the rules of temperance.

In a moral and religious light, the conferences of intemperance are still worse. To eajoy a comfortable meal, when it comes before us, is allowable: but he who is flers his mind to dwell upon the pleasurer of eating, and makes them the employment of his thoughts, has at least opened one fource of mental corruption †.

After all, he who would most perfectly enjoy the pleasures of the table, such as this are, must look for them within the rate of temperance. The palate, accustomed to saticty, hath lost its tone; and the greatest sensially have been brought to co fets, that the coastest sare, with an appetite kept in order by temperance, afferds a more delacious repair, than the most luxurious meal without it.

As temperate relates chiefly to eating, feberness or tobriety relates properly to druking. And here the same observations rectu. The strictest, and perhaps the best rule, is a crely to fatisfy the end of drinking. But if a little more indulgence be taken, it ought to be taken with the greatest circumstrection.

With regard to youth indeed, I should be inclined to great shifteness on this head. In eating, if they eat of proper and simple food, they cannot easily err. Their growing limbs, and strong exercise, require larger sopplies than full-grown bodies, which must be lept in order by a more rigid temperance. But if more indulgence he allowed them in eating, lefs, surely, should in drinking. With strong liquors of every kind they have nothing to do; and if they should totally abstain on this head, it were so much the better. The languor which attends age 1, requires perhaps, now and then, some aids; but the

fpirits

fpirits of youth want no recruits: a little rest is sussicient.

As to the bad consequences derived from excessive drinking, besides filling the blood with bloated and vicious humours, and debauching the purity of the mind, as in the cafe of intemperate eating, it is attended with this peculiar evil, the lofs of oar fenies. Hence follow frequent inconventences and mortifications. We expose our follies-we betray our fecrets-we are once imposed upon-we quarrel with our friends—we lay ourfelves open to our enemies; and, in thort, make ourfelves the objects of contempt, and the topics of ridicale to all our acquaintance.-Nor is it only the set of intoxication which deprives us of our reason during the prevalence of it, the habit of drunkenness from before and impairs the understanding, and renders us at all times lefs ht for the offices of

We are next injoined "to keep our holies in chadity." Flee youthful lufts," (1)s the ap file, "which war againft the foul" And there is furely nothing which cirries on a war againft the foul more fucciously. Wherever we have a catalogue in feripture (and we have many fuch catalogues) of those fins which in a peculiar manner debauch the mind, these youthful luft, have always, under some denominators, a place among them.—To keep outselves free from all contagion of this kind, let us endeavour to preferve a purity in our thoughts—our words—and our actions.

Firit, let us preferve a purity in our thoughts. These dark recesses, which the eye of the world cannot reach, are the receptacles of these youthful lusts. Here they find their first encouragement. The entrance of such impure ideas perhaps we cannot always prevent. We may always however prevent cherishing them; we may always prevent their making an impression upon us: the devil may be cast out as soon as discovered.

Let us always keep in mind, that even into those dark abods the eye of Heaven can penetrate: that every thought of our hearts is open to that God, before whom we must one day stand; and that however secretly we may indulge these impure ideas, at the great day of account they will certainly appear it an awful detail against us.

Let us remember again, that if our bodies be the temples of the Hoty Ghoft, our minds are the very functuaries of those temples: and if there be any weight in the apostle's argument against polluting our bodies, it urges with double force against polluting our minds.

But, above all other confiderations, in behoves us most to keep our thoughts pure, because they are the fountains from which our words and actions flow. "Out of the abundance of the heart the mouth speak eth." Obscene words and actions are only bad thoughts matured, and fpring as naturally from them as the plant from its feed. It is the fame vicious depravity carried a flep farther; and only shews a more confirmed, and a more mitchievous degree of guilt. While we keep our impunties in our thoughts, they debauch only ourselves; bad enough, it is true, But when we proceed to words and actions, we let our impurities loole: we spread the contagion, and become the corrupters of

Let it be our first care, therefore, to keep our thoughts pure. If we do this, our words and actions will be pure, of course. And that we may be the better enabled to do it, let us use such helps as avoid all company, and all books, that have a tendency to corrupt our minds; and every thing that can instance our passential of the books, the who allows himself in these things, holds a parley with vice; which will infallibly debauch him in the end, if he do not take the alarm in time, and break off such dailiance.

One thing ought to be our particular care, and that is, never to be unemployed. Ingenious amusements are of great use in filling up the vacuaties of our time. Idle we should never be. A vacant mind is an invitation to vice.

Gilpin.

§ 167. On covering and desiring other men's goods.

We are forbilden, next, " to covet, of defire other men's goods."

There are two great paths of vice, into which bad men commonly strike; that of unlawful pleasure, and that of unlawful gann—The paths of unlawful pleasure we have just examined; and have seen the danger of obeying the headstrong impulse of our appetites.—We have considered also an immoderate love of gain, and have seen dishonesty and fraud in a variety of shapes. But we have yet viewed them only as they relate to society. We have viewed only the outward action. The rule before us, 16 We must not covet, nor defire other

men's goods," comes a step nearer home, and considers the motive which governs the action.

Covetousness, or the love of money, is called in scripture "the root of all evil;" and it is called so for two reasons; because it makes us wicked, and because it makes us miserable.

First, it makes us wicked. When it once gets possession of the heart, it will let no good principle flourish near it. Most vices have their fits; and when the violence of the passion is spent, there is some interval of calm. The vicious appetite cannot always run riot. It is fatigued at least by its own impetuosity: and it is possible, that in this moment of tranquilky, a whisper from virtue may be heard. But in avarice, there is rarely intermiffion. It hangs like a dead weight upon the foul, always pulling it to earth. We might as well expect to see a plant grow upon a flint, as a virtue in the heart of a miler.

It make us miferable as well as wicked. The cares and the fears of avarice are proverbial; and it must needs be, that he, who depends for happiness on what is liable to a thousand accidents, must of course feel as many diffresses, and almost as many disappointments. The good man depends for happiness on something more permanent; and if his worldly affairs go ill, his great dependance is still left. But as wealth is the god which the cove-tous man worships (for "covetousnels," we are told, " is idolatry,") a disappointment here is a disappointment indeed. Be he ever so prosperous, his wealth cannot fecure him against the evils of mortality; against that time, when he must give up all he values; when his bargains of advantage will be over, and nothing left but tears and despair.

But even a defiring frame of mind, though it be not carried to such a length, is always productive of misery. It cannot be otherwise. While we suffer ourselves to be continually in quest of what we have not, it is impossible that we should be happy with what we have. In a word, to abridge our wants as much as possible, not to increase them, is the truest happiness.

We are much mistaken, however, if we think the man who hoards up his money

is the only covetous man. The prodigal, though he differ in his end, may be as avaricious in his means +. The former denies himself every comfort; the latter grasps at every pleasure. Both characters are equally bad in different extremes. The miser is more detestable in the eyes of the world, because he enters into none of its joys; but it is a question, which is more wretched in himself, or more pernicious to society.

As coveroulness is esteemed the vice of age, every appearance of it among young persons ought particularly to be discouraged; because if it gets ground at this early period, nobody can tell how far it may not afterwards proceed. And yet, on the other fide, there may be great danger of encouraging the opposite extreme. As it is certainly right, under proper restrictions, both to fave our money, and to spend it, it would be highly useful to fix the due bounds on each fide. But nothing is more difficult than to raife these nice limits between extremes. Every man's case, in a thousand circumstances, differs from his neighbour's: and as no rule can be fixed for all, every man of course, in these disquisitions, must be lest to his own conscience. We are indeed very ready to give our opinions how others ought to act. We can adjust with great nicety what is proper for them to do; and point out their mistakes with much precition; while nothing is necessary to us, but to act as properly as we can ourselves; observing as just a mean as possible between prodigality and avarice; and applying, in all our difficulties, to the word of God, where these great landmarks of morality are the most accurately

We have now taken a view of what is prohibited in our commerce with mankind: let us next fee what is injoined. (We are fill proceeding with thote duties which we owe to ourfelves). Inflead of pending our fortune therefore in unlawful pleafure, or increafing it by unlawful gain; we are required " to learn, and labour truly (that is houeftly) to get our own living, and to do our duty in that flate of life, unto which it shall pleafe God to call ...—The words will be sufficiently explained by confidering, first, that we all have some station in life—some

Sæviat, atque novos moveat fortuna tumultus; Quantum hine imminuet

<sup>†</sup> Aliem appetens, fui piofulu-

Hor, Sat.

particular duties to discharge; and second-1, in what manner we ought to discharge them.

First, that man was not born to be idle, may be inferred from the active spirit that appears in every part of nature. Every taring is alive; every thing contributes to the general good; even the very inanimate is the parts of the creation, plants, stones, natis, cunnot be called totally inactive, her bear their part likewise in the general undurines. If then every part, even of in matter nature, be thus employed, surely we cannot suppose it was the intention of the Manghey Father, that man, who is the next capable of employing himself properly, thould be the only creature without or location.

Action, that man was born for affive 16, or inn from the necessary, God would not been necessary, God would not inall, have imposed it. But wither that the bady would become enervated, whither mind corrected. Alleness, therefore in jurily offermed the origin both of the deand vice. So that if labour and the former, of their of bedy or mind, had 10 of the bady white respected ourselves, they will be lightly proper; but they have the refer.

a conce hav of them is plain, from the a that i men have of the affiftance of C. . If io, this affiliance should be Paul; every man should contribute his Para We have already feen, that it is I my there should be different flations in the norl l-that fome should be placed has hife, and others low. The lowell, " - inow, cannot be exempt from labour; and the highest ought not: though their bour, according to their station, will be 1 different kind. Some, we fee, "mu't labour (as the catechina phrases it) to get the own living; and others should do then duty in that flate of life, whatever that flate is, unto which it hat's pleased God to call them." All are affifted : all fould affift. God diffributes, we read, Vorinds talents among men; to some he give, five talents, to others two, and to Car, one: bot it is expected, we find, the notwichdan ling the longuality, each hoold employ the firm that is given to t' bolk adva stages as he who received five talents was under the fame obligation Of improving them, as he who had re-Carel only one; and would, it he had hid his talents in the earth, have been Junified, in proportion to the abuse.

Every man, even in the highest flation. may find a proper employment, both for his time and fortune, if he please: and he may affure himself that God, by placing him in that station, never meant to exempt him from the common obligations of fociety, and give him a licence to spend his life in ease and pleasure. God meant, affuredly, that he should bear his part in the general commerce of life-that he should confider himself not as an individual, but as a member of the community: the interests of which he is under an obligation to support with all his power;and that his elected flation gives him no other pre-entrance than that of being the more extenti . ufeful.

Having thus teen, that we have all fome station in life to support—some particular duties to discharge; let us now see in what manner we ought to discharge them.

We have an eafy rule given us in scripture on this head; that all our duties in life should be performed " as to the Lord, and not unto man:" that is, we should consider our stations in life as trusts repoted in us by our Maker; and as fuch thould discharge the duties of them. What, though to worldly truit be reposed? What, though we are accountable to nobody upon earth? Can we therefore suppose ourfelves in reality lefs accountable? Can we suppose that God, for no reason that we can divine, has fingled us out, and given us a large proportion of the things of this world (while others around us are in need) for no other purpose than to squander it away upon ourfelves? To God undoubtedly we are accountable for every bleffing we enjoy. What me in, in feripture, the talents given, and the u'e affigued; but the confeientious discharge of the duties of life, according to the advantages with which they are attended?

It matters not whither these advantages be an inherstone, or an acquisition: ftill they are the gift of God. Agreeably to their rank in life, it is true, all men should live; human definations require it; and in doing this properly, every one around will be benefied. Utility should be confidered in all our expences. Even the very amusements of a man of fortune should be founded in it.

In thort, it is the conflint injunction of feripture, in whatever itation we are place to confider ourselves as God's servants, and as acting immediately under his eye,

not expecting our reward among men, but from our great Master who is in heaven. This fanctifies, in a manner, all our actions: it places the little descuties of our station in the light of God's appointments; and turns the most common duties of life into acts of religion.

Gilpin.

#### § 168. On the facrament of baptifin,

The facrament of baptism is next confidered; in which, if we confider the inward grace, we shall see how aptly the lign represents it .- The inward grace, or thing fignified, we are told, is "a death unto fin, and a new birth unto righteoufness:" by which is meant that great renovation of nature, that purity of heart, which the christian religion is intended to produce. And fure there cannot be a more fignificant fign of this than water, on account of its cleanfing nature. As water refreshes the body, and purifies it from all contracted filth; it aptly represents that renovation of nature, which cleanses the foul from the impurities of fin. Water indeed, among the antients, was more ad 4 ted to the thing fignified, than it is at prefent among us. They used immersion in haptifug: to that the child being dipped into the water, and raised out again, baptism with them was more significant of a new birth unto righteoufnels. But though we, in these colder climates, think immertion an untafe practice; yet the original meaning is full fuppofed.

It is next asked, What is required of those who are baptised? To this we answer, "Repentance, whereby they forfake far; and faith, whereby they stedfastly believe the promises of God, made to them in that facrament."

The primitive church was extremely first on this head. In those times, before christianity was established, when adults offered themselves to baptism, no one was admitted, till he had given a very fatisfiastory evidence of his repentance; and till, on good grounds, he could profess his fault in Christ: and it was afterwards expected from him, that he should prove his taith and repentance, by a regular obedience during the future part of his life.

If faith and repentance are expected at baptifin; it is a very natural question,

Why then are infants baptifed, when, by reason of their tender age, they can give no evidence of either?

Whether infants should be admitted to baptism, or whether that sacrament should be deferred till years of difcretion, is a question in the christian church, which hath been agitated with fome animofity. Our church by no means looks upon bantism as necessary to the infant's falvation v. No man acquainted with the spirit of chiltranity can conceive, that God will leave the falvation of fo many innocent fouls in the hands of others. But the practice is confidered as founded upon the utage of the earliest times: and the church observing, that circumcifion was the introductory rite to the Jewith covenant; and that bantilm was intended to succeed circumcition: it naturally supposes, that baptism should be administered to infants, as circumcifion was. The church, however, in this cafe, hath provided fponfors, who make a profellion of obedience in the child's name. But the nature and office of this proxy hath been already examined, under the head of our baptifmal vow.

# § 169. On the facrament of the Lord's Supper.

The first question is an enquiry into the original of the institution: "Way was the sacrament of the Lord's supper ordained?"

It was ordained, we are informed,—" for the continual remembrance of the facilities of the death of Christ; and of the benefits which we receive thereby."

In examining a facrament in general, we have already feen, that both baptim, and the Lord's supper, were originally influted as the "means of receiving the grace of God; and as pledges to assure us thereof."

But belides these primary ends, they have each a secondary one; in representing the two most important truths of religion; which gives them more force and influence. Baptism, we have seen, represents that renovation of our finful nature, which the gospel was intended to introduce: and the peculiar end, which the Lord's supper had in view, was the sacrisce of the death of Christ; with all the be-

<sup>\*</sup> The cateshifm afferts the facraments to be only generally necessary to falvation, excepting particular cases. Where the use of them is intentionally rejected, it is certainly criminal.—The Quakers indied reject them on principle; but though we may wonder both at their logic and divinity, we should be forty to include them in an anathenia.

nefits which arise from it—the remission of our fins—and the reconciliation of the world to God. "This do," faid our Saviour (alluding to the passever, which the Lord's supper was designed to superiede) not as hither'o, in memory of your deliverance from Egypt; but in memory of that greater deliverance, of which the other was only a tyye: "Do it in remembrance of me."

The outward part, or fign of the Lord's fupper, is " bread and wine"-the things fignified are the " body and blood of Christ"-In examining the Licrament of baptilm, I endeavoured to shew, how very apt a fymbol water is in that ceremony. Bread and wine also are symbols equally apt in representing the body and blood of Christ, and in the use of these particular tymbols, it is reasonable to suppose, that our Saviour had an eye to the Jewith patfover; in which it was a cuffoin to dank wine, and to eat bread. He might has initiated any other apt fymbols for the time purpose; but it was his usual prictice, through the whole lystem of his inflatition, to make it, in every part, as familiar as peffible; and for this resion he froms to have chorn such tymbols as were then in ule; that he might give ... Intle offence as possible in a matter of indiffer nee.

Is our Saviour, in the inflitution of his supper, ordered both the bread and the wine to be received; it is certainly a great error in papills, to deny the cup to the laity. They fay, indeed, that, as both flish and blood are united in the substance of the human body; fo are they in the facramental bread; which, according to them, is changed, or, as they philafe it, transubstantiated into the real body of Carif. If they have no other reason, why they administer wine to the clergy? The clergy might participate equally of both in the bread .- But the plain troth is, they are definous, by this invention, to au l an air of mystery to the faciamer, and a superflitious reverence to the print, as if he, being endowed with some peculiar holiness, might be allowed the ue of both.

There is a difficulty in this part of the catechism, which should not be passed over. We are told, that "the body and blood of Carist are verily and indeed taken, and received by the trabful in the Lord': supper." This expression formal very like the Pop.sh doctrine, just mentioned of tran-

fubstantiation. The true sense of the words undoubtedly is, that the faithful believer only, verily and indeed receives the benefit of the sacrament; but the expression must be allowed to be inaccurate, as it is capable of an interpretation so critically opposite to that which the church of England hath always professed.—I would not willingly suppose, as some have done, that the compilers of the catechism meant to manage the affair of transfubstantiation with the papists. It is one thing to show a liberality of sentiment in matters of indifference; and another to speak timidly and ambiguously, where essentials are concerned.

It is next asked, What benefits we receive from the Lord's fapper? To which it is answered, "The threngthening and refreshing of our souls by the body and blood of Christ, as our bodies are by the bread and wine." As our bodies are firengthened and refreshed, in a natural way, by bread and wine; fo should our fouls b, in a fpiritual way, by a devoue commemoration of the paffion of Christ. By gratefully remembering what he fuffered for us, we should be excited to a greater abhorience of fin, which was the cause of his tofferings. Every time we partake of this facrament, like faithful foldiers, we take a fresh cath to our leader; and should be animated an w, by his example, to perfevere in the spiritual conflict in which, under him, we are engaged.

It is larly asked, "What is required of them who come to the Lord's supper?" To which we answer, "That we should examine ourselves, whether we repentus truly of our former sins—stedfastly purposing to lead a new life—have a lively faith in God's mercey through Christ—with a thankful remember see of his death; and to be in chastly with all men."

That pious frame of mind is here, in very few words, pointed out, which a chridian ought to cherish and cultivate in himself at a'l times; but especially, upon the performance of any solemn act of religion. Very little indeed is said in scripture, of any particular frame of mind, which stoudd accompany the performance of this duty; but it may easily be inserted from the nature of the duty itself.

In the first place, "we should repent us truly of our former fins; stedfastly purposing to lead a new lite." He who performs a religious exerc se, without being eitnest in this point, all s only a pharifascul hypochi, to his other sius. Unless

he feriously resolves to lead a good life, he had better be all of a piece; and not pretend, by receiving the sacrament, to a

piety which he does not feel.

These " stedfast purposes of leading a new life," form a very becoming exercise to christians. The lives even of the best of men afford only a mortifying retrospect. Though they may have conquered forne of their worst propensities; yet the triumphs of fin over them, at the various periods of their lives, will always be remembered with forrow; and may always be remembered with advantage; keeping them on their guard for the future, and ftrengthening them more and more in all their good resolutions of obedience .- And when can these meditations arise more properly, than when we are performing a rite, instituted on purpose te commemorate the great atonement for fin?

To our repentance, and refolutions of obedience, we are required to add "a lively faith in God's mercy through Chrift; with a thankful remembrance of his death." We should impress ourselves with the deepest sense of humility—totally rejecting every idea of our own merit—hoping for God's savour only through the merits of our great Redeemer—and with hearts full of gratitude, trusting only to his all-

futlicient facrifice.

Laftly, we are required, at the celebration of this great rite, to be "in charity with all men." It commemorates the greatest instance of love that can be conceived; and should therefore raise in us correspondent affections. It should excite in us that constant flow of benevolence, in which the spirit of religion consists; and without which indeed we can have no religion at all. Love is the very distinguishing badge of christianity: "By this," said our great Master, "shall all men know that ye are my disciples."

One species of charity should, at this time, never be forgotten; and that is, the forgiveness of others. No acceptable gift can be offered at this altar, but in the spirit of reconciliation.—Hence it was, that the ancient christians instituted, at the celebration of the Lord's supper, what they called love-feasts. They thought, they could not give a better instance of their being in perfect charity with each other, than by joining all ranks together in one common meal.—By degrees, indeed, this

well-meant custom degenerated; and it may not be amis to observe here, that the passages in which these enormities are rebuked, have been variously misconstruct; and have frightened trany well-meaning persons from the sacrament. Whereas what the apostle here says, hath no other relation to this rite, than as it was attended by a particular abuse in receiving it; and as this is a mode of abuse which doth not now exist, the apostle's reproof seems not to affect the christians of this age.

What the primary, and what the fecondary ends in the two facraments were, I have endeayoured to explain. But there

might be others.

God might intend them as trials of our faith. The divine truths of the goifel fpeak for themselves: but the performance of a politive duty rests only on faith.

These institutions are also strong arguments for the truth of christianity. We trace the observance of them into the very earliest times of the gospel. We can trace no other origin than what the scripture-give us. These rites therefore greatly tend

to corroborate the scriptures.

God alfo, who knows what is in man, might condescend so far to his weakness, as to give him these external hadges of religion, to keep the spirit of it more alive. And it is indeed probable, that nothing has contributed more than thefe ceremonies to preferve a sense of religion among mankind. It is a melancholy proof of these that no contentions in the christian churca have been more violent, nor carried on with more actimony, and unchristian real, than the contentions about baptism and the Lord's supper; as if the very estence of religion confitted in this or that mode of observing these rites. - But this is the abuse of them.

Let us be better taught: let us receive these facraments, for the gracious purposes for which our Lord injoined them, with gratitude, and with reverence. But let us not lay a greater stress upon them than our. Lord intended. Heaven, we doubt not, may be gained, when there have been the means of receiving neither the one factament nor the other. But unless our affections are right, and our lives answerable to them, we can never please God, though we perform the externals of religion with ever so much exactness. We may err mour notions about the sacraments: the

world has long been divided on these subjects; and a gracious God, it may be hoped, will pardon our errors. But to matters of practice we have no apology for error. The great lines of our duty are drawn fo strong, that a deviation here is not error, but guilt.

Let us then, to conclude from the whole, make it our principal care to purify our hearts in the fight of God. Let us befeech him to increase the influence of his Holy Spirit within us, that our faith may be of that kind " which worketh by love;" that all our affections, and from them our actions, may flow in a fleady course of obedience; that each day may correct the last by a fincere repentance of our mistakes in life; and that we may continue gradually to approach nearer the idea of christian perfection. Let us do this, disclaiming, after all, any merits of our own; and not trailing in outward observances; but trusting in the merits of Christ to make up our deficiencies; and we need not fear our acceptance with God.

## § 170. A ferious expostulation with un-

It were to be wished, that the enemies of religion would at least bring themselve to apprehend its nature, before they og posed its authority. Did religion/make its boall of beholding God with a clear and perfect view, and of possessing him without covering or veil, the argument would bear fome colour, when men should alledge that none of these things about them, do indeed afford this pretended evidence, and this degree of light. But fince religion fon the contrary, represents men as in a litate of darkveis, and of estrangement from God; fince it affirms him to have withdrawn himfelf from their discovery, and to have cho-len, in his word, the very styl\* and appellation of Deus absconditus; lasty, since it lation of Deus abtonutus; and, ample employs itself alike in establishing these two maxims, that God has left, if his church, certain characters of himself, by which they certain characters of himlef, it which they who sincerely seek him, shalf not fail of a sensible conviction; and yee that he has, at the same time, so far shaded, and obscured these characters, as to rend if them imperceptible to those who do not seek him with their whole heart, what advantage is it to men, who prosess themselves negligent in the search of truth to complain so frequents. the fearch of truth to complain fo frequently, that nothing reveals and displays it to them? For this very obscurity, under which they labour, and which they make

an exception against the church, does itself evince one of the two grand points which the church maintains (without affecting the other) and is fo far from overthrowing its doctrines, as to lend them a manifest confirmation and support.

If they would give their objections any strength, they ought to urge, that they have applied their utmost endeavour, and have used all means of information, even those which the church recommends, without fatisfaction. Did they express themselves thus, they would indeed attack religion in one of its chief pretentions: but I hope to shew, to the following papers, that no rational/person can speak after this manner: and I have affert, that none ever did. We know/very well, how men under this indifferency of spirit, behave themselves in the case: they suppose themselves to have made the mightiest effort towards the in-Affection of their minds, when they have thent some hours in reading the scriptures, and have asked some questions of a clergyman concerning the articles of faith. When this is done, they declare to all the world, that they have confulted books and men without fuccess. I shall be excused, if I refrain not from telling fuch men, that this neglect of theirs is insupportable. It is not a foreign or a petty interest, which is here in debate: we are ourselves the parties, and all our hopes and fortunes are the depending stake.

The immortality of the foul is a thing which sodeeplyconcerns, so infinitely imports us, that we must have utterly lost our feeling, to be altogether cold and remiss in our enquiries about it. And all our actions or defigns, ought to bend fo very different a way, according as we are either encouraged or forbidden, to embrace the hope of eternal rewards, that it is impossible for us to preceed with judgment and differetion, otherwife than as we keep this point always in view, which ought to be our ruling object, and final aim.

Thus is it our highest interest, no less than our principal duty, to get light into a subject on which our whole conduct depends. And therefore, in the number of wavering and unfatisfied men, I make the greateit difference imaginable between those who labour with all their force to obtain inftruction, and those who live without giving themselves any trouble, or to much as any thought in this affair.

I cannot but be touched with a hearty compassion for those who sincerely groan

under

under this diffatisfaction: who look upon it as the greatest of missortunes, and who spare no pains to deliver themselves from it, by making these researches their chief employment, and most serious sludy. as for those, who pass their life without resecting on its iffue, and who, for this reafon alone, because they find not in themfelves a convincing tellimony, refuse to feek it elsewhere, and to examine to the bottom, whether the opinion proposed be fuch as we are wont to entertain by popular fimplicity and credulity, or as such, though obscure in itself, yet is built on solid and immoveable foundations, I consider them after quite another manner. The careless ness which they betray in an affair, where their person, their interest, their whole eternity is embarked, rather provokes my resentment than engages my pity. Nay, it strikes me with amazement and astonishment; it is a monster to my apprehension. I speak not this as transported with the pious zeal of a spiritual and rapturous devotion: on the contrary, I affirm, that the love of ourselves, the interest of mankind, and the most simple and artless reason, do naturally inspire us with these sentiments; and that to fee thus far, is not to exceed the sphere of unrefined, uneducated men.

It requires no great elevation of foul, to observe that nothing in this world is productive of true contentment; that our pleasures are vain and fugitive, our troubles innumerable and perpetual: and that, after all, death, which threatens us every moment, mult, in the compass of a few years (perhaps of a few days) put us into the eternal condition of happiness, or misery, or nothing. Between us and these three great periods, or states, no barrier is interposed, but life, the most brittle thing in all nature; and the happiness of heaven being certainly not defigned for those who doubt whether they have an immortal part to enjoy it, fach persons have nothing left, but the miserable chance of annihilation, or of hell,

There is not any reflexion which can have more reality than this, as there is none which has greater terror. Let us fet the bravest face on our condition, and play the heroes as artfolly as we can; yet see here the issue which attends the goodliest life upon earth.

It is in vain for men to turn afide their thoughts from this eternity which awaits them, as if they were able to deftroy it by denying it a place in their imagination: it fubfils in spite of them; it advanceth unobserved; and death, which is to draw the curtain from it, will in a short time infallibly reduce them to the dreadful necessity of being for ever nothing, or for ever miserable.

We have here a doubt of the most affrighting consequence, and which, therefore to entertain, may be well esteemed the most grievous of misfortunes: but, at the same time, it is our indispensable duty not to lie under it, without struggling for deliverance.

He then who doubts, and yet feeks not to be refolved, is equally unhappy and unjust: butif withal he appears easy and composed, if he freely declares his indifference, nay if he takes a vanity in professing it, and seems to make this most deplorable condition the subject of his pleasure and joy, I have not words to fix a name on so extravagant a creature. Where is the very possibility of entering into these thoughts and resolutions? What delight is there in expecting misery without end? What vanity in hading one's self encompassed with impenetrable darkness? Or what consolation in despairing for ever of a comforter?

To fit down with fome fort of acquicecence under fo fatal an ignorance, is a thing unaccountable beyond all expression; and they who live with such a disposition, ought to be made sensible of its absurdity and stupidity, by having their inward reflexions laid open to them, that they may grow wise by the prospect of their own folly. For behold how men are went to reason, while they obstinately remain thus ignorant of what they are, and refuse all methods of instruction and illumination.

Who has fent me into the world I know not; what the world is I know not, nor what I am myself. I am under an astonishing and terrifying ignorance of all things. I know not what my body is, what my fenses, or my foul: this very part of me which thinks what I speak, which reflects upon every thing elfe, and even upon itself, yet is as mere a ftranger to its own nature, as the dullest thing I carry about me. I behold these frightful spaces of the universe with which I am encompassed, and I find myself chained to one little corner of the vast extent, without understanding why I am placed at this seat, rather than in any other; or why this moment of time given me to live, was affigned rather at such a point, than at any other of the whole eternity which was before me, or

q

stall that which is to come after me. tee nothing but infinities on all fides, which devour and fivallow me up like an atom, or like a fliadow, which endures but a finale inflant, and is never to return. The fun of my knowledge is, that I must shortly die; but that which I am most ignorant of is this very death, which I feel unable to

decline.

As I know not whence I came, fo I know not whither I go; only this I know, that at my departure out of the world, I multicither fall for ever into nothing, or into the hands of an incenfed God, without b per capable of deciding, which of thefe tan conditions thall eternally be my pornot. Such is my flate, full of weakness, e'denrity, and wretchedness. And from a't' is I conclude, that I ought, therefore, to pifs all the days of my life, without conthe powhat is hereafter to befull me; it is it I have nothing to do, but to fol-1. m inclinations without reflection or esquet, in doing all that, which, if what mostly of a miterable etcinity prove true, and refutibly plunge me into it. It is puble I might find some light to clear up ... doubt; but I thall not take a minute's bat is, nor fur one foot in the fearch of it On the contrary, I am refolved to treat the with form and derifton who labour in t'a inquiry and case; and, so to run withbut four or forelight, upon the trial of the levent; permetting myfelf to be led g levent; peranting mya
on to de it's, utterly uncertain as to second if we of my furuse con 'mon.

Ir carnell, it is a glory to rely ion to have to unreatonable meating its prof of of or the ; and then opposit on is of to litthe langer, that it relies to illustrate the Propal traths which on religion to 1 1. I the main foore of Chillian fait, is to thish h those two principles, the core pand nature, and the redemption by I are Cart. And these opposers, it they are of to use towards demonstrating the track of to redemption, by the fauctity of their lives, yet are at least admi ably uteful in fraing the corruption of nature, by fo tural fentiments and fuggettions.

Nothing is so important to any man as he own effects and condition; nothing for g not fo amazing, as mernity. If, the per-1 to we find perfore indiffe ent to the lof. of their being, and to the dang rof et lists my rv, it is impossible that this temper 1 . If be natural. They are quite other m in all other regards they feir the imaticat incoaveniencies, they for them as

they approach, and feel them if they arrive, and he who passeth days and nights in char in or despair, for the loss of an implayment, or for force imaginary II mish in his honour, is the very fame morial who knows that he must lote all by death, and yet remains without disquet, refentment, or emetion. This wond ifut infentibility, with ref, est to this go of the most fatal conferuence, in a heart to nicely fensible of the meanest trides, is an altonothing prodigy, and unintelligible inchantment, a fupernatural blindness and infatuation.

A man in a close dungeon, who knows not whether fentence of death has patied upon him, who is alloved but one hour's fpace to info m himfelf concerning it, and that one hour fushcient, in cafe it have passed, to obtain its reverse, would all contrary to nature and fenfe, should be make use of this hour not to procure information, but to purfue his vanity or fport. And yet fuch is the condition of the persons whom we are now deferibing; only with this difference, that the evils with which they are every moment threatened, do infinitely furpass the bare lost of life, and that transient punishment which the pritoner is supposed to apprehend: yet they run thoughtlefs upon the precipice, having only caff a veil over their eyes, to hinder them from difcorning it, and divert themfolyes with the officioutnets of fuca a, charitably warn them of their danger.

Thus not the zeal alone of those who heartily feel: God, de no istrates the truth of religious, but his ewife the blin liness of those who utterly forbear to feek him, and who pail their days under to horrible a neglect. There had words be a it ange turn and resolution in humm nature, befine men can submit to in his condition, much make ere they can applied and value theatelves upon it. For tay poling them to have obtained an absolute certutar, that the a was no fear after death, but of falling it to cothing, ought not this to be the folgest rather of d pur, than of julicy? And in not there fore to bighest pitch of a melik extravagance, while we want tarrentam'y, to glory in our doubt and Urtical ?

And we, ofter all, it is too visible, that man his to tall decimed from his original nature, a d'as it were 'e, irted from nimfost, to neu ish in hi heart a fectot feedplot of my, springing op from the libertine rodectio . This boat il cafe, or indolence, between the flar of hell, and annihilation, carries carries somewhat so tempting in it, that not only those who have the missortune to be feeptically inclined, but even those who cannot unfettle their judgment, do yet esteem it reputable to take up a counterfeit diffidence. For we may observe the largest part of the herd to be of this latter kind, false pretenders to insidelity, and mere hypocrites in atherim. There are persons whom we have heard declare, that the genteel way of the world confiits in thus acting the bravo. This is that which they term throwing off the yoke, and which the greater number of them profess, not fo much out of opinion, as out of gallantry and complaifance.

Yet, if they have the least reserve of common fenfe, it will not be difficult to make them apprehend, how miferably they abuse themselves by laving so talke a foundation of applause and esteem. For this is not the way to raife a character, even with worldly men, who, as they are able to pass a threwd judgment on things, fo they eafily differn that the only method of fucceding in our temporal affairs, is to prove ourfelves honeft, faithful, prudent, and capable of advancing the interest of our friends; because men naturally love nothing but that which fome way contributes to their use and benefit. But now what benefit can we any way derive from hearing a man confess that he has eased himself of the burden of religion; that he believes no God, as the witness and inspector of his conduct; that he confiders himfelf as absolute master of what he does, and accountable for it only to his own mind? Will he fancy that we shall be hence induced to repose a greater degree of confidence in him hereafter? or to depend on his comfort, his advice, or affillance, in the necessities of life? Can he imagine us to take any great delight or complacency when he tells us, that he doubts whether our very foul be any thing more than a little wind and finoke? nay, when he tells it us with an air of affurance, and a voice that tellifies the contentment of his heart? Is this a thing to be spoken of with pleafantive or ought it not rather be lamented with the deepest fadness, as the most melancilolic reflection that can strike our thoughts?

If they would compose themselves to ferious consideration, they must perceive the method in which they are engaged to be so yery ill chosen, so repugnant to gentility, and so remote even from that good air and

grace which they purfue, that, on the contrary, nothing can more effectually expose them to the contempt and aversion of mankind, or mark them out for persons defective in parts and judgment. And, indeed. thould we demand from them an account of their fentiments, and of the reasons which they have to entertain this fuspicion in religious matters, what they offered would appear to miferably weak and triffing, as rather to confirm us in our belief. This is no more than what one of their own fraternity told them, with great finartness, on such an occasion, If you continue (fays he) to dispute at this rate, you will infallably make me a Christian. And the gentleman was in the right; for who would not tremble to find himfelt embarked in the fame cause, with so forlorn, to defricable comparions?

And thus it is evident, that they who wear no more than the outward made of these principles, are the most unleggeounterseits in the world; massuch they are obliged to put a continual force and confirmint on their genius, only that they may render themselves the most instance.

pertinent of all men living.

If they are heartily and fincere', troubled at their want of light, let them not diffemble the difeate. Such a confession could not be reputed shatteful; for there is really no thame, but in being Nothing betrays to much thamelets. weakness of foul, as not to apprehend the milery of mar, while hving without God in the world: nothing is a furer token of extreme baseness of spirit, than not to hep? for the reality of eternal promifes: no mate is fo fligmatized a coward, as he that acts the bravo against heaven. Let them therefore leave these impieties to those who are born with fo unhappy a judgment, to to be capable of entertaining them in earnest. If they cannot be Christian men, let them, however, be men ef honour: and let them, in conclusion, acknowledge, that there are but two forts of perfons, who deferve to be fliled reasonable. either those who serve God with all ther heart, because they know him; or those who feek him with all their heart, because as yet they know him not.

If then there are perfors who fincerely enquire after God, and who, being truly fenfible of their mitery, affectionately defire to be rescued from it; it is to these alone that we can in justice afford our labour and service, for their direction in

inding

finding out that light of which they feel the want.

But as for those who live without either knowing God, or enleavouring to know him, they look on themselves as so little deferving their own care, that they cannot but be unworthy the care of others: and it requires all the charity of the religion which they despite, not to defpile them to fuch a degree, as even to abandon them to their own folly: but fince the fame religion obliges us to confider them, while they remain in this life, as shill capable of God's enlightening grace; and to acknowledge it as very possible, that, in the course of a few days, they may be replenished with a fuller measure of faith ther we now enjoy; and we ourfelies, on the other tide, fall rato the depths of their prefent blochets and mifery; we caple to do for them, what we define thould le done to us in their case; to intreat taem that they would take pity on themfelves, and would at least advance a step or two forward, if perchance they may come into the light. For which end it is wished, that they would employ in the perufid of this piece, fome few of thefe hours, which they fpend to unprofitably in other purfaits. It is possible they may gare formewhat by the reading; it lead, they connot be great lofers: but if any shall apply themselves to it, with perfect fineerny, and with an unfeigned denre of knowing the truth, I despair not of their fatisfaction, or of their being consinced by fo many proofs of our divine icligion, as they will here find laid together. Manj. Pojeul.

§ 171. Of the temper of meal which is necefforty for the discovery of deceme touth, and the degree of evidence that eight to be expected in discove matters, with an efficiency of reasons for the touth of the Holy Bible.

If all our knowledge be derived from God, and if it has pleafed God to require a certain degree of probity, feriouthefs, impartiality, and humility of mind, together with hearty prayers to him for his direction, blessing, and adhitance; and a proper submission to him, before he will communicate his truths to men; I mean, at least, communicate the same so as shall make a due impression upon their minds, and turn to their real prosit and edification, to their true improvement in virtue and happiness; and if men at any time come to the

examination either of the works or word of God, without that temper of mind, and without those addresses for his aid, and fubmission to his will, which he has determined shall be the conditions of his communications to them; especially if they come with the contrary dispositions, with a wicked, partial, proud, and lulicious temper, and with an utter difregard to God, his providence, worthip, and reveletion: all their relearches will come to nothing: if, I fay, this be the cafe, as to divine knowledge, as I believe it is, it cannot but be highly necessary for us all to consider of this matter before hand, and to endeayour after the proper qualifications, before we let ourfalves about the main enquiries themselves. If it has also pleased God to expect from us some more deference and regard for him, than for our post fallible fellow-creatures here below, and to claim our belief and obedience, upon plain external evidence, that certain doctrines or duties are derived from him, without our being always let into the fecters of his government, or acquainted with the reafons of his conduct, and also to expect that this plain external evidence be treated, as it is in all the other cares of human determinations and judgments: I mean, that it be fubmitted to, and acquiefced in, when it appears to be fuch as in all other cafes would be allowed to be fatisfactory, and plainly fuperior to what is alledged to the contrary; if, I fav, this alto be the cafe, as to divine knowledge, as I believe it is, it will be very proper for us all to confide? of this matter beforehand also; that so we may not be afterward disappointed, when in our future progress we do not always find that irrefiftible and overbearing cegree of evidence for certain divine truths, which in such cases is not to be had; which in truth is a most peculiar to the mathematies; and the expectation of which is fo common, though unjust, a pretence for infidelity among us.

As to the former of these enquiries, or that temper of mind which is necessary for the discovery of divine truth; it can certainly be no other than what the light of nature, and the consciences of men influenced thereby distate to us; those, I mean, already intimated; such as seriodiers, integrity, impartiality, and prayer to God, with the faithful belief, and ready practice of such truths and duties, as we do all along discover to be the word and will of God, together with such a modesty or resignation

of mind, as will rest satisfied in certain sublime points, clearly above our determination, with full evidence that they are revealed by God, without always infilling upon knowing the reasons of the divine conduct therein immediately, before we will believe that evidence. These are such things as all honest and sober men, who have naturally a fense of virtue and of God, in their minds, must own their obligation to. We all know, by the common light of nature, till we eclipfe or corrupt it by our own wickedness, that we are to deal with the utmost fairness, honesty, and integrity in all, especially in religious matters; that we are to hearken to every argument, and to confider every teflimony without prejudice, or bias, and ever to pronounce agreeably to our convictions; that we are but weak, fiall, dependent creatures; all whose faculties, and the exercise of them, are derived from God; that we ought therefore to exercise a due modelly, and practice a due fubmission of mind in divine matters, particularly in the fearch after the nature, and laws, and providence of our great Creator; a fubmission, I mean, not to human, but to divine authority, when once it shall be authenticly made known to us, that the humble addressing of ourselves to God for his aid, direction, and blefling on our studies and enquiries, is one plain instance of fuch our submission to him; and that a ready compliance with divine revelation, and a ready obedience to the divine will, fo far as we have clearly discovered it, is another necessary instance of the same humble regard to the divine Majesty. Not indeed, can any one who comes to these facred enquiries with the opposite dispositions of dishonesty, partiality, pride, buffoonery, neglect of all divine worthip, and contempt of all divine revelation, and of all divine laws, expect, even by the light of nature, that God should be obliged to discover farther divine truths to him. Nor will a fober person, duly senfible of the different states of Creator and creature, imitate Simon Magus, and his followers, in the first ages of the gospel; and fet up some metaphysical subtilties, or captions quellions, about the conduct of providence, as sufficient to set aside the evidence of confessed miracles themselves; but will rather agree to that wife aphorism laid down in the law of Mofes, and funposed all over the Bible; "that secret things " belong unto the Lord our God; but " things that are revealed, to us and to our " children that we may do them." Deut.

xxix. 29. Now, in order to the making fome impressions upon men in this matter, and the convincing them, that all our difcoveries are to be derived from God; and that we are not to expect his bliffing upon our enquiries without the foregoing qualifications, devotions, and obedience, give me leave here, inflead of my own farther reasoning, to set down from the ancient Jewi'h and Christian writers, several pasfages which feem to me very remarkable, and very pertinent to our prefent purpole; not now indeed, as supposing any of those observations of secred authority, but as very right in themfelves; very agreeable to the light of nature; and very good teffimore's of the fense of wife men in the feveral ancient ages of the world to this purpole. And I choose to do this the more largely here, because I think this matter to be of very great importance; because it seems to be now very little known or confidered, at least very little practifed by feveral pretended enquirers into revealed religion; and because the neglect hereof seems to me a main occasion of the reopticism and infidelity of this age.

"The Lord spake unto Moses, saving: See, I have called by name Bezaleel, the son of Uri, the son of Hur, of the tribe of Judah: and I have silled him with the Spirit of God, in wisdom, and in understanding, and in knowledge, &c. And in the hearts of all that are wise-hearted, I have put wisdom, &c." Ex. xxxi. 1, 2, 3, 6.

"It shall come to pass, if thou wilt not hearken into the voice of the Lord thy God, to observe to do all his commandments, and his shattetes, which I command thee this day, that all these curses shall come upon thee, and overtake thee;—the Lord shall sinite thee with madness, and blindness, and associately and thou shall grope at noon-day, as the blind gropeth in darkness." Deut. xxviii. 15, 28, 20.

"The Lord hath not given you an heart to perceive, and eyes to fee, and ears to hear, unto this day." Deut. xxix. 4.

"Give thy servant an understanding heart, to judge thy people; that I may dittern between good and bad; for who is able to judge this thy so great a people! And the speech pleased the Lord, that Solomon had asked this thing. And God sad unto him, Because thou hast asked this thing;—hast asked for thyself understanding to discern judgment; behold I have done according to thy words; lo, I have given the

a wise and an understanding heart; so that there was none like, thee before thee, neither after thee shall any arise like unto thee.

And all Isiael heard of the judgment which the king had judged; and they scared the king; for they saw that the wisdom of God was in him, to do judgment."

1 Kings, iii. 9, 10, 11, 12, 28.

"I faid, days should speak; and multitile of years should teach wisdom. But there is a spirit in man; and the inspiration of the Almighty giveth them understand-

ing." Job, xxxii. 7, 8.

"Behold in this thou art not just; I will answer thee, that God is greater than man. Why dost thou shive against him? For he giveth not account of any of his matters."

]ob, xxxiii. 12, 13.

"Surely it is meet to be faid unto God, I have borne chaftifement; I will not offend any more. That which I fee not, teach thou me; if I have done iniquity, I will do no more." Job, xxxiv. 31, 32.

" God thundereth marvelloufly with his veier; great thing, doth he which we cannot comprehen?" John xxxxii 5

we comprehend." Job, xxxvii. 5.

With God is to ril le majefly. Touching the Altoughty we cannot find him out; he is excellent in power, and in judgment, and in ple over juffice: he will not which therefore fear him: he respected not any that are wife of heart." Job, xxxvii. 22, 23, 24.

"Who hath put wisdom in the inward poits? Or who hath given understanding

u to the heart?" Job, xxxviii. 36.

"Then Job answered the Lord and faid; I know that thou could do every thing, and that no thought can be with-holden from thee.—Who is he that hideth counfel without knowledge? Therefore have I uttered that I understood not; things too wonderful for me, which I knew not." Job, alii. 1, 2, 3.

of the ear, but now mine eye feeth thee.— Wherefore I abbor myfelf, and repent in

dust and ashes." Job, xlii. 5, 6.

"The meek will he guide in judgment: the meek will he teach his way." Pfalm, day, 9.

"The secret of the Lord is with them that sear him; and he will show them his

covenant." Pialm, xxv. 14.

"Thout hrough thy commandments hast made me wifer than mine enemies; for they are ever with me. I have more underlanding than all my teachers, for thy testimonies are my medication. I understand more than the ancients, because I keep thy precepts. Through thy precepts I get understanding; therefore I hate every false way." Plalm, exix, 98, 99, 100, 104.

"Lord, my heart is not hanglets, nor mine eyes lofty; neither do I exercise my-felf in great matters, or in things too high

for me. S Ptalm, exxxi. 1.

"The Lord giveth wiflom: out of his mouth cometh knowledge and understand-

ing " Prov. ii. 4.

"Truth in the Lord with all thine heart, and lead not to thine own underd unding. In all thy ways acknowledge him, and he shall direct the paths." Prov. 10, 5, 6.

"The froward is abomination to the Lord: buthis fecret is with the rightcoms."

Prov. 10. 32.

" God giveth to a min that is good in his fight, wildom, and knowledge, and joy."

Eccles. 11. 26.

"God 1 ath made every thing beautiful in his time: also he hath for the world in their heart; so that no man can find out the work that God 1 also the from the beginning to the end." Eccl. f. ii. 11.

"Then I beheld all the work of God, that a man cannot find out the work that is done inder the fun; because though a man labour to feek it out; yet he 'all not find it; yea further, though a wife man think to know it, yet shall he not be able to find it." bealed, viii, 17.

" As for the four children, God gave them kno views and bill in all learning

and withorn." "Din. i. 17.

"None of the wick d full underfland, but the wife shall understand." Dan.

ui. 10

Who is wife and he shall understand these things; paudent, and he shall know them: to the ways of the Lord are right, and the just shall walk in them, but the transgressors shall fall therein." Hos. xiv. 9.

"And the angel that was fert unto me, whose name was Uriel, gave me an ar swer, and faid, thy heart hath gone too far in this world: and thinkest thou to comprehend the way of the Most High?" 2 Eta. iv.

"He faid moreover unto me; thine own things, and fuch as are grown up with t'ee, can't thou not know, how flould tay veiled then be able to comprehend the way of the

Highest." 2 Ltd. iv. 10, 11.

"They that dwell upon the earth may understand nothing; but that which is upon the earth: and he that dwelleth above the heavens, may only understand the thirty.

P 3 that

that are above the height of the heavens, &c." 2 Eld. iv. 21.

"Into a malicious foul wifdom shall not enter, nor dwell in the body that is subject unto fin, &c." Wifd. i. 41. &c.

"Their own wickedness hath blinded them." Wifd, ii. 21.

" As for the mysteries of God, they know them not." Wild. ii. 22.

" Wherefore I prayed, and understanding was given me: I called upon God, and the spirit of wildom came to me."

" It is God that leadeth unto wisdom, and directeth the wife. For in his hand are both we and our words; all wildom also. and knowledge of workmanship." v:i. 15, 16.

" When I perceived that I could not etherwise obtain wisdom, except God gave her me: (and that was a point of wildom alto, to know whose gift she was) I praved unto the Lord, and befought him, and with my whole heart I faid," Wifd, viii, 21.

" Give me wisdom that sitteth by thy throne, and reject me not from among thy children. For I thy fervant, and fon of thine handmaid, am a feeble person, and of a fhort time, and too young for the underflanding of judgment and laws. though a man be never fo perfect among the children of men, yet if thy wifdom be not with him, he shall be nothing regarded." Wild. iv. 4, 5, 6.

" Hardly do we guess aright at things that are upon earth; and with labour do we find the things that are before us. but the things that are in heaven who hath

tearched out?" Wifd. ix. 9.

" All wifdom cometh from the Lord, and is with him for ever .- She is with all flesh according to his gift; and he hath given her to them that love him." Ec. i. 1, 10.

" If thou defire wisdom, keep the commandments, and the Lord shall give her unto thee. For the fear of the Lord is wifdom and instruction; and faith and meckness are his delight." Ec. i. 26, 27.

" Myfferies are revealed unto the meek. -Seck not out the things that are too hard for thee; neither fearch the things that are above thy flrength. But what is commanded thee, think thereupon with reyerence; for it is not needful for thee to fee the things that are in fecret. Ec. iii. 19, 21, 22.

" Let thy mind he upon the ordinances of the Lord, and meditate continually in his commandments. He shall establish thine heart, and give thee wisdom at thine own defire." Ec. vi. 37.

" Wisdom, knowledge, and understanding of the law, are of the Lord. Love, and the way of good works, are from him. Error and darkness had their beginning together with finners." Ec. xi. 15, 16.

" Foolish men shall not attain unto wisdom; and finners thall not fee har. For the is far from pride; and men that are liars cannot remember her." Ec. xv. 7, 8.

" He that keepeth the law of the Lord getteth the understanding thereof; and the perfection of the fear of the Lord is wifdom." Ec. xvi. 11.

" As his ways are plain unto the holy, to are they flumbling-blocks unto the wicked." Ec. xx. ix. 24.

" The Lord hath made all things, and to the godly hath he given wildom." xliii. 33.

" If any man will do his will, he shall know of the doctrine whether it be of God, or whether I fpeak of myfelf." John, vii.

" O the depth of the riches both of the wifdom and knowledge of God! How unfearchable are his judgments, and his ways past finding out!" Rom. vi. 33.

" If any of you lack wifdem, let him ak of God, that giveth to all men liberally, and upbraideth not, and it shall be given him.—Every good gift, and every perfect gift, is from above, and cometh down from the Father of lights." James i. 5, 17.

Now from all this evidence, and much more that might be alledged, it is apparent, that the Jewish and Christian religions always suppose, that there must be a due temper of mind in the enquirers, or elfe the arguments for those religions will not have their due effect. That the course of God's providence defigns hereby to diffinguish between the well-disposed, the meck, the humble, and the pious, which are those whom the common light of nature declares may expect the divine bleffing on their studies of this fort; and the ill-disposed, the obstinate, the proud, and the impious; which are those whom the same common light of nature assures us may expect the divine malediction on the same : and that 'tis not for want of convincing and fatisfactory evidence in the business of reveltion, but because many men come with perverse, sceptical, and wicked dispositions, that they fail of fatisfaction therein. Accordingly, I think, it is true, in common observation, observation, that the virtuous and the religious, I mean those that are such according to natural confeience, do rarely, if ever, fail on their enquiries to embrace and acquietce in both the Jewith and Christian revelations, and that the debauched and profane do as feldom fail on their enquines to reject and relicule them. Which different faccels of the lame examination, agrees exactly with the whole tenor of the Scriptures, and is the very fame which must be true, in case those Scriptures be true alfo; and is, by confequence, a confiderable confirmation of their real verity and infpiration. And certainly, he that confiders his own weakness and dependance on God, and that all truth and evidence must come originally from him. will by natural judgment and equaty pronounce, that he was expects the divine blefling and illumination, in points of fuch vall confequence, is those of revelation most certainly are, ought above all things to purify his will, and recorfy his conduct in fuch points as all the world knows to be the will of God; and to address himfelf to the Diving Majefly with due fervency and fenoutnets, for his aid and affiliance, before he can justive promite himself success in to great and momentous an un left iking.

But ther, is to the fee and coquiry, or the degree of evidence that o ight to be evpected in religious matters, it feems to me very necessary to fay formewhat upon this felipel alto, before we come to our main defign. For as on the one fide it is a great error in all cafes to expect fuch evidence as the nature of the subject renders imposlible; to it is as weak on the other fide, to lay the fliefs of important truths on such evidence, as is in its own nature unfatisfactory and precarious: or to affert with great affurance what can no way be proved, even by that fort of evidence which is proper for the subject in debate. An instance of the first fort we have in Autolicus, an Heathen, in his debates with Theophilus of Antioch; who appears weakly to have infilted upon feeing the God of the Chriftians, ere he would believe his existence; while one of the known attributes of that God is, that he is invisible. And almost equally prepotterous would any philotophic sceptic now be, who should require the fight of the air in which we breathe, before he would believe that there was such an element at all. Whereas it is clear, that the air may be demonstrated to be sufficciently sensible and real, by a thousand

experiments; while yet none of those experiments can render it visible to us; just as the existence of a supreme being may be demonstrated by innumerable arguments, although none of those arguments imply even the possibility of his being properly feen by any of his creatures. But then, that we may keep a mean here, and m w neither on one fide, expect in our religious enquiries, overbeating, or strictly mathematic evidence, fuch as is impossible to be denied or doubted of by any; which would render the constant defign of providence, already flated, entirely ineffectual, and force both good and bad to be benevers, without any regard to their qualifications and temper of mind: nor on the other ade, may we depend on fuch weak and precarious mouments, as are not really futucient or littislictory to even fair, honeil, an I into actual men. I intend here to confider, what that degree of evidence is which ought to be infilled on; without which we are not, and with which we are obliged to acquick in divinematters. Nov this degree of evidence I take to be that, and no other, which upoght judges are determined by raill the important affairs of cllate and life that come before them, and according to which, they ever ann to give fentence in their court, of judicature. I choose to null race in this pulicial evidence, and these judiced determinations ofporially, becarle the perfors concerned in fuch matters are, by long use, and the nature of their employment, a nerally speaking, the belt and most fagacious discoverers of truth, and there that judge the most unbiassedly and taply, concerning fatheight or infuftcient evidence of all others. Such upright judges then, never expect directly undemable, or mathem, tic evidence; which they know is, in human affair , abtolitely impossible to be had: they don't require that the witnesses they examine should be infallible, or impeccable, which they are fenfible would be alike wild and ridiculous; yet do they expect full, fusicient, or convincing evidence; and fuch as is plainly fuperior to what is alledged on the other fide: and they require that the witnesses they believe, be, so far as they are able to discover, of a good character, upright, and faithful. Nor do they think it too much trouble to use their utmost still and fagacity in discovering where the truth lies; how far the witnesses agree with or contradict each other; and which was the several circumitances may be best compared, so as to find out any forgery, or detect any knavery which may be suspected in any branches of the evidence before They do not themselves pretend to judge of the reality or obligation of any ancient laws, or acts of parliament, from their own meer gueffes or inclinations, but from the authenticness of the records which contain them, and though they are not able always to fee the reason, or occasion, or wildom of fuch laws, or acts of parliament; yet do they, upon full external evidence that they are genuine, allow and execute the fame: as confidering themselves to be not legislators, but judges; and owning that ancient laws, and ancient fact, are to be known not by gueffes or supposals, but by the production of ancient records, and original evidence for their reality. Nor in such their procedure do they think themfelves guilty in their fentences, if at any time afterwards they discover that they have been imposed upon by false witnesses, or forged records; supposing, I mean, that they are conscious, that they did their utmost to discover the truth, and went exactly by the best evidence that lay before them; as knowing they have done their duty, and must in such a case be blameless before God and man, notwithflanding the mistake in the sentences themselves. Now this is that procedure which I would earneftly recommend to those that have a mind to enquire to good purpose into revealed religion: that after they have taken care to purge themselves from all those vices which will make it their great interest that religion should be falle; after they have refolved upon honesty, impartiality, and modesty, which are virtues by the law of nature; after they have devoutly implored the divine affiliance and bleffing on this their important undertaking; which is a duty likewise they are obliged to by the fame law of nature; that after all this preparation, I fay, they will fet about the enqui.y ittelf, in the very same manner that has been already described, and that all our upright judges proceed by in the discovery of truth. Let them spare for no pains, but confult all the originals, whenever they can come at them; and let them use all that diligence, sagacity, and judgment, which they are masters of, in order to see what real external evidence there is for the truth of the facts on which the Jewish and Christian religions do depend. I here speak of the truth of facts, as the furest way to determine us in this enquiry; because all the world,

I think, owns, that if those facts be true, these institutions of religion must also be true, or be derived from God; and that no particular difficulties, as to the reasons of several laws, or the conduct of providence in feveral cases, which those institutions no where pretend to give us a full account of, can be sufficient to fet aside the convincing evidence which the truth of fuch facts brings along with it. For example: Those who are well fatisfied of the truth of the Mofaic history; of the ten miraculous plagues with which the God of Ifrael smote the Egyptians; of the drowning of the Egyptians in the Red fea, while the Ifrachtes were miraculously conducted through the same; and of the amazing manner wherein the decalogue was given by God to that people at mount Sinai; will for certain, believe that the lewish religion was in the main derived from God, though he thould find feveral occasional passages in the Jewith facred book, which he could not account for, and feveral ritual laws given that nation, which he could not guess at the reasons why they were given them. And the cafe is the very fame as to the miraculous refurrection, and glorious afcention of our bletfed Saviour, Jesus Christ, with regard to the New Testament: on which account I reckon that the truth of fuch facts is to be principally enquired into, when we have a mind to fatisfy ourselves in the verity of the lewith and Christian religions. And if it be alledged that some of these facts are too remote to afford us any certain means of discovery at this distance of time; I anfwer, That then we are to felect such of those facts as we can examine, and to search into the acknowledgment or denial of those that are ancienter, in the oldest testimonies now extant; into the effects and confequences, and standing memorials of such facts in after ages, and how far they were real, and allowed to be fo; and in fhort, we are to determine concerning them, by the best evidence we can now have; and not let a bare suspicion, or a wish that things had been otherwife, overbalance our real evidence of facts in any case whatsoever. I do not mean that our enquirer is to have no regard to internal characters, or the contents of the Jewish and Christian revelations; or that he is not to examine into that also in the general, before he admits even the proof from miracles themselves; because what pretended miracles soever are wrought, for the support of idolatry, or wickedness, for the effablithment

blishment of notions contrary to the divine attributes, or of an immoral, or profane, or cruel religion, though they may prove fuch a religion to-be fupernatural, yet will they only prove that it comes from wicked damons, or evil spirits, and not from a God of purity and holinefs, and fo will by no means prove it divine, or worthy of our reception. But then, it is, for the main, fo well known, that the Jewish and Christian inflitutions do agree to the divine attributes, and do tend to purity, holinefs, juftice and charity; and are opposite to all immorality, profaneness, and idolatry, that I think there will not need much examination in fo clear a case; and that, by configuence, our main enquiry is to be as to the truth of the facts thereto relating. And in this case, I fear not to invite all our teeptics and unbelievers, to use their greatell nicety, their entire tkill, their shrewdest abilities, and their utmost fagacity in this enquiry; being well affured from my own observations in this matter, that the proper result of such an exact historical enquiry will be as plainly and evidently on the fide of revealed religion.

There is such an inimitable air of sincerity, honesty, and impartiality, in the sacred historians; the ancient profane testimonies shill extant do fo generally attell to, and confirm the facts, to far as they are concerned; the most ancient predictions have been all along to exactly and wonderfully fulfilled; the characters of the Messias in the Old Testiment have been so particularly answered in the New: our Lord's own predictions, and those of St. Paul and St. John have been all along hitherto fo furprifingly accomplished, the epistles of the apostles, and the history and fufferings of them and of their immediate fuccessors, do so fully confirm the miracles and circumstances belonging to the first times of the Gospel; that he who acquaints himfelf originally with these things, if he come with an untainted and honest mind, cannot easily be other than a belieger and a Christian.

I cannot but heartily wish, for the common good of all the scepties and unbelievers of this age, that I could imprint in their minds all that real evidence for natural and for revealed religion that now is, or during my past enquiries has been upon my own mind thereto relating; and that their temper of mind were such as that this evidence might afford them as great satisfaction as it has myself.—But though this entire communication of the evidence that is, or has

been in my own mind, for the certainty of natural religion, and of the Jewish and Christian institutions, be, in its own nature, impossible; yet, I hope, I may have leave to address myself to all, especially to the fceptics and unbelievers of our age; to do what I am able for them in this momentous concern; and to lay before them, as briefly and feriously as I can, a considerable number of those arguments which have the greatest weight with me, as to the hardest part of what is here defired and expected from them; I mean the belief of revealed religion, or of the Jewish and Christian inflitutions, as contained in the books of the Old and New Tellament. - But to wave farther preliminaries, some of the principal reasons which make me believe the Bible to be true are the following:

1. The Bible lays the law of nature for its foundation; and all along supports and affirts natural religion; as every true reve-

lation ought to do.

2. Aftonomy, and the rest of our certain mathematic sciences, do confirm the accounts of Scripture; so far as they are concerned.

3. The most ancient and best historical accounts now known, do, generally speaking, consirm the accounts of Scripture; so far as they are concerned.

4. The more learning has encreased, the more certain in general do the Scripture accounts appear, and its dishcult places are more eleared thereby.

5. There are, or have been generally, flunding memorials preferved of the certain truths of the principal historical facts, which were constant evidences for the certainty of them.

 Neither the Mofaical law, nor the Christian religion, could possibly have been received and established without such miracles as the facred history contains.

7. Although the Jews all along hated and perfectued the prophets of God: yet were they forced to believe they were true prophets, and their writings of divine inspiration.

 The ancient and prefent state of the Jewish nation are strong arguments for the truth of their law, and of the Scripture prophecies relating to them.

 The ancient and present states of the Christian church are also strong arguments for the truth of the Gospel, and of the Scrip-

ture prophecies relating thereto.

10. The miracles whereon the Jewish and Christian religion are founded, were

of old owned to be true by their very enemics.

• 11. The facred writers, who lived in times and places for remote from one another, do yet all carry on one and the fame grand wefign, viz. that of the falvation of mankind, by the worship of, and obedience to the one true God, in and through the King Messah; which, without a divine conduct, could never have been done.

12. The principal doctrines of the Jewish and Christian religion are agreeable to the most ancient traditions of all other nations.

- 13. The difficulties relating to this religion are not such as affect the truth of the facts, but the conduct of providence, the reasons of which the facred writers never pretended fully to know, or to reveal to mankind.
- 14. Natural religion, which is yet for certain in itself, is not without such difficulties, as to the conduct of providence, as are objected to revelation.
- 15. The facred history has the greatest marks of truth, honesty and impartiality, of all other histories whatsoever; and withat has none of the known marks of knavery and imposture.

16. The predictions of Scripture have been still fulfilled in the several ages of the world whereto they belong.

17. No opposite systems of the universe, or schemes of divine revelation, have any tolerable pretences to be true, but those of the Jews and Christians.

These are the plain and obvious arguments which persuade me of the truth of the lewish and Christian revelations.

Whifton.

#### § 172. The divine legation of Moses.

The evidence the Jews had to believe the feveral matters related by Mofes, preceding the deliverance from Egypt, was, so far as we know, no more than Mofes's word; whose credit was sufficiently established, by the testimonies given to him by the Deity; but, at the same time, it is not certain that they had not some distinct tradition concerning these things. But, as to his authority, and the authority of the laws and institutions given by him, they had, and their children, and we who take it from their children, have the strongest evidence the nature of the thing is capable of. For,

 The whole people, an infinite multitude, were witnesses of all the miracles wrought preceding the deliverance from Egypt, and of the final miracle that atchieved their deliverance; in memory whereof, the paflover, an annual folemnity, was inflituted, with the ftrongest injunctions to acquaint their children with the crustof that observance, and to mark that night throughout all their generations for ever.

2. The whole people were witnesses to the miracle in passing the Red Sea, and sung that hymn which Moses composed on that occasion, which was preserved for the

use of their children.

- 3. The whole people were witneffes to the dreadful promulgation of the law from Sin ii, with which they were ilfo to acquaint their chi'dren; and the feaft of Pentecoli was annually to be observed on the day on which that law was given; besides that the very tables in which the ten commands were written, were deposited in the Ark, and remained, at least, till the building of Solomon's temple, and probably till the defruction of it.
- 4. The whole people were witneffes to the many miracles wrought, during the space of forty years, in the wilderness; to the pillar of fire and cloud, to the manna, quals, &c. a sample of the manna remanded to future penerations; and they were directed to relate what they saw to their children.
- 5. The whole people were witnesses to the framing and building of the Ark, and Tabernacle; they were all contributors to it; they saw the cloud fill and rest upon it, and they assisted at the services performed there; and, to commemorate this, as well as their sojourning in tents in the wilderness, the annual seast of Tabernacles was appointed, which in succeeding years, they were to explain to their children.

As these things were absolutely sufficient to satisfy the children of Israel, then in being, touching the authority and obligation of this law, several things were added to enforce the observance, and to preserve the memory and evidence of what was to be observed.

- 1. The law was by Moses, at the command of God, put into writing, for the greater certainty, as well as all the directions for making the Ark, the Cherubim, the Tabernacle, the priest's garments, &c. and all the rules of government, judicature, &c. with every other circumstance revealed, for directing the faith and the conduct of the nation.
- 2. The law was to be preferved, peruled, and attended to, in the most eareful manner;

manner; the priests, who were to judge in que tions relating to it, must be well versed in it; the king, who was to rule over the nation, was to write out a copy of it for himself, and to peruse it continually; and the people were to write out passages of it, and to wear them by way of figns, upon their hands, and of frontlets, between their eyes, and to write them upon the post of their doors, &c. And they were to teach their children the most notable parts of it, and particularly to instruct them in the miracles attending the deliverance from Egypt, as they fat in their house, as they walked by the way, as they lay down, and as they role up, &c.

- 3. Befides the authority that promulgated the law, there was a folemn covenant and agreement between God and the people, which by the people became bound to keep, pretenered of the first law, and all that was contained in it; and God became bound to be the God of the Ifiaelitith people, to protect, and profper them; and this covenant, towards the end of their fojourning in the wildenies, was folemaly renewed.
- 4. The particulars of this covenant, upon God's part, were, to give the people the good land of Canaan, a land flowing with milk and honey, to preferve, and protect them in it; to give them perpetual indurance, and victory over their and his enemies; to profper them in all their labours; to give them the increase of their fields, and flocks; and to make them a great, a happy, and a flourithing people; on condition that they kept and obeyed his law.
- 5. The particulars, on the part of the people, were, to serve Jehovah, and no other God, in the way directed by the law; to preserve, observe, and obey the law carefully and exactly; and, if they sailed or transgressed, to submit and consent to the severe sanction of the law and covenant, which, in many instances, was, to individuals transgressing, death (to be cut off from the people) and to the bulk of the people, destruction, captivity, dispersion, blindness, madness, &c. besides the forseiture of all the good promises.
- 6. Befides the other bleffings, and preeminences, God was, by fome special visible symbol of his presence, to reside continually with the people; first, in the Tabernacle, which was made in the wilderness for that end, and afterwards in the temple; whence he was to give judgment and di-

rections, and to answer prayers, and accept of vows.

7. This covenant was also reduced into writing, and was the tenure by which the Israelites held the land of Canaan, and on which all their hopes were founded: wherefore it must in all generations be considered by them as a thing of no small moment.

As God was the head of this flate, and as the people held immediately their land of him; so he made several regulations for holding that property, that are very remarkable.

- 1. The land was by his command divided into twelve lots, one for each tribe; and they were put in possession accordingly, to the exclusion of the tribe of Levi, who for their portion had no more than what attended the service of God's house, and some cities with suburbs, dispersed amongst other tribes.
- 2. Not only were the descendants of each tribe to enjoy, in exclusion of other tribes, their own lot, but the particular fields and parcels, within each tribe, were to remain for ever with the respective families that first possessed them, and on failure of the issue of the possessed to the nearest of that family; hence all lands fold returned at the jubilee to the proprietor, or his nearest a-kin; he who had a right to revenge blood might redeem.
- 3. This right of blood, depending upon knowledge of descent and genealogy, made it absolutely necessary for the children of Ifrael to keep very exact records and proofs ef their descent; not to mention the expectation they had of fomething furprifingly fingular from the many promifes made to Abraham, Isaac, and Jacob, that the bleffing to mankind should spring from their Seed; and, in tracing their genealogy, we fee they were very critical, upon their return from Babylon: fo that, before their records were disturbed by the captivity, it could not well be otherwise, but that every body of any note amongst the Jews could tell you the name of his ancestor, who first had the family possession, in the days of Joihua, and how many degrees, and by what descent he was removed from him. And as these first possessions, pursuant to the custom of the nation, must have been defcribed by their father's name, 'tis highly probable, they could have quoted by name that ancestor who saw the minicles in Egypt, who faw the law given, who en-

tered into the covenant, and who contributed to the fetting up the Ark and Taber-

4. The very furprifing care taken by the Deity to keep the breed of the Jews pure and genuine, by the proofs of virginity, and by the miraculous waters of jealouly, is a circumflance that merits attention, and will eafily induce a belief that defcent and birth was a matter much mind-

ed amongst them. And,

5. The appointment and observance of the fabbatical year, and, after the feventh fabbatical year, a year of jubilec, for the general release of debts, lands, &c. is a circumstance of great moment, not only as these notable periods were useful towards the easy computation of time, but as it made enquiry into titles, and confequently genealogy, necessary every fittieth year; and as the ceffation from culture every feventh year gave continual occasions for the Deity's displaying his power in increating the crop of the fixth, purfuant to his promife.

Now, taking thefe circumflances together under confideration, could any human precaution have provided more means to keep up the memory and evidence of any fact? Could this have been done by human forefight or force? Has any thing like to it

ever been in the world befides?

What could tend more to perpetuate the memory of any event, than to deliver a whole people, by public glorious miracles, from intolerable flavery? To publish a very extraordinary fystem of laws immediately from heaven? To put this law in wfiting together with the covenant for the obeying it? To make the tenure of the estates depend on the original division of the land, to men who faw the miracles, and first took possession, and on the proximity of relation, by descent to them? To appoint a return of lands every fiftieth year, which should give perpetual occasion to canvass those descents? To order a sabbath every seventh year for the land, the lofs of which should be supplied by the preceding year's increase? And to select a whole tribe confilling of many thousands, to be the guardians, in some degree the judges and the executors of this law; who were barred from any portion of the land, in common with their brethren, and were contented with the contributions that came from the other tribes, without any fixed portion amongst them? This must keep up the belief and authority of that law

amongst the descendants of that people, or nothing could: and if such a belief, under all there circumstances, prevailed amongst a people so constituted, that belief could not possibly proceed from imposture; because the very means provided, for proof of the truth, are fo many checks against any possibility of imposition.

If any man will fuggest that the law of the Jews is no more than human invention. and that the book of the law is a forgery; let him fay when it was imposed upon that people, or at what period it could have possibly been imposed upon them, so as to gain belief, later than the period they mention, and under other circumstances than those in y relate.

Could the wik 'e people have been perfunded at a i, one period, by any impostor, that they were told feverally by their fathers, and they by theirs, that the law was given with fuch circumstances, and under fuch promises, and threats, if they were not really told fo; or that they, throughout all their generations, had worn certain passages of the law by way of frontlets and signs, if it had not really been so?

Could the whole people have been perfunded to tubmit to the pain of death, upon all the offences which the law makes capital, unless their fathers had done fo, upon the evidence of the authority of that law?

Could the whole people have been perfunded that they had kept exact genealogies, in order to entitle them to the blefling, and to the inheritances feverally, unless they actually had done so?

Could the whole people believe that they had kept passovers, feasts of tabernacles, &c. down from the date of the law, commemorative of the great events they relate to, unless they had really done so?

Could the children of Israel have been imposed on to receive an Ark, and a Tabernacle; then forged, and a compleat fet of service and liturgy, as descending from Moses by the direction of God, unless that Ark and that service had come to them from their ancestors, as authorized by God?

Could the whole people have submitted to pay tithe, first fruits, &c. upon any feigned revelation? Or, could the tribe of Levi, without divine authority, have submitted, not only to the being originally without a portion in Ifrael, but to the being incapable of any, in hopes of the contributions of the people; which however large when the whole twelve tribes ferved at the

(ame

fame temple, became very feanty when ten of them withdrew their allegiance from heaven?

Could ever the book of the law, if configned to the Levites, and promulgated, have been loft, so as to give room for new fictions? Or could a book of the law have been forged, if there was none piece-lent, and put upon the people, as a book that had been delivered to the Levites by Motios? If no book at all ever was delivered by lim to them, what authority could be preceded for such a book?

Hal a book been to be forged, in order to be received by the people, could it have cratained for many feandalous reflexions and accufations against the people, and formany fatal threats and predictions conscious them? and, if it had been to find, could it have been received as cotheatic?

If the law, &c. was forged, it must have to an before the days of David, because to the facred hymns, is his time, the public don of the Law is celebrated, and the law was observed; and yet the time between the entry of Ifrael into the land, and two reion of David, being but about four his divid years, is too short a space for forgetting the real manner of the entry, and forging another, to be received by a forging another, to be received by a forging whose genealogy was so fixed, and whose time was reckned by such periods.

If the book of the law was not forged before the reign of David, it could not profibly be forged after, unlefs the whole or box of the kingdom, the obsernacle, the state te, i.e., and all the facted hymns and prophetics, are looked upon as one compleat hatten; because the tabernacle, the tem-Ile, the occonomy of the kingdom, the first hymns and all the other writings faid to be facred, bear formal relation to the law.

But, that all these things were not suppositious, is evident from the anxious zeal that possessed the Jews who returned from the captivity; from their solicitude to restore the city, the temple and the facted service; from their strict examination of their genealogies, and serupulous care to comply with the law.

The space between the captivity and the return was so short, that some who saw the first temple, saw also the second, and many who were themselves, or at least whose sathers had been, officers in the first temple, returned to the service of the second: so that it is utually impossible that

the history, the liturgy, the service of the Jews, preceding the return, thould be a siction, at least that it should be a siction earlier than the return.

And the flory of this nation, from that period, fa'ls in fo much with the hiftory of the red of the world; their facred books have been to foon after that travilated. and they have been fo famous for the tenaciousness of their laws, that there is no possibility of suspecting that their law and history was forged later than the return. And, if it is quanted, that the devotions, the precepes, the relatutions, and rices and cercinories of this law, and the great lines of their hulory, are not forgel; ore needs, as to the prefer confideration, be but little folicatons concerning the accuriv of the copy of the books of the law. and of the other frered books; and whether there may not have been fome millake and interpolations. It is not with one or one head divorts or fertences we have to do; it is with the fathern of the facilharter, and the other religious laws and ferry is a the I ws, and with the political effabrifiment of their theocratical government, and the understy for the chablithment or both, that we have, at prefent, Concern.

For, if fuch a fythem of religious fervices and ceremonies was revealed and ecommanded by God, if, for the greater c ruinty, it was reduced into writing by Mofe, by divine direction; if tuch a model of government was framed, as is manifelily calculated for keeping up the obter ance of those services, and preferving the memory of the inditation, and keeping up the authority of the book wherein it was recorded; and if the nation, to whom this inflitution was delivered, have preferved if accordingly, complete evidence thence arises to us of the divinity of the inditation: and leads to a demonstrative proof of the truth of the Caridian religion, to which all the emblematical inflitutions tend, and in which they center.

Lord Forbes.

## § 173. On the Old and New Testament.

The Old Testament hath, by the general consent of learned men, all the marks of purest antiquity; there being nothing in the world which in this respect is equal to it, or which may pretend to be compared with it; all other the most ancient monuments of antiquity coming short of it by many ages. It was written in the first

and most antient language; from which the very alphabets and letters of all other

languages were derived.

This book contains, as the most ancient, so the most exact story of the world, the propagation of men, and the dispersing of families into the feveral parts of the

And though this book were written in feveral ages and places, by feveral persons; yet doth the doctrine of it accord together, with a most excellent harmony, without any dissonance or inconsistency.

And for the manner of delivering the things contained in it, 'tis fo folemn, reverend and majestic, so exactly suited to the nature of things, as may justly provoke our wonder and acknowledgment of its

divine original.

And as for the New Testament: those various correspondences, which it bears to the chief things of the Old Testament, may fufficiently evidence that mutual relation, dependance, and affinity which there is between them. That in fuch an age there was fuch a man as Christ, who preached fuch a doctrine, wrought many miracles, fuffered an ignominious death, and was afterwards worshipped as God, having abundance of disciples and followers, at fust chiefly amongst the vulgar, but a while after, amongst feveral of the most wife and learned men; who in a short space of time did propagate their belief and doctrine into the most remote parts of the world: I fay, all this is for the truth of the matter of fact, not so much as doubted or called into question, by Julian, or Celfus, or the Jews themselves, or any other of the most avowed enemies of Christianity. But we have it by as good certainty as any rational man can wish or hope for, that is, by universal testimony, as well of enemies as friends.

And if these things were so, as to the matter of fact, the common principles of nature will assure us, that 'tis not consistent with the nature of the Deity, his truth, wildom, or justice, to work such miracles in confirmation of a lie or imposture.

Nor can it be reasonably objected that these miracles are now ceased; and we have not any fuch extraordinary way to confirm the truth of our religion. fufficient that they were upon the first plantation of it, when men were to be inflituted and confirmed in that new doctrine. And there may be as much of the wisdom of providence in the forbearing them now, as in working them then: it being not reasonable to think that the universal laws of nature by which things are to be regularly guided in their natural course, should frequently, or upon every little occasion, be violated or difordered.

To which may be added that wonderful way whereby this religion hath been propagated in the world, with much fimplicity and infirmity in the first publishers of it: without arms, or faction, or favour of great men, or the perfuasions of philosophers or orators; only by the naked propofal of plain evident truth, with a firm resolution of fuffering and dying for it, by which it hath subdued all kind of persecutions and oppositions, and surmounted whatever difcouragement or refislance could be laid in its way, or made against it.

The excellency of the things contained in the Gospel are also so suitable to a rational being, as no other religion or profession whatsoever hath thought of, or

so expressly insisted upon.

Some of the learned Heathens have placed the happiness of man in the external

fenfual delights of this world.

Others of the wiser Heathen have spoken sometimes doubtfully concerning a future state, and therefore have placed the reward of virtue, in the doing of virtuous things. Virtue is its own reward. Wherein, though there be much of truth, yet it doth not afford encouragement enough for the vail defires of a rational foul.

Others who have owned a state after this life, have placed the happiness of it in gross and sensual pleasures, feasts and gardens, and company, and other such

low and gross enjoyments.

Whereas the doctrine of Christianity doth fix it upon things that are much more spiritual and sublime; the beatiste vision, a clear unerring understanding, a perfect tranquillity of mind, a conformity to God, a perpetual admiring and praising of him; than which the mind of man cannot fancy any thing that is more excellent or defirable.

As to the duties that are enjoined in reference to divine worship, they are so full of fanctity and spiritual devotion, as may shame all the pompous solemnities of other religions, in their costly facrifices, their dark wild mysteries, and external observances. Whereas this refers chiefly to the holiness of the mind, resignation to God, love of him, dependance upon him, fubmission to his will, endeavouring to be like him.

And as for the duties of the second table, which concern our mutual converbetion towards one another, it allows nothing that is hurtful or noxious, either to ourselves or others; forbids all kind of injury or revenge; commands to overcome evil with good; to pray for enemies and persecutors; doth not admit of any mental, much lefs any corporal uncleannefs; doth not tolerate any mamodest or uncomely word or gellure; forbids us to wrong others in their goods and poffelions, or to mifpend our own; requires ns to be very tender both of our own and other men's reputation; in brief, it enjoirs nothing but what is helpful, and ufeful, and good for mankind. Whatever any philosophers have preferibed concerning their moral virtues of temperance, and prudence, and patience, and the duties of feveral relations, is here enjouned, in a far more emment, fublime, and comprehensive manper, befides fuch examples and incitations to piety as are not to be paralleled elfewhere: the whole fystem of its doctrines being transcendently excellent, and so exactly conformable to the highest pu est reason, that in those very things wher in it goes beyond the rules of moral philosophy, we cannot in our best judgment but confent to fu'mit to it.

In bird; it doth in every respect so fully answer the chief scope and design of religion in giving all imaginable honour and tubmission to the Deity, promoting the good of mankind, fatisfying and supporting the mind of man with the highest lind of enjoyment, that a rational foul can wish or hope for, as no other religion or profession whatsoever can pretend unto-

Infidels pretend want of clear and infallible evidence for the truth of Christianity; than which nothing can be more abfurd and unworthy of a rational man. For let it be but impartially confidered; what is it, that fuch men would have? Do they expect mathematical proof and certainty in moral things? Why, they may as well expect to fee with their ears, and hear with their eyes: fuch kind of things being altogether asdisproportioned to such kind of proofs, as the objects of the feveral fenies are to one another. The arguments

or proof to be used in several matters are of various and different kinds, according to the nature of the things to be proved. And it will become every rational man to yield to fuch proofs, as the nature of the thing which he enquires about is capable of: and that man is to be looked upon as froward and contentious, who will not rest. fatisfied in fuch kind of evidence as is counted fufficient, either by all others, or by most, or by the wifest men.

If we suppose God to have made any revelation of his will to mankind, can any man propose or farrey any better way for conveying down to potterity the certainty of it, than that clear and univerfal tradition which we have for the hiftory of the Gospel? And must not that man be very unreasonable, who will not be content with as much evidence for an ancient book or matter of fact, as any thing of that nature is capable of? If it be only infallible and mathematical certainty that can fettle his mind, why should he believe that he was born of fuch parents, and belongs to fuch a family? 'Tis possible men might have combined together to delude him with fuch a tradition. Why may he not as well think, that he was born a Prince and not a subject, and confequently deny all duties of subjection and obedience to those above him? There is nothing to wild and extravagant, to which men may not expose themselves by such a kind of nice and ferupulous incredulity.

Whereas, if to the enquiries about religion a man would but bring with him the fame candour and ingenuity, the fame readiness to be instructed, which he doth to the fludy of human art, and fciences, that is, a mind free from violent prejudices. and a defire of contention; it can hardly be imagined, but that he must be convinced and fubdued by those clear evidences, which offer themselves to every inquisitive mind, concerning the truth of the principles of religion in general, and concerning the divine authority of the Holy Scriptures, and the Christian religion.

Billop Wilkins.

§ 174. Chief defign, and principal intention of the civil government of the Hebrews.

To lay down a true plan of the Hebrew government, it will be requifite previously to consider, what particular views the lawgiver might have in it. If any particular ends were defigned, to promote which the plan of the government itielf was to be adjusted; those designs will help to explain many parts and constitutions of the government, as it will show the great wisdom of the legislator, which has made the plan in its several parts most fit, and proper to serve, and secure those ends.

The Hebrew government appears not only defigned to ferve the common and general ends of all good governments; to protect the property, liberty, safety, and peace of the feveral members of the community, in which the true happiness and prosperity of national societies will always confift; but moreover to be an holy people to Jehovah, and a kingdom of prieks. For thus Moses is directed to tell the children of Ifrael, " Ye have feen what I did unto the Egyptians, and how I bore you on eagles wings, and brought you unto myself. Now therefore if you will hear my voice indeed, and keep my covenant, then ye shall be a peculiar treasure unto me, above all people; for all the earth is mine, and ye shall be unto me a kingdom of pricits and an holy nation." We learn what this covenant was in a further account of t. "Ye stand this day all of you b the Lord your God, your captains . tribes, your elders and your officers, and all the men of Hrael; that you should enter into covenant with the Lord thy God, and into his oath which the Lord thy God maketh with thee this day; that he may establish thee to-day for a people unto himself, and that he may be unto thee a God, as he hath faid unto thee, and as he hath fivorn unto thy fathers, to Abraham, Isaac, and to Jacob: for ye know," adds Mofes, "how we have dwelt in the land of Egypt, and how we came through the nations which ye paffed by; and ye have feen their abominations and their idols, wood and flone. filver and gold which were among them, left there should be among you, man, or woman, or family, or tribe, whose heart turneth away this day from the Lord our God to go and ferve the Gods of their nations."

Without any enquiry into the critical meaning of these expects as severally, every one may easily see this general intention of them; that the covenant of Jehovah with the Heb ew people, and their oath by which they bound their allegiance to Jehovah their God and King, was, that they should receive and obey the laws which he should appoint as their

fupreme governor, with a particular engagement to keep themselves from the idolatry of the nations round about them, whether the idolatry they had feen while they dwelt in the land of Egypt, or had observed in the nations by which they passed into the promised land. In keeping this allegiance to Jehovah, as their immediate and supreme Lord, they were to expect the bleffings of God's immediate and particular protection in the fecurity of their liberty, peace, and prosperity, against all attempts of their idolatrous neighbours; but if they should break their allegiance to Jehovah, or forfake the covenant of Jehovah, by going and serving other Gods and worthipping them, then they should forfeit these blessings of God's protection, and the anger of Jehovah thould be kindled against the land, to bring upon it all the curses that are written in this book.

The true sense then of this solemn transaction; between God and the Hebrew nation, which may be called the original contract of the Hebrew government, is to this purpose: If the Hebrews would voluntarily confent to receive Jehovah for their Lord and King, to keep his covenant and laws, to honour and worship him as the one true God, in opposition to all idolatry; then, though God as fovereign of the world rules over all the nations of the earth, and all the nations are under the general care of his providence, he would govern the Hebrew nation by peculiar laws of his particular appointment, and bless it with a more immediate and particular protection; he would fecure to them the invaluable privileges of the true religion, together with liberty, peace and prosperity, as a favoured people above all other nations. It is for very wife reasons you may observe, that temporal bleflings and evils are made so much use of in this constitution, for these were the common and prevailing enticements to idolatry; but by thus taking them into the Hebrew constitution, as rewards to obedience, and punishments of disobedience, they became motives to true religion, instead of encouragements to idolatry.

The idolatrous nations worshipped subordinate beings, whom they owned subject to the supreme; but they believed they had the immediate direction of the bleffings of life; that they gave health, long life, fruitful seasons, plenty, and prospe-

nty.

rity. This we are told by Maimonides, was a doctrine taught by the Sabians in their books, as well as in their instructions

to the people.

One of the oldest of the prophets has to fully expressed this reason of the Hebrew conflitution, that we need no further evi-" For their mother hath dence of it. played the harlot, the that conceived them hath done shamefully; for the faid, I will go after my lovers, that give me my bread and my water, my wool, and my flax, mme oil, and my drink. For the did not know that I gave her corn, and wine, and oil, and multiplied her filver and gold. which they prepared for Baal. Therefore vill I return, and take away my corn in the time thereof, and my wine in the scaton thereof; and will recover my wool and my flax, given to cover her nakednets."

The prophet Jeremiah gives the fame reason why the Jews fell into the idola-trous practice of burning incense to the queen of heaven: " But we will certainly do whatfoever thing goeth forth out of our own mouths to burn incense unto the queen of heaven, and to pour out drinkofferings unto her, as we have done; we, and our fathers, our kings and our princes in the cities of Judah, and in the streets of Jerufalem; for then had we plenty of victuals, and were well, and faw no evil; but fince we left off to burn incense to the queen of heaven, and to pour out drinkofferings unto her, we have wanted all things, and have been confumed by the fword and by the famine.'

This common doctrine of idolatry, that the feveral bleffings of life came from fome damon or idol, to whom the authority and Fower of bestowing temporal blessings were committed, was of fo general and powerful influence, that it became the wisdom of an is flitution defigned to preferve the faith and worthip of the one true God, against idolatry, to affert that God was the author of every bleffing of life, that he had not parted with the administration of providence, or given over the disposal of those blessings to any subordinate beings whatsoever; so that health, long life, plenty and all kinds of prosperity, were to be sought for, from him, as his gift, and only from his blefling and protection.

Wheever has just notions of the great evils of idolary to the dishonour of the supreme Sovereign and Governour of the world, to the corruption of the essential

principles of true religion and virtuous practice, as idolatry directed fo many barbarous, immoral and inhuman rites, and encouraged fuch enormous acts of vice, as acts of religion, of which some or other of the idols they worthipped were examples, and were effected to patronize them; it will appear to them a delign worthy the goodnels, as well as the wildom of God, to put tome stop to fuch a dangerous evil: especially when it was fo general and prevailing, that all fleth had corrupted its way, and all the nations of the earth were running cagerly into it. Even the Egyptians, a people to famed for wildom and good understanding, were as fenfeless and as corrupt in their idolatry, as any of their neighbours. The Hebrews themselves, whatever former care had been taken to preferve the knowledge of the true God and true religion in the family of Abraham, were fo addicted to this common corruption of religion, and were fo ready to fall into it, that there feemed no other way left to put any stop to the progress of idolatry any where, or to preferve the true religion in any people, but by I ne conflictation formed on this plan, ch might effectually carry on this he feveral parts of it. And this the goodness and wisdom of God made a principal defign in the conflitution of the lewish government.

More effectually to answer this chief defign, there was another fubordinate intention in the conflitution of this government. It was of no finall confequence to keep this nation separate from other nations, and from fuch intercourse with idolaters as might end in an apollacy from their own religion to the idolatry of their neighbours. There is then a law in general given by Motes. in which he is directed to fay in God's name to the children of Ifrael, " I am the Lord your God, after the doings of the land of Egypt, wherein ye dwelt, shall ye not do; and after the doings of the land of Canaan, whither I bring you, shall ye not do; neither thall ye walk in their ordinances, ye shall do my judgments and keepmy ordinances to walk herein; I am Je-

hovah your God."
Further, Moses ha

Further, Moses having recited the many and great abominations committed by the Canaanites, on the loss of the right knowledge of the one true God and of the true religion; and through the corruption of idolatous doctrines and practices, it is added; "Defile not ye yourselves in any of these things: for in all these the nations

are defiled, which I caft out before you." And again; " therefore shall ye keep mine ordinance that we commit not any one of thele abominable cultoms which were committed before you, that we defile not yourfelves therein; I am Jehovah your God." For the same purpose it is repeated; " and ye shall not walk in the manners of the nations which I call out before you, for they committed all thefe things, and therefore I abhorred them, but I have faid unto you, ye shall inherit their land, and I will give it unto you to possess it; a land that floweth with milk and honey. I am the Lord your God which hath separated you from other people, and ye shall be hely unto me; for I the Lord am holy, and have separated von from other people that we should be nune."

It had appeared by notorious examples, how eafily the Hebrews themfelves were to be enticed into idolatry, by frequenting the company of idolaters, and by converfing too much and too familiarly with them, while Ifrael abode in Shittin; "the people began to commitwhoredom with the daughters of Moab, and they called the people to the facistice of their gods; and the people did eat, and bowed down to their gods." to eafy was the paffage from fealing with them on their facistices, to joining with them in their idolatry. "Thu Ifrael joined himself to Baal-peor."

Such an example of prevailing idolatry, is juffly given, as a fufficient reason for a careful separation of the Hebrew people from idolatrous neighbours, in order to prevent to very dangerous temptations in future times. Mofes therefore thus exhours Hrael, "Your eyes have feen what the Lord did, because of Baal-poor, the Lord thy God hath deftroyed them from among you; but we that did cleave unto the Lord your God, are alive every one of you this day. Behold I have taught you flatutes and judgments, even as the Lord my God commanded me, that you should do fo in the land whither we go to pollets it. Keep therefore and do them, for that is your wisdom and your understanding, in the right of all the nations which shall hear of all thefe natures, and fav, furely this great nation is a great and underflanding people."

Among the laws here spoken of, there are some, the widdom of which appear principally, if not folely, as they were chosen at a commanded to this end, to separate the Hebrews from their idolatious neighbours,

by a prohibition of every idolatrous rite. The law itself for prohibiting inter-marriages with idolaters expressly gives this reason for it, "Neither shall you make marriages with them, thy daughter thou shall not give unto his son, nor his daughter shall thou take unto thy son; for they will turn away thy son from following me, that they may serve other gods; so will the anger of the Lord be kindled against you and destroy thee suddenly."

Many other laws, which at first view seem to be of small importance and concern, for the enacting of which some look for no reason at all, but the alone will of the law-giver, will appear in this view, of concern and importance, sufficient for the wisdom of God to take notice of, when he gave he laws to this nation. The most judicious of the Hebrew doctors, has very well explained several of the Mosaical laws upon this single consideration.

He gives this general reason for many laws, that they were made to keep men from idolatry, and fuch fille opinions as are a-kin to idolatry; fuch as the pretences to incantations, divinations, force telling things by the flars, or by the polletfrom of fome spirit or demon, or consulting with fuch perfors. He farther juffly obferves, that fuch things as are supposed to be effected by any magic actions, or are founded on any dispositions or influences of the flars, necessarily induce men to re verence and worthip them. He observed many of the magic rites confifted in certim geflures, actions, or the use of certain words, and mentions feveral examples of fuch superflitions, among the rest a remarkable rite to prevent a florm of hall-

However trifling fome of the Mofaic laws may appear at first view, and unworthy the wisdom of God to enact them as laws; yet the case will appear quite otherwise, when they are considered as necessary provisions against the danger of idolatry.

The law, for inflance, that appoints, "Ye shall not round the corners of your heads, neither shall thou mar the corners of thy beard," will thus appear directions of importance, when it was to prevent a magical cultom of the idolatrous priests, who made this fort of cutting off their hair and beards essential to their worship; and used them as things of consequence, in order to procure from their idols the several bleffings they defired and prayed for. A prohibition of such idolatrous and magical ceremonies was not to trivial, or below the

care of a wife Law-giver, who had a defign in the constitution of the Hebrew government, to keep that people from all idolatrous customs.

In like manner we may eafily perceive a reason why the law should direct, "Neither shall a garment of linen and woollen come upon thee;" when we understand, that such mixed garments of linen and woollen were the proper habits of idolatrous priests; and which, according to the professed doctrines of their idolatrous worthip, were supposed to have some powerful magical virtue in them.

For the fame reason we can easily understand the wisdom of appointing by law, that "the woman shall not wear that which apportaineth unto a main, neither shall a main put on a woman's garment; for all that do so are abomination to the Lord thy God," when it was an idolatrous constitution of their neighbours, as Maimon sound it in a magic book, that men ought to stand before the star of Venus in the slowered garments of women; and women were to put on the armour of men before the star of Mars, as bishop Patrick on the place truly represents its meaning.

The fame idolatrous custom is observed by Macrobius, that men worshipped Venus in women's habits, and women in the habit of men.

There is no reason then, we see, to imagine that these laws, which were to dishinguith the Hebrew people from the idolatrous nations, were made only out of hatred to their neighbours, and to all their customs and manners, good or bad, innocent as well as idolatrous. It appears on the contrary to be plainly quite another reason; it was from a wife care of their prefervation from fuch idolatrous cuttoms, as there was very great reason to fear, would Prove a dangerous temptation to lead them into idolatry, and which were hardly to be used without it. All reflections, with how much confidence foever on the Hebrew laws, as if they were established upon no better motives than the hatred of their neighbours, will appear in this view groundless, and without all foundation, when the true reason shall appear so wise, to plain, and so natural.

These two views then, to preserve in the Hebrew nation the knowledge and worthip of the one true God, and to preterve it from the spreading evils of idolatry,

by feparating it from the fociety of idolaters, by forbidding all use of idolatrous rites and cultoms, may be looked upon as confiderable intentions in the conflictation: according to which, we are to examine and to judge of the equity and wisdom of the constitution itself. Neither of which can be fo well judged of, without taking these intentions into consideration. If we regard the Hebrew constitution only as an inflitution of religion and religious worthip, or only as a civil polity and a form of civil government, we shall widely millake the true nature of it. It is evident beyond question, the Mofaical account of it reprefents it a theocracy, in which Jehovah is God, and King; and in which the tine worthip of the only true God was to be preferred against idolatry, and the nation, in obedience to the laws of this inflitution, thould enjoy liberty, peace, profperity and happiness in the protection of a wife and powerful government.

It may be proper to observe here, that these designs appear in themselves worthy the wistom and the goodness of God; that he should take care in some proper way to put a stop to so prevailing a course of idolatry. If the design shall appear in itself manifestly wise and good, the proper means to effect it will appear to be equitable, wise and good also. Some seem not to perceive, at least are not willing to own this. The more fully then to make us sensible of it, let us briefly observe some fitted and some seven seems of the many great exils of idolatry, which this Hebrew constitution was intended and formed to prevent.

One of the chief and most influencing principles of idolatry, was a false persuation that the temporal bleffings of life, health, length of days, fruttul feasons, victory in wars, and such advantages, were to be expected and sought for as the gists of tome interior and subordinate beings, as guardians of mortal men; or from recret influences of the stars and heavenly bodies, supposed inhabited, and animated by some powerful beings, or gods, whose protection and favour were to be obtained by the use of some magical cetemons, gedures and words, or by some sendicts or some barbarous rites of worship.

Thus men came not only to lose the true knowledge of the one only God, and of his immediate providence, and that all these blessings could therefore come from him alone, who was best pleased and

Q 2 best

best worshipped by virtue, goodness, righteousness and true holiness; but they became necessarily vicious and corrupt in practice, as well as principle. They came to think they were not to expect the blessings of life from the favour of the one true God, a Being himself of infinite purity, righteoutiefs, and goodnefs, by reverencing and by imitating him; but from the favour of a Jupiter, who with all his fine titles is represented in his history, to have been as intemperate, as luftful, and as wicked as any the worst of men; or from a Mercury, a pation of thieves and robbers; or from a Bacchus, the god of intemperance and drunkenness; or from a Venus, the patroness of all manner of uncleanness, and debauchery.

The known principles and the most sacred ceremonics and mysteries in the idolatrous worship of such deities, actually shewed what encouragement was given to all manner of vice. They extinguished all religious principles of moral virtue und goodness, and gave additional thrength to men's natural inclinations, to intemperance, luft, fraud, violence, and every kind of unrighteousness and debauchery. Phalli, and the Mylli, known religious rites in the worship of Bacchus, Ofiris, and Ceres, were fuch obscene ceremonies, that modelly forbids to explain them. It may be sufficient to mention the known cullom of virgins before marriage, facrificing their chastity to the honour of Venus, as a lateivious goddefs, as the historian expresses it. left the alone thould appear lafeivious. A custom, according to the historian, which was especially used in Cyprus, which was in the neighbourhood of Canaan.

Idolatry had introduced another most cruel custom of human facritices. This prevailed among the Phenicians, the Tyrians, and the Carthaginians, a Tyrian colony; on which inhuman custom the forementioned historian makes this remark, that they used a bloody and wicked rite of religion, as a remedy. They offered men for facrifices, and orought young children to the altars, at an age that usually moves the compassion of an enemy; and endeavoured to obtain the favour of the gods by the blood of those, for whose lives prayers were more generally used to be made to the gods.

This cruel cultom, how inhuman foever, fuch were the evil effects of idolatry, foon

became almost universal; and spread itself among the Greeks, the Gauls, and the German nations.

Among the Canaanites it was a known cuttom to offer their children to Moloch, likely the fame idol with Adrameleck and Anameleck. Some learned men have indeed been willing to believe, that passing through the fire to Moloch, might mean a fort of purification, rather than actual burning them in the fire; but besides the tellimony of historians in general to the practice of other nations, the Scriptures plainly mean confuming them to death by fire. So it is described by the prophet Ezekiel; " And have caused their fons whom they bare unto me, to pass through the fire to devour them." Did they cause them to pass through the fire, only to purify them, and to preferve them alive? No, certainly; but to devour or confume tham. The same prophet elsewhere determines this meaning, "Thou half flain my children and delivered them to cause them to pass through the fire." It is charged as an act of idolatry in Ahaz, that he caused his fon to pass through the fire, according to the abomination of the Heathen. This is explained in another place, that "he burned his children in the fire after the abomination of the Heathen." And it is expressly said of Adrameleck, and Anameleck, the idols of Sepharvaim, that " they burned their children in the fire to them."

If we confider the many other abominable immoralities of the Canaanites, by which they defiled themselves, as they are enumerated in the prohibition of them to the Hebrew nation, we may eafily perceive, that a nation which had defiled themselves in so many and so great abominations, did well deserve an exemplary punishment from the righteous Judge of the earth; that it was wife, as well as just, to shew in their punishment, that their idols were not, as they imagined and falfely believed, the givers of long life, peace, and worldly prosperity; but that the one true God was alone the supreme disposer of all the bleffings of providence; and that none of the idol gods, in whom they trusted, could fave them out of his hand, or deliver them, when God should visit their iniquities.

May we not also perceive a kind designin giving some remarkable instances of providence, for the punishment of so gross immoralities, the effects of idolatrous principles and practice, and for the encouragement of fuch acknowledgment and worthip of the true God, as was the best preferative against these abominations, by some observable instances of particular protection and favour; to let such worthippers of the true God know, that by keeping themselves from those abominations, the output and usual effects of idolatry, they was to hope for the continuance of such post, alter protection and favour in all aftertions?

harce at in y appear, the feverity with with the 1125 ew hillory acquaints us, the carry of e punified, and the title weerston in the vs held their land, with Gor carl out before them, were no was reconfident with the juffice, or wifden, or goodness of God, as some have minuated. The quedien is really brought to the one point, Whether fuch abominable immoralities, as followed naturally and univertally from their idolatious principles, and forms of worthip, were not highly criminal; to criminal as to deferve a punishment? that it became the juffice and wifelom of the Governour of the world to put some stop to them, to prevent them in tome meafare by forming and effablishing a conflictation in which the knowledge and worthip of the one true God should be preferved in opposition to idolativ, a perpetual fource of innumerable vices and immoralities. Idolativ, you fee then, appears in the natural fruits of it, not only an error of the understanding, not at all a matter of harmless speculation, but a fountain of very dangerous immoralities, which led men naturally, and even with the encouragements of religion, into intemperance, uncleanness, murders, and many vices, inconfident with the prosperity and peace of fociety, as well as with the happiness of private persons. When God shall punish such iniquities, he punishes men for their wickedness, not for their errors. He punishes men for such wickedness, as deserves to be punished, whatever pretended principles or real dictates of conscience it may proceed from. No man fure, can reasonably account it in-Justice in a government to punish sodomy, bestiality, or the frequent murder of innocent children, what pretences foever men should make to conscience or religion, in vindication of them. The most unnatural ans were countenanced by the mysteries

of idolatrous worship; the use of that obfeene ceremony the Phalli, owed its original to the memory of the sin against nature, and to the history of a god hallowing it by his own act. Can any man re tonably call such a restraint of vice perfectution, when not to endeavour by all means to restrain it, would argue a great neglect, weakness, and folly, in any administration of government whatsoever?

If then the punishment for fo heinous crimes and immortlities will be just and wife in itfelf, which way can any man find out, to make it unjust or unwise in the fupreme Governour of the world? How can it be unjuil in him, to appoint fuch perfors as he shall think most sit, to execute such righteous judgment by his commission? The common rights of pations, and any perfonal claim of the Hebrews, are altogether out of this question; the history plainly shews, they made no personal or national claim at all to the land of Canaan; but that God cast out the people before them, for all their abominations; that it was not their own power, but the hand of God, which brought them out of the land of Egypt, and into the promifed land. So that the whole is confidered as the immediate act of God himself, for the proof of which the history gives a long teries of miracles, in Egypt, at the Red-Sca, for many years in the wilderness, at the taking of Jericho, and fettling the Hebrew nation in the pottession of the promifed land.

And here let us jully observe, that this very way of punishing the Canaanites for their many great abominations by the Hebrew nation, to whom God give the poffession of their land, has some peculiar marks of wifdom, which may thew it fit to be preferred to many other ways; fuch as pestilential dutempers, fire from heaven, or a flood, ways in which God hath punished the wickedness of the world in former times. For this was a very fit means for the cure, as well as the punishment of idolatry, to destroy the root of these great evils, as well as to execute righteous judgment on those who had committed them. This was a design every way worthy the wisdom and goodness of God. Sure then, no ways inconfishent with his justice. The protection of the Hebrew nation, and the favour of God to them as a peculiar people, was a visible and flanding confutation of idolatry; it showed,

that

Q3

that Jehovah, the one true God, the King of Israel, had himself an immediate hand in the administration of particular providence; that he had not given it out of his own hands into the hands of any inferior beings whatfoever, which error was the great foundation of idolatry. It further shewed the power of Jehovah the true God, manifested in the protection of his people, superior to the power of all the idols of the Heathen; and that none of the false gods they worshipped could be compared to Jehovah.

This is a question then not to be argued from the common rights of men, and nations; for no such rights, either of invafion or conquest, are so much as pretended to in the most distant manner. We see the only point in questions is, what are the rights of God's supreme authority? What is confident with the wildom of his government, how far he may punish the greatest immoralities with temporal evils? Ask the Sacred History, it will tell you, the Heb. ews fet up no title to the land of Canaan, either civil or religious in their own right; it only makes the rights of the Sovereign of the world as extensive as the rights of the chief magistrates in every government are allowed by the laws of nature and nations to be over their own subjects. The Scriptures on this question only affert, that God gave a commission to execute his fentence, which was either a forfeiture of lands, or life, for a long commission of crimes, that defervedly incurred the forfciture of both.

Whether the Hebrew nation had really fuch a commission from God, or no; whether they were truly directed by divine oracle; whether fuch wonders were really wrought before their eyes, and fuch unquestionable instances of divine favour and protection in a long feries for many years, as the Hebrew history relates: these are all questions of fact. But in all fuch quellions general and abstract reasonings can have no place, where the facts themselves are naturally and morally possible, as every one may perceive they are in this case. If the supreme Governour of the world has a right to give such commission, it it is not unjust to use the hands of men, instead of a plague or fire from heaven, to punish the wickedness of men, the only question that can remain in such a case is this, whether in fact the Hebrew nation did . really receive such a commission from Je- under the Romans: but there is no need

hovah, or no: Thus far then the whole will rest upon the evidence of the Mosaic revelation; and there I shall leave it, it not being the defign of this differtation to enter into an argument, in which many, as I apprehend, have already given so full Rev. Mojes Lowman. fatisfaction.

§ 175. The fulfilment of the Mosaical prophecies concerning the Tews an unanfaverable argument for the truth of the Bible.

IT is observable that the prophecies of Moses abound most in the latter part of his writings. As he drew nearer his end, it pleased God to open to him larger prospects of things. As he was about to take leave of the people, he was enabled to disclose unto them more particulars of their future flate and condition. The defign of this work will permit us to take notice of fuch only as have fome reference to thefe later ages; and we will confine ourfelves principally to the 28th chapter of Deuteronomy, the greater part whereof we may fee accomplished in the world at this prefent time.

This great prophet and lawgiver is here proposing at large to the people the bleffings for obedience, and the curses for disobedience: and indeed he had foretold at feveral times and upon feveral occasions, that they should be happy or miserable in the world, as they were obedient or disobedient to the law that he had given them. And could there be any stronger evidence of the divine original of the Mofaical law? and hath not the interpofition of providence been wonderfully remarkable in their good or bad fortune? and is not the truth of the prediction fully attested by the whole teries of their history from their first settlement in Canaan to this very day? But he is larger and more particular in recounting the curses than the bleffings, as if he had a prescience of the people's disobedience, and foresaw that a larger portion and longer continuation of the evil would fall to their share, than of the good. I know that some critics make a division of these prophecies, and imagine that one part relates to the former captivity of the Jews, and to the calamities which they suffered under the Chaldwans; and that the other part relates to the latter captivity of the Jews, and to the calamities which they suffered

of any such distinction: there is no reason to think that any such was intended by the author; several prophecies of the one part as well as of the other have been suffilled at both periods, but they have all more amply been suffilled during the latter period; and there cannot be a more lively picture than they exhibit, of the state of the Jews at present.

1. We will consider them with a view to the order of time, rather than the order wherein they lie; and we may not improperly begin with this passage, ver. 49, "The Lord shall bring a nation against thee from far, from the end of the earth, as fwift as the eagle flieth, a nation whose tongue thou shalt not understand;" and the Chaldwans might be faid to come from far, in comparison with the Moabites, Philistines, and other neighbours, who used to infest Judea. Much the same description is given of the Chaldwans by Jeremiah, (v. 15.) " Lo, I will bring a nation upon you from far, O house of Israel, faith the Lord: it is a mighty nation, it is an ancient nation, a nation whose language thou knowest not, neither understandest what they fay." He compares them in like manner to eagles. (Sam. iv. 19.) " Our persecutors are fwifter than the eagles of the heaven: they purfued us upon the mountains, they laid wait for us in the wilderness." But this description cannot be applied to any nation with fuch propriety as to the Romans. They were truly brought from far, from the end of the earth. Vespasian and Adrian, the two great conquerors and deitroyers of the Jews, both came from commanding here in Britain. The Romans too for the rapidity of their conquells might very well be compared to eagles, and perhaps not without an allusion to the standard of the Roman armies, which was an eagle: and their language was more unknown to the Jews than the Chaldee.

2. The enemies of the Jews are farther characterifed in the next verie. "A nation of fierce countenance, which shall not regard the person of the old, nor show favour to the young." Such were the Chaldeans; and the sacred historian saith expressly, (a Chron. xxxvi. 17.) "that for the wickedness of the Jews God brought upon them the king of the Chaldees, who slew their young men with the sword, in the house of their sanctuary, and had no compassion upon young man or maiden, old man, or him that stooped for age; he gave

them all into his hand." Such also were the Romans: for when Vespasian entered Gadara, Josephus saith, that he slew all man by man, the Romans showing mercy to no age, out of hatred to the nation, and remembrance of their former injuries. The like slaughter was made at Gamala, for nobody cscaped besides two women, and they escaped by concealing themselves from the rage of the Romans. For they did not so much as spare young children, but every one at that time snatching up many cast them down from the citadel.

Their enemies were also to beliege and take their cities, ver. 52. " And he shall befiege thee in all thy gates, until thy high and fenced walls come down, wherein thou truitedit, throughout all thy land. So Shalmanefer king of Affyria came up against Samaria, and besieged it, and at the end of three years they took it." (2 Kings vviii. 9, 10.) " Sodid Sennacherib king of Aflyria come up against all the fenced cities of Judah, and took them:" (1b. ver. 13.) and Nebuchadnezzar and his captains took and spoiled Jerusalem, burnt the city and temple, " and brake down the walls of Jerufalem round about." (1b. xxv. 10.) So likewise the Romans, as we may read in Josephus's history of the Jewith war, demolished several fortified places, before they befieged and destroyed Jerusalem. And the Jews may very well be said to have trusted in their high and fenced walls, for they feldom ventured a battle in the open field. They confided in the firength and fituation of Jerusalem, as the Jebulites, the former inhabitants of the place, had done before them: (2 Sam. v. 6, 7.) infomuch that they are represented faying (Jer. xxi. 13.) "Who shall come down against us? or who shall enter into our habitation?" Jerusalem was indeed a very ftrong place, and wonderfully fortified both by nature and art, according to the description of Tacitus as well as of Josephus: and yet how many times was it taken? It was taken by Shishak king of Egypt, by Nebuchadnezzar, by Antiochus Epiphanes, by Pompey, by Sofius and Herod, before its final destruction by

4. In these sieges they were to suffer much, and especially from famine, "in the straitness wherewith their enemies should distress them," ver. 53, &c. And accordingly when the king of Syria bestieged Samaria, "there was a great samine in Samaria; and behold the school of the same of the mine in Samaria; and behold the school of the same of

it, until an ass's head was fold for fourscore pieces of filver, and the fourth part of a cab of dove's dung for five pieces of fliver." (2 Kings vi. 25.) And when Ne-buchadnezzar befieged Jerusalem, "the famine prevailed in the city, and there was no bread for the people of the land." (2 Kings xxv. 3.) And in the last siege of Jerusalem by the Romans there was a most terrible famine in the city, and Josephus hath given so melancholy an account of it, that we cannot read it without studdering. He faith particularly, that women fnatched the food out of the very mouths of their husbands, and sons of their fathers, and (what is most miserable) mothers of their infants: and in another place he faith, that in every house, if there appeared any femblance of food, a battle enfued, and the dearest friends and relations fought with one another, fnatching away the miferable provisions of life: fo literally were the words of Moles fulfilled, ver. 54. &c. " the man's eye shall be evil toward his brother, and toward the wife of his bosom, and towards his children, because he hath nothing left him in the fiege, and in the fliaitness wherewith thine enemies shall distress thee in all thy gates," and in like manner the woman's " eye shall be evil towards the husband of her bosom, and towards her son, and towards her daughter."

5. Nay it was expressly foretold, that not only the men, but even the women should eat their own children. Motes had foretold the same thing before, Levit. xxvi. 29. "Ye shall eat the flesh of your fons, and the flesh of your daughters shall ye eat." He repeats it here, ver, 53, "And thou shalt eat the fruit of thine own body, the flesh of thy sons and of thy daughters;" and more particularly ver. 56, &c. " The tender and delicate woman among you, who would not adventure to fet the fole of her foot upon the ground, for delicateness and tenderness—she shall eat her children for want of all things fecretly in the siege and straitness, wherewith thine enemies shall distress thee in thy gates." And it was sulfilled about 600 years after the time of Moles among the Ifraelites, when Samaria was befieged by the king of Syria, and two women agreed together, the one to give up her fon to be boiled and eaten to-day, and the other to deliver up her fon to be dreffed and caten to-morrow, and one of them was eaten accordingly. (2 Kings vi. 28, 29.)

It was fulfilled again about 900 years after the time of Moles, among the Jews in the fiege of Jerusalem before the Babylonish captivity; and Baruch thus expresseth it, (ii. 1, &c.) "The Lord hath made good his word, which he pronounced against us, to bring upon us great plagues, fuch as never happened under the whole heaven, as it came to pass in Jerusalem, according to the things that were written in the law of Moses, that a man should eat the flesh of his own son, and the flesh of his own daughter:" and Jeremiah thus laments it in his Lamentations, (vi. 10.) " The hands of the pitiful women have fodden their own children, they were their meat in the defluction of the daughter of my people." And again it was fulfilled above 1500 years after the time of Motes in the last ficge of Jerufalem by Titus, and we read in Josephus particularly of a noble weman's killing and cating her own fucking child. Mofes faith, " The tender and delicate woman among you, who would not adventure to fet the fole of her foot upon the ground, for delicatenets and tendernets." and there cannot be a more natural and lively description of a woman, who was according to Josephus illustrious for her family and riches. Moses saith, " she shall eat them for want of all things:" and according to Josephus she had been plundered of all her substance and provisions by the tyrants and foldiers. Moses saith, that she should do it " fecretly;" and according to Josephus, when she had boiled and eaten half, the covered up the rest, and kept it for another time. At so many different times and diffant periods hath this prophecy been fulfilled; and one would have thought that fuch diffress and horror had almost tranfcended imagination, and much less that any person could certainly have foreseen and foretold it.

6. Great numbers of them were to be destroyed, ver. 62. "And ye shall be left few in number, whereas ye were, as the stars of heaven for multitude." Now not to mention any other of the calamities and slaughters which they have undergone, there was in the last siege of Jerusalem by Titus an infinite multitude, saith Josephus, who perished by famine: and he computes, that during the whole siege, the number of those who were destroyed by that and by the war amounted to eleven hundred thousand, the people being assembled from all parts to celebrate the passover: and the

fame author hath given us an account of 1,240,490 destroyed in Jerusalem and other parts of Judea, besides 99,200 made prifoners; as Basnage has reckoned them up from that historian's account. Indeed there is not a nation upon earth, that hath been exposed to so many massacres and persecutions. Their history abounds with them. If God had not given them a promise of a numerous posterity, the whole race would many a time have been extirpated.

7. They were to be carried into Egypt, and fold for flaves at a very low price, ver. 68. " And the Lord shall bring thee into Egypt again, with thips: and there ye shall be fold unto your enemies for bondmen and bondwomen, and no man shall bu, you." They had come out of Egypt tri inphant, but now they should return the her as flaves. They had walked through the lea as dry land at their coming out, but now they should be carried thither in flips. They might be carried thither in the flips of the Tyrian or Sidonian merchants, o, by the Romans who had a fleet in the Mediterranean; and this was a much fafer way of conveying to many prifoners, than tending them by land. It appears from Josephus, that in the reigns of the two firth Ptolemies many of the Jews were flaves in Egypt. And when Jerufalem was taken by Titus, of the captives who were above 17 years he fent many bound to the works in Egypt; those under 17 were sold; but fo little care was taken of these captives, that eleven thousand of them perished for want. And we learn from St. Jerome, that after their last overthrow by Adrian, many thousands of them were fold, and those who could not be fold, were transported into Egypt, and perished by shipwreck or famine, or were massacred by the inhabitants.

8. They were to be rooted out of their own land, ver. 63. " And ye shall be plucked from off the land whither thou goest to possess it." They were indeed plucked from off their own land, when the ten tribes were carried into captivity by the king of Assyria, and other nations were planted in their flead; and when the two other tribes were carried away captive to Babylon; and when the Romans took away their place and nation; besides other captivities and transportations of the people. Afterwards, when the Emperor Adrian had subdued the rebellious ]ews,

he published an edict forbidding them upon pain of death to fet foot in Jerusalem, or even to approach the country round about Tertullian and Jerome fay, that they were prohibited from entering into Judea. From that time to this their country hath been in the possession of foreign lords and mafters, few of the Jews dwelling in it. and those only of a low servile condition. Benjamin of Tudela in Spain, a celebrated lew of the twelfth century, travelled into all parts to visit those of his own nation, and to learn an exact state of their affairs : and he hath reported, that. Jerusalem was almost entirely abandoned by the Jews. found there not above two hundred persons, who were for the most part dyers of wool. and who every year purchased the privilege of the monopoly of that trade. They lived all together under David's tower, and made there a very little figure. If Jerusalem had fo few Jews in it, the rest of the holy land was still more depopulate. He found two of them in one city, twenty in another, most whereof were dyers. In other places there were more persons; but in upper Galilee, where the nation was in greatest repute after the ruin of Jerusalem, he found hardly any Jews at all. A very accurate and faithful traveller of our own nation, who was himself also in the holy land. faith that it is for the most part now inhabited by Moors and Arabians; those possessing the valleys, and these the mountains. Turks there be sew: but many Greeks with other Christians of all sects and nations, fuch as impute to the place an adherent holiness. Here are also some Jews, yet inherit they no part of the land, but in their own country do live as aliens.

9. But they were not only to be plucked off from their own land, but also to be difperfed into all nations, ver. 25. " And thou shalt be removed in all the kingdoms of the earth;" and again, ver. 64. " And the Lord shall scatter thee among all people, from one end of the earth even unto the other." Nehemiah (i. 8, 9.) confesseth that these words were fulfilled in the Babylonish captivity; but they have more amply been fulfilled fince the great dispersion of the lews by the Romans. What people indeed have been scattered so far and wide as they? and where is the nation, which is a stranger to them, or to which they are strangers? They swarm in many parts of the East, are spread through most of the countries of Europe and Afric, and there are several

families of them in the West Indies. They circulate through all parts, where trade and money circulate; and are, as I may say, the brokers of the whole world.

10. But though they should be so disperfed, yet they should not be totally destroyed, but still subsist as a distinct people, as Moses had before foretold. Levit. Ein the land of their enemies, I will not cast them away, neither will I abhor them, to destroy them utterly, and to break my covenant with them." The Jewish nation, like the bush of Moses, hath been always burning, but is never confumed. what a marvellous thing is it, that after fo many wars, battles, and fieges, after fo many fires, famines, and pestilences, after so many rebellions, massacres, and persecutions, after so many years of captivity, flavery, and mifery, they are not destroyed utterly, and though scattered among all people, yet subsitt as a distinct people by themselves? Where is any thing comparable to this to be found in all the histories. and in all the nations under the fun?

11. However, they should suffer much in their dispersion, and should not rest long in any place, ver. 65, "And among these nations shalt thou find no ease, neither shall the sole of thy foot have rest." They have been fo far from finding rest, that they have been banished from city to city, from country to country. In many places they have been banished, and recalled, and banished again. We will only just mention their great banishments in modern times, and from countries very well known. In the latter end of the thirteenth century they were banished from England by Edward I. and were not permitted to return and fettle again till Cromwell's time. In the latter end of the fourteenth century they were banished from France (for the seventh time, fays Mezcray) by Charles VI; and ever fince they have been only tolerated, they have not enjoyed entire liberty, except at Metz, where they have a fynagogue. In the latter end of the fifteenth century they were banished from Spain by Ferdinand and Isabella; and according to Mariana, there were an hundred and seventy thoufand families, or as fome fay, eight hundred thousand persons who left the kingdom: most of them paid dearly to John H. for a refuge in Portugal, but within a few years were expelled from thence also by his fuccesfor Emanuel. And in our own time, within thefe few years, they were banished from Prague by the queen of Bohemia.

12. They should be " oppressed and fpoiled evermore;" and their "houses" and "vineyards," their "oxen" and " asses" should be taken from them, and they should "be only oppressed and crushed alway," ver. 29, &c. And what frequent seizures have been made of their effects in almost all countries? how often have they been fined and fleeced by almost all governments? how often have they been forced to redeem their lives with what is almost as dear as their lives, their treasure? Inflances are innumerable. We will only cite an historian of our own, who fays that Henry III. always polled the Jews at every low ebb of his fortunes. One Ahraham, who was found delinquent, was forced to pay feven hundred marks for his redemption. Aaron, another lew, proteiled, that the king had taken from him at times thirty thousand marks of filver, befides two hundred marks of gold, which he had presented to the queen. And in like manner he used many others of the Jews. And when they were banished in the reign of Edward I. their estates were conficated, and immense sums thereby accrued to the crown.

13. "Their fons and their daughters should be given unto another people," ver. 12. And in several countries, in Spain and Portugal particularly, their children have been taken from them by order of the government, to be educated in the popish religion. The fourth council of Toledo ordered that all their children thould be taken from them, for fear they should partake of their errors, and that they should be thut up in monasteries, to be instructed in the Christian truths. And when they were banished from Portugal, the king, says Mariana, ordered all their children, under 14 years of age, to be taken from them, and baptized: a practice not at all justifiable, adds the historian, because none ought to be forced to become Christans, nor children to be taken from their parents.

14. "They should be mad for the fight of their eyes which they should see," ver. 34. And into what madness, sury, and desperation have they been pushed by the cruel usage, extortions, and oppressions which they have undergone? We will alledge only two similar instances, one from ancient, and one from modern history. After the destruction of Jerutalem by Titus, some of the worst

of the Jews took refuge in the castle of Masada, where being closely besieged by the Romans, they at the persuasion of Eleazar their leader, first murdered their wives and children; then ten men were chosen by lot to flay the rest; this being done, one of the ten was chosen in like manner to kill the other nine; which having executed, he fet fire to the place, and then stabbed himself. There were nine hundred and fixty who perished in this miserable manner; and only two women and five boys escaped by hiding themselves in the aqueducts under ground. another inflance we have in our English history. For in the reign of Richard the First, when the people were in arms to make a general massacre of them, fifteen hundred of them feized on the city of York to defend themselves; but being besieged they offered to capitulate, and to ransome their lives with money. The offer being refused, one of them cried in despair, that it was better to die courageously for the law, than to fall into the hands of the Christians. Every one immediately took his knife, and stabbed his wife and children. The men afterwards retired into the king's palace, which they fet on fire, in which they confumed themselves with the palace and furniture,

15. " They should serve other gods, wood and stone," ver. 36; and again ver. 64, " they should serve other gods, which neither they nor their fathers had known, even wood and stone." And is it not too common for the Jews in popish countries to comply with the idolatrous worthip of the church of Rome, and to bow down to flocks and stones, rather than their effects should be seized and confiscated? Here again we must cite the author, who hath most studied, and hath best written their modern history, and whom we have had occasion to quote several times in this discourse. The Spanish and Portugal Inquisitions, saith he, reduce them to the dilemma of being either hypocrites or burnt. The numbers of these dissemblers is very considerable; and it ought not to be concluded, that there are no Jews in Spain or Portugal, because they are not known: they are so much the more dangerous, for not only being very numerous, but confounded with the ecclefiaftics, and entering into all ecclefiastical dignities. In another place he faith, The most surprifing thing is, that this religion spreads from generation to generation, and still fublists in the persons of dissemblers in a remote posterity. In vain the great lords of Spain make alliances, change their names, and take ancient scutcheons; they are still known to be of Jewish race, and lews themselves. The convents of monks and nuns are full of them. Most of the canons, inquisitors, and bishops proceed from this nation. This is enough to make the people and clergy of this country tremble, fince fuch fort of churchmen can only profune the facraments, and want intention in confectating the host they adore. the mean time Orobio, who relates the fact, knew these distemblers. He was one of them himself, and bent the knee before the facrament. Moreover he brings proofs of his affection, in maintaining, that there are in the fynagogue of Amsterdam, brothers and fifters and near relations to good families of Spain and Portugal; and even Franciscan monks, Dominicans, and Jesuits, who come to do penance, and make amends for the crime they have committed in distembling.

16. "They should become an astonishment, a proverb, and a bye-word among all nations," ver. 37. And do we not hear and fee this prophecy fulfilled almost every day? is not the avarice, usury, and hard-heartedness of a Jew grown proverbial? and are not their persons generally odious among all forts of people? Mohammedans, Heathens, and Christians, however they may disagree in other points, yet generally agree in vilifying, abusing, and perfecuting the Jews. In most places where they are tolerated, they are obliged to live in a separate quarter by themselves, (as they did here in the Old Jewry) and to wear some badge of distinction. Their very countenances commonly distinguish them from the rest of mankind. They are in all respects treated. as if they were of another foecies. And when a great master of nature would draw the portrait of a Jew, how detestable a character hath he represented in the person of his lew of Venice!

17. Finally, "their plagues should be wonderful, even great plagues, and of long continuance," ver. 59. And have not their plagues continued now these 1700 years? Their former captivities were very short in comparison; and Ezekiel and Daniel prophesied in the land of the Chaldwans: but now they have no true prophet to foretel an end of their calamities, they have only false Messahs to delude them

and aggravate their misfortunes. In their former captivities they had the comfort of being conveyed to the same place; they dwalt together in the land of Goshen, they were carried together to Babylon: but now they are dispersed all over the sace of the earth. What nation hath suffered so much, and yet endured so long? what nation hath subsisted as a distinct people in their own country, solong as these have done in their dispersion into all countries? and what a flanding miracle is this exhibited to the view and observation of the whole world?

Here are instances of prophecies, of prophecies delivered above three thousand years ago, and yet as we fee fulfilling in the world at this very time: and what stronger proofs can we defire of the divine legation of Moles? How these instances may affect others, I know not; but for myfelf I muft acknowledge, they not only convince, but amaze and aftonish me beyond expression. They are truly, as Mofes foretold they would be, "a fign and a wonder for ever," ver. 45, 46. " Morcover all thefe curses shall come upon thee, and shall purfue thee and overtake thee, till thou be deftroyed, because thou hearkenedst not unto the voice of the Lord thy God, to keep his commandments, and his flatutes which he commanded thee; and they thall be upon thee for a figu and for a wonder, and upon thy feed for ever."

Biftop Newton.

### § 176. The Excellence of Scripture.

The incomparable excellency which is in the Sacred Scriptures, will fully appear, if we confider the matters contained in them under this threefold capacity. 1. As matters of divine revelation. 2. As a rule of life. 3. As containing that covenant of grace which relates to man's eternal happiness.

- 1. Consider the Scripture generally, as containing in it matters of divine revelation, and therein the excellency of the Scriptures appears in two things. 1. The matters which are revealed. 2. The manaer wherein they they are revealed.
- 1. The matters which are revealed in Scripture, may be considered these three ways. 1. As they are matters of the greatest weight and moment. 2. As matters of the greatest depth and mysseriousness. 3. As matters of the most universal fatisfaction to the minds of men.
- 1. They are matters of the greatest moment and importance for men to know.

. +

The wisdom of men is most known by the weight of the things they fpeak; and therefore that wherein the wisdom of God is discovered, cannot contain any thing that is mean and trivial; they must be matters of the highest importance, which the Supreme Ruler of the world vouchsafes to speak to men concerning: and such we shall find the matters which God hath revealed in his word to be, which either concern the rectifying our apprehensions of his nature, or making known to men their state and condition, or discovering the way whereby to avoid eternal mifery. Now which is there of these three, which, supposing God to discover his mind to the world, it doth not highly become him to fpeak to men of?

1. What is there which doth more highly concern men to know, than God himfelf? or what more glorious and excellent object could he discover than himself to the world? There is nothing certainly which should more commend the Scriptures to us, than that thereby we may grow more acquainted with God; that we may know more of his nature, and all his perfections, and many of the great reasons of his actings in the world. We may by them understand with safety what the eternal purposes of God were as to the way of man's recovery by the death of his Son; we may there fee and understand the great wisdom of God; not only in the contrivance of the world, and ordering of it, but in the gradual revelations of himfelf to his people, by what steps he trained up his church till the fulness of time was come; what his aim was in laying fuch a load of ceremonies on his people of the Jews; by what steps and degrees he made way for the full revelation of his will to the world by speaking in these last days by his Son, after he had spoke at sundry times and divers manners by the prophets, &c. unto the fathers. In the Scriptures we read the most rich and admirable discoveries of divine goodness, and all the ways and methods he useth in alluring finners to himself; with what majesty he commands, with what condescension he intreats, with what importunity he woos men's fouls to be reconciled to him; with what favour he embraceth, with what tenderness he chastiseth, with what bowels he pitieth those who have chosen him to be their God! With what power he fupporteth, with what wisdom he directeth, with what cordials he refresheth the fouls

of such who are dejected under the sense of his displeasure, and yet their love is sincere towardshim! With what profound humility, what holy boldness, what becoming distance, and yet what restless importunity do we therein find the fouls of God's people addressing themselves to him in prayer! With what chearfulness do they serve him. with what confidence do they trull him, with what resolution do they adhere to him in allstreights and difficulties, with what patience do they submit to his will in their greatest extremities! How fearful are they of finning against God, how careful to please him, how regardless of fuffering, when they must choose either that or finning, how little apprehensive of men's displeasure, while they enjoy the favour of God! Now all these things which are so fully and pathetically expressed in Scripture, do abundantly set forth to us the exuberancy and pleonasm of God's grace and goodness towards his people, which makes them delight fo much in him, and be fo sensible of his displeasure. But above all other discoveries of God's goodness, his sending his Son into the world to die for finners, is that which the Scripture fets forth with the greatest life and eloquence. By eloquence, I mean not an artificial composure of words, but the gravity, weight, and perfualiveness of the matter contained in them. And what can tend more to melt our frozen hearts into a current of thankful obedience to God, than the vigorous reflection of the beams of God's love through Jesus Christ upon us? Was there ever so great an expression of love heard of! nay, was it possible to be imagined, that that God who perfectly hates fin, should himself offer the pardon of it, and fend his Son into the world to fecure it to the finner, who doth to heartily repent of his fins, as to deny himself, and take up his cross and follow Christ! Well might the Apostle say, " This is a faithful faying, and worthy of all acceptation, that Jesus Christ came into the world to fave: finners." How dry and sapless are all the voluminous discourses of philosophers, compared with this sentence! How jejune and unfatisfactory are all the discoveries they had of God and his goodness, in comparison of what we have by the Gospel of Christ! Well might Paul then fay, " That he determined to know nothing but Christ and him crucified." Christ crucified is the library which triumphant fonlewill be studying in to all eternity. This is the only library which to commend

is the true larging boxing, that which cures the foul of all its maladies and diftemers; other knowledge makes men's minds giddy and flatulent, this fettles and compoles them; other knowledge is apt to-fwell men into high conceits and opinions of themfelves, this brings them to the truet view of themfelves, and thereby to humility and fobriety; other knowledge leaves men's hearts as it found them, this alters, them and makes them better. So transcendent an excellency is there in the knowledge of Christ crucified above the fubliment speculations in the world.

And is not this an inestimable benefit we enjoy by the Scripture, that therein we can read and converse with all these expreffions of God's love and goodness, and that in his own language? Shall we admire and praise what we meet with in Heathen philosophers, which is generous and handlome; and shall we not adore the infinite fulness of the Scriptures, which run over with continued expressions of that and a higher nature? What folly is it to magnify those lean kine, the notions of philosophers, and to contemn the fat, the plenty and fulness of the Scriptures? If there be not far more valuable and excellent discoveries of the divine nature and perfections, if there be not far more excellent directions and rules of practice in the Sacred Scriptures, than in the fublimest of all the philosophers, then let us leave our full ears, and feed upon the thin. But certainly no fober and rational spirit, that puts any value upon the knowledge of God, but on the same account that he doth prize the discourses of any philosophers concerning God, he cannot but fet a value of a far higher nature on the Word of God. And as the goodness of God is thus discovered in Scripture, to is his justice and holines: we have therein recorded the most remarkable judgments of God upon contumacious finners, the severest denunciations of a judgment to come against all that live in fin, the exactest precepts of holiness in the world; and what can be defired more to discover the holiness of God, than we find in Scripture concerning him? If therefore acquaintance with the nature, perfection, defigns of so excellent a being as God is, be a thing defirable to human nature, we have the greatest cause to admire the excellency and adore the fulness of the Scriptures, which gives fo large, rational, and compleat account of the being and attributes of God. Andwhich tends yet more so commend the Scripturesto us, those things which the Scripture doth most fully discover concerning God, do not at all contradict those prime and common notions which are in our natures concerning him, but do exceedingly advance and improve them, and tend the most to regulate our conceptions and apprehensions of God, that we may not miscarry therein, as otherwise men are apt to do. For it being natural to men fo far to love themselves, as to set the greatest value upon those excellencies which they think themselves most masters of: thence men come to be exceedingly mistaken in their apprehensions of a deity, some attributing one thing as a perfection, another a different thing, according to their humours and inclinations. Thus imperious felf-willed men are apt to cry up God's absolute power and dominion as his greatest perfection; easy and soft-spirited men his patience and goodness; severe and rigid men his justice and severity: every one according to his humour and temper, making his god of his own complexion: and not only so, but in things remote enough from being perfections at all, yet because they are such things as they prize and value, they suppose of necessity they must be in God, as is evident in the Epicureans araeagía, by which they exclude providence, as hath already been observed. And withal considering how very difficult it is for one who really believes that God is of a pure, jutt, and holy nature, and that he hath grievoully offended him by his fins, to believe that this God will pardon him upon true repentance: it is thence necessary that God should make known himfelf to the world, to prevent our misconceptions of his nature, and to affure & fuspicious, because guilty creature. how ready he is to pardon iniquity, transgreffion and fin, to fuch as unfeignedly repent of their follies, and return unto himself. Though the light of nature may dictate much to us of the benignity and goodness of the divine nature, yet it is hard to conceive that that thould discover further than God's general goodness to such as please him: but no foundation can be gathered thence of his readinets to pardon offenders, which being an act of grace, must alone be discovered by his will. I cannot think the fun, moon, and flars are fuch itinerant preachers, as to unfold unto us the whole counsel and will of God in reference to man's accerptance with God upon repentance. It is not every thar

in the firmament can do that which the star once did to the wife men, lead them unto Christ. The sun in the heavens is no Parelius to the sun of righteousness. The best astronomer will never find the day-star from on high in the rest of his number. What St. Austin said of Tully's works, is true of the whole volume of the creation. There are admirable things to be found in them: but the name of Christ is not legible there. The work of redemption is not engraven on the works of providence; if it had, a particular divine revelation had been unneceffary, and the apostles were fent on a needless errand, which the world had understood without their preaching, viz. " That God was in Christ reconciling the world unto himself, not imputing to men their trefpasses, and hath committed to them the ministry of reconciliation." How was the word of reconciliation committed to them, if it were common to them with the whole frame of the world? and the apostle's quere elsewhere might have been easily answered, How can mer hear without a preacher? for then they might have known the way of falvation, without any special messengers sent to deliver it to them. I grant that God's long-fuffering and patience is intended to lead men to repentance, and that fome general collections might be made from providence of the placability of God's nature, and that God never left himself without a witness of his goodness in the world, being kind to the unthankful, and doing good, in giving rain and fruitful seasons. But though thefe things might sufficiently discover to such who were apprehensive of the guilt of tin, that God did not act according to his greatest severity, and thereby did give men encouragement to hearken out and enquire after the true way of being reconciled to God; yet all this amounts not to a firm foundation for faith as to the remission of fin, which doth suppose God himself publifting an act of grace and indemnity to the world, wherein he affures the pardon of fin to fuch as truly repent and unfeignedly believe his holy Gospel. Now is not this an inestimable advantage we enjoy by the Scriptures, that therein we understand what God himself hath discovered of his own nature and perfections, and of his readiness to pardon fin upon those gracious terms of faith and repentance, and that which necessarily follows from these two, hearty and fincere obedience? 2 The

2. The Scriptures give the most faithful representation of the state and condition of the foul of man. The world was almost lost in disputes concerning the nature, condition, and immortality of the foul before divine revelation was made known to mankind by the gospel of Christ; but " life and immortality was brought to light by the gospel," and the future state of the soul of man, not discovered in an uncertain Platonical way, but with the greatest light and evidence from that God who hath the supreme disposal of souls, and therefore best knows and understands them. The Scriptures plainly and fully reveal a judgment to come, in which God will judge the fecrets of all hearts, when every one must give an account of himself unto God, and God will call men to give an account of their flewardship here of all the receipts they have had from him, and the expences they have been at, and the improvements they have made of the talents he put into their hands. So that the gofpel of Christ is the fullest instrument of the discovery of the certainty of the future state of the foul, and the conditions which abide it, upon its being diflodged from the body. But this is not all which the Scripture difcovers as to the state of the foul; for it is not only a prospective-glass, reaching to its future state, but it is the most faithful looking-glass, to discover all the spots and deformities of the foul: and not only shews where they are, but whence they came, what their nature is, and whither they tend. The true original of all that diforder and discomposure which is in the soul of man, is only fully and fatisfactorily given us in the Word of God. The nature and working of this corruption in man, had never been so clearly manifelted, had not the law and will of God been discovered to the world; that is the glass whereby we see the fecret workings of those bees in our hearts, the corruptions of our natures; that fets forth the folly of our imaginations, the unruliness of our passions, the distempers of our wills, and the abundant deceitfulness of our hearts. And it is hard for the most Elephantine sinner (one of the greatest magnitude) so to trouble these waters, as not therein to discover the greatness of his own deformities. But that which tends most to awaken the drowly, fenfelels spirits of men, the Scripture doth most fully describe the tendency of corruption, " that the wages of fin is death," and the issue of continuance in fin

will be the everlatting mifery of the foul. in a perpetual separation from the presence of God, and undergoing the lashes and feverities of conscience to all eternity. What a great discovery is this of the faithfulnels of God to the world, that he fuffers not men to undo themselves without letting them know of it before hand, that they might avoid it! God feeks not to entrap mens fouls, nor doth he rejoice in the mifery and ruin of his creatures, but fully declares to them what the confequence and iffue of their finful practices will be, affures them of a judgment to come, declares his own future leverity against contumacious finners, that they might not think themselves surprised, and that if they had known there had been fo great danger in fin, they would never have been fuch fools as for the fake of it to run into eternal misery. Now God to prevent this, with the greatest plainness and faithfulness, hath thewed men the nature and danger of all their fins, and asks them before hand what they will do in the end thereof: whether they are able to bear his wrath, and wrettle with everlatting burnings? if not, he bids them bethink themselves of what they have done already, and repent and amend their lives, lest iniquity prove their ruin, and destruction overtake them, and that without remedy. Now if men have cause to prize and value a faithful monitor, one that tenders their good, and would prevent their ruin, we have cause exceedingly to prize and value the Scriptures, which give us the trueff representation of the state and condition of our fouls.

3. The Scripture discovers to us the only way of pleafing God and enjoying his favour. That clearly reveals the way (which man might have fought for to all eternity without particular revelation) whereby fins may be pardoned, and whatever we do may be acceptable unto God. It shows us that the ground of our acceptance with God, is through Christ, whom he hath made " a propitiation for the fins of the world," and who alone is the true and living way, whereby we may " draw near to God with a true heart, in full affurance of faith, having our hearts fprinkled from an evil conscience." Through Christ we understand the terms on which God will shew favour and grace to the world, and by him we have ground of a wappnosa access with freedom and boldness unto God. On his account we may hope not only for grace to subdue our fins, relist temptations conquer the devil and the world; but having " fought this good fight, and finished our course, by patient continuance in well doing, we may justly look for glory, honour, and immortality, and that " crown of righteoufness which is laid up for those who wait in faith," holiness, and humility for the appearance of Christ from heaven. Now what things can there be of greater moment and importance for men to know, or God to reveal, than the nature of God and ourfelves, the state and condition of our fouls. enjoy everlasting blis!

The Scriptures discover not only matters of importance, but of the greatest depth and mysteriousness. There are many wonderful things in the law of God, things we may admire, but are never able to comprehend. Such are the eternal purposes and decrees of God, the doctrine of the Trinity, the incarnation of the Son of God, and the manner of the operation of the Spirit of God upon the fouls of men, which are all things of great weight and moment for us to understand and believe that they are, and yet may be unsearchable to our reason, as to the particular manner of them.

The Scripture comprehends matters of the most universal satisfaction to the minds of men; though many things do much exceed our apprehensions, vet others are most fuitable to the dictates of our nature. As Origen bid Cellus fee, if uh ta the wirth; ที่ผมง สลังส พอเกลเรี ล่างอเลเร ละพุทิชิลง ฮบเลyopeworla, meraridnos THE invigiosas as bostas Tur Aiyouisus, whether it was not the agreeableness of the principles of faith with the common notions of human nature, which prevailed most upon all candid and ingenuous anditors of them. And therefore, as Socrates faid of Heraclitus's books. What he understood was excellent, and therefore he supposed that which he did not understand was so too: so ought we to say of the Scriptures: if those things which are within our capacity be fo suitable to our natures and reasons, those cannot contradict our reason which yet are above them. There are many things which the minds of men were fufficiently affured that they were, yet were to feek for fatisfaction concerning them, which they could never have As the had without divine revelation. nature of true happiness, wherein it lay, and how to be obtained, which the philofophers were fo puzzled with, the Scriptures give us full fatisfaction concerning

True contentment under the troubles of life, which the Scripture only acquaints us with the true grounds of; and all the prescriptions of Heathen moralists fall as much short of, as the directions of an empiric do of a wife and skilful physician. Avoiding the fears of death, which can alone be through a grounded expectation of a future state of happiness which death leads men to, which cannot be had but through the right understanding of the Word of God. Thus, we fee the excelthe only way to avoid eternal mifery and 'lency' of the matters themselves contained in this revelation of the mind of God to the world.

> As the matters themselves are of an excellent nature, so is the manner wherein they are revealed in the Scriptures; and

 In a clear and perspicuous manner; not but there may be still some passages which are hard to be understood, as being either prophetical, or confifting of ambiguous phrases, or containing matters above our comprehension; but all those things which concern the terms of man's falvation, are delivered with the greatest evidence and perspicuity. Who cannot understand what these things mean, "What doth the Lord require of thee, but to do juffly, and to love mercy, and to walk humbly with the God?"-that " without faith it is impossible to please God"-that " without holiness none shall see the Lord" -that " unless we be born again we can never enter into the kingdom of heaven:" these and such like things are so plain and clear, that it is nothing but mens shutting their eyes against the light can keep them from understanding them; God intended these things as directions to men; and is he not able to fpeak intelligibly when he pleases? He that made the tongue, shall he not speak so as to be understood without an infallible interpreter? especially when it is his defign to make known to men the terms of their eternal happiness? Will God judge men at the great day for not believing those things which they could not understand? Strange, that ever men should judge the Scriptures obscure in matters necessary, when the Scripture accounts it so great a judgment for men not to understand them. " If our gospel be hid, it is hid to them that are loft; in whom the god of this world hath blinded. the minds of them which believe not, left the light of the glorious gospel of Christ should shine unto them." Sure Lot's door. was visible enough, if it were a judgment for the men of Sodom not to see it; and the Scriptures then are plain and intelligible enough, if it be so great a judgment not to understand them.

2. In a powerful and authoritative manner; as the things contained in Scripture do not fo much beg acceptance as commandit; in that the expressions wherein our duty is concerned, are fuch as awe men's confeiences and pierce to their hearts and to their fecret thoughts; alltoings are open and naked before this Word of God; every fecret of the mind and thought of the heart lies open to its thoke and force; "it is quick and powerful, tharper than a two-edged two.d, piercing to the dividing afunder of foul and spirit, and of the joints and marrow, and is a difference of the thoughts and intents of the heart." The word is a telescope to discover the great luminaries of the world, the truths of highest concernment to the touls of men, and it is tuch a microtcope as discovers to us the smallest atom of our thoughts, and different the most secret intents of the heart. And as far as this light reacheth, it comes with power and authority, as it comes armed with the maicily of that God who reveals it, whose authority extends over the foul and confcience of man in its most fecret and hidden re-

3. In a pure and unmixed manner; in all other writings, how good forver, we have a great mixture of drofs and gold together; here is nothing but pure gold, diamonds without flaws, funs without spots. The most current coins of the world have their alloys of bafer metals, there is no fuch mixture in divine truths; as they all come from the fame author, fo they all have the fame purity. There is a Urim and Thummim upon the whole Scripture, light and perfection in every part of it. In the Philosophers we may meet, it may be, with fome feattered fragments of purer metal, amidit abundance of drofs and impure ore; here we have whole wedges of gold, the same vein of purity and holiness running through the whole book of Scriptures. Hence it is called "the form of found words;" here have been no hucksters to corrupt and mix their own inventions with divine truths.

4. In an uniform and agreeable manner. This I grant is not sufficient of itself to prove the Scriptures to be divine, because all men do not contradict themselves in their writings, but yet here are

some peculiar circumstances to be confidered in the agreeableness of the parts of Scripture to each other, which are not to be found in mere human writings. 1. That this doctrine was delivered by persons who lived in different ages and times from each other. Utually one age corrects another's faults, and we are apt to pity the ignorance of our predecessors, when it may be our policity may think us as ignorant, as we do them. But in the Sacred Scripture we read not one age condemning another; we find light still increating in the feries of times in Scripture, but no reflections in any time upon the ignorance, or weakness of the precedent; the dimmest light was sufficient for its age, and was a step to further discovery. Quindilian gives it as the reason of the great uncertainty of Grammar rules, quia non analogia dimissa cœlo formam loquendi dedit; that which he wanted as to Grammar, we have as to divine truths; they are delivered from heaven, and therefore are always uniform and agreeable to each

2. By persons of different interests in the world. God made choice of men of ail ranks to be inditers of his oracles, to make it appear it was no matter of flate policy, or particular interest, which was contained in his word, which perfors of fuch different interests could not have agreed in as they do. We have Mofes, David, Solomor, perlons of 10yal rank and quality; and can it be any mean thing, which there think it their glory to be penners of? We have Haiah, Daniel, and other persons of the highest education and accomplishments, and can it be any trivial thing which these employ themselves in? We have Amos, and other prophets in the Old Testament, and the apostles in the New, of the meaner fort of men in the world, yet all thefe join in concert together; when God tune their fpints, all agree in the same strain of divine truths, and give light and harmony to each other.

3. By persons in different places and conditions; some in prosperity in their own country, some under binishment and advertity, yet all agreeing in the same substance of doctrine; of which no alteration we see was made, either for the flattery of those in power, or for avoiding mismes and calomities. And under all the disferent dispensations before, under, and after the law, though the management of things was different, yet the doctrine and design was for substance the same in all.

All the different dispensations agree in the same common principles of religion; the same ground of acceptance with God, and obligation to duty was common to all, though the peculiar initances wherein God was served might be different according to the ages of growth in the church of God. So that this great uniformity considered in these circumstances, is an argument that these things came originally from the same Spirit, though conveyed through different instruments to the knowledge of the world.

5. In a perfualive and convincing manper: and that thefe ways, 1. Bringing divine truths down to our capacity, clothing spiritual matter in familiar expressions and finalitudes, that fo they might have the easier admission into our minds. 2. Propounding things as our interest, which are our duty: thence God fo frequently in Scripture, recommends our duties to us under all those motives which are wont to have the greatest force on the minds of men; and annexeth gracious promifes to our performance of them; and those of the most weighty and concerning things. Of grace, favor, protection, deliverance, audience of prayers, and eternal happiness, and if these will not prevail with men. what motives will? 3. Courting us to obedience, when he might not only command us to obey but punish presently for disobedience. Hence are all those most pathetical and affection ite firains we read in Scripture: "O that there were fuch a heart within them, that they would fear me and keep all my commandments always, that it might go well with them, and with their children after them !- Woe unto thee, O Jerusalem, wilt thou not be made clean? when shall it once be?-Turn ye, turn ye from your evil ways, for why will ye die, O house of Israel? How shall I give thee up, Ephraim? how shall I deliver thee Ifrael? how shall I make thee as Admah? how shall I set thee as Zeboim?-Mine heart is turned within me, my repentings are kindled together .- O Jerufalem, Jerufalem, how often would I have gathered thy children together, as a hen gathereth her chickens under her wings, and ye would not?" What majesty and yet what sweetness and condescension is there in these expressions! What obstinacy and rebellion is it in men for them to fand out against God, when he thus comes down from his throne of majesty and woos rebellious finners to return unto him that they may be pardoned! Such a matchless and unparalleled strain of rhetoric is there in the Scripture, far above the art and infinuations of the most admired orators. Thus we see the peculiar excellency of the manner wherein the matters contained in Scripture are revealed to us; thus we have considered the excellency of the Scripture, as it is a discovery of God's mind to the world.

The Scriptures may be confidered as a rule of life, or as a law of God, which is given for the government of the lives of men, and therein the excellency of it lies in the nature of the duties, and the encouragements to the practice of them.

1. In the nature of the duties required, which are most becoming God to require, most reasonable for us to perform.

- 1. Most becoming God to require, as they are most suitable and agreeable to the divine nature, the imitation of which in our actions is the fubiliance of our religion. Imitation of mm in his goodness and holiness, by our constant endeavours of mortifying fin and growing in grace and piety. In his grace and mercy, by our kindness to all men, forgiving the injuries men do unto us, doing good unto our greatest enemies. In his justice and equity, by doing as we would be done by, and keeping a conscience void of offence towards God and towards men. The first takes in the duties of the first, the other the duties of the fecond table. All acts of piety towards God, are a part of justice; for as Tully faith, Quid aliud est pietas nisi justitia adversus deos? And so our loving God with our whole hearts, our entire and fincere obedience to his will, is a part of natural justice; for thereby we do but render unto God that which is his due from us as we are his creatures. We fee then the whole duty of man, the fearing God and keeping his commandments, is as necessary a part of justice, as the rendering to every man his own is.
- 2. They are most reasonable for us to perform, in that 1. Religion is not only a service of the reasonable faculties which are employed the most in it, the commands of the Scripture reaching the heart most, and the service required being a spiritual service, not lying in meats and drinks, or any outward observations, but in a sanctified temper of heart and mind, which discovers itself in the course of a Christian's life: but 2. The service itself of religion is reasonable; the commands of the gospel are such, as no man's reason which considers

them, can doubt of the excellency of them. All natural worthip is founded from the dictates of nature, all inflituted worthip on God's revealed will; and it is one of the prime dictates of nature, that God mut bruais crially obeyed. Befides, God requires nothing but what is apparently man's interest to do; God provibits nothing but what will distroy him if he doth it; to that the commands of the Scriptures are very just and reafonable.

2. The encouragements are more than proportionable to the difficulty of obedience. God's commands are in themfelves eafy, and most suitable to our natures. What more rational for a creature than to obey his Maker? All the dithculty of religion arifeth from the corruption of nature. Now God, to encourage men to conquer the difficulties arifing thence, buth propounded the throngest motives, and most prevailing arguments to obedience. Such are the confiderations of God's love and goodne's manifested to the world by tending his Son into it to die for finner, and to give them an example which they are to follow, and by his readinets through him to pardon the fine, and accept the perfons of fuch who fo receive him as to walk in him; and by his promites of grate to affift them in the wrolling with the enemies of their falvation. And to all thefe add that glorious and unconceivable reward which God hath promifed to all those who sincerely obey him, and by thefe tings we fee how much the encouragements overweigh the difficulties, and that none can make the least pretence that there is no motive fufficient to down-weigh the troubles which attend the exercise of obelience to the will of God. So that we fee what a peculiar excellency there is in the Scripture, as a rule of life, above all the precepts of mere moralits, the foundation of obedience being laid deeper in man's Oligation to serve his Maker, the practice of obedience being carried higher in those most holy precepts which are in Scripture, the reward of obedience being incomparably greater than what men are able to conceive, much less to promise or bellow.

The excellency of the Scriptures appears as they contain in them a covenant of grace, or the transactions between God and man in order to his eternal happiness. The more memorable any transactions are, the more valuable are any authentic records of them. The Scriptures contain

in them the Magna Charta of heaven, an act of par lon wit; the royal affent of heaven, a proclimation of good-will from God towirls men; and can we then fet too great a value on that wareh cootains all the remarkable pullages between G of and the fouls of mea, 110 or to their tehenty. from the beginning of the world? Can we think, fince there is a God in the world of infinite goodness, that he fhould fuffer all mankind to possib inevitably without his propounding any means for efcaping of ciernal milery? Is God to good to men as to this prefent life; and can we think, if man's foul be immortal, that he would wholly neglect any offer of good to men as to their eternal welfare? Or is it possible to imagine that man should be happy in another world without God's promiting it, and preferibing conditions in order to it? If fo, then this happiness is no free gift of God, unless he hath the bestowing and promifing of it; and man is no rational agent, ualefs a reward suppose conditions to be performed in order to the obtaining it; or man may be bound to conditions which were never required of him; or if they must be required, then there must be a revelation of God's will, whereby he doth require them; and if fo, then there are fome records extant of the transactions between God and man, in order to his eternal happiness: for what reason can we have to imagine that fuch records, if once extant, flould not continue flill, especially fince the fame goodness of God is engaged to preferve fuch records, which at first did crafe them to be indited? Supposing then fuch repords extant formewhere in the world, of these grand transactions between God and men's fou's, our butinets is brought to a period; for want other records are there in the world that can in the least vie with the Scriptures, as to the giving fo just an account of all the transactions between God and men f om the foundation of the world? which gives us all the steps, methods, and ways whereby God hath made known his mind and will to the world, in order to man's eternal felvation? It remains only then that we adore. and magnify the goolness of Gol in making known his will to us, and that we fet a value and effect on the Scriptures, as the only authentic inftrument of that Grand Charter of peace, which God hath revealed in order to man's eternal happiness. Stilling fleet.

### § 177. The prevalence of Christianity an argument of its divinity.

The establishment of the Christian religion among men is the greatest of all miracles. In spite of all the power of Rome; in spite of all the passions, interests, and prejudices of fo many nations; fo many philosophers; so many different religions; twelve poor fishermen, without art, without eloquence, without power, publish and spread their doctrine throughout the world. In spite of a persecution for three centuries, which feemed every moment ready to extinguish it; in spite of continued and innumerable martyrdoms of persons of all conditions, sexes, and countries; the truth in the end triumphs over error, pursuant to the predictions both of the old and new law. Let any one shew some other religion, which has the fame marks of a divine protection.

A powerful conqueror may establish, by his arms, the belief of a religion, which flatters the fenfuality comen; a wife legiflator may gain himself attention and refpect by the usefulness of his laws; a sect in credit, and supported by the civil power, may abuse the credulity of the people: all this is possible: but what could victorious, learned, and superstitious nations fee, to induce them fo readily to Jefus Christ, who promised them nothing in this world but perfecutions and fufferings; who proposed to them the practice of a morality, to which all darling passions must be facrificed. Is not the conversion of the world to fuch a religion, without miracles, a greater and more credible one, than even the greatest of those which, some refule to believe?

# § 178. A fummary of arguments for the truth of the Gojpel.

He that well confiders the force of those arguments which are brought to establish the truth of the Christian religion; that sees how they all (though drawn from different topics) conspire in the most perfect manner to convince the world of the divine original of this faith; would scarce think it possible, that the reason and understanding of mankind should ever oppose it; will therefore conclude there is something more than pure insidelity at the bottom, and that they are not mere scruples of the mind which create so long and violent contention.

If he thinks on the excellency of the

precepts of the Christian religion, he finds them of the fittest nature possible to persuade him to receive it as the contrivance of heaven. They are all so worthy of God, so beneficial and improving to human nature, and so conducive to the welfare and happiness of society.

When he confiders the strange and speedy propagation of this faith through the world, with its triumph over the wit and policy, the force and malice of its formidable enemies; and all this accomplished by such methods, as the reason of mankind would have pronounced the most so lish and absurd: he sees here the overruling hand of God, which alone could give it such assenting fuccesses, by those very ways and means from which its utter consuston was to be expected.

The exact accomplithment of express and unquestionable prophecies, concerning the most remarkable events of the world, is a folemn appeal to all reasonable nature, whether that revelation be not truly divine, which contains such plain and wonderful predictions.

Lattly, The miracles wrought by Jefus Christ and his apostles, in confirmation of this faith and doctrine, are such proofs of the near concern which heaven had therein; that he who considers them, and at the fame time calls Christianity an imposture, must either take pains to avoid knowing the singer of God, when he sees it, or else do infinitely worle, by ascribing the manifelt effects thereof to mean artisce, or diabolical power.

From these topics the truth of Christianity has been so substantially argued, and so clearly proved; that, by all the rules of right reason in use amongst mankind, it is rendered plainly absurd and irrational to reject it. One need not wish to see an adversary reduced to worse extremities, than one of those arguments well managed and pressed home would reduce him to; provided he were kept from excursions, and obliged to return no answers but what were directly to the purpose.

Humphrey Detton.

### § 179. The facts related in the Evangelists may be depended on.

That there was such a person as Jesus of Nazareth, in Galilee, in the time of Tiberius Cæsar, the Roman emperor; that he had a company of poor men for his disciples; that he and his disciples went about the country of Judea, teaching and preach-

ing;

ing; that he was put to death upon the crofs, after the Roman manner, under Pontius Pilate, the Roman governor of Judea; that after his death, his disciples went about into all, or most parts of the then known world, teaching and preaching, that this Jesus was the Christ, the Son of God, and Saviour of the world, and that he was rifen from the dead, and gone into heaven; that in a few years they converted a very great number of people, in all places to this belief; that the profesfors of this belief were called Christians; that they were most cruelly perfecuted, and many thousands of them put to death, and that with the most e equinte torments, for no other reason, but lamife they were Christians; that these patiecutions were feveral times renewed against them, for the space of about three bundred years; and yet, for all this, that the number of Christians daily encreated, and that not only idiots and unlearned men, but great febolies and philosophers were converted to Christianity, even in the times of perfecution; all this, being merely matter of fact, was never yet denied by the greatest enemies of the Christian religion. And, indeed, these things are so abundantly testified by the histories, and other writings of those times; and have been so generally received for truth, as well by the opposers as believers of Christianity, by a conflant, univerfal, and uninterrupted tradition, from those days, even unto this time; that a man may as well deny the truth of any, or of all, the histories of the Archbijhop Synge. world, as of this.

#### § 180. Superiority of the Gospel to all other noritings, an argument of its truth.

To what was it owing, that the Jewish writers thould have fuch lovely and great ideas of God, and fuch just notions of the worship due to him, far above any thing which we meet with in the writings of the greatest lights of the Heathen world; every one of which either patronized idolatry, or fell into errors of worse consequence? Can it be accounted for by the force of natural or human affistances? No, the eminent Philosophers of Athens and Rome equalled them, it is certain, in natural abilities, and exceeded them confessedly in the supertructures of acquired knowledge, and all the advantages of a refined education. It must be therefore owing to some supernatural or divine helps; and none, but he, in whom are contained all the treasures of

wisdom, could have enriched their minds to fuch a degree, and furnished such a vast expence of thought. If Judea was enobled by these exalted notions, of which other nations, who were funk into the dregs of polytheism and idolatry, were destitute; if the kindly dew of heaven defeended on this fleece only, while all the earth around betrayed a want of refreshing moilture; this was the Lord's doing, and ought to be marvellous in our eyes.

Had God revealed himself to the Greeks, or fome other nation famed for their curious researches into every branch of literature, and for the depths of wisdom and policy; those truths, which were so many emanations from the great fountain of light, would have been looked upon as the refult of their penetration, and their own difcoveries: but by communicating his will to a people of no inventive and enterprizing genius, of no enlarged reach and compais of thought; fuch suspicions are avoided, and the proofs of a revelation more conspicuous and illustrious. this may be one reason among others, why, at a time when the rest of the world were bigoted to superstition, idolatry, and a false religion, God singled out this nation, in that point not fo corrupt as others. to be the guardian and depositary of the

If nothing recommended the Scripture but this fingle confideration, that all those collected beams of spiritual light center in it alone, which were widely diffused amidst a variety of treatifes, and lost amidst a crowd of palpable absurdities; even this would be no improbable argument of its divinity: but this is not all: let us, in order to compile an adequate, unerring standard of religious truths, take in all the assistances we can get from all the philosophers in Greece, from Tully at Rome, nay even from Confucius as far as China; and yet, after all, the scheme will be defective in what the Scriptures have recommended, a pure, rational worship of God only, in spirit and in truth, a fulness of pardon for every fin upon repentance, and the nobleness of the rewards hereafter. The love of God will not be required in fo high a degree, as it is in the Scriptures; nor enforced by fo strong a motive as our Saviour's dying for mankind has done; nor our charity and love to the diffressed recommended by so powerful an incentive, as that our Redeemer has made them his representatives, and will place to his own account

Rз

account, whatever was done for his fake to them.

One may challenge any man to produce, before Christianity, among the Heathen world, such a complete system of morality, reaching all the duties of life, without any defect; and full without overflowing, or any redundancy, as the scriptures contain. -And it is needless to tell any man of plain fenfe, that there must be always a proportion between the cause and the effect. Now, if we exclude the divine power, what proportion can we find between the causes of Christianity, and Christianity itfelf? Christianity is a religion, which has difabuted the world, and refeuedit from those many vicious practices, such as the exposing of infants, polygamy, &c. which were univertally defended among the Pagans, and from human facilities, and from innumerable abominible and brutal rites; a religion fo perfective of human nature, and to expressive of the divine; that we want ideas to carry us to a conception of any thing beyond it. And who were the authors or causes of this religion? Why, a fet of men bred up in low life to mean employments, which cramp the native powers of the mind. And can we terioufly think, that a fet of unlettered, unenterprifing men, could open teveral rich mines of truth, which had escaped the laborious researches of the profoundest icholers, and the happy fagacity of the most penetrating wits?

Since therefore every effect must have a competent and proportionable cause; and firee the supposed natural causes and authors of Christianity, considered as mere men, exclusive of divine impiration, were plainly unequal to the task, nor could ever have brought to light fuch doctrines, as exceeded whatever the philosophers before had done; though, laying afide their dregs, we should draw off the very flower and spirit of their writings: it is evident, we must have recourse to some supernatural and adequate cause which interested itself in this affair. And to whom, but to the Father of Light, in whom there is no darkness at all, can we be indebted, that now, persons of the flenderest capacities may view those elevated and beneficial truths in the strongest point of light, which the finest fpirits of the gentile world could not before fully afcertain; that our meanest mechanics, with a moderate share of application, may have juster and fuller notions of God's attributes, of eternal happiness, of every duty respecting their Maker, mankind, and

themselves, than the most distinguished scholars among the Heathens could attain to, after a life laid out in painful refearches?

Seed.

§ 181. Various reasonings in favour of Christianity.

God only knows, and God only can tell, whether he will forgive, and upon what terms he will forgive the offences done against him; what mode of worship he requires; what helps he will afford us; and what condition he will place us in hereafter. All this God actually has told us in the gospel. It was to tell us this, he sent his Son into the world, whose mission was confirmed by the highest authority, by figns from heaven, and miracles on earth; whose life and doctrine are delivered down to us by the most unexceptionable witnesses, who haled their testimony with their blood; who were too curious and increduleus to be themselves imposed upon, too honest and fineere, too plain and aitlefs, to impote upon others.

What then can be the reason that men fi'll refuse to see, and pernit in "loving darkness rather than light?" They will tell you perhaps that it because the gospel is full of incredible mysteries; but our Saviour tells you, and he tells you much truer, that it is "because their deeds are evil." The mysteries and distinculties of the gotpel can be no real objection to any man that confiders what mysterics occur, and what insuperable objections may be started, in almost every branch of human knowledge; and how often we are obliged, in our most important concerns, to decide and to act upon evidence, incumbered with far greater difficulties than any that are to be found in Scripture. If we can admit no religion that is not free from mystery, we must, I doubt, be content without any religion. Even the religion of nature itself, the whole constitution both of the natural and the moral world, is full of mystery; and the greatest mystery of all would be, if, with fo many irrefiftible marks of truth, Christianity should at last prove false. It is not then because the gospel has too little light for these men that they reject it, but because it has too much. For "every one that doth evil hateth the light, neither cometh to the light, lest his deeds should be reproved." The light of the gospel is too prying and inquisitive for It reveals certain things fuch an one. which he could wish to conceal from all the world, and if possible from himself. Nor

is this all; it not only reveals, but it reproves them. It strikes him with an evidence he cannot bear; an evidence not only of its own truth, but of his unworthy conduct. The gospel does indeed offend him; but it is not his under anding, it is his conscience, that is stacked: he could easily credit what it requires him to believe; but he cannot, or rather he will not, practice what it commands him to do.

It is plain that such a man cannot possibly admit a revelation that condemns him; and it is as plain that the man of virtue cannot fourn the hand that is graciously firetched out to reward him. If he is a truly virtuous man, that is, one who fincerely labours to know his duty, and fincerely intends to perform it, he cannot but wish for more light to guide him in the inveltigation, more affiftance to support him in the discharge of it, more happiness to crown his perfeverance in it, than bare reason alone can afford him. This is what all the best and wifest Heathens most ardently defired, what nature has been continually looking out for with the utmost carnestness of expectation. When with a mind thus disposed he sits down to examine the gospel, fuggest to me the least shadow of a reason why he should reject it? He finds in it a religion, pure, holy, and benevolent, as the God that gave it. He finds not only its moral precepts but even its sublimest mysteries, calculated to promote internal fanctity, vital piety, universal philanthropy. He finds it throughout so great and noble, so congenial to the finest feelings, and most generous fentiments of his foul; that he cannot but wish it may be true, and never yet, I believe, did any good man wish it to be true, but he actually found it so. He sees in it every expectation of nature answered, every infirmity supported, every want supplied, every terror dislipated, every hope confirmed; nay, he fees that God "has done exceeding abundantly above all that he could either ask or think;" that he has given him, what reason could hardly have the idea of, eternal happiness in a life to come.

It is not a matter of indifference whether you embrace Christianity or not. Though reason could answer all the purposes of revelation, which is sar, very far from being the case, yet you are not at liberty to make it your sole guide, if there be such a thing as a true revelation. We are the subjects of the Almighty; and whether we will acknowledge it or not, we live, and cannot but live, under his government.

His will is the law of his kingdom. If he has made no express declaration of his will, we must collect it as well as we can from what we know of his nature and our own. But if he has expressly declared his will, that is the law we are to be governed by. We may indeed refuse to be governed by it; but it is at our peril if we do; for if it proves to be a true declaration of his will, to reject it is rebellion.

But to reject or receive it, you may alledge, is not a thing in your own power. Belief depends not on your will, but your And will the righteous understanding. judge of the earth condemn you for want of understanding? No; but he may and will condemn you for the wrong conduct of your understanding. It is not indeed in your power to believe whatever you pleafe, whether credible or incredible; but it is in your power to confider thoroughly, whether a supposed incredibility be real or only apparent. It is in your power to beflow a greater or less degree of attention on the evidence before you. It is in your power to examine it with an earnest defire to find out the truth, and a firm refolution to embrace it wherever you do find it; or on the contrary, to bring with you a heart full of incorrigible depravity, or invincible prepoffestions. Have you then truly and honestly done every thing that is confessedly in your power, towards forming a right judgment of revelation? Have you ever laid before yourself in one view the whole collective evidence of Christianity? The confishence, harmony, and connection, of all its various parts; the long chain of prophecies undeniably compleated in it; the aftonishing and well-attefled miracles that attended it; the perfect fanctity of its author; the purity of its precepts; the fublimity of its doctrines; the amazing rapidity of its progress; the illustrious company of confesiors, faints, and martyrs, who died to confirm its truth; together with an infinite number of collateral proofs and subordinate circumstances, all concurring to form such a body of evidence, as no other truth in the world can shew; such as must necessarily bear down, by its own weight and magnitude, all trivial objections to particular parts? Surely these things are not trifles; surely they at least demand seriousness and attention. Have you then done the gospel this common piece of justice? Have you ever . fat down to consider it with impartiality and candour; without any favourite vice or early prejudice, without any fondness

for applause, or noyelty, or refinement, to missead you? Have you examined it with the same care and diligence, that you would examine a title to an estate? Have you enquired for proper books? Have you read the defences of revelation as well as the attacks upon it? Have you in difficult points applied for the opinion of wife and learned friends; just as you would consult the ablest lawyers when your property was concerned, or the most skilful physicians when your life was at stake? If you can truly fay, that you have done all thefe things; if you have faithfully bestowed on these enquiries, all the leifure and abilities you are master of, and called in every help within your reach, there is little danger of any material doubts remaining upon your mind. St. John's affection for his departed friend did not terminate with his life. It was continued after his crucifixion, to his memory, his character, and his religion. After a long life spent in teaching and fuffering for that religion, he concluded it with a work of infinite utility, the revifal of the three gospels already written, and the addition of his own to fupply what they had omitted. With this view principally he gives us feveral of our Savour's discourses with his disciples, which are no where elfe to be met with; and it is very observable, that these, as well as the many other occurrences of his life, which he introduces as supplemental to the other evangelists, are such as set his beloved mafter in the most amiable and graceful point of view, such as a favourite disciple would be most likely to select, and most disposed to enlarge upon. Of this kind, for inflance, are our Saviour's discourse with the woman of Samaria; the cure of the infirm man at the pool of Bethesda; the · acquittal of the woman taken in adultery; the description of the good shepherd and his sheep; the affecting history of Lazarus; the condescending and expressive act of washing his disciples feet; his inimitably tender and confolatory discourse to them just before his suffering; his most admirable prayer on the fame occasion; and his pathetic recommendation of his sheep to St. Peter after his refurrection. These passages are to be found only in St. John's gospel, and whoever reads them with attention will discover in them plain indications not only of a heaven-directed hand, but of a feeling and a grateful heart, imitten with the love of a

his distinguished kindness, persectly west informed and thoroughly interested, in every tender scene that it describes, soothing itself with the recollection of little domestic incidents and familiar conversations, and tracing out not only the larger and more obvious features of the favourite character, but even those siner and more delicate strokes in it, which would have eluded a less observing eye, or less faithful memory, than those of a beloved companion and friend.—

Our divine lawgiver showed his wisdom equally in what he enjoined, and what he left unnoticed. He knew exactly, what no Pagan philosopher ever knew, where to be silent and where to speak.——

That which principally attracts our notice in St. John's writings, and in his conduct, is, a fimplicity and fingleners of heart, a fervent picty, an unbounded benevolence, an unaffected modefty, humility, meeknefs, and gentlenefs of difp fition. These are evidently the great characteristic virtues that took the lead in his foul, and break forth in every page of his gospel and his cpittles.—To know what friendship really is, we must look for it in that facred repository of every thing great and excellent, the gospel of Christ.—

Our Saviour has affured us that he will confider every real Christian as united to him by cloter ties than even those of friendship. This assurance is given us in one of those noble strains of eloquence which are to common in the Sacred Writings. Our Lord being told that his mother and his brethren flood without, defiring to fpeak with him, he gives a turn to this little incident, perfectly new, and inexpressibly tender and affectionate. " Who is my mother, and who are my brethren? And he stretched forth his hands towards his disciples, and said, Behold my mother and my brethren! For wholoever shall do the will of my Father which is in heaven, the same is my brother, and fister, and mother." Bishop Porteus.

§ 182. Difficulties in the Word of God to be expected, with the duty of examining sts evidence.

found only in St. John's gospel, and whoever reads them with attention will discover in them plain indications not only of a heaven-directed hand, but of a feeling and a grateful heart, smitten with the love of a departed friend, penetrated with a sense of the constitution of nature. And in a like way of reflection it may be added, that he who denies the Scripture to have been from God, upon account of these difficulties, may, for the very same reason, deny the world to have been from him.——

Christianity being supposed either true or credible, it is unspeakable irreverence, and really the most presumptuous rashness, to treat it as a light matter. It can never justly be esteemed of little consequence, till it be positively supposed fasse. Nor do I know a higher and more important obligation which we are under, than that, of examining most feriously into the evidence of it, supposing its credibility; and of embracing it upon supposition of its truth.

Butler.

### § 183. The information the Gospel gives most desirable.

The Christian revelation has such pretences, at least, as may make it worthy of a particular confider tion: it pretends, to come from heaven; to have been delivered by the Son of God; to have been confirmed by undeniable miracles and prophecies; to have been ratified by the blood of Christ and his apostles, who died in afferting its truth: it can shew likewise an innumerable company of martyrs and confessors: its doctrines are pure and holy, its precepts just and righteous; its worship is a reasonable service, refined from the errors of idolatry and superstition, and spiritual, like the God who is the object of it: it offers the aid and affiltance of heaven to the weakness of nature; which makes the religion of the gospel to be as practicable, as it is reasonable; it promises infinite rewards to obedience, and threatens eternal punishment to obstinate offenders; which makes it of the utmost consequence to us foberly to confider it, fince every one who rejects it stakes his own foul against the truth of it.

Look into the Gospel; there you will find every reasonable suspicion of nature, nay every reasonable suspicion of nature, cleared up, and confirmed, every difficulty answered and removed. Do the present circumstances of the world lead you to suspect that God could never be the author of such corrupt and wretched creatures as men now are? Your suspicions are just and well sounded. "God made man upright;" but through the temptation of the devil sin entered, and death and destruction followed after.

Do you suspect, from the success of virtue and vice in this world, that the providence of God does not interpose to protect the righteous from violence, or to punish the wicked? The suspection is not without ground. God leaves his best fervants here to be tried oftentimes with affliction and sorrow, and permits the wicked to stourish and abound. The call of the gospel is not to honour and riches here, but to take up our cross and follow Christ.

Do you judge, from comparing the prefent state of the world with the natural notion you have of God, and of his justice and goodness, that there must needs be another state in which justice shall take place? You reason right; and the gospel confirms the judgment. God has appointed a day to judge the world in rightcousness: then those who mourn shall rejoice, those who weep shall laugh, and the persecuted and afflicted servants of God shall be heirs of his kingdom.

Have you sometimes misgivings of mind? Are you tempted to mistrust this judgment, when you fee the difficulties which furround it on every fide; fome which affect the foul in its separate state, fome which affect the hody in its state of corruption and dissolution? Look to the gospel: there these difficulties are accounted for; and you need no longer puzzle yourfelf with dark questions concerning the state, condition, and nature of separate fpirits, or concerning the body, however to appearance loft and deflroyed; for the body and foul shall once more meet to part no more, but to be happy for ever. In this case the learned cannot doubt, and the ignorant may be fure, that 'tis the man, the very man himfelf, who shall rife again: for an union of the fame foul and body is as certainly the refloration of the man, as the dividing them was the destruction.

Would you know who it is that gives this assurance? "Tis one who is able to make good his word: one who loved you fowell asto die for you; yet one too great to be held a prisoner in the grave. No; he rose with triumph and glory, the first-born from the dead, and will in like manner call from the dust of the earth all those who put their trust and considence in him.

But who is this, you'll fay, who was subject to death, and yet had power over

death? How could so much weakness and so much strength meet together? That God has the power of life, we know; but then he cannot die: that man is mortal, we know; but then he cannot give life.

Confider; does this difficulty deserve an answer, or does it not? Our blessed Saviour lived among us in a low and poor condition, exposed to much ill treatment from his jealous countrymen: when he fell into their power, their rage knew no bounds: they reviled him, infulted him, mocked him, scourged him, and at last nailed him to a cross, where by a shameful and wretched death he finished a life of forrow and affliction. Did we know no more of him than this, upon what ground could we pretend to hope that he will be able to fave us from the power of death? We might fay with the disciples, " We trusted this had been he who thould have faved Ifrael;" but he is dead, he is gone, and all our hopes are buried in his grave.

If you think this ought to be answered, and that the faith of a Christian cannot be a reasonable fauh, unless it be able to account for this feeming contradiction; I befeech you then never more complain of the gospel for furnishing an answer to this great objection, for removing this flum-bling-block out of the way of our faith. He was a man, and therefore he died. He was the Son of God, and therefore he rose from the dead, and will give life to all his true disciples. He it was who formed this world and all things in it, and for the lake of man was content to become man, and to tafte death for all, that all through him may live. This is a wonderful piece of knowledge which God has revealed to us in his gospel; but he has not revealed it to raife our wonder, but to confirm and establish our faith in him to whom he hath committed all power, " whom he hath appointed heir of all things."

Had the gospel required of us to expect from Christ the redemption of our souls and bodies, and given us no reason to think that Christ was endowed with power equal to the work, we might justly have complained; and it would have been a standing reproach, that Christians believe they know not what. But to expect redemption from the Son of God, the refurrection of our bodies from the same hand which at first created and formed them, are rational and well-founded acts of faith;

and it is the Christian's glory, that he knows in whom he has believed.

That the world was made by the Son of God, is a proposition with which reason has no fault to find: that he who made the world should have power to renew it to life again, is highly confonant to reason. All the mystery lies in this, that so high and great a person should condescend to become man, and subject to death, for the sake of mankind. But are we fit persons to complain of this transcendent mysterious love? or, does it become us to quarrel with the kindness of our blessed Lord towards us, only because it is greater than we can conceive? No; it becomes us to blefs and to adore this exceeding love, by which we are faved from condemnation, by which we expect to be refcued from death; knowing that the power of our bleffed Lord is equal to his love, and that he is " able to habdue all things to himfelf."

§ 184. Christ and Mahomet compared.

Go to your natural religion, lay before her Mahomet and his disciples arrayed in armour and in blood, riding in triumph over the spoils of thousands and ten thoufands, who fell by his victorious sword. Show her the cities which he fet in flames, the countries which he ravaged and destroyed, and the miserable distress of all the inhabitants of the earth. When she has viewed him in this scene, carry her into his retirements, shew her the prophet's chamber, his concubines and wives, and let her fee his adulteries, and hear him alledge revelation and his divine commission to jullify his lufts and his oppressions. When the is tired with this prospect, then shew her the blessed Jesus, humble and meek, doing good to all the fons of men, patiently instructing the ignorant and the porverse. Let her see him in his most retired privacies, let her follow him to the mount and hear his devotions and fupplications to God. Carry her to his table, to view his poor fare and hear his heavenly discourse. Let her see him injured but not provoked; let her attend him to the tribunal, and confider the patience with which he endured the scoffs Lead and reproaches of his enemies. her to his cross, and let her view him in the agonies of death, and hear his last prayer for his persecutors, " Father, forgive them, for they know not what they do." When natural religion has viewed both, ask which is the prophet of God?——But her answer we have already had, when the saw part of this scene through the eyes of the Centurion who attended at the cross; by him the said, "Truly this was the Son of God."

Sherlock.

§ 185. The absurdity and madness of infidelity.

If a person that had a fair estate in 1cversion, which in all probability he would speedily be possessed of, and of which he might reasonably promise to himself a long and happy enjoyment, thould be affured by fome skilful physician, that in a very fhort time he would inevitably fall into a difease which would so totally deprive him of his understanding and memory, that he should lofe the knowledge of all things without him, nay all conscioutness and fense of his own person and being: if, I fay, upon a certain belief of this indication, the man should appear overjoyed at the news, and be mightily transported with the discovery and expectation, would not all that faw him be aftonished at such behaviour? Would they not be forward to conclude, that the diffemper had feized him already, and even then the miferable creature was become a mere fool and an idiot? Now the carriage of our atheifts is infinitely more amazing than this; no dotage fo infatuate, no phrenfy fo extravagant as theirs. They have been educated in a religion that instructed them in the knowledge of a Supreme Being? a Spirit most excellently glorious, superlatively powerful, and wife, and good, Creator of all things out of nothing; that hath endued the fons of men, his peculiar favourites, with a rational spirit, and hath placed them as spectators in this noble theatre of the world, to view and applaud these glorious scenes of earth and heaven, the workmanthip of his hands; that hath furnished them in general with a sufficient store of all things, either necessary or convenient for life; and, particularly to such as fear and obey him, hath promited a supply of all wants, a deliverance and protection from all dangers; that they that seek him, shall want no manner of thing that is good. Who, besides his munisicence to them in this life, " hath so loved the world, that he fent his only-begotten Son, the express image of his substance," and partaker of his eternal nature and glory, to bring life

and immortality to light, and to tender them to mankind upon fair and gracious terms; that if they submit to his easy yoke, and light burden, and observe his commandments, which are not grievous, he then gives them the promise of eternal falvation; he hath referved for them in heaven " an inheritance incorruptible, and undefiled, and that fadeth not away;" he hath prepared for them an unspeakable, unconceivable perfection of joy and blifs, things that "eye hath not feen, nor ear heard, neither have entered into the heart of man." What a delightful ravishing hypothesis of religion is this! And in this religion they have had their education. Now let us suppose some great professor in atheifm to fuggelt to fome of thefe men, that all this is mere dream and imposture; that there is no fuch excellent being, as they suppose, that created and preserves them; that all about them is dark fenfeless matter, driven on by the blind impulses of fatality and fortune; that men first sprung up, like mushrooms, out of the mud and flime of the earth; and that all their thoughts, and the whole of what they call foul, are only the various action and re-percussion of small particles of matter, kept a-while a moving by fome mechanism and clock-work, which finally must cease and perish by death. If it be true then (as we daily find it is) that men listen with complacency to these horrid suggestions; if they let go their hope of everlafting life with willingness and joy; if they entertain the thoughts of final perdition with exultation and triumph; ought they not to be esteemed most notorious fools, even destitute of common sense, and abandoned to a calloufness and numbress of foul?

What then, is heaven itself, with its pleasures for evermore, to be parted with so unconcernedly? Is a crown of righteousness, a crown of life, to be surrendered with laughter? Is an exceeding and eternal weight of glory too light in the balance against the hopeless death of the atheid, and utter extinction?

\*\*Rentley.\*\*

§ 186. The books of the New Testament could not have been forged in the dark ages.

Some adversaries of the Christian doctrine have been so bold and shameless as to deny in a lump the antiquity claimed by each of the New Testament books, i e. to deny that they were written in the first century, by the writers to whom they are Toland is charged with having ascribed. betrayed a suspicion of this fort in his life of Milton: but in his Amyutor, or defence of the life of Milton, he disavows his having meant the writings, which we receive as inspired, by the words upon which the charge is grounded. But an anonymous Italian, ventured, in a letter to Le Clerc, to throw out the following suspicion: It is possible that in the fifth century, about the time when the Goths over-ran Italy, four men of superior understanding might unite in inventing and forging the writing, of the apossles, as well as of the fathers, and fallify fome pullages of Josephus and Suetonius, in order to introduce into the world, by the means of this fraud, a new and more rational religion.

These four men, who must have been very conversant in the Jewith theology, and Heathen antiquity, are here charged with the immense labour of forging the writings of the fathers, and of inventing that diversity of style and fertiment, by which they were diffinguished from each other. But it would not have been fife for our feeptic, to attribute to them a lefs laborious enterprize. His credulity, which in the prefent age men commonly affect to call by the name of unbelief, would have been shocked by the testimony of the fathers, had he confined his imputation of forgery to the apostles. Le Clerc returned a strong and sensible answer to his letter, in his Bibleotheque ancienne et moderne, tom xxi. p. 440.

