REPORT UPON

Births, Marriages and Deaths

FOR THE YEAR 1921

The Fifty-second Report of Vital Statistics for the Province of Ontario, for the year 1921, is herewith presented.

POPULATION.

The population of Ontario is 2,933,662, being an increase of 16.08% over that of 1911. This being the year in which the Federal Government took the census of Canada, the population is more accurate than at any time during the past decade.

The cities contained 1,163,133 or 39.7% of the whole, the towns of over 5,000 population 156,497 or 5.3%, and the balance, being 1,614,032 or 55.0% is distributed in the townships, villages and towns under 5,000 population, otherwise designated in this report as "rural."

BIRTHS (EXCLUDING STILL-BIRTHS).

The number of births registered during the year is, together with those of 1920 as follows:

	1921	Ratio	1920	Ratio
Entire Province.....	74,152	25.3	72,511	25.0
Cities.....	32,260	27.7	32,080	27.5
Towns (5,000 population).....	4,876	31.2	5,679	33.8
Rural.....	37,016	22.9	34,752	22.2

There was a numerical increase in births of 1,641 or 2.2% over those of 1920; the rate, however, was but slightly increased (0.3) per 1,000 of population.

Births and birth-rate per 1,000 of population for 10 years.

Year	Births	Ratio	Year	Births	Ratio
1912.....	58,870	22.9	1917.....	62,666	22.6

This interesting table published for the first time shows the ages of the parents in respect to births. It will be noted that there were more mothers at 25 years of age than at any other one age, while the commonest age for fathers was 30 years. Where illegitimacy is in question the largest number of mothers were 19 years of age. The youngest mother was 13 years; the oldest over 55 years of age. The youngest fathers were 16, and the oldest over 70.

STILL-BIRTHS.

ILLEGITIMATE BIRTHS.

There were registered 1,592 illegitimate births, which is a rate of 21.5 per 1,000 living births. This is 1.0 higher than for 1920. As usual, the city municipalities contributed the largest number, 1,052 or 66.1% of the whole being for the cities, a rate of 32.6 per 1,000 living births. The high rate which is invariably found in city municipalities does not reflect the true status of the morals of city dwellers, and while it is probably true that a higher rate would show in urban centres, the abnormally high rate is due in a large measure to hospitalization, and the fact that women come or are sent to urban centres from rural parts of the Province for their confinement.

MULTIPLE BIRTHS.

There were 784 pairs of twins born during the year, which is the largest number on record. Of these 813 were boys, and 755 girls. Of triplets there were one dozen sets or 36 children, being 25 boys and 11 girls.

MARRIAGES.

There were 24,871 marriages registered during the year, this being a rate of 8.5 marriages for every 1,000 of the population. This was a numerical decrease of 4,233 and a decrease of 1.5 in the rate. The falling off was likely due to the economic conditions of the country. The general commercial depression resulted in a large number of persons being out of employment during the year; this had the usual effect of lowering the marriage rate.

The following table gives a comparison between the years 1920 and 1921:

	1921	Ratio	1920	Rate

It will be noted in respect to tuberculosis that the cities have the lowest mortality rate. The reason for this is the fact that public health work is more advanced in the cities than in the towns and rural areas, and its good effect in respect to this disease is apparent.

The increase in cancer is a serious one and as remarked in former reports, the chief means of combating this increase is by the education of the public in knowledge which will lead to early recognition of the disease in order that treatment may be applied when it will have the best chance of success. The Provincial Board of Health and other agencies have spread, through pamphlets, newspaper articles and exhibits, a great deal of useful information on this and other public health topics.

INFANT MORTALITY.

The number of children who died before completing twelve months of age was 6,763, which is a rate of 91.3 per 1,000 living births and is the lowest rate ever recorded in the province.

In Table 13 will be found deaths under one year of age by city, town and rural municipalities.

The following table shows the Infant Mortality rate for a decade:
