1. DATE 10/10/64	2. LOCATION Norton, Connecticut		12. CONCLUSIONS <input type="checkbox"/> Was Balloon <input type="checkbox"/> Probably Balloon <input type="checkbox"/> Possibly Balloon
3. DATE-TIME GROUP Local 11:15 PM GMT 06/0100Z	4. TYPE OF OBSERVATION <input type="checkbox"/> Ground-Visual <input type="checkbox"/> Ground-Radar <input type="checkbox"/> Air-Visual <input type="checkbox"/> Air-Intercept Radar		<input type="checkbox"/> Was Aircraft <input type="checkbox"/> Probably Aircraft <input type="checkbox"/> Possibly Aircraft
5. PHOTOS <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	6. SOURCE Civilian		<input checked="" type="checkbox"/> Was Astronomical Meteor <input type="checkbox"/> Probably Astronomical <input type="checkbox"/> Possibly Astronomical
7. LENGTH OF OBSERVATION 4 seconds	8. NUMBER OF OBJECTS one	9. COURSE NE to SE	<input type="checkbox"/> Other _____ <input type="checkbox"/> Insufficient Data for Evaluation <input type="checkbox"/> Unknown
10. BRIEF SUMMARY OF SIGHTING Very bright, solid, light gray obj. Shaped like a boomerang. Approx 100' across tips & 25' thick.		11. COMMENTS The witness probably saw a meteor of unusual size & brightness.	

39. Do you think you can estimate the speed of the object?

(Circle One) Yes No

IF you answered YES, then what speed would you estimate? 10^6 per second. m.p.h.

40. Do you think you can estimate how far away from you the object was?

(Circle One) Yes No

IF you answered YES, then how far away would you say it was? feet.

41. Please give the following information about yourself:

NAME
Last Name First Name Middle Name

ADDRESS Noroton, Conn.
Street City Zone State

TELEPHONE NUMBER

What is your present job? Physicist.

Head lecturer at the Edgerton Memorial Planetarium, Stamford Museum and Nature Center, High Ridge Rd., Stamford, Conn.

Age 52 Sex Male

Please indicate any special educational training that you have had.

- a. Grade school e. e. Technical school
 b. High school (Type)
 c. College B.S. in Civil Engineering Other special training Evening course in
 d. Post graduate "Physical Optics"

42. Date you completed this questionnaire:

31st Oct. 1958
Day Month Year

Note:- I would like to have at least six (6) sets of these 10 sheets, to be used as follows:-
 3 in my care to be used by any patron of the planetarium or other reporting to the museum, who has seen an U.F.O. and wishes to properly report it---
 3 in the care of the Secretary of The Fairfield County Astronomical Society for preparation and for any qualified use of one of the members.

34. What were the weather conditions at the time you saw the object?

34.1 CLOUDS (Circle One)

- a. Clear sky
 b. Hazy
 c. Scattered clouds
 d. Thick or heavy clouds
 e. Don't remember

34.2 WIND (Circle One)

- a. No wind
 b. Slight breeze
 c. Strong wind
 d. Don't remember

34.3 WEATHER (Circle One)

- a. Dry
 b. Fog, mist, or light rain
 c. Moderate or heavy rain
 d. Snow
 e. Don't remember

34.4 TEMPERATURE (Circle One)

- a. Cold
 b. Cool 50°
 c. Warm
 d. Hot
 e. Don't remember

35. When did you report to some official that you had seen the object?

6th Oct. 1958
 Day Month Year

36. Was anyone else with you at the time you saw the object?

(Circle One) Yes No

36.1 IF you answered YES, did they see the object too?

(Circle One) Yes No

36.2 Please list their names and addresses:

37. Was this the first time that you had seen an object or objects like this?

(Circle One) Yes No

37.1 IF you answered NO, then when, where, and under what circumstances did you see other ones?

38. In your opinion what do you think the object was and what might have caused it?

An U.F.O. of unknown nature or cause.

