#### American Ship-Building.

We know what Master laid thy keel, What Workmen wrought thy ribs of steel, Who made each mast, and sail, and rope, What anvils rang, what hammers beat, In what a forge and what a heat Were shaped the anchors of thy hope!

#### SPEECH

### HON. W. E. ROBINSON. OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 12, 1883.

The House, as in Committee of the Whole, having under consideration, under the five-minute rule, the bill (H. R. 7061) to remove certain burdens on the American merchant marine, to encourage the American foreign carrying trade, and to amend the laws relating to the shipment and discharge of seamen—

Mr. ROBINSON, of New York, said:
Mr. SPEAKER: We can easily imagine with what anxiety the patriotic prisoner on board the British man-of-war strained his eyes in the morning light to see if the Stars and Stripes still floated over Fort McHenry, then and through the "perilous night" under English fire, and with what joy his doubts were dissipated when through the lifting smoke and vanishing mists he saw still waving the "Star Spangled Banner" that gladdened his heart and inspired his muse.

It is with similar anxiety that the patriot now turns to the widowed sea and seeks for the sheen of that star-lit banner. That flag has glad-dened the eye of every American, wherever he wandered, when he beheld its illuminated folds dancing in every breeze on every sea. It swept the Mediterranean under Preble; its vollied thunder rolled over the Pacific under Porter; the Lakes laughed in its sunlight under McDonough and Perry; and under Hull and Blakely, Decatur and Stewart, the Atlantic was lighted by its folds beneath which the English flag was struck to our Yankee sailors.

Is that flag forever folded, or shall it be again unfurled to greet the first beams of the morning sun? Are we now, after a century of success, to confess ourselves unable to contend with other nations and go begging to their doors for the privilege of buying their second-hand and second-class ships?

I contend that this surrender in the contest for maritime supremacy is unworthy of the American people. We can successfully compete with England in building iron steamships for ocean navigation. We taught England the way to cross the ocean by steam. The engine that carried the first ocean steamer across the Atlantic, the Savannah, was built in America, and so little did the English know of the science in which we were then giving her the first lesson that when they saw this American pioneer entering their harbor with dense smoke curling above her deck, they sent down an engine to extinguish the fire which they supposed had broken out in her cargo. We can still build ships and man them to compete with any nation on earth.

When Findend's coal hed and iron mires are played out like her.

When England's coal beds and iron mines are played out, like her stem of government, we shall still have our inexhaustible supply of th. We have all the materials for iron as well as wooden ship building in boundless abundance within our own territory, and we must not allow the humiliating confession to be made that we are unable to use them. I deny that it is necessary to go abroad to build or buy iron steamships. To-day an American ship-yard is in full and successful operation in a city on the Delaware which has been built up by the indomitable energy of John Roach. I would count myself unworthy

of his friendship if I heard his name mentioned with disrespect and did not say a word in his defense. This present week an iron steam-ship was launched from his ship-yard at Chester, on the Delaware, for a new American line to Brazil, and within the last twelve months twelve or fifteen steamships have been built and launched by this same energetic American.

If he has made money I rejoice at it and wish it was doubled, as the reward of a grand American career. Born in poverty and growing up without the advantages of education; born in Ireland, in the empire county of Cork; in Ireland, the land of Curran and Grattan, of Emmet and Fitzgerald, of Burke and Sheridan, of Goldsmith and Swift, of Moore and O'Connell, of Wellington and Wolseley; in Ireland, the great producing country, the nursery of American brains and bravery; in Ireland, where the Creator seems to have established the principal factory of genuine American patriotism, which furnished the inexhaust-ible supply to the limitless demand for that material in the American inie supply to the limitiess demand for that material in the American market; which gave us forour Army Butler, Hand, Irvine, Knox, Lewis, Montgomery, Morgan, Maylan, Stark, Sullivan and Wayne, Brown, Andrew Jackson and Macomb, Corcoran, Meagher, Mulligan, Sheridan and Shields, Pat Cleburne, Stonewall Jackson, and Albert Sidney Johnston; which gave us for our Navy Barry and Porter, Blakeley and Decatur, Perry and McDonough, and Charles Stewart, the grandfather of Charles Stewart Parnell; which gave to our press James Gordon Bennett and Horace Greeley, Duane, Dunlap, and McMichael; which gave to the list of our inventors and discoverers Fulton, Morse, McCormick, and Kane: that gave us the ornaments of our judiciary, the cloquence of our bar, the founders of our colleges, the lights of our pulpit, the genius of our stage, and the foremost of our merchants, artists, and literary men, whose names even I have not time here to enumerate; that gave us the present Admiral and Vice-Admiral of our Navy, the present Lieutenant-General (soon to be the General) of our Army, and the majority of the General (soon to be the General) of our Army, and the majority of the distinguished officers of both Departments; that gave us by birth three of our present Senators and five of our present House of Representatives (and a dozen for the next House), with a majority of each House by descent; and that gave us the present President of the United States—John Roach, coming to this country half a century ago from his desolate home in Ireland, from which all his family had been carried to their graves, a lad of fourteen, with a full heart of hope and an empty purse, without a friend or a dollar in the world, and traveling on foot, after landing in New York, twenty-seven miles into New Jersey for the after landing in New York, twenty-seven miles into New Jersey for the first meal which he enjoyed beneath that flag to which he has given a home on so many of his stately steamers, with a clear head, a sound body, and an indomitable love of American freedom, worked his way up from boyish poverty to manly affluence and to a knowledge of statesmanship in which he has few equals; and when the world seemed to yield to the opinion that American labor could not compete with English workmen; when the ship-yards of New York were turned into omnibus stables, beer gardens, and somewhat appropriate tombstone factories; when the man that built the Monitor that saved the Union at Norfolk had to seek for sustenance by driving a cart, John Roach kept the fires of American forges glowing through the night of despair and placed the proofs of his victory over prejudice on the Amazon and the Pacific, and if he had had fair play would have successfully contended for the mastery of the Atlantic. I am proud of him as an Irishman, prouder of him as an American, and when the future historian of America shall write the history of the jewels in the republican crown that shall be one of the brightest pages on which shall be written the name of John Roach, the American ship-builder. [Applause.]

[Here the hammer fell.]

Mr. ROBINSON, of New York. May I have a few minutes more?

Many MEMBERS. Go on! Go on!

The SPEAKER. The Chair hears no objection to the time of the gentleman being extended for five minutes more.

Mr. ROBINSON, of New York. I shall try to complete my remarks in five minutes, but if I should want seven I shall ask the Speaker to keep that hammer still.

I am opposed to any proposition to extinguish the few fires still glowing in American furnaces to rekindle them on the Clyde. There was much philosophy in old Dean Swift's advice to burn everything English but her coal. The time may be when Great Britain shall become an American coaling station for our leviathan steamers to Europe. Then and not till then shall I consent to build our shipping there. I shall and not till then shall I consent to build our shipping there. I shall never consent to acknowledge American inferiority and English suprem-I protest, however, against being misunderstood. I maniac against Englishmen, and harbor no hatred toward them. I am, if you choose, a monomaniac for America and American workmen and

American citizenship against the world. Against the English Government—not against the English people.

I cherish a pardonable dislike because it has crushed the hopes and hearts out of her own people as well as out of mine. Did any one ever hear in history the name of any nation save that of England where the elected representatives here, without any charge made againt them, c nined in prison while the tyrannical majority were pretending to legis-l t. for the people that elected them? Born beneath her flag, I sought the rece citizenship which this grand Republic offers to every oppressed son of despotic government. Before I could obtain that citizenship, twice upon the Holy Evangelists you compelled me, as you compel En glishmen and others, to take the oath that I foreswore all allegiance to all princes and potentates, and particularly to the brood of Great Britan. Do you blame me for keeping my oath? But this hatred of English government involves no personal enmity to her people, fellow sufferers with ourselves. Not even against the Queen or her representatives or any of her family do we harbor personal hostile designs, and I protest both as an American and an Irishman against the insult offered to the American people and to the children of Ireland in detailing a guard of American soldiers to protect these scions of royalty as they travel through this country. The Princess Louise may discharge her guard of American officers, relieving them of their English livery, and without protection travel over this broad land, and no American and above all no Irishman, would raise a hand except to protect her from harm. She may settle down as I see it stated that she intends to do for the winter at Charleston, in South Carolina, and in that grand old Irish city and State of the Irish Rutledges and Ramseys, Burkes and Irvines, Butlers and Prestons, Jacksons and Calhours, she will find herself, without any attendance or guards, far safer than she would be at Balmoral, Buckingham, or Windsor.

The Queen herself might leave her English palaces, and dismiss her guards, and travel through Ireland from Cape Clear to the Giant's Cause way, and with no protection but her own womanhood, could pass unharmed through scenes where her Government has brought the people to starvation and despair, and she would find that she could trust to "Erin's honor and Erin's pride" for her personal safety. On this account I feel keenly the insult thus given to all our people, without stopping to inquire whether England ever did or ever will or ever would detail any officers of her army to protect American citizens traveling through her territory, except as a police force to drag from their peace-ful beds at unseasonable hours American citizens, superior to most of her nobility, in character and genius and, accused of no crime, to lodge them in her filthy prisons beyond the reach of habeas corpus, and be yond the hope of trial and deliverance.

This idea that Irishmen harbor bloody designs against persons, how ever worthy of hatred, and that they encourage assassination, is but a part of the systematized conspiracy of the English press and its echoes here to the systematized conspiracy of the Linguist press and its echoester to impress the American mind with the idea that Ireland is full of crime, and that life is not secure among her people; this conspiracy is too successful, and we must expose it. I have a laborious correspondent who conceals his name, who for two years past has scraped up all the filthy Anglo-Saxon falsehoods which his brain could compass in congenial mud, and has sent them to me, when the names have an Irish signification, with expressive underscoring and other marks to attract attention. If he finds one homicide with an Irish name to the accused, he sends me that, but takes care to leave unnoticed the quadrupled cases of other nationalities. Now, to-day, with all her incentives and provocation to crime, there is no place on earth where life and property provocation to crime, there is no place on earth where life and property are so secure as in Ireland. The restraints of religion, the influence of her pious clergy, and the generous, noble, and benevolent impulses of the Irish heart secure for her this almost unrivaled character. I do not suppose that this English snob who keeps me posted on Irish infirmities would dare to assail the American character because crime is prevalent in our borders. Well, I find a statement in the Union Argus, the Republican paper published in my district in Brooklyn, on the 4th of the present month, and it gives the numbers of two murders and one snieide occurring in this country for every day in the previous year. suicide occurring in this country for every day in the previous year. Of seven hundred and twenty murders in the United States last year, one hundred and twenty-five were styled mysterious; three hundred and twenty-five mysterious murders were not telegraphed to Europe, but the one case of mysterious murder in Ireland committed in Phonix Park, I do not think by Irishuen, has been telegraphed the world over and made the prolonged topic of a world's talk. In my own New York, beloved by all her sons, native or adopted, with a population about the same as in Ireland, there were one hundred and thirty-one murders. Ireland presents no such record as that.

The suicides in New York were three hundred and eighty-three. There have not been that many in Ireland in a century. And these murders and suicides are by no means all that occurred in this country during the past twelve months, for there were no scavengers of crime to hunt up and telegraph, as in the case of Ireland, all the failings of to hunt up and telegraph, as in the case of Ireland, all the failings of humanity. Indeed many of the men reported murdered in Ireland are still alive. I turn to the Washington Daily Republican of the 27th of last month, the second day after Christmas, 1882, and I find seventeen homicides committed in this country mentioned among the current news in that paper for that day. I know the answer which is ready in the mouth of English falsehood that the criminals must have been Irish. Not a man among them so far as appears from the record has even an Irish name. Here they are: Thomas Kerr, Samuel Rives, Jennie Griffen, George Felmar, Charles Branch, John Booth, Joe Styles, Charles Gilman, George Portwood, ——Ellis, Frank Shaw, Merriam A. Montgomery, Joseph Jarvis, Samuel Blackwood, and Hon. N. L. Dukes, the member of the Pennsylvania Legislature, who killed A. C. Nutt, the bank president of Uniontown, who ought to have been his father-in-law! In one case the assassin's name was not known. Poor Ireland! how the In one case the assassin's name was not known. Poor Ireland! how the English press on both sides of the Atlantic would have denounced this "carnival of crime" if it had occurred among her people in a year instead of a day.

I have made this digression to show that my course here is not guided

by hatred of England, and I have no great desire to twist either extremity of her beast, but I pity the American "with soul so dead" as to try to cover up his own cowardly neglect of his fellow-citizens traveling abroad, by turning into ridicule the honest efforts of those who would sustain and defend the dignity of American citizenship outraged

in their persons

It is not hatred of England, but love of America which makes me protest against the shutting up of American workshops and the quenching test against the shutting up of American workshops and the quenching of American furnaces; to protest against the injury which this would inflict upon American workingmen, and to protest against giving despotic governments advantages over us in time of war. What would have been our fate had we been compelled to build the Monitor at Glasgow instead of at the city of Brooklyn? We might as well have employed English statesmen to build our "ship of state," the Constitution. And what do we gain, anyhow, for American commerce or the American marine, by buying worn-out steamships of slow speed from England, which we must man by mariners that are not American? English dires

marne, by buying worn-out steamships of slow speed from England, which we must man by mariners that are not American? English ships manned by Italians or Chinese, ridiculously called American!

Sir, if you cover the seas with English-built ships it matters little what rag you hang from their mizzen-peaks, you scratch the American paint from them, and they are still English vessels. I shall never consent to take any English ships and call them American, except we take them as Hull took the Guerriere, or Decatur the Macedonian, or Law-

when a beautiful child pines and dies in Ireland it is sometimes said by the poetical people of that country that the healthy infant has been stolen by the fairies and a sickly elf left in its place. This idea has been beautifully expressed in the exquisite poetry of Lover:

A mother came when stars [and stripes] were paling,
Wailing round a lonely spring.
Thus she cried, while tears were falling,
Calling on the Fairy King:
"Why with spells my child caressing,
Courting him with fairy joy,
Why destroy a mother's blessing,
Wherefore steal my baby boy?" "Give me back my baby boy!"

England is the fairy that stole our Navy. She would not give us now, but she would sell us back, the starvling elf which she has prepared for us, more despicable than the sickly fraud with which the fairies deluded the distracted Irish mother! If we take her ships and fairies deluded the distracted trish mother: If we take het ships and call them an American marine we shall manifest as little intelligence as the silly bird that hatches the cuckoo's egg and calls the young its own. The times demand a revival of American shipping, but running to England for aid will not help us out of our difficulty. English ships to England for aid will not help us out of our difficulty. English ships we want not, either as auxiliaries to our merchant marine or for de fense as a navy.

Non tali auxilio, nec defensoribus istis

We want healthy American ships, "a Yankee ship and a Yankee crew." If we can not have them without begging or borrowing or buying from foreign nations let us do without them.

I hold in my hand the works of the American poet Longfellow. I turn to his magnificent description of "The Building of the Ship;" but it was the building of an American ship that he described, and not a hired or purchased hulk of foreign build:

"Build me straight, O worthy Master! Stanch and strong, a goodly vessel, That shall laugh at all disaster, And with wave and whirlwind wrestle!"

And soon throughout the ship-yard's bounds Were heard the intermingled sounds Of sizes and of mallets, plied With vigorous arms on every side,

Day by day the vessel grew,
With timbers fashioned strong and true,
Stemson and keelson and sternson-knee,
Till, framed with perfect symmetry,
A skeleton ship rose up to view!
And around the bows and along the side
The heavy hammers and mallets piled,
Till after many a week, at length,
Wonderful for form and strength,
Sublime in its enormous bulk,
Loomed aloft the shadowy hulk!
And around it columns of smoke, upwreathing,
Rose from the boiling, bubbling, seething
Caldron, that glowed,
And overflowed
With the black tar, heated for the sheathing.
And amid the clamors
Of clattering hammers,
He who listened heard now and then
The song of the Master and his men.
Behold, at last,

Behold, at last, Each tall and tapering mast Is swung into its place; Shroud and stays Holding it firm and fast!

And everywhere
The slender, graceful spars
Poise aloft in the air,
And at the mast-head,
White, blue, and red,
A flag unrolls the stripes and stars.
Ah! when the wanderer, lonely, friendless,
In foreign harbors shall behold
That flag unrolled
'T will be as a friendly hand
Stretched out from his native land,
Filling his heart with memories sweet and endless!

Filling his heart with memories sweet and en The occan old, Centuries old, Centuries old, Strong \*s youth, and as uncontrolled Paces restless to and fro, Up and down the sands of gold, His beating heart is not at rest; And far and wide, With ceaseless flow, His beard of snow Heaves with the heaving of his breast. He waits impatient for his bride. There she stands, With her foot upon the sands, With her foot upon the sands, Decked with flags and streamers gay, In honor of her marriage day, Her snow-white signals fluttering, blending, Ready to be The bride of the gray old sea.

Then the Master,

The bride of the gray old sea.

Then the Master,
With a gesture of command,
Waved his hand;
And at the word,
Loud and sudden there was heard,
All around them and below,
The sound of hammers, blow an blow,
Knocking away the shores and spurs.
And see! she stirs!
She starts,—she moves,—she secuns to feel
The thrill of life along her keel,
And, spurning with her foot the ground,
With one exulting, joyous bound,
She leaps into the ocean's arms!

"Take her, O bridegroom, old and gray, Take her to thy protecting arms, With all her youth and all her charms!

"How beautiful she is! How fair
She lies within those arms, that press
Her form with many a soft caress
Of tenderness and watchful care!
Sall forth into the sea, O! ship
Through wind and wave, right onward steer!"

Through wind and wave, right onward steer!
We know what Master laid thy keel,
What Workmen wrought thy ribs of steel,
Who made each mast, and sail, and rope,
What anvils rang, what hammers beat,
In what a forge and what a heat
Were shaped the anchors of thy hope!
Fear not each sudden sound and shock.
'T is of the wave and not the rock;
'T is but the flapping of the sail,
And not a rent made by the gale!
In spite of rock and tempest's war,
In spite of false lights on the shore,
Sail on, nor fear to breast the sea!
Our hearts, our hopes, our prayers, our tears,
Our faith, triumphant o'er our fears,
Are all with thee,—are all with thee!