However, there are very few unbelievers among Christians, who have thrown out this fuspicion against the writings of the apostles; and indeed it is so manifestly groundless, that whoever does throw it out, must be impudently invincible by truth and argument. For,

1. The style of the apostles is so different, that their epidles could not without great difficulty be written by the same hand. St. Paul is uniform in all his epiftles; his manner is plainly different from that of other writers, and very difficult to be imitated. At least all the epistles to which his name is prefixed are the work of one hand. St. John again is totally different from him; and whoever writes in a eyle like that of St. Paul, cannot imitate the fl. le of St. John.

. In order to invent writings, and af-

cribe them to persons who lived some centuries ago, it is necessary to have an understanding and julgment, and a knowledge of hillory and antiquity beyond the powers of man, elfe the inventor mult commit fiequent errors. Now the writings of the New Toftament are unexceptionable in this The better we are acquainted refrect. with Iewish and Heathen antiquity, with the hiltory of the Romans, and the ancient geography of Paletline, the face of which country was totally changed by the conqueits of the Romans; the more clearly we discern their agreement with the New Tellament, even in some circumstruces so minute, that probably they would have ofcaped the nod outful and most encounspect impollure. The commentators abound with observations from antiquits, which may ferve to exemplify this; the learned Di. Lardner in particular has done emment fervice in this respect.

3. The most ancient fathers, even those who were contemporary with the apolles, Clemens Romanus, for inflance, and Ignatius, quote the books of the New Teffament, and afcribe them to the apostles. We must ther fore either suppose, with the Italian abovementioned, that all the writings of the fithers for some centuries were torged: a tutorcion which may be more effectually removed by medicinal applications than by the force of argument; or we must admit the books of the New Tellament, which they quote, to be in fict as ancient as they are pretended to

4. There are fome very old vertions of the New Testament; the Latin at least, feems to have been done to early as in the first century after the birth of Christ; and it is highly probable that the Syriac version is not less recient.

Is it possible to suppose that some centurics after Christ, when the Hebrew tongue was not understood in the western church, either fome blind chance proved fo fortunate, or the curning of fome Italian impostors was attended with fo much thought and learning, as to add to the credibility of the writings forged for the apostles, by an extempore Latin version full of Hebrew idioms, and by a Syriac interpretation? not to mention the Gothic translation of Ulphilas, which, besides, was done before the irruption of the Goths into Italy.

But if these writings are as ancient as they

they are pretended to be, they certainly carry with them an undeniable and indelible mark of their divine original: for the epifles refer to certain miracular gifts, which are faid to have been imported by the imposition of hands, and to have been conferred by God, in confirmation of the onal and written doctance of the aposites. If these epifles are appeared and ground, and written by St. Plat to the churches to which they are additeded, then note can deay that miracl. The matter is important enough to merit further attention.

St. Pial's first epostle to the Thessalonews is addressed to a church which was hardly founded, to which he had not presched the gosp I more than three Sabbath days, Acts xvii. 2. He had been obliged to quit this church abruptly, on account of an impending perfecution, ver. 10, and being apprenentive left the part curion thould caute fome to waver in the fath, he lays before them, in the three fe I chapters, arguments to prove the truth of his goipel. The first of thele unuments is, that which confirmed his doctrine at Thebelonica, chap. i. 6-10. " For our golpel," favs h , " came not to you in word only, but also in power, and in the Holy Ghoff," Power is an expression mide use of else where in the New Telbament to figuity manacolous acts. Admit him cale to bey been a radional man, and we could be him to write this to an int at careb, if no member thereof had eve. teen a miracle of his, or received a manculous gift, of the I'dly Ghoft, by the imposition of his hands.

He appeals to the same proof, in his first epiffle to the Counthians, who were extremely distatisfied with him and his manner of teaching, 1 Cor. ii. 4. " My speech, and my preaching, was not with enticing words of man's wisdom, but in demonstration of the spirit, and of power." The spirit is a word he elsewhere uses to fignify the extraordinary gifts of the " fpirit," fuch as the gift of tongues, &c .-The Hebrews were on the point of falling off from Christianity, yet he confidently tells them how great their condemnation will be, if they deny a doctrine, to which God had borne "witness with signs and wonders, and gifts of the Holy Ghost." Heb. xi. 4. and chap. vi. 4, 5. He remonstrates to them, that they had been " made partakers of the Holy Ghost, and

had tasted the powers of the world to In like manner he endeavours come." to convince the Galatians, who had deferted the pure doctrine of the gospel, that the law of Mofes was abolished; by putting to them this quellion, " Received ye the spirit by the works of the law, or by the hearing of faith?" Gal. in. 2. Is it poshole, that a deceiver of a found under landing, such as St. Paul's epittles shew him to have peak ned, thould refer the enemi e of his religion, of his office, and of the doctimes which di tinguished him from other feets of his religion, not only to the miracles which he pretends to have wrought, but to miraculous gifts which he pretends to have communicated to them, if they had it in their power to answer, that they knew nothing of their miraculous gifts?

In the 12th, 13th, and 14th chapters of the fift to the Coundhams, he reprehends the abuse of certain miraculous gifts of thomas, and preferibes a better application of them. If he actually wrote this to the Corinthians, and they had no miraculous gifts, no knowledge of foreign tongues, then St. Paul is not an impossion but a madman, which, I apprehend, is not the charge of unbelievers against him.

But if these initiacles be time, then the doctrine, and the book in confirmation of which they were wrought, are divine; and the more certainly fo, as there is no room for deception. A juggler may perfuade me, that he performs miracles, but he can never perfuade me, and a whole body of men of found intellects, that he has communicated to us the gift of working miracles, and speaking foreign languages, unless we can work the miracles, and speak the languages.

Michaelir.

## § 187. The Extent, Object, and End of the profiletic scheme.

If we look into the writings of the Old and New Testament we find, first, That prophecy is of a prodigious extent; that it commenced from the lajse of man, and reaches to the confummation of all things; that, for many ages, it was delivered darkly, to few persons, and with large intervals from the date of one prophecy to that of another; but, at length, became more clear, more frequent, and was uniformly carried on in the line of one people, separated from the rest of the world, among other reasons assigned, for this principality, to be the repository of the Divine One...; that, with

fome intermission, the spirit of prophecy subsisted among that people, to the coming of Christ; that he himself and his apostles exercised this power in the most conspicuous manner; and lest behind them many predictions, recorded in the books of the New Testament, which profess to respect very distant events, and even run out to the end of time, or, in St. John's expression, to that period, "when the mystery of God shall be perfected."

2. Further, besides the extent of this prophetic scheme, the dignity of the person, whom it concerns, deserves our consideration. He is described in terms, which excite the most august and magnificent ideas. He is spoken of, indeed, sometimes as being " the feed of the woman," and as the fon of man;" yet fo as being at the fame time of more than mortal extraction. He is even represented to us, as being tuperior to men and angels; as far above all principality and power, above all that is accounted great, whether in heaven or in earth; as the word and wisdom of God; as the eternal Son of the Father; as " the " heir of all things, by whom he made the " worlds;" as " the brightness of his glory, " and the express image of his person."

We have no words to denote greater ideas, than these; the mind of man cannot elevate itself to nobler conceptions. Of such transcendent worth and excellence is that Jesus said to be, to whom all the pro-

phets bear witness!

\* 3. Lastly, the declared purpose, for which the Messiah, presigured by so long a train of prophecy, came into the world, corresponds to all the rest of the representation. It was not to deliver an oppressed nation from civil tyranny, or to erect a great civil empire, that is, to atchieve one of those acts, which history accounts most heroic. No; it was not a mighty state, a victor people—

Non res Romanæ perituraque regna-

that was worthy to enter into the contemplation of this divine person. It was another and far sublimer purpose, which he came to accomplish; a purpose, in comparison of which, all our policies are poor and little, and all the persormances of man as nothing. It was to deliver a world from ruin; to abolish sin and death; to purify and immortalize human nature; and thus, in the most exalted sense of the words, to be the Saviour of all men, and the blessing of all nations.

There is no exaggeration in this account. I deliver the undoubted fense, if not always the very words of Scripture.

Confider then to what this representation amounts. Let us unite the several parts of it, and bring them to a point. A spirit of prophecy pervading all time—characterizing one person, of the highest dignity—and proclaiming the accomplishment of one purpose, the most beneficent, the most divine, that imagination itself can project.—Such is the scriptural delineation, whether we will receive it or no, of that occonomy,

which we call prophetic!

And now then (if we must be reasoning from our ideas of sit and right, to the rectitude of the divine conduct) let me ask, in one word, whether, on the supposition that it should ever please the moral Governor of the world to reveal himself by prophecy at all, we can conceive him to do it, in a " manner," or for "ends," more worthy of him? Does not the "extent" of the scheme correspond to our best ideas of that infinite Being, to whom all duration is but a point, and to whose view all time is equally prefent? Is not the "object" of this fcheme, " the Lamb of God that was flain from the foundation of the world," worthy, in our conceptions, of all the honour that can be reflected upon him by fo vast and splendid an occonomy? Is not the "end" of this scheme such as we should think most fit for fuch a scheme of prophecy to predict, and for so divine a person to accomplish?

You see, every thing here is of a piece; all the parts of this dispensation are asso-, nishingly great, and perfectly harmonize with each other.

Hurd.

§ 188. Our philosophical principles must be learnt from the book of Nature, our religious from the book of Grace.

In order to attain right conceptions of the contlitution of Nature, as laid before us in the volume of Creation, we are not to affume hypotheses and notions of our own, and from them, as from established principles, to account for the several phænomena that occur; but we are to begin with the effects themselves, and from these, diligently collected in a variety of well-cholen experiments, to investigate the causes which produce them. By such a method, directed and improved by the helps of a sublime geometry, we may reasonably hope to arrive at certainty in our physical enquiries, and on the basis of fact and demonstration may erect a system of the world,

that

that shall be true, and worthy of its author. Whereas, by pursuing a contrary path, our conjectures at the best will be precarious and doubtful; nor can we ever he fure that the most ingenious theories we can frame are any thing more than a wellinvented and confistent fable.

With the same caution we are to proceed in examining the constitution of Grace, as unfolded to our view in the volume of Redemption. Here also we are not to excogitate conceits and fancies of our own, and then diffort the expressions of holy writ, to favour our misshapen imaginations; but we are first to advert to what God has actually made known of himself in the declarations of his word; and from this, carefully interpreted by the rules of found criticism and logical deduction, to elicit the genuine doctrines of revelation. By fuch an exertion of our intellectual powers, affifted and enlightened by the aids which human literature is capable of furnishing, we may advance with eafe and fafety in our knowledge of the divine dispensations, and on the rock of Scripture may build a fystem of religion, that shall approve itself to our most enlarged understandings, and be equally fecured from the injuries and infults of enthufialts and unbelievers. On the other hand, previously to determine from our own reason what it is fit for a being of infinite wildom to do, and from that pretended fitness to infer that he has really done it, is a mode of procedure that is little fuited to the imbecility of our mental faculties, and still less calculated to lead us to an adequate comprehension of the will or works of Heaven. Hallifax.

#### \$ 189. Comparison between Heathenism and Christianity.

The apostle saith, " After the world by wisdom knew not God, it pleased God " to fave believers by the foolishness of " preaching." That is to fay, fince the mere systems of reason were eventually insufficient for the salvation of mankind; and fince it was impossible that their speculations should obtain the true knowledge of God; God took another way to instruct them: he revealed by preaching of the gospel what the light of nature could not discover, so that the system of Jesus Christ, and his apostles, supplied all, that was wanting in the fystems of the ancient philosophers.

But, it is not in relation to the ancient

philosophers only, that we mean to confider the proposition in our text; we will examine it also in reference to modera philofophy. Our philosophers know more than all those of Greece knew: but their science, which is of unspeakable advantage, while it contains itself within its proper sphere, becomes a source of errors, when it is extended beyond it. Human reason now lodgeth itself in new entrenchments. when it refuteth to submit to the faith. It even puts on new armour to attack it. after it hath invented new methods of felfdesence. Under pietence that natural science hath made greater progress, revela-tion is despised. Under pretence that modern notions of God the Creator are purer than those of the ancients, the yoke of God the Redeemer is broken off. We are going to employ the remaining part of this discourse in justifying the proposition of St. Paul, in the fenfe that we have given it: we are going to endeavour to prove, that revealed religion hath advantages infinitely fuperior to natural religion: that the greatoft geniusses are incapable of discovering by their own reason all the truths necessary to falvation: and that it displays the goodness of God, not to abandon us to the uncertainties of our own wifdom, but to make us the rich present of revelation.

We will enter into this discussion, by placing on the one fide a philosopher contemplating the works of nature: on the other, a disciple of Jesus Christ receiving the doftrines of revelation. To each we will give four subjects to examine: the attributes of God: the nature of man: the means of appealing the remorfe of confeience: and a future state. From their judgments on each of these subjects, evidence will arise of the superior worth of that revelation, which fome minute philosophers affect to despise, and above which they prefer that rough draught, which they sketch out by their own learned specula-

tions.

1. Let us consider a disciple of natural religion, and a disciple of revealed religion, meditating on the attributes of God. When the disciple of natural religion confiders the symmetry of this universe; when he observes that admirable uniformity. which appears in the fuccession of seasons, and in the constant rotation of night and day; when he remarks the exact motions of the heavenly bodies; the flux and reflux of the fea, so ordered that billows, which fivell

swell into mountains, and feem to threaten the world with an univerfal deluge, break away on the shore, and respect on the beach the command of the Creator, who faid to the fea. " hitherto shalt thou come, but no further; and here shall thy proud waves be flayed." when he attends to all thefe marvellous works, he will readily conclude. that the Author of nature is a being powerful and wife. But when he observes winds, tempetts, and earthquakes, which feem to threaten the reduction of nature to its primitive chaos; when he fees the feet overflow its banks, and built the enormous mole, that the induffix of mankind had raited; his speculations will be perpleyed, he will imagine, he fees characters of infirmity among to many proofs of creative perfection and power.

When he thinks, that God, having enriched the habitable world with innumerable production, of infinite worth to the inhabitant, hath placed man here as a fovereign in a tuperb pilace; when he confiders how admirably God hath proportioned the divers parts of the creation to the conflruction of the human body, the air to the lunge, aliments to the different humours of the body, the medium, by which objects are rendered visible, to the even, that, by which founds are communicated, to the ears, when he remark, how God bath connected man with his own species, and not with animals of another kind, how he hath diffubuted talents, to that four requiring the affiftance of others, all flould be muta ally united together; how he hath bound men together by invihile ties, to that one cannot fee another in pain without a fympathy, that inclines him to where him when the difficults of natural religion meditates on these grand subjects, he concludes that the Author of nature is a beneficent being. But, when he fees the innumerable miferies, to which men are subject; when he finds, that every creature, which contributes to support, contributes at the same time to defiroy us; when he thinks, that the air, which ashits respiration, conveys epidemical difeates, and imperceptible poifons; that aliments, which nourith us, are often our bane; that the animals, that ferve us, often turn favage against us; when he observes the perfidiousness of society, the mutual industry of mankind in tormenting each other; the arts, which they invent to deprive one another of life; when he attempts to reckon up the innumerable maladies, that confume us; when he confiders death, which bows the loftiest heads. diffolves the firmell cements, and fubverts the beil founded fortunes; when he makes these reslections, he will be apt to doubt, whether it be goodness, or the contrary attribute, that inclineth the Author of our being to give us existence. When the difciple of natural religion reads those reverse, of fortune, of which history furnish eth a great many examples; when he feeth tyrant, fall from a pinnacle of grandeur; wicked men often punished by their own wieledness, the avaircious punished by the objects of their avarice, the ambitious by the k of their ambition, the voluptuous by thole of their voluptuoufness; when he perceives, that the laws of virtue are to effential to public happiness, that without them for ety would become a banditti, at leaft, that society is more or less happy, or interable, according to its looter or Closer attachment to virtue; when he confider all thefe caies, he will probably conclude, that the Author of the universe is a jull and boly being. But, when he fees tyranny effablished, vice enthroned, humility in confusion, pride wearing a crown, and love to bolineds fometimes expoling people to many and intolerable calamities; he will not be able to juilify God, amidit the duknets in which his equity is in volved in the government of the world.

But, or all these mysleries, can one be proposed, which the Gospel deth not uniold; or, at least, is there one, on which it doth not give us some principles, that are fulfill sent to conciliate it with the perfections of the Creator, how opposite soever it may be m. 2

Do the diforders of the world puzzle the disciple of natural religion, and produce difficulties in his mind? With the principles of the Gofpel I can folve them all. When it is remembered, that this world hath been defiled by the fin of man, and that he is, therefore, an object of divine difpleature; when the principle is admitted, that the world is not now what it was, when it came out of the hands of God; and that in comparison with its pristine state, it is only a heap of ruins, the truly magnificent, but actually ruinous heap of an edifice of incomparable beauty, the rubbish of which is far more proper to excite our grief for the loss of its primitive grandeur, than to fuit our prefent wants. When these reflections are made,

tan we find any objections, in the diforders of the world, against the wildom of our Creato?

Are the miteries of man, and is the fital necessary of death, in contemplation? With the principles of the Gotpel, I tolve the dimentues, which there tad objects produce on the mind of the disciple of natural religion. If the principles of Childrent, be al mitted, if we allow, that the affrict one of o odmen are promable to them, and that, in many cites, prosperity would be fatil to them; if we grant, that the prefent is a transitory flate, and that the momentary into wall be proceeded by in immortal date; the recoll of the many finilar tector, waich the Crofpel abundantly declared; cin we find, in human miteries, and to the , cease of dying, objections against the solid of the Creator?

Do the prosperities of bad men, and ad-God With the principles of the Gotpel, I cm remove all the du culties, which their different conditions produce in the rand of the disciple of natural religion. If the principles of the Gofpel be admitted, if we be perfuided, that the tyrant, whole protonity afterniheth us, fulfils the countel of God; if eccleficalical hillory anure a that Herods, and Pilates, themfelses concubuted to the establishment of that ver, Cambanuty, which they meant to I flow, especially, it we admit a flate of fath e rewards and punishments; can the obscurity, in which providence hata Lea pleated to wrap up fome of its defrom , rate doubts about the judice of the Junu ?

In regard, then, to the first object of Cortemplation, the perfection of the nature of God, revealed religion is infinitely superior to natural religion; the disciple of the first religion is infinitely water than the pupil of the last.

II. Let us confider these two disciples examining the nature of man, and endeasouring to know themselves. The disciple of natural religion cannot know mankind; he cannot perfectly understand the nature, the obligations, the duration of man.

1. The disciple of natural religion can only imperfectly know the nature of man, the difference of the two substances, of which he is composed. His reason, indeed, may speculate the matter, and he may perceive that there is no relation between motion and thought, between the dissolution of a few sibres and violent sensations of pain, between an agitation of humours and pro-

found reflections; he may rafer from two different enects, that the enought to be two different causes, a cause of motion, and a cause of femation, a cause of agriculture, and a cause of restecting, that there is body, and that there is

Cuit. But, in my opinion, those philesophers, who are best acquimted with the nature of mm, cannot account for two difficulties. that are propoted to them, when, on the tocre principles of reason, they affirm, that man is composed of the two tubilances of matter and mind. I all, first, Do ve to well understand matter, are your ideas of it to complete, that we can affirm, for certem, it is fully public of nothing more than t'a , or that? Are ye fare that it implies ale nareliction to effirm, it sath one property, which hath escaped your observation? And, consequently, can ye actually demonstrate, that the cil see of matter is incompatible with thought? Since, when ve cannot differ or the union of an attribute with a jubiect, we inflintly conclude, that two ittribute, which feem to you to have no relation, suppose two different subjects: and time ye conclude that extent and thought compote two different subjects, body and foul, because ve can discover no n itur direlation between extent and thought; if I difcover a third attribute, which appears to me entirely unconnected with both extent and thought, I thall have a right, in my turn, to admit three fubjects in man; matter, which is the fubject of extent; mind, which is the fulgect of thought; and a third Jubicel, which belongs to the attribute, that feems to me to have no relation to either matter or mind. Now I do knew fuch an attribute: but I do not know to which of your two fubicats I ought to refer it: I me in fenfation. I find it in my nature, and I experience it every hour. But I am altogether at a lofs, whether I ought to attribute it to body, or to spirit. I perceive no more natural and necessary relation between fenfation and motion, than between fentation and thought.

There are, then, on your principle, three substances in man, one the substratum, which is the subject of extension; another, which is the subject of thought; and a third, which is the subject of subject of substance in man, which is known to me very imperfectly, to which all these attributes belong, and which are united together, although I am not able to discover their relation.

Revealed

Revealed religion removes these difficulties, and decides the question. It tells us, that there are two beings in man, and, if I may express myself so, two different men, the material man, and the immaterial man. The Scriptures speak, on these principles, thus; " The duft shall return to the earth as it was," this is the material man: " The spirit shall return to God who gave it," this is the immaterial man. " Fear not them which kill the body," that is to fay, the material man: " fear him, which is able to deflroy the foul," that is, the immaterial man. "We are willing to be ablent from the body," that is from the material man: " and to be present with the Lord," that is to say, to have the immaterial man difembodied. " They floned Stephen," that is, the material man: " calling upon God, and faying, Lord Jefus, receive my fpirit," that is to fay, receive the immaterial man.

2. The disciple of patural religion can obtain only an imperfect knowledge of the obligations, or duties of man. Netweal religion may indeed conduct him to a certain point, and tell him, that he ought to love his benefactor, and various fundar maxims. But is natural religion, think ye, fufficient to account for that contrariety, of which every man is confcious, that oppofition between inclination and obligation? A very folid argument, I grant, in favour of moral rectitude ariteth from obterving, that, to whatever degree a man may carry his fin, whatever efforts he may make to eradicate those feeds of virtue from his heart, which nature has fown there, he cannot forbear venerating virtue, and iccoiling at vice. This is certainly a proof, that the Author of our being meant to forbid vice, and to enjoin virtue. But is there no room for complaint? Is there nothing specious in the following objection? As, in spite of all my endeavours to destroy virtuous dispositions, I cannot help respecting virtue, ve infer, that the Author of my being intended I should be virtuous: so, as, in spite of all my endeavours to eradicate vice, I cannot help loving vice, have I not reason for inferring, in my turn, that, the Author of my being defigned I thould be vicious; or, at least, that he cannot justly impute guilt to me for performing those actions, which proceed from some principles, that were born with me? Is there no shew of reason in this famous sophism? Reconcile the God of nature with the God of religion. Explain how the

God of religion can forbid what the God of nature infpires; and how he, who follows those dictates, which the God of nature inspires, can be punished for so doing by the God of religion.

The Gospel unfolds this myslery. It attributes this fied of corruption to the depravity of in time. It attributes the respect, that we feel for virtue, to the remains of the image of God, in which we were formed, and which can never be entirely effaced. Because we were born in fin, the Gospel concludes, that we ought to apply all our attentive endeavours to enalicate the feeds of corruption. And, because the image of the Cre (tor 18 partly erasted from our hearts, the Gospel concludes, that we ought to give ourselve, wholly to the retracing of it, and so to answer the excellence of our extraction.

3. A difciple of natural religion can obtain only an imperfect knowledge of the duration of man, whether his feul be immortal, or whether it be involved in the ruin of matter. Reafon, I allow, advanceth fome folid arguments in proof of the doctrine of the immortality of the foul. For what necessity is there for supposing, that the foul, which is a spiritual, indivifible, and immaterial being, that conflitutes a whole, and is a distinct being, although united to a portion of matter, fhould ceafe to exist, when its union with the body is doblved? A positive act of the Creator is necessary to the annihilation of a fubliance. The annihilating of a being, that fublish, requireth an act of power fimilar to that, which gave it existence at first. Now, far from having any ground to believe, that God will cause his power to intervene to annihilate our fouls, every thing, that we know, perfundeth us, that he himfelf hath engraven characters of immertality on them, and that he will preferve them for ever, Enter into thy heart, frail creature! fee, feel, confider those grand ideas, those immortal designs, that thirst for existing, which a thousand ages cannot quench, and in these lines and points behold the finger of thy Creator writing a promise of immortality to thee. But, how folid soever these arguments may be, however evident in themselves, and striking to a philosopher, they are objectionable, because they are not popular, but above vulgar minds, to whom the bare terms, spirituality and existence, are entirely barbarous, and convey no meaning at all.

Moreover, the union between the operations of the foul, and those of the body. is so close, that all the philosophers in the world cannot certainly determine, whether, the operations of the body ceafing, the operations of the foul do not ceale with them. I see a body in perfect health, the my I, therefore, is found. The fame body is difordered, and the mind is disconcerted with it. The brain is filled, and the foul is instantly confuted. The brifker the circulation of the blood is, the quicker the ideas of the mind are, and the more extentive its knowledge. At length death comes, and diffolves all the parts of the body; and how difficult is it to perfunde one's felf, that the foul, which was affected with every former motion of the body, will not be diffipated by its entire diffo-

Are they the vulgar only, to whom philolophical arguments for the immortality of the foul appear deficient in cyclence? Do not superior geniuses require, at least, an explanation of what rank ye assign to beaffe, on the principle, that nothing expable of ideas and conceptions, can be involved in a diffolution of matter? Nobody would venture to affirm now, in an affembly of philotophers, what was some time ago maintained with great warmth, that beats are mere felf-moving machines. Experience feems to demonstrate the falfity of the metaphyfical reasonings, that have been proposed in favour of this opinion; and we cannot observe the actions of beatls, without being inclined to infer one of these two consequences: either the spirit of man is mortal, like his body; or the fouls of beatls are immortal, like those of mankind.

Revelation diffipates all our obscurities, and teacheth us clearly, and without a may-be, that God willeth our immortality. It carries our thoughts forward to a future state, as to a fixed period, whither the greatest part of the promises of God tend. It commandeth us, indeed, to confider all the blessings of this life, the aliments, that nourish us, the rays, which enlighten us, the air, that we breathe, seeptres, crowns, and kingdoms, as effects of the liberality of God, and as grounds of our gratitude. But, at the same time, it requireth us to surmount the most magnificent earthly objects. It commandeth us to consider light, air, and aliments, crowns, seeptres, and kingdoms, as unst to constitute the felicity of a soul created

in the image of the bleffed God, and with whom the bleffed God hath formed a close and intimate union. It affureth us, that an age of life cannot fill the wish of duration, which it is the noble prerogative of an immortal foul to form. It doth not ground the dostrine of immortality on metaphyfical fpeculations, nor on complex arguments, uninvestigable by the greatest part of mankind, and which always leave tome doubts in the minds of the ableft philosophers. The Gospel grounds the doctrine on the only principle that can support the weight, with which it is encomb red. The principle, which I mean, is the will of the Creator, who, having created our fouls at first by an act of his will, can either eternally preferve them, or absolutely annihilate them, whether they be material, or spiritual, mortal, or immortal, by pacure. Thus the disciple of revealed religion doth not float between doubt and aflurance, hope and fear, as the disciple of nature doth. He is not obliged to leave the most interesting question, that poor mortals can agitate, undecided; whether their fouls perish with their bodies. or furvive their ruins. He does not fav. as Cyrus fuid to his children & I know not how to permade myfelf, that the foul lives in this mortal body, and ceafeth to be, when the hody expires. I am more inclined to think, that it requires after death more penetration and purity. He doth not tay, as Socrates faid to his judges; And now we are going, I to fuffer death, and ye to enjoy life. God only knows which is the best. He doth not say as Cicero faid, speaking on this important article; I do not pretend to fay, that what I assim is as infallible as the Pythian oracle, I speak only by conjecture. The disciple of revelation, authorized by the testimony of Jesus Christ, " who hath brought life and immortality to light through the Gospel;" boldly affirms, " Though our outward man perish, yet the inward man is renewed day by day. We, that are in this tabernacle, do groan, being burdened; not for that we would be unclothed, but clothed upon, that mortality might be swallowed up of life. I know whom I have believed, and I am perfuaded that he is able to keep that, which I have committed unto him, against that day."

III. We are next to confider the disciple of natural religion, and the disciple of revealed religion, at the tribunal of God

as penitents foliciting for pardon. The former cannot find, even by feeling after it, in natural religion, according to the language of St. Paul, the grand mean of reconciliation, which God hath given to the church; I mean the facrifice of the crofs. Reafon, indeed, discovers, that man is guilty, as the confessions, and acknowledgments, which the Heathens made of their crimes, prove. It discerns, that a finner deferves punishment, as the remorfe and fear, with which their confeiences were often exeruciated, demonstrate. It prefumes, indeed, that God will yield to the entreaties of his creatures, as their prayers, and temples, and altars tellify. It even goes fo far as to perceive the necessity of fatisfying divine justice, this their facrifices, this their burnt offerings, this their human victims, this the rivers of blood, that flowed on their altars, shew.

But, how likely foever all these speculations may be, they form only a systematic body without a head; for no positive promise of pardon from God himself belongs to them. The mystery of the cross is entirely invisible; for only God could reveal that, because only God could plan, and only he could execute that prosound relief. How could human reason, alone, and unassisted, have discovered the mystery of redemption, when, alas! after an infallible God hath revealed it, reason is absorbed in its depth, and needs all its submission to receive it, as an article of faith?

But that, which natural religion cannot attain, revealed religion clearly discovers. Revelation exhibits a God-Man, dying for the fins of mankind, and fetting grace before every penitent finner: glace for all mankind. The schools have often agitated the questions, and sometimes very indifcreetly, Whether Jesus Christ died for all mankind, or only for a imall number? Whether his blood were shed for all, who hear the gospel, or for those only, who believe it? We will not dispute these points now: but we will venture to affirm, that there is not an individual of all our hearers, who hath not a right to fay to himfelf, If I believe, I shall be saved; I shall believe, if I endeavour to believe. Consequently, every individual hath a right to apply the benefits of the death of Christ to himself. The gospel reveals grace, that pardons the molt atrocious crimes, those that have the most fatal influences. Although ye have denied Christ with Peter, betrayed him with Judas, perfecuted him with Saul; yet the blood of a God-Man is sufficient to obtain your pardon, if ye be in the covenant of redemption. Grace which is accessible at all times, at every inflint of life. Woe be to you, my brethren; woe be to you, if, abuting this reflection, ye delay your return to God till the last moments of your lives, when your repentance will be difficult, not to fav impracticable and impolible! But it is always certain, that God every inflant opens the treasures of his mercy, when finners return to him by fincere repentance. Grace, capable of terminating all the melancholy thoughts, that are produced by the fear of being abandoned by God in the midft of our race, and of having the work of falvation left imperfect. For, after he Lath given us a prefent to magnificent, what can be refute? " He that spared not his own Son, but delivered him up for us all, how shall he not with him also freely give us all things?" Grace, so clearly revealed in our Scriptures, that the most accurate realoning, herefy the most extravagant, and infidelity the most obstinate, cannot enervate his declarations. For, the death of Christ may be considered in different views: it is a fufficient confirmation of his doctrine; it is a perfect pattern of patience, it is the most magnanimous degree of extraoidinary excellencies, that can be imagined: but the gospel very seldem presents it to us in any of these views, it leaves them to our own perception; but when it fpeaks of his death, it usually speaks of it as an explatory facilifice. Need we repeat here a number of formal texts, and express decisions on this matter? Thanks be to God, we are preaching to a Christian auditory, who make the death of the Redcemer the foundation of faith! The gospel, then, affureth the penitent finner of pardon. Zeno, Epicurus, Pythagoras, Sociates, Porch, Academy, Lycaum, what have ye to offer to your disciples, equal to this promise of the goipel?

1V. But that, which principally displays the prerogatives of the Christian above those of the philosopher, is an all-sufficient provision against the fear of death. A comparison between a dying Pagan and a dying Christian will shew this. I consider a Pagan, in his dying-bed, speaking to himself what follows. On which side soever I consider my state, I perceive nothing but trouble and despair. If I observe the fore-runners of death, I see aw-

ful fymptoms, violent fickness, and intolegable pain, which furround my fick-bed, and are the first scenes of the bloody tragedy. As to the world, my dearest objects disappear; my closest connections are diffolying; my most specious titles are effacing; my nobleft privileges are vanishing away; a difuril curtain fills between my eyes and all the decorations of the univerte. In regard to my body, it is a miss without motion, and life; my tongue is about to be condemned to eternal Lience: my eyes to perpetual darkness; all the organs of my bolv to entire disfolution; and the miscrable remains of my carcase to lodge in the grave, and to become food for the worms. If I confider my foul, I tearcely know whether it be immortal; and could I demonstrate its natural immortality, I should not be able to fay, wh ther my Creator would display his attributes in preferving, or in dedicoving it; whether my withes for immortality be the dictates of nature, or the language of fin. If I confider my past life, I have a witness within me, atteiling that my practice hath been lefs than my knowledge, how fmall foever the latter bath been; and that the abundant depravity of my heart hath thickened the darkness of my mind. It I confider faturity, I think I discover thio' many thick clouds a future flate; my reafon fuggetts, that the Author of nature bath not given me a foul fo fublishe in thought, and fo expansive in defire, merely to move in this little orb for a monicut; but this is nothing but conjecture; and, if there be another accoomy after this, should I be less miferable than I am here? One moment I hope for annihilation, the next I shudder with the fear of being annihilated; my thoughts and defires are at war with each other, they rife, they reliit, they destroy one another. Such is the dving Heathen. If a few examples of those, who have died otherwife, be adduced, they ought not to be urged in evidence against what we have advanced; for they are rare, and very probably deceptive, their outward tranquillity being only a concealment of trouble within. Trouble is the greater for confinement within, and for an affected appearance without. As we ought not to believe, that philosophy hath rendered men insensible of pain, because some philosophers have maintained that pain is no evil, and have feemed to triumph over it: fo acither ought we to believe, that it hath

difurmed death in regard to the disciples of natural religion, because some have affirmed, that death is not an object of fear. After all, if foine Pagans enjoyed a real tranquillity at death, it was a groundlefs tranquillity, to which reason contributed nothing at all.

O! how differently do Christians die! How doth revealed religion triumph over the religion of nature in this respect! May each of our hearers be a new evidence of this article! The whole, that troubles an expiring Heathen, revives a Christian in

his dying hed.

Thus fpeaks the dving Christian. When I confider the awful symptoms of death. and the violent agonics of dissolving nature, they appear to me as medical preparations, tharp, but falutary; they are neceffary to detach me from life, and to feparate the remains of inward depravity from me. Beli le, I shall not be abandoned to my own frailty; but my patience and conflancy will be proportional to my fufferings, and that powerful arm, which hath supported me through life, will uphold me under the preffure of death. If I confider my fins, many as they are, I am invulnerable; for I go to a tribunal of mercy, where God is reconciled, and juffice is fatisfied. If I consider my body, I perceive, I am putting off a mean and corruptible habit, and putting on robes of glory. Fall, fall ye imperfect fenfes, ye frail organs, fall house of clay into your original dust; ye will be "fown in corruption, but raifed in incorruption; fown in diffionour, but raited in glory; fown in weakness, but raited in power." If I confider my foul, it is passing, I see, from slavery to freedom. I shall carry with me that, which thinks and reflects. I shall carry with me the delicacy of talle, the harmony of founds, the beauty of colours, the fragrance of odoriferous finells. I shall furmount heaven and earth, nature and all terrestrial things, and my ideas of all their beauties will multiply and expand. If I consider the future acconomy, to which I go, I have, I own, very inadequate notions of it: but my incapacity is the ground of my expectation. Could I perfectly comprehend it, it would argue its refemblance to some of the pretent objects of my fenfes, or its minute proportion to the present operations of my mind. If worldly dignities and grandeurs. if accumulated treasures, if the enjoyments of the most refined voluptuousness, were to represent

represent to me celestial felicity, I should suppose, that, partaking of their nature, they partook of their vanity. But, if nothing here can represent the future state, it is because that state surpasseth every other. My ardour is increased by my imperfect My knowledge, and knowledge of it. virtue, I know, will be perfected; I know I shall comprehend truth, and obey order; I know, I shall be free from all evils, and in possession of all good; I shall be present with God, I know, and with all the happy spirits, who surround his throne; and this perfect state, I am sure, will continue for ever and ever.

Such are the all-fufficient supports, which revealed religion affords against the fear of death. Such are the meditations of a dying Christian; not of one, whose whole Christianity consists of dry speculations which have no influence over his practice; but of one, who applies his knowledge to relieve the real wants of his life.

Christianity, then, we have feen, is superior to natural religion, in these feur respects. To these we will add a few more reflections in farther evidence of the superiority of revealed religion to the religion of nature.

1. The ideas of the ancient philosophers concerning natural religion were not collected into a body of doctrine. One philofopher had one idea, another fludious man had another idea; ideas of truth and virwae, therefore lay differred. Who doth not fee the pre-eminence of revelation, on this article? No human capacity either hath been, or would ever have been equal to the noble conception of a perfect body of truth. There is no genius to narrow, as not to be capable of proposing some clear truth, fome excellent maxim: but to lay down principles, and to perceive at once a chain of confequences, these are the efforts of great geniuses; this capability is philosophical perfection. If this axiom be incontestible, what a fountain of wisdom does the fystem of Christianity argue! It represents us, in one lovely body, of perfect fymmetry, all the ideas, that we have enumerated. One idea supposeth another idea; and the whole is united in a manner fo compact, that it is impossible to alter one particle without defacing the beauty of

2. Pagan philosophers never had a system of natural religion comparable with that of modern philosophers, although the latter glory in their contempt of reyela-

Modern philosophers have derived the clearest and best parts of their systems from the very revelation, which they affect to despise. We grant, the doctrines of the perfections of God, of providence, and of a future state, are perfectly conformable to the light of reason. A man, who should purfue rational tracks of knowledge to his utmost power, would discover, we own, all these doctrines: but it is one thing to grant, that these doctrines are conformable to reason; and it is another to assim, that reason actually discovered them. It is one thing to allow, that a man, who should purfue rational tracks of knowledge to his utmost pewer, would discover all these doctrines; and it is another to pretend, that any man hash purioed their tracks to the utmost, and bath actually discovered them. It was the gospel that trught mankind the ule of the reason. It was the gofpel, that affired then to form a body of natural religion. Modern plnloiophers avail themf lves of thefe aids; they form a body of natural religion by the light of the gospel, and then they attribute to their own penetration what they derive from foreign aid.

3. What was most rational in the natural religion of the Pagan philotophers was mixed with fancies and dreams. There was not a fingle philofipher, who did not adopt some absurdity, and communicate it to his duciples. One taught, that every being was animated with a particular foul, and on this abfurd hypothesis he pretended to account for all the phenomena of nature. Another took every flar for a god, and thought the foul a vapour, that pailed from one body to another, expiating in the body of a beait the fins that were committed in that of a man. One attributed the creation of the world to a blind chance, and the government of all events in it to an inviolable fate. Another affirmed the eternity of the world, and faid, there was no period in eternity, in which heaven and earth, nature and elements, were not visible. One faid, every thing is uncertain; we are not fure of our own existence; the distinction between just and unjust, virtue and vice, is fanciful, and hath no real foundation in the nature of things. Another made matter equal to God; and maintained, that it concurred with the supreme Being in the formation of the universe. One took the world for a prodigious body, of which he thought God was the foul. Another affirmed the materiality of the foul, and attributed

tributed to matter the faculties of thinking and reasoning. Some denied the immortality of the foul, and the intervention of possitioned; and pretended, that an infigural inner; and particles of matter, indivible, and indefructible, revolved in the averfe; that from their fortuitous concourse arefe the present world; that mall this thate was no design; that the fect was not formed so walking, the eyes for steing, nor the hands so handling. The golgs is light without darkness. It hath as may haven, nothing sales, and other not be to the characters or that wishon, from which it proceeds.

4 Wait was pure in the natural religoal of the Heathens was not known, no coll be known to any but philotopass. The common people were meapalls of that penetration and labour, which the reachingaing of truth, and the didingo may or it from that fal 'loo !, an which pallor and prejutice and enveloped it, requite!. A mediocrity of genu, I allow, is remarkent for the purpole of informing a part of those configuences from the works of cature, of which we form the body of era al rengion: but none, but genutes of the unit caler, are capable of kommang there differt confequences, which are into del in daknets. The bulk of model id w. ited a short way proportional to every unil. They wante lan authority, the infelli dity of which all myderad might eafil, fee. They wanted a recelition founded on evidence plain and obvious to all the world. Philosopiers could not they the would fuch a thort way; but revelation bath flowed it. No philosopier could assume to authority, necessary to efficient fuch a bite it became God alone to di late in tich a manner, and in revolution he hath done it.

## § 190. The Goffel superior to the writings of the Heathens in cratory.

Objection to the Holy Scriptures. If Christ were the Son of God, and his apostles inspired by the Holy Ghost, and the Scriptures were God's Word, they would excel all other men and writings in all true raincal worth and excellency; whereas Aristotle excelleth them in logic and philosophy, and Cicero and Demostnenes in oratory, and Seneca in ingenious expressions of morality, &c.

Answer. You may as well argue, that Aristotle was no wifer than a minitrel, be-

cause he could not siddle so well; or than a painter, because he could not line fo well; or than a harlot, because he could not drefs himfelf to neatly. Means are to be estimated according to their fitness for their ends. Christ himfelf excelled all mankind, in all true perfections; and yet te becam hun not to exercife all men's arts, to their that he excelleth them. He came not into the world to teach men arc'utecture, navigation, medicine, astronomy, grunmar, music, logic, thetoric, &c. and therefore the wed not his skill in these. The world had fufficient helps and means for these in nature. It was to fave men from fin and hell, and bring them to pardoa, holivefs and heaven, that Christ was in unate, and that the apolles were infpr ed, and the Scriptures written and to be fitted to there ends, is the excellency to be expected in them, and in this they excel all persons and writings in the world. As God doth not fyllogize or know by our imperfect was of ranocination, but yet knoweth all things better than fyllogizers do; fo C'nut hath a more high and excellent kind of logic and oratory, and a more apt and spiratual and powerful Style, than Aufforde, Demofficies, Cicero, or Sineca. He shewed not that skill in methodical nealing, which Hypocrates and Galen thewed: but he thewed more and better skill, when he could heal with a word, and raife the dead, and had the power of life and death; fo did he bring more convincing evidence than Aristotle, and persunded more powerfully than Demosthenes or Cicero. And though this kind of formal learning was below him, and below the inspired medeagers of his Gospel, yet his i terior servants (an Aquinas, a Scotus, an Ockam, a Scaliger, a Ramus, a Gassendus) do match or excel the old philosophers, and abundance of Cariffians equalize or excel a Demosthenes or Cicero, in the truest oratory. Baxter.

## § 191. Objenties in the Scriptures no proof of their not being genuine.

That there are obscurities and difficulties in Holy Writ is acknowledged by all
persons that are conversant in the Sacred
Volume. And truly, if we consider things
aright, we shall find, this is not unworthy
eitner of God or of his Holy Word. Not
of God himself, who indited the Sacred
Scriptures; for he hath most wisely ordered; that there should be some things obtouch

feure and mysterious in them, to create a becoming reverence, and to let us know, that these writings are not penned after an ordinary manner. These clouds and darkness are fuitable to the majesty of heaven; they are proper to beget in us humility, and mean thoughts of ourfelves, to convince us of the shallowness of our intellects, to thew us how thort fighted we are, to give check to our prelumption, to quash our towering conceits of our knowledge, to superfede our vain boatling, to repel our vaunting pride and infolence. They are ferviceable also to rebuke our floth and negligence, to provoke our care and fludy, and to excite our utmost dili-Thus it hath pleafed God to exercife the understandings of men, and to make trial of their industry by these difficult paffages which occur in Scripture. If all places were easy, this book would be liable to contempt, and there would be no room left for our diligent tearch and enquiry. But now at every redding of it we fill find fomething to employ our und r flandings afresh, and to improve cur most inquifitive faculties. Here our minds may be perpetually builed; here is enough to entertain our greatest leifure and most carnest study. Here are many mysterics to be unfolded, many depths to be fithomed, many abstructies, both in the things and in the words that convey the notice of them to our minds, to be diffeovered: fo that to the greatest student and most ambittous enquirer, that will happen which the Son of Sirach faith in another cafe, "When a m in " hath done, then he beginneth." Here are not only fords and thallows which we may eafily wade through, but here are unpatiable depths and abytics. It hath feemed good to the wife Governor of the world, that there should be in the Holy Scripture fome things hard to be underflood, that hereby the excellency of these ricred writings might appear, and that by this means it might be feen of what univerful use they are: for those places which are plain and clear are fitted to ordinary capacities, and thole other portions which are deep and intricate are the proper entert inment of the learned; and thus the whole book is calculated for the general benefit of all. St. Chrysoftom hath summed it up thus very briefly: All passages in Scripture are not plain and peripicuous, lest we should be lazy; nor are all obscure, leftwe should despond. This excellent tem-

pering of the facred writ is a high commendation of it, and is no other than the wife contrivance of Heaven.

And as thi obscurity of some parts of Scripture is not unworthy of God himfelf. fo neither is it any disparagement to his facred word. For we must know, that this difficulty happens from the very nature of the things themselves, which are here recorded. It cannot be otherwise but that fome portions of Scripture must be dark and objeure, and confequently must labour under different and contrary expositions, because they were written so long ago, and contain in them fo many old cultoms and ulages, fo many relations concerning different people, fo many and various idioms of tongues, fuch diverfity of ancient exprefiloas, laws, and manners of all nations in the world. It is unreafonable to expect that we flould exactly underfland all their. It is not to be wondered at, that there eccifion doubts, difficulties, multikes. And it is certain, that the being ignorant of fome of thele, is no blemith, either to the facred writings, or to the perions who read and study them. Suppose I do not know what the hour of Asuppim is, I Chronxxvi. 15. or what kind of trees the Almug or Algum trees are, 1 Kings v. 12. 1 Chion. xx, 8, or who are meant by the Gammadim, Ezek, xxvii. 11. What though I am not to well skilled in the levish modes and fathions, as to tell what kind of women's ornament the houtes of the foul are, in If 111, 20, or what particular idols or Pagan derties Gad and Ment are, 16.1xv. 11. or which of the Heathen gods is meant by Chian or Remphan, Amos v. 26. Acts vii. 43. Some of the most learned expositors and critics have confessed their ignorance as to these places of scripture; particularly upon the last of them our profound antiquary, Selden, hath thefe defpairing words: For my part I perceive my blindness to be such, that I can see nothing at all! And to the same purpose this admirable person speaks concerning feveral other pallages in Scripture, as of Nishroc, Nergal, and other idols mentioned there, the origin and meaning of which names are hid from us. Many other reafons might be alledged of the real or feeming difficulty of some places, namely, the fublimity of the matter, the ambiguity and different fignifications of the words, the inadvertency of expositors, and sometimes their unskilfulness, and oftentimes their

wilful defigning to pervert the words, in order to the maintaining fome opinions or practices which they adhere to. But no man of a fedate mind and reason can think, that the Scriptures themselves are disparaged by these difficulties and multakes; tor they are not arguments of the Scripture's imperfection, but of man's. Besides, thile obfcurities, which are accompanied with the various ways of rendering fome expressions and determining the fense, are no proof of the imperfection of this holy book, because in matters of faith and manreis, which are the main things we are concerned in, and for which the Bible was chiefly writ, thefe writings are plain and intelligible. All necessary and fundamental points of religion are let down here in fuch expiritions as are fuitable to the capicties of the most simple and vulgar. God hath graciously condescended to the infirmities of the meaneth and most unlearned by speaking to them in these writings after the manner of men, and by propounding the greatest mysteries in a famehar flyle and way. The Scripture, to far as it relates to our belief and practice, is very eafy and plain, yea, much plamer than the glosses and comments upon it oftentimes are. In a word, most of the places of Scripture call not for an int. 1preter, but a practifer. As for other paffages, which are objeute and intricate, but which are very few in respect of those that are plain, they were defigned, as hath been already fuggetted, to employ our more inquifitive and claborate thoughts, and to whet our industry in the studying of this holy volume; that at last, when we have the happiness of retrieving the lost sense of the words, and refloring them to their genuine meaning, we may the more prize our acquest which hath cost us some pains. Or, if after all our attempts we cannot reach the true meaning, we have reason to entertain reverend thoughts of those difficult texts of Scripture, and to persuade ourselves, that they are worthy of the divine Enditer, though our weak minds cannot comprehend them. If human authors delight to darken their writings sometimes, and it is accounted no blemish, surely we may conclude, that the mysteries of the facred and inspired style are rather an enhancement than a diminution of its excellency. Shall we not think it fit to deal as fairly with the facred code, as Socrates did With Heraclitus' writings, that is, not only pronounce fo much as we understand of them to be excellent and admirable, but believe also, that what we do not understand is to too? It is certainly an undensable truth, that neither the wildom of God, nor the credit of this inspired book, are impaired by any difficulties we find in it.

Edwards.

§ 192. The Bible Superior to all other books.

In what other writings can we descry those excellencies which we find in the Bible? None of them can equal it in antiquity; for the first penman of the Sacred Scripture hath the flart of all philosophers, poets and historians, and is absolutely the ancient if writer extant in the world. No writings are equal to these of the Bible, if we mention only the Rock of human learning outsined in them. Here linguists and philologiths may find that which is to be found no where elfe. Here rhetoricians and orators may be entertained with a more loky cloquence, with a choicer composure of word, and with a greater variety of ityle, than any other writers can afford them. Here is a book, where more is understood than expressed, where words are few, but the fense is full and redundant. No book, equal this in authority, because it is the Wo d of God himself, and dictated by an uncring Spirit. It excels all other writings in the excellency of its matter, which is the highest, nobleft, and worthieft, and of the greatest concern to mankind. Liffly, the Scriptures transcend all other writings in their power and efficacy .-

Wherefore, with great ferioufness and importanity, I request the reader that he would entertain such thoughts and persuafions as these, that Bible-learning is the highest accomplishment, that this book is the most valuable of any upon earth, that this alone is sufficient for us, though all the libraries in the world were destroyed.

Edwards.

§ 193. All the religious knowledge in the novild derived from Revelation.

Deifin, or the principles of natural worfhip, are only the faint remnants or dying flames of revealed religion in the posterity of Noah; and our modern philosophers, nay, and some of our philosophising divines, have too much exalted the faculties of our souls, when they have maintained that by their force, mankind has been able to find out that there is one supreme agent or in: tellectual being which we call God; that praise and prayer are his due worship; and the rest of those deducements, which I am confident are the remote effects of revelation, and unattainable by our discourse, I mean as simply considered, and without the benefit of divine illumination. So that we have not lifted up ourfelves to God by the weak pinions of our reason, but he has been pleased to descend to us; and what Socrates faid of him, what Plato writ, and the rest of the Heatmen philosophers of several nations, is all no more than the twilight of revelation, after the fun of it was fet in the race of Noah. That there is fomething above us, some principle of motion, our reason can apprehend, though it cannot discover what it is by its own virtue. And indeed 'tis very improbable, that we, who by the flrength of our faculties cannot enter into the knowledge of any being, not so much as of our own, should be able to find out by them that Supreme Nature, which we cannot otherwife define than by faying it is infinite; as if infinite were definable, or infinity a fubject for our narrow understanding. who would prove religion by reason, do but weaken the cause which they endeavour to support. It is to take away the pillars from our faith, and prop it only with a twig; it is to defign a tower like that of Babel, which, it it were possible, as it is not, to reach heaven, would come to nothing by the confusion of the workmen. For every man is building a feveral way; impotently conceited of his own model, and of his own materials. Reason is always thriving, always at a lofs; and of necellity it mult fo come to pais, while it is exercifed about that which is not its proper object. Let us be content at last to know God by his own methods; at least fo much of him as he is pleafed to reveal to us in the Sacred Scriptures. To apprehend them to be the Word of God, is all our reason has to do; for all beyond it is the work of faith, which is the foal of Heaven impressed upon our human understanding. Dryden.

§ 194. The aveakness of Institutes, with the Unbeliever's Creed.

The publication of Lord Bolingbroke's posshumous works has given new life and spi. it to free thinking. We seem at pretent to be endeavouring to unlearn our ca-

chifm, with all that we have been taught about religion, in order to model our faith to the fathion of his lordship's system. We have now nothing to do, but to throw away our Bibles, turn the churches into theatres, and rejoice that an act of parliament now in force, gives us an opportunity of getting rid of the clergy by tranfportation. I was in hopes the extraordinary price of those volumes would have confined their influence to perfors of quality. As they are placed above extreme indigence and absolute want of bread, their loofe notions would have carried them no farther than cheating at cards, or perhaps plundering their country: but if these opinions spread among the vulgar, we shall be knocked down at noon-day in our flight, and nothing will go forward but robbettoand murders.

The inflances I have lately feen of freethinking in the lower part of the world, make me fear, they are going to be as fathionable and as wicked as their betters. I went the other night to the Robin Hood, where it is usual for the advocates against religion to affemble and openly avow their infidelity. One of the questions for the night was-Whether lord Bolingbroke had not done greater fervices to mankind by his writings, than the Aposlles or Evangelifts? - As this fociety is chiefly compoted of lawyers' clerks, petty tradelmen, and the lowest mechanics, I was at first surprized at fuch amazing erulition among them. Toland, Tindal, Collins, Chubb, and Mandeville, they feemed to have got by heart. A shoe-maker harangued his five minutes upon the excellence of the tenets maintained by lord Bolingbroke; but I foon found that his reading had not been extended beyond the idea of a patriot king, which he had millaken for a glorious fyttem of free-thinking, I could not help finiling at another of the company, who took pains to flew his difbelief of the golpel by unfainting the apostles, and calling them by no other title than plain Paul or plain Peter. The proceedings of this fo-ciety have indeed almost induced me to wish that (like the Roman Catholics) they were not permitted to read the Bible, rather than that they should read it only to abuse it.

I have frequently heard many wife tradefinen fettling the most important articles of our faith over a pint of beer. A balant took occasion siom Canning's affair

to maintain, in opposition to the Scriptures. that man night live by bread alone, at least that woman might; for elfe, faid he, how could the girl have been supported for a whole month by a few hard cruits? In answer to this, a barber-surgeon set forth the improbability of that flory; and thence inferred, that it was impossible for our Saviour to have fatted forty days in the wildernets. I lately heard a midthipman meir that the Bible was all a lie; for he and failed round the world with lord Anfon. and if there had been any Red Sea he must here met with it. I know a brick-layer, who, while he was working by line and rule, and carefully laying one brick upon and icr, would argue with a fellow-labourer that the world was made by chance; and a cook, who thought more of his trade, than his Bible, in a dispute concerning the to acles, made a pleafant miliake about the field, and gravely asked his antagonist whit he thought of the supper at Cana.

This affectation of free trainking among the lower chifs of people, is at prefent happi'v confined to the min. On Sundays, while the hafbands are toping at the alehouse, the good women, their wives, think It then duty to go to church, fry their prayers, bring home the text, and hear the Children their extechism. But our polite laures are, I fear, in their lives and convertations little better than I ce-" abers. Going to church, fince it is now no longer the fullion to carry on intrigues there, is almost wholly laid aside: and I verily beheve, that nothing but another earthquike can fill the churches with people of qualit :. The fair fex in general are too thoughtless to concern themselves in deep enquiries into matters of religion. It is futnicient that they are taught to believe themselves angels. It would therefore be an ill compliment, while we talk of the heaven they bestow, to persuade them into the Mahometan notion, that they have no fouls; though, perhaps, our fine gentlemen may imagine, that by convincing a lady that the has no toul, the will be less scrupulous about the disposal of her body.

The ridiculous notions maintained by free-thinkers in their writings, fearce deferve a ferious refutation; and perhaps the best method of answering them would be to select from their works all the absurd and impracticable notions, which they so stiffly maintain in order to evade the belief of the Christian religion. I shall there

throw together a few of their principal tenets, under the contradictory title of

The Unbeliever's Creed,

I believe that there is no God, but that matter is God, and God is matter; and that it is no matter whether there is any God or no.

I believe also, that the world was not made; that the world made itself; that it had no beginning; that it will last for ever, world without end.

I believe that a man is a beaft, that the foul is the body, and the body is the foul; and that after death there is neither body nor foul.

I believe that there is no religion; that natural religion is the only religion; and that all religion is unnatural. I believe not in Modes; I believe in the first philogophy; I believe not the Evangelists; I believe in Chubb, Collins, Toland, Tindal, Morgan, Mandeville, Woolston, Hobbes, Shaftesbury; I believe in lord Bolingbroke; I believe not St. Page

I believe not revelation; I believe in tradition; I believe in the Talmud; I believe in the Alcoran; I believe not the Bible; I believe in Socrates; I believe in Confucius; I believe in Sanconiathan; I believe in Mahomet; I believe not in Christ.

Lailly, I believe in all unbelief.

Anonymous.

§ 195. A moral demonstration of the truth of the Christian religion.

This discourse, of all the disputables in the world, shall require the sewest things to be granted; even nothing but what was evident; even nothing but the very subject of the question, viz. That there was such a man as Jesus Christ; that he pretented such things, and taught such dottrines: for he that will prove these things to be from God, must be allowed that they were from something or other.

But this pollulate I do not ask for need, but for order's sake and art; for what the histories of that age reported as a public assair, as one of the moit eminent transactions of the world, that which made so much noise, which caused so many changes, which occasioned so many wars, which divided so many hearts, which altered so many families, which procured so many deaths, which obtained so many laws in the disfavour, of itself; that which was

not done in a corner, but was thirty-three years and more in acting; which caused so many fects, and was opposed by so much art, and so much power that it might not grow, which filled the world with notic, which effected fuch great changes in the bodies of men by curing the difeafed, and finiting the contumacious or the hypocrites, which drew fo many eyes, and filled to many tongues, and employed to many pens, and was the care and the question of the whole world at that time, and immediately after; that which was configned by public acts and records of courts, which was in the books of friends and enemies, which came accompanied and remarked with eclipses and stars and prodigies of heaven and earth; that which the Jews even in spite and against their wills confessed, and which the witty adversaries intending to overthrow, could never fo much as challenge of want of truth in the matter of fact and flory; that which they who are infinitely concerned that it should not be believed, or more, that it had never been, do yet only labour to make it appear not to have been divine: certainly, this thing is fo certain that it was, that the defenders of it need not account it a kindnels to have it presupposed; for never was any flory in the world that had fo many degrees of ciedibility, as the flory of the person, life, and death, of Josus Christ: and if he had not been a true prophet, yet that he was in the world, and faid and did fuch things, cannot be denied; for even concerning Mahomet we make no question but he was in the world, and led a great part of mankind after him, and what was lets proved we infinitely believe: and what all men fay, and no man denies. and was notorious in itself, of this we may make further inquiries whether it was all that which it pretended; for that it did make pretences and was in the world, needs no more probation.

But now, whether Jefus Christ was sent from God and delivered the will of God, we are to take accounts from all the things of the world which were on him, or about him, or from him.

Biftop Taylor.

§ 196. Confiderations respecting the Persen of Jesus Christ.

I. Confider, first, his person: he was foretold by all the prophets: he, I say, for that appears by the event, and the correspondencies of their sayings to

this person: he was described by incl lible characterisms, which did sit him, and did never fit any but him; for, when he was born, then was the fulners of time and the Messias was expected at the time when Jefus did appear, which gave occafion to many of the godly then to weit! him, and to hope to live till the time ... his revelation: and they did fo, and with a fpirit of prophecy, which their onnation did confess and honour, glorine God at the revolation; and the most excellent and devout perfons that were confpicuous for their piety did then rejoice is him, and confets him; and the expectation of him at that time was fo public and f.mous, that it gave occasion to divers impoffors to abuse the credulity of the people, in pretending to be the Messias; but not only the predictions of the time, and the perfect Synchronisms, did point han out, but at his birth a thrange flar appeared, which guided certain Levantine princes and fages to the inquiry after him; a strange star, which had an irregular place and an irregular motion, that came by defign, and acted by counfel, the council of the Almighty Guide, it moved from place to place, till it stood just over the house where the babe did fleep; a flar, of which the Heatlen knew much, who knew nothing of him; a flar, which Chalcidius affirmed to have figurated the defcent of God for the falvation of man; a star, that guided the wife Childres to worthip him with girts (is the same disciple of Plato does affirm, and) as the holy Scriptures deliver; and this flar could be no feeret; it troubled all the country; it put Herod upon strange arts of security for his kingdom; it effected a fad tragedy accidentally, for it occasioned the death of all the little babes in the city, and voifinage of Bethlehem: but the birth of this young child; which was thus glorified by a flar, was also fignified by an angel, and was effected by the holy Spirit of God, in a manner which was in itself supernatural; a virgin was his mother, and God was his father, and his beginning was miraculous; and this matter of his birth of a virgin was proved to an interested and jealous person, even to Joseph, the supposed father of Jesus; it was affirmed publicly by all his family, and by all his disciples, and published in the midst of all his enemies, who by no artifice could reprove it; a matter so famous, that when it was urged as an argument to prove Jesus to

be the Messias, by the force of a prophecy in Isa ah, "A Virgin shall conceive a Son," they who obstinately refused to admit him, did not deny the matter of fact, but denied that it was fo meant by the prophet, which, if it were true, can only prove that Jefus was more excellent than was foretold by the prophets, but that there was nothing less in him than was to be in the Methas; it was a matter fo famous, that the Arabian physicians, who can afarm no fuch things of their Mahoinet, and yet not being able to deny it to be true of the holy Jefus, endeavour to alleviate and lenen the thing, by faying, It is not wholly beyond the force of nature, that a virgin should conceive; so that it was on all hands undeniable, that the mothat of Jefus was a virgin, a mother witheet a man.

This is that Jefus, at whose presence, before he was boin, a babe in his mother's belly alto did leap for joy, who was also s person extraordinary himself, conceived in his mother's old age, after a long barrannels, fignified by an angel in the temple, to his father officiating his priefly office, who was also struck dumb for his not pretest believing: all the people faw it, and all his kindred were witheffes of his reftitution, and he was named by the angel, and his office declared to be the fore-runner of the holy Jesus; and this also was foreteld by one of the old prophets; for the whole flory of this divine person is a chain of providence and wonder, every link of which is a verification of a prophecy, and all of it is that thing which, from Adam to the birth of Jeius, was pointed at and hinted by all the prophets, whose words in him passed perfectly into the

This is that Jefus, who, as he was born without a father, so he was learned without a master: he was a man without age, a doctor in a child's garment, dis-Puting in the fanctuary at twelve years old. He was a sojourner in Egypt, because the poor babe, born of an indigent mother, was a formidable rival to a potent King; and this fear could not come from the defign of the infant, but must needs arise from the illustriousness of the birth, and the prophecies of the child, and the fayings of the learned, and the Journey of the wife men, and the decrees of God; this journey and the return were both managed by the conduct of an angel

and a divine dream, for to the Son of God all the angels did rejoice to minister.

This bleffed person, made thus excellent by his Father, and glorious by miraculous confignations, and illustrious by the ministry of heavenly spirits, and proclaimed to Mary and to Joseph by two angels, to the shepherds by a multitude of the heavenly hoft, to the wife men by a prophecy and by a flar, to the lews by the shepherds, to the Gentiles by the three wife men, to Herod by the doctors of the law, and to himfelf perfectly known by the inchafing his human nature in the bosom and heart of God, and by the fulness of the Spirit of God, was yet pleafed for thirty years together to live an humble, a laborious, a chaile and a devout, a regular and an even, a wife and an exemplar, a pious and an obfcure life, without complaint, without fin, without defign of fame, or grandeur of spirit, till the time came that the clefts of the rock were to open, and the diamond give its luftre, and be worn in the diadems of kings, and then this perfon was wholly admirable; for he was uthered into the world by the voice of a loud crier in the wilderness, a person austere and wife, of a strange life, full of holiness and full of hardness, and a great preacher of rightcousness, a man believed by all the people that he came from God, one who in his own nation gathered disciples publicly, and (which amongst them was a great matter) he was the doctor of a new inflitution, and baptized all the country; yet this man, fo great, fo revered, fo followed, fo liftened to by king and people, by doctors and by idiots, by Pharifees and Sadducees, this man preached Jesus to the people, pointed out the Lamb of God, told that he must increase, and himself from all that fame must retire to give him place; he received him to baptism, after having with duty and modelly declared his own unworthiness to give, but rather a worthiness to receive baptism from the holy hands of Jesus; but at the folemnity God fent down the Holy Spirit upon his holy Son, and by a voice from heaven, a voice of thunder (and God was in that voice) declared that this was his Son, and that he was delighted in

This voice from heaven was such, so evident, so certain a conviction of what it did intend to prove, so known and accepted as the way of divine revelation

under the fecond temple, that at that time every man that defired a fign honeftly, would have been fatisfied with fuch a voice; it being the testimony, by whic'. God made all extraordinaries to be credible to his people, from the days of Ezia, to the death of the nation; and that there was fuch a voice, not only then, but divers times after, was as certain, and made as evident, as things of that nature can ordinatily be made. For it being a matter of fact, cannot be supposed infinite, but limited to time and place, heard by a certain number of perlons, and was as a clap of thunder upon ordinary accounts, which could be heard but by those who were within the sphere of its own activity; and reported by those to others, who are to give tellimony, as tellimonies are required, which are credible under the test of two or three difinterested, honest, and true men; and, though this was done in the presence of more, and oftener than once, yet it was a divine tellimony but at first, but is to be conveyed by the means of men; and, as God thundered from heaven at the giving of the law (though that he did fo, we have notice only from the books of Mofes, received from the Jewish nation,) fo he did in the days of the Baptist, and fo he did to Peter, James, and John, and fo he did in the presence of the Pharitees and many of the common people; and, as it is not to be supposed that all these would join their divided interests, for and against themselves, for the verification of a lie; fo, if they would have done it, they could not have done it without reproof of their own parties, who would have been glad by the discovery only to difgrace the whole flory. But, if the report of honest and just men fo reputed, may be questioned for matter of fact, or may not be accounted fufficient to make faith, when there is no pretence of men to the contrary, besides, that we can have no itory transmitted to us, no records kept, no acts of courts, no narratives of the days of old, no traditions of our fathers; so there could not be left in nature any usual instrument, whereby God could after the manner of men declare his own will to us, but either we should never know the will of Heaven upon earth, or it must be, that Ged must not only tell it once but always, and not only always to some men, but always to all men; and then, as there would be no use of history, or the honesty

of men, and their faithfulness in telling and act of God in declaration of his will, fo there would be perpetual necessity of miracles, and we could not serve God directly with our understanding; for there would be no fuch thing as faith, that is, of affent without conviction of understanding, and we could not please God with believing, because there would be in it nothing of the will, nothing of love and choice; and that faith which is, would be like that of Thomas, to believe what we fee or hear, and God should not at all govern upon earth, unless he did continually come himfelf; for thus, all government, all teachers. all apostles, all messengers would be needless, because they could not shew to the eye what they told to the ears of men; and it might as well be difbelieved in all courts and by all princes, that this was not the letter of a prince, or the act of a man, or the writing of his hand, and fo all human intercourse must cease, and all fenses, but the eye, be useless as to this affair, or elfe to the ear all voices must be strangers but the principal, if, I fay, no reports shall make faith. But it is certain, that when these voices were fent from heaven and heard upon earth. they prevailed amongst many that heard them not, and disciples were multiplied upon such accounts; or else it must be that none, that did hear them, could be believed by any of their friends and neighbours; for, if they were, the voice was as effective at the reflex and rebound, as in the direct emission, and could prevail with them that believed their brother or their friend, as certainly as with them that believed their own ears and eyes

I need not speak of the vast numbers of miracles which he wrought; miracles, which were not more demonstrations of his power, than of his mercy; for they had nothing of pompoulnels and oftentation, but infinitely of charity and mercy, and that permanent and lasting and often; he opened the eyes of the blind, he made the crooked straight, he made the weak strong, he cured fevers with the touch of his hand, and an issue of blood with the hem of his garment, and fore eyes with the spittle of his mouth and the clay of the earth; he multiplied the loaves and fishes, he raised the dead to life, a young maiden, the widow's fon of Naim, and Lazarus, and cast out devils by the word of his mouth, which he could never do

but by the power of God. For Satan does not cast out Satan, nor a house fight against itself, if it means to stand long; and the devil could not help Jesus, because the holy lefus taught men virtue, called them f om the worshipping devils, taught them to refult the devil, to lay afide all those abominable idolatries by which the devil doth rule in the hearts of men: he taught men to love God, to fly from temptations to fin, to hate and avoid all those things of which the devil is guilty; for Christia-Lity forbids pride, enty, malice, lying, and vet affirms, that the devil is proud, envious, malicious, and the father of lies; and therefore, wherever Christianity prevails, the dead is not worthipped, and therefore, he that can think that a man without the power of God could overturn the devil's Linciples, crofs his defigns, weaken his brought, baffle him in his policies, befool mike him open his own mouth against honfe'f, as he did often, and confets himfelt conquered by Jefus, and tormented, es the oracle did to Augustus Castar, and the devil to Jefus himself; he, I say, that thinks a mere man can do this, knows not the weaknesses of a man, nor the power of an angel; but he that thinks this could be done by compact, and by confent of the devil, must think him to be an intelbgence without understanding, a power without force, a fool and a fot to ashit a power against himself, and to perfecute tae power he did affift, to flir up the world to dellroy the Christians, whose Mafter and Lord he did affift to deftroy himfelf; and, when we read that Porphyrins an Heathen, a professed enemy to Christianity, did fay, Inos Tipopiers tie Sews ervocas ωφιλιάς ex hobile, that fince Jefus was worthipped, the gods could help no man, that is, the gods which they worshipped; the poor baffled enervated dæmons: he must either think that the devils are as foolish as they are weak, or else, that they did nothing towards this declination of their power; and therefore that they fuffer it by a power higher than themselves, that is, by the power of God in the hand of Jesus.

But, besides that God gave testimony from heaven concerning him, he also gave this testimony of himself to have come from God, because that "he did God's will;" for he that is a good man and lives, by the laws of God and of his nation, a life inno-

cent and fimple, prudent and wife, holy and spotless, unreproved and unsuspected, he is certainly by all wise men. said in a good sense to be the son of God; but he who does well and speaks well, and calls all men to glorify and serves no ends but of holiness and charity, of wisdom of hearts and reformation of manners, this man carries great authority in his sayings, and ought to prevail with good men in good things, for good ends, which is all that is here required.

But his nature was to fiveet, his manners to humble, his words to wife and composed, his comportment so grave and winning, his answers to scatonable, his quellions to deep, his reproof to fevere and charitable, his pity to great and merciful. his preachings fo full of reason and holinefs, of weight and authority, his converfation to useful and beneficent, his poverty great but his alms frequent, his family fo holy and religious, his and their employment so profitable, his meckness so incomparable, his paffions without difference. fave only where zeal or pity carried him on to worthy and apt expressions, a person that never laughed, but often wept in a fense of the cal unities of others; he loved every man and hated no man, he gave counsel to the doubtful, and instructed the ignorant, he bound up the broken hearts. and the gthened the feeble knees, he relieved the poor, and converted the finners. he despited none that came to him for relief, and as for those that did not, he went to them; he took all occasions of mercy that were offered him, and went abroad for more; he fpent his days in preaching and healing, and his nights in prayers and convertation with God: he was obedient to laws and subject to princes, though he was the Prince of Judgea in right of his mother, and of all the world in right of his father; the people followed him, but he made no conventions; and when they were made, he fuffered no tumults; when they would have made him a king, he withdrew himself; when he knew they would put him to death, he offered himfelf; he knew men's hearts, and conversed. fecretly, and gave answer to their thoughts and prevented their questions; he would work a miracle rather than give offence, and yet futter every offence rather than fee God his father dishonoured; he exactly kept the law of Moses, to which he came to put a period, and yet chose to

fignify his purpose only by doing acts of mercy upon their sabbath, doing nothing which they could call a breach of a commandment, but healing fick people, a charity, which themselves would do to beasts, and yet they were angry at him for doing it to their brethren.

In all his life, and in all his conversation with his nation, he was innocent as an angel of light, and when, by the greatness of his worth, and the severity of his doctrine, and the charity of his miracles, and the noises of the people, and his i.nmenfe fame in all that part of the world, and the multitude of his disciples, and the authority of his fermons, and his free reproof of their hypocrify, and his discovery of their false doctrines and weak traditions, he had branded the reputation of the vicious rulers of the people, and they refolved to put him to death, they who had the biggeft malice in the world, and the weakeft accufations, were forced to supply their want of articles against him by making truth to be his fault, and his office to be his crime, and his open confession of what was asked him to be his article of condemnation; and yet after all this they could not perfuade the competent judge to condemn him, or to find him guilty of any fault, and therefore they were forced to threaten him with Cafar's name, against whom then they would pretend him to be an enemy, though in their charge they neither proved, nor indeed laid it against him; and yet to whatfoever they objected he made no return, but his filence and his innocence were remarkable and evident, without labour and reply, and needed no more argument, than the fun needs an advocate to prove, that he is the brightest star in the firmament.

Well, fo it was, they crucified him; and, when they did, they did as much put out the eye of heaven, as destroy the Son of God: for, when with an incomparable sweetness, and a patience exemplar to all ages of fufferers, he endured affronts, examinations, fcorns, infolencies of rude ungentle tradefmen, cruel whippings, injurious, unjust, and unreasonable usages from those whom he obliged by all the arts of endearment and offers of the biggest kindness, at last he went to death, as to the work which God appointed him, that he might become the world's facrifice, and the great example of holiness, and the instance of representing by what way the world was to be made happy (even by fufferings and so entering into heaven:) that he might (I fay) become the Saviour of his enemies, and the elder brother to his friends, and the Lord of Glory, and the fountain of its emanation. Then it was, that God gave new testimonies from heaven: the fun was eclipfed all the while he was upon the crofs, and yet the moon was in the full; that is, he loft his light. not because any thing in nature did inveit him, but because the God of nature (as a Heathen at that very time confessed, who yet faw nothing of this fad iniquity) did futer. The rocks did rend, the veil of the temple divided of itself and opened the inclosures, and disparked the fanctuary. and made it pervious to the Gentiles eye; the dead arose, and appeared in Jerusalem to their friends, the Centurion and divers of the people fmote their hearts, and were by thete fliange indications convinced that he was the Son of God. His garments were parted, and lots call upon his inward cost, they gave him vinegar and gall to drink, they brake not a bone of him, but they pierced his fide with a fpear, looking upon him whom they had pierced; according to the prophecies of him, which were to clear, and defended to minutes and circumflances of his paffion. that there was nothing left by which they could doubt whether this were he or no who was to come into the world: but after all this, that all might be finally verified, and no fcruple left, after three days burial. a great flone being rolled to the face of the grave, and the flone fealed, and a guard of foldiers placed about it, he arose from the grave, and for forty days together conversed with his followers and disciples, and beyond all fuspicion was seen of five hundred brothren at once, which is a number too great to give their confent and testimony to a lie, and, it being so publicly and confidently affirmed at the very time it was done, and for ever after urged by all Christians, used as the most mighty demonstration, proclaimed, preached, talked of, even upbraided to the gainfayers, affirmed by eye-witnesses, persuaded to the kindred and friends and the relatives and companions of all those five hundred perfons who were eye-witnesses, it is infinitely removed from a reasonable suspicion; and at the end of those days was taken up into heaven in the fight of many of them, as Elias was in the presence of Elisha.

Now he, of whom all these things are true, must needs be more than a mere

man; and, that they were true, was affirmed by very many eye-witneffes, men, who were innocent, plain men, men that had no bad ends to forve; men, that looked for no preferment by the thrig in this life; men, to whom their ma br told they were to expedit of crowns r dicepties, not praise of men or wealthy partians, not power and care, but a volum ry calling away care and attendance to a fecular affeirs, that they might attend t or residiv; poverty and priton, trou-Scarl vexation, perfecution and labour, weppings and brithment, bends and don, and for a reward they mult flow till agoldin came, but that was not to be full to this would; and, when the day of : it don and recompense should come, the flood never know till it came, but worth hope of this and the fifth of Jecarl the word of God to taught, to or fixed, they must rely whoshy and for

Nov let it be confidered, how could to the of fact be proved better? and Low of I this be any thing, but fuch as to 144 upon matters of flet? what greater to tonly can we have of any thing that ever done which we fiw not, or all d ter, but by the report of wife and howift ins? especially, fince they were such " " he aid breeding was for far from d too and policyouth is, to t, as they Cold not a durally and reuto tably hope to any great number of protette, forthe that could be hoped for amongst i was a it must be a matter of their own clocking, and confequently uncertain, fo onall reeds be very inconfiderable, not hi to outweigh the danger and the loss, her yet at all valuable by them whole " salon and protonces were against it? In the we have pleatifully. But if thefe in the numerous and united, it is more. Taca we have more; for fo many did om these things which they flav and and, that thousands of people were cons and of the truth of them; but then, if the other offer their eath, it is yet more, La st not fo much as we have, for they f. I those things with their blood; they Base their life for a tellimony; and what ! "...d can any man expect, if he gives he life for a lie? who shall make him te-Course see, or what can tempt him to do it k, mingly? but, after all, it is to be re-Ecrabered, that as God hates lying, to he hates incredulity; as we must not believe a lie, so neither stop up our eyes and cars against truth; and what we do every minute of our lives in roate is of little and of great concernment, if we refuse to do it our religion, which yet it to be conducted as other turn in an airs true, by his man influences and a guments of perfeation, preper to the nature of the thans, it is an obelinacy, that is as containy to human reason, as it is to divine faith.

These things relate to the person of the holy Jesus, and prove sufficiently that it was extraordinary, that it was divine, that Go twas with him, that his power wrought in him, and therefore that it was his will which Jesus taught, and God signed. But then if nothing of all this had been, yet even the doctorse itself proves itself divine, and to come from God.

Right Taylor.

§ 197. Confiderations respecting the doctrine of Juna Christ.

H. For it is a doctive perfective of hum in nature, that to iches us to love God and to love o a mother, to furt no non, and to do good to e.e.y man, it propines to us the nobleil, the higheft, and the briel pleafores or the world, the jo s of charity, the roll of musicize, the place of quiet fpirit, the wealth of benefice ce, and forbids us only to be blaffs and to be devi's; it allows all that God and auture intended, and only refleres to lescrationcies of niture, and forbils us to take pleafure in that which is the only entert inment of devils, remorders and reverges, malic and spaceful words and alto elist penalt, corporal pir die e, where the con bed minder to health and focusing, to confevation of femilies and learning of communities; it teaches men to help their word, that themselve, may be secured in all their just interests, and to do good to others, that good may be done to them: it forbids biting one another, that we may not be devoured by one another; and common is obedience to furniers, that we may not be runed in confusion; it combines governments, and confirms all good laws, and makes peace, and opposes and prevents wars where they are not just, and where they are not necessary. It is a religion that is life and spirit, not consisting in ceremonies and external amuscinicits, but in the fervices of the heart, and the real fruit of lips and hands, that is, of good words and good deeds; it bids us to do that to God which is agrecable to his ex-Cillencies.

cellencies, that is, worship him with the best thing we have, and make all things elfe minister to it; it hids us do that to our neighbour, by which he may be better: it is the perfection of the natural law. and agreeable to our natural necessities, and promotes our natural ends and defigns: it does not deflroy reason, but instructs it in very many things, and complies with it in all; it hath in it both heat and light, and is not more effectual than it is beauteous: it promifes every thing that we can defire, and yet promifes nothing but what it does effect; it proclaims war against all vices, and generally does command every virtue; it teaches us with case to mortify those affections which reason durit scarce reprove, because the hath not strength enough to conquer; and it does create in us those virtues which reason of herfelf never knew, and after they are known, could never approve fufnciently: it is a doctrine, in which nothing is superfluous or burdensome; nor yet is there any thing wanting, which can procure happiness to mankind, or by which God can be glorified: and, if wifdom, and mercy, and justice, and simplicity, and holinefs, and purity, and meeknefs, and contentedness, and charity, be images of God and rays of divinity, then that dectrine, in which all these shine so gloriously, and in which nothing else is ingredient, must needs be from God; and that all this is atrue in the doctrine of Josus needs no other probation, but the reading the words.

For, that the words of Jesus are contained in the gospels, that is, in the writings of them, who were eye-witnesses and car-witnesses of the actions and fermons of lefus, is not at all to be doubted; for in every feet we believe their own records of doctrine and inflitution: for it is madness to suppose the Christians to pretend to be fervants of the laws of Jefus, and yet to make a law of their own which he made not: no man doubts but that the Alcoran is the law of Mahomet, that the Old Teftament contains the religion of the Jews; and the authority of these books is proved by all the arguments of the religion, for all the arguments perfuading to the religion are intended to prove no other, than is contained in those books; and, these having been, for fifteen hundred years and more, received absolutely by all Christian attemblies, if any man shall offer to make a question of their authority, he must declare his reasons, for the disciples of the

religion have sufficient presumption, security and possession, till they can be reasonably diffurbed; but, that now they can never be, is infinitely certain, because we have a long, immemorial, universal tradition that these books were written in those times, by those men whose names they bear, they were accepted by all churches at the very first notice, except some sew of the later, which were first received by some churches, and then confented to by all: they were acknowledged by the fame, and by the next age for genuine, their authority published, their words cited, appeals made to them in all quellions of religion, because it was known and confessed that they wrote nothing but that they knew, fo that thes were not deceived; and to fay, they would lie, must be made to appear by fomething extrinsical to this inquiry, and was never fo much as plantibly pretended by any adverfaries, and it being a matter of another man's will, must be declared by actions, o. not at all.

But, befides, the men, that wrote them, were to be believed, because they did miracles, they wrote prophecies, which are verified by the event, persons were cored at their fepulchies, a thing to famous that it was confessed even by the enemies of the religion: and, after all, that which the world ought to rely upon, is the wildom and the providence, and the goodness of God; all which it concerned to take ca: that the religion, which himself to adorne! and proved by miracles and mighty figr , should not be lost, nor any false writer be obtraded inflead of true, left, without | our fault, the will of God become imposible to be obeyed.

But to return to the thing: all those excellent things, which fingly did make famous so many feets of philosophers, and remarked fo many princes of their fedy all them united, and many more, which their eyes, oupala restector, dark and dim. could not fee, are heaped together in this System of wittom and holiners. Here, are plain precepts full of deepest mystery; here are the measures of holiness and approaches to God described; obedience and conformity, mortification of the body, and elevations of the spirit, abstractions from earth, and arts of fociety, and union with heaver, degrees of excellencies, and tendencies to perfection, imitations of God, and conversations with him; these are the height, and descents, upon the plain grounds of

natural reason, and natural religion; for there is nothing commanded but what our reason by nature ought to choose, and yet nothing of natural reason taught but what is heightened and made more perfect by the Spirit of God; and, when there is any thing in the religion, that is against slesh and blood, it is only when fleth and blood i, against us, and against reason, when steph and blood either would hinder us from great felicity, or bring us into great miters to conclude, it is fuch a law, that poiling can hinder men to receive and entotain, but a pertinacious baseness and have to vice, and none can receive it but tote who refolve to be good and excellent; and, if the holy lefus had come into the world with lefs tplendor of power and mighty demonstrations, yet, even the exwhere of what he taught, makes him sione fit to be the mailer of the world.

Bishop Taylor.

§ 198. Confiderations rifteding the effect, and the information, it Chief sorthgion.

III. But then let us cerfiller what this ever lent person did effect, and with what adjuments he brought so great things to pas. He was to put a period to the rites of Mosea, and the religion of the temple, or which the Jews were zealous even unto 4-timety; to reform the manners of all narrhind, to consound the widom of the Greeks, to break in pieces the power of the devil, to destroy the worthip of all slife gods, to pull down their oracles, and thinge their laws, and by principles wise and holy to reform the salte discourses of the world.

But fee wrat was to be taught, A trinity in the unity of the Godhead, Tow is xal is Tia, that is the Christian arithmetic, Three are one, and one age three, so Lucian in 15 Philopatris, or some other, derides the Christian doctrine; see their philosophy. Ex nihilo nihil fit. No: Ex nihilo omhia, all things are made of nothing; and a man-god and a god-man, the same person rnite and infinite, born in time, and yet from all eternity the Son of God, but yet born of a woman, and she a maid, but yet a mother; refurrection of the dead, reunion of foul and body; this was part of the Christian physicks or their natural philosophy.

But then certainly their moral was easy and delicious. It is so indeed, but not to flesh and blood, whose appetites it

pretends to regulate or to destroy, to restrain or else to mortify: "fasting and penance, and humility, loving our enemies, restitution of injuries, and self-denial, and taking up the cross, and losing all our goods, and giving our life for Jesus:" as the other was hard to believe, so this is as hard to do.

But for whom and under whose conduct was all this to be believed, and all this to be done, and all this to be fuffered? Surely, for fome glorious and mighty prince, whole splendor as far outshines the Roman empire, as the jewels of Cleopatra outthined the fivaddling clothes of the babe at Bethlehem. No, it was not fo neither. For all this was for Jefus, visom his followers preached; a poor babe, born in a stable, the fon of a carpenter, cradled in a cratch, swaddled in poor clouts; it was for him whom they indeed called a God, but yet whom all the world knew, and they themselves said, was whipped at a post, nealed to a crofs; he fell under the malice of the Jows his countrymen, and the power of his Roman lords, a cheap and a pitiful ficrifice, without beauty and without iplen-

The defign is great, but does not yet feem possible; but therefore let us fee what instruments the Holy Jesus chose, to effect these so mighty changes, to perfuade so many propositions, to endear so great softenings, to overcome so great enemies, to master so many impossibilities which this doctrine and this law from this Master were sure to meet withal.

Here, here it is that the Divinity of the power is proclaimed. When a man goes to war, he raifes as great an army as he can to out-number his enemy; but, when God fights, three hundred men, that lap like a dog, are fufficient; nay, one word can diffolve the greatest army. He that means to ested any thing must have means of his own proportionable; and if they be not, he must fail, or derive them from the mighty. See then with what instruments the holy Jesus sets upon this great reformation of the world.

Twelve men of obscure and poor birth, of contemptible trades and quality, without learning, without breeding; these men were sent into the midst of a knowing and wise world, to dispute with the most famous philosophers of Greece, to out-wit all the learning of Athens, to out-preach all the Roman orators; to introduce into a newly-

T 2 fettled

fettled empire, which would be impatient of novelties and change, such a change as must destroy all their temples, or remove thence all their gods: against which change all the zeal of the world, and all the paifions, and all the feeming pretences which they could make, must needs be violently opposed: a change, that introduced new laws, and caused them to reverse the old, to change that religion under which their fathers long did prosper, and under which the Roman empire obtained so great a grandeur, for a religion, which in appearance was filly and humble, meck and peaceable, not apt indeed to do harm, but expofing men to all the harm in the world, abating their courage, blunting their fwords, teaching peace and unactiveness, and making the foldiers arms in a manner ufclefs, and untying their military girdle: a religion, which contradicted their ressons of flate, and erected new judicatories, and made the Roman courts to be filent and without causes; a religion, that gave countenance to the poor and pitiful (but in a time when riches were adored, and ambition effected the greatest nobleness, and pleafure thought to be the chiefest good) it brought no peculiar bleffing to the rich or mighty, unless they would become poor and humble in some real sense or other; a religion, that would change the face of things, and would also pierce into the fecrets of the foul, and unravel all the intrigues of hearts, and reform all evil manners, and break vile habits into gentleness and counfel: that fuch a religion in fuch a time, preached by fach mean persons, fhould triumph over the philosophy of the world, and the arguments of the tubile, and the fermons of the eloquent, and the power of princes, and the intered of flates, and the inclinations of nature, and the blindness of zeal, and the force of cuitom, and the pleafures of fin, and the bufy arts of the devil, that is, against wit, and power, and money, and religion, and wilfulness, and fame, and empire, which are all the things in the world that can make a thing impossible; this, I fay, cou'd not be by the proper force of fuch inflruments; for no man can fpan heaven with an infant's palm, nor govern wife empires with diagrams.

It were impulence to fend a footman to command Cefar to lay down his arms, to dishand his legions, and throw himself into Tyber, or keep a tavern next to Pompey's

theatre; but, if a fober man shall stand alone, unarmed, undefended, or unprovided, and shall tell that he will make the funfland still, or remove a mountain, or reduce Xerves's army to the feantling of a fingle troop, he that believes he will and can do this, must believe he does it by a higher power, than he can yet perceive; and for it was in the present transaction. For that the holy Jefus made invisible powers to do him visible honours, that his apostles hunted the demons from their tripeds, their rave's, their dens, their hollow pipes, their temples, and their altais; that he made the oracles filent, as Lucian, Porphyry, Cellus, and other Heathens confess that, against the order of new things, which let them be never fo profitable or good do yet fuffer reproach, and cannot prevail unless they commence in a time of advantage and fiyour; yet, that this should slourish like the palm by preffure, grow glorious by opposition, thrive by perfecution, and was demonstrated by objections, argues a higher cause than the immediate inflrument. Now how this higher cause did intervene, is vifible and notorious: the apollles were ret learned, but the holy Jetus promifed that he would fend down wiftlem from above. from the father of fpirite; they had no power, but they should be invested with power from on high; they were ignorate and timorous, but he would make them learned and confident, and so he did: he promited that in a few days he would fend the Holy Ghaft upon them, and he did to: ofter to a days they filt and faw glories. immiffion from heaven, lights of moveable fire fitting upon their head, and that had did illuminate their hearts, and the mighty rufhing wind inspired them with a power of fpealting divers languages, and brought to their remembrances all that Jefus did and taught, and made them wife to conduct fculs, and bold to venture, and prudent to advise, and powerful to do miracles, and witty to convince gainfavers, and hugely instructed in the feriptures, and gave them the spirit of government, and the spirit of prophecy.

This thing was so public, that at the first notice of it three thousand souls were converted on that very day, at the very time when it was done; for it was certainly a visible demonstration of an invisible power, that ignorant persons, who were never taught, should in an instant speak all the languages of the Roman empire; and in-

deci

deed this thing was fo necessary to be fo, and so certain that it was so, so public and fo evident, and fo reasonable, and so useful, that it is not easy to say whether it was the indication of a greater power, or a greater wisdom; and now the means was proportionable enough to the biggest end: without learning, they could not confute the learned world; but therefore God became their teacher: without power, they could not break the devil's violence; but therefore God gave them power: without courage, they could not cented against all the violence of the Jeas and Gentiles; Lat therefore God was their thrength, and gae them fortitude: without great caution and providence, they could not avoid the traps of crafty perfecutors; but therehere God gave them crution, and made them provident, and, as Befelcel and Altolish received the fpint of God, the fpirit of underflanding to enable them to work e cellently in the Tabernacle, to had the are the to make them wife for the work of Ged and the ministries of this diviner tabernaels, which God pitched, not man.

Immediately upon this, the apostles, to ride a fulnels of demonstration and an u derable conviction, gave the spirit to et' ... Ifo, to Jews and Gentiles, and to tie, on of Samaria, and they fpake with to an sand prophefied; then they preache' to all nations, and endured all perfecuton, and cured all difeases, and raised the de I to hie, and were brought before tribasels, and confessed the name of Jesus, and convinced the blaiphemous Jews out of their own prophets, and not only previled upon women and weak men, but Gen upon the bravest and wiscil. All the circiples of John the Baptist, the Nazateres and Ebionites, Nicodemus and Jofeph of Arimathea, Sergias the prefident, Dionyfius an Athenian judge, and Polycarpus, Justinus and Irenaus, Athenagoras and Origen, Tertullian and Clemens of Alexandria, who could not be fuch fools do, upon a matter not certainly true but Probably falfe, to unravel their former principles, and to change their liberty for a prison, wealth for poverty, honour for difreputation, life for death, if by fuch exchange they had not been fecured of truth and holinels and the will of God.

But, above all these, was Saul, a bold and a witty, a zealous and learned young man, who, going with letters to persecute the Christians of Damascus, was by a light

from heaven called from his furious march, reproved by God's angel for perfecuting the cause of Jesus, was sent to the city, biptized by a Christian minister, instructed and fent abroad; and he became the prodigy of the world, for learning and zeal, for preaching and writing, for labour and fufferance, for government and wildom; he was admitted to fee the hely lefus after the Lord was taken into heaven, he wis taken up into Paradife, he converfed with angele, he faw unipeakable rays of glory; and besides that himself said it, who had no reason to lie, who would get nothing by it here but a conjugation of troubles, and who fhould get nothing by it hereafter if it were falle; befieles this, I fay, that he did all those acts of zeal and obedience for the promotion of the religion, does demonstrate he had reafon extraordinary for fo fudden a change, fo flrange a lebour, to frequent and incomparable fufferings; and therefore, as he did and fuffered to much upon such glorious motives, to he spared not to pullith it to all the world, he spake it to kings and princes, he told it to the envious lews: he had partners of his journey, who were witheffer of the miraculous accident; and in his publication he urged the notorioufnefs of the fleet, as a thing not feigned, not private, but done at noon-day under the tell of competent persons; and it was a thing that proved itself, for it was effective of a prefent, a great, and a permanent change.

But now it is no new wonder, but a pursuance of the same conjugation of great and divine things, that the fame and religion of Jefus was with fo incredible a imilinely leattered over the face of the habitable world, from one end of the earth unto the other; it filled all Asia immediately, it passed presently to Europe, and to the furthest Africans; and all the way it went it told nothing but an holy and an humble flory, that he who came to bring it into the world, died an ignominious death, and yet this death did not take away their courage, but added much: for they could not fear death for that Master, whom they knew to have for their fakes suffered death. and came to life again. But now infinite numbers of persons of all sexes, and all ages, and all countries, came in to the Holy crucifix; and he that was crucified in the reign of Tiberius, was in the time of Nero, even in Rome itself, and in

Nero's

Nero's family by many persons esteemed for a God; and it was upon public record that he was so acknowledged; and this was by a Christian, Justin Martyr, urged to the fenate, and to the emperors themfelves, who if it had been otherwise could eafily have confuted the bold allegation of the Christian, who yet did die for that Jefus who was fo speedily reputed for a God; the crofs was worn upon breafts, printed in the air, drawn upon foreheads, carried on banners, put upon crowns imperial; and yet the Christians were fought for to punishments, and exquisite punishments fought forth for them; their goods were confiscate, their names edious, prisons were their houses, and so many kinds of tortures invented for them that Domitius Ulpianus hath spent seven books in deferibing the variety of tortures the poor Christian was put to at his first appearing; and yet, in despite of all this, and ten thousand other objections and impossibilities, whatfoever was for them made the religion grow, and whatfoever was against them made it grow; if they had peace, the religion was prosperous; if they had pertecution, it was still prosperous; if princes favoured them, the world came in, because the Christians lived holily; if princes were incenfed, the world came in, because the Christians died bravely. They fought for death with greediness, they desired to be grinded in the teeth of lions; and with joy they beheld the wheels and the bended trees, the racks and the gibbets, the fires and the burning irons, which were like the chair of Elias to them, instruments to carry them to heaven, into the bosom of their beloved Jeius.

Who would not acknowledge the divinity of this person, and the excellency of this infiltution, that should see infants to weary the hands of hangmen for the testimony of Jesus; and wife men preach this doctrine for no other visible reward, but shame and death, poverty and banishment? and hangmen converted by the blood of martyrs, ipringing upon their faces, which their impious hands and cords have strained through their slesh? Who would not have confessed the honour of lefus, when he should see miracles done at the tombs of martyrs, and devils tremble at the mention of the name of Jesus, and the world running to the honour of the poor Nazarene, and kings and queens kiffing the feet of the poor fervants of Jesus?

Could a Jew fisherman and a publican effect all this, for the fon of a poor maiden of Judea? can we suppose all the world, or so great a part of mankind, can confent by chance, or fuffer fuch changes for nothing? or for any thing less than this? The fon of the poor maiden was the Son of God: and the fishermen spake by a divine spirit; and they catched the world with holine's and miracles, with wifdom and power bigger than the flrength of all the Roman legions. And what can be added to all this, but this thing alone to prove the divinity of Jesus? He is a God, or at least is taught by God, who can foretel future contingencies; and fo did the holy Jefus, and fo did his disciples.

Our bleffed Lord, while he was alive, forctold that after his death his religiou thould flourith more than when he was alive: he foretold perfecutions to his difciples; he foretold the mission of the Holy Ghoft to be in a very few days after his afcension, which within ten days came to pass; he prophesied that the fact of Marc Magdalene, in anointing the head and f = of her Lord, thould be public and known as the gospel itself, and spoken of in the fame place; he foretold the deflruction of Jerusalem and the figns of its approach and that it should be by war, and particularly after the manner of prophets, fymbolically, named the nation should do 1', pointing out the Roman eagles; he foretold his death, and the manner of it, and plainly before-hand published his refurestion, and told them it should be the fign to that generation, viz. the great argument to prove him to be the Christ; he prophetical that there should arise false Christs after him, and it came to pask to the extreme great calamity of the nation; and lattly, he foretold that his beloved disciple S. John should tarry upon the earth till his coming again, that is, to his coming to judgment upon Jerusalem; and that his religion should be preached to the Gentiles, that it should be scattered over all the world, and he received by all nations; that it should stay upon the face of the earth till his last coming to judge all the world, and that " the gates of hell should not be able to prevail against his church;" which prophecy is made good thus long, till this day, and is as a continual argument to justify the divinity of the author: the continuance of the religion helps to continue it, for it proves that it came from God,

who foretold that it should continue; and therefore it must continue, because it came from God; and therefore it came from God, because it does and shall for ever continue according to the word of the

holy Icfus.

But, after our bleffed Lord was entered into glory, the disciples also were prophets. Agabus foretold the dearth that was to be in the Roman empire in the days of Claudius Cæfar, and that St. Paul should be bound at Jerufalem: St. Paul foretold the entering-in of Hereticks into Afia after his departure; and he and St. Peter and St. Jude, and generally the rest of the apollles, had two great predictions, which the, used not only as a verification of the docting of Jefus, but as a means to flicingthes the hearts of the disciples, who were to broken with perfecution; the one was, that there should arise a sect of vile men, who should be enemies to religion and government, and cause a great apollacv, which happened notorioufly in the feet of the Gnostics, which those three apostles and St. John notoriously and plainly do describe: and the other wa, that although the lewith nation did mightily oppose the religion, it should be but for a while, for they should be dedroyed in a short time, and their nation made extremely miferable; but, for the Christians, if they would the from Jerufalem and go to Pella, there should not a hair of their head perish: the verification of this prophecy the Christians extremely longed for, and wondered it flyed to long, and began to be troubled at the delay, and suspected all was not well, when the great proof of their religion was not verified; and, while they were in thoughts of heart concerning it, the fud catalysis did come, and swept away eleven landred thousand of the nation; and from that day folward the nation was broken in pice's with intolerable calamities: they are scattered over the face of the earth, and are a vagabond nation, but yet, like oil in a veffel of wine, broken into bubbles but kept in their own circles; and they shall never be an united people, till they are servants of the holy Jesus; but shall remain without priest or temple, without altar or facrifice, without city or country, "ithout the land of promise, or the promile of a bleffing, till our Jesus is their high Priest, and the Shepherd to gather them into his fold: and this very thing is a mighty demonstration against the Jews by their own prophets; for when Isaiah. and Jeremiah, and Malachi, had prophefied the rejection of the Jews and the calling of the Gentiles, and the change of the old law, and the introduction of a new by the Messias; that this was he, was therefore certain, because he taught the world a new law, and prefently after the publication of this, the old was abrogate, and not only went into defuetude, but into a total abolition among all the world; and for those of the remnant of the scattered Jews who obstinately blaspheme, the law is become impossible to them, and they placed in such circumstances, that they need not dispute concerning its obligation; for it being external and corporal, ritual and at last made also local, when the circumstances are impossible, the law, that was wholly ceremonial and circumstantial, must needs pafs away: and when they have loft their priesthood, they cannot retain the law, as no man takes care to have his beard shaved, when his head is oft.

And it is a wonder to confider how the anger of God is gone out upon that miferable people, and that so great a blindness is fallen upon them; it being evident and notorious that the Old Tellament was nothing but a shadow and ambrage of the New; that the prophecies of that are plainly verified in this; that all the predictions of the Messias are most undensably accomplished in the person of Jesus Christ, so that they cannot with any plantibleness or colour be turned any other way, and be applied to any other person, although the Jews make illiterate allegations, and producious dreams, by which they have fooled themselves for fixteen hundred years together, and flill hope without reason, and are confident without revelation, and pursue a shadow while they quit the glorious body; while, in the mean time, the Christian prays for his conversion, and is at rell in the truth of Jefus, and hath certain unexpressible confidences and internal lights, claraties of the Holy Spirit of God, and loves to the holy Jefus produced in his foul that he will die when he cannot dispute, and is latisfied and he knows not how, and is fure by comforts, and comforted by the excellency of his belief, which speaks nothing but holiness, and light and reason, and peace and satisfactions infinite, because he is sure that all the world can be happy if they would live by the religion of Jesus, and that neither societies of men nor fingle persons can have felicity felicity but by this; and that therefore God, who so decrees to make men happy, hath also decreed that it shall for ever be upon the face of the earth, till the earth itself shall be no more. Amen.

Biffing Taylor.

§ 199. Confiderations on the awak Pretences of other Religious.

IV. Now, if against this vall heap of things any man field but confront the pretences of any other religion, and see how they fail both of reason and holiness, of wonder and divinity, how they enter by force, and are kept up by human interests, how ignorant and unholy, how unlearned and pititul are their pretences; the darknesses of these must add great eminency to the brightness of that.

For the Jews religion, which came from heaven, is therefore not row to be practifed, because it did come from heaven, and was to expire into the Christian, it being nothing but the image of this perfection: and the Jews med'd no other argument but this, that God bath mide theirs impossible now to be done; to, he that ties to ceremonies and outward ufage, temples and altars, facrifices and prieffs, troublefome and expensive rites and figures of future fignification, means that there should be an abode and fixt dwelling, for the feare not to be done by an ambulitory people; and therefore, frace God hath feattered the people into atoms and crumbs of fociety, without temple or prieft, without facishes or alter, without Ulim or Thummin, without prophet or vision, even communicating with them no way but by ordinary providence, it is but too evident, that God hith nothing to do with them in the matter of that religion; but that it is expired, and no way obligatory to them or pleading to him, which is become impossible to be acted: whereas, the Christian religion is as eternal as the foul of a man, and can no more cease than our spirits can die, and can worthip upon mountains and caves, in hilds and churches, in peace and war, in folitude and fociety, in perfecution and in fun-thine, by night and by day, and be folemnized by clergy and laity in the ellential parts of it, and is the perfection of the foul, and the highest reason of man, and the glorification of

But for the Heathen religions, it is evidently to be feen, that they are nothing

but an abuse of the natural inclination which all men have to worship a God. whom because they know not, they guess at in the dark; for that they know there is and ought to be fomething that hath the care and providence of their affairs. But the body of their religion is nothing but little arts of governments, and firatageins of princes, and devices to fecure the government of new usurpers, or to make obedience to the laws fure, by being facred, and to make the voke that was not natural, pleafant by foractling that is. But yet, for the whole body of it, who fees not, that their worshippings could not be facred, because they were done by something that is impure? They appealed their gods with adulteries and impute mixtures, by fuch things which Cato was athuned to fee, by pluttonous catings of fleth, and impious deinkings, and they did little in humano fanguire, they facilitied men and women and children to their damons, as is notorious in the rites of Brechus Omesta among it the Greeks, and of Jupiter, to whom a Greek and a Greekels, a Galation and a Galatels, were yearly effered; in the antivers of the oracles to Calchas, as appear in Homer and Viegil. Who fees not, t'at crimes were warranted by the example of their immortal gods; and that what did di honoar themselves, they fung to the horour of their gods, whom they affirmed to be paffionate and proud, jea'ous and revenueful, amorous and luftful, fearful and impatient, drunken and fliepy, weary and wounded? that the religions were made latting by policy and force, by ignorance, and the force of cultom; by the preferring an inveterate error, and loving of a quiet and prosperous evil; by the arguments of pleafure and the correspondencies of fensuality; by the fraud of oracles, and the patronage of vices; and because they feared every change as an earthquake, as fuppoling overturnings of their old error to be the eversion of their well-established governments? And it had been ordinarily impossible that ever Christianity should have entered, if the nature and excellency of it had not been such as to enter like rain into a fleece of wool, or the fun into a window, without noise or violence, without emotion and difordering the political conflitution, without caufing trouble to any man but what his own ignorance or peevishnels was pleafed to spin out of his own bowels: bowels; but did establish governments, secure obedience, made the laws sirm, and the persons of princes to be facred; it did not oppose force by force, nor strike-princes for judice; it defended itself against enemics by patience, and overcame them by kindress; it was the great instrument of Gol to demonstrate his power in our weaknesses, and to do good to mankind by the imitation of his excellent goodnate.

Lastly, he that considers concerning the religion and person of Mahomet; that he was a vicious person, luilful and tyrannical; that he propounded incredible and ri liculous propositions to his disciples; that it entered by the fword, by blood and violence, by murder and robbery; that it po pounds fenfual rewards, and allures to compliance by bribing our baselt lasts; t' it it conferves itself by the same means it entered; that it is unlearned and foolish. against reaton, and the discourses of all wie men; that it did no miracles, and male falle prophenes; in flort, that in the juston that founded it, in the article it , c. fuad ", in the manner of prevailing, in the reward it offers, it is unhois and feelish and rode: it must no ids appear to be void of all pictence; and that no man of reason can ever be fairly perfunded by arguments, that it is the daughter of God, and came down from heaven.

## Conclusion.

Since therefore there is so nothing to be sail for any other religion, and so very much for Christianity, every one of whose freteness can be proved, as well as the things themselves do require, and as all the world expects such things should be prived; it follows, that the hely Jesus is the Son of God; that his religious is commanded by God, and is that way by which he will be worshipped and how ured; and that "there is no other name under heaven by which we can be faved, but only the name of the Lord Jesus."

Bifliop Taylor.

\$ 200. To the Sceptics and Infidels of the

Gentlemen.

Suppose the mighty work accomplished, the cross trampled upon, Christianity every where proscribed, and the religion of nature once more become the religion of

Europe; what advantage will you have derived to your country, or to yourselves, from the exchange? I know your answeryou will have freed the world from the hypocrify of priests, and the tyranny of fuperflition .- No; you forget that Lycurgus, and Numa, and Olin, and Mango-Copac, and all the great legislators of ancient or modern flory, have been of opinion, that the affairs of civil fociety could not well be conducted without fome religion; you must of necessity introduce a pricithood, with, probably, as much hypocrify; a religion, with, affuredly, more fuperflition, than that which you now reprobate with fuch indecent and ill-grounded contempt. But I will tell you, from what you will have freed the world; you will have freed it from its abhorrence of vice, and from every powerful incentive to virtue; you wil, with the religion, have brought back the deprayed morality, of Pagemin : voi will have robbed mankind of their firm afterance of another life; and thereby you will have despoiled them of then patience, of their hamility, of their charity, of their chattiry, of all thote mild and filent vi tae, which (however defpicable they raive up one in your eyes) are the only one, was a meliorate and fublishe om natare t wise i a'agaaifm aever knew, which long from Christianity alone, what hado or might conflitute our comfort in this life, and without the postess n of which, another life, it after all there should happen to be one, mult be more vicious and more miterable than this is, unless a miracle be exerted in the alteration of our disposition.

Perhaps you will contend, that the univertal light of reason, that the truth and fitn is or things, are of themselves sufficient to exalt the nature, and regulate the manners of markind. Shall we never have done with this groundless commendation of natural law. Look into the hall chapter of Pau's epiftle to the Roman, and you will fee the extent of its influence over the Gentiles of those days; or if you dislike Paul's authority, and the manners of antiquity; look into the more admired accounts of modern voyagers; and examine its influence over the Pagans of our own times, over the fenfual inhabitants of Otaneitè, over the canniba's of New Zeland, or the remorfeless savages of America. But these men are Barbalians.-Your law of nature, notwithstanding, extends even to them:—but they have misused their reason;—they have then the more need of, and would be the more thankful for that revelation, which you, with an ignorant and fastidious self-sufficiency deem useless.—But, they might of themselves, if they thought sit, become wise and virtuous.—I answer with Cicero, Ut nihil interest, utrum nemo valeat, an nemo valere possit; sic non intelligo quil intersit, utrum nemo sit sapiens, an nemo esse possit;

Thefe, however, you will think, are extraordinary inflances; and that we pught not from thefe, to take our measure of the excellency of the law of nature; but rather from the civilized flates of China and Japan, or from the nations which flourished in learning and in arts, before Christianity was heard of in the world. You mean to fay, that by the law of nature, which you are defirous of fubilitating in the room of the gospel, you do not understand those rules of conduct, which an individual, abilitacted from the community, and deprived of the inflitution of mankind, could excogitate for himfelf; but such a fythem of precepts, as the most enlightened men of the most enlightened ages, have recommended to our observance. Where do you find this fythem? We caunot meet with it in the works of Stobacus, of the Scythian Anacharfis; nor in those of Plato, or of Cicero, nor in those of the emperor Antoninus, or the flave Epictetus; for we are perfuaded, that the most animated confiderations of the weiner, and the honellum, of the beauty of virtue, and the fitness of things, are not able to furnish, even a Brutus himfelf, with permanent principles of action; much less are they able to purify the polluted recesses of a vitiated heart, to curb the irregularities of appetite, or reftrain the impetuofity of pathon in common men. If you order us to examine the works of Giotius, or Puffendorf, of Burlamaqui, or Hutchinson, for what you understand by the law of nature; we apprehend that you are in a great error, in taking your notions of natural law, as discoverable by natural reafon, from the elegant fystems of it, which have been drawn up by Christian philofophers; fince they have all laid their foundations, either tac thy or expressly, upon a principle derived from revelation. thorough knowledge of the being and atpributes of God: and even those amongst

yourselves, who, rejecting Christianity, sill continue Theists, are indebted to revelation (whether you are either aware of, or difposed to acknowledge the debt, or not) for those sublime speculations concerning the deity, which you have fondly attributed to the excellency of your own unaffifled reason. If you would know the real strength of natural reason, and how far it can proceed in the investigation or info:cement of moral duties, you must confult the manners and the writings of those, who have never heard of either the Jewith or the Christian dispensation, or of those other manifestations of himself, which God vouchfated to Adam and to the patriarchs, before and after the flood, It would be difficult perhaps any where, to find a people entirely deflitute of traditionary notices concerning a deity, and of traditionary fears or expectations of another life; and the morals of mankind may have, perhaps, been no where quite fo abandoned, as they wou'd have been, had they been left wholly to themselves in these points: however, it is a truth, which cannot be denied, how much foever it may be lamented, that though the generality of mankind have always had fome faint conceptions of God, and his providence; yet they have been always greatly inefficacious in the production of good morality, and highly derogatory to his nature, amongst all the people of the earth, except the Jews and Christians; and fome may perhaps be defirous of excepting the Mahometans, who derive all that is good in their Koran from Christianity.

The laws concerning justice, and the reparation of damages, concerning the iccurity of property, and the performance of contracts; concerning, in thort, whatever affects the well-being of civil fociety, have been every where understood with fufficient precision; and if you choose to stile Justinian's code, a code of natural law, though you will err against propriety of speech, yet you are so far in the right, that natural reason discovered, and the depravity of human nature compelled human kind, to establish by proper sanctions the laws therein contained; and you will have moreover Carneades, no mean philo fopher, on your fide; who knew of no law of nature, different from that which men had instituted for their common utility; and which was various according to the

manners

manners of men in different climates, and changeable with a change of times in the fame. And in truth, in all countries where Paganism has been the established religion, though a philosopher may now and then have slepped beyond the paltry prescript of civil jurisprudence, in his pursuit of virtue; yet the bulk of mankind have ever been contented with that feanty pittance of morality, which enabled them to escape the lash of civil punishment: I call it a feanty pittance; because a man may be intemperate, iniquitous, impious, a thousand ways a profligate and a vill iin, and vet clude the cognizance, and avoid the punishment of civil liws.

I am fenfible, you will be ready to fav, what is all this to the purpo'e? though the bulk of mankind may never be able to invelligate the laws of natural religion, nor disposed to reverence their functions when investigated by others, nor folicitous about any other flandard of moral rectitude, than civil legislation; yet the inconveniences which may attend the extripation of Christianity, can be no proof of its truth. -I have not produced them, as a proof of its truth; but they are a flrong and conclusive proof, if not of its truth, at leaft of its utility; and the confideration of its utility, may be a motive to yourfelves for examining, whether it may not chance to be true; and it ought to be a reason with every good citizen, and with every man of found judgment, to keep his opimons to himfelf, if from any particular circumstances in his studies or in his education he should have the misfortune to think that it is not true. If you can difcover to the riting generation, a better religion than the Christian, one that will more effectually animate their hopes, and fubdue their passions, make them better men, or better members of fociety, we importune you to publish it for their advantage; but till you can do that, we beg of you, not to give the reins to their passions, by instilling into their unsuspicious minds your pernicious prejudices: even now, men fcruple not, by their lawlets lust, to ruin the repose of private families, and to fix a stain of infamy on the noblest: even now, they hesitate not, in lifting up a murderous arm against the life of their friend, or against their own, as often as the fever of intemperance stimulates their resentment, or the satiety of an

useless life excites their despondency: even now, whilstwe are persuaded of a resurrection from the dead, and of a judgment to come, we find it difficult enough to resist the solicitations of sense, and to escape unspotted from the licentious manners of the world: But what will become of our virtue, what of the consequent peace and happiness of society, if you persuade us, that there are no such things? in two words,—you may ruin yourselves by your attempt, and you will certainly ruin your country by your success.

But the confiderator of the inutility of your defign, is not the only one, which should induce you to abandon it; the argument a tuto ought o be warily managed, or it may tend to the filencing our opposition to any system of superstition, which has had the good forume to be functified by public authority; it is, indeed, liable to no objection in the present case; we do not, however, wholly rely upon its cogency. It is not contended, that Chriftianity is to be received, merely because it is useful: but because it is true. This you deny, and think your objections well grounded; we conclie them originating in your vanity, your immorality, or your mifapprehension. Thre are many worthlets doctrines, many uperflitious obtervances, which the faul or folly of mankind have every where mnexed to Christianity, (especially in the church of Rome) as effectial parts of it; if you take thefe forry appendages to Christianity, for Christianity itself, as Feached by Christ, and by the apostles; if you confound the Roman, with the Chrisan religion, you quite misapprehend its atu e; and are in a flate fimilar to that o men, (mentioned by Plutarch, in his teatife of superstition) who flying from uperflition, leapt over religion, and functinto downright atheifm.-Christianity s not a religion very palatable to a volutuous age; it will not conform its precept to the flandard of fathion; it will not liden the deformity of vice by lenient appelations; but calls keeping, whoredom; itrigue, adultery; and duelling, murder; will not punder the luft, it will not liense the intemperance of mankind; it is a troublesome monitor to a man o pleasure; and your way of life may have made you quarrel with your religon .- As to your vanity, as a cause of yor infidelity, suffer me to produce the fentiments of M. Bayle upon that head; if the description does not fuit your character, you will not be offended at it; and it you are offended with its freedom, it will do you good, . This inclines me to believe, that libertines, like Der-Barwany, are not greatly persuaded of the titth of what they say, They have made no deep examination; they have learned force few objections, which they are perpetually making a noite with; they freak from a principle of oftentation, and give thenfelves the lie in the time of danger.-Vanity has a greater thare in their disputes, than conscience; they imagine, that the fingularity and boldness of the opin ors which they maintain, will give them the reputation of men of parts:-by degrees, they get a habit of holding impious ofcourtes; and if their vanity be accompalied by a voluptuous life, their progress in that road is the iwifter.'

The main fleefs of your objections, refls not upon the infulcioney of the external evidence to the truth of Christianity; for few of you, though you may become the future ornaments if the fenate, or of the bar, have ever enployed an hour in its examination; but it is its upon the difficulty of the doctines, contained in the New Testament: they exceed, you fay, your comprehentin; and you telicitate yourselves, that you are not yet arrived at the true flandad of orthodox faith,-You think, it credo quia impubbile. would be taking a superfluous trouble, to enquire into the nature of the external proofs, by which Christianity is established; fince, in your opinon, the book ittelf carries with it its own refutation. A gentleman as acute, probably, as any of you; and who once beleved, perhaps, as little as any of you, he drawn a quite different conclusion from he perusal of the New 'Tellament; his bek (however exceptionable it may be thught in some particular parts) exhibits, tot only a diffinguished triumph of recon over prejudice, of. Christianity ove delim; but it exhibits, what is infinitelymore rare, the character of a man, who ha had courage and candour enough to acknowledge it.

But what if acre thould be some incomprehensible offrines in the Christian religion; some freumstances, which in their causes, or their consequences, sur-

pass the reach of human reason; are they to be rejected upon that account? You are, or would be thought, men of reading, and knowledge, and enlarged underflandings; weigh the matter fairly; and confider whether revealed religion be not, in this respect, just upon the same footing, with every other object of your contemplation. Even in mathematics, the science of demonstration itself, though you get over its first principles, and learn to digest the idea of a point without parts, a line without breadth, and a furface without thickness; yet you will find yourselves at a lof; to comprehend the perpetual approximation of lines, which can never meet; the doctine of incommensurables and of an infinity of infinites, each iain itely greater, or infinitely lefs, not only thin any finite quantity, but than each other. In physics, you cannot comprehend the primary cause of any thing; not of the light, by which you fee; nor of the elasticity of the air, by which you hear; nor of the fire, by which you are warmed. In physiology, you cannot tell, what full gave motion to the heart; nor what continues it; nor why its motion is le's voluntary, than that of the lung; nor why you are able to move your arm, to the right or left, by a fimple volition: you cannot explain the cause of animal heat; nor comprehend the principle, by which your body was at first formed, nor by which it is fullained, nor by which it will be reduced to earth. In natural religion, you cannot comprehend the eternity or omnipicience of the Deity; nor eafily understand, how his prescience can be confident with your freedom, or his immutability with his government of moral agents; nor why he did not make all his creatures equally perfect; nor why he did not create them fooner: In thort, you cannot look into any branch of knowledge, but you will meet with fubjects above your comprehension. The fall and the redomption of human kind, are not more incomprehensible, than the creation and the confervation of the universe; the infinite author of the works of providence, and of nature, is equally inferutable, equally paft our finding out in them both. And it is fomewhat remarkable, that the deepest inquirers into nature, have ever thought with most reverence, and spoken with most diffidence, concerning those things, which

in reveiled religion, may feem hard to be understood; they have ever avoided that felf-fufficiency of knowledge, which fprings from ignorance, produces indifference, and eads in infidelity. Admirable to this purpofe, is the reflection of the greatest mathematicion of the present age, when he is combating an or inion of Newton's, by an h pothelis of his own, still less defensible thin that which he opposes :- Tous les jours que je vois de ces cliprits-forts, qui Chaquent les verités de notre religion, et S'en mocquent même avec la plus impertirante fumfance, je penfe, chetifs mortel! combien et combien des choses sur lesquels vous raiformez fi legerement, font elles plas fablunes, et plus clevés, que celles fur I spielles le grand Newton s'egare fi giorkaismest.

Plato mentions a fet of men, who were very ignorant, and thought themselves furnemely wife; and who rejected the argument for the being of a God, derived from the harmony and order of the universe, as old and trite; there have been men, it feems, in all ages, who in affecting for a larity, have overlooked truth: an arto nent, however, is not the worfe for being old; and furely it would have been a me e jult mode of reasoning, if you had e onited the external evidence for the tenth of Christienity, weighed the old arguments from miracles, and from propheers, before you had rejected the whole acrount from the difficulties you met with in it. You would laugh at an Indian, who th peoping into a history of England, and meeting with the mention of the Thames being frozen, or of a thower of hail, or of thow, should throw the book aside, as unworthy of his further notice, from his want of ability to comprehend these phæ-

In confidering the argument from miracles, you will foon be convinced, that it is possible for God to work miracles; and you will be convinced, that it is as possible for human testimony to establish the truth of miraculous, as of physical or historical events; but before you can be convinced that the miracles in question are supported by such testimony as deserves to be credited, you must inquire at what perion, and by what persons, the books of the Old and New Testament were composed; if you reject the account, without making this examination, you reject it from prejudice, not from reason.

There is, however, a short method of examining this argument, which may, perhaps, make as great an impression on your minds, as any other. Three men of diffinguithed abilities, rose up at different times, and attacked Christianity with every objection which their malice could fuggett, or their learning could devife; but neither Celfus in the second century, nor Porphyry in the third, nor the emperor Iulian himfelf in the fourth century, ever questioned the reality of the miracles related in the gospels. Do but you grant us what these men (who were more likely to know the truth of the matter, than you can be) granted to their adverfaries, and we will very readily let you make the most of the my ic, to which, as the last wretched flift, they were forced to attribute them. We can find you men, in our days, who from the mixture of two colourless liquors, will produce you a third as red as blood, or ef any other colour vou defire; et dicto citius, by a drop referribling water, will reflore the transparency; they will make two fleids coaletce into a folid body; and from the mixture of liquors colder than ice, will inflamly raife you a horrid explofion, and a tremendous fl ne: thefe, and twenty other tricks they will perform, without having been fent with our Saviour to Egypt to learn magic; nay, with a bottle or two of oil, they will compose the undulations of a lake; and by a little art, they will restore the function, of life to a man, who has been an hour or two under water, or a day or two buried in the fnow: but in vain will these men, or the greatest magician that Egypt ever faw, fay to a beifterous fea, "Peace, be still," in vaia will they fay to a carcafe rotting in the grave, "Come forth;" the winds and the fea will not obey them, and the putrid carcase will not hear them. You need not fuffer vourselves to be deprived of the weight of this argument; from its having been observed, that the Fathers have acknowledged the supernatural part of l'aganism; since the Fathers were in no condition to detect a cheat, which was supported both by the disposition of the people, and the power of the civil magistrate; and they were, from that inability, forced to attribute to infernal agency what was too cunningly contrived to be detected, and contrived for too impious a purpose, to be credited as the work of God. With

With respect to prophecy, you may, perhaps, have accustomed yourselves to confider it, as originating in Afiatic enthufiasm, in Chaldean mystery, or in the fubtle stratagem of interested priests; and have given yourfelves no more trouble concerning the predictions of facred, than concerning the oracles of Pagan history. Or, if you have ever cast a glance upon this subject, the dissensions of learned men concerning the proper interpretation of the revelation, and other difficult prophecies, may have made you rathly conclude, that all prophecies were equally unintelligible; and more indebted for their accomplishment, to a fortunate concurrence of events, and the pliant ingenuity of the expositor, than to the inspired foresight of the prophet. In all that the prophets of the Old Testament have delivered, concerning the destruction of particular cities, and the defolation of particular kingdoms, you may fee nothing but shrewd conjectures, which any one acquainted with the history of the rife and fall of empires, might certainly have made: and as you would not hold him for a prophet, who should now affirm, that London or Paris would afford to future ages, a spectacle just as melancholy, as that which we now contemplate, with a figh, in the ruins of Agrigentum or Palmyia; fo you cannot perfuade yourselves to believe, that the denunciations of the prophets against the haughty cities of Tyre or Babylon, for inflance, proceeded from the infputation of the Deity. There is no doubt, that by fome fuch general kind of reatoning, many are influenced to pay no attention to an argument, which, if properly confidered, carries with it the throngest conviction.

Spinoza faid, That he would have broken his atheistic system to pieces, and embraced without repugnance the ordinary faith of Christians, if he could have perfuaded himself of the resurrection of Lazarus from the dead; and I question not, that there are many disbelievers, who would relinquish their deiflic tenets, and receive the gospel, if they could perfuade themselves, that God had ever to far interfered in the moral government of the world, as to illumine the mind of any one man with the knowledge of future events. A miracle strikes the senses of the persons who see it, a prophecy addreffes itself to the understandings of those

who behold its completion; and it requires, in many cases, some learning, in all some attention, to judge of the correspondence of events with the predictions concerning them. No one can be convinced, that what Jeremiah and the other prophets foretold of the fate of Babylon. that it should be besieged by the Medes; that it should be taken, when her mighty men were drunken, when her springs were dried up; and that it should become a pool of water, and should remain desolate for ever; no one, I fay, can be convinced, that all these, and other parts of the prophetic denunciation, have been minutely fulfilled, without spending some time in reading the accounts, which profane hiftorians have delivered down to us concerning its being taken by Cyrus; and which modern travellers have given us of its prefent fituation.

Porphyry was to perfuaded of the coincidence between the prophecies of Daniel and the events, that he was forced to affirm the prophecies were written after the things prophefied of had happened; another Porphyry has, in our days, been to aftonished at the correspondence between the prophecy concerning the destruction of Jerusalem, as related by St. Matthew, and the hiftory of that event, as recorded by Josephus; that, rather than embrace Christianity, he has ventured to affert (contrary to the faith of all ecclefiaffical history, the opinion of the learned of all ages, and all the rules of good criticism) that St. Matthew wrote his Golpel after Jerusalem had been taken and destroyed by the Romans. You may from these inflances perceive the thrength of the argument from prophecy; it has not been able indeed to vanquith the prejudices of either the antient or the modern Porphyry; but it has been able to compel them both, to be guilty of obvious fallehoods, which have nothing but impudent affertions to support them.

Some over-zealous interpreters of feripture have found prophecies in fimple narrations, extended real predictions beyond the times and circumítances to which they naturally were applied, and perplexed their readers with a thoufand quaint allufions and allegorical conceits; this proceeding has made unthinking men pay lefs regard to prophecy in general; there are fome predictions however, such as those

concerning

concerning the present state of the Jewish people, and the corruption of Christianity, which are now fulfilling in the world; and witch, if you will take the trouble to examine them, you will find of fuch an e traordinary nature, that you will not perhaps hefitate to refer them to God as their author; and if you once become perfunded of the truth of any one miracle, or of the completion of any one prophecy, you will resolve all your difficulties (concoming the manner of God's interpolition, in the moral government of our species, and the nature of the doctrines contained in revelation) into your own inability fully to comprehend the whole scheme of divine providence.

We are told however, that the strangeneis of the narration, and the difficulty of the doctimes contained in the New Tellament, are not the only circumstances which induce you to reject it; you have difcovered, you think, fo many contradictions, in the accounts which the Evangelists have given of the life of Christ, that you are compelled to confider the whole as an illdigeited and improbable flory. You would not reason thus upon any other occasion; you would not reject as fibulous the accounts given by Livy and Polybius of Hanaibil and the Caithaginians, though you fould discover a difference betwixt them in feveral points of little importance. You cinuot compare the history of the fame events as delivered by any two historians, but you will meet with many circumflances, which, though mentioned by one, are either wholly omitted or differently related by the other; and this observation is peculiarly applicable to biographical writings: But no one ever thought of difbelieving the leading circumstances of the lives of Vitellius or Vespasian, because Tacitus and Suctonius did not in every thing correspond in their accounts of these emperors; and if the memoirs of the life and doctrines of M. de Voltaire himself, were fome twenty or thirty years after his death, to be delivered to the world by four of his most intimate acquaintance; I do not apprehend that we should discredit the whole account of fuch an extraordinary man, by reason of some slight inconsistencies and contradictions, which the avowed enemies of his name might chance to difcover in the several narrations. Though we should grant you then, that the Evangelists had fallen into tome trivial con-

tradictions, in what they have related concerning the life of Christ; yet you ought not to draw any other inference from our conceilion, than that they had not plotted together, as cheats would have done, in order to give an unexceptionable confishency to their fraud. We are not however difpoted to make you any fuch concession; we will rather shew you the futility of your general argument, by touching upon a few of the places, which you think are most liable to your censure.

You observe, that neither Luke, nor Mark, nor John have mentioned the cruelty of Herod in murdering the infants of Bethlehem; and that no account is to be found of this matter in Josephus, who wrote the life of Herod; and therefore the fact recorded by Matthew is not true. -The concurrent testimony of many independent writers concerning a matter of fact, unquestionably adds to its probability; but if nothing is to be received as true, upon the testimony of a single author, we must give up some of the best writers, and difbelieve fome of the most interesting

tacks of antient history.

According to Matthew, Mark, and Luke, there was only an interval of three months, you fay, between the baptism and crucificion of Jefus; from which time, taking away the forty days of the temptation, there will only remain about fix weeks for the whole period of his public ministry; which lasted however, according to St. John, at the least above three years. Your objection fairly flated flands thus; Matthew, Mark, and Luke, in writing the hillory of Jesus Christ, mention the feveral events of his life, as following one another in continued fuccession, without taking notice of the times in which they happened; but is it a just conclusion from their filence, to infer that there really were no intervals of time between the transactions which they feem to have connected? Many inflances might be produced from the most admired biographers of antiquity, in which the events are related, as immediately consequent to each other, which did not happen but at very distant periods: we have an obvious example of this manner of writing in St. Matthew; who connects the preaching of John the Baptist with the return of Joseph from Egypt, though we are certain, that the latter event preceded the former by a great many years, John

John has faid nothing of the institution of the Lord's supper; the other Evangelists have faid nothing of the washing of the disciples' feet :- What then? are you not ashamed to produce these fasts, as inflances of contradiction? if omifions are contradictions, look into the history of the age of Louis the Fourteenth, or into the general hillory of M. de Voltaire, and you will meet with a great abundance of contradictions.

tong, in mentioning the discourse which Tefus had with his mother and his beloved disciple, at the time of his circulation, fays, that the, with Mary Magdalone, flood near the crofs; Matthew, on the other hand, fays, that Mary Magdalene and the other women were there, beholding afai off: this you think a manifelt contradiction; and feotingly inquire, whether the women and the beloved disciple, which were near the coofs, could be the fame with those, who stood for from the croft?-It is difficult not to transgue is the bounds of moderation and good in inners, in answering such sophistry: what! have you to learn, that though the livingeluls fpeak of the crucifixion, as of one event. it was not accomplished in one inflast, but laffed feveral hours? And why the women, who were at a distance from the crofs, might not, during its continuorece, draw near the crofs; or from bring near the crofs might not move from the crofs, is more than you can explain to either us, or yourfelves. And we take from you your only refuge, by denving expreisly, that the different Evangelist, in their mention of the women, theak of the fame point of time.

The Evangelule, you affirm, are fillen into groß contradictions, is their accounts of the appearances, by which Jefus manitelled himfelf to his difey les, after his refurrection from the dead; for Matthew fpeaks of two, Mark of three, Luke of two, and John of four. That contradictory propositions cannot be true, is readily granted; and if you will produce the place, in which Mitthew fays, that Jefus Christ appeared twice, and no oftener. it will be further granted, that he is contradicted by John, in a very material part of his narration; but till you do that, you must excuse me, if I cannot grant, trat the Evangelists have contradicted each other in this point; for to common underfamilings it is pretty evident, that if-Christ

appeared four times, according to John's account, he must have appeared twice, according to that of Matthew and Luke, and thrice, according to that of Mak.

The different Evangelists are not only accused of contradicting each other, but Luke is faid to have contradicted himfelf; for in his gospel he tells us, that lous afcended into heaven from Bethany; and in the Acts of the Apollles, of which be is the reputed author, he informs up, the Jefus alcended from Mount Olivet .- Year objection proceeds either from your ignorance of gography, or your ill will to Christianity; and upon either fuppersum, deferves our contempt: be plenfed, however, to remember for the fature, that Bethruy was not only the name of a town, but of a dillrict of Mount Onivet adjoining to the towe.

From this frecimen of the contindictions, alcohold to the lufto rans of the life of Chart, you may judge for yourtelves, what little reason there is to rep at Christianty upon their account; and how fadly you will be imposed upon (in a matter of more confequence to you than any other) it von take every thing tor a contradiction, which the unconfid advertures of Christiancy think proper of call one.

Defore I put an end to this address, I current belo taking notice of an argument. by which tome p'ulefophers have of I to the a oured to eventurn the whole fydem of it velation: and it is the more neoclass. to give an aniwer to their objection, as it is become a common ful ject of philotophical convertation, especially among those, who have vifited the continent. The objection tends to invalid, to, avis supposed, the author rity of Mcl s; by thewing that the earth is much older, then it can be proved to be from his account of the creation, and the feripture chronology. We contend, that fix thousand years have not yet clapsed, since the creation; and these philosophers contend, that they have indubitable proof of the enth's being at the least fourteen t'out ind years old; and they complain, t'int Mofes hangs as a dead weight upon them, and blunts all their zeal for inquiry.

The Canonico Recupero, who, it feems, is engaged in writing the history of mount Etna, has discovered a stratum of lava, which flowed from that mountain, ac-

cording

cording to his opinion, in the time of the fecond Punic war, or about two thousand years ago; this stratum is not yet covered with foil, sufficient for the production of either corn or vines; it requires then, favs the Canon, two thousand years, at least, to convert a stratum of lava into a fertile field. In finking a pit near Juci, in the neighbourhood of Etna, they have difcovered evident marks of feven distinct In as, one under the other; the furfaces of which are parallel, and most of them covered with a thick bed of rich earth; now, the emption, which formed the lowest of theil livas (if we may be allowed to reafon, favs the Canon, from analogy,) flowed from the mountain at least fourteen thoufund years ago .- It might be briefly anfwered to this objection, by denying, that there is any thing in the history of Moses repugnant to this opinion concerning the great antiquity of the earth; for though the life and progress of arts and sciences, and the fmall multiplication of the human species, render it almost to a demonstration probable, that man has not existed longer upon the furface of this earth, than acco ding to the Mofaic account; yet, that the earth was then created out of nothing, when man was placed upon it, is not, accoiding to the fentiments of some philosophers, to be proved from the original text of facred scripture; we might, I fiv, teply, with these philosophers, to this formidable objection of the Canon, by granting it in its fullest extent; we are under no necessity, however, of adopting their opinion, in order to flew the weakness of the Canon's reasoning. For in the full place, the Canon has not fatisfactorily established his main fact, that the lava in question, is the identical lava, which Diodorus Siculus mentions to have flowed from Etna, in the fecond Carthaginian war; and in the fecond place, it may be observed, that the time necessary for converting the lavas into fertile fields, must be very different, according to the different confiltencies of the lavas, and their different fituations, with respect to elevation or depression; to their being ex-Foled to winds, rains, and to other circumstances; just as the time, in which the heaps of iron flag (which refembles lava) are covered with verdure, is different at different furnaces, according to the nature of the flag, and fituation of the furnace; and something of this kind is deducible from

the account of the Canon himself; since the crevices of this famous stratum are really full of rich, good soil, and have pretty large trees growing in them.

But if all this thould be thought not fufficient to remove the objection, I will produce the Canon an analogy, in oppolition to his analogy, and which is grounded on more certain facts. Etna and Vefuvius resemble each other, in the causes which produce their eruptions, and in the nature of their lavas, and in the time neces ary to mellow them into soil fit for vegetation; or if there be any flight difference in this respect, it is probably not greater than what subsists between different lay as of the fame mountain. This being admitted, which no philosopher will deny, the Canon's analogy will prove just nothing at all, if we can produce an inflance of feven different lavas (with interjacent fliata of vegetable earth) which have flowed from mount Vesuvius, within the space, not of fourteen thousand, but of fomewhat less than seventeen hundred years; for then, according to our analogy, a fliatum of lava may be covered with vegetable feil, in about two hundred and fifty years, inflead of requiring two thoufand for the purpose. The eruption of Vefuvius, which deltroyed Herculaneum and Pompeii, is rendered still more famous by the death of Pliny, recorded by his nephew, in his letter to Tacitus; this event happened in the year 79; it is not yet then quite seventeen hundred years, fince Herculaneum was swallowed up: but we are informed by unquestionable authority, that . the matter which covers the ancient town of Herculaneum, is not the produce of one eruption only; for there are evident marks, that the matter of fix eruptions has taken its course over that which lies immediately above the town, and was the cause of its destruction. These strata are either of lava or burnt matter, with veins of good foil betwixt them.'-I will not add another word upon this subject; except that the bishop of the diocese, was not much out in his advice to Canonico Recupero-to take care, not to make his mountain older than Moses; though it would have been full as well, to have shut his mouth with a reason, as to have slopped it with the dread of an ecclefialtical cenfure.

You perceive, with what ease a little attention will remove a great disficulty; but If had we been able to fay nothing, in explanation of this phænomenon, we should not have acted a very rational part, in making our ignorance the foundation of our infidelity, or suffering a minute philosopher to rob us of our religion.

Your objections to revelation, may be numerous; you may find fault with the account, which Moses has given of the creation and the fall; you may not be able to get water enough for an universal deluge; nor room enough in the ark of Noah, for all the different kinds of aerial and terreftrial animals; you may be diffatisfied with the command for facrificing of Isaac, for plundering the Egyptians, and for extirpating the Canaanites; you may find fault with the lewish economy, for its ceremonies, its facrifices, and its multiplicity of prietts; you may object to the imprecations in the Pfalms, and think the immoralities of David, a fit subject for dramatic ridicule; you may look upon the partial promulgation of Christianity, as an insuperable objection to its truth; and waywardly reject the goodness of God toward yourselves, because you do not comprehend, how you have deserved it more than others; you may know nothing of the entrance of fin and death into the world, by one man's transgression; nor be able to comprehend the doctrine of the eross and of redemption by Jesus Christ; in short, if your mind is so disposed, you may find food for your scepticism in every page of the Bible, as well as in every appearance of nature; and it is not in the power of any person, but yourselves, to clear up your doubts; you must read, and you must think for yourselves; and you must do both with temper, with candour, and with care. Infidelity is a rank weed; it is nurtured by our vices, and cannot be plucked up as easily as it may be planted: your difficulties, with respect to revelation, may have first arisen, from your own reflection on the religious indifference of those, whom, from your earliest infancy, you have been accustomed to revere and imitate; domestic irreligion may have made you willing hearers of libertine convertation; and the uniform prejudices of the world, may have finished the business at a very early age; and left you to wander through life without a principle to direct your conduct, and to die without hope. We are far from wishing you to trust the word of the clergy for the truth of your re-

ligion; we beg of you to examine it to the bottom, to try it, to prove it, and not to hold it fast unless you find it good. Till you are disposed to undertake this task, it becomes you to consider with great seriousness and attention, whether it can be for your interest to esteem a few witty sarcasms, or metaphyfical fubtleties, or ignorant mifrepresentations, or unwarranted affertions, as unanswerable arguments against revelation; and a very flight reflection will convince you, that it will certainly be for your reputation, to employ the flippancy of your rhetoric, and the poignancy of your ridicule, upon any subject, rather than upon the subject of religion.

I take my leave with recommending to your notice, the advice which Mr. Locke gave to a young man, who was defirous of becoming acquainted with the doctrines of the Christian religion. 'Study the holy scripture, especially the New Testament: Therein are contained the words of eternal life. It has God for its author; Salvation for its end; and Truth without any mixture of error for its matter.'

Bishop Watson.

§ 201. Mistakes in judging of the Scripture style, &c.

The books of the Old Testament, which were written by the divine will and inspiration, were by the Jews of old usually divided into three feveral classes, whereof the first comprehended the five books of Moses; the fecond, all the prophets; and the third, those writings which they called Chetubim. the Greeks Hagiographa; or books that were written by holy men, but not with fuch fulness of spirit as to be ranked among the prophets. In this division they reckoned five books in the first class; eight in the fecond; and nine in the third; in all two-and-twenty; according to the nume ber of the letters of their alphabet, and as fully comprehending all that was necessary to be known and believed, as the number of their letters did all that was requifite to be faid or written; for in this method it is that they range them.

The books of Moses.

5. Exodus.
Leviticus.
Numbers.
Deuteronomy.

```
Joshua.
Four books of the former
                             Judges, and Ruth.
        prophets.
                            Samuel 1. and 2.
                            Kings 1. and 2.
                            Ifaiah.
Four books of the latter
                            Jeremiah, and his Lamentations.
        prophets.
                            Ezckiel.
                            The books of the 12 leffer prophets;
                            King David's Pfalms.
                            King Solomon's Proverbs.
                            His Eccletialtes.
                            His Song of Songs.
And the rest of the holy
                            The book of Job.
         writers.
                            The book of Daniel.
           Q.
                            The book of Ezra and Nchemiah.
                            The book of Either.
                           The book of Chromeles 1. and 2.
```

But he the books ever so genuine, and their trudition ever so certain, yet we cannet appose them wrote by persons divinely infaired, so long as we see in them certain characters inconfistent with such a suppolition. Surely the purest language, the most perfect style, the greatest clearness, the most exact method, the foundest reasoning, the man of apparent confiftency, and, in a word, all the excellencies of good writing, might be expected in a piece composed or dictated by the Spirit of God; but books wherein we find the reverse of all this, it is idle, if not impious, to ascribe

to the Deity.

I. One great mistake which the generality of readers run into, is, to judge of the composition of the Scripture, not from its original, but from its translations: for, besides that in ancient writings, such as the Bible is, there are alluffons to many rites and customs that are now laid aside, and, for this reason, must needs seem flat or impertinent; which, when they were in use, had a great deal of spirit and propriety in them; and besides that the Hebrew, in particular, is a language of a peculiar cast, both in the contexture of its words, and the cadence of its periods, and contains certain expressions, whose emphasis can no more be translated into another language, than the water of a diamond can be painted, without detracting from the original: besides all this, I say, the translators themselves, sometimes by running into mistakes, and at all times by adhering too religiously to the letter of the text, have contributed not a little to make the style of the Sacred Writings appear Reis advantageous. For, whereas other

translators have taken a liberty to accommodate the beauties of the language whereinto they translate, to the idiotions of that wherein their author wrote; thefe have thought themselves restrained from uling fuch freedom in a divine composition; and have therefore left feveral Hebraic, and other foreign phrases in their version, which seem a little uncouth, an I give the reader, who can look no farther, a very odd notion of the original: though it is certainly manifest, that the most elegant piece of oratory that ever was framed, if we render it literally, and not give it the true genius of the language whereunto we are admitting it, we lose all its beauty, and appear with the fame difadvantage.

II. Another mistake that we run into, is, when we confine eloquence to any nation, and account that the only proof of it, which is accommodated to the present taste. We indeed, in these European countries, whose languages, in a great measure, are derived from Greek and Latin, make them the patterns for our imitation, and account them the standard of perfection: but there is no reason why the eastern nations, whose languages have no affinity with them, should do the same; much leis is it reasonable to expect it in writers who lived long before these Greek or Latin authors, we so much admire, were born. It is sufficient for them that they wrote according to the fashionable, and esseemed eloquence of their own times: but that the Holy Ghost should inspire with certain schemes of speech, adapted to the modern tafte, and such as were utterly unknown in the countries where they lived, is a thing

U 2

that can never enter into any fober man's confideration. The truth is, fince Moles was bred up in all the refined learning and wifdom of the Egyptians; fince Solomon was excellent in all kind of knowledge, and in a manner idolized by the eastern world; and fince Daniel's promifing youth was improved by the learning of the Chaldean fages; we have all the reason imaginable to believe, that they wrote according to the perfection of ftyle which was then in use; that though their eloquence differs from ours, yet it is excellent in its kind; and that, if we have other notions of it, it is only because we are unacquainted with those bold allegories, and figurative ways of discourse; those dark fentences, furprifing brevities, and inconnected transitions, wherein the nature of their true fublime did confift.

III. Another mistake we run into is, when we suppose that the critical rules of eloquence are any ways necessary in divine compositions. The design of God, in 1ccording his laws, was to inform our underflandings, to cure our pathons, and rectify our wills; and if this end be but attained, it is no great matter in what form of diction the prescription be given. We never expect that a physician's receipt should be wrote in a Ciceronian ftyle: and if a lawyer has made us a firm conveyance of an estate, we never inquire what elegancies there are in the writing. When, therefore, God intends to do us far greater things than these; when he is delivering the terms of our falvation, and prefcribing the rules of our duty; why should we expect that he should insist on the niceties of style and expression, and not rather account it a diminution of his authority, to be claborate in trifles, when he has the momentous issues of another life to command our attention, and affect our passions? In some of the greatest works of nature, God has not confined himfelf to any fuch order and exactness. The stars, we see, are not cast into regular figures; lakes and rivers are not bounded by straight lines; nor are hills and mountains exact cones or pyramids. When a mighty prince declares his will by laws and edicts to his subjects, is he, do we think, careful at all about a pure flyle, or elegant composition? Is not the phrase thought proper enough, if it conveys as much as was intended? And would not the fine fleains of some modern erities by thought pedantic and affected on

fuch occasions? Why then should we expect in the Oracles of God an exactness that would be unbecoming, and beneath the dignity of an earthly monarch, and which bears no proportion or refemblance to the magnificent works of the creation? A strict observation of the rules of grammar and rhetoric, in elegant expressions, harmonious periods, and technical definitions and partitions, may gratify indeed fome readers; but then it must be granted that these things have the air of human contrivance in them; whereas in the finple, unaffected, articfs, un qual, bold, figurative flyle of the Holy Scriptures, their is a character fingularly great and maje fac. and what looks more life divine infpuation, than any other form of compoli tion.

These observations being premised, if we should now consider the nature of cloquence in general, as it is defined by Alitotle to be a faculty of personalized things, makes to consist in three things, instructing, delighting, and moving our readers or heavers mind, we shall find that the Holy Scriptus chave a fair claim to these several properties.

For where can we meet with fuch a Main reprefentation of things, in point of hillory, and fuch cogent arguments, in point of precept, as this one volume furnishes us with? Where is there an hido.v written more fimply and naturally, and at the fame time more nobly and loftily, than that of the creation of the world? Where are the great leffons of morality taught with fuch force and perforcuity (except in the fermons of Christ, and the writings of the apostles) as in the book of Deuteronotiny? Where is the whole compass of devotion, in the feveral forms of confeffion, petition, supplication, thanksgiving, vows, and praifes, to punctually taught us, as in the book of Pfalms? Where are the rules of wisdom and prudence so convincingly laid down, as in the Preveibs of Solomon, and the choice fentences of Ecclefiaftes? Where is vice and impiety of all kinds more juftly displayed, and more fully confuted, than in the threats and admonitions of the prophets? And what do the little warmths, which may be raifed in the funcy by an artificial composure and vehemence of style, signify in comparison of those strong impulses and movements which the Holy Scriptures make upon good meu's fouls, when they represent the frightfil juffice of an angry God to flubborn offenders, and the bowels of his compation, and unspeakable kindness, to all true tentents and faithful servants?

I'ne Holy Scripture indeed has none of those flathy ornaments of speech, wherewith human compositions to plentifully round; but then it has a fufficient flock of real and peculiar beauties to recommend it. To give one inflance for all out of the history of Joseph and his family: the whole relation indied is extremely nataral, but the momer of his discovering hanfelf to his bretheen is inmuitable. " And lof ob coald no long raction himtelflat, lifting up his voice with tears, ful-I am Joseph-down mir fitter yet hive?-And his bretain could not answer him; for they were troubled at his prefence. A I leigh fud to his between, come n it me, I play you and they cause near, and he faid I un Joseph-your brotherwom we fo'l into Egypt." Nothing cirun's can be a more lively defcription or Joleph's tender respect for his father, and love for his brothren; and, in like Finner, when las brothren returned, and tild their father in what splendor and glow his ion Joseph inved, it is faid, "that I tob's he at funted, for he believed them bot, but when he few the waggons which Joseph had fent for him, the spirit of Jacoo, their father, revived; and Ifra I faid, E is enough-Joseph my ion is yet alive -I will go \_\_ ind fee him\_before I die." Here is fach a contrast of different passions, of utter despondency, dawning hope, and confirmed faith, triumphant joy, and paterral affection, as no orator in the world could express more inovingly, in a more

c.6 mainer, or thorter compais of words. Niy more, had I leifure to gratify the curious, I might eafily their, that those very figures and schemes of speech, which are so much admired in profine authors, as their great beauties and ornaments, are so where more conspicuous than in the factor!

One figure, for inflance, esteemed very forid among the masters of art, is, when all the members of a period begin with the same word. The figure is called anaphora; and yet (if I mistake not) the 15th pfalm astords us a very beautiful passage of this kind. "Lord, who shall abide in thy tabernacle? Who shall dwell in thy holy hill? He that walkesh uprightly; he that back-biteth not with his

tongue; he that maketh much of them that fear the Lord; he that sweareth to his hurt, and changeth not; he that putteth not out his money to usury, nor taketh reward against the innocent. He that does these things shall never be moved."

The ancient orators took a great deal of pride in ranging finely their antitheta. Cicero is full of this, and uses it many times to a degree of affectation; and yet I cannot find any place wherein he has furpassed that passage of the prophet. "He that killeth an ox, is as if he flew a man; he that facrinceth a lamb, as if he cut off a dog's neck; he that offereth an oblation, as if he offered fwine's blood." But above all other figures, that whereon poets and orators love chiefly to dwell, is the hypotypolis, or lively description; and vet we shall hardly find in the best classe authors, any thing comparable, in this regard, to the Egyptians' defruction in the Red Sea, related in the fong of Mofes and Miriam; to the description of the Leviathan in Job; to the defcent of God, and a florm at fea in the Pialmilt; to the intrigues of an adulterous woman in the Proverbs; to the pride of the lewith ladies in Itaiah; and to the plague of locusts in Joel; which is reprefented like the ravaging of a country; and florming a city by an army: " A fire devoureth before them, and behind them a defolate wilderness, and nothing thall escape them. Before their face people shall be pained; all faces shall gather blackness. They shall run like gather blacknefs, mighty men; they shall climb the wall like men of war; they shall march every one in his way, and they shall not break their ranks. They shall run to and fro in the city; they thall run upon the wall; they shall chaib up upon the houses; they shall enter into the windows as a thief," The description is more remarkable, because the analogy is carried quite throughout without straining, and the whole processes of a conquering army in the manner of their march, their destroying the provision, and burning the country, in their scaling the walls, breaking into houses, and running about the vanquished city, are fully delineated and fet before our eyes.

From these few examples (for it would be endles to proceed in instances of this kind) it appears, that the Holy Bible is far from being desective in point of eloquence; and (what is a peculiar commendation of it) its style is full of a grateful variety;

variety; fometimes majestic as becomes that "high and holy one who inhabiteth eternity;" fometimes so low as to answer the other part of his character, " who dwelleth with him that is of an humble spirit;" and, at all times so proper, and adapted so well to the several subjects it treats of, that whoever confiders it attentively will perceive, in the narrative parts of it, a strain so simple and unaffected; in the prophetic and devotional, fomething fo animated and fublime; and in the doctrinal and preceptive, fuch an air of dignity and authority, as feems to speak its original divine.

We allow indeed, that method is an excellent art, highly conducive to the clearness and perspicuity of discourse; but then we affirm, that it is an art of modern invention in comparison to the times when the facred peninen wrote, and incompatible with the manner of writing which was then in vogue. We indeed in Europe, who, in this matter, have taken our examples from Greece, can hardly read any thing with pleasure that is not digested into order, and forted under proper heads; but the eastern nations, who were used to a free way of discourse, and never cramped their notions by methodical limitations, would have despised a composition of this kind, as much as we do a school-boy's theme, with all the formalities of its exordiums, ratios, and confirmations. And, if this was no precedent for other nations, much less can we think, that God Almighty's methods ought to be confined to human laws, which, being defigned for the narrowness of our conceptions, might be improper and injurious to his, whose "thoughts are as far above ours, as the heavens are higher than the earth."

The truth is, inspiration is, in some measure, the language of another world, and carries in it the reasoning of spirits, which, without controversy, is vastly different from ours. We indeed, to make things lie plain before our understandings, are forced to fort them out into distinct partitions, and confider them by little and little, that so at last, by gradual advances, we may come to a tolerable conception of them; but this is no argument for us to think that pure spirits do reason after this manner. Their understandings are quick and intuitive: they see the whole compass of rational inferences at once; and have no need of those little methodical distinc-

tions which oftentimes help the imperfection of our intellects. Now, though we do not affert, that the language of the Holy Scriptures is an exact copy of the reasoning of the spiritual world; yet, since they came by the inspiration of the Holy Ghost, it is but reasonable to expect that they should preserve some small relish of it; as books translated into another tongue always retain some marks of their originals. And hence it comes to pass, that though the Holy Ghost does vouchsafe to speak in the language of men, yet, in his divine compositions, there are some traces to be found of that bold and unlimited 14tiocination which is peculiar to the heavenly inhabitants, whose noble and slaming thoughts are never clogged with the cold and jejune laws of human method.

Stackboufe.

#### § 202. A Prayer or Pfalm.

Most gracious Lord God, my mercifel Father; from my youth up, my Creator, my Redeemer, my Comforter. Thou, O Lord, foundest and searchest the depths and fecrets of all hearts; thou acknowledgest the upright of heart; thou judgest the hypocrite; thou ponderest men's thoughts and doings as in a balance; thou measurest their intentions as with a line; vanity and crooked ways cannot be hid from thee.

Remember, O Lord, how thy fervant hath walked before thee; remember what I have first sought, and what hath been principal in my intentions. I have loved thy affemblies, I have mourned for the divisions of thy church, I have delighted in the brightness of thy fanctuary. This vine, which thy right hand hath planted in this nation, I have ever prayed unto thee, that it might have the first and the latter rain, and that it might stretch her branches to the feas, and to the floods. The flate and bread of the poor and oppressed have been precious in mine eyes; I have hated all cruelty and hardness of heart; I have (though in a despised weed) procured the good of all men. If any have been my enemies, I thought not of them, neither hath the fun almost fet upon my displeafures, but I have been as a dove, free from superfluity of maliciousness. Thy creatures have been my books, but thy Scriptures much more. I have fought thee in the courts, fields, and gardens; but I have found thee in thy temples.

Thousands have been my fins, and ten thousands my transgressions, but thy fanctifications have remained with me, and my heart (through thy grace) hath been an unquenched coal upon thine altar.

O Lord, my ftrength! I have fince my south met with thee in all my ways, by thy fatherly compassions, by thy comfortable chastifements, and by thy most visible providence. As thy favours have encreafed upon me, fo have thy corrections; fo as thou hast been always near me, O Lod! And ever as my worldly bleffings were exalted, to fecret darts from thee have pierced me; and when I have afcended before men, I have descended in humilia-And now, when I tion before thee. thought most of peace and honour, thy hand is heavy upon me, and hath humbled me according to thy former loving-kindness, keeping me still in thy fatherly (chool, not as a bastard, but as a child. Just are thy judgments upon me for my fins, which are more in number than the fands of the fea, but have no proportion to thy mercies; for what are the fands of the fea? Earth, heavens, and all thefe, are nothing to thy mercies. Besides my innumerable fins, I confess before thee, that I am a debtor to thee for the gracious talent of thy gifts and graces, which I have neither put into a napkin, nor put it. as I ought, to exchangers, where it might have made belt profit, but mis-spent it in things for which I was least fit; so I may truly say, my foul hath been a stranger in the course of my pilgrimage. Be merciful unto me, O Lord, for my Saviour's fake, and receive me into thy bosom, or guide me into thy Lord B.won.

## \$ 203. The doctrine of Christ a doctrine of truth and simplicity.

The Gospel of Christ, as taught by himself and his apostles, in its original plainness and purity, is a doctrine of truth and fimplicity, a doctrine so easy to be understood, so reasonable to be practised, to agreeable to the natural notions and reason of mankind, so beneficial in its effects, if men were really governed by it; traching them nothing but the worship of the true God, through the mediation of Christ; and towards each other, justice, righteousness, meekness, charity, and univerfal good-will; in expectation of a tuture judgment, and of a lasting state of happiness in a better world, for them who love God and keep his commandments;

this doctrine of Christ, I say, in its native simplicity and purity, is so reasonable, so excellent, and of such irressible evidence, that had it never been corrupted by superstitions from within, it never could have been opposed by power from without; but it must of necessity have captivated mankind to the obedience of faith; 'till the knowledge of the Lord had filled the earth, as the waters cover the sea.—

Whatever difficulties there may be in fome of the historical, or prophetical, or controverfial parts of the books of Scripture, yet as to the practical part, the duties required of a Christian in order to falvation, there is no man that ever read the fermons of Christ and his apostles, or ever heard them read, but understood perfectly well what our Saviour meant by commanding us to worthip the one true God of nature, the Author and Lord of the universe, and to do to all men as we would they should do to us; and that, " denying ungodliness and worldly lusts, we should live soberly, rightcously, and godly in this present world;" in expectation of being rightcoully and impartially adjudged, according to our works, to a state of happiness or miscry in the world to come; by our Saviour himself, our merciful and compassionate judge. There never was any man in the christian world, but felt the reasonableness and importance of this doctrine; and, whenever these things have been repeated to him, was immediately conscious to himself, either of having sollowed or transgressed these precepts.

# Dr. Clark. § 204. On the Superiority of Sacred History

and Christian Philosophy. In the histories which have been left us by men, we see nothing but the agency of man. They are men who obtain the victories, who take towns, who fubdue kingdoms, who dethrone fovereigns, to elevate themselves to the supreme power: God appears in no part, men are the fole actors of all these things. But in the history of the Holy Books it is God alone who performs the whole; God alone caufeth kings to reign, placeth them upon their thrones, or deposeth them again. It is God alone who opposeth the enemy, who facks towns, who disposeth of kingdoms and empires, who giveth peace or exciteth war: God alone appeareth in this Sacred History: it is he, if I may so speak, who is the sole hero. The kings and the conquerors of U 🛦

the earth appear but as the ministers of his will. In short, these Divine Books unfold the ways of Providence. who conceals himself in the other events recorded in our histories, seems to reveal himself in these: and it is in this book alone that we ought to learn to read the other histories which men have left us.

The Holy Books which have preferved religion to our times, contain the first monuments of the origin of things. They are more ancient than all thef abulous productions of the human mind, which have fince, in so melancholy a manner, amused the credulity of the following ages. And as error always springs from truth, and is a corrupt imitation of it, it is in the principal actions of this Divine Hillory, that the fables of Paganism find their foundation; so that one may fay, there is no error which pays not thereby homage to the antiquity and authority of our Sacred Writ-

The fincerity of Mofes appears in the fimplicity of his history. He und no precautions to gain credit, because he supposes those for whom he wrote were not deflitute of faith, and because he relates none but facts which were publicly known, to preferve the memory of them rather among their descendants, than to instruct that ge-

neration in the nature of them.

He concealeth not in a mysterious manner the holy books from the people, left they should discover the falsehood of them, like as the vain oracles of the Sybils were laid up with care in the Capitol, which was built to keep up the paide of the Romans, exposed to the eyes of the priests alone, and produced from time to time by fragments to justify to the minds of the people, either a dangerous enterprize, or an unjust war. Here the prophetic books were daily read by a whole people; the young and old, the women and children, the priests and the common people, the kings and subjects, were bound without ceafing to have them in their hands; every one had right to fludy their duty, and to discover their hopes there. Far from flattering their pride, they declared fully the ingratitude of their fathers; they announced in every page their misfortunes to be the just chastisement of their crimes; they reproached kings with sheir lewdness; priests with their injustice; the great with their profusion; the people with their inconstancy and infidelity, and this notwithdanding these holy books

were dear to them; and by the oracles which they faw there to be accomplished every day, they waited with confidence the fulfilment of those of which all the world at this day are the witnesses .-

There is a nobleness, and an elevation in the maxims of the Gospel, to which mean and grovelling minds cannot attain, The religion which forms great fouls, appears to be made only for them: and is order to be great, or to become to, there is a necessity of being a Christian.

Philosophy discovered the shame of the passions; but the did not teach how to conquer them: her pompous procepts were rather the eulogium of virtue, than the remedy of vice. It was even necessary for the glory and triumph of religion, that the greatest geniusies, and all the power of human reason should have exhausted themfelves, in order to render men virtuous. If the Socratefes and the Platos, had not been teachers of the world before Jeta-Christ, and had not in vain attempted to regulate manners, and correct men by the fole force of reaton, man might have been able to do honour by his virtue to the fuperiority of reason, or the beauty of virtue itfelf: but thefe preachers of wisdom did not make wife men; and it was necessary that the vain efforts of philosophy floali prepare new triumphs for grace.

In short, it was religion, which exhibited to the world the time wife man, fo long fince announced to us, by all the pomp and parade of human reason. She has not limited all her glory, like philosophy, to the effay of hardly forming one fage in a certury amough men: the hath peopled with them cities, empires, defaits; and the whole universe has been to her another Lyceum, where in the midst of public places the hath preached wifdom to all mankind. It is not only amongst the mest polite nations that the hath cholen her wife men: the Greck and Barbarian, the Roman and Scythian, have been equally called to her divine philosophy: it is not only for the learned that she hath reserved the sublime knowledge of her mysteries; the simple have prophesied as well as the sage; and the ignorant themselves have become her doctors and apolities. It was necessary that the true wildom should become the wisdom

of all men.

But further still: her doctrine was foolishness in appearance; and yet, the philosophers submitted their proud reason to this holy folly: the announced nothing but croffes

AND RELIGIOUS.

profies and fufferings; and yet the Cæfars became her disciples. She alone came to teach mankind that chastity, humility, temperance might be seated on the throne, and that the seat of the passions and of pleasures, might become the seat of virtue and innocence. What a glory was this for religion, Massillon, Bishop of Chemont,

#### § 205. The Light of Reason impersect.

If the glorious light of the Gospel besometimes overcast with clouds of doubt, so is the light of our reason too. But shall we depine ourfelves of the advantage of either, because those clouds cannot perhaps be entirely removed while we remain in this 1.ortal life? Shall we obtfinately and frovailly that our eyes again't that dayuning from on high that has vifited us, because we are not as yet able to bear the fall blaze of his beams? Indeed, not even in heaven itself, not in the highest state of perfection to which a finite being can ever att un, will all the counfels of Providence, : I the height and the depth of the infinite wildom of God, be ever disclosed or underdood. Taith, even then, will be necessary; and there will be mysteries which cannot be penetrated by the most exalted archengel, and truths which cannot be known bun otherwise than from revelation, or I lieved upon any other ground of affent tema fubmissive confidence in the divine ' udom. What, then, shall man prefume that his weak and narrow understanding is forherent to guide him into all truth, without any deed of revelation or fath? Shall he complain that the ways of God are not like his ways, and path his finding out? True philosophy, as well as tru. Christianity, would teach us a wifer and modester part. It would teach us to be content within those bounds which God has assigned to vs. " caffing down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obe-Cience of Christ." Lord Littleton.

#### \$ 206. The Simplicity of the Sacred Writers.

I cannot forbear taking notice of one other mark of integrity which appears in all the compositions of the facred writers, and particularly the Evangelists; and that is, the simple, unaffected, unornamental, and unostentatious manner, in which they deliver truths so important and sublime, and sacts so magnificent and wonderful, as are capable, one would think, of

lighting up a flame of oratory, even in the dullest and coldest broasts. They speak of an angel descending from heaven to foretel the miraculous conception of Jefus; of another proclaiming his birth, attended by a multitude of the heavenly holt prairing God, " and faying, Glory to God in the highest, and on earth peace, good-will towards men;" of his flar appearing in the Eaft; of angels minutring to him in the willemels; of his glory in the mount; of a voice twice heard from heaven, faying, " This is my beloved Son;" of innumerable miracles performed by him. and by his disciples in his name; of his knowing the thoughts of men; of his foretelling future events; of prodigies accompanying his crucifixion and death; of an angel de cending in terrors, opening his repulchre, and flightening away the foldiers who were fer to guard it; of his rifing from the dead, arcenling into heaven, and pouring down, according to his promife, the various and miraculous gifts of the Holy Sprit upon his apostles and disciples. All there amaking incidents do thefe intpired historians relate nakedly and plainly, without any of the colourings and heightenings of thetoric, or to much es a fingle noic of admiration; without making any comment or remark upon them, or drawing from them any conclusion in honour either of their mafter or themfelves, or to the advantage of the religion they preached in his name; but contenting themselves with relating the naked truth, whether it feems to make for them or against them, without either magnifying on the ene hand, or palliating on the other, they leave their caule to the unbiaffed judgment of mankind, feeking, like genuine apollles of the Lord of truth, to convince rather than to perfuide; and therefore coming, as St. Paul speaks of his preaching, "not with excellency of speech,not with enticing words of man's wifdom, but with demonstration of the Spirit, and of power, that," adds he, "your faith should not stand in the wisdom of men, but in the power of God." let it be remembered that he, who speaks this, wanted not learning, art or eloquence, as is evident from his speeches recorded in the Acts of the Apostles, and from the testimony of that great critic Longinus, who, in reckoning up the Grecian ofators, places among them Paul of Tarfus; and furely, had they been left folely to the fuggestions and guidance of human wildom.

wisdom, they would not have failed to lay hold on such topics, as the wonders of their master's life, and the transcendent purity and perfection of the noble, generous, benevolent morality contained in his precepts, furnished them with. These topics, I say, greater than ever Tully, or Demosthenes, or Plato, were possessed of, mere human wisdom would doubtless have prompted them to make use of, in order to recommend, in the strongest manner, the religion of Jesus Christ to mankind, by turning their attention to the divine part of his character, and hiding, as it were, in a blaze of heavenly light and glory, his infirmities, his fufferings, and his death. And had they upon such topics as these, and in such a cause, called into their affistance all the arts of composition, rhetoric, and logic, who would have blamed them for it? Not those persons, I presume, who, dazzled and captivated with the glittering ornaments of human wisdom, make a mock at the simplicity of the Gospel, and think it wit to ridicule the style and language of the Holy Scriptures. But the all-wife Spirit of God, by whom these facred writers were guided into all truth, thought fit to direct or permit them to proceed in a different method; a method, however, very analogous to that, in which he hath been pleased to reveal himself to us in the great book of nature, the flupendous frame of the universe; all whose wonders he hath judged it sufficient to lay before us in filence, and expects from our observations the proper comments and deductions, which, having endued us with reason, he hath enabled us to make. And though a careless and superficial spectator may fancy he perceives even in this fair volume many inconsistencies, defects, and superfluities; yet to a diligent, unprejudiced, and rational enquirer, who will take pains to examine the laws, confider and compare the feveral parts, and regard their use and tendency, with reference to the whole defign of this amasing structure, as far as his short abilities can carry him, there will appear, in those instances which he is capable of knowing, such evident characters of wisdom, goodness, and power, as will leave him no room to doubt of their author, or to suspect that in those particulars which he hath not examined, or to a thorough knowledge of which he cannot perhaps attain, there is nothing but folly, weakness, and malignity. The same thing might be said of the written book, the second vo-

lume, if I may so speak, of the revelation of God, the Holy Scriptures. For as in the first, so also in this are there many passages, that to a cursory, unobserving reader appear idle, unconnected, unaccountable, and inconsistent with those marks of truth, wifdom, justice, mercy, and benevolence, which in others are fo visible, that the most careless and inattentive cannot but discern them. And even these, many of them at least, will often be found, upon a closer and stricter examination, to accord and coincide with the other more plain and more intelligible passages, and to be no heterogeneous parts of one and the fame wife and harmonious compofition. In both, indeed, in the natural as well as the moral book of God, there are, and ever will be many difficulties, which the wit of man may never be able to refolve; but will a wife philosopher, because he cannot comprehend every thing he fees, reject for that reason all the truths that lie within his reach, and let a few inexplicable difficulties over-balance the many plain and infallible evidences of the finger of God, which appear in all parts, both of his created and written works? Or will he presume so far upon his own wisdom, as to fay, God ought to have expressed himself more clearly? The point and exact degree of clearness, which will equally fuit the different capacities of men in different ages and countries, will, I believe, be found more difficult to fix than is imagined; fince what is clear to one man in a certain fituation of mind, time, and place, will inevitably be obscure to another, who views it in other positions, and under other circumstances. How various and even contradictory are the readings and comments, which several men, in the several ages and climates of the world, have made upon nature! And yet her characters are equally legible, and her laws equally intelligible, in all times and in all places: " There is no speech nor language where her voice is not heard: her found is gone out through all the earth, and her words to the end of the world." All these misrepresentations therefore, and misconstructions, of her works, are chargeable only upon mankind, who have fet themselves to study them with various degrees of capacity. application, and impartiality. The question then should be, Why hath God given men such various talents? And not, Why hath not God expressed himself more

clearly? And the answer to this question. as far as it concerns man to know, is, that God will require of him according to what he hath, and not according to what he hath not. If what is necessary for all to know. is knowable by all; those men, upon whom God hath been pleased to bestow capacities and faculties superior to the vulgar, have certainly no just reason to complain of his having left them materials for the exercise of those talents, which, if all things were equally plain to all men, would be of no great advantage to the possessions. If, therefore, there are in the facred writings, as well as in the works of nature, many passages hard to be understood, it were to be wished, that the wife and learned, instead of being offended at them, and teaching others to be fo too, would be perfuaded, that both God and man expect that they would fet themfelves to confider and examine them carefully and impartially, and with a fincere defire of discovering and embracing the truth, not with an arrogant unphilosophical conceit of their being already fufficiently wife and knowing. And then I doubt not but most of these objections to revelation, which are now urged with the great-est confidence, would be cleared up and removed, like those formerly made to Creation, and the Being and Providence of God, by those most ignorant, most abfurd, and yet most self-sufficient pretenders to reason and philosophy, the Atheists and Sceptics.

\$ 207. The superiority of Christian philosophy over the Stoical.

Epictetus often lays it down as a maxim, that it is impossible for one person to be in fault, and another to be the sufferer. This, on the supposition of a future state, will certainly be made true at last; but in the floical sense, and system, is an absolute extravagance. Take any person of plain understanding, with all the feelings of humanity about him, and see whether the subtlest Stoic will ever be able to convince him, that while he is infulted, oppressed, and tortured, he doth not suffer. what comfort it will afford him, to be told, that, if he supports his afflictions and illtreatment with fortitude and patience, death will fet him free, and then he and his perfecutor will be equally rewarded; will equally lofe all personal existence, and feturn to the elements. How different are the consolations proposed by Christianity, which not only assures its disciples, that they shall rest from their labours in death, but that their works shall follow them: and by allowing them to rejoice in hope, teaches them the most effectual way of becoming patient in tribulation.

The Stoical doctrine, that human fouls are literally parts of the Deity, was equally shocking, and hurtful; as it supposed portions of his being to be wicked and miscrable; and by debasing men's ideas of the divine dignity, and teaching them to think themselves essentially as good as he, nourished in their minds an irreligious and fatal prefumption. Far differently the Christian system represents mankind, not as a part of the effence, but a work of the hand of God: as created in a state of improveable virtue and happiness; fallen by an abuse of free will, into sin, misery, and weakness; but redeemed from them by an Almighty Saviour; furnished with additional knowledge and strength; commanded to use their best endeavours; made senfible, at the fame time, how wretchedly defective they are; yet affured of endless felicity on a due exertion of them. The Stoic philosophy infults human nature and discourages all our attempts, by enjoining and promifing a perfection in this life, of which we feel ourselves incapable. The Christian religion shows compassion to our weakness, by prescribing to us only the practicable talk of aiming continually at further improvements, and animates our endeavours, by the promife of a divine aid, equal to every trial.

Specifying thus the errors and defects of so celebrated a system, is an unpleasing employment: but in an age, fond of preferring the gueffes of human fagacity before the unerring declarations of God, it feemed on this occasion necessary to obferve, that the Christian morality is agreeable to reason and nature; that of the Stoics, for the most part, founded on notions, intelligible to few; and which none could admit, without contradiction to their own hearts. They reasoned, many times, admirably well, but from falle principles; and the noblest of their practical precepts, being built on a fandy basis, lay at the mercy of every strong temptation.

Stoicism is indeed in many points inferior to the doctrine of Socrates, which did not teach, that all externals were indifferent, which did teach a future state of

recompence :

recompence; and agreeably to that, forbad fuicide. It doth not belong to the prefent subject to show, how much even this best system is excelled by Christianity. It is fufficient just to observe, that the author of it died in a profession, which he had always made of his belief in the popular deities, whose superstitions, and impure worship was the great source of corruption in the Heathen world; and the laft words he uttered, were a direction to his friend, for the performance of an idolatrous ceremony. This melancholy instance of ignorance and error, in the most illustrious character for wifdom and virtue in all heathen antiquity, is not mentioned as a reflection on his memory, but as a proof of human weakness in general. Whether reason could have discovered the great truths, which in these days are ascribed to it, because now seen so clearly by the light of the Gospel, may be a question; but that it never did, is an undeniable fact; and that is enough to teach us thankfulness for the bleshing of a better information. Socrates, who had, of all mankind, the fairest pretentions to set up for an instructor, and reformer of the world, confessed that he knew nothing, referred to tradition, and acknowledged the want of a fuperior guide: and there is a remarkable passage in Epictetus, in which he reprefents it, as the office of his supreme God, or of one deputed by him, to appear among mankind, as a teacher and example.

Upon the whole, the feveral fects of Heathen philosophy serve, as so many striking instances of the impersection of human wifdom; and of the extremo need of a divine affiltance, to rectify the mistakes of depraved reason, and to replace natural religion on its true foundation. The Stoics every where tellify the noblest zeal for virtue, and the honour of God; but they attempted to establish them on principles inconfistent with the nature of man, and contradictory to truth and experience. By a direct consequence of these principles, they were liable to be seduced, and in fact, often were feduced into pride, hard-heartedness, and the last dreadful extremity of human guilt, self-murder.

But however indefensible the philosophy of the Stoics in several instances may be, it appears to have been of very important use, in the heathen world; and they are on many accounts, to be considered in a very respectable light. Their doctrine of

evidence and fixed principles, was an excellent prefervative from the mischiefs, that might have arisen from the scepticism of the Academics and Pyrrhonists, if unopposed; and their zealous defence of a particular providence, a valuable antidote to the atheistical scheme of Epicurus. To this may be added, that their strict notions of virtue in most points, (for they saddy failed in some) and the lives of several among them, must contribute a good deal to preserve luxurious states from an absolutely universal dissoluteness; and the subjects of arbitrary government, from a wretched and contemptible pusillanimity.

Even now, their compositions may be read with great advantage, as containing excellent rules of felf-government, and of focial behaviour; of a noble reliance on the aid and protection of heaven, and of a perfect reagnation and submission to the divine will; points, which are treated with great clearness, and with admirable spirit, in the lessons of the Stoics; and though their directions are feldom practicable on their principles, in trying cases, may be rendered highly useful in subordination to Christian reslections.

If, among those, who are so unhappy as to remain unconvinced of the truth of Christianity, any are prejudiced against it by the influence of unwarrantable inclinations; fuch perfons will find very little advantage in rejecting the doctrines of the New Testament for those of the Portico; unless they think it an advantage to be luid under moral restraints, almost equal to those of the Gospel, while they are deprived of its encouragements and supports. Deviations from the rules of fobriety, justice, and piety, meet with fmall indulgence in the floic writings; and they, who profess to admire Epicletus, unless they pursue that feverely virtuous conduct which he every where prescribes, wi'l find themselves treated by him with the utmost degree of fcorn and contempt. An immoral character is indeed, more or less, the out-cast of all fects of philosophy; and Seneca quotes even Epicurus, to prove the univerfal obligation of a virtuous life. this great truth, God never left himfelf without witness. Persons of distinguished talents and opportunities feem to have been raised, from time to time, by Providence, to check the torrent of corruption, and to preferve the fense of moral obligations on the minds of the multitude, to whom

whom the various occupations of life left but little leifure to form deductions of their own. But then they wanted a proper commission to enforce their precepts; they intermixed with them, through false reasoning, many gross milakes; and their unit cidable ignorance, in several important points, entangled them with doubts, which easily degenerated into pernicious

If there are others, who reject Christinnity, from motives of diffile to its pecu-Har doctrines, they will featerly fail of entertaining more favourable impressions of it, if they can be prevailed on, with impartiality, to compare the Holy Scriptues, from whence alone the christian rehgion is to be learned, with the Roic writings; and then fairly to confider, whether there is any thing to be met with in the discoveries of our blessed Savieur, in the writings of his apostles, or even in the obfourth parts of the prophetic books, by which, equitably interpreted, either their fenfes, or their reason are contradicted, as . they are by the paradoxes of thefe philofophers: and if not, whether notices from above, of things in which, though we comprehend them but imperfectly, we are possibly much more interested, than at pretent we diteern, ought not to be received with implicit veneration; as useful evercites and trials of that duty, which finite understandings owe to infinite wisdom.

Mijs Carter.

\$ 208. The more we fludy the Scriptures the more we shall perceive their distincorigin, and the more we shall admire them.

The more we read, the more we meditate on the Holy Scriptures, the more we shall discover in them an inexhaustible fource of light, and of all manner of inflouction; that their language is not the language of men, nor the subject a production of their ingenuity; that they have a character peculiar to themselves, and different from the compositions even of the greatest and best men; that they are exempt from all vulgar passions and interests, and to the ordinary views of human prudence and forecast; in fine, that no man ever raised himself so much above humanity as to produce a work, in which all is so superior to man.

The most accurate of the Pagan authors are justly charged with errors, dark-

ness, and uncertainties, with respect both to facts and doctrine: but it became the wife and great Being, who inspired the facred penmen, to exempt their works from all fuch imputations; and, accordingly, he has favoured them with every argument of truth and perfuation, adorned them with the graces of language and fentiment. lighted up and enlivened them with the brightest examples of virtue and fanctity. punexed to their fludy and meditation fuch helps and communications of his Holy Spirit as cannot be defcribed, and made the belief and practice of them the only foundation of true peace and happiness .-Every one readily allows no fubicet can be equal to the life of our Lord and Saviour Jefus Christ; that is, to the incarnation and birth; the miracles and doctrine: the fufferings and death; the refurrection and alcention of a God become man to reform and fave a finful and loft world: And whoever imagines this hiftory can be better wrote than it is by the Evangelists, has it yet to learn. But though it becomes a Christian to be particularly conversant in this and the other writings of the New Testament, yet there is not any part of the Old which does not furnish ample matter of instruction .- The book of Genesis, in the account it gives of the creation, of the fall and punishment of our first parents, of the righteoufness of Noah, of the deluge, of the wonderful obedience of Abraham, and the promise made by God to reward it, of the destruction of Sodom, and the providence of God over the patriarch Joseph, presents to our minds the most fuitable subjects to fill them with every christian tentiment of reverence for the Supreme Being and his laws, love of his goodness, and dread of his justice. When we go on to Exodus, we fee the wonders wrought by the Almighty in fayour of his people, the impenitence of Pharaoh, and the various challifements by which the murmurings and idolatry of the Israelites in the desart were punished. Leviticus and Numbers fet forth the accuracy which God exacts in his worship: Deuteronomy, the fanctity of his laws; Joshua, the accomplishment of his promises. In the book of Judges, we see the strength and weakness of Sampson; in that of Ruth, the plain-dealing and equity of Boaz; in those of Kings, the holiness of Samuel, of Elijah, of Elisha, and the other prophets; the reprobation of Saul; the fall and repentance of David, his mildness and patience; the wisdom and fin of Solomon; the piety of Hezekiah and Josiah. In Eldras, the zeal for the law of God; in Tobit, the conduct of a holy family; in Judith, the power of grace; in Either, prudence; in Job, a pattern of admirable patience. The Maccabees afford fuch instances of personal and national bravery; fuch an exalted and generous love of our country, and all this grounded on the true principles of valour and patriotifin, as the most boasted atchievements in profane flory are perfect strangers to. The Proverbs and Ecclefiaftes, and the other two books which go under the title of the Wifdom of Solomon and of the Son of Sirach, teach a more useful and sublime philosophy than all the writings which Greece and Rome have published. The noble images and reflections, the profound reasonings on human actions, and excellent precepts for the government of life, sufficiently witness their inspired origin. This treasure, indeed, is thrown together in a confused magnificence, above all order, that every one may collect and digest such observations as chiefly tend to his own particular instruction. And though it behaves us to reverence the doctrine of the Holy Ghost, rather than pictend to assign the reasons for his dispensing it in this or that manner, yet, I think, we perceive the fitness of the method here taken, in fetting forth the nature, substance, and end of our obligations; and, without entering on minute discussions, in taking in the whole compass of duty; for by this means the paths of life are not only pointed out to each individual, and his personal character formed; but the minds of mankind, in general, are furnished and enriched with the beauty, copiousness, and variety of all virtues. The Prophets announce not only the promiles, but also the characteristic marks of the Messiah, with the threats against finners, and those calamities which were to befal the Jews and other nations. The Psalms unite in themselves the chief subjects, and all the different excellencies of the Old Tellament. In a word, every thing in the Sacred Writings will appear, as it truly is, holy, grand, and profitable, provided it be read with suitable dispositions. Phillips.

§ 209. Beautiful instances of Friendship
in the Scriptures.

One of the strongest and most affecting instances of a faithful attachment to be met with in history, occurs in the friendship which subfifted between two semales, The instance alluded to, is recorded in the Jewish annals, and most pathetically related by one of the sacred pen-inen. The reader need not be told, that this is the friendship of Naomi and Ruth.

Two very remarkable instances of friendship occur, in the history of our Saviour's life: it may not perhaps be altogether unnecessary to state them in all their shiking circumstances.

The Evangelist, in relating the miracles which Christ performed at Bethany, by restoring a person to life who had lain some days in the grave, introduces his narrative by emphatically observing, that "Jesus loved Lazarus;" intimating, it should feem, that the fentiments which Christ entertained of Lazarus, were a diffinct and peculiar species of that general benevolence with which he was actuated towards all mankind. Agreeably to this explication of the facred historian's meaning, when the fifters of Lazarus tent to acquaint Jesus with the state in which their brother lay; they did not even mention his name; but pointed him out by a more honourable and equally notorious defignation; the terms of their message were, " behold! he whom thou lovest is sick!" Accordingly, when he informs his disciples of the notice he had thus received, his expression is, " our friend Lazarus fleepeth." Now that Christ did not upon this occasion use the word friend in its loose undistinguishing acceptation, but in a restrained and strictly appropriated sense; is not only manifest from this plain account of the fact itself, but appears farther evident from the sequel. For, as he was advancing to the grave, accompanied with the relations of the deceased, he discovered the same emotions of grief as swelled the bosoms of those with whom Lazarus had been most intimately connected; and fympathizing with their common forrow, he melted into tears. This circumstance was too remarkable to escape particular observation: and it drew from the spectators, what one should think it must necesfarily draw from every reader, this natural and obvious reflection, " behold! how he loved him!"

But in the concluding catastrophe of our Saviour's life, he gave a still more decisive proof, that fentiments of the strongest perional attachment and friendship, were not unworthy of being admitted into his facred They were too deeply, indeed, impressed, to be extinguished even by the most excruciating torments. In those dreadtul moments, observing among the afflicted witnesles of his painful and ignominious furlerings, that faithful follower, who is deferibed by the historian as "the disciple whom he loved;" he diftinguished him by the most convincing instance of superior confidence, esteem, and affection that ever was exhibited to the admiration of mankind. For, under circumstances of the most agonizing torments, when it might be thought impossible for human nature to retain any other fensibility but that of its own inexpressible sufferings; he recommended to the care and protection of this his tried and approved friend, in terms of peculiar regard and endearment, the most tender and facred object of his private affections. But no language can represent this pathetic and affecting scene, with a force and energy equal to the fublime timplicity of the Evangelist's own narrative: " Now there stood by the cross of Jesus, his mother and his mother's fifter, and Mary Magdalene. When lefus faw his mother, and the disciple by, whom he loved; he faith to his mother, Behold thy fon' Then he faith to the disciple, Behold thy mother! And from that hour that difciple took her to his own home."

It may fafely be afferted, that among all those memorable examples of friendship, which have been celebrated with the highell encomiums by the ancients; there cannot be produced a fingle instance, in which the most distinguishing features of exalted amity are so strongly displayed, as in the foregoing relation. The only one, perhaps, that bears even a faint resemblance to it, is that famous transaction, recorded by Lucian in his dialogue intitled Toxaris. Eudamidas being on his death bed made his will, by which he bequeathed his aged mother to the care and protection of Aretheus; and his daughter to Charixenus, to be disposed of in marriage according to his discretion; injoining him, at the same time, to give her as ample a Portion as his circumstances would admit. He added, that in case either of the legatces should happen to die, he substituted the survivor in his stead. Charixenus died very soon after the testator: in consequence of which, Aretheus took each of these singularly considential legacies to himself; and celebrating the marriage of his only daughter and that of his friend, on the same day, he divided his sortune equally between them.

When the very different circumsances attending these respective examples, are duly considered; it must be acknowledged, that the former rises as much above the latter in the proof it exhibits of sublime friendship, as it does in the dignity of the characters concerned. Upon the whole then it appears, that the divine founder of the Chrishan religion, as well by his own example, as by the spirit of his moral doctrine, has not only encouraged but consecrated friendship.

Melmoth.

#### § 210. Fine Morality of the Gofpel.

Is it bigetry to believe the fublime truths of the Gofpel with full affurance of faith? I glory in fuch bigotry: I would not part with it for a thousand worlds: I congratulate the man who is possessed of it; for, amidit all the vicissitudes and calamities of the present state, that man enjoys an inexhaustible fund of consolution, of which it is not in the power of fortune to deprive him.