32. In the following sketch, imagine that you are at the point shown. Place an "A" on the curved line to show how high the object was above the horizon (skyline) when you *first* saw it. Place a "B" on the same curved line to show how high the object was above the horizon (skyline) when you *last* saw it.

33. In the following larger sketch place an "A" at the position the object was when you *first* saw it, and a "B" at its position when you *last* saw it. Refer to smaller sketch as an example of how to complete the larger sketch.

I had to turn to follow it.

25. Where were you located when you saw the object?
(Circle One):

- a. Inside a building
- b. In a car
- c. Outdoors
- d. In an airplane
- e. At sea
- f. Other _____

26. Were you (Circle One)

- a. In the business section of a city?
- b. In the residential section of a city?
- c. In open countryside?
- d. Flying near an airfield?
- e. Flying over a city?
- f. Flying over open country?
- g. Other _____ residential area countryside.

27. What were you doing at the time you saw the object, and how did you happen to notice it?

I was looking at the double cluster in lenses with my 7x50 binoculars when it sped into my field of view and I managed to keep it there.

28. IF you were MOVING IN AN AUTOMOBILE or other vehicle at the time, then complete the following questions:

28.1 What direction were you moving? (Circle One)

- a. North
- b. Northeast
- c. East
- d. Southeast
- e. South
- f. Southwest
- g. West
- h. Northwest

28.2 How fast were you moving? _____ miles per hour.

28.3 Did you stop at any time while you were looking at the object?

(Circle One) Yes No

29. What direction were you looking when you first saw the object? (Circle One)

- a. North
- b. Northeast
- c. East
- d. Southeast
- e. South
- f. Southwest
- g. West
- h. Northwest

30. What direction were you looking when you last saw the object? (Circle One)

- a. North
- b. Northeast
- c. East
- d. Southeast
- e. South
- f. Southwest
- g. West
- h. Northwest

31. If you are familiar with bearing terms (angular direction), try to estimate the number of degrees the object was from true North and also the number of degrees it was upward from the horizon (elevation).

31.1 When it first appeared:

- a. From true North 40 degrees.
- b. From horizon 70 degrees.

31.2 When it disappeared:

- a. From true North 160 degrees.
- b. From horizon 85 degrees.

20. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

21. IF POSSIBLE, try to guess or estimate what the real size of the object was in its longest dimension. _____ feet.

22. How large did the object or objects appear as compared with one of the following objects held in the hand and at about arm's length?

(Circle One):

- | | |
|------------------|------------------|
| a. Head of a pin | g. Silver dollar |
| b. Pea | h. Baseball |
| c. Dime | i. Grapefruit |
| d. Nickel | j. Basketball |
| e. Quarter | k. Other _____ |
| f. Half dollar | |

22.1 (Circle One of the following to indicate how certain you are of your answer to Question 22.)

- | | |
|-------------------|------------------|
| a. Certain | c. Not very sure |
| b. Fairly certain | d. Uncertain |

23. How did the object or objects disappear from view? Obscured by the roof of my house, as I was standing on the back porch looking at the double cluster in Perseus, using 7X50 binoculars.

24. In order that you can give as clear a picture as possible of what you saw, we would like for you to imagine that you could construct the object that you saw. Of what type material would you make it? How large would it be, and what shape would it have? Describe in your own words a common object or objects which when placed up in the sky would give the same appearance as the object which you saw.

Material- dull aluminum. Plan view as in #17. Say 100 feet across the tips, possibly 25 feet thick, flying at a height between one statute and one nautical mile, at a speed of one mach.

16. Tell in a few words the following things about the object.

a. Sound None heard.

b. Color Light gray.

17. Draw a picture that will show the shape of the object or objects. Label and include in your sketch any details of the object that you saw such as wings, protrusions, etc., and especially exhaust trails or vapor trails. Place an arrow beside the drawing to show the direction the object was moving.

18. The edges of the object were:

- (Circle One):
- a. Fuzzy or blurred
 - b. Like a bright star
 - c. Sharply outlined
 - d. Don't remember

e. Other _____

19. IF there was MORE THAN ONE object, then how many were there? _____
 Draw a picture of how they were arranged, and put an arrow to show the direction that they were traveling.