Ah, sir, if you buy your Clyde-built ships you destroy all this picture of Yankee industry; you quench the song as well as the fires of the Yankee "master and his men," and you destroy the poetry. No white, blue, and red shall unfurl the flag of the Stripes and Stars; "no memories sweet and endless" shall fill the heart of the lonely American wanderer over distant seas, and gray old Ocean shall no more embrace his Yankee bride; the thrill of life along the keel shall not be the throb of Yankee pride. If built upon the Clyde no Yankee cares to know what master laid the keel or what workmen wrought the ribs of steel or made the mast or sail or rope.

I know not what relief this bill as it now stands may give to the revival of American commerce.

I wish I could contribute something to secure that desirable end. On the first day of the last session on which the presentation of bills were in order I introduced a bill relating to merchant-seamen, of which some of the provisions are embodied in this bill. It was intended to protect the rights of the seamen; to relieve them from many hardships to which they are exposed under the present law; to secure to them better treatment, better wages, and better fare on shipboard, and to subserve the interests of American commerce. It also provided for the payment of advance wages only to the seaman himself or to his wife or mother.

mother.

I do not pretend to understand this subject as well as many of my friends, and in differing or seeming to differ from them I fear I may be wrong, and if so I shall be glad to give up my own mistaken notions for their wisdom; but at present I can not see how we can revive American commerce by buying ships abroad or by transferring American ship-yards from the Delaware to the Clyde.

I think much might be done by a judicious arrangement for carrying the mail. A few days since a Cunard steamer took out from New York 250 000 American ordinary letters, 10,000 recristered letters, and over a

I think much might be done by a judicious arrangement for carrying the mail. A few days since a Cunard steamer took out from New York 250,000 American ordinary letters, 10,000 registered letters, and over a hundred sacks of newspapers. These letters, at a half ounce each, weighed about four tons. The amount of postage, without including the extra charge for registered letters, was \$13,000. The Cunard steamers carry American grain for about three or four dollars a ton. If the postage had been but 1 cent on each letter, as I hope to see it both for foreign and domestic letters, this day's mail would have given a clear profit of over \$2,000 for one trip one way over ordinary freight. I see no reason why a hundred million of letters may not pass yearly from the approaching hundred million Americans to their corresponding millions in Europe. This at 5 cents each would be \$5,000,000 per annum for postage alone, while the reasonable freight on the same weight (about 1,500 tons) of grain would be only about \$6,000. All this American postage traffic we are giving now to English ships. How long we shall continue to do so is beyond my ken.

I want to revive American commerce. I want to reanimate American, not English, shipping. I want to see American ship-yards thronged with American workmen. I can not consent to degrade American labor to the level of English operatives, as described in Parliamentary reports concerning the condition of humanity in her subterranean gloom. I want to see the American workingman better fed, better clothed, better housed, and better educated than English slaves are or can be. I want to see him with his happy home, his plenteous table, his smiling wife, his children returned, not from the factories but from school, awaiting his coming from honorable and paying toil. I want to see the American mechanic building American ships, on American soil, whose keels shall plow the waters of all seas and oceans, gladdening the hearts of all who wander over them. And wherever waves roll and winds blow I want the American wanderer to see the beloved and honored flag of his country so high above all rivals that he can proudly exclaim:

Hail, brightest banner, that floats on the gale!
Flag of the country of Washington, hail!
Red are thy stripes as the blood of the brave—
Bright are thy stars as the sun on the wave;
Wrapt in thy folds are the hopes of the free—
Banner of Washington, blessings on thee!

[Great applause.]

Power of a State to Regulate Railroad Charges.

SPEECH

OF

# HON. JOHN A. ANDERSON,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 7, 1882.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 6900) making appropriations for the expenses of the Indian Department for the year ending June 30, 1884, and for other purposes—

Mr. ANDERSON said:

Mr. CHAIRMAN: The paragraph to which I have offered a formal amendment appropriates to these tribes a certain sum "for their instruction in agricultural and mechanical pursuits." The aim of that general policy is to make the Indians self-supporting. This result can only be accomplished when the practice of agriculture or of a mechanical art is profitable.

But the profitableness of farming depends very largely upon the cost of transporting products to their final market. Taking the crops of the United States as a whole it will be found that more than one-half of the

sum paid for them by the consumer is absorbed by freight charges. So that in the absence of competition between railroads, which is now the general rule, the cost of transportation is the chief factor in the problem of profitable agriculture; and the question of controlling freight charges law is the paramount one, not merely for the Indian, but for thirty

odd millions of our own people.

I desire to discuss one branch of it, namely, the legal power of a State to regulate the freight and passenger rates of the railroads within its jurisdiction, leaving for a later occasion the other branch, namely, that of Congressional regulation of interstate commerce.

All over the continent there is a resolute and growing determination to restrain the unbridled greed of the huge corporations which monopolize transportation. At the same time there is no general disposition to violate their legitimate rights.

A characteristic virtue of the average American is his willingness to act justly toward others while demanding full justice for himself. Whatever the legal or even equitable rights of the railroads may be he is ready to the legal or even equitable rights of the railroads may be he is ready to concede and observe them, and just whatever his own may be he will demand and enforce. While on the one hand he is opposed to communism, on the other he is opposed to being duped or fleeced. And probably his greatest perplexity in considering the transportation question arises from a genuine doubt as to what are the precise rights of the companies and what are the precise rights of the public. He is met at every turn by the countless attorneys of these corporations vociferating with characteristic assurance the State's inability to legislate because of "corporate powers," "unconstitutionality," "vested rights," "obligation of contracts," and kindred dicta. And his desire to remedy palpable and glaring outrages by these corporations is sometimes checked by a fear of violating established principles of justice in enforcing a remedy. I speak from experience, and trust that the following investigations of one who is not a lawyer may be of service to other laymen.

I speak from experience, and trust that the following investigations of one who is not a lawyer may be of service to other laymen.

Let us start with the powers and duties of an individual as a member of organized society. With these we are familiar both by experience and observation, whether the individual stands related to other persons or to the State; and a controversy between two parties as to their respective rights would be quickly decided by the public. But the masses are not equally familiar with the powers and duties of a "corporation." That very idea is vague, if not mysterious, to the average citizen. He never sees a corporation—only its agents; and being absorbed in his own affairs rarely examines into its nature or functions.

#### WHAT IS A CORPORATION?

How is it created, and what are its powers? Chief-Justice Marshall defines it, in a general sense, as "an artificial being, invisible, intangible, and existing only in contemplation of law." Another celebrated authority says: "A corporation is a body consisting of one or more persons, established by law, and continued by a succession of members." A partnership must necessarily terminate with the lives of all the partners. Corporate association is only a more durable partnership, one living after generations of the associates may have passed away. Hence, as the first essential, a corporation can only be created by the authority as the first essential, a corporation can only be created by the authority of the sovereignty, either State or national. This authority, whether termed a charter or an act of incorporation, is simply a law which confers upon certain designated persons six powers, known to the legal profession as the "corporate faculties." They are: First, the right to act by a corporate name; second, to have succession; third, to use a common seal; fourth, to sue and be sued; fifth, to acquire and convey property; and sixth, to make rules for the conduct of the affairs of the company not in conflict with law or the established rights of others

#### PROPERTY RIGHTS OF A CORPORATION.

These six faculties and no others constitute its powers; and there is nothing so mysterious after all about a mere corporation as such, since its rights are no greater or more perplexing than the rights of the same persons in a simple partnership, except as to succession and the use of a seal.

Suppose some man should build a hotel, both he and it would be subject to the laws. If, instead, a dozen men enter into partnership and build a similar hotel, both they and it are equally subject to the au-thority of State and city. And if in lieu of the partnership they are incorporated as a company through a general or special statute, that fact in no way changes the status of the hotel as subject to the law or the rights of the company, except in the use of a seal. And the incorporation of certain individuals as a railroad company, whether by State or national law, invests them with no powers or rights whatever save these six "corporate faculties."

It does not expent them from the laws of the leads it does not also

It does not exempt them from the laws of the land; it does not elevate their right or property above that of other citizens, and most certainly it does not clothe them with a power greater than that of the Government. The charter of such a company consists of two, and only two, parts, namely: 1, a grant of the six corporate faculties; and 2, a grant of power to do certain specified acts which can not be lawfully performed without legislative authority. Chief-Justice Marshall says:

The great object of an incorporation is to bestow the character and properties of individuality on a collected and changing body of men. Any privileges which may manned it from the burdens common in individuals do not flow necessarily from the charter, but nust be expressed in it or they do not axist.

#### WHAT IS THE LEGAL STATUS OF A RAILROAD?

Coming, then, to the second element of a charter, let us inquire what Coming, then, to the second element of a charter, let us inquire what are the specific powers usually granted to a railroad company. They are all embraced in the general reply, the power to build and operate a railway. And that raises the question, What is a railway? In the modern sense it is a road formed of iron or steel rails, affording one or more distinct tracks. The common road presents a broad surface, over which are description of vehicle may pass. A railway presents a track along tinct tracks. The common road presents a broad surface, over which any description of vehicle may pass. A railway presents a track along which only flanged wheels can run. And this fact, together with the superiority of a locomotive over other motors, practically excludes all vehicles except cars and engines. But what is its legal status? When completed is it the private property of the men who built it, and therefore to be used for their pecuniary profit, just as a coal mine is worked for the profit of its owners? or, on the other hand, is it exclusively owned by the state, and therefore to be used for the benefit of the public and under the regulation of law? under the regulation of law?

#### A RAILEOAD IS A PUBLIC HIGHWAY.

That it is a public highway in precisely the same sense as is a county That it is a public highway in precisely the same sense as is a county road is historically and judicially certain. Before men occupy territory the whole of it is an open highway for travel. With settlement and fences comes the necessity for public roads. But as these are for the accommodation of the community it is solely the prerogative of the community, through its government, to declare where public roads shall be, when they shall be built, to appropriate so much of the private land of individuals as may be required, to build the road either directly or by an agent, to pay for it, and to preserve it free from obstruction for the public use and good.

struction for the public use and good.

The better a road may be the greater is its benefit to the community; so that in time a turnpike or macadamized street supplants the original earth road. But this fact so far from rendering the street something other than a public highway makes it all the more a public highway. Then comes a railway as the greatest improvement over a turnpike which the genius of man has yet devised. It is the very perfection of roads; and this fact so far from stripping it of the character of a public

highway rather intensifies that character.

The only instance to the contrary would be that of a railway built by a person on his own land and for his own use. It would be a private railway just as the drives through his fields would be private roads. But a railway which passes over the land of many different owners can only be built by the State and as a public highway, because no other authority may seize the private land needed for the road; nor may the State take the private property of one man and devote it to the private use of another man or a company; it can only be taken and used for the public good. It is for these reasons that, as far back as history goes, and under every code, highways have alone been built by the State when built have always been and always must be public property and public highways.

#### JUDICIAL AUTHORITIES.

These questions have been settled by our laws and courts beyond all possibility of doubt. The Constitution provides:

#### ARTICLE IX.

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

#### ARTICLE X.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

Article 4 of the ordinance of 1787 provides:

The navigable waters leading into the Mississippi and Saint Lawrence, an the carrying places between the same, shall be common highways and forever free, as well to the inhabitants of the said Territory as to the citizens of the Unite States and those of any other States that may be admitted into the confederacy without any tax, impost, or duty therefor.

The right of "eminent donfain," contradistinguished from that of public domain, is:

public domain, is:

The superior right possessed by the sovereign in all property of the citizen or subject, whether real or personal, and whether or not the title were originally derived from the sovereign. One of the chief occasions for the exercise of this right lies in creating the necessary facilities for intercommunication. This extends to the construction of highways, embracing railroads, turnpikes, canals, ferries, wharves, &c. (Redfield's Laws of Railways, I, 228. See also 3 Kent Com., 339; 3 Paige, 45, 73; 12 Pickering, 467; 23 id., 327; 3 Selden, 314.)

And it would seem that notwithstanding this right of sovereignty may reside in the United States as the paramount sovereign, so far as the Territories are concerned, in reference to internal communication by highways and railways; and notwithstanding the ownership of the soil of a portion of the lands by the United States in many of the States as well as Territories, at the general rights of eminent domain are vested exclusively in the State sovereignty. (Redfield I, 32); 3 Howard (U. S.), 212; 9 How., 471; 13 How., 25; 6 McLean, 517.)

All railways and other similar corporations in this country exist, or are presumed to have existed, by means of an express grant from the legislative power of the State or sovereignty. (Redfield I, 3.)

That railways are but improved highways and are of such public use as to justify the exercise of the right of emirent domain, by the sovereign, in their construction, is now almost universally conceded. (18 Barb., 222, 246; State v. Rives, 5 Ired., 237, and many other cases.)

It seems to be well settled that the Legislatures have no power to take the property of the citizens for any but a public use; but that a railway is such a use. (21 Conn., 294; 14 Obio, 147; 3 Comst., 511.)

The Legislature must decide, in the first instance, when the right of eminent domain may be exercised, but this is subject to the revision of the courts, so far as the uses to which the property is applied are concerned. (2 Kent Com., 340; Red

All railroads, or parts of railroads, which are now or hereafter may be in oper-tion are established post-roads. (Sec. 3364 Revised Statutes.)

That a railway is a public highway, built, owned, and exclusively con-That a railway is a public highway, built, owned, and exclusively controlled by the State, is a fact universally recognized in American legislation and affirmed by all courts. But if this be true, how does it happen that private persons are willing to devote their private means and isbor to the creation of property which can only be owned by the community? Do they not acquire certain rights in the road? If so, what are these rights, and in what way do they affect those of the people as to the use of the road?

THE STATE BUILDS THE RAILROAD.

There are two modes in which the State may build a public road: First, directly and by its ordinary officers; or, second, indirectly and by private citizens or corporations acting as its authorized agents. And there are two ways in which it may raise the money to pay for the construction of the road: First, by a direct tax upon all its subjects, collected as are its annual revenues; or, second, by a direct tax upon those only of its subjects who use the road, to be collected by other than its ordinary tax-gatherers.

In the construction of a railway the State generally adopts each of the In the construction of a railway the State generally adopts each of the latter methods: First, by constituting a designated company as its agent for building a specified line; and, second, by authorizing this agent to collect a tax from such persons as shall use that line. Each of these powers is an attribute of supreme sovereignty and resides therefore in the State alone; because the seizure of one man's land by other private citizens for their personal benefit is a recognized crime, and the levy of a tax by them for the use of a public highway is robbery on land and at sea piracy. But the power of the State to collect rents from persons who use public property is self-evident. When this power is delegated by the State to individuals it is termed "the franchise of charging tolls, namely, the right to exact a price for the use of property which belongs namely, the right to exact a price for the use of property which belongs to the community."

THE RIGHT TO CHARGE TOLL A VALUABLE CONSIDERATION.

This franchise is among the most ancient and valuable items of public property, and has always been a source of vast revenue. It may be granted by the sovereign as a free gift, or as a substantial consideration for services rendered, and English history abounds with instances of

Now, it is this franchise, and nothing else, which the State offers as a valuable consideration for the building of a railway. It is this franchise, and nothing else, which the company accepts as a full equivalent for its private means and work in constructing the road; and this fran-

But the fact that the road is a public highway, and the consequent right of the people to use it, under such regulations as the State may prescribe, remain exactly the same whether the State builds it directly and pays for it out of its treasury, or builds it by an agent and pays that agent by granting him the franchise of collecting toll thereupon. In either case, when finished the road is the sole and exclusive property of the State. The company acquires no possible title of ownership in a rod, rail, or spike of it, a whit more than a contractor who builds a court-house for the county acquires the title thereto. And there is not a legislature in America, wild and reckless as some of them have been, which has ever pretended to grant the ownership of a railway to the company, because such a grant is beyond the power of any legisla-ture, either State or national, ultra vires, and would be declared null and void by every supreme court.

The only powers which can legally be delegated to a company for the construction of a road are: First, the authority to build the line; second, the right of eminent domain; third, the franchise of collecting toll, or, fourth, if an additional consideration be necessary, public lands, credit, or money. But when built, and forever thereafter, that road is the sole property of the State, and is a public highway exactly as is a street or country good. or county road.

POWER OF THE STATE TO FIX THE RATE OF TOLL.

It is perfectly clear also that the franchise of charging toll when exrecised by the company is qualified by all the limitations which govern it when exercised directly by the State itself. A fountain can not be higher than its source. The power of the State to determine the rate of charge is the most important of these limitations. This power remains in the State. It can not legally delegate the right to another nor divest itself of the obligation to exercise the right, because to part with this power world be to place its subjects at the sole process of the with this power would be to place its subjects at the sole mercy of the grantee, who by fixing extortionate charges might practically debar all other persons from the use of the road, and so convert a public highway

into his own private preperty.

The sovereign itself, though supreme, is bound in its use of public property by principles of justice and supreme considerations of public policy, the chief of which is that it shall act for the public good. Hence it can not part with the right of declaring that tolls "shall be fair and reasonable," because this right resides in the people rather than in the sovereign, and is a limitation upon the very power of the sovereign. It is equally binding on the Government whether it collects toll directly or by an agent, and whether the franchise he granted to an agent and or by an agent, and whether the franchise be granted to an agent as a free gift or for a valuable consideration. The power to declare what the rate of charge for the use of public property shall be, is wholly distinct

from the power to declare what particular person shall collect the toll, or use the toll when collected. The first is an attribute of sovereignty of which even the State can not divest itself, because being itself the agent of the people it can not free itself from the obligations of public policy and the duty of protecting the people from extortion or oppres-

CORPORATIONS AT THE MERCY OF THE STATE

If it be said that the existence of this inalienable power in the State leaves the company wholly at its mercy, and to such an extent that it may fix the tolls at merely nominal rates, and so destroy the value of the franchise, I admit the fact. There can be no doubt of that. But there was no possible doubt of it centuries before the companies accepted the They were bound to be aware of this inseparable limitation of the franchise, as imposed by the usages of governments and the decrees of courts since civilization began; and they were, in fact, fully aware

of the qualification.