There is not a book on earth fo favourable to all the kind, and all the fublime affections, or fo unfriendly to hatted and perfecution, to tyranny, injuffice, and every fort of malevolence as the Gefpel.—It breathes nothing throughout but mercy, benevolence, and peace.—

Poetry is sublime, when it awakens in the mind any great and good affection, as piety, or patriotifm. This is one of the nobleit effects of the heart. The Pfalms are remarkable, beyond all other writings, for their power of inspiring devout emotions. But it is not in this respect only that they are fablime. Of the Divine nature they contain the most magnificent deferiptions that the foul of man can comprehend. The hundred and fourth Pfalm, in particular, displays the power and goodness of Providence, in creating and preferving the world, and the various tribes of animals in it, with fuch majestic brevity and beauty, as it is vain to look for in any human composition.

Such

pentance of David, his mildness and patience; the wisdom and sin of Solomon; the piety of Hezekiah and Josiah. Eldras, the zeal for the law of God; in Tobit, the conduct of a holy family; in Judith, the power of grace; in Either, prudence; in Job, a pattern of admirable patience. The Maccabees afford such instances of personal and national bravery; fuch an exalted and generous love of our country, and all this grounded on the true principles of valour and patriotifin, as the most boasted atchievements in profane flory are perfect strangers to. The Proverbs and Ecclesiastics, and the other two books which go under the title of the Wifdom of Sciomon and of the Son of Sirach, teach a more useful and sublime philosophy than all the writings which Greece and Rome have published. The noble images and reflections, the profound reasonings on human actions, and excellent precepts for the government of life, fufficiently witness their inspired origin. This treasure, indeed, is thrown together in a confused magnificence, above all order, that every one may collect and digest such observations as chiefly tend to his own particular instruction. And though it behoves us to reverence the doctrine of the Holy Ghost, rather than pretend to assign the reasons for his dispensing it in this or that manner, yet, I think, we perceive the fitness of the method here taken, in fetting forth the nature, substance, and end of our obligations; and, without entering on minute discusfions, in taking in the whole compass of duty; for by this means the paths of life are not only pointed out to each individual, and his personal character formed; but the minds of mankind, in general, are furnished and enriched with the beauty, copiousness, and variety of all virtues .-The Prophets announce not only the promises, but also the characteristic marks of the Messiah, with the threats against finners, and those calamities which were to befal the Jews and other nations. § 209. Beautiful instances of Friendship in the Scriptures.

One of the strongest and most affecting instances of a faithful attachment to be met with in history, occurs in the friendship which subsisted between two semales. The instance alluded to, is recorded in the Jewish annals, and most pathetically related by one of the sacred pen-men. The reader need not be told, that this is the friendship of Naomi and Ruth.

Two very remarkable instances of friendship occur, in the history of our Saviour's life: it may not perhaps be altogether unnecessary to state them in all their shiking

circumstances.

The Evangelist, in relating the miracles which Christ performed at Bethany, by refloring a person to life who had lain some days in the grave, introduces his narrative by emphatically observing, that " Jesus loved Lazarus;" intimating, it should teem, that the fentiments which Christ entertained of Lazarus, were a distinct and peculiar species of that general benevolence with which he was actuated towards all mankind. Agreeably to this explication of the facred historian's meaning, when the fifters of Lazarus fent to acquaint Jesus with the state in which their brother lay; they did not even mention his name; but pointed him out by a more honourable and equally notorious defignation; the terms of their message were, " behold! he whom thou lovest is sick!" Accordingly, when he informs his disciples of the notice he had thus received, his expression is, " our friend Lazarus fleepeth." Now that Christ did not upon this occasion use the word friend in its loose undistinguishing acceptation, but in a restrained and strictly appropriated sense; is not only manifest from this plain ac-count of the fact itself, but appears farther evident from the fequel. For, as he was advancing to the grave, accompanied with the relations of the deceafed, he discovered the same emotions of grief as swelled the bosoms of those with whom Lazarus had been most intimately connected; and fympathizing with their common forrow, he melted into tears. This circumstance was too remarkable to escape particular observation: and it drew from the spectators, what one should think it must necesfarily draw from every reader, this natural and obvious reflection, " behold! how he loved him!"

But in the concluding catastrophe of our Saviour's life, he gave a still more decisive proof, that fentiments of the strongest perional attachment and friendship, were not unworthy of being admitted into his facred hofom. They were too deeply, indeed, imprelled, to be extinguished even by the most excruciating torments. In those dreadtul moments, observing among the afflicted witnesses of his painful and ignominious fufferings, that faithful follower, who is deferibed by the historian as " the disciple whom he loved;" he distinguished him by the most convincing instance of superior confidence, esteem, and affection that ever was exhibited to the admiration of mankind. For, under circumstances of the most agonizing torments, when it might be thought impossible for human nature to retain any other fenfibility but that of its own inexpressible sufferings; he recommended to the care and protection of this his tried and approved friend, in terms of peculiar regard and endearment, the most tender and facred object of his private affections. But no language can represent this pathetic and affecting scene, with a force and energy equal to the fublime timplicity of the Evangelist's own narrative: " Now there stood by the cross of Jesus, his mother and his mother's fifter, and Mary Magdalene. When Jesus saw his mother, and the disciple by, whom he loved; he saith to his mother, Behold thy fon! Then he faith to the disciple, Behold thy mother! And from that hour that difciple took her to his own home."

It may fafely be afferted, that among all those memorable examples of friendship, which have been celebrated with the highell encomiums by the ancients; there cannot be produced a fingle instance, in which the most distinguishing features of exalted amity are so strongly displayed, as in the foregoing relation. The only one, perhaps, that bears even a faint resemblance to it, is that famous transaction, recorded by Lucian in his dialogue intitled Toxatis. Eudamidas being on his death bed made his will, by which he bequeathed his aged mother to the care and protection of Aretheus; and his daughter to Charixenus, to be disposed of in marriage according to his discretion; injoining him, at the same time, to give her as ample a Portion as his circumstances would admit.

He added, that in case either of the legatees should happen to die, he substituted the survivor in his stead. Charixenus died very soon after the testator: in consequence of which, Arctheus took cach of these singularly considential legacies to himself; and celebrating the marriage of his only daughter and that of his friend, on the same day, he divided his sortune equally between them.

When the very different circumflances attending these interestive examples, are duly considered; it must be acknowledged, that the former rises as much above the latter in the proof it exhibits of sublime friendship, as it does in the dignity of the characters concerned. Upon the whole then it appears, that the divine sounder of the Christian religion, as well by his own example, as by the spirit of his motal doctrine, has not only encouraged but consecrated friendship.

Melmoth.

#### § 210. Fine Morality of the Gospel.

Is it bigotry to believe the fublime truths of the Gofpel with full affurance of faith? I glory in fuch bigotry: I would not part with it for a thouland worlds: I congratulate the man who is possessed of it; for, amidst all the vicissifundes and calamities of the present state, that man enjoys an inexhaustible fund of consolution, of which it is not in the power of fortune to deprive him.

—There is not a book on earth fo favourable to all the kind, and all the fublime affections, or fo unfriendly to hatred and perfecution, to tyranny, injuffice, and every fort of malevolence as the Gotpel.—It breathes nothing throughout but mercy, benevolence, and peace.—

Poetry is sublime, when it awakens in the mind any great and good affection, as piety, or patriotism. This is one of the nobleit effects of the heart. The Pfalms are remarkable, beyond all other writings, for their power of inspiring devout emotions. But it is not in this respect only that they are sublime. Of the Divine nature they contain the most magnificent deferiptions that the foul of man can comprehend. The hundred and fourth Psalm, in particular, displays the power and goodnels of Providence, in creating and preferving the world, and the various tribes of animals in it, with such majestic brevity and beauty, as it is vain to look for in any human composition.---

Such

Such of the doctrines of the Gospel as are level to human capacity appear to be agreeable to the purelt truth and the sounder morality. All the genius and learning of the Heathen world; all the penetration of Pythagoras, Socrates, and Aristotle, had never been able to produce such a system of moral duty, and to rational an account of providence and of man, as is to be found in the New Testament. Compared, indeed, to this, all other moral and theological wisdom

Loses discountenanced, and like folly shews. Beattle.

§ 211. Beneficince to the poor more farily injuried by the Gojpil, than by any other writings.

The Christian Scriptures are more copious and explicit upon our obligation to bestow relief upon the poor than almost any other. The description which Christ hath left us of the proceedings of the last day, establishes the obligation of bounty, fo far as his authority can be depended upon, beyond controverly. "When the Son of man shall come in his glovy, and all the holy angels with him, then thall he fit upon the throne of his glory, and before him shall be gathered all nations; and he shall feparate them one from another .- Then shall the king say unto them on his right hand, Come ye bleffed of my Father, inherit the kingdom prepared for you from the foundation of the world: for I was an hungred, and ye gave me meat: I was thirsty, and ye gave me drink: I was a ftranger, and ye took me in: naked, and ye clothed me: I was fick, and ye vifited me: I was in prison, and ye came unto me.-And inafmuch as ye have done it to one of the least of these my brothren, ve have done it unto me." It is not necessary to understand this passage as a literal account of what will actually pass on that day. Supposing it only a scenical description of the rules and principles, by which the supreme arbiter of our destiny will regulate his decisions, it conveys the same lesson to us; it equally demonstrates of how great value and importance these duties in the fight of God are, and what stress will be laid upon them. The apostles also describe this virtue as propitiating the divine favour in an eminent degree: and these recommendations have produced their effect. It does not appear that before the simes of Christianity, a hospital, infirmary, or public charity of any kind, existed in the world; whereas most countries in Christendom have song abounded with these institutions. To which may be added, that a spirit of private liberality seems to flourish amidst the decay of many other virtues: not to mention the legal provision for the poor, which obtains in this country, and which was unknown and unthought of by the most polished nations of antiquity.

Rev. W. Paley.

§ 212. The simplicity of the Gospel gives it an air of sublimity.

The graceful negligence of nature always pleafes beyond the trueft ornaments that art can devife. Indeed, they are they trueft, when they approach the nearest to this negligence. To attain it, is the very trumph of art. The wife artift, therefore, always compleats his studies in the great school of creation, where the forms of elegance lie scattered in an endless variety and the writer who wishes to possess fome portion of that sovereign excellence, simplicity, even though he were an infidel, would, have recourse to the Scriptures, and make them his model.

The pathetic and fubline fimplicity of our Saviour's whole description of the last judgment cannot be paralleled in any writing of any age.

-In the Gospel we find no pompous displays of reatoning; no laboured and difficult diffinctions; no long and learned enquiries concerning the nature and kinds of virtue; but virtue itself represented to the life; in examples, and precepts, which are level to the plained understandings; in familiar occurrences; in short and simple narrations; in actions, or discourses, real or imagined. And perhaps, among other things, it is this unfystematic form, this neglect of art and method, which produces that graceful eafe, that venerable, majestic fimplicity, that air of truth and originality. which distinguish the Scriptures from all human writings. Rev. J. Mainwaring.

§ 213. The Bible, as a very curious and ancient hiftory, worthy our attention.

Were the Bible but confidered impartially and attentively, in its most advantageous lights; as it contains all the written revelation of God's will now extant; as it is the basis of our national religion, and gives vigour and spirit to all our social laws; as it is the most ancient, and confequently. fequently, curious collection of historical incidents, moral precepts, and political inthrutions; as the flyle of it is, in some places, nobly fublime and postical, and in others, fweetly natural, plain, and unaffected: in a word, as the being well acquairted with it is highly requifite, in order to make men useful and ornamental in this life, to fav nothing of their happireis in the next, it is to be hoped, that a cool redection or two of this fort, might i dice the more ingenious and rational many them, to let the Bible takes its turn, and their right years, among those volumes v ach 1 als through their hands either for And theeld met ment or instruction. tech an entertainment once become fafaionable, of what mighty fervice would at be to the interest of religion, and confequently the happiness of manhand!

Rev. S. Crexall.

### E 214. Excellence of the Sacred Writings.

If we examine the Sacred Records, we fall find they confift of four different lands, the poetic, oratorical, hadorical, and didnetic forms. The poetic lies chiefly in the book of Pfalms, of Job, and feveral detached paffages in the Prophets, parti-cululy of Ifaiah. They contain many noble efforts of unmixed poetry or pure mustion; yet thefe, being all centered in on intention, that of extolling the works, and collabrating the power, wildom, and goodacts of the Deity, do generally artike of the character of eloquence, being chiefly of the lyric kind. In all Unter the great character of fimplicity is to drongly predominant, that every attempt to embellith them, by adding the supernumerary decorations of style in translation, lath ever been found to weaken and debate

As to the oratorical or pathetic parts, in umerable might be produced, equal, if het tuperior to any recorded by profane attiquity. In these, the leading character of simplicity is no less remarkable. Our Saviour's parables and exhortations are generally admirable in this quality. Filled with unfeigned compassion for the weakness and miteries of man, they breathe nothing but the purest benevolence. St. Paul's list conversation with his friends at Ephesics, on his departure for Jerusalem; his discourse on the resurrection, and on charity; his reproofs, his commendations, his apologies, especially that before Agrip-

pa, are wrote in the noblest strain of simplicity. And as a pertect model of this kind, we may give the story of Joseph and his brethren, which for tendernets, true pathos, and unmixed simplicity, is beyond compare, superior to any thing that ap-

pears in ancient flory.

But as the most important part of Scripture lies in the hillorical and preceptive part; especially in the New Testament, whence chiefly our idea of duty must be drawn; fo we find this uniform and fimple manner eminently prevailing throughout, in every precept and narration. history is conveyed in that aitless strain which alone could adapt it to the capacities of all mankind; the piecepts delivered by our Saviour are drawn from the principles of common tenfe, improved by the most exalted love of God and man; and either expressed in clear and direct terms, or couched under fuch images and allufions, as are every where to be found in nature, fuch as are, and mult ever be univertally known, and familiar to all mankind; in which we may further observe, his manner of teaching was greatly superior to the juffly applauded Socrates, who, for the most part drew his images and allusions from the lefs known arts and manners of Through all this variety of the city. fliking allufion and moral precept the flyle ever continues the fame, unadorned, fimple, vehement and majeffic; yet never drawing the reader's attention on itself, but on the divine fentiments it conveys.

To this we may further add, that these several kinds of composition are mixed and united with such propriety and force, as is scarce to be equalled in any other writings. The poetical parts are heightened by the greatest shokes of eloquence and precept; the pathetic by the noblest imagery and strictest morals; and the preceptive is strengthened and enforced by all the aids of poetry, eloquence and parable; calculated at once to engage the imagination, to touch the passions, and command the reason of mankind.

Rev. 7. Brown.

#### § 215. Queen Anne's Prayer.

Almighty and eternal God, the disposer of all the affairs in the world, there is nothing so great as not to be subject to thy power, nor so small, but it comes within thy care; thy goodness and wissom they themselves through all thy works, and

and thy loving kindness and mercy do appear in the several dispensations of thy providence, of which, at this time I earnestly desire to have a deep and humble fense. It has pleased thee to take to thy mercy my dearest husband, who was the comfort and joy of my life, after we had lived together many years happily in all conjugal love and affection. May I readily submit myfelf to thy good pleafure, and fincerely refign mine own will to thine, with all Christian patience, meekness and humility. Do thou graciously pardon the errors and failings of my life, which have been the occasion of thy displeasure; and let thy judgments bring me to fincere and unfeigned repentance, and to answer the wife ends for which thou half fent them. Be thou pleafed fo to affift me with the grace of thy Holy Spirit, that I may continue to govern the people which thou haft committed to my charge, in godlinets, righteoutness, justice, and mercy. In the management of all affairs, public and private, grant I may have a strict regard to thy holy will, that I may diligently and heartily advance thy glory, and ever entirely depend on thy providence. Do thou, O gracious Father, be pleased to grant I may do the greatest good I can in all my capacity, and be daily improving every Christian grace and virtue: so that when thou shalt think fit to put an end to this short and uncertain life, I may be made a partaker of those gracious, endless joys, which thou hall prepared for those that love and fear thee, through Jesus Christ our Lord. Amen.

#### § 216. Prince Eugene's Prayer.

I believe in thee, O my God! Do thou strengthen my faith: I hope in thee; confirm my hopes: I love thee; inflame my love more and more: I repent of all my fins; but do thou encrease my repentance! As my first beginning I worthip thee; as my last end I long for thee: as my eternal benefactor, I praise thee; and as my supreme protector I pray unto thee; that it may please thee, O Lord, to guide and lead me by thy providence, to keep me in obedience to thy justice; to comfort me by thy mercy, and to protect me by thy almighty power. I submit unto thee all my thoughts, words, and actions, as well as my afflictions, pains, and fufferings, and I defire to have thee always in my mind, to do all my works in thy name, and for

thy fake to bear all adversity with patience. I will nothing but what shou willest, () God; because 'tis agreeable unto thee, O give me grace that I may be attentive in my prayer, temperate in my diet, vigilant in my conduct, and unmoveable in all good purpofes. Grant, most merciful Loid. that I may be true and faithful to those that have entrufted me with their fecrets; that I may be courteous and kind towards all men, and that both in my words and actions, I may shew unto them a good example. Dispose my heart to admire and praife they goodacfs, to hate all errors and evil works, to love my neighbour, and to despise the world. Affish me good God, in tubduing luft by mortification, covetoufness by liberality, anger by mildness, and lukewarmnets by zeal and fervency. Enable me to conduct myfelf with prudence in all transactions, and to show courage in danger, patience in adverfity, and in profperity an humble mind. Let thy grace illuminate my understanding, direct my will, fanclify my body, and blefs my foul. Make me diligent in curbing all irregular affections, zealous in imploring thy grace, careful in keeping thy commandments, and conflant in working out my own falca-Finally, O God, make me fentible how little is the world, how great thy heavens, how thort time, and how long will be the bleffed eternity. O that I maj prepare myfelf for death! that I may dread thy judgments, that I may avoid the torments of hell, and obtain of thee, O God! eternal life through the merits of Jesus Christ our Lord. Amen.

#### § 217. The gay, young Altamont dying.

The fad evening before the death of this noble youth I was with him. No one was there, but his physician, and an intimate fficed whom he loved, and whom he had ruined. At my coming in, he faid;

You, and the physician, are come too late.—I have neither life, nor hope. You both aim at miracles. You would raise the dead.

Heaven, I said, was merciful.-

Or I could not have been thus guilty. What has it not done to blefs, and to fave me?—I have been too strong for Omnipotence! I plucked down ruin!

Refuting

Refusing to hear any thing from me, or take any thing from the physician, he lay silent, as far as sudden darts of pain would permit, till the clock struck. Then with yehemence;

Oh, time! time! it is fit thou shouldest thus strike thy murderer to the heart.—How art thou sted for ever!—A month!—Oh, for a fingle week! I ask not for years; tho' an age were too little for the much I have to do.

On my faying, we could not do too much: that heaven was a bleffed place—So much the worfe. 'Tis loit! 'tis

So much the worle. This loft! 'tis loft!—Heaven is to me the severest part of hell!

Soon after I proposed prayer.

Pray you that can. I never prayed. I cannot pray—Nor need I. Is not heaven on my file already? It closes with my conscience. Its severest strokes but second my own.

His friend being much touched, even to tears, at this, (who could forbear? I could not) with a most affectionate look, he

Keep those tears for thyself. I have undone thee,—Dost weep for me? That's ciuel. What can pain me more?

Here his friend, too much affected, would have left him.

No, flay. Thou still mayest hope.—Therefore hear me. How madly have I talked? How madly hast thou listened and beheved? But look on my present state, as a full answer to thee, and to mysself. This body is all weakness and pain; but my soul, as if strung up by torment to greater strength and spirit, is full powerful to reason; full mighty to suffer. And that, which thus triumphs within the jaws of mortality, is doubtless, immortal.—And, as for a Deity, nothing less than an Almighty could insist what I feel.

I was about to congratulate this passive, involuntary, confessor, on his afferting the two prime articles of his creed, extorted by the rack of nature; when he thus, very Passonately:

No, no! let me speak on. I have not long to speak—My much injured friend! my soul, as my body, lies in ruins; in scattered fragments of broken thought: remorfe for the past, throws my thoughts on the suture. Worse dread of the suture, strikes it back on the past. I turn, and turn, and find no ray. Didst thou seel half the mountain that is on me, thou

wouldst struggle with the martyr for his stake; and bless heaven for the slames;—that is not an everlasting slame; that is not an unquenchable fire.

How were we struck! Yet, soon after, still more. With what an eye of distraction, what a face of despair, he cried out:

My principles have poisoned my friend; my extravagance has beggared my boy; my unkindness has murdered my wise! And is there another hell?—Oh! thou blasphemed, yet most indulgent, Lord God! Hell itself is a refuge, if it hides me from thy frown.

Soon after his understanding failed. His terrified imagination uttered horrors not to be repeated, or ever forgot. And cre the sun arose, the gay, young, noble, ingenious, accomplished, and most wretched Altamont expired.

#### § 218, The Majesty and Supremacy of the Scriptures confessed by a Sceptic.

I will confess to you, that the majesty of the Scriptures strikes me with admiration, as the purity of the Gospel hath its influence on my heart. Perufe the works of our philosophers with all their pomp of diction: how mean, how contemptible are they compared with the Scripture! Is it possible that a book, at once so simple and fublime, should be merely the work of man? Is it possible that the sacred perfonage, whose history it contains, should be himself a mere man? Do we find that he assumed the tone of an enthusiast or ambitious fectary? What sweetness, what purity in his manner! What an affecting gracefulness in his delivery! What sublimity in his maxims! What profound wifdom in his discourses! What presence of mind, what fubtlety, what truth in his replies! How great the command over his passions! Where is the man, where the philosopher, who could so live, and so die, without weakness, and without oftentation? When Plato described his imaginary good, man loaded with all the shame of guilt, yet meriting the highest rewards of virtue, he describes exactly the character of Jesus Christ: the resemblance was so striking, that all the Fathers perceived it.

What prepossession, what blindness must it be, to compare the son of Sophronicus to the son of Mary! What an infinite disproportion there is between them! Sociates dying without pain or ignominy, easily supported his character to the last; and if

X 2 hi

his death, however easy, had not crowned his life, it might have been doubted whether Socrates, with all his wisdom, was any thing more than a vain tophist. He invented, it is faid, the theory of morals. Others, however, had before put them in practice; he had only to fay therefore what they had done, and to reduce their examples to precepts. Ariflides had been just before Socrates defined justice; Leonidas had given up his life for his country before Socrates declared patriotism to be a duty; the Spartans were a fober people before Socra'es recommended fobriety: before he had even defined virtue. Greece abounded in virtuous men. But where could Jefus learn, among his competitors, that pure and sublime morality, of which he only hath given us both precept and example. The greatest wisdom was made known amongst the most bigoted fanaticifm, and the simplicity of the most heroic virtues did honour to the vilest people on earth. The death of Socrates, peaceably philosophizing with his friends, appears the most agreeable that could be wished for; that of Jesus, expiring in the midst of agonizing pains, abused, insulted, and accused by a whole nation, is the most horrible that could be feared. Socrates in receiving the cup of poison, blessed indeed the weeping executioner who administered it; but Jesus, in the midst of excruciating tortures, prayed for his merciless tormentors. Yes, if the life and death of Socrates were those of a sage, the life and death of Jefus are those of a God. Shall we suppose the evangelic history a mere fiction? Indeed, my friend, it bears not the marks of fiction; on the contrary, the hitlory of Socrates, which nobody prefumes to doubt, is not to well attefled as that of Jesus Christ. Such a supposition, in fact, only shifts the difficulty without obviating it: it is more inconceivable that a number of persons should agree to write fuch a history, than that one only should furnish the subject of it. Iewish authors were incapable of the diction, and strangers to the morality contained in the Golpel, the marks of whose truth are fo striking and inimitable, that the inventor would be a more altonishing character than the hero.

Rouffeau.

§ 219. John Earl of Rochester's dying Recantation.

When John Earl of Rochester came to fee and confider his prodigious guilt and danger, what invectives did he use against himself, terming himself an ungrateful dog, and the vilest wretch that the fun shone upon; withing he had been a crawling leper in a ditch, a link-boy, or a beggar, or had lived in a dungeon, rather than offended God as he had done! He fent awful messages to his copartners in fin, and advised a gentleman of character, that came to visit him in these words: () remember that you contemn God no more. He is an avenging God, and will vifit you for your fins; and will, I hope, in mercy, touch your confeience as he hath done You and I have been friends and finners together a great while, therefore I am the more free with you. We have been all mittaken in our conceits and opinions; our perfuations have been falle and groundless, therefore God grant you repentance. And feeing the fame gentleman the next day, he faid, Perhaps you were disobliged by my plainness with you yellerday: I spake the words of truth and foberness; and striking his hand on his breaft, added, I hope God will touch your heart.

He condemned that foolifh and abfurd philosophy which the world so much admired, propagated by the late Thomas Hobbs; which, he said, had undone him, and many more of the best parts in the nation.

He commanded that his profane writing and obscene pictures should be burnt.

He wished his fon might never be a wit; which is, as he explained it, one of those wretched creatures, who pride themselves in abusing God and religion.

He proteffed he would not commit any known fin to gain a kingdom.

And for the admonition of others, he fubscribed the following recantation, and ordered it to be published, (viz.)

For the benefit of all those whom I may have drawn into sin by my example and encouragement, I leave to the world this my last declaration, which I deliver in the presence of the great God, who knows the sectets of all hearts, and before whom I am now appearing to be judged: That from the bottom of my soul, I detest and abhor the whole course of my former wicked

wicked life; that I think I can never fufficiently admire the goodness of God, who has given me a true lenfe of my pernicious opinions and vile practices, by which I have hitherto lived without hope, and with ut God in the world; have been an open enemy to Jefus Cheifl, doing the utmoil despite to the Holy Spirit of grace: and that the greatest testimony of my charity to fuch, is, to warn them, in the name of God, as they regard the welfare of their immortal fouls, no more to deny his being or his providence, or defpife his goodness; no more to make a mock of ho, or contemn the pure and excellent relig on of my ever bloffed Redeemer, thro' whole means alon , I, one of the greatest of finners, do yet hope for mercy and for iven is. Amen.

Declared and figured in the prefence of Ann Rochester, Robert Parsons, Jane 19, 1680.

I. ROCHESTER.

#### \$ 220. To the Biographer of Hane.

Upon the whole, Doctor, your meaning is good; but I think you will not fucceed, this time. You would perfuide us, by the example of David Hume, Efq; that atheir is the only cordial for low spirits, and the proper antidote against the sear of death. But furely, he who can reflect, with complacency, on a friend thus milemploying his talents in his life, and then, amuting himfelf with Lucian, Whift, and Charon, at his death, may fmile over Babylon in ruins; effects the earthquake, which deflroyed Lifbor, an agreeable occurrence; and congratulate the hardened Pharoah, on his overthrow in the Red Sea. Drollery in such circumstances, is neither more nor lefs, than

Moody madness, laughing wild, Amid te creft woe.

Would we know the baneful and pestilential influences of false philotophy on the human heart? We need only contemplate them in this most deplorable instance of Mr. Hume. These tayings, Sir, may appear harsh; but they are falutary. And if departed spirits have any knowledge of what is passing upon earth, that person will be regarded by your friend as rendering him the truest services, who, by energy of expression, and warmth of exhortation, shall most contribute to prevent his writings from producing those effects upon mankind which he no longer wishes they should produce. Let no man deceive himself, or be deceived by others. It is the voice of eterial Tiuth, which crieth alou, and faith to you, Sir, and to me, and to all the world—"He that believeth on the Son, hath everlasting life; and he that be-"lieveth not the Son, I all not see life;" but the wrath of God abideth on him."

By way of centrast to the behaviour of Mi. Hume, at the close of a life, passed without God in the world, permit me, Sir, to lay before your elf, and the public, the last sentiments of the truly learned, judicious, and admirable Hooker, who had tpent his days in the service of his Maker and Redeemer.

After this manner, therefore, spake the author of the Ecclesiastical Policy, im-

mediately before he expired :-

I have lived to fee, that this world is made up of perturbations; and I have been long preparing to leave it, and gathering comfort for the dreadful hour of making my account with God, which I now apprehend to be near. And though I have, by his grace, loved him in my youth, and leared him in mine age, and laboured to have a confeience void of offence, towards him, and towards all men; yet, " if thou, Lord, shouldest be extreme to " mark what I have done amin, who " can abide it?" And therefore, where I have failed, Lord thew mercy to me, for I plead not my rightcournels, but the forgiveness of my unright outliefs, through his merits, who died to parchate pardon for penitent finne. And fince I owe thee a de ith, Lord, let it not be terrible, and then take thine own time; I submit to it. " Let " not mine, O Lord, but thy will be " done!"-God hath heard my daily petitions; for I am at peace with all men, and he is at peace with me. From fuch blefled affurance I feel that inward joy, which this world can neither give, nor take from me. My conscience beareth me this witness, and this witness makes the thoughts of death joyful. I could wish to live, to do the church more service; but cannot hope it; for "my days are pail, as " a shadow that returns not."

His worthy Biographer adds-

More he would have spoken, but his spirits failed him; and, after a short conflict between nature and death, a quiet sigh put a period to his last breath, and so, ne fell assep—And now he scems to rest like Lazarus in Abraham's bosom. Let me X 3

here draw his curtain, till, with the most glorious company of the patriarchs and apostles, and the most noble army of martyrs and confessors, this most learned, most humble, and most holy man shall also awake to receive an eternal tranquillity, and with it a greater degree of glory, than common Christians shall be made partakers of !-

Doctor Smith, when the hour of his de-

parture hence shall arrive, will copy the example of the believer, or the infidel, as it liketh him best. I must freely own, I have no opinion of that reader's head, or heart, who will not exclaim, as I find myfelf obliged to de-

" Let me die the death of the righteous, and let my last end be like his!"

Rev. G. Horne.

#### PHYSICO-THEOLOGICAL REFLECTIONS.

§ 1. Reflections on the Heavens.

THE planets and comets which move round the Sun as their centre, constitute what is called, the Solar System. Those planets which are near the Sun not only finish their circuits sooner, but likewise move faster in their respective orbits, than those which are more remote from him. The motions of the planets are all performed from well to east, in orbits nearly circular. Their names, distances, bulks, and periodical revolutions, are as follow:

The Sun, an immente globe of fire, is placed near the common centre of the orbits of all the planets and comets; and turns round his axis in 25 days 6 hours. His diameter is computed to be 763,000 miles.

Mercury, the nearest planet to the Sun, goes round him in 87 day 23 hours, which is the length of his year. But, being teldom feen, and no ipots appearing on his furface, the time of his rotation on his axis, is as yet unknown. His distance from the Sun is computed to be 32,000,000 of miles, and his diameter 2,600. In his course round the Sun, he moves at the rate of 95,000 miles every hour. His light and heat are almost seven times as great as ours; and the Sun appears to him almost seven times as large as to us.

Venus, the next planet in order, is computed to be 59,000,000 miles from the fun; and by moving at the rate of 60,000 miles every hour in her orbit, the goes round the Sun in 225 of our days nearl . Her diameter is 7 906 miles; and by her motion upon her axis the inhabitants are carried 43 miles every hour.

The Earth is the next planet above Venus in the system. It is 82,000,000 miles from the Sun, and goes round him in a little more than 365 days. It travels at the rate of 1,000 miles every hour on its axis; is about 8,000 miles in diameter. In its orbit it moves at the rate of 58,000 every hour; which motion, though 120 times fwifter than that of a cannon ball, is little more than half as fwift as Mercury's motion in his orbit.

The Moon is not a planet, but only an attendant upon the Earth; going round it in a little more than 29 days, and round the Sun with it every year. 'The Moon's diameter is 2,180 miles, and her distance from the Earth's centre 240,000. gees found her orbit ir about 27 days, at the rate of near 2,300 miles every hour.

Mars is the planet next in order, being the first above the Earth's orbit. His distance from the Sun is computed to be 125,000,000 miles; and by travelling at the rate of 47,000 miles every hour, he goes round the Sun in about 687 of our days. His diameter is 4,444 miles, and by his diurnal rotation the inhabitants are carried 556 miles every hour.

Jupiter, the biggest of all the planets, is still higher in the system, being about 426,000,000 miles from the Sun; and going at the rate of 25,000 miles every hour in his orbit. His annual period is finished in about 12 of our years. He is above 1 000 times as big as the Earth, for his diameter is \$1,000 miles; which is more than ten times the diameter of the Earth. Jupiter turns round his axis in near 10 hours, and his year contains upwards of 10,000 of our days. His equatorial inhabitants are carried nearly 26,000 miles every hour, besides the 25,000 above mentioned by his annual motion.

Jupiter has four moons. The first goes round him in about two of our days, at the distance of 22,900 miles from his centre: the second performs its revolution in about three days and a half, at 364,000 miles distance: the third in a little more than feven day, at the distance of 580,000 miles: and the fourth in near 17 days, at

the distance of 1,000,000 miles from his

Besides these moons, Jupiter is surrounded by faint substances, called belts, in which to many changes appear, that philosophers are not agreed either concerning their nature or ufe.

Saturn, the next to Jupiter, is about 130 000,000 miles from the Sun; and trivelling at the rate of 18,000 miles every hour, performs its annual circuit in about 30 years. Its diameter is 67,000 mic; and therefore it is near 600 times

as big as the Earth.

This planet has five moons: the first goes round him in near two days, at the dilance of 140,000 miles from its centre : the fecond in near three days, at the diftake of 187,000 miles: the third in four dies and a half, at the diffance of 263,000 indes: the fourth in about 16 days, at the d tance of 600,000 miles, and the fifth in about 80 day, at the diffance of 1,800,000 miles.

Belides these moons, Siturn is attended with a thin broad ring, as an artificial globe is by an horizon; the nature and use of which are but little known at present.

Georgium Sidus, the remotest of all the planets yet ducovered, is near 40,000 mills in diameter, and upwards of 83 years in performing its revolution. How many meons this planet is attended by is unknown. Two have been already difcovered. And, if the ingenious and indefatigable Mr. Herschel is spared with life and health, we may expect to be favoured with still further discoveries.

Every person who looks upon, and compates the systems of moons together, which belong to Jupiter, Saturn, and the Georgium Sidus, must be amazed at the vast magnitude of these three planets, and the noble attendance they have in respect to our little Earth: and can never bring himfelf to think, that an infinitely wife Creator should dispote of all his animals and vegetables here, leaving the other planets bare and destitute of rational creatures. suppose that he had any view to our benefit, in creating these moons, and giving them their motions round their respective primaries; to imagine, that he intended these vast bodies for any advantage to us, when he well knew, that they could never be feen but by a few astronomers peeping through telescopes; and that he gave to the planets regular returns of day and night, and different scasons to all, where they would be convenient; but of no manner of fervice to us, except only what immediately regards our own planet, the Earth; . to imagine, I fay, that he did all this on our account, would be charging him impioutly with having done much in vain: and as abfurd, as to imagine that he has created a little fun and a planetary fyslem within the shell of our Earth, and intended them for our use. These considerations amount to little less than a positive proof, that all the planets are inhabited: for if they are not, why all this care in furnishing them with fo many moons, to supply those with light, which are at the greater distances from the Sun? Do we not fee, that the farther a planet is from the Sun, the greater apparatus it has for that purpose? save only Mars, which being but a finall planet, may have moons too fmall to be feen by us. We know that the Earth goes round the Sun, and turns round its own axis, to produce the viciflitudes of fummer and winter by the former, and of day and night by the latter motion, for the benefit of its inhabitants. May we not then fairly conclude, by parity of reafon, that the end and defign of all the other planets is the fame? And is not this agreeable to the beautiful harmony which exids throughout the universe? Surely it is: and raifes in us the most magnificent ideas of the Supreme Being, who is every where, and at all times prefent; displaying his power, wildom and goodness, among all his creatures! and diffributing happinels to innumerable ranks of various beings!

The comets are folid opaque bodies, with long transparent tails or trains, isluing from that fide which is turned away from the Sun. They move about the Sun, in very eccentric ellipses, and are of a much greater denfity than the Earth; for some of them are heated in every period to fuch a degree, as would vitrify or diffipate any fubitance known to us. Sir Isaac Newton computed the heat of the comet, which appeared in the year 1680, when nearest the Sun to be 2,000 times hotter than redhot iron, and that, being thus heated, it must retain its heat until it comes round again, although its period should be more than 20,000 years; and it is computed to

be only 575.

It is believed, that there are at least 21 comets belonging to our fystem, mov-X 4 ing ing in all forts of directions. But of all these the periods of three only are known with any degree of certainty. The first of the three appeared in the years 1531, 1607, 1682, and 1758, and is expected to appear every 75th year. The fecond of them appeared in 1532 and 1661, and may be expected to return in 1780, and every 129th year afterwards. The third, having last appeared in 1680, and its period being no less than 575 years, cannot return until the year 2225. This comet, at its greatest distance, is about 11,200,000,000 miles from the Sun; and at its least distance from the Sun's centre, which is 49,000 miles, is within less than a third part of the Sun's femi-diameter from his turface. In that part of its orbit which is nearest the Sun, it flies with the amazing swiftness of 880,000 miles in an hour; and the Sun, as feen from it, appears an 100 degrees in breadth, confiquently 40,000 times as large as he appears to us. The affonishing length that this comet runs out into empty space, suggests to our minds an idea of the vast distance between the Sun and the nearest fixed stars; of whose attractions all the comets must keep clear, to return periodically, and go round the Sun; and it shews us also, that the nearest stars, which are probably those that feem the largest, are as big as our Sun, and of the same nature with him; otherwise, they could not appear so large and bright to us as they do at fuch an immense distance.

The extreme heat, the dense atmosphere, the grofs vapours, the chaotic flate of the comets, feem at hill light to indicate them altogether unfit for the purpotes of animal life, and a most miserable habitation for rational beings; and therefore fome are of opinion, that they are to many hells for tormenting the danised with perpetual viciflitudes of heat and cold. But when we confider, on the other hand, the infinite power and goodness of the Deity; the latter inclining, the former enabling him to make creatures fuited to all flates and circumstances; that matter exists only for the fake of intelligent beings, and that wherever we find it, we always find it pregnant with life, or necessarily tublervient thereto; the nun beriefs species, the anonishing diversity of animals in earth, air, there, and even on other animals; every blade of grais, every tender leaf, every ratural fluid, swarming with life;

and every one of these enjoying such gratifications as the nature and state of each requires: when we reflect moreover. that fome centuries ago, till experience undecrived us, a great part of the earth was judged uninhabitable; the torrid zone, by reason of excessive heat, an! the two frigid zones because of their intolerable cold; it teems highly probable, that fuch numerous and large matter of durable matter as the comets are, however unlike they be to our earth, are not deflitute of beings capable of contemplating with wonder, and acknowledging with gratitude, the wildom, fyrametry, and beauty of the creation; which is more plainly to be observed in their extensive tour th ough the heavens, than in our more confined circuit. If farther conjecture is permitted, may we not suppose them in trumental in recruiting the e coended fuel of the Sun; and fupplying the exhausted moisture of the planets?-However difficult it may be, circumstanced as we are, to find out their particular deftination, this is an undoubted truth, that wherever the Deity exerts his power, there he also manifelts his wisdom and goodnefs.

The fixed flars, as appears from feveral confiderations, are placed at an immento diffance from us. Our haith is at fo great a distance from the Sun, that if seen from thence, it would appear no bigger than a point, although its circumference is known to be unwards of 25,000 nules. Yet that diffance is fo fmall, compared with the Earth's diffance from the fixed flars, that if the orbit in which the Earth moves round the Sun were folia, and feen from the nearest star, it would likewise appear no begger than a point, although it is at least 162,000,000 miles in diameter. For the Enti in going round the Sun is 162,000,000 miles nearer to some of the flars at one time of the year, than at another; and yet their apparent magnitudes, fituations, and distances from one another tlill remain the fame; and a telescope which magnifies above 200 times, does not fenfilly magnify them: which proves them to be at least 400,000 times farther from us than we are from the Sun.

It is not to be imagined, that all the stars are placed in one concave surface, so as to be equally distant from us; but that they are scattered at immense distances from one another through unlimited space. So that there may be as great a distance between

between any two neighbouring stars, as between our Sun and those which are nearest to him. Therefore an observer, who is nearest any nied star, will look upon it alone as a real fun; and confider the rest as so many thining points, placed at e un! diffances from him in the firma-

B" the help of telescopes we discover thousands of flars which are invisible to the niked eye; and the better our glades are, full the more become viable; to that we can fet no limits either to their number or their diffances. 'The celebrated Huygens carries his thoughts fo far, as to behere it not impossible, that there may be flars at fuch inconceivable diffances, that their light has not yet reached the Earth fince its creation, although the velocity of light be a million of times greater than the velocity of a cannon-bullet: and Mr. Additon very juilly observes, this thought is far from being extravagant, when we confider, that the universe is the work of infinite power, prompted by infinite goodness; having an infinite space to exert ittelf in; fo that our imagination can fet no bounds to it.

The Sun appears very bright and large in comparison of the fixed flars, because we keep constantly near the Sun, in comparison of our immense distance from the For a spectitor, placed as near to any flar as we are to the Sun, would fee that thar a body as large and bright as the Sun appears to us: and a spectator, as far diffant from the Sun as we are from the itars, would fee the Sun as small as we see a flar, diverted of all its circumvolving planets; and would reckon it one of the it is in numbering them.

The stars, being at such immense distances from the Sun, cannot possibly receive from him so strong a light as they seem to have; nor any brightness sufficient to make them visible to us. For the Sun's rays must be so scattered and dissipated before they reach fuch remote objects, that they can never be transmitted back to our eyes, to as to render these objects visible by reflection. The flars therefore shine with their own native and unborrowed luffre, as the Sun does; and fince each particular star, as well as the Sun, is confined to a particular portion of space, it is plain, that the stars are of the same nature with the Şun.

mighty, who always acts with infinite wifdom, and does nothing in vain, should create fo many glorious funs, fit for fo many important purposes, and place them at fuch distances from one another, without proper objects near enough to be benefited by their influences. Whoever imagines they were created only to give a faint glimmering light to the inhabitants of this globe, must have a very superficial knowledge of aftronomy, and a mean opinion of the Divine Wisslom: fince, by an infinitely less exertion of creating power, the Deity could have given our Earth much more light by one fingle additional moon.

Instead then of one sun and one world only in the universe, as the unskilful in astronomy imagine, that science discovers to us fuch an inconceivable number of funs, fyttems and worlds, dispersed through boundless space, that if our Sun, with all the planets, moons, and comets belonging to it, were annihilated, they would be no more missed, by an eye that could take in the whole creation, than a grain of fand from the fea shore. The space they possess being comparatively fo small, that it would scarce be a sensible blank in the universe. although Saturn, the outermost of our planets, revolves about the Sun in an orbit of 488,400,000 miles in circumference. and some of our comets make excursions upwards of 10,000,000,000 miles beyond Saturn's orbit; and yet, at that amazing distance, they are incomparably nearer to the Sun than to any of the flars; as is evident from their keeping clear of the attractive power of all the flars, and returning periodically by virtue of the Sun's attraction.

From what we know of our own fystem; it may be reasonably concluded, that all the rest are with equal wisdom contrived, fituated, and provided with accommodations for rational inhabitants. Let us therefore take a furvey of the fystem to which we belong; the only one accessible to us; and from thence we shall be the better enabled to judge of the nature and end of the other systems of the universe. For although there is almost an infinite variety in the parts of the creation which we have opportunities of examining, yet there is a general analogy running through and connecting all the parts into one scheme, one defign, one whole !

And then, to an attentive considerer, it It is no ways probable, that the Al- will appear highly probable, that the planets planets of our fystem, together with their moons, are much of the same nature with our Earth, and destined for the like purposes. For they are solid opaque globes, capable of supporting animals and vegetables. Some of them are bigger, some less, and some much about the five of our Earth. They all circulate round the Sun, as the Earth does, in a shorter or longer time, according to their respective distances from him; and have, where it would not be inconvenient, regular returns of fummer and winter, fpring and autumn. They have warmer and colder climates, as the various productions of our Earth require: and, in fuch as afford a possibility of discovering it, we observe a regular motion round their axes like that of our Earth, caufing an alternate return of day and night; which is neceffary for labour, reft, and vegetation, and that all parts of their furfaces may be exposed to the rays of the Sun.

Such of the planets as are faithest from the Sun, and therefore enjoy least of his light, have that deficiency made up by feveral moons, which contlantly accompany, and revolve about them, as our Moon revolves about the Earth. The remotest planet has, over and above, a broad ring encompaffing it; which, like a lucid zone in the heavens, reflects the Sun's light very copioutly on that planet: to that if the remoter planets have the Stin's light fainter by day than we, they have an addition made to it morning and evening by one or more of their moons, and a greater quantity of light in the night-time.

On the furface of the Moon, because it is nearer us than any other of the celeftial bodies are, we discover a nearer resemblance of our Earth. For, by the affiftance of telefcopes, we observe the Moon to be full of high mountains, large valleys, deep cavities, and even volcanoes. Thefe fimilarities leave us no room to doubt, but that all the planets and moons in the fyftem are deligned as commodious habitations for creatures endowed with capacities of knowing and adoring their beneficent Creator.

Since the fixed stars are prodigious spheres of fire, like our Sun, and at inconceivable distances from one another, as well as from us, it is reasonable to conclude, they are made for the same purposes that the Sun is; each to bestow light, heat, and vegetation on a certain number of inhabited planets, kept by gravitation within the iphere of its activity.

What an august! what an amazing conception, if human imagination can conceive it, does this give of the works of the Creator! Thousands of thousands of funs, multiplied without end, and ranged all around us, at immense distances from each other, attended by ten thousand times ten thousand worlds, all in rapid motion, yet calm, regular, and harmonious, invariably keeping the paths prescribed them; and there worlds peopled with myriads of intelligent beings, formed for endless progression in perfection and felicity.

If fo much power, wisdom, goodness, and magnificence is displayed in the material creation, which is the least confiderable part of the universe, how great, how wife, how good must he be, who made and governs the whole ! Fer zarte

#### § 2. Reflections on the Lastb and Sea.

It has been already observed, that the Earth ranks as a planet in the folar fythem; that its diameter is near 8,000 miles, and its circumference about 25,000. The furface of it is divided into land and water; the land is again divided into four parts. which are called, Europe, Affa, Africa, and America. The leas and unknown parts of its furface contain 160,522,026 fquare miles; the inhabited parts 38,990,569; Europe 4,456,065; Afia 10,768,823; Africa 9,654,807; America 14,110,874; in all 199,512,595; which is the number of fquare miles on the whole furface of our globe,

And if we examine it a little faither, what an admirable specimen have we of the divine skill and goodness? This globe is intended, not only for an habitation, but for a storehouse of conveniences. And if we examine the feveral apartments of our great abode, we shall find reason to be charmed with the displays both of nice economy and boundless profusion.

The Turface of the ground, coarse as it may feem, is yet the laboratory where the most exquisite operations are performed. And though a multitude of generations have been accommodated by it, it still continues inexhaustible.

The unevennels of the ground, far from being a defect, heightens its beauty and augments its usefulness. Here it is scooped into deep and sheltered vales, almost conflantly covered with verdure, which yields an easy couch and agreeable food to the various tribes of cattle. There it extends into a wide, open country, which annually bears a copious harvest; an harvest not only of the principal wheat, which is the staff of our life, but of the appointed barley, and various other grain, which are food for our anim .ls.

The furrows vary their produce. They bring forth flax and nemp, which help us to fome of the molt needfary accommodations of afe. Thefe are wove into ample volumes of cloth, which fixed to the mail, give wings to our thips. It is twifted into vail lengths of cordage, which gives nerves to the crane, and linews to the pulley, or elfe adhering to the anchor, fecure the veffel, even amidd the driving tempet. It covers our tables with a graceful elegance, and fur ounds our bodies with a cheriffing warmtn.

Yonder arise the hills, like a grand amphineacre! Some are clad with mantling times, some crowned with towering cedars, some ragged with mis-shapen rocks or yawning with subterrancous caves. And even those inaccessible crags, those gloomy cavities, are not only a refuge for wild goats, but sometimes for those of whom the world was not worthy.

At a greater dilance the mountains penetrate the clouds, with their afpiring brows. Their fides arrest and condense the vapours as they float along. Their caterned bowels collect the dripping treatures, and fend them gradually ab oad by trickling springs; and hence the waters increasing roll down, till they have swept through the most extensive climes, and regained their native seas.

The vine requires a strong resection of the sun-beams and a large proportion of warmth. How commodously do the hills and mountains minister to this purpose! May we not call those vast declivaties the garden-walls of nature? These concentre the solar fire, and completely ripen the grape! O that any should turn so valuable a gift of God into an instrument of sin!

What is nature but a feries of wonders? That fuch a variety of fruits should rife from the insipid, forded earth? I take a walk through my garden or orchard in December. There stand several logs of wood on the ground. They have neither sense nor motion; yet in a little time they are beautished with blossoms, they are covered with leaves, and at last loaded with fruit. I have wondered at the account of those prodigious engines, invented by Archimedes. But what are all the inventions of men, to those nice automata of nature?

The forest rears myriads of massy bodies, which, though neither gay with blossoms, nor rich with fruit, supply us with timber of various k nds. But who shall cultivate them? The toil were endless, See therefore the ever wise and gracious ordination of Providence! They have no need of the spade or the pruning-knise. They want no help from man.

When fawed into beaus, they fullain the roofs of our houses. They make carriages to convey our heaviest loads. Their subtlines is so pliant, that they are easily formed into every kind of surniture: yet their texture so tolid, that they compose the most important parts of the largest engines. At the same time their pressure is to light, that they sloat upon the waters. Thus while they serve all the ends of architecture, and bestow numberless conveniences on the family, they constitute the very basis of navigation, and give being to commerce.

If we defeed from the ground floor of our habitation into the fubterraneous lodgments, we shall find there also the most exquitte contrivance acting in concert with the most profuse goodness. Here are various minerals of sovereign esseasy; beds fraught with metals of inchest value; and mines, which yield a metal of a meaner aspect, but superior usefulness. Without the affishme of iron, what would become of all our mechanic skill? without this we could scarce either fix the math, or drop the faithful anchor. We should scarce have any ornament for polite, or utenfil for common life.

Here is an inexhaustible fund of combustible materials. These mollify the most dubborn bars. They melt even the most dubborn flint, and make it more ductile than the softest clay. By this means we are furnished with the most curious and serviceable manufacture in the world; which admits into our houses the chearing light, yet excludes the wind and rain; which gives new eyes to decrepit age, and more enlarged views to philosophy; bringing near what is immensely remote, and making visible what is immensely small.

Here are quarries stocked with stones, which do not sparkle like gems, but are more eminently useful. These form houses for peace, fortifications for war. These constitute the arches of the bridge, the arms of the mole or quay, which screen our ships from the most tempessuous

feas. These are comparatively soft in the bowels of the earth, but harden when in the open air. Was this remarkable peculiarity reversed, what difficulties would attend the labours of the mason? His materials could not be extracted from their bed, nor fashioned without infinite toil. And were his work completed, it could not long withstand the stary of the elements.

Here are various affortments and beds of clay, which however contemptible in its appearance, is abundantly more beneficial than the rocks of diamond or veins of gold: this is moulded into veffels of any fhape and fize: fome fo delicately fine as to fuit the table of a princeft; others fo remarkably cheap, that they miniter to the convenience of the peof of perfectly neat, as to give no diffusit even to the niced palate.

A multiplicity of other valuable flores is locked up in these ample vaults. But the key of all is given to industry, in order to produce each as necessity demands.

Which shall we most admire, the bounty or wisdom of our great Creator? How admirable is his precaution in removing these cumbrous wares from the furface. and beflowing them under the ground in proper repositories? Were they scattered over the furface of the foil, it would be embairafied with the enormous load. Our roads would be blocked up, and fcarce any room left for the operations of hufbandry. Were they, on the other hand, buried at a great depth, it would cort us immense pains to procure them. Were they uniformly spread into a pavement for nature, universal barrenness must ensue: whereas at prefent we have a magazine of metallic, without leftening our vegetable treasures. Follils of every kind enrich the bowels, verdure adorns the face of the

Well then may even the inhabitants of heaven lift up their voice and fing, Great and marvellous are thy works, O Lord Ged Almighty! And is there not infinite reafon for us to join this triumphant choir? Since all these things are to us, not only a noble spectacle, bright with the display of our Creator's wisdom, but likewise an inestimable gift, rich with the emanations of his goodness. The earth hath he set before the inhabitants of his glory: but he hath given it to the children of men. Has he not then an undoubted right to make that

tender demand, My fon, give me thing beart?

The rocks which bound the fea, are here proligiously high and strong, an everlasting barrier against both winds and waves. Not that the omnipotent engineer has any need of these here. It is true, they intervene, and not only repress the rolong billows, but speak the amazing Majedy of the Maker. But in other places the Creator shews, he is confined to no expedient. He hids a bank of despicable sand repel the most surious shocks of ossellating seas. And though the waves toy themselves they cannot prevail: though they rour, not they cannot speak ever.

Nay, is it not remarkable, that fand is a more efficient barrier against the feathan rock? Accordingly the fea is continually gaining upon a rocky shore: but it is continually losing on a fundy shore: unless where it sets in with an eddy. Thus it has been gaining, from age to age, upon the ifle of Portland and the Land's End in Conwall, undernaming, throwing down, and swallowing up one huge rock after another. Mean time the findy shores both on our southern and western coasis, gain continually upon the fea.

Beneath the tooks frequently lies a fimooth, level fand, almost as firm as a well compacted causeway; infomuch that the trend of an horse scarce impresses it, and the waters never penetrate it. Without this wise contrivance the fearching waves would infinuate into the heart of the earth; and the earth itself would in some places be hollow as an honey-comb, in others bibulous as a sponge. But this closely-cemented pavement is like claying the bottom of the universal canal; so that the returning tides only consolidate its substance, and prevent the fun from cleaving it with chinks.

Here the main rolls its surges from world to world. What a spectacle of magnissence and terror! How it fills the mind and amazes the imagination! It is the most august object under the whole heaven. What are all the canals on earth, to this immense reservatory? What are the proudest payces on earth, to yonder concave of the skies? What the most pompous illuminations, to this source of day? They are a spark, an atom, a drop. Nay in every spark, and atom, and drop, that proceeds from the hand of the Almighty, there is the manifestation of a wildom

and

and a power absolutely incomprehen-

Let us examine a fingle drop of water, only fo much as will adhere to the point of a needle. In this fpeck an eminent philofopher computes no lefs than thirteen thousand globules. And if so many thousands exist in so small a speck, how many in the unmeasured extent of the occan? Who can count them? As well may we grasp the wind in our fift, or mete out the universe with our span.

Nor are thefe regions without their proper inhabitants, clothed in exact conformity to the clime: not in swelling wool, or buoyant feathers, but with as much compactness and as little superfluity as possible. They are clad, or rather sheathed in scales, which adhere close, and are laid in a kind of natural oil: than which apparel nothing can be more light, and at the same time nothing more folid. hinders the fluid from penetrating their flesh: it prevents the cold from chilling their blood; and enables them to make their way through the waters, with the utmost facility. And they have each an airbladder, a curious instrument, by which they rife to what height or fink to what depth they please.

It is impossible to enumerate the fealy herds. Here are animals of monstrous thapes, and amazing qualities. The upper jaw of the fword-fith is lengthened into a flrong and sharp fword, with which (though not above fixteen feet long) he feruples not to engage the whale himfelf. The fun-fifth is one round mass of flesh; only it has two fins, which act the part of oars. The polypus, with its numerous feet and claws, feems fitted only to crawl. Yet an excrescence rising on the back enables it to steer a steady course in the waves. The thell of the nautilus forms a kind of boat, and he unfurls a membrane to the wind for a fail. He extends also two arms, with which, as with oars, he rows himfelf along. When he is disposed to dive, he firikes fail, and at once finks to the bottom. When the weather is calm, he mounts again, and performs his voyage without either chart or compass.

Here are shoals upon shoals of every fize and form. Some lodged in their shells, feem to have no higher employ, than imbibing nutriment, and are almost rooted to the rocks on which they lie: while others shoot along the yielding shood, and range

the spacious regions of the deep. How various is their figure! The shells of some feem to be the rude production of chance. rather than of skill or design. Yet even in thefe we find the nicest dispositions. Uncouth as they are, they are exactly fuited to the exigencies of their respective tenants. Some on the other hand are extremely neat. Their structure is all symmetry and elegance. No enamel is comparable to their polith. Not a room in all the palaces of Europe is fo adorned as the bed-chamber of the little fish that dwells in mother of pearl. Where elfe is fuch a mixture of red, blue and green, fo delightfully staining the most clear and gliftering ground?

But what I admire more than all their beauty, is the provision made for their fafety. As they have no fpeed to escape, to they have no dexterity to clude their foc. So that were they naked, they must be an casy prey to every free-booter. To prevent this, what is only cloathing to other animals, is to them a cloathing, an house, and a castle. They have a fortification which grows with them, and is a part of themselves. And by means of this they live secure amidst millions of ravenous jaws.

Here dwell mackerel, herring, and various other kinds, which when lean wander up and down the ocean: but when lat they throng our creeks and bays, or lat the running streams. Who bids these creatures leave our shores when they become unsit for our service? Who rallies and recalls the undisciplined vagrants, as soon as they are improved into desirable food? Surely the furlow is signed, the funmions issued, and the point of re-union settled, by a providence ever includent to mankind, ever loading us with benefits.

These approach, while those of enormous fize and appearance abandon our shores. The latter would fright the valuable sish from our coasts; they are therefore kept in the abysics of the ocean: just as wild beasts, impelled by the same overruling power, hide themselves in the receiles of the forest.

One circumstance relating to the natives of the deep is very astonishing. As they are continually obliged to devour one another for necessary subsistence, without extraordinary recruits, the whole watery race must soon be totally extinct. Were they to bring forth no more at a birth than land animals, the increase would be far too

fmall

fmall for the confumption. The weaker species would foon be destroyed by the stronger, and the stronger themselves must soon after perish. Therefore to supply millions of animals with their food, and yet not depopulate the watery realms, the issue produced by every breeder is almost incredible. They spawn not by scores, but by millions: a single semale is pregnant with a nation. Mr. Lewenhock counted in an ordinary cod, 9.384,000 eggs. By this amazing expedient, constant reparation is made, proportionable to the immense havock.

And as the fea abounds with animal inhabitents, fo it does also with vegetable productions: some foft as wool, others hard as stone. Some rife like a leastless fhrub, fome are expanded in the form of a net; fome grow with their heads down ward, and feem rather hanging on, than fpringing from the juttings of the rocks. But as we know few particulars concerning thefe, I would only offer one remark in general. The herbs and trees on the dry land are fed by the juices that permeate the foil, and fluctuate in the air. purpose they are furnished with leaves to collect the one, and with roots to attract the Whereas the fea plants, having other. fufficient nourifliment in the circumambient waters, have no need to detach roots into the ground, or forage the earth for fuffenance. Inflered therefore of penetrating, they are but just tacked to the bottom, and adhere to fome folid fubflance only with fuch a degree of tenacity, as may fecure them from being toll to and fio by the agitation of the waves.

We see from this and numberless other instances, what diversity there is in the operations of the great Creator. Yet every alteration is an improvement, and each new pattern has a peculiar sitness of

Considered in another view, the sea is that grand reservoir which supplies the earth with its fertility: and the air and sun are the mighty engines, which work without intermission, to raise the water from this ineghaustible cistern. The clouds as aqueducts convey the genial stores along the atmosphere, and distribute them in seasonable and regular proportions, through all the regions of the globe.

How hardly do we extract a drop of perfectly sweet water from this vast part of

brine? Yet the fun draws off every moment millions of tons in vaporous exhalations, which being fecurely lodged in the bottles of heaven, are fent abroad fweetened and refined, without the least brackin incture, or bituminous fediment: fent abroad upon the wings of the wind, to destil in dews and rain, to ooze in fountains, to trickle along in rivulets, to roll from the sides of mountains, to slow in copious threams amidst burning defarts, and through populous kingdoms, in order to refresh and fertilize, to beautify and enrich every soil in every clime.

How amiable is the goodness, how amazing the power, of the world's adorable Maker! How amiable his goodness, in distributing so largely what is so extenfively beneficial! That water, without which we can fearce perform any bufinefs, or enjoy any comfort, should sheam by our houses, start up from the ground, drop down from the clouds! Should come from the ends of the earth, to serve us, from the extremities of the ocean! How amazing his power! That this boundless mass of fluid falt, fo intolerably naufcous to the tafte, should be the original spring, which quenches the thirst both of man and every animal! Doubtless the power by which this is effected, can make all things work tegether for our good.

Vail and various are the advantages which we receive from this liquid element. The waters glide on in spacious currents, which not only chear the adjacent country, but by giving a britk motion to the air, prevent the stagnation of the vapours. They pass by large cities, and quietly rid them of a thousand nuisances. But they are also fit for more honourable services. They enter the gardens of a prince, float in the canal, ascend in the jet d'eau, or fall in the grand cascade. In another kind they ply at our mills, toil incessantly at the wheel, and by working the largest engines, take upon them an unknown thare of our fatigua and fave us both labour, time, and expence.

So forcibly do they act when collected. And how do they infinuate when detached? They penetrate the minutest tubes of a plant, and find a passage through all its meanders. With how much difficulty does the labourer push his way up the rounds of a ladder? While these carry their loads to a much greater height, and climb with the utmost ease. They convey

nourishment from the lowest fibres that are plunged in the earth, to the topmost twigs that wave amidst the clouds. Thus they furnish the whole vegetable world with necessary provision, by means of which the trees of the Lord are full of Jup, even the cedars of Lebanon, which he hath planted. And notwithflanding their vaft elevation and prodigious diffusion, not a single branch is destitute of leaves, nor a fingle leaf of moissure.

Befides the falutary and ufeful circulation of the rivers, the fea has a motion no less advantageous. Daily for five or fix hours, it flows toward the land, and for the fine time, retires to its inmost caverns. How great is the power that protudes to the shores such an inconceivable weight of waters, without any concurrence from the winds, often in direct opposition to them? Which bids the mighty element revolve with the most exact punctuality? Did it advance with a lawless and unlimited swell, it might deluge whole continents. Was it irregular and uncertain in its approaches, navigation would be at a fland. But being constant in its stated period, and never exceeding its appointed bounds, it does no prejudice to the country, and ferves all the ends of traffic.

Is the failor returned from his voyage? The flux is ready to convey his veffel to the very doors of the owner, without any hazard of fliking on the tocks, or of being fastened in the tands. Has the merchant freighted his ship? The reflux bears it away with the utmost expedition and fafety. Behold, O man, how highly thou art favoured by thy Maker! He bath fut all things in Subjection under thy feet. All theep and ocen, all the brafts of the fild: the forols of the air, and the files of the fea. Yea, the furges of the fer are fubservient to thee. Even these, wild and impetuous as they are, are ready to receive thy load, and like an indefatigable beaft of burden, carry it to the place which thou choosest.

What preserves this vast flood in perpetual purity? It receives the refuse and filth of the whole world. Whatever would defile the land and pollute the air, is transmitted to the ocean. How then is this receptacle of every nuifance kept clean, kept from contracting a notiome and pestilential taint? "I'is partly by its inceffant motion, and partly by its faltness. By the one it is secured from any internal principle of corruption; by the other it works itself clear of any adventitious defilement,

Confider the fea in another capacity, and it connects the remotest realms of the universe, by facilitating the intercourse between their respective inhabitants. The ancients indeed looked on the ocean as an impassable gulph. But we find it just the reverse; not a bar of separation, but the great bond of union. For this purpose it is never exhautted, though it supplies the whole earth with rain: nor overflows, though all the rivers in the universe are perpetually augmenting its flores. means of this we travel faither, than birds of the strongest pinions fly. We cross the flaming line, visit the frozen pole, and wing our way even round the globe.

What a multitude of ships are continually passing and repassing this universal thorough-fare! Whole harvests of corn. and vintages of wine, lodged in volatile flore-houses, are wasted by the breath of heaven, to the very ends of the earth: wafted, enormous and unwieldy as they are, almost as speedily as the roe bounds

over the hills.

Assonithing, that an element so unstable, should bear so immense a weight! That the thin air should drive on with such speed. those vast bodies, which the strength of a legion could fearce move! That the air and water should carry to the distance of many thousand miles, what the united force of men and machines could fearce drag a fingle vard!

How are the mariners conducted thro' this fluid common, than which nothing is more wide or more wild? Here is no tract, no posts of direction, nor any hut where the traveller may ask his way. Are they guided by a pillar of fire? No, but by a mean and otherwise worthless fossil. this furp iling stone was discovered, ships crept timoroully along the coasts. But this guides them, when nothing but skies are feen above, and nothing but feas below. This gives intelligence that shines clear in the thickest darkness, and remains fleady in the most tempestuous agitations. This emboldens us to launch into the heart of the ocean, and to range from pole to pole. By this means are imported to our islands the choice productions of every nation under heaven. Every tide conveys into our ports, the treasures of the remotest climes. And almost every private

house in the kingdom, is accommodated from the four quarters of the globe. At the same time that the sea adorns the abodes of the rich, it employs the hands of the poor. What a multitude of people acquire a livelihood, by preparing commodities for exportation? And what a multitude by manufacturing the wares imported from abroad? Thus, though it is a falle supposition, that the waters themselves are strained through subterranean passages into the inland countries, yet it is true, that their effects are transfuled into every town, every hamlet, and every cottage.

#### § 3. Reflections on the Atmosphere.

If we turn our thoughts to the atmofphere, we find a most curious and exquisite apparatus of air. This is a fource of innumerable advantages; all which are fetched from the very jaws of ruin. explain this. The pressure of the air on a person of a moderate size is equal to the weight of twenty thousand pounds. Tremendous confideration! Should an house fall upon us with half that force, it would break every bone of our bodies. Yet so admirably has the Divine wisdom contrived the air, and fo nicely counterpoifed its dreadful power, that we fuffer no manner of inconvenience; we even enjoy the load. Instead of being as a mountain on our loins, it is as wings to our feet, or finews to our limbs. Is not this common ordination of Providence fomewhat like the miracle of the burning bush? Well may we fay unto God, O how terrible, yet how beneficent, art thou in thy works!

The air, though too weak to support our flight, is a thoroughfare for innumerable wings. Here the whole commonwealth of birds expatiate, beyond the reach of their adversaries. Were they to run upon the earth, they would be in ten thousand dangers, without strength to resist, or speed to eleape them: whereas by mounting the skies, they are secure from peril, they scorn the horse and his rider. Some of them perching on the boughs, or foaring aloft, entertain us with their notes. Many of them yield us wholesome and agreeable food, and yet give us no trouble, put us to no expence; but till the time we want them, are wholly out of the way.

The air is charged also with several offices, abfolutely needful for mankind. In our lungs it ventilates the blood, qualifies its warmth, promotes the animal fecretions. We might live even months, without the light of the fun, yea, or the glimmering of a star. Whereas, if we are deprived but a few minutes of this, we ficken, we faint, we die. The fame univerfal nuite has a confiderable thate in cherishing the fever d tribes of plants. It transfules vegetable vigour into the trunk of an oak, and a blooming gaiety into the leaves of a rofe.

The air likewise conveys to our nostrils the extremely fubtle effluvia which exhale from odoriferous bodies: particles fo finall, that they elude the most careful hand. But this receives and transmits the invisible vagrants, without lofing even a fingle atom; entertaining us with the delightful fentations that arife from the fragrance of flowers, and admonithing us to withdraw from an unwholesome situation, to beware of perpicious food.

The air by its undulating motion conducts to our ear all the divertities of found. While danger is at a confiderable distance, this advertifes us of its approach; and with a clamorous but kind importunity,

urges us to provide for our fafety.

The air wafts to our fense all the modulations of mulic, and the more agreeable entertainments of conversation. It distributes every mufical variation with the utmost exactness, and delivers the message of the speaker with the most punctual fidelity: whereas, without this internuncio, all would be fullen and unmeaning filence. We should neither be charmed by the harmonious, nor improved by the articulate accents.

How gentle are the breezes of the air when unconfined! but when collected, they act with fuch immense force, as is sufficient to whirl round the hugest wheels, though clogged with the most incumbering loads. They make the ponderous millstones move as swiftly as the dancer's heel; and the mastly beams play as nimbly as the musician's fingers.

In the higher regions there is an endless fuccession of clouds, sed by evaporations from the ocean. The clouds are themfelves a kind of ocean, suspended in the air. They travel in detached parties, over all the terrestrial globe. They fructify, by proper communications of moisture, the spacious pastures of the wealthy, and gladden with no less liberal showers the cottager's little spot.

Nay,

Nay, the effatisfy the defolate and wester ground, and cause the bud of the tender herb to spring forth; that the natives of the loady defert, the herds which know to maiter's stall, may nevertheless expense the care of an all-supporting parent.

How wonderful! that pendant lakes thould be diffused, said mon stains heared over our heads, and both full ined in the donately part of the atmosphere! How go fine is the expedit at which without . Is of floar or buil. I eps tuch loads ci, derin a buoyant flate! Job cone le :-I this with Fely admiration. Dec 11-1 Clare seffled which bien lobes tem letob agineven is to, and hover like the lighted down? Linkelb S He enters or ha dick a and the cloud, thoun't nothing is mure bete and flur!, becomes by his clier 1 across, as catas of iron, is not rent under .. ' ('r v. eight.

When the fluices are opened and the view deficed, the would thek they could never be seen a feel of this, which would be immedited in the could be immediated in the could be immediated in garde flowers. They insend themfelves in if fir and through for olifices of the feelf witching por, and form the finall drops of the which the cheds diffill upon men abundantly. Thus in lead of drowning the earth, and fiverplag away its failts, they cherild universal patter, and (like their great Matter) definition their flores, to men, animals, a getables, as they are able to bear them.

Eat befide waters, here are cantoned by lous parties of winds, mild or ficice, get the or boilderous, furnished with bivery wings, to fan the glowing firmament, or else title titled to act as an universal beson, and by sweeping the chambers of the armosphere to cleanie the fine aereal fluid. Without this wholesome agency of the winds, the air would stagnate and become putrid: so that all the great cities in the world, instead of being leats of elegance, would degenerate into finks of corruption.

At fea, the winds swell the mariner's falls, and speed his course along the watery way. By land they perform the office of an immense feeds-man, scattering abroad the feeds of numberless plants, which, though the support of many animals, are too small for the management, or too mean for the attention of man.

Here are lightnings flationed, in act to foring whenever their piercing flash is

necessity, either to destroy the suspenses vapours, or dislodge any other noxious matter, which might prejudice the delicate temperature of the other, and obscure its more than chrystalline transparency.

Above all is fituate a radiant and majority orb, which enlightens and chears the inhabitants of the earth; while the air, by a fingular addief, amplifies its ufefulant. Its rede and power augments that hear, which is the life of nature; its refacting power prolongs that fplendor, which is the beauty of the creation.

I to, augments the heat. For the air is a cover which, without opposting us with any perceivable weight, confines, reto its, and thereby increases the vivifying I of the fun. The air increases this. much in the fame manner as our cloaths give a ditional heat to our body: whereas w'en it is lets in quantity, when it is ettenomed, the folar heat is very fenfibly draini hed. Travellers on the lofty mountomo of America, forectimes experience this to their coll. Though the clime at the foot of those valt mountains, is extremely hot and fultry, yet at the topt he cell is to execulive, as often to freeze both the horse and rider to death. We have ti refore great reason to praise God, for placing us in the commodious concavity, the cherishing wings of an atmosphere.

The emanations of light, though formed of hardive matter, yet (altonithing power of divine wildom!) are refined almost to the fubility of fpirit, and are feared inferior even to thought in speed. By which means they spread, with almost instantaneous swiftness, through an whole hemisphere; and though they fill whatever they pervade, yet they straiten no place, embarrass no one, encumber nothing.

Every where indeed, and in every element we may discern the footsteps of the Creator's wildom. 'The spacious canopy over our heads is painted with blue; and the ample carpet under our feet is tinged with green. There colours, by their foft and chearing qualities, yield a perpetual refreshment to the eye. Whereas had the face of nature gliflered with white, or glowed with forlet, fuch dazzling hues, instead of chearing, would have farigued the fight. Besides, as the several brighter colours are interspersed, and form the pictures in this magnificent piece, the green and the blue make an admirable ground, which shews them all to the utmost advantage.

Had

¥

Had the air been much groffer, it would have dimmed the rays of the fun and darkened the day. Our lungs would have been clogged in their vital function, and men drowned or fuffocated therein. Were it much more fubtle, birds would not be able to wing their way through the firmament: neither could the clouds be fuffained, in fo thin an atmosphere. It would clude likewite the organs of respiration: we should gasp for breath with as much difficulty and as little success as fishes do, when out of their native element.

#### § 4. Reflections on the Vegetable creation.

As to vegetation itself, we are sensible all our reasonings about the wonderful operations of nature, are fo full of uncertainty, that as the wife man truly observes, Hardly do we guefs aright at the things that are upon earth, and with laten do are Ind This is the things that are before us. abundantly verified in vegetable nature. For though its productions are to obvious to us, yet are we strangely in the dark concerning them, because the texture of their veilels is fo fine and intricate, that we can trace but few of them, though affifted with the best microtcopes. although we can never hope to come to the bottom and first principle of things, yet may we every where fee plain figuratures of the hand of a Divine Architect.

All vegetables are composed of water and earth, principles which strongly attract each other; and a large portion of air, which strongly attracts when fixed, but strongly repels when in an elastic state. By the combination, action, and re-action of those few principles, all the operations in

vegetables are effected.

The particles of air diftend each duftile part, and invigorate their fap, and meeting with the other mutually attracting principles, they are by gentle heat and motion enabled to affimilate into the nourishment of the respective parts. Thus nutrition is gradually advanced, by the nearer and nearer union of these principles, till they arrive at such a degree of consistency, as to form the several parts of vegetables. And at length, by the slying off of the watery vehicle, they are compacted into hard subfances.

But when the watery particles again foak into and difunite them, then is the union of the parts of vegetables diffolved, and they are prepared by putrefaction, to appear in forms new form, whereby the

nutritive fund of nature can never be exhausted.

All these principles are in all the parts of vegetables. But there is more oil in the more evalted parts of them. Thus feeds abound with oil, and consequently with fulphur and air. And indeed as they contain the rudiments of future vegetables, it was necessary they should be flored with principles, that would both preserve them from puttessettion, and also be active in promoting germination and vegetation.

And as oil is an excellent preservative against cold, so it abounds in the sap of the more no, there trees. And it is this by which the ever greens are enabled to keep their leaves all the winter.

Leaves not only bring nourifhment from the lower parts within the attraction of the growing fruit, (which like young animals is furnished with proper influements to suck it thence) but also carry off the redundant watery fluid, while they imbibe the dew and rain, which cont in much talt and fulphur: for the air is tall of and falphureous particles; and the v. rious combinations of thefe, are doubtlefs very ferviceable in promoting the work of vegetation. Indeed to fine a fluid as the air, is a more proper medium, wherein to prepare and combine the more exalted principles of vegetables, than the grois watery fluid of the fap. And that there is plenty of these particles in the leaves is evident, from the fulphureous exudations often found on their edges. To there refined acreal particles, not only the most racy, generous talle of fruits, but likewise the med grateful odours of flowers, yea and their beautiful colours are probably owing.

In order to supply tender shoots with nourithment, nature is exactful to furnish, at small dislances, the young shoots of all forts of trees, with many leaves throughout their whole length; which as so many jointly acling powers, draw plenty of sap to them.

The like provision has nature made, in the corn, grass, and reed-kind: the leasy spires, which draw nourishment to each joint, being provided long before the stem shoots: the tender stems would easily break, or dry up, so as to prevent their growth, had not these scabbards been provided, which both support and keep them in a supple and ductile state.

The growth of a young bud to a shootconfissin the gradual dilatation and extention of every part, till it is stretched out to its full length. And the capillary tubes still retain their hollowners, notwithitanding their being extended, as we see melted glass tubes remain hollow, though drawn.

to the finest thread. The pith of trees is always full of moikure while the shoot is growing, by the expansion of which, the tender, ductile shoot is distended in every part. But when each year's shoot is fully grown, then the pith gradually dries up. Mean time nature carefully provides for the growth of the succeeding year, by preserving a tender, ductile part in the bud, replete with succulent pith. Great care is likewife taken to keep the parts between the bark and wood always supple with shiny moisture, from which ductile matter the woody sibres, vesicles, and buds are larmed.

The great variety of different fubiliances in the fame vegetable, provés, that there are peculiar veffels for conveying different ferts of multiment. In many vegetables fome of those veffels are plainly seen rull of rulky, yellow, or red nutriment.

Where a facretion is defigued to compete an hard tub' ince, viz. the ke and catteel of hard-stone truits, it does not instand tely grow from the stone, which would be the shorted why to convey nourchment to it. But the unbatteal vitel tete ies a compate round the concave of the stone, and then enters the kernel near its core. By this artifice the visible being much prolonged, the motion of the fact, thereby retarded, and a visible nutriment conveyed to the seed, which turns to an lard substance.

Let us trace the vegetation of a tree, from the feed to its full maturity. When the med is four, in a few days it imbibes for much mointure, as to swell with very Breat force, by which it is enabled both to thike its roots down, and to force its tlem out of the ground. As it grows up, the first, second, third, and fourth order of lateral branches shoot out, each lower order bing longer than those immediately above them, not only as shooting first, but because inferred nearer the root, and fo drawing greater plenty of fap. So that a tree is a complicated engine, which has as many different powers us it has branches. And the whole of each yearly growth of the tree, is proportioned to the whole of the nourishment they attract.

But leaves also are so necessary to promote its growth, that nature provides

fmall, thin expansions, which may be called primary leaves, to draw nourishment to the buds and young shoots, before the leaf is expanded. Thefe bring nutriment to Thefe bring nutriment to them in a quantity sufficient for their small dentand: a greater quantity of which is afterward provided, in proportion to their need, by the greater expansion of the leaves. A still more beautiful apparatus we fird in the curious expansions of blosloms and flowers, which both protect and convey nourithment to the embryo, fruit and feeds. But as foon as the calix is formed rato a finall fruit, containing a minute, feminal tree, the bloffom falls off, leaving it to imbibe hourishment for idelt, which is brought within the reach of its function. by the adjoining leaves.

Let us proceed to make fome additional reflections upon the vegetable kingdom.

All plants produce feeds: but il ey are entire'y unfit for propagation, till they are impregnated. This is certained within the flower, by the duttor the anthere falling upon the moift digrant, where it burffs and fends forth a very table marter, which is almorbed by the dyle, and conveyed down to the feed. A foon as this operation is over, those or rans wither and fall. Bet one l'ower does not always chatain all to le: often the male organs are on one, the female on another. And that nothing n by be wanting, the whole apparatus of the anthere and flag mata is in all flowers contrived with wonderful wildom. In most, the fligm its forround the pillil, and are of the time height. But where the pithi is longer than the digmata, the flowers recline, that the dust may fall into the sligmata, and when impregnated rife again, that the feeds may not fall out. In other flowers the pithl is fhorter, and there the flowers preferve an erect situation. Nay, when the flowering feafon comes on, they become erect though they were drooping before. Laftly, when the male flowers are placed below the female, the leaves are very small and narrow, that they may not hinder the duit from flying upwards like smoke: and when in the fame to cies one plant is male, and the other female, there the dust is carried in abundance by the wind from the male to the female. We cannot also without admiration observe, that most flowers expand themselves when the sun shines, and close when either rain, clouds, or evening is coming on, left the genital duft should be coagulated, or otherwise rendered useless. Yet when the impregnation is Ϋ́

ever, they do not close, either upon showers, or the approach of event g.

For the scattering of feed, nature has provided numberlets way. Various be nesare given for food to animals: but while they eat the pulp, they few the \*feed. Either they dispose them at the same time: or if they twollow them, they are returned with interest. The muffletoe always greas on the other trees; because the thruth that eats the feeds of them, calls them forth with his dung. The jumpers alto, which fill our woods, are fown in the tame man-The crots-bill that lives on Frcones, and the hawfinch which feeds on pine-cones, tow many of those feeds, especially when they carry the cone to a flone or flump, to flop off its feales. Swine likewife and moles, by throwing up the earth, prepare it for the acception of feeds.

The great Parent of all decised that the whole earth should be covered with plants. In order to this he adapted the nature of each to the climate where it grows. So that some can bear intense heat, others intente cold. Some love a moderate warmth. Many delight in dry, others in mostle ground. Tre Alpine plants love mountain, whose top, are covered with cternal frow. And they blow and rijen their feeds very early, left the winter thould overtake and demog them. Plants which will grow to where elfe, flourith in Siberia, and near Hudton's Bay. Grafs can bear almost my timperature of the air: in which the good providence of God appears; this being fo necessary all over the globe, for the nomithment of caule.

Thus neither the fcorching fun nor the pinching cold hinders any country from having its vegetables. Nor is there any feel, which does not bring forth fome. Pond-weed and water-lilies inhabit the waters. Some plants cover the bottom of rivers and feas: others fill the marfhes. Some clothe the plains: others grow in the drieft woods, that fcarce ever fee the fun. Nay, flones and the trunks of trees are not void, but covered with liverwort.

The wisdom of the Creator appears no where more than in the manner of the growth of trees. As the roots descend deeper than those of other plants, they do not rob them of nourithment. And as their stems shoot up so high, they are easily preserved from cattle. The leaves

falling in autumn guard many plus against the rigour of winter; and in the faromera lead both them and a lander of against the history that the history of the wife inhibit the water from the enemy possion which transpring through their leaves, is indeaffly depended, and only to motion the plants that are round about. Larly, the portional articles of trees contributes very much to the popagation of infect. Multitudes of these lay their engal upon their leaves, where they find both food and fut tr.

Many plants and thrabs are aimed with thems, to keep the minuts from defliouring their frams. At the tame due their cover many other plants, under their banches, to that wide the religious are relied of all plants time algorithms are relied to continue the species.

The motes which i down the most barrea places, preferve the fineller plants, when they begin to floot, from cold and drought. They also linder the formenting each from fereing the roots of plants upward in the spring, as we see happen annually to truths of these. Hence sew mosts grow in feathern changes, not being necessary there to these or by

S. A-matword will bear no fell but pure fund. Sand is often blown by violent winds, to as to delege as it were mendors and fields. But where this grows, it face the fand, and gathers it into hillocks. Thus other hads are formed, the ground increased, and the feat repelled, by this wonderful day of monor of nature.

How careful is nature to preferve that uteful plant grais! The more its leaves are caten, the more they increase. For the Author of nature intended, that we getables which have fiender flolks and exect leaves should be expious and thek fer, and the afford food for so vall a quantity of grazing animals. But what increases our wender is, that although grass is the principal food of such animal, yet they touch not the flower and feed-bearing stems, that so the feeds may ripen and be sown.

The caterpillar of the moth, which feeds upon grafs to the great destruction thereof, seems to be formed in order to keep a due proportion between this and other plants. For grafs when lest to grow frieely, increases to that degree as to exclude all other plants, which would confequently be extirpated, unless the insect fometimes prepared a place for them. And

hence

he will is, that more fraction of nants and not to cot pulls has laid write the contribution of the proceeding year, than at any on the name of the proceeding year, then at any on the name of the proceeding year, then at any on the name of the na

In arte, fromer or leter, mul fabsa. Passas and up, they grow, m ŧħ o, they our rend, and having or confe, raturn to the dalf Almol all the black mould which ay in con the cuth, is awing to dead vegetails labeld, after the leaves and flows ar game, the roots of plants remain: but the attor at 198 rot and change into mould. All the cuth thus plephied, reform to p'n's what it has inclived from them. when I do no completed to the earth. they draw and become not see to their own rather the more faistful to a social smould: to that the tilled tree is in reality nothing Le men'd won't the veragount dewich that hader. And front's opports when ther day but the fame had of most is to not spareth on both. By the means ternative analysis contract to proper paper to warre is the curric could not make good its amual confurantion, were it not conflaat-I reconned.

in many cases the crudaceous liver vorts me the first foundation of vegetation. Therefore however deforfed, they are of the u most confequence, in the occonomy of time. When rocks fift emerge out of t'e fea, they are so polithed by the force of t'e waves, that ha dly any herb is alife to he its habitation upon them. But the minute crudaceous liverworts foon begin to cover these dry rocks, though they have no roundhment but the little mould and im-Pricepuble particles, which the rain and air bring thither. Thefe hverweit dying then into fine earth, in which a larger built of liverworts finke their roots. These also die, and turn to mould : and then the varicus kinds of moffes find nourill mut. Listy, these dying yield such plenty of mould, that herbs and shrubs casily take toot and live upon it.

That trees, when dry or cut down, may not remain useless to the world, and he nelancholy speciacles, nature hastens on their destruction, in a fingular manner. First the liverworts begin to strike root in them; afterward the moisture is drawn out of them, whence putrefaction follows. Then the mushroom-kind find a sit place to grow on, and corrupt them still more. A particular fort of beetle next makes himself a way between the bark and the woods

Then a fort of caterpillar, and feveral other forts of beetles, bore numberlets holes through the trunk. Laitly, the woodpeckers come, and while they are feeking for infects, flatter the tree, already corrustel, and exceedingly harben its return to the earth from whence it came. But how field the tank of a tree, which is emerted in water ever return to earth? A partic la kind of worm performs this work, as her fatting men well know.

But why is fo inconfiderable a plant as theres, to aimed and guarded by nature? Because it is one of the most ufeful plants that grows. Observe an heap of clay, on which for many years no plant has spring up: Ict but the feeds of a thirtle fix there, and other plants will quickly come thirher, and foor cover the ground; for the thiftles by their leaves attract monitare from the air, and by their roots fend it into the clay, and by that means not only thrive them lives, but provide a shelter for other plant.

Indee I, there is fuch a variety of wifdom, and profution of goodness, difplayed in every object of nature, even in those that Cein uf lets or inlignificant, and what is meet, in many of those which to an igrotant and superficial observer, appear no ious, that it is past doubt to the true philotophes, nothing has be n made in Vin. That is a fine as well as pious obfersation of Sir John Pringle, founded on th experiments of Dr. Pirolley, that no ventible grows in vain, but that from the oak of the forest to the grass of the f. ald, every individual plant is ferviceable to maskind; it not always diffinguished by to no private virtue, yet making a part of the whole, which cleanfes and purifies our atmosphere. In this the fragrant role and deadly nightfl.ade co-operate; nor is the herlage, nor the woods that flourish in the moil remote and unpeopled regions, unprofitable to us, nor we to them; confidering how condantly the winds convey to them our vin and air, for our relief, and their nournament. And if ever these salutary gales rite to florms and hurricanes, let us thill trace and revere the ways of a beneficent being; who not fortuitously but with defign, not in wrath but in mercy, thus shakes the waters and the air together, to bury in the deep those putrid and pestilential effluvia, which the vegetables upon the face of the earth had been insufficient to confume.

General Reflections and Obfordations § 5. on Beafts, Birds, Fig. es, and other inferior parts of the Works of God.

No part of nature is delitute of inhabitants. The woods, the waters, the depths of the earth, have their respective terrints; while the yielding air, and those tracts where man can never, but with much art and danger, accord, are also passed through by multicudes of the most beautiful beings of the creation.

Every order of animals is fitted for its fituation in him, ! I none more apparently than birds. Though they full below beatls in the scale of nature, yet they hold the next rank, and far furpais fithes and infects, both in the structure of their bodies,

and in their fagacity.

The body of man presents the greatest variety: beafts less persectly formed, discover their defects in the simplicity of their conformation: the mechanism of birds is yet lets complex: fithes are furnished with fewer organs still; while intects, more imperfect than all, fill up the chaim between animal and vegetable nature. Of man, the most perfect animal, there are but three or four species; the kinds of beasts are more numerous; birds are more various flill; fishes yet more; but infects afford an immente variety.

As to the number of animals, the species of beatls, including also serpents, are not very numerous. Such as are certainly known and clearly described, are not above an hundred and fifte. And yet probably not many that are of any confiderable trigpers, have escaped the nonce of the cu-

Tious.

The species of birds, known and deferibed, are near five handred, and the species of fithes, feeluling flat inh, as many; but if the fleell-tall are taken in, above fix times the number. How many of each genus remain undiscovered, we cannot very nearly conjecture. But we may fuppofe, the whole fum of healts and birds to exceed by a third part, and falses by one half, those that are known.

The infects, taking in the extanguious, both terredrial and aquatic, may for number vie even with plints themielves. The exfanguious alone, by what Dr. Lifter has observed and delineated, we may conjecture cannot be lefs, if not many more, than three thousand species. Indeed this computation feems much too low: for if there

are a thousand species in this island and the fea near it; and if the fame proportion hold between the infects natives of England, and those of the rest of the world; the species of insects on the whole globe, will amount to ten thousand.

Now if the number of creatures even in this lower world, be so exceedingly great; how great, how immense must be the power and wifelow of him that formed them all! For as it argues far more skill in an artificer, to be able to frame both clocks and watches, and pumpe, and many other forts of macounts, than he could display in making Les one of these so ts of engines: so the Almighty declares more of his wisdom, in forming fuch a multitude of different forts of cicatures, and all with admirable and unreproveable art, than if he had created but a few.

Again: The superiority of knowledge would be displayed, by contriving engines for the same purposes after different sathions, as the moving clocks or other engines by fprings mateau of weights: and the infinitely wife Creator, has shewn by many inflances, that he is not confined to one only influment, for the working one effect, but can perform the fame thing by divers means. So though most flying creatures have feathers, yet nath he enabled ferenal to fly without them; as the bat, one fort of lizard, two forts of fishes, and numberless forts of infects. In like manner, although the air bladder in hithes feems nce flary for twimming; yet are many fo formed as to fully without it, as first, the cartifigmous kind, which nevertheless ascend and defeend at pleafure, although by what means we cannot tell: fecondly, the c. taccous kind: the air which they receive tato their luigs, in some measure answer-

ing the fame end. Yet again: Though God has tempered the blood and bodies of most fishes to their cold element, yet to shew he can preserve a creature as hot as healts themselves in the coldest water, he has placed a variety of these cetaceous fishes in the northermost feas. And the copious fat wherewith their bodies is inclosed, by reflecting the internal heat, and keeping off the external cold, keeps them warm even in the neighbourhead of the pole. Another proof that God can by different means produce the same effect, is the various wave of extracting the nutritious juice out of the aliment in

various creatures.

In man and beafts the food, first chewed, is received into the stomach, where it is concocted and reduced into chyle, and fo evacuated into the intestines, where being mixed with the choler and pancieate juice, it is farther subtilized, and rendered so fluid, that its finer parts cauly enter the mouth of the lacteal veins. In birds there is no chewing: but in fuch as are not carrivorous, it is immediately fivallowed into the crop, or anti-flomach (which is obfaved in many, especially pissivorous birds) where it is moistened by for to proper juice, and then transferred to the gizzard, by the working of whole muldles, affilled by finail ; bbles, which they feallow for that purrefe, it is ground finall, and fo transmitted to the int Hines.

In oviparous reptiles, and all kind of ferpents, there is neither chewing nor comnearista in the flomach, but as they fwallevenmals whole, fo they void the fkins
whoken, having extracted the nutritious
faces. Here, by the by, we may observe
the wonderful delatibility of the throats
alignified gallets of ferpents. Two entire adult
much have been taken out of the flomach
of an adder, whose neck was no bigger
tain one's little finger.

Fishes, which neither chew, nor grind their meat, do, by means of a corrolive Jace in their flomach, reduce fkin, bones, and all into chyle. And yet this juice free, no acidity to the taffe. But how mid foever it taffe, it corrodes all animal fabiliances, as aqua fortis does iron.

Several eminent men have been of opinion, that all brutes are mere machines. This may be agreeable enough to the pride of man; but it is not agreeable to daily observation. Do we not continually obferre in the brutes which are round about us a degree of reason? Many of their actions cannot be accounted for without it: as that commonly noted of dogs, that running before their masters, they will stop at the parting of the road, till they fee which way their masters take. And when they have gotten what they fear will be taken from them, they run away and hide it. Nay, what account can be given, why a dog being to leap on a puble, which he fees he cunnot reach at once, if a stool or chair flands near it, first mounts that, and thence proceeds to the table? If he were mere clock-work, and his motion caused by a material spring, that spring being once let to work, would carry the machine in a right line, towards the object that put it in motion.

Were it true, that brutes were mere machines, they could have no perception of pleasure or pain. But how contrary is this, to the doleful fignifications they give, when beaten or tormented? How contrary to the common fense of mankind? For do we not all naturally pity them, apprehending them to feel pain just as we do? Whereas no man is troubled to fee a plant torn, or cut, or mangled how you pleafe. And how contrary to Scripture? A righterus man regardeth the life of his beagl: but the tender mucies of the wicked are and. Prov. 12. 10. The former clause is usually rendered, a good man is merciful to his beaft. And this is the true rendering, as appears by the opposite clause, that the wicked is cruel. Cruelty then may be exercifed towards beafts. But this could not be, were they mere machines.

The natural inflinct of all creatures, and the special provision made for some of the most helples, do in a particular manner demonstrate the great Creator's care.

First, What an admirable principle is the natural affection of all creatures toward their young! By means of this, with what care do they nurse them up, thinking no pains too great to be taken for them, no danger too great to be vensured upon. for their guard and fecurity! How will they careis them with their affectionate notes, put food into their mouths, suckle them, cherish and keep them warm, teach them to pick and eat, and gather food for themselves: and in a word, perform the whole part of fo many nurses, deputed by the fovereign Lord of the world, to help fuch young and shiftless creatures till they are able to shift for themselves.

Other animals, infects in particular, whose offspring is too numerous for the parent's provision, are so generated as to need none of their care. For they arrive immediately at their perfect state, and so are able to shift for themselves. Yet thus sas the parental instinct (equal to the most rational foresight) extends, that they do not drop their eggs any where, but in commodious places, suitable to their species. And some include in their nests sussicient and agreeable food, to serve their young till they come to maturity.

And for the young themselves: as the parent is not able to carry them about, o clothe them and dandle them, as man, deshi

doth: how admirably is it contrived, that they can foon walk about, and begin to thirt for themfelves! How naturally do they hunt for their teat, fuck, pick and take in their proper food!

On the other hand, the young of man, (as their parent's reason is sufficient to help, to nurse, seed and clothe them) are born utterly helpless, and are more absolutely than any creature cast upon their

parent's care.

Secondly, What admirable provision is made for fome of the most helpful greatures, at a time when they must etherwife utterly perifh! The winter is in improper scason to assord food for insects and many other animals. When the fields, trees, and plants are naked, and the cir is chilled with frost; what would become of fuch animals, whose tender bodies are impatient of cold, and who are nourthed only by the produce of the fpring or tum-To prevent their total defination, the wife Preferver of the world has fo ordered, that in the first place, these who are impetient of cold, should have such a peculiar structure of body, as during that feafon, not to fuffer any waile, nor confequently need any recruit. Hence many forts of birds, and almost all int &, puts the whole winter without any feed; and most of them without any respiration. It feems all motion of the animal juc. 11 extinct. For though cut in piezes they do not awake, nor do samy fluid coze cut at the wound. This fleep therefore is little less than death, and their waking, than a refusection; when the returning fun revives them and their find together."

The next provision is for such courte es as can bear the cell, but would want food. This is provided against in some, by a long patience of hunger, in others by their wonderful instinct, in laying up food before hand, against the approaching winter. By some of these, their hade treasuries are at the proper scason well shocked with provisions. Yea, whole fields are here and there bespired with the fruits of the neighbouring trees laid on early up in the earth, and covered fase by provident little animals.

And what a prodigious act is it of the Creator's indulgence to the poor, thisfiless irrationals, that they are already furnished with such cloathing, as is proper to their place and busines! with hair, with feathers, with faells, or with sirm armature,

all nicely accommodated, as well to the element wherein they live, as to their feveral occisions there! To be alls, hair is a commodate cloathing; which together with the apt texture of their kin, fits them in all weathers to lie on the grow! 1, 3.2 to do their fervice to man. The best and defence against the cold and wen as cost defence against the cold and wen, as confortable covering for their tender young.

All the animals near Hudfon's Bay are cloathed with a close, foft, warm fur. But what is fill more furprifing, and what draws all attestive minds to admire the wifdon and goodnels of Providence is, that the viv dogs and cats which are brought thinter from England, on the approach of winter change their appearance, and acquire a much longer, fofter, and thicker coat of han then they originally bad.

And as heir is a commodious diefs for b alls, forme feathers for birds. They are not only a pood guard against wet and cold, but nicely placed every where on the body, to give to tranealy pailage through the air, and to writ them through that thin medium. How curious is their texture for lightness, and withal close and firm for Richgth! and where it is necesmedullary tubilance are they filled with! to that even the throngest parts, far from being a love to the body, rather help to make it light and buoyant. And how cumostly sie the vanes of the feathers wrought with capillary filaments, nearly interviouen together whereby they are fufficiently close and flrong, both to guard the body against the injuries of the weather, and to impower the wings, like for many fail, to make flrong impulfes on the . ir in their flight.

No less curious is the cloatling of reptiles. How well adapted are the rings of fome, and the contortions of the fkin of others, not only to fence the body sufficiently but to enable them to creep, to perforate the earth, and to perform all the offices of their state, better than any other covering!

Observe, for inflance, the tegument of the earth-worms, made in the compleatest manner, for making their passage through the earth, wherever their occasions lead them. Their body is made throughout of small rings, which have a curious apparatus of muscles, that enable them with great strength to dilate, extend, or contrust then whole body. Each ring is likewif armed with flul, tharp prickles, we chathey can open at pleasure, or that A to their body. Lastly, under their di, there is a flimy juice, which they emit as occasion requires, to lubricate the body, and ficilitate their passage into the earth. By all these means they are enabled, with cale and speed, to work themselves into the earth, which they could not do, were that covered with hair, feathers, scales, or fach cloathing as any of the other cre, tales.

How wifely likewife are the inhabitants of the waters cloathed! The shells of for fifther, are a fliong goard to their t 1 r bodies, and confident enough with their flow motion; while the feales and has of others affold them an early and swift piffage through the witchs.

Admirable likewite is the fagacity of brute animals, in the conveniency and methol of their habitations. Their arcollectionic skill herein exceeds all the skill of man. With what inimitable art do for of thefe poor, untaught creatures, Is a pacel of rule ugly dicks or flians to ether! With what curionty do they Let them within, yea, wind and place every hair, feather, or lock of wool, to good and keep warm the tender bodies, I sharf themselves and their young! And with a hat art do they thatch over and cost their neils without, to deceive the e e of the spectators, as well as to guard and fence them against the injuries of the Weather!

Lion infects, those little, weak, tender ci atures, what artifis are they in build-i 5 their habitations! How does the bee 1 ther its comb from various flowers, the wife from folid timber! With what accaracy do other infects perforate the earth, wood, yea stone itielf! Farther ) et, with what care and neatness do most of them line their houses within, and feal them up and fence them without How artificially do others fold up the leaves of tiees; others glue light bodies together, and make floating houses, to transport themselves to and fro, as their various occations require,

Another instance of the wisdom of him that made and governs the world, we have in the balance of creatures. The whole furface of the terraqueous globe, can afford room and support, to no more

than a determinate number of all forts of creatures. And if they should increase to double or treble the number, they mult starve or devour one another. To keep the balance even, the great Author of nature hath determined the life of all creatures to fuch a length, and their increase to fuch a number, proportioned to their use in the world. The life indeed of some hurtful creatures is long; of the lion in particular. But then their increase is exceeding small; and by that means they do not overflock the world. On the other hand, where the increase is great, the lives of those creatures are generally short. And befide this, they are of great use to man, either for food or on other occasions. This indeed should be particularly obferved, as a figual inflance of divine providence, that utclal creatures are produced in great plenty: others in smaller numbers. The prodigious increase of infects, both in and out of the waters, may evemplify the former observation. For innumerable creatures feed upon them, and would perith were it not for this supply. And the latter is confirmed by what many have remark d: that creatures of little ufe, or by their voracioulness, pernicious, citler feldom bring forth, or have but one or two at a birth.

How remarkable in the defiruction and , reparation of the whole animal creation! The furface of the earth is the inexhaufible fource whence both man and beaft dethe their fulfillener. Whatever lives, lives on what vegetates, and vegetables, in their tuer, live on whatever has lived or vegetated: it is impossible for any thing to live, without defroying fomething elfe. It is thus only that animals can fubil themfalves, and propagate their fpeci-s.

God in creating the first individual of each frecies, animal or vegetable, not only gave a form to the dust of the earth, but a principle of life, inclosing in each a greater. Of smaller quantity of organical particles, indestructible and common to all organized beings. These pass from boly to body, supporting the life, and ministering to the nutrition and growth of each. And when any body is reduced to ashes, these organical particles, on which death hath no power, forvive and pass into other beings, bringing with them nourishment and life. Thus every production, every renovation, every increase by gene-

ration

ration or nutrition, suppose a preceding destruction, a conversion of substance, an accession of these organical particles, which ever subsisting in an equal number, render nature always equally full of life.

The total quantity of life in the universe is therefore perpetually the same. And whatever death feems to dethroy, it defiroys no part of that primitive life, which is diffused through all organized beings. Instead of injuring nature, it only causes it to shine with the greater lustre. If death is permitted to cut down individuals, it is only, in order to make of the universe, by the reproduction of beings, a theatre ever crouded, a spectacle ever knew. But it is never permitted to deflroy the most inconsiderable species.

That beings may fucceed each other, it is necessary that there be a diffraction among them. Yet like a provident mother, nature in the midst of her inexhaustible bundance, has prevented any walke, by the few species of carnivorous animals, and the few radi iduals of each species; multiplying and a fame can both the fpecies and individue to all those that feed on herbage. If vegetables the teen's to be profule, both with regard to the number and fertility of the species.

In the fea indeed all the species are carnivorous. But though they are perpetually preving upon, they never deftroy each other, because their fauitfulness is equal to their depredation.

Thus thro' fucceflive ages flands Firm fixt thy providential care? Pleas'd with the works of thine own hands Thou doft the waftes of time replat.

Let us add a few more reflections on the world in general. The fame wife Being, who was pleafed to make man, prepared for him also an habitation fo advantageoufly placed, that the heavens and the reft of the universe might serve it both as an ornament and a covering. He constructed likewise the air which man was the breathe, and the fire which was to fuffain his life. He propared also metals, taits, and all ten reflial elements to rehew and maintain viroughout all ages, whatever might be on any account necessary for the inhabitants of the earth.

The i me Divine Ruler is manifest in all he objects that compose the universe. It is he that caused the dry hand to appear, above the furface of the ocean, gauged the capacity of that amazing refervoir, and proportioned it to the fluid it contains, He collects the riting vapours, and causes them to distil in gentle showers. At his command the fun datts his colivening rays, and the winds featter the nexious effluvia, which if they were collected together might destroy the human race.

He formed those hills and lofty mountains which receive and retain the water within their bowels, in order to distribute it wish occonomy to the inhabitants of the plains, and to give it fuch an impulse, as might enable it to overcome the unevennels of the lands, and convey it to the remotest habitations.

He for all callet the plain, beds of clay,

or compact earths, the and dop the waters, which, after a greet ain, make their way flects of with nequently remain in a level with the neighbouring rivers, and fill our wells with their redundancy, or as those fubfide, flow into them again.

He proportioned the variety of plants in each country, to the exigencies of the inhabitant, and adapted the variety of the foils, to the nature of those plants.

He endued numerous animals with mild dispositions, to make them the domestics of man; and taught the other animals to govern themselves, with an aversion to dependence, in order to continue their fpecies without loading man with too many

It we more nearly furvey the animal and vegetable world, we find all animals and plants, have a certain and determined form, which is invariably the fame. So that if a monitor ever appear, it cannot propagate its kind, and introduce a new species into the universe. Great indeed is the variety of organized bodies. But their number is limited. Nor is it possible to add a new genus either of plants or animals, to those of which God has created the germina, and determined the

The fine Almighty power has created a precise number of simple elements, estentially different from each other, and invariably the fame. By these he varies the scene of the universe, and at the same time prevents its destruction, by the very immutability, of the nature and number of these elements, so that the world is for ever changed, and yet eternally the fame.

Yet it we would account for the origin

of these elements, we are involved in endless uncertainty. We can only say, he who has appointed their different uses in all ages, has rendered those uses infallible, by the impossibility of either destroying or

increasing them.

Herein we read the characters of his power, which is invariably obeyed; of his wisdom, which has abundantly provided for every thing; and of his tender kindness toward man, for whom he has provided fervices equally various and infallible. It is an additional proof of his continual care of his creatures, that though every thing be composed of simple elements, all placed within our reach, yet no power is able to destroy the least particle of them. Nothing but the same cause which was able to give them birth, can annihilate them, or change their nature. In truth, the defign and will of the Creator, is the only phyfical cause of the general economy of the world: the only physical cause of every organized body, every germen that flourishes in it; the only physical cause of every minute elementary particle, which enters into the composition of all.

We must not then expest ever to have a clear and full conception of effects, natures, and causes. For where is the thing which we can fully conceive? We can no more comprehend either what body in general is, or any particular body, suppose a mass of clay, or a ball of lead, than

what a spirit, or what God is.

If we turn our eyes to the minutest parts of animal life, we shall be lost in astonishment! And though every thing is alike easy to the Almighty, yet to us it is matter of the highest wonder, that in those specks of life, we find a greater number of members to be put in motion, more wheels and pullies to be kept going, and a greater variety of machinery, more elegance and workmannip (fo to speak) in the compofition, more beauty and ornament in the finishing, than are seen in the enormous bulk of the crocodile, the elephant, or the whale. Yea, they feem to be the effects of an art, as much more exquisite, as the movements of a watch are, than those of a coach or a waggon.

Hence we fearn, that an atom to God is as a world, and a world but as an atom; just as to him, one day is as a thousand years, and a thousand years but as one day. Every species likewise of these animalcular may serve.

to correct our pride, and shew how inadequate our notions are, to the real nature of things. How extremely little can we possibly know, either of the largest or simalled part of the creation? We are furnished with organs capable of discerning, to a certain degree of great or little only. All beyond is as far beyond the reach of our conceptions, as if it had never existed,

Proofs of a wife, a good, and powerful Being are indeed deducible from every thing around us: but the extremely great and the extremely finall, feem to furnish us with those that are most convincing. And perhaps, if duly considered, the fabric of a world, and the fabric of a mite, may be found equally striking and conclusive.

Glasses discover to as numberless kinds of living creatures, quite indiscernible to the naked eye. And how many thousand kinds may there be, gradually decreasing in fize, which we cannot fee by any help whatever? Yet to all these we must believe God has not only appointed the most wise means for prefervation and propagation, but has adorned them with beauty equal, at least, to any thing our eyes have feen.

In short, the world around us is the mighty volume wherein God has declared himfelf. Human languages and characters are different in different nations. And those of one nation are not understood by the rest. But the book of nature is written . in an univerful character, which every man may read in his own language. It confifts not of words, but things, which picture out the divine perfections. The firmament every where expanded, with all its flarry hoft, declares the immensity and magnificence, the power and witdom of its Thunder, lightning, storms, Creator. earthquakes and volcanoes, shew the terror of his wrath. Seasonable rains, sun-shine and harvest, denote his bounty and goodnefs, and demonstrate how he opens bis band, and fills all living things with plenteoufnefs, The constantly succeeding generations of plants and animals, imply the eternity of their first cause. Life, subsisting in millions of different forms, thewa the valt diffusion of his animating power, and death the infinite disproportion between him and every living thing.

Even the actions of animals are an eloquent and a pathetic language. Those that want the help of man have a thousand engaging ways, which like the voice of God speaking to his heart, command him to preferve and cherish them. In the mean time the motions or locks of those which might do him harm, strike him with terror, and warn him, either to sly from or arm himself against them. Thus it is, that every part of nature directs us to nature's God.

The reader will eafily excuse our concluding this chapter also, with an extract

from Mr. Hervey.

In all the animal world, we find no tribe, no individual neglected by it. Creator. Even the ignoble creatures are mod wifely execumflanced and most liberally accorrangement.

They all generate in that particular fealon, which supplies them with a stock of possitions, sufficient not only for the felves, but for their increding from the filter, they can, when there is both to fall their uddens, and can be made for the lambs. The brids hatches a particular lambs. The brids hatches a particular succession infects swarm on even a real so that the caterier, whether it be a conde on the female parent, needs only to all at a the ground, or make a little execution into the air, and find a feal ready decord for the mouths at home.

Their love to their offspring, while they are helpless, is inviacibly thoogs, where is the moment they are able to flatt for themfelves it vanishes as though it help never been. The hen that maches at the head of her little brood, would fly at a methal in their defence. Yet within they weeks, the leaves them to the wide would, and does not even know them any more.

If the God of Ifr el infpired Bezaleel and Aholiah with wifdom and knowledge in all manner of workmandap, the God of nature has not been wroting, in his tefluctions to the foal of the air. The fkill with which they each they hours, and adjust their apartments is a imitable. The caution with which they lade tacir abodes from the feeting eve, or 11truding hand, is adam ble. No general, though fruitful in expedients, could build fo commodious a lodgement. Give the most celebrated artificer the fame materials, which there weak and nacxperienced creatures ule. Let a Jones or a Demoivre have only force rude stones or ugly flicks, a few bits of dirt or terags of hair, a lock of wool, or a coach sprig of mots: and what works could they produce? We extol the commander, who knows how to take advintage of the ground; who by every

circumstance emburrasses the forces of his enemy, and advances the fuccels of his own. Does not this praise belong to the featured leaders? Who fix their pentile camp, or the demissions branches that wave a' ift in the air, or dance over the flicing? By this means the vernal gales tock their cradle, and the murmuring waters full the vorng, while both concur to tarrily their enemies, and keep them at a di lane . Some hide their little houthold from view, and the the factor of interested Fig. Others remove it from differery, in the centre of a thorny thicket. And by one fliatigem or another they are me call as figure, as if they intrenched the of less in the earth.

If the fiver his large fiveeping wings, and the plans flock of feathers, to spread one lan callow young, the wien mal s up by our made what is waiting in her Late to obtain is, the will be obliged to also in is, the will be obliged to reste up over purporous affice. Therefore with turp rang pulgment the defigies, of I wich would that diligence forthes her neil. It is a neat oval, bottomed and varily dovor with a regular concinc: within middle for wat i down, wit out thrich d with mols, oals a finall openuic Listor le entrance. By this means the enlivening heat of her body is greatly energied daining the time of incubation. And her young no fooner buril the mell, than they find themselves screened from t' car mance of the weather, and comforce y repoled, till they gather through in the warmth of a bagnio.

Pedaps we have been accustomed to look aroa infects, as to many rude fer ips of creation, but if we examine them with att buon, they will appear tome of the modepolithed pieces of divine working infup. Many of them are decked with the richelt finery. Their eyes are an anenblige of microtopes; the common dy, for indance, who, fur ounded with enemies, his neither drougth to refill, nor a place of retreat to fecure herielf. For this reafor the has need to be very vigilant, and always upon her guard. But her head is to fixed that it cannot turn to fee what puffes, either behind or around her. Providence therefore has given her, not barely a retinue, but more than a legion of eyes: infemue 1 that a fingle fly is supposed to be mistress of no less than eight thousand. By the help of this truly amazing appamitus, the fees on every fide, with the utmost case and speed, though without any motion of the eye, or flection of the neck.

The diets of infects is a vefture of refoliandent colours fet with an arrangement of the brightest gems. Their ways are the fined expansion imagin ble, compared to which lawn is as coarie as tocke oth. the cafes, which enclose their words, I ner with the finest variath, are soon ed 1 Forman ental flating , are Irdd I wien indicato to, or pilled whately withit. Not one but is endued with the control " to their prey, and do that the chape Lan ha, to diffrate the ball of the cu flation, and easily the pleasure of their condition.

What if the elept of it is a first that I had higher probables first as a constant. . reced in the femion of the by tren curious feelers, remove see an a to the in commons fize, there the in the same the explose time variation care sode by these the discover and . . . . . , whatever might defile to it neat apparel,

e. end more their tender live .

Livery one admires the map Pe Jer 2. With now supid carees does he bound . long the plain! Yet the grafa-hopper form is forward with a bound abundantly here impetuous. The ant too, in propertian to his fire, excels him both in for tuck and though, and will climb 1. Once, which the most coarageous court r dates not attempt to feale. If the real moves more flowly, the has however no ited to go the lane way twice over: because whenever the departs, wherever no temoves, the is alway at home.

The eigle, ic is true, is privileged with It consthat out Reinthe wind. Yet neither Is that poor outcast, the groveling mole, dueguded by Divine Providence. Because the is to dig her cell in the earth, her paws 1 rve for a pick-axe and fpade. Her eye is funk deep into its focket, that it may not be hurt by her rugged fituation. And to it needs, very little light, the has no reason to complain of her dark abode. So that her subterranean habitation, which fome might call a dungeon, yield her all the fafety of a fortified caille, and all the delights of a decorated grot.

Even the spider, though abhorred by man, is the care of all-fullaining heaven. She is to support herself by trepanning the wandering fly. Suitably to her em-Ploy, the has bags of glutinous moisture. From this she spins a clammy thread, and weaves it into a tenacious net. This she fpreads in the most opportune place. But knowing her appearance would deter him from a proaching, the then retires out of fight. Yet the constantly keeps within diffuse; fo as to receive immediate inteligence when any thing falls into her toils, ready to spring out in the very infant. And it is observable, when winter the air, and no more infects rove though it, knowing her labour would be in the leaves her fland, and difcontimes harvork.

I to it not forget the inhabitants of the Live. The bees fobfilt as a regular comm mity. And their indulgent Creator has Car of them all implements necessary either to bedding their combs, or composing they have each a portable c i . I fweets, and they have the most c was as dore-howes, wherein they depose the v. They readily diffinguish every plane, viola abords materials for their Left .. . ed are complete practitioners is the east of Reputation and refinement. The less aware that the vernal bloom and familier that continue but for a feafon. We come they improve to the utmost ev., in sing hour, and lay up a flock fan and to supply the whole flate, till their flower, but of crecurns.

If do made of this lower creation is em b' I with the powers of reason, the I don't of feafitive beings, are ends I v. In the foculty of inflinet: a fagacter which is neither derived from obferva to, no waits the finishing of experiene : which without a tutor teaches them all receffery skill, and enables them without a pottern to perform every needtul operation. And what is more remarkatle, a never milleads them, either into cravicas principles, or pernicious precisions in rever feels them in the most nice and discult of their undertakings.

Let us flep into another element, and just visit the watery world. There is not or among the innumerable myriads, that fivin the boundless ocean, but is watched over by the fovereign eye, and supported by his Almighty hand. He has condef-cended even to beautify them. He has given the most crack proportion to their Thape, the g yest colours to their skin, and a polithed furface to their feales. eyes of some are surrounded with a scarlet

circle: the back of others diverfified with crimfon stains. View them when they glance along the stream, or when they are fresh from their native brine, the silver is not more bright, nor the rainbow more glowing than their vivid, glossy hues.

But as they have neither hands nor feet, how can they help themselves, or escape their enemies? By the beneficial, as well as ornamental furniture of fins. These when expanded, like mails above, and ballafts below, poife their floating bodies. and keep them fleadily upright. They are likewise greatly affished by the flexibility and vigorous activity of their tails: with which they shoot through the paths of the fea, fwifter than a veffel with all its fails. But we are lost in wonder at the exquifite contrivance and delicate form if n of their gills: by which they are accommodated, even in that don't medium, with the benefits of respiration! A piece of mechanism this, in balged to the meanest of the fry: yet infinitely furpatine, in the finences of its structure and operation, whatever is curious in the works of act, or commodious in the palaces of princes.

# § 6. Observations on the difference between things natural and artificial.

If we examine the finest needle by the microscope, the point of it appears about a quarter of an inch broad, and its figure neither round nor flat, but irregular and unequal. And the furface, however fmooth and bright it may feem to the noked eye, is then feen full of rangedness, holes, and feratches, like an iron bar from the forge. But examine in the same manner the sling of a bee, and it appears to have in every part a polish most amazingly beautiful, without the least slaw, or inequality, and ends in a point too fine to be discerned by any glass whatever; and yet this is only the outward theath of far more exquifite inftruments.

A fmall piece of the finest lawn, from the distance and holes between its threads, appears like a lattice or hurdle. And the threads themselves seem coarser than the yarn wherewith ropes are made for anchors. Fine Brussels lace will look as if it were made of a thick, rough, uneven hair-line, intwisted or clotted together in a very aukward and unartful manner. But a silkworm's web on the nicest examination appears perfectly smooth and shining, and as much finer than any spinster in the world

can make, as the smallest twine is than the thickest cable. A pod of this filk winds into nine hundred and thirty yards. And as it is two threads twisted together all the length, so it really contains one thousand eight hundred and sixty; and yet weighs but two grains and an half. What an exquisite sinces! and yet this is nothing to the silk that issued from the worm's mouth when newly hatched.

The smallest dot which can be made with a pen, appears through a glass, a vast irregular spot, rough, jagged, and uneven about all its edges. The finest writing (such as the Lord's Prayer in the compass of a filver penny) seems as shapeless and uncouth as if wrote in Runic characters. But the speeks of moths, beetles, flies, and other infects, are most accurately circular; and all the lines and marks about them are drawn to the utmost possibility of exactness.

Our finest miniature paintings appear before a microscope, as mere daubings, plaister. on with a trowel. Our smoothest \* colibbings are thown to be mere roughness, full of our and flavor. Thus do the works of artinua, upon an accurate examination. On the conduity, the e arer we examine the worl's of nature, even in the lead and mean it of her productions, the more we are convinced, nothing is to be found there but beauty and perfection. View the numberles species of infects, what exactnets and symmetry shall we find in all their organs! What a profusion of colouring, whire, green, vermilion; what fringe and embiodery on every part! How high the fine his g, how inimitable the polish we every where behold! Yea, view the animalcule, inv fible to the naked eye, those breathing atoms fo finall, they are almost all workmanthip: in them too we discover the fame multiplicity of parts, diversity of figures, and variety of motions, as in the largest annuals. How amazingly curiou must the internal structure of these creatures be! how minute the bones, joints, muscles, and tendons! how exquifitely delicate the veins, arteries, nerves! what multitudes of veilels and circulations must be contained in this narrow compass! and yet all have sufficient room for their feveral offices, without interfering with each other!

The fame regularity and beauty is found in vegetables. Every sta'k, bud, slower, and feed, displays a figure, a proportion,

portion, an harmony, beyond the reach of art. There is not a weed whole every leaf doe, not shew a multiplicity of pores and veilels curioufly disposed for the conveyance of juices, to support and nourith it, and which is not adorned with innumerable

graces to embellish it.

But some may ask, to what purpose has nature bellowed fo much expence on fo infignificant creatures? I answer, this very thing proves they are not fo infignifrant, as we fondly suppose. This beauty is given them either for their own take, that they themselves may be delighted with it, or for ours, that we may objetive in them the amazing power and goodness of the Cicator. If the former, they are of consequence in the account of their Maker, and therefore deferve our regard. It the latter, then it is cortainly our duty to take notice of, and admire them.

In thort, the whole universe is a picture, in which are difflired the periodions of the Deity. It fliews not only his existence, but his unity, his power, his wildom, his independence, his goodnets. His urity appears in the harmony we cannot but from all the parts of roure; in that one tample end to vision they are directed, and the conformity of all the me as thereto. On every fide we diftern either timple elements or compound bodies, which have all different actions and offices. What the file inflames, the water quenches: what one wind freezes, another thaws. these and a thousand other operations, so termingly repugnant to each other, do nevertheless all concur, in a wonderful runner, to produce one effect. And all are to necessary to the main defigu, that were the agency of any one dellroyed, an interruption of the order and harmony of the creation must immed stely enfue.

Suppose, for initance, the wind to be taken away, and all fociety is in the utmost disorder. Navigation is a stand, and all our commerce with foreign nations deflroyed. On the other hand the vapours raited from the fea would remain suspended, just where they rose. tequently we should be deprived of that ufeful covering the clouds, which now screens us from the scorening heat. yea, and of the fruitful rains. So our land would be parched up, the fruits of the earth wither, animals die, through hunger and thirst, and all nature languish and droop. All the parts of nature therefore were constituted for the affishance of each other, and all undeniably prove the unity of their Omniscient Creator.

His power appears in the whole frame of cication, and his wisdom in every part of it. His independence is pointed out in the inexhaustible variety of beasts, birds, fifthes and infects: and his goodness, in taking care of every one of thefe, opening bis band, and filling all things living with plenteorgies.

Every thing is calculated by Divine Wildom, to make us wifer and better. And this is the fubiliance of true philosophy. We cannot know much. In vain does our fhallow reason attempt to fathom the mysteries of nature, and to pry into the secrets of the Almighty. His ways are path finding out. The eye of a little worm is a fullect capable of exhauting all our boafted speculations. But we may love much. And herein we may be affilled by contempliting the wonders of his creation. Indeed he feems to have laid the highest claim to this tribute of our love. b. the care he has taken to manifest his goo lacts in the most conspicuous manner, while at the fame time he has concealed from us the most curious particulars, with regard to the effences and flucture of his works. And to this our ignorance it is owing, that we fancy to many things to be utel is in the creation. But a deep fente. of his goodness will fatisfy all our doubts, and rejoive all our feruples.

# § 7. Confider it ins on the nature of Man.

Near 6000 years are elapfed fince the creation. At first tiere were only two When the flood came Luman beings. upon the earth, which was 1656 years from the beginning of time, thefe two had increated, according to a moderate computation, to the number of 10,737,418,240 perions. From Noah and his family are forung the prefent race of men, and are generally supposed to be only about 358,000,000 perfons.

If we proceed from the number to the nature of reafonable beings, we shall find much of the wisdom and goodness of God displayed in the flructure of the human body, as well as in the all-directing mind.

Let us begin with the less adorned, but more folid parts, those which support, and which contain the reft. First, you have a fystem fystem of bones, cast in a variety of moulds, in a variety of fizes: all strong, that they may bear up the machine, yet light, that they may not weigh us down: bored with, an inward cavity to contain the moiftening marrow, and perforated with fine ducts, to admit the nourifhing veffels. Infenfible themselves, they are covered with a membrane, exquifitely fenfible, which warns them of, and fecures them from the annoyance of any hurtful friction; and also preferves the mufcles from being fretted in their action, by the hard and rough tubflance of the bone. They are laigest at the extremities, that they may be joined more firmly, and not fo eafily diflocated. The manner of their articulation is truly admirable, and remarkably various: yet never varied without demonstrating seme" wife defign, and answering some valuable end. Frequently when two me united, the one is nicely rounded and capped with a fmooth fubflance; the other is scooped into an hollow of the fame dimensions to receive it. And both are lubricated with an unctuous fluid, to facilitate the rotation.

The feet compose the firmest pedestal, infinitely beyond all that flatuary can accomplish; capable of altering its form, and extending its fize, as different circumflances require. They likewife contain a fet of the nicest springs, which help to place the body in a variety of attitudes, and qualify it for a multiplicity of motions. The undermost part of the heel, and the extremity of the fole, are shod with a tough infentible fubitance: a kind of natural fandal, which never wears out, never wants repair: and which prevents an undue compression of the vessels by the weight of the body. The legs and thighs are like flately columns, fo articulated that they are commodieus for walking, and yet do not obftruct the easy pollure of fitting. The legs swell out towards the top with a genteel projection, and are neatly wrought off towards the bottom: a variation which lessens their bulk, while it increases their beauty.

The ribs, turned into a regular arch, are gently moveable, for the act of respiration. They form a safe lodgement for the lungs and heart, some of the most important organs of life. The back bone is designed, not only to strengthen the body, and sustain its most capacious store-rooms, but also to bring down the continuation of the brain, usually termed the spinal mar-

row. It both conveys and guards this fiver cord, as Solomon terms it, and by commodious outlets transmits it to all parts. Had it been only strait and hollow, it might have served these purposes. But then the loins must have been inflexible: to avoid which, it consists of year there bones, knit together by cartilate. This peculiarity of structure gives it its pliancy of an ofter, with the firmness of an oak. By this means it is capable of various inflections, without bruising the fost marrow, or diminishing that strength which is receitary to support all the upper steries. Such a formation in any other of the folids, must have occasioned great inconvenience. Here it is unspecukably useful, a masterpiece of creating skill.

The arms we exactly proportioned to each other, to preferve the equilibrium of the fleacture. Thefe being the guardthat defend, and the ministers that ferve the whole body, are fitted for the most diversitied and extensive operations: firm with bon , yet not weig ity with flesh, ands capable of performing all ufeful motions. They hend inwards and turn outwards: the emove upwards or downwards. They wheel about in whatever direction we pleafe. To thefe are added the hands, terminated by the fingers, not of the fame length, nor of equal bigness, but in both respects different, which gives the more beauty, and far greater usefulnets. Were they all flesh, they would be weak: were they one entire bone, they would be utterly inflexible: but confifting of various little bones and mufcles, what shape can they not assume? Being placed at the end of the arm, the sphere of their action is exceedingly enlarged. Their extremities are an aftemblage of fine tendinous fibres, acutely fenfible: which notwithstanding are dettined to almost incessant employ, and frequently among rugged objects. For this reason they are overlaid with nails, which preferve them from any painful impressions.

In the hand we have a case of the finest instruments. To those we owe those beautiful statues, this melodious trumpet. By the strength of the hand the tallest firs fall, and the largest oaks descend from the mountains. Fashioned by the hand they are a floating warehouse, and carry the productions of art and nature from Britain to Japan.

The hand is the original and universal feeptre, which not only represents, but aftertains

afcertains our dominion over all the elements and over every creature. Though we have not the strength of the horse, the suffices of the greynound, or the quick scent of the spaniel, yet directed by the understanding, and shabled by the hood, we can as it were make them all our own. These short hands have sound a way to pen trate the boxels of the ends, to touch the betom of the sea. These soils, to touch the betom of the sea. These soils hands converge the wing of the wind, can themselves with the violence of sine, and possible when the surface the forcible respensions to their survice the forcible respensions that the violence of sine, and possible the survice the surface of this desinguishing, this invaluable nearby!

Nove all is the head, for the refidence of to brain, ample to receive, and film to defind it. It has a communication with a line remotell part; has outlets for eaching counters to all quarters, and a little circuit, and afterwards return to the medical occurrent by diverting to this new channel, the little circuit, and afterwards return to the medical occurrent by diverting to this new channel, the whitem to policeating little circuit, and afterwards return to the main road. So that if any thing block up or fluitent the direct passings, the current by diverting to this new channel, the whitem to policeating little circuit, and afterwards return to the main road. So that if any thing block up or fluitent the direct passings, the current by diverting to this new channel, there is no expedient takes and including into a new track, they place. The arteries inofeculate with each other: breaking into a new track, they other: breaking into a new track, they fetch a little circuit, and afterwards return into the main road. So that if any thing block up or fluitent the direct passings, the current by diverting to this new channel, they are the subject of the main road. So that if any thing block up or fluitent the direct passings, the current by diverting to this new channel, they are the place.

The referenced from help, defeated from cold, and at the name time beautiful to the hair: a deposition to delicate, so are can map 1, to perfectly high, as to you to creating the weater.

Vent other annualities prone in their of set, the article of in our resect, which is in the reset of the our resect, which is in the reset of proceed, in I beforeke because, It is like with friest, but expected to dangers, and better contrived to repel or well them. Does it not also remind it of our noble original, and our fublimetad? Our original, which was the heath of the Almighty: our end, which was the temperator in im in glory?

This much for the rafters and beams of the bodie. Let us now furly by the lodging, within. Here are ligaments, a tough and long arraigement of fibres, to unite the could be an unwisidy joinble, a well-commeted and felf-manageable fuftem: membras, thin and flexile tunicles, to inwrap as flish, parts, to connect fome, and form for tion between others: arteries, the sees of our little world, that friking our as any go, into numberless finall canals, whit very street, yea, every apartment in the

vital city. These being wide at first, and growing narrower and narrower, check the rapidity of the blood. This thrown from the heart, dilates the arteries, and their oun latic force contracts them: by which means they vibrate against the Enger, and much and both in the discovery and cure of difert. . The larger arteries, whereever the blood is forced to bend, are fituate on the binding fide; left being flietched to an inveroper length, the circulation foodle to retirded. They are not, like for call of the value, nou the furface, but placed at a proper depth. And hereby they are more fecure from external injuries. In those pute which are most liable to prohese, an admirable expedient takes place. The arteries inofculate with each other: breaking into a new track, they fetc's a little circuit, and afterwards return it to the main road. So that if any thing block up or fliaiten the direct paffage, the cludes the impediment, flows on, and foon

regains its monted course.
The veins receive the blood from the artories, and re-convey it to the heart. The pretiure of the blood is not near to forcible in these as in the arteries. Therefore their to the is confiderably flighter. Such an e cal weonomial is nature, amidst all her live abity! In many of these canals, the current, though widening continually, is oblired to puth its way against the perpendizulu: hereby it is exposed to the danger of falling back and overloading the veffels. To prevent this, talves are interpoled at proper delines, which are no hindrance to the regular passage, but provent the reflux, and facilitate the pallage of the blood to the grand receptacle. But thefe valves are only where the blood is confirained to climb: where the afcent coafes, they ceafe alfo.

Here are glands to filtrate the paffing fluids, each of which is an affemblage of veffels, complicated with feeming confusion, but with perfect regularity. Each forms a fecretion far more curious than the most admitted operations of chymntry. Mufele, composed of the finest fibres, yet endued with incredible strength, fashioned after a variety of patterns, but all in the highest taste for elegance and conveniency. Tacke are the instruments of motion, and at the command of the will, execute their functions quick as lightning; nerves, surprisingly minute, which fet the muscles at

work, diffuse the power of sensation through the body, and upon any impression from without, give all needful intelligence to the soul: Vesicles, distended with an unchuous matter, in some places compose a soft cushion; as in the calf of the leg, whose large muscles, mixt with fat, are of singular service to those important bones. This stanks and fortifies them, like a strong bastion, supports and cherishes them, like a soft pillow. In other places they fill up the vacuities, and smooth the inequalities of the flesh. Inwardly they supply the machine for motion; outwardly they render it smooth and graceful.

The skin, like a curious surtout, covers the whole, formed of the most delicate network, whose meshes are minute, and whose threads are multiplied, even to a prodigy: the meshes are so minute, that nothing passes them, which is discernible by the eye; though they discharge every moment myriads and myriads of superstuous incumbrances. The threads are so multiplied, that neither the point of the smallest needle, nor the infinitely siner lance of a gnat, can pierce any part without drawing blood, and causing an uneasy sensation. Consequently, without wounding by so small a puncture, both a nerve and a vein!

But a course of incessant action must exhaust the solids and waste the sluids, and unless both are properly recruited, in a short time destroy the machine. For this reason it is surnished with the organs, and endued with the powers of nutrition: teeth, the foremost, thin and sharp, to bite asunder the food; the hindermost, broad and strong, indented with small cavities, the better to grind in pieces what is trainmitted to them. But in children the formation of teeth is postponed till they have occasion for them.

Were the teeth, like other bones, covered with the perioficum, chewing would give much pain. Were they quite naked, they would foon decay and periffication and against both, they are overlaid with a neat enamel, harder than the bone itself, which gives no pain in chewing, and yet fecures them from various injuries.

The lips prevent the food from slipping out of the mouth, and, assisted by the tongue, return it to the grinders. While they do this in concert with the cheeks, they squeeze a thin liquor from the adjacent glands. This mouthers the food and prepares it for digestion. When the mouth

is inactive these are nearly closed: but when we speak or eat, their mossture being then necessary, is express as need requires,

But the food could not descend merely by its own weight, through a narrow and clammy passage into the stomach. 'I herefore to effect this, muscles both strait and circular are provided. The former inlarge the cavity, and give an easy admittance. The latter, closing behind the descending aliment, press it downward. But befere the food enters the gullet, it must of necessity pass over the orifice of the windpipe: whence it is in danger of falling upon the lungs, which might occasion instant death. To obviate this, a moveable lid is placed, which when the fmallest particle advances, is pulled down and thut close, but as foon as it is swallowed, is let loofe and stands open. Thus the important pals is always made fure against any novious approaches; yet always left free for the air, and open for respiration.

The food descending into the stomach, is not yet ready for the bowels. Therefore that great receiver is strong to beat, and proper to detain it, till it is wrought into the smoothest pulp imaginable. From hence it is discharged by a gentle fosce, and passes gradually into the intestines.

Near the entrance waits the gall-bladder, ready to pour its falutary juice upon the aliment, which diffolves any thing vifeid, feours the intellines, and keeps all the fine apertures clear. This bag, as the flomath fills, is preft thereby, and than only difcharges its contents. It is aim furnished with a valve of a very peculiar, namely, of a fpiral form: through which the deterfive liquid cannot halftly pour, but must gently ooze. Admirable confuction! which, without any care of our, gives the needful supply, and no more

The nutriment then pursues its was through the mazes of the intestines: which by a wormlike motion protrade it and force its small particles into the lackal vessels. These are a series of the fact strainers, ranged in countless multitudes all along the sides of the winding passage. Had this been strait or short, the food could ret have resigned a sufficient quantity of in nourishing particles. Therefore it is arrefully convolved and greatly extended, that whatever passes may be sisted thoroughly. As the aliment proceeds, it is more and more drained of its nutricious juices. It consequence of this, it would become had

and pain the tender parts, but that glands are posted in proper places, to discharge a submeated shuid. These are smaller or lubricated fluid. tever near the flomach, because there the aliment is moift enough: whereas in the bowels remote from the flornach, they are either multiplied or enlarged.

The chyle drawn off by the lacteals is carried through millions of ducts, too fine even for the microscope to discover. To this it is owing that nothing enters the blood, but what is capable of passing through the finest vessels. It is then lodged in feveral commodious cells (the glands of the melentery) and there mixt with a thin clisting lymph, which makes it more apt to flow. Hence it is conveyed to the common receptacle, and mounts through a perp adicular tube into the last fubelavian v.in. This tube lies contiguous to the great artery, whole throng pullation drives on the fluid, and enables it to ascend and to load its treasure, at the very door of the

But the chyle is as yet in too ciude a state, to be fit for the animal functions. There-tor it is thrown into the lungs. In the bangy cells of this amazing laboratory, it mes with the external air, and its whole tab lance is made more fmooth and uniform. I've improved it enters the left ventricle of the heart, a strong, active, indefatigable cuscle. The large-muscles of the aim or of the thigh are foon wearied: a day's labour, or a day's journey, exhaults their firength. But the heart toils whole weeks, whole months, nay years, unwearied: is equally a thranger to intermission and itigue. Impelled by this, part of the blood shoots upward to the head; part rolls through the whole body.

But how shall a stream divided into myriads of channels, be brought back to its fou ce? Should any portion of it be unable to return, putrefaction, if not death, must ensue. Therefore the all-wise Creafor has connected the extremities of the arteries, with the beginning of the veins: fo that the same force which darts the blood through the former, helps to drive it through the latter. Thus it is re-conducted to the great ciftern, and there played off

Where two opposite currents would be in danger of clashing, where the streams from the venz cava and venz ascendens coincide, a fibrous excrescence interposes, which like a projecting pier, breaks the

throke of each, and throws both into their proper receptacle. Where the motion is to be speedy, the channels either forbear to wind (as in the great artery, which defcends to the feet) or lessen in their dimenfions, as in every interval between all the ramifications. When the progress is to be retarded, the tubes are variously convolved or their diameter contracted. Thus guarded, the living flood never discontinues its course, but night and day, whether we fleep or wake, ftill perfeveres to run brifkly through the arteries, and return foftly through the veins.

But farther. The great Creator has male us an invaluable present of the senses, to be the inlets of innumerable pleasures, and the means of the most valuable advan-

The eye, in its elevated station, commands the most enlarged prospects. Confifting only of fluids inclosed within coats, it fliews us all the graces and glories of nature. How wonderful, that an image of the hugest mountains, and the widest landscapes should enter the small pupil ! that the rays of light should paint on the . optic nerve, paint in an inflant of time, paint in their truest colours and exactest It eaments, every species of external objects!

The eye is fo tender, that the flighteft touch might injure its delicate frame. It is guarded therefore with a peculiar care, increnched deep and barricaded round with bones. As the smallest fly might incommede its polithed furface, it is farther protected by two substantial curtains. In sleep, when there is no occasion for the fense, but a necessity to guard the organ, these curtains close of their own accord. At any time they fly together as quick as thought. They are lined with an extremely line fponge, moist with its own dew. brittly palifades keep out the least mote. and moderate the too strong impressions of the light.

As in our waking hours we have almost incessant need for these little oabs, they run upon the finest castors, rolling every way with the utmost ease: which circumstance, added to the slexibility of the neck, renders our two eyes as useful as a thousand.

The ear consists of an outward porch and inner rooms. The porch, fomewhat prominent from the head, is of a cartilaginous substance, covered with tight membranes, and wrought into finuous cavities.

Z 2

These,

Thefe,

Thefe, like circling hills, collect the wandering undulations of the air, and transmit them with a vigorous impulse, to the finely stretched membrane of the drum. This is expanded upon a circle of boncs, over a polished reverberating cavity. It is furnished with braces that stain or relax, as the sound is faint or strong. The hammer and the anvil, the winding labyrinth, and the founding galleries, these and other pieces of mechanism, all instrumental to hearing, are inexpressibly curious.

Amazingly exact must be the tension of the auditory nerves, fince they answer the similar tremors of the atmosphere, and distinguish their most suited by an almighty hand, and spread through the echoing isles, receive all the impressions of sound, and propagate them to the brain. These give existence to the charms of music, and the still nobler charms of discourse.

The eye is useless amidst the gloom of night. But the ear hears through the darkest medium. The eye is on duty only in our waking hours: but the ear is

always accessible.

As there are concussions of the air. which are discernible only by the instruments of hearing, fo there are odoriferous particles wafted in the air, which are perceivable only by the fmell. The noftrils are wide at the bottom, that more effluvia may enter, narrow at the top, that, when entered, they may act more strongly. The fleams that exhale from fragrant bodies, are fine beyond imagination. Microscopes that shew thousands of animals in a drop of water, cannot bring one of these to our fight. Yet so judiciously are the olfactory nets fet, that they catch the vanishing fugitives. They imbibe a'l the roaming perfumes of ipring, and make us banquet even on the invisible dainties of nature.

Another capacity for pleasure our bountiful Creator has bestowed, by granting us the powers of taste. This is circumstanced in a manner so benign and wise, as to be a standing plea for temperance, which sets the finest edge on the taste, and adds the most poignant relish to

its enjoyments.

And these senses are not only so many sources of delight, but a joint security to our health. They are the inspectors that examine our food, and enquire into the properties of it. For the discharge of this office they are excellently qualified; and

most commodiously situated. So that nothing can gain admission, till it has past their scrutiny.

To all these, as a most necessary supplement, is added the sense of Feeling. And how happily is it tempered between the two extremes, neither too acute, nor too obtuse! Indeed all the sense are exactly adapted to the exigencies of our present state. Were they strained much higher, they would be avenues of anguish, were they much relaxt, they would be well-

nigh useless.

The crowning gift which augments the benefits accoung from all the fenses, is speech. Speech makes me a gainer by the eyes and ears of others; by their ideas and observations. And what an admirable inflrument for articulating the voice, and modifying it into speech, is the tongue? This little collection of muscular fibres, under the direction of the Creator, is the artificer of our words. By this we communicate the fecrets of our breafts, and make our very thoughts audible. This likewise is the efficient cause of music; it is foft as the lute, or thrill as the trumpet. As the tongue requires an easy play, it is lodged in an ample cavity. It moves under a concave roof, which gives additional vigour to the voice, as the shell of a violin to the found of the strings.

Wonderfully wife is the regulation of voluntary and involuntary motions. The will in fome cafes has no power: in others the is an abfolute fovereign. If the command, the arm is firetched, the hand clofed. How eafily, how punctually are her orders obeyed!—To turn the ferew, or work the lever, is laborious and wearifome. But we work the vertebræ of the neck, with all their appendant chambers: we advance the leg with the whole incumbent body; we rife, we fpring from the ground, and though fo great a weight is raifed, we meet with

no difficulty or fatigue.

That all this should be effected without any toil, by a bare act of the will, is very surprising. But that it should be done, even while we are entirely ignorant of the manner in which it is performed, is most associately. Who can play a single tune upon the spinet, without learning the differences of the keys? Yet the mind touches every spring of the human machine, with the most masterly skill, though she knows nothing at all of the nature of her instrument, or the process of her operations.

The

The eye of a rustic, who has no notion of optice, or any of its laws, shall lengthen and shorten its axis, dilate and contract its pupil, without the least hesitation, and with the utmost propriety: exactly adapting itself to the particular distance of objects, and the different degrees of light. By this means it performs some of the most curious experiments in the Newtonian philosophy, without the least knowledge of the science, or consciousness of its own dexterity!

Which shall we admire most, the multitude of organs; their fiaithed form and faultless order; or the power which the soul exercises over them? Ten thousand teins are put into her hands: and she manages all, conducts all, without the least perplexity or irregularity. Ruther with a promptitude, a considency and speed, that

nothing can equal!

So fearfully and wonderfully are we made! Made of fuch complicated parts, each fo nicely fathioned, and all fo exactly arranged; every one executing fuch curious functions, and many of them operating in so mysterious a manner! And since health depends on fuch a numerous affemblage of moving organs; fince a fingle fecretion stopped may spoil the temperature of the fluid, a fungle wheel clogged may put an end to the folids: with what holy fear should we pass the time of our sojourning here below! Trusting for continual preservation, not merely to our own care, but to the Almighty Hand, which formed the admirable machine, directs its agency, and supports its being!

This is an ingenious description of the casket, it is fit we should attend to the jewel it contains. If the House is so curiously and wonderfully made by the all-wise Architect, what may we not expect

the Inhabitants to be?

Know'ft thou th' importance of a foul immortal?

Behold the midnight glory: worlds on worlds!

Amazing pomp! redouble this amaze;

Ten thoutand add, and twice ten thoufand more;

Then weigh the whole; one foul outweighs them

And calls th' aftonishing magnificence
If unintelligent creation peor.

Young.

The reasoning of Mr. Addison on this abject is very flattering to human naure, and deserves the serious consideration of every intelligent Being. The

perpetual progress of the foul, says that elegant writer, to its perfection, without a pollibility of ever arriving at it, feems to me to carry a great weight with it for the immortality thereof. How can it enter into the thoughts of man, that the foul, which is capable of fuch immense perfections, and of receiving new improvements to all eternity, shall fall away into nothing almost as foon as it is created? Are fuch abilities made for no purpose? A brute arrives at a point of perfection that he can never pals: in a few years he has all the endowments he is capable of; and were he to live ten thousand more, would be the same thing he is at present. Were a human foul thus at a stand in her accomplish. ments, were her faculties to be full blown. and incapable of farther enlargements, I could imagine it might fall away infenfibly. and drop at once into a state of annihilation. But can we believe a thinking being, that is in a perpetual progress of improvement, and travelling on from perfection to perfection, after having just looked abroad into the works of its Creator, and made a few discoveries of his infinite goodness, wisdom, and power, must perish at her first fetting out, and in the very beginning of her enquiries?

A man, confidered in his present state, seems only sent into the world to propagate his kind. He provides himself with a successor, and immediately quits his post to make room for him.

Here:,
Heredem alterius, velut unda fupervenit undam.
Horacea. Ep. a.
Heif crowds heir, as in a rolling flood.
Wave urges wave.
Crescus.

He does not feem born to enjoy life, but to deliver it down to others. This is not furprifing to confider in animals, which are formed for our use, and can finish their business in a short life. The filk-worm. after having spun her task, lays her eggs and dies. But a man can never have taken in his full measure of knowledge, has not time to subdue his passions, establish his foul in virtue, and come up to the perfection of his nature, before he is hurried Would an infinitely wife off the stage. Being make such glorious creatures for io mean a purpose? Can he delight in the production of fuch abortive intelligences.

fuch short-lived reasonable beings? Would he give us talents that are not to be exerted? Capacities that are nover to be gratised? How can we find that wisdom, which shines through all his works, in the formation of man, without looking on this world as only a nursery for the next, and believing that the several generations of rational creatures, which rise up and disappear in such quick successions, are only to receive their first rudiments of existence here, and asterwards to be transplanted into a more friendly climate, where they may spread and slourish to all eternity.

There is not, in my opinion, a more pleasing and triumphant consideration in religion than this of the perpetual progress which the foul makes towards the perfection of its nature, without ever arriving at a period in it. To look upon the feul as going on from fliength to flrength, to consider that she is to shine for ever with new accessions of glory, and brighten to all eternity: that the will fill be adding virtue to virtue, and knowledge to knowledge; carries in it fomething wonderfully agreeable to that ambition that is natural to the mind of man. Nay, it must be a prospect pleasing to God himself, to see his creation for ever beautifying in his eyes, and drawing nearer to him, by greater degrees of refemblance.

Methinks, this fingle confideration, of the progress of a finite spirit to perfection, will be fufficient to extinguish all envy in inferior nature, and all contempt in superior. That cherubin, which now appears as a god to a human foul, knows very well, that a period will come about in eternity, when the human foul shall be as perfect as he himself now is: nay, when she shall look down upon that degree of perfection, as much as the now falls thort of it. It is true, the higher nature still advances, and by that means preferves his distance and superiority in the scale of being; but he knows, how high foever the station is of which he tlands possessed at present, the inferior nature will at length mount up to it, and thine forth in the fame degree of

With what aftonishment and veneration may we look into our own fouls, where there are such hidden stores of virtue and knowledge, such inexhausted fources of perfection? We know not yet what we hall be nor will it ever enter into the heart of man to conceive the glory that will be always in reserve for him. The soul, considered

with its Creator, is like one of those mathematical lines that may draw nearer to another for all eternity without a possibility of touching it: and can there be a thought fo transporting, as to consider ourselves in their perpetual approaches to him, who is not only the standard of persection but of happiness!

#### § 8. Confiderations on the Chain of Being supposed to be in Nature.

The chain of being, which fome worthy persons have supposed to exist in nature, is a very pleasing idea, and has been ably handled by the late Soame Jenyns, Efg. in his Disquisition upon that subject. farther we enquire, fays that able writer, into the works of our great Creator, the more evilent marks we shall discover of his infinite wifdom and power, and perhaps in none more remarkable, than in that wonderful chain of beings, with which this terrestrial globe is furnished; rising above each other, from the fenfelels clod, to the brightest genius of human kind, in which though the chain itself is sufficiently visible, the links, which compose it, are so minute, and so finely wrought, that they are quite imperceptible to our eyes. The various qualities, with which thefe various beings are endued, we perceive without difficulty, but the boundaries of those qualities, which form this chain of subordination, are to mixed, that where one ends, and the next begins, we are unable to discover. The manner by which this is performed, is a fubject well worthy of our confideration, and on an accurate examination appears to be this.

In order to diffuse all possible happines, God has been pleased to fill this earth with innumerable orders of beings, superior to each other in proportion to the qualities and faculties which he has thought proper to bestow upon them: to mere matter he has given extension, solidity, and gravity; to plants, vegetation; to animals, life and instinct; and to man, reason; each of which superior qualities augments the excellence and dignity of the possessor, and places him higher in the scale of unive fal existence. In all these, it is remarkable, that he has not formed this necessary, and beautiful fubordination, by placing beings of quite different natures above each other, but by granting fome additional quality to each fugerior order, in conjunction with all the possessed by their inferiors; so that, that they rise above each other in excellence, by means of these additional qualities, one mode of existence is common to them all, without which' they never could have coalefeed in one uniform and regular fyttem.

Thus, for instance, in plants we find all the outlities of mere matter, the only order below them, folidity, extension, and gravity, with the addition of vegetation; in animals, all the properties of matter, together with the vegetation of plants, to which is added, life and inffinct; and in man we find all the properties of matter, the vegetuion of plants, the life and inflinet of animals, to all which is superadded, reason.

That man is endued with these properties of all inferior orders, will plainly appea by a flight examination of his composition; his body is material, and has all the properties of mere matter, folidity, extension, and gravity; it is also veiled with the quality of plants, that is, a power of vegetation, which it incessintly exercises without any knowledge or confent of his: it is fown, grows up, expands, comes to maturity, withers and dies, like all other vegetables: he possesses likewise the qualities of lower animals, and shares their fate; like them, he is called into life without his knowledge or confent; like them, he is compelled by irrefittible inflincts, to answer the purpoles for which he was defigned; like them, he performs his deflined course, partakes of its bleffings, and ea ares its fufferings for a thort time, then dies, and is feen no more: in him infliaft is not less powerful, than in them, tho' lefs visible, by being confounded with reason, which it sometimes concurs with, and fometimes counteracts; by this, with the concurrence of reason, he is taught the belief of a God, of a future state, and the difference between moral good and evil; to purfue happinels, to avoid danger, and to take care of himfelf, and his offfiring; by this too he is frequently impel ed, in contradiction to reason, to re-linquish case, and safety, to traverse inhospitable deserts and tempestuous seas, to intuct, and fuffer all the miferles of war, and, like the herring, and the mackarel, to halten to his own destruction, for the public benefit, which he neither under-flands, or cares for, Thus is this wonder-ful chain extended from the lowest to the highest order of terrestrial beings, by links so nicely fitted, that the beginning and end of each is invisible to the most inquisitive eye, and yet they all together compose one

vast and beautiful system of subordination. The manner by which the confummate wildom of the divine artificer has formed this gradation, so extensive in the whole, and so imperceptible in the parts, is this t -He constantly unites the highest degree of the qualities of each inferior order to the lowest degree of the same qualities, belonging to the order next above it; by which means, like the colours of a skilful painter, they are so blended together, and shaded off into each other, that no line of didinction is any where to be feen. Thus, for inflance, folidity, extension, and gravity, the qualities of mere matter, being united with the lowest degree of vegetation, compose a flone; from whence this vegetative power afcending thio' an infinite variety of herbs, flowers, plants, and trees, to its greatest perfection in the sensitive plant, joins there the lowest degree of animal life in the shell-fish, which adheres to the rock ; and it is difficult to diffinguish which possesses the greatest share, as the one thews it only by thrinking from the finger, and the other by opening to receive the water, which furrounds it. In the fame manner this animal life rifes from this low beginning in the shell-fish, thro' innumerable species of insects, fishes, birds, and beafts, to the confines of reason, where, in the dog, the monkey, and the chimpanze, it unites so closely with the lowest degree of that quality in man, that they cannot easily be distinguished from each other. From this lowest degree in the brutal Hottentot, reason, with the affishance of learning and science, advances, thro' the various stages of human understanding,

or a Newton, it attains the submit. Here we must stop, being unable to purfue the progress of this altonithing chain beyond the limits of this terrethial globe with the naked eye; but thro' the peripolitive of analogy and conjecture, we may perceive, that it ascends a great deal higher, to the inhabitants of other planets, to angels, and archangels, the lower orders of whom may be united by a like easy transition with the highest of our own, in whom, to reason may be added intuitive knowledge, infight into futurity, with innumerable other faculties, of which we are unable to form the least idea; through whom it may ascend, by gradations alonest infinite, to those most exalted of created beings, who are feated on the foothool of the celestial throne.

which rife above each other, till in a Bacon,

Of the Scriptures, as the Rule of Life.

As you advance in years and understanding, I hope you will be able to examine for vourself the evidences of the Christian religion; and that you will be convinced, on rational grounds, of its divine authority. At present, such enquiries would demand more fludy, and greater powers of reasoning, than your age admits of. It is your part, therefore, till you are capable of understanding the proofs, to believe your parents and teachers, that the holy Scriptures are writings inspired by God, containing a true history of facts, in which we are deeply concerned—a true recital of the laws given by God to Moses, and of the precepts of our bleffed Lord and Saviour, delivered from his own mouth to his disciples, and repeated and enlarged upon in the edifying epiftles of his apoftles-who were men chosen from amongst those who had the advantage of conversing with our Lord, to bear witness of his miracles and returnection—and who, after his afcention, were affifted and inspired by the Holy. Ghost. This facred volume mult be the rule of your life. In it you will find all truths neceffary to be believed; and plain and cafy directions for the practice of every duty. Your Bible, then, must be your chief study and delight: but, as it contains many variouskinds of writing-fome parts obteure and difficult of interpretation, others plain and intelligible to the meanest capacity-I would chiefly recommend to your fre-quent peruial fuch parts of the facred writings as are most adapted to your understanding, and most necessary for your instruction. Our Saviour's precepts were fpoken to the common people amongst the Jews; and were therefore given in a manner easy to be understood, and equally striking and instructive to the learned and nnlearned: for the most ignorant may comprehend them, whilst the wifest mult be charmed and awed by the beautiful and majestic simplicity with which they are expressed. Of the same kind are the Ten Commandments, delivered by God to Mofes; which, as they were defigned for univerfal laws, are worded in the most concise and simple manner, yet with a majesty which commands our utmost reverence.

I think you will receive great pleasure. as well as improvement, from the historical books of the Old Testament-provided you

and keep the thread of it in your mind as you go on. I know of none, true or fictitious, that is equally wonderful, interesting. and affecting; or that is told in fo short and fimple a manner as this, which is, of all histories, the most authentic.

I shall give you some brief directions, concerning the method and course I with you to purfue, in reading the Holy Scriptures. May you be enabled to make the best ase of this wost precious gift of God -this facted treasure of knowledge !-May you read the Bible, not as a talk, nor as the dull employment of that day only, in which you are forbidden more lively entertainments-but with a fincere and ardent defire of instruction: with that love and delight in God's word, which the holy Pfalmilt fo pathetically felt and described, and which is the natural confequence of loving God and virtue! Though I fpeak this of the Bible in general, I would not be underflood to mean, that every part of the volume is equally interesting. I have already faid that it confilts of various matter, and various kinds of books, which must be read with different views and fentiments. The having fome general notion of what you are to expect from each book, may possibly help you to understand them, and will heighten your relish of them. I shall treat you as if you were perfectly new to the whole; for to I with you to confider yourfelf; because the time and manne, in which children usually read the Bible, are very ill calculated to make them really acquainted with it; and too many people, who have read it thus, without understanding it, in their youth, fatisfy themselves that they know enough of it, and never afterwards fludy it with attention, when they come to a maturer age.

If the feelings of your heart, whilst you read, correspond with those of mine, whilst I write, I shall not be without the advantage of your partial affection, to give weight to my advice; for, believe me, my heart and eyes overflow with tenderness, when I tell you how warm and earnest my prayers are for your happiness here and hereafter. Mrs. Chapone.

# § 222. Of Genefis.

I now proceed to give you fome fhort sketches of the matter contained in the different books of the Bible, and of the course in which they ought to be read.

The first book, Genesis, contains the read them as an history, in a regular course, most grand, and, to us, the most interesting

events,

events, that ever happened in the universe: -The creation of the world, and of man: .The deplorable fall of man, from his first state of excellence and bliss, to the distressed condition in which we see all his descendants continue: - The sentence of death pronounced on Adam, and on all his race-with the reviving promise of that deliverance which has fince been wrought for us by our bleffed Saviour :- The account of the early state of the world:-Of the universal deluge :- The division of mankind into different nations and languages:- The story of Abraham, the founder of the Jewish people; whose unshaken faith and obedience, under the severest trial human nature could fustain, obtained such favour in the fight of God. that he vouchfafed to style him his friend, and promised to make of his posterity a great nation, and that in his feed—that is, in one of his descendants—all the kingdoms of the earth thould be bleffed. This, you will eafily see, refers to the Mesfiah, who was to be the bleffing and deliverance of all nations. - It is amazing that the Jews, possessing this prophecy, among many others, should have been so blinded by prejudice, as to have expected, from this great personage, only a temporal deliverance of their own nation from the fubjection to which they were reduced under the Romans: It is equally amazing, that some Christians should, even now, confine the bleffed effects of his appearance upon earth, to this or that particular fect or profession, when he is so clearly and emphatically described as the Saviour of the whole world - The flory of Abiaham's proceeding to facrifice his only fon, at the command of God, is affecting in the highest degree; and sets forth a pattern of unlimited refignation, that every one ought to imitate, in those trials of obedience under temptation, or of acquiescence under afflicting dispensations, which fall to their lot. Of this we may be affured, that our triais will be always proportioned to the powers afforded us; if we have not Abraham's strength of mind, neither shall we be called upon to lift the bloody knife against the bosom of an only child; but if the almighty arm should be lifted up against him, we must be ready to resign him, and all we hold dear, to the divine will-This action of Abraham has been cenfured by fome, who do not attend to the diffinction between obedience to a special command, and the detestably cruel facrifices

of the Heathens, who fometimes voluntarily, and without any divine injunctions, offered up their own children, under the notion of appealing the anger of their gods. An absolute command from God himselfas in the case of Abraham-entirely alters the moral nature of the action; since he, and he only, has a perfect right over the lives of his creatures, and may appoint whom he will, either angel or man, to be his instrument of destruction. That it was really the voice of God which pronounced the command, and not a delution, might be made certain to Abraham's mind, by means we do not comprehend, but which we know to be within the power of him who made our fouls as well as bodies, and who can controul and direct every faculty, of the human mind: and we may be alfured, that if he was pleafed to reveal himfelf fo miraculously, he would not leave a possibility of doubting whether it was a real or an imaginary revelation. Thus the facrifice of Abraham appears to be clear of all superstition; and remains the noblest instance of religious faith and submission, that was ever given by a mere man: we cannot wonder that the bleffings bestowed on him for it should have been extended to his posterity.—This book proceeds with the hillory of Ifaac, which becomes very interesting to us, from the touching scene I have mentioned—and still more so, if we confider him as the type of our Saviour. It recounts his marriage with Rebeccathe birth and history of his two sons, Jacob, the father of the twelve tribes, and Efau, the father of the Edomites, or Idumeans-the exquisitely affecting story of Joseph and his brethren-and of his transplanting the Ifraelites inth Egypt, who there multiplied to a great nation.

Mrs. Chapone.

# § 223. Of Exodus.

In Exodus, you read of a feries of wonders, wrought by the Almighty, to rescue the oppressed Israelites from the cruel tyranny of the Egyptians, who, having first received them as guests, by degrees reduced them to a state of slavery. By the most peculiar mercies and exertions in their favour, God prepared his chosen people to receive, with reverent and obedient hearts. the folemn restitution of those primitive laws, which probably he had revealed to Adam and his immediate descendants, or which, at least, he had made known by the dictates of conscience; but which times and and the degeneracy of mankind, had much obscured. This important revolution was made to them in the Wilderness of Sinah; there, affembled before the burning moentain, forrounded "with blackness, and darkmess, and tempest," they heard the awful voice of God pronounce the eternal law, impressing it on their hearts with circumfances of terror, but without those encouragements, and those excellent promises, which were afterwards offered to mankind by Jesus Christ. Thus were the great laws of morality restored to the lews, and through them transmitted to other nations; and by that means a great restraint was opposed to the torrent of vice and impiety, which began to prevail over the world.

To those moral precepts, which are of perpetual and universal obligation, were superaded, by the ministration of Moses, many peculiar infitutions, wis-ly adapted to different ends—either, to fix the memory of those past deliverances, which were sigurative of a future and far greater squatton—to place inviolable barrie's between the Jews and the idolatrous nations, by whom they were surrounded—or, to be the civil law by which the community

was to be governed.

To conduct this feries of events, and to establish these laws with his people, God raised up that great prophet Moses, whose said and execute the most arduous enterprizes; and to pursue, with unabated zeal, the welfare of his countrymen. Even in the hour of death, this generous ardour still prevailed: his last moments were employed in fervent prayers for their prosperity, and in rapturous gratitude for the glimpse wouchsafed him of a Saviour, far greater than himself, whom God would one day raise up to his people.

Thus did Moses, by the excellency of his faith, obtain a glorious pre-eminence among the saints and prophets in heaven; while, on earth, he will be ever revered as the first of those benefactors to mankind, whose labours for the public good have endeared their memory to all ages.

Mrs. Chapone.

224. Of Leviticus, Numbers, and Deuteronomy.

The next book is Leviticus, which conpains little hefides the laws for the peculiar ritual observance of the Jews, and therefore affords no great instruction to us now:

you may pass it over entirely—and; for the same reason, you may omit the first eight chapters of Numbers. The rest of Numbers is chiefly a continuation of the history, with some ritual laws.

In Deuteronomy, Moses makes a recapitulation of the foregoing history, with zealous exhortations to the people, faithfully to worthip and obey that God, who had worked fuch amazing wonders for them: he promifes them the noblest temporal bleffings, if they prove obedient; and adds the most awful and striking denunciations against them, if they rebel, or forfake the true God. I have before observed, that the sanctions of the Mofaic law were temporal rewards and punishments: those of the New Testament are eternal; these last, as they are so infinitely more forcible than the first, were referved for the last, best gift to mankind -and were revealed by the Messiah, in the fullest and clearest manner. Moses, in this book, directs the method in which the Israclites were to deal with the seven nations, whom they were appointed to punish for their profligacy and idolatry, and whose land they were to posicis, when they had driven out the old inhabitants. He gives them excellent laws, civil as well 13 religious, which were ever after the flanoing municipal laws of that people.-This book concludes with Moses's song and

# § 225. Of Joshua.

The book of Joshua contains the conquests of the liraelites over the feven nations, and their establishment in the promiled land .- Their treatment of these conquered nations must appear to you very cruel and unjust, if you consider it as their own act, unauthorized by a positive command: but they had the most absolute injunctions, not to spare these corrupt people-" to make no covenant with them, nor shew mercy to them, but utterly to destroy them:"—and the reason is given, -"lest they should turn away the liraelites from following the Lord, that they might ferve other gods." The children of Israel are to be considered as instruments, in the hand of the Lord, to punish those whose idolatry and wickedness, had deservedly brought destruction on them: this example, therefore, cannot be pleaded in behalf of cruelty, or bring any imputstion on the character of the lews. With regard to other cities, which did not belong to these seven nations, they were directed to deal with them according to the common law of arms at that time. If the city fubmitted, it became tributary, and the people were spared; if it resisted, the men were to be flain, but the women and children Yet, though the crime of cruelty cannot be justly laid to their charge on this occasion, you will observe, in the course of their history, many things recorded of them, very different from what you would expect from the chosen people of God, if you supposed them selected on account of their own merit: their national character was by no means amiable; and we are repeatedly told, that they were not chosen for their superior righteousness - " for they were a stiff-necked people; and provoked the Lord with their rebellions from the day they left Egypt."-" You have been rebellious against the Lord," fays Mofes, " from the day that I knew you." -And he vehemently exherts them, not to flatter themselves that their success was, in any degree, owing to their own merits. They were appointed to be the scourge of other nations, whose crimes rendered them fit objects of divine chastisement. For the take of righteous Abraham, their founder, and perhaps for many other wife reasons, undifcovered to us, they were felected from a world over-run with idolatry, to preferve upon earth the pure worship of the one only God, and to be honoured with the birth of the Messiah amongst them. For this end they were precluded, by divine command, from mixing with any other people, and defended, by a great number of peculiar rites and observances, from falling into the corrupt worthip practifed by their neighbours. Mrs. Chajone.

# § 226. Of Judges, Samuel, and Kings.

The book of Judges, in which you will find the affecting stories of Sampson and Jephtha, carries on the history from the death of Joshua, about two hundred and sifty years; but the facts are not told in the times in which they happened, which makes some consultin; and it will be necessary to consult the marginal dates and notes, as well as the index, in order to get any cleap idea of the succession of events during that period.

The history then proceeds regularly through the two books of Samuel, and those of Kings: nothing can be more interesting and entertaining than the reigns of Saul, David, and Solomon: but, after

the death of Solomon, when ten tribes revolted from his fon Rehoboam, and became a separate kingdom, you will find fome difficulty in understanding distinctly the histories of the two kingdoms of Ifrael and Judah, which are blended together. and by the likeness of the names, and other particulars, will be apt to confound your mind, without great attention to the different threads thus carried on together: the index here will be of great use to you. The fecond book of Kings concludes with the Badylonish captivity, 588 years before Christ-till which time the kingdom of Judah had descended uninterruptedly in the line of David.

#### § 227. Of Chronicles, Exra, Nebemiah, and Eftber.

The first book of Chronicles begins with a genealogy from Adam, through all the tribes of Ifracl and Judah; and the remainder is the same history which is contained in the books of Kings, with little or no variation, till the separation of the ten tribes. From that period, it proceeds with the history of the kingdom of Judah alone, and gives therefore a more regular and clear account of the affairs of Judah than the book of Kings. You may pass over the first book of Chronicles, and the nine first chapters of the second book; but, by all means, read the remaining chapters, as they will give you more clear and distinct ideas of the history of Judah, than that you read in the fecond hook of Kings. The fecond of Chronicles ends, like the fecond of Kings, with the Babylonish cap-

You must pursue the history in the book of Ezra, which gives an account of the return of some of the Jews on the edict of Cyrus, and of the rebuilding the Lord's temple.

Nehemiah carries on the history for about twelve years, when he himfelf was governor of Jerusalem, with authority to rebuild the walls, &c.

The story of Esther is prior in time to that of Ezra and Nehemiah; as you will see by the marginal dates; however, as it happened during the seventy years captivity, and is a kind of episode, it may be read in its own place.

This is the last of the canonical books that is properly historical; and I would therefore advise, that you pass over what follows, till you have continued the history through the apocryphal books.

Ibid.

\$ 228.

# \$ 228. Of Job.

The story of Job is probably very ancient, though that is a point upon which learned men have differed: It is dated. however, 1520 years before Christ: I believe it is uncertain by whom it was written: many parts of it are obscure; but it is well worth fludying, for the extreme beauty of the poetry, and for the noble and fublime devotion it contains. The subject of the dispute between Job and his pretended friends feems to be, whether the Providence of God distributes the newards and punishments of this life in exact proportion to the merit or demerit of each individual. His antagonists suppose that it does; and therefore infer, from Job's uncommon calamities, that, notwithstanding his apparent righteousness, he was in reality a grievous sinner. They aggravate his supposed guilt, by the imputation of hypocrily, and call upon him to confess it, and to acknowledge the justice of his punishment, Job afferts his own innocence and virtue in the most pathetic manner, yet does not prefume to accuse the Supreme Being of injustice. Elihu attempts to arbitrate the matter, by alledging the impossibility that fo frail and ignorant a creature as man should comprehend the ways of the Almighty; and therefore condemns the unjust and cruel inference the three friends had drawn from the fufferings of Job. He also blames Job for the presumption of acquitting himself of all iniquity, since the best of men are not pure in the fight of God-but all have something to repent of: and he advises him to make this use of his afflictions. At last, by a bold figure of poetry, the Supreme Being himself is introduced, speaking from the whirlwind, and filencing them all by the most sublime display of his own power, magnificence, and wisdom, and of the comparative littleness and ignorance of man. This indeed is the only conclusion of the argument, which could be drawn at a time when life and immortality were not yet brought to light. A future retribution is the only fatisfactory folution of the difficulty arising from the sufferings of good people in this Mrs. Chapone. life.

# § 229. Of the Pfalms.

Next-follow the Psalms, with which you cannot be too conversant. If you have any taste, either for poetry or devotion, they will be your delight, and will afford

you a continual feast. The bible transla. tion is far better than that used in the common-prayer book, and will often give you the fense, when the other is obscure. In this, as well as in all other parts of the scripture, you must be careful always to confult the margin, which gives you the corrections made fince the last translation. and it is generally preferable to the words of the text. I would wish you to felect fome of the Pfalms that please you best, and get them by heart: or, at least, make yourfelf master of the sentiments contained in them. Dr. Delany's Life of David will fliew you the occasions on which several of them were composed, which add much to their beauty and propriety; and by comparing them with the events of David's life, you will greatly enhance your pleafure in them. Never did the spirit of true picty breathe more flrongly than in these divine songs: which being added to a rich vein of poetry, makes them more captivating to my heart and imagination, than any thing I ever read. You will confider how great disadvantages any poem must sustain from being rendered literally into profe, and then imagine how beautiful these must be in the original. May you be enabled, by reading them frequently, to transfuse into your own breast that holy slame which inspired the writer !- to delight in the Lord, and in his laws, like the Pfalmist-to rejoice in him always, and to think " one day in his courts better than a thousand!"-But may you escape the heart-piercing forrow of fuch repentance as that of David-by avoiding fin, which humbled this unhappy king to the dust-and which cost him fuch birter anguish, as it is impossible to read of without being moved! Not all the pleasures of the most prosperous sinners would counterbalance the hundredth part of those sensations described in his penitential Pfalms-and which must be the portion of every man, who has fallen from a religious state into such crimes, when once he recovers a fense of religion and virtue, and is brought to a real hatred of fin. However available such repentance may be to the fafety and happiness of the foul after death, it is a state of such exquifite fuffering here, that one cannot be enough surprized at the folly of those, who indulge fin, with the hope of living to make their peace with God by repentance, Happy are they who preserve their inno cence unfullied by any great or wilful erimes,

crimes, and who have only the common failings of humanity to repent of; these are sufficiently mortifying to a heart deeply fmitten with the love of virtue, and with the defire of perfection .- There are many very striking prophecies of the Messiah in these divine songs, particularly in Psalm xxii .- fuch may be found feattered up and down almost throughout the Old Testament. To bear tellimony to him, is the great and ultimate end for which the foirit of prophecy was bellowed on the facred writers; - but this will appear more plainly to you, when you enter on the fludy of prophecy, which you are now much too young to undertake. Mrs. Chapune.

§ 230. Of the Proverbs, Ecclefiafts, Solomon's Song, the Prophecies, and Apocrypha.

The Proverbs and Ecclefiastes are rich stores of wisdom, from which I with you to adopt such maxims as may be of infinite use both to your temporal and eternal interest. But detached sentences are a kind of reading not proper to be continued long at a time; a few of them, well chosen and digested, will do you much more service, than to read half a dozen chapters together. In this respect, they are directly opposite to the historical books, which, if not read in continuation, can hardly be understood, or retained to any purpose.

The Song of Solomon is a fine poem but its myltical reference to religion lies too deep for a common understanding: if you read it, therefore, it will be rather as matter of curiosity than of ediscation.

Next follow the Prophecies; which though highly deserving the greatest attention and study, I think you had better omit for some years, and then read them with a good exposition, as they are much too difficult for you to understand without affistance. Dr. Newton on the prophecies will help you much, whenever you undertake this fludy-which you should by all means do, when your understanding is ripe enough; because one of the main , proofs of our religion rests on the testimony of the prophecies; and they are very frequently quoted, and referred to, in the New Testament; besides, the sublimity of the language and fentiments, through all the difadvantages of antiquity and translation, must, in very many passages, strike every person of taste; and the excellent moral

and religious precepts found in them must be useful to all.

Though I have spoken of these books in the order in which they fland, I repeat, that they are not to be read in that order -but that the thread of the history is to be purfued, from Nehemiah to the first book of the Maccabees, in the Apocrypha: taking care to observe the chronology regularly, by referring to the index, which supplies the deficiencies of this history from Josephus's Antiquities of the Jews. The first of Maccabees carries on the story till within 195 years of our Lord's circumcifion: the second book is the same narrative, written by a different hand, and does not bring the history so forward as the first; fo that it may be entirely omitted, unless you have the curiofity to read some particulars of the heroic constancy of the lews, under the tortures inflicted by their heathen conquerors, with a few other things not mentioned in the first book.

You must then connect the history by the help of the index, which will give you brief heads of the changes that happened in the state of the Jews, from this time till the birth of the Messiah.

The other books of the Apocrypha, though not admitted as of facred authority, have many things well worth your attention: particularly the admirable book called Ecclefiasticus, and the book of Wisdom. But, in the course of reading which I advise, these must be omitted till after you have gone through the Gospels and Acts, that you may not lose the historical thread.

§ 231. Of the New Testament, which is constantly to be reserved to, as the Rule and Direction of our moral Conduct.

We come now to that part of scripture, which is the most important of all, and which you must make your constant study, not only till you are thoroughly acquainted with it, but all your life long; because, how often soever repeated, it is impossible to read the life and death of our bleffed, Saviour, without renewing and increasing in our hearts that love and reverence, and gratitude towards him, which is so justly due for all he did and fuffered for us ! Every word that fell from his lips is more precious than all the treasures of the earth; for his " are the words of eternal life!" They must therefore be laid up in your heart.

heart, and constantly referred to, on all occasions, as the rule and direction of all your actions; particularly those very comprehensive moral precepts he has gracioutly left with us, which can never fail to direct us aright, if fairly and honeftly applied: fuch as, " whatfoever ye would that men should do unto you, even so do unto them."-There is no occasion, great or fmall, on which you may not fafely apply this rule for the direction of your conduct: and, whilst your heart honestly adheres to it, you can never be guilty of any fort of injustice or unkindness. The two great commandments, which contain the fummary of our duty to God and man, are no less easily retained, and made a standard by which to judge our own hearts-" To love the Lord our God, with all our hearts, with all our minds, with all our strength; and our neighbour (or fellow-creature) as " Love worketh no ill to his ourselves." neighbour." Therefore if you have true benevolence, you will never do any thing injurious to individuals, or to fociety. Now, all crimes whatever are (in their remoter consequences at least, if not immediately and apparently) injurious to the fociety in which we live. It is impossible to love God without defiring to pleafe him, and, as far as we are able, to refemble him; therefore the love of God mult lead so every virtue in the highest degree; and, we may be fure, we do not truly love him, f we content ourselves with avoiding flagrant fine, and do not firive, in good carnest, to reach the greatest degree of perfection we are capable of. Thus do thefe few words direct us to the highest Christian virtue. Indeed, the whole tenor of the Gospel is to offer us every help, direction, and motive, that can enable us to attain that degree of perfection on which depends our eternal good. Mrs. Chapone.

§ 232. Of the Example fet by our Saviour, and his Character.

What an example is fet before us in our bleffed Mafter! How is his whole life, from earlieft youth, dedicated to the purfair of true wisdom, and to the practice of the most exalted virtue! When you see him, at twelve years of age, in the temple amongst the doctors, hearing them, and afting them questions on the subject of religion, and aftonishing them all with his understanding and answers—you will say, perhaps, — "Well might the Son of

" God, even at those years, be far wise? " than the aged; but, can a mortal child "emulate such heavenly wildom? Can " fuch a pattern be proposed to my imi-tation?"—Yes, certainly;—remember that he has bequeathed to you his hearvenly wildom, as far as concerns your own good. He has left you such declarations of his will, and of the consequences of your actions, as you are, even now, fully able to understand, if you will but attend to them. If, then, you will imitate his zeal for knowledge, if you will delight in gaining information and improvement; you may even now become " wife unto falvation." - Unmoved by the praise he acquired amongst these learned men, you fee him meekly return to the subjection of a child, under those who appeared to be his parents, though he was in reality their Lord: you fee him return to live with them, to work for them, and to be the joy and folace of their lives; till the time came, when he was to enter on that scene of public action, for which his heavenly Father had fent him from his own right hand, to take upon him the form of a poor carpenter's fon. What a lesson of humility is this, and of obedience to parents! -When, having received the glerious tertimony from heaven, of his being the beloved Son of the Most High, he enters on his public ministry, what an example does he give us, of the most extensive and conflant benevolence !- how are all his hours fpent in doing good to the fouls and bodies of men '-not the meanest finner is below his notice:-to reclaim and fave them, he condefcends to converfe familiarly with the most corrupt, as well as the most abject. All his miracles are wrought to benesit mankind; not one to punish and afflict them. Instead of using the almighty power, which accompanied him, to the purpose of exalting himself, and treading down his enemies, he makes no other use of it than to heal and to fave.

When you come to read of his sufferings and death, the ignominy and reproach, the forrow of mind, and torment of body, which he submitted to—when you consider that it was all for our sakes—"that by his stripes we are healed"—and by his death we are raised from destruction to eversasting life—what can I say, that can add any thing to the sensations you must then feel?—No power of language can make the scene more touching than it appears in the plain and simple narrations of the evangelists.

gelifts. The heart that is unmoved by it. can be scarcely human; -but the emotions of tenderness and compunction, which almost every one feels in reading this account, will be of no avail, unless applied to the true end-unless it inspires you with a fincere and warm affection towards your bleffed Lord-with a firm refolution to obey his commands;-to be his faithful difci-.ple-and ever to renounce and abhor those fins, which brought mankind under divine condemnation, and from which we have been redeemed at so dear a rate. Remember that the title of Christian, or follower of Christ, implies a more than ordinary degree of holiness and goodness. As our motives to virtue are stronger than those which are afforded to the rest of mankind, our guilt will be proportionably greater, if we depart from it.

Our Saviour appears to have had three great purpoles, in descending from his glory and dwelling amongst men. The first, to teach them true virtue, both by his example and precepts. The second, to give them the most forcible motives to the practice of it, by "bringing life and immortality to light;" by shewing them the certainty of a refurrection and judgment, and the absolute necessity of obedience to God's laws. The third, to sacrifice himself for us, to obtain, by his death, the remission of our sins, upon our repentance and reformation, and the power of bestowing on his sincere followers the inestimable gift of immortal happiness.

Mrs. Chapone.

§ 233. A comparative View of the Bleffed and Curjed at the Last Day, and the Inference to be drawn from it.

What a tremendous scene of the last day does the gospel place before our eyes!of that day, when you and every one of us shall awake from the grave, and behold the Son of God, on his glorious tribunal, attended by millions of celeftial beings, of whose superior excellence we can now form no adequate idea-when, in prefence of all mankind, of those holy angels, and of the great Judge himfelf, you must give an account of your past life, and hear your final doom, from which there can be no appeal, and which must determine your fate to all eternity; then think-if for a moment you can bear the thought-what will be the defolation, shame, and anguish, of those wretched fouls, who shall hear

these dreadful words; --- "Depart from me, ye curfed, into everlasting fire, prepared for the devil and his angels."

Oh! I cannot support even the idea of your becoming one of those undone, lost creatures! - I trust in God's mercy, that you will make a better use of that knowledge of his will, which he has vouchfafed you, and of those amiable dispositions he has given you. Let us therefore turn from this horrid, this insupportable view - and rather endeavour to imagine, as far as is possible, what will be the sensations of your foul, if you shall hear our heavenly Judge address you in these transporting words"Come, thou blessed of my Father, inherit the kingdom prepared for you, from the foundation of the world." - Think. what it must be, to become an object of the efteem and applause-not only of all mankind affembled together - but of all the host of heaven, of our blessed Lord himself - nay, of his and our Almighey Father:-to find your frail flesh changed, in a moment, into a glorious celeftial body, endowed with perfect beauty, health, and agility: -- to find your foul cleanfed from all its faults and infirmities; exalted to the purest and noblest affections; overflowing with divsne love and rapturous gratitude - to have your understanding enlightened and refined; your heart enlarged and purified; and every power and disposition of mind and body adapted to the highest relish of virtue and happiness !- Thus ac-complished, to be admitted into the society of amiable and happy beings, all united in the most perfect peace and friendship, all breathing nothing but love to God, and to each other ;-with them to dwell in scenes more delightful than the richest imagination can paint-free from every pain and care, and from all possibility of change or fatiety; -but, above all, to enjoy the more immediate presence of God himself-to be able to comprehend and admire his adorable perfections in a high degree, though flill far fhort of their infinity-to be conscious of his love and favour, and to rejoice in the light of his countenance!-But here all imagination fails :--- we can form no idea of that blifs, which may be communicated to us by fuch a near approach to the Source of all beauty and all good:-we must content ourselves with believing, " that it is what mortal eye hath not feen, nor ear heard, neither hath it entered into the heart of man to conceive." The crown of all our joys will be, to know

that we are secure of possessing them for ever-what a transporting idea!

Can you reflect on all these things, and not feel the most earnest longings after immortaliy?-Do not all other views and defires feem mean and triffing, when compared with this? - And does not your inmost heart resolve, that this shall be the chief and conflant object of its wifnes and purfuit, through the whole course of your life !- If you are not infensible to that defire of happiness which seems woven into our nature, you cannot furely be unmoved by the prospect of such a transcendant degree of it; and that continued to all eternity-perhaps continually increasing. You cannot but dread the forfeiture of fuch an inheritance, as the most insupportable evil! -Remember then-remember the conditions on which alone it can be obtained. God will not give to vice, to careleffnefs, or floth, the prize he has proposed to virtue. You have every help that can animate your endeavours : - You have written laws to direct you-the example of Christ and his disciples to encourage you -the most awakening motives to engage you-and you have besides, the comfortable promise of constant assistance from the Holy Spirit, if you diligently and fincerely pray for it .- O! let not all this mercy be lost upon you-but give your attention to this your only important concern, and accept, with profound gratitude, the ineffimable advantages that are thus affectionately offered you.

Though the four Gospels are each of them a narration of the life, sayings, and death of Christ; yet as they are not exactly alike, but some circumstances and sayings, omitted in one, are recorded in another, you must make yourself perfectly master of them all.

The Acts of the holy Aposlles, endowed with the Holy Ghost, and authorized by their divine Master, come next in order to be read.—Nothing can be more interesting and edifying, than the history of their actions—of the picty, zcal, and comage, with which they preached the glad tidings of salvation; and of the various exertions of the wonderful powers conferred on them by the Holy Spirit, for the confirmation of their mission.

Mrs. Chapane.

# § 234. Charafter of St. Paul.

The Character of St. Paul, and his miraculous convertion, demand your particular

attention: most of the apostles were men of low birth and education; but St. Paul was a Roman citizen; that is, he possessed the privileges annexed to the freedom of the city of Rome, which was confidered as a high diffraction, in those countries that had been conquered by the Romans. He was educated amongst the most learned feet of the Jews, and by one of their principal doctors. He was a man of extraordinary elequence, as appears not only in his writings, but in feveral speeches in his own defence, pronounced before governors and courts of justice, when he was called to account for the doctrines he taught - H: feems to have been of an uncommonly warm temper, and zealous in whatever religion he professed: this zeal. before his conversion, thewed itself in the most unjustifiable actions, by furiously perfecuting the innocent Christians: but, tho' his actions were bad, we may be fure his intentions were good; otherwise we should not have feen a miracle employed to convince him of his millake, and to bring him into the right way. This example may affure us of the mercy of God towards mistaken consciences, and ought to inspire us with the most enlarged charity and good-will towards those whose erroneous principles mislead their conduct: instead of refentment and hatred against their perfons, we ought only to feel an active wish of affilling them to find the truth; fince we know not whether, if convinced, they might not prove, like St. Paul, chosen velfels to promote the honour of God, and of true religion. It is not now my intention to enter with you into any of the arguments for the truth of Christianity; otherwife it would be impossible wholly to pass over that, which affection this remarkable convertion, and which has been fo admirably illustrated by a noble writer, whose trust on this subject is in every body's hands. Miss. Chapone.

### § 235. Of the Epofles.

Next follow the Epiffles, which make a very important part of the New Teffament; and you cannot be too much employed in reading them. They contain the most excellent precepts and admonitions; and are of particular use in explaining more at large several doctriues of Christianity, which we could not so fully comprehend without them. There are, indeed, in the Epiffles of St. Paul, many

passages hard to be understood: such, ia particular, are the first eleven chapters to the Romans; the greater part of his Epiftles to the Corinthians and Galatians; and feveral chapters of that to the Hebrews. Instead of perplexing yourself with these more obscure passages of scripture, I would wish you to employ your attention chiefly on those that are plain; and to judge of the doctrines taught in the other parts, by comparing them with what you find in thefe. It is through the neglect of this rule, that many have been led to draw the most absurd doctrines from the holy scriptures.-Let me particularly recommend to your careful perufal the xii. xiii. xiv. and xv. chapters of the Epistle to the Romans. In the xiv. chapter St. Paul has in view the difference between the Jewish and Gentile (or Heathen) converts, at that time: the former were disposed to look with horror on the latter, for their impiety in not paying the same regard to the distinctions of days and meats that they did; and the latter, on the contrary, were inclined to look with contempt on the former, for their weakness and superstition. Excellent is the advice which the Apostle gives to both parties: he exhorts the Jewish converts not to judge, and the Gentiles not to despife; remembering, that the kingdom of Heaven is not meat and drink, but righteoutness and peace, and joy in the Holy Ghoft.-Endeavour to conform yourfelf to this advice; to acquire a temper of univerfal candour and benevolence; and learn neither to despise nor condemn any perfons on account of their particular modes of faith and worship; remembering always, that goodness is confined to no party - that there are wife and worthy men among all the fects of Christians - and that, to his own master, every one must stand or fall.

I will enter no farther into the feveral points discussed by St. Paul in his various epistles—most of them too intricate for your understanding at present, and many of them beyond my abilities to state clearly. I will only again recommend to you, to read those passages frequently, which, with so much servour and energy, excite you to the practice of the most exasted picty and benerolence. If the essuson of a heart, warmed with the tenderest affection for the whole human race—if precept, warming, excouragement, example,

urged by an eloquepoe which such affection only could inspire, are capable of influencing your mind—you cannot fail to find, in such parts of his epistles as are adapted to your understanding, the strongest persuasives to every virtue that can adorn and improve your nature. Mrs. Chapens.