8. IF you saw the object, at NIGHT, TWILIGHT, or DAWN, what did you notice concerning the STARS and MOON?

8.1 STARS (Circle One):

- a. None
 b. A few
 c. Many (very)
 d. Don't remember

8.2 MOON (Circle One):

- a. Bright moonlight
 b. Dull moonlight
 c. No moonlight — pitch dark
 d. Don't remember

9. Was the object brighter than the background of the sky?

(Circle One):

a. Yes

b. No

c. Don't remember

10. IF it was BRIGHTER THAN the sky background, was the brightness like that of an automobile headlight?:

(Circle One) a. A mile or more away (a distant car)?

b. Several blocks away?

c. A block away?

d. Several yards away?

e. Other Less than "a"

11. Did the object:

(Circle One for each question)

- | | | | |
|---|-----|-------------------------------------|------------|
| a. Appear to stand still at any time? | Yes | <input checked="" type="radio"/> No | Don't Know |
| b. Suddenly speed up and rush away at any time? | Yes | <input checked="" type="radio"/> No | Don't Know |
| c. Break up into parts or explode? | Yes | <input checked="" type="radio"/> No | Don't Know |
| d. Give off smoke? | Yes | <input checked="" type="radio"/> No | Don't Know |
| e. Change brightness? | Yes | <input checked="" type="radio"/> No | Don't Know |
| f. Change shape? | Yes | <input checked="" type="radio"/> No | Don't Know |
| g. Flicker, throb, or pulsate? | Yes | <input checked="" type="radio"/> No | Don't Know |

12. Did the object move behind something at anytime, particularly a cloud?

(Circle One):

Yes

No

Don't Know.

IF you answered YES, then tell what

it moved behind: _____

13. Did the object move in front of something at anytime, particularly a cloud?

(Circle One):

Yes

No

Don't Know.

IF you answered YES, then tell what

it moved in front of: _____

Milky Way and other stars.

14. Did the object appear: (Circle One):

a. Solid?

b. Transparent?

c. Don't Know.

15. Did you observe the object through any of the following?

- | | | | | | |
|-----------------|--------------------------------------|----|----------------|--------------------------------------|----|
| a. Eyeglasses | <input checked="" type="radio"/> Yes | No | e. Binoculars | <input checked="" type="radio"/> Yes | No |
| b. Sun glasses | Yes | No | f. Telescope | Yes | No |
| c. Windshield | Yes | No | g. Theodolite | Yes | No |
| d. Window glass | Yes | No | h. Other _____ | | |

U. S. AIR FORCE TECHNICAL INFORMATION SHEET

This questionnaire has been prepared so that you can give the U. S. Air Force as much information as possible concerning the unidentified aerial phenomenon that you have observed. Please try to answer as many questions as you possibly can. The information that you give will be used for research purposes, and will be regarded as confidential material. Your name will not be used in connection with any statements, conclusions, or publications without your permission. We request this personal information so that, if it is deemed necessary, we may contact you for further details.

1. When did you see the object?

5th Oct. 1953
Day Month Year

2. Time of day: _____
Hour Minutes

(Circle One): A.M. or **P.M.**

3. Time zone:

(Circle One): **a. Eastern**
b. Central
c. Mountain
d. Pacific
e. Other _____

(Circle One): **a. Daylight Saving**
b. Standard

03:27

4. Where were you when you saw the object?

~~_____~~
Nearest Postal Address

Noroton
City or Town

Connecticut
State or Country

Additional remarks: _____

5. Estimate how long you saw the object. 0 0 1
Hours Minutes Seconds

5.1 Circle one of the following to indicate how certain you are of your answer to Question 5.

a. Certain c. Not very sure
b. Fairly certain d. Just a guess

6. What was the condition of the sky?

(Circle One): a. Bright daylight
b. Dull daylight
c. Bright twilight
d. Just a trace of daylight
e. No trace of daylight
f. Don't remember

7. IF you saw the object during DAYLIGHT, TWILIGHT, or DAWN, where was the SUN located as you looked at the object?

(Circle One): a. In front of you
b. In back of you
c. To your right
d. To your left
e. Overhead
f. Don't remember

9:30pm 5 Oct

27 October 1958

Dear Mr. [REDACTED]

This is to acknowledge and thank you for your letter dated 6 October 1958, addressed to the Civil Air Patrol, concerning an unidentified flying object sighting at Noroton, Connecticut on 5 October 1958.