The abuse of the power by the sovereign is certainly proof of the ex-The abuse of the power by the sovereign is certainly proof of the existence of the power, whatever else it may be; and the company's sole security against such abuse rests only in the sovereign's sense of justice and observance of equity. There alone, at least in a republic, it must forever rest; otherwise a legislature, chosen by the people and acting for the people, might irrevocably confer upon a soulless corporation the authority to rob the people by extorting ruinous tolls on public highways. But be the reasons what they may, the fact is beyond question that in England and America the right of fixing rates of toll has always been exercised by the government and affirmed by the highest courts. been exercised by the government and affirmed by the highest courts.

DUTY OF STATE TO FIX RATE OF TOLL.

While the legislature can not divest itself of the obligation to protect its subjects against extortionate tolls, it may delegate the function of fixing the precise rate of charge either to its own officers or to a company. But since this right inheres in the sovereign alone he may at any time resume its exercise. The determining of rates by the company is solely a ministerial and not at all an original act. The rates themselves have not the nature of a bargain between the company and its customers, but a wholly different nature, namely, that of a compensation paid by a traveler to the State for the use of a public road—a toll. This being the case, what should be the verdict as to the manner in which the companies discharge the trust of making and charge. ner in which the companies discharge the trust of making and changing schedules? Is it not time that the sovereign resumed the exercise of his proper function, and high time that just principles shall govern

of his proper function, and high time that just principles shall govern the construction of railway tariffs?

If the State itself were determining the tolls on a turnpike, would it ever dream of the "competition" theory or of "competitive points?" Its chief object in building a highway being to accommodate the public rather than to fill its coffers, would it "charge the traffic all it will bear?" Whatever may be the answer given, there can be no difference of opinion as to the reprehensible conduct of the corporations in this matter. If, from this standpoint, anything can be more surprising than the very idea that railroad rates as at present framed and shifted are really tolls, it is the fact that the State ever permitted the function of fixing the rates to be assumed by a company which pockets them.

Thus far I have been speaking of a railroad as distinct from the company which builds it; of its character as a public highway, of the rights of the people to its use as such, of the nature and qualifications of the franchise of toll, and of the rights of the company and of the State in the exercise of this franchise.

the exercise of this franchise.

COMBINATION OF FUNCTIONS BY RAILROAD COMPANIES.

But at this point let us examine another element of the problem, one which springs from the characteristic difference between a railroad and all other roads, namely, that only cars and locomotives can travel upon it. These are so costly, and useless for any other purpose, that but few persons can afford to own them.

but few persons can afford to own them.

As in the case of stage-coaches or steamboats, the general public finds it cheaper to hire from those who do own them. The first idea respecting the railway, both in England and America, was that the vehicles passing over it were to be owned by many different parties, and all of them distinct from the company having the franchise of collecting to the first in the case of a turnpike; and for years this was the practice. But in time it was found to be more economical, and therefore better, that the company holding the franchise should also furnish the engines and afterward the cars, they have been afterward the cars. and afterward the cars, though many of us remember freight-cars that

were owned by private merchants.

The general practice to-day is that a railway company performs three different functions: First, that of a collector of tolls from vehicles or persons passing over a public highway; second, that of an owner of engines and cars, who is entitled to compensation for their use; and third, that of a common carrier who engages in the business of transporting freight and passengers. Each of these is a separate and distinct function; each has separate privileges and distinct obligations; but neither of them, nor all of them when combined, are freed from the restraints of established law or placed beyond the power of the State in prescribing and enforcing the respective rights of its subjects.

Perhaps no little of the confusion in the public mind as to the present rights of railroad companies arises from the failure to separate these

three functions and to analyze the precise nature and obligations of each.

Yet we are familiar with the rights and duties of a person who has the franchise of collecting tolls on a bridge or turnpike; also with those of a liveryman; also with those of a stage or steamboat company which acts as a common carrier; and there need be no great perplexity because of the fact that the modern railway company combines all of these in its work, and often the additional service of a telegraph, express, or hotel company. The combination does not increase a single one of its privileges over those possessed by an individual engaged in the same line of business, nor affect by a hair's breadth a single one of its obligations and responsibilities to the public

gations and responsibilities to the public.

Because, the original and gleaming fact that a railway is a public highway, with all its consequences, remains wholly unaltered by the other fact that the toll-gatherer may also own and run a line of coaches over it. Any other person may legally do the same; but no person may own that highway, or use it except under such regulations as the State shall prescribe concerning the meeting and passing of vehicles, weight of load, rapidity of motion, or rate of toll. Whatever these regulations may be they rest equally upon all parties who move vehicles over the road, be they individuals or corporations, private travelers or common carriers. These laws grow out of the proprietary right of the State to declare the mode and conditions under which public property may be used, and are wholly different from another set of laws growing out of the wholly dif-ferent power of the sovereign to so regulate the business of common carriers as to protect the public from injury or extortion. And this latter power and latter code are more ancient than the former.

#### LAWS GOVERNING COMMON CARRIERS.

common or public carrier is one who carries for all who apply. (1 Salk., 249; 2 C. and P., 598; 1 Nev. and Per., 22.)

Salk., 249; 2 C. and P., 598; 1 Nev. and Per., 22.)

In an American case (Dwight v. Brewster, 1 Pick., 50) a common carrier is defined to be one who undertakes for hire or reward to transport from place to place the goods of such as employ him. The rule embraces the proprietors of stage-wagons and coaches, omnibuses, and railways. (Story, Bailm, § 496, and cases cited.) And in general the same rule is established here as in England that those who are engaged in the business of carrying for all who apply indiscriminately upon a particular route, by whatever mode of transportation they conduct their business, must be regarded as common carriers. (Redfield, II, 1, 3). It was decided at an early day that persons assuming to carry goods upon railways for all who applied were to be held as common carriers, and indeed it is now regarded as an elementary principle in the law that all who carry goods in any mode for all who apply are common carriers. (7 Man. and W., 253; 8 M. and W., 421; 4 M. and W., 421, 749; 12 M. and W., 766; 6 Whart., 505; 19 Wend., 534; 13 id., 611; Story on Bailm, § 500, &c.) In the case of Fuller (21 Conn., 570) it is said that in order to charge railways as common carriers it is not necessary to allege that they had power under their charter to become common carriers, but that having assumed the office and duties of common carriers of freight and passengers, they are thereby estopped to deny their obligations therefrom resulting by falling back upon any limited construction of their power under their charter. (Redfield, II, 1, 2)

That the State has the power to fix the charges and otherwise regulate the business of common carriers is a matter of history:

Whenever any person pursues a public calling and sustains such relations to the public that the people must of necessity deal with him, and are under moral duress to submit to his terms if unrestrained by law, then, in order to prevent extortion and an abuse of his position, the price he may charge for his services may be regulated by law. (98 Mass., 1; 5 Jones (N. C.) and 252; id., 258; 18 How., 272; 10 M. and W., 415; 12 Wheat., 259; 4 III., 53; 13 III., 37.)

In the case of Munn v. Illinois, U. S. Reports 94, 123, Chief-Justice Waite, in delivering the opinion of the United States Supreme Court, which is an exhaustive discussion of this point, said:

which is an exhaustive discussion of this point, said:

When one becomes a member of society he necessarily parts with some rights or privileges which, me an individual not affected by his relations to others, he might retain. "A body politic," as aptly defined in the preamble of the constitution of Massachusetts, "is a social compact by which the whole people coenants with each citizen, and each citizen with the whole people, that all shall be governed by certain laws for the common good." This does not confer power upon the whole people to control rights which are purely and exclusively private; but it does authorize the establishment of laws requiring each citizen to so conduct himself, and so use his own property, as not unnecessarily to injure another. This is the very essence of government, and has found expression in the maxim sic utere than a light and the same and the

Looking, then, to common law, from whence came the right which the Constitution protects, we find that when private property is "affected with a public-interest it ceases to be juris privati only." This was said by Lord Chief-Justice Hale more than two hundred years ago, and has been accepted without-objection as an essential element in the law of property ever since. Property does become clothed with a public interest when used in a manner to make it of public consequence, and affect the community at large. When, therefore, one devotes his property to a use in which the public has an interest, he in effect grants to the public an interest in that use, and must submit to be controlled by the public for the common good, to the extent of the interest which he has thus created. He may withdraw his grant by discontinuing the use; but so long as he maintains the use he must submit to the control.

From the same source comes the power to resultate the chargest of common

From the same source comes the power to regulate the charges of common carriers, which was done in England as long sage as the third year of the reign of William and Mary, and continued until within a comparatively recent period. And in the first statute we find the following suggestive preamble, to wit: "And whereas divers wagoners and other carriers, by combination among themselves, have raised the prices of carriage of goods in many places to excessive rates, to the great injury of the trade, be it therefore enacted," &c. Common carriers exercise a sart of public office and have duties to perform in which the public is interested (6 How., 382). Their business is therefore "af-

fected with a public interest," within the meaning which Lord Hale has so for

fected with a public interest," within the meaning which Lord Hale has so forcibly stated.

It is insisted, however, that the owner of the property is entitled to a reasonable compensation for its use, even though it be clothed with a public interest, and that what is reasonable is a judicial and not a legislative question.

As has already been shown, the practice has been otherwise. In countries where the common law prevails, it has been customary from time immemorial for the legislature to declare what shall be a reasonable compensation under such circumstances, or perhaps more properly speaking, to fix a maximum beyond which any charge made would be unreasonable. Undoubtedly in mere private contracts relating to matters in which the public have no interest what is reasonable must be ascertained judicially. But this is because the legislature has no control over such a contract. So, too, in matters which do affect the public interest, and as to which legislative control may be exercised, if there are no statutory regulations upon the subject, the courts must determine what is reasonable. The controlling act is the power to regulate at all. If that exists, the right to establish the maximum of charge as one of the means of regulation is implied. In fact, the common-law rule, which requires the charge to be reasonable, is itself a regulation as to price. Without it is owner could make his rates at will and compel the public to yield to his terms or forego the use.

But a mere common-law regulation of trade or business may be changed by statute. A person has no property, no vested interest, in any rule of the common law. That is only one of the forms of municipal law, and is no more sacred than any other. Rights of property which have been created by the common law can not be taken away without due process, but the law itself, as a rule of conduct, may be changed at the will, or even at the whim, of the legislature unless prevented by constitutional limitations. Indeed, the great office of statutes is to remedy

#### POWER OF LEGISLATURE TO CHANGE & CHARTER.

With respect to the point so often made that the charter of a company is a contract, that the State can not "impair the obligation of contracts," and therefore that the legislature is barred from imposing new obligations or changing privileges already granted, it will be sufficient to recite a Supreme Court decision in the case of Peik, rendered by Chief-Justice Waite. It is rather a question as to the power of a legislature to modify its action than one involving the relation of the roads and the

people:

The Chicago and Northwestern Railway Company was by its charter, and the charters of other companies consolidated with it, authorized "to demand and receive such sum or sums of money for the transportation of persons and property, and for the storage of property, as if shall deem reasonable." The Constitution of Wisconsin, in force when the charters were granted, provides that all acts for the creation of corporations within the State "may be altered or repealed by the Legislature at any time after their passage." Held, that the Legislature had power to prescribe a maximum of charges to be made by said company for transporting persons or property within the State, or taken up outside of the State and brought within it, or taken up inside and carried without. (94 U. S. Report, S. C., 165.)

An analysis of the exact functions performed by railway companies will satisfy any disinterested man as to the absolute right of a legisla-ture to regulate their entire business by stringent laws inexorably en-If their true legal status be that of toll-gatherers on a public highway, then the proprietary right of the sovereign to fix the rate of toll is sufficient. But if they have an additional status as a renter of engines and cars, or as public carriers, then the police jurisdiction of the State and its inalienable obligation to protect its subjects covers the whole field; while the fact that these corporations embrace so many different functions, each of which is "affected with a public interest," is a cumulative authority as well as an imperative necessity for legislation. Taken together and as a combined whole, these powers conclusively and completely bring under the jurisdiction of a Legislature every such company transacting business upon its territory.

If the great principles which underlie the respective rights and obligations of the State, of the people, and of the corporations in the momentous service of transportation have been made the least clearer or more forceful to the average citizen, my purpose has been fully accomplished. Unfortunately the glaring proofs of the crying necessity for legislative enactment against the extortions daily practiced by the companies are as numberless as autumn leaves. I shall not recount them. Perhaps they may best be summarized and emphasized by presenting

the view of the subject as taken by the corporations.

A BAILBUAD ATTORNEY'S VIEW OF THE SUBJECT.

As seen by a railroad attorney, through the mellow sunshine of an invigorating salary, it is substantially this:

That a railway, having been built with the private capital of the shareholders (usually a quite different class—bondholders), is the sole and absolute property of the company; that it is to be used, like other private property, vigorously and exclusively for the pecuniary benefit of its corporate owners; that the function of establishing and changing rates is the sovereign prerogative of the company and is to be exercised with an eye single to extorting the last possible cent from the public; that the theory of legislative regulation of railway tariffs is bald comthat the theory of legislative regulation of railway tariffs is baid communism, and its advocates demagogues; that as to the people—"Oh, the people be——!" that when a rival company proposes to compete, neither it nor the community has any rights which their royal majesties are bound to respect, a new line being a ruthless invasion of their sacred "territory" and black rebellion against their imperial authority; that a railroad "war" (paid for by others) is a gallant vindication of their heroism and sovereignty; that the only thing necessary to bring in the millenium is a universal "pool," enforced by national law, which shall wholly wipe out the evil of "competition" and permit the companies to give undivided attention to the great work of collecting "all the traffic will bear." That a corporation is the grandest invention of the age for escaping human and divine law. That having no material body to be kicked it can not be punished for swindling shareholders by watering stock, for defrauding bondholders by withholding dividends, for usurious extortions from shippers, for insults to passengers, for evasion of national and violation of State law; that having no soul to be damned, or none worth damning, it is free to corrupt conventions, bribe legislators, control Congressmen, own United States Senators, and perhaps weirdly modulate the opinions of a United States Supreme judge; that the responsibility of its agents, even for being an agent, is canceled that the responsibility of its agents, even for being an agent, is canceled by the power of the company; that it may with impunity habitually commit or cause to be committed series of crimes which if proven upon an individual would consign him to the penitentiary for life; and that it may do all these things with a brazen shamelessness and arrogance which incline the average American to turn for consolation to the docwhich incline the average American to turn for consolation to the doctrine of future punishment. I may not have quoted the precise language of corporation attorneys, but have gotten in most of the facts!

The contrast between these two views of the same subject is vivid and glaring. Which of the two is correct, and which shall prevail?

#### Paymaster's Department, United States Army.

#### SPEECH

## HON. COLUMBUS UPSON.

OF TEXAS.

#### IN THE HOUSE OF REPRESENTATIVES.

Wednesday, December 27, 1882,

On the following amendment, submitted by Mr. Browne, to the Army appro-priation bill:

Add at the end of line 114:

"And provided further, That whenever a vacancy occurs in the office of Paymaster General, assistant paymaster-general, deputy paymaster-general, or paymaster in the Army, by death, dismissal, resignation, retirement, or other cause, the same shall not be filled by appointment or otherwise; and whenever the force in the Fay Department shall not be sufficient for the due payment of the troops, the Secretary of War is authorized and required to detail, under such regulations as he may prescribe, an officer or officers in the Quartermaster's Department to supply the deficiency; and when the paymasters have all died, been dismissed, resigned, or been retired as hereinbefore stated, the payment of the Army shall be wholly transferred to the Quartermaster's Department, under such regulations as the Secretary of War may prescribe. Whenever, however, a vacancy occurs in the office of the Paymaster-General, the duties of that office shall devolve on the next officer in rank in the Pay Department." Add at the end of line 114:

Mr. UPSON said:

Mr. CHAIRMAN: The great importance of the radical change, namely, the merging of the Pay and Quartermaster's Departments of the Army, as proposed in the amendment to the Army bill, offered by Mr. Browne, of Indiana, induces me to add a few substantial reasons to those which I heretofore and but hurriedly suggested why that amendment, in the interest of economy and efficiency, should not be adopted.

If that amendment should become a law it would destroy a system of

payment in the United States Army which dates back to the reorganization of our Army in 1821, and has stood the test of practical experience, both in peace and in war, for the past sixty-one years, meeting during that period with the very general approval of the highest military authorities.

I feel fully warranted in saying that no other system of army payment has been devised or suggested which equally, with the present one, combines the advantages of prompt payment, safety of the public money, accurate and prompt accountability, with the least expense and liability to embezzlement and corrupt defalcation. A few prominent facts disclosed by the official records of the Army as to the long-exploded system of regimental, battalion, post, or company paymasters, contrasted with the workings of the present system, constitute an indisputable argument in favor of the latter.

The following appears in an official letter of Paymaster-General Tow-son, dated April 24, 1839, namely:

First. From 1808 to 1811, before the war "of 1812," the average annual loss by the defalcation of regimental and battalion paymasters amounted to 1.58 per cent. on the amount disbursed, and the annual average expenses for paying the Army to 3.10 per cent.

Second. From the beginning of the war of 1812 to 1816, under the same system, these averages were: Defalcations, 2.98 per cent., and the expenses, 4.36.

Third. From the date of the reorganization, in 1821, on the new plan (the presentone), to 1825, the average defalcations were .22, little more, it will be perceived, than the one-fifth of 1 per cent., which was finally paid into the Treasury; expenses for the same period, 2.13 per cent.

(The results during the Mexican war were better still, as not one dollar was lost by defalcation and the average expenses reduced.)

Fourth. From 1825, after the new system had been well established, not one dollar of defalcation, and the total average expenses reduced to 1½ per cent.

