

SUL finalisation update

4th September 2014

As the Wikimedia Foundation, I would like all users of our sites to have truly global accounts so that I can develop truly global features.

Five streams of work

- Global rename
- Request a rename
- Log in with old credentials
- Global account merge
- The finalisation script

As a user, I would like to rename my account globally without having to file hundreds of rename requests.

As a steward, I would like to rename accounts globally with a single click.

As a user who will be forcibly renamed,
I'd like a hassle-free way to request a
new name.

As a steward, I would like to process all
the SUL-related rename requests from
a single, central location.

As a user who was forcibly renamed without my knowledge, I would like to log in with my old username so that I am not locked out of my account.

As a product manager, I'd like the SUL finalisation to not lock users out of their accounts!

As a user with multiple unattached accounts that were globalised, I'd like a way to collect all my global accounts into a single, unified account.

As a steward, I'd like a way to have the correct local accounts assigned to a global one, without causing clashes.

As a user, I'd like to be able to log in to all Wikimedia wikis with a single, unified name.

As the Wikimedia Foundation, we'd like to globalise all accounts so that we can begin developing global features.

The team

- Bryan
 - Request a rename
 - Old credentials
- Kunal
 - Global rename
 - Global merge
 - Finalisation script
- Chris
 - Code review
 - CentralAuth guru
- Keegan
 - Community engagement
- Brandon
 - UX design
- Dan
 - Product owner
 - Scrum master