### § 236. The Epiftle of St. James.

The epiftle of St. James is entirely practical, and exceedingly fine; you can-not fludy it too much. It feems particularly defigned to guard Christians against misunderstanding some things in St. Paul's writings, which have been fatally perverted to the encouragement of a dependance on faith alone, without good works. But the more rational commentators will tell you, that, by the works of the law, which the apostle afferts to be incapable of justifying us, he means, not the works of moral righteousness, but the ceremonial works of the Mosaic law; on which the Jews laid the greatest stress, as necessary to salvation. But St. James tells us, that, " if any " man among us feem to be religious, and " bridleth not his tongue, but deceiveth "his own heart, that man's religion is, "vain;"-and that " pure religion, and undefiled before God and the Father, is " this, to visit the fatherless and widow in " their affliction, and to keep himself un-" fpotted from the world." Faith in Christ, if it produce not these effects, he declareth is dead, or of no power.

# § 237. Epiftles of St. Peter, and the first of St. John.

The Epifles of St. Peter are also full of the best instructions and admonitions, concerning the relative duties of life; amongst which, are set forth the duties of women in general, and of wives in particular. Some part of his second Epistle is prophetical; warning the church of false teachers, and false doctrines, which should undermine morality, and disgrace the cause of Christianity.

of Christianity,

The first of St. John is written in a highly figurative style, which makes it, in some parts, hard to be understood; but the spirit of divine love, which it so fervently expresses, renders it highly edifying and delightful.—That love of God and of man, which this beloved aposses a pathetically

pathetically recommends, is in truth the effence of religion, as our Saviour himself informs us.

Mrs. Chapone.

# \$ 238. Of the Revelations.

The book of the Rovelations contains a prophetical account of most of the great events relating to the Christian church, which were to happen from the time of the writer, St. John, to the end of the world. Many learned men have taken a great deal of pains to explain it; and they have done this, in many instances, very successfully: but I think it is yet too foon for you to fludy this part of scripture; some years hence, perhaps, there may be no objection to your attempting it, and taking into your hands the best expositions, to assist you in reading such of the most dishcult parts of the New Testament as you cannot now be supposed to understand. May Heaven direct you in studying this facred volume, and render it the means of making you wife unto falvation !- May you love and reverence, as it deferves, this bleffed and invaluable book, which contains the best rule of life, the clearest declaration of the will and laws of the Deity, the reviving assurance of favour to true penitents, and the unipeakably joyful tidings of eternal life and happiness to all the truly virtuous, through Jefus Chrift, the Saviour and Deliverer of the world!

#### § 239. ECONOMY OF HUMAN LIFE.

Ibid.

#### IN TWO PARTS.

Part I. Duties that relate to Man, confidered as an individual—the Paglious—II oman—Confinagainity, or natural relatious—Providence, or the accidental difference in men—the Social Duties—Religion.

#### INTRODUCTION.

Bow down your heads unto the dust, O ye inhabitants of earth! be filent and receive with reverence, instruction from on high.

Wherefoever the fun doth shine, wherefoever the wind doth blow, wherefoever there is an ear to hear, and a mind to conceive; there let the precepts of life be made known, let the maxims of truth be honoured and obeyed.

All things proceed from God. His

power is unbounded, his wisdom is from eternity, and his goodness endureth for

He fitteth on his throne in the centre, and the breath of his mouth giveth life to the world.

He toucheth the stars with his finger, and they run their course rejoicing.

On the wings of the wind he walketh abroad, and performeth his will through a'l the regions of unlimited space.

Order, and grace, and beauty, spring from his hand.

The voice of wisdom speaketh in all his works; but the human understanding comprehendeth it not.

The shadow of knowledge passeth over the mind of man as a dream; he see that in the dark; he reasoneth, and is deceived.

But the wisdom of God is as the light of heaver; he reasoneth not; his mind is the fountain of truth.

Juffice and mercy wait before his throne; benevolence and love enlighten his countenance for ever.

Who is like unto the Lord in glory? Who in power shall contend with the Almighty? Hath he any equal in wisdom? Can any in goodness be compared unto him?

He it is, O man! who hath created thee: thy station on earth is fixed by his appointment: the powers of thy mind are the gift of his goodness: the wonders of thy stame are the work of his hand.

Hear th n his voice, for it is gracious; and he that obeyeth, shall establish his soul in peace.

DUTIES that relate to MAN, confidered as an INDIVIDUAL

#### § 240. Consideration.

Commune with thyself, O man! and consider wherefore thou wert made.

Contemplate thy powers, contemplate thy wants and thy connections; fo shalt thou discover the duties of life, and be directed in all thy ways.

Proceed not to speak or act, before thou hast weighed thy words, and examined the tendency of every step thou shalt take; so shall digrace sly far from thee, and in thy house shall shame be a stranger; repentance shall not visit thee, nor forrow dwell upon thy cheek.

The thoughtless man bridleth not his tongue;

tongue; he speaketh at random, and is entangled in the foolishness of his own words.

As one that runneth in haste, and leapeth over a fence, may fall into a pit on the other fide, which he doth not fee; so is the man that plungeth fuddenly into any action, before he hath confidered the confequences thereof.

Hearken therefore unto the voice of confideration; her words are the words of wisdom, and her paths shall lead thee to fafety and truth.

#### § 241. Modesty.

Who art thou, O man! that presumest on thine own wifdom? or why dost thou vaunt thyself on thine own ac juirements?

The first step towards being wife, is to know that thou art ignorant; and if thou wouldst not be esteemed foolish in the judgment of others, cast off the folly of being wife in thine own conceit.

As a plain garment best adorneth a beautiful woman, fo a decent behaviour is the greatest ornament of wildom.

The speech of a modest man giveth Justre to truth, and the distidence of his words absolveth his error.

He relieth not on his own wisdom; he weigheth the counfels of a friend, and receiveth the benefit thereof.

He turneth away his ear from his own praise, and believeth it not; he is the last in discovering his own perfections.

Yet as a veil addeth to beauty, so are his virtues fet off by the shade which his mo-

defly casteth upon them.

But behold the vain man, and observe the arrogant; he clotheth himself in rich attire; he walketh in the public street; he casteth round his eyes, and courteth observation.

He toffeth up his head, and overlooketh the poor; he treateth his inferiors with insolence, and his superiors in return look down on his pride and folly with laughter.

He despiseth the judgment of others; he relieth on his own opinion, and is confounded.

He is puffed up with the vanity of his imagination; his delight is to hear and to speak of himself all the day long.

He swalloweth with greediness his own raife, and the flatterer in return eateth him up.

#### § 242. APPLICATION.

Since the days that are past are gone for ever, and those that are to come may not

come to thee; it behoveth thee, O man ! to employ the prefent time, without regretting the loss of that which is past, or too much depending on that which is to come.

This instant is thine: the next is in the womb of futurity, and thou knowest not

what it may bring forth.

Whatfoever thou refolvest to do, do it quickly. Defer not till the evening what the morning may accomplish.

Idleness is the parent of want and of pain; but the labour of virtue bringeth forth pleafure.

The hand of diligence defeateth want; prosperity and success are the industrious man's attendants.

Who is he that hath acquired wealth. that hath rifen to power, that hath clothed himself with honour, that is spoken of in the city with praife, and that standeth before the king in his council? Even he that hath shut out Idleness from his house; and hath faid unto Sloth, Thou art mine enemy.

He rifeth up early, and lieth down late: he exerciseth his min I with contemplation, and his body with action, and preserveth the health of both.

The flothful man is a burden to himfelf; his hours hang heavy on his head; he loitereth about, and knoweth not what he would do.

His days pass away like the shadow of a cloud, and he leaveth behind him no mark for remembrance.

His body is diseased for want of exercife; he wisheth for action, but hath not power to move; his mind is in darkness; his thoughts are confused; he longeth for knowledge, but hath no application.

He would eat of the almond, but hateth the trouble of breaking its shell.

His house is in disorder, his servants are wasteful and riotous, and he runneth on towards ruin; he feeth it with his eyes, he heareth it with his ears, he shaketh his head, and wisheth, but hath no resolution; till ruin cometh upon him like a whirlwind, and shame and repentance descend with him to the grave.

#### § 243. EMULATION.

If thy foul thirsteth for honour, if thy ear hath any pleasure in the voice of praise, raise thyself from the dust whereof thou art made, and exalt thy aim to something that is praise-worthy.

The oak that now spreadeth its branches towards the heavens, was once but an acorn in the bowels of the earth.

Endeavous A 2 2

Endeavour to be first in thy calling, whatever it be; neither let any one go before thee in well doing: nevertheless, do not envy the merits of another; but improve thine own talents.

Scorn also to depress thy competitor by any dishonest or unworthy method: strive to raise thyself above him only by excelling him; so shall thy contest for superiority be crowned with honour, if not with success.

By a virtuous emulation, the spirit of a man is exalted within him; he panteth after fame, and rejoiceth as a racer to run his course.

He rifeth like the palm-tree in spite of oppression; and as an eagle in the sirmament of heaven, he soareth alost, and sixeth his eye upon the glories of the sun.

The examples of eminent men are in his visions by night, and his delight is to follow them all the day long.

He formeth great defigns, he rejoiceth in the execution thereof, and his name goeth forth to the ends of the world.

But the heart of the envious man is gall and bitterness; his tongue spitteth venom; the success of his neighbour breaketh his rest.

He fitteth in his cell repining, and the good that happeneth to another, is to him an evil.

Hatred and malice feed upon his heart, and there is no rest in him.

He feeleth in his own breaft no love to goodness, and therefore believeth his neighbour is like unto him telf.

He endeavours to depreciate those that excel him, and putteth an evil interpretation on all their doings.

He lieth on the watch, and meditates mischief; but the detestation of man pursueth him, he is crushed as a spider in his own web.

#### § 244. PRUDENCE.

Hear the words of Prudence, give heed anto her counfels, and flore them in thine heart; her maxims are universal, and all the virtues lean upon her: she is the guide and mistress of human life.

Put a bridle on thy tongue; fet a guard before thy lips, left the words of thine own month destroy thy peace.

Let him that coffeth at the lame, take care that he halt not himself: who soever speaketh of another's failings with pleafure, shall hear of his own with bitterness of heart. Of much speaking cometh repentance, but in silence is safety.

A talkative man is a nuisance to fociety; the ear is sick of his babbling, the torrent of his words overwhelmeth conversation.

Boast not of thyself, for it shall bring contempt upon thee; neither deride another, for it is dangerous.

A bitter jest is the poison of friendship; and he that cannot restrain his tongue, shall have trouble.

Furnish thyself with the proper accommodations belonging to thy condition; yet spend not to the utmost of what thou canst afford, that the providence of thy youth may be a comfort to thy old age.

Let thine own business engage thy attention; leave the care of the state to the governors thereof.

Let not thy recreations be expensive, lest the pain of purchasing them exceed the pleasure thou hast in their enjoyment.

Neither let prosperity put out the eyes of circumspection, nor abundance cut off the hands of frugality; he that too much indulgeth in the superfluities of life, shall live to lament the want of its necessaries.

From the experience of others, do thou learn wiflom; and from their failings correct thine own faults.

Trust no man before thou hast tried him; yet mistrust not without reason, it is uncharitable.

But when thou hast proved a man to be honest, lock him up in thine heart as a treasure! regard him as a jewel of inestimable price.

Refuse the favours of a mercenary man; they will be a fnare unto thee; thou shalt never be quit of the obligation.

Use not to-day what to-morrow may want; neither leave that to hazard which forefight may provide for, or care prevent-

Yet expect not even from Prudence infallible fuccess; for the day knoweth not what the night may bring forth.

The fool is not always unfortunate, nor the wife man always fuccessful: yet never had a fool a thorough enjoyment; never was a wife man wholly unhappy.

#### § 245. FORTITUDE.

Perils, and misfortunes, and want, and pain, and injury, are more or less the certain lot of every man that cometh into the world.

It behoveth thee, therefore, O child of calamity! early to fortify thy mind with courage

courage and patience, that thou mayest support, with a becoming resolution, thy allotted portion of human evil.

As the camel beareth labour, and heat, and hunger, and thirft, through defarts of fand, and fainteth not; fo the fortitude of man thall fultain him through all perils.

A noble spirit disdaineth the malice of fortune; his greatness of soul is not to be cast down.

He hath not fuffered his happiness to depend on her smiles, and therefore with her frowns he shall not be dismayed.

As a rock on the fea-shore he standeth firm, and the dashing of the waves disturbeth him not.

He raifeth his head like a tower on a hill, and the arrows of fortune drop at his feet.

In the inflant of danger the courage of his heart fuffaineth him; and the fleadiness of his mind beareth him out.

He meeteth the evils of life as a man that goeth forth into battle, and returneth with victory in his hand.

Under the pressure of misfortunes, his calmness alleviates their weight, and his

constancy shall surmount them.

But the dastardly spirit of a timorous man betrayeth him to shame.

By shrinking under poverty, he stoopeth down to meanness; and by tamely bearing insults, he inviteth injuries.

As a reed is shaken with a breath of air, so the shadow of evil maketh him tremble.

In the hour of danger he is embarrassed and consounded; in the day of missortune he sinketh, and despair overwhelmeth his soul.

#### § 246. CONTENTMENT.

Forget not, O man! that thy flation on earth is appointed by the wisdom of the Eternal, who knoweth thy heart, who seeth the vanity of all thy wishes, and who often, in mercy, denieth thy requests.

Yet for all reasonable desires, for all honest endeavours, his benevolence hath established, in the nature of things, a pro-

bability of success.

The uneafiness thou feelest, the misfortunes thou bewailest, behold the root from whence they spring! even thine own folly, thine own pride, thine own distempered

Murmur not therefore at the dispensations of God, but correct thine own heart: neither say within thyself, If I had wealth or power, or leisure, I should be happy; for

know, they all bring to their feveral poffessors their peculiar inconveniencies.

The poor man feeth not the vexations and anxieties of the rich, he feeleth not the difficulties and perplexities of power, neither knoweth he the wearifomeness of leifure; and therefore it is that he repineth at his own lot.

But envy not the appearance of happiness in any man, for thou knowest not his fecret griefs.

To be fatisfied with a little is the greatest wisdom; and he that increaseth his riches, increaseth his cares: but a contented mind is a hidden treasure, and trouble findeth it not.

Yet if thou sufferest not the allurements of soutune to rob thee of justice or tensperance, or charity, or modestly, even riches themselves shall not make thee unhappy.

But hence shalt thou learn, that the cupof solicity, pure and unmixed, is by no means a draught for mortal man,

Virtue is the race which God hath fet him to run, and happiness the goal, which none can arrive at till he hath finished his course, and received his crown in the mansions of eternity.

#### § 247. TEMPERANCE.

The nearest approach thou canst make to happiness on this side the grave, is to enjoy from heaven understanding and health.

These blessings if thou possesses, and wouldst preserve to old age, avoid the allurements of voluptuousness, and sly from her temptations.

When she spreadeth her delicacies on the board, when her wine sparkleth in the cup, when she smileth upon thee, and perfuadeth thee to be joyful and happy; then is the hour of danger, then let Reason stand firmly on her guard.

For if thou hearkenest unto the words of her adversary, thou art deceived and

The joy which she promiseth, changeth to madness, and her enjoyments lead on to diseases and death.

Look round her board; cast thine eyes upon her guests, and observe those who have been allured by her smiles, who have listened to her temptations.

Are they not meagre? are they not fickly? are they not spiritles?

Their short hours of jollity and riot are followed by tedious days of pain and dejection. She hath debauched and palled

A a 3 thei

their appetites, that they have no relish for their nicest dainties: her votaries are become her victims; the just and natural consequence which God hath ordained, in the constitution of things, for the punishment of those who abuse his gifts.

But who is she that with graceful sleps, and with a lively air, trips overyonder plain?

The rose blushesh on her cheeks, the sweetness of the morning breathesh from her lips; joy, tempered with innocence and modesty, sparkleth in her eyes, and from the chearfulness of her heart she singeth as she walks.

Her name is Health; she is the daughter of Exercise and Temperance; their sons inhabit the mountains of the northen regibns.

They are brave, active, and lively, and partake of all the beauties and virtues of their fifter.

Vigour stringeth their nerves, strength dwelleth in their bones, and labour is their delight all the day long.

The employments of their father excite their appetites, and the repails of their mother refresh them.

To combat the passions is their delight; to conquer evil habits their glory.

Their pleasures are moderate, and therefore they endure; their repose is short, but sound and undisturbed.

Their blood is pure, their minds are ferene, and the physician findeth not the way to their habitations.

But fafety dwelleth not with the fons of men, neither is fecurity found within their gates.

Behold them exposed to new dangers from without, while a traitor within lurketh to betray them.

Their health, their strength, their beauty and activity, have raised desire in the bosom of lascivious love.

She standeth in her bower, she courteth their regard, she spreadeth her temptations.

Her limbs are fost and delicate; her attire is loose and inviting. Wantonness speaketh in her eyes, and on her bosom sits temptation. She beckoneth them with her finger, she wooeth them with her looks, and by the smoothness of her tongue, she endeavoureth to deceive.

Ah! fly from her allurements, stop thy ears to her enchanting words. If thou meetest the languishing of her eyes; if thou hearest the softness of her voice; if she caseth her arms about thee, she bindeth thee in chains for ever.

Shame followeth, and disease, and want, and care, and repentance.

Enfeebled by dalliance, with luxury pampered, and foftened by sloth, strength shall forsake thy limbs, and health thy constitution: thy days shall be few, and those inglorious; thy griefs shall be many, yet meet with no compassion.

#### The PASSIONS.

# \$ 248. HOPE and FEAR.

The promises of hope are sweeter than roses in the bud, and far more flattering to expectation; but the threatenings of sear are a terror to the heart.

Nevertheless, let not hope allure, nor fear deter thee from doing that which is right; so shalt thou be prepared to meet all events with an equal mind.

The terrors even of death are no terrors to the good; he that committeth no evil hath nothing to fear.

In all thy undertakings, let a reasonable assurance animate thy endeavours; if thou despairest of success, thou shalt not succeed.

Terrify not thy foul with vain fears, neither let thy heart fink within thee from the phantoms of imagination.

From fear proceedeth misfortune; but he that hopeth, helpeth himself.

As the office when purfued, hideth his head, but forgetteth his body; fo the fears of a coward expose him to danger.

If thou believest a thing impossible, thy despendency shall make it so; but he that persevereth, shall overcome all difficulties.

A vain hope flattereth the heart of a fool; but he that is wife pursueth it not.

In all thy desires let reason go along with thee, and fix not thy hopes beyond the bounds of probability; so shall success attend thy undertakings, thy heart shall not be vexed with disappointment,

# \$ 249. Joy and GRIEF.

Let not thy mirth be so extravagant as to intoxicate thy mind, nor thy sorrow so heavy as so depress thy heart. This world affordeth no good so transporting, nor inside the hange evil so severe, as should raise thee far above, or fink thee much beneath, the balance of moderation.

Lo! yonder standeth the house of Joy.

It is painted on the outside, and looketh gay; thou mayest know it from the continual noise of mirth and exultation that issueth from it.

The mistress standeth at the door, and calleth aloud to all that pass by; she singeth and shouteth, and laugheth without ceasing.

She inviteth them to go in and taste the pleasures of life, which she telleth them are no where to be found but beneath her roof

But enter not thou into her gate; neither affociate thyfelf with those who frequent her house.

They call themselves the sons of Joy; they laugh and seem delighted: but madnels and folly are in all their doings.

They are linked with mischief hand in hind, and their sleps lead down to evil. Dangers beset them round about, and the pit of destruction yawneth beneath their feet.

Look now on the other fide, and behold, in that vale, overshadowed with trees, and hid from the fight of men, the habitation of Sorrow.

Her bosom heaveth with sights, her mouth is filled with lamentation; she delighteth to dwell on the subject of human mifery.

She looketh on the common accidents of life and weepeth; the weakness and wickedness of man is the theme of her lips.

All nature to her teemeth with evil, every object she seeth is tinged with the gloom of her own mind, and the voice of complaint saddeneth her dwelling day and night.

Come not near her cell; her breath is contagious; she will blast the fruits, and wither the flowers, that adorn and sweeten the garden of life.

In avoiding the house of Joy, let not thy feet betray thee to the borders of this dismal mansion; but pursue with care the middle path, which shall lead thee by a gentle ascent to the bower of Tranquillity.

With her dwelleth Peace, with her dwelleth Safety and Contentment. She is cheerful but not gay; the is ferious, but not grave; the vieweth the joys and the forrows of life with an equal and fleady eye.

From hence, as from an eminence, fhalt thou behold the folly and the mifery of those, who led by the gaiety of their hearts, take up their abode with the companions of Jollity and riotous Mirth; or infected with Gloominess and Melancholy, spend all their days in complaining of the woes and calamities of human life.

Thou shalt view them both with pity, and the error of their ways shall keep thy feet from straying.

#### § 250. ANGER.

As the whirlwind in its fury teareth up trees, and deformeth the face of nature, or as an earthquake in its convulsions overturneth whole cities; so the rage of an angry man throweth mischief around him. Danger and destruction wait on his hand.

But confider, and forget not thine own weakness; so shalt thou pardon the failings of others.

Indu'ge not thyfelf in the passion of anger; it is whetting a sword to wound thine own breast, or murder thy friend.

If thou bearest slight provocations with patience, it shall be imputed unto thee for wisdom; and if thou wipest them from thy remembrance, thy heart shall not reproach thee.

Seeft thou not that the angry man lofeth his understanding? Whilst thou art yet in thy senses, let the wrath of another be a lesson to thyself.

Do nothing in a passion. Why wilt thou put to sea in the violence of a storm?

If it be disticult to rule thine anger, it is wife to prevent it: avoid therefore all occasions of falling into wrath; or guard thyself against them whenever they occur.

A fool is provoked with infolent speech-

es, but a wife man laugheth them to fcorn.

Harbour not revenge in thy breast, it will torment thy heart, and discolour its best inclinations.

Be always more ready to forgive, than to return an injury: he that watches for an opportunity of revenge, lieth in wait against himself, and draweth down mischief on his own head.

A mild answer to an angry man, like water cast upon the fire, abateth his neat; and from an enemy he shall become thy friend.

Consider how few things are worthy of anger, and thou wilt wonder that any but fools should be wrath.

In folly or weakness it always beginneth; but remember, and be well affured, it seldom concludeth without repentance.

On the heels of Folly treadeth Shame; at the back of Anger standeth Remorfe.

A84 .5 251. PITT

#### \$ 451. PITY.

As bloffoms and flowers are strewed upon earth by the hand of spring, as the kindness of summer produceth in perfection the bounties of harvest; so the smiles of pity shed blessings on the children of missortune.

He who pitieth another, recommendeth bimself; but he who is without compassion, deserveth it not.

The butcher relenteth not at the bleating of the lamb; neither is the heart of the cruel moved with distress.

But the tears of the compassionate are fweeter than dew drops falling from roles on the bosom of the spring.

Shut not thine ear therefore against the cries of the poor; neither harden thine heart against the calamities of the innocent,

When the fatherless call upon thee, when the widow's heart is sunk, and she imploreth thy affistance with tears of forrow; O pity her affisction, and extend thy hand to those who have none to help them.

When thou feelt the naked wanderer of the fireet, shivering with cold, and destitute of habitation; let bounty open thine heart, let the wings of charity shelter him from death, that thine own foul may live.

Whilst the poor man groaneth on the bed of sickness, whilst the unfortunate languish in the horrors of a dungcon, or the hoary head of age lists up a seeble eye to thee for pity; O how canst thou riot in superfluous enjoyments, regardless of their wants, unseeling of their woes!

#### § 252. Desire and Love.

Beware, young man, beware of the allucements of wantonners, and let not the harlot tempt thee to excess in her delights.

The madness of desire shall deseat its own pursuits; from the blindness of its rage thou shalt rush upon destruction.

Therefore give not up thy heart to her fweet enticements, neither fuffer thy foul to be enflaved by her enchanting delufions.

The fountain of health, which must supply the stream of pleasu c, shall quickly be dried up, and every spring of joy shall be exhausted.

In the prime of thy life old age shall

overtake thee; thy fun shall decline in the morning of thy days.

But when virtue and modesty enlighten her charms, the lustre of a beautiful woman is brighter than the stars of heaven, and the influence of her power it is in vain to resist.

The whiteness of her bosom transcendeth the lily; her smile is more delicious than a garden of roses.

The innocence of her eye is like that of the turtle; fimplicity and truth dwell in her heart.

The kisses of her mouth are sweeter than honey; the persumes of Arabia breathe from her lips.

Shut not thy bosom to the tenderness of love; the purity of its slame shall ennoble thy heart, and soften it to receive the fairest impressions.

#### § 253. W O M A N.

Give ear, fair daughter of love, to the inflructions of prudence, and let the precepts of truth fink deep in thy heart, fo field the charms of thy mind add fuffre to the elegance of thy form; and thy beauty, like the role it refembleth, shall retain its fweetness when its bloom is withered.

In the spring of thy youth, in the morning of thy days, when the eyes of men gaze on thee with delight, and nature whispereth in thine ear the meaning of their looks; ah! hear with caution their feducing words; guard well thy heart, nor listen to their soft persuasions.

Remember that thou art made man's reasonable companion, not the slave of his passion; the end of thy being is not merely to gratify his loose desire, but to assist him in the toils of life, to soothe him with thy tenderness, and recompence his care with soft endearments.

Who is the that winneth the heart of man, that subdueth him to love, and reigneth in his breast?

Lo! yonder she walketh in maiden sweetness, with innocence in her mind, and modesty on her cheek.

Her hand seeketh employment, her foot delighteth not in gadding abroad.

She is cloathed with neatners, the is fed with temperance; humility and meekners are as a crown of glory circling her head.

On her tongue dwelleth music, the sweetness of honey floweth from her lips.

Decency

Decency is in all her words, in her anfwers are mildness and truth,

Submission and obedience are the lessons of her life, and peace and happiness are her reward.

Before her steps walketh prudence, and virtue attendeth at her right hand.

Her eye speaketh softness and love; but discretion with a scepter sitteth on her brow.

The tongue of the licentious is dumb in her presence, the awe of her virtue keepeth him filent.

When fcandal is bufy, and the fame of her neighbour is toffed from tongue to tongue; if charity and good nature open not her mouth, the finger of filence refleth on her lip.

Her breast is the mansion of goodness, and therefore she suspected no evil in others.

Happy were the man that should make her his wife: happy the child that shall call her mother.

She prefideth in the house, and there is peace; she commandeth with judgment, and is obeyed.

She arifeth in the morning, she considers her affairs, and appointeth to every one their proper business.

The care of her family is her whole delight, to that alone she applieth her sludy; and elegance with frugality is seen in her mansions.

The prudence of her management is an honour to her husband, and he heareth her praise with a secret delight.

She informeth the minds of her children with wifdom: the fathioneth their manners from the example of her own goodness.

The word of her mouth is the law of their youth, the motion of her eye commandeth their obedience.

She speaketh, and her servants sly; she pointeth, and the thing is done: for the law of love is in their hearts, and her kindness addeth wings to their sect.

In prosperity she is not pussed up; in adversity she healeth the wounds of fortune with patience.

The troubles of her husband are alleviated by her counsels, and sweetened by her endearments: he putteth his heart in her bosom, and receiveth comfort.

Happy is the man that hath made her his wife; happy the child that calleth her mother.

#### CONSANGUINITY, or NATURAL RELATIONS. § 254. HUSBAND.

Take unto thyfelf a wife, and obey the

ordinance of God; take unto thyfelf a wife and become a faithful member of fociety.

But examine with care, and fix not suddenly. On thy present choice depends thy

future happiness.

If much of her time is destroyed in dress and adoinments; if she is enamoured with her own beauty, and delighteth in her own praise; if she laugheth much, and talketh loud; if her foot abideth not in her father's house, and her eyes with boldness rove on the faces of men: though her beauty were as the sun in the firmament of heaven, turn thy face from her charms, turn thy fect from her paths, and suffer not thy soul to be ensured by the allurements of imagination.

But when thou findest sensibility of heart, joined with softness of manners; an accomplished mind, with a form agreeable to thy fancy; take her home to thy house, she is worthy to be thy friend, thy companion in life, the wife of thy bosom.

O cherish her as a blessing sent thee from heaven. Let the kindness of thy behaviour endear thee to her heart.

She is the mistress of thy house; treat her therefore with respect, that thy fervants may obey her.

Oppose not her inclination without cause; she is the partner of thy cares, make her also the companion of thy pleasures.

Reprove her faults with gentleness; exact not her obedience with rigour.

Trust thy secrets in her breast; her counfels are sincere, thou shalt not be deceived.

Be faithful to her bed; for she is the mother of thy children.

When pain and fickness affault her, let thy tenderness foothe her affliction: a look from thee of pity and love shall alleviate her grief, or mitigate her pain, and be of more avail than ten physicians.

Confider the tenderness of her sex, the delicacy of her frame; and be not severe to her weakness, but remember thine own impersections.

#### § 255. FATHER.

Consider thou who art a parent, the importance of thy trust: the being thou hast produced, it is thy duty to support.

Upon thee also it dependeth, whether the shild of thy bosom shall be a blessing or a curse to thyself; an useful or a worthless member to the community.

Prepare him early with instruction, and feason his mind with the maxims of truth.

Watch the bent of his inclination, set

him right in his youth, and let no evil habit gain strength with his years.

So shall he rife like a cedar on the mountains; his head shall be seen above the trees of the forest.

A wicked fon is a reproach to his father; but he that doth right is an honour to his grey hairs.

The soil is thine own, let it not want cultivation; the seed which thou sowest, that

also shalt thou reap.

Teach him obedience, and he shall bless thee; teach him modesty and he shall not be ashamed.

Teach him gratitude, and he shall receive benefits; teach him charity and he shall gain love.

Teach him temperance and he shall have health; teach him prudence, and fortune shall attend him.

Teach him justice, and he shall be honoured by the world; teach him sincerity, and his own heart shall not reproach him.

Teach him diligence, and his wealth shall increase; teach him benevolence, and his mind shall be exalted.

Teach him science, and his life shall be useful; teach him religion, and his death shall be happy.

#### § 256. Son.

From the creatures of God let man learn wisdom, and apply to himself the instruction they give.

Go to the desert, my son; observe the young stork of the wilderness; let him speak to thy heart; he beareth on his wings his aged sire, he lodgeth him with safety, and supplieth him with sood.

The piety of a child is sweeter than the incense of Persia offered to the sun; yea more delicious than odours wasted from a field of Arabian spices by the western gales.

Be grateful then to thy father, for he gave thee life; and to thy mother, for the fullained thee.

Hear the words of his mouth, for they are spoken for thy good; give ear to his admonition, for it proceedeth from love.

He hath watched for thy welfare, he hath toiled for thy case: do honour therefore to his age, and let not his grey hairs be treated with irreverence.

Forget not thy helpless infancy, nor the frowardness of thy youth, and include the infarmities of thy aged parents; affiit and support them in the decline of life. So shall their hoary heads go down to the grave in peace; and thine own children, in reverence of thy example, shall repay thy piety with silial love.

#### § 257. Brothers.

Ye are the children of one father, provided for by his care; and the breaft of one mother hath given you fuck.

Let the bonds of affection, therefore, unite thee with thy brothers, that peace and happiness may dwell in thy father's house.

And when ye feparate in the world, remember the relation that bindeth you to love and unity; and prefer not a stranger to thine own blood,

If thy brother is in advertity, affilt him; if thy fifter is in trouble, forfake her not.

So shall the fortunes of thy father contribute to the support of his whole race: and his care be continued to you all in your love to each other.

PROVIDENCE; or the accidental Differences in Men.

#### \$ 258. Wise and IGNORANT.

The gifts of the understanding are the treasures of God; and he appointed to every one his portion, in what measure seemeth good unto himself.

Hath he endued thee with wisdom? hath he enlightened thy mind with the know-ledge of truth? Communicate it to the ignorant, for their instruction; communicate it to the wise, for thine own improvement.

True wisdom is less presuming than soliy. The wise man doubteth often, and changeth his mind; the sool is obstinate, and doubteth not; he knoweth all things but his own ignorance.

The pride of emptiness is an abomination; and to talk much is the foolithness of folly. Nevertherless, it is the part of wisdom to bear with patience their impertinence, and to pity their absurdity.

Yet be not puffed up with thine own conceit, neither boast of superior understanding; the clearest human knowledge is but blindness and folly.

The wife man feeleth his imperfections, and is humbled; he laboureth in vain for his own approbation: but the fool peepeth

n the shallow stream of his own mind, and s pleased with the pebbles which he sees at the bottom: he bringeth them up and sheweth them as pearls; and with the applause of his brethren delighteth he himfelf.

He boasteth attainments in things that are of no worth; but where it is a shame to be ignorant, there he hath no under-

Even in the paths of wisdom he toileth after folly; and shame and disappointment are the reward of his labour.

But the wife man cultivates his mind with knowledge: the improvement of arts is his delight, and their utility to the public crowneth him with honour.

Nevertheless the attainment of virtue he accounteth as the highest learning: and the science of happiness is the study of his life.

#### § 259. RICH and POOR.

The man to whom God hath given riches, and bleffed with a mind to employ them aright, is peculiarly favoured, and highly distinguished.

He looketh on his wealth with pleasure, because it affordeth him the means to do

He seeketh out objects of compassion: he enquireth into their wants; he relieveth with judgment, and without oftentation.

He affisteth and rewardeth merit: he encourageth ingenuity, and liberally promoteth every useful design.

He carrieth on great works; his country is enriched, and the labourer is employed; he formeth new schemes, and the arts receive improvement.

He considereth the superfluities of his table as belonging to the poor of his neighbourhood, and he defraudeth them not.

The benevolence of his mind is not checked by his fortune; he rejoiceth therefore in riches, and his joy is blameless.

But woe unto him that heapeth up wealth in abundance, and rejoiceth alone in the possession thereof:

That grindeth the face of the poor, and considereth not the sweat of their brows.

He thriveth on oppression without feeling ; the ruin of his brother disturbeth him

The terrs of the orphan he drinketh as milk; the cries of the widow are mulic to his car.

wealth; no grief nor distress can make impression upon it.

But the curse of iniquity pursueth him: he liveth in continual fear; the anxiety of his mind, and the rapacious defires of his own foul, take vengeance upon him for the calamities he has brought upon others.

O what are the mileries of poverty, in comparison with the gnawings of this man's heart.

Let the poor man comfort himself, year rejoice; for he hath many reasons.

He fitteth down to his morfel in peace: his table is not crowded with flatterers and devourers.

He is not embarrassed with a train of dependants, nor teafed with the clamours of folicitation.

Debarred from the dainties of the rich. he escapeth also their diseases.

The bread that he eateth, is it not sweet to his taste? the water he drinketh, is ic not pleasant to his thirst? yea, far more delicious than the richest draughts of the luxurious.

His labour preserveth his health, and procureth him a repose, to which the downy bed of floth is a stranger.

He limiteth his desires with humility, and the calm of contentment is sweeter to his foul than all the acquirements of wealth and

Let not the rich therefore presume on his riches, nor the poor in his poverty yield to his despondence; for the providence of God dispenseth happiness to them

#### § 260. MASTERS and SERVANTS.

Repine not, O man, at the state of fervitude: it is the appointment of God. and hath many advantages; it removeth thee from the cares and folicitudes of life.

The honour of a servant is his fidelity; his highest virtues are submission and obedience.

Be patient therefore under the reproofs of thy master; and when he rebuketh thee answer not again. The silence of thy resignation shall not be forgotten.

Be studious of his interests, be diligent in his affairs, and faithful to the trust which he reposeth in thee.

Thy time and thy labour belong unto him. Defraud him not thereof, for he payeth thee for them.

And thou who art a master, be just to His heart is hardened with the love of thy fervant, if thou expecteth from him fidelity :

fidelity; and reasonable in thy commands, if thou expectest a ready obedience.

The fpirit of a man is in him; feverity and rigour may create fear, but can never command his love.

Mix kindness with reproof, and reason with authority: so shall thy admonitions take place in his heart, and his duty shall become his pleasure.

He shall serve thee faithfully from the motive of gratitude; he shall obey thee cheerfully from the principle of love: and fail not thou, in return, to give his dili-

### 4 261. MAGISTRATES and SUBJECTS.

gence and fidelity their proper reward.

O thou, favourite of heaven, whom the fons of men, thy equals, have agreed to raife to fovereign power, and fet as a ruler over themfelves; confider the ends and importance of their truft, far more than the dignity and height of thy station.

Thou art cloathed in purple, and feated on a throne: the crown of majetly investeth thy temples; the sceptre of power is placed in thy hand: but not for thyself were these ensigns given; not meant for thine own, but

the good of thy kingdom.

The glory of a king is the welfare of his people; his power and dominion resteth on the hearts of his subjects.

The mind of a great prince is evalted with the grandeur of his fituation: he revolveth high things, and fearcheth for business worthy of his power.

He calleth together the wife men of his kingdom, he confulteth among them with freedom, and heareth the opinions of them all.

He looketh among his people with discernment; he discovereth the abilities of men, and employeth them according to their merits.

His magistrates are just, his ministers are wise, and the favourite of his bosom deceiveth him not.

He finite on the arts, and they flourish; the sciences improve beneath the culture of his hand.

With the learned and ingenious he delighteth himself; he kindleth in their breasts emulation, and the glory of his kingdom is exalted by their labours.

The spirit of the merchant who extendeth his commerce; the skill of the farmer, who enricheth his lands; the ingenuity of the artist, the improvement of the scholar;

all these he honoureth with his favour, or rewardeth with his bounty.

He planteth new colonies, he buildeth ftrong ships, he openeth rivers for convenience, he formeth harbours for safety; his people abound in riches, and the strength of his kingdom encreaseth.

He frameth his statutes with equity and wisdom; his subjects enjoy the fruits of their labour, in security; and their happiness consists in the observance of the law.

He foundeth his judgments on the principles of mercy; but in the punishment of offenders he is strict and impartial.

His ears are open to the complaints of his subjects; he restraines the hand of their oppressors, and deliveres them from their tyranny.

His people therefore look up to him as a father, with reverence and love; they confider him as the guardian of all they enjoy.

Their affection unto him begetteth in his breast a love of the public; the security of their happiness is the object of his care.

No murmers against him arise in their hearts: the machinations of his enemies endanger not his state.

His subjects are faithful, and firm in his cause; they stand in his detence as a wall of brass; the army of a tyrant flieth before them as chaff before the wind.

Security and peace bless the dwellings of his people; glory and strength encircle his throne for ever.

### The SOCIAL DUTIES.

### § 262. BENEVOLENCE.

When thou confiderest thy wants, when thou beholdest thy imperfections, acknowledge his goodness, O son of humanity! who honoured thee with reason, endued thee with speech, and placed thee in society, to receive and confer reciprocal helps and mutual obligations.

Thy food, thy cloathing, thy convenience of habitation; thy protection from the injuries, thy enjoyments of the comforts and the pleasures of life: all these thou owest to the affistance of others, and couldst not enjoy but in the bands of society.

It is thy duty therefore to be a friend to mankind, as it is thy interest that man should be friendly to thee.

As

As the rose breatheth sweetness from its own nature, so the heart of a benevolent man produceth good works.

He enjoyeth the ease and tranquillity of his own breast, and rejoiceth in the happiness and prosperity of his neighbour.

He openeth not his ear unto slander: the faults and the failings of men give a pain to his heart.

His defire is to do good, and he fearcheth out the occasions thereof; in removing the oppressions of another he relieveth himtelf.

From the largeness of his mind, he comprehendeth in his wishes the happiness of all men: and from the generosity of his heart, he endeavoureth to promote it.

### § 263. Justice.

The peace of fociety dependent on justice; the happiness of individuals, on the safe enjoyment of all their possessions.

Keep the defires of thy heart, therefore, within the bounds of moderation: let the hand of justice lead them aright.

Cast not an evil eye on the goods of thy neighbour; let whatever is his property be facred from thy touch.

Let no temptation allure thee, nor any provocation excite thee, to lift up thy hand to the hazard of his life.

Defame him not in his character; bear no false witness against him.

Corrupt not his fervant to cheat or forfake him; and the wife of his bosom, O tempt not to fin.

It will be a grief to his heart, which thou canst not relieve; an injury to his life, which no reparation can atone for.

In thy dealings with men be impartial and just; and do unto them as thou wouldst they should do unto thee.

Be faithful to thy trust, and deceive not the man who relieth upon thee; be assured it is less evil in the sight of God to steal, than to betray.

Oppress not the poor, and defraud not of his hire the labouring man.

When thou sellest for gain, hear the whisperings of conscience, and be satisfied with moderation; nor from the ignorance of the buyer make any advantage.

Pay the debts which thou owest, for he who gave thee credit, relied upon thine honour: and to with-hold from him his due, is both mean and unjust.

Finally, O fon of fociety! examine thy neart, call remembrance to thy aid; and if in any of these things thou sindest thou hast transgressed, take forrow and shame to thyself, and make speedy reparation to the utmost of thy power.

### § 264. CHARITY.

Happy is the man who hath fown in his breast the seeds of benevolence; the produce thereof shall be charity and love.

From the fountain of his heart shall rife rivers of goodness; and the streams shall overflow for the benefit of mankind.

He affifteth the poor in their trouble; he rejoiceth in furthering the prosperity of all men.

He cenfureth not his neighbour, he believeth not the tales of envy and malevolence, neither repeateth he their flanders.

He forgiveth the injuries of men, he wipeth them from his remembrance; revenge and malice have no place in his heart.

For evil he returneth not evil; he hateth not even his enemics, but requiteth their injuffice with friendly admonition.

The griefs and anxieties of men excite his compassion; he endeavoureth to alleviate the weight of their missortunes, and the pleasure of success rewardeth his labour.

He calmeth the fury, he healeth the quarrels of angry men, and preventeth the mischies of state and animosity.

He promoteth in his neighbourhood peace and good-will, and his name is repeated with praise and benedictions.

### \$ 265. GRATITUDE.

As the branches of a tree return their fap to the root from whence it arofe; as a river poureth his streams to the sea, where his spring was supplied; so the heart of a grateful man delighteth in returning a benefit received.

He acknowledgeth his obligations with cheerfulness; he looketh on his benefactor with love and efteem.

And if to return it be not in his power, he nourisheth the memory of it in his breast with kindness, he forgetteth it not all the days of his life.

The hand of the generous man is like the clouds of heaven, which drop upon the earth, fruits, herbage, and flowers: but the heart of the ungrateful is like a defert of fand, which swalloweth with greediness the showers that fall, and burieth them in its bosom, and produceth nothing.

Envy not thy benefactor, neither strive to conceal the benefit he hath conferred; for though the act of generosity commandeth admiration; yet the humility of gratitude toucheth the heart, and is amiable in the fight both of God and man.

But receive not a favour from the hands of the proud: to the felfish and avaricious have no obligation: the vanity of pride shall expose thee to shame, the greediness of avarice shall never be satisfied.

### 4 266. SINCERITY.

O thou who art enamoured with the beauties of Truth, and hast fixed thy heart on the simplicity of her charms, hold fast thy fidelity unto her, and forfake her not; the constancy of thy virtue shall crown thee with honour.

The tongue of the fincere is rooted in his heart: hypocrify and deceit have no place in his words.

He blusheth at falsehood, and is confounded: but in speaking the truth he hath a steady eve.

He supporteth as a man the dignity of his character; to the arts of hypocrify he scorneth to stoop.

He is consistent with himself; he is never embarraffed; he hath courage enough for sruth, but to lie he is afraid.

He is far above the meanness of dissimulation; the words of his mouth are the thoughts of his heart.

Yet with prudence and caution he openeth his lips; he studieth what is right, and fpeaketh with discretion.

He adviseth with friendship, he reproveth with freedom: and whatfoever he promifeth thall furely be performed.

But the heart of the hypocrite is hid in his breast; he masketh his words in the femblance of truth, while the business of his life is only to deceive.

He laugheth in forrow, he weepeth in joy; and the words of his mouth have no interpretation.

He worken in the dark as a mole, and funcieth he is safe; but he blundereth into light, and is betrayed and exposed, with his dirt on his head.

He passeth his days with perpetual confiraint; his tongue and his heart are for ever at variance.

He laboureth for the character of righteous man; and huggeth himself in the thoughts of his cunning.

O fool, fool! the pains which thou takes to hide what thou art, are more than would make thee what thou wouldst feem; and the children of wisdom shall mock at thy cunning, when, in the midst of security, thy disguise is stripped off, and the finger of derifion shall point thee to scorn.

### § 267. Religion.

There is but one God, the author, the creator, the governor of the world, almighty, eternal, and incomprehenfible.

The fun is not God, though his noblest image. He enliveneth the world with his brightness, his warmth giveth life to the products of the earth; admire him as the creature, the instrument of God; but worship him not.

To the One who is supreme, most wife and beneficent, and to him alone, belong worship, adoration, thanksgiving, and

Who hath stretched forth the heavens with his hand, who hath described with his finger the courses of the stars.

Who setteth bounds to the ocean, that it cannot pass; and saith unto the stormy winds, Be still.

Who shaketh the earth, and the nations tremble; who darteth his lightnings, and the wicked are dismayed.

Who calleth forth worlds by the word of his mouth; who fmiteth with his arm, and they fink into nothing.

" O reverence the Majesty of the Om-" nipotent; and tempt not his anger, left " thou be destroyed !"

The providence of God is over all his works; he ruleth and directeth with infinite wildom.

He hath instituted laws for the government of the world; he hath wonderfully varied them in his beings; and each, by his nature, conformeth to his will.

In the depths of his mind he revolveth all knowledge; the fecrets of futurity he open before him.

The thoughts of thy heart are naked to his view; he knoweth thy determinations before they are made.

With respect to his prescience, there is nothing contingent; with respect to his providence there is nothing accidental.

Wonderful he is in all his ways; his counfels

counsels are inscrutable; the manner of his knowledge transcendeth thy conception.

" Pay therefore to his wisdom all honour " and veneration; and bow down thyself " in humble and submissive obedience to " his supreme direction."

The Lord is gracious and beneficent; he hath created the world in mercy and love.

His goodness is conspicuous in all his works; he is the fountain of excellence, the centre of perfection.

The creatures of his hand declare his poodness, and all their enjoyments speak his praise; he clotheth them with beauty, he supporteth them with food, he preserveth them with pleasure from generation to generation.

If we lift up our eyes to the heavens, his glory shineth forth; if we cast them down upon the earth, it is full of his goodness; the hills and the vallies rejoice and fing; fields, rivers, and woods refound his praise.

But thee, O man, he hath distinguished with peculiar favour; and exalted thy

flation above all creatures.

He hath endued thee with reason, to maintain thy dominion: he hath fitted thee with language, to improve by fociety; and exalted thy mind with the powers of meditation to contemplate and adore his inimitable perfections.

And in the laws he hath ordained as the rule of thy life, so kindly hath he suited thy duty to thy nature, that obedience to his

"O praise his goodness with songs of

precepts is happiness to thyself.

" thanksgiving, and meditate in silence on " the wonders of his love; let thy heart " overflow with gratitude and acknow-" ledgment; let the language of thy lips " speak praise and adoration; let the ac-" tions of thy life shew thy love to his " law."

The Lord is just and righteous, and will judge the earth with equity and truth.

Hath he established his laws in goodness and mercy, and shall he not punish the transgressors thereof?

O think not, bold man! because thy punishment is delayed, that the arm of the Lord is weakened; neither flatter thyself with hopes that he winketh at thy doings.

His eye pierceth the secrets of every heart, and he remembereth them for ever; he respecteth not the persons or the stations

The high and the low, the rich and the poor, the wife and the ignorant, when the

foul hath shaken off the cumbrous shackles of this mortal life, shall equally receive from the sentence of God a just and everlasting retribution, according to their works.

Then shall the wicked tremble and be afraid; but the heart of the rightcous shall

rejoice in his judgments.

" O fear the Lord, therefore, all the " days of thy life, and walk in the paths " which he hath opened before thee. Let " prudence admonish thee, let temperance " restrain, let justice guide thy hand, bene-" volence warm thy heart, and gratitude " to heaven inspire thee with devotion. " These shall give thee happiness in thy " present state, and bring thee to the man-" fions of eternal felicity, in the paradife " of God."

This is the true Economy of Human

### ECONOMY of HUMAN LIFE.

Part II. Man confidered in the general-Confidered in regard to his infirmities and their effects-The advantages he may acquire over bis fellow-creatures-Natural accidents.

### MAN considered in the General.

### \$ 268. Of the Human Frame and STRUCTURE.

Weak and ignorant as thou art, O man! humble as thou oughtest to be, O child of the duft! wouldst thou raise thy thoughts to infinite wisdom? wouldst thou see Omnipotence displayed before thee? contemplate thine own frame.

Fearfully and wonderfully art thou made: praise therefore thy Creator with awe, and rejoice before him with reverence.

Wherefore of all creatures are thou only erect, but that thou shouldst behold his works! wherefore art thou to behold, but that thou mayst admire them! wherefore to admire, but that thou mayst adore their and thy Creator !

Wherefore is consciousness reposed in thee alone? and whence is it derived to thee?

It is not in flesh to think; it is not in bones to reason. The lion knoweth not that worms shall eat him; the ox perceiveth not that he is fed for slaughter,

Something is added to thee unlike to

what

what thou feest: something informs thy clay, higher than all that is the object of

thy senses. Behold, what is it?

Thy body remaineth perfect after it is fled, therefore it is no part of it; it is immaterial, therefore it is eternal: it is free to act, therefore it is accountable for its actions.

Knoweth the afs the use of food, because his teeth mow down the herbage? or standeth the crocodile erect although his back-bone is as straight as thine?

God formed thee as he had formed these: after them all wert thou created: superiority and command were given thee over all, and of his own breath did he communicate to thee thy principle of knowledge.

Know thyfelf then the pride of his creation, the link uniting divinity and matter; behold a part of God himfelf within thee; remember thine own dignity, nor dare to descend to evil or meanness.

Who planted terror in the tail of the ferpent? who clothed the neck of the horse with thunder? even he who hata instructed thee to cruth the one under thy feet, and to tame the other to thy purposes.

### § 269. Of the Use of the SENSES.

Vaunt not of thy body, because it was first formed; nor of thy brain, because therein thy soul resideth. Is not the master of the house more honourable than its walls?

The ground must be prepared before corn be planted; the potter must build his furnace before he can make his porcelane.

As the breath of Heaven fayeth unto the waters of the deep, I his way shall thy billows roll, and no other; thus high and no higher, shall they raise their sury; so let thy spirit, O man, actuate and direct thy shell; so let it repress its wildness.

Thy foul is the monarch of thy frame; fuffer not its subjects to rebel against it.

Thy body is as the globe of the earth, thy bones the pillars that fullain it on its basis.

As the ocean giveth rife to fprings, whose waters return again into its bosom through the rivers, so runneth thy life from thy heart outwards, and so runneth it into its place again.

Do not both retain their course for ever? Behold, the same God ordaineth them.

Is not thy nose the channel to persumes?
thy mouth the path to delicacies? Yet know

thou that perfumes long fmelt become offensive, that delicacies destroy the appetite they flatter.

Are not thine eyes the centinels that watch for thee? yet how often are they unable to distinguish truth from error?

Keep thy foul in moderation, teach thy fpirit to be attentive to its good; so shall these its ministers be always open to the conveyances of truth.

Thine hand is it not a miracle? is there in the creation aught like unto it? wherefore was it given thee, but that thou mightest stretch it out to the affishance of thy brother?

Why of all things living art thou alone made capable of blufhing? the world fhell read thy fhame upon thy face: therefore do nothing thameful.

Fear and diffmay, why rob they the countenance of its ruddy splendor? Avoid guilt, and thou shalt know that fear is beneath thee; that diffmay is unmaniv.

Wherefore to thee alone speak shadowin the visions of thy pillow? Reveren e them; for know, that dreams are from on high.

Thou man alone canst speak. Wonder at thy glorious prerogative; and pay to him who gave it thre a rational and welcome praise, teaching thy children wisdom, instructing the off pring of thy loins in piety.

## § 270. The Soul of Man, its Origin and Apple Crions.

The b'effings, O man! of thy external part, are health, vigour, and proportion. The greatest of these is health. What health is to the body, even that is honesty to the foul.

That thou hast a soul, is of all knowledge the most certain, of all truths the most plain unto thee. Be meek, be grateful for it. Seek not to know it gratefully: it is inscrutable.

Thinking, understanding, reasoning, willing, call not these the soul! They are its actions, but they are not its essence.

Raife it not too high, that thou be not despifed. Be not thou like unto those who fall by climbing; neither debase it to the sense of brutes; nor be thou like unto the horse and the mule, in whom there is no understanding.

Search it by its faculties; know it by its virtues. They are more in number

than

than the hairs of thy head; the stars of heaven are not to be counted with them.

Think not with Arabia, that one foul is parted among all men; neither believe thou with the fons of Egypt, that every man hath many: know, that as thy heart, fo also thy foul is one.

Doth not the sun harden the clay? doth it not also soften the wax? As it is one sun that worketh both, even so it is one soul that willeth contraries.

As the moon retaineth her nature though darkness spread itself before her face as a curtain, so the foul remaineth perfect even in the bosons of a fool.

She is immortal; the is unchange the; the is clike in all. Health cade, here forth to thew her loveliness, and application anomath her with the oil of without.

A'though the thill live after thee, thick not the was born before thee. She was concreated with thy fleth, and formed with thy brain.

Justice could not give her to thee exalted by virtues, nor mercy deliver her to thee deformed by vices. These must be thine, and thou must answer for them.

Suppose not death can shield thee from examination; think not corrupt on can hide thee from inquiry. He who formed thee of thou knowest not what, can be not raise thee to thou knowest not what again?

Perceiveth not the cock the hour of midnight? Exalteth he not his voice, to tell thee it is morning? Knoweth not the dog the footheps of his mafter? and flieth not the wounded goat unto the herb that health him? Yet when these die, their spirit returneth to the dust; thine alone surviveth.

Envy not to these their sentes, because Suicker than thine own. Learn that the edvantage lieth not in possibling good things, but in the knowing to use them.

Hadft thou the ear of a flag, or were thine eye as flrong and piercing as the eagle's; didft thou equal the hounds in fmell, or could the apetrelign to tnee his tule, or the tortoife her feeling; yet without reason, what would they avail thee? Perish not all these like their kindred?

Hath any one of them the gift of speech? Cun any say unto thee, Therefore did I

The lips of the wife are as the doors of a cabinet; no fooner are they opened, but treasures are poured out before thee.

Like unto trees of gold arranged in beds of filver, are wife fentences uttered in due leafon. Canst thou think too greatly of thy soul? or can too much be said in its praise? It is the image of him who gave it.

Remember thou its dignity for ever; forget not how great a talent is committed to thy charge.

Whatfoever may do good may also do harm. Beware that thou direct her course to virtue

Think not that thou canst lose her in the crowd; suppose not that thou canst bury her in thy closet. Action is her delight, and she will not be withheld from it.

Her motion is perpetual; her attempts are univerfal; her agility is not to be suppressed. Is it at the uttermost parts of the earth? she will have it: Is it beyond ton region of the slars? yet will her eye discover it.

Inquiry is her delight. As one who traverteth the burning finds in fearch of water, fo is the foul that tearcheth after knowledge.

Guard her, for the is rath; restrain her, for the is integular; correct her, for the is outrageous; more supple is the than water, more slexible than wax, more yielding than air. Is there aught can bind her?

As a fivoid in the hard of a madman, even fo is the foul to bim who wanteth difference.

The end of her fearch is truth; her means to different it are reason and experience. But are not these weak, uncertain, and fallacious? How then shall she attain unto it?

General opinion is no proof of truth, for the generality of men are ignorant.

Perceived thou of thyfelf, the knowledge of him who created thee, the fenfe of the woodhip thou ewell unto him? are not these plan before thy face? And beheld! what is there more that man needeth to know?

## § 271. Of the Person and Uses of Human Litt.

As the eve of morning to the lark, as the shade of evening to the owl, as shoney to the bee, or as the carcase unto the vulture; even such is life unto the heart of

Though bright, it dazzleth not; though obscure, it displeaseth not; though sweet, it cloyeth not; though corrupt, it forbiddeth not; yet who is he that knoweth its true value?

Learn to esteem life as it ought; then art thou near the pinnacle of wisdom.

Rh.

Think

Think not with the fool, that nothing is more valuable: nor believe with the pretended wife, that thou oughtest to contemn it. Love it not for itself, but for the good it may be of to others.

Gold cannot buy it for thee, neither can mines of diamonds purchase back the moment thou hall now lost of it. Employ the

fucceeding ones in virtue.

Say not, that it were best not to have been born; or if born, that it had been best to die early: neither dare thou to ask of thy Creator, Where had been the evil that I had not existed? Good is in thy power; the want of good is evil; and if the question be just, lo! it condemneth

Would the fish swallow the bait if he knew the hook was hidden therein? would the lion enter the toils if he saw they were prepared for him? fo neither were the foul to perish with this clay, would man wish to live? neither would a merciful God have created him: know hence thou shalt live afterward.

As the bird is inclosed in the cage before he seeth it, yet teareth not his slesh against its fides; so neither labour thou vainly to run from the flate thou art in; but know it is allotted thee, and be content with it.

Though its ways are uneven, yet are they not all painful. Accommodate thyfelf to all; and where there is least appearance of evil, suspect the greatest danger.

When thy bed is straw, thou sleepest in fecurity; but when thou stretcheth thyself on roses, beware of the thorns.

A good death is better than an evil life: strive therefore to live as long as thou oughtest, not as long as thou canst. While thy life is to others worth more than thy death, it is thy duty to preserve it.

Complain not with the fool, with the fortness of thy time: remember that with

thy days, thy cares are shortened.

Take from the period of thy life the useless parts of it, and what remaineth? Take off the time of thine infancy, the fecond infancy of age, thy fleep, thy thoughtless hours, thy days of sickness: and even at the fulnels of years, how few feafons haft thou truly numbered.

He who gave thee life as a bleffing, shortened it to make it more so. To what end would longer life have ferved thee? Wishest thou to have had an opportunity of more vices? As to the good, will not he who limited thy span, be satisfied with

the fruits of it?

To what end, O child of forrow! would thou live longer? to breathe, to eat, to fee the world? All this thou hast done often already. Too frequent repetition, is it not tirefome? or is it not superfluous?

Wouldst thou improve thy wisdom and thy virtue? Alas! what art thou to know? or who is it that shall teach thee? Badly thou employest the little that thou hash dare not, therefore, to complain that more is not given thee.

Repine not at the want of knowledge: it must perish with thee in the grave. Be honest here, thou shalt be wife hereafter.

Say not unto the crow, why numberest thou feven times the age of thy lord? or to the fawn, why are thine eyes to fee my offspring to an hundredth generations? Are thele to be compared with thee in the abuse of life? are they riotous? are they cruel? are they ungrateful? Learn from them rather, that innocence of life and fimplicity of manners are the paths to a good old age.

Knowest thou to employ life better than these? then less of it may suffice thee.

Man who dares enflave the world when he knows he can enjoy his tyranny but a moment, what would he not aim at if he were immortal?

Enough hast thou of life, but thou regardeit it not: thou art not in want of it, O man! but thou art prodigal: thou throwest it lightly away, as if thou hadst more than enough; and yet thou repinest that it is not gathered again unto thee?

Know that it is not abundance which

maketh rich, but economy.

The wife continueth to live from his first period; the fool is always beginning.

Labour not after riches first, and think thou afterwards wilt enjoy them. He who neglecteth the present moment, throweth away all he hath. As the arrow passeth through the heart, while the warrior knew not that it was coming; fo shall his life be taken away before he knoweth that he hath it.

What then is life, that man should defire it? what breathing, that he should covet it?

Is it not a scene of delusion, a series of miladventures, a pursuit of evils linked on all fides together? In the beginning it " ignorance, pain is in its middle, and it end is forrow.

As one ways pusheth on another till both are involved in that behind them, even fo succeedeth evil to evil in the life of man;

the greater and the present swallow up the lesser and the past. Our terrors are real evils; our expectations look forward into improbabilities.

Fools, to dread as mortals, and to defire as if immortal!

What part of life is it that we would with to remain with us? Is it youth? can we be in love with outrage, licentiousnefs, and temerity? Is it age? then we are fond of infirmities.

It is faid, grey hairs are revered, and in length of days is hongur. Virtue can add reverence to the bloom of youth; and without it age plants more wrinkles in the foul than on the forehead.

Is age respected because it hateth riot? What justice is in this, when it is not age that despiseth pleasure, but pleasure that despiseth age.

Be virtuous while thou art young, so shall thine age be honoured.

Man considered in regard to his Infirmities, and their Effects.

### \$ 272. VANITY.

Inconstancy is powerful in the heart of man; intemperance swayeth it whither it will; despair engrosseth much of it; and fear proclaimeth, Behold, I sit unrivalled therein! but vanity is beyond them all.

Weep not therefore at the calamities of the human state; rather laugh at its follies. In the hands of the man addited to vanity, life is but the shadow of a dream.

The hero, the most renowned of human characters, what is he but the bubble of this weakness! the public is unstable and ungrateful; why should the man of wisdom endanger himself for fools?

The man who neglecteth his prefent concerns, to revolve how he will behave when greater, feedeth himself with wind, while his bread is eaten by another.

Act as becometh thee in thy present station; and in more exasted ones thy face shall not be assumed

What blindeth the eye, or what hideth the heart of a man from himself like vanity? Lo! when thou feet not thyself, then others discover thee most plainly.

As the tulip that is gaudy without imell, confpicuous without use; so is the man who setteth himself up on high, and hath not merit.

The heart of the vais is troubled while it feemeth content; his cares are greater than his pleasures.

His folicitude cannot rest with his bones; the grave is not deep enough to hide it; he extendeth his thoughts beyond his being: he bespeaketh praise to be paid when he is gone: but whom promiseth it, deceiveth him.

As the man that engageth his wife to remain in widowhood, that she disturb not his soul; so is he who expecteth that praise shall reach his ears beneath the earth, or cherish his heart in its shroud.

Do well while thou livest; but regard not what is said of it. Content thyself with deserving praise, and thy posterity shall rejoice in hearing it.

As the butterfly, who feeth not her own colours; as the jessamine, which feeleth not the feent it casteth around: so is the man who appeareth gny, and biddeth others to take notice of it.

To what purpose, saith he, is my vesture of gold? to what end are my tables filled with dainties, if no eye gaze upon them? if the world know it not? Give thy raiment to the naked, and thy food unto the hungry; so shalt thou be praised, and seed that thou deservest it.

Why bestowest thou on every man the slattery of unmeaning words! Thou knowest when returned thee, thou regardest it not. He knoweth he lieth unto thee; yet he knoweth thou wilt thank him for it. Speak in fincerity, and thou shalt hear with instruction

The vain delightesh to speak of himself; but he seeth not that others like not to hear him.

If he have done any thing worth praife, if he poiles that which is worthy admiration, his joy is to preclaim it, his pride is to hear it reported. The letire of such amin defeateth itself. Men tay not, Behold, he hath done is or, See, he p. heftern its but, mark how proud he is of it!

The heart of man cannot attend at once to many things. He who fixeth his foul on shew, loseth reality. He pursu to bus which break in their flight, while he treads to earth what would do him homour.

### \$ 273. INCONSTANCY.

Nature urgeth thee to inconstancy, O man! therefore guard thyself at all times against it.

Thou art from the womb of thy mother various and wavering. From the loins of thy father inhesitest thou instability; now then shalt thou be firm?

Bb 2 Those

Those who gave thee a body, furnished it with weakness; but he who gave thee a foul, armed thee with resolution. Employ it, and thou art wise; be wise, and thou art happy.

Let him who doeth well, beware how he boasteth of it; for rarely it is of his own will.

Is it not the event of an impulse from without born of uncertainty, enforced by accident, dependent on somewhat else? To these men, and to accident, is due the praise.

Beware of irrefolution in the intent of thy actions, beware of inflability in the execution; so shalt thou triumph over two

great failings of thy nature.

What reproacheth reason more than to act contrarieties? What can suppress the tendencies to these, but summers of mind?

The inconftant feeleth that he changeth, but he knoweth not why; he feeth that he escapeth from himself, but he perceived not how. Be thou incapable of change in that which is right, and men will rely upon thee.

Establish unto thyself principles of action, and see that thou ever act according to

them.

First know that thy principles are just, and then be thou inslexible in the path of them.

So shall thy passions have no rule over thee; so shall thy constancy enture thee the good thou possesses, and drive from thy door missortune. Anxiety and disappointment shall be strangers to thy gates.

Suspect not evil in any one, until thou seed it: when thou seed it, forget it not.

Whoso hath been an enemy, cannot be a friend; for man mendeth not of his faults.

How should his actions be right who hath no rule of life? Nothing can be just which proceedeth not from reason.

The inconflant hath no peace in his foul; neither can any be at ease whom he concerneth himself with.

His life is unequal; his motions are irregular; his foul changeth with the weather.

To-day he loveth thee, to-morrow thou art detected by him; and why? himself knoweth not wherefore he loved, or wherefore he now hateth.

To-day he is the tyrant; to-morrow thy fervant is lefs humble: and why? he who is arrogant without power, will be fervile where there is no subjection.

To-day he is profuse, to-morrow he gradueth unto his mouth that which it

should eat. Thus it is with him who know. eth not moderation.

Who shall say of the camelion, he is black, when the moment after, the verdure of the grass overspreadeth him!

Who shall say of the inconstant, he is joyful, when his next breath shall be spent

in fighing.

What is the life of fuch a man but the phantom of a dream? In the morning he rifeth happy, at noon he is on the rack: this hour he is a god, the next below a worm: one moment be laugheth, the next he weepeth; he now willeth, in an inflant he willeth not, and in another he knoweth not whether he willeth or no.

Yet neither ease or pain have fixed themselves on him; neither is he waved greater, or become less; neither hath he had cause for laughter, nor reason for his forrow: therefore shall none of them abide with him.

The happiness of the inconfant is as a palace built on the surface of the sand: the blowing of the wind carrieth away is foundation: what wonder then that it falleth?

But what exalted form is this, that hitherwards directs its even, its uninterrupted course? whose foot is on the earth, whose head is above the clouds?

On his brow fitteth majefly; fleadiness is in his port; and in his heart reigneth tranquillity.

Though obflacles appear in the way, he deigneth not to look down upon them; though heaven and earth oppose his palfage, he proceedeth.

The mountains fink beneath his tread; the waters of the ocean are dried up under the fole of his foot.

The tyger throweth herfelf across his way in vain; the spots of the leopard glow against him unregarded.

He marcheth through the embattled legions; with his hand he putteth afide the terrors of death.

Storms roar against his shoulders, but are not able to shake them; the thunder burstesh over his head in vain; the lightning serveth but to shew the glories of his countenance.

His name is RESOLUTION! He come in from the utmost parts of the easth; he seeth happiness as ar off before him; his eye discovereth her temple beyond the limits of the pole.

He walketh up to it, he entereth boldly, and he remaineth there for ever.

Estal lish

Establish thy heart. O man! in that which is right; and then know the greatest of human praise is to be immutable.

### § 274. WEAKNESS.

Vain and inconstant as thou art, O child of imperfection! how can't thou but be weak? Is not inconstancy connected with fially? Can there be vanity without infirmit /? avoid the danger of the one, and thou shalt escape the mischiefs of the other.

Wherein art thou most weak? in that wherein thou feemed most strong; in that wherein most thou gloriest: even in polfeffing the things which thou hall: in all ig the good that is about thee.

Are not thy defires also frail? or knowell thou even what it is thou wouldest with? When thou haif obtained what most taou loughtest after, behold it contenteth thee not.

Wherefore lofeth the pleasure that is before thee its reli h? and why appeareth that which is yet to come the liveeter? Because thou art wearsed with the good of tais, because thou knowed not the evil of that which is not with thee, Know that to be content is to be happy.

Coaldest thou cause for thyself, would thy Creator lay before thee all that thine heart could a k for i would happiness then remain with thee? or would joy dwell al-

Ways in thy gates?

Alas! thy weakness forbiddeth it; thy infilmity declareth against it. Variety is to thee in the place of pleature; but that which permanently delignteth must be per-

When it is gone, thou repentest the loss of it, though, while it was with thee, thou

desputeit it.

That which succeedeth it, hath no more pleasure for thee: and thou afterwards quarrellest with thyself for preferring it; behold the only circumstance in which thou erreit not!

Is there any thing in which thy weakness appeareth more than in deniring things? It is in the possessing and in the u.ing them.

Good things cease to be good in our enjoyment of them. What nature meant hare liverts, are fources or bitterness to us; from our delights arise pain; from our joys,

Be moderate in the enjoyment, and it shall remain in thy possession; let thy joy be founded on reason; and to its end shall forrow be a stranger.

The delights of love are ushered in by fighs, and they terminate in languishment and dejection. The object thou burnest for, naufeates with fatiety: and no fooner haft thou possessed it, but thou art weary of its presence.

Join effects to thy admiration, unite friendship with thy love; so thalt thou find in the end, content fo absolute, that it furpulleth raptures, tranquillity more worth

than ecllafy.

Gol math given thee no good without its almixture of evil; but he hath given the also the means of throwing off the evil foun it.

As juy is not without the alloy of pain, to neither is forrow without its portion of pleasu e. Joy and grief, though unlike, are united. Our own choice only can give them us entire.

Melancholy itself often giveth delight, and the extremity of joy is mingled with tears.

The best things in the hands of a fool may be turned to his destruction; and out of the worst the wife will find the means of good.

So blended is weakness in thy nature, O man; that thou hall not firength either to be good, or to be evil entirely. Rejoice that thou canst not excel in evil, and let the good that is within thy reach content thec.

The virtues are allotted to various flat tions. Seck not after impossibilities, nor greve that thou can't not pollels them at all.

Wouldst thou at once have the liberality of the rich, and the contentment of the poor? or shall the wife of thy bolom be despifed, because she sheweth not the virtues of the widow?

If thy father fink before thee in the divino is of thy country, can at once thy juftice deilroy him, and thy duty fave his life!

If thou beholdest thy brother in the agonies of a flow death, is it not mercy to put a period to his life, and is it not also death to be his murdeier?

Truth is but one; thy doubts are of thine own raising. He was made virtues what they are, planted also in thee a knowledge of their pre-eminence. Act as thy foul dictates to thee, and the end shall be always right.

### \$ 275. Of the Insufficiency of Knowledge.

If there is any thing lovely, if there is any thing defirable, if there is any thing B b 2 within within the reach of man that is worthy of praise, is it not knowledge? and yet who

is he that attaineth unto it?

The flateiman proclaimeth that he hath it; the ruler of the people claimeth the praise of it; but findeth the subject that he possesseth it?

Evil is not requisite to man; neither can vice be necessary to he tolerated: yet how many evils are permitted by the connivance of the laws? how many crimes committed by the decrees of the council?

But be wife, O ruler! and learn, O thou that art to command the nations! One crime authorized by thee, is worle than the

escape of ten from punishment.

When thy people are numerous, when thy fons increase about thy table; sendest thou them not out to flay the innocent, and to fall before the fword of him whom they have not offended?

If the object of thy defires demandeth the lives of a thoutand, fayest thou not, I will have it? Surely thou forgettett that he who created thee, created also there; and that their blood is as rich as thine.

Sayest thou, that justice cannot be executed without wrong! furely thine own words condemn thee.

Thou who flatterest with false hopes the criminal, that he may confeis his guit; art thou not unto him a criminal? or is thy guilt the less, because he cannot punish it ?

When thou commandest to the torture him who is but suspected of ill, darest thou to remember, that thou mayest rack the in-

is thy purpose answered by the event? is thy foul fatisfied with his confession? Pain will enforce him to say what is not, as easy as what is; and anguish hath caused innocence to accuse herself

That thou mayest not kill him without cause, thou doft worse than kill him: that thou mayest prove if he be guilty, thou de-

Aroyest him innocent.

O blindness to all truth! O insufficiency of the wildom of the wife! know when thy judge shall bid thee account for this, thou thalt wish ten thousand guilty to have gone free, rather than one innocent then to stand forth against thee.

Insufficient as thou art to the maintenance of justice, how shalt thou arrive at the knowledge of truth? how shalt thou ascend to the footstep of her throne?

As the owl is blinded by the radiance of the fun, so shall the brightness of her

countenance dazzle thee in thy approaches. If thou wouldst mount up into her throne, first bow thyself at her footstool:

If thou wouldit arrive at the knowledge of her, first inform thyself of thine own ig-

norance.

More worth is the than pearls, therefore feek her carefully: the emerald, and the fapphire, and the ruby, are as dirt beneath her feet; therefore puriue her manfully.

I he way to her is labour; attention is the pilot that must conduct thee into her ports. But weary not in the way; for when thou art arrived at her, the toil shall

be to thee for pleasure.

Say not unto thyself, Behold, truth breedeth hatred, and I wil avoid it; diffimulation raiseth friends, and I will follow it. Are not the enemies made by truth, better than the friends obtained by flattery?

Naturally doth man defire the truth, yet when it is before him, he will not apprehend it; and if it force itself upon aim, is he not offended at it?

The fault is not in truth, for that is amiable: but the weakness of men beareth not its fplendour.

Wouldst thou see thine own insufficiency more plainly? view thyself at thy devotions! To what end was religion imitituted, but to teach thee thine infirmities, to remind thee of thy weakness, to thew thee that from heaven alone thou art to hope for good?

Doth it not remind thee that thou art duit! doth it not tell thee that thou art ashes? And behold repentance is not built

on frailty?

When thou givest an oath, when thou swearest thou wilt not deceive; behold it spreadeth shame upon thy face, and upon the face of him that receiveth it. Learn to be just, and repentance may be forgotten; learn to be honelt, and oaths are unnccessary.

The shorter follies are, the better: say not therefore to thyself, I will not play the

fool by halves.

He that heareth his own faults with patience, shall reprove another with boldnels.

He that giveth a denial with reason, thall fuffer a repulse with moderation.

If thou art suspected, answer with freedom: whom should suspicion affright, except the guilty?

The tender of heart is turned from his

purpose by supplications, the proud is rendered more obstinate by entreaty, the sense of thine insufficiency commanded thee to hear; but to be just, thou must hear without thy passions.

### \$ 276. MISERY.

Feeble and infufficient as thou art, O man, in good; frail and inconflant as thou art in pleasure; yet there is a thing in which thou art strong and unshaken. Its name is Misery.

It is the character of thy being, the prerogative of thy nature; in thy breaft alone it relideth; without thee there is nothing of it. And behold, what is its fource, but thine own paffions?

He who gave thee these, gave thee also

reason to subdue them; exert it, and thou shalt trample them under thy feet.

Thine entrance into the world, is it not fhameful? thy deftruction is it not glorious? Lo! men adorn the influments of death with gold and gems, and wear them above their garments.

He who begetteth a man, hideth his face; but he who killeth a thousand is

honoured.

Know thou, notwithstanding, that in this is error. Custom cannot alter the nature of truth; neither can the opinion of men destroy justice; the glory and the shame are misplaced,

There is but one way for man to be produced: there are a thousand by which he

may be destroyed.

There is no praife, or honour, to him who giveth being to another; but triumphs and empire are the rewards of murder.

Yet he who hath many children, hath as many bleffings; and he who hath taken away the life of another, shall not enjoy his own.

While the favage curfeth the birth of his fon, and bleffeth the death of his father, doth he not call himself a monther?

Enough of evil is allotted unto man; but he maketh it more while he lamenteth it.

The greatest of all human ills is forrow; too much of this thou art born unto; add not unto it by thy own perverseness.

Grief is natural to thee, and is always about thee; pleasure is a stranger, and visiteth thee but by times: sie well thy reason, and forrow shall be east behind thee; be prudent, and the visits of joy shall remain long with thee.

Every part of thy frame is capable of

forrow; but few and narrow are the paths that lead to delight.

Pleasures can be admitted only simply; but pains ruth in a thousand at a time.

As the blaze of straw sadeth as soon as it is kindled, so passet away the brightness of joy, and thou knowest not what is become of it.

Sorrow is frequent; pleasure is rare; pain cometh of itself; delight must be purchased; grief is unmixed; but joy wanteth not its alloy of bitterness.

As the foundest health is less perceived than the flightest malady, so the highest joy toucheth us less deep than the smallest forrow.

We are in love with anguish; we often fly from pleasure; when we purchase it, costeth it not more than it is worth?

Reflection is the business of man: a fense of his state is his first duty; but who remembereth himself in joy. It is not in mercy then that forrow is allotted unto us?

Man foreseeth the evil that is to come; he remembereth it when it is past: he considereth not that the thought of affliction woundeth deeper than the affliction itself. Think not of thy pain, but when it is upon thee, and thou shalt avoid what most would hurt thee.

He who weepeth before he needeth, weepeth more than he needeth: and why,

but that he loveth weeping?

The stag weepeth not till the spear is listed up against him; nor do the tears of the beaver fall, till the hound is ready to seize him: man anticipateth death, by the apprehensions of it; and the sear is greater misery than the event itself.

Be always prepared to give an account of thine actions; and the best death is that which is least premeditated.

### \$ 277. Of JUDGMENT.

The greatest bounties given to man, are judgment and will; happy is he who misapplieth them not.

As the torrent that rolleth down the mountains, destroyeth all that is borne away by it; so doth common opinion overwhelm reason in him who submitteth to is, without saying, What is thy soundation?

See that what thou receivelt as truth be not the shadow of it; what thou acknow-ledgest as convincing, is often but plausible. Be firm, be constant, determine for thyself; so shalt thou be aniwerable only for thine own weakness.

· Say not that the event proveth the wildom of the action: remember man is not above the reach of accidents.

Condemn not the judgment of another, because it differeth from thine own; may not even both be in an error?

When thou effectment a man for his titles. and contemneth the stranger because he wanteth them, judgest thou not of the · camel by its bridle?

Think not thou art revenged of thine enemy when thou flayest him: thou puttest him beyond thy reach, theu givest him quiet, and thou takest from thyself all

means of hurting him.

Was thy mother incontinent, and grieveth it thee to be told of it? Is finilty in thy wife, and art thou pained at the reproach of it? He who despiteth thee for it, condemneth himself. Art thou answerable for the vices of another?

Difregard not a jewe', because thou posfeffest it; neither enhance then the value of a thing, because it is another's: poslession to the wife addeth to the price of it.

Honour not thy wife the lefs, because she is in thy power; and despite him that bath faid, Would thou love her less? many her! What hath put her into thy power, but her confidence in thy virtue? thouldit thou love her lefs for being more obliged to her!

If thou wert just in thy courtship of her, though thou neglectest her while thou hast her, yet shall her loss be bitter to thy foul.

He who thinketh another bleft, only because he possesseth her; if he be not wifer than thee, at least he is more happy.

Weigh not the lofs thy friend hath fuffered by the tears he sheddeth for it; the greatest griefs are above these expressions of them.

Esteem not an action because it is done with noise and pomp; the noblest foul is that which doth great things, and is not moved in the doing them.

Fame allonisheth the ear of him who heareth it; but tranquility rejoiceth the heart that is peffeffed of it.

.Attribute not the good actions of another to had causes: thou canst not know his heart; but the world will know by this, that thine is full of envy.

There is not in hypocrify more vice than folly; to be honest is as easy as to

Be more ready to acknowledge a beneat than to revenge an injury; so shalt thou have more benefits than injuries done unto

Be more ready to love than to hate; fo fhalt thou be loved by more than hate thee.

Be willing to commend, and be flow to censure; so shall praise be upon thy virtues, and the eye of enmity shall be blind to thy imperfections.

When thou dost good, do it because it is good; not because men esteem it: wh n thou avoidest evil, fly it because it is ev !: not because men speak against it: be bonest for love of honeity, and thou shalt because formly fo; he that doth it without principle, is wavering.

With rather to be reproved by the wife. than to be applauded by him who hath no underlanding; when they tell thee of a fault, they suppose thou canst improve; the other, when he praifeth thee, thinked thou

like unto himfelf.

Accept not an office for which thou art rot qualified, left he who knoweth more of it despite thee.

Instruct not another in that wherein thyfelf art ignorant; when he feeth it, he will upbraid thee.

Expect not a friendship with him who hath injured thee; he who suffereth the wrong, may forgive it; but he who doth it, never will be well with him.

Lay not too great obligations on him thou withest thy friend; behold! the fense of them will drive him from thee: a little bereht gaineth friendship; a great one maketh an enemy.

Nevertheless, ingratitude is not in the nature of man; neither is his anger irreconcileable: he hateth to be put in mind of a debt he cannot pay; he is ashamed in the presence of him whom he hath injured.

Repine not at the good of a stranger, neither rejoice thou in the evil that befalleth thine enemy: withest thou that others foould do thus to thee?

Wouldst thou enjoy the good-will of all men, let thine own benevolence be univerfal. If thou obtained it not by this, no other means could give it thee : and know, though thou hast it not, thou hast the greater pleafure of having merited it.

#### \$ 278. PRESUMPTION.

Pride and meanness seem incompatible; but man reconcileth contraricties: he is at once the most miserable and the most arrogant of all creatures.

Prefumption is the bane of reason; it is

the nurse of error; yet it is congenial with reason in us.

Who is there that judgeth not either too highly of himself, or thinketh too meanly of others.

Our Creator himself escapeth not our presumption: how then shall we be safe from one another?

What is the origin of superstition? and whence ariseth salse worship? From our presuming to reason about what is above our reach, to comprehend what is incomprehensible.

Limited and weak as our understandings are, we employ not even their little forces as we ought. We foar not high enough in our approaches to God's greatness; we give not wing enough to our ideas, when we enter into the adoration of divinity.

Man who fears to breathe a whisper against his earthly fovereign, trembles not to arraign the dispensations of his God: he forgetteth his majesty, and rejudgeth his judgments.

He who dateth not repeat the name of his prince without honour, yet blusheth not to call that of his Creator to be witness to a lie.

He who would hear the fentence of the magistrate with filence, yet dareth to plead with the Eternal; he attempteth to sooth him with intreaties, to flatter him with promises, to agree with him upon conditions; nay, to brave and murmur at him if his request is not granted.

Why art thou unpunished, O man! in thy impiety, but that this is not thy day of retribution.

Be not like unto those who fight with the thunder; neither dare thou to deny thy Creator thy prayers, because he chaitiseth thee. Thy madness in this is on thine own head; thy impiety hurteth no one but thyself.

Why boasteth man that he is the favourite of his Maker, yet neglecteth to pay his thanks and his adorations for it? How suiteth such a life with a belief so haughty?

Man, who is truly but a mote in the wide expanse, believeth the whole earth and heaven to be created for him. he thinketh the whole frame of nature hath interest in his well-being.

As the fool, while the images tremble on the bosom of the water, thinketh that trees, towns, and the wide horison, are dancing to do him pleasure; so man, while

nature performs her destined course, believes that all her motions are but to entertain his eye.

While he courts the rays of the fun to warm him, he supposeth it made only to be of use to him; while he traceth the moon in her nightly path, he believeth that she was created to do him pleasure.

Fool to thine own pride! be humble! know thou art not the cause why the world holdeth its course; for thee are not made the vicissitudes of summer and winter.

No change would follow if thy whole race existed not; thou art but one among millions that are blessed in it.

Exist not thyself to the heavens; for, lo, the angels are above thee; nor disdain thy fellow-inhabitants of the earth, though they are inferior to thee. Are they not the work of the same hand?

Thou who are happy by the mercy of thy Creator, how darest thou in wantonness put others of his creatures to torture? Beware that cruelty return not upon thee.

Serve they not all the same universal Master with thee? Hath he not appointed unto each its laws? If ith he not care of their preservation? and darest thou to infringe it?

Set not thy judgment above that of all the earth; neither condemn as falfehood what agreeth not with thine own apprehension. Who gave thee the power of determining for others? or who took from the world the right of choice?

How many things have been rejected, which are now received as truths? How many now received as truths, shall in their turn be despited? Of what then can man be certain?

Do the good that thou knowest, and happiness shall be unto thee. Virtue is more thy business here than wisdom.

Truth and falsehood, have they not the fame appearance in what we understandnot? what then but our presumption can determine between them?

We cafily believe what is above our comprehension: or we are proud to pretend it, that it may appear we understand it. Is not this folly and arrogance?

Who is it that affirms most boldly; who is it that holds his opinion most obstinately? Even he who hath most ignorance: for he also hath most pride.

Every man, when he layeth hold of an opinion, defireth to remain in it; but most of all he who hath most presumption. He contenteth not himself to betray his own foul;

7

Soul; but he will impose on others to be-

Say not that truth is established by years, or that in a multitude of believers there is certainty.

One human proposition hath as much authority as another, if reason maketh not the difference.

Of the AFFECTIONS of MAN, which are hurtful to himself and others.

§ 279. COVETOUENESS.

Riches are not worthy a strong attention; therefore an earnest care of obtaining them is unjustifiable.

The defire of what man calleth good, the joy he taketh in possessing it, is grounded only in opinion. Form not thy opinion from the vulgar; examine the worth of things thyself, and thou shalt not be covetous.

An immoderate defire of richefs is a poifon lodged in the foul. It contaminates and defiroys every thing that was good in it. It is no fooner rooted there, than all virtue, all honefty, all natural affection, fly before the face of it.

The covetous would fell his children for gold; his parent might die ere he would open his coffer; nay, he confidereth not himself in respect of it. In the search of happiness he maketh himself unhappy.

As the man who felleth his house to purchase ornaments for the embellishment of it, even so is he who giveth up peace in the search of riches, in hope that he may be happy in enjoying them.

Where coverounels reigneth, know that the foul is poor. Wholo accounteth riches the principal good of man, will throw away all other goods in the pursuit of them.

Whoso feareth poverty as the greatest evil of his nature, will purchase to himself all other evils in the avoiding of it.

Thou fool, is not virtue more worth than riches? is not guilt more base than poverty? Enough for his necessities is in the power of every man; be content with it, and thy happiness shall smile at the forrows of him who heapeth up more.

of him who heapeth up more.

Nature hath hid gold beneath the earth, as if unworthy to be feen; filver hath she placed where thou tramplest it under thy feet. Meaneth she not by this to inform thee, that gold is not worthy thy regard, that filver is beneath thy notice?

Covetouiness burieth under the ground

millions of wretches; these dig for their and masters what returneth the injury; what maketh them more miserable than their slaves.

The earth is barren of good things where the hoardeth up treafure: where gold is in her bowels, there no herb groweth.

As the horse sindeth not there his grass, nor the mule his provender; as the fields of corn laugh not on the sides of the hills; as the clive holdeth not forth there her fruits, nor the vine her clusters; even so no good dwelleth in the breast of him whose heart broodeth over his treasure.

Riches are fervants to the wife; but they are tyrants over the foul of the fool.

The covetous ferveth his gold; it ferveth not him. He possessible the his wealth as the fick doth a fever; it burneth and tortureth him, and will not quit him until death.

Hath not gold destroyed the virtue of millions? Did it ever add to the goodness of any?

Is it not most abundant with the worst of men? wherefore then shouldst thou desire to be distinguished by possessing it?

Have not the wifelt been thole who have had leaft of it? and is not wifdom happines?

Have not the worst of thy species posfessed the greatest portions of it? and hath not their end been miserable?

Poverty wanteth many things; but covetousness denieth itself all.

The covetous can be good to no man; but he is to none so cruel as to himself.

If thou art industrious to procure gold, be generous in the disposal of it. Man never is so happy as when he giveth happiness to another.

### § 280. Profusion.

If there be a vice greater than the hoarding up of riches, it is the employing them to useless purposes.

He that prodigally lavisheth that which he hath to spare, robbeth the poor of what nature giveth them a right unto.

He who fquandereth away his treasure, resulted the means to do good: he denieth himself the practice of virtues whose reward is in their hand, whose end is no other than his own happiness.

It is more difficult to be well with riches, than to be at ease under the want of them. Man governeth himself much easier in poverty than in abundance.

Poverty requireth but one virtue, patience, to support it; the rich, if he have not many more, is guilty.

The poor hath only the good of his own flate committed unto him; the rich is intrufted with the welfare of thousands.

He that giveth away his treasure wisely, giveth away his plagues: he that retaineth thei inciease, heapeth up forrows.

Refuse not unto the stranger that which he winteth; deny not unto thy brother even that which thou wanted thyfelf.

Kn w there is more delight in being without what thou half given, than in polfelling millions which thou knowest not the ule of.

### \$ 281. Revenge.

The root of revenge is in the weakness of the foul: the most abject and timorous are the most addicted to it.

Who torture those they hate, but cowards? who murder those they rob but wo-

The feeling an injury, must be previous to the revenging it; but the noble mind disdaineth to fay, It hurts me.

If the injury is not below thy notice, he that doth it unto thee, in that, maketh himself so: wouldst thou enter the lists with thing inferior?

Difdain the man who attempteth to wrong thee; contemn him who would give thee disquiet.

In this thou not only preservest thine own peace, but thou inflictest all the punishment of revenge, without stopping to employ it against him.

As the tempest and the thunder affect not the fun or the stars, but spend their fury on stones and trees below; so injuries ascend not to the souls of the great, but waite themselves on such as are those who offer them.

Poorness of spirit will actuate revenge; greatness of soul despiseth the offence: nay, it doth good unto him who intended to have disturbed it.

Why seekest thou vengeance, O man! with what purpole is it that thou purfuest it? Thinkest thou to pain thine adversary by it? Know that thy felf feelest its greatest torments.

Revenge gnaweth the heart of him who is infected with it, while he against whom it is intended remaineth easy.

It is unjust in the anguish it inslicts; therefore nature intended it not for thee: needeth he who is injured more pain? or

not charity, temperance, prudence, and ought he to add force to the affiliation which another has cast upon him?

The man who meditateth revenge is not content with the mischief he hath received ; he addeth to his anguith the punishment due unto another: while he whom he feeketh to hurt, goeth his way laughing; he maketh himself merry at this addition to his miserv.

Revenge is painful in the intent, and it is dangerous in the execution: feldom doth the axe fall where he who lifted it up intended; and lo, he remembereth not that it must recoil against him.

While the revengeful feeketh his enemy's hurt, he oftentimes procureth his own destruction: while he aimeth at one of the eyes of his adversary, lo, he putteth out both his own.

If he attain not his end, he lamenteth ita if he succeed, he repenteth of it : the fear of justice taketh away the peace of his own foul; the care to hide him from it, destroyeth that of his friend.

Can the death of thine adversary fatiate thy hatred? can the fetting him at reft restore thy peace?

Wouldit thou make him forry for his offence, conquer him and spare him : in death he owneth not thy superiority; nor feeleth he more the power of thy wrath.

In revenge there should be a triumph of the avenger; and he who hath injured him, should feel his displeature; he should suffer pain from it, and thould repent him of the cause.

This is the revenge inspired from anger; but that which makes thee great is contempt.

Murder for an injury ariseth only from cowardice: he who inflicteth it. feareth that the enemy may live and avenge himfelf.

Death endeth the quarrel; but it reftoreth not the reputation: killing is an act of caution, not of courage; it may be fafe, but it is not honourable.

There is nothing so easy as to revenge an offence; but nothing is to honourable as to pardon it.

I he greatest victory man can obtain, is over himself; he that disdaineth to feel an injury, retorteth it upon him who offereth it.

When thou meditatest revenge, thou confesses that thou feelest the wrong: when thou complaineft, thou acknowledg. est thyself hurt by it; meanest thou to add this triumph to the pride of thine enemy?

That cannot be an injury which is not

felt; how then can he who despiseth it re-

venge it?

If thou think it dishonourable to bear an offence, more is in thy power; thou mayest conquer it.

Good offices will make a man ashamed to be thine enemy: greatness of soul will terrify him from the thought of hurting thee.

The greater the wrong, the more glory there is in pardoning it; and by how much more justifiable would be r.venge, by to much the more honou. is in clemency.

Haft thou a right to be a judge in thine own cause; to be a party in the act, and yet to pronounce sentence on it? Before thou condemnest, let another say it is just.

The revengeful is feared, and therefore he is hated; but he that is endued with elemency, is adored: the praise of his actions remaineth for ever; and the love of the world attendeth him.

### \$ 282. CRUELTY, HATRED, and ENVY.

Revenge is deteflable: what then is cruelty? Lo, it possesses the other; but it wanteth even the pretence of its provocations.

Men disown it as not of their rature; they are ashamed of it as a stranger to their hearts: do they not call it inhuma-

nity?

Whence then is her origin? unto what that is human owith the her exidence? Her father is Fear; and behold Ditmay, is it not her mother?

The hero lifteth his fword against the enemy that refulech; but no sooner doth

he lubmit, than he is fausfied,

It is not in honour to trample on the object that feareth; it is not in virtue to infult what is beneath it: fubdue the infolent, and spare the humble; and thou art at the height of victory.

He who wanteth virtue to arrive at this end, he who hath not cou age to aftend thus into it; lo, he supplied the place of conquest by murder, of sovereignty by standing

flaughter.

he who feareth all striketh at all: why are tyrants cruel, but because they live in terror?

Civil was are the most bloody, because those who tight in them are cowards: confinitions are murderers, because in death there is file ce. Is it not fear that telleth them they may be betrayed?

The cur will tear the earcais, though he

dared not look it in the face while living; the hound that hunteth it to the death, mangleth it not afterwards,

That thou mayest not be cruel, set thyfelf too high for hatred; that thou mayest not be inhuman, place thyself above the reach of envy.

Every man may be viewed in two lights; in one he will be troublefome, in the other less offensive: chuse to see him in that in which he least hurreth thee; then shalt thou not do hurt unto him.

What is there if at a man may not turn unto his good? In that which offendeth as most, there is more ground for complaint than hatted. Man would be reconciled to him of whom he complement: whom murdereth he, but him whom he hateth?

If thou art prevented of a benefit, fly not into rage; the less of thy reason is the

want of a greater.

Because thou art robbed of thy c'oul, wouldst thou strip thyself of thy coat also?

When thou enviel the man who poifeffeth honours; when his titles and his greatness raife thy indignation; feek to know whence they came unto him; enquire by what means he was possessed of them, and thine envy will be turned into pity.

If the fame fortune were offered unto thee at the fame price, be affured, if thou wert wife, thou wouldit refuse it.

What is the pay for titles, but fluttery? how doth man purchase power, but by being a flave to him who giveth it?

Wouldit thou lose time own liberty, to be able to take away that of another? or canst thou envy him who doth to?

Man purchaseth notain of his superiors but for a price; and that price is it not more than the value? Wouldn't thou pervert the customs of the world? wouldn't thou have the purchase and the price also?

As thou can't not envy what thou wouldift not accept, diffiain this cause of hatred; and drive from thy soul this occasion of the

parent of cruelty.

If they possessed the constraint of the convergence of it? If they knowest the value of virtue, pitiest thou not those who have bartered it so meanly?

When thou hast taught thyself to bear the seeming good of men without repining, thou will hear of their real happiness with

pleasure.

If thou feest good things fall to one who deserveth them, thou wilt rejoice in it: for

virtue is happy in the prosperity of the vir-

He who rejoiceth in the happiness of another, increasethaby it his own.

### 6 283. HEAVINESS of HEART.

The foul of the cheerful forceth a smile upon the face of affliction; but the despondence of the sad deadenoth even the brightness of joy.

What is the fource of fadness, but a fableness of the foul? what giveth it power but the want of spirit? Rouse thy-fall to the combat, and she quitteth the fall before thou strikess.

Sadness is an enemy to thy race, therefore drive her from thy heart; she poisoneth the sweets of thy life, therefore suffer her not to enter thy dwelling.

She mifeth the loss of a straw to the defination of thy fortune. While she vexcth thy foul about trisles, the robbeth thee of thine attendance to the things of confequence! behold, she but prophesieth what she seemeth to relate unto thee.

She for eadeth dro sines as a veil over the virtues: she hide them from those who would honour thee in beholding them; she entingleth and keepeth them down, while she maketh it most necessary for thee to evert them.

Lo, fits oppreffeth thee with evil; and fite tieth down thine hands, when they would throw the load from off thee.

If thou wouldst avoid what is base, if thou wouldst distain what is cowardly, if thou wouldst drive from thy heart what is unjust, tuffer not fadness to lay hold upon it.

Suffer it not to cover itself with the face of piety; let it not deceive thee with a shew of wisdom. Religion payeth honour to thy Maker; let it not be clouded with melancholy. Wisdom maketh thee happy; know then, that forrow is her fight is as a stranger.

For what should man be forrowfal; but for affifthions? Why should his heart give up joy, when the causes of it are not removed from him? Is not this being miseable for the take of misery?

As the mourner who looketh fad because he is his deed do do, who weepeth because his team one pull fore use this tree man who suffered his near to be fallow because he suffered his mour because he to allow.

futies in 22 in our boroute no is gloomy.

It is not they carled their produced the forces; for behold, the fame that fixed be to another resorang.

Als men it then, inducts maketh things better, and they will confets to they that it

is folly; nay, they will praise him who beareth his ills with patience, who maketh head against misfortune with courage. Applause should be followed by imitation.

Sadness is against nature, for it troubleth her motions: lo, it rendereth distorted whatsoever nature hath made amiable.

As the oak falleth before the tempest, and raiseth not its head again; so boweth the heart of man to the force of sadness, and returneth unto his strength no more.

As the snow melteth upon the mountains, from the rain that trickleth down their sides, even so is beauty washed from off the cheek by tears; and neither the one nor the other restoreth itself again.

As the pearl is diffolved by the vinegar, which feemeth at first only to obscure its surface; so is thy happiness, O man! swallowed up by heaviness of heart, though at first it feemeth only to cover it as with its shadow.

Behold fadness in the public fireets; east thine eye upon her in the places of refort; avoideth not she every one? and doth not every one fly from her presence?

See how the droopeth her head, like the flower whose root is cut asunder! see how the fixeth her eyes upon the earth! see how they serve her to no purpose but for weeping!

Is there in her mouth discourse? is there in her heart the love of society? is there in her foul, reason? Ask her the cause, she knoweth it not; enquire the occasion, and behold there is none.

Yet doth her strength fail her: lo, at length she finketh into the grave; and no one faith, What is become of her!

Hast thou understanding, and seefs thou not this! hast thou piety, and perceivest thou not thine error?

God created thee in mercy; had he not intended thee to be happy, his by nefficence would not have called thee into existence; how dareft thou then to fly in the face of Majesty?

Whilst thou art most happy with innocence, thou dost him most honour; and what is thy discontent but murmuring against him?

Created he not all things liable to changes, and darest thou to weep at their

changing?

If we know the law of nature, wherefore do we complain of it? if we are ignofact of it, what shall we accuse but our
blindeds to what every moment giveth in
proof of?

Know

\*

Know that it is not thou that art to give laws to the world; thy part is to submit to them as thou findest them. If they distress thee, thy lamentation but addeth to thy torment.

Be not deceived with fair pretences, nor suppose that forrow healeth misfortune. It is a poison under the colour of a remedie: while it pretendeth to draw the armow from thy breaft, lo, it plungeth it into thine heart.

While fadness separateth thee from thy friends, doth it not say, Thou art unfit for conversation? while she driveth thee into corners, doth she not proclaim that she is assamed of herself?

It is not in thy nature to meet the arrows of ill fortune unhurt; nor doth reason require it of thee: it is thy duty to bear misfortune like a man; but thou must first also feel it like one.

Tears may drop from thine eyes, though virtue falleth not from thine heart: be thou careful only that there is cause, and that they flow not too abundantly.

The greatness of the affliction is not to be reckoned from the number of tears. The greatest griefs are above these testimonies, as the greatest joys are beyond atterance.

What is there that weakeneth the foul like grief? what depresses it like fadness?

Is the forrowful prepared for noble enterprizes? or armeth he himself in the cause of virtue?

Subject not thyself to ills, where there are in return no advantages: neither facilities thou the means of good unto that which is in itself an evil.

Of the ADVANTAGES MAN may acquire over his Fellow-Creatures.

\$ 284. NOBILITY and HONOUR.

Nobility resideth not but in the soul; por is there true honour except in virtue.

The favour of princes may be bought by vice; rank and titles may be purchased for money: but these are not true honour.

Crimes cannot exalt the man, who commits them, to real glory; neither can gold make men noble.

When titles are the reward of virtue, when the man is fet on high who hath ferved his country; he who beltoweth the honours hath glory, like as he who receiveth them; and the world is benefited by it.

Wouldst thou wish to be raised, and

men know not for what? or wouldst thou that they should say, Why is this?

When the virtues of the hero descend to his children, his titles accompany them well; but when he who possible them is unlike him who deserved them, lo, do they not call him degenerate?

Hereditary honour is accounted the most noble; but reason speaketh in the cause of

him who hath acquired it.

He who, meritless himself, appealeth to the actions of his ancestors for his greatness, is like the thief who claimeth protection by slying to the pagod.

What good is it to the blind, that his parents could fee? what benefit is it to the dumb, that his grandfather was eloquent? even fo, what is it to the mean, that their predeceffors were noble?

A mind disposed to virtue, maketh great the possession: and without titles it will raise him above the vulgar.

He will acquire honour while others receive it; and will he not fay unto them, Such were the men whom ye glory in being derived from ?

As the shadow waiteth on the substance, even so true honour attendeth upon vir-

Say not that honour is the child of boldnefs, nor believe thou that the hazard of life alone can pay the price of it: it is not to the action that it is due, but to the manner of performing it.

All are not called to the guiding the helm of state; neither are these armies to be commanded by every one: do well in that which is committed to thy charge, and praise shall remain unto thee.

Say not that difficulties are necessary to be conquered, or that labour and danger must be in the way of renown. The woman who is chaste, is she not praised? the man who is honest, deserveth he not to be honoured?

The thirst of fame is violent; the defire of honour is powerful; and he who gave them to us, gave them for great purposes.

When desperate actions are necessary to the public, when our lives are to be exposed for the good of our country, what can add force to virtue, but ambition?

It is not the receiving monour that delighteth the noble mind; its pride is the deferving it.

Is it not better men should say, Why hath not this man a statue? than that they should ask, Why he hath one?

The ambitious will always be first in the crouds

eroud; he presseth forward, he looketh not behind him. More anguish is it to his soul, to see one before him, than joy to leave thousands at a distance.

thousands at a distance.

The root of ambition is in every man; but it riseth not in all: sear keepeth it dnwn in some; in many it is suppressed by

modesty.

It is the inner garment of the foul; the first thing put on by it with the stefh, and the last it layeth down at its separation from it.

It is an honour to thy nature when worthily employed; when thou directeft it to wrong purposes, it shameth and destroyeth thee.

In the breast of the traitor ambition is covered; hypocrify hideth its face under her mantle; and cool dissimulation furnisheth it with smooth words; but in the end men shall see what it is.

The screent loseth not his sting though benumbed with the frost, the tooth of the viper is not broken though the cold closeth his mouth: take pity on his state, and he will shew thee his spirit; warm him in thy boson, and he will requite thee with death.

He that is truly virtuous, loveth virtue for herfelf; he difdaineth the applause which ambition aimeth after.

How pitiable were the flate of virtue, if fhe could not be happy but from another's praise? she is too noble to seek recompense, and no more will, than can be rewarded.

The higher the sun ariseth, the less shadow doth he make; even so the greater is the virtue, the less doth it covet praise; yet cannot it avoid its rewar! in honours.

Glory, like a shadow, flieth him who pursueth it; but it followeth at the heels of him who would fly from it: if thou courtest it without merit, thou shalt never attain unto it; if thou deservest it, though thou hidest thyself, it will never for sake thee.

Purfue that which is honourable; do that which is right; and the applause of thine own conscience will be more joy to thee, than the shouts of millions who know not that thou deserveth them.

### § 285. Science and Learning.

The noblest employment of the mind of man, is the study of the works of his Creator.

To him whom the science of nature delighteth, every object bringeth a proof of his God; every thing that proveth it, giveth cause of adoration.

His mind is lifted up to heaven every

moment; his life is one continued act of devotion.

Casteth he his eye towards the clouds, findeth he not the heavens full of his wonders? Looketh he down to the earth, doth not the worm proclaim to him, Less than Omnipotence could not have formed me?

While the planets perform their courfes; while the fun remaineth in his place; while the comet wandereth through the liquid air, and returneth to its deflined road again; who but thy Gol, O man! could have formed them? what but infinite wifdon could have appointed them their laws? Behold how awful their splendor! yet do they not diminish: lo, how rapid their motions! yet one runneth not in the way of another.

Look down upon the earth, and fee her produce; examine her bowels, and behold what they contain: hath not wisdom and power ordained the whole?

Who biddeth the grass to spring up? who watereth it at its due seasons? Behold the ox croppeth it; the horse and the sheep, feed they not upon it? Who is he that provideth it for them?

Who giveth increase to the corn that thou fowest? who returneth it to thee a thousand fold?

Who ripeneth for thee the olive in its time? and the grape, though thou knowest not the cause of it?

Can the meanest fly create itself; or west thou aught less than God, couldst thou have fashioned it?

The beafts feel that they exist, but they wonder not at it; they rejoice in their life, but they know not that it shall end: each performeth its course in succession; nor is there a loss of one species in a thousand generations.

Thou who feest the whole as admirable as its parts, canst thou better employ thine eye than in tracing out thy Creator's greatness in them; thy mind, than in examining their wonders?

Power and mercy are displayed in their formation; justice and goodness shine forth in the provision that is made for them; all are happy in their several ways; nor envieth one the other.

What is the fludy of words compared with this? In what science is knowledge, but in the sludy of nature?

When thou hast adored the fabric, enquire into its use; for know the earth produceth nothing but may be of good to thee. Are not food and raiment, and the reme-

dies

dies for thy diseases, all derived from this source alone?

Who is wife then, but he that knoweth it? who hath understanding, but he that contemplateth it? For the rest, whatever science hath most utility, whatever knowledge hath least vanity, prefer these unto the others; and prosit from them for the sake of thy neighbour.

To live, and to die; to command, and to obey; to do, and to suffer; are not these all that thou hast farther to care about? Morality shall teach thee these; the Economy of Life shall lay them before thee.

Behold, they are written in thine heart, and thou needest only to be reminded of them: they are easy of conception; be attentive, and thou shalt retain them.

All other sciences are vain, all other knowledge is boast; lo, it is not necessary or beneficial to man; nor doth it make him more good, or more honest.

Piety to thy God, and benevolence to thy fellow cleatures, are they not thy great duties? What shall teach thee the one, like the study of his works? what shall inform thee of the other, like understanding thy dependencies?

## Of NATURAL ACCIDENTS.

### § 286. PROSPERITY and ADVERSITY.

Let not prosperity elate thine heart above measure; neither depress thy soul unto the grave, because fortune beareth hard against thee.

Her finiles are not stable, therefore build not thy confidence upon them; her frowns endure not for ever, therefore let hope teach thee patience.

To bear adversity well, is difficult; but to be temperate in prosperity, is the height of wisdom.

Good and ill are the tells by which thou art to know thy conflancy; nor is there aught else that can tell thee the powers of thine own soul: be therefore upon the watch when they are upon thee.

Behold prosperity, how sweetly she flattereth thee; how inscribbly she robbeth thee of thy strength and thy vigour?

Though thou hast been constant in ill fortune, though thou hast been invincible in distress; yet by her thou art conquered: not knowing that thy strength returneth not again; and yet that thou again mayst need it.

Affliction moveth our encmies to pity:

fuccess and happiness cause even our friends to envy.

Adverfity is the feed of well-doing: it is the nurse of heroism and boldness; who that hath enough, will endanger himself to have more? who that is at ease, will set his life on the hazard?

True virtue will act under all circumflances; but men see most of its effects when accidents concur with it.

In adversity man seeth himself abandoned by others; he findeth that all his hopes are centered within himself; he rouseth his foul, he encountereth his difficulties, and they yield before him.

In prosperity he fancieth himself sase; he thinketh he is beloved of all that smi'e about his table; he groweth carelets and remiss; he seeth not the darger that is before him; he trusteth to others, and in the end they deceive him.

Every man can advise his own soul in dist es; but prosperity blindeth the truth.

Better is the norrow that leadeth to contentment, than the joy that rendereth man unable to endure diffress, and after plungeth himself into it.

Our passions dictate to us in all our extremes: moderation is the effect of wildom.

Be upright in thy whole life; be content in all its changes: fo shalt thou make thy profit out of all occurrence; fo shall every thing that happeneth unto thee be the source of praise.

The wife maketh every thing the means of advantage; and with the same countenance beholden he all the faces of fortune; he govern the the good, he conquereth the evil; he is unmoved in all.

Prefume not in prosperity, neither despair in adversity: court not dangers, nor meanly fly from before them: dare to despise whatever will not remain with thee.

Let not adverfity tear off the wings of hope; neither let prosperity obscure the light of prudence.

He who despaireth of the end, shall never attain unto it; and he who seeth not the pit, shall perish therein.

He who calleth prosperity his good; who hath said unto her, With thee will I establish my happiness; lo! he anchoreth his vessel in a bed of sand, which the return of the tide washeth away.

As the water that paffeth from the mountains, kisseth, in its way to the ecean, every field that bordereth the rivers; as it tarrieth not in any place; even so fortune visiteth the sons of men; her motion

is incessant, she will not stay; she is unstable as the winds, how then wilt thou hold her? When she kisseth thee, thou art blessed; behold, as thou turneth to thank her, the is gone unto another.

### § 287. PAIN and SICKNESS.

The fickness of the body affecteth even the foul; the one cannot be in health without the other.

Pain is of all ills that which is most felt: and it is that which from nature bath the fewest remedies.

When thy constancy faileth thre, call in thy reason; when thy patience quitteth thee, call in thy hope.

To fuffer, is a necessity entailed upon thy nature; wouldst thou that miracles fhould protect thee from it? or shalt thou repine, because it happeneth unto thee, when lo, it happeneth unto all?

It is injuffice to expect exemption from that thou wert born unto; fubmit with mo-

defly to the laws of thy condition.

Wouldst thou fay to the scalons, Pass not on, left I grow old? is it not better to fusier well that which thou canst not avor 12

Pain that endureth long, is moderate; Hush therefore to complain of it: that which is violent is fhort: behold thou feeft the end of it.

The body was created to be subservient there foul; while thou afflicted the foul for to pains, behold thou fettest that above it.

As the wife afflicteth not himfelf, because a thorn teareth his garment; fo the patient gneveth not his foul, because that which covereth it is injured.

### § 288. DEATH.

As the production of the metal proveth the work of the alchymilt; fo is death the tell of our lives, the essay which sheweth the standard of all our actions.

Wouldst thou judge of a life, examine the period of it; the end crowneth the attempt: and where diffimulation is no more,

there truth appeareth.

He hath not spent his life ill, who knoweth to die well; neither can be have lost all his time, who employeth the last portion of it to his honour.

He was not born in vain who dieth as he ought; neither hath he lived unprofitably who dieth happily.

He that considereth he is to die, is contest while he liveth: he who striveth to forget it, hath no pleasure in any thing;

his joy appeareth to him a jewel which he expecteth every moment he shall lofe.

Wouldst thou learn to die nobly? let thy vices die before thee. Happy is he who endeth the business of his life before his death; who, when the hour of it cometh. hath nothing to do but to die; who wisheth not delay, because he hath no longer use for time.

Avoid not death, for it is a weakness; feir it not, for thou underst indeth not what it is: all that thou certainly knowell, is, that it putteth an end to thy forlows.

Think not the longest life the happiest; that which is best employed, doth man the most honour; himself shall rejoice after death in the advantages of it.

This is the complete ECONOMY of HUMAN LIFE. ----

§ 289. A Morning Prayer for a young Student at School, or for the common Uje of a School.

Father of All! we return thee most humble and hearty thanks for thy protection of us in the night feafon, and for the refreshment of our fouls and bodies, in the fweet repole of fleep. Accept allo our unfergued gratitude for all thy merci. during the helpless age of intancy.

Continue, we beforch thee, to guard us under the shadow of thy wing. Our age is tender, and our noture final; and, without the influence of thy grace, we shall

furely fall.

Let that influence descend into our hearts, and teach us to love thee and truth above all things. O guard us from temp. tations to deceit, and grant that we may abhor a lye, both as a fin and as a diffgrace.

Inferio us with an abhorrence of the louthformeness of vice, and the pollutions of fentual pleature. Grant, at the fame time, that we may early feel the delight of confeious purity, and wata our hands in innocency, from the united motives of inclination and of duty.

Give us, O thou Parent of all knowledge, a love of learning, and a tafte for the pure and fublime pleasures of the understanding. Improve our memory, quicken our apprehension, and grant that we may lay up such a store of learning, as may fit us for the flation to which it shall please thee to call us, and enable us to make great advances in virtue and religion, and thine as lights in the world, by the influence of a good example.

Give us grace to be diligent in our studies, studies, and that whatever we read we may strongly mark, and inwardly digest it.

Bless our parents, guardians, and infructors; and grant that we may make them the best return in our power, for giving us opportunities of improvement, and for all their care and attention to our welfare. They ask no return, but that we should make use of those opportunities, and co-operate with their endeavours—O grant that we may not disappoint their anxious expectations.

Affift us mercifully, O Loid, that we may immediately engage in the fludies and duties of the day, and go through them chearfully, diligently, and fuccessfully.

Accept our endeavours, and pardon our defects, through the merits of our bleffed Saviour, Jefus Christ our Lord. Amen.

### § 290. An Evening Prayer.

O Almighty God! again we approach thy mercy-feat, to offer unto thee our thanks and praifes for the bleffings and protection afforded us this day; and humbly to implore thy pardon for our manifold transgreffions.

Grant that the words of various influction which we have heard or read this day, may be so inwardly grafted in our hearts and memories, as to bring forth the fruits of learning and virtue.

Grant that as we recline on our pillows, we may call to mind the transactions of the day, condemn those things of which our conscience accuses us, and make and keep resolutions of amendment.

Grant that thy holy angels may watch over us this night, and guard us from temptation, excluding all improper thoughts, and filling our breads with the purelt fentiments of piety. Like as the hart panteth for the water-brook, so let our souls thirst for thee, O Lord, and for what-

ever is excellent and beautiful in learning and behaviour.

Correct, by the sweet influence of Christian charity, the irregularities of our temper; and reffrain every tendency to ingratitude, and to ill-usage of our parents, teachers, pattors, and matters. us to know the value of a good education, and to be thankful to those who labour in the improvement of our minds and morals. Give us grace to be reverent to our fuperiors, gentle to our equals or inferiors, and benevolent to all mankind. Elevate and enlarge our fentiments, and let all our conduct be regulated by right reason, attended with Christian charity, and that peculiar generofity of mind, which becomes a liberal scholar, and a sincere Christian.

O Lord, beflow upon us whatever may be good for us, even though we flould omit to pray for it; and avert whatever is hurtful, though in the blindness of our hearts we should defire it.

Into thy hands we refign ourselves, as we retire to rest; hoping by thy mercy, to rise again with renewed spirits, to go through the business of the morrow, and to prepare ourselves for this life, and for a blessed in the second to a stain, through the merits and intercession of thy Son, our Saviour, Jesus Christ our Lord. Amen.

### § 291. THE LORD'S PRAYER.

Our Father, which art in heaven; Hallowed be thy name. Thy kingdom come. Thy will be done in earth, as it is in heaven. Give us this day our daily bread. And forgive us our trefpafies, as we forgive them that trefpafs againft us. And lead us not into temptation; but deliver us from evil: For thine is the kingdom, and the power, and the glory, for ever and ever. Amen.

END OF THE FIRST BOOK.

## ELEGANT EXTRACTS

IN PROSE.

# BOOK THE SECOND. CLASSICAL AND HISTORICAL.

§ 1. Beneficial Effects of a Tafte for the Belles Lettres.

BELLES Lettres and criticism chiefly consider Man as a being endowed with those powers of taste and imagination, which were intended to embellish his mind, and to supply him with rational and useful Citertainment. They open a field of invelligation peculiar to themfelves. All that relates to beauty, harmony, grandeur, and elegance; all that can foothe the mind, gratify the fancy, or move the affections, belongs to their province. They prefent human nature under a different aspect from that which it assumes when viewed by other sciences. They bring to light various springs of action, which, without their aid, might have passed unobserved; and which, though of a delicate nature, f-equently exert a powerful influence on leveral departments of human life.

Such studies have also this peculiar adlantage, that they exercise our reason without fatiguing it. They lead to enquiries acute, but not painful; profound, but not dry nor abstruse. They strew slowers in the path of science; and while they keep the mind bent, in some degree, and active, they relieve it at the same time from that more toilsome labour to which it must submit in the acquisition of necessary erudition, or the investigation of abstract truth.

### § 2. Beneficial Effects of the Cultivation of TASTE.

The cultivation of taste is further recommended by the happy effects which it naturally tends to produce on human

life. The most busy man, in the most active sphere, cannot be always occupied by business. Men of serious professions caunot always be on the stretch of serious thought. Neither can the most gay and flourishing fituations of fortune afford any man the power of filling all his hours with pleafare. Life must always languith in the hands of the idle. It will frequently languish even in the hands of the busy, if they have not some employment subfidiary to that which forms their main purfuit. How then shall these vacant spaces, those unemployed intervals, which, more or less, occur in the life of every one, be filled up ! How can we contrive to dispose of them in any way that shall be more agreeable in itself, or more consonant to the dignity of the human mind, than in the entertainments of talte, and the fludy of polite literature? He who is fo happy as to have acquired a relish for thefe, has always at hand an innocent and irreproachable amufement for his leifure hours, to fave him from the danger of many a pernicious palfion. He is not in hazard of being a burden to himself. He is not obliged to fly to low company, or to court the riot of loofs pleasures, in order to cure the tediousness of existence.

Providence feems plainly to have pointed out this useful purpose, to which the pleasures of taste may be applied, by interposing them in a middle station between the pleasures of sense, and those of pure intellect. We were not defigned to grovel always among objects so low as the former; nor are we capable of dwelling constantly in so high a region as the latter.

C c 2

The pleasures of taste refresh the mind after the toils of the intellect, and the labours of abstract study; and they gradually raise it above the attachments of sense, and prepare it for the enjoyments of virtue.

So confonant is this to experience, that in the education of youth, no object has in every age appeared more important to wife men than to tincture them early with a relish for the entertainments of talle. The transition is commonly made with eafe from these to the discharge of the higher and more important duties of life. Good hopes may be entertained of those whose minds have this liberal and elegant turn. It is favourable to many virtues. Whereas to be entirely devoid of relith for eloquence, poetry, or any of the fine arts, is justly construed to be an unpromising symptom of youth; and raises suspicions of their being prone to low gratifications, or destined to drudge in the more vulgar and illiberal pursuits of life.

Blair.

## § 3. Improvement of Taste connected with Improvement in VIRTUE.

There are indeed few good dispositions of any kind with which the improvement of taste is not more or less connected. A cultivated taste increases sensibility to all the tender and humane passions, by giving them frequent exercise; while it tends to weaken the more violent and sierce emotions.

Ingenuas didiciffe fidelitet artes Emollit mores, net finit elle feres.

The elevated fentiments and high examples which poetry, eloquence, and history are often bringing under our view, naturally tend to nourith in our minds public fpirit, the love of glory, contempt of external fortune, and the admiration of what is truly illustrious and great.

I will not go fo far as to fay that the improvement of taste and of virtue is the same; or that they may always be expected to co-exist in an equal degree. More powerful correctives than taste can apply, are necessary for reforming the corrupt propensities which too frequently prevail among mankind. Elegant speculations are sometimes found to float on the surface of the mind, while bad passions possess the fame time this cannot but be admitted, that the

 These polish'd arts have humaniz'd mankind, Selten'd the rude, and calm'd the book'rous mind.

exercise of taste is, in its native tendency. moral and purifying. From reading the most admired productions of genius, whether in poetry or profe, almost every one rifes with some good impressions left on his mind; and though these may not always be durable, they are at least to be ranked among the means of disposing the heart to virtue. One thing is certain, and I shall hereafter have occasion to illustrate it more fully, that, without possessing the virtuous affections in a strong degree, no man can attain eminence in the fublime parts of eloquence. He must feel what a good man feels, if he expects greatly to move or to interest mankind. They are the ardent fentiments of honour, virtue, magnanimity, and public spirit, that only can kindle that fire of genius, and call up into the mind those high ideas, which attract the admiration of ages; and if this spirit be necessary to produce the most ditinguished efforts of eloquence, it must be necessary also to our relishing them with proper taffe and feeling.

### § 4. On Styre.

It is not easy to give a precise idea of what is meant by Style. The best define tion I can give of it is, the peculiar mar ner in which a man expresses his conceptions, by means of Language. It is different from mere Language or words. The words, which an author employs, may be proper and faultless; and his Style may, nevertheless, have great faults; it may be dry, or stiff, or feeble, or affected. Style has always fome reference to an author's manner of thinking. It is a picture of the ideas which rife in his mind, and of the manner in which they rife there; and hence, when we are examining an author's composition, it is, in many cases, extremely difficult to separate the Style from the sentiment. No wonder these two should be fo intimately connected, as Style is nothing elfe, than that fort of expression which our thoughts most readily assume. Hence, dilferent countries have been noted for peculiarities of Style, fuited to their different The eastern nations temper and genius. animated their flyle with the most strong and hyperbolical figures. The Athenians a polished and acute people, formed 3 Style, accurate, clear, and neat. The Air tics, gay and loose in their manners, affect ed a Style florid and diffuse. The like fort of characteristical differences are commonly remarked in the Style of the French

the English, and the Spaniards. In giving the general characters of Style, is is usual to talk of a nervous, a feeble, or a spirited Style; which are plainly the characters of a writer's manner of thinking, as well as of expressing himself: so dissipance of the general characters of Style, I am afterwards to discourse; but it will be necessary to begin with examining the more simple qualities of it; from the assemblage of which its more complex denominations, in a great measure, results.

All the qualities of a good Style may be ranged under two heads, Perspicuity and Ornament. For all that can possibly be required of Language is, to convey our ideas clearly to the minds of others, and, at the same time, in such a drefs, as, by pleasing and interesting them, shall most effectually strengthen the impressions which we seek to make. When both these ends accomplishever, we certainly accomplishever purpose for which we use Writing and Discourse, Blarr.

### § 5. On Perspicuity.

Perspicuity, it will be readily admitted, is the fundamental quality of Style\*; a quality fo effential in every kind of writing, that for the want of it nothing can atone. Without this, the richest ornaments of Style only glimmer through the dark; and puzzle, inflead of pleafing, the reader. This, therefore, must be our first object, to make our meaning clearly and fully underflood, and understood without the least dif-Leulty. "Oratio," fays Quinctilian, " de-" bet negligenter quoque audientibus esse " aperta; ut in animum audientis, ficut " sol in oculos, etiamsi in eum non inten-" datur, occurrat. Quare, non solum ut " intelligere possit, sed ne omnino possit " non intelligere, curandum †." If we are obliged to follow a writer with much care, to pause, and to read over his sen-tences a second time, in order to comprehend them fully, he will never please us

long. Mankind are too indolent to relish fo much labour. They may pretend to admire the author's depth after they have discovered his meaning; but they will seldom be inclined to take up his work a second time.

Authors fometimes plead the difficulty of their subject, as an excuse for the want of Peripicuity. But the excuse can rarely, if ever, be admitted. For whatever a man conceives clearly, that it is in his power, if he will be at the trouble, to put into diftind propolitions, or to express clearly to others: and upon no subject ought any man to write, where he cannot think clearlv. His ideas, indeed, may, very excufably, be on some subjects incomplete or inadequate; but flill, as far as they go, they ought to be clear; and, wherever this is the case, Perspicuity in expressing them is always attainable. The obscurity which reigns fo much among many metaphyfical writers, is, for the most part, owing to the indiffunctuels of their own conceptions. They fee the object but in a confused light: and, of course, can never exhibit it in a clear one to others.

Perspicuity in writing, is not to be confidered as merely a fort of negative virtue, or freedom from defect. It has higher merit: it is a degree of positive beauty. We are pleased with an author, we consider him as deserving praise, who frees us from all satigue of tearching for his meaning; who carries us through his subject without any embarrassiment or consuson; whose style flows always like a limpid stream, where we see to the very bottom.

### & 6. On PURITY and PROPRIETY.

Purity and Propriety of Language, are often used indiscriminately for each other; and, indeed, they are very nearly allied. A distinction, however, obtains between them. Purity, is the use of such words, and such constructions, as belong to the idiom of the Language which we speak; in opposition to words and phrases that are imported from other Languages, or that are obsolete, or new-coined, or used without proper authority. Propriety is the selection of such words in the Language, as the best and most established usage has appropriated to those ideas which we intend to express by them. It implies the correct and happy application of them, according to that usage, in opposition to vulgarisms, or low expressions; and to words

Cc 3

<sup>&</sup>quot;" Nobis prima fit virtus, perspicuitas, pro" pria verba, rectus ordo, non in longum dilat.
" conclusio; ninil neque dest, neque superstuat."

Quincall, ib. viii.

<sup>1</sup> de Discourse ought always to be obvious, even to the most careles and negligent heater; so that the fense shall strike his mind, as the light of the son does one eyes, though they are not directed upwards to it. We must study, not only that every learer may understand us, but that it shall be impossible for him not to understand us.?

and phrases, which would be less signistcant of the ideas that we mean to convey. Style may be pure, that is, it may all be fluidly English, without Scotticisms or Gallicisms, or ungrammatical, irregular expressions of any kind, and may, nevertheless, be deficient in propriety. The words may be ill-chosen; not adapted to the subject, nor fully expressive of the He has taken all his author's fenfe. words and phrases from the general mass of English Language; but he has made his felection among these words unhappily. Whereas Style cannot be proper without being also pure; and where both Purity and Propriety meet, befides making Style perspicuous, they also render it graceful. There is no standard, either of Purity or of Propriety, but the practice of the best writers and speakers in the country.

When I mentioned obfolete or newcoined words as incongrueus with Purity of Style, it will be easily understood, that fome exceptions are to be made. On certain occasions, they may have grace. Poetry admits of greater latitude than profe, with respect to coining, or, at least, new-compounding words; yet, even here, this liberty should be used with a sparing hand. In profe, such innovations are more hazardous, and have a worse effect. They are apt to give Style an affected and conceited air; and should never be ventured upon except by such, whose eftablished reputation gives them some degree of dictatorial power over Language.

The introduction of foreign and learned words, unless where necessity requires them, should always be avoided. Barren Languages may need fuch assistances; but ours is not one of these. Dean Swift, one of our most correct writers, valued himself much on using no words but such as were of native growth: and his Language, may, indeed, be confidered as a standard of the strictest Purity and Propriety in the choice of words. At prefent, we feem to be departing from this A multitude of Latin words have, of late, been poured in upon us. On some occasions, they give an appearance of elevation and dignity to Style. But often, allo, they render it stiff and forced: and, in general, a plain native Style, as it is more intelligible to all readers, to, by a proper management of words, it may be made equally strong and expresfive with this Latinized English. Blair.

### § 7. On Precision.

The exact import of Precision may be drawn from the etymology of the word. It comes from "precidere," to cut offit imports retrenching all superfluities, and pruning the expression so, as to exhibit neither more nor less than an exact copy of his idea who uses it. I observed before, that it is often difficult to separate the qualities of Style from the qualities of Thought; and it is found so in this instance. For in order to write with Precision, though this be properly a quality of Style, one must possess a very considerable degree of distinctives and accuracy in his manner of thinking.

The words, which a man uses to express his ideas, may be faulty in three respects They may either not express that idea which the author intends, but foine other which only refembles, or is a-kin to it; or, they may express that idea, but not quite fully and completely; or, they may exprefs it together with fomething more than he intends. Precition flands opposed to all these three faults; but chiefly to the laft. In an author's writing with propriety, his being free from the two former faults feems implied. The words which he uses are proper; that is, they expicts that idea which he intends, and they express it fully; but to be Precise, fignifies, that they express that idea, and There is nothing in his words no more. which introduces any foreign idea, any fuperfluous, unfeafonable accessory, so as to mix it confusedly with the principal object, and thereby to render our conception of that object loofe and indiffind. This requires a writer to have, himself, a very clear apprehension of the object he means to prefent to us; to have laid fail hold of it in his mind; and never to waver in any one view he takes of it; a perfection to which, indeed, few writers at-

### § 8. On the Use and Importance of PRECISION.

The use and importance of Precision, may be deduced from the nature of the human mind. It never can view, clearly and distinctly, above one object at a time. If it must look at two or three together, especially objects among which there is refemblance or connection, it finds itself consused and embarrassed. It cannot glearly

clearly perceive in what they agree, and in what they differ. Thus were any object, suppose some animal, to be presented to me, of whose structure I wanted to form a diffinct notion, I would defire all its trappings to be taken off, I would require it to be brought before me by itself. and to stand alone, that there might be nothing to diffract my attention. fame is the case with words. If, when you would inform me of your meaning, you also tell me more than what conveys it; if you join foreign circumstances to the principal object; if, by unn ceffirily varying the expression, you shaft the point of view, and make me fee tometimes the object itself, and sometimes another thing that is connected with it; you thereby oblize me to look on feveral object, at once, and I lofe fight of the principal. You load the animal you are showing me with fo many trappings and collars, and bring to many of the fame species before me, fomewhat refembling, and yet fomewhat differing, that I fee none of them clearly.

This forms what is called a Loofe Style: and is the proper opposite to Precision. It generally arises from using a superfluity of words. Feeble writers employ a multitude of words, to make themselves understood, as they think, more distinctly; and they only confound the reader. They are fenfible of not having caught the precise expression, to convey what the would fignify; they do not, indee I, conceive their own meaning very precifely themselves; and, therefore, help it out, as they can, by this and the other word, which may, as they suppose, supply the defect, and bring you fomewhat nearer to their idea: they are always going about it, and about it, but never just hit the thing. The image, as they fet it before you, is always feen double; and no double image is distinct. When an author tells me of his hero's courage in the day of battle, the expression is precise, and I understand it fully. But if, from the defire of multiplying words, he will needs praise his courage and fortitude; at the moment he joins these words together, my idea begins to waver. He means to express one quality more strongly; but he is, in truth, expressing two. Courage refifts danger; fortitude supports pain. The occasion of exerting each of these qualities is different; and being led to think of both together, when only one of them should be in my view, my view is rendered unfleady, and my conception of the object indistinct.

From what I have faid, it appears that an author may, in a qualified fense, be perspicuous, while yet he is far from being precise. He uses proper words, and proper arrangement: he gives you the idea as clear as he conceives it himself; and so far he is peripicuous; but the ideas are not very clear in his own mind: they are loofe and general; and, therefore, cannot be expressed with Precision. All subjects do not equally require Precision. It is fullicient on many occasions, that we have a general view of the meaning. The fubject, perhaps, is of the known and faimhar kind; and we are in no hazard of multiking the fente of the author, though every word which he uses be not precise and exact

9. The Carles of a Loofe Style.

The great fource of a Loofe Style, in opposition to Precision, is the injudicious ule of thole words termed Synonymous. They are called Synonymous, because they agree in expiciting one principalidea: but, for the most part, if not always, they express it with some diversity in the circumflances. They are varied by some acceffory idea which every word introduces, and which forms the diffinction between them. Hardly, in any Language, are there two words that convey precifely the fame idea; a perion thoroughly convertant in the propriety of the Language, will always be able to observe something that diamountes them. As they are like different shades of the same colour, an accurate writer con employ them to great advantage, by using them so as to heighten and finish the picture which he gives us. He supplies by one, what was wanting in the other, to the force, or to the luftre of the image which he means to exhibit. But in order to this end, he must be extremely attentive to the choice which he makes of them. For the bulk of writers are very apt to confound them with each other; and to employ them carelefsly, merely for the lake of filling up a period, or of rounding and divertitying the Language, as if the fignification were exactly the same, while, in truth, it is not. Hence a certain mist, and indistinctness, is unwarily thrown over Style.

§ 10. On the general Characters of STYLE. That different subjects require to be treated of in different forts of Style, is a position so obvious, that I shall not stay to illustrate it. Every one sees that Treatises of Philosophy, for instance, ought not to Cc +

be composed in the same Style with Ora-Every one fees also, that different parts of the same composition require a variation in the Style and manner. In a fermon, for inflance, or any harangue, the application or peroration admits of more ornament, and requires more warmth, than the didactic part. But what I mean at present to remark is, that, amidst this variety, we fill expect to find, in the compositions of any one man, some degree of uniformity or confishency with himself in manner; we expect to find fome predominant character of Style impressed on all his writings, which shall be suited to, and shall mark, his particular genius, and turn of mind. The orations in Livy differ much in Style, as they ought to do, from the rest of his history. The same is the case with those in Tacitus. Yet both in Livy's orations, and in those of Tacitus, we are able clearly to trace the distinguishing manner of each historian: the magnificent fulness of the one, and the sententious conciseness of the other. The " Lettres Persancs," and " L'Esprit de Loix," are the works of the same author. They required very different composition surely, and accordingly they differ widely; yet full we fee the same hand. Wherever there is real and native genius, it gives a determination to one kind of Style rather than another. Where nothing of this appears; where there is no marked nor peculiar cha-, acter in the compositions of any author, we are apt to infer, not without reaion, that he is a vulgar and trivial author, who writes from imitation, and not from the impulse of original genius. As the most celebrated painters are known by their hand, so the best and most origimal writers are known and distinguished, chroughout all their works, by their Style and peculiar manner. This will be found to hold almost without exception. Blair.

### 11. On the Austere, the Florid, and the Middle STYLE.

The ancient Critics attended to these general characters of Style which we are now to consider. Dionysius of Halicarnassus divides them into three kinds; and calls them the Austere, the Florid, and the Middle. By the Austere, he means a Style distinguished for strength and firmnels, with a neglect of imoothnels and ornament; for examples of which, he gives Pinder and Æschylus among the Poets, and Thucydides among the Profe writers. By the Florid, he means, as the name in-

dicates, a Style ornamented, flowing, and fweet; resting more upon numbers and grace, than strength; he instances Hesiod, Sappho, Anacreon, Euripides, and principally Isocrates. The Middle kind is the just mean between these, and comprehends the beauties of both; in which class he places Homer and Sophocles among the Poets: in Profe, Herodotus, Demosthenes, Plato, and (what feems strange) Aristotle. This must be a very wide class indeed, which comprehends Plato and Aristotle under one article as to Style. Cicero and Quinctilian make also a threefold division of Style, though with respect to different qualities of it; in which they are followed by most of the modern writers on Rhetoric; the Simplex, Tenue, or Subtile; the Grave, or Vehemens; and the Medium, or temperatum genus dicendi. But these divisions, and the illustrations they give of them, are so loose and general, that they cannot advance us much in our ideas of Style. I shall endeavour to be a little more particular in what I have to fay on this subject. Ibid.

### 6 12. On the Concife STYLE.

One of the first and most obvious distinctions of the different kinds of Style, is what arises from an author's spreading out his thoughts more or less. This distinction forms what are called the Diffuse and the Concife Styles. A concife writer comproffes his thought into the fewest possible words; he feeks to employ none but fuch as are most expressive; he lops off, as redundant, every expression which does not add something material to the sense. Ornament he does not reject; he may be lively and figured; but his ornament is intended for the fake of force rather than He never gives you the same thought twice. He places it in the light which appears to him the most striking; but if you do not apprehend it well in that light, you need not expect to find it in any other. His sentences are arranged with compactness and strength, rather than with cadence and harmony. The utmost precision is studied in them; and they are commonly defigned to fuggest more to the reader's imagination than they directly expreís.

### § 13. On the Diffuse STYLE.

A diffuse writer unfolds his thought fully. He places it in a variety of lights, De Compositione Verborum, Cap. 25ance for understanding it completely. He is not very careful to express it at first in its full strength, because he is to repeat the impression; and what he wants in itrength, he proposes to supply by copioulnels. Writers of this character generally love magnificence and amplification. Their periods naturally run out into some length, and having room for ornament of ly diffinguished. every kind, they admit it freely.

Each of these manners has its peculiar advantages; and each becomes faulty when carried to the extreme. The extreme of concileness becomes abrupt and obscure; it is apt also to lead into a Style too pointed, and bordering on the epigrammatic. The extreme of diffuseness becomes weak and languid, and tires the reader. However, to one or other of these two manners a writer may lean, according as his genius prompts him: and under the general character of a concile, or of a more open and diffuse Style, may possess much beauty in his composition.

For illustrations of these general characters, I can only refer to the writers who are examples of them. It is not fo much from detached passages, such as I was wont formerly to quote for instances, as from the current of an author's Style, that we are to collect the idea of a formed manner of writing. The two most remarkable examples that I know, of conciseness carried as far as propriety will allow, perhaps in fome cases farther, are Tacitus the Historian, and the President Montesquieu in "L'Esprit de Loix." Aristotle too holds an eminent rank among didactic writers for his brevity. Perhaps no writer in the world was ever fo frugal of his words as Aristotle; but this frugality of expression frequently darkens his meaning. Of a beautiful and magnificent diffuseness, Cicero is, beyond doubt, the most illustrious instance that can be given. Addison, also, and Sir William Temple, come in some degree under this class.

### 1 14. On the Nerwous and the Feeble STYLE.

The Nervous and the Feeble, are generally held to be characters of Style, of the same import with the Concise and the Diffuse. They do indeed very often coincide. Diffuse writers have, for the most part, some degree of seebleness; and nervous Writers will generally be inclined to a con-

and gives the reader every possible assist- cise expression. This, however, does not always hold; and there are instances of writers, who, in the midst of a full and ample Style, have maintained a great degree of strength. Livy is an example: and in the English language, Dr. Barrow. Barrow's Style has many faults. It is unequal, incorrect, and redundant; but withal, for force and expressiveness uncommon-On every subject, he multiplies words with an overflowing copiousness; but it is always a torrent of strong ideas and significant expressions which he pours forth. Indeed, the foundations of a nervous or a weak Style are laid in an author's manner of thinking. If he conceives an object strongly, he will express it with energy: but, if he has only an indiffinct view of his subject; if his idens be loofe and wavering; if his genius be fuch, or, at the time of his writing, fo careleisly exerted, that he has no firm hold of the conception which he would communicate to us; the marks of all this will clearly appear in his Style. Several unmeaning words and loofe epithets will be found; his expressions will be vague and general; his arrangement indiffinct and feeble; we shall conceive somewhat of his meaning, but our conception will be faint. Whereas a nervous writer, whether he employs an extended or a concife Style, gives us always a strong impression of his meaning; his mind is full of his fubject, and his words are all expressive: every phrase and every figure which he uses, tends to render the picture, which he would fet before us, more lively and complete. Ibid.

### § 15. On Harshness of STYLE.

As every good quality in Style has an extreme, when purfued to which it becomes faulty, this holds of the Nervous Style as well as others. Too great a fludy of strength, to the neglect of the other qualities of Style, is found to betray writers into a harsh manner. Harshneis arifes from unufual words, from forced inversions in the construction of a sentence, and too much neglect of smoothness and eafe. This is reckoned the fault of some of our earliest classics in the English Language; such as Sir Walter Raleigh, Sir Francis Bacon, Hooker, Chillingworth, Milton in his profe works, Harrington, Cudworth, and other writers of confiderable note in the days of Queen Elizabeth, James I. and Charles I. These writers had nerves and strength in a high degree, and

and are to this day eminent for that quality in Style. But the language in their hands was exceedingly different from what it is now, and was indeed entirely formed upon the idiom and construction of the Latin, in the arrangement of fentences. Hooker, for instance, begins the Preface to his celebrated work of Ecclesiastical Polity with the following fentence: "Though for no " other cause, yet for this, that posterity " may know we have not loofely, through " filence, permitted things to pals away as " in dream, there shall be, for men's in-" formation, extant this much, concerning " the pictent flate of the church of God " established amongst us, and their careful " endeavours which would have upheld the " fame." Such a fentence now founds harsh in in our ears. Yet some advantages certainly attended this fort of Style; and whether we have gained, or loft, upon the whole, by departing from it, may bear a question. By the freedom of arrangement, which it permitted, it rendered the language susceptible of more strength, of more variety of collocation, and more harmony of period. But however this be. fuch a Style is now obfolete; and no modern writer could adopt it without the confure of harshnets and affectation. present form which the Language has asfuned, has, in fome measure, sacrificed the fludy of strength to that of perspicuity and eafe. Our arrangement of words has become less forcible, perhaps, but more plain and natural; and this is now underflood to be the genius of our Language.

### § 16. On the Dry STYLE.

The dry manner excludes all ornament of every kind. Content with being undenlood, it has not the least aim to please either the fancy or the ear. This is tolerable only in pure didactic writing; and even there, to make us bear it, great weight and folidicy of matter is requifite; and entire peripicuity of language. Ariftotle is the complete example of a Dry Style. Never, perhaps, was there any author who adhered fo rigidly to the thricknels of a didactic manner, throughout all his writings, and conveyed fo much instruction, without the least approach to ornament. With the most profound genius, and extensive views, he writes like a pure intelligence, who addresses himself solely to the understanding, without making any use of the channel of the imagination. But

this is a manner which deserves not to be imitated. For, although the goodness of the matter may compensate the dryness or harshness of the Style, yet is that dryness a considerable desect; as it fatigues attention, and conveys our sentiments, with disadvantage, to the reader or hearer.

Ibid.

### & 17. On the Plain STYLE.

A Plain Style rifes one degree above a dry one. A writer of this character employs very little ornament of any kind, and rests almost entirely upon his sense. But, if he is at no pains to engage us by the employment of figures, mufical arrangement, or any other art of writing, he fludies, however, to avoid difgusting u, like a dry and a harth writer. Besides Perspicuity, he pursues Propriety, Purity, and Precision, in his language; which form one degree, and no inconfiderable one, of beauty. Liveliness too, and force, may be confident with a very Plain Style: and, therefore, fuch an author, if his fentiments be good, may be abundantly agreeable. The difference between a dry and plain writer, is, that the former is incapable of ornament, and feems not to know what it is; the latter feeks not after it. He giveus his meaning, in good language, diffinit and pure; any further ornament he gives himself no trouble about; either, because he thinks it unnecessary to his subject; or, because his genius does not lead him to delight mit; or, because it leads him to defpife it \*.

This last was the case with Dean Swiss, who may be placed at the head of those that have employed the Plain Style. Few writers have discovered more capacity. He treats every subject which he handles, whether serious or ludicrous, in a masterly manner. He knew, almost beyond any man, the Purity, the Extent, the Precision of the English Language; and, therefore, to such as wish to attain a pure and correct Style, he is one of the most useful models. But we must not look for much ornament and grace in his Language.

\* On this head, of the General Characters of Style, particularly the Plan and the Simple, and the characters of thofe English authors who are clatted under them, in this, and the following Lectures [xix] feveral ideas have been taken from a manufeript treatife on rhetoric, part of which was fhewigh on the tone and years ago, by the learned and ingenious Author, Dr. Adam Smith, and which, it is heped, will be given by him to the Public.

His haughty and morose genius made him despise any embellishment of this kind, as beneath his dignity. He delivers his fentiments in a plain, downright, positive manner, like one who is fure he is in the right; and is very indifferent whether you be pleased or not. His sentences are commonly negligently arranged; diffinelly enough as to the fense, but without any regard to smoothness of lound; often without much regard to compaciness or elegance. If a metaphor, or any other figure, chanced to render his fatire more poignant, he would, perhaps, vouchfafe to adopt it, when it came in his way; but if it tended only to embellith and illustrate, he would rather throw it aside. Hence, in his terious pieces, his style often borders upon the dry and unpleafing; in his humorous ones, the plainness of his manner sets off his wit to the highest advantage. There is no freth nor affectation in it; it feems native and unfludied; and while he hadly appears to finile himfelf, he makes his reader laugh heartily. To a writer of fuch a genius as Dean Swift, the Plain Style was most admirably fitted. Among our philotophical writers, Mr. Locke comes under this class; perspicuous and pure, but almost without any ornament whatever. In works which admit, or require, ever fo much ornament, there are parts where the plain manner ought to predominate. But we must remember, that when this is the character which a writer affects throughout his whole composition, great weight of matter, and great force of fentiment, are required, in order to keep up the reader's attention, and prevent him from becoming tired of the author.

### § 18. On the Neat STYLE.

What is called a Neat Style comes next in order; and here we are got into the region of ornament; but that ornament not of the highest or most sparkling kind. A writer of this character shews, that he does not despise the beauty of language. It is an object of his attention. But his attention is shewn in the choice of his words, and in a graceful collocation of them; rather than in any high efforts of imagination, or eloquence. His fentences are always clean, and free from the incumbrance of superfluous words; of a moderate length; rather inclining to brevity, than a fwelling structure; closing with pro-Priety; without any tails, or adjections dragging after the proper close. His

cadence is varied; but not of the studied mufical kind. His figures, if he uses any, are short and correct; rather than bold and glowing. Such a Style as this may be attained by a writer who has no great powers of fancy or genius, by industry merely, and careful attention to the rules of writing; and it is a Style always agree. able. It imprints a character of moderate elevation on our composition, and carries a decent degree of ornament, which is not unfuitable to any subject whatever. A familiar letter, or a law paper, on the drieft fubiect, may be written with neatness; and a fermon, or a philosophical treatife, in a Neat Style, will be read with pleafure.

### § 19. On an Elegant STYLE.

An Elegant Style is a character, expreffing a higher degree of ornament than a neat one; and, indeed, is the term utually applied to Style, when possessing all the virtues of ornament, without any of its excelles or defects. From what has been formerly delivered, it will eafily be underflood, that complete Elegance implies great perspicuity and propriety; purity in the choice of words, and care and dexterity in their harmonious and happy arrangement. It implies further, the grace and beauty of imagination spread over Style, as far as the fubject admits it; and all the illuffation which figurative language adds, when properly employed. In a word, an elegant writer is one who pleafes the fancy and the ear, while he informs the understanding; and who gives us his ideas clothed with all the beauty of expression, but not overcharged with any of its misplaced finery. In this class, therefore, we place only the first rate writers in the language; fuch as Addition, Diyden, Pope, Temple, Bolingbroke, Atterbury, and a few more; writers who differ widely from one another in many of the attributes of Style, but whom we now class together, under the denomination of Elegant, as, in the scale of Ornament, possessing nearly the same place.

### § 20. On the Florid STYLE.

When the ornaments, applied to Style, are too rich and gaudy in proportion to the fubject; when they return upon us too fast, and strike us either with a dazzling lustre, or a salled a Florid Style; a term commonly used to signify the excess of ornament.

In a young composer this is very par-donable. Perhaps, it is even a promising symptom, in young people, that their Style should incline to the Florid and Luxuriant: " Volo se efferat in adolescente facundi-" tas," fays Quinctilian, " multum inde "decoquent anni, multum ratio limabit, " aliquid velut usu ipso deteretur; sit mo-" do unde excidi possit quid et exculpi .--" Audeat hæc ætas plura, et inveniat et "inventis gaudeat; sint licet illa non satis "interim sicca et severa. Facile reme-" dium est ubertatis: sterilia nullo labore vincuntur"." But, although the Florid Style may be allowed to youth, in their first essays, it must not receive the same indulgence from writers of maturer years. It is to be expected, that judgment, as it ripens, should chasten imagination, and reject, as juvenile, all fuch ornaments as are redundant, unsuitable to the subject, or not conducive to illustrate it. Nothing can be more contemptible than that tinfel fplendour of language, which some writers perpetually affect. It were well, if this could be ascribed to the real overslowing of a rich imagination. We should then have fomething to amuse us, at least, if we found little to instruct us. But the worst is, that with those frothy writers, it is a luxuriancy of words, not of fancy. We see a laboured attempt to rife to a splendour of composition, of which they have formed to themselves some loose idea; but having no ftrength of genius for attaining it, they endeavour to supply the defect by poetical words, by cold exclamations, by commonplace figures, and every thing that has the appearance of pomp and magnificence. It has escaped these writers, that sobriety in ornament, is one great fecret for rendering it pleasing: and that without a foundation of good sense and solid thought, the most Florid Style is but a childish imposition on the Public. The Public, however, are but too apt to be so imposed on; at least, the mob of readers; who are very ready to be caught, at first, with whatever is dazzling and gaudy.

I cannot help thinking, that it reflects

• " In youth, I wish to see luxuriancy of fancy 4 appear. Much of it will be diminished by years; much will be conjected by ripening " judgment; fome of it, by the mere practice of " composition, will be worn away. Let there be "only sufficient matter, at first, that can bear fome pruning and lopping off. At this time of " life, let genius be bold and inventive, and pride " itself in its efforts, though these should not, as " yer, he correct. Luxuriancy can eatily be cured; " but for barrennes, there is no remedy."

more honour on the religious turn, and good dispositions of the present age, than on the public taste, that Mr. Hervey's Meditations have had fo great a currency. The pious and benevolent heart, which is always displayed in them, and the lively fancy which, on some occasions, appears, justly merited applause: but the perpetual glitter of expression, the swoln imagery, and strained description which abound in them, are ornaments of a falle kind. I would, therefore, advise students of oratory to imitate Mr. Hervey's piety, rather than his Style; and, in all compositions of a serious kind, to turn their attention, as Mr. Pope fays, " from founds to things, from " fancy to the heart." Admonitions of this kind I have already had occasion to give, and may hereafter repeat them; as I conceive nothing more incumbent on me, in this course of Lectures, than to take every opportunity of cautioning my readers against the affected and frivolous use of ornament; and, instead of that slight and superficial taste in writing, which I apprehend to be at present too fashionable, to introduce, as far as my endeavours can avail, a taste for more folid thought, and more manly simplicity in Style.

### § 21. On the different Kinds of SIM-PLICITY.

The first is, Simplicity of Composition, as opposed to too great a variety of parts, Horace's precept refers to this:

Demque fit quod vis fimplex duntaxat et unum\*.

This is the simplicity of plan in a tragedy, as diffinguished from double plots, and crowded incidents; the Simplicity of the Iliad, or Æneid, in opposition to the digressions of Lucan, and the scattered tales of Ariotto; the Simplicity of Grecian architecture, in opposition to the irregular variety of the Gothic. In this fense, Simplicity is the same with Unity.

The second sense is, Simplicity of Thought, as opposed to refinement. Simple thoughts are what arise naturally; what the occasion or the subject suggest unfought; and what, when once fuggested, are easily apprehended by all. Refinement in writing, expresses a less natural and obvious train of thought, and which it required a peculiar turn of genius

- " Then learn the wand'ring humour to controul
- "And keep one equal tenour through the whole." FRANCIS.

to pursue; within certain bounds very beautiful; but when carried too far, approaching to intricacy, and hurting us by the appearance of being recherché, or far fought. Thus, we would naturally fav, that Mr. Purnell is a poet of far greater fimplicity, in his turn of thought, than Mr. Cowley: Cicero's thoughts on moral subjects are natural: Seneca's too refined and laboured. In these two senses of Simplicity, when it is opposed either to variety of parts, or to refinement of thought, it has no proper relation to Style.

There is a third fense of Simplicity, in which it has respect to Style; and stands opposed to too much ornament, or pomp of language; as when we fay, Mr. Locke is a simple, Mr. Hervey a florid, writer; and it is in this fense, that the " simpler," the " tenue," or " subtile genus dicendi," is understood by Cicero and Qunctilian. The fimple style, in this fense, coincides with the plain or the neat style, which I before mentioned; and, therefore, requires no farther illustration.

But there is a fourth fense of Simplicity, also respecting Style; but not respecting the degree of ornament employed, fo much as the easy and natural manner in which our language expresses our thoughts. This is quite different from the former fense of the word just now mentioned, in which Simplicity was equivalent to Plainnefs: whereas, in this fenfe, it is compatible with the highest ornament. Homer, for inflance, possesses this Simplicity in the greatest perfection; and yet no writer has more ornament and beauty. This Simplicity, which is what we are now to confider, stands opposed, not to ornament, but to affectation of ornament, or appearance of labour about our Style; and it is a distinguishing excellency in writing.

### § 22. SIMPLICITY appears casy.

A writer of Simplicity expresses himself in such a manner, that every one thinks he could have written in the same way; Hotace describes it,

- ut fibi quivis Speret idem, fudet multum, fruitraque laboret Aufus idem\*.

There are no marks of art in his expresfion; it seems the very language of nature; you fee, in the Style, not the writer and his labour, but the man, in his own natural character. He may be rich in his expreffion; he may be full of figures, and of fancy; but these flow from him without effort; and he appears to write in this manner, not because he has studied it, but because it is the manner of expression most natural to him. A certain degree of negligence, also, is not inconsistent with this character of ityle, and even not ungraceful in it; for too minute an attention to words is foreign to it: "Habeat ille," favs Cicero, (Orat. No. 77.) " molle quiddam, et " quod indicet non ingratam negligentiam " hominis, de re magis quàm de verbo "laborantist." This is the great advantage of Simplicity of Style, that, like simplicity of manners, it shows us a man's fentiments and turn of mind laid open without disguise. More studied and artificial manners of writing, however beautiful, have always this difadvantage, that they exhibit an author in form, like a man at court, where the fplendour of drefs, and the ceremonial of behaviour, conceal those peculiarities which diffinguish one man from another. But reading an author of Simplicity, is like converling with a person of distinction at home, and with case, where we find natural manuers, and a marked character.

### § 23. On Naiveté.

The highest degree of this Simplicity, is expressed by a French term to which we have none that fully answers in our language, Natveté. It is not easy to give a precise idea of the import of this word. It always expresses a discovery of character. I believe the best account of it is given by a French critic, M. Marmontel, who explains it thus: That fort of amiable ingenuity, or undifguifed openness, which feems to give us some degree of superiority over the person who shews it; a certain infantine Simplicity, which we love in our hearts, but which displays some scatures of the character that we think we could have art enough to hide; and which, therefore, always leads us to finile at the person who

† " Let this Style have a certain foftness and " eafe, which shall characterife a negligence, not "unpleasing in an author who appears to be se more folicitous about the thought than the ex-" preffion." discovers

<sup>• &</sup>quot; From well-known tales such fictions would l raife,

<sup>&</sup>quot;As all might hope to imitate with eafe; "Yet, while they strive the same successto gain; Should find their labours and their hopes in vain,"

discovers this character. La Fontaine, in his Fables, is given as the great example of fuch Naïveté. This, however, is to be understood, as desoriptive of a particular species only of Simplicity.

### § 24. Ancients eminent for Simplicity.

With respect to Simplicity, in general, we may remark, that the ancient original writers are always the most eminent for it. This happens from a plain reason, that they wrote from the dictates of natural genius, and were not formed upon the labours and writings of others, which is always in hazard of producing affectation. Hence, among the Greek writers, we have more models of a beautiful Simplicity than among the Roman. Homer, Hefiod, Anacreon, Theocritus, Herodotus, and Xenophon, are all diffinguished for it. Among the Romans, also, we have some writers of this character; particularly Terence, Lucretius, Phædrus, and Julius Cæfar. following passage of Terence's Andria, is a beautiful instance of Simplicity of manner in description:

-Funus interim Procedit; fequimur; ad fepulchrum venimu;; In ignem imposita cft; fletur; interea hæc foror Quam dixi, ad flammam acceffit impi udentiùs Satis com periculo. Ili tum examina us P.m. philus

Bene diffimulatum amorem, & celatum indicat; Occurrit praceps, mulierum ab igne retralit, Mea Glycerium, inquit, quid agis? Cur te is per-

Tum illa, ut confuetum facile amorem cerneres, Rejecit se in eum, flens quam familiaritei \*. ACT. 1. Sc. 1.

All the words here are remarkably happy and elegant: and convey a most lively picture of the scene described. while, at the same time, the Style appears wholly artless

e "Meanwhile the funeral proceeds; we fol-" low;

of Come to the fepulchre: the body's plac'd

44 Upon the pile; lamented; whereupon " This fifter I was speaking of, all wild,

a Ran to the flames with peril of her life. \* There! there! the frighted Pamphilus beff trays

et His well-diffembled and long-hidden love; " Runs up, and takes her round the waift, and e cries,

" Oh! my Glycerium ! what is it you do?

"Might eafily perceive their long, long love,
Threw herfelf back into his arms, and wept.

" Oh! how familiarly !" COLMAN.

and unlaboured. Let us next confider fome English writers, who come under this class.

#### Simplicity the Characteristic of Tile \$ 25. LOTSON's Style.

Simplicity is the great beauty of Archbishop Tillotson's manner. Tillotson has long been admired as an eloquent writer, and a model for preaching. But his eloquence, if we can call it such, has been often misunderstood. For if we include in the idea of eloquence, vehemence and thrength, picturefque description, glowing figures, or correct arrangement of fentences, in all these parts of oratory the Archbithop is exceedingly deficient. His Style is always pure, indeed, and perspicuous, but careless and remiss, too often feeble and languid; little beauty in the construction of his fentences, which are frequently fuffered to drag unharmoniously; soldom any attempt towards strength or sublimity. But, notwithstanding these desects, such a conflant vein of good fense and piety runs through his works, fuch an earnest and ferious manner, and fo much useful inftruction, conveyed in a Style fo pure, natural, and unaffected, as will justly recommend him to high regard, as long as the English language remains; not, indeed, as a model of the highest eloquence, but as a simple and amiable writer, whose manner is firongly expressive of great goodness and worth. I observed before, that Simplicity of manner may be confishent with some degree of negligence in Style; and it is only the beauty of that Simplicity which makes the negligence of fuch writers feem graceful. But, as appears in the Archbi-shop, negligence may fometimes be carried fo far as to impair the beauty of Simplicity, and make it border on a flat and languid manner.

#### § 26. Simplicity of Sir WILLIAM TEM. PLE's Style.

Sir William Temple is another remarkable writer in the Style of Simplicity. In point of ornament and correctness, he rifes a degree above Tillotion; though, for correctness, he is not in the highest rank. All is easy and flowing in him; he is exceedingly harmonious; fmoothness, and what may be called amounty, are the distinguishing characters of his manner; relaxing, fometimes, as fuch a manner will naturally do, into a prolix and remis Style. No writer whatever has stamped upon his Style

a more

a more lively impression of his own character. In reading his works, we seem engaged in conversation with him; we become thoroughly acquainted with him, not merely as an author, but as a man; and contract a friendship for him. He may be classed as standing in the middle, between a negligent Simplicity, and the highest degree of Ornament which this character of Style admits.

Blair.

## § 27. Simplicity of Mr. Addison's Style.

Of the latter of these, the highest, most correct, and ornamented degree of the fimple manner, Mr. Addison is beyond doubt, in the English language, the most perfect example: and therefore, though not without some faults, he is, on the whole, the fafest model for imitation, and the freest from confiderable defects, which the language affords. Perspicuous and pure he is in the highest degree; his precision, indeed, not very great; yet nearly as great as the subjects which he treats of require: the construction of his sentences easy, agreeable, and commonly very mufical; carrying a character of smoothness, more than of fliength. In figurative language he is rich, particularly in fimilies and metaphors; which are fo employed, as to render his Style splendid without being gaudy. There is not the least affectation in his manner; we see no marks of labour; nothing forced or constrained; but great elegance joined with great case and simplicity. He is, in particular, distinguished by a character of modesty and of politeness, which appears in all his writings. No author has a more popular and infinuating manner; and the great regard which he every where shews for virtue and religion, recommends him highly. If he fails in any thing, it is in want of strength and precision, which renders his manner, though perfectly suited to such essays as he writes in the Spectator, not altogether a proper model for any of the higher and more elaborate kinds of composition. Though the public have ever done much justice to his merit, yet the nature of his merit has not always been feen in its true light: for, though his poetry be elegant, he certainly bears a higher rank among the profe writers, than he is intitled to among the poets; and, in profe, his humour is of a much higher and more original strain than his Philosophy. The character of Sir Roger

de Coverley discovers more genius than the critique on Milton. Ibid.

### § 28. Simplicity of Style never wearies.

Such authors as those, whose characters I have been giving, one never tires of read-There is nothing in their manner that strains or fatigues our thoughts: we are pleased, without being dazzled by their luftre. So powerful is the charm of Simplicity in an author of real genius, that it atones for many defects, and reconciles us to many a careless expression. Hence, in all the most excellent authors, both in profe and verse, the simple and natural manner may be always remarked: although, other beauties being predominant this form not their peculiar and distinguishing character. Thus Milton is simple in the midst of all his grandeur; and Demosthenes in the midit of all his vehemence. To grave and folemn writings, Simplicity of manner adds the more venerable air. Accordingly, this has often been remarked as the prevailing character throughout all the facred Scriptures: and indeed no other character of Style was fo much fuited to the dignity of inspiration.

## § 29. Lord SHAFTSBURY deficient in Simplicity of Style.

Of authors who, notwithstanding many excellencies, have rendered their Style much less beautiful by want of Simplicity. I cannot give a more remarkable example than Lord Shaftibury. This is an author on whom I have made observations several times before; and shall now take leave of him, with giving his general character under this head. Considerable merit, doubtless, he has. His works might be read with profit for the moral philosophy which they contain, had he not filled them with fo many oblique and invidious infinuations against the Christian Religion; thrown out, too, with fo much spleen and satire, as do no honour to his memory, either as an author or a man. His language has many beauties. It is firm and supported in an uncommon degree: it is rich and musical. No English author, as I formerly shewed, has attended so much to the regular construction of his fentences, both with respect to propriety, and with respect to cadence, All this gives so much elegance and pomp to his language, that there is no wonder it should have been sometimes highly admired. It is greatly hurt, however, by perpettiz

petual stiffness and affectation. This is its capital fault. His lordship can express nothing with Simplicity. He feems to have confidered it as vulgar, and beneath the dignity of a man of quality, to speak like other men. Hence he is ever in bulkins: full of circumlocutions and artificial elegance. In every fentence, we fee the marks of labour and art; nothing of that ease which expresses a sentiment coming natural and warm from the heart. Of figures and ornament of every kind, he is exceedingly fond; fometimes happy in them; but his fondness for them is too vifible; and having once laid hold of some metaphor or allusion that pleased him, he knows not how to part with it. What is most wonderful, he was a professed admirer of Simplicity; is always extolling it in the ancients, and censuring the moderns for the want of it; though he departs from it himself as far as any one modern whatever. Lord Shaftfbury possessed delicacy and refinement of taffe, to a degree that we may call excessive and fickly; but he had little warmth of passion; few strong or vizorous feelings; and the coldness of his character led him to that artificial and flately manner which appears in his writings. He was fonder of nothing than of wit and raillery; but he is far from being happy in it. He attempts it often, but always awkwardly; he is fliff, even in his pleafantry; and laughs in form, like an author, and not like a man\*.

From the account which I have given of Lord Shaftibury's manner, it may eafily be imagined, that he would miflead many who bitndly admired him. Nothing is more dangerous to the tribe of imitators, than an author, who with many imposing beauties, has also some very considerable blemishes. This is fully exemplified in Mr. Blackwall of Aberdeen, the author of the Life of Homer, the Letters on Mythology, and the Court of Augustus; a writer of considerable learning, and of ingenuity also; but infected with an extravagant love of an artificial Style, and of that parade of

It may, perhaps, be not unworthy of being mentioned, that the first edition of his Enquiry into Virtue was published, surreptitions I believe, in a separate form, in the year 1699; and is sometimes to be met with: by comparing which with the corrected edition of the same treatife, as it now flands among his works, we see one of the most curious and useful examples, that I know, of what is called Linea Labor; the ait of polishing language, breaking long sentences, and wooking up army effect draught into a high-sinished performance.

language which distinguishes the Shaftsburean manner.

Having now faid fo much to recommend Simplicity, or the easy and natural manner of writing, and having pointed out the defects of an opposite manner; in order to prevent mistakes on this subject, it is necessary for me to observe, that it is very possible for an author to write simply, and vet not beautifully. One may be free from affectation, and not have merit. The beautiful Simplicity supposes an author to posfels real genius; to write with folidity, purity, and liveline's of imagination. In this case, the simplicity or unaffectedness of his manner, is the crowning ornament; it heightens every other beauty; it is the diels of nature, without which all beauties are imperfect. But if mere unaffectedness were fusicient to constitute the beauty of Style, weak, triffing, and dull writers might often lay claim to this beauty. And accordingly we frequently meet with pretended critics, who extol the dullest writers on account of what they call the " Chaffe Simplicity of their manner;" which, in truth, is no other than the absence of every ornament, through the mere want of genius and imagination. We must distinguish, therefore, between that Simplicity which accompanies true genius, and which is perfectly compatible with every proper ornament of Style; and that which is no other than a careless and slovenly manner. Indeed the diffinction is eafily made from the effect produced. The one hever fails to interest the reader; the other is infinid and tiresome. Rlair.

#### § 30. On the Vehement STYLE.

I proceed to mention one other manner or character of Style, different from any that I have yet spoken of; which may be distinguished by the name of the Vehement. This always implies strength; and is not, by any means, inconsistent with Simplicity: but, in its predominant character, is distinguishable from either the strong or the simple manner. It has a peculiar ardour; it is a glowing Style; the language of a man, whole imagination and passions are heated, and strongly affected by what he writes; who is therefore negligent of lesser graces, but pours himself forth with the rapidity and fulness of a torrent. It belongs to the higher kinds of oratory; and indeed is rather expected from a man who is speaking, than from one who is writing in his closet. The orations

tions of Demosthenes furnish the full and perfect example of this species of Style.

# § 31. Lord BOLINGBROKE excelled in the Vehement Style.

Among English writers, the one who has most of this character, though mixed, indeed, with several defects, is Lord Bolingbroke. Bolingbroke was formed by nature to be a factious leader; the demagogue of a popular assembly. Accordingly, the Style that runs through all his political writings, is that of one declaiming with heat, rather than writing with deliberation. He abounds in rhetorical figures; and pours himfelf forth with great impetuolity. He is copious to a fault; places the same thought before us in many different views; but generally with life and ardour. He is bold, rather than correct; a torrent that flows ilrong, but often muddv. His fentences are varied as to length and thortness; inclining, however, most to long periods, fometimes including parentheles, and frequently crowding and heaping a multitude of things upon one anothat, as naturally happens in the warmth of speaking. In the choice of his words, there is great felicity and precision. In exact continuction of fentences, he is much inferior to Lord Shaftsbury; but greatly superior to him in life and eafe. Upon the whole, his merit, as a writer, would have been very confiderable, if his matter had equalled his Style. But whilst we find many things to commend in the latter, in the former, as I before remarked, we can hardly find any thing to commend. his reasonings, for the most part, he is flimfy and false; in his political writings, factious: in what he calls his philotophical ones, irreligious and fophistical in the hightit degree. Ibid.

#### § 32. Directions for forming a STYLE.

It will be more to the purpose, that I conclude these differtations upon Style with a few directions concerning the proper method of attaining a good Style in general; leaving the particular character of that Style to be either formed by the subject on which we write, or prompted by the bent of genius.

The first direction which I give for this purpose, is, to study clear ideas on the subject concerning which we are to write or speak. This is a direction which may at first appear to have small relation to Style.

Its relation to it, however, is extremely close. The foundation of all good Style, is good fense, accompanied with a lively imagination. The Style and thoughts of a writer are so intimately connected, that, as I have feveral times hinted, it is fiequently hard to distinguish them. Whereever the impressions of things upon our minds are faint and indiffinet, or perplexed and confused, our Style in treating of such things will infallibly be so too. Whereas, things will infallibly be fo too. what we conceive clearly and feel strongly, we will naturally express with clearness and with strength. This, then, we may be assured, is a capital rule as to Style, to think closely of the subject, till we have attained a full and diffinct view of the matter which we are to clothe in words, till we become warm and interested in it; then, and not till then, shall we find expression begin to slow. Generally speaking, the best and most proper expressions, are those which a clear view of the subject fuggests, without much labour or enquiry after them. This is Quinctilian's observa-tion, Lib. viii. c. 1. "Plerumque optima " verba rebus cohierent, et cernuntur suo " lumine. At nos quæ rimus illa, tan-" quam lateant seque subducant. Ita nun " quam putamus verba esse circa id de " quo dicendum cst; sed ex aliis locis pe-" timus, et inventis vim afferimus "."

### § 33. Practice necessary for forming a STYLE.

In the fecond place, in order to form a good Style, the frequent practice of composing is indispensably necessary. Many rules concerning Style I have delivered; but no rules will interest the end without exercise and habit. At the same time, is not every fort of composing that will improve Style. This is so far from being the case, that by frequent, careless and hally composition, we shall acquire certainly a very bad Style; we shall have more trouble afterwards in unlaming faults, and correcting negligences, than it we had not been accustomed to composition at all. In the beginning, therefore,

\* "The most proper words for the most part adhere to the thoughts which are to be experient fed by them, and may be discovered as by their own light. But we hunt after them, as if they were hidden, and only to be found in records." Hence, initiad of conceiving the words to he near the fubject, we go in quest of their to fome other quarter, and endeavour to give force to the expressions we have found out."

D d we

we ought to write flowly and with much care. Let the facility and speed of writing, be the fruit of longer practice. "Moram et solicitudinem," says Quinctilian with the greatest reason, L. x. c, 3. "initiis impero." Nam primum hoc constituendum ac obtinendum est, ut quam optime scribamus; celeritatem dabit consuetudo. Paulatim res facilitis se ostendent, verba respondento, compositio prosequetur. Cuncta denique et in familia bene instituta in ossicio crunt. Summa hac est rei citò scribendo non sit ut bene scribatur; bene scribendo, sit ut citò. Blar.

### § 34. Too anxious a Care about Words to be a voided.

We must observe, however, that there may be an extreme in too great and anxious a care about Words. We must not retard the course of thought, nor cool the heat of imagination, by paufing too long on every word we employ. There is, on certain occasions, a glow of composition which should be kept up, if we hope to express ourselves happily, though at the expence of allowing tome inadvertencies A more fevere examination to pa's. of their must be left to be the work of correction. For if the practice of compotition be useful, the laborious work of coirecting is no less so; it is indeed absolutely necessary to our reaping any benefit from the habit of composition. What we have written should be laid by for some little time, till the ardour of composition be past, till the fondness for the expressions we have used be worn off, and the expressions themselves be forgotten; and then reviewing our work with a cool and critical eye, as if it were the performance of another, we shall disce in many imperfections which at first e caped us. Then is the scason for pruning redundancies; for weighing the arrangement of fentences; for attending to the juncture and connecting particles; and bringing Style into a regular, correct, and This " Lime Labor" supported form. must be submitted to by all who would

\* if 1 enion that fuch as are beginning the practice of composition, write flowly, and with convois deliberation. Their great object at first should be so write as well as possible; practice will enable them to write specially. By degrees matter will ofter itself full more readily; words will be at hand; composition will stow; every thing, as in the airangement of a well-ordered family, will prefent itself in its properplace. The sum of the whole is this; by hadly composition, we shall never acquire the art of composing well; by writing well, we shall come to write speedily."

communicate their thoughts with proper advantage to others; and some practice in it will soon sharpen their eye to the most necessary objects of attention, and render it a much more easy and practicable work than might at sirst be imagined. Ibid.

#### § 35. An Acquaintance with the best Authors necessary to the Formation of a STYLE.

In the third place, with respect to the assistance that is to be gained from the writings of others, it is obvious that we ought to render ourselves well acquainted with the Style of the best authors. This is requifite, both in order to form a just take in Style, and to supply us with a feil flock of words on every subject. In reading authors with a view to Style, attention should be given to the peculiarities of their different manners; and in this and former Lectures I have endeavoured to fuggest several things that may be useful in this view. I know no exercise that will be found more useful for acquiring a proper Style, than to translate some passage from an eminent English author, into our own words. What I mean is, to take, for inflance, fome page of one of Mi. Addison's Spectators, and read it carefully over two or three times, till we have got a firm hold of the thoughts contained in it; then to lay aside the book; to attempt to write out the passage from memory, in the best way we can; and having done so, next to open the book, and compare what we have written with the flyle of the author. Such an exercise will, by comparison, shew us where the defects of our Style lie; will lead us to the proper attentions for rectifying them; and, among the different ways in which the fame thought may be expressed, will make us perceive that which is the most beautiful

#### § 36. A servile Imitation to be avoided.

In the fourth place, I must caution, at the same time, against a servile imitation of any one author whatever. This is always dangerous. It hampers genius; it s sikely to produce a stiff manner; and those who are given to close imitation, generally imitate an author's faults as well as his beauties. No man will ever become a good writer, or speaker, who has not own genius. We ought to beware, in particular, of adopting any author's noted phrases, or transcribing passages from him.

Such a habit will prove fatal to all genuine composition. Infinitely better it is to have fomething that is our own, though of moderate beauty, than to affect to shine in borrowed ornaments, which will, at last, betray the utter poverty of our genius. On these heads of composing, correcting, reading and imitating, I advise every student of oratory to consult what Quinctilian has delivered in the Tenth Book of his Institutions, where he will find a variety of excellent observations and directions, that well deserve attention. Blair.

# § 37. Stylb must be adapted to the Subject.

In the fifth place, it is an obvious but material rule, with respect to Style, that we always fludy to adapt it to the subject, and also to the capacity of our hearers, if we are to speak in public. Nothing merits the name of eloquent or beautiful, which is not fuited to the occasion, and to the persons to whom it is addressed. is to the last degree awkward and absurd, to attempt a poetical florid Style, on occasions when it fould be our business only to argue and scafon; or to speak with elaborate pomp of expression, before pertons who comprehend nothing of it, and who can only stare at our unseasonable magnificence. These are defects not so much in point of Style, as, what is much worse, in point of common sense. When we begin to write or speak, we ought previously to fix in our minds a clear conception of the end to be aimed at; to keep this steadily in our view, and to suit our Style to it. If we do not facrifice to this great object every ill-timed ornament that may occur to our fancy, we are unpardonable; and though children and fools may admire, men of sense will laugh at us and our Style.

# § 38. Attention to STYLE must not detract from Attention to THOUGHT.

In the last place, I cannot conclude the subject without this admonition, that, in any case, and on any occasion, attention to Style must not engrois us so much, as to detract from a higher degree of attention to the Thoughts. "Curam verbottum," fays the great Roman Critic, rerum volo esse solicitudinem." A direction the more necessary, as the pre-

fent tafte of the age, in writing, feems to lean more to Style than to Thought. 'It is much easier to dress up trivial and common fentiments with fome beauty of expression, than to afford a fund of vigorous, ingenious, and useful thoughts. The latter requires true genius; the former may be attained by industry, with the help of very superficial parts. Hence, we find so many writers frivolously rich in Style, but wretchedly poor in fentiment. The public ear is now to much accustomed to a correct and ornamented Style, that no writer can, with fafety, neglect the fludy of it. But he is a contemptible one, who does not look to fomething beyond it; who does not lay the chief stress upon his matter, and employ such ornaments of Style to recommend it, as are manly, not foppifh, " Majore animo," fays the writer whom I have so often quoted, " aggredienda est " eloquentia; que si toto corpore valet, " ungues polire et capillum componere, non existimabit ad curam suam pertinere. Ornatus et virilis et fortis et fanctus fit; nec effeminatam levitatem et fuco ementitum colorem amet; sanguine et viri-" bus niteat. ""

### § 39. Of the Rife of Poetry among the

The Romans, in the infancy of their state, were entirely rude and unpolished. They came from thepherds; they were increased from the refuse of the nations around them; and their manners agreed with their original. As they lived wholly on tilling their ground at home, or on plunder from their neighbours, war was their bufiness, and agriculture the chiefart they fol-Long after this, when they had lowed. spread their conquests over a great part of Italy, and began to make a confiderable figure in the world,-even their great men retained a roughness, which they raised into a virtue, by calling it Roman Spirit; and which might often much better have been called Roman Barbarity. It feems to me, that there was more of aufterity than justice, and more of insolence than courage,

" A higher spirit ought to animate those who study eloquence. They ought to consult the health and soundness of the whole body, rather than bend their attention to such trifling objects as paring the nails, and dressing the hair. Let ornament be manly and chaste, without esseminate gaiety, or artificial colouraints of the such trifling with the glow of health and thrength."

Dd z

To your expression be attentive; but about your matter be folicitous."

in some of their most celebrated actions. However that be, this is certain, that they were at first a nation of soldiers and husbandmen: roughness was long an applauded character among them; and a fort of rusticity reigned, even in their senatehouse.

In a nation originally of fuch a temper as this, taken up almost always in extending their territories, very often in fettling the balance of power among themselves, and not unfrequently in both these at the same time, it was long before the politer arts made any appearance; and very long before they took root or flourished to any degree. Poetry was the first that did so; but fuch a poetry, as one might expect among a warlike, bufied, unpolished peo-

Not to enquire about the fongs of triumph, mentioned even in Romulus's time, there was certainly fomething of poetry among them in the next reign under Numa: a prince, who pretended to converfe with the Muses, as well as with Egeria; and who might possibly himself have made the verses which the Salian priests sung in his time, Pythagoras, either in the fame reign, or if you please some time after, gave the Romans a tincture of poetry as well as of philosophy; for Cicero affures us. that the Pythagoreans made great use of poetry and music: and probably they, like our old Druids, delivered most of their precepts in verte. Indeed the chief employment of poetry, in that and the following ages, among the Romans, was of a religious kind. Their very prayers, and perhaps their whole liturgy, was poetical. They not also a fort of prophetic or facred writers, who feem to have wrote generally in verse; and were so numerous, that there were above two thoufand of their volumes remaining even to Augustus's time. They had a kind of plays too, in these early times, derived from what they had feen of the Tufcan actors, when fent for to Rome to expiate a plague that raged in the city. These feem to have been either like our dumbthews, or elfe a kind of extempore farces; a thing to this day a good deal in use all over ttaly, and in Tuicany. In a more particular manner add to thefe, that extempore kind of jetting dialogues begun at their harvest and vintage feaths; and carried on so rudely and abusively afterwards, as to occasion a very severe law to reitrain their licentiousness—and those lovers of poetry and good eating, who feem to have attended the tables of the richer fort, much like the old provincial poets, or our own British bards, and sang there, to some instrument of music, the atchievements of their ancestors, and the noble deeds of those who had gone before them, to inflame others to follow their great examples.

The names of almost all these poets sleep in peace with all their works; and, if we may take the word of the other Roman writers of a better age, it is no great loss to us. One of their best poets represents them as very obscure and very contemptible; one of their best historians avoids quoting them, as too barbarous for politer ears; and one of their most judicious emperors ordered the greatest part of their writings to be burnt, that the world might be troubled with them no longer.

All these poets therefore may very well be dropt in the account: there being nothing remaining of their works: and probably no merit to be found in them, if they had remained. And fo we may date the beginning of the Roman poetry from Livius Andronicus, the first of their poets of whom any thing does remain to us; and from whom the Romans themselves seein to have dated the beginning of their poetry,

even in the Augustan age.

The first kind of poetry that was followed with any success among the Romans, was that for the stage. They were a very religious people; and flage plays in those times made no inconsiderable part in their public devotions; it is hence, perhaps, that the greatest number of their oldest poets, of whom we have any remains, and indeed almost all of them, are dramatic poets. Spence.

#### § 40. Of Livius, Næyius, and En-NIUS.

The foremost in this list, were Livius, Nævius, and Ennius. Livius's first play (and it was the first written play that ever appeared at Rome, whence perhaps Horace calls him Livius Scriptor) was afted in the 514th year from the building of the city. He feems to have got whatever reputation he had, rather as their first, than as a good writer; for Cicero, who admired these old poets more than they were afterwards admired, is forced to give up Livius; and fays, that his pieces did not deferve a fecond reading. He was for some time the sole writer for the stage; till Nævius rose to rival him, and proba-

bly far exceeded his master, Navius ventured too on an epic, or rather an historical poem, on the first Carthagenian war. Ennius followed his steps in this, as well as in the dramatic way; and feems to have excelled him as much as he had excelled Livius; fo much at least, that Lucretius fays of him, "That he was the first of their poets who deserved a lasting crown from the Muses." Thefe three poets were actors as well as poets; and feem all of them to have wrote whatever was wanted for the stage, rather than to have consulted their own turn or genius. Each of them published, sometimes tragedies, fometimes comedies, and fometimes a kind of dramatic fatires; fuch fatires, I suppose, as had been occasioned by the extempore poetry that had been in fathion the century before them. All the most celebrated dramatic writers of antiquity excel only in one kind. There is no tragedy of Terence, or Menander; and no comedy of Actius, or Euripides. But thefe first dramatic poets, among the Romans, attempted every thing indifferently; just as the present fancy, or the demand of the people, led them.

The quiet the Romans enjoyed after the second Punic war, when they had humbled their great rival Carthage; and their carrying on their conquests afterwards, without any great difficulties, into Greece,gave them leifure and opportunities for making very great improvements in their poetry. Their dramatic writers began to act with more steadiness and judgment; they followed one point of view; they had the benefit of the excellent patterns the Greek writers had fet them; and formed themselves on those models. Spence.

#### § 41. Of PLAUTUS.

Plautus was the first that consulted his own genius, and confined himself to that species of dramatic writing, for which he was the best fitted by nature. Indeed, his comedy (like the old comedy at Athens) is of a ruder kind, and far enough from the polish that was afterwards given it among the Romans. His jests are often rough, and his wit coarse; but there is a strength and spirit in him, that make one read him with pleasure: at least, he is much to be commended for being the first that confidered what he was most capable of excelling in, and not endeavouring to fine in too many different ways at once. Cacilius followed his example in this par-

ticular; but improved their comedy fo much beyond him, that he is named by Cicero, as perhaps the best of all the comic writers they ever had. This high character of him was not for his language, which is given up by Cicero himlelf as faulty and incorrect; but either for the dignity of his characters, or the strength and weight of his fentiments.

#### \$ 42. Of TERENCE.

Terence made his first appearance when Cacilius was in high reputation. It is faid, that when he offered his first play to the Ediles, they fent him with it to Cacilius for his judgment of the piece. Cacilius was at supper when he came to him; and as Terence was dreffed very meanly, he was placed on a little stool, and defired to read away; but upon his having read a very few lines only, Cacilius altered his behaviour, and placed him next himself at the table. They all admired him as a rifing genius; and the applause he received from the public, answered the compliments they had made him in private. His Eunuchus, in particular, was acted twice in one day; and he was paid more for that piece than ever had been given before for a comedy: and yet, by the way, it was not much above thirty pounds. We may fee by that, and the rest of his plays which remain to us, to what a degree of exactness and elegance the Roman comedy was arrived in his There is a beautiful simplicity, time. which reigns through all his works. There is no fearthing after wit, and no oftentation of ornament in him. All his speakers feem to fay just what they should say, and no more. The story is always going on; and goes on just as it ought. This whole age, long before Terence, and long after, is rather remarkable for strength than beauty in writing. Were we to compare it with the following age, the compositions of this would appear to those of the Augustan, as the Doric order in building if compared with the Corinthian; but Terence's work is to those of the Augustan age, as the Ionic is to the Corinthian order : it is not so ornamented, or so rich; but nothing can be more exact and pleafing. The Roman language itself, in his hands, feems to be improved beyond what one could ever expect; and to be advanced almost a hundred years forwarder than the times he lived in. There are some who look upon this as one of the strangest phænomena in the learned world : but it is a phanomenon which may be well enough explained from Cicero. He fays, " that in feveral families the Roman language was spoken in perfection, even in those times;" and instances particularly in the families of the Lælii and the Scipio's. Every one knows that Terence was extremely intimate in both these families: and as the language of his pieces is that of familiar conversation, he had indeed little more to do, than to write as they talked at their tables. Perhaps, too, he was obliged to Scipio and Lalius, for more than their bare conver-That is not at all impossible; and indeed the Romans themselves seem generally to have imagined, that he was affifted by them in the writing part too. If it was really fo, that will account still better for the elegance of the language in his plays: because Terence himself was born out of Italy: and though he was brought thither very young, he received the first part of his education in a family, where they might not speak with so much correctness as Lælius and Scipio had been used to from their very infancy. Thus much for the language of Terence's plays: as for the rest, it seems, from what he says himfelf, that his most usual method was to take his plans chiefly, and his characters wholly, from the Greek comic poets. Those who say that he translated all the comedies of Menander, certainly carry the matter too far. They were probably more than Terence ever wrote. Indeed this would be more likely to be true of Afranius than Terence; though, I suppose, it would scarce hold, were we to take both of them together. Spence.

#### § 43. Of AFRANIUS.

We have a very great loss in the works of Afranius: for he was regarded, even in the Augustan Age, as the most exact imitator of Menander. He owns himfelf, that he had no restraint in copying him; or any other of the Greek comic writers, wherever they fet him a good example. Afranius's stories and persons were Roman, as Terence's were Grecian. This was looked upon as so material a point in those days, that it made two different species of comedy. Those on a Greek story were called, Palliatæ; and those on a Roman Togatæ. Terence excelled all the Roman poets in the former, and Afranius in the latter.

#### § 44. Of PACUVIUS and ACTIUS.

About the same time that comedy was improved fo confiderably, Pacuvius and Actius (one a contemporary of Terence, and the other of Afranius) carried tragedy as far towards perfection as it ever arrived in Roman hands. The step from Ennius to Pacuvius was a very great one; fo great, that he was reckoned, in Cicero's time, the best of all their tragic poets. Pacuvius, as well as Terence, enjoyed the acquaintance and friendship of Ladius and Scipio: but he did not profit fo much by it, as to the improvement of his language. Indeed his flyle was not to be the common conversation style, as Terence's was; and all the stiffenings given to it, might take just as much from its elegance as they added to its dignity. What is remarkable in him, is, that he was all oft as eminent for painting as he was for poetry. He made the decorations for his own plays; and Pliny speaks of some paintings by him, in a temple of Hercules, as the most celebrated work of their kind, done by any Roman of condition after Fabius Pictor. Actius began to publish when Pacuvius was leaving off: his language was not so fine, nor his verses so well-turned, even as those of his predecessor. There is a remarkable story of him in an old critic, which, as it may give fome light into their different manners of writing, may be worth relating. Pacuvius, in his old age, retired to Tarentum, to enjoy the foft air and mild winters of that place. As Actius was obliged, on some affairs, to make a journey into Asia, he took Tarentum in his way, and staid there some days with Pacuvius. It was in this visit that he read his tragedy of Atreus to him, and defired his opinion of it. Old Pacuvius, after hearing it out. told him very honeftly, that the poetry was fonorous and majestic, but that it seemed to him too stiff and harsh. Actius replied, that he was himself very sensible of that fault in his writings; but that he was not at all forry for it: " for," fays he, "I have always been of opinion, that it is the fume with writers as with fruits; among which those that are most fost and palatable, decay the foonest; whereas those of a rough taile last the longer, and have the finer relish, when once they come to be mellowed by time."-Whether this style ever came to be thus mellowed. I very much doubt; however that was, it is a

point that seems generally allowed, that he than elegance, and put one more in mind and Pacuvius were the two best tragic poets the Romans ever had. Spence.

\$ 45. Of the Rife of Satire: Of Luci-LIUS, LUCRETIUS, and CATULLUS.

All this while, that is, for above one hundred years, the stage, as you see, was a'most solely in possession of the Roman poets. It was now time for the other kinds of poetry to have their turn; however, the first that sprung up and slourished to any degree, was still a cyon from the fame root. What I mean, is Satire; the produce of the old comedy. This kind of poetry had been attempted in a different manner by some of the former writers, and in particular by Ennius: but it was so altered and in improved by Lucilius, that he was called the inventor of it. This was a kind of poetry wholly of the Roman growth; and the only one they had that was fo; and even as to this, Lucilius improved a good deal by the fide lights he borrowed from the old comedy at Athens. Not long after, Lucretius brought their poetry acquainted with philosophy: and Catullus began to shew the Romans something of the excellence of the Greek lyric poets. Lucretius discovers a great deal of spirit wherever his subject will give him leave; ind the first moment he steps a little aside iom it, in all his digressions, he is fuller of life and fire, and appears to have been f a more poetical turn, than Virgil himelf; which is partly acknowledged in the ne compliment the latter feems to pay im in his Georgies. His subject often bliges him to go on heavily for an huned lines together: but wherever he reaks out, he breaks out like lightning om a dark cloud; all at once, with force nd brightness. His character, in this, fices with what is faid of him: that a hiltre he took had given him a frenzy, id that he wrote in his lucid intervals. e and Catullus wrote, when letters in meral began to flourish at Rome much ore than ever they had done. Catullus is too wife to rival him; and was the of admired of all his cotemporaries, in the different ways of writing he atmpted. His odes perhaps are the least luable part of his works. The strokes satire in his epigrams are very severe; d the descriptions in his Idylliams, very and picturesque. He prints throngly; t all his paintings have more of force

of Homer than Virgil.

With these I shall chuse to close the first age of the Roman poetry; an age more remarkable for flrength than for refinement in writing. I have dwelt longer on it perhaps than I ought; but the order and fuccession of these poets wanted much to be fettled: and I was obliged to fay fomething of each of them, because I may have recourfe to each on some occasion or another, in shewing you my collection. All that remains to us of the poetical works of this age, are the mifcellaneous p cms of Catullus; the philotophical poem of Lucretius; fix comedies by Terence; and twenty by Plautus. Of all the reft, there is nothing left us, except such paffages from their works as happened to be quoted by the ancient writers, and particularly by Cicero and the old critics

§ 46. Of the Criticities of CICERO, Ho-RACE, and QUINCILLIAN on the above Writer.

The best way to settle the characters and merits of these poets of the fast age, where fo little of their own works remains, is by confidering what is faid of them by the other Roman writers, who were well acquainted with their works. The best of the Roman critics we can confult now, and perhaps the best they ever had, are Cicero, Horace, and Quinctilian. If we compare their fentiments of these poets together, we thall find a difagreement in them; but a disagreement which I think may be accounted for, without any great difficulty. Cicero, (as he lived before the Roman poetry was brought to perfection, and possibly as no very good judge of poetry himself) seems to think more highly of them than the others. He give up Livius indeed; but then he makes it up in commending Navius. All the other comic poets he quotes often with respect; and as to the tragic, he carries it so fir as to seem firongly inclined to oppose old Ennius to Æchilus, Pacuvius to Sophocles, and Actius to Euripides .- This high notion of the old poets was probably the general fathion in his time; and it continued afterwards (especially among the more elderly fort of people) in the Augustan age; and indeed much longer. Horace, in his epittle to Augustus, combats it as a vulgar error in his time; and perbars it was an error from which that prince himlelf was not r. bully

Dć A

wholly free. However that be, Horace, on this occasion, enters into the question very fully, and with a good deal of warmth. The character he gives of the old dramatic poets (which indeed includes all the Poets I have been speaking of, except Lucilius, Lucretius, and Catullus,) is perhaps rather too severe. He says, "That their language was in a great degree superannuated, even in his time; that they are often negligent and incorrect; and that there is generally a stiffness in their compositions: that people indeed might pardon these things in them, as the fault of the times they lived in; but that it was provoking they should think of commending them for those very faults." In another piece of his, which turns pretty much on the same subject, he gives Lucilius's character much in the fame manner. He owns, "that he had a good deal of wit; but then it is rather of the farce kind, than true genteel wit. He is a rapid writer, and has a great many good things in him; but is often very superfluous and incorrect; his language is dashed affectedly with Greek; and his verses are hard and unharmonious."-Quinctilian steers the middle way between both. Cicero perhaps was a little misled by his nearness to their times; and Horace by his subject, which was professedly to speak against the old writers. Quinctilian, therefore, does not commend them fo generally as Cicero, nor speak against them so strongly as Horace; and is perhaps more to be depended upon, in this case, than either of them. He compares the works of Ennius to some facred grove, in which the old oaks look rather venerable than pleafing. He commends Pacuvius and Actius, for the strength of their language and the force of their fentiments; but fays, " they wanted that polish which was set on the Roman poetry afterwards." He speaks of Plautus and Cacilius, as applauded writers: of Terence as a most elegant, and of Afranius, as an excellent one; but they all, fays he, fall infinitely thort of the grace and beauty which is to be found in the Attic writers of comedy, and which is perhaps peculiar to the dialect they wrote in. To conclude: According to him, Lucilius is too much cried up by many, and too much run down by Horace; Lucretius is more to be read for his matter than for his flyle; and Catallus is remarkable in the fatirical part of his works, but scarce so in the rest of his Irric poetry. Stence.

# § 47. Of the flourishing State of Poetry among the Romans.

The first age was only as the dawning of the Roman poetry, in comparison of the clear full light that opened all at once afterwards, under Augustus Cæsar. The state which had been so long tending towards a monarchy, was quite fettled down to that form by this prince. When he had no longer any dangerous opponents, he grew mild, or at least concealed the cruelty of his temper. He gave peace and quiet to the people that were fallen into his hands; and looked kindly on the improvement of all the arts and elegancies of life among them. He had a minister, too, under him, who (though a very bad writer himself) knew how to encourage the best; and who admitted the best poets, in particular, into a very great share of friendflip and intimacy with him. Virgil was one of the foremost in this lift; who, at his first setting out, grew soon their most applauded writer for genteel paftorals: then gave them the most beautiful and most correct poem that ever was wrote in the Roman language, in his rules of agriculture (to beautiful, that fome of the antients feem to accute Virgil of having fludied beauty too much in that piece); and last of all, undertook a political poem, in support of the new establishment. I have thought this to be the intent of the Æncid, ever fince I first read Bossu; and the more one confiders it, the more I think one is confirmed in that opinion. Virgil is faid to have begun this poem the very year that Augustus was fixed from his great rival Anthony: the government of the Roman empire was to be wholly in him: and though he chose to be called their father, he was, in every thing but the name, their king. This monarchical form of government must naturally be ap: to displease the people. Vir il seems 10 have laid the plan of his poem to reconcile them to it. He takes advantage of their religious turn; and of fome old prophecies that must have been very flattering to the Roman people, as promising them the empire of the whole world : he weaves this in with the most probable account of their origin, that of their being descended from the Trojans. To be a little more parti-cular: Virgil, in his Æneid, shews that Æneas was called into their country by the express order of the gods; that he was made king of it, by the will of heaven, and by all the human rights that could be: that there was an uninterrupted succession of kings from him to Romulus; that his heirs were to reign there for ever; and that the Romans, acder them, were to obtain the monarchy of the world. It appears from Virgil, and the other Roman writers, that Julius ( afar was of the royal race, and that Augustus was his sole heir. The naturdicialt of all this is, that the promifes ma to the Roman people, in and through this week terminating in Augustus, the Romans of they would obey the gods, and be mafters of the world, were to yield obedience to the new establishment under that prince. As odd a tcheme as this may feem now, it is scarce so odd as that of fome people among us, who perfuaded themselves, that an absolute obedience was owing to our kings, on their supposed defcent from some unknown patriarch: and yet that had its effect with many, about a century ago; and teems not to have quite lost all its influence, even in our remembrance. However that be, I think it appears plain enough, that the two great points aimed at by Virgil in his Æneid, were to maintain their old religious tenets, and to support the new form of government in the family of the Cæfars. That poem therefore may very well be confidered as a religious and political work, or i .. icr (as the vulgar religion with them was aree any thing more than an engine of flate) it may fairly enough be confidered as a work merely political. If this was the case. Virgil was not so highly encouraged by Augustus and Macenas for no hing. To speak a little more plainly: He wrote in the fervice of the new usurpation on the state: and all that can be offered in vindication of him, in this light, is, that the ulurper he wrote for, was grown a time one; and that the temper and bent of their constitution, at that time, was such, that the reins of government must have fallen into the hands of some one person or another; and might probably, on any new revolution, have fallen into the hands of some one less mild and indulgent than Augustus was, at the time when Virgil wrote this poem in his service. But whatever may be faid of his reasons for writing it, the poem itself has been highly applauded in all ages, from its first appearance to this day; and though left unfinished by its author, has been always teckoned as much superior to all the other

epic poems among the Romans; as Homer's is among the Greeks. Spence.

### § 48. Observations on the Aneid, and the Author's Genius.

It preserves more to us of the religion of the Romans, than all the other Latin poets (excepting only Ovid) put together: and gives us the forms and appearances of their deities, as strongly as if we had fo many pictures of them preferved to us, done by tome of the best hands in the Augustan age. It is remarkable, that he is commended by fome of the ancients themfelves, for the strength of his imagination as to this particular, though in general that is not his character, fo much as exactness. He was certainly the most correct poet even of his time; in which all false thoughts and idle ornaments in writing were discouraged: and it is as certain, that there is but little of invention in his Æneid; much less, I believe, than is generally imagined. Almost all the little facts in it are built on history; and even as to the particular lines, no one perhaps ever borrowed more from the poets that precoded him, than he did. He goes fo far back as to old Ennius; and often inferts whole verses from him, and some other of their carlielt writers. The obsoleteness of their style, did not hinder him much in this: for he was a particular lover of their old language; an I no doubt inferted many more antiquated words in his poem, than we can discover at present. Judgment is his diffinguithing character; and his great excellence confided in chufing and ranging things aright. Whatever he borrowed he had the skill of making his own, by weaving it so well into his work, that it looks all of a piece; even those parts of his poems, where this may be most practifed, resembling a fine piece of Mosaic, in which all the parts, though of such different marbles, unite together; and the various shades and colours are so artfully disposed as to melt off insensibly into one

One of the greatest beauties in Virgil's private character was, his modesty and good-nature. He was apt to think humbly of himself, and handsomely of others: and was ready to shew his love of merit, even where it might seem to class with his own. He was the first who recommended Horace to Maxenas.

1bid.

#### § 49. Of HORACE.

Horace was the fittell man in the world for a court where wit was fo particularly encouraged. No man feems to have had more, and all of the genteelest fort; or to have been better acquainted with mankind. His gaiety and even his debauchery, made him fill the more agreeable to Macenas: so that it is no wonder that his acquaintance with that Minister grew up to so high a degree of friendthip, as is very uncommon between a first Minister and a poet; and which had possibly such an effect on the latter, as one shall scarce ever hear of between any two friends, the most on a level: for there is fome room to conjecture, that he hastened himself out of this world to accompany his great friend in the next. Horace has been most generally celebrated for his lyric poems; in which he far excelled all the Roman poets, and perhaps was no unworthy rival of feveral of the Greek: which feems to have been the height of his ambition. His next point of merit, as it has been usually reckoned, was his refining fatire; and bringing it from the coarseness and harshness of Lucilius to that genteel, easy manner, which he, and perhaps nobody but he and one person more in all the ages fince, has ever possesfed. I do not remember that any one of the ancients fays any thing of his epiftles: and this has made ine fometimes imagine, that his epiftles and fatires might originally have passed under one and the same name; perhaps that of Sermones. They are generally written in a style approaching to that of conversation; and are so much alike, that several of the satires might just as well be called epistles, as feveral of his epistles have the spirit of satire in them. This latter part of his works. by whatever name you please to call them (whether fatires and epistles, or discourses in verse on moral and familiar subjects) is what, I must own, I love much better even than the lyric part of his works. It is in these that he shews that talent for criticism, in which he so very much excelled; especially in his long epittle to Augustus; and that other to the Piso's, commonly called his Art of Poetry. They abound in strokes which shew his great knowledge of mankind, and in that pleafing way he had of teaching philosophy, of laughing away vice, and infinuating virtue into the minds of his readers. They may

ferve, as much as almost any writings can, to make men wiser and better: for he has the most agreeable way of preaching that ever was. He was, in general, an honest, good man himself; at least he does not feem to have had any one ill-natured vice about him. Other poets we admire; but there is not any of the ancient poets that I could with to have been acquainted with, so much as Horace. One cannot be very conversant with his writings, without having a friendship for the man; and longing to have just such as he was for one's friend.

Spence.

# § 50. Of TIBULLUS, PROPERTIUS, and OVID.

In that happy age, and in the fame court, flourished Tibullus. He enjoyed the acquaintance of Horace, who mentions him in a kind and friendly manner, both in his Odes and in his Epiffles. Tibullus is evidently the most exact and most beautiful writer of love verses among the Romans, and was effeemed fo by their belt judges; though there were fome, it feems, even in their better ages of writing and judging, who preferred Properties to him, Tibullus's talent feems to have been only for elegiac verse: at least his compliment on Messala (which is his only poem out of it) shews, I think, too plainly, that he was neither defigned for heroic verse, nor panegyric. Elegance is as much his distinguishing character, among the elegiac writers of this age, as it is Terence's, among the comic writers of the former; and if his subject will never let him he sublime, his judgment at least always keeps him from being faulty.—His rival and co-temporary, Propertius, scems to have set himself too many different models, to copy either of them so well as he might otherwife have done. In one place, he calls himself the Roman Callimachus; in another, he talks of rivalling Philetas: and he is faid to have studied Mimnermus, and some other of the Greek lyric writers, with the same view. You may see by this, and the practice of all their poets in general, that it was the constant method of the Romans (whenever they endeavoured to excel) to set some great Greek pattern or other before them. Propertius, perhaps, might have fucceeded better, had he fixed on any one of these; and not endeavoured to imr prove by all of them indifferently. - Ovid makes up the triumvirate of the elegine

writers of this age; and is more loose and incorrect than either of the other. As Propertius followed too many masters, Ovid endeavoured to shine in too many different kinds of writing at the same time. Besides, he had a redundant genius; and almost always chose rather to indulge, than to give any restraint to it. If one was to give any opinion of the different merits of his several works, one should not perhaps be much befide the truth, in faying, that he excels most in his Fasti; then perhaps in his love-verses; next in his heroic spiftles; and laftly, in his Metamorphofes, As for the verfes he wrote after his misfortunes, he has quite lost his spirit in them; and though you may discover some difference in his manner, after his banishment came to fit a little lighter on him, his genius never thines out fairly after that fatal flroke. His very love of being witty had forlaken him; though before it feems to have grown upon him, when it was leaft becoming, toward his old age: for his Metamorphofes (which was the last poem he wrote at Rome, and which indeed was not quite finished when he was fent into banishment) has more inflances of false wit in it, than perhaps all his former writings put together. One of the things I have heard him most cried up for, in that piece, is his transitions from one story to another. The ancients thought differently of this point; and Quinctilian, where he is speaking of them, endeavours rather to excuse than to commend him on that head. We have a considerable loss in the latter half of his Fasti; and in his Medea, which is much commended. Dramatic poetry feems not to have flourished, in proportion to the other forts of poetry, in the Augustan age. We scarce hear any thing of the comic poets of that time; and if tragedy had been much cultivated then, the Roman writers would certainly produce some names from it, to oppose to the Greeks, without going so far back as to those of Actius and Pacuviu. Indeed their own critics, in speaking of the dramatic writings of this age, boast rather of single pieces, than of authors: and the two particular tragedies, which they talk of in the highest strain, are the Medea of Ovid, and Varius's Thyestes. However, if it was not the age for plays, it was certainly the age in which almost all the other kinds of poetry were in their greatest excellence at Rome. Spence.

#### § 51. Of PHEDRUS.

Under this period of the best writing, I should be inclined to infert Phedrus. For though he published after the good manner of writing was in general on the decline, he flourished and formed his style under Augustus: and his book, though it did not appear till the reign of Tiberius, deferves, on all accounts, to be reckoned among the works of the Augustan age. Fabula Æsopeæ, was probably the title which he gave his fables. He profesfedly follows Æsop in them; and declares, that he keeps to his manner, even where the subject is of his own invention. By this it appears, that Æsop's way of telling stories was very thort and plain; for the diffing nifhing beauty of Phiedrus's fables is, their concifene's and fimplicity. The taffe was fo much fallen, at the time when he published them. that both thefe were objected to him as faults. He used those critics as they deferved. He tells a long, tedious flory to those who objected against the concilencis of his style; and answers some others, who condemned the plainness of it, with a run of bombast verses, that have a great many noify elevated words in them, without any fense at the bottom.

#### & 52. Of MANILIUS.

Manilius can scarce be allowed a place in this lift of the Augustan poets; his poetry is inferior to a great many of the Latin poets, who have wrote in these lower ages, to long fince Latin has ceafed to be a living language. There is at least, I believe, no instance, in any one poet of the flourithing ages, of such language, or such versification, as we meet with in Manilius; and there is not any one ancient writer that speaks one word of any such poet about those times. I doubt not, there were bad poets enough in the Augustan age; but I question whether Manilius may deserve the honour of being reckoned even among the bad poets of that time. What mult be said, then, to the many passages in the poem, which relate to the times in which the author lived, and which all have a regard to the Augustan age? If the whole be not a modern forgery, I do not see how one can deny his being of that age: and if it be a modern forgery, it is very lucky that it should agree so exactly, in so many little particulars, with the ancient globe of the heavens, in the Farnese palace. Al. lowing

lowing Manilius's poem to pass for what it pretends to be, there is nothing remains to us of the poetical works of this Augustan age, besides what I have mentioned: except the garden poem of Columella; the little hunting piece of Gratius; and, perhaps, an elegy or two of Gallus. Spence.

### § 53. Of the Poets whose Works have not come down to us.

These are but small remains for an age in which poetry was so well cultivated and followed by very great numbers, taking the good and the bad together. 'It is probable, most of the best have come down to us. As for the others, we only hear of the elegics of Capella and Montanus; that Proculus imitated Callimachus; and Rufus. Pindar: that Fontanus wrote a fort of pitcatory eclogues; and Macer, a poem on the nature of birds, beafts, and plants. That the same Macer, and Rabirinus, and Marfus, and Ponticus, and Pedo Albinovanus, and feveral others, were epic writers in that time (which, by the way, feems to have fignified little more, than that they wrote in hexameter verse): that Fundanius was the best comic poet then, and Melissus no bad one: that Varius was the most esteemed for epic poetry, before the Æneid appeared; and one of the most effected for tragedy always: that Pollio (befides his other excellencies at the bar, in the camp, and in affairs of state) is much commended for tragedy; and Varius, either for tragedy or epic poetry; for it does not quite appear which of the two he wrote. These last are great names; but there remain some of still higher dignity, who are, or at least defired to be thought, poets in that time. In the former part of Augustus's reign, his first minister for home affairs, Maccenas; and in the latter part, his grandfon Germanicus, were of this number. Germanicus in particular translated Aratus; and there are fome (I do not well know on what grounds) who pretend to have met with a confiderable part of his translation. The emperor himself seems to have been both a good critic, and a good author. He wrote chiefly in profe; but some things in verse too; and particularly good part of a tragedy, called Ajax.

It is no wonder, under such encouragements, and so great examples, that postry should arise to a higher pitch than it had ever done among the Romans. They had been gradually improving it for above two centuries; and in Augustus sound a

prince, whose own inclinations, the temper of whose reign, and whose very politics, led him to nurse all the arts; and poetry, in a more particular manner. The wonder is, when they had got so far toward persection, that they should fall as it were all at once; and from their greatest purity and simplicity, should degenerate so immediately into a lower and more affected manner of writing, than had been ever known among them.

### § 54. Of the Fall of Poetry among the Romans.

There are some who affert, that the great age of the Roman eloquence I have been speaking of, began to decline a little even in the latter part of Augustus's reign. It certainly fell very much under Tiberius; and grew every day weaker and weaker, till it was wholly changed under Caligula. Hence therefore we may date the third age, or the fall of the Roman poetry. Augustus, whatever his natural temper was, put on at least a mildness, that gave a calm to the state during his time: the succeeding emperors flung off the malk; and not only were, but openly appeared to be, rather monsters than men. We need not go to their historiaus for proofs of their prodigious vileness: it is enough to mention the bare names of Tiberius, Caligula, Nero. Under such heads, every thing that was good run to ruin. All discipline in war, all domestic virtues, the very love of liberty, and all the tafte for found eloquence and good poetry, funk gradually; and faded away, as they had flourished, together. Instead of the fensible, chaste, and manly way of writing, that had been in use in the former age, there now rose up a desire of writing imartly, and an affectation of thining in every thing they faid. A certain prettiness, and glitter, and luxuriance of ornaments, was what distinguished their most applauded writers in prose; and their poetry was quite loft in high flights and obscurity. Seneca, the favourite profe writer of those times; and Petronius Arbiter, so great a favourite with many of our own; afford too many proofs of this. As to the profe in Nero's time; and as to the poets, it is enough to fay, that they had then Lucan and Persius, instead of Virgil and Horace.

§ 55. Of Lucan.

Perfius and Lucan, who were the most celebrated poets under the reign of Nero, may very well ferve for examples of the

faults I just mentioned, one of the swelling, and the other of the obscure style, then in fashion. Lucan's manner in general runs too much into fustian and bombast. His muse was a kind of dropsy, and looks like the foldier described in his own Pharsalia, who in passing the desert sands of Africa, was bit by a ferpent, and swelled to such an immoderate fize, " that he was lost (as he expresses it) in the tumours of his own body." Some critics have been in too great haste to make Quinctilian say some good things of Lucan, which he never meant to do. What this poet has been always for, and what he will ever deferve to be admired for, are the feveral philosophical passages that abound in his works; and his generous fentiments, particularly on the love of liberty and the contempt of death. In his calm hours, he is very wife; but he is often in his rants, and never more fo than when he is got into a battle, or a fform at fea: but it is remarkable, that even on those occasions, it is not so much a violence of rage, as a madness of affectation, that appears most strongly in him. To give a few instances of it, out of many: In the very beginning of Lucan's storm, when Cæsar ventured to cross the sea in so small a vessel; " the fixt stars themselves feem to be put in motion." Then " the waves rife over the mountains, and carry away the tops of them." Their next step 15 to heaven; where they catch the rain "in the clouds:" I suppose, to increase their force. The fea opens in feveral places, and leaves its bottom dry land. All the foundations of the universe are shaken; and nature is afraid of a second chaos. His little skiff, in the mean time, fometimes cuts along the clouds with her fails; and sometimes seems in danger of being stranded on the sands at the bottom of the fea; and must inevitably have been lost, had not the storm (by good fortune) been so strong from every quarter, that she did not know on which fide to bulge first.

When the two armies are going to join battle in the plains of Pharialia, we are told, that all the foldiers were incapable of any fear for themselves, because they were wholly taken up with their concern for the danger which threatened Pompey and the commonwealth. On this great occasion, the hills about them, according to his account, seem to be more afraid than the mea; for some of the mountains looked as if they would thrust their heads into the clouds; and others, as if they wanted

to hide themselves under the valleys at their seet. And these disturbances in nature were universal: for that day, every single Roman, in whatever part of the world he was, selt a strange gloom spread all over his mind, on a sudden; and was ready to cry, though he did not know why or wherefore.

Spence.

# § 56. His Description of the Sca-fight of

The fea-fight off Marseilles, is a thing that might divert one, full as well as Erafmus's Naufragium Joculare; and what is still stranger, the poet chuses to be most diverting in the wounds he gives the poor foldier. The first person killed in it, is pierced at the same inflant by two spears; one in his back, and the other in his breaft; fo nicely, that both their points meet together in the middle of his body. They each, I suppose, had a right to kill him; and his foul was for some time doubtful which it should obey. At last, it compounds the matter: drives out each of the spears before it, at the same instant; and whips out of his body, half at one wound. and half at the other .- A little after this, there is an honest Greek, who has his right hand cut off, and fights on with his left. till be can leap into the fea to recover the former; but there (as misfortunes feldom come fingle) he has his left arm chopt off too: after which, like the hero in one of our ancient ballads, he fights on with the trunk of his body, and performs actions greater than any Witherington that ever was -When the battle grows warmer, there are many who have the fame misfortune with this Gre k. In endeavouring to climb up the enemies thips, teveral have their arms flruck off; fall into the fea; leave their hands behind them! Some of these swimming combatants encounter their enemies in the water; fome supply their friends thips with arms; fome, that had no arms, entangle themselves with their enemies; cling to them, and fink together to the bottom of the fea; others flick their bodies against the beaks of their enemies ships: and scarce a man of them flung away the use of his carcule, even when he thould be dead.

But among all the contrivances of these posthumous warriors, the thing most to be admired, is the fagacity of the great Tyrrhenus. Tyrrhenus was standing at the head of one of the vessels, when a ball of lead, stung by an artful singer, struck

out both his eyes. The violent dash of the blow, and the deep darkness that was foread over him all at once, made him at first conclude that he was dead: but when he had recovered his fenses a little, and found he could advance one foot before the other, he defired his fellow foldiers to plant him just as they did their Ballista; he hopes he can flill fight as well as a macoine; and feems mightily pleafed to think how he shall cheat the enemy, who will fling away darts at him, that might have killed people who were alive.

Such strange things as these, make me

always wonder the more, how Lucan can be to wife as he is in some parts of his poem. Indeed his fentences are more folial than one could otherwise expect from to young a writer, had he wanted fuch an uncle as Seneca, and fuch a matter as Cornutus. The fwellings in the other parts of his peem may be partly accounted for, perhaps, from his being born in Spain. and in that part of it which was the fartheil removed from Greece and Rome; may, of that very city, which is marked by Cicero as particularly over-run with a bad taile. After all, what I most dislike him for, is a blot in his moral character. He was at first pretty high in the favour of Nero. On the discovery of his being concerned in a plot against him, this philofopher (who had written fo much, and fo gallantly, about the pleasure of dying) behaved himself in the most despicable manner. He named his own mother as guilty of the conspiracy, in hopes of saving himself. After this, he added several of his friends to his former confession; and thus continued labouring for a pardon, by making facrifices to the tyrant of fuch lives, as any one, much less of a philosopher than he feems to have been, ought to think dearer than their own. All this baseness was of no use to him: for, in the end, Nero ordered him to execution too. His veins were opened; and the last words he froke, were tome verses of his own.

Spence.

#### § 57. Of Persius.

Persius is said to have been Lucan's school-fellow under Cornutus; and, like him, was bred up more a philosopher than a poet. He has the character of a good man; but scarce deserves that of a good writer, in any other than the moral fense of the word: for his writings are very virtuous, but not very poetical. His great fault is obscurity. Several have endeas voured to excuse or palliate this fault in him, from the danger of the times he lived in; and the necessity a fatirist then lay under, of writing fo, for his own fecurity. This may hold as to some passages in him: but to fay the truth, he feems to have a tendency and love to obscurity in himself: for it is not only to be found where he may fpeak of the emperor, or the state; but in the general course of his satires. So that, in my conscience, I must give him up for an obscure writer; as I should Lucan for

a tumid and fwelling one.

Such was the Roman poetry under Nero. The three emperors after him were made in an hurry, and had short tumultuous reigns. Then the Flavian family came in. Verpafian, the first emperor of that line, endeavoured to recover fomething of the good tafte that had formerly flourished in Rome; his fon Titus, the delight of mankind, in his thort reign, encouraged poetry by his example, as well as by his liberalities: and even Domitian loved to be thought a patron of the mules. After him, there was a fuccession of good emperois, from Nerva to the Antonines. And this extraordinary good fortune (for indeed, if one confiders the general run of the Roman emperors, it would have been fuch, to have had any two good ones only together) gave a new spirit to the arts, that had long been in fo languishing a condition, and made poetry revive, and raife up its head again, once more among them. Not that there were very good poets even now; but they were better, at least, than they had been under the reign of Nero.

#### Of SILIUS, STATIUS, and VA-§ 58. RERIUS FLACCUS.

'This period produced three epic poets, whose works remain to us; Silius, Statius, and Valerius Flaccus. Silius, as if he had been frightened at the high flight of Lucan, keeps almost always on the ground, and scarce once attempts to foar throughout his whole work. It is plain, however, though it is low; and if he has but little of the spirit of poetry, he is free at least from the affectation, and obscurity, and bombast, which prevailed so much among his immediate predecessors. Silius was honoured with the confulate; and lived to fee his son in the same high office. He was a great lover and collector of pictures and flatues; some of which he worthipped; especially

especially one he had of Virgil. He used to offer facrifices too at his tomb near Naples. It is a pity that he could not get more of his spirit in his writings: for he had scarce enough to make his offerings acceptable to the genius of that great poet. -Statius had more of spirit, with a less share of prudence: for his Thebaid is certainly ill-conducted, and scarcely well written. By the little we have of his Achilleid, that would probably have been a much better poem, at least as to the writing part, had he lived to finish it. As it is, his description of Achilles's behaviour at the feast which Lycomedes makes for the Grecian ambaffadors, and some other parts of it, read more pleasingly to me than any part of the Thebaid. I cannot help thinking. that the passage quoted so often from Juvenal, as an encomium on Statius, was meant as a fatire on him. Martial feems to flrike at him too, under the borrowed name of Sabellus. As he did not finish his Achilkid, he may deserve more reputation perhaps as a miscellaneous than as an epic writer; for though the odes and other copies of verses in his Sylva are not without their faults, they are not fo faulty as his Thebaid. The chief faults of Statius, in his Sylvæ and Thebaid, are faid to have proceeded from very different causes: the former, from their having been written incorrectly and in a great deal of hafte; and the other, from its being over corrected and hard. Perhaps his greatest fault of all, or rather the greatest sign of his bad judgment, is his admiring Lucan fo extravagantly as he does. It is remarkable, that poetry run more lineally in Statius's family, than perhaps in any other. He received it from his father; who had been an eminent poet in his time, and lived to fee his fon obtain the laurel-crown at the Alhan games; as he had formerly done himself.-Valerius Flaccus wrote a little before Statius. He died young, and the his poem unfinished. We have but seven books of his Argonauties, and part of the eight, in which the Argonauts are left on the sea, in their return homewards. Several of the modern critics, who have been fome way or other concerned in publishing Placeus's works, make no scruple of place ing him next to Virgil, of all the Roman epic poets; and I own I am a good deal inclined to be seriously of their opinion; for he feems to me to have more fire than Silius, and to be more correct than Statius;

and as for Lucan, I cannot help looking upon him as quite out of the question. He imitates Virgil's language much better than Silius, or even Statius; and his plan, or rather his flory, is certainly less embarraffed and confused than the Thebaid. Some of the ancients\*themselves speak of Flaceus with a great deal of respect; and particularly Quincillian; who fays nothing at all of Silius or Statius; unless the latter is to be included in that general expression of 'feveral others,' whom he leaves to be

celebrated by pofferity.

As to the dramatic writers of this time, we have not any one comedy, and only ten tragedies, all published under the name of Lucius Annaus Seneca. They are probably the work of different hands; and might be a collection of favourite plays, put together by fome bad grummarim; for either the Roman tragedies of this age were very indifferent, or thele are not their beit. They have been attributed to authors as far diffant as the reigns of Augustus and Trajan. It is true, the perfor who is to positive that one of them in particular much be of the Augustan age, says this of a piece that he feems refolved to cry up at all rates; and I believe one thould do no injury to any one of them, in supposing them all to have been written in this third age, under the decline of the Roman poetry.

Of all the other pacts under this period, there are none whole works remain to ur, except Martial and Juven I. The famer flourithed under Domitim; and the latter under Nerva, Trajan, and Adrian. Spince.

#### \$ 59. Of MARTIAL.

Martial is a dealer only in a little kind of writing; for Epigram is certainly (what it is called by Diyden) the lowed flep of poetry. He is at the very bottom of the hill; but he diverts himself there, in gathering flowers and playing with infects. prettily enough. If Martial made a newyear's gift, he was fure to fend a diffich with it: if a friend died, he made a few verses to put on his tomb-stone: if a statue was fet up, they came to him for an infcription. These were the common offices of his muse. If he struck a fault in life, he marked it down in a few lines: and if he had a mind to please a friend, or to get the favour of the great, his thyle was turned to panegyric; and these were his highest employments. He was, however, a good writer in his way; and there are inflances even of his writing with some dignity on higher occasions. Spence.

### § 60. Of JUVENAL.

Juvenal began to write after all I have mentioned; and, I do not know by what good fortune, writes with a greater spirit of poetry than any of them. He has scarce any thing of the gentility of Horace: yet he is not without humour, and exceeds all the fatiritls in feverity. To fay the truth, he flashes too much like an angry executioner; but the deprivity of the times, and the vices then in fishion, may often excuse fome degree of rage in him. It is faid he did not write till he was elderly; and after he had been too much used to declaiming. However, his fatires have a great deal of fpirit in them; and thew a flrong hatred of vice, with fome very fine and high fentiments of virtue. They are indeed fo animated, that I do not know any poem of this age, which one can read with near fo much pleafure as his fatires.

Juvenal may very well be called the laft of the Roman poets. After his time, poetry continued decaying more and more, quite down to the time of Co-flantine, when all the arts were to far lot and extinguished among the Romans, that from that time they themselves may very well be called by the name they used to give to all the world, except the Greeks; for the Romans then had source any thing to distinguish them from the Barbarians.

There are, therefore, but three ages of the Roman postry, that can carry any weight with them in an enquiry of this nature. The first age, from the first Punic war to the time of Augustus, is more remarkable for fliength, than any great degree of beauty in writing. The fecond age, or the Augustan, is the time when they wrote with a due mixture of beauty and flrength. And the third, from the beginning of Nero's reign to the end of Adrian's, when they endeavoured after beauty more than flrength; when they loft much of their vigour, and run too much into affectation. Their poetry, in its youth, was throng and nervous: in its middle age, it was manly and polite; in its latter days, it grew tawdry and feeble; and endeavoured to nide the decays of its former beauty and through, in false ornaments of drefs, and a borrowed flush on the face; which did not fo much render it pleasing, as it showed that its natural complexion was faded and lott.

§ 61. Of the Introduction, Improvement, and Fall of the Arts at Rome.

The city of Rome, as well as its inhabitants, was in the beginning rude and unadorned. Those old rough soldiers looked on the effects of the politer arts as things fit only for an effeminate people; as too apt to foften and unnerve men; and to take from that martial temper and ferocity, which they encouraged fo much and fo univerfally in the infancy of their flate. Their houses were (what the name they gave them fignified) only a covering for them, and a defence against bad weather. Thefe sheds of theirs were more like the caves of wild beails, than the habitations of men; and were rather flung together as chance led them, than formed into regular fliects and openings; their walls were half mud, and their 100fs, pieces of wood fluck together; nay, even this was an after-improvement; for in Romulus's time, their houses were only covered with thaw. If they had any thing that was tine, than ordinary, that was chiefly taken up in fetting off the temples of their gods; and when these began to be furnished with flatues (for they had none till long after Numa's time) they were probably more fit to give terror than delight; and feemed rather formed to as to be horrible enough to strike an awe into those who worshipped them, than handfome enough to invite any one to look upon them for pleafure. There defign, I suppose, was answerable to the materials they were made of; and if their gods were of earthen ware, they were reckoned better than ordinary; for many of them were chopt out of wood. One of the chief ornaments in those times, both of the temples and private houses, confided in their ancient trophics: which were trunks of trees cleared of their branches, and fo formed into a rough kind of poils. These were loaded with the arms they had taken in war, and you may eafily conceive what fort of ornaments these posts must make, when half decayed by time, and hung about with old rully arms, besmeared with the blood of their enemics. Rome was not then that beautiful Rome, whose very ruins at this day are sought after with fo much pleasure: it was a town, which carried an air of terror in its appearance; and which made people shudder, whenever they first entered within its

\$ 62. The Condition of the Romans in the Second Punic War.

Such was the state of this imperial city, when its citizens had made fo great a proerefs in arms as to have conquered the better part of Italy, and to be able to engage in a war with the Carthaginians; the flrongest power then by land, and the ab-The Romans, in the folute masters by sca. first Punic war, added Sicily to their dominions. In the fecond, they greatly increafed their strength, both by sea and land; and acquired a taste of the arts and elegancies of life, with which till then they had been totally unacquainted. For tho' before this they were masters of Sicily (which in the old Roman geography made a part of Greece) and of several cities in the eastern parts of Italy, which were inhabited by colonies from Greece, and were adorned with the pictures, and statues, and other works, in which that nation delighted, and excelled the rest of the world so much; they had hitherto looked upon them with so careless an eye, that they had felt little or nothing of their beauty. This infentibility they preferved fo long, either from the groffness of their minds, or perhaps from their superstition, and a dread of reverencing foreign deities as much as their own; or (which is the most likely of all) out of mere politics, and the defire of keeping up their martial spirit and natural roughness, which they thought the arts and elegancies of the Grecians would be but too apt to destroy. However that was, they generally preserved themselves from even the least suspicion of taste for the polite arts, pretty far into the fecond Punic war; as appears by the behaviour of Fahius Maximus in that war, even after the fales were turned on their fide. When that general took Tarentum, he found it full of riches, and extremely adorned with pictures and statues. Among others, there were some very fine colosseal figures of the gods, represented as fighting against the rebel giants. These were made by some of the most eminent masters in Greece; and the Jupiter, not improbably, by Lyfip-Pus. When Fabius was disposing of the poil, he ordered the money and plate to be sent to the treasury at Rome, but the fluxes and pictures are left behind. The secretary who attended him in his survey, was formewhat firmek with the largeness and hoble air of the figures just mentioned; and affect, Whether they too mail be left

with the reft? "Yes," replied Fabiuss" leave their angry gods to the Tarens" tines; we will have nothing to do with them."

Spence.

§ 63. MARCELLUS attacks SYRACUSE, and fends all its Pictures and Statues to ROME.

Marcellus had indeed behaved himfelf very differently in Sicily, a year or two before this happened. As he was to carry on the war in that province, he bent tho whole force of it against Syracuse. There was at that time no one city which belonged to the Greeks, more elegant, or better adorned, than the city of Syracuse; it abounded in the works of the best masters. Marcellus, when he took the city, cleared it entirely, and fent all their flatues and pictures to Rome. When I fay all, I use the language of the people of Syracuse; who soon after laid a complaint against Marcellus before the Roman senate, in which they charged him with ffripping all their houses and temples, and leaving nothing but bare walls throughout the city. Marcellus himself did not at all disown it, but fairly confessed what he had done: and used to declare, that he had done so, in order to adorn Rome, and to introduce a tafte for the fine acts among his countrymen.

Such a difference of behaviour in their two greatest leaders, soon occasioned two different parties in Rome. The old people in general joined in crying up Fabius. -Fabius was not rapacious, as some others were; but temperate in his conquells. In what he had done, he had acted, not only with that moderation which becomes a Roman general, but with much prudence and forefight. "These fineries," they cried, " are a pretty diversion for an ille " effeminate people: let us leave them to the Greeks. The Romans delire no " other ornaments of life, than a simplie city of manners at home, and fortitude " against our enemies abroad. It is by " these arts that we have raised our name " so high, and spread our dominion so far: " and shall we suffer them now to be ex-"changed for a fine taste, and what they call elegance of living? No, great Ju-" piter, who presidest over the capital! let " the Greeks keep their arts to themselves,: " and let the Romans learn only how to " conquer and to govern mankind."—An-other fet, and particularly the younger people, who were extremely delighed with

the noble works of the Grecian artists that . had been set up for some time in the temples and portacos, and all the most public places of the city, and who used frequently to spend the greatest part of the day in contemplating the beauties of them, ex-tolled Marcellus as much for the pleafure he had given them. "We shall now," faid they, " no longer be reckoned among the Barbarians. That ruft, which we " have been so long contracting, will soon " be worn off. Other generals have con-" quered our enemies, but Marcellus has " conquered our ignorance. We begin to " fee with new eyes, and have a new world " of beauties opening before us. Let the "Romans be polite, as well as victorious; " and let us learn to excel the nations in " tafte, as well as to conquer them with our " arms."

Whichever fide was in the right, the party for Marcellus was the successful one; for, from this point of time we may date the introduction of the arts into Rome. The Romans by this means began to be fond of them; and the love of the arts is a passion, which grows very fast in any breast, wherever it is once entertained.

We may fee how fast and how greatly it prevailed at Rome, by a speech which old Cato the cenfor made in the senate, not above feventeen years after the taking of Syracule. He complains in it, that their people began to run into Greece and Afia; and to be infected with a defire of playing with their fine things: that as to fuch spoils, there was less honour in taking them, than there was danger of their being taken by them that the gods brought from Syracuse, had revenged the cause of its citizens, in spreading this taste among the Romans: that he heard but too many daily crying up the ornaments of Corinth and Athens; and ridiculing the poor old Roman gods; who had hitherto been propitious to them; and who, he hoped, would fill continue fo, if they would but let their flatues remain in peace upon their pedef-Spence. tals. .

§ 64. The ROMAN Generals, in their feveral Conquests, convey great Numbers of Pidures and Statues to Rome.

It was in vain too that Cato spoke against it; for the love of the arts prevailed every day more and more; and frem henceforward the Roman generals, in their several conquests, feem to have strove who should bring away the greatest

number of statues and pictures, to fet of their triumphs, and to adorn the city of Rome. It is surprising what accessions of this kind were made in the compass of a little more than half a century after Marcellus had fet the example. The elder Scipio Africanus brought in a great number of wrought vales from Spain and Africa, toward the end of the second Punic war; and the very year after that was finished, the Romans entered into a war with Greece, the great school of all the arts, and the chief repository of most of the finest works that ever were produced by them. It would be endless to mention all their acquifitions from hence; I thail only put you in mind of some of the most confiderable. Flaminius made a great shew both of statues and vases in his triumph over Philip king of Macedon; but he was much exceeded by Æmilius, who reduced that kingdom into a province. Æmilius's triumph latted three days; the first of which was wholly taken up in bringing in the fine statues he had selected in his expedition; as the chief ornament of the second confifted of vales and sculptured vessels of all forts, by the most eminent hands. These were all the most chosen things, culled from the collection of that successor of Alexander the Great; for as to the inferior spoils of no less than seventy Grecian cities, Æmilius had left them all to his foldiery, as not worthy to appear among the ornaments of his triumph. Not many years after this, the young Scipio Africanus (the person who is most celebrated for his polite taste of all the Romans hitherto, and who was fcarce exceeded by any one of them in all the succeeding ages) destroyed Carthage, and transferred many of the chief ornaments of that city, which had so long bid fair for being the seat of empire, to Rome, which soon became undoubtedly fo. This must have been a vast accession: though that great man, who was as just in his actions as he was elegant in his tatte, did not bring all the finel of his spoils to Rome, but left a great part of them in Sicily, from whence they had formerly been taken by the Carthaginians The very fame year that Scipio freed Rome from its most dangerous rival. Carthage, Mummius (who was as remarkable for his rusticity, as Scipio was for elegance and taste) added Achaia to the Roman ftate; and facked, smong feveral others, the famous city of Corinth, which had been long looked upon as one of the principal refervoir

refervoirs of the finest works of art. He cleared it of all its beauties, without knowing any thing of them: even without knowing, that an old Grecian statue was better than a new Roman one. He used, how-ever, the surest method of not being mistaken; for he took all indifferently as they came in his way; and brought them off in fuch quantities, that he alone is faid to have filled Rome with flatues and pictures. Thus, partly from the talle, and partly from the vanity of their generals, in less than feventy years time (reckoning from Marcellus's taking of Syracufe to the year in which Carthage was deftroyed) Italy was furnished with the noblest productions of the ancient artists, that before lay feattered all over Spain, Africa, Sicily, and the reft of Greece. Sylla, befide many others, added valliv to them afterwards; particularly by his taking of Athens, and by his conqueits in Afia; where, by his too great indulgence to his armies, he made taffe and rapine a general thing, even among the common teldiers, as it had been, for a long time, among their leaders.

In this manner, the first confiderable acquifitions were made by their conquering armie,; and they were carried on by the persons sent out to govern their provinces, when conquered. As the behaviour of these in their governments, in general, was one of the greatest blots on the Roman nation, we must not expect a full account of their transactions in the cld historians, who treat particularly of the Roman affairs: for fuch of these that remain to us, are either Romans themselves, or else Greeks who were too much attached to the Roman interest, to speak out the whole truth in this affair. But what we cannot have fully f.om their own historians, may be pretty well supplied from other hands. A poet of their own, who feems to have been a very honest man, has fet the rapacionings of their governors in general in a very strong light; as Cicero has fet forth that of Verres in particular, as strongly. If we may judge of their general behaviour by that of this governor of Sicily, they were more like monflers and harpies, than men. For that Public robber (as Cicero calls him, more than once) hunted over every corner of his island, with a couple of finders (one a Greek painter, and the other a statuary of the fame nation) to get together his collection; and was to curious and fo rapacious in that search, that Cicero says, there was not a gem, or flatme, or relievo, or picture, in all Sicily, which he did not fee; nor any one he liked, which he did not take away from its owner. What he thus got, he fent into Italy. Rome was the centre both of their rapids in war, and of their rapines in peace. and if many of their practors and proconfuls acted but in half to abandoned a manner as this Verres appears to have done, it is very probable that Rome was more enriched in all these fort of things secretly by their governors, than it had been openly by their generals.

Spence.

§ 65. The Methods made use of in drawing the Works of the best ancient Artists into ITALY.

There was another method of augmenting these treasures at Rome, not so infamous as this, and not fo glorious as the former. What I mean, was the custom of the Ædiles, when they exhibited their public games, of adorning the theatres and other places where they were performed, with great numbers of statues and pictures: which they bought up or borrowed, for that purpole, all over Greece, and fometimes even from Afia. Scaurus, in particular, in his ædileship, had no less than three thousand slatues and relievos for the mere ornamenting of the stage, in a theatre built only for four or five days. This was the fame Scaurus who (whilft he was in the fame office too) brought to Rome all the pictures of Sicyon, which had been fo long one of the most eminent schools in Greece for painting; in lieu of debts owing, or pretended to be owed, from that city to the Roman people.

From these public methods of drawing the works of the best ancient artisls into Italy, it grew at length to be a part of private luxury, affected by almost every body that could afford it, to adorn their houses, their porticos, and their gardens, with the best statues and pictures tiley could procure out of Greece or Afia. None went earlier into this tafte, than the family of the Luculli, and particularly Lucius Lucullus, who carried on the war against Mithridates. He was remarkable for his love of the arts and polite learning even from a child; and in the latter part of his life gave himself up to much to collections of this kind, that Plutarch reckons it among his follies. " As I am speaking of his faults (fays that historian in nis life) I should not omit his vast baths, and piazzas for walking; or his gardens, which were much more magnificent than any in his time

E c a

at Rome, and equal to any in the luxurious ages that followed; nor his excessive fondness for statues and pictures, which he got from all patts, to adorn his works and gardens, at an immense expence; and with the vast riches he had heaped together in the Mithridatic war." There were several other samilies which sell about that time into the same fort of excess; and, among the rest, the Julian. The first emteror, who was of that family, was a great collector; and, in particular, was as fond of old gems, as his successor, Augustus, was of Corinthian vales.

This may be called the first age of the flourishing of the politer arts at Rome; or rather the age in which they were introduced there: for the people in this period were chiefly taken up in getting fine thing,, and bringing them together. There were perhaps some particular persons in it of a very good tafte: but in general one may fay, there was rather a love, than any great knowledge of their beauties, during this age, among the Romans. They were brought to Rome in the first part of it, in greater numbers than can be eafily conceived; and in some time, every body began to look upon them with pleafure. The collection was continually augmenting afterwards, from the feveral methods I have mentioned; and I doubt not but a good talle would have been a general thing among them much carlier than it was, had it not been for the frequent convulfions in their flate, and the perpetual flruggles of fome great min or other to get the reins of government into his hands. These continued quite from Sylla's time to the establishment of the state under Augustus. The peaceful times that then fucceeded, and the encouragement which was given by that emperor to all the arts, afforded the Romans full leifure to contemplate the fine works that were got together at Rome in the age before, and to perfect their tatte in all the elegancies of life. The artifles. who were then much invited to Rome, worked in a thyle greatly superior to what they had done even in Julius Cafar's time : fo that it is under Augustus that we may begin the second, and most perfect age of sculpture and painting, as well as of poetry. Augustus changed the whole appearance of Rome infelfs he found it ill built, and left it a city of murble. He adorsed it with buildings, extremely finer than any ar could bout before his time, and fet off all those buildings, and even the common

firects, with an addition of some of the finest flatues in the world.

Spence.

§ 66. On the Decline of the Arts, Eloquence, and Postry, upon the Death of Augustus.

On the death of Augustus, though the arts, and the talle for them, did not fuffer so great a change, as appeared immediately in the taffe of eloquence and poetry. yet they must have suffered a good deal, There is a fecret union, a certain kind of sympathy between all the polite arts, which makes them languish and slourish together, The fame circumflances are either land ounfriendly to all of them. The favour of Augustus, and the tranquillity of his reign. was as a gentle dew from heaven, in a favourable feafon, that made them bud forth and flourith; and the four reign of Tiberius, was as a fudden frost that cheelel their growth, and at last killed all the beauties. The vanity, and tyranny, and diffurbances of the times that followed. gave the finishing stroke to sculpture . well as eloquence, and to painting a will as poetry. The Greek artists at Ron. were not fo foon or fo much infected by the bad tafte of the court, as the Roman writers were; but it reached them too, though by flower and more imperceptills degrees. Indeed what elfe could be espected from such a run of monthers as Tiberius, Caligula, and Nero? For the were the emperors under whose reigns the acts began to languish; and they fuffered fo much from their baleful influence, that the Roman writers foon after them fpeak of all the art, as being brought to a very low cbb. They talk of their being evtremely fallen in general; and as to painting, in particular, they represent it as in a most feeble and dying condition. The series of fo many good emperors, which happened after Domitian, gave some spint again to the arte; but foon after the Autonines, they all declined apace, and, by the time of the thirty tyrants, were quite fallen, so as never to rife again under any future Roman emperor.

You may see by these two accounts I have given you of the Roman poetry, and of the other arts, that the great periods of their rise, their flourishing, and their decline, agree very well; and, as it were, tally with one snother. Their style was prepared, and a wast collection of sine works laid in, mader the first period, or in the times of the republic. In the second,

or the Augustan age, their writers and artifts were both in their highest perfection; and in the third, from Tiberius to the Antonines, they both began to languish; and then revived a little; and at last funk totally together.

In comparing the descriptions of their poets with the works of art, I should therefore chuse to omit all the Roman poets after the Antonines. Among them all, there is perhaps no one whose omitsion need be regretted, except that of Claudian; and even as to him it may be confidered, that he wrote when the time knowledge of the arts was no more; and when the true tafte of poetry was fliangely con upted and loft; even if we were to judge of it by his own viitings only, which are extremely better tian my of the poets long before and long or him. It is therefore much better to confine one's felf to the taree great ages, that to run fo far out of one's way for a Ingle post or two; whose authorities, after h must be very disputable, and indeed 'ene of any weight.

### § 67. On DIMOSTHENES.

I fall not spend any time upon the circurdances of Demosthere's life; they are tel known. The floag ambition which he discovered to excel in the ait of speak-123; the unfarcefulation of his first attrops; les un cariel perfeverance in furresunting all the duality attace that arole from his person and address; his frutting honfelf up in a cave, that he might butly with left diffraction; his declaiming by the tea-shore, that he might accustom matelf to the norse of a tumultuous affembly, and with pebbles in his mooth, that he might correct a defect in his speech; his practifing at home with a naked fword hanging over his shoulder, that he might check an ungraceful motion, to which he was fubict; all those circumstances, which we Larn from Pintarch, are very encouraging to such as study Eloquence, as they show for art and application may avail, for acquiring an excellence which nature feemed unwilling to grant us.

### 1) 68. DEMOSTHENES imitated the manly Eliquence of Perices.

Despiting the affected and florid manner which the shetoricians of that are followed, Demolthenes returned to the forcible and many sloquence of Pericles; and frength and vehemence form the principal characteristics of his Style. Never had

orator a finer field than Demosthenes in his Olynthiacs and Philippies, which are his capital orations; and, no doubt, to the noblenefs of the fubject, and to that integrity and public spirit which eminently breathe in them, they are indebted for much of their merit. The subject is, to rouze the indignation of his countrymen against Philip of Macedon, the public enemy of the liberties of Greece; and to guard them against the insidious measures, by which that crafty prince endeavoured to lay them affect to danger. In the profecution of this end, we fee him taking every proper method to animate a people, renowned for judice, humanic, and valour, but in many instances become corrupt and degenerate. He boldly taxes them with their venality, their indolence, and indifference to the public cause; while, at the fame time, with all the air of an orator, he recals the glory of their anceffors to their thoughts, thews them that they are still a flourishing and a powerful people, the natural protectors of the liberty of Greece, and who wanted only the in lin tion to exert themfelves, in order to make Philip tremble. With his cotemporary orators, who were in Philip's interest, and who perfunded the people to peace, he keeps no meafures, but plainly replone ies them as the betrayers of their country. He not only prompts to vigorous conduct, but he lays down the plan of that confust; he enters into particuling; and points out, with great exactivities, the measures of execution. This is the firam of their orations. They are firengly animated; and full of the impotuone, and his of pablic fpicit. They proceed in a continued train of inductions, confequences, and demonstrations, founded on found realor. To Liquies which he uses we never sought after; but always rise from the fubject. He employs them tparingly in leed; for fplendour and ornament are not the delinctions of this orator's composition. It is an energy of thought, peculiar to himfelf, watch forms his character, and tets him above all others. He appears to attend much more to things than to words. We forget the orator, and think of the buliness. He warms the mind, and impels to action. He has no pluade and offentation; no metnods of infinuation, no laboured introductions; but is like a ma. full of his fubisct, who, after prepuring an audience, by a fentence or two for hearing plain to this enters directly on builders. Ibid. E e 3 \$ 67.

## § 69. DEMOSTHENES contrasted with Eschines.

Demosthenes appears to great advantage, when contrasted with Æschines. in the celebrated oration "pro Corona." Æschines was his rival in business, and personal enemy; and one of the most diftinguished orators of that age. But when we read the two orations, Æschines is seeble in comparison of Demosthenes, and makes much less impression on the mind. His reasonings concerning the law that was in question, are indeed very subtile; but his invective against Demosthenes is general, and ill-supported. Whereas Demosthenes is a torrent, that nothing can resist. He bears down his antagonist with violence; he draws his character in the frongest colours; and the particular merit of that oration is, that all the descriptions in it are highly picturefque. There runs through it a strain of magnanimity and high honour: the orator fpeaks with that firength and confcious dignity which great actions and public spirit alone inspire. Both orators use great liberties with one another; and, in general, that unrestrained licence which ancient manners permitted, even to the length of abusive names and downright scurrility, as appears both here and in Cicero's Philippics, hurts and offends a modern car. What those ancient orators gained by fuch a manner in point of freedom and boldness, is more than compensated by want of dignity; which feeins to give an advantage, in this refpect, to the greater decency of modern speaking. Blair.

#### \$ 70. On the Style of DEMOSTHENES.

The Style of Demosthenes is strong and concise, though sometimes, it must not be dissembled, harsh and abrupt. His words are very expressive; his arrangement is firm and manly; and, tho' far from being unmufical, yet it feems difficult to find in him that iludied, but concealed number, and rhythmus, which some of the ancient critics are fond of attributing to him. Negligent of those lesser graces, one would rather conceive him to have aimed at that fublime which lies in fentiment. His actions and pronunciation are recorded to have been uncommonly vehement and ardent; which, from the manner of his composition, we are naturally led to believe The character which one forms of him, from reading his works, is of the

austere, rather than the gentle kind, He is, on every occasion, grave, ferious, paffionate; takes every thing on a high tone; never lets himself down, nor attempts any thing like pleasantry. If any fault can be found in his admirable eloquence, it is, that he fometimes borders on the hard and dry. He may be thought to want smoothness and grace; which Dionysius of Halicarnaffy attributes to his imitating too closely the manner of Thucydides, who was his great model for Style, and whose history he is faid to have written eight times over with his own hand. But thefe defects are far more than compensated, by that admirable and mafterly force of masculine doquence, which, as it overpowered all who heard it, cannot, at this day, be read without emotion.

After the days of Demosthenes, Greece lost her liberty, eloquence of course languished, and relapsed again into the seeble manner introduced by the Rhetoricians and Sophists. Demetrins Phalerius, who lived in the next age to Demosthene, attained indeed some character, but he is represented to us as a flowery, rather than a persuasive speaker, who aimed at grace rather than substance. "Delectabat Athemienses," says Cicero, "magis quam inflammabat." "He amused the Athemians, rather than warmed them." And after this time, we hear of no more Grecian orators of any note.

### § 71. On Cicero.

The object in this period most worthy to draw our attention, is Cicero himself; whose name alone suggests every thing that is splendid in oratory With the histhat is splendid in oratory tory of his life, and with his character, as a man and a politician, we have not at present any direct concern. We confider him only as an eloquent speaker; and, in this view, it is our buffiness to remark both his virtues, and his defects, if he has any. His virtues are, beyond controverly, eminently great. In all his orations there is high art. He begins, generally, with a regular exordium; and with much preparation and infinuation prepoffesses the hearers, and studies to gain their affections. His method is clear, and his arguments are ar ranged with great propriety. His method is indeed more clear than that of Demosthenes; and this is one advantage which he has over him. We find every thing is its proper place; he never attempts to move till he has endeavoured to convince! and

and in moving, especially the softer pasfions, he is very successful. No man, that ever wrote, knew the power and force of words better than Cicero. He rolls them along with the greatest beauty and pomp; and in the structure of his fentences, is curious and exact to the highest degree. He is always full and flowing, never abrupt. He is a great amplifier of every subject; magnificent, and in his senti-ments highly moral. His manner is on the whole diffuse, yet it is often happily varied, and fuited to the fubject. In his four orations, for instance, against Catiline, the tone and style of each of them, particularly the first and last, is very different, and accommodated with a great deal of judgment to the occasion, and the fituation in which they were fpoken. When a great public object roused his mind, and demanded indignation and force, he departs confiderably from that loofe and declamatory manner to which he inclines at other times, and becomes exceedingly cogent and vehement. This is the case in his o:ations against Anthony, and in those too against Verres and Catiline.

### § 72. Defests of CICERO.

Together with those high qualities which Cicero possesses, he is not exempt from certain defects, of which it is necesfary to take notice. For the Ciceronian Eloquence is a pattern fo dazzling by its beauties, that, if not examined with accuracy and judgment, it is apt to betray the unwary lato a faulty imitation; and I am of opinion, that it has fometimes produced this effect. In most of his orations, especially those composed in the earlier part of his life, there is too much art; even carried the length of oftentation. There is no visible a parade of eloquence. He forms often to aim at obtaining admiration, rather than at operating conviction, by what he fays. Hence, on fome occasions, he is showy, rather than folid; and diffuse, where he ought to have been prefing. His fentences are, at all times, round and fororous; they cannot be accused of monetony, for they possess variety of cadence; but, from too great a study of meeting the continues deficient is foreign. On all occasions, where there is the same for it he is where there is the least room for it, he is full of himself. His great actions, and the real ervices which he had performed to his country, apologize for this in part; ancient manners, too, impoled fewer re-

straints from the side of decorum; but. even after these allowances made, Cicero's oftentation of himself cannot be wholly palliated; and his orations, indeed all his works, leave on our minds the impression of a good man, but withal, of a vain man.

The defects which we have now taken notice of in' Cicero's cloquence, were not unobserved by his own cotemporaries. This we learn from Quinctilian, and from the author of the dialogue, "de Causis "Corruptæ Eloquentiæ," Brutus we are informed called him, " fractum et "elumbem," broken and enervated. "Suorum temporum homines," fays Quinctilian, " incesscre audebant eum ut "tumidiorem & Afianum, et redundan-" tem, et in repetitionibus nimium, et in " falibus aliquandò frigidum, & in com-" positione fractum et exultantem, & pe-"nè viro molliorem"." These censures were undoubtedly carried too far; and favour of malignity and personal enmity. They faw his defects, but they aggravated them; and the fource of these aggravations can be traced to the difference which prevailed in Rome, in Cicero's days, between two great parties, with respect to eloquence, the "Attici," and the "A-" fiani." The former, who called themfelves the Attics, were the patrons of what they conceived to be the chafte, simple, and natural ftyle of eloquence; from which they accused Cicero as having departed, and as leaning to the florid Afaitic manner. In feveral of his rhetorical works, particularly in his "Orator ad Brutum," Cicero, in his turn, endeavours to expose this fect, as substituting a frigid and jejune manner, in place of the true Attic eloquence; and contends, that his own composition was formed upon the real Attic Style. In the tenth Chapter of the last Book of Quinctilian's Inflitutions, a full account is given of the disputes between these two parties; and of the ichodian, or middle manner between the Attics and the Afiatics. Quinctilian himseit decla ... on Cicero's fide; and, whether it be Attic or Asiatic, prefers the full, the copious, and the amplifying style. He concludes with this very just observation: "Plures "funt eloquentize facies; sed stultissimum

• 44 His cotemporaries ventured to reproach 46 him as (welling, redundant, and Afastic; 100 % of frequent is repetitions: in his attempt to swards was swards was smeltines colds and, in the frain a of his composition, feeble, defutory, and more efferminate than became a man."

" est quarere, ad quam recturus se sit ora-"tor; cum omnis species, qua modò recta " est, habeat usum.—Utetur enim, ut res " exiget, omnibus; nec pro causa modò, " sed pro partibus causa." Blair.

# § 73. Comparison of Cicero and Demostners.

On the subject of comparing Ciceto and Demosthenes, much has be n faid by critical writers. The different manners of these two princes of eloquence, and the distinguishing characters of each, are so strongly marked in their writings, that the comparison is, in many respects, obvious and easy. The character of Demosthenes is vigour and austerity; that of Cicero is gentleness and infinuation. In the one, you find more manliness; in the other, more ornament. The one is more harsh, but more spirited and cogent; the other more ngreeable, but withal, loofer and weaker.

To account for this difference, without any prejudice to Cicero, it has been faid, that we must look to the nature of their different auditories; that the refined Athenians followed with eafe the concife and convincing eloquence of Demoshenes; but that a manner more popular, more flowery, and declamatory, was requifite in speaking to the Romans, a people less acute, and less acquainted with the arts of speech. But this is not fatisfactory. For we must observe, that the Greek orator spoke much oftener before a mixed multitude, than the Roman. Almost all the public business of Athens was transacted in popular affemblies. The common people were his hearers, and his judges. Whereas Cicero generally addreffed himfelf to the "Patres Confcripti," or, in criminal trials, to the Prator, and the Select Judges; and it cannot be imagined, that the persons of highest rank and best education in Rome, required a more diffuse manner of pleading than the common citizens of Athens, in order to make them understand the cause, or relish the speaker. Perhaps we sha'l come nearer the truth, by observing, that to unite toge-

4 Flo puenca admits of many different founce, and mortung can be more for life than to eneque, by which or them an orator is to regular hacking expendition; fince every form, which is to make any oration, according as circumstances results, will employ them all; founce them not only to the cutte or fubect of which he treats, that the other oration is that fablect."

ther all the qualities, without the least exception, that form a perfect orator, and to excel equally in each of those qualities, is not to be expected from the limited powers of human genius. The highest degree of strength is, I suspect, never found united with the highest degree of smoothness and ornament: equal attentions to both are incompatible; and the genius that carries ornament to its utmost length, is not of such a kind, as can excel as much in vigour. For there plainly lies the characteristical difference between these two celebrated orators.

It is a difadvantage to Demofflener, that, besides his concisencis, which so .times produces obfcurity, the language, in which he writes, is lets familiar to not of us than the Latin, and that we are less acquainted with the Greek antiquities that we are with the Roman. We read Cicero with more case, and of course with more pleafure. Independent of this circumfactor too, he is no doubt, in himfelt, a 11 te agreeable writer than the other. But not withstanding this advantage, I am of qunion, that were the state in danger, or fore great public interest at stake, which drew the ferious attention of men, an erakea in the spirit and strain of Demosthenes weeld have more weight, and produce greater effects, than one in the Ciceronian manutr. Were DemoRhenes's Philippics spoken in a British assembly, in a similar conjunctore of affairs, they would convince and perfunde at this day. The rapid flyle, the vehement reasoning, the dildain, anger, which perpetually boldness, freedom, animate them, would render their fuccefs infallible over any modern affembly-I question whether the same can be said of Cicero's orations; whose elequence, however beautiful, and however well futted to the Roman taile, yet borders of declaration, and is more remove from the manner in which we now expect to hear real bufinels and causes of importance treated.

In comparing Demosthenes and Cicero, most of the French etitics incline to give the preference to the latter. P. Rapin the Jesuit, in the parallels which he has drawn between some of the most emission Greek

In this judgment I concur with Mr. David Hume, in his Lifty upon Eloquence. He gives it as his opinion, that, of all human productions, the Outman of Demofiheness prefers to us the models which approach the nearest to perfection.

and Roman writers, wallormly decides in favour of the Roman. For the preference which he gives to Cicero, he affigns, and lays stress on one reason of a pretty extraordinary nature; viz. that Demosthenes could not possibly have so complete an infight as Cicero into the manners and paltions of men; Wny?-Because he had not the advantage of perufing Ariffotle's treatile of Rhetoric, wherein, fays our critic, he has fully laid open that myslery; and, to support this weighty argument, he enters into a controverly with A. Gellius, in order to prove that Arithotle's Rhetoric was not published till after Demosthenes had spoken, at least, his most considerable orations. Nothing can be more childish. Such orators as Cicero and Demosthenes, derived their knowledge of the human patiions and their power of moving them, from higher fources than any treatife of shetoric. One French critic has indeed departed from the common track; and, the bestowing on Cicero those just praises, to which the confent of fo many ages fleas han to be entitled, concludes, however, with giving the palm to Demosthenes. This is Fenelon, the famous archbishop of Cambray, and author of Telemachus; himfelf, furely, no enemy to all the graces and flowers of composition. It 1. in his Reflections on Rhetoric and Poeup, that he gives this judgment; a small teach, commonly published along with his Distogues on Eloquence \*. There dialogues and reflections are particularly verthy of peruful, as containing, I think,

As his expressions are remarkably happy and b autiful, the puttings here referred to de-" que Demostiiene me paro t superieur a Ciréion Je proteffe que personne n'admire plus Carron que je fais. Il embellit tout ce qu'il touche. Il fait honneur à la pariet. Il fait " des mots ce qu'un autre n'en fauroit faire. Il a je ne sai combien de fortes d'esprits. Il ett " meme court, & vehement, toutes les fois qu'il " veut l'estre ; contre Catiline, contre Verses, Contre Antoine, Mais on remarque quelque Priure dans fons difcours. L'art y est merveilfint au falut de la république, ne s'oubl'e pas. et ne se lusse pas oubher. Demochane parcit soit de soit es en voir que la patrie. Il ne cherche point se beau il le fait, sans un la cherche point se beau il le fait, sans un la cherche point se beau il le fait, sans un la cherche point se beau il le fait, sans un la cherche point se beau il le fait sans un la cherche point se beau il le fait sans un la cherche point se beau il le fait sans un la cherche point se la cherche point se cherche point se cherche point se cherche point se cherche pare la cherc penfer. On ne peut le critiquer, partequ'on est fais. On beuge and choise days qu'y y bon y les bathe justeft ideas on the subject, that are to be met with in any modern critical writer.

Blair.

# § 74. On the Means of improving in ELOQUENCE.

Next to moral qualifications, what, in the fecond place, is most necessary to an orator, is a fund of knowledge. Much is this inculcated by Cicero and Quinétilian: "Quod omnibus difciplinis et artibus de" bet esse instructus Orator." By which they mean, that he ought to have what we call a Liberal Education; and to be formed by a regular study of philosophy, and the polite arts. We must never forget that,

### Setibendi recte, fapere eft & principium & fons,

Good fenfe and knowledge are the foundation of all good speaking. There is no art that can teach one to be eloquent, in any fphere, without a full-cient acquaintance with what belongs to that iphere; or if there were an art that made luch pretenflons, it would be mere quackery, tike the pretentions of the tophills of cid, to teach their disciples to speak for and a, in it every subject; and would be deier ally exploded by all wife men. Attention to flyle, to composition, and all the arts of speech, can only assist an orator in Litting off, to advantage, the flock of macroais which he possesses; but the lock, the mato (A) themselves, must be brought from 6.her quarters than from thetoric. He who is to pie id at the bar, must make himselt thoroughly mafter of the knowledge of the law; of all the learning and experience that can be useful in his protestion, for supporting a cause, or convincing a judge. He was is to speak from the pulpit, must apply himfelf closely to the fludy of divinity, of practical religion, of morals, or hu man nature; that he may be rich in all the topics both of instruction and of perfualion. He who would fit himfelf for heing a member of the supreme council of the nation, or of any public affembly, must be thoroughly acquainted with the buffners that belongs to such affembly; he must

" toles. On le perd de vue. On n'est occaçé

" que de Philippe qui envahit tent. Je su s'
" charme de ces deux ontéenes mais j'avoir que
" je sus moins touché de l'art none, se de la
" magnifique éloquence de Cucron, que de la
" rapide simplicué de Demostranc."

Audy the forms of court, the course of procoduse; and must attend minutely to all the facts that may be the subject of question or deliberation.

Belides the knowledge that properly belongs to that profession to which he addicts himself, a public speaker, if ever he expects to be eminent, must make himself acquainted, as far as his necessary occupations allow, with the general circle of polite literature. The fludy of poetry may be useful to him on many occasions, for embellithing his style, for suggesting lively images, or agreeable allusions. The study of history may be still more useful to him; as the knowledge of facts, of eminent characters, and of the course of human affairs, finds place on many occasions \*. There are few great occasions of public speaking, in which one will not derive affiftance from cultivated taste, and extensive knowledge. They will often yield him materials for proper ornament; fometimes, for argument and real use. A deficiency of knowledge, even in subjects that belong not directly to his own profession, will expose him to many disadvantages, and give betfer qualified rivals a great superiority over him.

#### § 75. A Habit of Industry recommended to the intended Speaker.

Allow me to recommend, in the third place, not only the attainment of useful knowledge, but a habit of application and industry Without this, it is impossible to excel in any thing. We must not imagine that it is by a fort of mushroom growth, that one can rife to be a diffinguished pleader, or preacher, or speaker in any assembly. It is not by starts of application, or by a few years preparation of fludy afterwards discontinued, that eminence can be attained. No; it can be attained only by means of regular industry, grown up into a habit, and ready to be exerted on every occasion that calls for in-Tais is the fixed law of our nature; and he must have a very high opinion of his own genius indeed, that can believe himself an exception to it. A very

4 " Imprimis verò, abundare debet Orator ex-" emplorum copia, cum veterum, tum etiam no-" vocum ; adeò ut non modò qua conscripta funt " h it mis, aut fermonibus velut per manus tra-" dita, quæque quotidie aguntur, debest solle; " verum ne ea quidem quæ a clarioribus poetis " fun. ficta negligere." Quinct. L. xii. Cap. 4.

wife law of our nature it is; for indultre is, in truth, the great " Condimentum," the feafoning of every pleasure; without which life is doomed to languish. Nothing is fo great an enemy both to honourable attainments, and to the real, to the brik, and spirited enjoyment of life, as that relaxed state of mind which arises from indolence and diffipation. One that is deftined to excel in any art, especially in the arts of speaking and writing, will be known by this more than by any other mark whatever, an enthusiaim for that art; an enthusiasm, which, firing his mind with the object he has in view, will dispose him to relish every labour which the means require. It was this that characterised the great men of antiquity; it is this, which must distinguish the moderns who would tread their steps. This honourable enthusiasm, it is highly necessary for such as are fludying oratory to cultivate. If your wants it, manhood will flag miferably.

#### § 76. Attention to the heft Models recommended to the Student in Eloquence.

Attention to the best models will contibute greatly towards improvement. Every one who speaks or writes should, indeed, endeavour to have fomewhat that is his own, that is peculiar to himself, and that characterises his composition and style. Slavish imitation depresses genius, or nther betrays the want of it. But withal, there is no genius so original, but may be profited and affifted by the aid of proper examples, in style, composition, and delivery. They always open some new ideas; they ferve to enlarge and correct our own-They quicken the current of thought, and excite emulation.

### § 77. Caution necessary in choosing Mo-

Much, indeed, will depend upon the right choice of models which we purpose to imitate; and supposing them rightly chosen, a farther care is requisite, of not being seduced by a blind universal admiration. For, "decipit exemplar, vitiis imi-" tabile." Even in the most finished models we can select, it must not be forgotten, that there are always fome things improper for imitation. We should study to 20quire a just conception of the peculiar characteristic beauties of any writer, or public speaker, and imitate these only.

447

ought never to attach himself too closely to any single model: for he who does so, is almost sure of being seduced into a faulty and assected initiation. His business should be, to draw from several the proper ideas of persection.

Blair.

### § 78. On the Style of Bolingeroke and Swift.

Some authors there are, whose manner of writing approaches nearer to the flyle of freaking than others; and who, therefore, can be imitated with more fafety. In this class, among the English authors, are Dean Swift, and Lord Bolingbroke. The Dean, throughout all his writings, in the midst of much correctness, maintains the easy natural manner of an unaffected speaker; and this is one of his chief excellencies. Lord Bolingbroke's style is more splendid, and more declamatory than Dean Swift's; but still it is the style of one who speaks, or rather who harangues. Indeed, all his political writings (for it is to them only, and not to his philosophical ones, that this observation can be applied) carry much more the appearance of one declaiming with warmth in a great affembly, than of one writing in a closet, in order to be read by others. They have all the copiousness, the fervour, the inculcating method, that is allowable and graceful in an orator; perhaps too much of it for a writer: and it is to be regretted, as I have formerly observed, that the matter contained in them should have been so trivial or so false; for, from the manner and style, confiderable advantage might be reaped.

# § 79. Frequent Exercise in composing and speaking necessary for Improvement in Eloquence.

Bessel attention to the best models, frequent exercise, both in composing and speaking, will be admitted to be a necessary mean of improvement. That fort of composition is, doubtless, most useful, which relates to the profession, or kind of public speaking, to which persons addict themselves. This they should keep ever in their eye, and be gradually inusing themselves to it. But let me also advice them, not to allow themselves in negligent composition of any kind. He who has it for his aim to write, or to speak correctly, should, in the most trivial kind of composition, in writing a letter, any, even in

common discourse, study to acquit himself with propriety. I do not at all mean, that he is never to write, or to speak a word. but in elaborate and artificial language. This would form him to a stiffness and uffectation, worse, by ten thousand degrees, than the greatest negligence. But it is to be observed, that there is, in every thing, a manner which is becoming, and has propriety; and opposite to it, there is a clumfy and faulty performance of the same thing. The becoming manner is very often the most light, and seemingly careless manner; but it requires tafte and attention to seize the just idea of it. That idea. when acquired, we should keep in our eye. and form upon it whatever we write or

# § 80. Of what Use the Study of critical and aberorical Writers may be.

It now only remains to enquire, of what use may the study of critical and rhetorical writers be, for improving one in the practice of eloquence? These are certainly not to be neglected; and yet, I dare not fay that much is to be expected from them. For professed writers on public speaking, we must look chiefly among the ancients In modern times, for reasons which were hefore given, popular eloquence, as an art, has never been very much the object of study; it has not the same powerful esfect among us that it had in more democratical flates; and therefore has not been cultivated with the fame care. Among the moderns, though there has been a great deal of good criticilm on the different kinds of writing, yet much has not been attempted on the subject of eloquence, or public discourse; and what has been given us of that kind has been drawn mothly from the ancients. Such a writer as Joannes Gerardus Vossius, who has gathered into one heap of pondrous lumber, all the trifling, as well as the useful things, that are to be found in the Greek and Roman writers, is enough to difgust one with the sludy of Among the French, there eloquence. than among the English. The Bishop of Cambray's writings on cloquence, I before mentioned with honour. Rollin, Batteux, Crevier, Gibert, and feveral other French critics, have also written on oratory; but though some of them may be useful, none of them are so considerable as to deserve particular recommendation. Ibid.

# § 81. Recounse must chiefly be had to the original Writers.

It is to the original ancient writers that we must chiesly have recourse; and it is a reproach to any one, whose profession calls him to speak in public, to be unacquainted with them. In all the arcient rhetorical writers, there is, indeed, this defect, that they are too fysicmatical, as I formerly shewed; they aim at doing too much; at reducing rhetoric to a complete and perfeet art, which may even supply invention with materials on every subject; infomuch that one would imagine they expected to form an orator by rule, in as mechanical a manner as one would form a carpenter. Whereas, all that can in truth be done, is to give openings for affifting and enlightening talle, and for pointing out to genius the course it ought to hold.

Aristotle laid the foundation for all that was afterwards written on the fubject. That amazing and comprehensive genius, which does honour to human nature, and which gave light into fo many different feiences, has invelligated the principles of rhetoric with great penetration. Arithotle appears to have been the first who took thetoric out of the hands of the fophitts, and introduced reafoning and good fense into the art. Some of the profoundest things which have been written on the passions and manners of men, are to be found in his Treatife on Rhetoric; though in this, as in all his writings, his great brevity often renders him obscure. Succeeding Greek thetoricians, most of whom are now loft, improved on the foundation which Aristotle had Isid. Two of them still remain, Demetrius Phalerius, and Dionysius of Halicarnassus; both write on the construction of fentences, and deferve to be perufed; cipecially Dionyfius, who is a very accurate and judicious critic.

I need feateely recommend the rhetorical writings of Cicero. Whatever, on the subject of eloquence, comes from so great an orator, must be worthy of attention. His most considerable work on this subject is that De Oratere, in three books. None of Cicero's writings are more highly finished than this treatife. The dialogue is polite; the characters are well supported, and the conduct of the whole is beautiful and agreeable. It is, indeed, full of diagressions, and his rules and observations may be thought sometimes too vague and general. Useful things, however, may be

learned from it; and it is no small benefito be made acquainted with Cicero's own idea of eloquence. The "Orator ad M. "Brutum, it is also a confiderable treatise; and, in general, throughout all Cicero's rhetorical works there run those high and sublime ideas of eloquence, which are fitted both for so ming a just taste, and for creating that enthusiasm for the art, which is of the greatest consequence for excelling in it.

But, of all the antient writers on the fubicet of oratory, the most instructive, and most uteful, is Quinctilian. I know to books which abound more with good for and discover a greater degree of juraccurate taste, than Quinctilian's let tions. Almost all the principles of & crincism are to be found in them has argefled into excellent order ancient ideas concerning thetoric, at the same time, hindelf an cloque Though fome parts of in . tain too much of the technic." cial fyllem then in vogue, a reason may be Cought dry in the yet I would not advite the critical? at the bar, even their technical per prove of teme ufe. Sidom him at fon, of more found and driver into than Quinculian, applied a solch co fludy of the art of outery.

### § S2. On the Newsfir, of a Canglical Edu-

The fairest diamonds are rough till they are polithed, and the purett gold muit le run and washed, and sitted in the ore. We are untaught by nature; and the first qualities will grow wild and degenerate if the mind is not formed by discipline, and cultivated with an early care. In towe perfons, who have run up to men without a liberal education, we may observe many great qualities darkened and colipfed; their minds are crusted over like diamonds in the rock, they fish out fometimes into an irregular greatness of thought, and bettay in their actions an unguided force, and unmanaged virtue; fomething very great and very noble may be differred, but it looks cumbersome and awkward, and 15 alone of all things the worfe for being natural. Nature is undoubtedly the best mistress and aptest scholar; but nature herself must be civilized, or she will lock lavage, as the appears in the Indian princes, who are vetted with a native majesty, a fur-

prifing

prifing greatness and generolity of foul. and discover what we always regret, fine parts, and excellent natural endowments, without improvement. In those countries, which we call barbarous, where art and politeness are not understood, nature hath the greater advantage in this, that fimplicity of manners often fecures the innocence of the mind; and as virtue is not, fo neither is vice, civilized and refined; but in these politer parts of the world, where virtue excels by rules and discipline, vice No is more instructed, and with us good qualities will not spring up alone: many nuttul weeds will rife with them, and choak them in their growth, unless removed by some skilful hand; nor will the mind be brought to a just perfection without cicrishing every hopeful feed, and repreffing every superfluous humour: the mind is like the body in this regard, which cannot fall into a decent and easy carriage, unless it be fashioned in time: an untaught behaviour is like the people that use it, truly rustic, forced and uncouth, and art must be applied to make it natural.

Felton.

### § 83. On the Entrance to Knowledge.

Knowledge will not be won without t and application: fome parts of it tre casier, some more disticult of access: we must proceed at once by sap and battery; and when the breach is practicable, vou have nothing to do, but to prefs boldly on, and enter: it is troublesome and deep digging for pure waters, but when once you come to the spring, they rise and meet you: the entrance into knowledge is oftentimes very narrow, dark and tirefome, but the rooms are fpacious, and gloriously furnished: the country is admirable, and every prospect entertaining. You need not wonder, that fine countries have strait averues, when the regions of happiness, like those of knowledge, are impervious, and that to lazy travellers, and the way to hraven itself is narrow.

Common things are easily attained, and no body values what lies in every body's way: what is excellent is placed out of ordinary reach, and you will easily be perfunded to put forth your hand to the utmost liretch, and reach whatever you aspire at

### § 84. Cloffice recommended.

Many are the fithjosts which will invite and deferve the steadiest application from

those who would excel, and be distinguished in them. Human learning in general: natural philosophy, mathematics, and the whole circle of science. But there is no necessity of leading you through these several fields of knowledge: it will be most commendable for you to gather fome of the fairest fruit from them all, and to lay up a store of good fense, and found reason, of great probity, and folid virtue. This is the true use of knowledge, to make it fubservient to the great duties of our most holy religion, that as you are daily grounded in the true and faving knowledge of a Christian, you may use the helps of human learning, and direct them to their pro-per end. You will meet with great and wonderful examples of an irregular and mistaken virtue in the Greeks and Romans, with many inflances of greatm is of mind, of unshaken sidelity, contempt of human grandeur, a most passionate love of their country, prodigality of life, difdain of fervitude, inviolable truth, and the most public difinterested souls, that ever threw off all regards in comparison with their country's good: you will differn the flaws and blemithes of their fairest actions, fee the wrong apprehensions they had of virtue. and be able to point them right, and keep them within their proper bounds. Under this correction you may extract a generous and noble spirit from the writings and hillories of the ancients. And I would in a particular manner recommend the clathe authors to your favour, and they will recommend themselves to your approbation.

If you would refore to make the Greek as well as the Latin tongue, you will find, that the one is the fource and original of all that is most excellent in the other: I do not mean so much for experision, as thought, though some of the most beautiful frokes of the Latin tongue and drawn from the lines of the Greekin or nors and poets; but for thought and funcy, for the very soundation and embellishment of their works, you will see, the Latins have ransacked the Greeian store, and, as Horace advices all who would succeed in writing well, had their authors night and morning in their hands.

And they have been such happy imitators, that the copies have proved more exact than the originals; and Rome has triumphed over Athens, as well in wit as arms; for though Greece may have the honour of invention, yet it is estimate to strike out a new course of thought

than to equal old originals; and therefore it is more honour of larpais, than to invent anew. Verrio is a great man from his own defigns; but if he had attempted upon the Cartons; and outdone Raphael Urbin in life and colours, he had been acknowledged greater than that celebrated mafter, but now we must think him less. Felton.

## § 85. A Comparison of the Greek and Roman Writers.

If I may detain you with a short comparifon of the Greek and Roman authors, I must own the last have the preference in my thoughts; and I am not fingular in my opinion. It must be confessed, the Romans have left no tragedies behind them. that may compare with the majesty of the Grecian stage; the best comedies of Rome were written on the Grecian plan, but Menander is too far lost to be compared with Terence; only if we may judge by the method Terence used in forming two Greek plays into one, we shall naturally conclude, fince his are perfect upon that model, that they are more perfect than Menander's were. I shall make no great difficulty in preferring Plautus to Arithophanes, for wit and humour, variety of characters, plot and contrivance in his plays, though Horace has censured him for low wit.

Virgil has been so often compared with Homer, and the merits of those poets fo often canvassed, that I shall only say, that if the Roman shines not in the Grecian's flame and fire, it is the coolness of his judgment, 1ather than the want of heat. You will generally find the force of a poet's genius, and the strength of his fancy, displays themselves in the descriptions they give of battles, storms, prodigies, &c. and Homer's fire breaks out on these occasions in more dread and terror; but Virgil mixes compassion with his terror, and, by throwing water on the flame, makes it burn the brighter; so in the storm; so in his battles on the fall of Pallas and Camilla; and that scene of horror, which his hero opens in the second book; the burning of Troy; the ghost of Hector; the murder of the king; the massacre of the people; the sudden surprise, and the dead of night, are so relieved by the picty and pity that is every where intermixed, that we forget our fears and join in the lamentation. All the world acknowledges the Eneid to be most perfect in its kind; and confidering the datadvantage of the language, and the feverity of the Roman nuse, the poem is still more wonderful, since, without the liberty of the Grecian poets, the diction is so great and noble, so clear, so forcible and expressive, so chaste and pure, that even all the strength and compais of the Greek tongue, joined to Homer's fire, cannot give us stronger and clearer ideas, than the great Virgil has set before our eyes; some few inflances excepted, in which Homer, thro' the force of genius, has excelled.

I have argued hitherto for Virgil; and it will be no wonder that his poem should be more correct in the rules of writing, it that strange opinion prevails, that Homer writ without any view or defign at all; that his poems are loofe independent pieces tacked together, and were originally only fo many fongs or ballads upon the gods and heroes, and the fiege of Troy. If this be true, they are the completed firing of ballads, I ever met with, and whoever collected them, and put them in the method we now read them in, whether it were Pifistratus, or any other, has placed them in fuch order, that the Iliad and the Odyffe's feem to have been composed with one view and defign, one scheme and intention, which are carried on from the beginning to the end, all along uniform and confistent with themselves. Some have argued, the world was made by a wife Being, and not jumbled together by chance, from the very absurdity of such a supposition; and they have illustrated their argument, from the impossibility that such a poem as Homer's and Virgil's should rife in such beautiful order out of millions of letters eternally shaken together: but this argument is half spoiled, if we allow, that the poems of Homer, in each of which appears one continued formed defign from one end to the other, were written in loofe scraps on no fettled premeditated scheme. Horace, we are fure, was of another opinion, and fo was Virgil too, who built his Æneid upon the model of the Iliad and the Odysseis. After all, Tully, whose relation of this pasfage has given some colour to this suggestion, fays no more, than that Pififfratus whom he commends for his learning, and condemns for his tyranny) observing the books of Homer to lie confused and out of order, placed them in the method the great author, no doubt, had first formed them in: but all this Tully gives us only as report. And it would be very strange, that Aristotle should form his rules on Homer's poems; that Horace should follow

his example, and propose Homer for the flandard of epic writing, with this bright testimony, that he " never undertook any thing inconfiderately, nor ever made any foolish attempts;" if indeed this celebrated poet did not intend to form his poems in the order and defign we see them in. If we look upon the fabric and construction of those great works, we shall find an admirable proportion in all the parts, a perpetual coincidence, and dependence of one upon another; I will venture an appeal to any learned critic in this cause; and if it be a fufficient reason to alter the common readings in a letter, a word, or a phrase, from the confideration of the context, or propriety of the language, and call it the restoring of the text, is it not a demonstration that these poems were made in the same course of lines, and upon the same plan we read them in at prefent, from all the arguments that connexion, dependence, and regularity can give us? If those crities, who maintain this odd fancy of Homer's writings, had found them loofe and undigested, and restored them to the order they stand in now, I believe they would have gloried in their art, and maintained it with more uncontested reasons, than they are able to bring for the discovery of a word or a syllable hitherto falsely printed in the text of any author. But, if any learned men of fingular fancies and opinions will not allow these buildings to have been originally defigned after the present model, let them at least allow us one poetical supposition on our side, That Homer's harp was as powerful to command his fcattered incoherent pieces into the beautiful structure of a poem, as Amphion's was to summon the stones into a wall, or Orpheus's to lead the trees a dance. For certainly, however it happens, the parts are so justly disposed, that you cannot change any book into the place of another, without spoiling the proportion, and confounding the order of the whole.

The Georgics are above all controverfy with Hefiod; but the Idylliums of Theoritus have fomething so inimitably sweet in the verse and thoughts, such a native simplicity, and are so genuine, so natural result of the rural life, that I must, in my noor judgment, allow him the honour of he pastoral.

In Lyrics the Grecians may feem to have excelled, as undoubtedly they are superior n the number of their poets, and variety of

their verse. Orpheus, Alczus, Sappho, Simonides, and Stesichorus are almost entirely lost. Here and there a fragment of some of them is remaining, which, like some broken parts of ancient statues, preferve an imperfect monument of the delicacy, strength, and skill of the great master's hand.

Pindar is fublime, but obscure, impetuous in his course, and unfathomable in the depth and loftiness of his thoughts. Anacreon flows foft and eafy, every where diffuting the joy and indolence of his mind through his verfe, and tuning his harp to the smooth and pleasant temper of his soul. Horace alone may be compared to both; in whom are reconciled the loftiness and majesty of Pindar, and the gay, careless, jovial temper of Anacreon: and, fuppose, however Pindar may be admired for greatness, and Anacreon for delicateness of thought; Horace, who rivals one in his triumphs, and the other in his mirth and love, surpasses them both in justness, elegance, and happiness of expression. Anacreon has another follower among the choicest wits of Rome, and that is Catullus, whom, though his lines be rough, and his numbers inharmonious, I could recommend for the foftness and delicacy, but must decline for the looseness of his thoughts, too immodest for chaste ears to

I will go no farther in the poets; only, for the honour of our country, let me obferve to you, that while Rome has been contented to produce fome fingle rivals to the Grecian poetry, England hath brought forth the wonderful Cowley's wit, who was beloved by every muse he courted, and has rivalled the Greek and Latin poets in every kind but tragedy.

I will not trouble you with the historians any further, than to inform you, that the contest lies chiefly between Thucydides and Sallust, Herodotus and Livy; though I think Thucydides and Livy may on many accounts more justly be compared: the critics have been very free in their cenfures, but I shall be glad to suspend any farther judgment, till you shall be able to read them, and give me your opinion.

Oratory and philosophy are the next disputed prizes; and whatever praises may be justly given to Aristotle, Plato, Xenophon and Demosthenes, I will venture to fay, that the divine Tully is all the Grecian orators and philosophers in one. Felion.

# 86. A fort Commandation of the Latin

And now, having possibly, given you fome prejudice in favour of the Romans, I must beg leave to affure you, that if you have not leifure to master both, you will find your pains well rewarded in the Latin tongue, when once you enter into the clegangies and beauties of it. It is the peculiar felicity of that language to speak good fense in suitable expressions; to give the finest thoughts in the happiest words, and in an easy majesty of style, to write up to the subject. " And in this, lies the great " fecret of writing well. It is that elegant « fimplicity, that ornamental plainness of fpeech, which every common genius thinks fo plain, than any body may reach " it, and findeth fo very elegant, that all " his sweat, and pains, and study, fail him " in the attempt.

In reading the excellent authors of the Roman tongue, whether you converse withpoets, orators, or historians, you will meet with all that is admirable in human composure. And though life and spirit, properly and force of style, be common to them all, you will see that nevertheless every writer shines in his peculiar excellencies; and that wit, like beauty, is diversified into a thousand graces of seature and

complexion.

I need not trouble you with a particular character of these colebrated writers. What I have said already, and what I shall say farther of them as I go along, readers at less needily at present, and I would not pre-engage, your opinion implicitly to my side. It will be a pleasant exercise of your judgment to distinguish them yourself; and when you and I shall be able to depart from the common received opinions of the oritics and commentators, I may take some other, occasion of laying them before you, and submitting what I shall then say of them by your approbation.

Felton.

### \$ 87: Directions in reading the Claffics.

In the mean time, I shall only give you two or three cautions and directions for your reading them, which to some people will look a little odd, but with me they are of great moment, and very necostary to be conterved.

The firm is, that you would never be perfunded into what they call Common-praces; which is a way of taking an author to pieces, and ranging him under pro-

per heads, that you may readily find wha he has faid upon any point, by confulting an alphabes. This practice is of no use bu in circumstantials of time and place, cuf tom and antiquity, and in fuch instance: where facts are to be remembered, no where the brain is to be exercised. It thefe cases it is of great use: it helps the memory, and ferves to keep those things in a fort of order and fuccession. But common-placing the fenfe of an author is fuch a stupid undertaking, that, if I may be indulged in faying it, they want common sense that practise it. What heaps of this rubbish have I seen! O the pains and labour to record what other people have faid, that is taken by those who have no thing to fay themselves! You may depend upon it, the writings of these men are me ver worth the reading; the fancy is cramped, the invention spoiled, their thought on every thing are prevented, if they thing at all; but it is the peculiar happiness of the fe collectors of fense, that they can write without thinking.

I do most readily agree, that all the bright sparkling thoughts of the ancient their finest expressions, and noblest sentiments, are to be met with in these transferibers: but how wretchedly are they brought in, how miserably put together! Indeed, I can compare such productions to nothing but rich pieces of patch-work, sewed to-

gether with packthread.

When I fee a beautiful building of evact order and proportion taken down, and the different materials laid together by themfelves, it puts me in mind of these commorplace men. The materials are certainly very good, but they understand not the rules of architecture so well, as to form them into just and masterly proportions any more, and yet how beautiful would they stand in another model upon another plan!

For, we must confess the truth: We can say nothing new, at least we can say nothing better than has been said before; but we may agreetheless make what we say our own. And this is done when we do not trouble ourselves to remember in what page or what book we have read such a passage; but it falls in maturally with the course of our own thoughts, and takes its place in our writings with as much case, and looks with as good a grace, as it appeared in who thousand years ago.

This is the best way of remembering the ancient authors, when you relish their

way

way of writing, enter into their thoughts, and imbibe their fense. There is no need of tying ourselves up to an imitation of any of thein; much lefs to copy or transcribe them. For there is room for vaft variety of thought and flyle; as nature is various in her works, and is nature still. Good authors, like the celebrated mafters in the teveral schools of painting, are originals in their way, and different in their manner. And when we can make the fame use of the Romans as they did of the Grecians, and habituate ourfelves to their way of thinking and writing, we may be equal in tack, though different from them all, and be effected originals as well as they.

And this is what I would have you do. Mix and incorporate with those ancient flicams; and though your own wit well be improved and heightened by fach a fliong fathon, yet the spirit, the thought, the face, the expression, which shall flow from your pen, will be entirely your own.

Eston.

#### & SS. The Method of Schools windiene d.

It has been a long complaint in this polite and excellent age of learning, that we low our time in words; that the memory of youth is charged and overloaded withor improvement; and all they learn is mere cant and jargon for three or four years together. Now, the complaint is it. Some meafure true, but cot exilly rem died; and perhaps, after all the exclamation of fo much time loft in mere words and terms, the hopeful yourhs, whole lefs of time is formuch lamented, were capable of learning nothing but words at those ye us. I do not min I what fome quacks in the art of teaching fac; they pretend to work word ..., and to make young pentionen mafters of the languages, before they can be mafters of common fense; but the to me is a demonstration, that we are capable of little elfe than words, till thelve or thirteen, if you will observe, that a boy shall beable to repeat his grammar over, two or three years before his understan ling opens enough to let him into the reason and clear apprehension of the rules; and when this is done, fooner or liter, it coalether coant and jargon: fo that all this climour is wrong founded, and the crufe of complaint his other against the backwardness four Judgment, than the method of our founds. And therefore I am for the oll v.v in schools still, and children will be in ... shed

there with a flock of words at leaft, when they come to know how to use them.

Host

#### § 89. Commendation of S. beols.

I am very far from having any mean thoughts of those great men who prefide in our chiefest and most celebrated school; it is my happiness to be known to the most eminent of them in a particular manner, and they will acquit me of any difrespect, where they know I have the greatest veneration; for with them the genius of classic learning dwells, and from them it is derived. And I think myfelf honoured in the acquaintance of fome matters in the country, who are not left polite than they are learned, and to the exact knowledge of the Greek and Roman tongues, have joined a true taile, and delicate relish of the claffic authors. Eut fhould you ever helit into fome formal hands, though your fends is too fine to relift those pedantites I have becaremonttrating against, when you come to understand them, yet for the present they may impose upon you with a grave appear ance; and, as learning is commonly ma naged by fuch perfons, you may think them very I meed, becarte they are very dull : and if you should receive the sinctura while you are young, it may fink too deep for all the writers of Holicon to take out. You may be fortible of it, as we are of ill I with, which we regret but a more beak, and fore may mix with your fladies for ever, and give had colours to every thing you diffigu, whether in speech 6. WHITE

For their memor critics dief up that entertainment to very all, that they wall post your politics and bring you to a vice-on time. With they wall formed to hard robert passes, turn to nothing but cradities and indirection. You will have be notice of discrete, if you table with them; they are all for time and ford feeding, and spent the bed provisions in the cooling, you must be content to be taugut pathnoon, in the content to be taugut pathnoon, in five, and for your most materials.

So then these go attention will never be able to foreigned track or vota. I ship and track where a near give is in a case with of the bolt windom in the world, can never in the etyposite or an extension of the bolt windom.

Ibid.

### § 90. On forming a Style.

Give me leave to touch this subject, and draw out, for your use, some of the chief strokes, some of the principal lineaments, and fairest seatures of a just and beautiful style. There is no necessity of being methodical, and I will not entertain you with a dry system upon the matter, but with what you will read with more pleasure, and, I hope, with equal profit, some defultory thoughts in their native order, as they rise in my mind, without being reduced to rules, and marshalled according to aut.

To affift you, therefore, as far as art may be an help to nature, I shall proceed to fay something of what is required in a sinished piece, to make it complete in all its parts,

and mafterly in the whole.

I would not lay down any impracticable fehemes, nor trouble you with a dry formal method: the rule of writing, like that of our duty, is perfect in its kind; but we must make allowances for the infirmities of nature; and fince none is without his faults, the most that can be faid is, That he is the best writer, against whom the fewest can be alledged.

"A composition is then perfect, when the matter rises out of the subject; when the thoughts are agreeable to the matter, and the expressions suitable to the thoughts; where there is no inconsistency from the beginning to the end; when the whole is perspicuous in the beautiful order of its parts, and formed in due symmetry and proportion."

Felton.

### § 91. Expreffion fuited to the Thought.

In every sprightly genius, the expression will be ever lively as the thoughts. All the danger is, that a wit too fruitful should run out into unnecessary branches; but when it is matured by age, and corrected by judgment, the writer will prune the luxuriant boughs, and cut off the supersucous shoots of fancy, thereby giving both strength and beauty to his work.

Perhaps this piece of discipline is to young writers the greatest self-denial in the world: to confine the fancy, to stiffe the birth, much more to throw away the beautiful offspring of the brain, is a trial, that none but the most delicate and lively wits can be put to. It is their praise, that they are obliged to retrench more wit than others have to lavish: the chippings and silings of these jewels could they be pre-

ferved, are of more value than the whole mass of ordinary authors: and it is a maxim with me, that he has not wit enough, who has not a great deal to spare.

It is by no means necessary for me to run out into the several forts of writing we have general rules to judge of all, without being particular upon any, though the style of an orator be different from that of an historian, and a poet's from both.

Ilid.

#### § 92. On Embellishments of Style.

The defign of expression is to convey our thoughts truly and clearly to the world, in fuch a manner as is most probable to attain the end we propose, in communicating what we have conceived to the public; and therefore men have not thought it enough to write plainly, unless they wrote agreeably, so as to engage the attention, and work upon the affections, as well as inform the understanding of their readers: for which reason, all arts have been invented to make their writings pleafing, as well a profitable; and those arts are very commendable and honest; they are no trick, no delution, or imposition on the fenses and understanding of mankind; for they are founded in nature, and formed upon observing her operations in all the various passions and workings of our minds.

To this we owe all the beauties and embellishments of style; all sigures and schemes of speech, and those several decorations that are used in writings to enliver and adorn the work. The stourishes of sancy resemble the sourcishes of the peam mechanic writers; and the illuminators of manuscripts, and of the press, borrowed their title perhaps from the illumination which a bright genius every where gives to his work, and disperses through his

composition.

The commendation of this art of enlightening and adorning a fubject, lies in a right diftribution of the shades and light. It is in writing, as in picture, in which the art is to observe where the lights will fall, to produce the most beautiful parts to the day, and call in shades what we cannot hope will shine to advantage.

It were endless to pursue this subject through all the ornaments and illustrations of speech; and yet I would not dismiss it, without pointing at the general rules and necessary qualifications required in those who would attempt to shinosin the productions of their pen. And therefore

you must pardon me if I seem to go back, for we cannot raise any regular and durable p.le of building without laying a firm foundation.

Felton.

5 03. On the first Requisite, a Mustery of Language.

The first thing requisite to a just style, is a perfect maffery in the language we write in; this is not fo easily attained as is commonl, imagined, and depends upon a competent knowledge of the force and propriety rwords, a good natural taffe of firength and delicacy, and all the beauties of expression. It is my own opinion, that all the rules and critical observations in the world will never bring a man to a just dyle, who has not of himfelf a natural ealy way of writing; but they will improve agood genius, where nature leads the way, provided he is not too ferupulous, and does not make himfelf a flave to his rules; for that will introduce a sliffness and affectation, which are utterly abhorient from all good writing.

By a perfect maftery in any language, I understand not only a ready command of words, upon every occasion, not only the force and propriety of words as to their fense and fignification, but more espeally the purity and idiom of the lanquige; for in this a perfect maftery does confid. It is to know what is English, and what is Latin, what is French, Sparth, or Italian, to be able to mark the bounds of each language we write in, to point out the diffinguishing chatongue; what expressions or manner of exprelling is common to any language belief. s our own, and what is properly and pecuhuly our phrase, and way of speaking, For this is to speak or write English in purity and perfection, to let the flicams run clear and unmixed, without taking in other languages in the courfe: in English, therefore, I would have all Gallicitms (for inflance) avoided, that our tongue may be fincere, that we may keep to our own language, and not follow the French mode in our speech, as we do in our cloaths. It i convenient and profitable fometimes to import a foreign word, and naturalize the Pirale of another nation, but this is very sparingly to be allowed; and every fyllable of foreign growth ought immediately to be discarded, if its use and ornament to our language be not very evident.

§ 94. On the Purity and Idiom of Language.

While the Romans studied and used the Greek tongue, only to improve and adorn their own, the Latin flourished, and grew every year more copious, more elegant, and expressive; but in a few years after the ladies and beaux of Rome affected to speak Greek, and regarding nothing but the foftness and effeminacy of that noble language, they weakened and corrupted their pative tongue: and the monftrous affectation of our travelled ladies and gentlemen to speak in the French air, French tone, French terms, to drefs, to cook, to write, to court in French, corrupted at once our language and our manners, and introduced an abominable gallimaufry of French and English mixed together, that made the innovators ridiculous to all men of fense. The French tongue hath undoubtedly its graces and beauties, and I am not against any real improvement of our own language from that or any other: but we are always fo foolish, or unfortunate, as never to make any advantage of our neighbours. We affect nothing of theirs, but what is filly and ridiculous; and by neglecting the substantial use of their language, we only enervate and spoil our own.

Languages, like our bodies, are in a perpetual flux, and fland in need of recruits to supply the place of those words that are continually falling off through difute : and fince it is fo, I think 'tis better to raife them at home than abroad. We had better rely on our own troops than foreign forces, and I believe we have fufficient flrength and numbers within ourfelves: there is a vail treasure, an mexhauthible fund in the old English, from wheree nuthors may draw conflast Supplies, as our officers make their fureflace, wit, from the coal-works and the mines. The weight, the fliength, and figuricancy of many antiquated word, fhould recommend their to the again. The only wiping off the rud they have contracted, and deparating them from the drofs they he mingled with, and both in value and beauty they will rife above the standard, rather than fall below it.

Perhaps our tongue is not fo muûcal to the ear, nor fo abundant in maitiplicity of words; but its ffrength is real, and its words are therefore the more expressive: the peculiar character of our language is, that it is close, compact, and full: and Ff 2

Ibid.

our writings (if you will excuse two Latin words) come nearest to what Tully means by his Pressa Oratio. They are all weight and substance, good measure pressed together, and running over in a redundancy of fense, and not of words. And therefore the purity of our language confifts in preferving this character, in writing with the English strength and spirit: let us not envy others, that they are more fost, and diffuse, and rarified; be it our commendation to write as we pay, in true Sterling; if we want supplies, we had better revive old words, than create new ones. I look upon our language as good bullion, if we do not debase it with too much alloy; and let me leave this censure with you, That he who corrupteth the purity of the English tongue with the most specious foreign words and phrases, is just as wife as those modish ladies that change their plate for china; for which I think the laudable traffic of old cloaths is much the fairest barter.

Felton.

### § 95. On Plainness and Perspicuity.

After this regard to the purity of our language, the next quality of a just style, is its plainness and perspicuity. This is the greatest commendation we can give an author, and the best argument that he is master of the language he writes in, and the subject he writes upon, when we underfland him, and see into the scope and tendency of his thoughts, as we read him. All obscurity of expression, and darkness of fense, do arise from the confusion of the writer's thoughts, and his want of proper words. If a man hath not a clear perception of the matter he undertakes to treat of, be his style never so plain as to the words he uses, it never can be clear; and if his thoughts upon this subject be never so just and distinct, unless he has a ready command of words, and a faculty of easy writing in plain obvious expressions, the words will perplex the fense, and cloud the clearness of his thoughts.

It is the unhappiness of some, that they are not able to express themselves clearly: their heads are crowded with a multiplicity of undigested knowledge, which lies consused in the brain, without any order or distinction. It is the vice of others, to assert the obscurity in their thoughts and language, to write in a difficult crabbed style, and perplex the reader with an intricate meaning in more intricate words.

The common way of offending against

plainness and perspicuity of style, is an affectation of hard unufual words, and of close contracted periods: the faults of pedants and fententious writers; that are vainly oftentatious of their learning, or their wisdom. Hard words and quaint expressions are abominable: wherever you meet fuch a writer, throw him aside for a coxcomb. Some authors of reputation have used a short and concise way of expression, I must own; and if they are not so clear, as others, the fault is to be laid on the bicvity they labour after: for while we fludy to be concife, we can hardly avoid being obscure. We crowd our thoughts into too small a compass, and are so sparing of our words, that we will not afford enow to express our meaning.

There is another extreme in obscure writers, not much taken notice of, which fome empty conceited heads are apt to run into out of a prodigality of words, and a want of sense. This is the extravagance of your copious writers, who lofe their meaning in the multitude of words, and bury their sense under heaps of phrases. Their understanding is rather rarified than condensed: their meaning, we cannot say, is dark and thick; it is too light and fubtle to be discerned: it is spread so thin, and diffused so wide, that it is hard to be collected. Two lines would express all they fay in two pages: 'tis nothing but whipt fyllabub and froth, a little varnish and gilding, without any folidity or fubstance.

§ 96. On the Decorations and Ornaments of Style.

The deepest rivers have the plainest surface, and the purest waters are always clearest. Crystal is not the less solid for being transparent; the value of a style rises like the value of precious stones. It is be dark and cloudy, it is in vain to poiss his it is bears its worth in its native looks, and the same art which enhances its price when it is clear, only debases it if it be dull.

You fee I have borrowed fome metaphors to explain my thoughts; and it is, I believe, impossible to describe the plainness and clearness of style, without some expressions clearer than the terms I am otherwise bound up to use.

You must give me leave to go on with you to the decorations and ornaments of style: there is no inconfistency between the plainness and perspicuity, and the ornament of writing. A style resemblesh

peautyi

beauty, where the face is clear and plain as to fymmetry and proportion, but is capable of wonderful improvements, as to features and complexion. If I may transgress in too frequent allusions, because I would make every thing plain to you, I would pass on from painters to statuaries, whose excellence it is at first to form true and just proportions, and afterwards to give them that softness, that expression, that strength and desicacy, which make them almost breathe and live.

The decorations of style are formed out of those feveral schemes and figures, which are contrived to express the passions and motions of our minds in our speech; to give life and ornament, grace and beauty, to our expressions. I shall not undertake the rhetorician's province, in giving you an account of all the figures they have invented, and those several ornaments of writing, whose grace and commendation lie in being used with judgment and propriety. It were endless to pursue this subject through all the schemes and illustrations of speech: but there are some common forms, which every writer upon every fubject may use, to enliven and adorn his work.

These are metaphor and similitude; and those images and representations, that are drawn i the flrongest and most lively colours, to imprint what the writer would have in leaders conceive, more deeply on their minds. In the choice, and in the use of there, your ordinary writers are most apt to offead. Amages are very sparingly to be introduced: their proper place is in poems and orations; and their use is to move pity or terror, admiration, compaffion, anger and refentment, by representing fomething very affectionate or very dreadful, very attonishing, very miterable, or very provoking, to our thoughts. They give a wonderful force and beauty to the subject, where they are painted by a masterly hand; but if they are either weakly drawn, or unskilfully placed, they raise no passion but indignation in the reader.

### § 97. On Metaphors and Similitudes.

The most common ornaments are Metaphor and Similitude. One is an allusion to words, the other to things; and both have their beauties, if properly applied.

Similitudes ought to be drawn from the most familiar and best known particulars

in the world: if any thing is dark and obfeure in them, the purpose of using them is defeated; and that which is not clear itself, can never give light to any thing that wants it. It is the idle fancy of some poor brains, to run out perpetually into a course of similitudes, confounding their subject by the multitude of likenesses; and making it like so many things, that it is like nothing at all. This tristing humour is good for nothing, but to convince us, that the author is in the dark himself; and while he is likening his subject to every thing, he knoweth not what it is like.

There is another tedious fault in some fimile men; which is, drawing their comparisons into a great length and minute particulars, where it is of no importance whether the refemblance holds or not. But the true art of illustrating any subject by fimilitude, is, first to pitch on such a refemblance as all the world will agree in: and then, without being careful to have it run on all four, to touch it only in the strongest lines and the nearest likeness. And this will fecure us from all stiffness and formality in fimilitude, and deliver us from the nauscous repetition of as and fo, which some so so writers, if I may beg leave to call them fo, are continually founding in our ears.

I have nothing to fay to those gentlemen who bring similitudes and forget the resemblance. All the pleasure we can take when we meet these promiting sparks, is in the disappointment, where we find their sancy is so like their subject, that it is not like at all.

1bid.

### § 98. On Metaphors.

Metaphors require great judgment and confideration in the ale of them. They are a shorter similitude, where the likeness is rather implied than expressed. The signification of one word, in metaphors, is transferred to another, and we talk of one thing in the terms and propriety of another. But there must be a common refemblance, some original likeness in nature, some correspondence and easy transition, or metaphors are shocking and consused.

The beauty of them displays itself in their easiness and propriety, where they are naturally introduced; but where they are forced and crowded, too frequent and various, and do not rise out of the course of thought, but are constrained and present into the service, instead of making the displayers.

F f 3

course more lively and chearful, they make it fullen, dull and gloomy.

You must form your judgment upon the best models and the most celebrated pens, where you will find the metaphor in all its grace and strength, shedding a lustre and beauty on the work. For it ought never to be used but when it gives greater force to the fentence, an illustration to the thought, and intinuates a filent argument in the allusion. The use of metaphors is not only to convey the thought in a more pleasing manner, but to give it a stronger impression, and enforce it on the mind. Where this is not regarded, they are vain and trifling trash; and in a due observance of this, in a pure, chaste, natural expression, consist the jureness, beauty, and delicacy of flyle.

#### § 49. On Epithets.

I have faid nothing of Epithets. Their bufine 1 is to express the nature of the things they are applied to; and the choice of them depends upon a good judgmen,c, to diffinguish what are the most proper titles to be given on all occasions, and a complete knowledge in the accidence, qualities and affections of every thing in the They are of molt ornament when they are of ufc: they are to determine the character of every person, and decide the merits of every cause; conscience and justice are to be regarded, and great skill and exactness are required in the use of For it is of great importance to call things by their right names: the points of latire, and flrains of compliment depend upon it; otherwise we may make an als of a lion, commend a man in fatire, and lampoon him in panegyric. Here also there is 100m for genius: common justice and judgment thould direct us to fay what is proper at least; but it is parts and fire that will prompt us to the most lively and most torcible epithets that can be applied; and 'ti, in their energy and propriety their beauty lies.

#### § 100. On Allegories.

Allegories I need not mention, because they are not so much any ornament of style, as an artful way of recommending truth to the world in a borrowed shape, and a dress more agreeably to the fancy, than naked truth herielf can be. Truth is ever most beautiful and evident in her native dies: and the arts that are used to convey her to our minds, are no argument

that she is descient, but so, many testimonies of the corruption of our nature, when truth, of all things the plainest and sincerest, is forced to gain admittance to us in disguise, and court was in massquerade.

Ibid.

#### § 101. On the Sublime.

There is one in gredient more required to the perfection of flyle, which I have partly mentioned, already, in speaking of the fuitableness of the thoughts to the subject, and of the words to the thoughts; but you will give me leave to consider it in another light, with regard to the majesty and dignit, y of the subject.

It is f.t. as we have faid already, that the thoughts and expressions should be fuited to the matter on all occasions; but in n shler and greater subjects, especially where the theme is facred and divine, a nuft be our care to think and write up to the dignity and majetly of the toings w. prefume to treat of: nothing little, me s, or low, no childish thoughts, or boyna expressions, will be endured; all must be awful and grave, and great and foleme. The noblest fentiments must be conveyed in the weightiest words: all ornaments and illustrations must be borrowed from the richest parts of universal nature; and in divine subjects, especially when we attempt to speak of God, of his wildom, goodness, and power, of his mercy and juffice, of his difpentations and providence (by all which he is pleafed to manifelt himself to the sons of men) we mult nath our thoughts, and enlarge our minds, and fearch all the treasures of knowledge for every thing that is great, wonderful, and magnificent: we can only express out thoughts of the Creator in the works of his creation; and the brightest of these can only give us fome faint shadows of his greatness and his glory. The strongest figures are too weak, the most exaited language too low, to express his ineflable excellence. Nohyperbole can be brought to heighten our thoughts; for in fo sublime a theme, nothing can be hyperbolical-The riches of imagination are poor, and all the rivers of eloquence are dry, in supplying thought on an infinite subjects How poor and mean, how bafe and grovelling, are the Heathen conceptions of the Dcity! fomething fublime and noble mult needs be faid on fo great an occasion; but in this great article, the most celebrated of the Heathen pens seem to flag

and fink; they bear up in no proportion to the dignity of the theme, as if they were depressed by the weight, and dazzled with the splendour of the subject.

We have no inflances to produce of any writers that rife at all to the majesty and dignity of the Divine Attributes except the facred penmen. No less than Divine Inspiration could enable men to write worthily of God, and none but the Spirit of God knew how to express his greatness, and display his glory: in comparison of thefe divine writers, the greatest geniuses, the noblest wits of the Heathen world, are low and dull. The fublime majetly and royal magnificence of the feripture poems are above the reach, and beyond the power of all moral wit. Take the best and livehell poems of antiquity, and read them as we do the scriptures, in a profe translation, and they are flat and poor. Horace, and Virgil, and Homer, lofe their spirits and their strength in the transfusion, to that degree, that we have hardly patience to read them. But the facred writings, even in our translation, preserve their majesty and their glory, and very far furpals the brightest and noblest compositions of Greece and Rome. And this is not owing to the richness and folemnity of the eastern eloquence (for it holds in no other inflance) but to the divine direction and affiftance of the holy writers. For, let me only make this remark, that the most literal translation of the scriptures, in the most nitural fignification of the worls, is geneially the best; and the faine punctualness, which debases other writings, preserves the spirit and majesty of the sacred text: it can suffer no improvement from human wit; and we may observe that those who have prefumed to heighten the expressions by a poetical translation or paraphrate, have funk in the attempt; and all the decorations of their verse, whether Greek or Latin, have not been able to reach the dignity, the majesty, and solemnity of our profe: fo that the profe of scripture cannot be improved by verse, and even the divine poetry is most like itself in prote. One observation more I would leave with you,: Milton himself, as great a genius as he was, owes his superiority over Homer and Virgil, in majesty of thought and splendour of expression, to the scriptures: they are the fountain from which he derived his light; the facred treasure that enriched his fancy, and furnished him with all the truth and wonders of God and his

creation, of angels and men, which no mortal brain was able either to discover or conceive: and in him, of all human writers, you will meet all his fentiments and words raifed and suited to the greatness and dignity of the subject.

I have detained you the longer on this majefty of flyle, being perhaps myfelf carried away with the greatness and pleasure of the contemplation. What I have dwelt for much on with respect to divine subjects, is more casily to be observed with reference to human: for in all things below divinity, we are ratherable to exceed than fall short; and in adorning all other subjects, our words and sentiments may rise in a just proportion to them: nothing is above the reach of man, but heaven; and the same wit can raise a human subject, that only debases a divine.

Felica.

#### § 102. Rules of Order and Proportion.

After all these excellencies of slyle, in purity, in plainness and perspicuity, in ornament and majesty, are considered, a finished piece of what kind soever must whole; for light rises out of order, and beauty from proportion. In architecture and painting, these fill and relieve the eye. A just disposition gives us a clear view of the whole at once; and the due symmetry and proportion of every part in itself, and of all together, leave no vacancy in our thoughts or eyes; nothing is wanting, every thing is complete, and we are fatisfied in beholding.

But when I speak of order and proportion, I do not intend my Buff and formal method, but only a proper latribution of the parts in general, where they follow in a natural course, and are not confounded with one another. Laying lown a scheme, and marking out the divisions and febdivisions of a discourse, are only necessary in fyllems, and tome pieces of controverty and argumentation: you fee, however, that I have venemed to write without any declared order; and this is allowable, where the method opens as you read, and the order discovers infelt in the progress of the fubject; but emerially, of all pieces that were ever written in a professe i and flated method, and diffing ai hed by the number and fucceilion of their parts, our English fermons are the con, letell in order and proportion; the method is to cary and natural, the pares bear fo just a proportion to one another, that among many

Ff 4 others,

others, this may pass for a peculiar commendation of them; for those divisions and particulars which obscure and perplex other writings, give a clearer lightto ours. All that I would infingate, therefore, is only this, that it is not necessary to lay the method we use before the reader, only to write and then he will read, in order.

But it require, a full command of the fubject, a diffinct view, to keep it always in fight, or elfe, without fome method first defigned, we should be in danger of losing it, and wandering after it, till we have lost ourselves, and bewildered the reader.

A prescribed method is necessary for weaker heads, but the beauty of order is its freedom and unconfliaint; it must be differfed and shine in all the parts through the whole performance; but there is no neceflity of writing in trammels, when we can move more at eafe without them: neither is the proportion of writing to be meafured out like the proportions of a horse, where every part must be drawn in the minutest respect to the fize and bigness of the reft; but it is to be taken by the mind, and formed upon a general view and consideration of the whole. The statuary that carves Hercules in stone, or casts him in brafs, may be obliged to take his dimenfions from his foor; but the poet that deferibes him is not bound up to the geometer's rule: nor is an author under any obligation to write by the scale.

These hints will serve to give you some notion of order and proportion: and I must not dwell too long upon them, lest I transgress the rules I am laying down.

Felton.

#### § 103. A Recapitulation.

I shall make no formal recapitulation of what I have delivered. Out of all these rules together, rifes a just style, and a perfeet composition.' All the latitude that can be admitted, is in the ornament of writing; we do not require every author to fhine in gold and jewels: there is a moderation to be used in the pomp and trappings of a discourse: it is not necessary that every part thould be embellished and adorned; but the decoration should be skilfully diftributed through the whole! 100 full and glaring a light is offenfive, and confounds the eyes: in heaven ittelf there are vacancies and spaces between the stars; and the day is not less beautiful for being intersperfed with clouds; they only moderate the brightness of the sun, and, without di-

minishing from his splendour, gild and adorn themselves with his rays. But to descend from the skies: It is in writing as in drefs; the richest habits are not always the completest, and a gentleman may make a better figure in a plain fuit, than in an embroidered coat: the drefs depends upon the imagination, but must be adjusted by the judgment, contrary to the opinion of the ladies, who value nothing but a good fancy in the choice of their cloachs. first excellence is to write in purity, plainly, and clearly; there is no dispensation from thefe: but afterwards you have your choice of colours, and may enliven, adorn, and paint your subject as you please.

In writing, the rules have a relation and dependance on one another. They are held in one focial bond, and joined, like the moral virtues, and liberal arts, in a fort of harmony and concord. He that cannot write pure, plain English, must never pretend to write at all; it is in vain for him to dress and adorn his discourse; the finer he endeavours to make it, he make, it only the more ridiculous. And on the other fide, let a man write in the exacteft purity and propriety of language, if he has not life and fire, to give his work fome force and spirit, it is nothing but a mere corpfe, and a lumpish, unwieldy mass of matter. But every true genius, who is perfect master of the language he writes in, will let no fitting ornaments and decorations be wanting. His fancy flows in the richest vein, and gives his pieces such lively colours, and so beautiful a complexion, that you would almost fay his own blood and spirits were transfused into the work. Ibid.

#### § 104. How to form a right Tafte.

A perfect mastery and elegance of syle is to be learned from the common rules, but must be improved by reading the orators, and poets, and the celebrated master in every kind; this will give you a right taste, and a true relish; and when you can distinguish the beauties of every sinished piece, you will write yourself with equal commendation.

I do not affert that every good writer must have a genius for poetry; I knew Tully is an undeniable exception: but I will venture to affirm, that a foul that is not moved with poetry, and has no taste that way, is too dull and lumpish ever to write with any prospect of being read. It is a fatal miliake, and simple superstinion.

ŧ٩

to discourage youth from poetry, and endeavour to prejudice them against it; if they are of a poetical genius, there is no restraining them: Ovid, you know, was deaf to his father's frequent admonitions. But if they are not quite fmitten and bewitched with love of verse, they should be trained to it, to make them masters of every kind of poetry, that by learning to imitate the originals, they may arrive at a right conception, and a true taste of their authors: and being able to write in verse upon occasion, I can assure you, is no difadvantage to profe; for without relishing the one, a man must never pretend to any talle of the other.

l'aste is a metaphor, borrowed from the p late, by which we approve or diflike what we cat and drink, from the agreeableness or disagrecableness of the relish in our mouth. Nature directs us in the common use, and every body can tell sweet from bitter, what is sharp or four, or vapid, or naufeous; but it requires fenfes more refined and exercifed, to discover every take that is most perfect in its kind; every palate is not a judge of that, and yet drinking is more used than reading. All that I pretend to know of the matter, is, that wine should be, like a style, clear, deep, bright, and flrong, fincere and pure, found and dry (as our advertisements do well express it) which last is a commendable term, that contains the juice of the richest spirits, and only keeps out all cold and dampneis.

It is common to commend a man for an ear to music, and a taste of painting; which are nothing but a just discernment of what is excellent and most perfect in them. The first depends entirely on the ear; a man can never expect to be a mafter, that has not an ear tuned and fet to mulic; and you can no more fing an ode without an ear, than without a genius you can write one. Painting, we should think, requires some understanding in the art, and evact knowledge of the best masters' manner, to be a judge of it; but this faculty, like the rest, is founded in nature: knowledge in the art, and frequent conversation with the best originals, will certainly perfeet a man's judgment; but if there is not a natural far acity and aptness, experience will be of no great service. A good taste is an argument of a great foul, as well as a lively wit. It is the infirmity of poor spirits to be taken with every appearance, and dazzled by every thing that sparkles:

but to pass by what the generality of the world admires, and to be detained with nothing but what is most perfect and excellent in its kind, fpeaks a superior genius. and a true difcernment: a new picture by fome meaner band, where the colours are fresh and lively, will engage the eye, but the pleasure goes off with looking, and what we ran to at first with eagerness, we presently leave with indifference: but the old pieces of Raphael, Michael Angelo, Tintoret, and Titian, though not to inviting at first, open to the eye by degrees; and the longer and oftener we look, we still discover new beauties, and find new pleafure. I am not a man of to much feverity in my temper, as to allow you to be pleafed with nothing but what is in the last perfection; for then, possibly, so many are the infirmities of writing, beyond other arts, you could never be pleased. There is a wide difference in being nice to judge of every degree of perfection, and rigid in refuling whatever is deficient in any point. This would only be weakness of flomach, not any commendation of a good palate; a true tafte judges of defects as well as perfections, and the best judges are always the persons of the greatest candour. They will find none but real faults, and whatever they commend, the praise is juilly due.

I have intimated already, that a good taffe is to be formed by reading the beff authors; and when you shall be able to point out their beauties, to differ the brightest passages, the strength and elegance of their language, you will always write yourself, and read others by that standard, and must therefore necessarily excel.

Felion.

### § 105. Tufte to be improved by Imitation.

In Rome there were some popular orators, who, with a falle cloquence and vielent action, carried away the applause of the people: and with us we have fome popular men, who are followed and admired for the loudness of their voice, and a false pathos both in utterance and writing. I have been fometimes in some confulion to hear fuch persons commended by those of superior sense, who could diffinguith, one would think, between empty, pompous, specious harangues, and those pieces in which all the beauties of writing are combined. A natural tafte must therefore be improved, like fine parts, and a great genius; it mult be affifted by ait, or

it will be easily vitiated and corrupted. False eloquence passes only where true is not understood; and nobody will commend bad writers, that is acquainted with good.

These are only some cursory thoughts on a subject that will not be reduced to rules. To treat of a true taste in a formal method, would be very insipid; it is best collected from the beauties and laws of writing, and must rise from every man's own apprehension and notion of what he hears and reads.

It may be therefore of farther use, and most advantage to you, as well as a relief and entertainment to refresh your spirits in the end of a tedious discourse, if besides mentioning the classic authors as they fall in my way, I lay before you fome of the correcteft writers of this age and the laft, in feveral faculties, upon different subjects: Not that you should be drawn into a fervile imitation of any of them; but that you may fee into the spirit, force, and beauty of them all, and form your pen from those general notions of life and delicacy, of fine thoughts and has py words, which rife to your mind upon reading the great mafters of flyle in their feveral ways, and manner of excelling.

I must beg leave, therefore, to defer a little the entertainment 1 promised, while I endervour to lead you into the true way of imitation, if ever you shall propose any original for your copy; or, which is infinitely presentable, into a perfect mastery of the spirit and perfections of every celebrated writer, whether ancient or modern.

#### § 106. On the Historical Style.

History will not admit those decorations other subjects are capable of; the passions and affections are not to be moved with any thing, but the truth of the narration. All the force and beauty must lie in the order and expression. To relate every event with clearness and perspicuity, in fuch words as bell express the nature of the fubiect, is the chief commendation of an historian's style. History gives us a draught of facts and transactions in the world. The colours these are painted in; the thrength and fignificancy of the feveral faces; the regular confusion of a battle: the distractions of tumult sensibly depicted; every object and every occurrence so presented to your view, that while you read, you feem indeed to fee them: this is

the art and perfection of an historical style. And you will observe, that those who have excelled in history, have excelled in this especially; and what has made them the standards of that style, is the clearness, the life and vigour of their expression, every where properly varied, according to the variety of the subjects they wrote on: for history and narration are nothing but just and lively descriptions of remarkable events and accidents.

## § 107. Of HERODOTUS and THUCY-

For this reason we praise Herodotus and Thucydides among the Greeks, for I will mention no more of them; and upon this account we commend Sallust and Livy among the Romans. For though they all differ in their style, yet they all agree in these common excellencies. Herodotus displays a natural oratory in the beauty and clearness of a numerous and solemn diction; he flows with a fedate and majestic pace, with an easy current, and a pleasant fiream. Thucydides does fometimes write in a flyle so close, that almost every word is a fentence, and every fentence almost acquaints us with fomething new; fo that from the multitude of causes, and variety of matter crowded together; we should fuspect him to be obscure: but yet so happy, so admirable a master is he in the art of expression, so proper and so full, that we cannot fay whether his diction does more illustrate the things he speaks of, or whether his words themselves are not illustrated by his matter, fo mutual a light do his expressions and subject reslect on each other. His diction, though it be pressed and close, is nevertheless great and magnificent, equal to the dignity and importance of his subject. He first, after Heiodotus, ventured to adorn the historian's style, to make the narration more pleasing, by leaving the flatness and nakedness of former ages. This is most observable in his battles, where he does not only relate the mere fight, but writes with a martial spirit, as if he stood in the hottest of the engagement; and what is most excellent, as well as remarkable in so close a style, is, that it is numerous and harmonious, that his words are not laboured nor forced, but fall into their places in a natural order, as into their most proper situation. Ibid.

§ 108. Of Sallust and Livr. Sallust and Livy, you will read, I hope, with

with fo much pleasure, as to make a thorough and intimate acquaintance with them. Thucydides and Salluft are generelly compared, as Livy is with Herodotus; and, fince I am fallen upon their characters, I cannot help touching the companifens. Salluft is represented as a concise, a fliong, and nervous writer; and fo far he agrees with Thucydides's manner: but he is also charged with being obscure, as concile writers very often are, without any reason. For, if I may judge by my own apprehensions, as I read him, no writer can be more clear, more obvious and intelligible. He has not, indeed, as far as I can observe, one redundant expression; but his words are all weighed and chofen, 10 expressive and fignificant, that I will challenge any critic to take a fentence of his, and expicts it clearer or better; his centraction feems wrought and laboured. To me he appears as a man that confidered and fludted performity and brevity to that degree, that he would not retrench a word which might help him to express his mearing, nor fuffer one to fland, if his feme was clear without it. Being more diffele, would have weakened has langraps, and have made it obscurer rather than cleaver; for a multitude of word, Cally ferve to cloud or diffipute the fenfe; and though a copious flyle in a mailer's hand to clear and be in iful, yet where con-Ofencis and perfaculty are once reconciled, any attempt to enlarge the exprefdone, if it does not deriven, does certainly make the light much feebler. Sallult is all life and fpurit, yet grave and majedic in his diction: his use of old words to perfective right, there is no affect tron, but none weight and figuricancy in them: the boldness of his metaphors are among has Steatest beauties; they are chosen with great judgment, and thew the force of his Senius; the colouring is frong, and the fliokes are bold: and in my opinion he choic them for the fake of the brevity he loved, to express more clearly and more forcibly, what otherwife he must have written in loofer characters with lefs firength and beauty. And no fault can be objected to the justest and exactest of the Roman writers.

Livy is the most considerable of the Roman historians, if to the perfection of his style we join the compass of his subject; in which he has the advantage over all that wrote before him, in any nation but the Jewish, especially over Thucydides;

whose history, however drawn out into length, is confined to the shortest period of any, except what remains of Sallust. No historian could be happier in the greatness and dignity of his fubject, and none was better qualified to adoin it; for his genius was equal to the majedy of the Roman empire, and every way expable of the mighty undertaking. He is not to copious in words, as abundant in matter, rich in his expression, grave, majestic, and lively; and if I may have liberty to enlarge on the old commendation, I would tay his flyle flows with milk and horey, in fuch abundance, fuch pleafure and in ectness. that when once you are proficient enough to read him readily, you will go on with unwearied delight, and never lay him out or your hands without impatience to refume him. We may refemble him to Herodotus, in the manner of his diction; but he is more like Thacydides in the grandeur and majetty of expication; and if we observe the multimade of clauses in the length of the periods, perhaps Thucydides himself is not more crowded; only the length of his period, is upt to deceive us; and great men among the incients, as well as moderns, have been induced to think this writer was copious, because his fentences were long. Copions le i indeed, and forcible in as descriptions, not levith in the number, but exaberant in the richnets and figures over of his words. You will old e.e., for I totals upon my own obfervation, that Live is not to eafy and obvious to be underflood as Salluff; the experment is made every where in reading face or fix pages of each author together. The thortness of Sallad's fentences, . Jong as they are clear, flows his forte and meaning all the way in an inflant; the progress is quick and plain, and every three lines gives us a new and complete idea; we are carried from one temp to another with fo fwift a pace, that we ran as we read, and yet connot, if we read diffinally, run faffer than we underfland him. This is the brightest testimony that can be given of a clear and obvious ityle. In Livy we cannot pals on to readily; we are forced to wait for his meaning till we come to the end of the fentence, and have fo many claules to fort and refer to their proper places in the way, that I must own I cannot read him to readily at fight as I can Salluft; though with attention and confideration I understand him as well. He is not fo easy, nor so well adapted to

young proficients, as the other: and is ever plainest, when his sentences are shortest; which I think is a demonstration. Some. perhaps, will be apt to conclude, that in this I differ from Quinctilian; but I do not conceive so myself; for Quinctilian recommends Livy before Salluft, rather for his candour, and the larger compass of his history; for he owns a good proficiency is required to understand him; and I can only refer to the experience of young proficients, which of them is more open to their apprehension. Distinction of sentences, in few words, provided the words be plain and expressive, ever gives light to the author, and carries his meaning uppermost; but long periods, and a multiplicity of clauses, however they abound with the most obvious and fignificant words, do necessarily make the meaning more retired, less forward and obvious to the view: and in this Livy may feem as crowded as Thucydides, if not in the number of periods, certainly in the multitude of claufes, which, fo disposed, do rather obscure than illuminate his writings. But in so rich, fo majestic, so slowing a writer, we may wait with patience to the end of the fentence, for the pleasure slill increases as we read. The elegance and purity, the greatness, the nobleness of his diction, his happiness in narration, and his wonderful eloquence, are above all commendation; and his ftyle, if we were to decide, is certainly the standard of Roman history. For Sallust, 1 must own, is too impetuous in his course; he hurries his reader on too fast, and hardly ever allows him the pleasure of expectation, which in reading history, where it is justly raised on important events, is the greatest of all others.

#### § 109. Their Uje in Style.

Reading these celebrated authors will give you a true taste of good writing, and form you to a just and correct style upon every occasion that shall demand your pen. I would not recommend any of them to a strict imitation; that is servile and mean; and you cannot propose an exact copy of a pattern, without falling fhort of theoriginal: but if you once read them with a true relish and discernment of their beauties, you may lay them aside, and be secure of writing with all the graces of them all, without owing your perfection to any. Your flyle and manner will be your own, and even your letters upon the most ordinary subjects, will have a native beauty and elegance in the composition, which will equal them with the best originals, and set them far above the common standard.

Upon this occasion, I cannot pass by your favourite author, the grave and facetious Tatler, who has drawn mankind in every dress and every disguise of nature, in a ftyle ever varying with the humours, fancies, and follies he describes. He has shewed himself a master in every turn of his pen, whether his subject be light or serious, and has laid down the rules of common life with so much judgment, in such agreeable, such lively and elegant language, that from him you at once may form your manners and your style. Ibul.

#### § 110. On Spenser and Shakespear.

I may add some poets of more ancient date: and though their style is out of the standard now, there are in them still some lines so extremely beautiful, that our modern language cannot reach them. Chaucer is too old, I fear; but Spenser, though he be antiquated too, hath still charms remaining to make you enamoused of him. His antique verse has music in it to ravish any ears, that can be sensible of the softest, sweets numbers, that ever slowed from a poet's pen.

Shakespear is a wonderful genius, a single instance of the force of nature and the strength of wit. Nothing can be greater and more lively than his thoughts; nothing nobler and more forcible than his expression. The fire of his fancy breaks out into his words, and sets his reader on a stame: he makes the blood run cold or warm; and is so admirable a master of the passions, that he raises your courage, your pity, and your fear, at his pleasure; but he delights most in terror. Ibid.

#### § 111. On MILTON and PHILIPS.

Milton is the affertor of poetic liberty, and would have freed us from the bondage of rhyme, but, like sinners, and like lovers, we hug our chain, and are pleased in being slaves. Some indeed have made some faint attempts to break it, but their verse had all the softness and esseminacy of rhyme without the music; and Dryden himself, who sometimes struggled to get loose, always relapsed, and was faiter bound than ever: but rhyme was his province, and he could make the tinkling of his chains harmonious. Mr. Philips has trod the nearest in his great master's steps,

and has equalled him in his verse more than he falls below him in the compass and dignity of his subject. The Shilling is truly splendid in his lines, and his poems will live longer than the unfinished castle, as long as Blenheim is remembered, or Cyder drank in England. But I have digrested from Milton; and that I may return, and say all in a word; his style, his thoughts, his verse, are as superior to the generality of other poets, as his subject.

Felton.

## § 112. Great Men have usually appeared at the same time.

It is a remarkable phænomenon, and one which has often employed the speculations of curious men, that writers and artists, most distinguished for their parts and genius, have generally appeared in confiderable numbers at a time. Some ages have been remarkably barren in them; while, at other periods, Nature scems to have exerted herfelf with a more than ordinary effort, and to have poured them forth with a profule fertility. Various reafons have been affigned for this. Some of the moral causes lie obvious; such as favourable circumstances of government and of manners; encouragement from great men; emulation excited among the men of genius. But as these have been thought inadequate to the whole effect, physical causes have been also assigned; and the Abbé du Bos, in his reflections on Poetry and Painting, has collected a great many observations on the influence which the air, the climate, and other fuch natural causes, may be supposed to have upon genius. But whatever the causes be, the fact is certain, that there have been certain periods or ages of the world much more diffinguished than others, for the extraordinary productions of genius.

### § 113. Four of these Ages marked out by the Learned.

Learned men have marked out four of these happy ages. The first is the Grecian age, which commenced near the time of the Pelopponnesian war, and extended till the time of Alexander the Great; within which period, we have Herodotus, Thucydides, Cenophon, Socrates, Plato, Aristotle Demosthenes, Æschynes, Lysias, Isocrate: Pindar, Æschylus, Euripides, Sopholier, Aristophanes, Menander, Anacreon, Pheodritus, Lysippus, Apelles, Phidias, Braxitelis. The second is the Rodies

man age, included nearly within the days of Julias Cæsar and Augustus; affording us, Catullus, Lucretius, Terence, Virgil, Horace, Tibullus, Propertius, Ovid, Phædrus, Cæfar, Cicero, Livy, Sallutt, Varro, and Vitruvius. The third age is, that of the reftoration of learning, under the Popes Julius II. and Leo X.; when flourished Ariolto, Taffo, Sannazarius, Vida, Machiavel, Guicciardini, Davila, Erasmus, Paul Jovius, Michael Angelo, Raphael, Titian. The fourth, comprehends the age of Louis XIV. and Queen Anne; when flourished. in France, Corneille, Racine, De Retz, Moliere, Boileau, Fontaine, Baptiste, Rousseau, Bossiuet, Fenelon, Bourda-loue, Pascall, Malebranche, Massillon, Bruyere, Bayle, Fontenelle, Vertot; and in England, Dryden, Pope, Addison, Prior, Swift, Parnell, Congreve, Otway, Young, Rowe, Atterbury, Shaftibury, Bolingbroke, Tillotfon, Temple, Boyle, Locke, Newton, Clarke.

#### § 114. The Reputation of the Ancients effablifhed too firmly to be shaken.

If any one, at this day, in the eighteenth century, takes upon him to decry the ancient Classics; if he pretends to have discovered that Homer and Virgil are poets of inconfiderable merit, and that Demosthenes and Cicero are not great Orators, we may boldly venture to tell fuch a man, that he is come too late with his discovery. The reputation of such writers is established upon a foundation too folid to be now fliaken by any arguments whatever; for it is established upon the almost univerfal talle of mankind, proved and tried throughout the fuccession of to many ages. Imperfections in their works he may indeed point out; passages that are faulty he may shew; for where is the human work that is perfect? But if he attempts to discredit their works in general, or to prove that the reputation which they have gained is on the whole unjust, there is an argument against him, which is equal to full demonstration. He must be in the wrong; for human nature is against him. In matters of tafte, fuch as poetry and oratory, to whom does the appeal lie? where is the standard? and where the authority of the last decision? where is it to be looked for, but as I formerly flie wed, in those feelings and fentiments that are found, on the most extensive examination, to be the common feariments and feelings of men? These have been fully consulted on this lic, has been tried and appealed to for many centuries, and throughout almost all civilized nations. It has pronounced its verdict; it has given its fanction to these writers; and from this tribunal there lies no farther appeal.

In matters of mere reasoning, the world may be long in an error; and may be convinced of the error by stronger reasonings, when produced. Positions that depend upon science, upon knowledge, and matters of fact, may be overturned according as fcience and knowledge are enlarged, and new matters of fact are brought to light. For this reason, a system of philosophy receives no fufficient fanction from its antiquity, or long currency. The world, as it grows older, may be justly expected to become, if not witer, at least more knowing; and supposing it doubtful whether Aristotle, or Newton, were the greater genius, yet Newton's philosophy may prevail over Aristotle's, by means of later discoveries, to which Ariflotle was a flranger. But nothing of this kind holds as to matters of Tafte; which depend not on the progress of knowledge and science, but upon sentiment and feeling. It is in vain to think of undeceiving mankind, with respect to errors committed here, as in Philosophy. For the univerfal feeling of mankind is the natural feeling; and because it is the natural, it is, for that reason, the right feeling. The reputation of the Had and the Æncid must therefore stand upon fure ground, because it has flood so long; though that of the Anthotelian or Platonic philo-

# § 115. The Reputation of the Art exts not owing to Pedantry.

fophy, every one is at liberty to call in

Blair.

quellion.

It is in vain also to alledge, that the reputation of the ancient pocts and orators, is owing to authority, to pedantry, and to the prejudices of education, transmitted from age to age. These, it is true, are the authors put into our hands at schools and colleges, and by that means we have now an early prepoffeifion in their favour; but how came they to gain the possession of colleges and ichools? Plainly, by the high fame which these authors had among their own cotemporaries. For the Greek and Latin were not always dead languages. There was a time, when Homer, and Virgil, and Horace, were viewed in the fame light as we now view Dryden, Pope, and Addison. It is not to commentators and universities, that the classics are indebted for their same. They became classics and school-books in consequence of the high admiration which was paid them by the bissipidges in their own country and nation. As early as the days of Juvenal, who wrote under the reign of Domitian, we find Virgit and Horace become the standard books in the education of youth.

Quod stabant pueri, cum totus decolor ess. t Fiaccu, & hæreret nigro fuligo Maron.

From this general principle, then, of the reputation of great ancient Claffics being fo early, to latting, fo extensive, among all the most polished nations, we may just and boldly infer, that their reputation connot be wholly unjust, but must have a following the most better that their writing.

§ 116. In achat Respects the Moderns eral the Ancients.

Let us guard, however, against a blind and implicit veneration for the Ancients in every thing. I have opened the general principle, which mult go far in inflituting a fair comparison between them and the Moderns. Whatever superiority the Ancients may have had in point of genius. yet in all arts, where the natural progress of knowledge has had room to produce any confiderable effects, the Moderns cannot but have fome advantage. The world may, in certain respects, be considered as a person, who must needs gain somewhat by advancing in years. Its improvements have not, I confess, been always in proportion to the centuries that have passed ove: it; for, during the courte of some ages, it has funk as into a total lethargy. Yet, when roused from that lethargy, it has generally been able to avail ittelf, more or lets, of former discoveries. At intervals, there arose some happy genius, who could both improve on what had gone before, and invent fomething new. With the advantage of a proper flock of materials, an inferior genius can make greater progress

- \* " Then thou art bound to fmell, on either " hand,
  - " As many flinking lamps as fchool boys "fland,
  - "When Horace could not read in his own fully'd book,
  - "And Virgil's facted page was all before at with imoke."

    DRYDEN.

than a much superior one, to whom these materials are wanting.

Hence, in Natural Philosophy, Astronomy, Chemistry, and other sciences that depend on an extensive knowledge and obfervation of facts, modern philosophers have an unquestionable superiority over the ancient. I am inclined also to think, that in matters of pure reasoning, there is more precision among the moderns, than in some instances there was among the ancients; owing perhaps to a more extensive literary intercourfe, which has improved and sharpened the faculties of men. In some studies too, that relate to taste and fine writing, which is our object, the progress of society mult, in equity, be admitted to have given us some advantages. For instance, in history; there is certainly more political knowledge in feveral European nations at present, than there was in ancient Greece and Rome. We are better acquainted with the nature of government, because we have feen it under a greater variety of The world is more forms and revolutions. laid open than it was in former times; commerce is greatly enlarged; more countries are civilized; posts are every where established; intercourse is become more easy; and the knowledge of facts, by confequence, more attainable. All these are great advantages to historians; of which, in some measure, as I shall afterwards shew, they have availed themselves. In the more complex kinds of poetry, likewife, we may have gained fomewhat, perhaps, in point of regularity and accuracy. In dramatic performances, having the advantage of the ancient models, we may be allowed to have made some improvements in the variety of the characters, the conduct of the plot, attentions to probability, and to decorum: Bluir.

§ 117. We must look to the Ancients for elegant Composition, and to the Moderns for accurate Philosophy.

From whatever cause it happens, so it is, that among some of the ancient writers, we must look for the highest models in most of the kinds of elegant composition. For accurate thinking and enlarged ideas, in several parts of philosophy, to the moderns we ought chiefly to have recourse. Of correct and fir shed writing in some works of taske, they may afford useful patterns; but for all that belongs to original genius, to spirited, masterly, and high execution, our best and most happy ideas are,

generally speaking, drawn from the ancients. In epic poetry, for instance, Homer and Virgil, to this day, stand not within many degrees of any rival. Orators, fuch as Cicero and Demosthenes, we have none. In history, notwithstanding some defects, which I am afterwards to mention in the ancient historical plans, it may be safely afferted, that we have no such historical narration, fo elegant, fo picturefque, fo animated, and interesting as that of Herodotus, Thucydides, Xenophon, Livy, Tacitus. and Salluft. Although the conduct of the drama may be admitted to have received fome improvements, yet for poetry and fentiment we have nothing to equal Sophocles and Euripides; nor any dialogue in comedy, that comes up to the correct, graceful, and elegant simplicity of Terence. We have no fuch love-elegies as those of Tibullus; no fuch pallorals as fome of Theocritus's: and for Lyric poetry, Horace stands quite unrivalled. The name of Horace cannot be mentioned without a particular encomium. That " curiofa felicitas," which Petronius has remarked in his expression; the sweetness, elegance, and spirit of many of his odes, the thorough knowledge of the world, the excellent fentiments, and natural easy manner which diffinguish his Satires and Epistles, all contribute to render him one of those very few authors whom one never tires of reading; and from whom alone, were every other monument deflroyed, we should be led to form a very high idea of the talle and genius of the Augustan age. Ibid.

#### § 118. The affiduous Study of the Greek and Roman Chyfics recommended.

To all fach then, as wish to form their taste, and nourish their genius, let me warmly recommend the assiduous study of the ancient classics, both Greek and Roman.

Nocturna verfare manu, verfate diurna .

Without a confiderable acquaintance with them, no man can be reckoned a polite scholar; and he will wart many assistances for writing and speaking well, which the knowledge of such authors would afford him. Any one has great reason to suspect his own taste, who receives little or no pleasure from the perulal of writings, which so many ages and nations have consented

" "Read them by day, and fludy them by night."
FRANCIS.

in holding up as subjects of admiration. And I am persuaded, it will be found, that in proportion as the ancients are generally studied and admired, or are unknown and difregarded in any country, good taste and good composition will flourish, or decline. They are commonly none but the ignorant or supersicial, who undervalue them.

Blair.

#### § 119. The ancient Historians excel in picturesque Narration.

In all the virtues of narration, particularly in that of picturefque descriptive narration, feveral of the ancient historians eminently excel. Hence, the pleasure that is found in reading Herodotus, Thucydides, Xenophon, Livy, Sallust, and Tacitus. They are all conspicuous for the art of narration. Herodotus is, at all times, an agreeable writer, and relates every thing with that naiveté and timplicity of manner, which never fails to interest the reader. Though the manner of Thucydides be more dry and harfh, yet, on great occafions, as when he is giving an account of the plague of Athens, the flege of Platea, the fedition in Corcyra, the defeat of the Athenians in Sicily, he displays a very strong and masterly power of description. Xenophon's Cyropædia, and his Anabasis, or retreat of the ten thousand, are extremely beautiful. The circumstances are finely felected, and the narration is easy and engaging; but his Hellenics, or continuation of the history of Thucydides, is a much inferior work. Salluft's art of historical painting in his Catilinarian, but, more efpecially, in his Juguithine war, is well known; though his style is liable to cenfure, as too fludied and affected.

Ibid.

# § 120. Livy remarkable for Historical Painting.

Livy is more unexceptionable in his manner; and is excelled by no historian whatever in the art of narration: feveral remarkable examples might be given from him. His account, for instance, of the famous defeat of the Roman army by the Samnites, at the Furcæ Caudinæ, in the beginning of the ninth book, affords one of the most beautiful exemplifications of historical painting, that is any where to be met with. We have first, an exact description of the narrow pass between two mountains, into which the enemy had descoyed the Romans. When they find them

felves caught, and no hope of escape left, we are made to fee, first, their astonistiment, next, their indignation, and then, their dejection, painted in the most lively manner, by fuch circumstances and actions as were natural to persons in their fitua-The reftless and unquiet manner in which they pass the night; the consultations of the Samnites; the various meafures proposed to be taken; the medianes between the two armies, all heighten the fcene. At length, in the morning, th. confuls return to the camp, and inform them that they could receive no other terms but that of furrendering their arms, and passing under the yoke, which was confidered as the last mark of ignominy for a conquered army.

# § 121. TACITUS remarkable for High.

Tacitus is another author eminent for historical painting, though in a manner altogether different from that of Livi. Livy's descriptions are more full, more plain, and natural; those of Tacitus confift in a few bold strokes. He selects one or two remarkable circumstances, and sets them before us in a strong, and, generally, in a new and uncommon light. Such is the following picture of the fituation of Rome, and of the Emperor Galba, when Otho was advancing against him: " Age-" batur huc illuc Galba, vario turbæ fluctu-" antis impulfu, completis undique basilies "et templis, lugubri prospectu. Nequa " populi aut plebis ulla vox; fed attoniti "vultus, et conversæ ad omnia aures-"Non tumultus, non quies; fed quale " magni metûs, et magnæ iræ, filentium "est." No image, in any poet, is more Arong and expressive than this last stroke of the description: " Non tumultus, non " quies, fed quale," &c. This is a conception of the fublime kind, and discovers high genius. Indeed, throughout all his work, Tacitus shews the hand of a master. As he is profound in reflection, so he is striking in description, and pathetic in sentiment. The philosopher, the poet, and

"Galba was driven to and fro by the tide of the multitude, showing him from place to place." The temples and public buildings were filled with crowds, of a dismal appearance. No demours were heard, either from the citizens, of from the rabble. Their countenances were stilled with consternation; their ears were employed in listening with anxiety. It was not a tumult; it was not questiness; it was the stilled with confernation, and of wrath."

the historian, all meet in him. Though the period of which he writes may be reckoned unfortunate for an historian, he has made it afford us many interesting exhibitions of human nature. The relations which he gives of the deaths of feveral eminent perfonages, are as affecting as the deepest tragedies. He paints with a glowing pencil; and possesses, beyond all writers, the talent of painting, not to the imagination merely, but to the heart. With many of the most distinguished beauties, he is, at the fame time, not a perfect model for hillory; and fuch as have formed themselves upon him, have seldom been fuccefsful. He is to be admired, rather than imitated. In his reflections he is too refined; in his flyle too concife, fornetimes quaint and affected, often abrupt and obtime. History feems to require a more natural, flowing, and popular manner.

Blair.

## § 122. On the Beauty of Epistolary Writing.

Its first and fundamental requisite is, to be natural and timple; for a fliff and laboared manner is as bad in a letter, as it I in conversation. This does not banish foughtliness and wit. These are graceful in letters, just as they are in conversation; when they flow cafily, and without being fulled; when employed fo as to feafon, Lot to cloy. One who, either in conversaton or in letters, affects to thine and to tparkle always, will not pleafe long. The fivle of letters thould not be too highly polithed. It ought to be neat and correct, but no more. All nicety about words, betravs fludy; and hence mufical periods, end appearances of number and harmony in arrangement, should be carefully avoided in letters. The best letters are commonly fuch as the authors have written with most facility. What the heart or the imagination dictates, always flows readily; but where there is no fubject to warm or interest these, constraint appears; and hence, those letters of mere compliment, congratulation, or affected condolance, which have coft the authors most labour in compoling, and which, for that reason, they perhaps confider as their mafter-pieces, never fail of being the most disagreeable and infipid to the readers.

Ibid.

§ 123. Ease in writing Letters must not degenerate to carelessues.

It ought, at the fame time, to be remem-

bered, that the ease and simplicity which I have recommended in epittolary correfpondence, are not to be understood as importing entire careleffnels. In writing to the most intimate friend, a certain degree of attention, both to the fubject and the flyle, is requifite and becoming. It is no more than what we owe both to ourselves. and to the friend with whom we correspond. A flovenly and negligent manner of writing, is a difobliging mark of want of refpect. The liberty, befides, of writing letters with too careless a hand, is apt to betray persons into imprudence in what they write. The first requisite, both in converfation and correspondence, is to attend to all the proper decorums which our own character, and that of others, demand. An improdent expression in conversation may be forgotten and, pass away; but when we take the pen into our hand, we must remember, that " Litera feriptie manet."

#### § 124. On PLINY's Letters.

Pliny's letters are one of the most celebrated collections which the ancients have given us, in the epiflolary way. They are elegant and polite; and exhibit a very pleafing and amable view of the author. But, according to the vulgar phiase, they fmell too much of the lamp. They are too elegant and fine; and it is not eafy to avoid thinking, that the author is casting an eye towards the Public, when he is appearing to write only for his friends. Nothing indeed is more difficult, than for an author, who publishes his own letters, to diveft himfelf altogether of attention to the opinion of the world in what he fays; by which means, he becomes much less agreeable than a man of justs yould be, if, without any confliant of this fort, he were writing to his intimate friend.

### § 125. On Cicero's Letters.

Cicero's Epitles, though not fo showy as those of Pliny, are, on several accounts, a far more valuable collection; indeed, the most valuable collection of letters extant in any language. They are letters of real business, written to the greatest men of the age, composed with purity and elegance, but without the least affectation; and, what adds greatly to their merit, written without any intention of being published to the world. For it appears that Cicero never kept copies of his own letters; and we are wholly indebted to the care of his freedman Tyro, for the large collection that was

Gg

made, after his death, of those which are now extant, amounting to near a thousand \*. They contain the most authentic materials of the history of that age; and are the last monuments which remain of Rome in its free flate; the greatest part of them being written during that important criffs, when the republic was on the point of ruin; the most interesting situation, perhaps, which is to be found in the affairs of mankind. To his intimate friends, especially to Atticus, Cicero lays open himself and his heart. with entire freedom. In the course of his correspondence with others, we are introduced into acquaintance with feveral of the principal personages of Rome; and it is remarkable that most of Cicero's correfpondents, as well as himfelf, are elegant and polite writers; which ferves to heighten our idea of the taile and manners of that age. Rlair.

§ 126. On Port's and Swift's Letters.

The most distinguished collection of letters in the English language, is that of Mr. Pope, Dean Swift, and their friends; partly published in Mr. Pope's works, and partly in those of Dean Swift. This collection is, on the whole, an entertaining and agreeable one; and contains much wit and ingenuity. It is not, however, altogether free of the fault which I imputed to Pliny's Epifles, of too much fludy and refinement. In the variety of letters from different perfons, contained in that collection, we find many that are written with eafe, and a beautiful fimplicity. Those of Dr. Arbuthnot, in particular, always deferve that praise. Dean Swift's also are unaffected; and as a proof of their being fo, they exhibit his character fully, with all its defects; though it were to be wished, for the honour of his memory, that his epiftolary correspondence had not been drained to the dregs, by fo many fuccessive publications, as have been given to the world. Several of Lord Bolingbroke's, and of Bishop Atterbury's Letters, are masterly. The cenfure of writing letters in too artificial a manner, falls heaviest on Mr. Pope himself. There is visibly more study, and less of nature and the heart in his letters, than in those of some of his correspondents. He had formed himself on the manner of Voi-

\* See his Letter to Atticus, which was written a year or two before his death, in which he tells him, in answer to some enquises concerning his epidles, that he had no collection of them, and that Tyro had only about seventy of them.

Ad ATT. 16. 5.

ture, and is too fond of writing like'a wit. His letters to ladies are full of affectation. Even in writing to his friends, how forced an introduction is the following, of a letter to Mr. Addison: "I am more joyed at " your return, than I should be at that of " the Sun, as much as I wish for him in " this melancholy wet feafon; but it is hi. " fate too, like yours, to be displeasing to "owls and obfeene animals, who cannot "bear his luftre." How sliff a compliment is it, which he pays to Bishop Atterbury: "Though the noise and daily " buille for the Public be now over, I date " fay, you are still tendering its welfare; " as the Sun in winter, when feeming to "retire from the world, is preparing "warmth and benedictions for a better "feafon." This fentence might be tolerated in an harangue; but is very unfutable to the flyle of one friend corresponding with another.

§ 127. On the Letters of BALZAC, VOITURE, SEVIGNI', and Lady MARY WORTLEY MONTAGUE.

The gaiety and vivacity of the French geniue appear to much advantage in their letters, and have given birth to feveral agreeable publications. In the last age, Balzac and Voiture were the two most co lebrated epitholary writers. Balanc's neputation indeed foon declined, on account of his fwelling periods and porrpous three But Voiture continued long a favourite asthor. His composition is extremely spark ling; he thows a great deal of wit, and can trifle in the most entertaining manner. His only fault is, that he is too open and professed a wit, to be thoroughly agreeable ... a letter-writer. The letters of Madame de Sevignè are now esteemed the most accomplithed model of a familiar correspondence. They turn indeed very much upon trifles, the incidents of the day, and the news of the town; and they are overloaded with extravagant compliments, and expresfions of fondness, to her favourite daughter; but withal, they shew such perpetual sprightliness, they contain such easy and varied narration, and so many strokes of the most lively and beautiful painting, perfeetly free from any affectation, that they are justly entitled to bigh praise. The Letters of Lady Mary Wortley Montague are not unworthy of being named after those of Mad. de Sevigne. They have much of the French eafe and vivacity, and retain more the character of agreeable epittolary

epistolary style, than perhaps any letters which have appeared in the English Language.

Blair.

#### § 128. Lyric Poetry. On PINDAR.

Pindar, the great father of lyne poetry. has been the occasion of leading has imitators into fome defects. His genius was fublime; his expressions are beautiful and happy; his descriptions picturelque. But hading it a very breien subject to fing the prailes of those who had grined the prize in the public games, he is perpetually digrettive, and fills up his poems with fables of the go is and heroes, that have little connection either with his jubject, or with one another. The ancients admired him giently; but as many of the hidories of puricular families and citic, to which he alledes, are now unknown to us, no is to obscure, partly from his subjects, and partly from his rapid, abrupt manner of treating tuem, that, notwithflanding the brusty of his expression, our pleasure in reading him is much diminified. One would inasine, that many of his modern imitators thought the best way to catch his sport, was to imitate his diforder and objectity. Interest of the choruses of Euripides and Sophocles, we have the fame kind of lyric portry as in Pindar, carried on with more charnefs and connection, and at the fame the with much fublimity.

### § 129. On HORACE, as a Lyric Poet.

Of all the writers of odes, ancient or modern, there is none that, in point of circitness, harmony, and happy expertions, cin vie with Horace. Ite has distincted from the Pindarie rapture to a time moderate degree of elevation; and jong connected thought, and good fense, with the highest hearties of poetry. He do s not often aspire beyond that middle teginn, which I mentioned as belonging to the ode; and those odes, in which he extempts the sublime, are perhaps not also his best. The peculiar character, in which he excels, is grace and elegance;

and in this flyle of composition, no poet has ever attained to a greater perfection than Horace. No poet supports a moral sentiment with more dignity, touches a gay one more happily, or possesses the act of trisling more agreeably, when he chuses to trisle. His language is so fortunate, that with a single word or epithet, he often conveys a whole deteription to the fancy. Hence he ever his been, and ever will continue to be, a favourite author with all persons of table.

### § 150. On CASIMIR, and other modern Lyric Poets.

Among the Latin poets of later ages, there are elseen many imitators of Horace. One of the most dulonguished is Calinir; a Polish poet of the last century, who wrote four books of odes. In graceful case of espicialor, he is tar inferior to the Roman. The oftener affects the fublane; and in the a tempt, tike other lyric writers, frequently becomes harsh and unnatural. But, on feveral occasions, he discovers a considerable degree of original genus, and poetical fire. Bachanan, in some of his lyric compositions, is very elegant and claffical

Among the French, the odes of Jean Baptifle Rouffeau have been much and juffly celebrated. They poffefs great beauty, both of fentiment and expression. They are animated, without being rhaptodical; and are not inferior to any poetical productions in the French language.

In our own language, we have feveral lyric compositions of considerable merit. Dryden's Ode on St. Cecilia, is well known. Mr. Grey is diffinguished in foine of his odes, both for tenderneis and tubrimity; and in Dodtley's Miscellanics, feveral very beautiful lyric poems are to be found. As to professed Pindaric odes, they are, with a few exceptions, so incoherent, as feldom to be intelligible. Cowley, at all times harth, is doubly fo in his Pindaric compositions. In his Anacreontic odes, he is much happier. They are fmooth and elegant; and, indeed, the most agreeable and the most perfect, in their kind, of all Mr. Cowley's poems.

§ 131. On the different Kinds of Poetical Composition in the Sacred Books; and of the distinguishing Characters of the chief Writers. 1st. Of the Didactic.

The several kinds of poetical composition which we find in scripture, are chiefly the G g 2 didactic,

There is no ode whatever of Horace's, withthe peat beauties. But though I may be fingular
to my opinion, I cannot help thinking that in
fome of those odes which have been much admered for fublim ty (fuch as Ode iv. Lib. iv.
"Quilem minifrum fulmins alitem, &c.")
If ere appears fomewhat of a strained and forced
that to be losty. The genius of this amiable
pact shews itself, according to my judgment, to
rester advantage, in themes of a more temperate
kind.

didactic, elegiac, pastoral, and lyric. Of the didactic species of poetry, the Book of Proverbs is the principal instance. The nine first chapters of that book are highly poetical, adorned with many distinguished graces, and figures of expression. At the 10th chapter, the style is sensibly altered, and descends into a lower strain, which is continued to the end; retaining however that sententious, pointed manner, and that artful construction of period, which distinguishes all the Hebrew poetry. The Book of Ecclesiates comes likewise under this head; and some of the Psalms, as the 119th in particular.

Blair.

# § 132. Of the Elegiac and Pastoral Poetry of Scripture.

Of elegiac poetry, many very beautiful specimens occur in Scripture; such as the lamentation of David over his friend Jonathan; feveral passages in the prophetical books; and feveral of David's Pfalms, composed on occasions of distress and mourning. The 42d Pfalm, in particular, is, in the highest degree, tender and plaintive. But the most regular and perfect elegiac composition in the Scripture, perhaps in the whole world, is the book, entitled the Lamentations of Jeremials, As the prophet mourns in that book over the destruction of the Temple, and the Holy City, and the overthrow of the whole flate. he affembles all the affecting images which a subject so melancholy could suggest. The composition is uncommonly artificial. By turns the prophet, and the city of Jerusalem, are introduced, as pouring forth their forrows; and in the end, a chorus of the people fend up the most earnest and plaintive supplications to God. The lines of the original too, as may, in part, appear from our translation, are longer than is usual in the other kinds of Hebrew poetry; and the melody is rendered thereby more flowing, and better adapted to the querimonious strain of elegy.

The Song of Solomon affords us a high exemplification of pastoral poetry. Confidered with respect to its spiritual meaning, it is undoubtedly a mystical allegory; in its form, it is a dramatic pastoral, or a perpetual dialogue between personages in the character of shepherds: and, suitably to that form, it is full of rural and pastoral images, from beginning to end. Ibid.

§ 133. On the Lyric Poetry of Scripture. Of lyric poetry, or that which is intended to be accompanied with music, the Old Testament is full. Besides a great number of hymns and fongs, which we find scattered in the historical and prophetical books, fuch as the fong of Moses, the fong of Deborah, and many others of like nature, the whole book of Pfalms is to be confidered as a collection of facred odes. In these, we find the ode exhibited in all the varieties of its form, and supported with the highest spirit of lyric poetry; fometimes sprightly, chearful, and triumphant; fometimes folemn and magnificent; fometimes tender and foft. From thefe inflances, it clearly appears, that there are contained in the holy scriptures full exemplifications of feveral of the chief kinds of poetical writing.

#### § 134. A Diversity of Style and Manner in the different Composits of the Sacred Books, On JOB, DAVID, and ISAIAH.

Among the different composers of the facred books, there is an evident diverfity of flyle and manner; and to trace their different characters in this view, will contribute not a little towards our reading their writings with greater advantage. The most eminent of the facred poets are, the author of the Book of Job, David, and Ifaiah. As the compositions of David are of the lyric kind, there is a greater variety of style and manner in his works, than in those of the other two. The manner in which, confidered merely as a poet, David chiefly excels, is the pleafing, the foft, and the tender. In his Pfalms, there are many lofty and fublime passages; but, in strength of description, he yields to Job; in sublimity, he yields to Isaiah. It is a fort or temperate grandeur, for which David is chiefly diffinguished; and to this he always foon returns, when, upon fome occasions, he rises above it. The plalms in which he touches us most, are those in which he describes the happiness of the righteous, or the goodness of God; expresses the tender breathings of a devout mind, or fends up moving and affectionate supplications to heaven. Isaiah is, without exception, the most sublime of all poets. This is abundantly visible in our translation; and, what is a material circumstance, none of the books of scripture appear to have been more happily translated than the writings of this prophet. Majesty 15 his reigning character; a majesty more commanding, and more uniformly supported, than is to be found among the rest of

the Old Testament poets. He possesses, indeed, a dignity and grandeur, both in his conceptions and expressions, which are altogether unparalleled, and peculiar to himself. There is more clearness and order too, and a more visible distribution of parts, in his book, than in any other of the prophetical writings.

\*\*Blar\*\*.

#### § 135. On JEREMIAH.

When we compare him with the rest of the poetical prophets, we immediately fee in Jeremiah a very different genius. Ifaiah employs himfelf generally on magnificent subjects. Jeremiah seldom discovers any disposition to be sublime, and inclines always to the tender and elegiac. Ezechiel, in poetical grace and elegance, is much inferior to them both; but he is diffinguished by a character of uncommon force and ardour. To use the elegant expresfions of Bithop Lowth, with regard to this Prophet: "Est atrox, vehemens, tragi-" cus; in fensibus, fervidus, acerbus, in-"dignabundus; in imaginibus, fecundus, " truculentus, et nonnunquam penè defor-" mis; in dictione, grandiloquus, gravis, " austerus, et interdum incultus; frequens " in repetitionibus, non decoris aut gratice " causa, sed ex indignatione et violentia. "Quicquid susceperit tractandum, id se-" dulò persequitur; in eo unice hæret de-"fixus; a propofito rarò deflectens. In " cateris, a plerisque vatibus fortasse su-" peratus; sed in co genere. ad quod vi-" detur a natura unice comparatus, nimi-" rum, vi, pondere, impetu, granditate, "nemo unquam eum superavit." The fame learned writer compares Isaiah to Homer, Jeremiah to Simonides, and Ezechiel to Æschylus. Most of the book of Isaiah is strictly poetical; of Jeremiah and Ezechiel, not above one half can be held to belong to poetry. Among the minor prophets, Hosea, Joel, Micah, Habakkuk, and especially Nahum, are distinguished for poetical spirit. In the prophecies of Daniel and Jonah, there is no poetry.

### § 136. On the Book of Job.

It only now remains to speak of the book of Job. It is known to be extremely ancient; generally reputed the most ancient of all the poetical books; the author uncertain. It is remarkable, that this book has no connection with the affairs or manners of the Jews, or Hebrews. The scene is laid in the land of Uz, or Idumza,

which is a part of Arabia; and the imagery employed is generally of a different kind, from what I before showed to be peculiar to the Hebrew poets. We meet with no allusions to the great events of sacred history, to the religious rites of the Jews, to Lebanon or to Carmel, or any of the peculiarities of the climate of Judæa. We find sew comparisons founded on rivers or torrents; these were not familiar objects in Arabia. But the longest comparison that occurs in the book, is to an object frequent and well known in that region, a brook that fails in the scalon of heat, and disappoints the expectation of the traveller.

The poetry, however, of the book of Job, is not only equal to that of any other of the facred writings, but is superior to them all, except those of Isaiah alone. As Isaiah is the most sublime, David the most pleasing and tender, so Job is the most descriptive, of all the inspired poets. A peculiar glow of fancy, and strength of description, characterise the author. No writer whatever abounds fo much in metaphors. He may be faid, not to describe. but to render visible, whatever he treats of. A variety of instances might be given. Let us remark only those strong and lively colours, with which, in the following paffages, taken from the 18th and 20th chapters of his book, he paints the condition of the wicked; observe how rapidly his figures rife before us; and what a deep impression, at the same time, they leave on the imagination. "Knowest thou not this " of old, fince man was placed upon the " earth, that the triumphing of the wicked " is flioit, and the joy of the hypocrite, but for a moment? Though his excel-" lency mount up to the heavens, and his " head reach the clouds, yet he shall perish " for ever. He shall sly away as a dream, " and shall not be found; yea, he shall be "chased away, as a vision of the night. "The eye also which saw him, shall see "him no more; they which have feen "him, shall say, where is he?-He shall " fuck the poison of asps, the viper's " tongue shall flay him. In the fullness of "his fufficiency, he shall be in straits; "every hand shall come upon him. He " shall flee from the iron weapon, and the "bow of ficel shall strike him through. "All darkness shall be hid in his secret " places. A fire not blown shall confume "him. The beaven shall reveal his ini-" quity, and the earth shall rise up against "him. The increase of his house shall " depart. Gg 3

" depart. His goods shall flow away in "the day of wrath. The light of the " wicked shall be put out; the light shall " be dark in his tabernacle. The steps " of his ftrength shall be straitened, and "his own counsel shall cast him down, " For he is cast into a net, by his own " feet. He walketh upon a mare. Ter-" rors shall make him afraid on every side; " and the robber shall prevail against him. "Brimstone shall be scattered upon his " habitation. His remembrance shall pe-"rish from the earth, and he shall have " no name in the street. He shall be dri-" ven from light into darkness. They " that come after him shall be assonished " at his day. He shall drink of the wrath " of the Almighty."

#### § 137. On the Iliad of HOMFR.

The subject of the Iliad must unquestionably be admitted to be, in the main, happily chosen. In the days of Homer, no object could be more splended and dignified than the Trojan war. So great a confederacy of the Grecian flates, under one leader, and the ten years siege which they carried on against Troy, must have fpread far abroad the renown of many military exploits, and interested all Greece in the traditions concerning the heroes who had most eminently fignalized them-Upon these traditions, Homer felves. grounded his poem; and though he lived, as is generally believed, only two or three centuries after the Trojan war, yet, through the want of written records, tradition mult, by his time, have fallen into the degree of obscurity most proper for peetry; and have left him at full liberty to mix as much fable as he pleased, with the remains of true history. He has not chosen, for his fubject, the whole Trojan war; but, with great judgment, he has felected one part of it, the quarrel betwixt Achilles and Agamemnon, and the events to which that quarrel gave rife; which, though they take up forty-feven days only, yet include the most interesting, and most critical period of the war. By this management, he has given greater unity to what would have otherwise been an unconnected history of battles. He has gained one hero, or principal character, Achilles, who reigns throughout the work; and he has shewn the pernicious effect of discord among confederated princes. At the same time, I admit that Homer is less fortunate in his subject than Virgil. The plan of the

Aneid includes a greater compass and a more agreeable diversity of events; whereas the Iliad is almost entirely filled with battles.

The praise of high invention has in every age been given to Homer, with the greatest reason. The prodigious number of incidents, of speeches, of characters divine and human, with which he abounds; the furprifing variety with which he has divertified his battles, in the wounds and deaths, and little history-pieces of almost all the persons slain, discover an invention next to boundlefs. But the praise of judgment is, in my opinion, no less due to Homer, than that of invention. His flory is all along conducted with great art. He rifes upon us gradually; his heroes are brought out, one after another, to be objects of our attention. The diffres thickens, as the poem advances; and every thing is fo contrived as to aggrandize Achilles, and to render him, as the poet intended he should be, the capital figure.

But that wherein Homer excels all writers, is the characteristical part. Here, the is without a rival. His lively and spirited exhibition of characters, is, in a great measure, owing to his being so do matter a writer, abounding every where with dialogue and conversation. There is much more dialogue in Homer than in Vigu; or, indeed, than in any other poet.

1/13.

#### § 138. On the Odeffey of Homfr.

My observations, hitherto, have been made upon the Iliad only. It is necessary to take some notice of the Odyssey also-Longinus's criticism upon it is not without foundation, that Homer may, in this poem, be compared to the fetting fun, whole grandeur still remains, without the heat of his meridian beams. It wants the vigour and fublimity of the Iliad; yet, at the same time, possesses so many beauties, as to be juilly entitled to high praise. It is a very amusing poem, and has much greater variety than the Iliad; it contains many interesting stories; and beautiful descriptions. We see every where the same descriptive and dramatic genius, and the same fertility of invention, that appears in the other work. It descends indeed from the dignity of gods, and heroes, and warlike atchievements; but in recompence, we have more pleafing pictures of ancient manners. Inflead of that ferocity which reigns in the Iliad, the Odyssey presents us with the molt most amiable images of hospitality and humanity; entertains us with many a wonderful adventure, and many a landscape of nature; and instructs us by a constant vein of morality and virtue, which runs through the poem.

Blar.

§ 139. On the Beauties of VIRGIL.

Virgil possesses beauties which have justly drawn the admitation of ages, and which, to this day, hold the balance in equilibrium between his fame and that of Homer. The principal and diffinguiffing excellency of Virgil, and which, in my opinion, he possesses beyond all poets, is tenderness. Nature had endowed him with exquisite sensibility; he selt every affecting circumflance in the feenes he describes; and, by a fingle stroke, he knows how to reach the heart. This, in an epic poem, is the merit next to fublimity; and puts it in an author's power to render his composition extremely interesting to all readers.

The chief beauty of this kind, in the Iliad, is the interview of Hector with Andromache. But, in the Æneid, there are many fuch. The fecond book is one of the greatest master-pieces that ever was executed by any hand; and Virgil feems to have put forth there the whole strength of his genius, as the subject afforded a variety of feenes, both of the awful and tender kind. The images of horror, prefented by a city burned and tacked in the night, are finely mixed with pathetic and attecting incidents. Nothing, in any poet, is more beautifully deteribed than the death of old Priam; and the family-pieces of Æneas, Anchifes, and Cicula, are as tender as can be conceived. In many paffages of the Eneid, the same pathetic spirit ilines; and they have been always the favourite passages in that work. fourth book, for instance, relating the unhappy passion and death of Dido. has been always most justly admired, and abounds with beauties of the highest kind. The interview of Æneas with Andromache and Helenus, in the third book; the episodes of Pallas and Evander, of Nitus and Euryalus, of Lausus and Mezentius, in the Italian wars, are all striking instances of the poet's power of raising the tender emotions. For we must observe, that though the Æneid be an unequal poem, and, in fome places, languid, yet there are beau-ties scattered through it all; and not a few, even in the last fix books. The best

and most finished books, upon the whole, are the first, the second, the fourth, the fixth, the seventh, the eighth, and the twelsth.

10 the twelsth.

§ 140. On the comparative Marit of Ho-MER and VIRGIL.

Upon the whole, as to the comparative ment of those two great princes of epic poetry, Homer and Virgil; the former must undoubtedly be admitted to be the greater genius; the latter, to be the more correct writer. Homer was an original in his art, and discovers both the beauties and the detects, which are to be expected in an orrginal author, compared with those who fucceed him; more boldness, more nature and eate, more fublimity and force; but greater irregularities and negligences in composition. Virgi has, all along, kept his eye upon Homer; in many places he has not to much imitated, as he has literally translated him. The description of the florm, for inflance, in the first Asucid, and Æneas's speech upon that occasion. are translations from the 1:1th book of the Odyfley; not to mention almost all the fimiles of Virgil, which are no other than copies of those of Homer. The pre-eminence in invention, therefore, muff, beyond doubt, be ascribed to Homer. As to the pre-eminence in judgment, though many critics are disposed to give it to Virgil, yet, in my opinion, it hangs doubtful. In Homer, we differn all the Greek vivacity; in Virgil, all the Roman statebooks. Homer's imagination is by much the most rich and copious; Virgil's the most chaste and correct. The firength of the former hes, in his power of waiming the fancy; that of the latter, in his power of touching the heart. Homer's ftyle is more fimple and animated; Virgil's more elegant and untform. The fift has, on many occasions, a fublimity to which the latter never attains; but the latter, in return, never finks below a certain degree of epic dignity, which cannot to clearly be pronounced of the former. Not, however, to detract from the admiration due to both these great poets, most of Homer's defects may reasonably be imputed, not to his genius, but to the manners of the age in which ne lived; and for the feeble pallages of the Æneid, this excuse ought to be admitted, that the Aneid was left an unfinished work.

Ibid.

To the admirers of polite learning, the Lequies of Dr. Blair, at large, are Roungly recom-Gg 4 mended. mended. The Extracts in this book are defigned only as specimens of that elegant and useful work, and for the use of School-boys. It would be usjust, and indeed in-practicable, to give any more Extracts, consistently with the necessary limits prescribe, to this book.

§ 141. On the Ancient Writers; and on the Labour with which the Ancients composed.

The Ancients (of whom we speak) had good natural parts, and applied them right; they understood their own strength, and were masters of the subject they undertook; they had a rich genius carefully cultivated; in their writings you have nature without wildness, and art without oftentation. For it is vain to talk of nature and genius, without care and diligent application to refine and improve them. The finest paradise will run wild, and lose both its pleafure and usefulnes, without a skilful hand constantly to tend and prune it. Though these generous spirits were inspired with the love of true praise, and had a modest afforance of their own abilities; yet they were not fo felf-fufficient, as to imagine their first thoughts were above their own review and correction, or their last above the judgment of their friends. They fubmitted their compositions to the cenfure of private persons and public affemblies. They reviewed, altered, and polifhed, till they had good hopes they could present the world with a finished piece. And fo great and happy was their judgment, that they understood when they had done well, and knew the critical feafon of laying afide the file.

For, as those excellent masters, Pliny and Quinctilian, observe, there may be an intemperance in correction; when an ingenious man has such an excess of modesty and saulty distrust of himself, that he wears off some of the necessary and ornamental parts of his discourse, initead of polithing the rough, and taking off the supersluous.

These immortal wits did not preposterously resolve first to be authors, and then immediately fall to writing without sludy and experience; but took care to furnish themselves with knowledge by close thought, select conversation, and reading; and to gain all the information and light that was necessary to qualify them to do justice to their subject. Then, after they had begun to write, they did not hurry on their pen with speed and impatience to appear

in the view of the world; but they took time and pains to give every part of their discourse all possible strength and ornament, and to make the whole composition uniform and beautiful. They wisely considered, that productions which come before their due time into the world, are feldom perfect or long-lived; and that an author who designs to write for posterity, as well as the present generation, cannot sludy a work with too deep care and resolute industry.

Varus tells us of his incomparable friend Virgil, that he composed but very few verles in a day. That confummate philofopher, critic, and poet, regarded the value, not number of his lines; and never thought too much pains could be beflowed on a poem, that he might reafonably expect would be the wonder of all ages, and last out the whole duration of time. Quinctilian affares us, that Salluft wrote with abundance of deliberation and prudent caution; and indeed that fully appears from his complete and exquifite writings. Demothenes laboured night and day, outwatched the poor mechanic in Athens (that was forced to perpetual drudgery to support himself and his family) till he had acquired fuch a mastery in his noble profesfion, fuch a rational and over-ruling vehemence, such a perfect habit of nervous and convincing eloquence, as enabled him to defy the strongest opposition, and to triumph over envy and time.

Plato, when he was eighty years old, was bufily employed in the review and amendment of his divine dialogues: and fome people are severe upon Cicero, that in imitation of Plato, he was fo ferupulous whether he ought to write ad Piraa or in Pirau, Piraum or in Piraum, that now in the fixtieth year of his age, in the fury of the civil wars, when he knew not how to dispose of his tanily, and scarce expected fafety, he earnefly intreated his noble and learned friend Atticus to resolve that difficulty, and eafe him of the perplexity which it created him. Whatever raillery or reflection some humoursome wits may make upon that great man's exactness and nicety in that respect, and at such a time; 'tis a plain proof of his wonderful care and diligence in his composition, and the strict regard he had to the purity and propriety of his language. The ancients so accurately understood, and so indefatigably fludied their subject, that they scarce ever fail to finish and adorn every part with strong sense, and lively expression.

Blackwall.

#### § 142. On Homer.

'Tis no romantic commendation of Homer, to fay, that no man understood perfons and things better than he; or had a deeper infight into the humours and paffions of human nature. He represents great things with such sublimity, and little ones with such propriety, that he always makes the one admirable, and the other pleasant.

He is a perfect master of all the lofty graces of the figurative flyle, and all the purity and cafine's of the plain. Strabo, the excellent geographer and historian, affures us, that Homer has described the places and countries of which he gives account, with that accuracy, that no man can imagine who has not feen them; and no man but must admire and be astonished who has. His poems may juftly be companed with that shield of divine workmanthip to inimitably represented in the eighteenth book of the Iliad. You have there exact images of all the actions of war, and emplorments of peace; and are entertained with the delightful view of the univerte. Homer has all the beauties of every dialect and ftyle feattered through his writings; he is fcarce inferior to any other poet, in the poet's own way and excellency; but excels all others in force and comprehension of genius, elevation of fancy, and immense copiousness of invention. Such a fovereignty of genius reigns all over his wo ks, that the ancients effected and admired him as the great High Priest of nature, who was admitted into her inmost choir, and acquainted with her most solemn mysteries.

The great men of former ages, with one voice, celebrate the praises of Homer; and old Zoilus has only a few followers in these later times, who detract from him either for want of Greek, or from a spirit of conceit and contradiction.

These gentlemen tell us, that the divine Plato himself banished him out of his commonwealth; which, say they, must be granted to be a blemish upon the poet's reputation. The reason why Plato would not let Homer's poems be in the hands of the subjects of that government, was because he did not esteem ordinary men capable readers of them. They would be apt to pervert his meaning, and have wrong

notions of God and religion, by taking his bold and beautiful allegories in too literal a fenfe. Plato frequently declares that he loves and admires him as the best, the most pleafant, and the divinest of all the poets: and fludiously imitates his figurative and mystical way of writing. Though he forbad his works to be read in public, yet he would never be without them in his own closet. Though the philosopher pretends. that for reasons of state he must remove him out of his city; yet he declares he would treat him with all possible respect while he staid; and dismiss him laden with prefents, and adorned with garlands (as the pricits and supplicants of their gods used to be); by which marks of honour, all people wherever he came might be warned and induced to effect his person facred. and receive him with due veneration.

Ibid.

#### § 143. On THEOCRITUS.

If we mention Theocritus, he will be another bright inflance of the happy abilities and various accomplishments of the ancients. He has writ in feveral forts of poetry, and fucceeded in all. It feems unnecellary to praise the native simplicity and easy freedom of his pastorals; when Virgil himfelf fometimes invokes the mufe of Syracuse; when he imitates him through all his own poems of that kind, and in feveral passages translates him. Quinctilian says of our Sicilian bard, that he is admirable in his kind; but when he adds, that his muse is not only fly of appearing at the bar, but in the city too, 'tis evident this remark must be confined to his pastorals. In several of his other poems, he shews such strength of reason and politeness, as would qualify him to plead among the orators, and make him acceptable in the courts of princes. In his finaller poems of Cupid stung, Adonis killed by the Boar, &c. you have the vi-gour and delicacy of Anacreon; in his Hylas, and Combat of Pollux and Amycus. he is much more pathetical, clear and pleafant, than Apollonius on the same, or any other subject. In his conversation of Alcmena and Tirefias, of Hercules and the old fervant of Augeas, in Cynicea and Thyonichus, and the women going to the ceremonies of Adonis, there is all the easiness and engaging familiarity of humour and dialogue, which reign in the Odysseis; and in Hercules destroying the lion of Nemæa. the spirit and majesty of the Iliad. The panegyric upon king Ptolemy is justly esteemed an original and model of perfection in that way of writing. Both in that excellent poem, and the noble hymn upon Castor and Pollux, he has praised his gods and his hero with that delicacy and dexterity of address, with those sublime and graceful expressions of devotion and reject, that in politeness, smoothness of turn, and a refined art of praising without offence, or appearance of flattery, he has equalled Callimachus: and in lostuness and flight of thought, scarce yields to Pindar or Homer.

#### § 144. On HERODOTUS.

Herodotus had gained experience by travelling over all his own country, Thrace, and Seythia; he travelled likewife to Arabia, Paleftine, and Egypt; where he carefully viewed the chief curiofities and moif remarkable places, and converfed with the Egyptian priefts, who informed him of their ancient hiltory, and acquainted him with their customs, facred and civil. Indeed he speaks of their religious rites with such plainness and clearness in some cases, and fuch referve and reverence in others, that I am apt to believe he was initiated into their ceremonies, and consecuated a priest of some of their orders\*.

Thus, being acquainted with the most famous countries, and valuable things, and knowing the most considerable persons of the age, he applied himself to write the history of the Greeks and Barbatians: and performed the noble work with that judgment, faithfulness, and eloquence, that grained him the approbation and applause of the most august assembly in the world at that time, the slower of all Greece, met together at the Olympic games.

His history opens to the reader all the antiquities of Greece, and gives light to all her authors.

10.11.

#### § 145. On LIVY.

We do not find that Livy had travelled much, or been employed in military affairs; yet what he might want in experience, was happily supplied by wonderful parts and eloquence, by severe study, and unwearied endeavours after knowledge and information; so that he describes all the countries, towns, seas, and ports, whither the Roman legions and navies came, with near the same accuracy and perfection (if

\* See Herodot. Gale's Edition, lib. ii. fect. 3. p. 91. fect. 65. p. 114.fect. 171. p. 156.

possible) which he could any place in Italy: lays a fiege, draws up an aimy, with skill and conduct fearce inferior to Catar himfelf. Was there as much charm in the converfation of this extraordinary man, as there is in his writings, the gentleman of Cales would not repent of his long journey, who came from thence only to fee Livy, upon the fame of his incomparable eloquence, and other celebrated abilities; and we have reason to believe he received satisfaction, because, after he had seen Livy, and coaverfed with him, he had no curiofity to fee Rome, to which he was fo near; and which at that time was, for its magnificence and glories, one of the greatest wonders of the whole carth.

## § 146. Mach of their Beauty arifes from Variety.

The reader is always entertained with as agreeable variety, both of matter and flyle, in Herodotus and Livy. And indeed every author that expects to please, must gratify the reader with variety: that is the univerfal charm, which takes with people of all tastes and complexions. 'Tis an appetite planted in us by the Author of our being; and is natural to an human foul, whose immense defires nothing but an infinite good, and unexhausted pleasure, can fully gratify. The most palatable dish becomes raufeous, if it be always fet before a man: the most musical and harmonious notes, too often and unfeafonably fliuck, grate the ear like the jarring of the most harsh and hateful discord.

These authors, and the rest of their spirit and elevation, were sensible of this; and therefore you find a continual change, and judicious variation, in their style and numbers.

One passage appears to be learned, and carefully laboured; an unstudied easiness, and becoming negligence, runs through the next. One sentence turns quick and short; and another, immediately following, runs into longer measures, and spreads itself with a fort of elegant and beautiful luxuriancy. They seldom use many periods together, consisting of the same number of members; nor are the members of their periods

riods of equal length, and exact measure, one with another.

The reflections that are made by these noble writers, upon the conduct and humours of mankind, the interests of courts, and the intrigues of parties, are so curious and instructive, so true in their substance, and so taking and lively in the manner of their expression, that they satisfy the soundest judgment, and please the most sprightly imagination. From these glorious authors we have instruction without the common formality and dryness of precept; and receive the most edifying advice in the pleasing way of infinuation and surprize.

\*\*Elackwell.\*\*

### § 147. Perspicuity a principal Beauty of the Challes.

Another excellency of the true claffice is, perspicuity, and clear style; which will excase and cover several faults in an author; but the want of it is never to be atoned by any pretence of lostiness, caution, or any consideration whatever.

And this is the effect of a clear head, and vigorous understanding; of close and regular thinking, and the diligence of telect reading. A man should write with the tame defign as he fpeaks, to be underflood with case, and to communicate his mind with pleafure and inftruction. If we telect Xenophon out of the other Greek classes, whether he writes of the management of family affairs, or the more ardaous matters of flate and policy; whether he gives an account of the wars of the Grecians, er the morals of Sociates; the flyle, though to far varied as to be furtable to every tubgeet, yet is always clear and figuiteant, tweet without Incloufness, and elegantly cafy.

In this genteel author we have all the politeness of a fludied composition; and yet all the freedom and winning familiarity of elegant conversation.

Here I cannot but particularly mention. Xenophon's Sympofium, wherein he has given us an easy and beautiful description of a very lively and beautiful convertation. The pleasant and ferious are there so happily mixed and tempered, that the discourse is neither too light for the grave, nor too solemn for the gay. There is mith with dignity and decorum; and philosophy attended and enlivened by all the graces.

#### § 148. On Cicero.

If among the Latin Classics we name Tully, upon every subject he equally thews the thrength of his reason, and the brightness of his style. Whether he addrenes his friend in the most graceful negligence of a familiar letter, or moves his auditors with laboure I periods, and paftionate firance of manly oratory; whether he proves the majetly of God, and immortality of haman tools, in a more fublime and pompous eloquence; or lays down the roles of prodence and virtue, in a more calm and even way of writing; he always exprehes good fende in pure and proper language; he is learned and early, richly plana, and reat without affectation. He is always copious, but never runs into a faulty luxuriance, nor tires his reader: and though he fays almost every thing that can be faid upon his fubject, yet you will scarce ever think he fays too much. Ilid.

### § 149. On the Objentities in the Claffics.

Those few obscurities which are in the best authors, do not proceed from haste and confusion of thought, or ambiguous exprefition, from a long crowd of parentheis, or perplexed periods; but either the places continue the fame as they were in the original, and are not intelligible to us only by reaton of our ignorance of fome curlem, of trofe times and countries; or the pattern are altered and spoiled by the prefamption and buly impertinence of foolidi ti members and conceited critics. Warth planly appears from this, that fince we have had more accurate accounts of the Greek and Roman antiquities, and old manuterists have been fearched and compared by able and diligent hands, innumerable errors have been rectified, and corruptions which have crept into the text, parge lout : a various reading happily difcovered, the removal of a veric, or a point of diffraction out of the wrong into the right place, or the adding a small mark where it was left out, has given clear light to man, paffages, which for ages had lam overspread with an error, that had objeured the fense of the author, and quite confounded all the commentators. latter part of the thirty-second verse of the hymn of Callimachu, on Apollo was in the first editions thus, Tis ar Been Doillor acidos; " who can fing of Phæbus in the mountains?" which was neither sense of itself, nor had any connection with what went before. But Stephens's amendment

of it fet right both the fense and the connection, without altering a letter; Tis ar & ica Deilor acidou: " Phoebus is an unexhaufted fubject of praise;"-among all his glorious qualifications and exploits, what poet can be fo dull, what wit fo barren, as to want materials for an hymn to his honour?-In the fourth verse of the eleventh epigram of Theocritus, there wanted a little point in the word impositing, which took off all the fprightliness and turn of the thought; which Daniel Heinfius luckily restored, by changing the nom. sing. υμνοθέτης, into the dat. plur. υμνοθέτης. " The friends of Eusthenes the poet, gave him, though a Aranger, an honourable burill in a foreign country; and the poet was extremely be-loved by 'em." How flat and infipid! According to the amendment it runs thus: " The acquaintance of Euthenes buried him honourably, though in a foreign country, and he was extremely beloved by his brother poets themselves." For a man to be mightily honoured by flrangers, and extremely beloved by people of the fame profession, who are apt to malign and envy one another, is a very high commendation of his candour, and excellent temper. That very valuable amendment in the fixth line of Horace's preface to his odes, has cleared a difficulty, which none of the critics could handsomely acquit themselves of before the admirable Dr. Bentley; and has refcued the poet, eminent for the clearness of his style, from the imputation of harshness and obscurity in the very beginning, and first address to his reader; where peculiar care and accuracy are expected. It would be endless to mention the numerous places in the ancients happily reflored and illustrated by that great man; who is not only a found and differning critic, but a clean and vigorous writer, excellently skilled in all divine and human literature; to whom all scholars are obliged for his learned performances upon the claffics; and all mankind for his noble and glorious defence of religion. The learned Meursius was strangely puzzled with a passage in Minutius Felix\*; and altered the text with fuch intolerable boldness, as, if allowed, would foon pervert and destroy all good authors; which the ingenious editor of that father has cleared, by putting the points of distinction in their proper places. Reges tantum regni sui, per officia ministrorum, universa novere. Meursius had disguised

\* Min. Felix, Camb. edit. by Davis. § 33. p. 163. not. 7.

and deformed the passage thus: Regesstatum regni sui per officia ministrorum diversa novére. Dr. Bentley has made a certain emendation in Horace's Art of Poetry, only by altering the places of two lines, making that which was the forty-fixth in the common books, the forty-fixth in his own beautiful editions.

Blackwall.

## § 150. On feweral Advantages which the Classics enjoyed.

It was among the advantages which the chief classics enjoyed, that most of them were placed in prosperous and plentiful circumstances of life, raifed above anxious cares, want, and abject dependance. They were persons of quality and fortune, courtiers and flatefmen, great travellers, and generals of armies, possessed of the highest dignities and posts of peace and war, Their riches and plenty furnished them with leifure and means of fludy; and their employments improved them in knowledge and experience. How lively must they describe those countries, and remarkable places, which they had attentively viewed with their own eyes! What faithful and emphatical relations were they enabled to make of those councils, in which they prefided; of those actions in which they were present and commanded!

Herodotus, the father of history, besides the advantages of his travels and general knowledge, was so considerable in power and interest, that he bore a chief part in expelling the tyrant Lygdamis, who had usurped upon the liberties of his native country.

Thucydides and Xenophon were of diftinguished eminence and abilities, both in civil and military affairs; were rich and noble; had strong parts, and a careful education in their youth, completed by severe study in their advanced years: in short, they had all the advantages and accomplishments both of the retired and active life.

Sophocles bore great offices in Athens; led their armies; and in strength of parts, and nobleness of thought and expression, was not unequal to his colleague Pericles; who, by his commanding wisdom and eloquence, influenced all Greece, and was said to thunder and lighten in his harangues.

Euripides, famous for the purity of the Attic flyle, and his power in moving the passions, especially the softer ones of grief and pity, was invited to, and generously entertained in, the court of Archelaus

king of Macedon. The fmoothness of his composition, his excellency in dramatic poetry, the foundness of his morals, conveyed in the sweetest numbers, were so univerfally admired, and his glory fo far fpread, that the Athenians, who were taken prisoners in the fatal overthrow under Nicias, were preserved from perpetual exile and ruin, by the allowithing respect that the Sicilians, enemies and strangers, paid to the wit and fame of their illustrious countryman. As many as could repeat any of Euripides's verses, were rewarded with their liberty, and generously fent home with marks of honour.

Plato, by his father's fide, sprung from Codrus, the celebrated king of Athens; and by his mother's from Solon, their no less celebrated law-giver. To gain experience, and enlarge his knowledge, he travelled into Italy, Sicily, and Egypt. He was courted and honoured by the greatest men of the age wherein he lived; and will be studied and admired by men of taste and judgment in all succeeding ages. In his works, are inestimable treasures of the best learning. In short, as a learned gentleman says, he writ with all the strength of human reason, and all the charm of human eloquence.

Anacreon lived familiarly with Polycrates king of Samos: and his fprightly mufe, naturally flowing with innumerable pleafures and graces, muft improve in deficacy and fweetness by the gatety and refined conversation of that flourishing court.

The bold and exalted genius of Pindar was encouraged and heightened by the honours he received from the champions and princes of his age; and his conversation with the heroes qualified him to fing their praises with more advantage. The conquerors at the Olympic games scarce valued their garlands of honour, and wreaths of victory, if they were not crowned with his never-fading laurels, and immortalized by his celestial fong. The noble Hicro of Syracuse was his generous friend and patron; and the most powerful and polite state of all Greece esteemed a line of his in praise of their glorious city, worth public Moftof acknowledgments, and a statue. the genuine and valuable Latin Classics had the same advantages of fortune, and improving conversation, the same encouragements with these and the other celebrated Grecians.

Terence gained such a wonderful insight into the characters and manners of mankind, such an elegant choice of words, and

fluency of ftyle, fuch judgment in the conduct of his plot, and such delicate and charming turns, chiefly by the converfation of Scipio and Lælius, the greatest men, and most refined wits, of their age. So much did this judicious writer, and clean scholar, improve by his diligent application to fludy, and their genteel and learned converfation; that it was charged upon him by those who envied his superior excellencies, that he published their compositions under his own name. His enemies had a mind that the world should believe those noblemen wrote his plays, but fcarce believed it themselves; and the poet very prudently and genteely flighted their malice, and made his great patrons the finest compliment in the world, by esteeming the accufation as an honour, rather than making any formal defence against it\*.

Salluft, so famous for his neat exprefive brevity and quick turns, for truth of fact and clearness of flyle, for the accuracy of his characters, and his piercing view into the mysteries of policy and motives of action, cultivated his rich abilities, and made his acquired learning so useful to the world, and so honourable to himself, by bearing the chief offices in the Roman government, and sharing in the important councils and debates of the senate.

Cæfar had a prodigious wit, and univerfal learning; was noble by birth, a confummate flate finan, a brave and wife general, and a most heroic prince. His prudence and modefly in speaking of himself, the truth and clearnets of his descriptions, the inimitable purity and perspicuity of his flyle, diftinguish him with advantage from all other writers. None bears a nearer refemblance to him in more instances than the admirable Xenophon. What useful and entertaining accounts might reasonably be expected from such a writer, who gives you the geography and history of those countries and nations, which he himself conquered, and the description of those military engines, bridges, and encampments, which he himself contrived and marked out!

The best authors in the reign of Augustus, as Horace, Virgil, Tibullus, Propertius, &c. enjoyed happy times, and plentiful circumtances. That was the golden age of learning. They flourished under the favours and bounty of the richest and most generous court in the world;

\* See Prologue to Adelphi, v. 15-22:

and the beams of majesty shone bright and propitious on them.

What could be too great to expect from fuch poets as Horace and Vingil, beloved and munificently encouraged by fuch patrons as Macenas and Augustus?

A chief reason why Tacitus writes with fuch skill and authority, that he makes such deep searches into the nature of things, and designs of mea, that he so exquisitely understands the screets and intrigues of courts, was, that he himself was admitted into the highest places of trust, and employed in the most public and important affairs. The statesman brightens the schoolar, and the contul improves and elevates the historian.

Black well.

# § 151. On the Care of the Auctions in filecting Numbers.

The Ancients are peculiarly to be admired for their care and happy exactively in felecting out the nobleft and most valuable numbers, upon which the force and pleafantials of Hyle principally depend. A difcourte, confitting most of the strongeft numbers, and best fort of feet, such as the Ductyi, Spondee, Anapefi, Molofs, Cretic, &c. regularly compacted, flands him and ileady, and founds magnificent and a recable to a judicious ear. But a dircourse made up of the weakest numbers, and the worlt fort of feet, fuch as the Pyrrhichee, Chorce, Trochee, &c. is loofe and Impuid, and not capable with fuch advantage to expect monly fende. It cannot be pronounced with cit, nor heard with patience. The periods on the cliffies are generally composed of the major part of the noblett numbers; and when they are forced to use weak, and wone-town ting feet and measures, they to enefally temper and ilrengthen them with firm and nervous fyllables on both files, that the imperfection is covered, and the dignity of the fentence preferved and supported.

Wid.

#### § 152. On their making the Sound on Echo to the Sonje.

Another excellency, nearly allied to this, in these glorious writers, is their suiting the contexture of their ditcourse, and the sound of their syllables, to the nature and character of their subjects. That is, they so contrive and work their composition, that the sound shall be a resemblance, or, as Longinus says, an echo of the sense, and words lively pictures of things. In describing the loveliness of beauty, and

the charms of joy and gaiety, they avoid difagreeable elifions; do not make the difcourle hard by joining mutes and coupling letters, that, being united, make a distanteful and grating found. But by the choice of the best vowels, and the sweetcil half-vowels, the whole composition is made smooth and deheate; and glob; with casiness and pleasure through the

In defeniting of a thing or perfectfull of terror, ruggedness, or deformity, they are the world-founding vowels; and encumber the fyllables with mutes of the roughest and most difficult pronunciation. The ruflung of land-floods, the routing of huge waters, and the dathing of waves against the thores, is imitated by words that make a vail and boisterous found, and rudely clash together.

The great Plato, who had a genius for all manner of learning, was diffeouraged from poetry by reading that verse in Homer, which so wonderfully expresses the roating of the billows:

#### Hickes Boomsin icetyoping ares it .

Hails and fwiftness are figured by short fell-bles, by quick and rapid numbers; flowness, gravity, &c. by long fyllables, and numbers strong and folcom. I shall produce tome inflances, and speak to them just as they come into my thoughts, without any meety of method. Vi gil, in his account of the sufferings of wicked souls in the regions of punishment, fils the reader with dread and an izement: every jyllable feinds terror, are and affordiment accompany his majorite numbers. In this passage is

- Tum fleva for re

Verbera, tum findor ferri, traci eque catera, the hiffing letter repeated with broad founding vowels immediately following the force and roughness of the canine letter to often used, and those strong syllables in the second, third, and fourth places, emphatically express those dreadful founds. A man of any ear will, upon the repetition of them, be apt to fancy he hears the crack of the furies whips, and the rattling and Those harth cliclank of infernal chains. fions, and heavy robust fyllables, in that description of the hideous Cyclops, Monflrum horrendum, informe, ingens, naturally express the enormous bulk and brutish

" Ihad 17. v. 265. † Æneid 6. v. 558, &c. fiercenessa fierceness, of that mis-shapen and horrid monster.

Our Spenfer, one of the best poets this nation has bred, and whose faults are not to be imputed either to want of genius or care, but to the age he lied in, was very happy and judicious in the choice of his numbers; of which take this example, not altogether foreign or unparallel to that of Virgil just mentioned.

He heard a dreadful found,
Which through the wood loud-bellowing did rebound.

And then.

——— His monftrous enemy With fluidy theps came thatking in his fight, An Indoors grint, horrible and his his.

Those verses in the first Geotele,

ter funt con it, imponere Pelio O.i. n Scilicet, atque Oike frondotum ravol. et e Olympian †

are contrived with great art to reprefent the prodigious pains the greats took in leaping mountains upon mountains to feale heaven, and the flowness of their progress in that unwieldy work.

For a vowel open before a vowel, mikes a chaim, and requires a flrong and full breath, therefore a paufe must follow, which returnly expresses difficulty and opposition

But when fwiftness and freed are to be deferibed, fee how the free won-lerful man varies his numbers, and still fints his verfe to his subject!

Quadrupedante putrem fonitu quatit ungula campum.

Here the rapid numbers, and fhort fyllables, fultained with 910ng vowels, adourably reprefent both the vigour and speed of a horse at full stretch scouring over the plain.

When Horace fings of mirth, beauty, and other subjects that require delicacy and sweetness of composition, he smooths his lines with soft syllables, and slows in gay and melting numbers. Scarce any reader is so much a sloic, but good-humour steals upon him; and he reads with something of the temper which the author was in when he wrote. How inexpressibly sweet are those neat lines!

Utit me Glyceræ nitor,

Splendentis Pario maimore pariot:

Urit grata protervitas,

Et vultus nimiām lubricus afpicis

\* Fairy Queen.

Innumerable beauties of this nature are feattered through his lyric poetry. But when he undertakes lofty and noble fubjects, he rufes his thyle, and ftrengthens his expression. For example, when he proposes to do honour to Pindar, and sing the glories of Augustus, he reaches the Grecian's noblest flights, has all his magnificance of thought, his strength of fancy, and dating liberty of figures.

The Roman from fours as high as the Thebin: he equals that commanding sprit, those awful and vigorous beauties, which he generously prenounces inimitable; and praises both his immortal predecesfor in lyric poetry, and his royal beneficion, with as much grandeur, and exalted cloquence, as ever Pindai praised any of her heroes.

It is a just observation of Longinus, that though Homer and Vingil are chiefly commed to the Dactyl and Spondee, and rately use any equivalent feet, yet they temper them together with such afformshing skill and dangence, so carefully vary their fyllables, and adapt their sounds to the nature of the thing described, that in their poetas there is all the harmonious change and variety of numbers, which can be empoted by all the possible turns, and different positions of all the feet in the language.

Blackwall.

#### § 153. Translations cannot be sufficient Substatutes for such Originals.

A reader of fuch authors can fearce ever be weary; he has the advantage of a traveller for many miles round Damafeus; he never removes out of Paradife, but is regaled with a conflant fuccefion of pleafures, and enjoys in a small compass the bounty and gaiety of univerfal nature. From hence may be feen the injuffice and folly of these people, who would have translations of the classics: and then, to tave the trouble of learning Greek and Latin, throw away the great originals to duit and oblivion. I would indeed have all the classics turned into our language by the most masterly hands, (as we already have some) among other reasons, for this, that ingenious and inquisitive people, who have the mi-fortune not to be well acquainted with the learned tongues, may have forne taile of their excellencies. Ignorant persons, who know nothing of their language, would foon be perfuaded to believe; and shallow pretenders, who know nothing of their beauties, would boldly pronounce, that

fome translations we have go beyond the originals; while scholars of clear and sound judgment are well satisfied, that it is impossible any version should come up to them. A translation of the noble classics out of their native tongue, so much in many respects inferior to them, always more or less flattens their sense, and tarnishes their beauties. It is something like transplanting a precious tree out of the warm and fruitful climes in which it was produced, into a cold and barren country: with much care and tenderness it may live, bloffom and bear; but it can never fo chearfully flourish, as in its native soil; it will degenerate and lofe much of its delicious flavour, and original richness. And besides the weakening of the sense (though that he by far the most important consideration) Greek and Latin have such a noble harmony of found, fuch force and dignity of numbers, and fuch delicacy of turn in the periods, that cannot entirely be preferved in any language of the world. These two languages are so peculiarly sufceptive of all the graces of wit and elocution, that they are read with more pleafure and lively guft, and confequently with more advantage, than the most perfect translation that the ablest genius can compose, or the strongest modern language can bear. The pleasure a man takes in reading, engages a close attention; raises and cheers the spirits; and impresses the author's fentiments and expressions deeper on the memory. A gentleman travels through the finest countries in the world, is in all respects qualified to make observations, and then writes a faithful and curious history of his travels. I can read his relations with pleasure and improvement, and will pay him the praise due to his merits; but must believe, that if I myself travelled through those countries, and attentively viewed and confidered all those curiofities of art and nature which he deferibes, I should have a more satisfactory idea, and higher pleafure, than it is poffible to receive from the exactest accounts. Authors of such distinguished parts and perfections, cannot be studied by a rational and difcerning reader without very valuable advantages. Their strong fense and manly thought, cloathed in the most fignishcant and beautiful language, will improve his reason and judgment: and enable him to acquire the art of genteel and fenfible writing. For it is a most absurd objection, that the Classics do not improve

your reason, nor enlarge your knowledge of useful things, but only amuse and divert you with artificial turns of words, and flourishes of rhetoric, Let but a man of capacity read a few lines in Plato, Demosthenes, Tully, Sallust, Juvenal, &c. and he will immediately discover all such objections either to proceed from ignorance, a depraved taste, or intolerable conceit. The classics are intimately acquainted with those things they undertake to treat of; and explain and adorn their fubject with found reasoning, exact dispolition, and beautiful propriety of language. No man in his right mind would have people to fludy them with neglect and exclusion of other parts of useful knowledge, and good learning. No; let a man furnish himself with all the arts and fciences, that he has either capacity or opportunity to learn; and he will fill find. that readiness and skill in these correct and rational authors is not the least ornamental or ferviceable part of his attainments. The neatness and delicacy of their compositions will be refreshment and music. after the toils of severer and harsher studies. The brightness of their sense, and the purity and elegance of their diction, will qualify most people, who duly admire and fludy their excellencies, to communicate their thoughts with energy and clearness. Some gentlemen, deeply read in old fystems of philosophy, and the abstrucer part of learning, for want of a sufficient acquaintance with these great masters of flyle and politeness, have not been able fo to express their notions, as to make their labours fully intelligible and useful to mankind. Irregular broken periods, long and frequent parentheses, and harsh tropes, have perplexed their notions; and much of their fense has lain buried under the confusion and rubbuth of an obscure and horrid style. The brightest and most rational thoughts are obscured, and in a great measure spoiled, if they be encumbered with obfolete and coarfe words unfkilfully placed, and ungracefully turned. matchless graces of some fine odes in Anacreon or Horace, do chiefly arise from the judicious choice of the beautiful words, and the delicacy and harmoniousness of the structure. Blackwall.

# § 155. The peculiar Excellence of the Speeches of the GREEKS and ROMANS.

Besides the other advantages of studying the classical historians, there is one, which

4

which gentlemen of birth and fortune, qualified to manage public business, and fit as members in the most august assemblies, have a more considerable share in, than people of meaner condition. The speeches of the great men among the Greeks and Romans deferve their peculiar fludy and imitation, as being master-pieces of clear reasoning and genuine cloquence: the oratois in the Classics fairly state their case, and strongly argue it: their remarks are furprifing and pertinent, their repartees quick, and their raillery clear and diverting. They are bold without rathness or infolence; and fevere with good manners and decency. They do justice to their subject, and speak agreeably to the nature of things, and characters of persons. Their sentences are sprightly, and their morals found. In short, no part of the compositions of the ancients is more finished, more instructive and pleafing, than their orations. Here they feem to exert their choicest abilities, and collect the utmost force of their Their whole histories may be compared to a noble and delicious country, that lies under the favourable eye and perpetual smiles of the heavens, and is every where crowned with pleasure and plenty: but their choice descriptions and speeches feem like some peculiarly fertile and happy spots of ground in that country, on which nature has poured out her riches with a more liberal hand, and ait has made the utmost improvements of her bounty. They have taken fo much pains, and used fuch accuracy in the specches, that the greater pleafure they have given the readei, the more they have exposed themfelves to the centure of the critic. orations are too fublime and elaborate; and those persons to whom they are ascribed, could not at those times compose or speak them. 'Tis allowed, that they might not deliver themselves in that exact number and collection of words, which the hiftorians have fo curiously laid together; but it can scarce be denied, but the great men in history had frequent occasions of speaking in public; and 'tis probable, that many times they did actually speak to the Fabius Maximus and same purpose. Scipio, Cafar and Cato, were capable of making as good speeches as Livy or Sallust; and Pericles was an orator no ways inferior to Thucydides. When the reason of the thing will allow that there was time and room for premeditation, there is no question but many of those admirable men

in history spoke as well as they are reprefented by those able and eloquent writers. But then the historians putting the speeches into their own style, and giving us those harangues in form, which we cannot tell how they could come at, trespass against probability, and the strict rules of writing history. It has always been allowed to great wits fometimes to step out of the beaten road, and to foar out of the view of a heavy scholiast. To grant all that is in the objection: the greatest Classics were liable to human infirmities and errors: and whenever their forward cenfurers shall fall into tuch irregularities, and commit fuch faults joined to fuch excellencies, the learned world will not only pardon, but admire them. We may fay of that celebrated speech of Marius in Sallust, and others that are most attacked upon this foot, as the friends of Virgil do in excuse of his offending against chronology in the flory of Æneas and Dido; that had there been no room for fach little objections, the world had wanted some of the most charming and confummate productions of human wit. Whoever made those noble speeches and debates, they so naturally arise from the posture of affairs, and circumflances of the times which the authors. then describe, and are so rational, so pathetic, and becoming, that the pleasure and instruction of the reader is the same. A complete differtation upon the uses and beauties of the chief speeches in the clasfical historians, would be a work of curiofity, that would require an able genius and fine pen. I shail just make some short ft ictures upon two; one out of Thucydides and the other out of Tacitus.

Blackwall.

## § 155. On the Funeral Oration of PE-

The funeral oration made by Pericles upon his brave countrymen who died in battle, is full of prudence and manly eloquence; of hearty zeal for the honour of his country, and wife remarks. He does not lavish away his commendations, but renders the honour of the state truly desirable, by shewing they are always conferred with judgment and wariness. He praises the dead, in order to encourage the living to follow their example; to which he proposes the strongest inducements in the most moving and lively manner; from the confideration of the immortal honours paid to the memory of the deceased; and, Ηh

the generous provisions made by the government for the dear persons left behind by those who fell in their country's cause. He imputes the greatest share of the merits of those gallant men, to the excellency of the Athenian constitution; which trained them up in fuch regular discipline, and fecured to them and their defcendants fuch invaluable privileges, that no man of fense and gratitude, of public spirit, and a lover of his children, would scruple to yearture his life to preferve them inviolable, and transmit them to late posterity. The noble orator in his speech gives an admirable character of his countrymen the Athenians. He reprefents them as brave, with confideration and coolness; and polite and genteel, without effeminacy. They are, fays he, easy to their fellow-citizens, and kind and communicative to strangers: they cultivate and improve all the aits, and enjoy all the pleafures of peace; and yet are never furprifed at the alums, nor impatient of the toils and fatigues of war. They are generous to their friends, and terrible to their enemies. They use all the liberty that can be defired without infolence or licentiousness; and fear nothing but transgreffing the laws ...

§ 156. On MUCIAN's Speech in TA-

Mucian's speech in Tacitus + contains many important matters in a finall compass; and in a few clean and emphatical words goes through the principal topics of persuasion. He presses and conjures Vespasian to dispute the empire with Vitellius, by the duty he owes his bleeding country; by the love he has for his hopeful fons; by the fairest prospect of success that could be hoped for, if he once vigoroutly fet upon that glorious bufiness; but, if he negleded the present opportunity, by the difmal appearance of the worst evils that could be feared: he encourages him by the number and goodness of his forces; by the interest and steadiness of his friends; by the vices of his rival, and his own virtues. Yet all the while this great man compliments Vefpafian, and pays him honour, he is cautious not in the least to diminish his own glory: if he readily allows him the first rank of merit, he briskly claims the fecond to himself. Never were liberty and complaifance of speech more happily mixed; he conveys sound exhortation in praise; and at the same time says very bold and very obliging things. In short, he speaks with the bravery of a foldier, and the freedom of a friend; in his address, there is the air and the gracefulness of an accomplished courtier; in his advice, the figurity and caution of a consum ate states and caution of a consum ate states and caution.

§ 157. The Claffes exhibit a beautiful System of Morals.

Another great advantage of fludving the Classics is, that from a few of the belt of them may be drawn a good fyilem an! beautiful collection of found morals. There the precepts of a virtuous and happy life are fet off in the light and gracefulness of clear and moving expression; and eloquence is meritoriously employed in cin. dicating and adorning religion. males deep impressions on the minds of young gentlemen, and claims them with the love of goodness to engagingly drested, and to beautifully commended. The Offices, Cato Major, Tufculan Queflions, &c. of Tully, want not much of Epictetus and Antoning in morality, and are much superrior in language. Pindar writes in an excellent flrain of piety as well as poetry; he carefully wipes off the afperfices that eld fables had thrown upon the deities; and never speaks of things or persons sacred. but with the tenderest caution and reverence. He praifes virtue and religion with a generous warnith; and speaks of its eternal rewards with a pious aflurance. A notable critic has observed, to the perpetual feandal of this poet, that his chief, if not only excellency, lies in his moral fentences. Indeed Pindar is a great mafter of this excellency, for which all men of fente will admire him; and at the same time be aftonished at that man's honesty who flight: fuch an excellency; and that man's underflanding, who cannot discover many more excellencies in him. I remember, in one of his Olympic Odes, in a noble confidence of his own genius, and a just contempt of his vile and malicious adversaries, he compares himfelf to an eagle, and them to crows: and indeed he foars far above the reach and out of the view of noify The famous Greek fluttering cavillers. The famous Greek professor, Duport, has made an entertaining and useful collection of Homer's divine and moral fayings, and has with great dexterity compared them with parallel paffa-

<sup>\* 5</sup> se Thuryd. Oxon. Ed. lib. 2. p. 103. † Lacu. Elzevir. Ed. 1634. Hift. 2. p. 581,

46,

ges out of the inspired writers. By which it appears, that there is no book in the world so like the style of the Holy Bible, as Homer. The noble historians abound with moral ressections upon the conduct of human life; and powerfully instanct both by precepts and examples. They paint vice and villainy in horrid colours; and employ all their reason and eloquence to pay due honeurs to virtue, and render undissembled goodne is annable in the eye of mankind. They express a true reverence for the established resignon, and a hearty concern for the prosperous state of their native country. Bluckweast.

## § 158. On XENOPHON's Memoirs of Sugrates.

Xenophon's memorable things of Societies, is a very influedtive and refined fyshem of morality: it good through all joints of duty to God and min, with great eleanness of fense and found notion, and with inexpredible implicity and purity of longuage. The great Sociates there discourses in such a manner, as is most proper to engage and persuide all sorts of readers; he argues with the reason of a philosopher, and addresses with the authority of a lawgiver, and addresses with the samiliarities and endearments of a friend.

He made as many improvements in tise morality, as could be made by the unaffilted ftrength of human reason; may, be delivers himself in some places, as if he was enlightened by a ray from heaven, larene of Plato's divine divilogues; Societes utters a surprising prophecy of a divine person, a true friend and lover of human nature, who was to come into the world to instruct them in the most acceptable way of addressing their prayers to the majesty of God.

10.1.

#### \$ 159. On the Morality of JUVENAL.

I do not wonder when I hear that some prelates of the church have recommended the serious study of Juvenal's moral parts to their clergy. That manly and vigorous author, so perfect a master in the serious and sublime way of satire, is not unacquainted with any of the excellencies of good swriting; but is especially to be admired and valued for his exalted morals. He distuades from wickedness, and exhorts

to goodness, with vehemence of zeal that can scarce be dissembled, and strength of reason that cannot ensily be resisted. He does not praise virtue, and condemn vice, as one has a savourable, and the other a malignant aspect upon a man's fortune in this world only; but he establishes the unalterable distinctions of good and evil; and builds hi, dostrine upon the immoveable foundations of God and infinite Providence.

His morals are fuited to the nature and dignity of an immortal foul: and, like it, derive their original from heaven.

How found and ferviceable is that wonderful notion in the thirteenth fatire . That an inward inclination to do an ill thing is criminal: that a wicked thought fluns the mind with guilt, and exposes the effender to the punishment of heaven, though it never ripen into action! A fuitable practice would effectually cruth the forgent's head, and britin a long and black train of mischness and miscries out of the world. What a feene of horror does he disclose, when in the same setire > he epens to our view the wounds and gather of a wicked conference! The guilty reader is not only terrified at dicalful cracks and flashes of the heavens, but looks pale and trembles at the thunder and lightning of the poet's awful verfe. The notion of true fortitude cannot be better flated than it is in the eighth fatire t, where he prefingly exhorts his reader always or prefer his conscience and principles before his life; and not be reftrained from doing his dety, or be awed into a compliance wich a villainous propofal, even by the presence and command of a barbarous tyrant, or the nearest prospect of death in all the circumstances of crucky and terror. Must not a professor of Christianity be athamed of himfelf for harbouring uncharitable and bloody resentments in his breast, when he reads and confiders that invaluable paffage against revenge in the above-mentioned thirteenth fatire & where he argues against that fierce and fatal passion, from the ignorance and littleness of that mind which is possessed with it; from the honour and generofity of passing by and forgiving injuries; from the example of those wise and mild men, of Chrysippus and Thales, and

Gnomologia Homerica, Cantab. 1660. † Dalog. Select. Cantab. 1683. ad Alcibiad.

<sup>\*</sup> V. 208, &c. † V. 192, &c. 210, &c. † V. 79—85-§ V. 181, &c. H h 2

especially that of Socrates, that undaunted champion and matter of natural religion; who was so great a proficient in the best philosophy, that he was affured his malicious prosecutors and munderers could do him no hurt; and had not himself the least inclination or rising wish to do them any; who discoursed with that chearful gravity, and graceful composure, a few moments before he was going to die, as if he had been going to take possession of a kingdom; and drank off the poisonous bowl, as a potion of Immortality. Bluckwall.

#### § 160. The hift Claffics lay down excellent Rules for Conversation.

The best Classics lay down very valuable rules for the management of conversation, for graceful and proper address to those persons with whom we converse. They instruct their readers in the methods of engaging and preserving friends; and reveal to them the true secret of pleasing mankind. This is a large and agreeable field; but I shall confine myself to a small compass.

While Tully, under the person of Crasfus, gives an account of the word ineptus. or impertinent, he infinuates excellent caution to prevent a man from rendering himself vidiculous and distasteful to company. These are his words: "He that " either does not observe the proper time " of a thing, or speaks too much, or vain-" glorioufly fets himfelf off, or has not a " regard to the dignity or interest of these " he converses with, or, in a word, is in " any kind indecent or excessive, is called " impertinent." That is admirable advice in the third book of his Omces, for the prudent and graceful regulation of a man's difcourse (which has so powerful an influence upon the misfortune or happiness of life) that we should always speak with that prudence, candour, and undiffembled complaifance, that the perfors we address may be perfuaded that we both love and reverence them.

For this persuation settled in their minds, will secure their friendship, and create us the pleasure of their mutual love and respect. Every judicious reader of Horace will allow the justness of Sir William Temple's character of him, That he was the greatest master of life, and of true sense in the conduct of it. Is it possible to comprise better advice in sewer lines, than those of his to his friend Lollius, which I shall give you in the original?

Arcanum neque tu ferntaberis ullius unquam : Comm themque teges, & vino tottus & 112: Neo tui landibb thudia, ait aliena reprendes : Nee, cum ven... volet ille, poemata pangas.

Horace had an intimate friendthip and interest with men of the chief quality and distriction in the empire; who then was fitter to lay down rules how to approach the great, and gain their countenance and partomage?

This great man has a peculiar talent of handfomely expreffing his gratitude to his noble benefactors: he just puts adue value upon every favour; and, in short, manages that nice subject of praise with a musty grace, and irreproachable decency. How clean is that address to Augustus absent from Rone, in the fifth ode of the found book!

Uncern redde tum, dux bone, patrix; Josh i vers com, vultus ubritus Affolia populo, manor it des, It foles melia, ou ni.

Here ire no forced figure, or unnatural rants; 'tis all feafonable and beautiful, poetical and literally true.

Heal.

#### § 161. Directions for reading the Claff.

Those excellencies of the Ancients. which I have accounted for, from to be fufficient to recommend them to the effects and fludy of all lovers of good and polits learning: and that the young teholar may fludy them with fuitable fucces, and mprovement, a few directions may be proper to be observed; which I shall lay down in this chapter. 'Tis in my opinion a right method to begin with the best and mot approved Classics; and to real those authors first, which must often be read over-Befides that the best authors are cased to he understood, their noble sense and animated expression will make throng impresfions upon the young scholar's mind, and train him up to the early love and imitation of their excellencies.

Plautus, Catulius, Terence, Virgil, Horace, Ovid, Juvenal, Tibulius, Propertius, cannot be studied too much, or gone over too often. One reading may suffice for Lucan, Statius, Valerius Flaccus, Sihus Italicus, Claudian; though there will be frequent occasions to consult some of their particular passages. The same may be said with respect to the Greek poets: Homer, Pindar, Anacieon, Aristophanes, Earipides, Sophocles, Theocirius, Callimachus, must never be entirely laid aside;

and will recompence as many repetitions as a man's time and affairs will allow. Hefiod, Orphous, Theogo is, Affehylus, Lycophron, Apollonius Rho hus, Nicander, Aiatus, Oppian, Quintus Claber, Dionyfus, Periegetes, and Nonnus, will amply reward the labour of one careful perulal. Sallut, Livy, Cicero, Cafar, and Tocitus, deferve to be read feveral times; and read them as oft as you pleafe, they will always afford freth pleasure and improvement. I cannot but place the two Phoys after these illustrious writers, who flours? 1ed, indeed, when the Roman language was a little upon the declenfion; but by the agour of a great genius, and wondrous indulry, railed themselves in a great measure L'ove the discouragements and disadvantiges of the age they lived in. In quality and learning, in experience of the world, and employments of amportance in the government, they were equal to the great it of the Latin writers, though excelled by force of them in language.

The elder Pliny's natural history is a work learned and copious, that catertains you with all the variety of nature infelf, and is one of the greatest monuments of unverfal knowledge, and unweared application, now extant in the world. His gentagon, and defeription of herbs, trees and commiss, are of great use to the un brifanding of all the authors of Rome and Greece.

Play to voyaget is one of the fin. ? bits that Italy has produced; he is corre t and elegant, has a florid and cay fare, tempered with maturity and foundness of judgment. Every thing in him is evquietely fludied; and yet, in general speaking, thery thing is natural and easy. In his mi-Comparable oration in Lonour of Trajan, he has frequent and for pating turns of trace with without playing and tinkting upon hands. He has exhausted the subject of panegyric, using every topic, and every de-heacy of praise. Herodotus, Thucydides, Xenophon, Plato, Demoithenes, are of the fime merit among the Greeks: to which, I think, I may add Polybius, Lucian, and Plutarch. Polybius was nobly born, a man of deep thought, and perfect matter of his subject : he discovers all the mysteries of policy, and presents to your view the inmost springs of those actions which he dekribes: his remarks and maxims have been regarded, by the greatest men both in civil and military affairs, as oracles of prudence: Cipio was his friend and admirer; Cicero, Strabo, and Plutarch, have honoured him

with high commendations; Constantine the Great was his diligent reader; and Brutus abridged him for his own confliminge. Lucim is an univerfal tenolar, and a prodigious wit: he is Attic and neat in his il. le, clear in his narration, and wonderfully factious in his reportees: he fur-Tithes you with almost all the poetical hiftory in fuch a diverting manner, that you will not easily for et it; and supplies the most dry and betten wit with a rich plenty of materials. Plutarch is an author of deep fente, and vail learning; though he does not reach his illuffrious predeceffors in the graces of his lauguage, his morels are found and roble, illustrated with a perpetual very cy of beauciful metaphors and companions, and entriced with very remarkable flories, and pertinent camples: in his Lives there is a complete account of all the Roman and Grecian antiquities, or their cuttoms, and afraits of peace and war: those writings will turnish a capable and inquifitive reader with a curious variety of chiracters, with a very valuable flore of wife remails and found politics. The furface is a little rough, but under lie vaft quantities of precious ore. Blackwall.

# § 162. The fidocalmente Claffics not to be mylevied.

Every repetition of these authors will bring the reader fresh profit and fatisfaction. The rest of the Classics must by no to any be neglected; but ought once to be carefully read over, and may ever after be occasionally confolted with much advantage. The Greet in Claffics next in value to thole we have a med, are, Diodorus Sicalus, Dionyfius Halic untilentis, Stiabo, Alian, Arrian's Espectation of Alexander the Great, Polyamus, Iterodian; the Lutin are, Hutius, Julim, Quntes Curtius, Florus, Nepos, and Suctorius. We may, with a bule allowance, admit that observation to be just, that he who would completely understand one Classic, must diligently read all. When a young gentleman is entered upon a course of these fludies, I would not have him to be difcouraged at the checks and difficulties he will fometimes meet with: if upon close and due confideration he cannot entirely mafter any passage, let him proceed by constant and regular reading, he will either find in that author he is upon, or fome other on the same subject, a parallel place, that will clear the doubt.

The Greek authors wonderfully explain

Hh 3 and

and illustrate the Roman. Learning came late to Rome, and all the Latin writers follow the plans that were laid out before them by the great masters of Greece.

They every where imitate the Greeks, and in many places t anflate 'em. Compare 'em together, and they will be a comment to one another; you will by this means be enabled to pass a more certain judgment upon the humour and idiom of both languages; and both the pleasure and advantage of your reading will be double.

Blackwall.

## § 163. The Greek and Latin Writers to be compared.

By a careful comparison of the Greek and Latin writers, you will fee how judicioully the latter imitated the farmer; and will yourfelf be qualified, with greater pleafure and fuccess, to read and imitate both. By observing what advantages Virgil has made of Homer in his Ancid, and of Theocritus in his Pafforals; how cleanly Horace has applied feveral places, out of Anacreon and other lynes, to his own purpole; you will learn to collect precious flore, out of the Ancients; to transfuse their spirits into your language with as little lofs as possible; and to borrow with fo much moderly and discretion, as to make their tiches your own, without the feandal of unfair dealing. It will be convenient and pleasant to compare authors together, that were countrymen and fellow-citizens; as Euripides, Thucydides, and Xenophon: that were contemporaries; as Theocritus and Callimachus; that writin the same dialect; as Anacreon and Herodotus, in the Ionic; Theoritus, Pindar, and Callimachus, upon Ceres and the Bath of Pallas, in the Doric: that writ upon the fame fubject; as Apollonius, Valerius Flaceus, and Theocritus, on the cembat of Pollux and Amycus, and the death of Hylas. Sal'ul's polite and curious history of Cataline's conspiracy, and Tully's tour glorious orations upon the same subject, are the brightest commentaries upon each other. The historian and the orator scarce disagree in one particular; and Sallust has left behind him an everlasting monument of his candour and impartiality, by owning and commending the conful's vigilance, and meritorious fervices; though thefe two great men had the misfortune to be violent enemies. He that praises and honours an adversary, shews his own generofity and juffice, by proclaiming his ad erfary's emin / merits.

By comparing aut loss after this method,

what feems difficult in one will be eafy in another; what one expresses short, another will enlarge upon; and if some of them do not furnish us with all the variety of the dialect and idioms of the language, the rest will supply those defects. It will likewife be necessary for the young scholar diligently to remark and commit to piemory the religious and civil customs of the Ancients: an accurate knowledge of them will make him capable to differn and relish the propriety of an author's words, and the elegance and graces of his allufion. When St. Paul speaks of his speedy approaching martyrdom, he uses this exprestion, 'Lyw yaz hon omerdinas, , which is at allusion to that universal custom of the world, of pouring wine or oil on the head of the victim immediately before it was flain. The apoille's emphatical word fignifies --- wine is just now pouring on my head, I am jud going to be facilited to Pagan rage and superstition. That pate or of St. Paul, " For I think that God hah " fet forth us the apollles laft, as it we " appointed to death: for we are made a " spectacle unto the world, and to angely " and to men f;" is all expressed in Junifficul terms, and cannot be under to . without taking the allufion that it hadfeilly bears to the Roman gladiators, where came lail upon the flage at noon, and we marked out for certain flaughter and defluction; being naked, with a fword in one hand, and teating one another in piecewith the other; whereas, those who fought the wild beafts in the morning were allowed weapons offensive and defensive, and had a chance to come off with life. The most ancient way of giving tentence among the Greeks, and particularly the Athematic was by black and white pebbles, called ψηφι.. Those judges who put the black ones into an urn, passed sentence of condemnation upon the perfon tried; and the? who put in the white, acquitted and latter Hence we may learn the fignificancy and beauty of our Saviour's words in St. John, " to him that overcometh I will give a " white flone t." I, who am the only judge of the whole world, will pass the fentence of absolution upon my faithful fervants, and the champions of my crossi and crown them with the inestimable 1ewards of immortality and glory. There are innumerable places, both in the Sacred Classies and the others, which are not to

<sup>\* 2</sup> Tim. iv. 16. † 1 Cor. iv. 9. 1 Rev. 11.

be understood without a competent knowledge of antiquities. I call the writers of the New Testament the Sacred Classics; and shall, in a proper place, endeavour fully to prove, that they deferve the highest character for the painty of their In guage, as well as the vigour of their tenie, against the ignorance of some, and the insolence of others, who have fallen very rudely upon them with respect to their fivle. Every scholar, and every Christian, is obliged to the utmost of his abilities, to defend those venerable authors against all exceptions, that may in any respect tend to diminish their value. I cannot but be of the opinion of those gentlemen, who think there is propriety in the expression, as well as sublimity in the fentaments of the New Tellament; and effect that man as bad a critic, who undervalues its language, as he is a Christian, who denies its doctiones,

§ 164. On the Study of the N in Tofa-

The claffic fehalar must by no means bo fo much wanting to his own duty, pleafare and improvement, as to neglect the Buly of the New Tellament, but must be perpentally converfant in those methmable wher gs, which have all the ticafaics of on ne wildom, and the word, of eternal the rate a. The best way will be to make them the fast and list of oil your fludies, to open and close the da with that facied book, wherem you have a faithful and most entertaining nistory of that bleffed and miraculous work of the redeinption of the world; and fure directions how to qualify and intitle yourfelt for the great talertion purchased by Jesus.

This exercise will compose your thoughts into the sweetest serenity and chearfulnes; and happily consecrate all your time and studies to God. After you have read the Greek Testament once over with care and deliberation, I humbly recommend to your frequent and attentive perusal, these solutions.

--- 1 St. John 1. 3.--- Revel. 1. 18. 19

In this collection you will find the Book of God, written by the evangelits, and apoilles, compriled in a most admirable and comprehensive epitome. A true critic will did over memorous inflances of every stale in perfection is every grace and oration of speech more chaffe and beautiful than the most a limited and shiring passages of the fecular writers.

In particular, the description of God, and the future flate of heavenly glory, in St. Paul and St. Peter, St. James and St. John, an far transford the descriptions of Jupiter and Olympes, which Homer, and Pardar, and Virgil, give us, as the thunder and lightning of the heavens do the rattling and flathes of a Solarmous, or the eternal Jehovah is superior to the Pagia deities. In all the New Tellament, especially these felect passeges, God delivers to mankin ! laws of meior, mylleries of wildom, and tides of happinel, which fools and madmen flup dly neglect, or impioutly forn; while all the bit and brighteft beings in to emiserfe regard them with facred attention, and contemplate them with wonder and transporting delight. These studes, with a funtable Chiffian practice (which they fo loudly call for, and fo pathetically pref ) will raile you above all vexations fears, and deluding hopes; and I cop you from putting an undue value upon either the cloquence or enjoyments of this world.

& 165. The All Critics to be fludred.

That we may full qualify ourfelves the better to real and relich the Cladics, we mu't ferroully fledy the old Greek and Latin cribes. Of the first are Aristotle. Dionaidas Longinus, and Dionyfius of Halicarnathis; of the latter are Tully, Horace, and Quandilian. Thefe are excellent authors, which lead their readers to the fountain-head of true fense and sublimity; teach them the first and infallible principles of convincing and moving eloquence; and reveal all the mystery and delicacy of good writing. While they judiciously difcover the excellencies of other authors, they successfully shew their own; and are glorious examples of that fublime they praise. They take off the general distantefulness of precepts; and rules, by their dextrous management, have beauty as we'l as usefulness. They were, what every true critic must be, persons of great reading

H h 4

ınd

and happy memory, of a piercing fagacity and elegant taite. They praise without flattery or partial favour; and censure without pride or envy. We shall still have a completer notion of the perfections and beauties of the ancients, if we read the choicest authors in our own tongue, and fome of the best writers of our neighbour nations, who always have the Ancients in view, and write with their spirit and judgment. We have a glorious let of poets, of whom I shall only mention a few, which are the chief; Spenfer, Shakespeare, Milton, Waller, Denham, Cowley, Dryden, Prior, Addison, Pope; who are inspired with the true spirit of their predecessors of Greece and Rome; and by whose immortal works the reputation of the English poetry is raifed much above that of any language in Europe. Then we have profe writers of all professions and degrees, and upon a great variety of fub ects, true admirers and great matters of the old Claffics and Critics; who observe their rules, and write after their models. We have Raleigh, Clarendon, Temple, Taylor, Trilotfon, Sharp, Sprat, South-with a great many others, both dead and living, that I have not time to name, though I effect them not inferior to the illuftrious few I have mentioned; who are in high effects with all readers of talle and diffinction, and will be long quoted as bright examples of good fense and fine writing. 110race and Aristotle will be read with greater delight and improvement, if we join with them, the Duke of Buckingham's Eflay on Poetry, Rolcommon's Translation of Horace's Art of Poetry, and Effay on Translated Verse, Mr. Pope's Estay on Criticism, and Discourses before Homer, Dryden's Critical Prefaces and Discourses, all the Spectators that treat upon Classical Learning, particularly the jully admired and celebrated critique upon Wilton's Paradife Loft, Dacier upon Ariflotie's Poetics, Boffu on Epic Poetry, Boileau's Art of Poetry, and Reflections on Longinus, Dr. Felton's Differnation on the Claffics. and Mr. Trapp's Poetical Prelections. These gentlemen make a true judgment and use of the Ancients: they esteem it a reputation to own they admire them, and borrow from them; and make a grateful return, by doing honour to their memories, and defending them against the at acks of forne over-forward wits, who furiously envy their fame, and intuitely fall short of their meilt. Blackwall,

#### \$ 166. The best Authors to be read several Times over.

I cannot but here repeat what I faid before, of the advantage of reading the best authors several times over. There must needs be pleasure and improvement in a repetition of fuch writers as have fresh beauties in every fection, and new wonders arifing in every new page.

One furerncial reading exhausts the fmall flores of a superficial writer, but the genuine Ancients, and those who write with their spirit and after their pattern, An ill written loofe are deep and full. book is like a formal common-place fop, who has a fet of phrases and stories, which in a converfation or two are all run over; the man quickly impoverables himfelf, and in a few hours becomes perfectly dry at linfipid. But the old Claffics, and then genume followers among the moderns, are like a rich natural genin , wo tas an enfailing supply of good first on all occafions; and gratifies his company with a perpetual and charming variety.

#### § 167. The Rife and Progress of Philips-I break Criticipus.

Ancient Greece, in its happy days, was the feat of Liberty, of Sciences, and of Aits. In this fur region, fertile of wi', the Epic writers came nift; then the Lyric; then the Tragic; and, failly, the Hiftorians, the Comic Writers, and the Orators, each in their turns delighting whole multitudes, and commanding the attention and almiration of all. Now, when wife and thinking men, the fubtil inveiligators of principles and cautes, observed the wonderful effect of these works upon the human mind, they were prompted to enquire whence this should proceed; for that it should happen merely from Chance, they could not well believe,

Here therefore we have the rife and origin of Criticism, which in its beginning was " a deep and philosophical search into " the primary laws and elements of good " writing, as far as they could be collect-" ed from the most approved perform-

In this contemplation of authors, the first critics not only attended to the powers and different species of words; the force of numerous composition, whether in profe or verse; the aptitude of its various kinds to different subjects; but they farther confidered Adered that, which is the basis of all, that is to fay, in other words, the meaning of the fenfe. This led them at once into the most curious of subjects; the nature of man in general; the different characters of men, as they differ in rank or age; their reason and their passions; how the one was to be perfuaded, the others to be raited or calmed; the places or repositories to which we may recur, when we want proper matter for any of these purposes. Besides all this, they studied fentiments and manners; what conflitutes a work; what, a whole and parts; what, the effence of probable, and even of natural fiction, as contributing to conditute a just diamatic fable. Harris.

#### § 168. PLATO, ARISTOTLE, THLO-PHRASTUS, and other GRIEK Mathors of Philosophical Criticipa.

Much of this kind may be found in different pasts of Plato. But Armotle, Fis difciple, who may be called the fyllematizer of his mafter's doctrines, has, in his two treatifes of poetry and rhetoric, with beth wonderful penetration developed every part of the fubject, that he may be juitly called the Pather of Criticifin, both from the age when he lived, and from his truly to infeendent genius. The criticifin which this capital writer taught, has fo intumate a correspondence and alliance with philosophy, that we can call it by no other name, than that of Philosophical Criticities.

To Ariflotle fucceeded his disciple Theophrastlas, who followed his master's example in the study of criticism, as may be from in the catalogue of his writings, preferved by Diogenes Laertius. But all the citical works of Theophrastlus, as well as of many others, are now lost. The principal authors of the kind now remaining in Greek are Demetrius of Phaless, Dionystus of Halicarnassus, Dionysius Longinus, together with Hermogenes, Aphthonius, and a few others.

Of these the most masterly seems to be Demetrius, who was the earlist, and who appears to follow the precepts, and even the text of Aristotle, with far greater attention than any of the rest. His examples, it must be confessed, are sometimes obscure, but this we rather impute to the destructive hand of time, which has prevented us from seeing many of the original authors.

Dionysius of Halicarnassus, the next in order, may be faid to have written with judgment upon the force of numerous composition, not to mention other tracts on the subject of oratory, and those also critical as well as hidorical. Longinus, who was in time far later than thefe, feems principally to have had in view the passions and the imagination, in the treating of which he has acquired a just applause, and expressed himself with a dignity suitable to the subject. The rest of the Greek critics, though they have faid many ufeful things, have vet to minutely multiplied the rules of art, and so much confined themselves to the oratory of the tubunal, that they appear of no great fervice, as to good writing in general.

# § 169. Philopophical Critics among the ROMANS.

Among the Romans, the fuft critic of note was Cicero; who, though far below Antlotle in depth of philosophy, may be fud, like him, to have exceeded all his countrymen. As his celebrated treatife concerning the Orator is written in dialogue, where the speakers introduced are the greated men of his nation, we have incidentally an elegant fample of those manner, and that pointeness, which were peculiar to the leading characters during the Roman commonwealth. There we may fee the behaviour of free and accompliffied rien, before a bafer address had fet that fluidard, which has been too often taken for good breeding ever fince.

Next to Cicero came Horace; who often, in other parts of his writings, acts the critic and scholar, but whose Art of Poetry is a flandard of its kind, and too well known to need any encomium. After Horace arole Qui étilian, Cicero's admirer and follower, who appears, by his works, not only learned and ingenious, but, what is fill more, an honest and a worthy man. He likewife dwells too much upon the oratory of the tribunal, a fact no way furprizing, when we confider the age in which he lived: an age when tyrannic government being the fashion of the times, that nobler species of eloquence. I mean the popular and deliberative, was, with all things truly liberal, degenerated and funk. The later Latin rhetoricians there is no need to mention, as they little help to illustrate the subject in hand. I would only repeat, that the species of criticism here mentioned.

mentioned, as far at least as handled by the more able masters, is that which we have denominated Criticism Philosophical.

Harris.

§ 170. Concerning the Progress of Criticisin in its second Species, the Historical— Greek and Roman Critics, by whom this Species of Criticism was cultivated.

As to the Criticism already treated, we find it not confined to any one particular author, but containing general rules of a.t. either for judging or writing, confirmed by the example not of one author, but of many. But we know from experience, that, in process of time, languages, cuttoms, manners, laws, governments, and religions, infenfibly change. The Macedonian tyranny, after the fatal battle of Charonca, wrought much of this kind in Greece: and the Roman tyraany, after the fatal battles of Pharfalia and Philippi, carried it throughout the known world. Hence, therefore, of things obfolete the names became obfolete also; and authors, who in their own age were intelligible and eafy, in after days grew difficult and obfcure. Here then we behold the rife of a fecond race of critics, the tribe of scholiasts, commentators, and explainers.

These naturally attached themselves to particular authors. Aridarchus, Didymus, Eustathius, and many others, bestowed their labours upon Homer; Proclus and Tactzes upon Heffod; the fame Proclus and Olympiodorus upon Plato; Simplicius, Aminonius, and Philoponus, upon Arittotle; Ulpian upon Demosthenes; Macrobias and Afconius upon Cicero; Cilliergus upon Theocritus; Donatus upon Terence; Servius upon Virgil; Acro and Posphysio upon Horace; and fo with respect to others, as well philosophers as poets and orators. To these scholadis may be added the feveral compofers of Lexicons; fuch as Hefychius, Philorenus, Suidas, &c. also the writers upon Grammar, fuch as Apollonius, Priscian, Sofipater, Charifius, &c. Now all these pains-taking men, confidered together, may be faid to have completed another species of criticism, a species which, in distinction to the former, we call Criticism Historical.

And thus things continued, though in a declining way, till, after many a fevere and unfaccefful plunge, the Roman empire funk through the weft of Europe. Latin then foon loft its purity; Greek they hardly knew; Classics, and their Scho-

liasts, were no longer studied; and an age succeeded of legends and crusades.

Ibid.

§ 171. Moderns emirient in the two Species of Criticifin before mentioned, the Philogo-fried and the Historical—the last Sort of Critici is remanerous—those, mentioned in this Society, confined to the Greek and Latin Languages.

At length, after a long and barberous peried, when the fluides of monkery began to retire, and the light of humanity once again to down, the arts also of criticism insensibly revive i. 'Tis true, indeed, the and ors of the philosophical fort (I mean that which respects the causes and principles of good writing in general) were not many in number. However, of this rank, among the Italians, were Vida, and the older Scaliger; among the French were Rapin, Bouhours, Borleau, together with Borlu, the most methodic and accurate of them all. In our own country, our nobility may be fairl to have diffinguifhed themselves; Lord Roscommon, in his Essay upon translated Verse; the Duke of Buckingham, in his Effay on Poetry; and Lord Shaftfbury, in his treatife called Advice to an Author: to whom may be added, our late admired genius, Pope, in his truly elegant poem, the Effay upon Cu-

The Difcourses of Sir Joshua Reynolds upon painting have, after a philosophical manner, investigated the principles of an art, which no one in practice has better verified than himself.

We have mentioned these discourses, not only from their merit, but as they incidentally teach us, that to write well upon a liberal art, we must write philosophically—that all the liberal arts in their principles are congenial—and that these pinciples, when traced to their common source, are sound all to terminate in the first philosophy.

But to pursue our subject—However small among moderns may be the number of these Philosophical Critics, the writers of historical or explanatory criticism have been in a manner innumerable. To name, out of many, only a few—of Italy were Beroaldus, Ficinus, Victorius, and Robertellus; of the Higher and Lower Germany were Erasimus, Sylburgius, Le Clerc, and Fabricius; of France were Lambin, DuVall, Harduin, Capperonerius; of England were Stanley (editor of Æschylus)

Gataker,

Gatalier, Davies, Clark (editor of Homer) together with multitudes more from every region and quarter,

Thick as autumnal leaves that flrow the brooks

In Valiombrof.4.——

But I fear I have given a strange catalogue, where we seek in vain for such illustrious personages, as Setostris, Cyrus, Alexander, Castar, Attila, Tortula, Tamerlane, &c. The heroes of this work (if I may be perdoned for calling them so) have only aimed in retirement to present us with knowledge. Knowledge only was their object, not havock, nor devastation.

Harris.

§ 172. Compilers of Lexicons and Dictionaris, and Authors upon Grammars.

After Commentators and Editors, we must not forg t the compilers of Lexicons and Dictionaries, fuch as Charles and Henry Stevens, Favorinus, Constantine, Budaus, Cooper, Faber, Vossius, and others. To these allowe may add the authors upon Grammar; in which fubject the learned Greeks, when they quitted the East, led the way, Moschopulus, Chryfoloras, Lafcari, Theodore Gaza; then in Italy, Laurentius Valle; in England, Grocin and Linucer; in Spain, Sanctius; in the Low Countries, Vollas; in France, Celai Scaliger by his refidence, though by birth an Italian, together with those able writers Mest. de Port Rosal. Nor ought we to omit the writers of Philological Epiffles, mach as Eminuel Maitia; nor the writers of Literary Catalogues (in French called Catalogues Raifonnecs) fach as the account of the manufcripts in the unperial library at Vienna, by Lambecius; or of the Arabic manuferipes in the Eicunal library, by Michael Cahri.

ibid.

§ 173. Modern Critics of the Explanatry Kind, commenting Modern Writer— Lexicographers — Grammarians — Tranflaters.

Though much historical explanation has been bestowed on the ancient Classics, yet have the authors of our own country by no means been forgotten, having exercised many critics of learning and ingenuity.

Mr. Thomas Warton (besides his fine edition of Theocritus) has given a curious history of English Poetry during the middle centuries; Mr. Tyrwhit, much accu-

rate and diversified erudition upon Chaucer; Mr. Upton, a learned Comment on the Fairy Queen of Spenfer; Mr. Addison, many polite and elegant Spectators on the Conduct and Beauties of the Paradife Loit; Dr. Warton, an Essay on the Genius and Writings of Pope, a work filled with fpeculations, in a tafte perfectly pure. The lovers of literature would not forgive me, were I to omit that ornament of her fex and country, the critic and patroness of our illustrious Shakespeare, Mrs. Montague. For the honour of criticism, not only the divines already mentioned, but others also, of rank still superior, have bestowed their labours upon our capital poets (Shakespeare, Ivilton, Cowley, Pope) suspending for a while their feverer fludies, to relax in these regions of genius and imagi-

The Dictionaries of Minshew, Skinner, Spelman, Summer, Junius, and Johnson, are all well known, and juttly esteemed. Such is the merit of the last, that our language does not possess, a more copious, learned, and valuable work. For grammatical knowledge we ought to mention with dialinction the learned prelate, Dr. Lowth, bushop of London; whose admirable tract on the Grammar of the English Language, every lover of that language ought to study and understand, if he would witte, or even speak it, with purity and precision.

Let my countrymen too reflect, that in fludying a work upon this Jubject, they are not only fludying a language in which it becomes them to be knowing, but a language which can boad of as many good books as any among the living or modern languages of laurope. The writers, born and educated in a free country, have been left for years to their native freedom. Their pages have been never defiled with an index expangatorius, nor their germus ever fliackled with the terrors of an inquinition.

May this invaluable privilege never be imparted either by the hand of power, or by licentious abuse! Ibid.

§ 174. On Translators.

Perhaps with the critics just described I ought to arrange Translators, if it be true that translation is a species of explanation, which differs no otherwise from explanatory comments, than that these attend to parts, while translation goes to the whole.

Now as translators are infinite, and many of them (to borrow a phrase from sports-

men) unqualified persons, I shall enumerate only a sew, and those such as for their merits have been deservedly esteemed.

Of this number I may very truly recken Meric Cafauhon, the translator of Ma cus Antoninus; Mrs. Carter, the translator of Epicletus; and Mr. Sydenhum, the translator of many of Plato's Dialogues. All these seems to have accurately understood the original language from which they translated. But that is not all. The authors translated being philosophers, the translators appear to have studied the style of their philosophy, well knowing that in ancient Greece every seet of philosophy, like every science and art, had a language of its own.\*

To these may be added the respectable names of Melmoth and of Hampton, of Franklin and of Potter; nor should I omit a few others, whose labours have been similar, did I not recollect the trite, though elegant admonition:

Singuladum captron cumvectamur amore. Vino.

Harras.

§ 175. Rife of the third Species of C. incifm, the Corrective—practifed by the Ancients, but much more by the Moderns; and why.

But we are now to enquire after another species of Criticism. All ancient books, having been preserved by transcription, were liable, through ignorance, negligence, or fraud, to be corrupted in three different ways, that is to say, by actrenchings, by additions, and by alterations.

To remedy these evils, a third fort of criticism arofe, and that was Criticism Corrective. The business of this at first was painfully to collate all the various copies of authority, and then, from annula the variety of readings thus collected, to establish, by good readons, either the true, or the most probable. In this sense we may call such criticism not only corrective but authoritative.

As the number of these corruptions must needs have increased by length of time, hence it has happened that corrective criticism has become much more necessary in these later ages, than it was in others more ancient. Not but that even in ancient days varsous readings have been noted. Of this kind there are a multitude in the text of

Homer; a fact not fingular, when we consider his great antiquity. In the Comments of Aremorius and Philopoias upon Ariticite, there is mention made of feveral in the text of that philotopher, which the commentators compare and examine.

We find the farie in Aulus Gellius, as to the Roman authors; where it is withal remarkable, that, even in that early period, much firefs is laid upon the authority of ancient manufacipts, a reading in Cicero being judined from a copy made by his learned freed-man, Thos and a reading in Vingil's Georgies, from a look which had once belonged to Virgil's family.

But fince the revival of literature, to correct has been a business of much more latitude, having continually employed, for two centuries and a halr, both the pains of the most laborrous, and the wass of the most acute. Many of the learned men before enumerated were not only famous as hiftorical critics, but as corrective alfo. Such were the two Scaligers (of whom one has been already mentioned, § 171.) the two Cafaubons, Salmofius, the Heinfii, Grievius, the Gronovii, Burman, Kutler, Walle, Bentley, Pearce, and Markland. In the fame class, and in a rank highly eminent, I place Mr. Toupe of Cornwall, who, in his Emer dations upon Suidas, and his edition of Longinus, has thewn a critical acumen, and a compais of learning, that may juflly arrange him with the most distinguished scholars. Nor must I forget Dr. Taylor, refidentiary of St. Paul's, nor Mr. Upton, prebendary of Rochefter. The former, by his edition of Demosthenes, (as far as he lived to cury it) by his Lyfias, by his Comment on the Marmor Sandvicenfe, and other critical pieces; the latter, by his correct and elegant edition, in Greek and Latin, of Arman's Epictetus (the fir t of the kind that had any pretentions to be called complete) have rendered themselves, as Scholars, lasting ornaments of their country. These two valuable men were the friends of my youth; the companions of my focial, as well as my literary hours. I admired them for their erudition; I loved them for their virtues; they are now no more-

His faltem accumulem donis, et fungar inani Munere—— VIRG-

> Ibid. § 176.

§ 176. Criticijin may have been abufed—yet defended, as of the last Importance to the Cause of Literature.

But here was the misfortune of this last species of criticism. The best of things may pass into abuse. There were numeyous corruptions in many of the finelt authors, which neither ancient editions, nor manufcripts, could held. What then was to be done?-Were forms to fair to remain disfigured, and be feen for ever under fuch apparent blemifies?-" No (fays a critic,) "Conjecture can cure all-Conjecture, " whose performances are for the most part " more certain than any thing that we can " exhibit from the authority of manu-"fcripts."-We will not alk, upon this wenderful affertion, how, if to certain, can it be called conjecture?-'I'is enough to observe (be it called as it now) that this ipinit of conjecture has too often paffed into an intemperate excess; and then, whatever it may have boafted, has done more mifchief by far than good. Authors have been taken in hand, like auttomical fabicals, only to display the skill and abilities of the autil: fo that the end of many an edd on feems often to have been no more than to exhibit the great (ag.,cit) and erudium of an editor. The joy of the talk was the honour of mending, while corruptions were fought with a more than common catention, as each of them alloyded a teilimoty to the editor and his art.

And here I big leave, by way of diprefion, to relate a thort flory concerning a noted empiric. "Being once in a ball-"room crowled with company, he was "asked by a gentleman, what he thought "of fuch a lady? was it not pity that the "fquinted?"—"S juint! Sir!" replied the doftor, "I wish every lady in the room "fquinted; there is not a man in Europe "can cute fquinting but mytelf."—

But to return to our tubject—well indeed would it be for the cause of letters, were this hold conjectual spirit confined to works of scond rate, where, let it change, copunge, or add, as happens, it may be tolerably sure to leave matters, as they were; or if not much better, at least not much worse: but when the divine geriuses of higher rank, whom we not only appland, but in a manner revere, when these come to be attempted by petulant correctors, and to be made the subject of their wanton caprice, how can we but exclaim, with a kind of religious abhorrence—

procul! O! procul este profani!

These sentiments may be applied even to the celebrated Bentley. It would have become that able writer, though in literature and natural abilities among the first of his age, had he been more temperate in his criticism upon the Paradise Lost; had he not so repeatedly and injuriously off red violence to its author, from an affected superiority, to which he had no pretunce. But the rage of conjecture seems to have seized him, as that of jealously did Medeat a rage which she confest herself unable to result, although she knew the mischiefs it would prompt her to perpetrate.

And now to obviate an unmerited cenfure, (as if I were an enemy to the thing, from being an enemy to its abufe) I would have it remembered, it is not either with criticitim or critics that I prefume to find full. The arts, and its professors, while they practife it with temper, I truly honoar; and think, that were it not for their acute and learned labours, we should be in danger of degenerating into an age of dunces.

Indeed critics (if I may be allowed the metar 'er') are - fort of mailers of the ceremeny in the court of letters, through whole, flance we are introduced into force or the first and best company. Should we eyer, therefore, by idl projudices againft pearatry, verbal reconnecter, and we know for what, come to flight then bit, and rejest them from ear from, to is well if we do not flight also those Claffac with whom criticism converses, becoming content to read them in tru fations, or (what is full worfe) in translations of triul tions, or (what is workers in their that) not to read them at all. And I will be bold to affert. if that should ever happen, we shall speedily return into those de is of darliness, out of which we happily emerged upon the revival of ancient lite atme.

#### § 177. The Epic Writers came forth.

It appear, that not only in Greece, Lut in other countries more burbatous, the first writings were in metre, and of an epic cast, recording wars, battles, hences, ghosts; the marvellous always, and often the incredible. Men feemed to have thought, that the higher they foared the more important they should appear; and that the common life, which they then lived, was a thing too contempuble to merit imutation.

Hence it followed, that it was not till this common life was rendered respectable by more refined and polished manners, that men thought it might be copied, so as to

gain them applause.

Even in Greece itself, tragedy had attained its maturity many years before comedy, as may be seen by comparing the age of Sophocles and Euripides with that of Philemon and Menander.

For ourfelves, we shall find most of our first poets prone to a turgid bombast, and most of our first proface writers to a pe-

most of our first product witters to a pedantic flissness; which stude styles gradually improved, but reached not a classical punity sooner than Tillotson, Dryden, Addison, Shaftsbury, Prior, Pope, Acterbury, &c. &c.

Harris.

#### § 178. Nothing excellent in literary Performances happens from Chance.

As to what is afferted foon after upon the efficacy of caufes in works of ingenuity and art, we think in general, that the effect must always be proportioned to its cause. It is hard for him, who reasons attentively, to refer to chance any superlative production.

Effects indeed firike us, when we are not thinking about the caufe; yet may we be affured, if we reflect, that a caufe there is, and that too a caufe intelligent and rational. Nothing would perhaps more contribute to give us a taffe truly critical, than on every occifion to inventigate this caufe, and to ai', ourfelves, upon feeling any uncommon effect, why we are this delighted; why this checked; why hosted into pity; why made to field r with borro?

Till this is is well uniwered, all is darkness; and our admiration, like that of the vulgar, founded upon ignorance.

Ibid.

# § 179. The Chafes or R you of fuch Ex-

To explain, by a few examples, that are known to all, and for that reason here alledged, because they are known.

I am flruck with the night feene in Virgil's fourth Æneid—"The universal filence "throughout the globe—the sweet rest of its various inhabitants, soothing their cares and forgetting their labout—the "unhappy Dulo alone restless; restless, "agitated with impetuous passons."—Æn. iv. 522.

I am affected with the flory of Regulus, as painted by West—" The crowd of anxious friends, perfuading him not to return—his wife fainting through fensional field the bility and fear—persons the least con-

" nected appearing to feel for him, yet himself unmoved, inexorable, and stern."

Horat. Carm. L. iii. Od. 5.

Without referring to these deeply tragic scenes, what charms has music, when a masterly band pass unexpectedly from loud to soft, or from soft to loud!—When the system changes from the greater third to the less; or reciprocally, when it changes from this last to the former.

All these effects have a similar and well known cause, the amazing force which contraries acquire, either by juxta-position, or by quick succession.

18.1.

### § 180. Why Contraries have this Eff. A.

But we ask fill faither, Why have contraries this force?—We answer, Because of all things which duffer, none differ in widely. Sound differ from darkness, but not so much as from flence; darkness differs from sound, but not so much as from light. In the same intense manner differ repose and reflessiness; felicity and mifery; dubious solicitude and from resolution: the epic and the comic; the subline and the Iudicrous.

And why differ contraries thus widely'—Because while attributes, simply different, may co-exist in the same subject, contraries cannot co-exist, but always destroy one another. Thus the same marble may be both white and hard, but the same marble cannot be both white and black. And hence it follows, that as their difference is more intense, to is our recognition of them more vivid, and our impressess more permanent.

This effect of contraties is evident even in objects of fenfe, where imagination and intellect are not in the least concerned. When we pass (for example) from a hothouse, we feel the common air more intensely cool; when we pass from a dark cavern, we feel the common light of the day more intensely glaring.

But to proceed to inflances of another and a very different kind.

Few feenes are more affecting than the taking of Troy, as deferibed in the feeond Encid—" The apparition of Hector to "Encas, when affeep, announcing to him the commencement of that direful event — the diffant lamentations, heard by "Eneas as he awakes—his afcending the houfe-top, and viewing the city in flames — his friend Pentheus, escaped from defruction, and relating to him their wretched and deplorable condition—Eneas, with

with a few friends, rushing in to the thick-" eft danger-their various fuccess till " they all perish, but himself and two more " -the affecting scenes of horror and pity " and Priam's palace—a fon flain at his fa-" ther's feet; and the immediate maffacre of the old monarch himfelf-Eneas, on " feeing this, inspired with the memory of " his own father-his refolving to return " home, having now lott all his compa-" nions-his feeing Helen in the way, and " his defign to difpatch fo wicked a woman " -Venus interpoling, and flowing him " (by removing the film from his eyes) " the most sublime, though most direful, of " all fights; the Gods themselves busied " in Troy's destruction; Neptune at one " employ, Juno at another, Pallas at a " third-It is not Helen (favs Venus) " but the gods, that are the authors of " your country's ruin-it is their incle-" mency," &c.

Not lefs folemn and awful, though lefs leading to pity, is the commencement of the first Eneid—"The Sibyl's civern—"her frantic geftures, and prophicy—the request of Eneas to defeend to the shades "—her answer, and information about the "lofs of one of his friend—the fate of poor Misenus—his funeral—the golden bough discovered, a preparatory cir-" cumflance for the defeent—the facilities "—the woods in rootion—the dogs of Ifricate howling—the actual defeent, in all its particulars of the marvessous, and the "terrible."

If we pass from an ancient author to a modern, what scene more thriking than the first feene in Hamlet '-" The folemnity " of the time, a fevere and pinching night " -the folemnity of the place, a platform " for a guard-the guards themselves; " and their apposite discourse-yonder star " in fuch a polition; the Lell then beating " one-when description is exhausted, " the thing itself appears, the Ghost enters." From Shakespeare the transition to Milton is natural. What pieces have ever met a more just, as well as universal ap-Plause, than his L'Allegro and Il Penseiofo?-The first, a combination of every incident that is lively and chearful; the second, of every incident that is melancholy and ferious: the materials of each collected,

cording to their character, from rural life,

from city life, from music, from poetry; in

a word, from every part of nature, and

every part of art.

To pass from poetry to painting—the Crucifixion of Polycrates by Salvator Rofa, is "a most affecting representation of various human figures, seen under different modes of horior and pity, as they contemplate a dreadful spectacle, the crucifixion above-mentioned." The Aurora of Guido, on the other side, is one of those joyous exhibitions, where one of those joyous exhibitions, where one hothing is seen but youth and beauty, in very attitude of elegance and grace." The former picture in poetry would have been a deep Penscroso; the latter, a most pleasing and animated Allegro.

And to what cause are we to refer these last enumerations of striking effects?

To a very different one from the former—not to an opposition of contrary incidents, but to a concatenation or accumulation of many that are fimilar and congenial.

And why have concatenation and accumulation fuch a force?—From these most simple and obvious truths, that many things similar, when added together will be more in quantity than any of them taken singly;—consequently, that the more things are thus added, the greater will be their effect.

We have mentioned, at the fame time, both accumulation and concatenation; because in painting, the objects, by exiling at once, are accumulated; in poetry, as they exil by fucceffion, they are not accumulated but concatenated. Yet, through ratmory and imagination, even these also derive an accumulative force, being presented from pissing away by those admirable faculties, till, like many pieces of method together, they collectively form one common magnitude.

It must be faither remembered, there is an accumulation of things analogous, even when those things are the objects of different faculties. For example—As are passionate gestures to the eye, so are passionate ideas to the imagination. To feel the amazing force of an accumulation like this, we must see some capital actor, acting the drama of some capital poet, where all the powers of both are assembled at the same instant.

And thus have we endeavoured, by a few obvious and eafy examples, to explain what we mean by the words, "feeking the caufe or reason, as often as we feel works of art and ingenuity to affect us."—See 167.178.

# § 181. Advice to a Beginner in the Art of Criticium.

If I might advise a beginner in this elegant pursuit, it should be, as far as possible, to recur for principles to the most plain and simple truths, and to extend every theorem, as he advances, to its utmost latttude, so as to make it suit, and include, the greatest number of possible cases.

I would advise him farther, to avoid subtle and far-setched refinement, which, as it is for the most part adverse to perspecuity and truth, may serve to make an able So-

phist, but never an able Critic.

A word more—I would advife a young Critic, in his contemplations, to turn his eye rather to the praife-worthy than the blameable; that is, to inveltigate the caufes of praife, rather than the caufes of blame. For though an uninformed beginner may, in a fingle inflance, happen to blame properly, it is more than probable, that in the next he may fail, and incur the centure passed upon the criticing cobler, Ne futor altra cripulam.

## § 182. On numerous Composition.

As Numerous Composition arises from a just arrangement of words, so is that arrangement just, when formed upon their

verbal quintity,

Now if we feek for this verbal quantity in Greek and Latin, we fiull find that, while those two languages were in purity, their verbal quantity was in purity also. Every fyllable had a mensure of time, either long or theirt, defined with precision either by its conslituent vowel, or by the relation of that vowel to other letters adjoining. Syllables thus characterized, when combined, made a foot,; and feet thus characterized, when combined, made a foot and feet thus characterized, when combined made a verse; for that while a particular barmony existed in every part, a general harmony was disfused through the whole.

Pronunciation at this period being, like other things, perfect, accent and quantity were accunately diffinguished; of which diffinction, familiar then, though now obfeure, we venture to suggest the following explanation. We compare quantity to mufical tones differing in long and shert, as upon whatever line they stand, a semibrief differs from a minim. We compare accent to musical tones differing in high and low, as D upon the third line differs from G upon the sirft, be its length the same, or be it longer or shorter.

And thus things continued for a fucces, fion of centuries, from Homer and Hesiod to Virgil and Horace, during which interval, if we add a trisle to its end, all the truly classical poets, both Greek and Latin, slourished.

Nor was profe at the fame time reglected. Penetrating wits discovered this also to be capable of numerous composition, and founded their ideas upon the fol-

lowing reasonings:

Though they allowed that profe faculd not be strictly metrical (for then it would be no longer profe, but poetry); yet at the fame time they afferted, if it had no Rhythm at all, such a vague effusion would of course satigue, and the read-twould feek in vain for those returning pauses, so helpful to his reading, and so grateful to his ear.

#### § 183. On other Decorations of Proje lefides Proface Feet; as Alliteration.

Befides the decoration of Proface Feet, there are other decorations, admittible into English composition, such as Alliteration, and Sentences, especially the Period.

First therefore for the first; I mean Alliteration.

Among the claffics of old, there is no face illuftration of this figure, than Lucretius's defeription of those blost abode, where his gods, detached from providentiscares, ever lived in the fruition of divin-

ferenity:

Apparet divum numen, fedelque quetre, Qua neque concutturit venti, neque nubila na-

Afperguer, neque was acti contreta primal Car cordens y olds, fem jurga, manbilus ather lategit, et large diffulo lumine ridet. Lucret, III. 18.

The fublime and accurate Virgil did not contemn this decoration, though he used it with such pure, unaffected simplicity, that we often feel its force without contemplating the cause. Take one instance out of infinite, with which his works abound:

Aurora interea miferis mortobbos almam Extulerat lucem, referens oper ratque labores An. XI. v. 183.

To Virgil we may add the superior authority of Homer:

Ητοι ο καππεδίον το 'Αλήτον στος 'Αλάτος "Ον θυμών κατεδων σιάτον 'Αθεάπων 'Αλιείκου. Ιλ. ζ. 201-

Hermogenes, the rhetorician, when he quotes these lines, quotes them as an example

# BOOK II. CLASSICAL AND HISTORICAL.

ample of the figure here mentioned, but calls it by a Greek name, ITAPHXHEIE.

Cicero has translated the above verses elegantly, and given us too Alliteration, though not under the same letters:

Qui mifer in campis errabat folus Alæis. Inte fuum cor edens, hominum veftigia vitans.

Aristotle knew this figure, and called it ΠΑΡΟΜΟΙΩΣΙΣ, a name perhaps not for precise as the other, because it rather exprefies refemblance in general, than that which arises from sound in particular. His example is-AFPON yaz Dager, APFON πας' αὐτῦ.

The Latin rhetoricians sliled it Annominatio, and give us examples of fimilar

But the most fingular fact is, that fo early in our own history, as the reign of Henry the fecond, this decoration was elected and cultivated both by the Enghth and the Welch. So we are informed by Gualdus Cambrenfis, a contemporary writer, who, having first given the Welch instance, subjoins the English in the following verfe-

God is together Garamen and Wifedome.

-that is, God is at once both joy and wildom.

He calls the figure by the Latin name Annominatio, and adds, "that the two " nations were fo attached to this verbal " ornament in every high-finished com-" position, that nothing was by them " elteemed elegantly delivered, no diction " considered but as rude and rustic, if it " were not first amply refined with the " polishing art of this figure."

'Tis perhaps from this national taste of ours, that we derive many proverbial fimiles, which, if we except the found, feem to have no other merit-Fine as five-pence

-Round as a Robin-&c.

Even Spenser and Shakespeare adopted the practice, but then it was in a manner faitable to fuch geniuses.

Spenser fays-

For not to have been dipt in Lethe lake Could fave the fon of Them from to dis; But that blind bard did him immortal make With verfes dipt in dew of Caffille.

Shakespeare says-

Had my fweet Harry had but half their numbers, This day might I, hanging on Hotipur's neck, Have ta'ked, &c. Hen. IVth, Part 24, AC 24. Milton followed them.

For eloquence, the foul; fong charms the fenfel P. L. II. 556. and again,

Behemoth, biggest born of earth, upheav'd His vaftnefs-P. L. VII. 4714

From Dryden we select one example out of many, for no one appears to have employed this figure more frequently, or, like Virgil, with greater fimplicity and threagth.

Better to hunt in fields for health unbought, Thun fee the doctor for a naufeous draught. The wife for cure on exercise depend; God never made his work for min to mend. DRYD. Fables.

Pope fings in his Dunciad-

Twas chatt'ing, gimning, mouthing, jabb'ring

And noite, and Norton; brangling, and Brevall ; Lennis, and diffonance-

Which lines, though truly poetical and humourous, may be suspected by some to shew their art too conspicuously, and too nearly to resemble that verse of old Ennius-

O! tite, tute, tati, tibi tanta, tyranne, tulifli. Script. ad Herenn. L.1v. f. 18.

Gray begins a fublime Ode,

Ruin feize thee, ruthlefs king, &c.

We might quote also Alliterations from profe writers, but those we have alledged we think fufficient. Harris.

## § 184. On the Period,

Nor is elegance only to be found in fingle words, or in fingle feet; it may be found, when we put them together, in our peculiar mode of putting them. 'Tis out of words and feet thus compounded, that we form fentences, and among fentences none fo striking, none so pleasing as the Period. The reason is, that, while other fentences are indefinite, and (like a geometrical right line) may be produced indefinite, ly, the Period (like a circular line) is always circumscribed, returns, and terminates at a given point. In other words, while other fentences, by the help of common copulatives, have a fort of boundless cifusion; the conflituent parts of a Period have a fort of reflex union, in which union the sentence is so far complete, as neither to · require, nor even to admit, a fartier extension. Readers find a pleasure in this grateful li

BOTTANT BRILACTS IN PROSE.

grateful circuli which leads them fo agreeably to an acquisition of knowledge.

The author, if he may be permitted, would refer by way of illustration, to the beginnings of his Hermes, and his philosophical arrangements, where some attempts have been made in this pe iodical fivle. He would refer also, for much more illuftrious examples, to the opening of Cicero's Offices; to that of the capital Oration of Demolthenes concerning the Crown; and to that of the celebrated Panegyric, made (if he may be so called) by the father of Periods, Hocrates.

Again -every compound fentence is compounded of other fentences more fimple, which compared to one another, have a certain proportion of length. Now it is in general a good rule, that among these conflituent fentences, the last (if possible) should be equal to the first; or if not equal, then rather longer than thorter. The reason is, that without a special cause, abrupt conclusions are offensive, and the reader, like a traveller quietly purfuing his journey, finds an unexpected precipice, where he is difagrecably flopt.

Hanıs.

### § 185. On Monofyllables.

It has been called a fault in our language, that it abounds in Monofyllables. As their, in too lengthened a fuite, difgrace a composition, Lord Shaftesbury, (who fludied purity of flyle with great attention) limited their number to nine; and was careful in his characteriffics, to conform to his own law. Even in Latin too many of them were condemned by Quinctidan.

Above all, care should be had, that a fentence end not with a crowd of them, those especially of the vulgar, untunable fort, fuch as, "to fet it up," to " get by and by at it," &c. for these difgrace a fentence that may be otherwise laudable, and are like the rabble at the close of some pompous cavalcade. Ibid.

## § 186. Authorities alledged.

Twas by these, and other arts of similar fort, that authors in distant ages have cultivated their style. Looking upon knowledge (if I may be allowed the allusion) to pais into the mansions of the mind through language, they were careful (if I may purfue the metaphor) not to offend in the vestibule. They did not effeen it pardonable to despise the public ear, when penter, to every commen mechanic, than

they faw the love of numbers fo univerfally diffuled.

Nor were they discouraged, as if they thought their labour would be loft. In thefe more refined but yet popular arts, they knew the amazing difference between the power to execute, and the power to judge .- that to execute was the joint effort of genius and of habit; a painful acquifition, only attainable by the few ;-to judge, the fimple effort of that plain but common fense, imparted by Providence in fome degree to every one

### § 187. Objectors answered.

But here methinks an objector demands -" And are authors then to compose, and " form their treatifes by rule? - Are they " to balance periods?—To fean pages " and cretics?—To affect alliterations?—

"To enumerate monofyllables?" &c. If, in answer to this objector, it should be fiid, They ought; the permission should at leaft be tempered with much caution. These arts are to be so blended with a pure but common flyle, that the reader, as he proceeds, may only feel their latent force. If ever they become glaring, they degenerate into affectation; an extreme more difguiling, because less natural, than even the vulgar language of an uppolithed clown. 'I is in writing, as in acting-The best writers are like our late admired Garrick-And how did that able genins employ his art?-Not by a vain oilentation of any one of his powers, but by alatent use of them all in such an exhibition of nature, that while we were prefent in a theatre, and only beholding an actor, we could not help thinking ourtelves in Dermark with Hamlet, or in Bosworth field with Richard.

### § 188. When the Habit is once gained, nothing so easy as Practice.

There is another objection still .- These speculations may be called minutine; things partaking at best more of the elegant than of the folid; and attended with difficulties beyond the value of the labour.

To answer this, it may be observed, that when habit is once gained, nothing to early as practice. When the ear is once habituated to these verbal thythms, it forms them spontaneously, without attention or It we call for instances, what more easy to every smith, to every carthe

the several energies of their proper arts? How little do even the rigid laws of verfe obstruct a genius truly poetic? How little did they cramp a Milton, a Dryden, or a Pope? Cicero writes, that Antipater the Sidonian could pour forth Hexameters extempore, and that, whenever he choic to verify, words followed him of courfe. We may aid to Antipater the aucient Rhipfodifts of the Greeks, and the modem Improvifatori of the Irdians. this then be practicable in verfe, how much more to in prote? In profe, the laws of which fo far differ from those of poetry, that we can at any time relax them as we find expedient? Nay more, where to re-Lix them is not only expedient, but even necessary, because, though numerous compolition may be a requilite, yet regularly returning thythm is a thing we should avoid.

§ 189. In every Whole, the confliction Parts, and the Facility of their Coincidence, merit our Regard.

In every whole, whether natural or artificial, the conflituent parts well ment our regard, and in nothing more than in the facility of their coincidence. If we view a landship, how pleasing the harmony beticen hills and woods, between river, and listis! If we felect from this landskip a to a how well does the trunk correspond with its branches, and the whole of its form, with its beautiful verduce! If we can animal, for examp', a fine horfe, to ta union in his colour, his figure and la motions! If one of human race, what may pleatingly congenied, than when virtu and genius appear to anim ite a graceful figure?

--- pulchro veniens e corpore virtus?

The charminereases, if to a graceful figure we add a graceful elocution. Elocution too is heightened still, if it convey the first tent ments; and these again are heightened, if cloathed with graceful diction that is, with words which are rere, frecise, and well arranged.

M.d.

§ 190. Verbal Decerations not to be called Minutia.

We must not call these verbal decorations, minutine. They are effential to the beauty, nay to the completion, of the whole. Without them the completion, though its sentiments may bejust, is like a picture with good drawing, but with bad and desective colouring.

These we are affired were the sentiments of Cicero, whom we must allow to have been a matter in his art, and who has amply and accurately treated verbal decoration and numerous composition, in no less that two capital treaties, (his Octaor, and his De Oramor) are agglering a tirth his own authority with that of villetic and Theophrastus; to whom, if more were wanting, we make that the names of Demetrius Phale eas. Dionysias of Haitearnallis, Dionysius Longinus, and Quinctilian.

. § 191. Advice to Readers.

Whoever reals a perfect or finished composition, whatever be the language, whatever the subject, should read it, even if alone, both audioly and didinctly.

In a composition of this character, not only precise words are admitted, but words metaphorical and ornamental. And farther—as every fentence contains a latent harmony, so is that harmony derived from the rhat most use on buttern that is.

A cong vivon then like this, should (as I fild before) be read both difficulty and audibly; with due regard to stops and paules; with occasional clevations and dependions of the voice, and win tower effects stitutes just at accounterproduction, or knowmentable got all this, reads a work of such character as he would read a fessionspaper, will not only missimany beauties of the flag, but said probably mis. (which is worse) a large proportion of the fense.

Ibid.

§ 192 Every Whole should have a Reginning, a Middle and an End. The Theory examplified in the Georgies of Virgil.

Let us t.k. for an example the most highly finished performance among the Romans, and that in their most perished period, I mean the Georgies of Virgil;

Quid facint lates (ereto, quo tidere terram Veres, Minnos (1) nom que agongere vites Conveniet. (11) que cura boum, qui calcus hobe do

Strecon, fiventhas quanti experience parcis, the come of noise am, &c - ing George I.

In these lines, and so on (if we consult the original) for forty two lines inclusive, we have the beginning; which beginning includes two things, the plan, and the invocation.

In the four first verses we have the plan, which p'an gradually opens and becomes

I i 2 the

THE PARTY OF THE PROPERTY OF T

grateful circumwarch leads them to agree-

The author, if he may be permitted, would refer by way of illustration, to the beginnings of his Hermes, and his phicosphical arrangements, where some attempts have been made in this periodical fiyle. He would refer also, for much more illustrious examples, to the opening of Cicero's Offices; to that of the capital Oration of Demosthenes concerning the Crown; and to that of the celebrated Panegyrie,

made (if he may be so called) by the father

of Periods, Hocrates.

Again—every compound fentence is compounded of other fentences more fimple, which compared to one another, have a certain proportion of length. Now it is in general a good rule, that among these constituent tentences, the last (if possible) should be equal to the first; or if not equal, then rather longer than shorter. The reason is, that without a special cause, abrupt conclusions are offensive, and the reader, like a traveller quietly pursuing his journey, finds an unexpected precipice, where he is disagreeably stopt.

Harris.

#### § 185. On Monosyllables.

It has been called a fault in our language, that it abounds in Monofyllables. As thete, in too lengthened a fuite, difference a composition, Lord Shastesbury, (who studied purity of style with great attention) limited their number to nine; and was careful in his characteristics, to conform to his own law. Even in Latin too many of them were condemned by Quinctinan.

Above all, care should be had, that a fentence end not with a crowd of them, those especially of the vulgar, untunable fort, such as, "to set it up," to "get by and by at it," &c. for these disgrace a fentence that may be otherwise laudable, and are like the rabble at the close of some pompous cavalcade.

\*\*Ibid.\*\*

#### § 186. Authorities alledged.

'Twas by these, and other arts of similar fort, that authors in distant ages have cultivated their style. Looking upon knowledge (if I may be allowed the allusion) to pais into the mansions of the mind through language, they were careful (if I may pursue the metaphor) not to offend in the vestibule. They did not esteen it pardonable to despise the public ear, when

they faw the love of numbers so universally diffused.

Nor were they discouraged, as if they thought their labour would be lost. In these more resined but yet popular arts, they knew the amazing difference between the power to execute, and the power to judge:—that to execute was the joint effort of genius and of habit; a painful acquisition, only attainable by the sew;—to judge, the simple effort of that plain but common sense, imparted by Providence in some degree to every one

### § 187. Objectors answered.

But here methinks an objector demands—" And are authors then to compose, and "form their treatises by rule?—Are they to balance periods?—To sean pagas " and cretics?—To affect alliterations?—" To commerate monofyllables?" &c.

If, in answer to this objector, it should be fiid, They ought; the permission should at least be tempered with much caution. These aits are to be so blended with a pure but common flyle, that the reader, as he proceeds, may only feel their latent force. If ever they become glaring, they degenerate into affectation; an extreme more disgusting, because less natural, than even the vulgar language of an unpolified clown. Tis in writing, as in acting-The best writers are like our late admired Garrick-And how did that able genius employ his art?-Not by a vain oilentation of any one of his powers, but by a latent use of them all in such an exhibition of nature, that while we were prefent in a theatre, and only beholding an actor, we could not help thinking ourfelves in Denmark with Hamlet, or in Bosworth field with Richard.

#### § 188. When the Habit is once gained, nothing jo easy as Practice.

There is another objection fill.—These speculations may be called minutiae; things partaking at best more of the elegant than of the solid; and attended with difficulties beyond the value of the labour.

To answer this, it may be observed, that when habit is once gained, nothing so easy as practice. When the car is once habituated to these verbal rhythms, it soms them spontaneously, without attention of labour. It we call for instances, what more easy to every smith, to every carpenter, to every common mechanic, than

484

the several energies of their proper arts? How little do even the rigid laws of verse obstruct a genius truly poetic? How little did they cramp a Milton, a Dryden, or a Pope? Cicero writes, that Antipater the Sidonian could pour forth Hexameters extempore, and that, whenever he chose to verify, words followed him of courfe. We may add to Antipater the ancient Rhipfodiffs of the Greeks, and the modem Improvifatori of the Italians. this then be practicable in verfe, how much more fo in profe? In profe, the laws of which to far differ from those of poetry, that we can at any time relax them as we find expedient? Nay more, where to re-Lix them is not only expedient, but even necessary, because, though numerous composition may be a requisite, yet regularly returning rhythm is a thing we thould avoid.

§ 189. In every Whole, the confliction Parts, and the Facility of their Coincidence, merit our Regard.

In every whole, whether natural or artificial, the conflituent parts well merit our regard, and in nothing more than in the facility of their coincidence. If we view a landskip, how pleasing the harmony between hills and woods, between rivers, and Irans! If we felect from this landskip a t' e, how well does the trunk correspond vibits brinches, and the whole of its form, with its beautiful verdure! If we this in animal, for example a fine horse, . ta union in his colour, his foure and he motions! If one of human i. ce, what macyle thingly congenial, thin when virtue and genius appear to animite a graceful figure?

- pulchro veniens e corpore viitus?

The charm increases, if to a graceful figure we add a graceful electrical. Election too is heightened full, if it convey electric furthermore, and these again are heightened, if cloathed with graceful diction, that is, with words which are pure, precise, and well arranged.

§ 190. Verbal Decorations not to be called Minutia.

We must not call these verbal decorations, minutine. They are effential to the beauty, nay to the completion, of the whole. Without them the composition, though its sentiments may bejust, is like a picture with good drawing, but with bad and desective colouring.

These we are assured were the sentiments of Cicero, whom we must allow to have been a master in his art, and woo has amply and accurately treated verbal decoration and numerous composition, in no less than two capital treatises, (his Oratos, and his De Oratore) strengthening e until his own authority with that of visitoits and Theophrastic; to whom, if more were wanting, we most add the names of Demetrius Phase eas. Dionysias of Hailearnassius, Dionysius Longinus, and Quinctilian.

## § 191. Advice to Readers.

Whoever reads a perfect or finished composition, whatever be the language, whitever the subject, should read it, even if alone, bor's austibly and distinctly.

In a composition of this character, not only practic words are admitted, but words metaphorical and ornamental. And farther—as every fentence contains a latent harmony, so is that harmony derived from the rhot mobils con litarent parts.

A comparison then like this, should (as I faid before) be read both difficulty and audibly; with due regard to stops and parties; with orizational elevations and departition of the voice, and wn tever else constitutes juliant accurate promunication. Its who, help fing or neplecting, or knowing nothing of all this, reads a work of such character as he would read a session paper, will not only answamp beauties of the stay, but will probably unformant (which is worse) a large proportion of the sense.

Ibid.

§ 192 Evry Whole should have a Beginners, a Middle and an End. The Theory exemplified in the Georgi's of Virgil.

Let us take for an example the most highly finish d perfero ance among the Romans, as I that in their most perfished period, I mean the Georgies of Virgil:

Quad faciat factor femiles, quo fidere terram Vertere, Mainose (finishin que adjoingere vites Convenit, (fini) que cura boum, qui cultus hibitado

hibondo Set , ecori , [rv] ambas quanta experienta parcis, Himocane o incip am, &c — , ng George I.

In these lines, and so on (if we consult the original) for forty two lines inclusive, we have the beginning; which beginning includes two things, the plan, and the invocation.

In the four first verses we have the plan, which p'an gradually opens and becomes I i 2 the

# ESEGANT EXTRACTS IN PROSE

the whole work, as an acorn, when developed, becomes a perfect oak. After this comes the invocation, which extends to the last of the forty-two veries above mentioned. The two together give us the true character of a beginning, which, as above deferibed, nothing can precede, and which it is necessary that something should follow.

The remaining part of the first book together with the three books following, to verse the 458th of book the fourth, make the middle, which also has its true character, that of succeeding the beginning, where we expect something farther; and that of preceding the end, where we ex-

pect nothing more.

The eight last verses of the poem make the end, which, like the beginning, is short, and which preserves its real character by fatisfying the reader that all is complete, and that nothing is to follow. The performance is even dated. It finishes like an epittle, giving us the place and time of writing; but then giving them in such a manner, as they ought to come from Virgil.

But to open our thoughts into a farther

detail.

As the poem, from its very name, respects various matters relative to land, (Georgica) and which are either immediately or mediately connected with it; among the variety of these matters the poem begins from the lowest, and thence advances gradually from higher to higher, till, having reached the highest, it there properly stops.

The first book begins from the simple culture of the earth, and from its humblest progeny, corn, legumes, slowers, &c.

It is a nobler species of vegetables which employs the second book, where we are taught the culture of trees, and, among others, of that important pair, the olive and the vine. Yet it must be remembered, that all this is nothing more than the culture of mere vegetable and inanimate nature.

It is in the third book that the poet rifes to nature fenfitive and animated, when he gives us precepts about cattle, horses,

**£**h.**₽**p, & **c**.

At length, in the fourth book, when matters draw to a conclusion, then it is he treats his subject in a moral and political way. He no longer pursues the culture of the mere brute nature; he then describes, such et tells us

-Mores, et studia, et populos, et suelia, &c.

for fuch is the character of his bees, those truly focial and political animals. It is here he first mentions arts, and memory, and laws, and families. It is here (their great fagacity considered) he supposes a portion imparted of a sublimer principle. It is here that every thing vegetable or merely brutal seems forgotten, while all appears at least human, and sometimes, even divine:

His quidam fignis, atque hac exempla fecuti, Effe applius partem divinae mentis, et hauftus Af therios dixere; deum namque ne per omnes Terrafque tractufque maris, &c

Georg. IV. 219.

When the fubject will not permit him to proceed farther, he fuddenly conveys his reader, by the fable of Ariffus, among nymphs, heroes, demi gods, and gods, and thus leaves him in company supposed more than mortal.

This is not only a fublime conclusion to the fourth book, but naturally leads to the conclusion of the whole work; for he does no more after this than shortly recapitulate, and elegantly blend his recapitulating with a compliment to Augustus.

But even this is not all.

The dry, didactic character of the Georgics, made it necessary they should be enlivened by epifodes and digressions. It has been the art of the poet, that their epifodes and digressions should be homogeneous: that is, should so connect with the subject, as to become, as it were, parts of it. On these principles every book has for its end, what I call an epilogue; for its beginning, an invocation; and for its middle, the feveral precepts relative to its fubicet, I mean husbandry. Having a beginning, a middle, and an end, every part itself becomes a finaller whole, though with respect to the general plan, it is nothing more than a part. Thus the human arm, with a view to its cloow, its hands, its fingers &c. is as clearly a whole, as it is fimply but a part with a view to the entire body.

The smaller wholes of this divine poom may merit some attention; by these I mean

each particular book.

Each book has an invocation. The first invokes the sun, the moon, the various rural deities, and lastly Augustus: the second invokes Bacchus; the third, Pales and Apollo; the fourth his patron Macconas. I do not dwell on these invocations, much less on the parts which follow, for this in fact would be writing a comment upon the poem. But the Epilogues, besides, their

# BOOK II. CLASSICAL AND HISTORICAL.

their own intrinsic beauty, are too much to our purpose to be passed in silence.

In the arrangement of them the poet fems to have purfued fuch an order, as that alternate affections should be alternately excited; and this he has done, well knowing the importance of that generally acknowledged truth, "the force derived to contraries by their juxta-position or succession." The first book ends with those portents and prodigies, both upon earth and in the heavens, which preceded the death of the dictator Cæfar. To thefe direful scenes the epilogue of the second book opposes the tranquillity and felicity of the rural life, which (as he informs us) faction and civil differed do not usually impair-

Non 10s Romanæ, peritur ique 10gna-

In the ending of the third book we read of a peffilence, and of nature in devaffation; in the fourth, of nature reflored, and, by help of the gods, replenished.

As this concluding epilogue (I mean the table of Arifkeus) occupies the most important place; so is it decorated accordingly with language, events, places,

and perforages.

No language was ever more polished and harmonious. The descent of Aristeus to his mother, and of Orpheus to the shades, are events; the watery palace of the Neredes, the cavern of Proteus, and the fene of the infernal regions, are places; Artifaus, old Proteus, Orpheus, Eurydice, Cyllene, and her nymphs, are personages; all great, all striking, all sublime.

Let us view these epilogues in the poet's

order.

I. Civil Horrors.

II. Rural Tranquillity.

Nature laid wafte.

IV. Nature reflored.

Here, as we have faid already, different pations are, by the subjects being alternate, alternately excited; and yet withal excited so judiciously, that when the poem concludes, and all is at an end, the reader leaves off with tranquillity and joy.

§ 193. Exemplified again in the Menexenus of Plato.

From the Georgics of Virgil we proceed to the Menexenus of Plato; the first being the most finished form of a didactic

poem, the latter the most consummate mo-

The Menevenus is a funeral oration in praise of those brave Athenians, who, had fallen in battle by generously afferting the cause of their country. Like the Georgies, and every other just composition, this oration has a beginning, a mid-

dle, and an end.

The beginning is a folemn account of the deceased hiving received all the legitimate rights of burial, and of the propriety of doing them honour not only by deeds but by words; that is, not only by funeral ceremonies, but by a speech, to perpetuate the memory of their magnanimity, and to recommend it to their posterity, as an object of imitation.

As the deceased were brave and gallant men, we are shewn by what means they came to possess their character, and what noble exploits they perform in con-

lequence.

Hence the middle of the oration contains first their origin; next their education and form of government; and last of all, the consequence of such an origin and education; their heroic atchievements from the earliest days to the time then present.

The middle part being thus complete, we come to the conclution, which is perhaps the most sublime piece of oratory, both for the plan and execution, which is extant, of any age, or in any lan-

guage.

By an awful profopopeia, the deceased are called up to address the living; and fathers slain in battle, to exhort their living children; the children slain in battle, to confole their living fathers; and this with every idea of manly consolation, with every generous incentive to a contempt of death, and a love of their country, that the powers of nature or of art could suggest.

'Tis here this oration concludes, being (as we have thewn) a perfect whole, executed with all the frength of a fublime language, under the management of

a great and a fublime genius.

If these speculations appear too dry, they may be rendered more pleasing, if the reader would peruse the two pieces criticized. His labour, he might be assured, would not be lost, as he would peruse two of the sinest pieces which the two finest ages of antiquity produced.

Ibid.

194.

\* See before, § 179. .

§ 194. The Theory of Whole and Parts concerns finall Works as well as great.

We cannot however quit this theory concerning whole and part, without observing that it regards alike both for ill wo ke and great; and that it defeends even to an effay, to a fonnet, to an ode. These minuter florts of genius, unless they possels (if I may be pardoned the expression) a certain character of Totality, lose a capital plafure derived from their union; from a union which, collected in a few pertinent ideas, combines them all happily under one anneable form. Without this union, the production is no better than a fort of vague entution, where fentences follow fentences, and thanzas follow flanzas, with no apparent reason why they should be two ratter than twenty, or twenty rather than two.

If we want another argument for this minuter Totality, we may refer to nature, which art is faid to mitute. Not only this universe is one supendous whole, but such also is a tree, a shoot a slower; such those beings which, without the aid of glassies, even escape our perception. And so much for Totality (I venture to familiarize the term) that coramon and essential character to every legitimate composition.

Harris.

itton.

## § 195. On Accuracy.

There is another character left, which, though foreign to the prefent purpofe, I venture to mention; and that is the character of Accuracy. Every work ought to be as accurate as possible. And yet, though this apply to works of every kind, there is a difference whether the work be great or small. In greater works (such as histories, epic poems, and the like) their very magnitude excuses incidental defects; and their authors, according to Horace, may be allowed to slumber. It is otherwise in smaller works, for the very reason that they are smaller. Such, through every part, both in sentiment and diction, should be perspicuous, pure, simple, and precise.

#### § 196. On Diction,

As every fentiment must be express by words, the steery of sentiment naturally leads to that of Diction. Indeed, the connection between them is so intimate, that the same sentiment, where the diction differs, is as different in appearance, as the

fame person, drest like a peasant, or drest like a gentleman. And hence we see how much diction merits a serious attention,

But this perhaps will be better underflood by an example. Take then the following—"Don't let a lucky hit flip; if you do, be-like you mayn't any more get at it." The fentiment (we must confets) is express clearly, but the diction furely is rather vulgar and low. Take it another way—"Opportune moments are few and fleeting; seeze them with a vidity, or your progression will be impeded." Here the diction, though not low, is rather obscure. The woods are unifual, pedantic, and effected.—But what says shake speare:—But what says shake speare:

There is a tide in the inter-of-men, Which, taken a the flood, haden to to fortune; Omitted, all the volves of the raffe. Is bound in thallow,

Here the dittion is elegant, without being sulgar eraffected; the words, though common, being taken under a metaphor, are fo far elfranged by this metaphorical ufe, that they acquire, through the change, a competent dignity, and yet, without becoming vulg 1, remain intelligible and clear.

18.14.

### § 197. On the Metaphor.

Knowing the stress laid by the ancient critics on the Metaphor, and viewing its admirable effects in the decorating of Diction, we think it may merit a faither

regard.

There is not perhaps any figure of speech for pleasing as the Metaphor. It is at times the language of every individual, but above all, is peculiar to the man of genius. His fagacity discerns not only common analogies, but those others more remote, which escape the vulgar, and which, though they feldom invent, they feldom still to recognize, when they hear them from persons more ingenious than themselves.

It has been ingeniously observed, that the Metaphor took its rife from the poverty of language. Men, not finding upon every occasion words ready made for their ideas, were compelled to have recourse to words analogous, and transfer them from their original meaning to the meaning then required. But though the Metaphor began in poverty, it did not end there. When the analogy was just (and this often happened) there was something peculiarly pleasing in what was both new, and yet familiar; so that the Metaphor was then cultivated, not out of necessity, but for or-

nament.

# BOOK II. CLASSICAL AND HISTORICAL.

nament. It is thus that cloaths were set assumed to defend us against the cold, but came afterwards to be worn for distinction and decoration.

It must be observed, there is a force in the united words, neve and function. What is new, but not familiar, is often unintelligible; what is familiar, but not new, is no better than common place. It is in the union of the two, that the observed; and it is in this union, that we view the character of a just Metaphyr.

But after we have so praised the Metaphor, it is sit at length we should explain what it is; and this we shall attempt, as well by

a description, as by examples.

"A Metaphor is the transferring of a "word from its usual meaning to an ana"logous meaning, and then the employ"ing it agreeably to fach transfer." For example, the usual meaning of evening is a conclusion of the day. But age too is a conclusion; the conclusion of human life. Now there being an analogy in all conclusions, we arrange in order the two we have alledged, and fay, that, as evening is to the day, so is age to human life. Hence, by an easy permutation, (which farinthes at once two metaphors) we say alternately, that evening is the age of the day; a id that age is the evening of life.

Thre are other metaphors equally pleafing, but which we only mention, as their avalogy cannot be milaken. It is thus that old men have been called flubble; and the flage, or theatre, the mirror

of human life.

In language of this fort there is a double farisfiction: it is strikingly clear; and yet raifed, though clear, above the low and vulgar idiom. It is a praise too of such metaphors, to be quickly comprehended. The similitude and the thing illustrated are commonly dispatched in a single word, and comprehended by an immediate and inflantaneous intuition.

Thus a person of wit, being dangerously ill, was told by his friends, two more physicians were called in. So many! says he—lo they fire then in platoons?——

. Harris.

§ 198. What Metaphors the best.

These instances may affist us to discover what metaphors may be called the best.

They ought not, in an elegant and polite fyle (the flyle of which we are speaking) to be derived from meanings too sublime;

for then the diction would be turgid and bombast. Such was the language of that poet who, deferibing the footman's flambeaux at the end of an opera, tung or faid,

Now blood a thousand floring fairs, and bade Gran high there-

Nor ought a metaphor to be fire-fetched, for then it becomes an enigma. It was thus a gentleman once puzzled his country fittend, in telling him, by way of compliment, that he was become a perfect centur. His honeft fitend knew nothing of centurs, but being fond of riding, was hardly ever off his horle.

Another extreme remains, the reverso of the too tubinace and that is, the transferring from tup, cts too contempable. Such was the case of that post quoted by Horace, who to defenbe writes, wrote

Jupater hybernes cana mile consepart Alpes.
(10 of 1 ft. Satt 5-)
O'er the cold Alps Jove it its balloary frow.

Nor was that modern poet more fortunate, whom Dryden quotes, and who, trying his genius upon the fame fubject, fup, ored winter—

To periving with from the bildpate woods.

With the time class of wits we may arrange that pleafant fellow, who, speaking of an old lady whom he had affionted, gave us in one thort fentence no less than three choice metaphors. I perceive (faid he) her back is up;—I mait curry favour—or the fat will be in the fire.

Nor can we omit that the fame word, when transferred to the fame fubjects, produces me uphors very different, as to pro-

priety or impropriety.

It is with propriety that we transfer the words to endrage, from human beings to things purely ideal. The metaphor appears jud, when we fay, to embrace a proportion; to embrace an offer; to embrace an opportunity. Its application perhaps was not quite to elegant, when the old fleward wrote to his lord, upon the fubject of his farm, that, "if he met any oxen, he would not fail to embrace them."

If then we are to avoid the turgid, the enigmatic, and the bate or ridiculous, no other metaphors are left, but such as may be described by negatives; such as are neither turgid, nor enigmatic, nor base and ridiculous.

Such is the character of many metaphors already alledged; among othres that of Shakespeare's, where tides are transferred to speedy and determined conduct.

li4 Nor

# FARGARY SATRACTS IN PROSE

Nor does his Wolfey with less propriety moralize upon his fall, in the following it obscure the lustre," &c. &c. Harris. beautiful metaphor, taken from vegetable nature:

This is the state of man; to-day he puts forth The tender leaves of hope; to morrow bloffoms; And bears his bluthing honours thick upon him; The third day comes a frost, a killing frost, -nips his root-

In such metaphors (besides their intrinsic elegance) we may fay the reader is flattered; I mean flattered by being left to discover something for himself.

There is one observation, which will at the same time shew both the extent of this figure, and how natural it is to all men.

There are metaphors so obvious, and of course so naturalized, that, ceasing to be metaphors, they become (as it were) the proper words. It is after this manner we fay, a sharp fellow; a great orator; the foot of a mountain; the eye of a needle; the bed of a river; to ruminate, to ponder, to edify. &c. &c.

There we by no means reject, and yet the metaphors we require we wish to be tomething more, that is, to be formed under the respectable conditions here established.

We observe too, that a singular use may be made of metaphors either to exalt or to depreciate, according to the fources from which we derive them. In ancient flory, Orestes was by some called the murtherer of his mother; by others, the avenger of his father. The reasons will appear, by refer-.ring to the fact. The poet Simonides was offered money to celebrate certain mules. that had won a race. The fum being pitiful, he faid, with disdain, he should not write upon demi-affes-A more competent fum was offered, he then began;

Hail! Daughters of the generous horfe, That fkims, like wind, along the courfe.

There are times, when, in order to exalt. we may call beggars, petitioners; and pick-pockets, collectors: other times, when, in order to depreciate, we may call petitioners, beggars; and collectors, pickpockets .- But enough of this.

We fay no more of metaphors, but that it is a general caution with regard to every species, not to mix them, and that more particularly, if taken from subjects which are contrary.

Such was the case of that orator, who pace afferted in his oration, that if cold " water were thrown upon a certain mea-

fure, it would kindle a flame, that would

### § 199. On Enigmas and Puns.

A word remains upon Enigmas and Puns. It shall indeed be short, because, though they resemble the metaphor, it is as brase and copper resemble gold.

A pun seldom regards meaning, being

chiefly confined to found.

Horace gives a fad fample of this fourious wit, where (as Dryden humorously translates it) he makes Persius the burnot exhort the patriot Brutus to kill Mr. King, that is, Rupilius Rex, because Brutus, when he flew Clefar, had been accustomed to king killing:

Hunc Regem occide; operum hoc milit crede tuorum est. Horat. Sat Lib. I. VII.

We have a worfe attempt in Homer; where Ulyffes makes Polypheme believe his name was OTTIE, and where the dull Cyclops, after he had loft his eye, upon being asked by his brethien, who had done him so much mischief, replies it was done by OΥTIE, that is, by nobody.

Enigmas are of a more complicated nature, being involved either in pun, or me-

taphor, or fometimes in both:

'Ανδρείδον τους χαλκόν έτ' ἀνέςι κολλήστυτα. I faw a man, who, unprovok'd with ne. Struck brats upon another's back by fire.

This enigma is ingenious, and means the operation of cupping, performed in ancient days by a machine of brass.

In fuch fancies, contrary to the principles of good metaphor and good writing, a perplexity is caused, not by accident but by defign, and the pleafure lies in the being able to refolve it.

## § 200. Rules defended.

Having mentioned Rules, and indeed this whole theory having been little more than rules developed, we cannot but remark upon a common opinion, which feems to have arisen either from prejudice or midake.

"Do not rules," fay they, "cramp " genius? Do they not abridge it of cer" tain privileges?"

'Tis answered, If the obeying of rules were to induce a tyranny like this; to defend them would be abfurd, and against the liberty of genius. But the truth is, rules, supposing them good, like good government, take away no privileges.

They do no more, than fave genius from error, by shewing it, that a right to err is

no privilege at all.

'Tis furely no privilege to violate in grammar the rules of syntax; in poetry, those of metre; in music, those of harmony; in logic, those of fyilogism; in painting, those of perspective; in dramatic poetry, those of probable imitation.

Harris.

#### The flattering Doctrine that Genius \$ 201. will fuffice, fallacious.

It must be confessed, 'tis a flattering doctrine, to tell a young beginner, that he has nothing more to do than to truit his own genius, and to contemn all rules, as the tyranny of pedants. The painful tods of accuracy by this expedient are eluded, for geniuse, like Milton's Harps, (Par. Loit, Book III. v. 365, 366.) are supposed to be ever tuned.

But the misfortune is, that genius is femething rare; nor can he who possesses it, even then, by neglecting rules, produce what is accurate. Those, on the contra-11, who, though they want genius, think rale, worthy their attention, if they cannot become good authors, may still make tolerable critics; may be able to fliew the difference between the creeping and the simple; the pert and the pleasing; the turged and the fublime; in short, to sharpea, like the whetflone, that genius in others, which nature in her frugality has not given to themselves.

#### § 202. No Genius ever affed quithout Rules.

Indeed I have never known, during a life of many years, and fome finall attention paid to letters, and literary men, that genius in any art had been ever crainpt by rules. On the contrary, I have feen great geniuses, miserably err by transgrefing them, and, like vigorous travellers, Who lofe their way, only wander the wider on account of their own firength.

And yet 'tis somewhat singular in literary compositions, and perhaps more fo in poetry than elsewhere, that many things have been done in the best and purest taste, long before rules were established and syflematized in form. This we are certain "as true with respect to Homer, Sophocles, Euripides, and other Greeks. In modern times it appears as true of our admired Shakespeare; for who can believe

that Shakespeare studied rules, or was ever versed in critical systems?

#### § 203. There never was a time when Rules did not exift.

A specious objection then occurs. "If " these great writers were so excellent " before rules were established, or at least " were known to them, what had they to " direct their genius, when rules (to them " at least) did not exist?"

To this question 'tis hoped the answer will not be deemed too hardy, should we affert, that there never was a time when rules did not exist; that they always made a part of that immutable truth, the natural object of every penetrating genius; and that if, at that early Greek period, fystems of rules were not established, those great and fublime authors were a rule to themfelves. They may be faid indeed to have excelled, not by art, but by nature; yet by a nature which gave birth to the perfection of art.

The case is nearly the same with respect to our Shakespeare. There is hardly any thing we applaud, among his innumerable beauties, which will not be found flrictly conformable to the rules of found and ancient criticism.

That this is true with respect to his characters and his fentiment, is evident hence, that in explaining thefe rules, we have so often recurred to him for illustrations.

Befides quotations already alledged, we fubjoin the following as to character:

When Falftaff and his fuite are fo ignominioufly routed, and the fcuffle is by Falflaff fo humoroully exaggerated; what can be more natural than fuch a narrative to fuch a character, delinguished for his humour, and withal for his want of veracity and courage?

The fagacity of common poets might not perhaps have fuggetted to good a narrative, but it certainly would have fuggested something of the kind, and 'tis in this we view the effence of dramatic character, which is, when we conjecture what any one will do or fay, from what he has done or faid already.

If we pass from characters (that is to fay manners) to fentiment, we have already given inflances, and yet we shall still give another.

When Rofincroffe and Guildernstern wait upon Hamlet, he offers them a recorder or

pipr.

pipe, and defires them to play-they reply, they cannot-He repeats his request, that if there be any things in Snakespeare they answer, they have never learnt-He affures them nothing was fo eafy-they still decline .- 'Tis then he tells them, with disdain, "There is much music in this " little organ; and yet you cannot make " it speak-Do you think I am easier to " be played on than a pipe?" Hamlet, A& III.

This I call an elegant fample of fentiment, taken under its comprehensive fense, But we stop not here-We consider it as a complete instance of Socratic reasoning, though 'tis probable the author knew nothing how Socrates used to argue.

To explain-Xenophon makes Sociates reason as follows with an ambitious youth,

by name Euthydemus.

"Tis strange (says he) that those who " defire to play upon the harp, or upon " the flute, or to ride the managed horse, " should not think themselves worth notice, " without having practifed under the best " masters-while there are those who af-" pire to the governing of a state, and can "think themselves completely qualified, "though it be without preparation or Xenoph. Mem. IV. c. 2. " labour." f. 6.

Aristotle's Illustration is similar, in his reasoning against men chosen by lot for magistrates. "'Tis (says he) as if wrestlers were to be appointed by lot, and not those that are able to wrelle; or, as if from among failors we were to chute a pilot by lot, and that the man fo elected was to navigate, and not the man who knew the business." Rhetor. L. II. c. 20. p. 94. Edit. Sylb.

Nothing can be more ingenious than this mode of reasoning. The premises are obvious and undeniable; the conclufion cogent and yet unexpected. It is a species of that argumentation, called in dialectic Emayayn, or induction.

Aristotle in his Rhetoric (as above quoted) calls such reasonings τὰ Σωκρατικά, the Socratics; in the beginning of his Poetics, he calls them the Σωκρατικοί λόγοι, the Socratic discourses; and Horace, in his Art of Poetry, calls them the Socra-Harris. ticæ chartæ.

§ 204. The Connection between Rules and Genius.

If truth be always the same, no wonder geniuses should coincide, and that too in philosophy, as well as in criticism.

We venture to add, returning to rules. objectionable (and who is hardy enough to deny it?) the very objections, as well as the beauties, are to be tried by the same rules; as the fame plummet alike shews both what is out of the perpendicular, and in it; the same rules alike prove both what is crooked and what is flraight.

We cannot admit that geniuses, though prior to fystems, were prior also to rules, because rules from the beginning existed in their own minds, and were a part of that immutable truth, which is eternal and every where. Arittotle, we know, did not form Homer, Sophocies, and Euripides; 'twas Homer, Sophoeles, and Euripides, that formed Aristotle.

And this furely should teach us to pay attention to rules, in as much as they and genius are fo reciprocally connected, that tis genius which discovers rules; and then

rules which govern genius.

'Tis by this amicable concurrence, and by this alone, that every work of art justle merits admiration, and is rendered as highly perfect as, by human power, it can be made.

§ 205. We ought not to be content with knowing what we like, but what is really worth liking.

'Tis not however improbable, that some intropid spirit may demand again, What avail theie fubtleties?-Without fo much trouble, I can be full enough pleafed-I know what I like .- We answer, And to does the carrion-crow, that feeds upon a carcafe. The difficulty hes not in knowing what we like, but in knowing how to I.ke, and what is worth liking. Till these ends are obtained, we may admire Durfey before Milton; a fmoking boor of Hemskirk, before an apostle of Raphael.

Now as to the knowing how to like, and then what is worth liking; the first of thefe, being the object of critical disquifition, has been attempted to be shewn through the course of these inquiries.

As to the fecond, what is worth our liking, this is best known by studying the beil authors, beginning from the Greeks; then passing to the Latins; nor on any account excluding those who have excelled among the moderns.

And here, if, while we pursue some author of high rank, we perceive we don't instantly relish him, let us not be disheartened-let us even feign a relish, till weg

A morfel perhaps and a relish come. pleases us-let us cherish it-Another morfel strikes us-let us cherish this also. -Let us thus proceed, and fleadily perfevere, till we find we can relish, not morfels, but wholes; and feel, that what bepan in fiction terminates in reality. The him being in this manner removed, we shall discover beauties which we never imagined; and contemn for purilities, what we once foolishly admired.

One thing however in this process is indiffernably required: we are on no account to expect that fine things should defrend to us; our take, if possible, must be

made to ticend to them.

T wi the labour, this the work; there is pleature in the fuccess, and praise even

in the attempt.

This (pre lation applies not to literature o ly: it applies to mude, to painting, and, a they are all congenial, to all the liberal airs. We should in each of them endeayour to investigate what is best, and there (if I may so express myself) fix our abode.

By only feeking and perufing what is truly excellent, and by contemplating always this and this alone, the mind intenfibi, becomes accustomed to it, and finds t'at in this alone it can acquishe with contest. It happens indeed here, as in a fully cet for more important, I mean in a moral and a virtuous condust. if we chuse the best rife, use will make it pleafast.

\$ 2.6 Charafter of the ENGLISH, the LATIN, and the ORIENTAL, the GREEK Languages.

We Britons in our time have been remakable borrowers, as our multiform language may fufficiently thew. Our terms In polite literature prove, that this came tom Greece; our terms in mulic and Punting, that there came from Italy; our phales in cookery and war, that we learnt there from the French; and our phrases in navigation, that we were taught by the Flemings and Low Dutch. These many and very different fources of our language may be the coufe why it is so deficient in regularity and analogy. Yet we have this advantage to compensate the defect, that what we want in elegance, we gain in copioulnels, in which last respect few languages will be found superior to our own.

Let us pass from ourselves to the nations of the East. The Eastern world, from the earliest days, has been at all

times the feat of enormous monarchy : on its natives fair liberty never shed its genial influence. If at any time civil difcords arote among them, (and arife there did innumerable) the contest was never about the form of their government (for this was an object of which the combatants had no conception;) it was all from the poor motive of, who should be their master; whether a Cyrus or an Artaxerxes, a Ma-

homet or a Mullapha.

Such was their condition; and what was the confequence?-Their ideas became conforant to their fervile flate, and their words became conforant to their fervile i leas. The great diffinition for ever in their fight, was that of tyrant and flave; the most unnatural one conceivable, and the most susceptible of pomp and empty exaggeration. Hence they talked of kings as gods; and of themfelves as the meaneit and most abject reputes. Nothing was either great or little in moderation, but every fentiment was heightened by incredible hyberbole. Thus, though they fometimes alcended into the great and magnificent+, they as frequently degenerated into the tunid and bomball. The Greeks too of Afia became infected by their neighbours, who were often, at times, not only their neighbours, but their matters; and hence that Invariance of the Ahatic flyle, unknown to the chaile eloquence and purity of Athens. But of the Greeks we forbear to fpeak now, as we shall speak of them more fully, when we have first confidered the nature or genius of the Romans.

And what fort of people may we pronounce the Romans? - A nation engaged in wars and commotions, fome foreign, fome domestic, water for teven hundred years wholly engroffed their thoughts. Hence therefore their language became, like their ideas, copious in all terms expreffive of things political, and well adapted to the purposes both of history and popular eloquence .- But what was their philosophy?-As a nation it was none, if we may credit their ableit writers. And hence

. For the Barbarians, by being more flavish in their manners than the Greeks, and those of Afia than those of Europe, tubinit to despotic government without murmining or discontent. Anft. Poht. III. 4

† The truett fublime of the Eaft may be found in the feriptuits, of which perhaps the principal cause is the intrinsic greatness of the subject there treated; the creat on of the universe, the dispentations of divine Providence, &c.

the .

the unfitness of their language to this subject; a defect which even Cicero is compelled to confess, and more fully makes appear, when he writes philosophy himself, from the number of terms which he is obliged to invent\*. Virgil seems to have judged the most truly of his countrymen, when, admitting their inferiority in the

\* See Cic. de Fin. I. C. 1, 2, 1, 111. C. 1, 2, 4, &c. but in particular Tuic. Ditp I 3, where he fays, " Philotophia jacuit ufque ad banc ætatem, nec ullam habent lumen literarum Latinarum: que illustranda & excitanda nobis est; ut 6," &c. See also Tute. Ditp. IV. 3. and Acad. I. 2. where it appears, that until Cicero applied himfelf to the writing of philotophy, the Romans had nothing of the kind in their language, except some mean performances of Amatamus the Epicurean, and others of the fame feet. How far the Romans were indebted to Cicero for philofophy, and with what industry, as well as cloquence, he cultivated the fullect, may be feen not only from the titles of those works that are now loft, but much more from the many noble bnes full fortunately preferved.

The Epicirean poet Lucreties, who flourified nearly at the Lame time, feems by his filence to have overlooked the Latin vinters of his own feet; deriving all his philosophy, is well as Citero, from Grecian touices; and, like him, acknowledging the difficulty of writing philosophy in Latin, both from the poverty of the tongue, and from the novelty of the fullyect.

Nec me animi fallit, Graiorum obscura reperta

Difficile inhuftrare Lating verfibus effe, (Multa novis robus præfertim quum fit agen-

dum,)

Propter egeftatem linguæ et rerum novitatem: Sed tia me virtus tamen, et fperata voluptas Suavis amientæ quemvis perferre laborem Suadet — Lucr. l. 237.

In the fame age, V. 110, among his numerous works, whote fome in the way of philotophy, as did the patriot Brutus a treatife concerning virtues much applicated by Cicero; but there works are now life.

Soon after the writers above mentioned came Horace, fome of whole lattices and ep tiles may be juftly ranked among the most valuable pieces of Latin philosophy, whether we counder the purity of their style, or the great address with

which they trent the jubicet.

After Horare, though with as long an interval as from the days of Augustus to those of Nero, came the fattrift Persius, the friend and disciple of the stoic Cornutus; to whose precepts, as he did honour by his virtuous life, so his works, though small, shew an early proficiency in the science of morals. Of him it may be said, that he is almost the single difficult writer among the Litin classics, whose meaning has sufficient ment to make it worth while to labour through his obsciunities.

In the fame degenerate and tyrannic period lived also Seneca; whose character, both as a man and a writer, is discussed with great accuracy by the noble author of the Characteristics,

to whom we refer.

more elegant arts, he concludes at last with his utual majesty:

Tu regere imperio populos, Romane, memento, (Hæ tibi crunt artes) pacifque imponere morem, Parcere subjectis, et debellare superbos.

From confidering the Romans, let us pass to the Greeks. The Grecian commonwealths, while they maintained their

Under a milder dominion, that of Hadran and the Antonines, hyed Aulus G llius, or (as four-call him) Agellius, an entert ming writer in the mitcellaneous way, well felled in criticitin and antiquity; who; though he can hardly be entitled to the name of a philotopher, yet deferves actor pals unmentioned here, from the Cution, tragments of philotophy intersperied in his works.

With Aulus Gellius we'r ingo Mastebius, not becaufe a contemporary (to be is fuppase) to have lived under Honorius and Theodotie) for from his near refemblance, in the character as writer. His works, like the other's, are rober-laneous; tilled with mythology and ancent becaute from a published with mythology and ancent becaute from a published by hence intermixed. He comment as a upon the Somantin Supports of Coero may be confidered at wholly of the philosophical kind.

In the time age with Aulus Gellius, flouished Apuleius of Madula in Africa, a Platonic write, whole matter in general far exceeds his perpleted and affected dyl, too conformable to the fallthetenic of the age when he lived.

Of the fame country, but of a later age, and a harther ityle, was Martanus Capell is if indeed to define it the name rather of a philologith, CAA of a philologith.

after Capella we may rank Chalendus Ce Platone, though both his age, and country, and religion, are do abtful. His manner of writing a rather more especiable than that of the two preceding not does be appear to be their inferior in the knowledge of philotophy, his work head a landable commentary upon the 1 minus of Platon

The I fl Latin phelosopher was Boethus, who was defeeted from tome of the nobleft of the Roman fumilies, and was conful in the begarming of the fixth century. He wrote many parlosophreal works, the greater part in the logast way. But his ethic piece, "On the Confolition of Phil dophy," and which is partly prote and partly werte, deferves great encommums both for the matter and for the ityle; in which lut be approaches the purity of a far better age than his own, and is in all respects presenable to those crabbed Africans already mentioned. B conmand of Theodoric, king of the Goths, it wis the hard fate of this wo, thy man to fuffer death; with whom the Latin tongue, and the last icmains of Roman dignity, may be faid to have funk in the western world.

There were other Romans, who left phylofophical writings; fich as Mufonius Rufus, and the two emperors, Marcus Antonius and Julian; but as there preferred the use of the Greek tongue to their own, they can hardly be considered among the number of Latin writers.

And so much (by way of sketch) for the Latia authors of philosophy; a small number for so vait an empire, if we consider them as all the product of near six successive centuring liberty.

siberty, were the most heroic confederacy that ever existed. They were the politest, the bravest, and the wisest, of men. In the short space of little more than a century they became such statesmen, warriors, orators, historians, physicians, poets, critics, painters, sculptors, architects, and slat of all) philosophers, that one can hardly help considering that golden period, as a providential event in honour of human nature, to show to what perfection the species might ascend\*.

Now the language of these Greeks was truly like themselves; it was consormable to their transcendant and universel genius. Where matter so abounded, words sollowed of course, and those exquisite in every land, as the ideas for which they stood. And hence it followed, there was not a Police to be found which could not with appropriate the expressed in Greek.

propriety be expressed in Greck.

Here were words and numbers for the

\* If we except Homer, Hefiod, and the Lyberpotts, we hear of few Greena writers between the expedition of Xerxis. After that monarch had been defeated, and the dread of the Perfan power was at an end, the effulgence of Greena genus (if I may use the expression) independent of the Macedonian, after whom it disappeared, and never rose again. This is that golden period spoken of above. I do not mean that Greece bed not many writers of great ment subsequent to the period, and especially of the philosophic lend, but the great, the striking, the subsequent to a begin to which it never could ascend in any stream.

fine fame kind of fortune befel the people of Rome. When the Punic wars were ended, and Cuthage, their dreaded ivid, was no more, then, Herace informs us, they began to cultivate is politic arts. It was foon after this their great actors, and historiams, and poets arose, and historiams, and poets arose, and some, like Greece, had her golden period, which libed to the death of Octavius Cafar.

I call thefe two periods, from the two greatest geniuses that flourished in each, one the Sociation

pen d, the other the Ciceronian.

There are fill farther analogies fubfifting between them. Neither period commenced, as long as folicitude for the common welfare en-3rd men's attentions, and fuch wars impended " threatened their destruction by foreigners and tarbarians. But when once thefe fears were ever, a general fecurity foon entued, and inflead of attending to the arts of defence and felf-prefervition, they began to cultivate those of cherance and pleafure. Now, as these naturally produced a kind of wanton infolence, not unlike the vicious temper of high-fed animals; fo by this the Bands of amion were infenfibly diffolved. Hence then, among the Greeks, that fatal Peloponnefian war, which, together with other wars, s's immediate confequence, broke the confede-

humour of an Afistophanes; for the native elegance of a Philemon or Menander; for the amorous strains of a Minnermus or Sappho; for the rural lays of a Theoritus or Bion; and for the sublime conceptions of a Sophocles or Homer. The same in prote. Here stocrates was enabled to diplay his art, in all the accuracy of periods and the nice count rpoite of diction. Here Demosthenes found materials for that nervous composition, that manly force of unaffected eloquence, which rushed like a torrent, too impetuous to be withstood.

Who were more different in exhibiting their philosophy, than Xenophon, Plato, and his disciple Aristotle? Different, I say, in their character of composition; for, as to their philosophy itself, it was in reality the same. Aristotle, strict, methodic, and orderly; subtle in thought; sparing in ornament; with little addicts to the passions or imagination; but exhibiting the

incy of their commonwealths; wafted their itteneth; made them jealous of each other; and thus pixed i way for the contemptable kingdom of Micedon to endaye them all, and afcend in a few years to universal monarchy.

A like luxurance of professity fowed discord among the Romans; raifed those unhappy contents, between the senate and the Gracela; between Sylls and Muius; between Pompey and Cestar; till at length, after the last struggle for liberty by those brace patriots, Brutus and Cashus at Philippis, and the sublequent deet at of Antony at Achium, the Rom in became subject

to the dominion of a fellow citizen.

It must indeed be confeded, that after Alexander and Octavius had established their monarchies, there were many bright geninfes, who were emment under their government. Auftotle maintained a friendflip and epiftulary correspondence with Alexander. In the time of the fame monarch lived Theophraftus, and the cyme Diogenes. Then also Demosthenes and Attennes fpoke their two celebrated orations. So likewife, in the time of O tivius, Virgil wrote his Aincid, and with Horne, Varius, and many other fine writer, partock of his protection and royal munificence. But then it must be remembered, that these men were bied and oducated withe principles of a free government. It was hence they derived that high and manly fprist which made them the admiration of after-ages. The fuccifiors and forms of government left by Alexander and Octavius, foon stopt the growth of any thing farther in the kind. So true is that egides, & The wegi ta wouten penoripiae. "It is liberty that is formed to nurse the tentiments of great genules; to infpire them with hope; to puft forward the propentity of contest one with annther, and the generous emulation of being the first in rank." De hubb Sect 44. sybole in every fentence we feem to read a page. How exquisitely is this all performed in Greek! Let those, who imagine it may be done as well in another language, fatisfy themselves, either by attempting to translate him, or by perusing his translations already made by men of learning. On the contrary, when we read either Xenophon or Plate, nothing of this method and flifet order appears. The formal and didactic is wholly dropt. Whatever they may teach, it is without profesting to be teachers; a train of dialogue and truly polite address, in which, as in a mirror, we behold human life adorned in all its colours of fentiment and manners.

And yet, though these disser in this manner from the Stagyrite, how different are they likewise in character from each other!—Plato, copious, sigurative, and majessic; intermixing at times the facetious and fatric; enriching his works with tales and fables, and the myssic theology of ancient times. Xenophon, the pattern of perfect simplicity; every where smooth, harmonious, and pure; declining the sigurative, the marvellous, and the myssic; ascending but rarely into the sublime; nor then so much trusting to the colours of style, as to the intrinsic dignity of the sentiment itself.

The language, in the mean time in which he and Plato wrote, appears to fuit fo accurately with the fivle of both, that when we read either of the two, we cannot help thinking, that it is he alone who has hit its character, and that it could not have appeared fo elegant in any other manner.

And thus is the Greek tongue, from its propriety and univerfality, made for all that is great and all that is beautiful, in every fubject and under every form of writing:

Grais ingenium, Grais dedit ore rotundo Muta loqui.

It were to be wished, that those amongst us, who either write or read with a view to employ their liberal leisure (for as to such as do either from views more fordid, we leave them, like slaves, to their destined drudgery) it were to be wished, I say, that the liberal (if they have a relish for letters) would inspect the finished models of Grecian literature; that they would not waste those hours, which they cannot recal, upon the meaner productions of the French

whole with such a pregnant brevity, that in every sentence we seem to read a page. How exquisitely is this all performed in Greek! Let those, who imagine it may be done as well in another language, satisfolid improvement.

To be competently skilled in ancient learning is by no means a work of fire intuperable pains. The very progrets as felf is attended with delight, and refembles a journey through fome pleafant countries where, every mile we advance, new charn; arife. It is certainly as easy to be a scho. lar, as a gameiler, or many other characters equally illiberal and low. The time application, the tame quantity of habit, will fit us for one as completely as for the And as to those who tell us, with an air of feeming wildom, that it i m n, and not books, we must study to become knowing; this I have always remarks, from repeated experience, to be the comon confolation and language of dure . They shelter their ignorance under a by bright examples, whose transcendent at a lities, without the common helps, has been fulncient of themselves to great and important ends. But alas!

#### Decipit exemplar vitiis imitabile-

In truth, each man's underständing, when ripened and mature, is a composite of natural capacity, and of superinduced habit. Hence the greatest men vid be necessarily those who pores the 1-1 capacities, cultivated with the best -Hence also moderate capacition when adorned with valuable science, " if far transcend others the most acute by nature, when either neglected, or applied to And thus, for low and base purposes. the honour of culture and good harning, they are able to render a man, if he will take the pains, intrinfically more excellent than his natural superiors. Harris.

# § 207. History of the Limits and Extent of the Middle Age.

When the magnitude of the Roman empire grew enormous, and there were two imperial cities, Rome and Conflantinople, then that happened which was natural; out of one empire it became two, diffinguished by the different names of the Western, and the Eastern.

The Western empire soon sunk. So early as in the sith century, Rome, once the mistress of nations, beheld herself at the feet of a Gothic sovereign. The Eastern empire lasted many centuries.

longer, and, though often impaired by external enemies, and weakened as oftenby internal factions, yet flill it retained traces of its ancient splendor, resembling, in the language of virgil, some fair but taded flower:

Car neque fulgor adhue, needum fur forma

At length, after various plunges and various escapes, it was totally annimited in the lifteenth century by the victorious arms of Mahomet the Great.

The interval between the fall of thefe two empires (the Wellern or Latin in the fifth cutury, the Eaflern or Grecian in the pitteenth) making a space of near a thout and years, conflitutes what we call the

Midale Age.

Dominion paffed during this interval i no the hands of rude, illuviate in m: men who conquered more by multitude than by military fkill; and who, having little or no take either for feiences or arts, natur. He despited those things from which they

had reaped no advantage.

This was the age of Monkery and Leoutly, of Leonine verfes, (that is, of led Lact put iato thane .) of project , to decrewith by pleaglith it's mil bittoon; or ciulades, to conquer raid is, and extripite beleties, of pirices dipoied, needs Crossas was by Cyrus, but one who had no armies, and who did not even wear a fe nd.

Different portio s of this age have been diduqualied by did nent descriptions: such as Sa calum Monotheleticum, Sæculum Eiconsel altreum, Saculum Obfernum, Sæculum Ferreum, Sæculum Hildibiandinum, &c; strange names it must be confest, tome more obvious, others less fo, yet none ter ting to furnish us with any high or proming ideas.

And yet we must acknowledge, for the honour of humanity and of its great and div. n. Author, who never forfakes it, that fonce sparks of intellect were at all times tinble, through the whole of this dark and dreary period. It is here we must look, for the tafte and literature of the times.

The few who were enlightened, when arts and sciences were thus obscured, may be faid to have happily maintained the continuity of knowledge; to have been (if I may use the expression) like the twillhit of a fummer's night; hat auspicious gleam between the fetting and the riting fun, which, though it cannot retain the luftre

of the day, helps at least to fave us from the totality of darkness.

§ 208. An Account of the Destruction of the Alexandrian Library.

" When Alexandria was taken by the " Mahometans, Amrus, their commander, " found there Philoponus, whose conver-" fation highly pleafed him, as Amrus was " a lover of letters, and Philoponus, a " learned man. On a certain day Philo-" ponus faid to him: 'You have vifited " all the repolitories or public warehouses " in Alexandria, and you have fealed up " things of every fort that are found there. " As to those things that may be useful to " you, I prefume to fay nothing; but as " to things of no fervice to you, some of " them perhaps may be more fuitable to " me.' Amrus fud to him: And what " is it you want?' 'The philosophical "I ooks (replied he) preferved in the royal " libraries." 'This (taid Amius) is a re-" quett upon which I cannot decide. You " defire a thing where I can iffue no or. " ders till I have leave from Omar, the " commander of the faithful.'-Letters " were accordingly written to Omar, in-" formure him of what Philopenus had " faid, and an answer was returned by "Omar, to the following purport: "As " to the books of which you have made " melition, if there be contained in them " what accords with the book of God " (meaning the Alcoran) there is without " them, in the book of God, all that is " funcient. But if there be any thing in " them repugnant to that book, we in no " respect want them. Order them there-" fore to be all deflroyed.' Amrus, upon " this ordered them to be differred through " the baths of Alexandria, and to be there " burnt in making the buths v aim. After "this manner, in the space of six months, they were all consum. I."

The hillorian, having related the flory, adds from his own feeling, "Hear what " was done, and wonder?"

Thus ended this noble library; and thus began, if it dil not began focuer, the age of barbarity and ignorance.

\$ 209. A Short I foried Account of ATHENS, from the Time of her Pirstan Triemphs to that of her becoming subject to the TURKS .- Sketch, during this long Interval, of her Political and Literary State; of her Philogephys; of ber G, mnasia; of her good and bud For-

tune, &c. Ge-Manners of the present Inhabitants.—Olives and Honey.

When the Athenians had delivered themselves from the tyranny of Pisistratus, and after this had defeated the vail efforts of the Persians, and that against two fuccessive invaders, Darius and Xerxes, they may be confidered as at the fummit of their national glory. For more than half a century afterwards they maintained, without controll, the lovereignty of Greece\*.

As their tafte was naturally good, arts of every kind foon role among them, and flourithed. Valour had given them reputation; reputation gave them an afcendant; and that ascendant produced a security, which left their minds at case, and gave them leifure to cultivate every thing liberal or elegant.

It was then that Pericles adorned the city with temples, theatres, and other beautiful public buildings. Phidias, the great sculptor, was employed as his architect; who, when he had erected edinces, adorned them himself, and added statues and basiorelievos, the admiration of every beholder. It was then that Polygnotus and Myro painted; that Sophocles and Euripides wrote; and, not along after, that they faw the divine Sociates.

Human affairs are by nature prone to change; and flates, as well as individuals, are born to decay. Jealousy and ambition insensibly fomented wars: and success in these wars, as in others, was often various. The military strength of the Athenians was first impaired by the Lacedemonians; after that, it was again humiliated, under Epaminondas, by the Thebans; and, last of all, it was wholly crushed by the Macedonian Philip.

But though their political fovereignty was loft, yet, happily for mankind, their love of literature and arts did not fink

along with it.

Just at the close of their golden days of empire, flourished Xenophon and Plato, the disciples of Socrates; and from Plato descended that race of philosophers called the

· Old Academy.

Aristotle, who was Plato's disciple, may be faid not to have invented a new philo-Cophy, but rather to have tempered the Lablime and rapturous mysteries of his mast-

• For these historical facts confult the ancient and modern authors of Grecian history.

ter with method, order, and a stricter mode of reasoning.

Zeno, who was himself also educated in the principles of Platonism, only differed from Plato in the comparative estimate of things, allowing nothing to be intrinsically good but virtue, nothing intrinfically bad but vice, and confidering all other things to be in themselves indifferent.

He too, and Aristotle, accurately cultivated logic, but in different ways: for Ariflotle chiefly dwelt upon the simple syllogitm; Zeno upon that which is derived out of it, the compound or hypothetic. Both too, as well as other philosophers, cultivated rhetoric along with logic; holding a knowledge in both to be requifite for those who think of addressing mankind with all the efficacy of perfuation. Zeno elegantly illustrated the force of these two powers by a fimile, taken from the hand: the close power of logic he compared to the fift, or hand comprest; the diffuse power of logic, to the palm, or hand open.

I shall mention but two sects more, the New Academy, and the Epicurean.

The New Academy, so called from the Old Academy (the name given to the school of Plato) was founded by Arcesilas, and ably maintained by Carneades. From a mistaken imitation of the great parent of philosophy, Socrates, (particularly as he appears in the dialogues of Plato) because Socrates doubted some things, therefore Aicefilas and Carneades doubted all.

Epicurus drew from another fource; Democritus had taught him atoms and a void. By the fortuitous concourse of atoms he fancied he could form a world, while by a feigned veneration he complimented away his gods, and totally denied their providential care, lest the trouble of it thould impair their uninterrupted state of blifs. Virtue he recommended, though not for the fake of virtue, but pleasure; pleasure, according to him, being our chief and fovereign good. It must be consest, however, that though his principles were erroneous, and even bad, never was a man more temperate and humane; never was a man more beloved by his friends, or more cordially attached to them in affectionate esteem.

We have already mentioned the alliance between philosophy and rhetorick. This campot be thought wonderful, if rhetoric be the art by which men are perfuaded, and if men cannot be perfuaded without 4 knowledge of human nature: for what but philosophy, can procure us this know-

It was for this reason the ablest Greek philosophers not only taught (as we hinted before) but wrote also treatifes upon rhetoic. They had a farther inducement, and that was the intrinsic beauty of their language, as it was then spoken among the learned and polite. They would have been ashamed to have delivered philosophy, as it has been too often delivered fince, in compositions as clumfy as the common dialect of the mere vulg ir.

The fame love of elegance, which made them attend to their flyle, made them attend even to the places where their philo-

Jophy was taught.

Plato delivered his lectures in a place fluded with groves, on the banks of the river Iliffus; and which, as it once belonged to a person called Academus, was cilled after his name, the Academy. Auftotle chose another spot of a similar character, where there were trees and fiele; a spot called the Lycaum. Zeno taught in a portico or colonnade, diffingurhed from other buildings of that fort (of which the Athenians had many) by the name of the Variegated Portico, the wills being decorated with various puntings of Polygnotus and Myro, two capital mallers of that transcendent period. Epicaus addressed his hearers in those wellkrown gardens called, after his own name, the gardens of Epicurus.

Some of these places gave names to the doctrines which were taught there. Pitto's philosophy took its name of Academie, from the Academy; that of Zeno was called the Stoic, from a Greek word signify-

ing a portico.

The fystem indeed of Aristotle was not denominated from the place, but was called Peripatetic, from the manner in which he taught; from his walking about at the time when he differted. The term Epi-

Open air, shade, water, and pleasant walks, seem above all things to savou tout exercise the best suited to contemplation. I mean gentle walking, without inducing fatigue. The many agreeable walks in and about Oxford may teach my own countrymen the truth of this affertion, and best explain how Horace lived, while the sludent at Athens, employed (as he tells us)

- iter filvas Academi quærere verum.

These places of public institution were.

called among the Greeks by the mame of Cymnafia, in which, whatever that word might have originally meant, were taught all those exercises, and all those arts, which tended to cultivate not only the bolv but the mind. As man was a being confilling of both, the Greeks could not confider that education as complete in which both were not regarded, and both properly formed. Hence their Gymnafia, with reference to this double end, were adorned with two flatues, those of Mercury and of Hercules; the corporeal accomplishments being patronized (as they supposed) by the God of itrength, the mental accomplishments, by the God of ingenuity.

It is to be feared, that many places, now called Academies, feared deferve the name upon this extentive plan, if the profeffors teach no more than how to dance,

fence, and ride upon horses.

It was for the cultivation of every liberal accomplishment that Athens was celebrated (as we have faid) during many centuries, long after her political induence

was lost, and at an end.

When Alexander the Great died, many tyrants, like many hydras, immediately forung up. Athens then, though the field maintained the form of her recent government, was perpetually checked and humiliated by their infolence. Antipater delitoped her orators, and the was tacked by Demetrius. At lenoth the Lecame fabject to the ell-poverful Roman, and found the cruel Sylla her feven fremen.

His face (which perhap large ated his manners) was of a pumple red, intermixed with write. This calculations could not escape the witty Athenians they described him in a certs, and ridiculously stud.

Solla's face is a melberry, frinkled with meal-The devailations and carnage which he caused soon after, gave them too much rea-

ion to repent their farcaim.

The civil war becseen Cufar and Pompey from followed, and their natural love of liberty made them fide with Pompey. Here again they were a dortunate, for Cæfar conquered. But Cæfar did not treat them like Sylla. With that elemency, which made in mitable a part of his character, he dimitfed them, by a fine allufion to their ilsultious sheeffor, faving, that he spared the living for the fake of the dead.

Another from followed foon after this, the wars of Brutus and Cassius wit. Augustus and Antony. Their partiality for li-

K k

berty did not here for ake them; they took past in the contest with the two patriot Romans, and erected their statues near their own ancient deliverers, Harmodius and Aristogiton, who had slain Hipparchus. But they were slill unhappy, for their enemies triumphed.

They made their peace however with Augustus; and, having met afterwards with different treatment under different emperors, fometimes favourable, fometimes harsh, and never more severe than under Vespasian, their oppressions were at length relieved by the virtuous Nerva and

Trajan

Mankind, during the interval which began from Nerva, and which extended to the death of that best of emperors, Marcus Antoninus, felt a respite from those evils which they had so severely felt before, and which they felt fo severely revived under Commedus, and his wretched fuccessors.

Athens, during the above golden period, enjoyed more than all others the general felicity, for the found in Adrian to generous a benefactor, that her citizens could hardly help esteeming hima second founder. He reflored their old privileges, gave them new; repaired their ancient buildings, and added others of his own. Marcus Antoninus, although he did not do fo much, still continued to show them his benevolent attention.

If from this period we turn our eyes back, we shall find, for centuries before, that Athens was the place of education, not only for Greeks, but for Romans. "I'was hither that Horace was fent by his father; twas here that Cicero put his fon Marcus under Cratippus, one of the ablest philosophers then belonging to that city.

The fects of philosophers which we have already described, were still existing when St. Paul came thither. We cannot enough admire the superior eloquence of that apostle, in his manner of addressing so intelligent an audience. We cannot enough admire the fublimity of his exordium; the propriety of his mentioning an altar which he had found there; and his quotation from Aratus, one of their well-known poets. Acts xvii. 22.

Nor was Athens only celebrated for the residence of philosophers, and the institution of youth: Men of rank and fortune found pleasure in a retreat which contributed to much to their liberal enjoyment.

The friend and correspondent of Cicerb, T. Pomponius, from his long attachment to this city and country, had attained. fuch a perfection in its arts and language. that he acquired to himself the additional name of Atticus. This great man may be faid to have lived during times of the world and cruellest factions. His youth was front under Sylla and Marius; the middle of his life during all the fanguinary feenes that followed; and when he was old, he for the proferiptions of Antony and Octivia. Yet though Cicero and a multitude more of the best men perished, he had the good fortune to furvive every danger. Nor did he feek a fafety for himfelf alone: his virtue fo recommended him to the leaders of every fide, that he was able to fave rot himfelf alone, but the lives and fortunes of many of his friends.

When we look to this amiable character, we may well suppose, that it was not merely for amusement that he chose to live .t Athens; but rather that, by residing there, he might fo far realize philosophy, as to employ it for the conduct of life, and not

merely for offentation.

Another person, during a better period (that I mean between Nerva and Marcus Antoninus) was equally celebrated for his affection to this city. By this person I mean Herodes Atticus, who acquire I the last name from the same reasons for which it had formerly been given to Pomponia.

We have remarked already, that vicilitudes befal both men and cities, and change too often hypen from prosperous to alverfe. Such was the flate of Athens, under the fuccessors of Alexander, and so on from Sylla down to the time of Augustia It fliared the fame hard fate with the Roman empire in general, upon the accessor of Commodus.

At length, after a certain period, the Barbarians of the North began to pour into the South. Rome was taken by Alama and Athens was befreged by the fame. Yet here we are informed (at least we learn fo from history) that it was miraculously faved by Minerva and Achilles. The goddess, it feems, and the hero, both of them appeared, compelling the invader to raise the fiege.

§ 210. The Account given by SYNE. sive of ATHENS, and its subsequent History.

Synefius, who lived in the fifth century, visited Athens, and gives, in his epistles, an account of his visit. Its lustre appears at that time to have been greatly diminished. Among

4**99** a s

Among other things he informs us, that the celebrated portico or colonnade, the Greek name of which gave name to the fest of Stoics, had, by an oppressive proconful, been despoiled of its fine pictures; and that, on this devastation, it had been for taken by those philosophers.

In the thirteenth century, when the Grecian empire was cruelly oppressed by the confadors, and all things in confusion, Athens was befieged by one Segurus Leo, who was unable to take it; and, after that, by a Marquis of Montserrat, to whom

it furiendered.

Its fortune after this was various; and it was foincimes under the Venetians, fometimes under the Catalonians, till Mahomet the Great made himfelf mafter of Conflantinople. This fatal catalhophe (which happened near two thousand years after the time of Pisislatus) brought. Athens, and with it all Greece, icto the hands of the Firks, under whose despotic yoke it has continued ever fince.

The city from this time has been occafionally visited, and descriptions of it published by different travellers. Wheeler was there along with Spon, in the time of ou Charles the Second, and both of them have published curious and valuable narra-Others, as well natives of this ifland as foreigners, have been there fince, and tome have given (as Monfr. Le Rov) presons publications of what we are to Suppose they few. None however have equalled the truth, the accuracy, and the eligance of Mr. Stuart, who, after having reided there between three and four years, has given fuch plans and elevations of the capital buildings now flanding, together with learned comments to elucidate every part, that he feems, as far as was possible for the power of description, to have reflored the city to its ancient iplendour.

He has not only given us the greater outlines and their measures, but separate measures and drawings of the minuter decorations; so that a British artist may (if he please) follow Phidias, and build in Bri-

tain as Phidias did at Athens.

Spon, speaking of Attica, says, 'that the road near Athens was pleasing, and the very peasants polished.' Speaking of the Athenians in general, he says of them "ils ont une politesse d'esprit naturelle, & beaucoup d'addresse dans toutes les affaires, qu'ils entreprenent."

Wheeler, who was Spon's fellow-traveller, fays as follows, when he and his

company approached Athens: "We began now to think ourselves in a more civilized country than we had yet path: for not a shepherd that we met, but bid us welcome, and withed us a good journey." p. 335. Speaking of the Athenians, he adds, "This must with great truth be said of them, their bal fortune hath not been able to take from them what they have by nature, that is, much fubilety or wit." p. 347. And again. "The Athenians, notwithflanding the long possession that barbarism hath had of this place, scem to be much more polithed, in point of manners and convertation, than any other in there parts; being civil, and of respectful behavious to all, and highly complimental in their discourse." p. 356.

Stuart fays of the prefent Athenians, what Spon and Wheeler faid of their fore-fathers;—" he found in them the fame addrefs, the fame natural acuteness, though feverely curbed by their desposic masters."

One cultom I cannot omit. He tells me, that frequently at their convivial meetings, one of the company takes what they now call a lyre, though it is rather a fpecies of guitar, and after a fhort prelude on the infurment, as if he were writing for infpiration, accompanies his infrumental mufe with his voice, fuddenly chanting fome extempore verfes, which feldom exceed two or three diffichs; that he then delivers the lyre to his neighbour, who, after he has done the fame, delivers it to another; and that fo the lyre circulates, till it has paff round the table.

Nor can I forget his informing me, that, not with landing the various fortunes of Athens, as a city, Ather was fill famous for Olives, and Moant Hymettus for Honey. Human inflitutions perish, but Nature is permanent.

# § 211. Anecdote of the Medern GREEKS.

I shall quit the Greeks, after I have related a short narrative; a narrative, so far curious, as it helps to prove, that even among the present Greeks, in the day of servicede, the remembrance of their ancient glory is not totally extinct.

When the late Mr. Anson (Lord Anson's brother) was upon his travels in the East, he hired a vessel to visit the isle of Tenedos. His pilot, an old Greek, as they were sailing along, said with some satisfaction, "There 'twas our seet lay." Mr. Anson demanded, "What sleet!" "What sleet!" replied the old man (a little piqued at the travel of the said of t

K k z

300

question) "why our Grecian sleet at the siege of Troy"."

Harris.

§ 212. On the different Modes of Heftory.

The modes indeed of history appear to be different. There is a mode which we may call historical declination; a mode, where the author, dwelling little upon facts, indulges himfelf in various and copious reflections.

Whatever good (if any) may be derived from this method, it is not likely to give us it uch knowledge of facts.

Another mode is that which I call general or rather public hiltory; a mode abundant in facts, where treaties and alliances, battles and dieges, matches and terreats, are accurately detailed; together wich dates, deferiptions, tables, plans, and ill one collateral helps both of chronology and geography.

In this, no doubt, there is utility: yet the fameness of the events resembles not a little the sameness of human bodies. One head, two shoulders, two legs, &c. se mequally to characterise an European and an African; a mative of old Rome, and a ma-

tive of modern.

A third species of history still behind, is that which gives a sample of sentiments and manners.

If the account of these last be faithful, it cannot fail being instructive, since we view through these the interior of human nature. This by these we precive what fort of animal man is: so that while not only Europeans are distinguished from Asiaties, but English from French, Freich from Italians, and (what is still more) every individual from his neighbour; we view at the same time one nature, which is common to them all.

Horace informs us that a drama, where the fentiments and manners are well preferved, will pleafe the audience more than a pompous fable, where they are wanting. Perhaps what is true in domatic compontion, is no lefs true in historical.

Plutarch, among the Greek hillorians, appears in a peculiar manner to have me-

rited this praic.

Nor ought I to coult (as I shall shoot refer to them) some of our best Morkish historians, though prone upon occasion to degenerate into the incredible. As they often lived during the times which they

definited, 'twas natural they should paint the life and the manners which they saw, Ibid.

§ 213. Concerning Natural Beauty; it Idea the fane in all Times.—Thessallian Themself of Virgii, and Hornelf ef Milton, in defending Paradigi—exhibited of late Fears for in Picture—thence transferred to Exclusive Galdens—not seconding to the collaborated of v of the middle Actorization Lainney, Petranelli, and Syngle Artist Corporate between the Figure Cyrus, and Phillip Le Bell j Frynch.

Let us pair for a moment from the e'g and weeks of Att, to the more alog of works of Perture. The two help to use a nearly afted, with the fame take utaky relate, with m booth.

Now there is nothing more certain, to that the face of materia is nature historia at all times exprisiting. The vulgar, wide holds ho father time to fection of characteristics, because all their views merely termoate in ethnize. They only remark that the mode in every that the rich clover; we are or an artifact view father cooled by alk, would form us. But the laberal have noblest views and though they give to culture its begratic, they can be delighted with not be noted, where culture was never known.

Ages ago it is have celebrated with a thinfilte raption, "a deep retised is "with a river rufning through it; as a "having it fides formed by two mare?" and opposite mountains, and those fab. "divertised by woods, precipices, reviewed to make the continuous description." Such was to feen produced by the river Peneu, as a ran between the mountains. Olympus ad Orit, in that well-known vale the Thefa ian Tempe.

Virgil and Horace, the first for tall among the Romans, appear to have been enamoured with the beauties of this confident. Horace prayed for a villa, where there was a garden, a rivulet, and about these a little grove:

Heath table of techn vicinus juga aquæ form Et paulam tylvæ fuper has foret.

Virgil wished to enjoy rivers and weed and to be hid under immense shade in to cool valleys of mount Hemus—

-O' qui me achdisin vallibus Hiem Siffat, e ingenti ramorum precept no b à' Goorg Hi-t'

<sup>•</sup> This flory was told the author, Mr Harris, by Mr. Anton himfelf.

The great elements of this species of seatty, according to these principles, were a ter, wood, and uneven ground; to which ray be added a fourth, that is to say, an. 'Tis the happy mixture of these our that produces every scene of natural screen, as 'tis a more myslerious naixture of other elements (perhaps as sample, and set more in number) that produces a world of an excite.

Virgil and Horace having been quoted, to may quote, with equal truth, our great and aman, Milton. Speaking of the flowers of Paradile, he calls them flowers,

which not nice Art

IV. 292.

The painters in the preceding century ken to have felt the power of these elections and to have transferred them into berlandscapes with such amazing force, I they appear not so much to have solved as to have emulated nature. Claude Loraine, the Poussins, Salvator Rofa, I a few more, may be called superior and in this evquisite taste.

Our gardens in the mean time were taftecand infipid. Those who made them, leight the farther they wandered from the the theoret they approached the hane. Unfortunately, where they traied, no sublime was to be found; and their they went, the farther they left belind.

But perfection, alas! was not the work a day. Many prejudices were to be resect; many gradual afcents to be made; cans from bad to good, and from good better, before the delicious amenities a Claude or a Pouffin could be rivalled a Stour-head, a Hayley, or a Stow; or extremendous charms of a Salvator Rosa

be equalled in the scenes of a Piercesseld, or a Mount Edgecumb.

Not however to forget the subject of our inquity.—Though it was not before the prefect century, that we established a charler taile; though our neighbours at this instinct are but learning it from us; and though to the vulgar every where it is totally incomprehensible (be they vulgar in rank, or vulgar in capacity); yet, even in the darkest periods we have been treating, of periods when taste is often thought to have been lost, we shall still discover an entil htened few, who were by no means insensible to the power of these beauties.

Hoa warmly does Leland describe Guy's Clift; Sannazarius, his villa of Mergalina; and Petrarch, his favourite Vauclute!

Take Guy's Chif from Leland in his own old English, mixt with Lati —" It is a "place meet for the Muses; there is sylicince; a praty wood; antra in vivo faxo (grottos in the living rock); the river rolling over the stones with a praty novie." His Latin is more elegant—" Nemusculum ibiden opacum, fontes liquidi et geminei, prata, storida, antra muscosa, rivi levis et per sava decursus, nec non folitudo et quies Mu is amicificant."—Vol. iv. p. 66.

Mergillina, the villa of Sannazarius, near

Meigillina, the villa of Sannazarius, near Naples, is thus fleetched in different parts of his poems:

Excifo in fcopulo, fluctus unde aurea canos Defineeus, cello fe culmine Mergiline Autollit, nauntopie proced veneento 5 offert. Sannez De partu Virgin, L. 25.

Rupis O. f. c.e., pelagoque coftos, Valla, Nymphatum cuft, et propaquæ Dordos— Tu mili folos nemorum receffus Dæ, et hærentes per op act buros Saxat. Tu, foares, Agamppedumque Antra rechaiss.

quæque in primis mibi grata minitrat Otta, Mutarunique cavas per faxa latebras, Mergilina a novos fundunt ubi citria flores-Catria, Medorum facros referentia lucos. Egufil, De partu Virgin, III. fub. fia.

De Fonte Mergillino.

Fit milit rivo vitieus perenni Fons, atenofum prope littu, unde Sæpè descendens úbt nanta tores Haurit anncos, &c.

Ejufd. Epigr. II. 36.

Eiufd. Epigr. I. 2.

It would be difficult to translate these elegant morsels.—It is sufficient to express what

what they mean, collectively-" that the " villa of Mergillina had folitary woods; " had groves of laurel and citron; had " grottos in the rock, with rivulets and " Iprings; and that from its lofty fituation " it looked down upon the sea, and com-" manded an extensive prospect."

It is no wonder that such a villa should enamour fuch an owner. So fliong was his affection for it, that when, during the fublequent wars in Italy, it was demolished by the imperial troops, this unfortunate event was supposed to have hastened his

Vaucluse (Vallis Clausa) the favourite retreat of Petrarch, was a romantic scene,

not far from Avignon

"It is a valley, having on each hand, "as you enter, immense cliss, but closed "up at one of its ends by a femicircular " ridge of them; from which incident it " derives its name. One of the most stu-" pendous of these cliss stands in the front " of the temicircle, and has at its foot an " opening into an immenfe cavern. With-" in the most retired and gloomy past of " this cavern is a large oval balon, the pro-" duction of nature, filled with pellucid and " unfathomable water; and from this re-" fervoir if us a river of respectable mag-" nitude, dividing, as it runs, the meadows "beneath, and wind g through the pre-" cipices that impend from above."

This is an imperfect sketch of that spot, where Petrarch spent his time with so much delight, as to fay that this alone was life to him, the rest but a state of punishment.

In the two preceding narratives I feem to fee an anticipation or that taffe for natural beauty, which new appears to flourish through Great Britain in such persection. It is not to be doubted that the owner of Mergillina would have been charmed with Mount Edgcumb; and the owner of Vaucluse have been delighted with Piercefield.

When we read in Xenophon, that the younger Cyrus had with his own hand planted trees for beauty, we are not furprifed, though pleafed with the flory, as the age was polithed, and Cyrus an accomplished prince. But when we read, that in the beginning of the 14th century, a king of France (Philip le Bel) should make it penal to cut down a tree, qui a efte garde four fa beauty, which had been preserved for its beauty; though we praise the law, we cannot help being furprised, that the prince should at such a period have been fo far enlightened.

§ 214. Superior Literature and Knowledge both of the Greek and Latin Clergy, auhence-Barbarity and Ignorance of the Laity, whence-Samples of Lay Mannie, in a Story from Anna Comnena's Hiftery. -Church Authority ingenucustly employed to check Barbanty-the jame Authority enployed for other good Purpojes-to jave the foor fews-to flop Trials by Butter More juggested concerning Lay Manier -Ferocity of the Northern Laymen, settince -different Coujes affigued .- in vention during the dark Ages great, though the Inventors often unknown. Inference and ing from theje Intentions.

Before I quit the Latins, I flall fubjen two e. three observations on the Europeans

in general.

The superior characters for literature here courserated, whether in the Western or Eatlern Christendom (for it is of Christendom only we are now fpeaking) were by far the greatest part of them eccl. heftics.

In this number we have feleded from among the Greeks the patriaich of Conflantinople, Photius; Michael Pulu; Eurlathius and Euffratius, both of concepal dignity; Planudes; Cardinal Belleto -from among the Latins, vere table Be? , Gerbertus, afterwards Pope Silvefler to Second; Ingulphus, Abbot of Croyland; Hildebe t, Archbishop of Tours; Peter Abelaid, John of Salisbur, Bishop of Charties; Roger Bacon; Francis Perrach; many Monkith historians; Æneas Sylvius, afterwards Pope Pius the Second, &c. Something has been already faid con-

cerning each of these, and other ecclepattics. At present we shall only remark, that it was necessary, from their very profession, that they should read and write; accomplishments at that time usually wafined to themselves.

Those of the Western Church were chliged to acquire some knowledge of Latin; and for Greek, to those of the Eastern Church it was still (with a few corruptions)

their native language.

If we add to these preparations that mode of life, which, being attended mostly with a decent competence, gave them inmense leisure; it was not wonderful that, among such a mulfitude, the more meritorious should emerge and soar, by dint cla genius, above the common herd. Similar effects proceed from fimilar causes. The learning of Egypt was polled by their

priests; who were likewise left from their inflitution to a life of leifure.

From the laity, on the other fide, who, from their mean education, wanted all thefe requifites, they were in fact no better than what Dryden calls them, a tribe of lifachar; a race, from their cradle bred in barbarity and ignorance.

A fample of these illustrious laymen may be found in Anna Comnena's hillory of her father Alexius, who was Grecian emperor in the eleventh century, when the first Crufade arrived at Conftantinople. So promifcuous a rout of rude adventurers could not fail of giving umbrage to the Byzantine court, which was flately and ceremonious, and confcious withal of its internal debility.

After some altercation, the court permitted them to pals into Afia through the Imperial territories, upon their leaders taking an oath of fealty to the emperor.

What happened at the performance of this ceremonial, is thus related by the fair

historian above-mentioned.

" All the commanders being affembled, " and Godfrey of Bulloign himfelf among "the reft, as foon as the oath was finished, " one of the counts had the audacioutness" " to feat himfelf befide the emperor upon " his throne. Earl Baldwin, one of their "own people, approaching, took the count by the hand, made I in rife from "the throne, and rebuked in for his " infolence.

"The count role, but made no re-" ply, except it was in his own unknown " jargon, to mutter abuse upon the em-

" peror.

" When all things were dispatched, the " emperor fent for this man, and demand-" ed who he was, whence he came, and of " what lineage?-His answer was as fol-" low-I am a genuine Frank, and in the " number of their nobility. One thing I " know, which is, that in a certain past of " the country I came from, and in a place " where three ways meet, there stands an " ancient church, where every one who " has a defire to engage in fingle combat, " having put himself into fighting order, " comes, and there implores the ailiflance " of the Deity, and then waits in expecta-"tion of some one that will dare attack "him. On this spot I myself waited a "long time, expecting and feeking some " one that would arrive and fight me. But "the man, that would dare this, was no "where to be found."

" The emperor, having heard this " ftrange narrative, replied pleafantly-" If at the time when you fought war, " you could not find it, a leafon is now "coming in which you will find wars " enough. I therefore give you this ad-" vice; not to place yourfelf either in the " rear of the army, or in the front, but 6 to keep among those who support the "centre; for I have long had know-" ledge of the Turkith method in their " " " " " "

This was one of those counts, or barons, the petty tyrents of Western Europe; men, who, when they were not engaged in general wars (fuch as the rayaging of a mighbouring kingdom, the mattacring of infidels, heretics, &c.) had no other method of filling up their letture, than, through help of their vaffals, by waging war upon one another.

And here the humanic and wildom of the church cannot enough be admired, when by her authority (which was then mighty) the endeavoured to thoten that feene of bloodshed, which the could not totally prohibit. The truce of God (a name given it purpofely to render the menfure more folemn) enjoined thefe ferocious beings, under the terrors of excommunication, not to fight from Wednesday evening to Monday morning, out of reverence to the mysteries accomplished on the oth & four day; the afcention on Thursday; the crucifixion on Friday; the descent to hell on Saturday; and the refurrection on Sunday.

I hope a further observation will be pardoned, when I add, that the fame humanity prevailed during the fourteenth century, and that the terrors of courch power were then held forth wir an intent equally landable. A dreadful ploque at that period defolated all Europe. The Germans, with no better reason than their own fenseless superflition, imputed this cal mity to the Jews, who then lived among them in great opulence and fplendour. Many thou ands of these unhappy people were in umanly massacred, till the pope benevolently interfered, and prohibited, by the tevereft butis, to mad and tanguinary a proceed-

I could not omit two fuch falutary exertions of church power, as they both occur within the period of this inquiry. I might add a third, I mean the opposing and en deavouring to check that absurdes of all practices, the trial by battle, which Spel.

'K k a

man expressly tells us, that the church in

all ages condemned.

It must be confessed, that the fact just related, concerning the unmannered count, at the court of Constantinople, is rather against the order of Chronology, for it happened during the first crushdes. It serves, however, to they the manners of the Latin, or Western laity, in the beginning of that holy war. They did not in a succession of years, grow better, but worfe.

It was a century after, that another crufade, in their march against insidels, sacked this very city; depoted the then emp, ror. and committed devaffations, which no one would have committed but the most igno-

rant, as well as cruel barbarians.

But a question here occurs, easier to propose than to a swer-" To what me we to " attribute this character of terocity, which "feems to have then prevailed through the laity of Eercy, ?"

Shall we tay it was climate, and the nature or the country? - I hele, we must confels, have, in tome inflances, great in-

fluence.

The Indians, feen a few years fince by Mr. Byron in the fouthern parts of South America, were brutal and favage to an enormous excels. One of them, for a trivial chance, murdered his own child (an infant) by daining it against the rocks .-The Cyclopes, as described by Homer, were much of the fame fort; each of them gave law to his own family, without regard for one another; and besides this, they were Atheists and Man-eaters.

May we not suppose, that a stormy sea, together with a frozen, barren, and inhospitable shore, might work on the imagination of these Indians, to as, by banishing all pleasing and benign ideas, to fill them with habitual gloom, and a propensity to be cruel?—Or might not the tremendous scenes of Ætna have had a like effect upon the Cyclopes, who lived amid imoke, thunderings, eruptions of fire, and earthquakes? If we may believe Fazelius, who wrote upon Sicily about two hundred years ago, the inhabitants near Ætna were in his time a fintilar race.

If therefore these limited regions had fach an effect upon their natives, may not family check be prefumed from the vall gioth of the North? may not its cold, barrens uncomfortable climate, have made phinerous triber equally rude and fa-

If this be not enough, we may

ther cause, I mean their profound ignorance. Nothing mends the mind more than culture; to which these emigrants had no defire, either from example or education, to lend a patient ear.

We may add a farther cause still, which is, that when they had acquired countries better than their own, they fettled under the fame military form through which they had conquered; and were in fact, when fettled, a fort of army after a campaign. quartered upon the wretched remains of the ancient inhabitants, by whom they were attended under the different names of feifs.

vailds, villams, &c.

It was not likely the ferocity of thefe conquerors flould abate with regard to then vaffals, whom, as firangers, they were more likely to suspect than to love.

It was not likely in flould abate with regard to one another, when the neighbourbord of their cailles, and the contiguity of their territories, must have given occasions (as we learn from hillory) for endleft altercation. But this we leave to the learned in feudal tenures.

We shall add to the preceding remarks, one more, fomewhat fimilar, and yet perteetly different; which is, that though the darkness in Western Europe, during the period here mentioned, was (in Scripture language) "a darkness that might be felt," yet it is turprising, that during a period to obscure, many admirable inventions found their way into the world; I mean fuch as clocks, telescopes, paper, gunpowder, the marmer's needle, printing, and a number here omitted.

It is furprifing too, if we confider the importance of these arts, and their extenfive utility, that it should be either unknown, or at least doubtful, by whom they were invented.

A lively fancy might almost imagine, that every art, as it was wanted, had suddenly started forth, addressing those that fought it, as Eneas did his companions-

-Coram, quem quæritis, adfum. Viko.

And yet, fancy apart, of this we may he assured, that though the particular inventors may unfortunately be forgotten, the inventions themselves are clearly referable to man; to that subtle and active principle, human wit, or ingenuity.

Let me then submit the following que-

- 14.00 If the human mind be to realy of direct " origin

# BOOK IL CLASSICAL AND HISTORICAL.

origin as every other part of the universe; and if every other part of the universe bear tellimony to its author; do not the inventions above-mentioned give us reason to affect, that God, in the operations of man, never leaves himfelf without a witness?

§ 215. Opinions on Past Ages and the Prefint .- Conclusion arising from the Discusfor of theje Opinions .- Conclusion of the

And now having done with the Middle Age, we venture to fay a word upon the Present.

Every past age has in its turn been a pre-This indeed is obvious, but this fent age. is not all; for every pall age, when prefent, has been the object of abuse. Men have been represented by their contemporaties not only as bad, but degenerate; as inferior to their predeceflors both in morals and hodily powers.

This is an opinion fo generally received, that Virgil (in conformity to it) when he would express former times, calls them fimply better, as if the term, better, implied

former of courte.

Hic genus antiquom Teneri, pulcherrima prolo-, Magnasimi heroes, nati melior bus annis. Æn. vi. 643.

The fame opinion is ascribed by Homer to old Nestor, when that venerable chief fpeaks of those heroes whom he had known in his youth. He relates fome of their names. Perithous, Dryar, Caneus, Thefeus; and fome alto of their exploits; as how they had extrapated the favage Centaurs .- He then subjoins.

-ue 2.51 8' av üriç, Των οί τον βροτος είσην ε τιχθένιου, μαχέτιτο. ίλ. Α. 271.

--- with the'e no one Of earthly race, as men are now, could fight.

As these heroes were supposed to exceed in strength those of the Trojan war, fo were the heroes of that period to exceed those that came after. Hence, from the time of the Trojan war to that of Homer, we learn that human strength was decreased by a complete half.

Thus the same Homer,

Todeider, para jam, i i diop arte pele Todeider, para jam, i i diop arte pipus, Om sin Berti eld, i i i m fin madde a ciec IX. L. 392.

Then grafp'd Tydides in his hand a ftone, A bulk immenfe, which not two men could bear, As non are now, the alone with take

Virgil goes farther, and tells us, that not twelve men of his time (and those too chosen ones) could even carry the stone which Turnus flung:

Vix illud left his fex cervice fubricut, Qu'dia nune homiaum producit corpora tedus: The manu raptum trepida torquebat in hoftens. Atu. xu. 8 19.

Thus human strength, which in Homer's time was lettened to half, in Virgil's time was leffened to a twelfth. If thrength and bulk (as commonly happens) be proportioned, what pygmics in flature must the men of Virgil's time have been, when their flrength, as he informs us, was fo far diminished! A man only eight times as fliong (and not, according to the poet, twelve times) must at least have been between five and fix feet higher than they

But we all know the privilege claimed by poets and painters.

It is in virtue of this privilege that Horace, when he mentions the moral degeneracies of his contemporaries, afferts that " their fathers were worle than their grand-" fathers; that they were worfe than their " fathers; and that their children would be " worse than they were;" describing no fewer, after the grandfather, than three fuccestions of degeneracy:

> A'tas parentem, pejor avir, tulit Nos nequire , mix ditairs Progenium vitioborum. Hot. Od. L. n. 6.

We need only ask, were this a fact, what would the Romans have been, had they degenerated in this proportion for five or fix generations more?

Yet Juvenal, jubsequent to all this, fuppoles a fimilar progretion; a progretion in vice and infamy, which was not complete till his own times.

Then truly we learn, it could go no farther:

Nil ent ulteras, noftris quod moribus addat . Pefteritat, &c. Omne in præcipiti vitium fletit, &c.

Sat. i. 147, &c. -

But even Juvenal, it feems, was mistaken, bad as we must allow his simes to have been. Several centuries after, without rel gard to Juvenal, the fame doctring was ]

eulcated with greater zeal than ever.
When the Western empire began as cline, and Europe and Africa were real by barbarians, the calamities then his ing (and formidable they were) natural

There was in this confolation fomething philosophical and pleasing. yet perhaps it is a higher philosophy (could we attain it) not to forget the patt, but in contemplation of the past to view the future; so that we may fay, on the work prospects, with a becoming resignation, what Eneas faid of old to the Cumean Prophetch,

-Vugin, no scenes of ill To me, or new, or unexpected rife , I've feen 'em all; have feen, and long before "Within myfelf revolv'd 'em in my mind. En VI. 103, 104, 105.

In such a conduct, if well founded, there is not only fortitude, but picty: Fortitude, which never finks, from a conscious integrity; and Piety, which never refuls, by referring all to the Divine Will.

Harris.

\$ 216. The Character of the Man of Bufiness often writed with, and adorned by that of the Scholar and Philopopher.

Philosophy, taking its name from the love of wisdom, and having for its end the inveffigation of truth, has an equal regard both to practice and speculation, in as much as truth of every kind is fimilar and congenial. Hence we find that some of the most illustrious actors upon the great theatre of the world have been engaged at times in philosophical speculation. Pericles, who governed Athens, was the difeiple of Anaxagoras; Epaminondas spent his youth in the Pythagorean school; Alexander the Great hal Arithotle for his preceptor; and Scipio made Polybius his companion and friend. Why need I mention Cicero, or Cato, or Brutu ? The orations, the epittles, and the philotophical works of the first, show him sufficiently conversant both in action and contemplation. So eager was Cato for knowledge, even when furrounded with bunnefs, that he used to read pailotophy in the senatehouse, while the fenate was affembling; and as for the patriot Brutus, though his life was a continual frene of the most important actions, he found time not only budy, but to compole a Treatile upon

ridia Priscus, were at the same period took senators and philosophers; and appear

rannic appression, by the manly system of the Stoic moral. The best emperor whom the Romans, or perhaps any nation, ever knew, Marcus Antoninus, was involved during his whole life in business of the last consequence; sometimes conspiracies forming, which he was obliged to diffipate; formidable wars arising at other times, when he was obliged to take the field, Yet during none of these periods did he forfake philosophy, but still persisted in meditation, and in committing his thoughts to writing, during moments, gained by stealth from the hurry of courts and campaigns.

If we descend to later ages, and search our own country, we shall find Sir Thomas More, Sir Philip Sidney, Sir Walter Raleigh, Lord Herbert of Cherbury, Milton, Algernon Sidney, Sir William Temple, and many others, to have been all of them eminent in public life, and yet at the fame time conspicuous for their speculations and literature. If we look abroad, examples of like characters will occur in other countries. Grotius, the poet, the critic, the philosopher, and the divine, was employed by the court of Sweden as ambailador to France; and De Witt, that acute but unfortunate statesman, that pattern of parsimony and political accomplishments, was an able mathematician, wrote upon the Elements of Curves, and applied his algebia with accuracy to the trade and commerce of his country.

And to much in defence of Philosophy, against those who may possibly undervalue her, because they have succeeded without her; those I mean (and it must be contest they are many) who, having spent their whole lives in what Milton cails the "bufy hum of men," have acquired to themselves habits of amazing efficacy, unaffitted by the helps of science and erudition. To such the retired fludent may appear an awkward being, because they want a just standard to measure his merit. But let them recur to the bright examples before alledged; let them remember that these were eminent in their own way; were men of action and business; men of the world; and yet did they not dildain to cultivate philosophy, when these were gone, and the worst of the for the splendor of their active character.

This reasoning has a farther end. justifies me in the address of these phis have supported the severest trials of ty- losophical arrangements, as your Lordship has been distinguished in either character, I mean in your public one, we well as in your private. Those who know the history of our foreign transactions, know the reputation that you acquired in Germany, by negociations of the last importance: and those who are honoured with your nearer friendship, know that you can speculate as well as act, and can employ your pen both with elegance and instruction.

It may not perhaps be unentertaining to your Lordship to see in what manner the 'Preceptor of Alexander the Great arranged his pupil's ideas, so that they night not cause confusion, for want of accurate disposition.' It may be thought also a fact worthy your notice, that he became acquainted with this method from the venerable Pythagoras, who, unless he drew it from remoter sources, to us unknown, was, perhaps, himself its inventor and original teacher.

Harris.

#### § 217. The Progressions of Art disgustful, the Completion beautiful.

Fables relate that Venus was wedded to Vulcar, the goddes of beauty to the god of defo mity. The tale, as some explain it, gives a double representation of art; Vulcan shewing us the progessions of art, and Venus the completions. The progressions, such as the hewing of stone, the grinding of colours, the suspinious, and many times disgussful; the completions, such as the temple, the place, the picture, the statue, these all of them are beauties, and justly call for admiration.

Now if logic be one of those arts, which help to improve human reason, it must necessarily be an art of the progressive character; an art which, not ending with itself, has a view to something farther. If then, in the speculations upon it, it should appear dry rather than elegant, severe rather than pleasing, let it plead, by way of defence, that, though its importance may be great, it partakes from its very nature (which cannot be changed) more of the deformed god, than of the beautiful goddes.

1 bid.

#### § 218. Thoughts on Elegance.

Having answered the objections usually

Addressed to the right honourable Thomas
Lord Hyda, chancellet of the Duchy of Lananter, see.

brought against a permanent sense of beauty, let us now proceed to single out the particular species or kinds of beauty; and begin with elegance of person, that so wonderfully elevates the human character.

Elegance, the most undoubted off-pring and visible image of fine taste, the moment it appears, is universally admired: men disagree about the other constituent pasts of beauty, but they all unite without hesitation to acknowledge the power of elegance.

The general opinion is, that this most confpicuous part of beauty, that is percrived and acknowledged by every body, is yet utterly inexplicable, and retires from our tearch when we would discover what it is. Where shall I find the fecret retreat of the graces, to explain to me the elegance they dictate, and to paint, in visible colours, the fagitive and valying enchantment that hovers round a graceful person, yet leaves us for ever in agreeable suspence and confusion? I need not feek for them, midain; the graces are but emblems of the human mind, in its lovelieft appearances; and while I write for you, it is impossible not to feel their influence.

Perfonal elegance, for that is the object of our pretent enquive, may be defined the image and reflection of the grandeur and beauty of the invisible foul. Grandeur and beauty in the foul itlelf are not objects of fense; colours cannot paint them, but they are united to fentiments that appear viable; they bellow a noble meaning and importance of attitude, and diffuse inexpressible loveliness over the

When two or more pactions or fentiments unite, they are not to readily diftinguished, as if they had appeared feparate; however, it is early to observe, that the complacency and alimination we feel in the prefence of elegant persons, is made up of respect and affection; and that we are disappointed when we see fach perfons act a base or indecent These symptoms plainly shew, that part. personal elegance appears to us to be the image and reflection of an elevated and beautiful mind. In some characters, the grandeur of foul is predominant; to whom beauty is majostic and awful. this stile is Miss F--. In other racters, a fost and attracting grace is the conspicuous: this latter kind is more pleasing, for an obvious reason. But elegance cannot exist in either alone, without a mixture of the other; for majesty without the beautiful, would be haughty and disgussing; and easy accessible beauty would lose the idea of elegance, and become an object of contempt.

The grandeur and beauty of the foul charm us univerfelly, who have all of us implanted in our botoms, even in the midft of mifery, passions of high descent, immenfe ambition, and romintic hopes. You may conceive an imprisoned bird. whose wild notes, prompted by the approach of spring, give her a consuled notion of joy, although the has no diffinet idea of airy flights and femmer groves; fo when man emerging from wre chednels assumes a nobler character, and the elevation of the human genius appears openly, we view, with fecret joy and delightful amazement, the fure evidence and pledge of our dignity; the mind catches fire by a train that lies within itself, and expands with conscious pride and merit, like a generous youth over the images of his country's heroes. Of the foftened and engiging part of elegance, I shall have occasion to speak at large hereafter.

Perfound elegance or prace is a fugitive luftre, that never fettles in any part of the body, you fee it glance and disappear in the features and motions of a graceful perion; it fluttes your view; it faines like an echilation; but the moment you follow it, the wandering flame vanishes, and immediately lights up in fomething elfe; you may as well think of fixing the pleafing delution of your dreams, or the colours of a diffolying

rainbow.

You have adien early at times, in the fummer feafon, to take the advantage of the cool of the morning, to ride abroad. Let us suppose you have midaken an hour or two, and just got out a few minutes before the riling of the fun. You fee the fields and woods that lay the night before in obscurity, atticing themfelves in beauty and verdure; you fee a profusion of brilliants shining in the dew; you fee the stream gradually admitting the light into its pure bosom; and you hear the birds, which are awakened by a rapture, that comes upon them from the morning. If the eastern sky be clear, you fee it glow with the promise of a hame that has not yet appeared; and if it be overcast with clouds, you see those clouds stated by a bright red, bordered with gold or silver, that by the changes appear volatile, and ready to vanish. How various and beautiful are those appearances, which are not the sun, but the distant effects of it over different objects! In like manner the soul slings inexpressible charms over the human person, and actions; but then the cause is less known, because the soul for ever shines belind a cloud, and is always retired from our sense.

You conceive why elegance is of a fugitive nature, and exists chiesly in motion: as it is communicated by the principle of action that governs the whole person, it is found over the whole body, and is fixed no where. The curious eye with eagerness pursues the wandering beauty, which it fees with surprize at every turn, but is never able to overtake. It is a waving flame, that, like the reflection of the fun from water, never fettles; it glances on you in every motion and disposition of the body: its different powers through attitude and motion frem to be collected in dancing, wherein it plays over the arms, the legs, the breaft, the neck, and in thort the whole frame: but if grace has any fixed throne, it is in the face, the refidence of the foul, where you think a thousand times it is just iffuing into view.

Elegance assumes to itself an empire equal to that of the soul; it rules and inspire, every part of the body, and makes use of all the human powers; but it particulally takes the passions under its charge and direction, and turns them into a kind of artillery, with which it does infinite execution.

The pullions that are favourites with the graces are modelly, good nature, particularly when it is heightened by a imall colouring of affection into fweetnefs, and that fine languor which feems to be formed of a mixture of flid joy and hope. Surprize, shame, and even grief and anger, have appeared pleasing under pro-per restrictions; for it must be observed, that all excess is shocking and disagreeable, and that even the most pleasing passions appear to most advantage when the tincture they cast over the countenance is enseebled and gentle. The paifions that are enemies to the graces are, impudence, affectation, firring and harsh degrees of pride, malice, and authority. .Ebere

# BOOK IL CLASSICAL AND HISTORICAL.

There is an union of the fine passions, but so delicate that you cannot conceive any one of them separate from the rest, called sensibility, which is requisite in an elegant deportment; it chiefly resides in the eye, which is indeed the feat of the

pullions.

I have spoken of the passions only as they are subservient to grace, which is the object of our present attention. The face is the mother-country, if I may call it fo, or the habitation of grace; and it visits the other parts of the body only as diffant provinces, with fome little partiality to the neck, and the fine bafis that supports it; but the countenance is the very palace in which it takes up its refidence; it is there it revels through its various apartments: you fee it wrapped in clouded majerty upon the brow; you discover it about the lips hardly rising to a finile, and vanishing in a moment, when it is rather perceived than feen; and then by the most engaging vicifitudes, it enlivens, flames, and dinolves in the eye.

You have, I suppose, all along obferved, that I am not treating of beauty, which depends on different principles, but of that elegance which is the effect of a delicate and awakened taffe, and in every kind of form is the enchantment that attracts and pleases universally, even without the affiftance of any other chaim; whereas without it no degree of beauty is charming. You have undoubtedly feen women lovely without much beauty, and handsome without being lovely; it is gracefulness causes this variation, and throws a luftre over difagreeable features, as the fun paints a showery cloud with

the colours of the rainbow.

I before remarked, that the grace of every elegant person is varied agreeable to the character and disposition of the person it beautifies; I am sensible you readily conceive the reason. Elegance is the natural habit and image of the foul beaming forth in action; it must therefore be expressed by the peculi ir features, air, and disposition of the person; it must arise from nature, and flow with case and a propriety that dislinguishes it. imitation of any particular person, however graceful, is dangerous, lest the affectation appear; but the unfludied elegance of nature is acquired by the example and conversation of several elegant persons of different characters, which people adapt to the import of their own geftures, without knowing how.

It is also because elegance is the reflection of the foul appearing in action. that good flatues, and pictures drawn from life, are laid before the eye in motion. If you look at the old Gothic churches built in barbarous ages, you will fee the statues reared up dead and inani-

mate against the walls. I faid, at the beginning of this little discourse, that the beauty of dress results

from mode or fashion, and it certainly does fo in a great measure; but I must limit that affertion by the following observation. that there is also a real beauty in attire that does not depend on the mode: those robes which leave the whole person at liberty in its motions, and that give to the imagination the natural proportions and fymmetry of the body, are always more becoming than fuch as reflrain any part of the body, or in which it is lost or disfigured. You may castly imagine how a pair of flavs laced tightly about the Minerva we admired, would oppress the fublime brauty of her comportment and figure. Since persons of rank cannot chuse their own drefs, but must run along with the present fashion, the secret of dressing gracefully must consist in the slender variations that cannot be observed to defert the fashion, and yet approach nigher to the complexion and import of the cointenance, and that at the fame time allows to the whole body the greatest pos-sible freedom, ease, and imagery: by imagery I mean, that as a good painter will thew the effect of the mutches that do not appear to the eye, fo a perion skilful in drefs will display the elegance of the form, though it be covered and out of view. As the talle of drefs approaches to perfection all art ditappear, and it feems the effect of negligence and infline. tive inattention; for this reason its beauties arife from the mauner and general air rather than from the rachness, which laft, when it becomes too gross and oppreffive, defroys the eligance. A brilliancy and parade in drefs is therefore the infallible fign of bad tafte, that in this contraband manner endeavours to make amends for the want of true elegance, and bears a relation to the heaps of ornament that encumbered the Gothic buildings. Apelles observing an Helen painted by one of his scholars, that was overcharged with a rich dress, " I find, young man

faid he, "not being able to paint her beautiful, you have made her fine "

Harsh and violent motions are always unbecoming. Milton attributes the fine kind of motion to his angels that the Heathens did to their deitie , 1 ft, fliding with. and flep. It is impossible to preferve the attractions in a country direction attend on a minuct; as the flep qui 'ens, t' most delicate of the graces fettie. The rule holds ar is estably through all action, whether quick or flows it should been portale of the truse polithed and toferned inotion, partical alse in the trustitions of the counter the, where the germs of the person seems to to near and reside.

The degrees tha very high upon the feele of elegance, and probably few have arrived near the highest pitch; but it is cottin, that the idea of furnifing beaut. that was familiar to Greece, has been hardly conceived by the moderns, many of their statues remain the objects of our admiration, but who is superior to mattition; their pictures, that have but he read of wreck of time, appear in the decontions made of them to have equal resignation with the flatner; and their poetry abounds with the fame celeffed immercy. But what puts this matter cat of doubt is that then Clebrated bemades were the mod la of their aitifs, and it is known, that the elegancies of This and Physic was explicitly the function printer of Greece, and conferred to convolvend marble to eternih and charm diffart og so

restord eligino, in which till affire the most contactions and noble applarance, confuies us in our enquires after it, by the quickness and veri ty of its changes, as well as by a complication that is not easily unravelled. I defined it to be the image and reflection of a great and beautiful foul; let us depirate the diffinit parts of this variety, when they appear anunder you will find them perfeetly familiar and intelligible.

The first, and most respectable pur, that entries acto the composition of elegance, is the lofty conicioufnets of worth er victor, which tuffains an habitual desca-

ey, and becoming pride.

The fecond, and most pleasing part, is a display of good-nature approaching to aticeion, of gentle offability, and, in geperal, of the pleasing pathons. It feems difficult to records. Contro p ris, and in fact it is for but when they a it. hen they appear like a remove and three

kinduefs, that i at at once poble and foft, that may be won, but mult be courted with Celleagy.

The third part of elegance is the appear use of a polified and tranquil habit of min I, that folions the actions and emotion, and give a covert prospect of innocorec and unarlambel repote. I will he t of click toparite, and full of dignity of foul.

Lobert I, ranthe boile of this differents, in any or to a roots tron our rode, for the militian district of the formation on the formation of the f and grathers or had three witch me pecoliary cilled for each, " up up so the sum in finite a digrate and worth not to be found in any other with a dibere-However ofers and furprising the most closion objects in nature by the heaving oce a the moon that gail it, all out. a followed belie over the right, the Pain farm if at, or the fam it elf; vet then because and croadear millionly day or of an inferior hard, becoud all compenses, to this of the riel of a me. Their trial ments are united under the given distants of vertue; and fuch are times. Maibments the difference the mich that Plato, a very place philosopher, by fiely, fill Virtue w. trapped crays 2 Cope, all men weall or error mucel (1) 22

Notice and toxic are notice able, and tile than stell together. A rand deved of tach sa hightful seeb; it is like a progresty ratio is, a hole month or ing tow is, just bring to the min spation the much and life that or cower to be, end is now no more. Truch is the genus of talle, and cut is is to the comme of fimple beauty, in wat, in writing, and throughout the fine arts.

Generality covers almost all other def. 8s, and ractes a blood around to main which they disappear and are left, lifte fovereign beauty, it makes a their out to our all clions; it wins our hearts without refilance or delay, and unites all the world to favour and support it d figns.

Granden; of isol, fortitude, and a refolution that hanghtily flruggles with despair, and will reider yield to, nor make terms with mirfortures; which, through every figurior, repote a noble confidence in itfelt, and had an immove the view to future g' ny and bonour, after the the world with a miration and delight. We, as is were, Irm forward with flat rife as I that b'ing je to ben al the humer foul collers, i s

Stength, and afferting a right to function I tes. When you leave man out of your account, and view the whole vinible crearon befide, you indeed fee feveral traces of grandour and unipeakable pewer, and the a remixture of a rich femers of behave: yet full the whole appears to be but a 10ban abuildity, and to have a hidenes and construction. But when you reflore man to prote it, and put him it the beel of it, coased with remus and an imported foul; shear coargive him a pollon for to the Loundlets views that special along me as h ete not and a fortitude to action of the, advietly not to mir straight Car, the occupant the castle the ter-I never worth and the level and he wishes inhabitant chole purpole they as you

A mind faught with the vitte sar the rata diod of elegance. In the ted ticta, proceedity, and good lear of tool, for evap' de and charm, even when they bank from the common form-, and appear wild and unmethodized by education, they are "ill be utiful. On the co. parv, is from is we differenthat outwind elegace, which is formed by the mode, to want truth, gerecofity, or grandeur of foul, it in a mily finks in our effects like counterfeit coin, and we are femalife of a reluction diffippointment, like that of the lover in the opigoin, who became carmonic with the fady's voice and the firther, or her hard is the dule, but an end of his pathon as from as he hall be a to visa lat-

Let us now pair on to the med planning part of elegance, an Labitial diffly of the kind and gentle patheau.

We are naturally inclined to love those who be in an affection to us; and we are claimed with the homage that is paid to our merit; by these weakingles politicing, articles us. The well-bind gentleman always in his behaviour infinite activities to their, tempered with respect. The attention to please confesses plainly his kind test to you, and the high effect he holds you in. The assides prevention of our wither, and that it liking successful to instance puts on fer our falls are it in simble; and although we know to kind of stattery to be profittute and hish tall, yet it is not indifferent to us; we receive it in a manner that shows how much it gratings us.

The defire of being agreeable, finds out the art of being fo without study or labour. Rushies who fall in love, grow unusually police and engaging. This new charm, that

has altered their nature,, and fuddenly endued them with the powers of pleafing, is nothing more than an enlivened attention to pleafe, that has taken poledion of their minds, and tinched their astions. We easily not to worder that fove is thus each their to worder that fove is thus each uting its tender affiduity is but the natural addict of the pathon; reliteness borrow the different form of a cason, and becomes agreeable by the appearance of lindary.

White his is one ill incoars housed by Come Front, that is foregoing, the content of the whole position and according to the whole position is to be a content of the content of the common of the left for the common of the left by its float for a common of the left by its float for a content of the order of always heart with planting.

The last considered part of elaptice is the polare of a tranq it food, to it a politic in fortening the actions and amount at and exhibits a recited prospect of happiness and independent.

A cally of mind that is from an graceful eath action, and in the erth-lil mint of our pales, gives a mideral the golden eng, when homen nature, adonald with innocence, and to prace the tast adoing a solution the arms of content. The state profipe of human nature disays pleate as; and although the content, and taking the content activities on the content activities on the content activities on the content activities, yet as a loop point in imagination with a content activities of the loop of the content activities and the notice home for which we do not be for the loop of the

Include est of traspath, puriodisly beautific natheral politry. The images of cilin and has py quet that a peur in the led grown, in them vales, and thrabers by fine grizzane, partie the poet to indo ; he groins in rural feeres. The me ac it it 12% and compose, the mind, at the fence time enchant, it. The hue of the bearings, eafe, caft over the human actions of tomotion, forms a very delightful part of ele the , and gives the other confinue tyris an appearance of nature and touth for matranguel flate of mind, andibarl d by mant or fears, the vi ws of men are generous and elevated. I rom the combination of these fine parts, grandeur of forl, complaiency, and eaf, ande the enchautments of elegance; but the appearance of the two sail are of a ser found togeth r, and then they form Politen fo.

When we take a view of the separate

parts that constitute personal elegance, we immediately know the feeds that are proper to be cherithed in the infant mind, to tring forth the beauteous production. The virtues should be cultivated early with facted care. Good-nature, modelly, 'affability, and a kind concern for others, should be carefully inculcated; and an easy unconfliained dominion acquired by Tallit over the passions. A mind thus finely prepared, is capable of the highest luttre of chigance; which is afterwards attained with as little labour as our first language, by only asiociating with graceful people of different characters, from whom an habitual gracefulness will be acquired, that will bear the natural unaffected flamp of our own minds; in fbort, it will be our own character and genius stripped of its native rudeness, and enriched with beauty and attraction.

Nature, that beflows her favours without respect of persons, often denies to the great the capacity of distinguished elegance, and slings it away in obscure villages. You sometimes see it at a country fair spread an amiableness over a sun-burnt girl, like the light of the moon through a mist; but such, madam, is the necessary of habitaal elegance acquired by education and converse, that it even you were born in that low class, you could be no more than the slight damfel at the may pole, and the object of the hope and jeatoury of a few suites.

People are rendered totally incapable of elegates by the want of good-nature, and the other gentle pailton; by the want of modely and fenficility; and by a wart of that robbe raide, which andes from a confciousies, of lofty and generous tentiments. The ablence of these vative charms is generally supplied by a brisk stupidity, an i .pudence unconscious of defect, a caft of malice, and an uncommon tendercy to iidicule; ... if nature h d given thele her step-children an inflinctive intelligerce, t' as they can rife out of contempt only by the depiction of others. For the fame reason it is, that persons of true and finished ta le feldom affect ridicule, because they are confcious of their own superior merit. Pride is the cause of ridicule in the one, as it is of candour in the other; but the efrefects differ as the fludied parade of poverty does from the negligent grandeur of riches. You will fee nothing more common in the world, than for people, who by flupidity and infenfibility are incapable of the graces, to commence with our the

strength of the petite talents of mimicry and the brisk tartness that ill-nature never fails to supply.

From what I have faid it appears, that a fense of elegance is a tense of dignity, of virtue, and inrecence, united. Is it not natural then to expect, that in the course clade releduction, men fleuld eu tivare the gar we qualities they approve and "r lists, and of them, men orly and at de opearances, which require no felfderial; and thus, without acquiring the virue, they facrified their honeity and fincenty; whence it comes to pals, that there is often the leafly i tue, where there is the greatest appearance of it; and that the polithed pair of mankind only arrive at the fubale corruption, of uniting vice with the diefs and complexion of virtue.

Three dwelt on personal elegance, because the ideas and principles in this part of good table are more familiar to you. We may then take them for a foundation, in our future observations, fince the fame principles of easy grace and simple grandeur, will animate our ideas with an unfladed propriety, and enlighten our judgments in beauty, in literature, in sculpture, principe, and the other departments of finatale.

\*\*Lybo.\*\*

### § 219. On Perfonal Beauty.

I shall but slightly touch on our taste of pursonal be may, because it requires no directions to be known. To ask what is beauty, by a philosopher, is the question of a bland min. I shall therefore only make a few rest. Steams on this head, that he out of the common track. But, prior to what I have to few, it is necessary to make some observations on physiognomy.

There is an obvious relation between the mind and the turn of the features, fo well known by inflinet, that every one is more or lefs expert at reading the countenance. We look as well as the ik our minds; and amongst people of little experience, the look is generally most fincere. This is to well understood, that it is become a part of education to learn to difguife the countestance, which yet requires a habit from early youth, and the continual practice of hypocrify, to deceive an interligent eye. The natural virtues and vices not only have their places in the aspect, even acquired habits that much affect the mind fettle there; contemplation, in length of time, gives a cast of thought on the counterance.

Now to come Lack to our subject. The ahemblage

affemblage called beauty, is the image of noble sentiments and amiable pations in the face; but so blended and confused that we are not able to separate and diffinguith them. The mud has a fenfil ility, and clear knowledge, in many inflances without reflection, or even the power of regioning upon its own perceptions. We can no more account for the relation between the pathons of the mind and a fet of features, than we can account for the relation between the founds of mufic and the pattions; the eye is judge of the one without principles or rules, as the ear is of the other. It is impossible you should not take notice of the remarkable difference of beauty in the fame face, in a good and in ill humour : and if the gentle pathons, in an induferent fice, donot change it to perfect beauty, it is because nature did not originally model the features to the just and f miliar expecttion of those pattions, and the genuine expreflions of nature can never be wholly ob-Interated. But it is necessary to observe, that the engaging import that forms beauty, is often the fymbol of padions that, although pleafing, are dangerous to virtue; and that a firmnels of mind, whose cast of feature is much le's pleafing, is more favourable to virtue. From the athnity between beauty and the pathons it must fol-Low, that beauty is relative, that is, a fense of human beauty is confined to our species; and alto, as far as we have power over the paffions, we are able to improve the face, and transplant chaims into it; both of watca observations have been often made. From the various principles of beauty, and the agreeable combinations, or which the face gives intelligence, tprings that variety found in the flyle of beauty.

Complexion is a kind of beauty that is only pleafing by affociation. The brown, the fair, the black, are not any of them original beauty; but when the complexion is united in one picture on the imagination, with the affemblage that forms the image of the tender passions, with gentle similes, and kind endearments, it is then inseparable from our idea of beauty, and forms a part of it. From the same cause, a national set of scatures appear amiable to the inhabitants, who have been accustomed to see the amiable dispositions throu .. them. This observation resolves a difficulty, that often occurs in the reflections of men on our prefent tubject. We all speak of beauty as if it were acknowledged and fettled by a public flandard; yet we find, in fact, that people, in placing their affections, often have little re-

gard to the common notions of beauty. The truth is, complexion and form being the charms that are visible and conspicuous, the common standard of beauty is generally restrained to those general attractions: but fince personal grace and the engaging pathons, although they cannot be delineated, have a mo e univertal and uniform power, it is no wonder people, in religning their hearts, to often contradict the common received flandard. Accordingly, as the engaging pattions and the address are discoveted in conversation, the tender attach. ments of people are generally fixed by an intercourle of fentiment, and feldom by a transient view, except in romances and novels. It is further to be observed, that when once the affections are fixed, a new face with a higher degree of beauty will not always have a higher degree of power to icinove them, because ou. assections arise from a source within ourselves, as well as from external beauty; and when the tender pullon is attached by a particular object, the imagination furrounds that object with a thousand ideal embellishments that exid only in the mind of the lover.

The hidory of the thort life of beauty may be collected from what I have faid. In youth that borders on infancy, the paffions are in a flate of vegetation, they only appear in full bloom in maturity; for which reason the beauty of youth is no more than the dawn and promife of future beauty. The features, as we grow mio years, gradu illy form along with the mind : different fenfibilities gather into the countenance. and b come beauty there, as colours mount in a tul p, and enrich it. When the cloquent force and delicacy of fentiment has continued fome lattle time, age begins to thinen the features, and deflroy the engaging variety and vivacity of the counternance, the eye gradually lofes its fire, and is no longer the mirror of the agreeable passions. Finally, old age furrows the face with wrinkles, as a barbarous conqueror overturns a city from the foundation, and transitory beauty is extinguished.

Beauty and elegance are nearly related, their difference conflits in this, that elegance is the image of the mind diplayed in notion and deportment; beauty is an image of the mind in the countenance and form; confequently beauty is of a more fixed nature, and owes lefs to art and habit.

When I speak of beauty, it is not wholly out or my way to make a singular observation on the tender passion at our species. Innocent and virtuous love casts a beautecus hae over human nature; it quickens and fliengthens our admiration of virtue, and our deteflation of vice; it opens our eves to our imperfections, and gives us a pride in excelling; it intpires us with heroic lentiment, generolity, a contempt of life, a boldness for enterprize, challity, and purity of fentiment. It takes a smilitude to devotion, and almost deafies the object of passion. People whose breasts are dulled with vice, or flupified by nature, call this paffion romantic love; but when it was the mede, it was the diagnostic of a virtuous age. These symptoms of heroism spring from an obscule principle, that in a soble mind unites itself with every pashonate view in life; this r. n elels principle is diffinguithed by endowing people with extraordinary rowers and enthuliatm in the juriuit of their favourite withes, and by disgust and drippointment when we arrive at the point where our wishes feem to be compleated. It has made great conquerors despite dangers and death in their way to victory, and high ofterwards when they had no more to conquer. U.Lir.

#### § 223. On Conversation.

From external beauty we come to the charms of converfation and writing. Words, by reprefenting ideas, become the pacture of our thoughts, and communicate them with the greatest felelity. But they are not only the signs of sensible ideas, they exhibit the very image and diffinguishing likeness of the mind that utes them.

Convertation does not require the same merit to please that writing does. The human toul is endued with a kind of natural expression, which it does not acquire. Tre expection I speak of consists in the figuificant modulations and tones of voice, accompanied, in unaffected cople, by a periety of gesture. This native language was not intended by nature to represent the transitory ideas that come by tie fintes to the imagination, but the patfions of the mind and its emotions only; therefore modulation and gesture give life and packen to words; their mighty force in oratory is very confricuous: but although their effects be milder in converfation, yet they are very fensible; they agricte the feul by a variety of gentle femations, and help to form that fixeet chain that makes the most triffing subjects en iging. This fine expression, which is

not learned, is not fo much taken notice of as it deserves, because it is much superfeded by the use of artificial and acquired language. The modern system of philosophy has also concurred to that it out from our reslections.

It is in conversation people put on all their graces, and appear in the latter of good-breeding. It is certain, ce !breeding, that fets for great a diffusity in between individuals of the fune fpecies, creates nothing new (I mean a good education) but only draws forth into prospect, with skill and address, the agreeable dispositions and fentiments that lay latent in the mind. You may call good-breeding anificial; but it is like the art of a gardener, under whose hand a barren tree puts forth its own bloom, and is enriched with its specific fruit. It is scarce possible to conceive any scene so truly agrecable, as an affembly of people claborately educated, who assume a character superior to ordinary life, and support it with case and familiarity.

The heart is won in convertation by its own passions. Its pride, its grandeur, its affections, lay it open to the enchantment of an infinuating address. Flattery is a gross charm, but who is proof against a gentle and yielding disposition, that infers your superiority with a delicacy so fine, that you cannot fee the lines of which it is composed? Generosity, disinterestednes, a noble love of truth that will not deceive, a feeling of the diffrefles of others, and greatness of foul, inspire us with admiration along with love, and take our affections as it were by floren; but, above all, we are teduced by a view of the tender and affection the pattions, they carry a foft infection, and the heart is betrayed to them by its own forces. If we are to judge from lymptoms, the foul that engages us to powerfully by its reflected glances, is an object of infinite beauty I observed before, that the modulations of the human voice that express the foul, move us powerfully; and indeed we are affected by the natural emotions of the mind expressed in the fimplest language: in thore, the happy art, that, in convertation and the intercourte of life, lays hold upon our affections, is but a just address to the engaging passions in the human breaft. But this is en power, like beauty, is the gift of nature.

Soft pleafing speech and graceful o itward show, No arts can gain them, but the gods bestow. Por r's Hom. From the various combinations of the feveral end-aring paffions and lofty fentiments, artic the variety of pleating characters that beautify human foci-ty.

There is a different fource of pleafure in converfar in from what I have spoken of, called wit; which diverts the world fo much, that I cannot venture to omit it, although delicae, and a refined taffe hetitate a little, and will not allow its value to be equal to its currency. Wit deals lags ly in allusion and whimfical similateds; its contennance is always double, and it unites the true and the fastaffic by a nice gradation of colouring that cannot be perceived. You observe that I am only focusing of the ready wit of conventation.

Wit is properly called in to support a convertation where the heart or affections are not concerned; and its proper butiness is to a lieve the mind from folitay inattention, where there is no room to move it by passion; the mind's eve, when difengaged, is diverted by being fixed upon a vapour, that dince, as it were, on the furface of the imagination, and continually alters its afpect: the motley image, whose comic side we had only time to furvey, is too unimportant to be attentively confidered, and luckely vanishes before we can view it on every fide. Shallow folks expect that those who diverted them in converfation, and made happy bon mets, ought to write well; and imagine that they themselves were made to laugh by the force of genius but they are generally disappointed when they see the admired character descend upon paper. The truth is, the frivolous turn and habit of a comic companion, is almost diametrically opposite to true genius, whose natural exercise is deep and flow-paced reflection. You may as well expect that a man should, like Cæsar, form consistent schemes for subduing the world, and employ the principal part of his time in catching flies. I have often heard people express a surprise, that Swift and Addison, the two greatest masters of humour of the last age, were easily put out of countenance, as if pun, mimicry, or repartee, were the offspring of genius.

Whatever similitude may be between humour in writing, and humour in conversation, they are generally sound to require different talents. Humour in writing is the offspring of reflection, and is by nice touches and labour brought to wear

the negligent air of nature; whereas, wit in conventation is an enemy to reflection. and glows brighted when the magination fling oil the thou lit the moraint it ardes, in its genuine new-born diefs. Men a little elevated by liquor, feem to have a peculiar facility at thicking out the capitcrow and fantadic fimiges that raife our mirth; in fact, what we generally admire in fallies of wit, is the nicety with which they touch upon the verge of folly, indifcretion, or malice, while at the fore time they preferve thought, tubilety, and goodhu cour, and what we hugh at is the motby appearance, whole whanfical confittency we cannot a court for.

People are pleafed at wit for the falor reason that they are for lost diversion of any kind, not for the ware roll of diversion of any kind, not for the ware roll of the thing, but because the model inset able to be as an intent strain of thinding; and yit to casing of thought is iduationly, or rather impossible. In such an uneity different, the indeady eventions of wit give taken and relieve it delightfully, by employing the imagination without requiring any reflection. Those who have in elected appeals for wit, like those who are event in qued of diversion, betay a freedom intention of the control of the control

## § 221. On M. A.

There are few who have not felt the charm, of mune, and acknowledged its expressions to be intelligible to the heart. It is a language of delightful sentions, that is far more cloquent than words: it breathers to the car the clearest intimations, but how it was learned, to what is the meaning of some of its most astroling strains, we know not.

We feel plainly that music touches and gently agitates the agreeable and sublime passions; that it wraps us in melancardy, and clevates in joy; that it distolves and inflames; that it melts us in tenderacts, and rouses to rage; but its strokes are so since and delicate, that, like a tragedy, even the passions that are wounded please; its forrows are charming, and its rage heroic and delightful; as people seed the particular passions with different degrees of force, their taste of harmony must proportionably vary. Music then is a language directed to the passions; but the rudst passions put on a new nature, and

become pleasing in harmony: let me add, also, that it awakens some pussions which we perc ive not in ordinary life. Particularly the north levited fentation of mufic arifes from a confuled percep ion of ideal or viscoury beauty and rupture, which is fushe ently percentable to northe imagination, but not clear enough to become an object of knowledge. This shadowy brancy the wind attempts, with a longuishang curiosity, to collect into a difficit object of view and comprehenfion; but it links and escapes, like the diffolving ideas of a delightful dicam, that are wither within the reach of the memory, nor yet totall; fled. The nobloft charm of mutic then, though real and affecting, feem, too confulct and fluid to be c'il et d'into a dilinét ilet. Harmony is also understood by the crowd, and atmost always raist i'cen by nauficians; who are, with hardly any everytion, fervile fellowers of the talle of mode, and who having extended much time and pains on the mechanic and practical part, lay a firsts on the dexterities of hand, which yet have no real value, but as they ferve to pr duce those collections of found that move the possions. The present Itahan taffe for music is exactly correspondent to the talle of the z -corredy, that about a century ago gined ground upon the Roger The nuncions of the premat day are characed at the union frey form between the grave and the fartist c, and at the furprising transitions they make between extreme, while every keater who has the lead in ainder of the title of name leng is thouled at the fliange jargon. If the fome talle thould proveil in printing, we must from expect to fee one wo nam's head, a horfe's body, and a fithe's tail, united by foft gradation, creatly admired at our public exhibitions. Muficol gentlemen should take particular care to preferve in its full vigour and fenfibility their original natural tafte, which alone feels and discovers the true beauty of medic.

If Milton, Shakespeare, or Dryden, had been born with the same genius and inspiration for music as for poetry, and had passed through the practical part without corrapting the natural taste, or blending with it preposition in favour of the slights and dexterities of hand, then would their notes be tuned to passions and to sentiments as natural and expressive as the tones and modulations of the voice in discourse. The music and the thought

would not make different expressions: the hearers would only think in petuously ; and the effect of the music would be to give the ideas a tumultuous violence and divine impulie upon the mind. Any perfor conversant with the classic poets, fees infigurely that the passionate power of music I fpeak of, was perfectly underflood and practifed by the ancients; that the mufes of the Greeks always fung, and their fong was the echo of the fubject, which swelled their poetry into enthufiafin and rapture. An enquiry into the nature and merits of the ancient made, and a comparifor thereof with modern composition, by a person of peetic genus and an admirer of harmony, who is tree from the thackles of practice, and the prejudices of the mode, aid d by the countenance of a few men of rank, of elevated and true taile, would probably Ly the prefent half-Gothic mode of mute in rains, like those towers of whose little labour. I ornaments it is an exict pictore, and redore the Grecian taile of pillionate harmony once more, to the delight and wonder of mankind. But as from the dispession of things, and the force of fathion, we cannot hope in our time to refeue the fiered lyre, and fee it put into the hards of men of genius, I can only recall you to your own natural feeling of larmony, and ob erve to you, that is emotions are not found in the laboured, fantaflie, and furprifing compositions that form the modern Hyle of music: but you meet them in tome few pieces that are the growth of wild unvisited take: you discover to no in the swelling founds that wrap us in imaginary grandear; in those plaintive notes that make us in love with woe; in the tones that utter the lover's fighs, and fluctuate the breast with gentle pain; in the noble flrekes that coil up the courage and fury of the foul, or that full it in confused visions of joy: in short, in those affecting fliains that find their way to the inward recesses of the heart:

Universiting all the chains that tie The hidden foul of harmony.

# § 222. On Sculpture and Painting.

Sculpture and painting have their standard in nature; and their principles differ only according to the different materials rande use of in these arts. The variety of his colours, and the stat surface on which the painter is at liberty to raise his magic objects,

objects, give him a vast scope for ornament, variety, harmony of parts, and opposition, to please the mind, and divert it from too firict an examination. The feulptor being fo much confined, has nothing to move with but beauty, passion, and force of attitude; scalpture therefore admits of no mediocrity; its works are either intolerable, or very fine. In Greece, the fini hing of a fingle statue was often the work of many years.

Sculpture and painting take their merit from the fame spirit that poetry does; a influefs, a grandeur, and force of expreffion: and their principal objects are, the fublime, the beautiful, and the paffionate. Painting, on account of its great latitude, approaches alto very near to the variety of poetry; in general their principles vary only according to the different materials of each.

Poetry is capable of taking a feries of fucceffice tacts, which comprehend a whole action from the beginning. It puts the pathons in motion gradually, and winds them up by faceclave efforts, that all conduce to the intended effect; the mind could never be agitated fo violently, if the florm had not come on by degrees: befides, language, by its capacity of reprefenting thoughts, of forming the communication of mind with mind, and defending emotions, takes in feveral great, awful, and pathonate ideas that colours cannot reprefent; but the painter is confined to objects of vision, or to one point or mflant of time, and is not to being into view any events which did not, or at lead might not happen, at one and the fame instant. The chief art of the historypainter, is to hit upon a point of time, that unites the whole fuccestive action in one view, and flrikes out the emotion you are defirous of raifing. Some painters have had the power of preferring the traces of a receding pathon, or the mixed diffurbed emotions of the mind, without impairing the principal passion. The Medea of Timomachus was a miracle of this kind; her wild love, her rage, and her maternal pity were all poured forth to the eye, in one portrait. From this mixture of passions, which is in nature, the murderess appeared dreadfully affect-

It is very necessary, for the union of defign in painting, that one principal figure appear eminently in view, and that all the rest be subordinate to it; that is,

the passion or attention of that principal object should give a cast to the whole piece: for inflance, if it be a wreftler for a courfer in the race, the whole fcene thould not only be active, but the attentions and pathons of the reft of the figures should all be directed by that object. If it be a filherman over the flream, the whole scene must be tilent and meditative; if ruins, a bridge, or waterfall, even the living persons must be subordinate, and the caveller should gaze and look back with wonder. This flifet union and concord is rather more necessary in punting than in poetry: the reason is, painting is almost pullably a deception, and requires the utmost Bail in felecting a vicinity of probable ideas, to give it the air of ically and nature. For this reason alto nothing flrange, wenderful, or thock. ing to credulity, ought to be admitted in paintings that are deligned after red life.

The principal art of the landfcapepainter hes in felecting thefe objects of view that are beautiful or great, provided there be a propriety and a just neighbourhood preferved in the attemblage, along with a careless distribution that solicits your eye to the principal object where it refts; in giving such a glance or consused view of those that retire out of prospect, as to rate conofity, and create in the imagination affecting ideas that do not appear; and in beflowing as much life and action as possible, without overcharging the piece. A landicare is culiveard by putting the animated figures in o action; by flinging over it the che utal Apect which the fun behows, cuber by a proper difficfition or finade, or by the appearances that beautify his rinng or fetting; and by a judicious profect of water, weight alw is conveys the ideas of motion, a few dilbevelled clouds have the tame check, but with fome west left vivicity.

Three cells coof portrait painting and feulpture springs from the fame principles that office us in life; they are not the perfons who perform at a comedy or tragedy we go to see with formuch pleasure, but the paffions and emotions they display: in like manner, the value of flatues and pictures rifes in proportion to the flrength and clearness of the expression of the passions, and to the peculiar and diffinguishing air of character. Great painters almost always chuse a fine face to exhibit the paffions in. If you recollect what I faid on beauty, you will eafily conceive the reaton

L i 4

in a beautiful face; beauty is the natural vehicle of the agreeable passions. For the fame reason the tempessuous passions appear strongest in a fine face; it suffers the most violent 'derargement by them. To which we may add, upon the fame principle, that dignity or courage cannot be mixed in a very ill-rayoured countenance; and that the painter after exerting his whole skill, finds in their stead pride and terror. These observations, which have been often made, ierve to illustrate our thoughts on beauty. Befides the fluid propriety of nature, sculpture and figure-painting is a kind of deferin tion, which, like poetry, is under the direction of genius; that, while it preferves nature, femetimes, in a fine flight of tancy, throws an ideal fplendor over the figures that never existed in real life. Such is the fublime and celefial character that breathes over the Apollo Belvedere, and the inexpressible beauties that dwell upon the Venus of Medici, and frem to shed an illumination around her. This fuperior beauty must be varied with propriety, as well as the passions; the elegance of Juno, much be decent, lofty, and elated; of Minerva, matculine, confident, and chaste; and of Venus, winning, fost, and confcious of pleating. These fister arts, painting and flatuary, as well as poetry, put it out of all doubt, that the imagination carries the ideas of the beautiful and the fublime far beyond vifible nature; fince no mortal ever possessed the blaze of divine charms that furrounds the Apollo Belvedere, or the Venus of Medici, I have just mentioned.

A variety and fluft of colouring is generally the refuge of painters, who are not able to animate their defigns. We may call a luftre of colouring, the rant and fuftian of painting, under which are hid the want of strength and nature. None but a painter of real genius can be fevere and modest in his colouring, and please at the same time. It must be observed, that the glow and variety of colours give a pleasure of a very different kind from the object of painting. When foreign ornaments, gilding, and carving come to be considered as necessary to the beauty of pictures, they are a plain diagnostic of a decay in taste and UBer.

#### § 223. On Architeffure.

A free and easy proportion, united with amplicity, seem to constitute the elegance

why the agreeable passions are most lively in a beautiful face; beauty is the natural vehicle of the agreeable passions. For the same reason the tempessions appear strongest in a fine face; it suffers the most violent derangement by them. To which we may add, upon the same principle, that dignity or courage cannot be mixed in a very ill-ravoured countenance; and that the painter after exerting his whole skill, finds in their stead pride and terror. These observations, which have been often made, serve to illustrate our thoughts on

When I am taking a review of the objects of beauty and grandeur, can I pass by unnoticed the source of colours and visible beauty? When the light is withdrawn all nature retires from view, visible bodies are annihilated, and the foul mourns the univertal absence in schude; when it returns, it brings along with it the creation, and reslores joy as well as beauty.

Ibid.

### § 224. Thoughts on Colours and Lights.

If I should distinguish the perceptions of the fenfes from each other, according to the strength of the traces left on the imagination, I should call those of hearing, feeling, finelling, and taffing, notions, which imprefs the memory but weakly; while those of colours I should call ideas, to denote their flrength and peculiar clearness upon the imagination. This diffinction deferves particular notice. The author of nature has drawn an impenetrable veil over the fixed material world that furrounds us; folid matter refutes our acquaintance, and will be known to us only by refilling the touch; but how obscure are the informations of feeling? light comes like an intimate acquaintance to relieve us: it introduces all nature to us, the field, the trees, the flowers, the cryftal ffreams, and azure fky. But all this beauteous diversity is no more than an agreeable enchantment formed by the light that ipreads itself to view; the fixed parts of nature are eternally entombed beneath the light, and we see nothing in fact but a creation of colours. Schoolmen, with their usual arrogance, will tell you their ideas are transcripts of nature, and assure you that the veracity of God requires the should be so, because we cannot well avoid thinking fo: but nothing is an object of vision but light, the picture we see is not annexed to the earth, but comes with angelic celerity to meet our eyes. That which is called body or substance, flance, that reflects the various colours of the light, and lies hid beneath the appearance, is wrapt in impenetrable obfeurity; it is fatally flut out from our eyes and imagination, and only caufes in us the ideas of feeling, taiting, or fmelling, which yet are not refemblances of any part of matter. I do not know if I appear too flrong when I call colours the expreffion of the Divinity. Light firikes with fuch vivacity and force, that we can hardly call it inanimate or unintelligent.

#### § 225. On Uniformity.

Shall we admit uniformity into our lift of beauty, or first examine its real merits? When we look into the works of nature, we cannot avoid observing that uniformity is but the beauty of minute objects. The opposite sides of a leaf divided in the middle, and the leaves of the fame species of vegetables, retain a flinking uniformit, , but the branch, the tree, and forcit, defert this fimilarity, and take a noble irregularity with vall advantage. Cut a tree into a regular form, and you change its lefty port for a minute prettinefs. What forms the beauty of country (cene, but the want of uniformity? No two hills, vales, rivers, or prospects, are alike; and you are charmed by the variety. Let us now suppose a country made up of the most beautiful halls and defcents imaginable, but every hill and every valealike, and at an equal differee; they foon tire you, and you find the delight vanishes with the novelty.

There are, I own, certain affemblages that form a powerful beauty by their unit n, of which a fine face is incontemble evidence. But the charm does not feem by any means to refide in the uniformity, which in the human countenance is not very exact. The human countenance may be planned out much more regularly, but I fancy without adding to the beauty, for which we must feek another fource. In truth, the finest eye in the world without meaning, and the finest mouth without a fmile, are infipid. An agreeable countenance includes in the idea thereof an agreeable and gentle disposition. How the countenance, and an arrangement of colours and features, can express the idea of an unfeen mind, we know not; but so the fact is, and to this fine intelligent picture, whether it be false or true, certain I am, that the beauty of the human countenance is owing, more than to uniformity. Shall we then fay, that the greatest uniformity, along with the greatest variety, forms beauty? But this is a repetition of words without distinct idear, and explicates a well-known effect by an obscure cause. Uniformity, as far as it extends, excludes variety; and variety, as far as it reaches, excludes uniformity. Variety is by far more pleafing than uniformity, but it does not conflitute beauty; for it is impossible that can be called beauty, which, when well known. ceases to please: whereas a fine piece of music shall charm after being heard a hundied times; and a lovely countenance makes a stronger impression on the mind by being often feen, because there beauty is real. I think we may, upon the whole, conclude, that if uniformity be a beauty, it is but the beauty of minute objects; and that it pleafes only by the visible defign, and the evident footdeps of intelligence it difco-

#### § 226. On N velty.

I must say something of the evanescent charms of novelty. When our cariofity is excited at the opening of new hene, our ideas are affecting and beyond life, and we fee objects in a brighter hue than they after appear in. For when curiofity is fated, the objects grow dull, and our ideas fall to their diministive natural fize. What I have thid may account for the suptured prospect of our youth we fee backward; novely always accommends, because expectations of the unknown are ever high; and in youth we have an eternal novelty; unexperienced credulous youth gilds our young ideas, and ever meets a fresh lustre that is not yet allayed by doubts. In age, experience corrects our Lope , and the imagination cools; for this reason, wisdom and high pleasure do not refide together.

I have oblerved through this discourse, that the delight we receive from the vifible of jects of nature, or from the fine arts, may he divided into the conceptions of the fubli ne, and conceptions of the beautiful. Of the origin of the fublime I spoke hypothetically, and with diffidence; all we certainly know on this head is, that the fenfations of the fublime we receive from external objects, are attended with obscure ideas of power and immensity; the origin of our fenfations of beauty are still more unintelligible; however, I think there is fome foundation for classing the objects of beauty under different heads, by a correspondence or similarity, that may be observed between several particulars. Itid.

§ 227. On the Origin of our general Ideas of Beauty.

A full and confiftent evidence of defign, especially if the defign be attended with an important effect, gives the idea of beauty: thus a ship under sail, a greyhound, a well-shaped horse, are beautiful, because they display with ease a great defign. Birds and beasts of prey, completely armed for destruction, are for the same reason beautiful, although objects of terror.

Where different defigns at a fingle view, appear to concur to one effect, the beauty accumulates; as in the Grecian architecture: where different defigns, leading to different effects, unite in the fame whole, they cause consusion, and diminish the idea of beauty, as in the Gothic buildings. Upon the same principle, confusion and disorder are ugly or frightful; the figures made by spilled liquors are always ugly. Regular figures are handsome; and the circular, the most regular, is the most beautiful. This regulation holds only where the fublime does not enter; for in that cafe the irregularity and carelessness add to the ideas of power, and raise in proportion our admiration. The confunon in which we see the stars scattered over the heavens, and the rude arrangement of mountains, add to their grandeur.

A mixture of the sublime aids exceedingly the idea of beauty, and heightens the horrors of diforder and uglinefs. Personal beauty is vailly raised by a noble air; on the contrary, the dissolution and ruins of a large city, diffress the mind proportionally: but while we mourn over great ruins, at the destruction of our species, we are also foothed by the generous commiferation we feel in our own breasts, and therefore ruins give us the same kind of grateful melan-choly we feel at a tragedy. Of all the objects of discord and confusion, no other is to shocking as the human foul in madnels. When we see the principle of thought and beauty difordered, the horror is too high, like that of a maffacre committed before our eyes, to fuffer the mind to make any reflex act on the god-like traces of pity that distinguish our species; and we seel no sensations but those of dismay and

Regular motion and life shewn in inanimate objects, give us also the secret pleafure we call beauty. Thus waves spent, and successively breaking upon the shore, and waving fields of corn and grass in continued motion, are ever beautiful. The beauty of colours may perhaps be arranged under this head: colours, like notes of mufic, affect the passions; red incites anger, black to melancholy; white brings a gendle joy to the mind; the foster colours refresh or relax it. The mixtures and gradations of colours have an effect correspondent to the transitions and combinations of sounds; but the strokes are too transient and seeble to become the objects of expression.

Beauty also results from every disposition of nature that plainly discovers her favour and indulgence to us. Thus the spring feafon, when the weather becomes mild, the verdant fields, trees loaded with fruit or covered with shade, clear springs, but particularly the human face, where the gentle passions are delineated, are beyond expression beautiful. On the same principle, inclement wintry skies, trees stripped of their veidure, desert barren lands, and, above all, death, are frightful and shocking. I must, however, observe, that I do not by any means suppose, that the sentiment of beauty arises from a reflex considerate act of the mind, upon the observation of the defigns of nature or of art; the fentiment of beauty is inflantaneous, and depends upon no prior reflections. All I mean is, that defign and beauty are in an arbitrary manner united together; fo that where we see the one, whether we reslect on it or no, we perceive the other. I must further add, that there may be other divifions of beauty eafily discoverable, which I have not taken notice of.

The general fense of beauty, as well as of grandeur, seems peculiar to man in the creation. The herd in common with him enjoy the gentle breath of spring; they lie down to repose on the slowery bank, and hear the peaceful humming of the bee; they enjoy the green fields and pastures: but we have reason to think, that it is man only who sees the image of beauty over the happy prospect, and rejoices at it; that it is hid from the brute creation, and depends not upon sense, but on the intelligent mind.

We have just taken a transient view of the principal departments of taste; let us now, madam, make a few general reflections upon our subject. User.

§ 228. Senfe, Tafte, and Genius diftinguified.

The human genius, with the best assistance, and the finest examples, breaks forth

gradually acquired a just taste, and chaste simple conceptions of beauty. At an immature age, the fense of beauty is weak and confused, and requires an excess of colouring to catch its attention. It then prefers extravagance and rant to justness, a gross false wit to the engaging light of nature, and the shewy, rich, and glaring, to the fine and amiable. This is the childhood of taste; but as the human genius strengthens and grows to maturity, if it be affifted by a happy education, the fense of universal beauty awakes; it begins to be disgusted with the false and mishapen deceptions that pleafed before, and rells with delight on elegant simplicity, on pictures of eafy beauty and unaffected grandeur.

The progress of the fine arts in the human mind may be fixed at three remarkable degrees, from their foundation to the loftiest height. The basis is a sense of beauty and of the sublime, the second slep we may call tafte, and the last genius.

A sense of the beautiful and of the great is universal, which appears from the uniformity thereof in the most distant ages and nations. What was engaging and sublime in ancient Greece and Rome, are fo at this day: and, as I observed before, there is not the least necessity of improvement or science, to discover the charms of a graceful or noble deportment. There is a fine, but an ineffectual light in the breast of man. After nightfall we have admired the planet Venus; the beauty and vivacity of her luftre, the immense distance from which we judged her beams issued, and the filence of the night, all concurred to firike us with an agreeable amazement. But she shone in distinguished beauty, without giving sufficient light to direct our. steps, or shew us the objects around us. Thus in unimproved nature, the light of the mind is bright and uteless. In utter barbarity, our prospect of it is still less fixed; it appears, and then again seems wholly to vanish in the favage breast, like the same planet Venus, when she has but just raised her orient beams to mariners above the waves, and is now descried, and now loft, through the swelling billows.

The next step is taste, the subject of our enquiry, which confide in a distinct, unconfused knowledge of the great and beautiful. Although you fee not many possessed of a good taste, yet the generality of mankind are capable of it. The very populace of Athens had acquired a good

but flowly; and the greatest men have but taste by habit and fine examples, so that a delicacy of judgment feemed natural to all who breathed the air of that elegant. city; we find a manly and elevated fense distinguish the common people of Rome and of all the cities of Greece, while the level of mankind was preferved in those cities; while the Plebeians had a share in the government, and an utter separation was not made between them and the nobles, by wealth and luxury. But when once the common people are rent afunder wholly from the great and opulent, and made fubiervient to the luxury of the latter; then the talke of nature infallibly takes her flight from both parties. The poor by a fordid habit, and an attention wholly confined to mean views, and the rich by an attention to the changeable modes of fancy, and a vitiated preference for the rich and coffly, lofe view of fim le beauty and grandeur. It may feem a paradox, and yet I am firmly perfuaded, that it would be caller at this day to give a good tafte to the young favages of America, than to the noble youth of Rurope.

Genius, the pride of man, as man is of the creation, has been possessed but by few, even in the brightest ages. Men of superior genius, while they see the rest of mankind painfully struggling to comprehend obvious truths, glance themselves through the most remote consequences, like lightning through a path that cannot be traced. They see the beauties of nature with life and warmth, and paint them forcibly without effort, as the morning fun does the scenes he riscs upon; and in feveral inflances, communicate to objects a morning freshness and unaccountable lustre, that is not feen in the creation of nature. The poet, the statuary, the painter, have produced images that left nature far be-

hind. The conficliations of extraordinary perfonages who appeared in Greece and Kome. at or near the same period of time, after ages of darkness to which we know no beginning; and the long barrenness of those countries after in great men, prove that genius owes much of its lustro to a personal contest of glory, and the strong rivalthip of great examples within actual view and knowledge; and that great parts alone are not able to lift a perion out of barbarity. It is further to be observed, that when the inspiring spirit of the fine acts retired, and lest inanimate and cold the

bieslie

breafts of poets, painters, and statuaries, men of taste still remained, who distinguished and admired the beauteous monuments of genius; but the power of execution was lost; and although monarchs loved and courted the arts, yet they refused to return. From whence it is evident, that neither taste, nor natural parts, form the creating genius that inspired the great masters of antiquity, and that they owed their extraordinary powers to something different from both.

If we consider the numbers of men who wrote well, and excelled in every department of the liberal arts, in the ages of genius, and the simplicity that always attends beauty; we must be led to think, that although few perhaps can reach to the supreme beauty of imagination difplayed by the first-rate poets, orators, and philosophers; yet most men are capable of just thinking and agreeable writing. Nature lies very near our reflections, and will appear, if we be not misled and prejudiced before the fense of beauty grows to maturity. The populace of Athens and Rome prove strongly, that uncommon parts or great learning are not necessary to make Usber. men think justly.

# § 229. Thoughts on the Human Capacity.

We know not the bounds of taste, because we are unacquainted with the extent and boundaries of the human genius. The mind in ignorance is like a fleeping giant; it has immense capacities without the power of using them. By listening to the lectures of Socrates, men grew heroes, philoso-phers, and legislators; for he of all mankind feemed to have discovered the short and lightfome path to the faculties of the mind. To give you an instance of the human capacity, that comes more immediately within your notice, what graces, what fentiments, have been transplanted into the motion of a minuet, of which a favage has no conception! We know not to what degree of rapture harmony is capable of being carried, nor what hidden powers may be in yet unexperienced beauties of the imagination, whose objects are in scènes and in worlds we are firangers to. Children, who die young, have no conception of the fentiment of personal beauty. Are we certain that we are not yet children in respect to several species of beauties? We are ignorant whether there he not passions in the foul, that have

hitherto remained unawaked and undifcowered for want of objects to rouse them: we feel plainly that some such are gently agitated and moved by certain notes of music. In reality, we know not but the taste and capacity of beauty and grandeur in the soul, may extend as far beyond all we actually perceive, as this whole world exceeds the sphere of a cockle or an oyster.

1bid.

### § 230. Tafte how depraved and loft.

Let us now consider by what means taste is usually depraved and lost in a nation, that is neither conquered by barbarians nor has loft the improvements in agriculture, husbandry, and defence, that allow men leiture for reflection and embellithment. I observed before that this natural light is not fo clear in the greatest men, but it may lie oppressed by barbarity. When people of mean parts, and of pride without genius, get into elevated flations, they want a taile for simple grandeur, and mistake for it what is uncommonly glaring and extraordinary; whence proceeds false wit of every kind, a gaudy richness in dress, an oppressive load of ornament in building, and a grandeur overstrained and puerile universally. I must observe, that people of bad taste and little genius almost always lay a great stress on trivial matters, and are oftentatious and exact in fingularities, or in a decorum in trifles. people of mean parts appear in high stations, and at the head of the fashionable world, they cannot fail to introduce a false embroidered habit of mind: people of nearly the same genius, who make up the crowd, will admire and follow them; and at length solitary taste, adorped only by noble simplicity, will be lost in the general example.

Also when a nation is much corrupted; when avarice and a love of gain have seized upon the hearts of men; when the nobles ignominously bend their necks to corruption and bribery, or enter into the base mysteries of gaming; then decency, elevated principles, and greatness of soul, expire; and all that remains is a comedy or puppet-shew of elegance, in which the dancing-maker and peer are upon a level, and the mind is understood to have no part in the drama of politeness, or else to act undersa mean disguise of virtues which it is not possessed.

\$ 231. Some Reflections on the Human Mind.

Upon putting together the whole of our reflections you see two different natures laying claim to the human race, and dragging it different ways. You see a necesfity, that arises from our fituation and circumstances, bending us down into unworthy misery and fordid baseness; and you see, when we can escape from the insulting tyranny of our fate, and acquire ease and freedom, a generous nature, that lay stupified and oppressed, begin to awake and charm us with prospects of beauty and This awaking genius gazes in glory. rapture at the beauteous and elevating scenes of nature. The beauties of nature are familiar, and charm it like a mother's bosom; and the objects which have the plain marks of immense power and grandeur, raise in it a still, an inquisitive, and trembling delight: but genius often throws over the objects of its conceptions colours finer than those of nature, and opens a paradife that exists no where but in its own creations. The bright and peaceful scenes of Arcadia, and the lovely descriptions of pastoral poetry, never existed on earth, no more than Pope's shepherds or the river gods of Windfor forest: it is all but a charming illusion, which the mind first paints with celestial colours and then languishes for. Knight-errantry is another kind of delusion, which, though it be fictitious in fact, yet is true in sentiment. I believe there are few people who in their youth, before they be corrupted by the commerce of the world, are not knight-errants and princesses in their hearts. The foul, in a beauteous ecstacy, communicates a flame to words which they had not; and poetry, by its quick transitions, bold figures, lively images, and the variety of efforts to paint the latent rapture, bears witness, that the confused ideas of the mind are fill infinitely superior, and beyoud the reach of all description. It is this divine spirit that, when roused from its lethargy, breathes in noble fentiments, that charms in elegance, that stamps upon marble or canvals the figures of gods and heroes, that inspires them with an air above humanity, and leads the foul through the enchanting meanders of mulic in a waking vision, through which it eannot break, to discover the near objects that charm it.

flow shall we venture to trace the ob-

gehius, which evidently does not come to the mind from the senses? It is not conveyed in found, for we feel the founds of music chaim us by gently agitating and swelling the passions, and setting some pasfions affort, for which we have no name. and knew not until they were awaked in the mind by harmony. This beauty does not arrive at the mind by the ideas of vition, though it be moved by them; for it evidently bestows on the mimic representations and images the mind makes of the objects of sense, an enchanting loveliness that never existed in those objects Where thall the foul find this amazing beauty, whose very shadow, glimmering upon the imagination, opens unspeakable raptures in it, and distracts it with languishing pleafure? What are those stranger fentiments that lie in wait in the foul, until music calls them forth? What is the obscure but unavoidable value or merit of virtue? or who is the law-maker in the mind who gives it a worth and dignity beyond all estimation, and punishes the breach of it with conscious terror and despair? What is it, in objects of immeasurable power and grandeur, that we look for with still amazement and awful delight?-But I find, madam, we have been infenfibly led into subjects too abstruse and severe; I must not put the graces with whom we have been conversing to flight, and draw the ferious air of meditation over that countenance where the fmiles naturally

I have, in consequence of your permisfion, put together fuch thoughts as ocif I had leisure hereafter, I would dispose of them with more regularity, and add any new observations that I may make. Before I finish, I must in justice make my acknowledgments of the assistance I received. I took notice, at the beginning. that Rollin's Observations on Talke gave occasion to this discourse. Sir Harry Beaumont's polithed dialogue on beauty, called Crito, was of service to me; and I have availed myself of the writings and sentiments of the ancients, particularly of the poets and flatuaries of Greece, which was the native and original country of the graces and fine arts. But I should be very unjust, if I did not make my chief acknowledgments where they are more peculturly due. If your modelly will not fuffer me to draw that picture from which I borrowed my ideas of eligance, Lam

bound at leaft, in honesty, to disclaim every merit but that of copying from a bright original.

U/ber.

§ 232. General Reflections upon what is called Good Tafte. From ROLLIN's Belles Lettres.

Tafte as it now falls under our confideration, that is, with reference to the reading of authors and composition, is a clear, lively, and diffinet differning of all the beauty, truth, and justness of the thoughts and expressions, which compole a discourse. It distinguishes what is conformable to eloquence and propriety in every character, and suitable in different circumstances. And whilst, with a delicate, and exquisite sagacity, it notes the graces, turns, manners, and expressions, most likely to please, it perceives also all the defects which produce the contrary effect, and diftinguishes precisely wherein those desects confift, and how far they are removed from the strict rules of art, and the real beauties of nature.

This happy faculty, which it is more eafy to conceive than define, is less the effect of genius than judgment, and a kind of natural reason wrought up to perfection by fludy. It ferves in composition to guide and direct the understanding. It makes use of the imagination, but without submitting to it, and keeps it always in fubjection. It consults nature universally, follows it step by step, and is a faithful image of it. Reserved and sparing in the midst of abundance and riches, it dispenses the beauties and graces of discourse with temper and wisdom. It never suffersitself to be dazzled with the falle, how glittering a figure foever it may make. Tis equally offended with too much and too little. It knows precifely where it must stop, and cuts off, without regret or mercy, whatever exceeds the beautiful and perfect. \*Tis the want of this quality which occafions the various species of bad style; as bombast, conceit, and witticism; in which as Quintilian fays, the genius is void of judgment, and fuffers ittelf to be carried away with an appearance of beauty, queties ingenium judicio caret, & specie boni fullitur

Tafe, fimple and uniform in its principle, is varied and multiplied an infinite humber of ways, yet to as under a thou-fand different forms, in profe or verfe, in a declaratory or concile, fubline or fimple, locale or ferious flyle, 'tis always the

fame, and carries with it a certain characeter of the true and natural, immediately perceived by all persons of judgment. We cannot say the style of Terence, Phædrus, Sallust, Cæsar, Tully, Livy, Virgil, and Horace, is the same. And yet they have all, if I may be allowed the expression, a certain tincture of a common spirit, which in that diversity of genius and style makes an aftinity between them, and a sensible difference also betwiext them and the other writers, who have not the stamp of the best age of antiquity upon them.

I have already faid, that this distinguishing faculty was a kind of natural reason wrought up to perfection by study. In reality all men bring the first principles of taste with them into the world, as well as those of rhetoric and logic. As a proof of this, we may urge, that every good orator is almost always infallibly approved of by the people, and that there is no difference of taste and sentiment upon this point, as Tully observes, between the ignorant and

the learned. The case is the same with music and painting. A concert, that has all its parts well composed and well executed, both as to instruments and voices, pleases univerfally. But if any discord arises, any ill tone of voice be intermixed, it shall difplease even those who are absolutely ignorant of music. They know not what it is that offends them, but they find somewhat grating in it to their ears. And this proceeds from the taste and sense of harmony implanted in them by nature. In like manner a fine picture charms and transports a spectator, who has no idea of painting. Ask him what pleases him, and why it pleases him, and he cannot easily give an account, or specify the real reasons; but natural fentiment works almost the fame effect in him as art and use in connoisseurs.

The like observations will hold good as to the taste we are here speaking of. Most men have the first principles of it in themselves, though in the greater part of them they lie dormant in a manner, for want of instruction or resection; as they are often fished or corrupted by a vicious education, had customs, or reigning prejudices of the age and country.

But how deprayed foever the take may be, it is never absolutely lost. There are certain fixed remains of it, deeply rooted in the understanding, wherein all man agree. Where these secret feeds are cell-

**ÉVATO** 

tivated with care, they may be carried to a far greater height of perfection. And if it to happens that any fresh light awakens these first notions, and renders the mind attentive to the immutable rules of truth and beauty, fo as to discover the natural and necessary consequences of them, and ferves at the same time for a model to facilitate the application of them; we generally fee, that men of the best finie gladly cast off their ancient errors, correct the mistakes of their somer judgments, and return to the juffness, and delicacy, which are the effects of a refined tafte, and by degrees draw others after them into the same way of thinking.

To be convinced of this, we need only look upon the fuccess of certain great orators and celebrated authors, who by their natural talents have recalled these primitive ideas, and given fresh life to these feeds, which lie concealed in the mind of every man. In a little time they united the voices of those who made the best use of their reason, in their favour; and soon after gained the applaule of every age and condition, both ignorant and I aimed. It would be easy to point out among it us the date of the good taffe, which now reigns in all arts and sciences; by tracing each up to its original, we should see that a small number of men of genius have acquired the nation this glory and advantage.

Even those, who live in the politer ages without any application to learning or fludy, do not fail to gain some tincture of the prevailing good taile, which has a share without their perceiving it themselves, in their conversation, letters, and behaviour. There are sew of our soldiers at present, who would not write more correctly and elegantly than Ville-Hardouin, and the other others wholived in a ruder and more barbarous age.

From what I have said, we may conclude, that rules and precepts may be laid down for the improvement of this discerning faculty; and I cannot perceive why Quintilian, who justly sets such a value upon it, should say that it is no more to be obtained by art, than the taste or smell; Non magis arts readitur, guam gustus autodor; unless he meant, that some persons are so stupid, and have so little use of their judgment, as might tempt one to believe that it was in reality the gift of nature

Neither do I think that Quintilian is

absolutely in the right in the inflance he produces, at least with respect to taste. We need only imagine what passes in certain nations, in which long cultom has introduced a fondness for certain odd and extravagant dithes. They readily commend good liquors, elegant food, and good cookery. They foon learn to discern the delicrey of the feafoning, when a skilful mafter in that way has pointed it out to them; and to prefer it to the grofiness of their former diet. When I talk thus, I would not be understood to think those nations had great cause to complain, for the wantof knowledge and ability in what is become so fatal to us. But we may judge from hence the refemblance there is between the tafte of the body and mind, and how proper the first is to describe the characters of the second.

The good taste we speak of, which is that of literature, is not limited to what we call the sciences, but extends itself imperceptibly to other arts, such as architecture, painting, sculpture, and music. 'Tis the same discerning faculty which introduces univerfally the fame elegance, the fame symmetry, and the same order in the disposition of the parts; which inclines us to a noble simplicity, to natural beauties, and a judicious choice of ornaments. On the other hand, the depravation of taffe in arts has been always a mark and confequence of the depravation of tafte in literature. The heavy, confused, and gross ornaments of the old Gothic buildings, placed usually without elegance, contrary to all good rules, and out of all true proportions, were the image of the writings of the authors of the same age.

The good taste of literature reaches also to public cultoms and the manner of hying. An habit of confulting the best rules upon one subject, naturally leads to the doing it also upon others. Paulus Æmilius, whole genius was fo univerfally extensive, having made a great feast for the entertainment of all Greece upon the conquest of Macedon, and observing that his guests looked upon it as conducted with more elegance and art than might be expected from a foldier, told them they were much in the wrong to be furprifed at it: for the same genius, which taught how to draw up an army to advantage, naturally pointed out the proper disposition of a table.

But by a firange, though frequency, which is one great proof of the wakiness,

weakness, or rather the corruption of human understanding, this very delicacy and elegance, which the good tafte of literature and eloquence usually introduces into common life, for buildings, for instance, and entertainments, coming by little and little to degenerate into excess and luxury. introduces in its turn the bad tafte in litepature and eloquence. This Seneca informs us, in a very ingenious manner, in one of his epiftles, where he feens to have drawn a good description of himself, though he did not perceive it.

One of his friends had asked him, whence the alteration could possibly arise which was fometimes observable in eloquence, and which carried most people into certain general faults; fuch as the affectation of bold and extravagant figures, metaphors struck off without measure or caution, sentences so short and abrupt, that they left people rather to guess what they meant, than conveyed a meaning.

Seneca answers this question by a common proverb among the Greeks; " As is their life, fo is their discourse," Talis hominibus fuit oratio, qualis vita. As a private person lets us into his character by his discourse, so the reigning flyle is oft an image of the public manners. The heart carries the understanding away with it, and communicates its vices to it, as well as its virtues. When men strive to be distinguished from the rest of the world by novelty, and refinement in their furniture, buildings, and entertainments, and a studious fearch after every thing that is not in common use; the same taste will prevail in eloquence, and introduce novelty and irregularity there. When the mind is once accustomed to despise rules in manners, it will not follow them in style. Nothing will then go down but what strikes by its being new and glaring, extraordinary and affected. Trifling and childish thoughts will take place of such as are bold and overstrained to an excess. We shall affect a fleek and florid style, and an elecution pompous indeed, but with little more thanmere found in it.

And this fort of faults is generally the effect of a fingle man's example, who, having gained reputation enough to be followed by the multitude, fets up for a mafter, and gives the firain to others. 'Tis thought honourable to imitate him, to obterre and copy after him, and his flyle becomes die rule and model of the public and a

As then; luxury in diet and dress is a plain indication that the manners are not under fo good a regulation as they should be; fo a licentiousness of style, when it becomes public and general, shews evidently a depravation and corruption of the understandings of mankind.

To remedy this evil, and reform the thoughts and expressions used in style, it will be requifite to cleanfe the fpring from whence they proceed. 'Tis the mind that must be cured. When that is found and vigorous, eloquence will be fo too; but it becomes feeble and languid when the mind is enfeebled and enervated by pleasures and delights. In a word, it is the mind which prefides, and directs, and gives motion to the whole, and all the rest fol-

lows its impressions.

He has observed elsewhere, that a style too studied and far-fetched is a mark of a little genius. He would have an orator, especially when upon a grave and serious subject, be less curious about words, and the manner of placing them, than of his matter, and the choice of his thoughts. When you fee a discourse laboured and polished with so much carefulness and study, you may conclude, fays he, that it comes from a mean capacity, that busies itself in trifles. A writer of great genius will not stand for such minute things. He thinks and speaks with more nobleness and grandeur, and we may discern, in all he says, a certain easy and natural air, which argues a man of real riches, who does not endeavour to appear fo. He then compares this florid prinked eloquence to young people curled out and powdered, and continually before their glass and the toilet: Barba et coma nitidos, de capfula totos. Nothing great and folid can be expected from such characters. So also with orators. The discourse is in a manner the visage of the mind. If it is decked out, tricked up, and painted, it is a fign there is some defect in the mind, and all is not found within. So much finery, displayed with such are and fludy, is not the proper ornament of eloquence. Non est ornamentum virile, concinnitas.

Who would not think, upon hearing Seneca talk thus, that he was a declared enemy of bad tafte, and that no one was more capable of opposing and preventing it than he? And yet it was he, more than any other, that contributed to the depravation of rafte, and corruption of eloquence. I shall take an occasion to speak upon this subject in another place, and shall do it the more freely, as there is cause to fear left the bad tafte for bright thoughts, and turns of expression, which is properly the character of Seneca, should prevail in our own age. And I question whether this be not a mark and presage of the ruin of eloquence we are threatened with, as the immoderate luxury that now reigns more than ever, and the almost general decay of good manners, are perhaps also the fatal harbingers of it.

One fingle person of reputation sometimes, as Seneca observes, and he himself is an instance of it, who by his eminent qualifications shall have acquired the esteem of the public, may furfice to introduce this bad tafte, and corrupt ftyle. Whilst moved by a fecret ambition, a man of this character strives to distinguish himself from the rest of the orators and writers of his age, and to open a new path, where he thinks it better to march alone at the head of his new disciples, than follow at the heels of the old masters; whilst he prefers the reputation of wit to that of folidity, pursues what is bright rather than what is folid, and fets the marvellous above the natural and true; whilst he chooses rather to apply to the fancy than to the judgment, to dazzle reason than convince it, to surprise the hearer into an approbation, rather than deserve it; and by a kind of delusion and soft enchantment carry off the admiration and applauses of superficial minds (and fuch the multitude always are); other writers, seduced by the charms of novelty, and the hopes of a like fuccess, will suffer themselves insenfibly to be burried down the stream, and add strength to it by following it. And thus the old taste, though better in itself, shall give way to the new one without redress, which shall presently assume the force of law, and draw a whole nation after it.

This should awaken the diligence of the masters in the university, to prevent and hinder, as much as in them lies, the ruin of good tafte; and as they are entrusted with the public instruction of youth, they should look upon this care as an effential part of their duty. The custom, manners, and laws of the ancients have changed; they are often opposite to our way of life, and the usages that prevail amongst us; and the knowledge of them may be thereform less necessing for us. Their actions are generaled countries return; great events have had their course, without any reafon left for us to expect the like; and the revolutions of flates and empires have perhaps very little relation to their present fituation and wants, and therefore become of less concern to us. But good taste, which is grounded upon immutable principles. is always the same in every age; and it is the principal advantage that young perfons should be taught to obtain from reading of ancient authors, who have ever been looked upon with reason as the masters, depositories, and guardians of sound elo-quence and good taste. In fine, of all that may anywise contribute to the cultivating the mind, we may truly say this is the most essential part, and what ought to be preferred before all others.

This good talte is not confined to literature; it takes in also, as we have already fuggested, all arts and sciences, and branches of knowledge. It confilts therefore in a certain just and exact discernment, which points out to us, in each of the sciences and branches of knowledge, whatever is most curious, beautiful, and useful, whatever is most essential, suitable, or necesfary to those who apply to it; how far consequently we should carry the study of it: what ought to be removed from it; what deferves a particular application and preference before the rest. For want of this discernment, a man may fall short of the most essential part of his profession, without perceiving it: nor is the case so rare as one might imagine. An instance taken from the Cyropædia of Xenophon will fet the matter in a clear light.

The young Cyrus, son of Cambyles King of Perlia, had long been under the tuition of a master in the art of war. who was without doubt a person of the greatest abilities and best reputation in his time. One day, as Cambyles was difcourfing with his fon, he took occasion to mention his master, whom the young Prince had in great veneration, and from whom he pretended he had learnt in general whatever was necessary for the command of an army. Has your master, fays Cambyles, given you any lectures of economy; that is, has he taught you . how to provide your troops with necesfaries, to supply them with provisions, to prevent the distempers that are incident to them, to cure them when they are fick, to firengthen their bodies by free quent exercile, to raise emulation among them, how to make yourself obeyed. effeemed, and beloved by them? Up

M m

all these points, answered Cyrus, and several others the King ran over to him, he has not spoke one word, and they are all new to me. And what has he taught you then? To exercise my arms, replies the young Prince, to ride, to draw the bow, to cast a spear, to form a camp, to draw the plan of a fortification, to range my troops in order of battle, to make a review, to fee that they march, file off, and encamp. Cambyses smiled, and let his son fee, that he had learnt nothing of what was most essential to the making of a good officer, and an able general; and taught him far more in one conversation, which certainly deserves well to be studied by young gentlemen that are defigned for the army, than his famous mailer had done in many years.

Every profession is liable to the same inconvenience, either from our not being fufficiently attentive to the principal end we should have in view in our applications to it, or from taking custom for our guide, and blindly following the footsteps of others, who have gone before us. There is nothing more useful than the knowledge of history. But if we rest satisfied in load. ing our memory with a multitude of facts of no great curiofity or importance, if we dwell only upon dates and difficulties in chronology or geography, and take no pains to get acquainted with the genius, manners, and characters of the great men we read of, we shall have learnt a great deal, and know but very little. A treatise of rhetoric may be extensive, enter into a long detail of precept, define very exactly every trope and figure, explain well their differences, and largely treat such questions as were warmly debated by the thetoricians of old; and with all this be very like that discourse of rhetoric Tully speaks of, which was only fit to teach people not to ipeak at all, or not to the purpose. Scripfit artem rhetoricam Cleanthes, sed sic, nt, st quis obmutescere concupierit, nibil aliud legere debeat. In philosophy one might spend abundance of time in knotty and abitrule disputes, and even learn a great many fine and curious things, and at the same time neglect the effectial part of the fludy, which is to form the judgment and direct the manners.

In a word, the most necessary qualification, not only in the art of speaking and the friences, but in the whole conduct of our life, is that taste, prudence, and discretion, which upon all subjects and an every

occasion teaches us what we should do, and how to do it. Illud dicere satis babes, nibil esse, non modo in orando, sed in smai vita, prius consilio.

Rollin.

§ 233. Dr. Johnson's Preface to bis Edition of Shakespeare.

That praises are without reason lavished on the dead, and that the honours due only to excellence are paid to antiquity, is a complaint likely to be always continued by those, who, being able to add nothing to truth, hope for eminence from the heresies of paradox; or those, who, being forced by disappointment upon consolatory expedients, are willing to hope from poterity what the present age resules, and flatter themselves that the regard, which is yet denied by envy, will be at last bestowed by time.

Antiquity, like every other quality that attracts the notice of mankind, has undoubtedly votaries that reverence it, not from reason, but from prejudice. Some seem to admire indifcriminately whatever has been long preserved, without considering that time has fometimes co-operated with chance; all perhaps are more willing to honour past than present excellence; and the mind contemplates genius through the shade of age, as the eye surveys the fun through artificial opacity. The great contention of criticism is to find the faults of the moderns, and the beauties of the ancients. While an author is yet living, we estimate his powers by his worst performance; and when he is dead, we rate them by his best.

To works, however, of which the excellence is not absolute and definite, but gradual and comparative; to works not raited upon principles demonstrative and scientific, but appealing wholly to observation and experience, no other test can be applied than length of duration and con-What markind have tinuance of efteem. long possessed they have often examined and compared; and if they perful to value the possession, it is because frequent comparisons have confirmed opinion in its favour. As among the works of nature no man can properly call a river deep, or a mountain high, without the knowledge of many mountains, and many rivers; for in the productions of genius, nothing can be flyled excellent till it has been toonpared with other works of the same kind. Demonstration immediately displays its power, and has nothing to hope or feet

from the flux of years; but works tentative and experimental must be estimated by their proportion to the general and collective ability of man, as it is discovered in a long succession of endeavours. Of the first building that was raised, it might be with certainty determined, that it was round or square; but whether it was spacious or lofty must have been referred to time. The Pythagorean scale of numbers was at once discovered to be perfect : but the poems of Homer we yet know not to transcend the common limits of human intelligence, but by remarking, that nation after nation, and century after century, has been able to do little more than transpose his incidents, new name his characters, and paraphrase his sentiments.

The reverence due to writings that have long subsisted, arises, therefore, not from any credulous confidence in the superior wisdom of past ages, for gloomy persuasion of the degeneracy of mankind, but is the consequence of acknowledged and indubitable positions, that what has been longest known has been most considered, and what is most considered is best understood.

The poet, of whose works I have undertaken the revision, may now begin to assume the dignity of an ancient, and claim the privilege of established fame and prescriptive veneration. He has long outlived his century, the term commonly fixed as the test of literary merit. Whatever advantages he might once derive from personal allusion, local customs, or temporary opinions, have for many years been lost; and every topic of merriment, or motive of forrow, which the modes of artificial life afforded him, now only obscure the scenes which they once illuminated, The effects of favour and competition are at an end; the tradition of his friendships and his enemies has perished; his works support no opinion with arguments, nor supply any faction with invectives; they can neither indulge vanity, nor gratify malignity; but are read without any other reason than the desire of pleasure, and are therefore praised only as pleasure is obtained : yet, thus unaffifted by interest or passions they have past through variations of tafte and change of manners, and, as they devolved from one generation to another, have received new honours at every transmission.

But because human judgment, though it be gradually gaining upon certainty, never becomes infallible; and approbation, though long continued, may yet be only

the approbation of prejudice or fashion: it is proper to enquire, by what peculiarities of excellence Shakespeare has gained and kept the favour of his countrymen.

Nothing can please many, and please long, but just representations of general nature. Particular manners can be known to few, and therefore few only can judge how nearly they are copied. The irregular combinations of fanciful invention may delight awhile, by that novelty of which the common satiety of life sends us all in quest; but the pleasures of sudden wonder are soon exhausted, and the mind can only repose on the stability of truth.

Shakespeare is, above all writers, at least above all modern writers, the poet of nature; the poet that holds up to his readers a faithful mirror of manners and of life. His characters are not modified by the cultoms of particular places, unpractifed by the rest of the world; by the peculiarities of studies or professions, which can operate but upon small numbers; or by the accidents of transient fashions or temporary opinions: they are the genuine progeny of common humanity, such as the world will always supply, and observation will always find. His persons act and fpeak by the influence of those general paffions and principles by which all minds are agitated, and the whole system of life is continued in motion. In the writings of other poets, a character is too often an individual; in those of Shakespeare, it is commonly a species.

It is from this wide extension of design that fo much instruction is derived. It is this which fills the plays of Shakespeare with practical axioms and domestic wif-It was said of Ruripides, that every verse was a precept; and it may be said of Shakespeare, that from his works may be collected a fystem of civil and occonomical prudence. Yet his real power is not shewn in the splendor of particular passages, but by the progress of his fable, and the tenor of his dialogue; and he that tries to recommend him by select quotations, will succeed like the pedant in Herocles, who, when he offered his house to sale, carried a brick in his pocket as a specimen.

It will not easily be imagined how much Shakespeare excels in accommodating his fentiments to real life, but by comparing him with other authors. It was observed of the ancient schools of declamation, that the more diligently they were frequented, the more was the student disqualized for the world, became he found nothing there has a which

which he should ever meet in any other place. The same remark may be applied to every stage but that of Shakespeare. The theatre, when it is under any other direction, is peopled by fuch characters as were never feen, conversing in a language which was never heard, upon topics which will never arise in the commerce of mankind. But the dialogue of this author is often fo evidently determined by the ineident which produces it, and is purfued with so much ease and simplicity, that it feems fearcely to claim the merit of fiction, but to have been gleaned by diligent felection out of common conversation and common occurrences.

Upon every other stage the universal agent is love, by whose power all good and evil is distributed, and every action quickered or retarded. To bring a lover, a Indy, and a rival into the fable; to entangle them in contradictory obligations, perplex them with oppositions of interest, and harrafs them with violence of defires inconfiltent with each other; to make them meet in rapture, and part in agony; to fill their mouths with hyperbolical joy and outrageous forrow; to diffress them as nothing human ever was distressed; to deliver them as nothing human ever was delivered; is the bufiness of a modern dramatist. For this, probability is violated, life is mifrepresented, and language is depraved. But love is only one of many passions; and as it has no greater influence upon the fum of life, it has little operation in the dramas of a poet, who caught his ideas from the living world, and exhibited only what he faw before him. He knew that any other paffion, as it was regular or exorbitant, was a cause of happiness or calamity.

Characters, thus ample and general, were not easily discriminated and preserved; yet perhaps no poet ever kept his personages more custinct from each other. I will not say with Pope, that every speech may be assigned to the proper speaker, because many speeches there are which have nothing characteristical; but, perhaps, though some may be equally adapted to every person, it will be difficult to find any that can be properly transferred from the present possession. The choice is right, when there is reason for shoice.

Other dramatifts can only gain attention by hyperbolical or aggravated characters, by fabulous and unexampled excellence or deprayity, as the writers of barbarous ro-

mances invigorated the reader by a giant and a dwarf; and he that should form his expectations of human affairs from the play, or from the tale, would be equally deceived. Shakespeare has no heroes; his scenes are occupied only by men, who act and speak as the reader thinks that he should himself have spoken or acted on the same occasion: even where the agency is supernatural, the dialogue is level with life. Other writers disguise the most natural passions and most frequent incidents; so that he who contemplates them in the book will not know them in the world: Shakespeare approximates the remote, and familiarizes the wonderful; the event which he represents will not happen; but, if it were possible, its effects would probably be such as he has assigned; and it may be said, that he has not only shewn human nature as it acts in real exigencies, but as it would be found in trials, to which it cannot be exposed.

This therefore is the praise of Shakefpeare, that his drama is the mirror of life; that he who has mazed his imagination, in following the phantoms which other writers raise up before him, may here be cured of his delirious cestacies, by reading human sentiments in human language, by scenes from which a hermit may estimate the transactions of the world, and a consessor predict the progress of the passions.

His adherence to general nature has exposed him to the censure of critics, who form their judgments upon narrower principles. Dennis and Rymer think his Romans not sufficiently Roman; and Voltaire censures his kings as not completely royal. Dennis is offended, that Menenius, a fenator of Rome, should play the buffoon; and Voltaire perhaps thinks decency violated when the Danish usurper is reprefented as a drunkard. But Shakespeare always makes nature predominate over, accident; and if he preserves the essential character, is not very careful of distinctions superinduced and adventitious. His story. requires Romans or Kings, but he thinks only on men. He knew that Rome, like every other city, had men of all dispositions; and wanting a buffoon, he went into the fenate-house for that which the senatehouse would certainly have afforded him. .He was inclined to thew an uturper and a murderer not only odious, but despicable; he therefore added drunkennels to his other qualities, knowing that kings love wine

like other men, and that wine exerts its natural power upon kings. These are the petty cavils of petty minds; a poet overlooks the casual distinction of country and condition, as a painter, satisfied with the figure, neglects the drapery.

The censure which he has incurred by mixing comic and tragic scenes, as it extends to all his works, deserves more consideration. Let the fact be first stated, and

then examined.

Shakespeare's plays are not, in the rigorous and critical fenfe, either tragedies or comedies, but compositions of a dislinct kind; exhibiting the real state of sublunary nature, which partakes of good and evil, joy and forrow, mingled with endless variety of proportion, and innumerable modes of combination; and expressing the course of the world, in which the loss of one is the gain of another; in which, at the same time, the reveller is hattening to his wine, and the mourner burying his friend: in which the malignity of one is fometimes defeated by the frolic of another; and many mischiefs and many benefits are done and hindered without defign.

Out of this chaos of mingled purpofes and casualties, the ancient poets, according to the laws which cultom had prescribed, selected some the crimes of men, and some their absurdities; some the momentous vicissitudes of life, and some the lighter occurrences; some the terrors of distress, and some the gaieties of prosperity. Thus role the two modes of imitation, known by the names of tragedy and comedy, compositions intended to promote different ends by contrary means, and considered as so little allied, that I do not recollect, among the Greeks or Romans, a single writer who attempted both.

Shakespeare has united the powers of exciting laughter and sorrow, not only in one mind, but in one composition. Almost all his plays are divided between serious and ludicrous characters; and in the successive evolutions of the design, sometimes produce seriousness and sorrow, and some-

times levity and laughter.

That this is a practice contrary to the rules of criticism will be readily allowed; but there is always an appeal open from criticism to nature. The end of writing is to instruct; the end of poetry is to instruct by pleasing. That the mingled drama may coney all the instruction of tragedy or comedy cannot be denied, because it instructs both in its alterations of exhibition,

and approaches nearer than either to the appearance of life, by shewing how great machinations and slender designs may promote or obviate one another, and the high and the low co-operate in the general system

by unavoidable cancatenation.

It is objected, that by this change of scenes the passions are interrupted in their progression, and that the p incipal event, being not advanced by a due gradation of preparatory incidents, wants at last the power to move, which constitutes the perfection of dramatic poetry. This reationing is fo specious, that it is received as true even by those who in daily experience feel it to be falle. The interchanges of min- . gled feenes feldom fail to produce the intended viciflitudes of passion. Fiction cannot move to much, but that the attention may be easily transferred; and though it must be allowed that pleasing melancholy be fometimes interrupted by unwelcome levity, yet let it be confidered likewife, that melancholy is often not pleasing, and that the diffurbance of one man may be the relief of another; that different auditors have different habitudes; and that, upon the whole, all pleasure confists in variety.

The players, who in their edition divided our author's works into comedies, histories, and tragedies, feem not to have distinguished the three kinds by any very exact or

definite ideas.

An action which ended happily to the principal perions, however ferious or diftressful through its intermediate incidents, in their opinion constituted a comedy. This idea of a comedy continued long amongst us; and plays were written, which, by changing the catastrophe, were tragedies to-day, and comedies to-morrow.

Trigedy was not in those times a poem of moregeneral dignity or elevation than comedy; it required only a calamitous conclusion, with which the common criticism of that age was satisfied, whatever lighter pleasure it afforded in its

progreis.

History was a series of actions, with no other than chronological succession, independent on each other, and without any tendency to introduce or regulate the conclusion. It is not always very nicely distinguished from tragedy. There is not much nearer approach to unity of action in the tragedy of Antony and Cleopatra, than in the history of Richard the Second. But a history might be continued M m 2 through

through many plays; as it had no plan, it had no limits.

Through all these denominations of the drama, Shakespeare's mode of composition is the same; an interchange of seriousness and merriment, by which the mind is softened at one time; and exhilarated at another. But whatever be his purpose; whether to gladden or depress, or to conduct the story, without vehemence or emotion, through tracts of easy and familiar dialogue, he never fails to attain his purpose; as he commands us, we laugh or mourn, or sit silent with quiet expectation, in tranquillity without indifference.

When Shakeipeare's plan is understood, most of the criticisms of Rymer and Voltaire vanish away. 'The play of Hamlet is opened, without impropriety, by two centinels: Iago bellows at Brabantio's window, without injury to the scheme of the play, though in terms which a modern audience would not easily endure; the character of Polonius is seasonable and useful; and the Grave-diggers themselves may be

heard with applaute.

Shakeipeare engaged in dramatic poetry with the world open before him; the rules of the ancients were yet known to few; the public judgment was unformed; he had no example of fuch fame as might force him upon imitation, nor critics of fuch authority as might restrain his extravagance; he therefore indulged his natural disposition; and his disposition, as Rymer has remarked, led him to comedy. In tragedy he often writes, with great appearance of toil and fludy, what is written at last with little felicity; but in his tomic scenes, he feems to produce, without labour, what no labour can improve. In tragedy he is always struggling after some occasion to be comic; but in comedy he seems to repose, br to luxuriate, as in a mode of thinking congenial to his nature. In his tragic scenes there is always something wanting; but his comedy often furpasses expectation or defire. His comedy pleases by the thoughts and the language, and his tragedy, for the greater part, by incident and action. His tragedy feems to be skill, his comedy to be inflinct.

The force of his comic scenes has suffered little diminution, from the changes made by n century and a half, in manners or in words. As his personages as upon principles arising froits genaine passion, very little modified by particular forms, their pleasures and vexations are communicable loals times and to all places; they are na-

tural; and therefore durable: the adventitious peculiarities of personal habits are only superficial dyes, bright and pleasing for a little while, yet foon fading to a dim tinct, without any remains of former luftre; but the discriminations of true passion are the colours of natural they pervade the whole mass, and can only perish with the body that exhibits them. The accidental compositions of heterogeneous modes are dissolved by the chance which combined them; but the uniform simplicity of primitive qualities neither admits increase, nor fuffers decay. The fand heaped by one flood is scattered by another, but the rock always continues in its place. The fiream of time, which is continually washing the diffoluble fabrics of other poets, paties without injury to the adamant of Shakespeare.

If there be, what I believe there is, in every nation, a style which never becomes obfolete, a certain mode of phraseology so conforant and congenial to the analogy and principles of its respective language, as to remain fettled and unaltered; this flyle is probably to be fought in the common intercourie of life, among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned depart from established forms of speech, in hopes of finding or making better; those who wish for distinction fortake the vulgar, when the vulgar is right; but there is a converfation above groffness, and below refinement, where propriety refides, and where this poet feems to have gathered his comic dialogue. He is therefore more agreeable to the cars of the prefent age than any other author equally remote, and among his other excellencies delegves to be studied as one of the original masters of bur language.

These observations are to be considered not as unexceptionably constant, but ascontaining general and predominant truth. Shakespeare's familiar dialogue is affirmed to be smooth and clear, yet not wholly without ruggedness or difficulty; as a country may be eminently fruitful, though it has spots unsit for cultivation: his characters are praised as natural, though their sentiments are sometimes soreed, and their actions improbable; as the earth upon the whole is sphetical; though its surface is varied with protuberances and

cavities.

Shakespeare with his excellencies has likewise saults, and faults sufficient to ob-

scure and overwhelm any other merit. I shall shew them in the proportion in which they appear to me, without envious malignity or superstitious veneration. No question can be more innocently discussed than a dead poet's pretensions to renown; and little regard is due to that bigotry which sets candour higher than truth.

His first defect is that to which may be imputed most of the evil in books or in men. He facrifices virtue to convenience, and is so much more careful to please than to instruct, that he seems to write without any moral purpose. From his writings, indeed, a system of social duty may be selected, for he that thinks reasonably must think morally; but his precepts and axioms drop cafually from him; he makes no just distribution of good or evil, nor is always careful to shew in the virtuous a disapprobation of the wicked; he carries his perfons indifferently through right and wrong, and at the close difmisses them without further care, and leaves their examples to operate by chance. This fault the barbarity of his age cannot extenuate; for it is always a writer's duty to make the world better, and justice is a virtue independent on time or place.

The plots are often so loosely formed, that a very slight consideration may improve them, and so carelessly pursued, that he seems not always fully to comprehend his own design. He omits opportunities of instructing or delighting, which the train of his story feems to force upon him, and apparently rejects those exhibitions which would be more affecting, for the sake of

those which are more easy.

It may be observed, that in many of his plays the latter part is evidently neglected. When he found himself near the end of his work, and in view of his reward, he shortened the labour to snatch the profit. He therefore remits his efforts where he should most vigorously exert them, and his catastrophe is improbably produced or impersectly represented.

He had no regard to diffinction of time or place, but gives to one age or nation, without scruple, the customs, infitutions, and opinions of another, at the expence not

and opinions of another, at the experite not only of likelihood, but of possibility. These faults Pope has endeavoured, with more zeal than judgment, to transfer to his imagined interpolators. We need not wonder to find Hector quoting Aristotle, when we see the loves of Tricious and Hippolyta, tembiaed with the Gothic mythology of fairies. Shakespeare, indeed, was not the only violator of chronology; for, in the same age, Sidney, who wanted not the advantages of learning, has, in his Arcadia, confounded the pattoral with the seudal times, the days of innocence, quiet, and security, with those of turbulence, violence, and adventure.

In his comic scenes he is seldom very fuccessful, when he engages his characters in reciprocations of fmartness and contests of farcasm; their jells are commonly gross. and their pleafantry licentious; neither his gentlemen nor his ladies have much delicacy, nor are fufficiently diffinguished from his clowns by any appearance of refined manners. Whether he represented the real conversation of his time is not easy to determine; the reign of Elizabeth is commonly supposed to have been a time of stateliness, formality, and referve; yet, perhaps the relaxations of that feverity were not very elegant. There mult, however, have been always fome modes of gaiety preferable to others, and a writer ought to choose the best.

In tragedy, his performance feems conflantly to be worfe, as his labour is more. The effulions of paffion, which exigence forces out, are for the most part firthing and energetic; but whenever he folicits his invention or flrains his facultier, the offfpring of his throes is tumour, meanness,

tediousness, and obscurity.

In narration, he affects a disproportionate pomp of diction, and a wearifone train of circumfocution, and tells the incident imperfectly in many words, which might have been more plainly delivered in few, Narration in dramatic poetry is naturally tedious, as it is unanimated and inactive, and obstructs the progress of the action; it should therefore always be rapid, and enlivened by frequent interruption. Shakespeare sound it an incumbrance, and instead of lightening it by brevity, endeavoured to recommend it by dignity and splendor.

His declamations, or fet speeches, are commonly cold and weak, for his power was the power of nature; when he endeavoured, like other tragic writers, to carch opportunities of amplification, and, instead of inquiring what the occasion demanded, to shew how much his stores of knowledge could supply, he seldom cscapes without the pity or resentment of his reader.

It is incident to him to be now and then entangled with an unwieldy fentiment, which he cannot well express, and will not reject;

M m +

he struggles with it a while, and, if it continues flubborn, comprizes it in words such as occur, and leaves it to be difentangled and evolved by those who have more leifure to bellow upon it.

Not that always where the language is intricate the thought is fubtile, or the image always great where the line is bulky; the quality of words to things is very often neglected, and trivial fentiments and vulgar ideas disappoint the attention, to which they are recommended by fonorous epi-

thets and fivelling figures.

But the admirers of this great poet have most reason to complain when he approaches nearest to his highest excellence, and feems fully resolved to fink them in dejection, and mollify them with tender emotions by the fall of greatness, the danger of innocence, or the crosses of lowe. he does best, he soon ceases to do. He is not long foft and pathetic without some idle conceit, or contemptible equivocation. He no fooner begins to move, than he counteracts himself; and terror and pity, as they are rifing in the mind, are checked and blasted by sudden frigidity.

A quibble is to Shakespeare what luminous vapours are to the traveller; he follows it at all adventures; it is fure to lead him out of his way, and fure to engulf him in the mire. It has some malignant power over his mind, and its fascinations are irrefiftible. Whatever be the dignity or pro-fundity of his disquisition, whether he be enlarging knowledge, or exalting affection, whether he be amuling attention with incidents, or enchaining it in suspense, let but a quibble spring up before him, and he leaves his work unfinished. A quibble is the golden apple for which he will always turn aside from his career, or stoop from his elevation. A quibble, poor and barren as it is, gave him such delight, that he was content to purchase it, by the sacrifice of reason, propriety, and truth. A quibble was to him the fatal Cleopatra for which he loft the world, and was content to lofe

It will be thought strange, that, in enumerating the defects of this writer, I have not yet mentioned his neglect of the unities; his violation of those laws which been inflitured and established by the

joint authority of poets and critics.
For his other deviations from the art of writing, I refign him to critical juffice, without making any other demand in his havour, than that which must be indulged

to all human excellence; that his virtues be rated with his failings: but, from the censure which this irregularity may bring upon him, I shall, with due reverence to that learning which I must oppose, adventure to try how I can defend him.

His histories, being neither tragedies nor comedies, are not subject to any of their laws; nothing more is necessary to all the praise which they expect, than that the changes of action be to prepared as to be understood, that the incidents be varitous and affecting, and the characters confistent, natural, and distinct. No other unity is intended, and therefore none is

to be fought.

In his other works he has well enough preserved the unity of action. He has not, indeed, an intrigue regularly perplexed and regularly unravelled; he does not endeavour to hide his defign only to discover it; for this is feldom the order of real events, and Shakespeare is the poet of nature: but his plan has commonly what Aristotle requires, a beginning, a middle, and an end; one event is concatenated with another, and the conclufion follows by easy consequence. There are perhaps fome incidents that might be spared, as in other poets there is much talk that only fills up time upon the stage; but the general system makes gradual advances, and the end of the play is the end of expectation.

To the unities of time and place he has shewn no regard; and perhaps a nearer view of the principles on which they stand, will diminish their value, and withdraw from them the veneration which, from the time of Corneille, they have very generally received, by discovering that they have given more trouble to the poet, than

pleasure to the auditor.

The necessity of observing the unities of time and place arises from the supposed necessity of making the drama credible. The critics hold it impossible, that an action of months or years can be possibly be-lieved to pass in three hours; or that the spectator can suppose himself to sit in the theatre, while ambalfadors go and return between distant kings, while armies are levied and towns belieged, while an exile wanders and returns, or till he whom they faw courting his mittrefs, should lament the untimely fall of his fon. The mind revolus from evident fallshood, and action lotes its force when it departs from the refemblance of making. retemblance of reality.

A Story

From the narrow limitation of time necessarily arises the contraction of place. The spectator, who knows that he saw the first act at Alexandria, cannot suppose that he fees the next at Rome, at a distance to which not the dragons of Medea could, in fo short a time, have transported him; he knows with certainty that he has not changed his place; and he knows that place cannot change itself; that what was a house cannot become a plain; that what was Thebes can never be Persepolis.

Such is the triumphant language with which a critic exults over the milery of an irregular poet, and exults commonly without refultance or reply. It is time, therefore, to tell him, by the authority of Shakesperie, that he assumes, as an unquestionable principle, a position, which, while his breath is forming it into words, his underflanding pronounces to be false. It is falle, that any representation is mistaken for reality; that any dramatic fable, in its materiality, was ever credible, or, for a fingle moment, was ever credited.

The objection arising from the impossibility of passing the first hour at Alexandria, and the next at Rome, supposes, that when the play opens, the spectator really imagines himself at Alexandria; and believes that his walk to the theatre has been a voyage to Egypt, and that he lives in the days of Antony and Cleopatra. Surely he that imagines this may imagine more. He that can take the stage at one time for the palace of the Ptolemies, may take it in half an hour for the promontory of Actium. Delusion, if delusion be admitted, has no certain limitation; if the spectator can be once perfuaded, that his old acquaintance are Alexander and Cælar, that a room illuminated with candles is the plain of Pharfalia, or the bank of Granicus, he is in a state of elevation above the reach of reason, or of truth, and from the heights of empyrean poetry, may despile the circumspections of terrestrial nature. There is no reason why a mind thus wandering in ecstacy, should count the clock; or why an hour should not be a century in that calenture of the brain that can make the stage a field.

The truth is, that the spectators are always in their senses, and know, from the first act to the last, that the stage is only a lage, and that the players are only players. They came to hear a certain number of these recents with just gesture and elegant meditarion. The shoes relate to some ac-

tion, and an action must be in some place; but the different actions that complete a flory may be in places very remote from each other; and where is the absurdity of allowing that space to represent first Athens, and then Sicily, which was always known to be neither Sicily nor Athens. but a modern theatre?

By supposition, as place is introduced, time may be extended; the time required by the fable elapses for the most part between the acts; for, of fo much of the action as is represented, the real and poetical duration is the same. If, in the first act. preparations for war against Mithridates are represented to be made in Rome, the event of the war may, without absurdity, be represented, in the catastrophe, as happening in Pontus; we know that there is neither war, nor preparation for war; we know that we are neither in Rome nor Pontus; that neither Mithridates nor Lucullus are before us. The drama exhibits fuccessive imitations of fuccessive actions: and why may not the second imiration represent an action that happened years after the first, if it be so connected with it. that nothing but time can be supposed to intervene? Time is, of all modes of existence, most obsequious to the imagination; a lapse of years is as easily conceived as a passage of hours. In contemplation we easily contract the time of real actions, and therefore willingly permit it to be contracted when we only fee their imitation.

It will be asked, how the drama moves, if it is not credited? It is credited with all credit due to a drama. It is credited, whenever it moves, as a just picture of a real original; as representing to the auditor what he would himself feel, if he were to do or suffer what is there feigned to be suffered or to be done. The reslection that strikes the heart is not, that the evils before us are real evils, but that they are evils to which we ourselves may be exposed. If there be any fallacy, it is not that we fancy the players, but that we fancy ourselves unhappy for a moments but we rather lament the possibility, than suppose the presence of milery, as a mother weeps over her babe, when the remembers that death may take it from her. The delight of tragedy proceeds from our consciousness of fiction; if we thought murders and treasons real, they would please no more.

Imitations produce pain or pleasure, not because because they are mistaken for realities, but because they bring realities to mind. When the imagination is recreated by a painted landscape, the trees are not supposed capable to give us shade, or the fountains coolness; but we confider how we should be pleased with such fountains playing beside us, and such woods waving over us. We are agitated in reading the history of Henry the Fifth, yet no man takes his book for the field of Agincourt. A dramatic exhibition is a book recited with concomitants that increase or diminish its effect. Familiar comedy is often more powerful on the theatre, than in the page; Imperial tragedy is always less. The humour of Petruchio may be heightened by grimace; but what voice or what gesture can hope to add dignity or force to the foliloquy of Cato?

A play read affects the mind like a play acted. It is therefore evident, that the action is not supposed to be real; and it follows, that between the acts a longer or shorter time may be allowed to pass, and that no more account of space or duration is to be taken by the auditor of a drama, than by the reader of a narrative, before whom may pass in an hour, the life of a hero, or the revolutions of an empire.

Whether Shakespeare knew the unities, and rejected them by defign, or deviated from them by happy ignorance, it is, I think, impossible to decide, and useless to inquire. We may reasonably suppose, that, when he rose to notice, he did not want the counsels and admonitions of scholars and critics, and that he at last deliberately perfifted in a practice, which he might have begun by chance. As nothing is effential to the fable but unity of action, and as the unities of time and place arise evidently from false assumptions, and by circumscribing the extent of the drama, leffens its variety, I cannot think it much to be lamented that they were not known by him, or not observed: nor, if such another poet could arise, should I very vehemently reproach him, that his first act passed at Venice, and his next in Cyprus. Such violations of rules, merely positive, become the comprehensive genius of Shakespeare, and such censures are suitable to the minute and slender criticism of Voltaire:

Non usque adeo permiscuit imis Longus fumma dics, ut non, fi voce Metelfi Serventur leges, malint a Carfare tolli.

Yet when I speak thus slightly of dramatie rules, I cannot but recollect how much wit and learning may be produced against me; before such authorities I am afraid to fland, not that I think the prefent question one of those that are to be decided by mere authority, but because it is to be suspected. that there perhaps have not been so easily received, but for better reasons than I have yet been able to find. The refult of my enquiries, in which it would be ludicrous to boatt of impartiality, is, that the unities of time and place are not effectial to a just drama; that though they may sometimes conduce to pleafure, they are always to be facrificed to the nobler beauties of variety and influction; and that a play written with nice observation of critical rules, is to be contemplated as an elaborate curiofity, as the product of superfluous and offentations art, by which is flewn, rather what is possible than what is needfary.

He that, without diminution of any other excellence, shall preferve all the unities unbroken, deferves the like applause with the architect, who shall display all the orders of architecture in a citadel, without any deduction from its strength: but the principal beauty of a citadel is to exclude the enemy; and the greatest graces of a play are to copy na-

ture, and instruct life.

Perhaps, what I have here not dogmatically but deliberately written, may recall the principles of the drama to a new examination. I am almost frighted at my own temerity; and when I estimate the fame and the strength of those that maintain the contrary opinion, am ready to fink down in reverential filence; as Æneas withdrew from the defence of Troy, when he saw Neptune shaking the wall, and Juno heading the besiegers.

Those whom my arguments cannot perfuade to give their approbation to the judgment of Shakespeare, will easily, if they consider the condition of his life, make some allowance for his ignorance.

Every man's performances, to be rightly estimated, must be compared with the state of the age in which he lived, and with his own particular opportunities; and though to a reader a book be not worse or better for the circumstances of the author, yet as there is always a filent reference of human works to human abilities, and as the inquiry, how far man may extend his defigns, or how high he may rate his native

force.

force, is of far greater dignity than in what rank we shall place any particular performance, coriosity is always busy to discover the instruments, as well as to survey the workmanship, to know how much is to be ascribed to original powers, and how much to casual and adventitious help. The palaces of Peru or Mexico were certainly mean and incommodious habitations, if compared to the houses of European monarchs; yet who could forbear to view them with assoniblement, who remembered that they were built without the use of since?

The English nation, in the time of Shakefpeare, was yet flruggling to emerge from bubarity. The philology of Italy had been transflanted hither in the reign of Henry the Lighth; and the learned langu ges had been succet-fully cultivated by Lilly, Linacre, and More; by Pole, Cheke, and Gardiner; and afterwards by Smith, Clerk, Haddon, and Afcham. Greek was now taught to boys in the principal schools; and these who united eleganice with learning, read, with great diligences the Italian and Spanish poets. But incrature was yet confined to professed fcholars, or to men and women of high rank. The public was gross and dark; and to be able to read and write, was an accomplishment still valued for its rarity.

Nations, like individuals, have their infancy. A people, newly awakened to literary curiofity, being yet unacquainted with the true flate of things, knows not how to judge of that which is proposed as its resemblance. Whatever is remote from common appearances is always welcome to vulgar, as to childish creduity; and of a country unenlightened by learning, the whole people is the vulgar. The study of those who then aspired to plebeian learning was laid out upon ad entures, giants, dragons, and encantments. The Death of Arthur was the favourite volume.

The mind, which was feafted on the luxurious wonders of fiction, has no tafte of the infipidity of truth. A play, which imitated only the common occurrences of the world, would, upon the admirers of Palmerin and Guy of Warwick, have made little imprefion; he that wrote for such an audience was under the necessity of looking round for strange events and fabulous transactions; and that incredibility, by which maturer knowledge is bisended, was the chief recommendation of writings to unfailful curiosity.

Our author's plots are generally borrowed from novels; and it is reasonable to suppose, that he chose the most popular, such as were read by many, and related by more; for his audience could not have followed him through the intricacies of the drama, had they not held the thread of the story in their hands.

The stories, which we now find only in remoter authors, were in his time accessible and familiar. The sable of As you like it, which is supposed to be copied from Chaucer's Gamelyn, was a little pamphlet of these times; and old Mr. Cibber remembered the tale of Hamlet in plain English prote, which the critics have now to teck in Saxo Grammaticus.

His English histories he took from English chronicles and English ballads; and as the ancient writers were made known to his countrymen by versions, they supplied him with new subjects; he dilated some of Plutarch's lives into plays, when they had been translated by North.

His plots, whether historical or fabulous, are always crowded with incident, by which the attention of a rude people was more easily caught than by sentiment or argumentation; and fuch is the power of the marvellous, even over those who despise it, that every man finds his mind more strongly seized by the tragedies of Shakespeare than of any other writer: others please us by particular speeches; but he always makes us anxious for the event, and has, perhaps, excelled all but Homer in fecuring the first purpose of a writer, by exciting reffless and unquenchable currofity, and compelling him that reads his work to read it through.

The thows and buttle, with which his plays abound have the fame original. As knowledge advances, pleasure passes from the eye to the ear, but returns, as it declines, from the ear to the eye. Those to whom our author's labours were exhibited, had more skill in pomps or processions than in poetical language, and perhaps wanted fome visible and discriminated events, as comments on the dialogue. He knew how he should most please; and whether his practice is more agreeable to nature, or whether his example has prejudiced the nation, we still find, that on our stage something must be done as well as faid, and inactive doclamation is very coldly heard, however mufical or elegant, passionate or sublime.

Voltaire expresses his wonder, that our author's

author's extravagancies are endured by a nation, which has feen the tragedy of Cato. Lot him be answered, that Addison speaks the language of poets, and Shakespeare of men. We find in Cato innumerable beauties which enamour us of its author, but we fee nothing that acquaints us with human fentiments or human actions; we place it with the fairest and the noblest progeny which judgment propagates by conjunction with learning; but Othello is the vigorous and vivacious offspring of observation impregnated by genius. Cato affords a splendid exhibition of artificial and fictitious manners, and delivers just and noble fentiments, in diction easy, elevated and harmonious, but its hopes and fears communicate no vibration to the heart; the composition refers us only to the writer; we pronounce the name of Cato, but we think on Addison.

The work of a correct and regular writer is a garden accurately formed and diligently planted, varied with shades, and seented with flowers; the composition of Shakespeare is a forest, in which oaks extend their branches, and pines tower in the air, interspersed sometimes with weeds and brambles, and fometimes giving shelter to myrtles and to roles; filing the eye with awful pomp, and gratifying the mind with endless diversity. Other poets difplay cabinets of precious rarities, minutely unithed, wrought into thape, and polithed into brightness. Shakespeare opens a mine which contains gold and diamonds in inexhaustible plenty, though clouded by incrustations, debated by impurities, and mingled with a mais of meaner minerals.

It has been much disputed whether Shakespeare owed his excellence to his own native force, or whether he had the common helps of scholastic education, the precepts of critical science, and the exam-

ples of ancient authors.

There has always prevailed a tradition, that Shakespeare wanted learning, that he had no regular education, nor much fill in the dead languages. Jonson, his friend, affirms, that he had journal Laim and left Greek; who, besides that he had no imaginable temptation to falsehood, wrote at a time when the character and acquisitions of Shakespeare were known to multitudes. His evidence ought therefore to decide the controversy, unless some testimony of equal force could be opposed.

Some have imagined, that they have discovered deep learning in many imitations

of old writers; but the examples which I have known urged were drawn from books translated in his time; or were such easy coincidences of thought, as will happen to all who consider the same subjects; or such remarks on life, or axioms of morality, as float in conversation, and are transmitted through the world in proverbial sentences.

I have found it remarked, that in this important fentence, Go befere, Pll fellow, we read a translation of I pra, sequar. I have been told, that when Caliban, after a pleasing dream, tay. I cry'd to sleep again, the author imitates Anacreon, who had, like every other man, the same with on the

same occasion.

There are a few passages which may pass for imitations, but so few, that the exception only confirms the rule; he obtained them from accidental quotations, or by oral communication; and as he used what he had, would have used more if he had obtained it.

The Comedy of Errors is confessedly taken from the Menachmi of Plautus; from the only play of Plautus which was then in English. What can be more probable, than that he who copied that would have copied more; but that those which were not translated were inaccessible?

Whether he knew the modern languages is uncertain. That his plays have some French scenes, proves but little; he might easily procure them to be written, and probably, even though he had known the language in the common degree, he could not have written it without assistance. In the story of Romeo and Juliet, he is observed to have followed the English translation, where it deviates from the Italian; but this, on the other part, proves nothing against his knowledge of the original. He was to copy, not what he knew himself, but what was known to his audience.

It is most likely that he had learned Latin sufficiently to make him acquainted with construction, but that he never advanced to an easy perusal of the Roman authors. Concerning his skill in modern languages, I can find no sufficient ground of determination; but, as no imitations of French or Italian authors have been discovered, though the Italian poetry was then high in esteem, I am inclined to believe, that he read little more than English, and chose for his sables only such tales as he found translated.

That much knowledge is scattered over his works is very justly observed by Pope, but

but it is often fuch knowledge as books did not supply. He that will understand Shakespeare must not be content to study him in the closet, he must look for his meaning sometimes among the sports of the field, and sometimes among the manufactures of the shop.

There is, however, proof enough that he was a very diligent reader, nor was our language then so indigent of books, but that he might very liberally indulge his curiofity without excursion into foreign literature. Many of the Roman authors were translated, and some of the Greek; the Reformation had filled the kingdom with theological learning; most of the topics of human disquisition had found English writers; and poetry had been cultivated, not only with diligence, but success. This was a stock of knowledge sufficient for a mind so capable of appropriating and improving it.

But the greater part of his excellence was the product of his own genius. He found the English stage in a state of the utmost rudeness; no essays either in tragedy or comedy had appeared, from which it could be discovered to what degree of deslight either one or other might be carried. Neither character nor dialogue were yet understood. Shakespeare may be truly said to have introduced them both amongst us, and in some of his happier scenes to have carried them both to the utmost height.

By what gradations of improvement he proceeded, is not easily known; for the chronology of his works is yet unfettled. Rowe is of opinion, that perhaps we are not to look for his beginning, like those of other writers, in his least perfect works; are had so little, and nature so large a share in what be did, that for aught I know, fays he, the performances of his youth, as they were the most vigorous, were the best. But the power of nature is only the power of ufing, to any certain purpole, the materials which diligence procures, or opportunity supplies. Nature gives no man knowledge, and, when images are collected by study and experience, can only assist in combining or applying them. Shakespeare, however favoured by nature, could impart only what he had learned; and, as he must increase his ideas, like other mortals, by gradual acquisition, he, like them, rew wifer as he grew older, could display life better, as he knew it more, and instruct

with more efficacy, as he was himfelf more amply instructed.

There is a vigilance of observation, and accuracy of diffinction, which books and precepts cannot confer; from this, almost all original and native excellence proceeds. Shakeipeare must have looked upon mankind with peripicacity, in the highest degree curious and attentive. Other writers borrow their characters from preceding writers, and divertify them only by the accidental appendages of prefent manners; the drefs is a little varied, but the body is the same. Our author had both matter and form to provide; for, except the characters of Chaucer, to whom I think he is not much indebted, there were no writers in English, and perhaps not many in other modern languages, which showed life in its native colours.

The contest about the original benevo. lence or malignity of man, had not yet commenced. Speculation had not yet attempted to analyfe the mind, to trace the passions to their fources, to unfold the feminal principles of vice and virtue, or found the depths of the heart for the mo. tives of action. All those inquiries, which from the time that human nature became the fashionable study, have been made fometimes with nice differnment, but often with idle fubtilty, were yet unattempted. The tales, with which the infancy of learning was fatisfied, exhibited only the superficial appearances of action, related the events, but omitted the causes, and were formed for fuch as delighted in wonders rather than in truth. Mankind was not then to be studied in the closet; he that would know the world, was under the necessity of gleaning his own remarks. by mingling, as he could, in its bufiness and amusements.

Boyle congratulated himself upon his high birth, because it favoured his curiofity, by facilitating his access. Shake-speare had no such advantage; he came to London a needy adventurer, and lived for a time by very mean employments. Many works of genius and learning have been performed in states of life that appear very little favourable to thought, or to enquiry: so many, that he who considers them, is inclined to think that he sees enterprize and perfeverance predominating over all external agency, and bidding help and hindrance vanish before them. The genius of Shake-speare was not to be depressed by the weight

of poverty, nor limited by the narrow conversation to which men in want are inevitably condemned; the incumbrances of his fortune were shaken from his mind, as dew-

drops from a lion's mane.

Though he had so many difficulties to encounter, and to little affishance to furmount them, he has been able to obtain an exact knowledge of many modes of life, and many casts of native dispositions; to vary them with great multiplicity; to mark them by nice diffinctions; and to shew them in full view by proper combinations. In this part of his performances he had none to imitate, but has been himself imitated by all succeeding writers; and it may be doubted whether, from all his fuccessors, more maxims of theoretical knowledge, or more rules of practical prudence, can be collected, than he alone has given to his country.

Nor was his attention confined to the actions of men; he was an exact furveyor of the inanimate world; his descriptions have always fome peculiarities, gathered by contemplating things as they really exist. It may be observed, that the oldest poets of many nations preserve their reputation, and that the following generations of wit, after a fhort celebrity, fink into oblivion. The first, whoever they be, must take their fentiments and descriptions immediately from knowledge; the refemblance is therefore just; their descriptions are verified by every eye, and their fentiments acknowledged by every breaft. Those whom their fame invites to the fame studies, copy partly them, and partly nature, till the books of one age gain fuch authority, as to fland in the place of nature to another; and imitation, always deviating a little, becomes at last capricious and casual. Shakespeare, whether life or nature be his subject, thews plainly that he has feen with his own eyes; he gives the image which he receives, not weakened or distorted by the intervention of any other mind; the ignorant feel his representations to be just, and the learned fee that they are complete.

Perhaps it would not be easy to find any author, exceps Homer, who invented fo much as Shakespeare, who so much advanced the studies which he cultivated, or effuted to much novelty upon his age or country. The form, the characters, the language, and the shows of the English drama are his. He feems, fays Donnis, te bave been the very original of our English tragical barmeny, that is, the barmony of blank verse, diversified often by dissyllable and trissyllable terminations. For the diversity distinguishe it from heroic barmony, and by bringing it nearer to common use, makes it more proper to gain attention, and more fit for action and dialogue. Such verje we make noben ave are writing profe; we make such verse in common conversation.

I know not whether this praise is rigoroufly just. The dissyllable termination, which the critic rightly appropriates to the drama, is to be found, though, I think, not in Gorboduc, which is confessedly before our author; yet in Hieronymo\*, of which the date is not certain, but which there is reason to believe at least as old as his earliest plays. This however is certain, that he is the first who taught either tragedy or contrdy to please, there being no theatrical piece of any older writer, of which the name is known, except to antiquaries and collectors of books, which are fought because they are scarce, and would not have been scarce had they been much escemed.

To him we must ascribe the praise, unless Spenser may divide it with him, of having first discovered to how much smoothness and harmony the English language could be softened. He has speeches, perhaps fometimes fcenes, which have all the delicacy of Rowe, without his effeminacy. He endeavours, indeed, commonly to strike by the force and vigour of his dialogue, but he never executes his purpose better, than when he tries to footh by foftness.

Yet it must be at last confessed, that as we owe every thing to him, he owes fomething to us; that, if much of his praise is paid by perception and judgment, much is likewise given by custom and veneration. We fix our eyes upon his graces, and turn them from his deformities, and endure in him what we should in another loath or despife. If we endured without praising, respect for the father of our drama might excuse us; but I have seen, in the book of fome modern critic, a collection of anomalies, which shew that he has corrupted language by every mode of depravation, but which his admirer has accumulated as a monument of honour.

He has scenes of undoubted and perpetual excellence, but perhaps not one play, which if it were now exhibited as the work of a contemporary writer, would be heard to the conclusion. I am indeed far from

It appears, from the induction of Bed Jonfon's Barebolomers-Fuir, to have been acted before the year 1590.

thinking, that his works were wrought to his own ideas of perfection; when they were fuch as would fatisfy the audience, they fatisfied the writer. It is feldom that authors, though more studious of fame than Shakespeare, rise much above the standard of their own age; to add a little to what is best, will always be sufficient for present praise, and those who find themselves exalted into same, are willing to credit their encomiasts, and to spare the labour of contending with themselves.

It does not appear, that Shakespeare thought his works worthy of posterity, that he levied any ideal tribute upon future times, or had any further prospect, than of present popularity and present profit. When his plays had been acted, his hope was at an end; he folicited no addition of honour from the reader. He therefore made no scruple to repeat the same jests in many dialogues, or to entangle different plots by the same knot of perplexity; which may be at least forgiven him by those who recollect, that of Congreve's four comedies, two are concluded by a marriage in a mask, by a deception, which, perhaps, never happened, and which, whether likely or not, he did not invent.

So careless was this great poet of future fame, that, though he retired to ease and plenty, while he was yet little declined into the vale of years, before he could be difgusted with fatigue, or disabled by infirmity, he made no collection of his works, nor desired to rescue those that had been already published from the depravations that obscured them, or secure to the rest a better destiny, by giving them to the world in their genuine state. Johnson.

# § 234. Pope's Preface to bis Homer.

Homer is univerfally allowed to have had the greatest Invention of any writer whatever. The praise of Judgment Virgil has justly contested with him, and others may have their pretentions as to particular excellencies; but his Invention remains yet unrivalled. Nor is it a wonder if he has ever been acknowledged the greatest of poets, who most excelled in that which is the very foundation of poetry. It is the Invention that in different degrees distinguishes all great geniuses; the utmost firetch of human study, learning, and industry, which masters every thing besides, can never attain to this. It furnishes Art with all hermaterials, and without it, Judgment itself can at best but steal wilely; for

Art is only like a prudent steward that lives on managing the riches of Nature. Whatever praises may be given to works of judgment, there is not even a fingle beauty in them to which the invention must not contribute: as in the most regular gardens, art can only reduce the beauties of nature to more regularity, and fuch a figure, which the common eye may better take in, and is therefore more entertained with. And perhaps the reason why common critics are inclined to prefer a judicious and methodical genius to a great and fruitful one is, because they find it easier for themselves to purfue their observations through an uniform and bounded walk of art, than to comprehend the vast and various extent of nature.

Our author's work is a wild paradife, where if we cannot see all the beauties so distinctly as in an ordered garden, it is only because the number of them is infinitely greater. It is like a copious nursery which contains the seeds and first productions of every kind, out of which those who followed him have but selected some particular plants, each according to his fancy, to cultivate and beautify. If some things are too luxuriant, it is owing to the richness of the soil; and if others are not arrived to perfection or maturity, it is only because they are over-run and opprest by those of a stronger nature.

It is to the strength of this amazing invention we are to attribute that unequalled fire and rapture, which is so forcible in Homer, that no man of a true poetical spirit is master of himself while he reads him. What he writes, is of the most animated nature imaginable; every thing moves, every thing lives, and is put in action. If a council be called, or a battle fought, you are not coldly informed of what was faid or done as from a third perfon; the reader is hurried out of himfelf by the force of the poet's imagination, and turns in one place to a hearer, in another to a spectator. The course of his verses resembles that of the army he describes:

oi i at loan, and no wood your warse visuals.

"They pour along like a fire that (weeps the whole earth before it." It is however remarkable that his fancy, which is every where vigorous, is not discovered immediately at the beginning of his poem in its fullest splendor: it grows in the progress both upon himself and others, and becomes on are, like a chariot-wheel, by its swn rapidity, Exact disposition, just thought,

thought, correct elocution, polithed numbers, may have been found in a thousand; but this poetical fire, this "vivida vis animi," in a very few. Even in works where all those are imperfect or neglected, this can overpower criticism, and make us admire even while we disapprove. where this appears, though attended with absurdities, it brightens all the rubbish about it, till we see nothing but its own fplendor. This fire is different in Virgil. but discerned as through a glass, restected from Homer, more shining than sierce, but every where equal and constant: in Lucan and Statius, it bursts out in sudden, short, and interrupted flashes: in Milton it glows like a furnace kept up to an uncommon ardor by the force of art: in Shakespeare, it strikes before we are aware, like an accidental fire from heaven; but in Homer, and in him only, it burns every where clearly, and every where irrelifibly.

I shall here endeavour to shew, how this vast Invention exerts itself in a manner superior to that of any poet, through all the main constituent parts of his work, as it is the great and peculiar characteristic which distinguishes him from all other authors.

This strong and ruling faculty was like a powerful star, which, in the violence of its course, drew all things within its vortex. It feemed not enough to have taken in the whole circle of arts, and the whole compass of nature, to supply his maxims and resections; all the inward passions and affections of mankind, to furnish his characters: and all the outward forms and images of things for his descriptions; but, wanting yet an ampler sphere to expatiate in, he opened a new and boundless walk for his imagination, and created a world for himfelf in the invention of fable. That which Ariflotle calls the "Soul of poetry," was first breathed into it by Homer. I shall begin with confidering him in this part, as it is naturally the first; and I speak of it both as it means the defign of a poem, and as it is taken for fiction.

Fable may be divided into the Probable, the Allegorical, and the Marvellous. probable fable is the recital of fuch actions as though they did not happen, yet might, in the common course of nature: or of such as, though they did, become fables by the additional episodes and manner of telling them. Of this fort is the main flory of an epic poem, the return of Ulysses, the settlement of the Trojans in Italy, or the

Achilles, the most short and single subject that ever was chosen by any poet. Yet this he has supplied with a vaster variety of incidents and events, and crowded with a greater number of councils, speeches, battles, and episodes of all kinds, than are to be found even in those poems whose schemes are of the utmost latitude and irregularity. The action is hurried on with the most vehement spirit, and its whole duration employs not fo much as fifty days. Virgil, for want of so warm a genius, aided himfelf by taking in a more extensive subject, as well as a greater length of time, and contracting the defign of both Homer's poems into one, which is yet but a fourth part as large as his. The other epic poets have used the same practice, but generally carried it so far as to superinduce a multiplicity of fables, destroy the unity of action, and lose their readers in an unreasonable length of time. Nor is it only in the main design that they have been unable to add to his invention, but they have followed him in every episode and part of story. If he has given a regular catalogue of an army, they all draw up their forces in the fame order. If he has funeral games for Patroclus, Virgil has the same for Anchises: and Statius (rather than omit them) destroys the unity of his action for those of Archemoras. If Ulysses visits the shades. the Æneas of Virgil, and Scipio of Silius, are fent after him. If he be detained from his return by the allurements of Calypso. so is Æneas by Dido, and Rinaldo by Armida. If Achilles be absent from the army on the score of a quarrel through half the poem, Rinaldo must absent himself just as long, on the like account. If he gives his hero a fuit of celestial armour, Virgil and Tasso make the same present to theirs. Virgil has not only observed this close imitation of Homer, but where he had not led the way, supplied the want from other Greek authors. Thus the story of Sinon and the taking of Troy was copied (fays Macrobius) almost word for word from Pifander, as the loves of Dido and Æneas are taken from those of Medea and Jason in Apollonius, and several others in the fame manner.

To proceed to the allegorical fable: if we reflect upon those innumerable knowledges, those secrets of nature and physical philosophy, which Homer is generally supposed to have wrapped up in his allegories, what a new and ample scene of wonder may like. That of the Iliad is the anger of this confideration afford us! how fertile

will that imagination appear, which was able to clothe all the properties of elements, the qualifications of the mind, the virtues and vices, in forms and persons; and to introduce them into actions agreeable to the nature of the things they shadowed! This is a field in which no fucceeding poets could dispute with Homer; and whatever commendations have been allowed them on this head, are by no means for their invention in having enlarged his circle, but for their judgment in having contracted it. For when the mode of learning changed in following ages, and science was delivered in a plainer manner; it then became as reafonable in the more modern poets to lay it aside, as it was in Homer to make use of it. And perhaps it was no unhappy circumthance for Virgil, that there was not in his time that demand upon him of so great an invention, as might be capable of furnishing all those allegorical parts of a poem.

The marvellous fable includes whatever is supernatural, and especially the machines of the gods. He feems the first who brought them into a fystem of machinery for poetry, and fuch a one as makes its greatest importance and dignity. For we find those authors who have been offended at the literal notion of the gods, constantly laying their acculation against Homer as the chief support of it. But whatever cause there might be to blame his machines in a philosophical or religious view, they are so perfect in the poetic, that mankind have been ever fince contented to follow them: none have been able to enlarge the sphere of poetry beyond the limits he has fet: every attempt of this nature has proved unfuccessful; and after all the various changes of times and religions, his gods continue to this day the gods of poetry.

We come now to the characters of his persons; and here we shall find no author has ever drawn so many, with so visible and surprising a variety, or given us such lively and affecting impressions of them. Every One has something so singularly his own, that no painter could have distinguished them more by their features, than the poet has by their manners. Nothing can be more exact than the distinctions he has observed in the different degrees of virtues and vices. The fingle quality of courage is wonderfully diversified in the several characters of the Iliad. That of Achilles is furious and intractable; that of Diomede forward, yet liftening to advice, and subject to command; that of Ajax is heavy, and

felf-confiding; of Hector, active and vigilant: the courage of Agamemnon is infpirited by love of empire and ambition: that of Menelaus mixed with sofiness and tenderness for his people: we find in Idomeneus a plain direct foldier, in Sarpedon a gallant and generous onc. Nor is this judicious and aftonishing diversity to be found only in the principal quality which constitutes the main of each character, but even in the under-parts of it, to which he takes care to give a tincture of that principal one. For example, the main characters of Ulytles, and Nettor confift in wildom; and they are diffined in this, that the wisdom of one is artificial and various, of the other natural, open, and regular. But they have, belides, characters of courage; and this quality also takes a different turn in each from the difference of his prudence: for one in the war depends fill upon caution, the other upon experience. It would be endless to produce inflances of these kinds .- The characters of Virgil are (ar from flriking us in this open manner; they lie in a great degree hidden and undiftinguifhed, and where they are marked most evidently, affect us not in proportion to those of Homer. His characters of valour are much alike; even that of Turnus teems no way peculiar but as it is in a fuperior degree; and we see nothing that differences the courage of Mneilheus from that of Sergefilms, Cloanthus, or the reit. In like manner it may be remarked of Statius's heroes, that an air of imperuolity runs through them all; the fame hourid and favage courage appears in his Capaneus, Tydeus, Hippomedon, &c. They have a parity of character, which makes them feem brothers of one family. I, believe when the reader is led into this track of reflection, if he will purfue it through the epic and tragic writers, he will be convinced how infinitely superior in this point. the invention of Homer was to that of all

The speeches are to be considered as they slow from the characters, being perfect or defective as they agree or disagree with the manners of those who utter them. As there is more variety of characters in the Iliad, so there is of speeches, than in any other poem. Every thing in it has manners (as Aristotle expresses it) that is, every thing is acted or spoken. It is hardly credible, in a work of such length, how small a number of lines are employed in narration. In Virgil the dramatic past is

Na

less in proportion to the narrative; and the speeches often consist of general reslections or thoughts, which might be equally just in any person's mouth upon the same occasion. As many of his persons have no apparent characters, so many of his speeches escape being applied and judged by the rule of propriety. We oftener think of the author himself when we read Virgil, than when we are engaged in Hemer: all which are the effects of a colder invention, that interests us less in the action described: Homer makes us hearers, and Virgil leaves us readers.

If in the next place we take a view of the fentiments, the same presiding faculty is eminent in the fublimity and spirit of his thoughts. Longinus has given his opinion, that it was in this part Homer principally excelled. What were alone sufficient to prove the grandour and excellence of his fentiments in general, is, that they have fo remarkable a parity with those of the scripture: Duport, in his Gnomologia Homerica, has collected innumerable inflances of this fort. And it is with juffice an excellent modern writer allows, that if Virgil has not fo many thoughts that are low and vulgar, he has not so many that are sublime and noble; and that the Roman author feldom rifes into very attonishing fentiments, where he is not fired by the Iliad.

If we observe his descriptions, images, and fimiles, we shall find the invention still predominant. To what elfe can we afcribe that vail comprehention of images of every fort, where we see each circumstance of art, and individual of nature, summoned together, by the extent and fecundity of his imagination; to which all things, in their various views, presented themselves in an instant, and had their impressions taken off to perfection at a heat? Nay, he not only gives us the full prospects of things, but feveral unexpected peculiarities and fide-views, unobserved by any painter but Homer. Nothing is fo furprifing as the descriptions of his battles, which take up so less than half the Iliad, and are supplied with so rast a variety of incidents, that no one bears a likeness to another: fuch different kinds of deaths, that no two heroes are wounded in the fame manner: and fuch a profusion of noble ideas, that every battle rifes above the last in greatness, horror, and confusion. It is certain there is not near that number of images and descriptions in any epic poet; though .

quantity out of him: and it is evident of Virgil especially, that he has scarce any comparisons which are not drawn from his malter.

If we descend from hence to the expresfion, we fee the bright imagination of Homer shining out in the most enlivened forms of it. We acknowledge him the father of poetical diction, the first who taught that language of the gods to men. expression is like the colouring of some great matters, which discovers itself to be laid on boldly, and executed with rapidity. It is indeed the throngest and most glowing imaginable, and touched with the greatest spirit. Aristotle had reason to say, he was the only poet who had found out living words; there are in him more daring figures and metaphors than in any good author whatever. An arrow is impatient to be on the wing, and a weapon thirsts to drink the blood of an enemy, and the like. Yet his expression is never too big for the fense, but juilly great in proportion to it. It is the sentiment that fwells and fills out the diction, which rifes with it, and forms it elf about it: for in the same degree that a thought is warmer, an expression will be brighter; as that is more strong, this will become more perspicuous: like glass in the furnace, which grows to a greater magnitude, and refines to a greater clearness, only as the breath within is more powerful, and the heat more intense.

To throw his language more out of profe, Homer feems to have affected the compound epithets. This was a fort of composition peculiarly proper to poetry, not only as it heightened the diction, but as it assisted and filled the numbers with greater found and pomp, and likewife conduced in some measure to thicken the images. On this last consideration I cannot but attribute these also to the fruitfulness of his invention, since (as he has managed them) they are a fort of supernumerary pictures of the persons or things to which they are joined. We see the motion of Hector's plumes in the epithet meevθαίολο, the landscape of Mount Neritus in that of irroripuxxo, and so of others; which particular images could not have been infifted upon fo long as to express them in a description (though but of a fingle line) without diverting the reader too much from the principal action or figure. As a meraphor is a short simile, one of these epithets is a short description.

and descriptions in any epic poet; though . Lastly, if we consider his verification, every one has assisted himself with a great we shall be sensible what a share of peace.

Is due to his invention in that. He was not fatisfied with his language as he found it settled in any one part of Greece, but fearched through its differing dialects with this particular view, to beautify and per-fect his numbers: he confidered these as they had a greater mixture of vowels or confonants, and accordingly employed them as the verse required either a greater smoothness or strength. What he most affected was the Ionic, which has a peculiar sweetness from its never using contractions, and from its cultom of refolving the diphthongs into two syllables, so as to make the words open themselves with a more spreading and sonorous sluency. With this he mingled the Attic contractions, the broader Doric, and the feebler Æolic, which often rejects its aspirate, or takes off its accent; and compleated this variety by altering some letters with the licence of poetry. Thus his measures, instead of being fetters to his fense, were always in readiness to run along with the warmth of his rapture, and even to give a farther representation of his motions, in the correspondence of their founds to what they fignified. Out of all these he has derived that harmony, which makes us confess he had not only the richest head, but the finest ear in the world. This is so great a truth, that whoever will but confult the tune of his veries, even without understanding them (with the same fort of diligence as we daily see practised in the case of Italian operas) will find more sweetness, variety, and majesty of found, than in any other language or poetry. The beauty of his numbers is allowed by the critics to be copied but faintly by Virgil himfelf, though they are so just to ascribe it to the nature of the Latin tongue: indeed, the Greek has some advantages, both from the natural found of its words, and the turn and cadence of its verte, which agree with the genius of no other language. Virgil was very fensible of this, and used the utmost diligence in working up a more intractable language to whatfoever graces it was capable of; and in particular never failed to bring the found of his line to a heautiful agreement with its fense. If the Grecian poet has not been so frequently celebrated on this account as the Roman, the only reason is, that fewer critics have understood one language than the other. Dionyfius of Haliearnaffus has pointed out many of cur aushows beauties in this kind, in his treatile

of the Composition of Words. It suffices at present to observe of his numbers, that they flow with fo much ease, as to make one imagine Homer had no other care than to transcribe as fast as the Muses dictated: and at the same time with so much force and inspiring vigour, that they awaken and raise us like the found of a trumpet. They roll along as a plentiful river, always in motion, and always full; while we are borne away by a tide of verse, the most rapid and yet the most fmooth imaginable. Thus, on whatever fide we contemplate Homer, what principally strikes us is his Invention. It is that which forms the character of each part of his work; and accordingly we find it to have made his fable more extensive and copious than any other, his manners more lively and strongly marked, his speeches more affecting and transported, his fentiments more warm and fublime, his images and descriptions more full and animated, his expression more raifed and daring, and his numbers more rapid and various. I hope, in what has been faid of Vingil, with regard to any of these heads, I have no may derogated from his character. Nothing is more abfurd or endless, than the common method of comparing eminent writers by an onposition of particular passages in them, and forming a judgment from thence of their merit upon the whole. We ought to have a certain knowledge of the principal character and diflinguishing excellence of each: it is in that we are to confider him, and in proportion to his degree in that we are to admire him. No author or man ever excelled all the world in more than one faculty; and as Homer has done this in Invention, Virgil has in Judgment, Not that we are to think Homer wanted Judgment, because Virgil had it in a more eminent degree, or that Virgil wanted Invention, because Homer possest a larger share of it : each of these great authors had more of both than perhaps any man besides, and are only said to have less in comparison with one another. Homer was the greater genius, Virgil the better artift. In one we most admire the man, in the other the work: Homer hurries and transports us with a commanding impetuofity, Virgil leads us with an attractive majefy: Homer scatters with a generous profusion, Virgil bestows with a careful magnificence: Homer, like the Nile, pours

out his riches with a boundless overflow;

Nnz

Virgil

Virgil, like a river in its banks, with a gentle and constant stream. When we behold their battles, methinks the two poets resemble the heroes they celebrate; Homer, boundless and irresistible as Achilles, bears all before him, and shines more and more as the tumult increases: Virgil, calmly daring like Æneas, appears undifurbed in the midft of the action; difpoles all about him, and conquers with tranquillity. And when we look upon their machines, Homer teems like his own Jupiter in his terrors, shaking Olympus, scattering the lightnings, and firing the heavens; Virgil, like the same power in his benevolence, counfelling with the gods, laying plans for empires, and regularly ordering his whole creation.

But after all, it is with great parts, as with great virtues, they naturally border on some imperfection; and it is often hard to distinguish exactly where the virtue ends, or the fault begins. As prudence may sometimes sink to suspicion, so may a great judgment decline to coldness; and as magnanimity may run up to profusion or extravagance, so may a great invention to redundancy or wildness. If we look upon Homer in this view, we shall perceive the chief objections against him to proceed from so noble a cause as the excess of this faculty.

Among these we may reckon some of his Marvellous Fictions, upon which fo much criticism has been spent, as surpuffing all the bounds of probability. Perhaps it may be with great and superior fouls, as with gigantic bodies, which, exerting themselves with unusual strength, exceed what is commonly thought the due proportion of parts, to become miracles in the whole; and, like the old heroes of that make, commit fomething near extravagance, amidst a series of glorious and inimitable performances. Thus Homer has his speaking horses, and Virgil his myrtles diffilling blood, where the latter has not so much as contrived the easy intervention of a Deity to save the probability.

It is owing to the same vast invention, that his similes have been thought too exuberant and full of circumstances. The force of his faculty is seen in nothing more, than in its inability to confine itself to that single circumstance upon which the comparis n is grounded: it runs out into embellishments of additional images, which however are so managed as not so over-

power the main one. His similes are like pictures, where the principal figure has not only its proportion given agreeable to the oliginal, but is also set off with occasional ornaments and prospects. The same will account for his manner of heaping a number of comparisons together in one breath, when his sancy suggested to him at once so many various and corresponding images. The reader will easily extend this observation to more objections of the same kind.

If there are others which feem rather to charge him with a defect or narrowness of genius, than an excess of it; those seeming defects will be found upon examination to proceed wholly from the nature of the times he lived in. Such are his groffer reprefentations of the gods, and the vicious and imperfect manners of his heroes; but I must here speak a word of the latter, as it is a point generally carried into extremes, both by the censurers and defenders of Homer. It must be a strange partiality to antiquity, to think with Madam Dacier, " that \* those times and manners are so " much the more excellent, as they are " more contrary to ours." Who can be fo prejudiced in their favour as to magnify the felicity of those ages, when a spirit of revenge and cruelty, joined with the practice of rapine and robbery, reigned through the world; when no mercy was shewn but for the fake of lucre; when the greatest princes were put to the fword, and their wives and daughters made flaves and concubines? On the other fide, I would not be fo delicate as those modern critics, who are shocked at the servile offices and mean employments in which we fometimes fee the heroes of Homer engaged. There is a pleasure in taking a view of that simplicity in opposition to the luxury of succeeding ages, in beholding monarchs without their guards, princes tending their flocks, and princesses drawing water from the springs. When we read Homer, we ought to reflect that we are reading the most ancient author in the heathen world; and those whoconsider him in this light will double their pleasure in the perusal of him. Let them think they are growing acquainted with nations and people that are now no more; that they are stepping almost three thoufand years back into the remotest antiquity, and entertaining themselves with a clear and furprising vision of things no where elfa

· Preface to her Homer.

to be found; the only true mirror of that ancient world. By this means alone their greatest obstacles will vanish; and what usually creates their dislike, will become a faisfaction.

This confideration may farther ferve to answer for the constant use of the same epithets to his gods and heroes, such as the far-darting Phobus, the blue-eyed Pallas. the swift footed Achilles, &c. which some have cenfured as impertinent and tedioufly repeated. Those of the gods depended upon the powers and offices then believed to belong to them, and had contracted a weight and veneration from the rites and folemn devotions in which they were used: they were a fort of attributes in which it was a matter of religion to falute them on all occasions, and which it was an irreverence to omit. As for the epithets of great men, Monf. Boileau is of opinion, that they were in the nature of furnames, and repeared as such; for the Greeks, having no names derived from their fathers, were obliged to add fome other diffinction of each person; either naming his parents expressly, or his place of birth, profession, or the like : as Alexander the fon of Philip, Herodotus of Halicarnassus, Diogenes the Cynic, &c. Homer therefore, complying with the cuftom of his country, used such diffinctive additions as better agreed with poetry. And indeed we have fomething parallel to these in modern times, fuch as the names of Harold Harefoot, Edmund Ironfide, Edward Long-sharks, Edward the Black Prince, &c. If yet this be thought to account better for the propriety than for the repetition, I shall add a farther conjecture: Hefiod, dividing the world into its different ages, has placed a fourth age between the brazen and the iron one, of " Heroes distinet from other men: a divine race, who fought at Thebes and Troy, are called Demi-Gods, and live by the care of Jupiter in the illands of the bleffed "." Now among the divine honours which were paid them, they might have this also in common with the gods, not to be mentioned without the folemnity of an epithet, and fuch as might be acceptable to them by its celebrating their families, actions, or qua-

What other cavils have been raifed against Homer, are such as hardly deserve a teply, but will yet be taken notice of the yoccur in the course of the work.

much the same, as if one should think to raife the superstructure by undermining the foundation: one would imagine, by the whole course of their parallels, that these critics never fo much as heard of Homer's having written first; a consideration which whoever compares thefe two poets ought to have always in his eye. Some accuse him for the fame things which they overlook or praise in the other; as when they prefer the fable and moral of the Ancis to those of the Iliad, for the same reasons which might fet the Odysses above the Æneis: as that the hero is a wifer man; and the action of the one more beneficial to his country than that of the other: or elfe they blame him for not doing what he never defigned; as because Achilles is not as good and perfect a prince as Aincas, when the very moral of his poem required a contrary character: it is thus that Rapin judges in his compariton of Homer and Virgil, Others felect those particular paffages of Homer, which are not so laboured as fome that Virgil drew out of them: this is the whole management of Scaliger in his Poetices. Others quarrel with what they take for low and mean expressions, sometimes through a false delicacy and refinement, oftener from an ignorance of the graces of the original; and then triumph in the awkwardness of their own translations; this is the conduct of Perault in his Parallels. Laftly, there are others, who, pretending to a fairer proceeding, diffinguish between the personal merit of Homer, and that of his work; but when they come to affign the causes of the great reputation of the Iliad, they found it upon the ignorance of his times and the prejudice of those that followed: and, in pursuance of this principle, they make those accidents (fuch as the contention of the cities, &c.) to be the causes of his fame, which were in reality the consequences of his meric, The same might as well be said of Virgil or any great author, whose general character will infallibly raife many cafual additions to their reputation. This is the method of Monf. de la Motte; who yet confesses upon the whole, that in whatever age Homer had lived, he must have been the greatest poet of his nation, and that he may be faid in this sense to be the master even of those who surpassed him.

Many have been occasioned by an injudia

cious endeavour to exalt Virgil; which is

In all these objections we see nothing that contradicts his title to the honour of N n 2

Hefiod, lib. i, ver. 155, kc.

the thief invention; and as long as this (which indeed is the characteristic of poetry itself) remains unequalled by his followers, he still continues superior to them. A cooler judgment may commit fewer faults, and be more approved in the eyes of one fort of critics: but that warmth of fancy will carry the loudest and most universal applauses, which holds the heart of a reader under the strongest enchantment. Homer not only appears the inventor of poetry, but excels all the inventors of other arts in this, that he has swallowed up the honour of those who succeeded him. What he has done admitted no increase, it only left room for contraction or regulation. He shewed all the stretch of fancy at once; and if he has failed in some of his flights, it was but because he attempted every thing. A work of this kind feems like a mighty tree which rifes from the most vigorous feed, is improved with industry, flourishes, and produces the finest fruit; nature and art conspire to raise it; pleasure and profit join to make it valuable. and they who find the julled faults, have only faid, that a few branches (which run luxuriant through a richness of nature) might be sopped into form to give it a more regular appearance.

Having now spoken of the beauties and defects of the original, it remains to treat of the translation, with the same view to the chief characteristic. As far as that is feen in the main parts of the poem, such as the fable, manners, and fentiments, no translator can prejudice it but by wilful omissions or contractions. As it also breaks out in every particular image, description, and fimile, whoever lessens or too much fostens those, takes off from this chief character. It is the first grand duty of an interpreter to give his author entire and unmaimed; and for the reft, the diction and verification only are his proper province; fince these must be his own, but the others he is to take as he finds them.

It should then be considered, what methods may afford some equivalent in our language for the graces of these in the Greek. It is certain no literal translation can be just to an excellent original in a superior language: but it is a great mistake to imagine (as many have done) that a rash paraphrase can make amends for this general defect; which is no less in danger to lose the spirit of an ancient, by deviating into the modern manners of expression. If there be sometimes a dark-

ness, there is often a light in antiquity, which nothing better preferves than a verfion almost literal. I know no liberties one ought to take, but those which are necessary for transfusing the spirit of the original, and supporting the poetical style of the translation: and I will venture to fay, there have not been more men misled in former times by a fervile dull adherence to the latter, than have been deluded in ours by a chimerical infolent hope of raising and improving their author. It is not to be doubted that the fire of the poem, is what a translator should principally regard, as it is most likely to expire in his managing: however, it is his fafest way to be content with preserving this to his utmost in the whole, without endeavouring to be more than he finds his author is, in any particular place. It is a great secret in writing, to know when to be plain, and when poetical and figurative; and it is what Homer will teach us, if we will but follow modefuly in his footsteps. Where his diction is bold and lofty, let us raise ours as high as we can; but where he is plain and humble, we ought not to be deterred from imitating him by the fear of incurring the censure of a mere English critic. Nothing that belongs to Homer feems to have been more commonly miftaken than the just pitch of his style; some of his translators having swelled into fustian in a proud confidence of the sublime; others funk into flatness in a cold and timorous notion of fimplicity. Methinks I see these different followers of Homer, fome fweating and straining after him by violent leaps and bounds, (the certain figns of false mettle); others slowly and fervilely creeping in his train, while the poet himself is all the time proceeding with an unaffected and equal majesty before them. However, of the two extremes, one could fooner pardon frenzy than frigidity: no author is to be envied for fuch commendations as he may gain by that character of style, which his friends must agree together to call fimplicity, and the rest of the world will call dulness, There is a graceful and dignified fimplicity, as well as a bald and fordid one, which differ as much from each other as the air of a plain man from that of a floven: It is one thing to be tricked up, and another not to be dreffed at all. Simplicity is the mean between oftentation and rufficity.

This pure and noble fimplicity is no where in such perfection as in the Scrip-

fure and our author. One may affirm, with all respect to the inspired writings, that the divine spirit made use of no other words but what were intelligible and common to men at that time, and in that, part of the world; and as Homer is the author nearest to those, his style must of course bear a greater resemblance to the facred books than that of any other writer. This consideration (together with what has been observed of the parity of some of his thoughts) may methinks induce a translator on the one hand to give into feveral of those general phrases and manners of expression, which have attained a veneration even in our language from being used in the Old Testament; as on the other, to avoid those which have been appropriated to the Divinity, and in a manner configued to mystery and religion.

For a farther prefervation of this air of fimplicity, a particular care should be taken to express with all plainness, those moral sentences and proverbial speeches which are so numerous in this poet. They have something venerable, and I may say oracular, in that unadorned gravity and shortness with which they are delivered: a grace which would be utterly lost by enduavouring to give them what we call a more ingenious (that is, a more modern) turn in the paraphrase.

Perhaps the mixture of fome Grecisms and old words, after the manner of Milton, if done without too much affectation, might not have an ill effect in a version of this particular work, which most of any other seems to require a venerable antique cast. But certainly the use of modern terms of war and government, such as platoon, campaign, junto, of the like (into which some of his translators have fallen) cannot be allowable; those only excepted, without which it is impossible to treat the subjects in any living language.

There are two peculiarities in Homer's diction, which are a fort of marks, or moles, by which every common eye diftinguishes him at first sight: those who are not his greatest admirers look upon them as defects, and those who are, seem pleased with them as beauties. I speak of his compound epithets, and of his repetitions. Many of the former cannot be done listerally into English without destroying the purity of our language. I believe such should be retained as slide totally of themselves into an English com-

pound, without violence to the ear, or to the received rules of composition; as well as those which have received a fanction from the authority of our best poets, and are become familiar through their use of them; such as the cloud-compelling Jove, &c. As for the rest, whenever any can be as fully and significantly expressed in a single word as in a compound one, the course to be taken is obvious.

Some, that cannot be fo turned as to preserve their full image by one or two words, may have justice done them by circumlocution; as the epithet ilros publoc to a mountain, would appear little or ridiculous translated literally " leaf-thaking," but affords a majethic idea in the periphrasis: " The lofty mountain shakes his waving woods." Others that admit of differing fignifications, may receive an advantage by a judicious variation according to the occasions on which they are introduced. For example, the epithet of Apollo, ingosoc, or "far-shooting," is capable of two explications; one literal in respect to the darts and bow, the ensigns of that god; the other allegorical with regard to the rays of the fun: therefore in such places where Apollo is represented as a god in person, I would use the former interpretation; and where the effects of the fun are deferibed, I would make choice of the latter. Upon the whole, it will be necessary to avoid that perpetual repetition of the fame epithets which we find in Homer; and which, though it might be accommodated (as has been already thewn) to the ear of those times, is by no means fo to ours: but one may wait for opportunities of placing them, where they derive an additional beauty from the occafions on which they are employed; and in doing this properly, a translator may at once shew his fancy and his judgment.

As for Homer's repetitions, we may divide them into three forts; of whole narrations and speeches, of single sentences, and of one verse or hemistich. I hope it is not impossible to have such a regard to these, as neither to lose so known a mark of the author on the one ham!, nor to other determined the reader too much on the other. The repetition is not ungraceful in those speeches, where the dignity of the speaker renders it a fort of insolence to alter his words; as in the messages from gods to men, or from higher powers to inseriors in concerna of state, or where the ceremonial of religion seems to require it, in the solemn

Nn4

forms of prayer, oaths, or the like, In other cases, I believe, the best rule is, to be guided by the nearness, or distance, at which the repetitions are placed in the original: when they follow too close, one may vary the expression; but it is a question, whether a professed translator be authorised to omit any: if they be tedious, the author is to answer for it.

It only remains to speak of the Versisication. Homer (as has been faid) is perpetually applying the found to the fenfe, and varying it on every new subject. This is indeed one of the most exquisite beauties of poetry, and attainable by very few: I know only of Homer eminent for it in the Greek, and Virgil in Latin. I am fenfible it is what may fometimes happen by chance, when a writer is warm, and fully possessed of his image: however it may be reasonably believed they defigned this, in whose verse it so manifeltly appears in a superior degree to all others. Few readers have the ear to be judges of it; but those who have, will see I have endeavoured at this beauty.

Upon the whole, I must confess myself utterly incapable of doing justice to Homer. I attempt him in no other hope but that which one may entertain without much vanity, of giving a more tolerable copy of him than any entire translation in verse has yet done. We have only those of Chapman, Hobbes, and Ogilby. Chapman has taken the advantage of an immeasurable length of verse, notwithstanding which, there is scarce any paraphrase more loose and rambling than his. He has frequent interpolations of four or fix lines, and I remember one in the thirteenth book of the Odysses, ver. 312, where he has spun twenty verses out of two. He is often mistaken in so bold a manner, that one might think he deviated on purpose, if he did not in other places of his notes infift fo much upon verbal trifles. He appears to have had a strong affectation of extracting new meanings out of his author, infomuch as to promife, in his rhyming preface, a poem of the mysteries he had revealed in Homer: and perhaps he endeavoured to itrain the obvious tenfe to this end. His expression is involved in fultian, a fault for which he was remarkable in his original writings, as in the tragedy of Bussy d'Amboise, &c. In a word, the nature of the man may account for his whole performance; for he appears, from his preface and remarks, to

have been of an arrogant turn, and an enthusiast in poetry. His own boast of having sinished half the Iliad in less than sisteen weeks, shews with what negligence his version was performed. But that which is to be allowed him, and which very much contributed to cover his defects, is a daring stery spirit that animates his translation, which is something like what one might imagine Homer himself would have writ before he arrived at years of discretion.

Hobbes has given us a correct explanation of the sense in general: but for particulars and circumstances he continually lops them, and often omits the most beautiful. As for its being efteemed a close translation, I doubt not many have been led into that error by the shortness of it, which proceeds not from his following the original line by line, but from the contractions above-mentioned. He fometimes omits whole fimiles and fentences, and is now and then guilty of millakes, into which no writer of his learning could have fallen, but through carelesiness. His poetry, as well as Ogilby's, is too mean for criticism.

It is a great loss to the poetical world that Mr. Dryden did not live to translate the Iliad. He has left us only the first book, and a small part of the fixth; in which, if he has in some places not truly interpreted the fense, or preserved the antiquities, it ought to be excuted on account of the halfe he was obliged to write in. He feems to have had too much regard to Chapman, whose words he sometimes copied, and has unhappily followed him in passages where he wanders from the original. However, had he translated the whole work, I would no more have attempted Homer after him than Virgil, his version of whom (notwithstanding some human errors) is the most noble and spirited translation I know in any language. But the fate of great geniuses is like that of great ministers, though they are confessedly the first in the commonwealth of letters, they must be envied and calumniated only for being at the head of it.

That which, in my opinion, ought to be the endeavour of any one who translates Homer, is above all things to keep, alive that spirit and fire which makes his chief character: in particular places, where the sense can bear any doubt, to follow the strongest and most poetical, as most

agrecing

agreeing with that character; to copy him in all the variations of his style, and the different modulations of his numbers; to preserve, in the more active or descriptive parts, a warmth and elevation; in the more sedate or narrative, a plainness and folemnity; in the speeches, a fullness and perspicuity; in the sentences, a shortness and gravity: not to neglect even the little figures and turns on the words, nor fometimes the very cast of the periods, neither to omit nor confound any rites or customs of antiquity: perhaps too he ought to include the whole in a shorter compass than has hitherto been done by any translator. who has tolerably preserved either the sense or poetry. What I would farther recommend to him, is to fludy his author rather from his own text than from any commentaries, how learned foever, or whatever figure they may make in the ellimation of the world; to confider him attentively in comparison with Virgil above all the ancients, and with Milton above all the moderns. Next thefe, the archbishop of Cambray's Telemachus may give him the truest idea of the spirit and turn of our author, and Bossu's admirable treatife of the epic poem the jullest notion of his defign and conduct. But after all, with whatever judgment and study a man may proceed, or with whatever happiness he may perform such a work, he must hope to please but a few; those only who have at once a talle of poetry, and competent learning. For to fatisfy fuch as want either, is not in the nature of this undertaking; fince a mere modern wit can like nothing that is not modern, and a pedant nothing that is not Greek.

What I have done is submitted to the public, from whose opinions I am prepared to learn; though I fear no judges so little as our best poets, who are most fenfible of the weight of this talk. As for the worst, whatever they shall please to fay, they may give me some concern as they are unhappy men, but none as they are malignant writers. I was guided in this translation by judgments very differrent from theirs, and by persons for whom they can have no kindness, if an old observation be true, that the strongest antipathy in the world is that of fools to men of wit. Mr. Addison was the first whose advice determined me to undertake this task, who was pleased to write to me upon that occasion, in such terms as I cannot repeat without vanity. I was translation.

obliged to Sir Richard Steele for a very. early recommendation of my undertaking to the public. Dr. Swift promoted my interest with that warmth with which he always serves his friend. The humanity and frankness of Sir Samuel Garth are what I never knew wanting on any occafion. I must also acknowledge, with infinite pleasure, the many friendly offices, as well as fincere criticisms, of Mr. Congreve, who had led me the way in translating some parts of Homer; as I wish, for the fake of the world, he had prevented me in the rest. I must add the names of Mr. Rowe and Dr. Parnell, though I shall take a farther opportunity of doing justice to the last, whose goodnature (to give it a great panegyric) is no less extensive than his learning. favour of these gentlemen is not entirely undeferved by one who bears them fo true an affection. But what can I say of the honour fo many of the great have done me, while the first names of the age appear as my subscribers, and the most diffinguished patrons and ornaments of learning as my chief encouragers? Among these, it is a particular pleasure to me to find, that my highest obligations are to fuch who have done most honour to the name of poet: that his grace the duke of Buckingnam was not displeased I should undertake the author, to whom he has given (in his excellent Eslay) so complete a praise.

"Read Homer once, and you can read no more;
"For all Books elle appear to mean, to poor,
"Ver fe will feem Prote; but fill perfift to read,
"And Homer will be all the books you need."

That the earl of Halifax was one of the first to favour me, of whom it is hard to fay, whether the advancement of the polite arts is more owing to his generofity or his example. That such a genius as my Lord Bolingbroke, not more diffinguished in the great scenes of business than in all the useful and entertaining parts of learning, has not refused to be the critic of these sheets, and the patron of their writer. And that so excellent an imitator of Homer as the noble author of the tragedy of Heroic Love, has continued his partiality to me, from my writing Pastorals. to my attempting the Iliad. I cannot deny myself the pride of confessing, that I have had the advantage not only of their advice for the conduct in general, but their correction of feveral particulars of this

I could fay a great deal of the pleasure of being distinguished by the earl of Carnarvon; but it is almost absurd to particularize any one generous action in a person whose whole life is a continued series of them. Mr. Stanhope, the present se-cretary of state, will pardon my desire of having it known that he was pleafed to promote this affair. The particular zeal of Mr. Harcourt (the fon of the late lord chancellor) gave me a proof how much I am honoured in a share of his friendship. I must attribute to the same motive that of several others of my friends, to whom all acknowledgments are rendered unnecessary by the privileges of a familiar correspondence: and I am fatisfied I can no better way oblige men of their turn, than by my filefice.

In fhort, I have found more patrons than ever Homer wanted. He would have thought himself happy to have met the same favour at Athens, that has been shown me by its learned rival, the univerfity of Oxford. If my author had the wits of after ages for his defenders, his translator has had the Beauties of the prefent for his advocates; a pleasure too great to be changed for any fame in reversion. And I can hardly envy him those pompous honours he received after death, when I reflect on the enjoyment of so many agreeable obligations, and easy friendships, which make the fatisfaction of life. This diffinction is the more to be acknowledged, as it is shewn to-one whose pen has never gratified the prejudices of particular parties, or the vanities of particular men. Whatever the success may prove, I shall never repent of an undertaking in which I have experienced the candour and friendship of so many persons of merit; and in which I hope to pass some of those years of youth that are generally lost in a circle of follies, after a manner neither wholly unuseful to others, nor disagreeable to myself.

# § 235. An Essay on Virgil's Georgics, prefixed to Mr. Dryden's Translation.

Virgil may be reckoned the first who introduced three new kinds of poetry among the Romans, which he copied after three the greatest masters of Greece. Theocritus and Homer have still disputed for the advantage over him in pastoral and heroics; but I think all are unanimous in giving him the precedence to Hesiod in

his Georgics. The truth of it is, the sweetness and rusticity of a pastoral cannot be so well expressed in any other tongue as in the Greek, when rightly mixed and qualified with the Doric dialect; nor can the majesty of an heroic poem any where appear so well as in this language, which has a natural greatness in it, and can be often rendered more deep and sonorous by the pronunciation of the Ionians. But in the middle style, where the writers in both tongues are on a level, we see how far Virgil has excelled all who have written in the same way with him.

There has been abundance of criticism spent on Virgil's Pastorals and Æneids, but the Georgics are a subject which none of the critics have sufficiently taken into their confideration; most of them passing it over in filence, or casting it under the fame head with Pastoral; a division by no means proper, unless we suppose the style of a husbandman ought to be imitated in a Georgic, as that of a shepherd is in Pastoral. But though the scene of both these poems lies in the same place, the speakers in them are of a quite different character, fince the precepts of husbandry are not to be delivered with the simplicity of a plowman, but with the address of a poet. No rules therefore that relate to Pastoral can any way affect the Georgics, fince they fall under that class of poetry which confifts in giving plain and direct instructions to the reader; whether they be moral duties, as those of Theognis and Pythagoras; or philosophical speculations, as those of Aratus and Lucretius; or rules of practice, as those of Hesiod and Virgil. Among these different kinds of subjects, that which the Georgies go upon is, I think, the meanest and least improving, but the most pleasing and delightful. Precepts of morality, besides the natural corruption of our tempers, which makes us averse to them, are so abstracted from ideas of sense, that they seldom give an opportunity for those beautiful descriptions and images which are the spirit and life of poetry. Natural philosophy has indeed sensible objects to work upon, but then it Often puzzles the reader with the intricacy of its notions, and perplexes him with the multitude of its disputes. But this kind of poetry I am now speaking of, addresses itself wholly to the imagination: it is altogether conversant among the fields and woods, and has the most delightful part of nature for its province. It raises in

our minds a pleasing variety of scenes and landscapes, whilst it teaches us, and makes the dryest of its precepts look like a description. A Georgic therefore is some ' part of the science of husbandry put into a pleasing dress, and set off with all the beauties and embellishments of poetry.' Now fince this science of husbandry is of a very large extent, the poet shews his skill in fingling out fuch precepts to proceed on, as are useful, and at the same time most capable of ornament. Virgil was fo well acquainted with this fecret, that to fet off his first Georgic he has run into a set of precepts, which are almost foreign to his fullicet, in that beautiful account he gives us of the figns in nature, which precede the changes of the weather.

And if there be to much art in the choice of fit piccepts, there is much more required in the treating of them, that they may fall in after each other by a natural unforced method, and shew themselves in the bell and most advantageous light. They should all be so finely wrought together in the same piece, that no coarse scam may discover where they join; as in a curious brede of needle-work one colour falls away by fuch just degrees, and another rifes so infenfibly, that we see the variety without being able to diffinguish the total vanishing of the one from the first appearance of the other. Nor is it sufficient to range and dispose this body of precepts into a clear and easy method, unless they are delivered to us in the most pleasing and agreeable manner; for there are leveral ways of conveying the same truth to the mind of man; and to choose the pleafantest of these ways, is that which chiefly dislinguishes poetry from prose, and makes Virgil's rules of hulbandry pleasanter to Where the proferead than Varro's. writer tells us plainly what ought to be done, the poet often conceals the precept in a description, and represents his countryman performing the action in which he would instruct his reader. Where the one fets out, as fully and diffinctly as he can, all the parts of the truth which he would communicate to us; the other fingles out the most pleasing circumstance of this truth, and so conveys the whole in a more, diverting manner to the understanding. I shall give one instance out of a multitude of this nature that might be found in the Georgics, where the reader may express the same thing, and how much of the fruitfulness of Italy, of a country

pleafanter every manner of expression is. than the plain and direct mention of it would have been. It is in the fecond Georgic, where he tells us what trees will bear grafting on each other:

Et sæpe alterius ramos impune videmus Vertere in alterius, mutatamque infita mala Ferre pyrum, et prunis lapidola rubescere corna -Steriles Platam malos geffere valentes. Caftanea fagos, ornufque incanuit albo Exut ad colum ramis felicibus arbos Miraturque novas frondes et non fua poma-

Here we see the poet considered all the effects of this union between trees of different kinds, and took notice of that effect which had the most furprise, and by consequence the most delight in it, to express the capacity that was in them of being thus united. This way of writing is every where much in use among the poets, and is particularly practifed by Virgil, who loves to fuggest a truth indirectly, and without giving us a full and open view of it, to let us see just so much as will naturally lead the imagination into all the parts that lie concealed. This is wonderfully diverting to the understanding, thus to receive a precept, that enters, as it were, through a bye-way, and to apprehend an idea that draws a whole train after it. For here the mind, which is always delighted with its own discoveries, only takes the hint from the poet, and feems to work out the reft by the strength of her own faculties.

But fince the inculcating precept upon precept, will at length prove tirefome to the reader, if he meets with no entertainment, the poet must take care not to incumber his poem with too much business; but fometimes to relieve the subject with a moral reflection, or let it rest a while, for the fake of a pleasant and pertinent digression. Nor is it sufficient to run out into beautiful and diverting digressions (as it is generally thought) unless they are brought in aptly, and are something of a piece with the main defign of the Georgie: for they ought to have a remote alliance at least to the subject, that so the whole poem may be more uniform and agreeable in all its parts. We should never quite lose fight of the country, though we are fometimes entertained with a distant prospect of it. Of this nature are Virgil's descriptions of the original of agriculture, life, life, and the like, which are not brought in by force, but naturally rife out of the principal argument and defign of the poem. I know no one digression in the Georgics that may seem to contradict this observation, besides that in the latter end of the first book, where the poetlaunches out into a discourse of the battle of Pharsalia, and the actions of Augustus. But it is worth while to consider, how admirably he has turned the course of his narration into its proper channel, and made his husbandman concerned even in what relates to the battle, in those inimitable lines:

Schicet et tempus veniet, cum finibus illis Agrica incui vo terram molitus aratro, Exefa inveniet (cabi à tobigme pila: Aut gravibus raftis galeas pulfabit manes, Grandisque effoifis mirabitur offa fepulchris-

And afterwards, speaking of Augustus's actions, he still remembers that agriculture ought to be some way hinted at throughout the whole poem:

Dignus honos: iqualent abductis arva colonis; Et curvæ rigidum falces conflantur in enfem.

We now come to the flyle which is proper to a Georgie; and indeed this is the part on which the poet must lay out all his strength, that his words may be warm and glowing, and that every thing he describes may immediately present itself, and rise up to the reader's view. He ought, in particular, to be careful of not letting his subject debase his style, and betray him into a meanness of expression, but every where to keep up his verse, in all the pomp of numbers and dignity of words.

I think nothing which is a phrase or faying in common talk should be admitted into a serious poem; because it takes off from the folemnity of the expression, and gives it too great a turn of familiarity: much less ought the low phrases and terms of art that are adapted to husbandry, have any place in such a work as the Georgic, which is not to appear in the natural fimplicity and nakedness of its subject, but in the pleasantest dress that poetry can bestow on it. Thus Virgil, to deviate from the common form of words, would not make use of tempore but sydere in his first verse; and every where else abounds with metaphors, Grecisms, and circumlocutions, to give his verse the greater pomp, and preserve it from finking into a plebeian style. And herein confists Virgil's master-piece,

who has not only excelled all other poets, but even himself in the language of his Georgics; where we receive more strong and lively ideas of things from his words, than we could have done from the objects themselves; and find our imaginations more affected by his descriptions, than they would have been by the very sight of what he describes.

I shall now, after this short sceme of rules, consider the different success that Hefiod and Virgil have met with in this kind of poetry, which may give us fome further notion of the excellence of the Georgics. To begin with Hefiod; if we may guess at his character from his writings, he had much more of the hulbandman than the poet in his temper: he was wonderfully grave, discreet, and frugal; he lived altogether in the country, and was probably, for his great prudence, the oracle of the whole neighbourhood. principles of good hulbandry ran through his works, and directed him to the choice of tillage and merchandize, for the fubject of that which is the most celebrated of them. He is every where bent on instruction, avoids all manner of digressions, and does not flir out of the field once in the whole Georgic. His method in describing month after month, with its proper scasons and employments, is too grave and fimple; it takes off from the furprite and variety of the poem, and makes the whole look but like a modern almanack in verse. The reader is carried through a course of weather, and may before-hand guess whether he is to meet with snow or rain, clouds or funshine, in the next description. His defcriptions indeed have abundance of nature in them, but then it is nature in her fimplicity and undress. Thus when he fpeaks of January, "The wild beafts," tays he, "run shivering through the woods, " with their heads stooping to the ground, " and their tails clapt between their legs; " the goats and oxen are almost flea'd with cold; but it is not fo bad with the sheep, because they have a thick coat " of wool about them. The old men too " are bitterly pinched with the weather; " but the young girls feel nothing of it, " who fit at home with their mothers by " a warm fire-lide." Thus does the old gentleman give himfelf up to a loofe kind of tattle, rather than endeavour after a just poetical description. Nor has he shewn more of art or judgment in the precepts he has given us, which are fown to very

thick, that they clog the poem too much, and are often so minute and full of circum-stances, that they weaken and unnerve his verse. But after all, we are beholden to him for the first rough sketch of a Georgic: where we may still discover something venerable in the antiqueness of the work; but if we would see the design enlarged, the figures reformed, the colouring laid on, and the whole piece sinished, we must expect it from a greater master's hand

Virgil has drawn out the rules of tillage and planting into two books, which Hesiod has dispatched in half a one; but has to raifed the natural rudeness and simplicity of his fubject, with fuch a fignificancy of expression, such a pomp of verse, such variety of transitions, and such a solemn air in his reflections, that if we look on both poets together, we fee in one the plainnefs of a downright countryman, and in the other fomething of ruffic majefly, like that of a Roman dictator at the plow-tail. He delivers the meanest of his precepts with a kind of grandeur; he breaks the clods and toffes the dung about with an air of gracefulness. His prognostications of the weather are taken out of Aratus, where we may fee how judiciously he has picked out those that are most proper for his husbandman's observation; how he has enforced the expression, and heightened the images, which he found in the original.

The second book has more wit in it, and a greater boldness in its metaphors, than any of the rest. The poèt, with a great beauty, applies oblivion, ignorance, wonder, defire, and the like, to his trees. The last Georgic has indeed as many metaphors, but not so daring as this; for human thoughts and passions may be more naturally ascribed to a bee, than to an inanimate plant. He who reads over the pleasures of a country life, as they are described by Virgil in the latter end of this book, can scarce be of Virgil's mind, in preferring even the life of a philosopher to it.

We may, I think, read the poet's clime in his description; for he seems to have been in a sweat at the writing of it:

Sistat, et ingenti ransorum protegat umbra!

And is every where mentioning among a verse that ridicules part of a line transhis chief pleasures, the coolness of his lated from Hesiod—Nudus ara, fere nudus. shades and rivers, vales and grottos; which —And we way easily guess at the judgamore northern poet would have amitted, ment of this extraordinary critic, whoever

for the description of a sunny hill and fire-fide.

The third Georgic feems to be the most laboured of them all; there is a wonderful vigour and spirit in the description of the horse and chariot-race. The force of love is represented in noble instances, and very sublime expressions. The Scythian winterpiece appears so very cold and bleak to the eye, that a man'can scarce look on it without shivering. The murrain at the end has all the expressiveness that words can give. It was here that the poet strained hard to outdo Lucretius in the description of his plague; and if the reader would see what success he had, he may find it at large in Scaliger.

But Virgil feems no where fo well pleafed as when he is got among his bees, in the fourth Georgie; and ennobles the actions of to trivial a creature, with metaphors drawn from the most important conceins of mankind. His vertes are not in a greater noise, and hurry in the battles of Ameas and Turnus, than in the engagement of two fwarms. And as in his Ancis he compares the labours of his Trojans to those of bees and pismires, here he compares the labours of the bees to those of the Cyclops. In fhort, the last Georgie was a good prelude to the Æneis; and very well shewed what the poet could do in the description of what was really great, by his deferibing the mock grandeur of an infect with to good a grace. There is more pleafantness in the little platform of a garden, which he gives us about the middle of this book, than in all the spacious walks and water-works of Rapin. The speech of Proteus at the end can never be enough admired, and was indeed very fit to conclude so divine a work.

After this particular account of the beauties in the Georgies, I should in the next place endeavour to point out its imperfections, if it has any. But though I think there are some few parts in it that are not so beautiful as the rest, I shall not presume to name them, as rather suspecting my own judgment, than I can believe a fault to be in that poem, which lay so long under Virgil's correction, and had his last hand put to it. The first Georgic was probably burlesqued in the author's, life time; for we still find in the scholiasts a verse that ridicules part of a line translated from Hesiod—Nadus ara, fore niedus.—And we way easily guess at the judgment of this extraordinary critic, whoever

he was, from his censuring in this particular precept, We may be fure Virgil would not have translated it from Hesiod, had he not discovered some beauty in it; and indeed the beauty of it is what I have before observed to be frequently met with in Virgil, the delivering the precept so indirectly, and fingling out the particular circumstances of fowing and plowing naked, to fuggest to us that these employments are proper only in the hot feafon of the

year.

I shall not here compare the style of the Georgics with that of Lucretius, which the reader may see already done in the preface to the second volume of Dryden's Miscellany Poems; but shall conclude this poem to be the most complete, elaborate, and finished piece of all antiquity. Æneis, indeed, is of a nobler kind; but the Georgic is more perfect in its kind. The Æneis has a greater variety of beauties in it, but those of the Georgic are more exquifite. In short, the Georgic has all the perfection that can be expected in a poem written by the greatest poet in the slower of his age, when his invention was ready, his imagination warm, his judgment fettled, and all his faculties in their full vigour and maturity. Addison.

#### § 236. Hiftory of the HEATHEN DEITIES.

I. Coelus and Terra: Cœlus is faid to be the fon of the Air, great father of the gods, and husband of Terra the daughter of the Earth; by whom he had the Cyclops, Oceanus, Titan, the Hundred Giants, and many other children, the most eminent of which was Saturn.

Nothing is more uncertain that what is related of Cœlus and Terra; and the whole fable plainly feems to fignify that the Air and Earth were the common father and parent of all created beings. . Cœlus was called Uranus by the Greeks, and Terra was also named Vesta; she presided over all feafts and banquets; and the first fruits of the earth were offered to her in the most folemn facrifices. According to the fable, Cœlus was dethroned by his youngest son Saturn, and wounded by him, to prevent his having more children.

2. SATURN. Saturn was the fon of Cœlus and Terra, and the most ancient Titan, his elder brother, of all the gods. - refigned his birth-right to him, on condition that he should destroy all his male issue, that the empire of the world might in time fall to his posterity. Saturn accepted of this condition; but Titan afterwards suspecting that his brother had broke the contract between them, made war against him, and kept him in prison; from whence he was released by his son Jupiter, and re-inflated in his government : he was afterwards dethroned by Jupiter him-

Saturn being driven from his throne. left the kingdom, and went into Italy, and there lived with king Janus. That part of Italy where he concealed himself was called Latium.

He is represented as the emblem of Time, with a scythe in his hand; and in his time, it is faid, was the golden age of the earth, when the ground yielded all forts of fruit without culture, and Allraa, or Justice, dwelt among men, who lived together in perfect love and amity.

The Saturnalia, or Feasts of Saturn, were instituted by Tullus king of the Romans; or, according to Livy, by Sempro-

nius and Minutius the consuls.

3. CYBELE. Cybele was the wife of Saturn, and accounted mother of the god. she was called Ops by the Latins, and Rhea by the Greeks. She was also named Bona Mater, Vesta, and Terra.

Cybele hath her head crowned with towers, and is the goddess of cities, garrisons, and all things that the carth suf-She is the earth itself, on which are built many towers and castles.

In her hand the carries a key, because, in winter the earth locks up her treasures, which in the spring she unlooses, brings forth and dispenses with a plentiful hand.

She is feated in a chariot, because the earth hangs in the air, being poifed by its own weight. Her garments were painted with flowers of various colours, and figured with images of feveral creatures; which needs no explanation, fince every one knows, that such a dress is suitable to the

Divine honours were daily paid to this goddess; and the priests of Cybele performed their facrifices with a confused noise of timbrels, pipes, cymbals, and other instruments; and the sacrificants profaned both the temple of their goddess, and the ears of their hearers, with howling, riot, and every kind of wantonness.

The priests of this goddess were called Galli, from a river in Phrygia, They

Mete

were also called Curetes, Corybantes, Telchines, Cabiri, and Idai Dastyli,

JUPITER, Jupiter, fon of Saturn and Cybele, or Ops, is the father and king of gods and men. He is represented fit-ting on a throne of ivory and gold, holding thunder in his right hand, and in the left, a scepter made of cyprus; which wood, being free from corruption, is a symbol of eternal empire. On this scepter fits an eagle; either because he was brought up by that bird, or that heretofore the eagle fitting upon his head, portended his reign; or because in the war against the Giants, it brought him the thunder, and thence was called his Armourbearer. He had golden shoes, and an embroidered cloak, adorned with various flowers, and figures of animals.

He was educated, as well as born, upon Ida, a mountain in Crete; but by whom, the variety of opinions is wonderful.

There are some who assirm, that he was nursed by the Curetes, or Corybantes; some by the Nymphs; and some by Amalthea, daughter of Melissus king of that island. Others, on the contrary, have recorded, that he was fed by the bees with honey; others, by goat's milk.

They add besides, that the goat being dead and the skin pulled off, Jupiter made of it a shield, called Ægis, which he used afterwards in the battle against the Giants.

Jupiter, after he had deposed his father Saturn from the throne, and expelled him the kingdom, divided the parental inheritance with his two brothers, Neptune and Pluto. He so obliged and affisted mankind by great favours, that he not only got the title of Jupiter, but also obtained divine honours, and was esteemed the common father of gods and men.

Jupiter had names almost innumerable; which he obtained, either from the places where he lived, and wherein he was worhipped, or from the various actions of his life.

The Greeks called him Ammon or Hammon, which fignifies fandy. He obtained this name first in Lybia, where he was worshipped under the figure of a ram; because when Bacchus was athirst in the defarts of Arabia, and implored the affishance of Arabia, pupiter appeared in the form of a sam, opened a fountain with his foot, and discovered it to him.

He was called Capitolinus, from the Capitoline hill, on the top whereof he had

the first temple that ever was built in Rome; which Tarquin the Elder first vowed to build, Tarquin the Proud did build, and Horatius the Consul dedicated. He was besides called Tarpeius, for the Tarpeian rock on which this temple was built. He was also styled Optimus Maximus, from his power and willingness to profit all men.

The title of Dodonæus was given Jupiter from the city Dodona in Chaonia, which was so called from Dodona, a nymph of the sea. Near to this city was a grove facred to him, which was planted with oaks, and famous, because in it was the most ancient oracle of all Greece.

The name Feretrius was given him, because after the Romans had overcome their enemies they carried the imperial spoils (Spolia Opima) to his temple. Romulus first presented such spoils to Jupiter, after he had slain Acron, king of Canina; and Cornelius Gallus offered the same spoils, after he had conquered Tolumnius, king of Hetruria; and, thirdly, M. Marcellus, when he had vanquished Viridomarus king of the Gauls.

Those spoils were called Opima, which one general took from the other in battle.

He is also named Olympius from Olympus, the name of the master who taught him, and of the heaven wherein he resides.

The Greeks called him Σωτης (Soter) Servator, the Saviour, because he delivered them from the Medes.

He was likewife called Xenius, or Hofpitalis; because he was thought the author of the laws and customs concerning hospitality.

5. Juno. Juno was the Queen of Heaven, both the fister and wise of Jupiter; the daughter of Saturn and Cps; born in the island Samos, where she lived while the continued a virgin.