General B. W. Brice, in his annual report for the fiscal year ending June 30, 1866, uses the following language:

I am enabled to reiterate the unprecedented result that since July, 1861, in the expenditure of \$1,083,000,000, disbursed by this Department in minute sums, and surrounded by difficulties and hazards, the total cost to the Government, in expenses and losses of every character, can not in the worst possible event exceed three-fourths of 1 per cent.

Is there an instance on record of public disbursement so cheaply performed? and this, too, under the present organization and system of payments.

It will be found upon an examination of the actual disbursements and expenses of the Paymaster's Department that the estimate as to those items of the gentleman from Indiana [Mr. Browne] are far from being accurate, when he says:

While I do not pretend to be precisely accurate, I think I am safe in asserting that the Pay Department in fact disburses only from \$10,000,000 to \$11,000,000 per annum; so we pay 4 per cent. for the mere disbursement of the money for the payment of the troops.

The actual cost of paying the Army for the fiscal year ending June 30, 1882, was 21 per cent. instead of 4 per cent., and the amount disbursed \$13,613,257.41, instead of \$10,000,000, or \$11,000,000, as stated by Mr. Browne, as will appear from the following statement taken from the records of the Pay Department, namely:

Expenses of Pay Department, United States Army, for fiscal year ending June

Pay of officers	\$180, 274 64, 800 14, 426	00
Commutation of quarters to ufficers	259, 501 22, 034	
Mileage of officers	281,536	02
Actual expenses of clerks	37, 265	26
Total expenses.  Total disbursements.  Percentage of expenses to disbursements.	318, 801 13, 613, 257	41

Lest it might be inferred by the attempt to merge the Pay Department into the Quartermaster's Department, under the popular and at present contagious cry of "economy" and "reduction of expenditures," that the Pay Department was extravagantly administered as compared with the expenses of the Quartermaster's Department, I will say that I find the expenses of the Quartermaster's Department, not including mileage and clerks' traveling expenses, to be \$710,284.16; amount of disbursements, \$12,446,242.22; percentage of expenses to disbursements, 5.7 per cent., while the average expenses of the Pay Department for several years past is but about 2½ per cent.\*

The Pay Department system for the preservation of which I am con-

The Pay Department system, for the preservation of which I am contending, has not only withstood the test of time and experience, of

peace and war, but of thorough investigations before Congress.

The question of consolidating the Pay, Quartermaster, and Subsistence Departments was made the subject of careful investigation by the Military Committee of the House at the third session of the Fortieth Congress, the first session of the Forty-fourth Congress, and the second session of the Forty-fifth Congress. The weight of testimony was strongly against the merging of the Pay Department with the Quartermaster and Subsistence Departments, or with either of them; and special attention is called to what was said by a few of the many officers who gave testimony on that subject:

who gave testimony on that subject:

General Sherman: A staff system that has admitted of an increase of the line of the Army from the mere nucleus of 1860 to a million of men, and its reduction back to the present standard, without confusion, and with the most perfect accountability as to property and money, at all times providing for the Army abundantly, is entitled to our respect.

Lieutenant-General Sherdans: Of course they can be consolidated; but I doubt whether you can get as good a result as you have now. I do not believe in tearing things down, especially when they have done well. They have certainly done well as they are, and I do not know that any great saving is to be made by consolidation. I am not prepared to recommend anything of the kind.

Major-General Haxcock: It would be "practicable" to consolidate the Quartermaster's, Commissary, and Pay Departments into one corps, but the operation would be difficult and attended with no great advantage or economy. All or most of the persons who now constitute the separate corps would appear in the consolidated corps, and they certainly would not act any more efficiently or economically on account of the consolidation.

A careful examination of all the views expressed will not only show that the weight of evidence is against the consolidation of these corps, but that the opposition to it has decidedly increased, and that while some who at first favored.

\*It is but proper to note that the expenses of the Quartermaster's Department includes the care, purchase, &c., of property, besides other expenses; and it is believed that that Department is at present economically and efficiently administered.

Mr. UPSON's proposed substitute for Mr. Browne's amendment:

Provided further, That the President of the United States shall, at the earliest period practicable, retire, under and in accordance with the provisions of chapter 2 of the Revised Statutes of the United States, all paymasters, or officers in the Pay Department of the United States Army, incapable of performing the duties of his or their office or incapacitated for active service; and such retirement shall not be prevented, limited, or restricted by any act of Congress in force at the date of the approval of this act.

And provided further, That there shall be no more appointments to the grade of major in the Pay Department of the Army until the number of majors in that department shall have been reduced by death, retirement, resignation, dismissal, or other cause below forty.

And provided further, That in future appointments in the grade of major and paymaster shall be made from the captains in the line of the Army.

It now either oppose or do not support it, there are no changes of opinion in the other direction.

General HOWAED: But careful inquiry will, I am confident, discover grave difficulties in the way of such consolidation. Our Army, though now not very large, is very widely scattered. There would be a liability of overtaxing a single officer at Washington; and confusion in accounts would be inevitable, unless clear distinction was kept up in all papers and books and reports, corresponding almost exactly with that now kept by the Quartermaster, Commissary, and Pay Departments.

Departments.

General McClellan: You ask my opinion as to the proposed consolidation of the three corps (Quartermaster, Commissary, and Pay) into one. I don't like the idea at all, and had I the power would prevent it.

If this consolidation scheme is carried out, experience will prove that some individual interest was at the bottom of it, and that no real benefit inured to the service; and before long the old order of things will be restored.

It seems almost superfluous for me to say that our peace organization should be such as to enable us to increase the Army rapidly in time of war. Any disinterested soldier knows what this means with regard to the number of staff and

interested soldier knows what this means with regard to the number of staff and line officers in peace.

Major-General MEADE: I can not say that, after reading all that has been written and said, I am prepared to advocate consolidation. I have had a fair opportunity to observe the workings of the present system, both in time of war and peace, It has always worked well.

Major-General Thomas: I do not think it would be advisable to unite them, either one with another or to unite the whole three together. Their duties are separate, and I think they are very wisely divided as they are. General Fosters: The paymasters have again, an entirely different duty to perform, in which great care and responsibility are required. At many posts the officers who perform the quartermaster's duties could not furnish the requisite bonds for the security of the public money now furnished by every paymaster. The public money for the payment of the Army is safer in the hands of the paymasters than in the hands of quartermasters, who have to follow the movement of troops, and thus, is a certain degree, endanger its safety, especially in time of war.

General Longstreet: The duties of the Quartermaster's, Commissary, Pay,

masters than in the hands of quartermasters, who have to follow the movement of troops, and thus, to a certain degree, endanger its safety, especially in time of war.

General Longstreet: The duties of the Quartermaster's, Commissary, Pay, and Medical Departments are sufficiently burdensome and complicated when kept as separate departments. Consolidated, an officer of higher grade would be chief, while the organizations would virtually remain as before. The only good reason that I can give in favor of consolidation is that a place may be made for some distinguished and meritorious officer.

General Townsend: The question of paying troops is a very difficult one. Payment by company commanders would involve the frequent changing of funds from hand to hand, great multiplication of accounts, and corresponding increase in clerical force of the Treasury to settle them; and more than all, frequent and serious losses to the Government from want of secure places of deposit at most of the military stations. Large supplies of funds must be sent to the officers in the fall before communication is cut off with many posts. Agents, whose expenses must be paid, must carry them, for there are no banking facilities at hand. At the posts, a safe, a trunk, or a chest will be the well-known deposit, inviting to frequent robberies. The officers would not be under bonds, and might often be defaulters; or from want of capacity for keeping such intricate accounts might often make serious mispayments. Suppose the remedy be applied of requiring bonds. Not many officers could get bondsmen without leaving their post, if they could at all. Moreover, where a man is required to give bonds for any duty, he should have the liberty of accepting or declining the duty rather than give the bond.

Another objection would be a removal of sheck against paying wrong accounts, for the officer who made up the soldier's statements would dilicewise pay him. Now, the paymaster first examines and corrects the accounts before he pays them, and he is charged w

#### General McDowell says:

I do not recommend the consolidation of the Pay Department with the ordinary supply departments. On the contrary, I would increase it and keep it utterly distinct from them, and favor the plan of extending its payments to include that of all money due on contracts for either material or services, in all branches of the service; making it the military chest, the cashier of the Army, having nothing whatever to do with the creating of obligations, but confined to the duty of discharging them, as is now done in the case of the muster and pay rolls of the troops and officers' accounts for pay, and, recently, for traveling expenses, where the account or demand is made by one set of officers and discharged by another. I think this division, when once under way, would tend to afford additional guarantees to the Treasury and much simplify the business of the Army.

There seems to be much force and sound reason in the suggestion of General McDowell to extend the duties of the Pay Department so as to General McDowell to extend the duties of the Pay Department so as to include the payment of all money due on contracts in all branches of the service, "having nothing whatever to do with the creating of obligations but confined to the duty of discharging them." This change, in the language of General McDowell, we submit, "would tend to afford additional guarantees to the Treasury, and much simplify the bus iness of the Army.

General Terry says:

General Terry says:

I think that to consolidate the Quartermaster's, the Subsistence, and the Pay Departments into one corps would be to disregard a principle which underlies all modern progress—the principle that the best results are obtained by the division of labor; that the best work is done by specialists—a principle that is of quite as much importance in military organizations as it is in civil life. The Quartermaster's Department is already loaded down by the multiplicity of subjects over which it has control; to add to its duties would, I think, impair its efficiency. That the Pay Department should not be consolidated with the other two, or with either of them, seems to me to be shown by the fact that paymasters must travel from post to post, paying troops, while the duties of quartermasters and commissaries require them to remain stationary. Should a legal union of these departments be effected it would not be a union in practice. The officers of the new organization would, of necessity, be assigned to special duties, some to the duty now performed by quartermasters, some to that which is now performed by paymasters, &c. I think that the change suggested would be merely nominal; that it would involve that the change suggested of the paymasters.

General Grover says:

I do not think it would be advisable to consolidate the Quartermaster's, Comissary's, and Pay Departments in one.

General Getty says:

It would be practicable; but to consolidate the three corps into one would not, a my opinion, be for the last interest of the service.

General Dodge says:

General Dodge says:

I think it will be a very great mistake to consolidate the Quartermaster's, Commissary's, and Pay Departments.

General Hardes: A paymaster requires a knowledge of the list of regulations and precedents and decisions affecting pay and bounty, and a familiarity with various sets of Congress and decisions of accounting officers, which can hardly be expected of line officers " and you would find constant mistakes in the disbursements made by them. " I have an experience " o onearly twenty-six years in the service, and I am bound to say that the present system, the system on which the Pay Department is worked, has supplied the Army admirably.

Particular attention is called to the special knowledge which should

be possessed by paymasters, referred to by General Hardie. General Augur, in speaking of the consolidation of the Quartermaster's Commissary's, and Pay Departments, said:

Practicable, undoubtedly, but in my opinion not advisable; experience has shown that our staff organization is efficient for field service on the largest scale. It should be preserved, but reduced or extended to meet the requirements of the service.

General Ord says:

I think the present system is as good a one as we could have. I know of  $_{\rm BO}$  better. It has stood the test of experience very well.

General Kelton says:

The Pay Corps can not be incorporated with the Supply Corps for the reasons— First. Their duties and accounts are utterly dissimilar. Second. Their duties require them to be absent from any one station the greater part of every two months.

General Marcy says:

For the reason that each of the departments named in question 8, has all the work it can efficiently perform now, and as the chiefs of those departments have abundant occupation in properly administering the affairs of their separate departments, I think the consolidation indicated would diminish their efficiency.

The statements above quoted from such an array of distinguished officers, life-schooled and practically experienced in military science, both in "piping peace" and in "grim war," should have great weight and influence

To abandon the present system, and call in officers of the Quartermaster's Department to make payments to the Army, would be practimaster's Department to make payments to the Army, would be practically a return to the old system, so long tried and found wanting, for at almost all the military posts in this country a lieutenant of the line is detailed to do the duty of both quartermaster and commissary. These officers are not under bonds, and the questions arise, Could they get bondsmen? If they could, would they; or should they be required do so?

Most of the bonded officers of the Quartermaster's Department are stationed and remain at the headquarters of the divisions, depart-

ments, and depots, their property responsibility being such as to confine them to their stations. They are not subject to the provision of law which requires paymasters to renew their bonds every four years. This provision preserves an active, reliable bond as to paymasters, upon which recovery may be had.

which recovery may be had.

If you pay through the post quartermaster and the quartermaster of each detachment and detail of troops, funds must be conveyed to them, and the expense thereof must be paid. As it is now, a paymaster who is familiar with the laws and regulations and decisions governing payments carries funds to the place of payment, settles on the spot all questions, places the money in the hands of the soldier, receives such sums as may be deposited by them, returns to his post, and places his surplus funds in a United States depository. If the practice exists of leaving funds in the hands of any officer at a post for the payment of troops absent from the pay-table when the paymaster pays, as was asserted by Mr. Browne, of Indiana, it must prevail to a very limited extent, as such payment is illegal and the paymaster would be responsible for any loss resulting therefrom

As I understand, no such practice is authorized or permitted in the

Pay Department.

As the law is now construed, it requires the express authority of the Secretary of War to enable any officer of the Pay Department to hold funds in his personal possession at places on the frontier distant from designated depositories. This authority is personal to the officer and has to be renewed whenever he may change his station.

It is believed that the author of this amendment falls into a grave error of feet when he states.

error of fact when he states-

Besides that, take for illustration the case where a paymaster is called upon to make payment at a post where he expects to find, say, five hundred men. In point of fact he may find only a few at the post, the larger number being on detached service, some atone point and some at another, ten, fifteen, or twenty-five miles distant. The result is that he pays as many as he finds at the post and then leaves sufficient money on deposit to pay the rest when they come in from time to time. He leaves his vouchers at the post with either the commissary of subsistence or the quartermaster or other officer, who pays the money out as the detachments of troops drop in, and takes their receipts on the pay-rolls for it. Thus practically you do at times what this amendment contemplates shall be uniformly done.

We would regard such conduct as not only unauthorized but repre hensible, and warranting a dishonorable dismissal from the Army ruling upon this question the Paymaster-General used the following language, namely:

While this practice may exist to some extent there is no authority for it, and should the money fail to reach the hands of the soldier he would have a just claim for it and the paymaster would be responsible.

If the duties of paymasters were conferred upon acting assistant quarermasters stationed at posts, who are generally lieutenants, subject to

frequent changes, it would cause frequent removals or transfers of the public funds in their charge and tend to interrupt and postpone the reguar and prompt payment of the troops. There are at this time two hundred acting assistant quartermasters, stationed from the Atlantic to the Pacific Ocean, including all of the Territories and more than twenty

It is not believed that any one officer could perform the duties, make It is not believed that any one officer could perform the duties, make all the returns now required by law and the regulations of the Pay and Quartermaster's Departments, and do it satisfactorily. The performance of this duty under widely different systems would produce confusion in the disbursements, and would inevitably tend to inaccuracy, as past experience has demonstrated.

Another serious objection to the amendment proposed is that, should the serious objection to the amendment proposed is that, should be a serious objection to the amendment proposed is that, should be a serious objection to the amendment proposed is that, should be a serious objection to the amendment proposed is that, should be a serious objection to the amendment proposed is that, should be a serious objection to the amendment proposed is that, should be a serious objection to the amendment proposed is that, should be a serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is that the serious objection to the amendment proposed is the serious objection to the amendment proposed is that the serious objection to the amendment proposed is the serious objection to the amendment propose

it become a law, it would take from the President the authority, very wisely and properly conferred, of selecting a suitable officer for the supervision of the Pay Department of the Army. The last clause of the amendment provides:

Whenever, however, a vacancy occurs in the office of the Paymaster-General ne duties of that office shall devolve on the next officer in rank in the Pay De-

In such an event the duties of Paymaster-General might devolve upon a defaulting, incompetent, or otherwise unworthy officer. to me to be a very objectionable and dangerous feature of the amend-

In my judgment the proposed amendment would be detrimental to the military service, and should not be adopted.

#### The Tariff.

#### SPEEGH

# HON. JOHN G. CARLISLE.

OF KENTUCKY,

#### IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 27, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other purposes.

Mr. CARLISLE said:

Mr. CHAIRMAN: It is not my purpose to discuss to-day the questions Mr. CHAIRMAN: It is not my purpose to discuss to-day the questions of free trade, or protection, or tariff for revenue, except, perhaps, incidentally in the course of my comments upon the provisions of the pending bill. While these questions are interesting and important, it is evident that any attempt to discuss them within the limited time albited to me in this debate would necessarily exclude other matters to which, in my opinion, the attention of the committee ought to be called. When we shall come to the consideration of the bill by clauses the high-protective theory upon which it is based will doubtless be frequently challenged, and then ample compertunity will be offered to challenged, and then ample opportunity will be offered to every gentleman to declare by his speeches and votes whether he is in favor of a constitutional tariff to raise revenue for public purposes, or a favor of a constitutional tariff to raise revenue for public purposes, or a scheme of taxation such as this is, having for its principal object the protection of private capital engaged in particular industries. As these opportunities occur I shall not hesitate to express my opinions and to give my votes in accordance with them. While, therefore, I shall postpone until that time a discussion of the general questions involved in all such legislation as this, there was a proposition made this morning by the distinguished gentleman from Ohio on my left which, I think, ought not to go to the country without some notice.

The gentleman from Ohio [Mr. Converses], while denying that there was any power conferred upon Congress to impose protective duties or

was any power conferred upon Congress to impose protective duties, or duties merely for the purpose of protection, by that clause of the Constitution which anthorizes it to impose duties upon imports, &c., yet claimed that this power existed under the clause of the Constitution conferring upon Congress the power to regulate commerce. This was, to say the least of it, a novel doctrine, and the gentleman himself conceded, in response to an interrogatory propounded by me, that so far as he knew it had not received the sanction of any judicial tribunal in the country.

country

Mr. Chairman, that provision of the Constitution upon which the gentleman relies will be found in the section which enumerates the powers delegated to Congress, and is in these words:

To regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

It will be observed that the power to regulate commerce with foreign nations is precisely of the same nature and extent and is conferred in precisely the same language as the power to regulate commerce among the several States. If, therefore, the proposition made by the gentleman from Ohio is correct, that Congress in the exercise of the power to regulate commerce with foreign nations may impose protective or prohibitory duties, then the conclusion is inevitable that Congress possesses

the same power in regulating commerce between the several States and may impose protective or prohibitory duties upon merchandise brought for sale from one State of the Union into another.

If Congress in the exercise of the power to regulate commerce may, by the imposition of a tax or duty, prohibit in time of peace the importa-

tion of goods from Great Britain, it may, in the exercise of the same power, conferred in the same language by the same clause of the Constitution, prohibit the importation of articles of merchandise from the State of Pennsylvania into the State of Ohio; and I submit to the gentleman from Ohio, who is an able constitutional lawyer, whether he would, upon mature reflection, undertake to maintain a construction leading to such a conclusion. I believe such a doctrine has never been advanced heretofore in Congressional debates, in commentaries on the Constitution, or in the decisions of our courts. The laws to which the gentleman alluded prohibiting the sale of certain articles to the Indians are not in fact and were not intended to be commercial regulations. They are mere police regulations enacted for the purpose of protecting the morals and preserv-ing the peace of these uncivilized people, who as a general thing inhabit the Territories and are under the guardianship and tutelage of the General Government.

With this brief statement I must pass from the question raised by the gentleman from Ohio and proceed to the discussion of the bill under

The measure presented by the Committee on Ways and Means owes its origin to an almost universal demand from all classes and conditions of our people for a real substantial reduction of taxation and for a simplification of the laws imposing duties upon imported goods. A large part of the people and a great many of their Representatives here believed that it was the duty of this Congress immediately after its organization to proceed to make that reduction and simplification. The majority, however, thought otherwise, and the result was the appointment of a commission to investigate the whole subject and report a plan of re-vision to Congress. While this was not of itself a measure of relief, it was an acknowledgment that relief was demanded and ought to be granted. That commission was appointed. It has performed its labor, and on the first day of the present session its report was referred to the Committee on Ways and Means, and the Committee of the Whole now has before it the result of all the investigations made under that reference

In order to show, Mr. Chairman, what the opinion of that tribunal was as to the demands of the country upon this subject I ask the Clerk to read a brief extract from its report.

The Clerk read as follows:

The Clerk read as follows:

While giving all the consideration implied in the foregoing statement to the interests affected by revision, in determining the rates to be recommended the commission has been governed solely by its own views of justice, expediency, and a regard for the interests of consumers and the public sentiment of the connective that it is a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction. No rates of defensive duties, except for the establishment of new industries, which more than equalize the conditions of labor and capital with those of foreign competitors can be justified. Excessive duties, or those above such standard of equalization, are positively injurious to the interest which they are supposed to benefit. They encourage the investment of capital in manufacturing enterprise by rash and unskilled speculators, to be followed by disaster to the adventurers and their employés, and a plethora of commodities which deranges the operations of skilled and prudent enterprise. Numerous examples of such disasters and derangements occurred during and shortly after the excessively protective period of the late war, when tariff duties were enhanced by the rates of foreign exchange and premiums upon gold.

Mr. CARLISLE. Will the Clerk now pass to what I have marked

Mr. CARLISLE. Will the Clerk now pass to what I have marked on the next page?

The Clerk read as follows:

Entertaining these views, the commission has sought to present a scheme of tariff duties in which substantial reduction should be the distinguishing feature. The average reduction in rates, including that from the enlargement of the free-list and the abolition of the duties on charges and commissions, at which the commission has aimed, is not less on the average than 20 per cent, and it is the opinion of the commission that the reduction will reach 25 per cent.

Mr. CARLISLE. I think it is not uncharitable to say that the gentleman that wrote that report did not prepare the schedules which accompany it or even know what they contained; for if he did prepare the schedules or know what they contained the statement in the report that the reduction was equal to 20 or perhaps 25 per cent. is simply inexcusable. The report, however, does contain an express admission that the public sentiment of the country and the interests of our various industries demand a reduction of taxation to the extent of from 20 to 25 per cent. And now I call upon gentlemen on the other side of the House to give us that reduction. If they refuse to do it the storm which swept the majority from this body last November will prove to be but a gentle breeze in comparison with the hurricane of 1884. If that commission had prepared and reported a bill, or if the Committee on Ways Mr. CARLISLE. I think it is not uncharitable to say that the genmission had prepared and reported a bill, or if the Committee on Ways and Means had prepared and reported a bill making an average reduction of even 20 per cent. in the rates, justly and equitably apportioned among all the articles subject to duty so as to make an actual reduction of taxation to that extent, I would have given it my support; and I believe it is safe to say that every advocate of revenue reform on this side of the House would have done the same thing. While such a measure would not have accomplished all that ought to be done ultimately by any means, it would have been a long step in the right direction and I

should have accepted it as such.

But instead of such a measure they have presented for our consideration a proposition which makes an apparent reduction of even less than \$21,000,000 from a customs revenue of over \$216,000,000, which is less than 10 per cent. on the present rate of duty; and I do not hesitate to say that it is more protective in its general plan and structure, more grinding and oppressive upon the people, and more injurious to the trade and commerce of the country than any tariff scheme ever before presented to Congress.

Mr. CHACE. Will the gentleman permit me to interrupt him?

Mr. CARLISLE. Certainly.

Mr. CHACE. Do I understand the gentleman to say that the proposed reduction was less than 10 per cent. of the present average rate

Mr. CARLISLE. That is what I said.

What do you understand to be the average rate of Mr. CHACE.

Mr. CARLISLE. Under the present law the average rate of duty is 42.51 per cent.; under the proposed law it will be 38.40 per cent.
Mr. CHACE. But there is a reduction of 10 per cent. of the whole

amount of revenue.

Mr. CARLISLE. There is not.

Mr. CHACE. I understand the gentleman to say it is \$20,000,000

Mr. CARLISLE. I did not say on \$200,000,000. It is \$20,000,000 on \$216,000,000; which is less than 10 per cent.
Mr. CHACE. Is not the reduced rate 20 per cent. off the 40 per cent.

Mr. CARLISLE. It is not. The rates of duty are proposed to be reduced less than 10 per cent.; and even assuming that the reduction of rates will in every instance result in a reduction of taxation, which I deny, the proposed bill will diminish the burdens of the people less than 10 per cent., as any gentleman can ascertain by making a simple calculation.

The apparent reduction claimed by the friends of this bill is something over \$20,000,000; but more than half of that is taken off the single article of sugar. The apparent reduction upon sugar is \$11,-249,625, leaving the reduction upon all the other schedules in the bill \$9,606,000, which is less than 4½ per cent. of the present revenue.

Mr. HAMMOND, of Georgia. How much is taken off the single ar-

ticle of tin-plate?

Mr. CARLISLE. The Committee on Ways and Means has reported a reduction of nearly \$5,000,000 on tin-plates below the recommenda-tions of the Tariff Commission, but notwithstanding this the bill proposes to leave the duties on that article just as they are in the present law. The apparent reduction upon one of the most important schedules, that of iron and steel, is in round numbers only \$1,809,000, which is less than 6 per cent. reduction on the existing tariff rate. this I do not mean 6 cents subtracted from the average rate of duties, but 6 per cent. of the average rate of duty, which is quite a different thing; that is to say, the average rate of duty on the metal schedule under the present law is 40.79 per cent., while under the pending bill it will be 38.34 per cent.

The apparent reduction on wools and woolen goods is \$3,061,000, which is a little over 10 per cent. And just here, allow me to say in response to what was said this morning by the gentleman from Massachusetts [Mr. RUSSELL] that the rate of reduction on wools, the raw material of the woolen manufacturer, is just about double the rate of reduction on the article manufactured from it. That is to say, the bill proposes to reduce the rate of duty on the raw material just about twice as much as it proposes to reduce the rate of duty on woolen clothing which the

people are compelled to buy and wear.

Mr. RUSSELL. Before the gentleman passes from that point I would like to ask him what he estimates to be the reduction on the raw material, the wool?
Mr. CARLISLE.

I can tell the gentleman in a minute.

Mr. RANDALL.

It is 18 per cent.
I think it is about 18 per cent. Mr. CARLISLE.

Mr. RUSSELL. It is not that.

Mr. CARLISLE. Not that much on wools? Mr. RUSSELL. No, sir.

Mr. CARLISLE. On wools, not woolen goods, the reduction is 18

Mr. RUSSELL. It is apparently 18 or 20 per cent., but from a change of classification, of the dividing line between the value of wools, carrying it from 32 to 30, the rate of reduction is reduced to about 10

or 12 per cent.

Mr. CARLISLE. I do not know by what method of calculation the gentleman can arrive at that result, as we do not know how much wool valued between 30 and 32 cents per pound is now imported. I am stating the plain facts as they appear from the figures furnished us by the experts.

Mr. RUSSELL. But they do not appear plainly.
Mr. CARLISLE. I will not consume further time in regard to the amount of the reduction, except to say that in my opinion it will be shown during the progress of this discussion that in a great many cases where there is an apparent reduction the simple effect will be to reduce the nominal rates of duty but continue the full amount of taxation upon the people.

The gentleman from Ohio [Mr. McKinley] and other gentlemen who have spoken in support of this measure have attached a very great importance to the fact that the bill proposes the abolition of the duties on commissions, charges, &c. And it was said by one gentleman at least that in his opinion this would amount to a reduction of at least 10 per cent. of the duty. In response to that gentleman, I expressed the opinion yesterday, which I believe a careful examination of the subject will sustain, that the average reduction to be effected by the repeal of that clause of the statutes will not exceed 3 per cent.

The article of earthen-ware is the one most affected by the repeal of

those charges. As to cotton goods, woolen goods, and articles of that character, the cost of the packages, of course, is comparatively very little. The greatest reduction in such cases is the abolition of the duty on the 2½ per cent. commission.

The gentleman from Ohio who has just taken his seat [Mr. McKin-

LEY] undertook to show to the House, from what he said was an actual invoice of earthen-ware, that the decrease of duties resulting from the abolition of the duties on commissions and charges would be very large. The Tariff Commission took the same view of the subject, and in its report the following statement is given:

To illustrate, taking the "calculations on one hundred crates of earthen-ware, being a fair average of the goods as imported," in the statement of the president of the Pottery Dealers' Association, the original cost is given at \$3,019, on which the duty at 50 per cent, would be \$1,509,50, while the dutiable basis on the same importation under the present tariff, with dutiable charges and commissions added, is \$3,763 which at 40 per cent, gives \$1,505,20 as the amount of duty; so that the duty under the proposed rates is substantially only 5 per cent, higher than those under the present tariff, because of the proposed abolition of the duty on charges and commissions.

Now, I would like some friend of the commission to inform us why it is that this calculation is made upon the basis of a duty of 50 per cent. ad valorem when the Tariff Commission proposes no such rate of duty on any class or grade of earthen-ware in its schedule. on any class or grade of earthen-ware in its schedule. The duty imposed by the present law on this common earthen and stone ware, painted or printed [exhibiting a piece], is 40 per cent. ad valorem; the Tariff Commission proposed to increase it to 55 per cent., but the Committee on Ways and Means proposes in the bill now before the House to increase the duty on this common stuff to 65 per cent. ad valorem.

Mr. BREWER. Does the gentleman know that such ware as he now holds in his hand has not been used in the United States for the past

twenty years?
Mr. CARLISLE. Why?
Mr. BREWER. It has not been in fashion; it has not been sold at

Mr. CARLISLE. You as a manufacturer want to make it. do you

Mr. BREWER. I do not know that we do.
Mr. CARLISLE. Why, then, do you want the duty increased from o to 65 per cent. ?
Mr. BREWER.

BREWER. I will answer the gentleman by saying that the 'painted goods' refers to a different grade of goods, and a very much higher grade than the one the gentleman has exhibited; but this happens to come under that classification.

Mr. CARLISLE. But this bill proposes to put the duty upon this

Mr. CARLISLE. But this only proposes to put the duty aparticular article at 65 per cent., does it not?

Mr. BREWER. It does.

Mr. CARLISLE. I am glad that point, at least, is settled.

Mr. BREWER. But it is not used in this country, and has not been

Mr. CARLISLE. The gentleman from Ohio speaks about the skill required in the manufacture of this kind of ware. Why, sir, unless I am misinformed, that ware is made simply by taking a piece of paper with the figure, flower, animal, or whatever it may be, printed upon it, putting that paper upon the clay and burning it off in the furnace, thus transferring the decoration to the finished earthen-ware. It requires no skill whatever. It is the cheapest and most common class of earthen-ware used by the poorest people of the country who are not able to buy the higher grades of decorated ware, but who nevertheless desire to use an article a little more attractive than the plain white-ware. This bill proposes to place this cheap common ware in the same class with the most costly and beautiful china, porcelain, parian, and bisque ware and impose mone all the same rate of duty and the gentlemen from and impose upon all the same rate of duty, and the gentleman from Ohio, who advocates protection in the interest of the laboring man, justifies this classification.

justifies this classification.

Now, Mr. Chairman, taking the Tariff Commission's own figures as to the cost abroad of one hundred crates of earthen-ware, let us see how the duties are affected by this bill notwithstanding the abolition of duties on commissions and charges. I use my own calculations based upon their figures, and any gentleman can easily test the accuracy of the results. The cost of one hundred crates, with all commissions and

charges added, under the present law is \$3,763, according to the report just read. The present duty of 40 per cent. upon the whole cost, including all commissions and charges, is \$1,505.20. The cost of the same one hundred crates of earthen-ware without commissions is \$3,019, according to the report. The duty at 55 per cent., the rate proposed by the Tariff Commission on this kind of ware, is \$1,660, an increase of 10 per cent. But a duty of 65 per cent., as proposed by this bill, on the same one hundred crates costing \$3,019 amounts to \$1,962.35-

case of over 30 per cent.

I might go through the entire schedule relating to earthen and stone ware and show that the claim set up by the Tariff Commission and by the advocates of the bill here on the floor that there is not a very large increase of duties is unfounded in fact. With the permission of the committee I will append to my remarks several statements made from actual invoices, showing the increase on the several grades of these

Every gentleman knows that the provision of the law in relation to the duties upon commissions, charges, and packages applies only to those articles which are subject to purely ad valorem rates, or to dif-ferent specific rates based upon value. As to large classes of articles enumerated in the law the provision has and can have no application. As I said yesterday the principal importations under the metal schedule As I said yesternay the principal importations under the metal schedule are pig-iron, wrought and cast scrap-iron, tin-plates, and iron and steel rails, the duties upon all of which are purely specific. The duties upon sugar are all purely specific, because the 25 per cent. additional is reckoned upon the duty and not upon the value of the article itself. I affirm that when the calculation is accurately made, if it ever can

be accurately made, it will appear that this abolition of duties upon

charges will not affect the revenue to the extent of 3 per cent.

It is true, as stated by the gentleman from Ohio [Mr. McKinley],
that the Committee on Ways and Means have, in many instances, reduced the duties recommended by the Tariff Commission—principally,
however, I must be permitted to repeat, on the article of tin-plates, upon which the reduction amounts to nearly \$5,000,000, and on the raw sugars, upon which it will be some \$7,000,000 or \$8,000,000 more than the sugars, upon which it will be some \$7,000,000 or \$5,000,000 more than the Tariff Commission recommended. Out of sixteen schedules more than half the reduction proposed by this bill is made on a single one—the sugar schedule; and in my judgment, while this reduction will affect the revenues of the Government it will not affect the taxation imposed upon the people. These reductions are made in the lower or non-consumable grades of sugar, while the duties upon the higher or consumable grades are left by this bill absolutely prohibitory, so that not a pound of imported sugar can pass into consumption among our seconds uptil it has first been manipulated by the refiner.

people until it has first been manipulated by the refiner.

After the majority had adopted the amendments reducing the lower grades of sugars to the rates recommended by this bill we undertook

grades of sugars to the rates recommended by this bill we undertook to follow that up by making precisely the same rate of reductions on the higher grades of sugar, but we were defeated in every instance.

Mr. BERRY. In whose interest was that?

Mr. CARLISLE. In the interest of the refiners and against the interests of the people and the consumers. But, sir, in the woolen schedule and in the cotton schedule the Committee on Ways and Means made large increases in the rates of duty, not only over the recommendations of the Tariff Commission, but in many important instances large increases over the present law. There is a new clause inserted in the Fremes over the present law. There is a new clause inserted in the schedule of woolen goods which embraces what is known as "all-wool dress goods," which now come into this country under our present law at 6 cents a square yard and 35 per cent. ad valorem, or at 8 cents a square yard and 40 per cent. ad valorem, the rate of duty being dependent upon the question whether the goods are valued at more or less than 20 cents per square yard. A new clause is inserted by which all that class of goods, which constitute the great bulk of the importation of dress goods, and is the common holiday wear of the laboring people of this country, has increased duties imposed upon it ranging from 75 to 125 per cent. ad valorem. Here are the goods, which gentlemen can look at for themselves. The duty upon that class of goods [indicating a particular kind of woolen goods] under the present law is 66] per cent., but under the bill proposed by the committee the duty will be equal to 103] per cent. ad valorem. The duty upon this under the present law [indicating another article of dress goods] which is purchased by the laboring people for dresses for their wives and children, is equivalent to 80 per cent., which is certainly enough for the poor man to be compelled to pay in addition to the actual value of the goods; but by this proposed revision it is made to bear a duty of 101 per cent. and valorem. And on many other grades of these goods—for instance, an article worth 15 cents per yard—the duty proposed by this bill is 125 per cent. ad valorem.

Mr. ELLIS. All in the "interest of labor."
Mr. CARLISLE. All in the interest of labor, as suggested by my

friend from Louisiana

I suppose, Mr. Chairman, that I should here make some reference at least to the remarks made by my friend from Ohio [Mr. McKINLEY], who has just preceded me, to the effect that the increase of duty on earthen-ware is in the interest of the American laborer. It is said in the report of the Tariff Commission that wages in this country in that industry are 113 per cent. higher than abroad. For myself, I do not

believe it. I admit that wages are considerably lower in Europe than here, but in my opinion that is a very exaggerated statement. But assume that there is such a difference. The Tariff Commission

ost of material, total amount of wages paid, and the value of the products in the manufacture of earthen-ware. From this statement, which gentlemen will find in that report, it appears that the whole wages paid in this country in that industry in the year 1881 amounted to \$3,279,335, and the value of the product was \$7,943,229. The Tariff Commission proposes to give a protection of 55 per cent. and 65 per cent. and valorem upon the product of this industry. If you really the product of this industry. upon the product of this industry. If you reckon it at 55 per cent. ad valorem, the duty proposed is equivalent to a protection of \$4,368,771, or \$1,089,000 more than our domestic manufacturers paid for all the labor in that industry. And I desire to say here what no gentleman can successfully controvert, that while, according to the census reports, there were in round numbers 2,700,000 people engaged in the various manufacturing and mechanical industries in this country in 1880, there were only about 700,000 in round numbers engaged in the manufacture of steel and iron, the various textile fabrics, glass and earthen ware, and chemicals, the highly-protected articles under our tariff. And I affirm that these statistics show that the 700,000 men and women who were engaged in these protected industries which I have named received annually in wages 10 per cent. less than the average earnings of the laborers engaged in the other occupations. That is what protection has done and is doing for them, according to the statistics furnished by the manufacturers themselves.

Mr. Chairman, this change of the law in relation to the woolen goods to which I have just alluded will decrease the revenue of the Government by prohibiting the importation of that class of goods, but it will add to the taxation imposed upon the people nearly \$2,000,000. informed by reliable and intelligent gentlemen who know the facts that at least 75 per cent. of the dress goods now imported into this country will be embraced in the new clause and will be subject to the increased duty by this provision; and yet in the statement which has been submitted to the committee by the gentleman from Pennsylvania no account whatever is taken of that fact and the calculations are based upon the assumption that the rates of duty are actually diminished. This is not the fault of the gentleman who made up the statement, but results necessarily from the fact that the official statistics from which his calculations were made do not separate the all-wool dress goods from those having a cotton or linen woof. This is one of the cases alluded to by me where the revenue is largely diminished and the taxes largely increased, and the sole purpose of the provision is to compel the purchasers of these goods to pay exorbitant prices for their woolen clothing, while domestic manufacturers are making experiments to see whether they can produce them in this country.

Mr. RUSSELL. Before the gentleman passes from the woolen schedule, let me ask if he does not admit, in the compound duty fixed upon woolen goods, which makes the high advalorem duty, that a good part

s included in the compensatory duty on wool?

Mr. CARLISLE. I admit that upon my theory as an advocate of a tariff for revenue when you impose a duty upon the raw material or partly raw material you must impose compensatory duties upon the finished product made from it, because the duty on the raw material inreases its cost to the manufacturer. But the gentleman's theory is that the imposition of a duty upon an article invariably reduces its cost; and of course if this is correct, there is no justification for what is called a compensatory duty. If the duty on the raw material makes it cheaper than it would be without the duty, as the gentleman contends, the duty on the manufactured product made from it ought to be reduced on that

Mr. RUSSELL. Unless to bring into life a manufacturing interest here which competes with other manufacturing interests, and on the whole reduces the rate.

Mr. CARLISLE. How long will it be before we reach that point?
Mr. RUSSELL. We have reached it already.
Mr. BLOUNT. Then why increase the rate?
Mr. CARLISLE. The gentleman speaks of the duty on wool. We hear constantly from his side of the House that the great purpose of the advocates of protection is to increase, or at least to maintain the present rates of wages paid to American laborers; in other words, that the sole justification for the imposition of protective duties is the fact that such duties enable producers of protected articles to pay high wages; and yet it is now proposed to impose a duty of over 30 per cent. on wool, and a duty of only 15½ per cent. on hemp—I speak of that article only because it occurs to me at the moment—when everybody knows that it requires at least ten times the amount of labor to produce a ton of hemp' that it does to produce a ton of wool. When we tried, as the gentle-man very well knows, to reduce the duties on wool, in order that we might also reduce the duties upon the manufactured goods made from it, and thus at last reach the consumers and benefit the people at large, we were defeated by the votes of gentlemen who now insist that the manufacturers must be protected against the duties on their raw material. If the duties upon their raw materials are burdensome to them, why do they persistently oppose all our efforts to reduce or repeal them? When we come to the cotton schedule, a schedule embracing a series

of articles which the people are compelled to use and which in my judgof articles which the people are compelled to use and which in my judg-ment need less protection than almost any articles that could be named, we find very large increases in the rates of duty. The cotton, the raw material of the manufacturers of these articles, is absolutely free, and they possess an advantage over their competitors abroad to the extent of one-half or three-quarters of a cent per pound on account of their proximity to the sources of supply. They have the best machinery in the world, and their labor is more skillful and productive than that the world, and their labor is more skillful and productive than that of the oldest establishments in Europe. The only tax upon their merial is the duty upon dyes and colors, which affects only the manufactures of printed or colored goods, and the moderate duties imposed upon the inconsiderable quantities of oil used in making the cloth.

Mr. RUSSELL. And the additional cost of plant.

Mr. CARLISLE. Yes, the additional cost of plant, caused by the tax on machinery, which I hope the gentleman will help us to reduce when we come to that part of the bill.

Mr. RUSSELL. Lan for maintaining all interests

Mr. RUSSELL. I am for maintaining all interests.

Mr. CARLISLE. All interests except the interests of the consumer, who at last pays all the duties, whether they be imposed upon the machinery, or the raw material, or only upon the finished product. The manufacturer really pays none of them. He merely advances them in the first instance, and then adds them to the price of his goods.

In this bill the duties on cotton goods in common use among the people are increased in some cases from 35 per cent. to 40 per cent., and

in other cases from 35 per cent. to 45 per cent. ad valorem.

Mr. RUSSELL. But does not the gentleman from Kentucky know that we have reduced the rates from the commission's report on the low

that we have reduced the rates from the commission's report on the low grades of cotton goods and increased them on some of the finer goods where there is required a great deal of labor?

Mr. CARLISLE. That is another instance—and I am glad the gentleman has reminded me of it—of a reduction of the rates of duty without reducing the burdens of taxation. The duties are decreased on the low grades of cotton, but the reduction is wholly immaterial; it relieves nobody, because we are actually exporting that class of goods. We send considerable quantities of these coarse cotton fabrics to China and other countries, and we could send much more than we now do if our manucountries, and we could send much more than we now do if our manufacturers could be induced to relinquish the idea of monopolizing the home market in lines of goods which they can not profitably produce at reasonable prices, and devote their capital and skill to the grades for which their machinery and labor are adapted. While the decrease to which the gentleman alludes assists in bringing down the apparent average rate of duty in the cotton schedule it relieves no human being from any burden now resting upon him. To offset that the committee has put the duty up from 35 per cent. to 45 per cent. on the articles which the people can purchase abroad at lower prices than they can be produced for at home, and which are being imported in large quanti-

Mr. RUSSELL. Does the gentleman not know there is not a single

Mr. CARLISLE. Take the article of hosiery.
Mr. CARLISLE. I am speaking of the cheap goods.
Mr. CARLISLE. Take your hosiery. It is at 35 per ce Mr. CARLISLE. Take your hosiery. It is at 35 per cent. ad valoremand you leave it at 35 per cent.; but there was only \$23,000 worth of it imported during the whole fiscal year. Take the next item, where nearly \$8,000,000 worth are imported, and you increase the duty from 35 to 45 per cent., making an enormous addition to the charges upon

Mr. RUSSELL. For the reason that we want to manufacture it in

this country.

Mr. HASKELL. Where did the gentleman from Kentucky get that first item of information as to the importation of hosiery amounting to

Mr. CARLISLE. I refer the gentleman to the statement he has on

Mr. HASKELL. Mr. CARLISLE.

What statement?
The statement made by order of the Ways and Means Committee

Mr. CHACE. The gentleman is mistaken. It is not so in that state-ent. He has made an error.

Mr. CARLISLE. I am not mistaken; I read from that statement

the following:

On stockings, hose, half-hose, shirts, and drawers, and all goods made on knitting-machines or frames, composed wholly of cotton, and not herein otherwise provided for, 35 per cent.; importation, \$23,087.42.

[Applause.]

Mr. Chairman, I wish the time allotted to me would permit me to discuss this metal schedule. [Cries of "Go on!"] I care no more about the duty on cotton-ties than I do about the duties on barrel-hoops, wire and wire rods, chains, or any of the other forms of iron or steel but in my opinion justice and sound policy require us to so legislate on this subject as to permit all the people of this country who are compelled to use these articles in their various industries to procure them as cheaply as they can. This bill not only increases the duty on cotton-ties, four-fifths of which are exported, without the allowance of any drawback, but it proposes to increase the duty on hoops for barrels and casks, on rods for the manufacture of wire fences, and many other necessary articles. This wire for fencing has become an article of absolute necessity to the

farmers of the West and Northwest, where timber is scarce and dear The burdens borne by the agriculturists of the country are already sufficiently onerous, but this bill proposes to increase them in many ways besides the imposition of a tax on fertilizers, about which the gentle-man from Alabama spoke this morning.

The gentleman from Pennsylvania [Mr. Kelley] said that one of the rules or principles adopted by the committee was to impose a higher rate of duty on the finished product than upon the materials from which Now I desire to call his attention to the article of wire rods just mentioned. The committee proposes to put a duty of at least 175 per cent. ad valorem upon the steel billet from which the wire rod is made, the raw material of the manufacturers who make the fencing wire for sale to the farmers.

There were consumed in this country during the last year 75,000 tons There were consumed in this country during the last year 75,000 tons of these wire rods in manufacturing barbed wire for use in the West, and 75,000 tons more for telegraph purposes. Now, this bill proposes to increase the duty on those rods from \$11.75 per ton, which is the equivalent of 30 per cent., the present rate of duty, to \$16.80 per ton, which is equivalent to 43 per cent. This will add at least \$750,000 per annum to the taxes imposed upon the consumers of these articles.

Then it is proposed by a most remarkable clause in the bill, in relative to the taxes are the second of the second of

tion to steel ingots, blooms, slabs, and billets, to put a duty equal to 224 per cent. ad valorem upon certain forms of Bessemer-steel blooms, of 222 per cent. ad valorem upon all Bessemer-steel slabs of a certain size, and 175 per cent. ad valorem upon the billets which the wire-rod makers must use in making this barbed wire for the farmer. This bill proposes that if Bessemer blooms or slabs are imported into

this country in forms weighing five hundred pounds or over, and measuring five or more inches square, they shall be admitted at a duty of six-tenths of a cent per pound; but if they weigh less than five hundred pounds or measure less than five inches square, the very lowest rate of duty to be imposed upon them by this bill is 2 cents per pound, or \$44.80

per ton, which is equivalent to the ad valorem rates first stated.

Now, what will be the effect of this duty? Owners of the large steelmills in this country, the manufacturers of steel rails, can import these large blooms, weighing from five hundred to a thousand pounds each, at six-tenths of a cent per pound duty; and they can handle them, because they have the heavy machinery necessary for that purpose. But the man who wants to make a wire rod out of identically the same kind of steel must pay 175 per cent. duty on the imported billet, or he must go to the Bessemer-steel-rail makers and buy it from them at whatever price they may see proper to charge him.

Mr. KELLEY. I do not desire to interrupt the gentleman, but I wish to ask him whether on these smaller blooms or billets there is

not a reduction of one-fourth of a cent?

Mr. CARLISLE. No, sir.
Mr. KELLEY. And whether the difference is not made between

crucible steel and Bessemer steel?

Mr. CARLISLE. No, sir. Instead of making a reduction you propose to make an increase. They are admitted now as a manufacture of steel "not otherwise provided for" at 45 per cent. ad valorem.

Mr. KELLEY. Without taking up your time now I will answer you

Mr. CARLISLE. I will meet the gentleman whenever he is ready for the discussion. The effect of this discrimination in the rates of duties against these slabs and billets and blooms of small sizes and in favor of those of large sizes is simply this: the owners of the large mills in Pennsylvania and elsewhere who have the machinery for using that material will bring in the large sizes at the low rate of duty, and then cut them up into the small sizes suitable for use in manufacturing agricultural implements, wire rods, and other articles, and sell them at whatever price they may choose to ask Mr. ANDERSON.

Will the gentleman permit me to ask him a

Mr. CARLISLE. Certainly.

Mr. ANDERSON. I have been informed that the reason for that Mr. ANDERSON. I have been informed that the reason for that was because it was impossible to distinguish the crucible steel from the Bessemersteel, and that this classification was necessary on that account. Is there anything in that statement?

Mr. CARLISLE. If it weighs less than five hundred pounds?

Mr. CARLISLE. If it weighs over five hundred pounds there seems mr. CARLISLE. If it weighs over five hundred pounds there seems

to be no apprehension of difficulty about distinguishing the one from the other. The difficulty seems to arise the moment you cross the line between five hundred pounds and four hundred and ninety-nine pounds in a piece of steel. [Laughter and applause.] Upon that subject Mr. Oliver was asked a question before the Senate Committee on Finance a few days ago.

Mr. ANDERSON. I was asking for information.
Mr. CARLISLE. Mr. Oliver was the gentleman who knew more about the iron and steel industries of the country and more about the qualities and characteristics of those metals than any other member of that body. He was asked this question by a Senator and member of the Committee on Finance:

As I understand from many sources that it is impossible to detect the crucible steel from the other and coarser grades of steel, what is there to prevent all or a majority of the crucible steel coming in under that six-tenths of I cent per pound duty instead of the other rate?

Mr. OLIVER. It is not impossible to detect it. An analysis or fracture to any

expert should show.

So I submit to my friend from Kansas [Mr. Anderson] that according to the testimony of a member of the Tariff Commission who is especially acquainted with this industry there is no difficulty in distinguishing between Bessemer steel and crucible steel.

Mr. Anderson. That is what I wanted to know.

Mr. CARLISLE. Then, Mr. Chairman, there is another most remarkable provision in this bill to which I must call attention before

markable processor in possible.

Mr. ANDERSON. Take all the time you want.

Mr. CARLISLE. Here is a provision entirely new in the tariff legislation of this country, and I suppose entirely new in the tariff legislation. lation of any country:

lation of any country:

On all iron or steel, and on all manufactures, wares, utensils, vessels, and articles of iron or steel, or of which such metals or either of them shall be the component part of chief value, whether wholly or partly manufactured, there shall be levied, collected, and paid no less rate of duty than the highest duty or rate of duty imposed upon any part of said goods in any of the forms in which it or they existed prior to or during their passage into the form or article on which the duty is to be levied: Provided, That this shall not apply to nor in any manner affect the articles specially enumerated or provided for in this act, but shall apply to all other manufactures of iron or steel, or of which iron or steel shall be the component material or part of chief value.

Machinery which the gentleman from Massachusetts mentioned a while ago as one of the articles taxed and used by his constituents, engaged in the manufacture of wool, is not an enumerated article in this tariff bill. In machinery iron or steel will in every instance constitute the component part of chief value, so that it is one of the articles embraced by the provision just read. What is the result? We are to have 2 cents a pound upon Bessemer steel in the form of piston-rods and various other forms, which I can not now stop to enumerate; but if cold-rolled or hammered or polished in any way whatever, it must pay 1 cent a pound in addition. Suppose a piece of machinery has a piston-rod or some other part which is polished, cold-rolled, or hammered, the entire article must pay 3 cents a pound at the very lowest rate, and may pay 4½ cents per pound. Suppose it has some copper in it, copper being taxed at 4 cents a pound; then the whole article, according to the proviso, must pay the duty imposed upon that part of it—the highest duty imposed upon any part. Thus the duty will be 4 cents a pound upon the whole machine—iron, steel, copper, and all.

Mr. TOWNSHEND, of Illinois. Suppose that copper is only one-

Mr. CARLISLE. That makes no difference. The first question to be determined is, whether the article is not enumerated; secondly, whether it is an article of which iron or steel constitutes the material of chief value. These questions being answered in the affirmative, the article must pay the highest rate of duty imposed upon any of its comonent parts whether that part be iron or steel or copper Mr. TOWNSHEND, of Illinois. No matter how small

No matter how small the part may

Mr. CARLISLE. No matter how small. In the Committee on Ways and Means we tried, as gentlemen know—because the proceedings of the committee were public, and I am divulging no secrets—we tried to make this clause so read that this non-enumerative article should pay the rate of duty imposed upon the material of chief value. But we were not able to accomplish that; and this shows that the advocates of the bill understand distinctly what they are doing. [Laughter.] Now I hope my friend from Massachusetts [Mr. Russell], who would like to have cheaper machinery will help us correct that provision when to have cheaper machinery, will help us correct that provision when we reach it in the course of our deliberations.

Mr. RUSSELL. Will the gentleman allow me to correct a statement which he made here in regard to stockings and hose? The gentleman referred to the importation of \$23,087.49 of shirts and drawers.

Mr. CARLISLE. There I say you did not change the duty at all,

cause none comes in.

Mr. RUSSELL. That is the amount imported under that classification; it has nothing whatever to do with hosiery; it has no reference to that at all.

Mr. CARLISLE. I may have used the word hosicry inadvertently for "hose and other articles." But that was the item about which I was speaking, and my reference to the figures showed it.

Mr. RUSSELL. Well, that has nothing to do with this importation.

Mr. CARLISLE. Certainly not; therefore the committee did not raise the duty on it, but when it came to a class that did have something and on with investigate way are also below the duty from 25 to 15 to 15. to do with importations you raised the duties from 35 to 45 per cent, ad

Mr. RUSSELL. Ah, but the gentleman does not state it fairly.
Mr. CARLISLE. Let us see.
Mr. RUSSELL. No one knows the proportion of the low and high priced hosiery imported under this clause, amounting to eight or nine million dollars.

Mr. CARLISLE. Does the gentleman know Mr. Charles L. Spencer, whorepresents the Philadelphia Association of Hosiery and Knit Goods Manufacturers?

Mr. RUSSELL. I do not.
Mr. CARLISLE. Here is his testimony before the Tariff Commission, in which he says—I can not read it all—that we have imported of

all, but principally of the third class, the class on which you have raised the duty, during the fiscal year ending June 30, goods to the amount

Mr. RUSSELL. He is talking about hosiery, and you about shirts

Mr. CARLISLE. He is talking about the item on which you have raised the duty.

[Here the hammer fell.]
Many Members. Go on!
Mr. SPRINGER. I ask unanimous consent that the time of the

gentleman from Kentucky [Mr. Carlisle] be extended.

Mr. Carlisle. I am very much obliged to gentlemen who desire
to grant me an extension of time, but under the arrangement which has been made I do not think it proper to hold the floor longer.
The CHAIRMAN. The gentleman from Kentucky [Mr. TURNER]

asks unanimous consent that the time of his colleague be extended.

Mr. CARLISLE. I am very much obliged to my colleague, but the understanding was that the general debate should close at 5 o'clock, and as the gentleman from Kansas [Mr. HASKELL] must follow me, I do not feel like trespassing longer upon the time of the committee. hope to have ample opportunity under the five-minute debate to dis-cuss these various questions in a more satisfactory manner than it is possible to do now

#### Penny Postage.

Postage is a tax not only on the business of the country but upon the intelligence, knowledge, and the exercise of the friendly and social feelings, and in the opinion of the undersigned should be reduced to the lowest point which would enable the Department to sustain itself. That principle has been uniformly acted on in the United States as the true standard for the regulation of postage, and the cheaper it can be made, consistently with that rule, the better.—Postmaster-General Cave Johnson.

#### SPEECH

## HON. WILLIAM E. ROBINSON.

OF NEW YORK,

#### IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 21, 1882,

On the bill (H. R. 7049) making appropropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1884, and for other purposes, including a clause reducing the rate of postage on single letters from 3 to 2 cents.

INJUSTICE OF A TWO-CENT RATE—LOWEST-PAYING RATES THE RULE—CHEAP EDUCATION FOR THE PEOPLE—CONVEYANCE OF PRINTED MATTER—FRANKING INJUSTITY—PUBLIC DOCUMENTS—ISSACHAR'S BURDENS—OPPOSED TO TWO-CENT RATE—BEHIND ENGLAND—LENGTH OF ROTTE AND WEIGHT OF MATTER FALSE PROPHECIES—HISTORY OF TWENTY-RIGHTH CONGRESS—LOW RATES AND HIGH INCOME—HIGH POSTAGE IMMORAL—POSTAL HISTORY—RIBLICAL AND CHINESE—ENGLISH POSTAL HISTORY—THE MALLOACH—HISTORY—OF AMERICAN POSTAL SERVICE—OCEAN PENNY POSTAGE—THE MEAN POSTAL-CARD—POSTAL FIGURES.

Mr. ROBINSON, of New York, said:

Mr. Speaker: The most unjust and offensive tax on the people now inflicted and barely tolerated under our system of government is the present tax of 3 cents each on single letters. Scarcely more grievous, however, than the proposed tax of 2 cents, designed to perpetuate the iniquity of compelling the private correspondence of a free people to pay for the support of wealthy publishers and merchants and franked

No man dares, and no man does, deny that the sealed postal matter known as first-class matter would more than pay for itself at 1 cent. per half ounce. I do not think there would be much difficulty in finding plenty of responsible contractors who would engage to convey all our first-class matter as fully and as efficiently as now conveyed for 1 cent on each half ounce or under, and pay the Government millions of dollars a year for the privilege.

This being so, every cent collected on letters to make up the losses on

other matter of the second, third, or fourth class, which does not come legitimately under the head of postal matter, is an oppressive tax on the people using the mails for their legitimate purposes.

· I have two years more before me to serve in Congress, if I live, and I shall make it the chief effort of my service here to oppose and abolish the iniquity of inflicting a 2-cent tax on single letters where 1 cent

would more than pay.

Is there no way by which we can compel the tinkers in postal reform to come into the forum of reason and argue this question in the light of common sense?

It is an axiom in American statesmanship, formulated by Cave Johnson, Postmaster-General in President Pierce's Cabinet, who opposed the reduction of postage in 1845, but became a convert in 1847, in the extract from one of his annual reports, which I shall put as a text at the head of these remarks, and invoke attention to it as the true stand-

ard of American doctrine on this subject. I think I can demonstrate beyond contradiction that letters are now taxed double their cost. beyond contradiction that letters are now taxed double their cost. We arm now imposing an unjust and oppressive tax of millions of dollars yearly upon the people who write letters, in favor of the few wealthy publishers and merchants; and in this proposed reduction to 2 cents we propose to continue the injustice and oppression. Could I state it more pointedly in any denunciatory language which I could use than in simply stating the fact, that for wealthy publishers we convey their mail at 2 cents a pound and charge the poor people who write letters to absent friends or otherwise, even under this proposed reduction, 64 cents a pound? cents a pound?

I may be answered that it is for the benefit of the people to send public documents free and newspapers at 2 cents a pound. But would it not be also for the benefit of the people if they were allowed to convey their own correspondence free or at 2 cents a pound? Has the millionaire Jay Gould any right to convey his correspondence at 2 cents a pound, when you deny to John Smith and James Brown and other value which the visibles of conditions their conveyance of conditions their contractions. plain people the privilege of sending their correspondence at 2 cents an

I do not discuss the question whether Jay Gould's editorials or the people's own current thoughts would be most desirable for partially or wholly free circulation. But if the spread of Jay Gould's ideas be so desirable for popular education in Republican circles, let Jay Gould or the General Government pay for their conveyance and not tax others who have no great admiration for his teachings.

This plain proposition is undeniable, that if the letter correspondence of the country will pay expenses at I cent per single letter it should not be taxed twice that sum for the benefit of a wivileged class; and I chal-

be taxed twice that sum for the benefit of a privileged class; and I challenge, I defy the advocates of a 2-cent postage on letters to come into debate and show that a 1-cent postage will not pay. We are inflicting an unjust tax of many millions annually on the people's correspondence to add to the wealth of millionaires and monopolists who seem at a loss with what follies and extravagances to get rid of their increasing wealth.

#### CHEAP EDUCATION FOR THE PEOPLE

If you want to educate the people of the United States by passing newspapers free through the mail or by sending free the Agricultural Reports, the CONGRESSIONAL RECORD, the Census reports, and other public documents, do so, but charge the expenses to the general Treasury and not inflict a prohibitory tax upon knowledge and social communication. There is one way in which you can educate the people munication. There is one way in which you can educate the people more thoroughly and at less expense than in any other manner. Open the post-office to every man, woman, and child in the United States that they may write to every other man, woman, and child in the Union for 1 cent on each letter, and you will give a greater impulse to education among the masses than was ever given before.

It seems almost incredible that of the thirty-six or seven millions of Americans of 10 years of age and upward one-sixth are unable to read and write. You tell me that this illiteracy arises from the foreign-born element, as many ignorant persons undoubtedly believe. But such is not the fact. Some of the States having the fewest foreign-born have the largest number of illiterates.

the largest number of illiterates.

Taking the population of the following States, 10 years of age and upward, and we have the following results:

States.	Population.	Illiterate.	Foreign- born.	Foreign illiterate.
Alabama Georgia Louisiana North Carolina Rhode Island South Carolina Tennessee Virginia	1,062,130	433, 447 520, 416 318, 380 463, 975 24, 793 369, 848 420, 722 430, 352	9, 396 10, 208 52, 317 3, 502 70, 562 7, 350 16, 333 14, 270	727 572 5,690 1119 19,283 362 1,233 777

In the District of Columbia over 18 per cent. of the entire population can neither read nor write, while of the foreign-born only 12 per cent.

	Illiterate.		
States,	White native-born.	Foreign- born.	
Colorado	8, 373 75, 025 182, 420 87, 780 17, 825 137, 949 46, 329 83, 185 72, 820	1, 533 2, 038 43, 907 12, 615 7, 665 14, 561 3, 39 32, 30 2, 411	

You may tell me that these illiterates are principally colored people. That is true, but my Republican friends must not allow the figures to

show that they are in such a hopeless minority among the intelligent people of the United States. In the whole country there are 6, 239,958, or 17 per cent., illiterate, while there are only 763,620 foreign-born, or only 12 per cent., unable to read and write.

Now, if you want to set the whole country, black and white, to mastering the mysteries of reading and writing, give them 1-cent postage, and my Republican friends will adopt the surest means of making their voters as intelligent as the Democrats. Set the boys and girls to writing letters to each other on New Year's, Valentine's day, Easter, the Fourth of July, and Christmas, and intermediate days, by lowering the postage to 1 cent, and "many shall run to and fro, and knowledge shall be increased."

The conveyance of regular newspapers and publications costs the Government about 40 per cent. of the entire expenditures of the postal service, while it does not pay 4 per cent. of the cost. Mr. Jay Gould appears at the post-office of New York with a package of one hundred pounds to be conveyed to Oregon or Arizona, and the United States takes it to be so conveyed for \$2. Immediately beside him a mechanic presents himself with a package of sealed circulars of the same weight precisely, which he wishes to send to Brooklyn or Newark, and the postmaster, even at this reduced rate of 2 cents for half-ounce letters, refrises to convey the mechanic's parcel for less than \$64. It this interpret.

refuses to convey the mechanic's parcel for less than \$64. Is this just or even tolerable in republican government?

The newspaper proprietors pay carriers for delivering their papers to their readers. The small fraction which they throw off to the dealers and carriers is more than they now pay for transportation through the and carriers is more than they now pay for transportation through the mails—half to three-quarters of a cent on each paper is allowed to the carriers and dealers. But by the mails they only pay the eighth of a cent. They can not desire more. Besides, the extra trains that are run, and which increase the cost of mail transportation, are run for the benefit of the papers. The extra train from New York to Albany, at a cost of \$25,000 a year, is run for the benefit of newspapers and paid by the surplus on letters. Of this I do not complain. We are a newspaper people and I would not curtail their circulation. But this and other extra trains start at an hour when there is little letter mails and other extra trains start at an hour when there is little letter mails and fewer passengers. A man could carry in his carpet-bag all the letters that go out by them. They are run for the benefit of the press.

The train called the fast train, which leaves New York for Albany at 4.35 o'clock in the morning, is a part of this expedited mail system for which a former Congress appropriated \$600,000. It seems not enough burden upon the people that they should be overtaxed in favor of the large newspapers, which pay only about 4 per cent. of the revenue from the Post-Office, while they cost the Government 40 per cent. of the revenue from the Post-Office, while they cost the Government 40 per cent. of the expenses, but this expedited mail, which adds another \$600,000 to the last, is almost exclusively for the New York city papers. There are practically no letters mailed between the departure of the last evening mail, about 9 o'clock, and this early morning train; but the printing and mailing of newspapers are done in that time, and the morning newspapers go to newspapers are done in that time, and the morning newspapers go to press about fifty minutes or an hour before this train leaves. It is loaded with newspapers, and these are thrown off at some thirty or forty stations between New York and Albany. It goes through on fast time, arriving in Albany about 8.20. This fast train is not for the benefit of the people nor for that of the business men, but every man, woman, and child in the United States is taxed for it on his 2-cent letter. The United States become the carriers of the morning papers and unjustly inflict the cost as a tax upon the whole people to the tune of \$600,000, which is taken from every breakfast table in the land in single pennies overcharged on letters to enrich the already overwealthy.

But you tell me we should tax the letter-writers to convey the news-

But you tell me we should tax the letter-writers to convey the news papers free because they spread intelligence among the people. A reduction on newspaper postage would not result in an increased spread of intelligence so much as a reduction of letter postage. Treble the number of letters sent by the people to one another and you do more to spread intelligence and educate the masses than you can do in any other

spread intelligence and educate the masses than you can do in any other way. The sentiments of some of these large newspapers are not deemed by many desirable for circulation among a republican people. The representatives of monarchy at this capital have been sending some of them home to show their leanings toward despotism.

The vilest stuff that pollutes our mails and calls for the scrutinizing attention of Anthony Comstock to prevent its circulation is not so deleterious to our national vitality as the treasonable trumpetings of monarchy and snobbery with which some of these leading papers are filled for whose circulation we tax the intellect of the country. In place of economizing or facilitating their circulation they should be excluded from the mails as disgraceful matter and dangerous to free

Another iniquity in our postal system is the franking privilege, which loads the mails with matter that should pay its own way. This system of franking and penalty envelopes and all free-matter conveyance should be abolished. Why oppress the Post-Office Department for the millions of dollars spent in forwarding the three-fourths useless matter sent through it for the State, Treasury, War, Navy, Interior, and Justice Departments, and for Congress? "Let every tub stand on its own bottom," and let these Departments and Congress pay their postage as

others do, or look to the Treasury for a general appropriation if they

must have privileges.

The gentleman from New Jersey [Mr. HULL], in a speech delivered in this House April 11, 1882, stated that four tons of free mail matter were daily sent from Washington, in addition to that arriving free. This, if paid at the rate of letter postage, would amount to \$7,680 a day. The same gentleman, in that same speech, says that the stage-routes on the plains could not carry the mails on account of the weight of this useless matter, and frequently bags of mail matter were thrown into the mud-holes for the stage to pass over. The great loss in that matter was in the waste of the bags. Their contents were useless.

#### PUBLIC DOCUMENTS

Take the history of the Patent Office reports.

When I first came to Washington, in 1843, forty years ago, the first regular standard Patent Office report was published in an edition of 3,000 sets. In 1845–'46, 7,000 sets were published; in 1847, 30,000; in 1848, 45,000; in 1849, 65,000; in 1852, 77,000. All these in one volume each. In 1854 it was published in two volumes, and 90,000 sets were printed, at a cost of over \$100,000; in 1856 it was printed in three volumes, and 90,000 sets were issued, at a cost of over \$160,000. The number of volumes printed in nineteen years, 1851-'69, was 2,000,000 volumes, at a cost of over \$2,000,000, the weight over 6,000,000 pounds or 3,000 tons, and all conveyed free by an unjust tax levied upon the writers of letters

Since 1872 those Patent Office reports are continued in the Official Gazette, published every Tuesday, of over eighty pages, thousands of which are sent free through the mails, while the Agricultural Report, which are sent free through the mails, while the Agricultural Report, which used to be a part of the Patent Office report, is circulated by the hundred thousand, all free, and the expense charged to the poor letter-writers. We have ordered 300,000 copies of the pending report of the Agricultural Department. These will average about three pounds a volume, or in round numbers 1,000,000 pounds. This if conveyed at the proposed reduced postage of 2 cents to the letter of half an ounce would be \$640,000 for this single publication.

#### ISSACHAR'S BURDENS.

The Scriptures tell us that Issachar was an ass bending between two The Scriptures tell us that Issachar was an ass bending between two burdens. Our Issachar is the letter-writing class bending between the two burdens of wealthy publishers and mercantile millionaires, and this letter-writing class are bound hopelessly under the burden. They can not lighten the load by getting outward help. Merchants may send their wares by mail at 1 cent an ounce, or by express at lower rates; publishers theirs by the mail at an eighth of a cent an ounce, or cheaper by express; but the law compels the letter-writer to send his at 4 or 6 cents an ounce, and prohibits him from sending them, as he could, by express at the tenth of a cent an ounce or less nuder pain of fine and incomplete the contraction of the property of the express at the tenth of a cent an ounce or less under pain of fine and imprisonment.

The poor letter-writers, for the privilege of corresponding with each other, which they could do with large profit to the Government at 1 cent the single letter, are compelled to pay 3 or 2 cents for each single letter for the purpose of allowing others to send their wares almost free and the tons of Congressional and Department letters entirely so. And yet after doing all that there is to be a surplus of six or seven millions

But Issachar will resume his manhood and throw off the burdens of others, and carry only his own. The day is fast approaching when the people will not tolerate their representatives here in making them pay a tax upon every letter which they write to convey other matter free to a few privileged classes which they consider injurious to the well-being of the country.

#### OPPOSED TO TWO-CENT RATES

I am therefore utterly opposed to the adoption of this clause in its present shape. It will only delay the reform in our postage laws which the people demand and will have. I am opposed to passing general laws as riders on appropriation bills. And the reduction of letter postage is not the only thing the people demand, and the reduction which they have a right to expect is not the partial and imperfect one from 3 to 2 cents, but from 3 to 1. That reduction must come and will come speedily. Before the date fixed for this reduction to take place, January 1, 1884, the demand for a uniform 1-cent postage will be so stern and commanding that the people's Representatives will gladly obey their constituencies by amending this provision to 1 cent before it can take effect as 2. The people also demand reform in the Post-Office laws re-

effect as 2. The people also demand reform in the Post-Office laws respecting franking abuses, and a readjustment of the rates of postage on second, third, and fourth class matter.

This committee reporting this bill owed it to the people to digest and report a well-considered bill after mature deliberation, and opportunity given to have parties heard who believed in 1-cent postage and contend for reform of franking abuses and other postal obliquities. This incompruous clause should be stricken from this bill and recommitted to the committee with instructions to prepare a bill remedying all the evils complained of in the postal service, with a reduction of letter postage to 1 cent, and I hope if this benot done in the House it may be done in the Senate, and that we may have a postal reform worthy of statesmen rather than the devices of tinkers. We want no local and partial

patching up of a defective law, but a new one, perfect in all its parts as

patening up of a detective law, but a new one, periect in an its parts as far as human effort can attain perfection.

The people of these United States are now oppressed with the most unjust tax existing in the world. And this unjust and oppressive tax is little less flagrant at 2 cents than at 3. We can demonstrate—the proof is overwhelming—that the first-class matter is more than paying proof is overwhelming—that the first-class matter is more than paying its expenses; that its expenses would be amply paid at 1 cent, and its unjust and appressive to make those who pay the tax on their letters pay also the great deficiencies in the other three classes of postal matter and the oppressive burden of free matter. We are inflicting an unjust tax of ten to twenty millions a year on the masses of the people who write letters to fill the already plethoric purses of wealthy publishers and princely merchants. For every letter that a poor woman writes to her absent daughter or husband or mother, she has to take 2 cents from the loaf of bread which she places on her table to pay the cents from the loaf of bread which she places on her table, to pay the transportation of Jay Gould's newspaper or some other monopolist's wares at the rate of 2 cents a pound—while we charge 64 cents a pound on letters even at the proposed reduction to 2 cents.