A preliminary analysis of this sighting suggests you observed a meteor or meteorite of uncommon brightness, possibly for the first time through binoculars. The fact that it was exceptionally clear that night was also probably a contributing factor.

In order to complete a final analysis and/or evaluation of the sighting, your original letter needs expansion and in some instances clarification.

I am inclosing a U. S. Air Force Technical Information Sheet for you to complete. In addition, under remarks on page 10 of the form, will you please answer the following questions:

1. Was the angular estimation of the size made through the binoculars or with the unaided eye?
2. If angular estimate of size was made through the glasses, is this an estimate of a portion of the angular field of vision?
3. What is the field of vision of the witnesses' binoculars?
4. Has the witness ever observed a meteor through binoculars?

When the form is completed will you please forward it direct to Air Technical Intelligence Center, Wright-Patterson Air Force Base, Dayton, Ohio. They will then complete the evaluation of your sighting and you will be advised of the conclusions.

Many thanks again for your interest in this matter.

OFFICE OF PUBLIC AFFAIRS
Sincerely,

Incl

C.A.P. --- A.A.F.,

Bolling Field,

Washington 25, D.C.

Dear Sir,

As the head-lecturer at the Edgerton Memorial Planetarium of the Stamford (Conn.) Museum and Nature Center, I have always parried questions from the audience about "Flying Saucers" with the statement "Never having seen an U.F.C., I cannot say." Will you consider the following and let me know if I saw an U.F.C.?

At close to 9:30 P.M., E.D.T. Sunday Oct. 5, 1958, while observing the double cluster in Cassiopeia with a pair of 7X50 binoculars, there rapidly shot into my field of view a faintly luminous area, shaped like a parabolic crescent, trailing the horns. The shape reminded me of a non-rotating boomerang or a swallow gliding (if it had no head or tail) or in other words, curved swept-wings. I managed to keep it in the field of the binoculars until it was cut off by my house, being at a point near Beta Pegasi.

It's intensity was uniform over its area and well above that of the background of the Milky Way, but not bright and was unvarying while I saw it. It was about 0.5° to 1.0° across the horns, and its speed was uniform, covering about 40° in less than 4 seconds, and its path appeared to be a straight line.

During this period of observing, "seeing" was the best I've seen in months. With the binoculars I was able to see M13, M15, M31, and Asteroid #7 (Iris). The temperature had dropped from over 70° F in mid-day to about 50° at this time. No one else was with me.

May I please have your comments?

Yours truly  n

Official Policy

Case 1958

20 November 1958

Dear Mr. [REDACTED]

The report of an unidentified flying object you submitted on 6 October 1958 has been evaluated and the official opinion of the Air Technical Intelligence Center is that it was a meteor. The horn shape was probably created by the spark trail in the immediate vicinity of the meteor head. The fact that the width was reported as being greater than the apparent length can be explained as an irregular shape, tumbling and being oriented such that its longest dimension was at right angles to its path at the time of sighting. The angular velocity of 10 degrees per second reported in conjunction with the other reported information rules out all but a meteor or satellite. Satellite data excluded this as a possibility.

Thank you for your interest in this matter.