Juno became extremely jealous of Jupiter, and never ceafed to perplex the children he had by his miftreffes. She was mother of Vulcan, Mars, and Hebe; the was also called Lucina, and presided over marriages and births; and is represented in a chariot drawn by peacocks, with a scepter in her right hand, and a crown on her head; her person was august, her carriage noble, and her dress elegant and

Iris, the daughter of Thaumas and Electra, was fervant and peculiar medenger of Jung,

Juno. Because of her swiftness, she is painted with wings, fitting on a rainbow. It was her office to unloofe the fouls of dying women from the chains of the body.

6. Apolio. Apollo is described as a beardless youth, with long hair, crowned with laurel, and shining in an embroidered -vestment; holding a bow and arrows in his right hand, and a harp in the left. Sometimes he is feen with a shield in the one hand, and the Graces in the other. The power of this god is threefold; in heaven, where he is called Sol; in earth, where he is named Liber Pater; and in hell, where he is styled Apollo. He generally is painted with a harp, shield, and arrows.

He was the fon of Jupiter and Latona. His mother, who was the daughter of Casus the Titan, conceived twins by Jupiter: at which [uno being incenfed, fent the serpent Python against her; Latona, to avoid the intended mitchief, fled into the island Delos, where she brought forth Apollo and Diana at the same birth.

By the invention of physic, music, poetry, and rhetoric, he defervedly prefided over the Muses. He also taught the arts of foretelling and archery; by which he so much obliged mankind, that he was enrolled in the number of the gods.

He destroyed all the Cyclops, the forgers of Jupiter's thunderbolts, with his arrows, to revenge the death of his fon Æsculapius, whom Jupiter had killed with his thunder, because, by the power of phyfic, he restored the dead to life again.

He fell violently in love with the virgin Daphne, so famous for her modesty. When he purfued her she was changed into a laurel; the most chaste of trees; which is never corrupted with the violence of heat or cold, but remains always flourishing, always pure.

Apollo raifed the walls of the city of Troy by the music of his harp alone; and was challenged by Mariyas, a proud mufician; but the god flayed him alive, because he presumed to contend with him in his own art, and afterwards turned him into a river. Also when Midas, king of Phrygia, foolifaly determined the victory to the god Pan, when Apollo and he fang, and plunged him into the river Po. His together, Apollo stretched his ears to the length and thape of affes ears.

called Cynthius, from the mountain Cynthus in the island of Delos; from whence Diana is also called Cynthia; and Delius, from the same island, because he was born there.

He is called Delphicus, from the city Delphi in Bœotia, where he had the most famous temple in the world. They fav, that this famous oracle became dumb at the birth of our Saviour; and when Augustus defired to know the reason of its filence, the oracle answered him, That, in Judæa, a child was born, who was the Supreme God, and had commanded him to depart, and return no more answers.

He is called Pæan, either from allaying forrows, or from his exact skill in hunting, wherefore he is armed with arrows.

He is called Phoebus, from the swiftness of his motion, or from his method of healing by purging.

He was named Pythius, not only from the serpent Python, which he had killed, but likewise from asking and consulting; for none among the gods delivered more responses than he; especially in the temple which he had at Delphi, to which all nations reforted, fo that it was called the oracle of all the earth. These oracles were given out by a young virgin, called Pythia from Pythius, one of Apollo's

Sor. Sol, who enlighteneth the world, is esteemed the same as Apollo. He was the father of Phæton by Clymene; and, as a proof of his paternal affection, promised to grant his son whatever he should request. The rash youth asked the guidance of his chariot for one day: Sol in vain used every argument to dissuade him from the enterprize; but having fworn by the river Styx, an oath it was unlawful for the gods to violate, unwillingly granted his request, and gave him the necessary instructions for his behaviour.

Phæton, transported with joy, mounted the chariot, and began to lash the slaming steeds; but they finding the ignorance of their new driver, ran through the air, and fet both heaven and earth on fire. Jupiter, to prevent a total conflagration, firuck Phæton with thunder from his chariot, fisters, Phæthusa, Lampetia, and Phoebe, and also Cycnus his friend, immoderately This god had many names. He is bewailed his death on the banks of the

Piver:

river; and, by the pity of the gods, his fifters were changed into poplar trees, and his friend Cycnus into a swan.

8. MERCURY. Mercury, fon of Jupiter and Maia, daughter of Atlas, was the god of eloquence and merchandize, and messenger of the gods.

He is represented a young man, with a cheerful countenance, an honest look, and lively eyes; fair without paint, with winged shoes and hat, and holding in his hand a winged rod, bound about with two ser-

pents.

He had many remarkable qualities, on account of which they worthipped him as a god. He is faid to have invented letters, and the use of them: it is evident, that he excelled in eloquence, and the faculty of speaking; and therefore was accounted the god of rhetoric and cratory. He is reported to have been the first inventor of contracts, weights, and measures: he also taught the arts of buying, selling, and trainc; and thence was called the god of merchants, and of gain.

In the art of thieving, he far exceeded all the sharpers that ever have been, and is named the Prince and God of Tricking. The very day in which he was born, he she have the cows of king Admetus, though attended by Apollo himself; who, while he complained of the thest, and bent his bow with an intent of revenge, found himself robbed of his quiver and arrows

alfo.

He was a wonderful mafter at making peace; and pacified not only mortals, but also the gods themselves, when they quarrelled. This faculty is fignified by the rod which he holds in his hand, and which formerly he got from Apollo, to whom he had before given a harm

had before given a harp.

He had divers offices: the chief were, to carry the commands of Jupiter; allo to attend persons dying, to unloose their souls from the chains of the body, and carry them down to hell: likewise to revive, and replace into new bodies, those that had already compleated their time in the

Elyfian fields.

94 Mans. Mars, the fon of Jupiter and Juno, or, as is related by Ovid, of Juno only, who conceived him by the touch of a flower showed her by Flora.

Mans is the god of war, herce in aspect, flera in countenance, and terrible in dress: he fits in a chariot drawn by two horses, which are driven by a distracted woman. He is covered with armour, and brandishes a spear in his right hand. Sometimes he is represented sitting on horseback, formidable with his whip and spear, with a cock near him, the emblem of watchfulness.

His fervants are Fear and Terror. Difcord also goes before in a tattered garment, and Clamour and Anger follow

him.

Bellona, goddess of war, is the companion of Mars, or, according to others, his fister or wife. She prepares for him his chariot and horses, when he goes to battle.

His name, Mars, sets forth the power and influence he has in war, where he

presides over the soldiers.

He is called Gradivus, from his stateliness in marching, or from his vigour in

brandishing his spear.

He is called Quirinus from Quris, or Quiris, fignifying a spear. This name was afterwards attributed to Romulus, who, with Remus, was esteemed the son of Mars; from whom the Romans were called Quirites.

10. BACCHUS. Bacchus was fon of Jupiter and Semele, and is faid to have been nourished by Jupiter in his thigh on the death of his mother. As soon as he was born, he was committed to the care of Silenus and the Nymphs, to be brought up; and, in reward for their service, the Nymphs were received into heaven, and there changed into stars called the Hyades.

Bacchus is a filthy, shameful, and immodest god; with a body naked, red face, lascivious look, swoln cheeks and belly, dispirited with luxury, and intoxicated

with wine.

He is crowned with ivy and vine-leaves, and in his hand holds a thyrsus for a scepter. His chariot is drawn sometimes by tygers and lions, sometimes by tygers and panthers: a drunken band of Satyrs, Demons, and Nymphs, presiding over the wine-presses, fairies of the sountains, and priestesses, attend him as his guard, and old Silenus, riding on an ass, brings up the rear.

Bacchus invented fo many things useful to mankind, either in finishing controversies, building cities, enacting laws, or obtaining victories, that for this reason he was admitted into the council of the

0 •

gods, by the joint suffrages of the whole world.

He first planted the vine and drank the juice of the grape; the tillage of the ground, and making honey, are attributed to Bacchus: when he was king of Phosnicia, he instructed his subjects in trade and navigation. He promoted society among a men, and brought them over to religion and the knowledge of the gods.

He subdued the Indians, and many other nations, and triumphed in a chariot drawn by tygers. Riding on an elephant, he travelled Agypt, Syria, Phrygia, and all the East, gained many and great victories, and there erected pillars, as Hercules

did in the West.

He had various names: he was called Bromius, from the crackling of fire, and noise of thunder, that was heard when his mother was killed in the embraces of Jupiter.

Bimater, because he had two mothers.

Evius, or Evous; for in the war with the Giants, when Jupiter did not fee Bacchus, he thought that he was killed; and cried out, Alas, Son! Or, because when he found that Bacchus had overcome the Giants, by changing himself into a lion, he cried out again, Well done, Son!

Evan, from the acclamations of the Bacchantes, who were therefore called Evantes.

Elcleus and Eleus, from the acclamation wherewith they animated the foldiers before the fight, or encouraged them in the battle ittelf. The fame acclamation was also used in celebrating the Orgia, which were sacrifices offered up to Bac-

lacchus was also one of the names given to Bacchus, from the noise which men when drunk make.

Liber, and Liber Pater, from libero, as in Greek they call him Education [ Eleuthe-

rior the Deliverer.

chus.

Also Leuzus, and Lyzus; for wine frees the mind from cares, and those who have drank plentifully, speak too often whatsoever comes into their minds.

11. MINERVA. Minerva, or Pallas, the goddess of wisdom, war, arts, and sciences, was the daughter of Jupiter; who sanding on likelihood of having children by Juno, it is said defired Vulcan to strike his forehead with his hammer; and, after three months, he brought forth Mi-

nerva. She was called Minerva, as some say, from the threats of her stern and sierce look. Instead of a woman's dress, the is arrayed in armour; wears a golden head-piece, and on it glittering cress; a brazen coat of mail covers her breast; she brandishes a lance in her right hand, and in her lest holds a shield, whereon is painted the grisly head of Medusa, one of the Gorgons, rough and formidable with snakes.

Upon the head of this goddess there was an olive crown, which is the symbol of peace; either because war is only made that peace may follow; or because the

taught men the use of that tree.

There were five Minervas; but that one, to whom the rest are referred, was descended of Jupiter. For he, as some say, sinding that his wife was barren, through grief struck his forehead, and brought forth Minerva.

This goddess, like Vesta and Diana, was a perpetual virgin; and so great a lover of chastity, that she deprived Tiresias of his eyes, because he saw her bathing in the sountain of Helicon.

Minerva was the inventress of divers arts, especially of spinning; and therefore

the distaff is ascribed to her.

The Athenians were much devoted to her worship; and she had been adored by that people before Athens itself was built. The Rhodians also paid great honour to heis goddes. She was extremely jealous left any one should excel her in any art; and near her are placed divers mathematical instruments, as goddess of arts and sciences. The cock and the owl are facred to her; the first being expressive of courage and watchfulness, and the latter the emblem of caution and foresight.

Minerva represents wisdom, that is, useful knowledge, joined with discreet practice; and comprehends the understanding of the most noble arts, together with all the virtues, but more especially that of chastity. Her birth from Jupiter's head, is most certainly an emblem, that all human arts and sciences are the production of the mind of man, directed by superior wisdom.

12. VENUS. Venus is faid to be the daughter of Jupiter and Dione. She is flyled the goddess of the Graces, Eloquence, Beauty, Neatness, and Chearfulness; in her countenance many charminabound.

She

glittering with diamonds, and refulgent with a rosy crown; she breathes pleasures, and flows in foftness. Two Cupids attend at her fides, the Graces stand round her, and the lovely Adonis follows after, gently holding up her train. Her chariot is of ivory, finely carved, beautifully painted and gilt, fashioned in form of a shell, and drawn by swans, doves, and fivallows, or fometimes by sparrows, as she directs, when she pleases to mount it.

She is faid to have fprung from the froth of the fea; and, being laid in a shell, as it were in a cradle, to have been driven by Zephyrus upon the island of Cyprus, where the Hora received her, cherished her in their bosoms, educated, and adoined her; and when she was grown up, they carried her into heaven, and prefented her to the gods, who, being taken with her beauty, all strove to marry her; but at last she was betrothed to Vulcan, to whom afterwards she was given in wed-

The first of Venus's companions was Hymenæus, the god of marriage, and protector of virgins. Maids newly married offered facrifices to him, as also to the goddess Concordia.

Cupid, the god of love, was the next of Venus's companions. She also passionately loved Adonis, a beautiful youth.

The poets speak of two Cupids; one of which is an ingenious youth, the fon of Jupiter and Venus, a celestial deity; the other a debauchee, fon of Nox and Erebus, whose companions are Drunkenness, Sorrow, Enmity, Contention, and other plagues of that kind.

The Graces, called Charities, were three lifters, daughters of Jupiter and Eurynome, or Venus.—Thefe will be more particularly

mentioned in a future place.

Venus was worshipped under various names: Cypris and Cypria, Cytheris and Cytherea, from the islands of Cyprus and Cythera, whither the was first carried in a sea-shell.

Erycina, from the mountain Eryx, in the island of Sicily; upon which Aneas built a splendid and famous temple to her honour, because the was his mother.

Idalia and Acidalia, from the mountain dulus, in the island Cyprus, and the founiain Acidalius, in Bosotia.

Marina, because she was born of the sea, ind begotten of the froth of the waters. From thence the is called Aphroditis and

She is clothed with a purple mantle Anadyomone, that is, emerging out of the waters, as Apelles painted her.

> She is called Paphia, from the city Paphos in the island of Cyprus, where they facrificed flowers and frankincense to her: also the Lesbian Queen, from Lesbos, in the fame island.

On a dispute at a feast of the gods, between Juno, Pallas, and Venus, for the pre-eminence of beauty, Jupiter, not being able to bring them to an agreement, referred the decision to Paris, a shepherd on Mount Ida, with direction that a golden apple should be given to the fairest. Paris determined the prize in favour of Venus, and affigned to her the golden reward. Venus, in return for this fingular regard to her, promifed Paris Helena, the fairest beauty in the world. Paris failed into Greece with a great fleet, and brought away Helen, who had been betrothed to Menclaus, king of Sparia; but he being then absent, Paris carried her away with him to Troy, which brought on the famous fiege of that city, as is related in the Grecian History.

[These were the principal, or first class of Deities in the Heathen Mythology; the Du Majores, to whom the highest degree of worthin was paid; as it was univerfally imagined, that these deities were more cininently employed in the government of the world, and prefided over the immediate concerns of minkind.

Vulcan, Neptune, Pluto, and fome others, are also esteemed principal Deities; but mention will be made of thefe as they occur in the feveral orders or ranks of Terrestrial, Marine, and Infernal Deities.]

#### I. TERRESTRIAL.

I. TITAN. Titan, the elder brother of Saturn, though not a god, claims the first place, being the elder son of Coelus and Terra; and, on an agreement with Jupiter his younger brother, he yielded to him his birthright, as is before mentioned. His fons were the Giants, called from him Titans.

2. VESTA. Vesta, the eldest of all the goddesses, the mother of Saturn, and the wife of Colus, is represented as a matron fitting and holding a drum. Sac is not reckoned among the Celestials, the being the Earth herfelf. Vella is her name from O 0 2

from cloathing, because the earth is cloathed with plants and fruits. She fits, because the earth being immoveable, rests in the lowest part of the world. She carries a drum, because the earth contains the boisterous

winds in its bosom.

Her head is also surrounded with divers flowers and plants, voluntarily weaving themselves into a crown, while animals of every kind play about, and fawn upon her. By reason the earth is round, Vesta's temple at Rome was built round; and they fay, that her image was orbicular in some

It is no wonder that the first oblations were offered to her, fince all the facrifices fpring from the earth; and the Greeks both began and concluded all facrifices

with this goddess.

4. VULCAN. Vulcan, the hufband of Venus, was son of Jupiter and Juno (some fay of Juno only); but, being born deformed, he was cast down from heaven by Jupiter as foon as he was born, and in the fall broke his leg. He was the god of fubterraneous fires, and prefided over metals.

He first made his addresses to Minerva, and was refused by her: he afterwards married Venus, but that goddess difre-

·garded him for his deformity.

Vulcan made the chariot of the sun, and sapplied Jupiter with thunder: he fixed his forges on Mount Ætna, but chiefly in the island Lemnos, where he worked for the gods, and taught the natives the art of working iron by fire. His forgemen were the Cyclops, who were represented as having only one eye, in the middle of their forcheads. Apollo, it is faid, slew them all, for having forged the thunder with which Jupiter struck Æsculapius, the god of physic. The principal temple of Vulcan was on Mount Ætna; and he is painted with a hat of blue colour, the fymbol

He was called Mulciber, or Multifer, from his foftening and polishing iron.

Janus was the fon of Cœlus . JANUS. and Hecate. He had a double face and forehead in one and the same head; hence he was called the two-faced God; and therefore is faid to fee things placed behind his back, as well as before his face. In his right hand he holds a key, and in his left a rod; and beneath his feet are twelve altars

He had leveral temples built and de-

dicated to him, some of which had double doors, others four gates; because he was fometimes represented with four faces.

It was a custom among the Romans. that, in his temple, the confuls were inaugurated, and from thence faid to open the year on the kalends of January, when new laurel was put on the statue of the god. The temple of Janus was held in great veneration by the Romans, and was kept open in the time of war, and shut in the time of peace; and it is remarkable, that, within the space of seven hundred years, this temple was shut only thrice: once by Numa; afterwards by the confuls Marcus Attilius and Titus Manlius, after a league struck up with the Carthagenians; and, lattly, by Augustus, after the victory of Actium.

5. LATONA. Latona was the daughter of Phæbe, and Cœus the Titan; whom, for her great beauty, Jupiter loved and deflowered.

When Juno perceived her with child, fhe cast her out of heaven to the earth, having first obliged Terra to swear, that she would not give her any where an habitation to bring forth her young: and befides, the fent the ferpent Python to perfecute the harlot all over the world. But in vain; for in the island Delos, under a paim or an olive-tice, Latona brought forth Diana and Apollo.

6. DIANA. Diana, goddess of hunting, was the daughter of Ceres and Jupiter, and fifter of Apollo. She is usually painted in a hunting habit, with a bow in her hand, a quiver full of arrows hanging down from her shoulders, and her breast covered with the skin of a deer: she was the goddess of hunting and chastity.

She has three different names, and as many offices: in the heavens she is called Luna and Phoebe, on the earth Diana, and in hell Hecate. In the heavens the enlightens all things by her rays; on the earth the fubdues all the wild beafts by her bow and darts; and in hell keeps in subjection the ghosts and spirits, by her power and au-

Diana was exposed by her mother in the fireets, and was nourished by shepherds: for which reason, the was worthipped in the ftreets, and her statue usually fet before the doors of the houses.

Many temples were erected to this goddess, of which, that of Ephesus was the chief. The woods, groves, and forests, were also consecrated to her.

Action, grandson of Cadmus, a famous hunter, introducing himself into the privacy of Diana, whilst she was bathing in a fountain, the goddess changed him into a stag, and he was devoured by his dogs.

7. Aurora. Aurora was the daughter of Terra and Titan, the fifter of the fun and moon, and mother of all the flars.

She fits high in a golden chariot, drawn by white horfes. She was much taken with the love of Cephalus, a very beautiful youth; and when the could by no perfuafion move him to violate his faith, plighted to his wife Procis, daughter of the king of Athens, the carried him up into heaven by force.

Aurora, being also charmed with the fingular beauty of Tithonus, son of La-omedon, and brother of Priamus, carried him up into heaven, joined him to herself in wedlock, and from the Fates obtained immortality for him instead of a portion.

Memnon was the fon of this marriage, who, when he came to Troy, to bring afsistance to Priamus, fighting in a single combat with Achilles, was slain.

8. CERES. Ceres is represented as a lady, tall in stature, venerable with majesty, beautisted with yellow hair, and crowned with a turban composed of the ears of corn. She holds in her right hand a burning torch, and, in her left, a handful of poppies and ears of corn.

She was daughter of Saturn and Ops, and of fo great beauty, that the drew the gods into the love and admiration of her person.

She first invented and taught the art of tilling the earth, of sowing pulse and corn, and of making bread; whereas before men are only acorns. As soon as agriculture was introduced, and men began to contend about the limits of those fields, which before were common and uncultivated, she enacked laws, and determined the rights and properties of each person when disputes arose.

Ceres is beautiful, because the earth, which she resembles, gives a very delight ful and beautiful spectacle to beholders: especially when it is arrayed with plants, diversified with trees, adorned with flowers, enriched with fruits, and covered with green herba; when it displays the honours of the

Spring, and pours forth the gifts of Autumn with a bountiful hand.

She holds a lighted torch, because when Proserpine was stolen away by Pluto, she lighted torches with the slames of mount Ætna, and with them sought her daughter through the whole world. She also carries poppies, because when spent with grief, and could not obtain the least rest or sleep. Jupiter gave her poppies to eat, which plant, they say, has a power of creating sleep and forgetfulness.

Among various nations, the first fruits of the earth were offered to Ceres, as godded of corn and agriculture; and the Cercalia, or Mysteries instituted in honour of Ceres, both in Greece and Sicily, were of two fosts: the greater, or chief, were peculiar to Ceres, and called Eleusinia, from Encues, a city of Attica; and, in the lesser, sections were made also to Proseptine.

In these seasts, the votaries ran through the public streets with great notic and lamentation, carrying lighted totches in their hands, in representation of the search mide by Ceres after her daughter, when stolen by Pluto.

#### II. MARINE DEITIES.

1. NEPTUNE. Neptune was the son of Saturn and Ops, and brother of Jupiter and Pluto. His mother preserved him from the devoming jaws of his father, who are up all the male children, and conveyed him to shepherds to be brought up as is before mentioned. In the division of his father's dominions by Jupiter, the empire of the sea was allotted to Neptune.

He having joined with Apollo in a confrincey against Jupiter, they were both driven from heaven; and, by Jupiter's command, forced to serve Laomedon in building the walls of Troy. Neptune, not receiving the reward of his service, sent a sea-monter on the coasts, which ravaged the country.

Neptune afterwards became charmed with the beauty of Amphitrite, and long bore her disdain; at last, by the assistance of a Dolphin, and the power of slattery, he drew her into marriage. Neptune, as an acknowledgment for this kindness, placed the dolphin among the stars, and he became a constellation.

As to the actions of this god; the poets fay, that in a dispute with Minerva, who should give a name to Athens, the capital city of Greece, he struck the ground with

Oo3 his

his trident, and produced a horse; for which reason the Athenians sacrificed to him that animal. Neptune was called Poseidon by the Greeks: the Romans gave him also the name of Confus, and erected an altar to him in the circus of Rome. The Circenfian games, or horfe-races, instituted in honour of him, were, from this name, called Confualia. In these games, which were celebrated in the months of February and July, the rape of the Sabine virgins was represented.

Neptune is esteemed governor of the fea, and father of the rivers and fountains. He is represented iid ng on the sea in a car, in the form of a shell, drawn by sea-horses, preceded by Tritons. He holds a trident in his hand, as an emblem of his fovereignty, and is attended by the younger Tritons,

and fea-nymphs.

### The other DEITIES are,

1. Oceanus, a marine deity, descended from Cœlus and Vesta; and by the ancients was called, not only the father of rivers, but also of animals, and of the gods themselves.

2. 1 betis, goddess of the sea, wife of . Oceanus, by whom the is faid to have had many fors; the chief of whom was Nereus, who dwelt in the Ægean sca, and by his wife Doris had fifty daughters, called from him Nereides. Thetis is represented I ting in a chariot, in the form of a shell, drawn by dolphins.

3. majoinue, daughter of Occanus and Doris, gendels of the tea, and wife of Neptune. She is by the poets frequently taken for the sea itself; and by some writers, 'I hetis and Amphitrite are faid to be the

fame perion.

4. Triton, the fon of Neptune and Amphit, ite, was also his companion and trumpeter. In the upper part of his body he bears the refemblance of a man, and of a fuh in the lower part. Most of the tea-gods

from him are called Tritons.

5. The Syrens were inhabitants of the fea. They had faces of women, but the bodies of flying fish. Their names were Parthenope, Ligaa, and Leucosia. These dwelt near the coast of Sicily, and drew to them all patten; ers by the tweetness of their finging, and then devoured them.

#### III. INFERNAL DEITIES.

1. PLUTO. Pluto, fon of Saturn and Rhea, and brother of Jupiter and Nep-

tune. In the division of his father's king. dom, when he was dethroned by Jupiter, Pluto had the western parts assigned to him, which gave rife to the poetical fable, that he was the god of hell.

These insernal kingdoms are attributed to him, not only because the western part of the world fell to him by lot; but also beca fe he introduced the use of burying and funeral obsequies: hence he is believed to exercise a sovereignty over the dead. He fits on a dark throne, holding a key instead of a scepter, and wearing a crown of ebony. Sometimes he is crowned with a diadem, fometimes with cypress, and fometimes with the daffodil, which flower Proferpine was gathering when he flole her away. He is called Dis by the Latins, and Hades by the Greeks, which latt fignifies dark and gloomy. His horfes and chariot are of a black colour; and himself is often painted with a rod in his hand for a scepter, and covered with a head-picce.

2. PROSERPINE. Proserpine is queen of hell, the infernal Juno, and wife of Pluto. She was daughter of Jupiter and Ceres.

Wilen none of the goddesses would marry Pluto, because of his deformity, the god being vexed that he was despised, and torced to live a fingle life, in a rage mounted his chariot, and fuddenly sprung up from a den in Sicily amongst a company of very beautiful virgins, who were gathering flowers in the fields of Enna. Pluto, inflamed with the love of Proterpine, carried her off with him, and funk into the earth, not far from Syracule, where suddenly a lake arose.

The nymphs, her companions, being flruck with terror, acquainted her mother with the loss of her daughter. Ceres, with lighted torches from Mount Ætna, long fou, ht her in vain: but at last, being informed by the nymph Arethusa, that she was stolen by Pluto, she went down into heil, where the found Proferpine queen of those dark dominions. The enraged mother complained to Jupiter of the violence offered to her daughter by his brother Plu-Jupiter promited that the should return to the earth, provided she had eat nothing in hell: hereupon Ceres went down rejoicing; and Proferpine was returning with transport, when Ascalaphus declared that he faw Proferpine eat some grains of a pomegranate which she gathered in Pluto's orchard: by this discovery her return was stopped. The mother, incensed at this intelligence, changed Ascalaphus into an owl; and, by her importunate intreaty, extotted from Jupiter, that Proferpine should live one half of the year with her, and the rest of the time with her husband Pluto. Proferpine afterwards so loved this disagreeable husband, that she became jealous of him, and changed his mittress Mentha into the herb named Mint.

### The other DEITIES are.

- 1. Plutus, either from the affinity of the name, or that both were gods of riches, is frequently joined to Pluvo. He was said to be blind, void of judgment, and sa nature quite timorous, all which qualities denote some peculiar property of this god: blind, and void of judgment, in the unequal distribution of riches, as he frequently passes by good men, whilst the wicked are loaded with wealth; and timorous, by reason the rich are constantly in fear, and watch over their treasures with great care and anxiety.
- 2. Nox, goddess of darkness, is the most ancient of all the goddess. She married the river Erebus in hell, by whom she had many daughters. Nox is painted in black robes best with stars.
- 3. Charon, the son of Erebus and Nox, is the ferryman of hell. He is represented by the poets as a terrible, grim, dirty old fellow. According to the fable, he attended with his boat, and, for a small piece of money, carried over the river Styx the souls of the dead; yet not all promiscuously, but only those whose bodies were committed to the grave; for the unburied shades wandered about the shores an hundred years, and then were admitted into the boat, and ferried over the lake.
- 4. The Gients or Tuans were at first inhabitants of the earth; who, trusting to their great stature and strength, waged war against Jupiter, and attempted to dethrone him from the possession of heaven. In this battle, they heaped up mountains upon mountains, and from thence darted trees of fire into heaven. They hurled also prodigious stones and folid rocks, which falling again upon the earth, or in the sea, became mountains or islands: but being unsuccessful in their attempt, and destroyed by the thunder of Jupiter, with the assistance of the other gods, they were driven from the earth and cast into hell.
  - 5. The Fates were three in number,

daughters of Erebus and Nox. Thele were faid to prefide over time paft, prefent, and to come. Their names are Clotho, Lachefis, and Aropos. Their office is to fuperintend the thread of life; Clotho holds the dittaff, and draws the thread, Lachefis turns the spindle, and Atropos cuts the thread with her sciffars; that is, the first calls us into life, the second determines our lot and condition, and the third finish sour life.

6. The Furies, or Eumenides, were daughters of Nox and Acheron. They were three, namely, Aleclo, Megæra, Tifyphone: their abode was in hell, to torment the wicked; they were armed with blazing torches, and furrounded with fnakes, and other influments of horror.

# The RIVERS of HELL avere,

- 1. Acheron, Son of Sol and Terra. He fupplied the Titans with water when they waged war against Jupiter; who, for this reason, changed him into a river, and cast him into hell. The waters of this river are extremely muddy and bitter.
- 2. Styx, the principal river of hell; and held in so great veneration by the gods, that whoever broke the oath he had once made by this river, was deprived of his divinity for one hundred years.
- 3. Cocrtus. This river is increased by the tears of the wicked; and flows with a lamentable noise, imitating the damned.
- 4. Phiegethen. This river fwells with fiery wave, and rolls dreams of fire. The fouls of the dead, having passed over these rivers, are carried to Pluto's palace.
- 5. Letbe is a river in hell. If the ghosts of the dead drink the waters of this river, they are said to lose the remembrance of all that had passed in this world.

[It may here be very properly observed; that these infernal regions, the residence of Pluto, are said to be a subterraneous cavern, whither the shades or souls of mortals descended, and were judged by Minos, Eacus, and Rhadamanthus, appointed by Pluto judges of hell. This place contained Tartarus, the abode of the unhappy; also Elysium, the abode of those that had lived well. Cerberus, a dog with three heads, was door-keeper, and covered with servents, always waited at the infernal gate, to prevent mortals from entering, or the, manes or shades from going out. Charon,

. 83

004

as is said before, was ferryman of hell, and conducted the departed souls to the tribunal of Minos. The Harpies, or birds of prey, were also inhabitants of hell. These were indifferently called Furix, Ocypete, and Lamiæ; and were instruments in the hands of the gods to raise wars in the world, and disturb the peace of mankind.]

Fable relates two remarkable punishments in hell. 1. Ixion, for attempting to seduce Juno, was by Jupiter cast into hell, and condemned to be chained to a wheel, which continually whirled round. 2. Syfiphus, the son of Æolus, was doomed in hell to roll a huge round stone from the bottom to the top of a mountain, whence it immediately descended. This punishment was allotted him, because he revealed the secrets of the gods, and discovered to Asopus the place where Jupiter had concealed his daughter Ægina.

# INFERIOR DEITIES.

In the Heathen Mythology, there are many other deities or gods of inferior note, flyled Dii Minores; and as thefe frequently occur in the writings of the poets, it is necessary to make brief mention of them.

The Muses, daughters of Jupiter and Mnemosyne, goddess of memory, were the reputed goddess of the feveral arts and sciences, and presided over the seals and folemnities of the gods. They were the companions of Apollo, and inhabited with him chiefly on the hills of Parnasius, Helicon, and Pindus. The Hippocrene, and other fountains at the foot of Parnasius, were facred to them; as were also the palm-tree and the laurel. They are represented young and very handsome, and are nine in number.

1. Clio is faid to be the chief muse. She derives her name from glory and renown. She presided over history, and is said to be the inventress of the lute.

22 Calliofe, so called from the sweetness of her voice. She presided over cloquence and heroic poets.

3. Erate, or the lovely. She prefided

over lyric poetry.

4. Thalia, from the gaicty and pleafantry of her forgs, called the Flourithing Maid. She invented comedy and geonetry.

5. Melemene was the mule of that age.

She prefided over tragedy, and melancholy fubjects.

6. Terpfichore, or the Jovial. She prefided over music and dancing.

7. Euterpe, so called because the imparts joy. She invented the flute, and presided over music: she is also said to be the patroness of logic.

8. Polyhymnia, fo called from multiplicity of fongs. She is faid to excel in me-

mory, and preside over history.

9. Urania, or, the Celestial Muse. She presided over divine poesy, and is said to be the inventress of astronomy.

The Muses are distinguished by masks, lyres, garlands, globes, and other emblems, expessive of their different offices or ac-

complishments.

Preasus, the famous horse of ancient fable, was an attendant on Apollo and the Muses; he inhabited the hills of Parnassus, Helicon, and other mountains. He is said to be sprung from the blood of Medua, killed by Perseus, and is represented by the poets with wings to his sides, expressive of the slights and elevation of the mind in poetry. When Perseus cut off the head of Medusa, the horse Pegasus struck the ground with his soot; upon which, at the bottom of the hill, a sountain arose named Hippocrene. This sountain was facred to Apollo and the Muses.

The Graces, called also Charities, were three sisters, daughters of Jupiter and Eurynome, or Venus. The first was named Aglaia from her chearfulness, the second Thalia from her perpetual verdure; and the third Euphrosyne, from delight. They were companions of the Muses and Mercury, and attendants on Venus. They are represented with pleasing countenances and naked, to denote that our actions should be free and candid, not covered over with dissimulation or deceit. A chain binds their arms together, to express that the link of love and harmony should be united and unbroken.

THEMIS, ASTREA, and NEMESIS, were three goddesses: the first of law and peace; the second of justice; and the third, a rewarder of virtue, and punisher of vice.

Æolus, god of the winds, and fon of Jupiter and Acesta.

Monus, fon of Nox and Somnus, and

god of banter or jesting.

PAN, fon of Mercury and Penelope, was the god of the woods and shepherds. He is represented half man, and half goat,

with a large pair of horns on his head, a crook in one hand, a pipe, composed of reeds, in the other. The Arcadians much admired his muthck, and paid him divine honours. The Romans also built a temple to Pan, at the foot of Mount Palatine, and his seasts were called Lupercalia. Sylvanus and Faunus were also gods of the forests, from whom were descended the other rural deities, as Satyrs, Sylvans, Fauns, Nymphs, or Dryades, who were all inhabitants of the woods.

PALES is the goddefs of the shepherds and pasture, and by some is called Magna Mater and Vesta. They offered to her milk and wasers of millet for a good growth of pasture. Her feasts, Pálilia, were celebrated about the eleventh or twelship of the kalends of May, on which day Romulus sounded the city of Rome.

FLORA, goddess of the spring and slowers, and wife of Zephyrus. She is represented adorned with garlands, and near her is a basket of slowers. Feronia is also counted the goddess of groves and orchards.

POMONA was goddess of the gardens, and all fruit-trees and plants. She was beloved of Vertumnus, as Ovid relates.

PRIAPUS, fon of Venus and Bacchus, an obscene deity. He also presided over gardens.

TERMINUS was a deity who prefided over the houndaries of lands, which were held fo facred, that whoever removed a land-mark, or ploughed them up, was fubject to death. On the last day of the year, the Romans offered facrifice to the god Terminus; and these festivals were called Terminalia.

Cuein, god of love, fon of Mars and Venus, is represented blind, with a bow in his hand, and a quiver of arrows on his shoulders, with which he wounds the hearts of lovers.

HYMENÆUS, or Hymen, son of Apollo and Urania, or, as some suy, of Bacchus and Venus. He is the god of marriage; and is represented under the figure of a young man, holding a torch in his hand, with a crown of roses, or sweet marjorum, on his head.

The Penates and Lares were also deemed gods; the first presided over provinces and kingdoms, and the latter over houses and particular families. The Lares also presided over the highways; and they were wont to sacrissee to these houshold gods, frankincense, wine, bread, corn, and

a cock; and, according to some writers, a lamb and a hog.

The Ganii also were spirits, or deities, that presided over all persons and places. And indeed so great were the number of these inferior gods, that the ancient mythology surnished almost as many deities as there are things in nature; for there was no part of the body, or action of life, but had a peculiar divinity, by whom it was said to be immediately directed or protected.

Asculariue, fon of Apollo and the nymph Coronis, was the god of physic: he was dain by Jupiter with a thunderbolt forged by the Cyclops, on the complaint of Pluto, for railing the dead, or rather recovering men, by his skill in medicine, from their sickness. He was worshipped under the sigure of a serpent; and sometimes he is represented seated on a throne of gold and ivory, with a long beard, holding a rod environced with a serpent, and a dog at his

The CYCLOPS, four in number, were fons of Neptune and Amphituite. They were fervants to Vulcan, and had only one eye, placed in the middle of their foreheads: they were flain by Apollo, in revenge for forging the thunderbolts with which Jupiter killed Æsculapius, as is before related. They inhabited the island of Sicily; and, on account of their great strength, were deemed giants by the poets.

SILENUS was the folter-father of Bacchus. He is accounted the gol of abstruse mysteries and knowledge. He is represented as a fat, old, drunken tellow, riding on an ass.

### ÆGYPTIAN DEITIES.

Ostrus, Apis, and Serapis, are different names of one and the fame deity, fon of Jupiter by Niobe, and husband to Io. daughter of Inachus and Ismena. Jupiter became passionately in love with Io; and, in order to pursue his unlawful passion, changed her into a cow. Io, to avoid the refentment of Juno, fled into Egypt; and Ofirus, after he had reigned many years over the Argives in Peloponnesus, left his kingdom to his brother Ægialus, and failed into Egypt to feek new dominions. He there married Io, who was also named Ifis; and, obtaining the government, they taught the Egyptians husbandry, also every other useful art and science, and governed with great wisdom and equity.

Ofiris, having conferred the greatest

benefits on his own subjects, committed the regency of his kingdom to Isis; and, with a large body of forces, set out in order, to civilize the rest of mankind. This he performed more by the power of persuasion, and the soothing arts of music and poetry, than by the terror of his arms. He marched first into Æthiopia, thence to Arabia and India; and, returning to Egypt, was slain by his brother Typhon, and buried at Memphis, the chief city of Egypt.

Isis afterwards vanquished Typhon, reigned happily in Egypt to her death,

and was also buried at Memphis.

On us, fon of Ofiris and Ifis, succeeded to the government, The Egyptians deemed him the protector of the river Nile, the averter of evils, governor of the world, and

the author of plenty.

These deities of the Egyptians were held in the greatest veneration. Temples were erected, and divine honours paid to Ofiris under the figure of an ox; and the printefles of this facrificed to that god less under different shapes, according to the purposes for which they were intended. And, as fable is faid to take its origin from the Egyptians, it will appear, from their intercourse with the Jews long refident in Egypt, that a mixture of true religion and error incleased that false worthip, which full prevailed in that country, and af ciwards spread into Rome, and the more distant parts of the world. These gods of the Egyptians were worshipped under various names and characters, according to the prevailing opinion of different countries, or fome other incident. Thus, according to Herodotus, Ofiris and Bacchus are the same; according to Diodorus the historian, Ofiris is Sol, Jupiter, &c. and Plutarch fays, Ofiris, Scrapis, and Apis of the Egyptians, are Pluto, Oceanus, &c. in the Roman mythology.

If is is faid to be the same with the Roman Cybele, Ceres, Minerva, Luna, &c. and was called the mother of the gods. Orus also was the symbol of light, and was figured as a winged boy. He was named the Hermes of the Greeks, and the Apollo

and Cupid of the Romans.

Both in Egypt and Rome, each deity had his peculiar temple, where the most folemn facrifices were made to them, according to the prevailing notion of their power and influence. The worship of these gods so far prevailed among the Fomans, that they erected to their honour

a public edifice named the Pantheon, in which, as a general repository, were placed the statues of their several deities, with their respective symbols: Jupiter was distinguished by a thunderbolt: Juno by a crown; Mars by a helmet; Apollo, or the Sun, by its beams; Diana, or the Moon, by a crescent; Ceres by a cornucopia, or horn of plenty, or an ear of corn; Cupid by a bundle of arrows; Mercury by wings on his feet, and a caduceus, or wand, in his hand; Bacchus by the ivy; Venus by the beauty of her person; and the rest had the like diffinguishing characters placed above their statues, or in their hands, according to the received opinion of the people, or the ingenuity of the artift.

### Of ORACLES,

The Oracles of the ancients were deemed the predictions, mysterious declarations of the will of the gods: it may, with a kind of certainty, be admitted, that the natural bent of the mind of man to fearch into suturity gave rise to this institution.

To whatever cause, however, the origin may be afcribed, the intlitution of oracles became general, among the idolatrous nations, and increased over the face of the whole earth. Not to mention other nations, the oracles of the Egyptians and Greeks were numerous, especially of the latter people, at least we have a more full account of them. The oracle of Dodona. a city of Epirus in Greece, was facred to Jupiter; the oracle of Jupiter Hammond was also of ancient date, and famous in Lybia; the oracle of Apollo at Heliopolis was of great note; the oracle also of Apollo at Delphi, if not the most ancient, was the most celebrated of all Greece, infomuch that it was called the oracle of the whole earth. And, indeed, so established was the credit of these oracular declarations, that the enacting laws, the reformation of government, also peace or war, were not undertaken by states or princes, but even in the more common concerns of life, no material business was entered upon without the fanction of the oracle. Each oracle had its pricit, or priestess, who delivered out the answers of the gods. These answers, for the most part, were in verse, and couched under such mysterious terms, that they admitted of a double interpretation; infomuch, that whether the prediction was completed, or the expedia on of the supplicant disappointed, the crack was

cicar

clear from blame. The oracle of Apollo' at Delphos, being in the greatest reputation, was reforted to from all parts. The priestess of Apollo was named Pythia, from the serpent Python, killed by that god, as is before mentioned. The offerings to the gods on these applications were liberal, according to the ability, or the importance of the answer required by the supplicant; and, it is faid, the temple and city of Delphos especially, was, by these means, filled with immense treasure.

The principal oracle of the Egyptians was at Memphis, a royal city of Egypt, where they erected an altar, and worthipped their god Apis, under the figure of an ox. His wife Isis had also worship, and her priests were called Isiaci.

The SYBILLINE ORACLES Were certain women, whom the ancients believed to be endued with the gift of prophecy. They are faid to be ten in number, and were famous in all lands. They had no fixed refidence, but travelled into different countries. and delivered their predictions in verse in the Greek tongue. One of these Sybils, named Erythraea, or Cuman, from Cuma, a city in the Ionian fea, according to Virgil, came into Italy, and was held in the highest esteem by the Romans, who confulted the oracle of the Sybil on all occafions that related to the welfare of the republic.

Augury, or the art of divination by birds, the meteors of the heavens, or the entrails of beafts, was held in the highest veneration by the idolatrous nations. The people of God, the Jews, were not free from idolatry in the time of Moses; and we read alto in holy writ, that Saul, being vexed in spirit, applied to the seers, or persons skilled in the knowledge of futurity. But not to go so far back, Romulus and Remus confulted the Auguries before they built Rome; and the foundation of that city was determined by the flight of birds. Numa established a college of Augurs, and confirmed his regulation of the Roman state by their fanction. It appears also, in the history of that people, that no national concern was entered upon, without first consulting the Auguries; and, according to the propitious or bad omen, they made peace or war, and appointed magistrates. Indeed the Augurs, and their declarations, were held in to high regard by the Romans, that whoever contemned them was accounted impious and pro- " ator," not only Jupiter, Mars, Venus, and

phane. To conclude, divination, or the spirit of prediction, made a considerable part of the Pagan theology, especially among the Romans, those lords of the world, who fell into the general delution, and adopted almost all the gods of every people they subdued.

# CONCLUSION. Of fabulous Hiftory.

Notwithstanding the origin of fable seems uncertain, and to be lost in antiquity, it may be faid to take its rife from truth, or facred history. And in the foregoing relation of the Heathen deities, it is evident, many particulars correspond with the hiftory of the most early transactions, as they are recorded by Moles in holy writ. The golden age of Saturn, the wars of the Giants, the deluge of Deucalion, and the repeopling of the earth, declare their origin from divine truth, as received and delivered down by the patriarchs.

On the confusion of tongues at the building of Babel, and the dispersion of mankind, the tradition of the patriarchs became fubject to variation; and, as is observed by the learned Rollin, the change of habitation, and divertity of language, opened the door of error, and introduced an alteration in worship, agreeable to the soil, or rather according to the humour, or fome accidental event of the respective colonies.

However confused and erroneous the general worship of man became, it is evident, from every circumstance, that, in the first ages of the world, mankind knew but one Deity, the SUPKEME God, and Creator of the univerte; but afterwards, when men abandoned themselves to vice, and, as is faid in Scripture, " went a whoring "after their own inventions," and departed from the purity of their forefathers, their ideas of the Divinity became weakened. and initead of the worthip of the only TRUE Gop, they substituted other deities, or objects of worthip, more agreeable to the comprehension of their own depraved nature. Thus, by a mixture of truth and fable, one deity became productive of another, till at last the inventive fancy gradually gave life to every visible object, both in the heavens, and on earth. Thus, " having changed the glory of the uncor-" ruptible God, into an image made like " corruptible man, and to birds, and four-" footed beafts, and creeping things, and " ferving the creature more than the Creother other false deities, but stars, rivers, and fountains, animals, reptiles, and plants, At length, received divine adoration. great men and heroes, who excelled in any useful science, or became famous by conquests, or a superior conduct of life, by an eafy transition from admiration to a superstitious respect, were deemed more than human, and had divine honours paid to them also under different names, in different countries; or, probably, prompted by ambition, they assumed to themselves the homage and adoration that was due only to the Divine Creator, the AL-MIGHTY LORD, and Governor of the world. This accounts for that multitude of deities, both in heaven and on earth, which makes the maryellous part of antient fiction, and became the object of Pagan divinity, when the earth was overwhelmed with darkness, and, as is expressed in holy writ, " the hearts of men went after their se idols."

The fertile imagination of the poets, who celebrated the exploits of the ancient heroes, and expressed the common actions of life in figurative characters, joined to the extravagance of priests and orators in their panegyrics on the living and the dead, greatly forwarded the work of fable: and in time, learning being obliterated, their writings were looked upon as registers of facts. Thus the world, grown old in error, by the folly and credulity of mankind, siction got admission into history, and became at last a necessary pages of the world.

For this cause, an acquaintance with fabulous history, as is before observed, is become a necessary part of polite learning in the education of youth, and for the due understanding the Greek and Roman authors; also the paintings, statues and other monuments of antiquity. By this knowledge, the tender mind will moreover be inspired with an early abhorrence of the absurd ceremonies and impious tenets of the Heathen mythology; and, at the same time, be impressed with the deepest sense and veneration for the Christian religion, the light of the Gospel in Christ Jesus, who, in the fulness of time, through the tender mercies of God, dispelled those clouds of darkness, ignorance and folly, which had long debased human nature, and foread over the face of the earth the greatest and most ablurd superstitions, as is before related, and will farther appear

from many incidents in the histories of Greece and Rome.

§ 237. Concerning the Neglect of Oratorical Numbers.—Objet vations upon Dr. Til-LOTSON's Style.—The Care of the ancient Orators with respect to Numerous Composition, stated and recommended. In a Letter.

The passage you quote is entirely in my fentiments. I agree with that celebrated author and yourfelf, that our oratory is by no means in a flate of perfection; and, though it has much strength and solidity, that it may yet be rendered far more polithed and affecting. The growth, indeed, of cloquence, even in those countries where the flourished most, has ever been exceedingly flow. Athens had been in possession of all the other polite improvements, long before her pretentions to the perfuative aits were in any degree confiderable; as the earliest orator of note among the Romans did not appear sooner than about a century before Tully.

That great master of persuasion, taking notice of this remarkable circumstance, assigns it as an evidence of the superior difficulty of his favourite art. Possibly there may be some truth in the observation: but whatever the cause be, the fact I believe, is undeniable. Accordingly eloquence has by no means made equal advances, in our own country, with her fifter arts; and though we have feen some excellent poets, and a few good painters, rife up amongst us, yet I know not whether our nation can supply us with a single orator of deserved eminence. One cannot but be surprised at this, when it is considered, that we have a profession set apart for the purposes of persuasion, and which not only affords the most animating and interesting topics of rhetoric, but wherein a talent of this kind would prove the likelieft, per, haps, of any other, to obtain those ambitious prizes which were thought to contribute so much to the successful progress of ancient eloquence.

Among the principal defects of our English orators, their general difregard of harmony has, I think, been the least obferved. It would be injustice indeed to deny that we have some performances of this kind amongst us tolerably musical: but it must be acknowledged at the same time, that it is more the effect of accident than design, and rather a proof of the power of our language, than of the art of our orators.

Dr. Tillotson, who is frequently mentioned as having carried this species of eloquence to its highest perfection? seems to have had no fort of notion of rhetorical numbers: and may I venture to add, without hazarding the imputation of an affected fingularity, that I think no man had ever less pretensions to genuine oratory than this celebrated preacher? If any thing could raise a flame of cloquence in the breast of an orator, there is no occasion upon which one should imagine it would be more likely to break out, than in celebrating departed merit; yet the two fermons which he preached on the death of Mr. Gouge and Dr. Whichcote, are as cold and languid performances as were ever, perhaps, produced upon fuch an animating subject. One cannot indeed but regret, that he, who abounds with such noble and generous fentiments, should want the art of fetting them off with all the advantage they deserve; that the sublime in morals should not be attended with a suitable elevation of language. The truth however is, his words are frequently ill-chosen, and almost always ill-placed: his periods are both tedious and unharmonious; as his metaphors are generally mean, and often ridiculous. It were easy to produce numberless instances in support of this aftertion. Thus, in his fermion preached before queen Anne, when the was princefs of Denmark, he talks of squeezing a parable, thruffing religion by, driving a strict bargain with God, sharking shifts, &c.; and, ip aking of the day of judgment, he de-feribes the world as cracking about our ears. I cannot however but acknowledge, in juftice to the oratorical character of this most valuable prelate, that there is a noble fimplicity, in some few of his fermons; as his excellent discourse on sincerity deserves to be mentioned with particular applause.

But to show his deficiency in the article I am considering at present, the following stricture will be sufficient, among many others that might be cited to the same purpose. "One might be apt," says he, "to think, at first view, that this parable was over-done, and wanted something of a due decorum; it being hardly credible, that a man, after he had been so mercifully and generously dealt withal, as upon his humble request to have so hage a debt so freely forgiven, should, whilst the memory of so much mercy was fresh upon him, even in the very, was fresh upon him, even in the very, a mext moment handle his fellow-servant.

" who had made the same humble request to him which he had done to his lord, " with so much roughness and cruelty, for so inconsiderable a sum."

This whole period (not to mention other objections which might jufly be raifed againfit) is unmufical throughout; but the concluding members, which ought to have been particularly flowing, are most miferably loose and disjointed. If the dolicacy of Tully's ear was so exquisitely refined, as not always to be satisfied even when he read Demosthenes; how would it have been offended at the harshness and dissonance of so unharmonious a sentence!

Nothing, perhaps, throws our eloquence at a greater distance from that of the ancients, than this Gothic arrangement; as those wonderful effects, which sometimes attended their elocution, were in all probability, chiefly owing to their skill in mufical concords. It was by the charm of numbers, united with the firength of reafon, that Tully confounded the audacious. Catiline, and filenced the eloquent Hortensius. It was this that deprived Curio of all power of recollection, when he role up to oppose that great master of enchanting rhetoric: it was this, in a word, made even Caefar himfelf tremble; nay, what is yet more extraordinary, made Cæsar alter his determined purpose, and acquit the man he had refolved to condemn.

You will not suspect that I attribute too much to the power of numerous compofition, when you recollect the instance which Tully produces of its wonderful effect. He informs us, you may remember, in one of his rhetorical treatifes, that he was himself a witness of its influence, as Carbo was once haranguing to the people. When that orator pronounced the following sentence, Patris dictum sapiens, temeritas filii comprobavit, it was aftonishing, fays ne, to observe the general applause which followed that harmonious close. A modern ear, perhaps, would not be much affected upon this occasion: and, indeed, it is more than probable, that we are ignorant of the art of pronouncing that period with its genuine emphasis and cadence. We are certain, however, that the music of it confifted in the dichoree with which it is terminated : for Cicero himself affures us, that if the final measure had been changed, and the words placed in a different order, their whole effect would have been absolutely destroyed.

This art was first introduced among the Greeks

Greeks by Thrasymachus, though some of the admirers of liocrates attributed the in-It does not appear vention to that orator. to have been observed by the Romans till near the time of Tully, and even then it was by no means univerfally received. The ancient and less numerous manner of composition had still many admirers, who were fuch enthusiasts to antiquity as to adopt her very defects. A disposition of the same kind may, perhaps, prevent its being recrived with us; and while the archbishop shall maintain his authority as an orator, it is not to be expected that any great advancement will be made in this species of eloquence. That fliength of understanding likewise, and folidity of reason, which is fo eminently our national characteristic, may add fomewhat to the difficulty of reconciling us to a fludy of this kind; as at first glance it may feem to lead an orator from his grand and principal aim, and tempt him to make a facrifice of fense to found. It must be acknowledged, indeed, that in the times which succeeded the disfolution of the Roman republic, this art was fo perverted from its true end, as to become the fingle fludy of their enervated orators. Pliny the younger often complains of this contemptible affectation; and the polite author of that elegant dialogue which, with very little probability, is attributed either to Tacitus or Quinctilian. assures us it was the ridiculous boast of certain orators, in the time of the declenfion of genuine eloquence, that their harangues were capable of being fet to music, and fung upon the stage. But it must be remembered, that the true end of this art I am recommending, is to aid, not to supersede reason; that it is so far from being necessarily effeminate, that it not only adds grace but strength to the powers of perfuation. For this purpose Tully and Quinctilian, those great masters of numerous composition, have laid it down as a fixed and invariable rule, that it must never appear the effect of labour in the orator; that the tuneful flow of his periods must always feem the casual result of their disposition; and that it is the highest offence against the art, to weaken the expression, in order to give a more musical tone to the cadence. In short, that no unmeaning words are to be thrown in merely to fill up the requisite measure; but that they must still rife in sense as they improve in sound. Fitzosborne.

#### § 238. Upon Grace in Writing. In a Letter.

When I mentioned Grace as essential in constituting a fine writer, I rather hoped to have found my fentiments reflected back with a clearer light by yours, than imagined you would have called upon me to explain in form, what I only threw out by accident. To confess the truth, I know not whether, after all that can be faid to illustrate this uncommon quality, it must not at last be resolved into the poct's nequeo monstrare et sentio tantum. In cases of this kind, where language does not supply us with proper words to express the notions of one's mind, we can only convey our fentiments in figurative terms: a defect which necessarily introduces some obscurity.

I will not, therefore, undertake to mark out with any fort of precision, that idea which I would express by the word Grace: and, perhaps, it can no more be clearly described than justly defined. To give you, however, a general intimation of what I mean when I apply that term to compositions of genius, I would resemble it to that easy air which so remarkably diffinguishes certain persons of a genteel and liberal cast. It consists not only in the particular beauty of fingle part, but arifes from the general symmetry and construction of the whole. An author may be just in his fentiments, lively in his figures, and clear in his expression; yet may have no claim to be admitted into the rank of finished writers. Those several members must be so agreeably united as mutually to reflect beauty upon each other; their arrangement must be so happily disposed as not to admit of the least transposition, without manifest prejudice to the entire piece. The thoughts, the metaphors, the allusions, and the diction, should appear easy and natural, and feem to arile like fo many fpontaneous productions, rather than as the effects of art or labour.

Whatever, therefore, is forced or affected in the fentiments; whatever is pompous or pedantic in the expression, is the very reverse of Grace. Her men is neither that of a prude nor a coquet: she is regular without formality, and sprightly without being fantassical. Grace, in short, is to good writing what a proper light is to a sine picture; it not only shews all the figures in their several proportions and relations, but shews them in the most advantageous manner.

As gentility (to refume my former illustration) appears in the minutest action, and improves the most inconsiderable gesture; so Grace is discovered in the placing even a single word, or the turn of a mere expletive. Neither is this inexpressible quality confined to one species of composition only, but extends to all the various kinds; to the humble pastoral as well as to the losty epic; from the slightest letter to the most solemn discourse.

I know not whether Sir William Temple may not be confidered as the first of our profe authors, who introduced a graceful manner into our language. At least that quality does not feem to have appeared early, or spread far, amongst us. But wherefoever we may look for its origin, it is certainly to be found in its highest perfection in the effays of a gentleman whose writings will be diffinguished so long as politeness and good sense have any admirers. That becoming air which Tally effected the criterion of fine composition, and which every reader, he fays, imagines fo eafy to be imitated, yet will find to difficult to attain, is the prevailing characteristic of all that excellent author's most elegant performances. In a word, one may jully apply to him what Plato in his allegorical language, favs of Aridophanes; that the · Graces, having fearched all the world round for a temple wherein they might for ever dwell, settled at last in the breast of Mr. Additon. Fitzoshorne.

### § 239, Concerning the Style of HORACE, in his Moral Writings. In a Letter.

Are you aware how far I may millead you, when you are willing to reign your-telf to my guidance, through the regions of criticitin? Remember, however, that I take the lead in these paths, not in confidence of my own superior knowledge of them, but in compliance with a request, which I never yet knew how to refuse. In short, I give you my sentiments, because it is my sentiments you require: but I give them at the same time rather as doubts than decisions.

After having thus acknowledged my infufficiency for the office you have affigued me, I will venture to confess, that the poet who has gained over your approbation, has been far less successful with mine. I have ever thought, with a very celebrated modern writer, that

Le vers le mieux rempli, la plus noble pensée, Ne peut plaire à l'esprit quand l'useille eit bi ilé:.

Bettrat.

Thus, though I admit there is both wit in the raillery, and strength in the sentiments. of your friend's moral epiftle, it by no means falls in with those notions I have formed to myself, concerning the essential requifites in compositions of this kind. He feems, indeed, to have widely deviated from the model he professes to have had in view, and is no more like Horace, than Hyperion to a Satyr. His deficiency in point of verification, not to mention his want of elegance in the general manner of his poem, is fufficient to deflroy the pretended refemblance. Nothing, in truth, can be more abfurd, than to write in poetical measure, and yet neglect hum my; as, of all the kinds of fille flyle, that which is neither profe nor verse, but I know not what inartificial combination of powerless words bordered with rhyme, is far, furely, the most infufferable.

But you are of opinion, I perceive (and it is an opinion in which you are not fingular) that a negligence of this kind may be justified by the authority of the Rom in fatirift: yet farely those who entert it a that notion have not thoroughly after lel ei ther to the precepts or the practice of Horace. He has attributed, I confess, his fetirical composition to the information of a certain Mule, whom he diffinguishes hy the title of the nula pelefters; and it is this expression which seems to have missed the generality of his imitators. But though he will not allow her to fly, he by no means intends the should creep, on the context, it may be faid of the Mote of Homee, as of the Eve of Milton, that

#### -grace is in all her Reps.

That this was the idea which Horace himself had of her, is evident, not only from the general air which prevails in his Saires and Epiftles, but from several exprefs declarations, which he lets fall in his progress through them. Even when he speaks of her in his greatest fits of modefty, and describes her as exhibited in his own moral writings, he particularly infifts son the ease and harmony of her motions. Though he humbly disclaims, indeed, all pretentions to the higher poetry, the acer spiritus et eis, as he calls it; he represents his style as being governed by the tempera certa modosque, as flowing with a certain regular and agreeable cadence. Accordingly, we find him particularly condemning his predecestor Lucilius for the dissonance of his numbers; and he professes to have made the experiment, whether the lame

Ş

kind of moral subjects might not be treated in more soft and easy measures:

Quid vetat et nofmet Lucii fenpta legentes, Querere num illus, nam retun dura negarit Verficulos natura magis factos et cuntes Mollius 2

The truth is, a tuneful cadence is the fingle prerogative of poetry, which the pretends to claim to his writings of this kind; and fo far is he from thinking it uneficiential, that he acknowled yet it as the only feparation which diffinguishes them from profe, If that were once to be broken down, and the mufical order of his words delivoyed, there would not, he tells us, be the least appearance of poetry remaining.

Non

Invenios etiam d. jecti membra poetæ.

However, when he delivers himself in this humble strain, he is not, you will observe, fketching out a plan of this species of poetry in general; but speaking merely of his own performances in particular. His demands rife much higher, when he informs us what he expects of those who would fucceed in compositions of this ribial kind. He then not only requires flowing numbers but an expression concile and unincumb red; wit excited with good-breedin; and managed with referve; as upon some occalions the featiments may be enforced with all the Breagth of cloquence and postry; and though in some parts the piece may appear with a more ferious and folemn cut of colouring, yet, upon the whole, he tells us it must be lively and riant. This I take to be his meaning in the following pallage: "

Eit breather open, at course fertent'a, neu le Ingestet verbis billa oner mits i unes, La fermone opus eff mode theories it pie pretas, Interdura inham, parentis viribus atque Externantis ers confutto.

Sin h, then, was the notion which Horace had of this kind of writing. And it there is any propriety in these his rules, if they are sounded on the truth of taske and arr; I seur the performance in question, with numberless others of the same stamp (which have not however wanted admirers) must inevitably stand condemned. The truth of it is, most of the pieces which are usually produced upon this plan, rather give one an image of Lucilias, than of Horace: the authors of them seem to mistake the awkward negligence of the favourite of Scipio, for the easy air of the friend of Mæcenas.

You will fii'l tell me, perhaps, that the example of Horace himfelf is an unanswerable objection to the notion I have embraced; as there are numberless lines in Lis Satures and Epiffles, where the verfitication is evidently neglected. But are you fure, Hortenfius, that those lines which found fo unharmonious to a modern ear. had the same effect upon a Roman one? For myfelf, at leath, I am much inclined to believe the contrary and it feems highly incredible, that he who had ventured to censure Lucihus for the uncouthness of his numbers, should himself be notoriously guilty of the very fault against which he to though exclaims Most certain it is, that the demacy of the ancients with refpect to numbers, was far superior to any thing that molern talle can pretend to; and that they discovered differences which are to us abfolutely imperceptible. To mention only one remarkable inflance; a very ancient writer has observed upon the following verte in Vingil,

Armavirumque cano, Trope qui primus ab oristhat if inflead of promis we were to pronounce it primis (a) being long, and is fhort) the entire harmony of the line would be defliosed.—But whose ear is now so exquisitely sensible, as to perceive the distinction between toole two quantities? Some reasinement of this kind might probably give matter to those lines in Horace, which now teem to untuneable.

In subjects of this nature it is not possible, perhaps, to expressione's ideas in any very precife and determinate manner. I will only therefore in general observe, with respect to the requisite style of these performances, that it conflits in a natural ease of expression, an elegant similarity of phrase, which though formed of the most usual terms of language, has yet a grace and energy, no less striking than that of a more elevated diction. There is a certain lively colouring peculiar to compositions in this way, which, without being to bright and glowing as is necessary for the higher poetry, is nevertheless equally removed from whatever appears harth and dry. But particular instances will, perhaps, better illustrate my meaning, than any thing I can farther say to explain it. There is scarce a line in the Moral Epilles of Mr. Pope, which might not be produced for this purpole. I chuse however to lay before you the following verses, not as preferring them to many others which might be quoted from from that inimitable fatirist; but as they afford me an opportunity of comparing them with a version of the same original lines, of which they are an imitation; and, by that means, of thewing you at one view what I conceive is, and is not, in the true manner of Horace:

Peace is my dear delight-not Fleury's more; But touch me, and no minifter to fore . Whoe'er offends, at fome unlucky time, Shdes into verte, and hitches in a rhyme; Sacred to ridicule his whole life long. And the fid burden of fome merry long.

I will refer you to your own memory for the Latin paffage, from whence Mr. Pope has taken the general hint of these verses; and content myfelf with adding a tranflation of the lines from Horace by another hand:

Behold me blimeless bud, how fond of peace! But he who hurts me (nay, I will he heard) Had better take a lion by the beard; His eyes thall weep the folly of his tongue, By laugh ng crowds in rueful ballad fun '-

There is a strength and spirit in the former of these passages, and a flatness and languor in the latter, which cannot fail of being discovered by every reader of the least delicacy of differnment; and yet the words which compose them both are equally founding and fignificant. The rules then, which I just now mentioned from Horace, will point out the real caufe of the different effects which these two passages produce in our minds; as the patlages themselves will ferve to confirm the truth and juffice of the rules. In the lines of Mr. Pope, one of the principal beauti's will be found to confift in the shortness of the expression; whereas the fentiments in the other are too much incumbered with words. Thus for inflance,

Peace is my dear delight, is pleafing, because it is concise; as,

Behold me blameless band, how fond of peace i is, in comparison of the former, the verba laffas onerantia aures. Another diftinguithing perfection in the imitator of Horace, is that spirit of gaiety which he has diffuted. through these lines, not to mention those happy, though familiar, images of fliding into verse, and bitching in rhyme; which can never be fusiciently admired. But the translator, on the contrary, has cast too serious an air over his numbers, and appears with an emotion and earnestness that disap-Points the force of his fatire:

Nay, I will be heard,

has the mien of a man in a passion; and

His eyes shall weep the folly of his tongue,

though a good line in itself, is much too folemn and tragical for the undiflurbed pleafantry of Horace.

But I need not enter more minutely into an examination of these passages. The general hints I have thrown out in this letter will furnice to thew you whereir I imagine the true manner of Horac, cor fifts. And after all, perhaps, it can no more be explained, than acquired, by rules of art. It is what true genius can only execute, and Fuzeflorne. just taste alone discover.

#### § 240. Concerning the Criterion of Taple. In a Letter.

It is well, my friend, that the age of transformation is no more; otherwife I fhould tremble for your fevere attack upon the Mufes, and expect to fee the flory of your metamorphofis embellish the poetical miracles of fome modern Ovid. But it is long fince the fate of the Piërides has gained any credit in the world, and you may now, in full fecurity, contemn the divinities of Parniffins, and speak inteverently of the daughters of Jove himfelf. You fee, neverth refs, how highly the Ancients conceived of them, when they thus reprefented them as the offspring of the great father of gods and men. You reject, I know, this article of the beathen creed: but I may venture, however, to affert, that philosophy will confirm what fable has thus invented, and that the Muses are, in strict tiuth, of heavenly extraction.

The charms of the fire arts are, indeed, literally derived from the Author of all nature, and founded in the original frame and conflictation of the human mind. Accordingly, the general principles of tafle are common to our whole species, and arise from that internal fenfe of beauty which every man, in tome degree at least, evidently posicsies. No rational mind can be fo wholly void of all perceptions of this fort, as to be capable of contemplating the various objects that furround him, with one equal coldness and indifference. There are certain forms which must necessarily fill the foul with agreeable ideas; and the is instantly determined in her approbation of them, previous to all reasonings concerning their use and convenience. It is upon these general principles, that what is called fine taste in the arts is founded; and confequently is by no means to precarious and

unlettled P p

unsettled an idea as you choose to describe it. The truth is, taste is nothing more than this universal sense of beauty, rendered more exquisite by genius, and more correct by cultivation: and it is from the simple and original ideas of this fort, that the mind learns to form her judgment of the higher and more complex kinds. Accordingly, the whole circle of the imitative and oratorical arts is governed by the fame general rules of criticism; and to prove the certainty of these with respect to any one of them, is to establish their validity with regard to all the rest. I will therefore confider the Criterion of Taste in relation only to fine writing.

Each species of composition has its distinct perfections; and it would require a much larger compass than a letter affords, to prove their respective beauties to be derived from truth and nature; and confequently reducible to a regular and precise standard. I will only mention therefore those general properties which are essential to them all, and without which they must necessarily be defective in their several kinds, Thefe, Ithink, may be comprehended under uniformity in the defign, variety and refemblance in the metaphors and fimilitudes, together with propriety and harm ny in the diction. Now, some or all of these qualities constantly attend our ideas of beauty, and necessarily raise that agreeable perception of the mind, in what object locver they appear. The charms of fine composition then, are so far from exifting only in the heated imagination of an enthusiastic admirer, that they result from the constitution of nature herfelf. And perhaps the principles of criticism are as certain and indifputable, even as those of the mathematics. Thus, for instance, that order is preferable to confufion, that harmony is more pleasing than disionance, with some few other axioms upon which the science is built; are truths which strike at once upon the mind with the same force of conviction, as that the whole is greater than any of its parts, or, that if from equals you take away equals, the remainder will be equal. And in both cases, the propositions which rest upon these plain and obvious maxims, feem equally capable of the same evidence of demonstration.

But as every intellectual, as well as animal, faculty is improved and strengthened by exercise; the more the soul exerts this her internal sense of beauty upon any par-

ticular object, the more she will enlarge and refine her relish for that peculiar species. For this reason the works of those great masters, whose performances have been long and generally admired, supply a farther criterion of fine tafte, equally fixed and certain as that which is immediately derived from Nature herself. The truth is, fine writing is only the art of raising agreeable fensations of the intellectual kind; and, therefore, as by examining those original forms which are adapted to awaken this perception in the mind, we learn what those qualities are which conflitute beauty in general; fo by observing the peculiar construction of those compositions of genius which have always pleased, we perfect our idea of fine writing in particular. It is this united approbation, in persons of different ages and of various characters and languages, that Longinus has made the tell of the true sublime; and he might with equal justice have extended the fame criterion to all the inferior excellencies of elegant composition. Thus the deference paid to the performances of the great masters of antiquity, is fixed upon just and folid reasons: it is not because Aristotle and Horace have given us the rule of criticism, that we must submit to their authority; it is because those rules are derived from works which have been diftinguished by the uninterrupted admiration of all the more improved part of mankind, from their earliest appearance down to this present hour. For whatever, through a long feries of ages, has been univerfally esteemed as beautiful, cannot but be conformable to our just and natural ideas of beauty.

The opposition, however, which sometimes divides the opinions of those whose judgments may be supposed equal and perfect, is urged as a powerful objection against the reality of a fixed canon of criticism: it is a proof, you think, that after all which can be faid of fine taste, it must ultimately be resolved into the peculiar relish of each individual. But this diversity of sentiments will not, of itself, destroy the evidence of the criterion; fince the same effect may be produced by numberless other causes. A thousand accidental circumstances may concur in counteracting the force of the rule, even allowing it to be ever so fixed and invariable, when left in its free and uninfluenced flate, Not to mention that false bias which party or personal dislike may fix upon the mind, difficult to disengage himself entirely from any other celebrated spot of antiquity. those partial affections in favour of particular beauties, to which either the general course of his studies, or the peculiar cast of his temper, may have rendered him most fenfible. But as perfection in any works of genius results from the united beauty and propriety of its feveral distinct parts, and as it is impossible that any human compofition should possess all those qualities in their highest and most sovereign degree; the mind, when she pronounces judgment upon any piece of this fort, is apt to decide of its merit, as those circumstances which she most admires, either prevail or Thus, for instance, the exare deficient. cellency of the Roman masters in painting, confilts in beauty of defign, nobleness of attitude, and delicacy of expression; but the charms of good colouring are want-On the contrary, the Venetian school is said to have neglected design a little too much; but at the fame time has been more attentive to the grace and harmony of well-disposed lights and shades. Now it will be admitted by all admirers of this noble art, that no composition of the pencil can be perfect, where either of these qualities are absent; yet the most accomplished judge may be so particularly struck with one or other of these excellencies, in preference to the rest, as to be influenced in his censure or applause of the whole tablature, by the predominancy or deficiency of his favourite beauty. Something of this kind (where the meaner prejudices do not operate) is ever, I am persuaded, the occasion of that diversity of sentences which we occasionally hear pronounced by the most approved judges on the same piece. But this only shews that much caution is necessary, to give a fine taste its full and unobitructed effect; not that it is in itself uncertain and precarious.

Fitzosborne.

# \$ 241. Reflections upon feeing Mr. PorB's House at Binsteld. In a Letter.

Your letter found me just upon my return from an excursion into Berkshire, where I have been paying a visit to a friend, who is drinking the waters at Sunning-Hill. In one of my morning rides over that delightful country, I accidentally passed through a little village, which afforded me much agreeable meditation; 23 in times to come, perhaps, it will be vifited by the lovers of the polite arts, with

the most unprejudiced critic will find it as much veneration as Virgil's tomb, or The place I mean is Binfield, where the Poet, to whom I am indebted (in common with every reader of taile) for fo much exquifite entertainment, spent the earliest part of his youth. I will not scruple to confess, that I looked upon the scene where he planned some of those beautiful performances, which first recommended him to the notice of the world, with a degree of enthusiasm; and could not but confider the ground as facted, that was impressed with the footsteps of a genius that undoubtedly does the highest honour to our age and nation.

The fituation of mind in which I found myfelf upon this occasion, suggested to my remembrance a pullage in Tully, which I thought I never so thoroughly entered into the spirit of before. That noble author, in one of his philosophical conversationpieces, introduces his triend Atticus as observing the pleasing effect which scenes of this nature are wont to have upon one's mind: "Movemur cura," fays that polite Roman, " nescio quo pacto, locis iplis, " in quibus corum, ques diligimus aut ad-" miramur, adfunt vestigia. Me quidem " ipfæ illæ nostræ Athenæ, von tam ope-" ribus magnificis exquifitifque antiquo-" rum artibus delectant, quam recorda-" tione summorum virosum, nhi quisque " habitare, ubi federe, ubi disputare sit " folitus."

Thus, you fee, I could defend myfelf by an example of great authority, were 1 in danger upon this occasion of being ridiculed as a romantic vinonary. But I am too well acquainted with the refined fentiments of Orontes, to be under any apprehension he will condemn the impresfions I have here acknowledged. On the contrary, I have often heard you mention with approbation, a circumstance of this kind which is related of Silius Italicus. The annual ceremonies which that poet performed at Virgil's fepulchre, gave you a more favourable opinion of his tafte, you confessed, than any thing in his works was able to raife.

It is certain, that some of the greatest names of antiquity have distinguished themselves, by the high reverence they shewed to the poetical character. Scipio, you may remember, defired to be laid in the same tomb with Ennius; and I am inclined to pardon that succeisful madman A. lexander many of his extravagancies, for the generous Pp2

There feems, indeed, to be fomething in poetry that raises the professors of that very fingular talent, far higher in the estimation of the world in general, than those who excel in any other of the refined arts. And accordingly we find that poets have been diffinguished by antiquity with the most remarkable honours. Thus Homer, we are told, was deified at Smyrna; as the citizens of Mytilene stamped the image of Sappho upon their public coin: Anacreon received a solemn invitation to spend his days at Athens, and Hipparchus, the fon of Pifistratus, fitted out a splendid vessel in order to transport him thither: and when Virgil came into the theatre at Rome, the whole audience rose up and saluted him, with the same respect as they would have paid to Augustus himself.

Painting, one would imagine, has the fairest pretentions of rivalling her fifter art in the number of admirers; and yet, where Apelles is mentioned once, Homer is cel brated a thousand times. Nor can this be accounted for by urging that the works of the latter are still extant, while those of the former have perished long fince; for is not Milton's Paradise Lost more univerfally esteemed than Raphael's Cartoons?

The truth, I imagine, is, there are more who are natural judges of the harmony of numbers, than of the grace of proportions. One meets with but few who have not, in some degree at least, a tolerable ear; but a judicious eye is a far more uncommon possession. For as words are the universal medium, which all men employ in order to convey their fentiments to each other; it feems a just consequence, that they should be more generally formed for relishing and judging of performances in that way: whereas the art of reprefenting ideas by means of lines and colours, lies more out of the road of common use, and is therefore less adapted to the tatle of the general run of mankind.

I hazard this observation, in the hopes of drawing from you your fentiments upon a tubject, in which no man is more qualified to decide; as indeed it is to the conversation of Orontes, that I am indebted for the discovery of many refined delicacies in the imitative arts, which, without his judicious affiltance, would have lain

generous regard he paid to the memory of concealed to me with other common ob-Pindar, at the facking of Thebes. fervers. Fitzoforme, Fitzosborne.

> § 242. Concerning the Use of the Ancient Mythology in Modern Poetry. In a Let-

If there was any thing in any former letter inconsistent with that esteem which is justly due to the ancients, I desire to retract it in this; and difavow every expression which might feem to give precedency to the moderns in works of genius. I am to far indeed from entertaining the fentiments you impute to me, that I have often endeavoured to account for that fuperiority which is so visible in the compofitions of their poets: and have frequently affigned their religion as in the number of those causes, which probably concurred to give them this remarkable pre-eminence. That enthusiasm which is so essential to every true artist in the poetical way, was confiderably heightened and enflamed by the whole turn of their facred doctrines; and the fancied presence of their Muses had almost as wonderful an effect upon their thoughts and language, as if they had been really and divinely inspired. Whilst all nature was supposed to swarm with divinities, and every oak and fountain was believed to be the residence of fome prefiding deity; what wonder if the poet was animated by the imagined influence of such exalted society, and found himself transported beyond the ordinary limits of fober humanity? 'The mind when attended only by mere mortals of superior powers, is observed to rise in her strength; and her faculties open and enlarge themselves when she acts in the view of those, for whom she has conceived a more than common reverence. But when the force of superstition moves in concert with the powers of imagination, and genius is enflamed by devotion, poetry must fhine out in all her brightest perfection and íplendor.

Whatever, therefore, the philosopher might think of the religion of his country; it was the interest of the poet to be thoroughly orthodox. If he gave up his creed, he must renounce his numbers: and there could be no inspiration, where there were no Muses. This is so true, that it is in compositions of the poetical kind alone that the ancients feem to have the principal advantage over the moderns: in every other species of writing one might venture

perhaps to affert, that these latter ages have, at least, equalled them. When I fay fo, I do not confine myself to the productions of our own nation, but comprehend likewise those of our neighbours: and with that extent the observation will possibly hold true, even without an exception in favour of history and oratory.

But whatever may with justice be determined concerning that question, it is certain, at least, that the practice of all fucceeding poets confirms the notion for am principally contending. Though the altars of Paganisin have many ages fince been thrown down, and groves are no longer facred; yet the language of the poets has not changed with the religion of the times, but the gods of Greece and Rome are still adored in modern verse. Is not this a confession, that fancy is enlivened by superstition, and that the ancient bards catched their rapture from the old mythology? I will own, however, that I think there is fomething ridiculous in this unnatural adoption, and that a modern poet makes but an aukward figure with his antiquated gods. When the Pagan system was fanctioned by popular belief, a piece of machinery of that kind, as it had the ai. of probability, afforded a very striking manner of celebrating any remarkable circumstance, or raising any common one. But now that this superstition is no longer supported by vulgar opinion, it has lost its principal grace and efficacy, and feems to be, in general, the most cold and uninteresting method in which a poet can work up his fentiments. What, for instance, can be more unaffecting and spiritless, than the compliment which Boileau has paid to Louis the XIVth on his famous passage over the Rhine? He represents the Naiads, you may remember, as alarming the god of that river with an account of the march of the French monarch; upon which the rivergod assumes the appearance of an old experienced commander, and flies to a Dutch fort, in order to exhort the garrison to-fally out and dispute the intended pas-Accordingly they range themselves in form of battle, with the Rhine at their head; who, after some vain efforts, obferving Mars and Bellona on the fide of the enemy, is so terrified with the view of those superior divinities, that he most gallantly runs away, and leaves the hero in quiet possession of his banks. I know not how far this may be relished by critics, or

jussified by custom; but as I am only mentioning my particular tafte, I will acknowledge, that it appears to me extremely infipid and puerile.

I have not, however, so much of the spirit of Typhœus in me, as to make war upon the gods without restriction, and attempt to exclude them from their whole poetical dominions. To represent natural, moral, or intellectual qualities and affections as persons, and appropriate to them those general emblems by which their powers and properties are usually typified in Pagan theology, may be allowed as one of the most pleasing and graceful figures of poetical rhetoric. When Dryden, addrelling himself to the month of May as to a person, says,

For thee the Graces lead the dancing hours;

one may confider him as speaking only in metaphor: and when fuch thadowy beings are thus just shown to the imagination, and immediately withdrawn again, they certainly have a very powerful effect. But I can relish them no farther than as figures only; when they are extended in any ferious composition beyond the limits of metaphor. and exhibited under all the various actions of real persons, I cannot but consider them as so many absurdities, which cultom has unreasonably patronized. Thus Spenfer, in one of his pattorals, represents the god of love as flying, like a bird, from bough to bough. A thepherd, who hears a rultling among the bushes, supposes it to be fome game, and accordingly discharges his bow. Cupid returns the shot, and after several arrows had been mutually exchanged between them, the unfortunate swain discovers whom it is he is contending with: but as he is endeavouring to make his escape, receives a desperate wound in the heel. This siction makes the subject of a very pretty idylium in one of the Greek poets; yet is extremely flat and difgusting as it is adopted by our British bard. And the reason of the difference is plain: in the former it is supported by a popular supersition; whereas no strain of imagination can give it the least air of probability, as it is worked up by the latter,

Quodeunque mihi oftendis fic, incredulus odi.

I must confess, at the same time, that. the inimitable Prior has introduced this fabulous scheme with such uncommon grace, and has paid so many gentrel compliments

pliments to his mistress by the assistance of Venus and Cupid, that one is carried off from observing the impropriety of this machinery, by the pleasing address with which he manages it: and I never read his tender poems of this kind, without applying to him what Seneca fomewhere fays upon a fimilar occasion: Major ille est qui judicium abstulit, quam qui meruit.

To focak my fentiments in one word, I would leave the gods in full possession of allegorical and burlefque poems: in all others I would never fuffer them to make their appearance in person and as agents, but to enter only in fimile or allusion. It is thus Waller, of all our poets, has most happily employed them: and his application of the flory of Daphne and Apollo will ferve as an inflance, in what manner the ancient mythology may be adopted with the utmost propriety and beauty.

§ 243. On the Delicacy of every Author of Genius, with respect to his own performances. In a Litter.

If the ingenious piece you communicated to me, requires any farther touches of your pencil, I must acknowledge the truth to be, what you are inclined to fufpect, that my friendthip has imposed upon my judgment. But though in the prefent instance your delicacy feems far too refined; yet, in general, I must agree with you, that works of the most permanent kind, are not the effects of a lucky moment, nor struck out at a single heat. The best performances, indeed, have generally coft the most labour; and that eale, which is so effectial to fine writing, has seldom been attained without repeated and fevere corrections: Ludentis speciem dabit et torquebitur, is a motto that may be applied, I believe, to most successful authors of genius. With as much facility as the numbers of the natural Prior feem to have flowed from him, they were the refult (if I am not misinformed) of much application: and a friend of mine, who undertook to transcribe one of the noblest performances of the finest genius that this, or perhaps any age can boaft, has often affured me, that there is not a fingle line, as it is now published, which stands in conformity with the original manuscript. The truth is. every fentiment has its peculiar expression, and every word its precise place, which do not always immediately present themfelves, and generally demand frequenttrials,

before they can be properly adjusted: not to mention the more important difficulties, which necessarily occur in settling the plan and regulating the higher parts which compose the structure of a finished work.

Those, indeed, who know what pangs it costs even the most fertile genius to be delivered of a just and regular production, might be inclined, perhaps, to cry out with the most ancient of authors, Oh! that mine adversary had noritten a book! A writer of refined tafte has the continual mortification to find himself incapable of taking entire possession of that ideal beauty which warms and fills his imagination. His conceptions still rise above all the powers of his art, and he can but faintly copy out those images of perfection, which are impicffed upon his mind. Never was any thing, fays Tully, more beautiful than the Venus of Apelles, or the Jove of Phidias; yet were they by no means equal to those high notions of beauty which animated the genuifes of those wonderful artists. In the fame manner, he observes, the great masters of oratory imagined to themselves a certain perfection of eloquence, which they could only contemplate in idea, but in vain attempted to draw cat in expression. Perhaps no author ever perpetuated his reputation, who could write up to the full flandard of his own judgment: and I am perfuaded that he, who upon a furvey of his compositions can with entire complacency pronounce them good, will hardly find the world join with him in the fame favourable sentence.

The most judicious of all poets, the inimitable Virgil, used to resemble his productions to those of that animal, who, agreeably to the notions of the Ancients, was supposed to bring forth her young into the world, a mere rude and shapeless mass; he was obliged to retouch them again and again, he acknowledged, before they acquired their proper form and beauty. cordingly we are told, that after having spent eleven years in composing his Æneid, he intended to have fet apart three more for the revifal of that glorious performance. But being prevented by his last fickness from giving those finishing touches, which his exquifite judgment conceived to be still necessary, he directed his friends Tucca and Varius to burn the noblest poem that ever appeared in the Roman language. In the fame spirit of delicacy, Mr. Dryden tells us, that had he taken

more time in translating this author, he might possibly have succeeded better: but never, he assures us, could he have succeeded so well as to have satisfied himself.

In a word, Hottenfius, I agree with you, that there is nothing more difficult than to fill up the character of an author, who proposes to raise a just and lasting admiration; who is not contented with those little transient flashes of applause, which attend the ordinary race of writers, but confiders only how he may shine out to posterity; who extends his views beyond the prefent generation, and cultivates those productions which are to flourith in future ages. What Sir William Temple observes of poetry, may be applied to every other work where tafte and imagination are concerned: " It requires the greatest con-" traries to compose it; a genius both " penetrating and folid; an expression both strong and delicate. There must " be a great agitation of mind to invent, " a great calm to judge and correct : there " must be upon the same tree, and at the " fame time, both flower and fruit." But though I know you would not value yourfelf upon any performance, wherein thefe very opposite and very singular qualities were not conspicuous: yet I must remind you at the same time, that when the file ceases to polish, it must necessarily weaken. You will remember, therefore, that there is a medium between the immoderate caution of that orator, who was three Olympiads in writing a fingle oration; and the extravagant expedition of that poet, whole funeral pile was composed of his own numberless productions. Fitzosborne.

#### § 244. Reflections upon Style. In a Letter.

The beauties of Style scem to be generally considered as below the attention both of an author and a reader. I know not, therefore, whether I may venture to acknowledge, that among the numberless graces or your late performance, I particularly admired that strength and elegance with which you have enforced and adorned the noblest sentiments.

There was a time, however, (and it was a period of the truest resinements) when an excellence of this kind was esteemed in the number of the politest accomplishments; as it was the ambition of some of the greatest names of antiquity to distinguish themselves in the improvement of their native tongue. Julius Casar, who was not only the greatest hero, but the

finest gentleman that ever, perhaps, appeared in the world, was defirous of adding this talent to his other most shining endowments: and we are told he fludied the language of his country with much application: as we are fure he possessed it in its highest elegance. What a loss, Euphronius, is it to the literary world, that the treatife which he wrote upon this fulject, is perished with many other valuable works of that age! But though we are deprived of the benefit of his observations, we are happily not without an inflance of their effects; and his own memoirs will ever remain as the best and brightest exemplar, not only of true generalfhip, but of fine writing. He published them, indeed, only as materials for the use of those who should be disposed to enlarge upon that remarkable period of the Roman flory; yet the purity and gracefulness of his style were fuch, that no judicious writer durst attempt to touch the subject after him.

Having produced to illustrious an inflance in favour of an art, for which I have ventured to admire you; it would be impertinent to add a fecond, were I to cite a lefs authority than that of the immortal Tully. This nobleauthor, in his dialogue concerning the celebrated Roman orator, frequently mentions it as a very high encomium, that they possessed the elegance of their native language; and introduce a Brutus as declaring, that he should prefer the honour of being effected the great master and improver of Roman eloquence, even to the glory of many triumphs.

But to add reason to precedent, and to view this art in its use as well as its dignity; will it not be allowed of some importance, when it is considered, that cloquence is or a of the most considerable auxiharies of truth? Nothing indeed contribut a more to fubdue the mind to the force of reason, than her being supported by the powerful affiliance of mafculine and vigorous oratory. As on the contrary, the most legitimate arguments may be dilappointed of that success they deserve, by being attended with a spiritless and enseebled evpreffion. Accordingly, that mult elegant of writers, the inimitable Mr. Additon, obferves, in one of his chays, that " there " is as much difference between compre-" hending a thought cloathed in Cicero's " language and that of an ordinary writer, " as between seeing an object by the light " of a taper and the light of the fun. It is furely then a very ftrange conceit Pp 4

of the celebrated Malbranche, who seems to think the pleasure which arises from perusing a well-written piece, is of the criminal kind, and has its source in the weakness and effeminacy of the human heart. A man must have a very uncommon severity of temper indeed, who can find any thing to condemn in adding charms to truth, and gaining the heart by coptivating the ear; in uniting roses with the thorns of science, and joining pleasure with instruction.

The truth is, the mind is delighted with a fine style, upon the same principle that it prefers regularity to consussion, and beauty to deformity. A taste of this sort is indeed so far from being a mark of any depravity of our nature, that I should rather consider it as an evidence, in some degree, of the moral rectitude of its constitution, as it is a proof of its retaining some relist at least of harmony and order.

One might be apt indeed to suspect, that certain writers amongst us had considered all beauties of this fort in the same gloomy view with Malbranche: or, at least, that they avoided every refinement in style, as unworthy a lover of truth and philosophy. Their fentiments are funk by the lowest expressions, and seem condemned to the first curse, of creeping upon the ground all the days of their life. Others, on the contrary, mislake pemp for dignity; and, in order to raile their expressions above vulgar language, lift them up beyond common apprehensions, esteeming it (one should imagine) a mark of their genius, · that it requires some ingenuity to penetrate their meaning. But how few writers, like Euphronius, know to hit that true medium which lies between those distant extremes! How feldom do we meet with an author. whose expressions, like those of my friend, are glowing but not glaring, whose metaphors are natural but not common, whose periods are harmonious but not poetical; in a word, whose sentiments are well set, and shewn to the understanding in their truest and most advantageous lustre.

Fitzosborne.

## § 245. On Thinking. In a Letter.

If one would rate any particular merit according to its true valuation, it may be necessary, perhaps, to consider how far it can be justly claimed by mankind in general. I am sure, at least, when I read the very uncommon sentiments of your last letter, I found their judic ous author rise

in my esteem, by reslecting, that there is not a more fingular character in the world. than that of a thinking man. It is not merely having a succession of ideas, which lightly skim over the mind, that can with any propriety be stiled by that denomination. It is observing them separately and distinctly, and ranging them under their respective classes; it is calmly and steadily viewing our opinions on every fide, and resolutely tracing them through all their confequences and connections, that conftitutes the man of reflection, and distinguishes reason from fancy. Providence, indeed, does not feem to have formed any very confiderable number of our species for an extensive exercise of this higher faculty; as the thoughts of the far greater part of mankind are necessarily restrained within the ordinary purposes of animal life. But even if we look up to those who move in much superior orbits, and who have opportunities to improve, as well as leifure to exercise, their understandings; we shall find, that thinking is one of the least exerted privileges of cultivated humanity.

It is, indeed, an operation of the mind which meets with many obstructions to check its just and free direction; but there are two principles, which prevail more or less in the constitutions of most men, that particularly contribute to keep this faculty of the foul unemployed: I mean, pride and indolence. To deicend to truth through the tedious progression of well-examined deductions, is confidered as a reproach to the quickness of understanding; as it is much too laborious a method for any but those who are possessed of a vigorous and resolute activity of mind. For this reason, the greater part of our species generally choole either to feize upon their conclufions at once, or to take them by rebound from others, as best suiting with their vanity or their laziness. Accordingly Mr. Locke observes, that there are not so many errors and wrong opinions in the world as is generally imagined. Not that he thinks mankind are by any means uniform in embracing truth; but because the majority of them, he maintains, have no thought or opinion at all about those doctrines concerning which they raise the greatest cla-Like the common foldiers in an. army, they follow where their leaders direct, without knowing, or even enquiring, into the cause for which they so warmly contend.

This will account for the flow fleps by which

which truth has advanced in the world, on one fide; and for those absurd systems which, at different periods, have had an universal currency, on the other. For there is a strange disposition in human nature, either blindly to tread the same paths that have been traversed by others, or to strike out into the most devious extravagancies: the greater part of the world will either totally renounce their reason, or reason only from the wild suggestions of an heated imagination.

From the same source may be derived those divisions and animosities which break the union both of public and private focieties, and turn the peace and harmony of human intercourse into dissonance and contention. For while men judge and act by fuch measures as have not been proved by the standard of dispassionate reason, they must equally be mistaken in their estimates both of their own conduct and that of

If we turn our view from active to contemplative life, we may have occasion, perhaps to remark, that thinking is no less uncommon in the literary than the civil world. The number of those writers who can, with any justness of expression, be termed thinking authors, would not form a very copious library, though one were to take in all of that kind which both ancient and modern times have produced. Necessarily, I imagine, must one exclude from a collection of this fort, all critics, commentators, translators, and, in short, all that numerous under-tribe in the commonwealth of literature, that owe their existence merely to the thoughts of others. I should reject, for the same reason, such compilers as Valerius Maximus and Aulus Gellius: though it must be owned, indeed, their works have acquired an accidental value, as they preserve to us several curious traces of antiquity, which time would otherwise have entirely worn out. Those teeming genuises likewise, who have propagated the fruits of their studies through a long feries of tracts, would have little pretence, I believe, to be admitted as writers of reflection. For this reason I cannot regret the loss of those incredible numbers of compositions which some of the Ancients are faid to have produced:

Quale fuit Caffi rapido ferventius amni Ingenium : capils quem fama est este, librifque Hok Ambustum propriis.

Thus Epicurus, we are told, left behind

him three hundred volumes of his own works, wherein he had not inferted a fingle quotation; and we have it upon the authority of Varro's own words, that he himfelf composed four hundred and ninety books. Seneca affures us, that Didymus the Grammarian wrote no lefs than four thoufand; but Origin, it seems, was yet more prolific, and extended his performances even to fix thousand treatises. It is obvious to imagine, with what fort of materials the productions of such expeditious workmen were wrought up : found thought and well-matured reflections could have no share, we may be sure, in these hasty performances. Thus are books multiplied. whilst authors are scarce; and so much easier is it to write than to think! But fhall I not myfelf, Palamedes, prove an inflance that it is fo, if I fuspend any longer your own more important reflections, by interrupting you with fuch as mine?

Fitzoftorne.

#### § 246. Reflections on the Advantages of Conversation.

It is with much pleasure I look back upon that philosophical week which I lately enjoyed at -; as there is no part, perhaps, of focial life which affords more real fatisfaction than those hours which one patfes in rational and unreferved converfation. The free communication of fentiments amongst a set of ingenious and speculative friends, fuch as those you gave me the opportunity of meeting, throws the mind into the most advantageous exercise, and shows the strength or weakness of its opinions, with greater force of conviction than any other method we can employ.

That " it is not good for man to be alone," is true in more views of our species than one; and fociety gives strength to our reason, as well as polish to our manners. The foul, when left entirely to her own folitary contemplations, is infensibly drawn by a fort of conflitutional bias, which generally leads her opinions to the fide of her inclinations. Hence it is that the contracts those peculiarities of reasoning, and little habits of thinking, which fo often confirm her in the most fantastical errors. But nothing is more likely to recover the mind from this false bent, than the counterwarmth of impartial debate. Conversation opens our views, and gives our faculties a more vigorous play; it puts us upon turning our notions on every fide, and holds them up to a light that discovers those la-

tent flaws which would probably have lain concealed in the gloom of unagitated abfraction. Accordingly, one may remark, that most of those wild doctrines, which have been let loose upon the world, have generally owed their birth to persons whose circumstances or dispositions have given them the fewest opportunities of canvassing their respective systems in the way of free and friendly debate. Had the authors of many an extravagant hypothesis discussed their principles in private circles, ere they had given vent to them in public, the ob-Servation of Varro had never, perhaps, heen made, (or never, at least, with so much juftice) that "there is no opinion fo abfurd, · but has some philosopher or other to

" produce in its support."

Upon this principle, I imagine, it is, that some of the finest pieces of antiquity are written in the dialogue-manner. Plato and Tully, it should feem, thought truth could never be examined with more advantage than amidit the amicable opposition of well regulated converse. It is probable, indeed, that subjects of a serious and philosophical kind were more frequently the topics of Greek and Roman conversations than they are of ours; as the circumstances of the world had not yet given occasion to those prudential reasons which may now, per-haps, restrain a more free exchange of sentiments amongit us. There was fomething, likewife, in the very scenes themfelves where they usually assembled, that almost unavoidably turned the itream of their conversations into this useful channel. Their rooms and gardens were generally adorned, you know, with the statues of the greatest masters of reason that had then appeared in the world; and while Socrates or Aristotle stood in their view, it is no wonder their discourse fell upon those subjects which such animating representations would naturally suggest. It is probable, therefore, that many of those ancient pieces which are drawn up in the dialogue-manner, were no imaginary convertations invented by their authors; but faithful transcripts from real life. And it is this circumitance, perhaps, as much as any other, which contributes to give them that remarkable advantage over the generality of modern compositions which have been formed upon the same plan. I am sure, at leaft, I could scarce name more than three or four of this kind which have appeared in our language wetthy of notice. My lord Shaftelbury's dialogue, intitled " The

Moralists;" Mr. Addison's upon Ancient Coins: Mr. Spence's upon the Odyssey; together with those of my very ingenious friend, Philemon to Hydaspes; are, almost, the only productions in this way which have hitherto come forth amongst us with advantage. Thefe, indeed, are all masterpieces of the kind, and written in the true spirit of learning and politeness. The conversation in each of these most elegant performances is conducted, not in the usual abfurd method of introducing one disputant to be tamely filenced by the other; but in the more lively dramatic manner, where a just contrast of characters is preserved throughout, and where the feveral speakers support their respective sentiments with all the strength and spirit of a well-bred oppolition.

### § 247. On the Great Hifterical Ages.

Every age has produced heroes and politicians; all nations have experienced revolutions; and all hitlories are nearly alike, to those who seek only to furnish their memories with facts; but whosoever thinks, or, what is still more rare, whoseever has taste, will find but four ages in the history of the world. These four happy ages are those in which the arts were curried to perfection; and which, by ferving as the ara of the greatness of the human mind, are examples for posterity.

The first of these ages to which true glory is annexed, is that of Philip and Alexander, or that of a Pericles, a Demosthenes, an Aristoile, a Plato, an Apelles, a Phidias, and a Praxiteles; and this honour has been confined within the limits of ancient Greece; the rest of the known world was then in a state of barbarism.

The second age is that of Cæsar and Augustus, distinguished likewise by the names of Lucretius, Cicero, Titus, Livius, Virgil, Horace, Ovid, Varro, and Vitruvius.

The third is that which followed the taking of Conflantinople by Mahomet II, Then a family of private citizens was feen to do that which the kings of Europe ought to have undortaken. The Medicis invited to Florence the Learned, who had been driven out of Greece by the Turks.—This was the age of Italy's glory. The polite arts had already recovered a new life in that country; the Italians honoured them with the title of Virtu, as the first Greeks had ditinguished them by the name of Wisson. Every thing tended towards perfection:

perfection; a Michael Angelo, a Raphael, a Titian, a Tasso, and an Ariosto, slourished. The art of engraying was invented; elegant architecture appeared again, as admirable as in the most triumphant ages of Rome; and the Gothic barbarism, which had disfigured Europe in every kind of production, was driven from Italy, to make way for good taste.

The arts, always transplanted from Greece to Italy, found themselves in a favourable foil, where they instantly produced fruit. France, England, Germany, and Spain, aimed in their turns to gather these fruits; but either they could not live in those climates, or else they degenerated

very fast.

Francis I. encouraged learned men, but fuch as were merely learned men: he had architects; but he had no Michael Angelo, nor Palladio: he endeavoured in vain to establish schools for painting; the Italian masters whom he invited to France, raised Some epigrams and a no pupils there. few loose tales, made the whole of our poctry. Rabelais was the only profe-writer in vogue in the time of Henry II.

In a word, the Italians alone were in possession of every thing that was beautiful, excepting music, which was then but in a rude state; and experimental philofophy, which was every where equally un-

known.

Lastly, the fourth age is that known by the name of the age of Lewis XIV. and is perhaps that which approaches the nearest to perfection of all the four; enriched by the discoveries of the three former ones, it has done greater things in certain kinds than those three together. All the arts, indeed, were not carried farther than under the Medicis, Augustus, and Alexander; but human reason in general was more improved. In this age we first became acquainted with found philosophy. It may truly be faid, that from the last years of Cardinal Richelieu's administration till those which followed the death of Lewis XIV. there has happened such a general revolution in our arts, our genius, our manners, and even in our government, as will ferve as an immortal mark to the true glory of our country. This happy influence has not been confined to France; it has communicated itself to England, where it has stirred up an emulation which that ingenious and deeply-learned nation stood in need of at that time; it has introduced tafte into Germany, and the sciences into Russia; it has

even re-animated Italy, which was languishing; and Europe is indebted for its politeness and spirit of society, to the court

of Lewis XIV

Before this time, the Italians called all the people on this fide the Alps by the name of Barbarians. It must be owned that the French, in some degree, deserved this reproachful epithet. Our forefathers joined the romantic gallantry of the Moore with the Gothic rudeness, They had hardly any of the agreeable arts amongst them; which is a proof that the useful arts were likewise neglected; for, when once the things of use are carried to persection, the transition is quickly made to the elegant and the agreeable; and it is not at all astonishing, that painting, sculpture, poetry, eloquence, and philosophy, should be in a manner unknown to a nation, who, though possessed of harbours on the Western ocean and the Mediterranean sca, were without ships; and who, though fond of luxury to an excess, were hardly provided with the most common manufac-

The Jews, the Genoese, the Venetians, the Portuguese, the Flemish, the Dutch, and the English, carried on, in their turns, the trade of France, which was ignorant even of the first principles of commerce. Lewis XIII. at his accession to the crown, had not a fingle ship; the city of Paris contained not quite four hundred thousand men, and had not above four fine public edifices; the other cities of the kingdom resembled those pitiful villages which we fee on the other fide of the Loire. The nobility, who were all stationed in the country, in dungeons furrounded with deep ditches, oppressed the peasant who cultivated the land. The high roads were almost impassable; the towns were destitute of police; and the government had hardly any credit

among foreign nations. We must acknowledge, that, ever fince . the decline of the Carlovingian family, France had languished more or less in this infirm state, merely for want of the benefit

of a good administration.

For a state to be powerful, the people must either enjoy a liberty founded on the laws, or the royal authority must be fixed beyond all opposition. In France, the people were flaves till the reign of Philip Augustus; the noblemen were tyrants till Lewis XI.; and the kings, always employed in maintaining their authority against their vallals, had neither leifure to think about the happiness of their subjects, nor the

power of making them happy.

Lewis XI. did a great deal for the regal power, but nothing for the happiness or glory of the nation. Francis I. gave birth to trade, navigation, and all the arts : but he was too unfortunate to make them take root in the nation during his time, fo that they all perished with him. Henry the Great was on the point of raising France from the calamities and barbarisms in which she had been plunged by thirty years of discord, when he was assassinated in his capital, in the midst of a people whom he had begun to make happy. The Cardinal de Richelieu, busied in humbling the house of Austria, the Calvinists, and the Grandees, did not enjoy a power sufficiently undisturbed to reform the nation; but he had at least the honour of beginning this happy work.

Thus, for the space of 900 years, our genius had been almost always restrained under a Gothic government, in the midst of divisions and civil wars; destitute of any laws or fixed customs; changing every second century a language which still continued rude and unformed. The nobles were without discipline, and strangers to everything butwar and idleness: the clergy lived in disorder and ignorance; and the common people without industry, and stuppised in their wretchedness.

The French had no share either in the great discoveries, or admirable inventions of other nations: they have no title to the discoveries of printing, gunpowder, glasses, telescopes, the sector, compass, the airpump, or the true system of the universe: they were making tournaments, while the Portuguese and Spaniards were discovering and conquering new countries from the call to the west of the known world. Charles V. had already scattered the treasures of Mexico over Europe, before the subjects of Francis I. had discovered the uncultivated country of Canada; but, by the little which the French did in the beginning of the Exteenth century, we may fee what they are capable of when properly conducted.

Voltaire.

§ 248. On the Conflication of England.

In every government there are three forts of power: the legislative; the executive, in respect to things dependent on the law of nations; and the executive, in regard to things that depend on the civil law.

By virtue of the first, the prince or magistrate enacts temporary or perpetual laws, and amends or abrogates those that have been already enacted. By the second, he makes peace or war, sends or receives embassies, he establishes the public security, and provides against invasions. By the third, he punishes criminals, or determines the disputes that arise between individuals. The latter we shall call the judiciary power, and the other simply the executive power of the state.

The political liberty of the subject is a tranquillity of mind, arising from the opinion each person has of his safety. In order to have this liberty, it is requisite the government be so constituted as one man need

not to be afraid of another.

When the legislative and executive powers are united in the same person, or in the same body of magistrates, there can be no liberty; because apprehensions may arise, lest the same monaich or senate should enact tyrannical laws, to execute them in a tyrannical manner.

Again, there is no liberty, if the power of judging be not separated from the legislative and executive powers. Were it joined with the legislative, the life and liberty of the subject would be exposed to arbitrary controul; for the judge would be then the legislator. Were it joined to the executive power, the judge might behave with all the violence of an oppression.

There would be an end of every thing, were the same man, or the same body, whether of the nobles, or of the people, to exercise those three powers, that of enacting laws, that of executing the public resolutions, and that of judging the crimes or

differences of individuals.

Most kingdoms of Europe enjoy a moderate government, because the prince, who is invested with the two sirst powers, leaves the third to his subjects. In Turky, where these three powers are united in the Sultan's person, the subjects groan under the weight of a most frightful oppression.

In the republics of Italy, where these three powers are united, there is less liberty than in our monarchies. Hence their government is obliged to have recourse to as violent methods for its support, as even that of the Turks; witness the state inquisitors at Venice, and the lion's mouth, into which every informer may at all hours throw his written accusations.

What

What a fituation must the poor subject be in under those republics! The same body of magistrates are possessed, as executors of the law, of the whole power they have given themselves in quality of legislators. They may plunder the state by their general determinations; and, as they have likewise the judiciary power in their hands, every private citizen may be ruined by their particular decisions.

The whole power is here united in one body; and though there is no external pomp that indicates a despotic sway, yet the people seel the effects of it every mo-

ment

Hence it is that many of the princes of Europe, whose aim has been levelled at arbitrary power, have constantly set out with uniting in their own persons all the branches of magistracy, and all the great

offices of flate.

I allow, indeed, that the mere hereditary aristocracy of the Italian republics, does not answer exactly to the despotic power of the eastern princes. The number of magistrates sometimes softens the power of the magistracy; the whole body of the nobles do not always concur in the same designs; and different tribunals are erected, that temper each other. Thus, at Venice, the legislative power is in the Council, the executive in the Pregadi, and the judiciary in the Quarantia But the mischief is, that these different tribunals are composed of magistrates all belonging to the same body, which constitutes almost one and the same power.

The judiciary power ought not to be given to a standing senate; it should be exercised by persons taken from the body of the people (as at Athens) at certain times of the year, and pursuant to a form and manner prescribed by law, in order to erect a tribunal that should last only as

long as necessity requires.

By this means the power of judging, a power so terrible to mankind, not being annexed to any particular state or profefsion, becomes, as it were, invisible. People have not then the judges continually prefent to their view; they fear the office, but

not the magistrate.

In accusations of a deep or criminal nature, it is proper the person accused should have the privilege of chusing in some measure his judges, in concurrence with the law; or at least he should have a right to except against so great a number, that the remaining part may be deemed his own choice.

The other two powers may be given rather to magistrates or permanent bodies, because they are not exercised on any private subject; one being no more than the general will of the state, and the other the execution of that general will.

But though the tribunals ought not to be fixed, yet the judgments ought, and to fuch a degree as to be always conformable to the exact letter of the law. Were they to be the private opinion of the judge, people would then live in fociety without knowing exactly the obligation it lays

them under.

The judges ought likewise to be in the same station as the accused, or in other words, his peers, to the end that he may not imagine he is fallen into the hands of persons inclined to treat him with rigour.

If the legislature leaves the executive

power in possession of a right to imprison those subjects who can give security for their good behaviour, there is an end of liberty; unless they are taken up, in order to answer without delay to a capital crime: in this case they are really free, being subject only to the power of the law.

But should the legislature think itself in danger by some secret conspiracy against the state, or by a correspondence with a foreign enemy, it might authorise the executive power, for a short and limited time, to imprison suspected persons, who in that case would lose their liberty only for a

while, to preferve it for ever.

And this is the only reasonable method than can be substituted to the tyrannical magistracy of the Ephori, and to the state inquisitors of Venice, who are also despo-

ical

As in a free state, every man who is supposed a free agent, ought to be his own governor; so the legislative power should reside in the whole body of the people. But since this is impossible in large states, and in small ones is subject to many inconveniences, it is sit the people should act by their representatives, what they cannot

act by themselves.

The inhabitants of a particular town are much better acquainted with its wants and interests, than with those of other places; and are better judges of the capacity of their neighbours, than of that of the rest of their countrymen. The members therefore of the legislature should not be chosen from the general body of the nation; but it is proper, that in every considerable place, a representative should be elected by the inhabitants.

The great advantage of representatives is their being capable of discussing affairs. For this the people collectively are extremely unit, which is one of the greatest inconveniences of a democracy.

It is not at all necessary that the representatives, who have received a general infruction from their electors, should wait to be particularly instructed in every affair, as is practised in the diets of Germany. True it is, that by this way of proceeding, the speeches of the deputies might with greater propriety be called the voice of the nation; but, on the other hand, this would throw them into infinite delays, would give each deputy a power of controlling the assembly; and on the most urgent and pressing occasions, the springs of the nation might be stopt by a single caprice.

When the deputies, as Mr. Sidney well observes, represent a body of people, as in Holland, they ought to be accountable to their constituents: but it is a different thing in England, where they are deputed by

boroughs.

All the inhabitants of the several districts ought to have a right of voting at the election of a representative, except such as are in so mean a situation, as to be deemed to have no will of their own.

One great fault there was in most of the ancient republics; that the people had a right to active resolutions, such as require some execution; a thing of which they are absolutely incapable. They ought to have no hand in the government, but for the chusing of representatives, which is within their reach. For though few can tell the exact degree of men's capacities, yet there are none but are capable of knowing, in general, whether the person they chuse is better qualified than most of his neighbours.

Neither ought the representative body to be chosen for active resolutions, for which it is not so fit; but for the enacting of laws, or to see whether the laws already enacted be duly executed; a thing they are very capable of, and which none indeed but themselves can properly perform.

In a flate, there are always persons distinguished by their birth, riches, or honours; but were they to be confounded with the common people, and to have only the weight of a single vote like the rest, the common liberty would be their slawery, and they would have no interest in supporting it, as most of the popular resolutions would be against them. The share

they have, therefore, in the legislature, ought to be proportioned to the other advantages they have in the state; which happens only when they form a body that has a right to put a stop to the enterprizes of the people, as the people have a right to put a stop to theirs.

The legislative power is therefore committed to the body of the nobles, and to the body chosen to represent the people, which have each their assemblies and deliberations apart, each their separate views

and interests.

Of the three powers above-mentioned, the judiciary is in some measure next to nothing. There remains therefore only two; and as those have need of a regulating power to temper them, the part of the legislative body, composed of the nobility, is extremely proper for this very purpose.

The body of the nobility ought to be hereditary. In the first place it is so in its own nature: and in the next, there must be a considerable interest to preserve its privileges; privileges that in themselves are obnoxious to popular envy, and of course, in a free state, are always in dan-

ge

But as an hereditary power might be tempted to pursue its own particular interests, and forget those of the people; it is proper that, where they may reap a singular advantage from being corrupted, as in the laws relating to the supplies, they should have no other share in the legislation, than the power of rejecting, and not

that of refolving.

By the power of resolving, I mean the right of ordaining by their own authority, or of amending what has been ordained by others. By the power of rejecting, I would be understood to mean the right of annulling a resolution taken by another, which was the power of the tribunes at Rome. And though the person possessed of the privilege of rejecting may likewise have the right of approving, yet this approbation passes for no more than a declaration, that he intends to make no use of his privilege of rejecting, and is derived from that very privilege.

The executive power ought to be in the hands of a monarch: because this branch of government, which has always need of expedition, is better administered by one than by many: whereas whatever depends on the legislative power, is oftentimes better regulated by many than by a single

person.

But if there was no monarch, and the executive power was committed to a certain number of persons selected from the legislative body, there would be an end then of liberty; by reason the two powers would be united, as the same persons would actually sometimes have, and would moreover be always able to have, a share in both.

Were the legislative body to be a confiderable time without meeting, this would likewise put an end to liberty. For one of these two things would naturally follow; either that there would be no longer any legislative resolutions, and then the state would fall into anarchy; or that these resolutions would be taken by the executive power, which would render it absolute.

It would be needless for the legislative body to continue always affembled. This would be troublesome to the representatives, and moreover would cut out too much work for the executive power, so as to take off its attention from executing, and oblige it to think only of defending its own prerogatives, and the right it has to execute.

Again, were the legislative body to be always affembled, it might happen to be kept up only by filling the places of the deceased members with new representatives; and in that cate, if the legislative body was once corrupted, the evil would be past all remedy. When different legislative bodies succeed one another, the people, who have a bad opinion of that which is actually fitting, may reasonably entertain some hopes of the next : but were it to be always the fame body, the people, upon feeing it once corrupted, would no longer expect any good from its laws; and of course they would either become desperate, or fall into a state of indolence.

The legislative body should not assemble of itself. For a body is supposed to have no will but when it is affembled: and befides, were it not to assemble unanimously it would be impossible to determine which was really the legislative body, the part affembled or the other. And if it had a right to prorogue itself, it might happen never to be prorogued; which would be extremely dangerous in case it should ever attempt to encroach on the executive power. Besides, there are seasons, some of which are more proper than others, for affembling the legislative body: it is fit therefore that the executive power should regulate the time of convening as well as

the duration of those assemblies, according to the circumstances and exigencies of state known to itself.

Were the executive power not to have a right of putting a flop to the incroachments of the legislative body, the latter would become despotic; for as it might arrogate to itself what authority it pleated, it would soon destroy all the other powers.

But it is not proper, on the other hand, that the legislative power should have a right to stop the executive. For as the executive has its natural limits, it is useless to confine it; befides, the executive power is generally employed in momentary operations. The power, therefore, of the Roman tribunes was faulty, as it put a stop not only to the legislation, but likewise to the execution itself; which was attended with infinite milchies.

But it the legislative power, in a free government, ought to have no right to flop the executive, it has a right, and ought to have the means of examining in what manner its laws have been executed; an advantage which this government has over that of Crete and Sparia, where the Colmi and the Ephori give no account of their administration.

But whatever may be the iffue of that examination, the legislative body ought not to have a power of judging the perfon, nor of course the conduct, of him who is intrusted with the executive power. His person should be facted, because, as it is necessary for the good of the state to prevent the legislative body from rendering themselves arbitrary, the moment he is accused or tried, there is an end of liberty.

In this case the flate would be no longer a monarchy, but a kind of republican, though not a free government. But as the person introded with the executive power cannot abute it without bad counfellors, and fuch a hate the laws as miniflers, though the laws favour them as fubiccis; there men may be examined and punished. An advantage which this government has over that of Gnidus, where the law allowed of no fuch thing as calling the Amymones \* to an account, even after their administration +; and therefore the people could never obtain any fatisfaction for the injuries done them.

\* These were magistrates chosen annually by the people. See S ephen of Byzantium.

1 It was law in to accuse the Roman magifixites after the expiration of their feveral offices. See Dionyi. Hal.ca n. l. 9. the affair of Genusies the tribune. Though, in general, the judiciary power ought not to be united with any part of the legislative, yet this is liable to three exceptions, founded on the particular interest of

the party accused.

The great are always obnoxious to popular envy; and were they to be judged by the people, they might be in danger from their judges, and would moreover be deprived of the privilege which the meanest fubject is possessed of, in a free state, of being tried by their peers. The nobility, for this reason, ought not to be cited before the ordinary courts of judicature, but before that part of the legislature which is composed of their own body.

It is possible that the law, which is clearfighted in one sense, and blind in another,
might in some cases be too severe. But as
we have already observed, the national
judges are no more than the mouth that
pronounces the words of the law, mere passive beings, incapable of moderating either
its force or rigour. That part, therefore, of
the legislative body, which we have just now
observed to be a necessary tribunal on another occasion, is also a necessary tribunal
in this; it belongs to its supreme authority
to moderate the law in favour of the law

itself, by mitigating the sentence.

It might also happen, that a subject intrufted with the administration of public affairs, might infringe the rights of the people, and be guilty of crimes which the ordinary magistrates either could not, or would not punish. But in general the legislative power cannot judge; and much less can it be a judge in this particular case, where it represents the party concerned, which is the people. It can only therefore impeach: but before what court shall it bring its impeachment? Must it go and abase itself before the ordinary tribunals, which are its inferiors, and being composed moreover of men who are chosen from the people as well as ittelf, will naturally be iwayed by the authority of so powerful an accuser? No: in order to preserve the dignity of the people, and the security of the subject, the legislative part which represents the people, must bring in its charge before the legislative part which represents the nobility, who have neither the same interests nor the fame passions.

Here is an advantage which this government has over most of the ancient republics, where there was this abuse, that the people were at the same time both judge and accuse.

The executive power, pursuant to what has been already said, ought to have a share in the legislature by the power of rejecting, otherwise it wou'd soon be stripped of its prerogative. But should the legislative power usurp a share of the executive, the latter would be equally undone.

If the prince were to have a share in the legislature by the power of resolving, liberty would be lost. But as it is necesfary he should have a share in the legislature, for the support of his own prerogative, this share must consist in the power of

rejecting.

The change of government at Rome was owing to this, that neither the fenate who had one part of the executive power, nor the magistrates, who were entrusted with the other, had the right of rejecting, which was entirely lodged in the people

Here then is the fundamental conflitution of the government we are treating of. The legislative body being composed of two parts, one checks the other by the mutual privilege of rejecting: they are both checked by the executive power, as the executive is by the legislative.

These three powers should naturally form a state of repose or inaction. But as there is a necessity for movement in the course of human assairs, they are torced to move, but still to move in concert.

As the executive power has no other part in the legislative than the privilege of rejecting, it can have no share in the public debates. It is not even necessary that it should propose, because, as it may always disapprove of the resolutions that shall be taken, it may likewise reject the decisions on those proposals which were made against its will.

In some ancient commonwealths, where public debates were carried on by the people in a body, it was natural for the executive power to propose and debate with the people, otherwise their resolutions must have been attended with a strange

confusion.

Were the executive power to ordain the raifing of public money, otherwise than by giving its consent, liberty would be at an end; because it would become legislative in the most important point of legislation.

If the legislative power was to settle the subsidies, not from year to year, but for ever.

ever, it would run the risk of losing its liberty, because the executive power would no longer be dependent; and when once it was possessed of such a perpetual right, it would he a matter of indifference, whether it held it of itself, or of another. The fame may be faid, if it should fix, not from year to year, but for ever, the sea and land forces with which it is to intrust the executive power.

To prevent the executive power from being able to oppress, it is requisite that the armies with which it is intrufted should confiit of the people, and have the fame spirit as the people; as was the case at Rome till the time of Marius. To obtain this end, there are only two ways; either that the persons employed in the army should have sufficient property to answer for their conduct to their fellow-subjects, and be enlitted only for a year, as was cuftomary at Rome: or if there should be a flanding army, composed chiefly of the most despicable part of the nation, the legillative power should have a right to difband them as foon as it pleafed; the foldiers should live in common with the rest of the people; and no separate camp, harracks, or fortress, should be suffered.

When once an army is established, it bught not to depend immediately on the legislative, but on the executive power; and this from the very nature of the thing; its business consisting more in acting than

in deliberation.

From a manner of thinking that prevails amongst mankind, they set a higher value upon courage than timoroufnets, on activity than prudence, on strength than counsel. Hence the army will ever despise a senate, and respect their own officers. They will naturally flight the orders fent them by a body of men, whom they look upon as cowards, and therefore unworthy to command them. So that as soon as the army depends on the legislative body, the government becomes a military one; and if the contrary has ever happened, it has been owing to some extraordinary circumstances. It is because the army has always kept divided; it is because it was composed of several bodies, that depended each on their particular province: it is because the capital towns were strong places, defended by their natural fituation, and not garrifoned with regular troops. Holland, for instance, is Hill fafer than Venice: the might drown

or starve the revolted troops; for as they are not quartered in towns capable of furnishing them with necessary subfishence, this subsistence is of course precatious.

Whoever shall read the admirable treatife of Tacitus on the manners of the Germans, will find that it is from them the English have borrowed the idea of their political government. This beautiful fyftem was invented first in the woods.

As all human things have an end, the flate we are speaking of will lose its liberty. it will perith. Have not Rome, Sparta, and Carthage perified? It will periff when the legislative power shall be more corrupted than the executive.

It is not my bufiness to examine whether the English actually enjoy this liberty, or not. It is fullicient for my purpose to obferve, that it is established by their laws;

and I enquire no further. Neither do I pretend by this to undervalue other governments, nor to fay that this extreme political liberty ought to give uncafiness to those who have only a moderate there of it. How thould I have any fuch defign, I, who think that even the excels of reason is not always definable, and that mankind generally find their account better in mediums than in extiemes?

Harrington, in his Oceana, has also inquired into the highest point of liberty to which the conflitminon of a flate may be carried. But of him indeed it may be faid, that for want of knowing the nature of real liberty, he busied himself in pursuit of an imaginary one; and that he built a Chalcedon, though he had a Byzantium Mentefquicu. before Lis eyes.

## § 249, Of COLUMBUS, and the Diffevery of AMERICA.

It is to the discoveries of the Portuguele in the o'd world, that we are indebt . ed for the new; if we may call the conquest of America an obligation, which proved to fatal to its inhabitants, and at times to the conquerors themselves.

This was doubtless the most important event that ever happened on our globe, one half of which had been hitherto flrangers to the other. Whatever had been esteemed most great or noble before, feemed absorbed in this kind of new crea-We still mention with respectful admiration, the names of the Argonauts,

who did not perform the hundredth part of what was done by the failors under Gama and Albuquerque. How many altars would have been raised by the ancients to a Greek, who had discovered America! and yet Bartholomew and Christopher Columbus were not thus rewarded.

Columbus, firuck with the wonderful expeditions of the Portuguese, imagined that fomething greater might be done; and from a bare inspection of the map of our world, concluded that there must be another, which might be found by failing always west. He had courage equal to his genius, or indeed superior, seeing he had to struggle with the prejudices of his contemporaries, and the repulses of several princes to whom he tendered his fervices. Genoa, which was his native country, treated his schemes as visionary, and by that means loft the only opportunity that could have offered of aggrandizing her power. Henry VII. king of England, who was too greedy of money to hazard any on this noble attempt, would not liften to the proposals made by Columbus's brother: and Columbus himself was rejected by John II. of Portugal, whose attention was wholly employed upon the coast of Africa. He had no prospect of success in applying to the French, whose marine lay totally neglected, and their affairs more confuled than ever, during the minority of Charles VIII. The emperor Maximilian had neither ports for shipping, money to fit out a fleet, no fufficient courage to engage in a scheme of this nature. The Venetians, indeed, mis ht have undertaken it; but whether the natural aversion of the Genoese to these people would not suffer Columbus to apply to the rivals of his country, or that the Venetians had no idea of any thing more important than the trade they carried on from Alexandria and in the Levant, Columbus at length fixed all his hopes on the court of Spain.

Ferdinand, king of Arragon, and Ifabella, queen of Castile, had by their marriage united all Spain under one dominion, excepting only the kingdom of Grenada, which was hill in the possession of the Moors; but which Ferdinand soon after took from them. The union of these two princes had prepared the way for the reatness of Spain: which was afterwards begun by Columbus; he was however obliged to undergo eight years of inceffant

application, before Isabella's court would confent to accept of the inestimable benefit this great man offered it. The bane of all great projects is the want of money. The Spanish court was poor; and the prior, Perez, and two merchants, named Pinzono, were obliged to advance seventeen thousand ducats towards fitting out the armament. Columbus procured a patent from the court, and at length fet fail from the port of Palos in Andalusia, with three ships, on August 23, in the year

It was not above a month after his departure from the Canary illands, where he had come to an anchor to get refreshment, when Columbus discovered the first island in America; and during this short run, he fuffered more from the murmurings and discontent of the people of his fleet, than he had done even from the refufals of the princes he had applied to. This island, which he discovered, and named St. Salvador, lies about a thousand leagues from the Canaries; presently after, he likewise discovered the Lucayan islands, together with those of Cuba and Hispaniola, now

called St. Domingo.

Ferdinand and Isabella were in the utmost surprize to see him return, at the end of nine months, with some of the American natives of Hispaniola, several rarities from that country, and a quantity of gold, with which he presented their majesties.

The king and queen made him fit down in their presence, covered like a grandee of Spain, and created him high admiral and viceroy of the new world. Columbus was now every where looked upon as an extraordinary person sent from heaven. Every one was vying who should be foremost in affilling him in his undertakings, and embarking under his command. He foon fet fail again, with a fleet of seventeen ships. He now made the discovery of several other new islands, particularly the Caribbees and lamaica. Doubt had been changed into admiration on his first voyage; in this, admiration was turned into envy.

He was admiral and viceroy, and to these titles might have been added that of the benefactor of Ferdinand and Isabella. Nevertheless, he was brought home prifoner to Spain, by judges who had been purposely sent out on board to observe his conduct. As foon as it was known that Columbus was arrived, the people ran in shoals to meet him, as the guardian genius

of Spain. Columbus was brought from the ship, and appeared on shore chained hands and feet.

He had been thus treated by the orders of Fonfeca, bishop of Burgos, the intendant of the expedition, whose ingratitude was as great as the other's fervices. Isabella was ashamed of what she saw, and did all in her power to make Columbus amends for the injuries done to him: however, he was not suffered to depart for four years, either because they feared that he would seize upon what he had discovered for himself, or that they were willing to have time to observe his behaviour. At length he was fent on another voyage to the new world; and now it was, that he discovered the continent, at fix degrees distance from the equator, and faw that part of the coast on which Carthagena has been lince built.

At the time that Columbus first promised a new hemisphere, it was infifted upon that no fuch hemisphere could exist; and after he had made the actual discovery of it, it was pretended that it had been known long before. I shall not mention one Martin Behem, of Nuremberg, who, it is faid, went from that city to the straits of Magellan in 1460, with a patent from the Duchess of Burgundy, who, as she was not alive at that time, could not issue patents. Nor shall I take notice of the pretended charts of this Martin Behem, which are still shewn; nor of the evident contradictions which discredit this story: but, in short, it was not pretended that Martin Behem had peopled America; the honour was given to the Carthaginians, and a book of Aristotle was quoted on the occasion, which he never wrote. Some found out a conformity between some words in the Caribbee and Hebrew languages, and did not fail to follow fo fine an opening. Others were positive that the children of Noah, after settling in Siberia, passed from thence over to Canada on the ice; and that their descendants, asterwards born in Canada, had gone and peopled Peru. According to others again, the Chinese and Japanese sent colonies into America, and carried over lions with them for their diversion, though there are no lions either in China or Japan. In this manner have many learned men argued upon the discoveries made by men of genius. If it should be asked, how men ark came upon the continent of America? is it not easily answered, that they were placed there by the fame Power who canfes trees and grais to grow?

The reply which Columbus made to fome of those who envied him the high reputation he had gained, is still famous. These people pretended that nothing could be more easy than the discoveries he had made; upon which he proposed to them to fet an egg upright on one of its ends; but when they had tried in vain to do it, he broke one end of the egg, and fet it upright with case. They told him any one could do that: How comes it then, replied Columbus, that not one among you thought of it?-This story is related of Brunelleschi, who improved architecture at Florence many years before Columbus was born. Most bon mots are only the repetition of things that have been faid before.

The aines of Columbus cannot be affected by the reputation he gained while living, in having doubled for us the works of the creation. But mankind delight to do justice to the illustrious dead, either from a vain hope that they enhance thereby the merit of the living, or that they are naturally fond of truth. Americo Vespucci. whom we call Americus Vespusius, a merchant of Florence, had the honour of giving his name to this new half of the globe. in which he did not posses one acre of land, and pretended to be the first who discovered the continent. But supposing it tine, that he was the first discoverer, the glory was certainly due to him, who had the penetration and courage to undertake and perform the first voyage. Honour, as Newton fays in his dispute with Leibnitz, is due only to the first inventor; those that follow after are only his scholars. Columbus had made three voyages, as admiral and viceroy, five years before Americus Verpusius had made one as a geographer, under the command of Admiral Ojeda; but this latter writing to his friends at Florence. that he had discovered a new world, they b lieved him on his word; and the citizens of Florence decreed, that a grand illumination should be made before the door of his house every three years, on the seast of All Saints. And yet could this man be faid to deserve any honours, for happening to be on board a fleet that, in 1489, failed along the coast of Brazil, when Co'umbus had, five years before, pointed out the way to the rest of the world?

There has lately appeared at Florence a life of this Americus Vespusius, which seems to be written with very little regard to truth, and without any conclusive reasoning. Several French author are there complained

Qq2

complained of, who have done justice to Columbus's merit; but the writer should not have fallen upon the French authors, but on the Spanish, who were the first that did this justice. This writer fays, that "he " will confound the vanity of the French " nation, who have always attacked with " impunity the honour and fuccess of the "Italian nation." What vanity can there be in faying, that it was a Genoese who first discovered America? or how is the honour of the Italian nation injured in owning, that it was to an Italian, born in Genoa, that we are indebted for the new world? I purpofely remark this want of equity, good-breeding, and good-sense, as we have too many examples of it; and I must fay, that the good French writers have in general been the least guilty of this infufferable fault; and one great reason of their being to univerfally read throughout Europe, is their doing justice to all nations-

The inhabitants of these islands, and of the continent, were a new race of men. They were all without beards, and were as much aftonished at the faces of the Spaniards, as they were at their ships and artillery: they at first looked upon these new visitors as monsters or gods, who had come out of the sky or the sea. These voyages, and those of the Portuguese, had now taught us how inconfiderable a spot of the globe our Europe was, and what an aftonishing variety reigns in the world. Indoftan was known to be inhabited by a race of men whose complexions were yellow. In Africa and Afia, at some distance from the equator, there had been found several kinds of black men; and after travellers had penetrated into America as far as the line, they met with a race of people who were tolerably white. The natives of Brazil are of the colour of bronze. The Chinese still appear to differ entirely from the rest of mankind, in the make of their eyes and nofes. But what is still to be remarked is, that into whattoever regions thefe various races are transplanted, their complexions never change, unless they mingle with the The mucous natives of the country. membrane of the negroes, which is known to be of a black colour, is a manifest proof , that there is a differential principle in each species of men, as well as plants.

Dependant upon this principle, nature has formed the different degrees of genius, and the characters of nations, which are feldom known to change. Hence the ne-

groes are flaves to other men, and are purchased on the coast of Africa, like beasts, for a sum of money; and the vast multitudes of negroes transplanted into our American colonies, serve as slaves under a very inconsiderable number of Europeans. Experience has likewise taught us how great a superiority the Europeans have over the Americans, who are every where easily overcome, and have not dared to attempt a revolution, though a thousand to one superior in numbers.

This part of America was alfo remarkable on account of its animals and plants, which are not to be found in the other three parts of the world, and which are of fo great use to us. Horses, corn of all kinds, and iron, were not wanting in Mexico and Peru; and among the many valuable commodities unknown to the old world, cochineal was the principal, and was brought us from this country. Its use in dying has now made us forget the scarlet, which for time immemorial had been the only thing known for giving a fine red colcur.

The importation of cochineal was foon fucceeded by that of Indigo, cacao, vahille, and those woods which serve for ornament and medicinal purposes, particularly the quinquina, or je uits bark, which is the only specific against intermitting severs. Nature has placed this semedy in the mountains of Peru, whill she had dispersed the disease it cured through all the rest of the world. This new continent likewise surnished pearls, coloused stones, and diamonds.

It is certain, that America at present furnishes the meanest citizen of Europe with his conveniencies and pleasures. The gold and filver mines, at their first discovery, were of fervice only to the kings of Spain and the merchants; the rell of the world was impoverished by them, for the great multitudes who did not follow bufinels, found themselves possessed of a very fmall quantity of specie, in comparison with the immense sums accumulated by those, who had the advantage of the first disco-But by degrees, the great quantity of gold and filver which was lent from America, was dispersed throughout all Europe, and by passing into a number of hands, the diffribution is become more equal. The price of commodities is likewife increased in Europe, in proportion to the increase of specie.

To comprehend you the treasures of America passed from the possession of the Spaniards

Spaniards into that of other nations, it will be fufficient to consider these two things: the use which Charles V. and Philip II. made of their money; and the manner in which other nations acquired a share in the wealth of Peru.

The emperor Charles V. who was always travelling, and always at war, necessarily disperfed a great quantity of that specie which he received from Mexico and Peru, tbrough Germany and Italy. When he fent his fon Philip over to England, to marry queen Mary, and take upon him the title of Kin of En land, that prince deposited in the tower of London twentyfeven large one s of filver in bars, and an hundred horse loads of gold and silver con. The toubles in Flanders, and the intrigues of the league in France, coff this Philip, according to his own confession, above three thoused nullions of livres of our .r.oney.

The manner in which the gold and filver of Peru is diff. ibused amongst all the people of Europe, and from thence is fent to the East in ic, is a surprising, though well known circumstance. By a strict law en A 1 by Ferdinand and Ifabella, and afterwards confirmed by Charles V. and all the kings of Spain, all other nations were not on y excluded the entrance into any of the ports in Spanish America, but likewife from having the least share, directly or indi ectly, in the trade of that part of the world. One would have imagined, that this law would have enabled the Spaniards to fub tue all Europe; and yet Spain fubfifts only by the continual violation of this very law. It can hardly furnish exports for America to the value of four millions; whereas the rest of Europe sometimes send over merchandize to the amount of near fifty millions. This prodigious trade of the nations at enmity or in alliance with Spain, is carried on by the Spaniards themfelves, who are always faithful in their dealings with individuals, and always cheating their king. The Spaniards gave no security to foreign merchants for the performance of their contracts; a mutual credit, without which there never could have been any commerce, supplies the place of other obligations.

The manner in which the Spaniards for a long time configned the gold and filver to foreigners, which was brought home by their galleons, was still more surprising. The Spaniard, who at Cadiz is properly factor for the foreigner, delivered the bul-

lion he received to the care of certain bravoes, called Meteors: thefe, armed with pistols at their belt, and a long sword, carried the bullion in parcels properly marked, to the ramparts, and flung their over to other meteors, who waited below, and carried them to the boats which were to receive them, and there boats carried them on board the thips in the road. These meteors and the factors, together with the commissaries and the guards, who never diflurbed them, had each a flated fee, and the foreign merchants was never cheated. The king, who received a duty upon this money at the arrival of the galleons, was likewife a gainer; fo that, properly speaking, the law only was cheated; a law which would be ab-olutely uteless if not cluded. and which, nevertheless, cannot yet be abrogated, because old prejudices are always the most difficult to be overcome amongit men.

The greatest instance of the violation of this law, and of the fidelity of the Spaniards, was in the year 1684, when war was declared between France and Spain. His catholic majesty endeavoured to seize upon the effects of all the French in his kingdom; but he in vain iffued edicts and admonitions, inquiries and excommunications; not a fingle Spanish factor would betray his French correspondent. This fidelity, which does fo much honour to the Spanish nation, plainly shews, that men only willingly obey those laws, which they themselves have made for the good of society, and that those which are the mere eff ets of a lovereign's will, always meet with opposition.

As the discovery of America was at first the tource of much good to the Spaniards, it afterwards occasioned them many and confiderable evils. One has been, the depriving that kingdom of its subjects, by the great numbers necessarily required to people the colonies: another was, the infecting the world with a difeafe, which was before known only in the new world, and particularly in the island of Hispaniola. veral of the companions of Christopher Columbus returned home infected with this contagion, which afterwards fpread over Europe, It is certain, that this poifon, which taints the springs of life, was peculiar to America, as the plague and the small-pox were discases originally endemial to the fouthern parts of Numidia. We are not to believe, that the eating of human flesh, practised by some of the

American  $\mathbf{Q} \mathbf{q} \mathbf{3}$ 

American favages, occasioned this disorder. There were no cannibals on the island of Hispaniola, where it was most frequent and inveterate; neither are we to suppose, with some, that it proceeded from too great an excets of sensual pleasures. Nature hat never punished excesses of this kind with such disorders in the world; and even to this day, we find that a momentary indulgence, which has been passed for eight or ten years, may bring this civel and shameful scourge upon the challest union.

The great Columbus, after having built feveral houses on these islands, and discovered the continent, returned to Spain, where he enjoyed a reputation unfullied by rapine or crucity, and died at Valladolid in 1506. But the governors of Cuba and Hispaniola, wno succeeded him, being perfuaded that these provinces furnished gold, resolved to make the discovery at the price of the lives of the inhabitants. In thort, whether they thought the natives had concrived an implacable hatred to them; or that they were apprehensive of their fuperior numbers; or that the rage of flaughter, when once begun, knows no bounds, they, in the space of a few years, entirely depopulated Hitpaniola and Cuba, the former f which contained three millions of inhabitants, and the latter above fix hundred thousand.

Bartholomew de la Casas, bishop of Chiapa, who was an eye-witness to these desolations, relates, that they hunted down the natives with dogs. These wretched savages, almost naked and without arms, were pursued like wild beasts in the forests, devoured alive by dogs, shot to death, or surprised and burnt in their habitations.

He farther declares, from ocular testimony, that they frequently caused a number of these miserable wieckes to be summoned by a priest to come in, and submit to the Christian religion, and to the king of Spain; and that after this ceremony, which was only an additional act of injustice, they put them to death without the least remorfe.—I believe that De la Casa has exaggerated in many parts of his relation; but, allowing him to have said ten times more than is truth, there remains enough to make us shudder with horror.

It may feem furprising, that this maffacre of a whole race of men could have been carried on in the fight, and under the administration of several religious of the order of St. Jerome; for we know that Cardinal Ximenes, who was prime minister of Castile before the time of Charles V. sent over four monks of this order, in quality of presidents of the royal council of the island. Doubtless they were not able to resist the torrent; and the hatred of the natives to their new masters, being with just reason become implacable, rendered their destruction unhappily necessary.

Voltaire.

§ 250. The Influence of the Progress of Science on the Manners and Characters of Men.

The progress of science, and the cultivation of literature, had confiderable effect in changing the manners of the Fur-pean nations, and introducing that civility and refinement by which they are now diffinguished. At the time when their empire was overturned, the Romans, though they had loft that correct tatte which has rendered the productions of their ancestors the standards of excellence, and models for imitation to succeeding ages, still preserved their love of letters, and cultivated the arts with great ardour. But rude Barbarians were so far from being struck with any ada miration of these unknown accomplishments, that they despised them. They were not arrived at that flate of seciety, in which those faculties of the human mind. that have beauty and elegance for their objects, begin to unfold themselves. They were strangers to all those wants and defires which are the parents of ingenious invention; and as they did not comprehend either the merit or utility of the Roman arts, they destroyed the monuments of them, with industry not inferior to that with which their posterity have since studied to preserve, or to recover them. The convuisions occasioned by their settlement in the empire; the frequent as well as violent revolutions in every kingdom which they established; together with the interior defects in the form of government which they introduced, banished security and leisure: prevented the growth of tafte or the culture of science; and kept Europe, during several centuries, in a state of ignorance. But as foon as liberty and independence began to be felt by every part of the community, and communicated some taste of the advantages arising from commerce, from public order, and from personal security, the human mind became conscious of powers which it did not formerly perceive, and fond of occupations or pursuits

of which it was formerly incapable. Towards the beginning of the twelfth century, we discern the first symptoms of its awakening from that lethargy in which it had long been funk, and observe it turning with curiofity and attention towards new obiects.

The first literary efforts, however, of the European nations, in the middle ages, were extremely ill-directed. Among nations, as well as individuals, the powers of imagination attain some degree of vigour before the intellectual faculties are much exercifed in speculative or abstract disquif tion. Men are poets before they are philosophers. They feel with sensibility, and describe with force, when they have made but little progress in investigation or reafoning. The age of Homer and of Hefiod long preceded that of Thiles, or of Socrates. But unhappily for literature, our ance fors, deviating from this course which nature points out, plunged at once into the depths of abstruse and metaphysical enquiry. They had been converted to the Christian faith foon after they fettled in their new conquests: but they did not receive it pure. The presumption of men had added to the simple and instructive doctrines of Christianity, the theories of a vain philosophy, that attempted to penetrate into mysteries, and to decide questions which the limited faculties of the human mind are unable to comprehend, or to refolve. These over curious speculations were incorporated with the fystem of religion, and came to be confidered as the most effential part of it. As foon, then, as curiofity prompted men to inquire and to reason, these were the subjects which first presented themselves, and engaged their attention. The scholastic theology, with its infinite train of bold disquisitions, and Subtile distinctions concerning points which are not the object of human reason, was the first production of the spirit of enquity after it began to resume some degree of activity and vigour in Europe.

It was not this circumstance alone that gave such a wrong turn to the minds of men, when they began again to exercise talents which they had so long neglected. Most of the persons who attempted to revive literature in the twelfth and thirteenth centuries, had received instruction, or derived their principles of science from the Greeks in the eaftern empire, or from the Arabians in Spain and Africa. Both these people, acute and inquisitive to excess, cor-

rupted those sciences which they cultivated, The former rendered theology a system of speculative refinement, or of endless controversy. The latter communicated to philosophy a spirit of metaphysical and frivolous fubilety. Misled by these guides, the persons who first applied to science were involved in a maze of intricate inquiries. Instead of allowing their fancy to take its natural range, and to produce such works of invention as might have improved their tafte, and refined their fentiments; inflead of cultivating those arts which embellish human life, and render it comfortable; they were fettered by authority; they were led aftray by example, and wasted the whole force of their genius in speculations as unavailing as they were difficult.

But feuitless and ill-directed as these fpeculations were, their novelty roufed, and their boldness interested, the human mind. The ardour with which men purfued these uninviting studies was assonithing. Genuine philosophy was never cultivated, in any enlightened age, with greater zeal. Schools, upon the model of those instituted by Charlemagne, were opened in every cathedral, and almost in every monaflery of note. Colleges and univerfities were erected, and formed into communities, or corporations, governed by their own laws, and invested with separate and extensive jurisdiction over their own mem-A regular course of studies was planned. Privileges of great value were conferred on masters and scholars. Academical titles and honours of various kinus were invented, as a recompence for both. Nor was it in the schools alone that superiority in science led to reputation and authority; it became the object of respect in life, and advanced such as acquired it to a rank of no inconsiderable eminence, Allured by all these advantages, an incredible number of students resorted to these new feats of learning, and crowded with eagerness into that new path which was open to fame and diffinction.

But how confiderable seever these first efforts may appear, there was one circumstance which prevented the effects of them from being as extensive as they ought to have been. All the languages in ... rope, during the period under review ", were barbarous, They were deflitute of elegance, of force, and even of perspicuity. No attempt had

<sup>\*</sup> From the subversion of the Roman empire to the beginning of the fixteenth century.

been hitherto made to improve or to polish them. The Latin tongue was confecrated by the church to religion. Custom, with authority scarce less sacred, had appropriated it to literature. All the sciences cultivated in the twelfth and thirteenth centuries were taught in Latin. All the books with respect to them, were written in that language. To have treated of any important subject in a modern language, would have been deemed a degradation of it. This confined science within a very narrow circle. The learned alone were admitted into the temple of knowledge; the gate was shut against all others, who were allowed to remain involved in their former darkness and ignorance.

But though science was thus prevented, during feveral ages, from diffuling itself tl rough fociety, and its influence was circumscribed, the progress of it may be mentioned, nevertheless, among the great causes which contributed to introduce a change of manners into Europe. That ardent, though ill judged, spirit of inquiry, which I have described, occasioned a fermentation of mind, which put ingenuity and invention in motion, and gave them vigour. It led men to a new employment of their faculties, which they found to be agreeable. as well as interesting. It accustomed them to exercises and occupations which tended to foften their manners, and to give them fome relish for those gentle virtues which are peculiar to nations among whom icience hath been cultivated with success.

Rebertfen.

§ 251. On the respect paid by the Lace-DEMONIANS and Althenians to old Age.

It happened at Athens, during a public representation of some play exhibited in honour of the commonwealth, that an old gentleman came too late for a place fuitable to his age and quality. Many of the young gentlemen, who observed the difficulty and confusion he was in, made signs to him that they would accommodate him if he came where they fat: the good man builled through the crowd accordingly; but when he came to the feats to which he was invited, the jest was, to fit close and expose him as he slood, out of countenance, to the whole audience. The feolic went sound all the Athenian benches. But on those occasions, there were also particular places assigned for foreigners: when the good man kulked towards the boxes ap-

pointed for the Lacedæmonians, that honest people, more virtuous than polite, rose up all to a man, and, with the greatest respect, received him among them. The Athenians, being suddenly touched with a sense of the Spartan virtue, and their own degeneracy, gave a thunder of applause; and the old man cried our, "The Athe-"nians understand what is good, but the "Lacedæmonians practife it."

Spectator.

## § 252. On PATUS and ARRIA.

In the reign of Claudius, the Roman emperor, Arria, the wife of Cacinna Patus, was an illustrious pattern of magnanimity and conjugal affection.

It happened that her husband and her fon were both, at the same time, attacked with a dangerous illness. The son died. He was a youth endowed with every quality of mind and person which could endear him to his parents. His mother's heart was torn with all the anguish of grief; yet the refolved to conceal the diffresting event from her husband. She prepared and conducted his functal so privately, that Pætus did not know of his death. Whenever she came into her hufband's bed-chamber, she pretended her fon was better; and, as often as he inquired after his health, would answer, that he had rested well, or had enten with an appetite. When she found that she could no longer restrain her grief; but her tears were gushing out, she would leave the room, and, having given vent to her passion, return again with dry eyes and a ferene countenance, as if the had left her forrow behind her at the door of the chamber.

Camillus Scribonianus, the governor of Dalmatia, having taken up arms against Claudius, Pætus joined himself to his party, and was soon after taken prisoner, and brought to Rome. When the guards were going to put him on board the ship, Arria besought them that the might be permitted to go with him. "Certainly," said she, "you cannot refuse a man of consular digminty, as he is, a few attendants to wait upon him; but, if you will take me, I alone will perform their office." This favour, however, was resused; upon which she hired a small sishing vessel, and boldly ventured to follow the ship.

Returning to Rome, Arria met the wife of Scribonianus in the emperor's palace, who preffing her to discover all that she knew of the insurrection, - "What!" said she, "fhall I regard thy advice, who saw "thy husband murdered in thy very arms, "and yet survivest him?"

Pætus being condemned to die, Arria formed a deliberate resolution to share his sate, and made no secret of her intention. Thrasea, who married her daughter, attempting to dissuade her from her purpose, among other arguments which he used, said to her, "Would you then, if my life "were to be taken from me, advise your "daughter to die with me?" "Most cer"tainly I would," she replied, "if she had lived as long, and in as much "harmony with you, as I have lived with "Pætus."

Perfifting in her determination, the found means to provide herfelf with a dagger; and one day, when the observed a more than usual gloom on the countenance of Pætus, and perceived that death by the hand of the executioner appeared to him more terrible than in the field of glay—perhaps, too, sensible that it was chiefly for her sake that he wished to live—the drew the dagger from her side, and stabbed herfelf before his eyes. Then instantly olucking the weapon from her breast, the prefented it to her husband, saying, "My Pætus, it is not painful •." Pliny.

### § 253. ABDOLONYMUS raised to the Government of Sidon.

The city of Sidon having furrendered to Alexander, he ordered Hephvilion to bestow the crown on him whom the Sidonians should think most worthy of that honour. Hephaslion being at that time refident with two young men of distinction, offered them the kingdom; but they refused it, telling him that it was contrary to the laws of their country, to admit any one to that honour, who was not of the royal He then, having expressed his family. admiration of their difinterested spirit, defired them to name one of the royal race, who might remember that he received the crown through their hands. Overlooking many who would have been ambitious of this high honour, they made choice of Abdolonymus, whose singular merit had ren-

In the Tatler, No. 72, a fancy piece is drawn, founded on the principal fact in this flory, but wholly ficktions in the circumflarces of the tale. The author, mithking Czeinna Pzeus for Thrafea Pzeus, has accused even Nero unjuftly; charging him with an action which certainly belonged to Claudius. See Plmy's Epitles, Book in. Lp. 16. Dion. Caffius, Lib. 1x. 221 Tactus, Lib. xvi.

dered him conspicuous even in the vale of obscurity. Though remotely related to the royal family, a series of missortunes had reduced him to the necessity of cultivating a garden, for a small stipend, in the suburbs of the city.

While Abdolonymus was bufily employed in weeding his garden, the two friends of Hephæilion, bearing in their hands the enfigns of royalty, approached him, and faluted him king, informing him that Alexander had appointed him to that office; and requiring him immediately to exchange his ruffic garb, and utenfils of hufbandry, for the regal robe and feeptre. At the fame time, they urged him, when he fhould be feated on the throne, and have a mation in his power, not to forget the humble condition from which he had been raifed.

All this, at the first, appeared to Abdolonymus as an illusion of the fancy, or an insult offered to his poverty. He requested them not to trouble him fatther with their impertinent jeds, and to find some other way of annusing themselves, which might leave him in the peaceable enjoyment of his obscure habitation—At length, however, they co-vinced him that they were ferious in their proposal, and prevailed upon him to accept the legal office, and accompany them to the palace.

No fooner was he in possession of the government, than prile and envy created him enemies, who whilpered their murmurs in every place, till at last they reached the ear of Alexander; who, commanding the new-elected prince to be fent for, required of him, with what temper of mind he had borne his poverty. "Would to Heaven," replied Abdolonymus, " that I may be able " to bear my crown with equal moderation: " for when I possessed little, I wanted no-" thing: these hands supplied me with whatever I desired." From this answer, Alexander forme i fo high an idea of his wildom, that he confirmed the choice which had been made, and annexed a neighbouring province to the government of Sidon. Quintus Gurtius.

# § 254. The Resignation of the Emperor CHARLES V.

Charles resolved to resign his kingdoms to his son, with a solemnity suitable to the importance of the transaction; and to perform this last act of sovereignty with such formal pomp, as might leave an indelible impression on the mines, not only of his subjects,

subjects, but of his successor. With this view, he called Philip out of England, where the peevish temper of his queen, which increased with her despair of having iffue, rendered him extremely unhappy; and the jealoufy of the English left him no hopes of obtaining the direction of their affairs. Having affembled the states of the Low Countries, at Bruffels, on the twentyfifth of October, one thousand five hundred and fifty-five, Charles feated himfelf, for the last time, in the chair of state; on one fide of which was placed his fon, and on the other his fifter, the queen of Hungary, regent of the Netherlands; with a splendid retinue of the grandees of Spain, and princes of the empire, standing behind him. The president of the council of Flanders, by his command, explained, in a few words, his intention in calling this extraordinary meeting of the states. He then read the instrument of resignation, by which Charles furrendered to his fon Philip all his territories, jurisdiction, and authority in the Low Countries; absolving his subjects there from their outh of allegiance to him, which he required them to transfer to Philip, his lawful heir, and to serve him with the same loyalty and zeal which they had manifested, during so long a course of years, in support of his government.

Charles then role from his feat, and leaning on the shoulder of the prince of Orange, because he was unable to stand without support, he addressed himself to the audience, and, from a paper which he held in his hand, in order to affift his memory, he recounted with dignity, but without oftentation, all the great things which he had undertaken and performed fince the commencement of his administration. He observed, that, from the seventeenth year of his age, he had dedicated all his thoughts and attention to public objects; referring no portion of his time for the indulgence of his ease, and very little for the enjoyment of private pleasure: that, either in a pacific or hostile manner, he had visited Germany nine times, Spain fix times, France four times, Italy seven times, the Low Countries ten times, England twice, Africa as often, and had made eleven voyages by fea: that, while his health permitted him to discharge his duty, and the vigour of his constitution was equal, in any degree, to the arduous office of governing such extenfive dominions, he had never shunned labour, nor repined under fatigue: that

now, when his health was broken, and his vigour exhausted by the rage of an incurable diffemper, his growing infirmities admonished him to retire; nor was he so fond of reigning, as to retain the sceptre in an impotent hand, which was no longer able to protect his subjects, or to render them happy: that, instead of a sovereign worn out with diseases, and scarcely half alive, he gave them one in the prime of life, accustomed already to govern, and who added to the vigour of youth, all the attention and fagacity of maturer years: that if, during the course of a long administration, he had committed any material error in government; or if, under the pressure of so many and great affairs, and amidst the attention which he had been obliged to give to them, he had either neglected, or injured any of his subjects, he now implored their forgiveness: that, for his part, he should ever retain a grateful sense of their fidelity and attachment, and would carry the remembrance of it along with him to the place of his retreat, as his sweetest confolation, as well as the best reward for all his fervices; and, in his last prayers to Almighty God, would pour forth his ardent wishes for their welfare.

Then, turning towards Philip, who fell on his knees, and kissed his father's hand, " If," fays he, "I had left you by my death, this rich inheritance, to which I have made such large additions, some regard would have been justly due to my memory on that account: but now, when " I voluntarily refign to you what I might still have retained, I may well expect the warmest expressions of thanks on your part. With these, however, I dispense; and shall consider your concern for the welfare of your fubjects, and your love of them, as the best and most acceptable testimony of your gratitude to me. It is in your power, by a wife and virtuous administration, to justify the extraordinary proof which I this day give " of my paternal affection; and to de-" monstrate, that you are worthy of the confidence which I repose in you Pre-" ferve an inviolable regard for religion; " maintain the Catholic faith in its purity; " let the laws of your country be facred in " your eyes; encroach not on the rights " and privileges of your people: and, if " the time shall ever come, when you shall " wish to enjoy the tranquillity of private " life, may you have a fon endowed with " fuch qualities, that you can refign your "feeptre to him with as much fatisfaction as I give up mine to you!"

As soon as Charles had sinished this long address to his subjects, and to their new sovereign, he sun't into the chair, exhausted, and ready to faint with the fatigue of such an extraordinary effort. During his discousse, the whole audience melted into tears; some, from admiration of his magnon mity; others, softened by the expressions of tenderness towards his son, and of love to his people; and all were affected with the deepest sorrow, at losing a sovereign, who had distinguished the Netherla ds, his native country, with particular marks of is regard and attachment.

A few weeks afterwards, Charles, in an assembly no less splendid, and with a ceremonial equally pompous, resigned to his son the crowns of Spain, with all the territoris depending on them, both in the Od and in the New World. Of all these var. possessions he reserved nothing to himself, but an annual pension of a hundred thousand crowns, to destray the charges of his family, and to afford him a small sum for acts of beneficence and charity.

The place he had chosen for his retreat, was the monastery of St. Justus, in the province of Estramadura. It was seated in a vale of no great extent, watered by a finall brook, and furrounded by rifing grounds, covered with lofty trees. From the nature of the foil, as well as the temperature of the climate, it was esteemed the most healthful and delicious situation in Spain. Some months before his refignation, he had fent an architect thither, to add a new apartment to the monastery, for his accommodation; but he gave strict orders, that the style of the building should be such as suited his present situation rather than his former dignity. It confifted only of fix rooms; four of them in the form of friars' cells, with naked walls; the other two, each twenty feet square, were hung with brown cloth, and furnished in the most simple manner. They were all on a level with the ground; with a door on one fide, into a garden, of which Charles himself had given the plan, and which he had filled with various plants, intending to cultivate them with his own hands. On the other fide, they communicated with the chapel of the monastery, in which he was to perform his devotions. In this humble retreat, hardly sufficient for the comfortable accommodation of a private gentleman, did Charles enter, with twelve domestics only. He buried there, in solitude and silence, his grandeur, his ambition, together with all those vast projects which, during half a century, had alarmed and agitated Europe, filling every kingdom in it, by turns, with the terror of his arms, and the dread of being subjected to his power.

Robertson.

### \$ 255. An Account of MULY MOLUC.

When Don Sebastian, king of Portugal, had invaded the territories of Muly Moluc, emperor of Morocco, in order to dethrone him, and fet his crown upon the head of his nephew, Moluc was wearing away with a distemper which he himself knew was incurable. However, he prepared for the reception of fo formidable an enemy. He was indeed to far spent with his ficknefs, that he did not expect to live out the whole day, when the last decisive battle was given; but knowing the fatal confequences that would happen to his children and people, in case he should die before he put an end to that war, he commanded his principal officers, that if he died during the engagement, they should conceal his death from the army, and that they should ride up to the litter in which his corpfe was carried, under pretence of receiving orders from him as usual. Before the battle begun, he was carried through all the ranks of his army in an open litter, as they flood drawn up in array, encouraging them to fight valiantly in defence of their religion and country. Finding afterwards the battle to go against him, though he was very near his last agonies, he threw himself out of his litter, rallied his army, and led them on to the charge; which afterwards ended in a complete victory on the fide of the Moors. He had no fooner brought his men to the engagement, but finding himself utterly spent, he was again replaced in his litter, where laying his finger on his mouth, to enjoin secrecy to his officers, who stood about him, he died a few moments after in that posture.

Spestator.

# § 256. An Account of VALENTINE and Union.

At the fiege of Namur by the allies, there were in the ranks of the company commanded by captain Pincent, in colonel Frederic Hamilton's regiment, one Unnion, a corporal, and one Valentine, a pate

vate centinel: there happened between these two men a dispute about an affair of love, which, upon fome aggravations, grew to an irreconcileable hatred. Unnion being the officer of Valentine, took all opportunities even to strike his rival, and profess the spite and revenge which moved him to it. The centinal bore it without refistance; but frequently faid, he would die to be revenged of that tyrant. They had spent whole months in this manner, the one injuring, the other complaining; when, in the midft of this rage towards each other, they were commanded upon the attack of the castle, where the corporal received a shot in the thigh, and fell; the French preiling on, and he expecting to be trampled to death, called out to his enemy, "Ah, Valentine! can you leave me here?" Valentine immediately 1an back, and in the midst of a thick fire of the French, took the corporal upon his back, and brought him through all that danger as far as the abbey of Salfine, where ac nnon ball took off his head: his body fell under his enemy whom he was carrying off. Unnion immediately forgot his wound, role up, tearing his hair, and then threw himfelf upon the bleeding carcafe, crying, " Ah, Valentine! was it for me, who have fo barbaroufly used thee, that thou halt died? I will not live after thee." He was not by any means to be forced from the body, but was removed with it bleeding in his arms, and attended with tears by all their comrades who knew their enmity. When he was brought to a tent, his wounds were dressed by force; but the next day, still calling upon Valentine, and lamenting his cruelties to him, he died in the pangs of remorfe, Tatler.

# § 257. An Example of Historical Narra-

The Trojans (if we may believe tradition) were the first founders of the Roman commonwealth; who, under the conduct of Æneas, having made their escape from their own ruined country, got to Italy, and there for some time lived a rambling and unsettled life, without any fixed place of abode, among the natives, an uncultivated people, who had neither law nor regular government, but were wholly free from all rule or restraint. This mixed multitude, however, crowding together into one city, though originally different in extraction, language, and customs, united into one body, in a surprisingly short space of time.

And as their little state came to be improved by additional numbers, by policy, and by extent of territory, and feemed likely to make a figure among the nations, according to the common course of things, the appearance of prosperity drew upon them the envy of the neighbouring states; fo that the princes and people who bordered upon them, begun to feek occasions of quarelling with them. The alliances they could form were but few: for most of the neighbouring flates avoided embroiling themselves on their account. The Romans, feeing that they had nothing to trust to but their own conduct, found it necessary to bestir themselves with great diligence, to make vigorous preparations, to excite one another to face their enemies in the field, to hazard their lives in defence of their liberty, their country, and their families. And when, by their valour, they repulfed the enemy, they gave affiftance to their allies, and gained friendships by often giving, and seldom iemanding, favours of that fort. They had, by this time, established a regular form of government, to wit, the monarchical. And a fenate, confisting of men advanced in years, and grown wite by experience, though infirm of body, confulted with their kings upon all important matters, and, on account of their age, and care of their country, were called fathers. Afterwards, when kingly power, which was originally established for the prefervation of liberty, and the advantage of the state, came to degenerate into lawless tyranny, they found it necessary to alter the form of government, and to put the supreme power into the hands of two chief magistrates, to be held for one year only; hoping, by this contrivance, to prevent the bad effects naturally arising from the exorbitant licentiousness of princes, and the indefeafible tenure by which they generally imagine they hold their fovereignty, &c. Salt. Bell. Catilinar.

#### § 258. The Story of DAMON and PYTHIAS.

Damon and Pythias, of the Pythagorean fect in philosophy, lived in the time of Dionysius, the tyrant of Sicily. Their mutual friendship was so strong, that they were ready to die for one another. One of the two (for it is not known which) being condemned to death by the tyrant, obtained leave to go into his own country, to settle his affairs, on condition that the

other should consent to be imprisoned in his stead, and put to death for him, if he did not return before the day of execution. The attention of every one, and especially of the tyrant himself, was excited to the highest pitch; as every body was curious to fee what should be the event of so strange an affair. When the time was almost elapsed, and he who was gone did not appear, the rashness of the other, whose fanguine friendship had put him upon running so seemingly desperate a hazard, was univerfally blamed. But he still declared, that he had not the least shadow of doubt in his mind of his friends's fidelity. The event shewed how well he knew him. He came in due time, and furrendered himfelf to that fate, which he had no reason to think he should escape; and which he did not defire to escape by leaving his friend to suffer it in his place. Such fidelity softened even the favage heart of Dionysius himself. He pardoned the condemned. He gave the two friends to one another; and begged that they would take himself in for a third. Val. Max. Cic.

## § 259. The Story of Dionysius the Tyrant.

Dionysius, the tyrant of Sicily, shewed how far he was from being happy, even whilst he had abounded in riches, and all the pleasures which riches can procure. Damocles, one of his flatterers, was complimenting him upon his power, his treasures, and the magnificence of his royal state, and affirming, that no monarch ever was greater or happier than he. " Have you " a mind, Damocles," fays the king, " to " tafte this happiness, and know, by ex-"perience, what my enjoyments are, of which you have so high an idea?" Damocles gladly accepted the offer. Up-on which the king ordered, that a royal banquet should be prepared, and a gilded couch placed for him, covered with rich embroidery, and fideboards loaded with gold and filver place of immente value. Pages of extraordinary beauty were ordered to wait on him at table; and to obey his commands with the greatest readineis, and the most profound submission. Neither ointments, chaplets of flowers, nor rich perfumes were wanting. The table was loaded with the most exquisite delicacies of every kind. Damocles fancied himself amongst the gods. In the midst of all his happiness, he sees, let · down from the roof exactly over his neck

as he lay indulging himself in state, a glittering sword hung by a single hair. The sight of destruction thus threatening him from on high, soon put a stop to his joy and revelling. The pomp of his attendance, and the glitter of the carved plate, gave him no longer any pleasure. He dreads to stretch soith his hand to the table. He throws off the chaplet of roses. He hastens to remove from his dangerous situation, and at last begs the king to restore him to his former humble condition, having no desire to enjoy any longer such a dreadful kind of happiness.

Cic. Tufe, Queft.

# § 260. A remarkable Inflance of filial Duty.

The prator had given up to the triumvir a woman of some rank, condemned, for a capital crime, to be executed in the prison. He who had charge of the execution, in confideration of her birth, did not immediately put her to death. He even ventured to let her daughter have access to her in prison; carefully searching her, however, as the went in, left the should carry with her any sustenance; concluding, that in a few days the mother must of course perish for want, and that the feverity of putting a woman of family to a violent death, by the hand of the executioner, might thus be avoided. Some days passing in this manner, the triumvir began to wonder that the daughter still came to ville her mother, and could by no means comprehend, how the latter should live so long. Watching, therefore, carefully, what passed in the interview between them, he found, to his great affonishment, that the life of the mother had been, all this while, supported by the milk of the daughter, who came to the prison every day, to give her mother her breafts to fuck. The strange contrivance between them was represented to the judges, and procured a pardon for the mother. Nor was it thought sufficient to give to so dutiful a daughter the forseited life of her condemned mother, but they were both maintained afterwards by a pension settled on them for life. And the ground upon which the prison stood was consecrated, and a temple to filial piety built upon it.

What will not filial duty contrive, or what hazards will it not run, if it will put a daughter upon venturing, at the peril of her own life, to maintain her imprisoned and condemned mother in so unusual a

manner!

manner! For what was ever heard of more strange, than a mother sucking the breasts of her own daughter? It might even seem so unnatural as to render it doubtful whether it might not be, in some sort, wrong, if it were not that duty to parents is the first law of nature.

Val. Max. Plin.

#### § 261. The Continence of SCIPIO AFRI-CANUS.

The foldiers, after the taking of New Carthage, brought before Scipio a young lady of fuch distinguished beauty, that the attracted the eyes of all wherever the went. Scipio, by enquiring concerning her country and parents, among other things learned, that the was betrothed to Allucius, prince of the Celtiberians. He immediately ordered her parents and bridegroom to be fent for. In the mean time he was informed, that the young prince was so excessively enamoured of his bride, that he could not survive the loss of her. For this reason, as soon as he appeared, and before he spoke to her parents, he took great care to talk with him. " As "you and I are both young," faid he, "we can converse together with greater "freedom, When your bride, who had " fallen into the hands of my foldiers, " was brought before me, I was informed " that you loved her passionately; and, in " truth, her perfect beauty lest me no " room to doubt of it. If I were at liber-"ty to indulge a youthful passion, I "mean honourable and lawful wedlock, " and were not folely engrosfed by the "affairs of my republic, I might have "hoped to have been pardoned my ex-" cestive love for so charming a mistress. "But as I am situated, and have it in my " power, with pleasure I promote your "happiness. Your future spouse has met " with as civil and modest treatment from " me, as if the had been amongst her own " parents, who are foon to be yours too. "I have kept her pure, in order to have " it in my power to make you a present " worthy of you and of me. The only "return I afk of you for this favour is, " that you will be a friend to the Roman " people; and that if you believe me to "be a man of worth, as the states of " Spain formerly experienced my father " and uncle to be, you may know there " are many in Rome who refemble us;

" universe, whom you ought less to defire " to be an enemy, or more a friend, to "you or yours." The youth, covered with blushes, and full of joy, embraced Scipio's hands, praying the immortal gods to reward him, as he himself was not capable to do it in the degree he himfelf defired, or he deferved. Then the parents and relations of the virgin were called. They had brought a great fum of money to raniom her. But feeing her restored without it, they began to beg Scipio to accept that sum as a present; protesting they would acknowledge it as a favour, as much as they did the restoring the virgin without injury offered to her. Scipio, unable to refult their importunate folicitations, told them, he accepted it; and ordering it to be laid at his feet, thus addressed Allucius: "To the portion you " are to receive from your father-in-law, " I add this, and beg you would accept it "as a nuptial present." So he desired him to take up the gold, and keep it for himself. Transported with joy at the prefents and honours conferred on him, he returned home, and expatiated to his countrymen on the merits of Scipio. "There " is come amongst us," said he, " a young "hero, like the gods, who conquers all things as well by generofity and bene-" ficence, as by arms." For this reason, having raifed troops among his own fubjects, he returned a few days after to Scipio with a body of 1400 horse. Livy.

## § 262. The private Life of EMILIUS. SCIPIO.

The taking of Numantia, which terminated a war that difgraced the Roman name, completed Scipio's military exploits. But, in order to have a more perfect idea of his merit and character, it seems that, after having seen him at the head of armies, in the tumult of battles, and in the pomp of triumphs, it will not be lost labour to consider him in the repose of a private life, in the midst of his friends, family, and household. The truly great man ought to be so in all things. The magistrate, general, and prince, may constrain themselves, whilst they are in a manner exhibiting themselves as spectacles to the public, and appear quite different from what they really are. But reduced to themselves, and without the witnesses who force them to wear the mask, all their lustre, like the and there are not a people in the pomp of the theatre, often abandons them,

and leaves little more to be feen in them than meanages and narrowness of mind.

Scipio did not depart from himself in any respect. He was not like certain paintings, that are to be feen only at a distance: he could not but gain by a nearer view. The excellent education which he had had, through the care of his father Paulus Æmilius, who had provided him with the most learned masters of those times, as well in polite learning as the sciences; and the instructions he had received from Polybius, enabled him to fill up the vacant hours he had from public affairs profitably, and to support the leifure of a private life, with pleasure and This is the glorious testimony given of him by an historian: " Nobody " knew better how to mingle leifure and " action, nor to use the intervals of rest " from public business with more elegance " and taste. Divided between arms and " books, between the military labours of " the camp, and the peaceful occupations " of the closet, he either exercised his body " in the dangers and fatigues of war, or " his mind in the study of the sciences "."

The first Scipio Africanus used to say, That he was never less idle, than when at leifure, or less alone, than when alone. A fine faying, cries Cicero, and well worthy of that great man. And it shews that, even when inactive, he was always employed; and that when alone, he knew how to converse with himself. A very extraordinary disposition in persons accustomed to motion and agitation, whom leifure and folitude, when they are reduced to them, plunge into a difgust for every thing, and fill with melancholy; fo that they are displeased in every thing with themselves, and fink under the heavy burden of having nothing to do. This faying of the first Scipio seems to me to suit the fecond still better, who having the advantage of the other by being educated in a taste for polite learning and the sciences, found in that a great resource against the inconvenience of which we have been speaking. Besides which, having usually Polybius and Panætius with him, even in the field, it is easy to judge that his house was open, in times of peace, to all the learned. Every body knows, that the comedics of Terence, the most accomplished work of that kind Rome ever pro-

duced, for natural elegance and beauties, are ascribed to him and Lælius, of whom we shall soon speak. It was publicly enough reported, that they affilted that poet in the composition of his pieces; and Terence himself makes it an honour to him in the prologue to the Adelphi. f shall undoubtedly not advise any body, and least of all persons of Scipio's rank, to write comedies. But on this occasion, let us only confider take in general for letters. Is there a more ingenuous, a more affecting pleasure, and one more worthy of a wife and virtuous man, I might perhaps add, or one more necessary to a military person, than that which results from reading works of wit, and from the conversation of the learned? Providence thought fit, according to the observation of a Pagan, that he should be above those trivial pleafures, to which persons without letters, knowledge, curiofity, and tafte for reading, are obliged to give themselves

up.
Another kind of pleasure, still more senfible, more warm, more natural, and more implanted in the heart of man, constituted the greatest felicity of Scipio's life; this was that of friendship; a pleasure seldom known by great persons or princes, because. generally loving only themselver, they do not deferve to have friends. However, this is the most grateful tie of human fociety; fo that the poet Ennius fays with great reason, that to live without friend. is not to live. Scipio had undoubtedly a great number of them, and those very illustrious : but I shall speak here only of Lælius, whose probity and prudence acquired him the furname of the Wife.

Never, perhaps, were two friends better fuited to each other than those great They were almost of the same age, and had the fame inclination, benevolence of mind, talle for learning of all kinds, principles of government, and zeal for the public good. Scipio, no doubt, took place in point of military glory; but Lælius did not want merit of that kind; and Cicero tells us, that he fignalized himself very much in the war with Viriathus. As to the talents-of the mind, the superiority, in respect of eloquence, seems to have been given to Lælius; though Cicero does not agree that it was due to him, and fays, that Lælius's style savoured more of the ancient manner, and had something les agreeable in it than that of Scipio.

Let us hear Lælius himself (that is the

words Cicero puts into his mouth) upon the strict union which subsisted between Scipio and him. " As for me," fays Lelius, " of all the gifts of nature or fortune, " there are none, I think, comparable to " the happiness of having Scipio for my " friend. I found in our friendship a per-" feet conformity of fentiments in respect " to public affairs; an inexhaustible fund " of counsels and supports in private life; " with a tranquillity and delight not to be " expressed. I never gave Scipio the " least offence, to my knowledge, nor " ever heard a word escape him that did " not please me. We had but one house, " and one table at our common expence, " the frugality of which was equally the " tafte of both. In war, in travelling, in " the country, we were always together. " I do not mention our studies, and the " attention of us both always to learn " fomething; this was the employment of " all our leifure hours, removed from the " fight and commerce of the world."

Is there any thing comparable to a friendship like that which Lælius hast just described? What a consolation is it to have a fecond felf, to whom we have nothing fecret, and in whose heart we may pour out our own with perfect effusion! Could we taste prosperity so sensibly, if we had no one to fhare in our joy with us? And what a relief is it in adversity, and the accidents of life, to have a friend still more affected with them than ourselves! What highly exalts the value of the friendship we speak of, was its not being founded at all upon interest, but folely upon esteem for each other's virtues. "What " occasion," fays Lælius, " could Scipio " have of me? Undoubtedly none; nor I of him. But my attachment to him was " the effect of my high efteem and admi-" ration of his virtues; and his to me arose " from the favourable idea of my character " and manners. The friendship increased " afterwards upon both fides, by habit and " commerce. We both, indeed, derived ee great advantages from it; but those " were not our view, when we began to " love each other."

I cannot place the famous embassy of Scipio Africanus into the East and Egypt, better than here; we shall see the same taste of simplicity and modesty, as we have just been representing in his private life, hine out in it. It was a maxim with the Romans, frequently to send annualsadors to their allies, to take cognizance of their

affairs, and to accommodate their differences. It was with this view that three illustrious persons, P. Scipio Africanus, Sp. Mummius, and L. Metellus, were fent into Egypt, where Ptolemy Physon then reigned, the most cruel tyrant mentioned in history. They had orders to go from thence to Syria, which the indolence, and afterwards the captivity of Demetrius Nicanor amongst the Parthians, made a prey to troubles, factions, and revolts. They were next to vifit Afia Minor, and Greece; to inspect into the affairs of those countries; to inquire into what manner the treaties made with the Romans were observed; and to remedy, as far as possible, all the disorders that should come to their knowledge. They acquitted themselves with fo much equity, wisdom, and ability, and did fuch great fervices to those to whom they were fent, in re-establishing order amongst them, and in accommodating their differences, that, when they returned to Rome, ambaffadors arrived there from all the parts in which they had been. to thank the fenate for having fent persons. of fuch great merit to them, whose wisdom and goodness they could not sufficiently commend.

The first place to which they went, according to their instructions, was Alexandria. The king received them with great magnificence. As for them, they affected it so little, that at their entry, Scipio, who was the richest and most powerful person of Rome, had only one friend, the philosopher Panatius, with him, and five domestics. His victories, says an ancient writer, and not his attendants, were considered; and his personal virtues and qualities were efteemed in him, and not the glitter of gold and silver.

Though, during their whole stay in Egypt, the king caused their table to be covered with the most exquisite provisions of every kind, they never touched any but the most simple and common, despising all the rest, which only serve to soften the mind and enervate the body.-But, on fuch occasions, ought not the ambassadors of fo powerful a state as Rome to have fultained its reputation of majesty in a foreign nation, by appearing in public with a numerous train and magnificent equipages? This was not the taste of the Romans, that is, of the people that, among all nations of the earth, thought the most justly of true greatness and folid glory.

§ 263.

## § 263. On Punctuation.

Punctuation is the art of marking in writing the feveral paufes, or refts, between fentences and the parts of fentences, according to their proper quantity or proportion, as they are expressed in a just and accurate pronunciation.

As the feveral articulate founds, the fyllables and words, of which fentences confift, are marked by letters; fo the rests and pauses, between sentences and their parts,

are marked by Points.

But, though the feveral articulate founds are pretty fully and exactly marked by letters of known and determinate power; yet the feveral paufes, which are used in a just pronunciation of discourse, are very imperfectly expressed by Points.

For the different degrees of connexion between the feveral parts of fentences, and the different paufes in a just pronunciation, which express those degrees of connexion according to their proper value, admit of great variety; but the whole number of Points, which we have to express this variety, amounts only to four.

Hence it is, that we are under a necesfity of expressing paules of the same quantity, on different occasions, by different Points; and more frequently, of expressing pauses of different quantity by the same

Points.

So that the doctrine of Punctuation must needs be very imperfect: few precise rules can be given which will hold without exception in all cases; but much must be left to the judgment and talle of the

On the other hand, if a greater number of marks were invented to express all the possible different pauses of pronunciation; the doctrine of them would be very perplexed and difficult, and the use of them would rather embarrass than assist the reader.

It remains, therefore, that we be content with the rules of Punctuation, laid down with as much exactness as the nature of the subject will admit: such as may serve for a general direction, to be accommodated to different occasions; and to be fupplied, where deficient, by the writer's

judgment.
The several degrees of connex on between fentences, and between their principal conftructive parts, Rhetoricians have considered under the following distinctions, a constructive parts, and the degrees of con-

as the most obvious and remarkable: the Period, Colon, Semicolon, and Com-

The Period is the whole sentence, complete in itself, wanting nothing to make a full and perfect fense, and not connected in construction with a subsequent sentence.

The Colon, or Member, is a chief conflructive part, or greater division, of a fen-

The Semicolon, or Half-member, is a less confluctive part, or subdivision, of a fentence or member.

A sentence or member is again subdivided into Commas, or Segments; which are the least constructive parts of a fentence er member, in this way of confidering it; for the next fubdivition would be the refolution of it into phrases and words.

The Grammarians have followed this division of the Rhetoricians, and have appropriated to each of these distinctions its mark, or point; which takes its name from the part of the sentence which it is employed to diffinguish, as follows:

The Period The Colon is thus marked The Semicolon The Comma

The proportional quantity, or time, of the points, with respect to one another, is determined by the following general rule: The Period is a paule in quantity or duration double of the Colon: the Colon is double of the Semicolon; and the Semicolon is double of the Comma. So that they are in the fame proportion to one another, as the Semibref, the Minim, the Crotchet, and the Quaver, in mulic. The precise quantity, or duration, of each paule or note evenot be defined; for that varies with the time, and both in discourse and music the same composition may be rehearfed in a quicker or a flower time: but in mufic the proportion between the notes remains ever the tame; and in discourse, if the doctrine of Punctuation were exact, the proportion between the paufes would be ever invariable.

The Points then being defigned to express the pauses, which depend on the difterent degrees of connexion between fentences and between their principal conftructive parts; in order to understand the meaning of the Points, and to know how to apply them properly, we must consider the nature of a fentence, as divided into its principal

R 1

nexion between those parts upon which such division of it depends.

To begin with the least of these principal constructive parts, the Comma. In order the more clearly to determine the proper application of the Peint which marks it, we must distinguish between an impersed phrase, a simple sentence, and a compounded sentence.

An imperfect phrase contains no affertion, or does not amount to a proposition or fentence.

A fimple fentence has but one subject, and one finite verb.

A compounded fentence has more than one fullyett, or one finite verb, either expreffed or underflood: or it contails of two or more fimple fentences connected together

In a fentence, the fubjeft and the verb may be each of them accompanied with feveral adjuncts; as the object, the end, the circumfances of time, place, manner, and the like; and the fubject of verb may be either immediately connected with them, or mediately; that is, by being connected with force thing, which is compacted with force other; and to on.

If the feveral adjuncts affect the object of the verbing different manner, they conly for many imperfect photo, and the fentence is fimple.

A simple futence admits of the point, by which it rules be divided, or d tin genti-ed in to parts.

If the total adjuncts affect the Jobiest or the verb in the random and extreme may be reforted into to many amplitudeness, the fertecen then becomes comparished, and it must be divided in a fit of the Poirts.

Ten, if these we fever if fubje to be longing in the same manner to one with or feveral ve by been given, the name manner to one fit by to the fit serv and verbs are fill to be same and equal in manber; for every veril made base its future by and every fubject its verb, and every one of the tubjects, or verbs, thould or may have its point or diffinction.

Examples :

"The pattion for praise produces excellent effects in women of fense." Addition, Speck. No 73. In this sentence passion is the subject, and produces the verb: each of which is accomparied and connected with its adjurcts. The subject is not passion in general, but a particular passion deter-

mined by it Is foret of specification, as we may call i paffion for praise. So likewise the simmediately connected with its object cellent effects; and mediately, that i poy the intervention of the word effects, with avomen, the subject in which these effects are produced; which again is connected with its adjunct of specification; for it is not meaned of women in general, but of women of fenje only. Laffly, it is to be observed, that the verb is connected with each of these several adjunds in a different manner; namely, with efficiency as the object; with accomen, as the Jubje & of them; with jerje, as the quality or chara? endie of thote wemen. The adjuncts therefore are only to many imperfeel phrase; it e sentence is a simple sentence, and admits of no point, by which now be diffinguithed into parts.

"The pulson for praife, which is fo

The piffion for praife, which is for the velocities in the fair fex, produces excellent effects in women of fenfe." Here a new velocities introduced, accompanied with adultation of it owner, and the fubject is repeated by the relative pronoun which. It now becomes a compounded fentence, and up of two simple fentences, one of which is inferted in the middle of the other, it must therefore be diffinguished that confidence in the form the production of the additional leavence.

the best pany inflances have we [in the firsters] or chaffity, fidelity, devotion! How prany ladies distinguish themfelves by the education of their children, care of the farrities, and love of their husbands; violate the great qualities and atchievements of womerskind: as the making of war, the critiving on of traffic, the admendication of justice, are those by which men grow famous, and get themselves a name. That.

In the first of these two sentences, the adjuncts chastis, factors, according are connected with the verb by the word instances in the same manner, and in effect make so many distinct sentences: "how many instances have we of chastist! how many instances have we of selection!" They must therefore be separated from one another by a point. The same may be said of the adjuncts, "checked as their children, &c." in the solid her part of the next sentence: as them, of the several subjects, "the making of war. &c." in the latter part; which have in cliect each their verb;

100

for each of these "is an atchievement by

which men grow famous."

As fentences themselves are divided into simple and compounded, so the members of sentences may be divided likewise into simple and compounded members: for whole fentences, whether simple or compounded, may become members of other sentences by means of some additional connexion.

Simple members of fentences closely connected together in one compounded member, or fentence, are distinguished or feparated by a Comma: as in the fore-

going examples.

So likewife, the cafe absolute; nouns in opposition, when confishing of many terms; the participle with something depending on it are to be dislinguished by the Commustor they may be resolved into simple members.

When an address is made to a person, the noun, answering to the vocative case in Latin, is distinguished by a Comma.

#### L'amples :

" This faid, He form'd thee, Adam; thee, O man, Dust of the ground."

"Now morn, her rofy steps in th' eastern clime Advancing, fow'd the earth with orient pearl"

Two nouns, or two adjectives, connected by a fingle Copulative or Difjunctive, are not separated by a point: but when there are more than two, or where the conjunction is understood, they must be distingushed by a Comma.

Simple members connected by relatives, and comparatives, are for the most part distinguished by a Comma: but when the members are short in comparative sentences; and when two members are closely connected by a relative, restraining the general notion of the antecedent to a particular sense; the pause becomes almost insensible, and the Comma is better omitted.

#### Examples:

"Raptures, transports, and extasses, are the rewards which they confer: sighs and tears, prayers and broken hearts, are the offerings which are paid to them."

Addison, ibid.

"Gods partial, changeful, paffionate, unjust, Whole attributes were rage, revenge, or lust."

Pape.

"What is sweeter than honey? and what is stronger than a lion?"

A circumstance of importance, though no more than an imperfect phrase, may be set off with a Comma on each side, to give it greater force and distinction.

Example:

"The principle may be defective or faulty; but the consequences it produces are so good, that, for the benefit of mankind, it ought not to be extinguished."

Addison, ibid.

A member of a sentence, whether simple or compounded, that requires a greater pause than a Comma, yet does not of itself make a complete sentence, but is followed by something closely depending on it, may be distinguished by a Semicolon.

Example:

"But as this passion for admiration, when it works according to reason, improves the beautiful part of our species in every thing that is laudable; so nothing is more destructive to them, when it is governed by vanity and folly."

Addison, ibid.

Here the whole sentence is divided into two parts by the Semicolon; each of which parts is a compounded member, divided into its simple members by the Comma.

A member of a fentence, whether simple or compounded, which of itself would make a complete sentence, and so requires a greater pause than a Semicolon, yet is followed by an additional part making a more full and perfect sense, may be distinguished by a Colon.

Example:

Were all books reduced to their quintessence, many a bulky author would make his appearance in a penny paper: there would be scarce any such thing in nature as a folio: the works of an age would be contained on a few shelves: not to mention millions of volumes that would be utterly annihilated." Addison, Spect. No 124.

Here the whole sentence is divided into four parts by Colons: the first and last of which are compounded members, each divided by a Comma; the second and third are simple members.

When a Semicolon has preceded, and a greater pause is still necessary; a Colon R r 2 may

may be employed, though the fentence be The Interrogation point, incomplete.

The Colon is also commonly used, when an example, or a speech, is introduced.

When a fentence is so far perfectly finished, as not to be connected in construction with the following fentence, it is marked with a Period.

In all cases, the proportion of the several points in respect to one another is rather to be regarded, than their supposed precife quantity, or proper office, when taken feparately.

Besides the points which mark the pauses in discourse, there are others which denote a different modulation of the voice in correspondence with the sense. These are

The Exclamation point, The Parenthefis,

The Interrogation and Exclamation Points are lufficiently explained by their names; they are indeterminate as to their quantity or time, and may be equivalent in that respect to a Semicolon, a Colon, or a Period, as the fense requires. They mark an elevation of the voice.

The Parenthesis incloses in the body of a fentence a member inferted into it, which is neither necessary to the sense, nor at all affects the conftruction. It marks a moderate depression of the voice, with a paste greater than a Comma.

END OF THE SECOND BOOK,