Sincerely,

LAWRENCE J. TACKER

<p>1. The official opinion of the Air Technical Intelligence Center is that Mr. ██████████ saw a meteor. The horn shape was probably created by the spark trail in the immediate vicinity of the meteor head. The fact that the width was reported as being greater than the apparent length can be explained as an irregular shape, tumbling and being oriented such that its longest dimension was at right angles to its path at the time of sighting.</p> <p>2. The angular velocity of 10 degrees per second reported by Mr. ██████████ is approximately accurate, in conjunction with the other reported information rules out all but a meteor or satellite. Satellite data excluded this as a possibility.</p> <p>3. Contributing factors to the non-recognition are:</p> <ul style="list-style-type: none"> a. Surprise. b. Short time of observation. c. Initial experience for witness observing meteor through binoculars. It is the opinion of the ATIC that such an experience could startle a person with more training than that of Mr. ██████████ 														

Aircraft, Balloons, Airships, etc. APPARENT (LOW) SPEED (IF REPORT IS NEAR ACCURATE) RULES OUT AIRCRAFT ETC.

Other: _____

Evaluation of Source Reliability THIS WITNESS IS APPARENTLY A MAN OF SOME TECHNICAL TRAINING HOWEVER, IT APPEARS THAT HIS EXPERIENCE IN THE AREA OF ASTRONOMY IS LIMITED EXPERIENCED ASTRONOMERS HAVE PROBABLY AT ONE TIME OR THE OTHER OBSERVED A METEOR THRU BINOCULARS OR OTHER VISUAL AID.

Analysis and Conclusions:

1. THE WITNESS SAW A METEOR OF UNUSUAL SIZE AND BRIGHTNESS. IT IS BELIEVED THAT THE HORN SHAPE WAS CREATED BY THE TRAIL OF SPARKS IN THE IMMEDIATE VICINITY OF THE METEOR HEAD. THE FACT THAT THE WIDTH WAS REPORTED AS BEING GREATER THAN THE APPARENT LENGTH CAN BE EXPLAINED AS AN IRREGULAR SHAPE WHICH WAS ORIENTED SUCH THAT ITS LONGEST DIMENSION WAS AT RIGHT ANGLES TO ITS FLIGHT PATH AT THE TIME OF SIGHTING.

2. CONTRIBUTIVE FACTORS TO THE NON-RECOGNITION ARE:

- A. SHORT TIME OF OBSERVATION
- B. FIRST SUCH EXPERIENCE FOR WITNESS - SEEING METEOR THRU BINOCULARS
- C. SURPRISE.

In reply to the questions on the enclosed carbon copy of a letter from Major Tacker, are the following:-

- 1) The angular estimation of the size was made through binoculars.
- 2) It was an estimate of a portion of the angular field of vision.
- 3) The field of vision of my binoculars, when wearing eye glasses is close to 5° .
- 4) I have never seen a meteor through binoculars.

N.B. There was no trail or brighter portion or change in intensity. There are no search lights in this area. There was no haze or clouds.

U. S. AIR FORCE TECHNICAL INFORMATION SHEET
(SUMMARY DATA)

In order that your information may be filed and coded as accurately as possible, please use the following space to write out a short description of the event that you observed. You may repeat information that you have already given in the questionnaire, and add any further comments, statements, or sketches that you believe are important. Try to present the details of the observation in the order in which they occurred. Additional pages of the same size paper may be attached if they are needed.

DATE Oct. 31, 1958

At close to 9:30 P.M., E.D.T., Sunday Oct. 5, 1958, while observing the double cluster in Perseus with a pair of 7X50 binoculars, there rapidly shot into my field of view a faintly luminous area, shaped like a parabolic crescent, trailing the horns. The shape reminded me of a non-rotating boomerang or a swallow gliding (if it had no head or tail) or in other words, curved swept-wings. I managed to keep it in the field of the binoculars until it was cut off by my house gutter, being at a point near Beta Pegasi.

It's intensity was uniform over its area and well above that of the background of the Milky Way, but not bright and did not vary while I saw it. It was about 1° across the horns, and its speed was uniform, covering about 40° in about 4 seconds, and its path appeared to be a straight line.

During this period of observing, "Seeing" was the best I've seen in months. That night I was able to see M13, M15, M31, & Iris (Ast.7)