The people of the United States are now writing a thousand millions

The people of the United States are now writing a thousand millions of letters each year at 3 cents. The revenue from that is \$30,000,000 a year. Make the postage 1 penny and in less than twelve months five letters at least will be posted for every one sent now. That would bring in a revenue of fifty millions a year. This will suffice to pay for the countless tons of free matter, the immense loss on the conveyance of newspapers as now forwarded, but with a proper reduction of expenditures in the Department, a restriction on the franking privilege, and a proper readjustment of rates on third and fourth class matter, the expenses will be very much lessened and the revenue doubled.

expenses will be very much lessened and the revenue doubled.

This idea of a 2-cent postage is antiquated and behind the age. was discussed forty years ago and rejected by men of intelligence. committee of Boston gentlemen, among whom were Edward Brooks, Joshua Leavitt, Dr. S. G. Howe, and Moses Kimball, reported on its absurdity in 1848 by showing that a Boston parcels express company delivered parcels in neighboring towns and villages at the following rates compared with similar parcels at 2 cents postage:

	Number of letters.	Postage.
Parcels less than I pound carried at 3 cents		\$0 64 1 93 6 40 16 00 32 00 64 0

Sixty-four dollars for carrying a parcel of one hundred weight across a ferry or over a bridge, a distance over which you could have a bar-rel of flour weighing two hundred pounds conveyed for 25 cents or less. With what cheek can we face our constituents to justify charging under this pseudonymous reform, for carrying a parcel for our tax-payers and charging \$64, while one business man would charge another for conveying the same parcel only 25 cents? The Cunard steamers would convey a ton of freight from New York to Liverpool for \$4, while we charge \$64 for earrying the twentieth part of that weight from New York to

One-penny postage is too much. If we had a smaller coin, a farthing, One-penny postage is too much. It we had a smaller coin, a farthing, for instance, and reduce it to that, it would pay and leave a surplus. Our difficulty in two or three years will be to know what to do with that increasing surplus. We can afford to double the weight and vastly increase the efficiency of the service and yet have a troublesome surplus in two or three years after we grant this just demand of the people. BEHIND ENGLAND.

Is it not a shame that we should be crawling with such snail's pace after England in conferring benefits on the people. Forty years ago she conferred upon her people postal facilities at one penny a letter. Her rate is half a penny or one cent per half ounce—and we now in this year of 1853 are talking of a charge twice as large as hers as a "reform!" Four cents an ounce you call a reduction of postage, while you convey a pound of newspapers for half the price and talk of reducing even that. At the rate of one cent on the half ounce her postal system pays all the expenses and leaves a surplus of about ten millions of dollars a year and upward.

The objections in the British Parliament to the proposed reduction of postage to 1 penny were the same as we have now in our own Con-Violent protests were made against so great a reduction, and then as now short-sighted statesmen were found to prophesy that it would not pay and that they should make a gradual decrease commencing with a reduction to 2 pence; but Mr. Goulbourn contended that if the experiment was to be tried at all it would be best to take penny postage. He declared that a postage of 2 pence would fail, but a penny might succeed. Sir Robert Peel advocated it as a boon to the lower classes. Daniel O'Connell advocated it as the most valuable legislative relief ever given to the people, and even if it did not pay the reduction should be made. Lord Ashburton declared that he had been in favor of 2-pence postage, but had changed his mind in favor of coming to 1-penny postage at once. The cheap postage of Great Britain was pas

in deference to the will of the people and not on the ground of producing revenue, and this deference to the public good demanded the cheap postage even if a new tax were necessary to make up the deficiency. But there was no permanent deficiency under the 1-penny postage; there

would have been under the 2.

The English ministry showed more deference to popular opinion than our Government has shown. In 1837 Rowland Hill published his pamphlet ignoring a 2-penny rate and advocating penny postage. A select committee was appointed, which sat sixty-three days, examined over a hundred witnesses, including the postmaster-general and his secretaries. Their report filled three folio volumes. In our committee I do not think penny postage was even mentioned. No reform in franking or relating to second, third, and fourth class matter is recommended, and the reduction comes in as a rider on an appropriation bill.

Reduce your postage to 1 cent. Let the country get prepared for this great boon, and the day the measure takes effect double the num-ber of letters will be mailed that were ever mailed before, and the vast increase will roll like a swelling wave through the entire mail service, and all out citizens, wherever resident, shall enjoy the benefits of a uni-form, speedy, and cheap transportation of social intelligence and busi-

LENGTH OF ROUTE AND WEIGHT OF MATTE

The great argument for keeping up high postage in this country is the extent and length of the mail-routes. The expense of the Post-Office is practically the same whether letters are conveyed one or one hundred miles. Rowland Hill estimated the cost of transportation of a letter from London to Edinborough (three hundred and ninety-seven miles) as one thirty-sixth of a penny. The weight of letters is of very a letter from London to Edinborough (three hundred and minety-seven miles) as one thirty-sixth of a penny. The weight of letters is of very little consideration. Ten thousand letters on the average would not weigh more than a barrel of flour. It is very little difference in weight whether you carry one or ten letters; and as for distance, if you have a contract for carrying the mails from Boston to New York, and another contract to carry them from New York to Philadelphia, what difference whill it may be whether your carry the some output the letters. ence will it make whether you convey by the same that go from Boston to Philadelphia?

Our letters are taxed unjustly for the conveyance of millions of free

letters by the several Departments, for the distribution of the immense tonnage of Congressional and public documents, for the conveyance of regular newspapers at 2 cents a pound, which does not pay but a small regular newspapers at 2 cents a pound, which does not pay but a small fraction of the cost of their conveyance, for the extension of star and other routes in new or thinly settled parts of the country which do not pay expenses. Why should these burdens be inflicted as a tax upon correspondence? These non-paying routes are necessary, and should be supported not by a tax upon the writers of letters, but upon the general Treasury, which is amply remunerated by the sale of public lands and the advanced prosperity of the whole country.

There is nothing in our Constitution or form of government to demand that the Post-Office Department should pay its expenses. It is more of a necessity than the Army or Navy, yet these Departments are in no sense self-sustaining.

in no sense self-sustaining.

FALSE PROPRETS.

There never was a prophecy of falling off of the revenues on reduction of postage that was not proved false. There never was a prophecy There never was a prophecy sed revenue from reduced rates of postage that was not more than fulfilled.

Some of the gloomy forebodings of the wiseacres on the passage of the bill of July, 1845, reducing postage on single letters to 5 and 10 cents furnish amusing reading now. The Boston Post and New Hampshire Patriot, leading Democratic papers, saw a fearful deficiency to be made up by additional tariff duties upon articles which poor farmers were compelled to buy. The Philadelphia North American, a Whig paper, edited by Morton McMichael, was of the same opinion. The Madisonian, of Washington, prophesied that the Southern planters and Western grain-growers would be taxed enormously to gratify the available of the same opinion. rice and cupidity of sharpers and speculators. George McDuffie, then Senator from South Carolina, opposed the passage of the law and prophe-sied that in less than six months one-fourth of the offices would be discontinued for want of business, and in less than twelve months the country would demand its repeal. He advised the Department and the postmasters to hold on to their old books, as Congress would in two weeks after its next assembling repeal the law.

Mr. David S. Reid, then a member of this House from North Caro-

sina and afterward governor of and United States Senator from that State, said in a formal letter to his constituents, as those opposed to penny postage now say, that the reduction was too great, and that the tax taken off the mail correspondence must be collected on salt, iron, sugar, and blankets, and that he opposed its passage. The Postmaster-General, Cave Johnson, of Tennessee, in his annual report six months offer the law went into reception for the following the control of t after the law went into operation, foretold a frightful decrease in revenue unless the law was amended. But no amendment was made. The actual deficiency the first year was only half a million. For the second year it was less than \$34,000 and this same Postmaster-General in his report of December, 1847, estimated an actual surplus for that current year of nearly a quarter of a million of dollars. I was then in Washington and pretty intimately acquainted with all these great prophets of evil, and was then as now for cheap postage, and foretold the failure of these prophesies. The stubborn character of these old statesmen in

opposition to all reforms and progress is exemplified in this same Cave Johnson, who two years previously was a member of this House and when an appropriation was proposed of \$30,000 to enable Professor Morse to carry out his invention in telegraphy, proposed as an amendment to give \$30,000 to develop animal magnetism, on which some mountebank was then lecturing in Washington.

But telegraphy and cheen restore succeeded in spite of the hitter side.

But telegraphy and cheap postage succeeded in spite of the bitter ridicule of these great statesmen, and so it will be in the future, when in the light of history the whole nation will wonder why we hesitated in this year of 1882 to adopt penny postage.

I may also mention as a remarkable fact that this same Postmaster-

General Johnson in less than two years after his prophecy of failure from low rates of postage actually suggested a still further reduction, which he did not urge for the simple reason that we were then engaged in war with Mexico, which imposed heavy burdens upon the Treasury. Indeed, the success of the law of 1845 made a model cheap-postage advocate out of Cave Johnson.

HISTORY OF THE TWENTY-EIGHTH CONGRESS.

During these discussions on the introduction of telegraphy and cheap postage I was an interested and pen-holding spectator.

"Eheu! fugaces anni."

The venerable Tyler (in whose Cabinet Web-It was forty years ago! ster had lingered) and his accomplished young wife, with his Cabinet, John C. Calhoun, George M. Bibb, William Wilkins, John Y. Mason, Charles A. Wickliffe, and John Nelson, at the head of their several De-Charles A. Wickline, and John Nelson, at the nead of their several peartments, were surrendering the White House and public affairs into the hands of James K. Polk and his excellent wife, with his Cabinet, James Buchanan, Robert J. Walker, William L. Marcy, George Bancroft, Cave Johnson, and John Y. Mason. I recall their venerable and majestic forms through the mist of years. I see the thunder-cloud of Webster's eye-brows, fringed with foam of fire from the orbs below; the consuming fire of Calhoun's eye; the quaint cut of Bibb's knee-breeches, and the curious twist of his queue; the white neck-tie and inclining head of Buchanan; the slender body but towering intellect of Walker; the ponderous nationality of Marcy. All gone, save the two worthy women mentioned, and the now venerable Bancroft, who, by his own right and by the dignity and worth of his own great name, is among all mankind alone entitled to the privileges of the grandest representative body in the world, the Senate of the United States. "Serus in colum redeat." At the head of the Supreme Court sat the incorrunt-

ative body in the world, the Senate of the United States. "Sens in celum redeat." At the head of the Supreme Court sat the incorruptible and illustrious Taney, surrounded by those venerable jurists, Joseph Story, John McLean, James M. Wayne, and Samuel Nelson. It was the Twenty-eighth Congress, and strange to say that Calhoun and Clay and Webster were not among the Senators; the first had accepted the State Department for a year in Tyler's Cabinet, in which Webster had lingered to complete the negotiations of the Washington treaty, and Mr. Clay had retired from the Senate to run for the Presidency in 1844 all three hoursers returning afterward to the Senate dency in 1844, all three, however, returning afterward to the Senate, the first two to die in harness there, and the latter finishing his grand career in the Cabinetof Fillmore. It was a Whig Senate, the diminishing marks of the tidal wave of log-cabinism, and Willie P. Mangum, the majestic representative of North Carolina, was President pro tempore, in place of John Tyler, elevated to the Presidency through the death of President Harrison. Asbury Dickens was in the first decade of his quarter century's Secretaryship of that body. Among its more prominent members for size and intellect were Dixon H. Lewis of prominent members for size and intellect were Dixon H. Lewis of Alabama, in place of William R. King, to whom the present able presiding officer is by comparison but a pigmy; John M. Niles of Connecticut, previously Postmaster-General; Hannegan of Indiana, afterward minister to Prussia; Crittenden of Kentucky; Barrow and Porter of Louisiana, the father of the latter a Presbyterian clergyman, executed as an Irish rebel in 1798, and himself dying in Baltimore, whither he had gone as a friend of Garrett Davis of Kentucky in his quarrel with Thomas Haynes Bayly, of Accomack, in Virginia; Rufus Choate of Massachusetts, of eccentric eloquence; Robert J. Walker of Mississippi, unmatched as a financier; Thomas H. Benton and David R. Atcheson of Missouri; Levi Woodbury of New Hampshire, afterward judge of the Supreme Court; William L. Dayton of New Jersey, dying in Paris as our minister to France; Dickinson, Dix, Foster, Talmadge, and Silas Wright of New York; Allen of Ohio; Buchanan and turgeon of Pennsylvania; McDuffie of South Carolina; and Archeand Rives of Virginia. All dead, I believe, but Atcheson of Missouri, who survives much political abuse of "border ruffianism" in venerable old age. ble old age

ble old age.

It was a Democratic House from which had vanished the lingering relics of "Tippecanoe and Tyler too"—John W. Jones of Virginia Speaker, with a brief pro temporeship to George W. Hopkins of the same State. Matthew St. Clair Clarke of Pennsylvania, a venerable name in American history, was Clerk, succeeded by Caleb J. McNulty of Ohio and Benjamin B. French of New Hampshire. I am still sitting in my seat, from which I was afterward expelled and to which I was again restored, on the right of the Speaker, where the statue of Trumbull of Connecticut now stands in the old Hall. From my elevated position I look across to the westerly side of the Hall, which was then generally, though not exclusively, occupied by the Whigs, and I see the shining head and trembling form of John Quincy Adams in his chair, which I now have in my possession in Brooklyn, Linn Boyd of Kentucky, Ed-

mund Burke of New Hampshire, Stephen A. Douglas of Illinois, George C. Dromgoole of Virginia, Joshua R. Giddings of Ohio, Hamilton Fish of New York, Charles J. Ingersoll of Pennsylvania, R. Barnwell Rhett of South Carolina, Thomas L. Clingman of North Carolina, Alexander of South Carolina, Thomas L. Clingman of North Carolina, Alexander H. Stephens of Georgia, Alexander Ramsey of Pennsylvania, Robert C. Winthrop of Massachusetts, Jacob Collamer and Solomon Foot of Vermont, John P. Kennedy ("Horseshoe Robinson") of Maryland, George P. Marsh of Vermont, Kenneth Rayner of North Carolina, Washington Hunt of New York, Samuel F. Vinton of Ohio, Robert McClelland of Michigan, John White and Garret Davis of Kentucky, Caleb B. Smith of Indiana, and Robert C. Schenck of Ohio. Nearer toward and the Stephen's girls of the Alexander Control of the Stephen's girls of the Stephen girls me and on the Speaker's right, on the eastern side of the main aislemostly but not all Democrats—Istill see bending over their desks James J. McKay of North Carolina, Howell Cobb of Georgia, Robert Dale Owen of Indiana, John P. Hale of New Hampshire, Andrew Johnson of Tennessee, John Slidell of Louisiana, Hannibal Hamlin of Maine, Felix Grundy McConnell of Alabama, Henry C. Murphy of Brooklyn, New Grundy McConnell of Alabama, Henry C. Murphy of Brooklyn, New York, Jacob Thompson of Mississippi, and Hugh A. Haralson of Georgia; most of them fled beyond the bourne, having seen "the last of earth." The venerable sage of Quincy, whose residence here, to which I so often accompanied him, now occupied by the gentleman from Illinois [Mr. THOMAS]; Dromgoole, perhaps the ablest man on the Democratic side when he chose to assert his right; Marsh, dying but recently while our representative at Rome; McClelland, afterward governor of Michigan and Secretary of the Interior in Pierce's Cabinet; John P. Hale, Senator and proposented or still proposented in the best social circles of Washington. Mo-Secretary of the Interior in Pierce's Cabinet; John P. Hale, Senator and embassador, still represented in the best social circles of Washington; McConnell, of warm and generous heart; Murphy, the scholar and statesman, dying but yesterday in my own city, and Haralson of the empire State of the South, still recalled by the too seldom visiting but always welcome ornaments of social life in this metropolis. And yet how many survive! Clingman, since Senator, frequently visits his numerous friends in both Houses; Stephens, translated from his movable chair in this present House to the governorship of Georgia; Ramsey, then from Pennsylvania, since governor of the Territory and State of Minnesota and Senator from House to the governorship of Georgia; Ramsey, then from Pennsylvania, since governor of the Territory and State of Minnesota and Senator from that State, but recently Secretary of War, and now chairman of the Utah Commission. Winthrop, afterward Speaker and Senator and more recently orator of the Franklin, Washington, and Yorktown monuments; Rayner, Solicitor of the Treasury; Schenck, since minister of razil, general, and embassador to England, now living in Washington, and Hannibal Hamlin, still youthful and holding a high diplomatic position. There were then only twenty-six States and only three Territories. Florida, then represented by Mr. Levy, afterward known avalue. Iowa, represented by A. C. Dodge, and Wisconsin by Henry Dodge. The States of California, Colorado, Florida, Iowa, Kansas, Minnesota, Nebraska, Nevada, Oregon, Texas, West Virginia, and Wisconsin were then unknown and the Territories of Arizona, Dakota, Idaho, Montana, New Mexico, Washington, and Wyoming were unnamed, and Montana, New Mexico, Washington, and Wyoming were unnamed, and much of the immense territory included in the above States and Territories belonged to other nations. Our population was not then much over one-third of what it is now

It was before this Twenty-eighth Congress that the first great reduction of postage was discussed and carried, reducing the rate for single letters to 5 cents under three hundred miles, and 10 cents above that distance. The rates previous to that had been unchanged from 1825 twenty years-and were:

Every single-sheet letter conveyed not exceeding thirty miles...... Over thirty and not exceeding eighty miles...... Over eighty and not exceeding one hundred and fifty miles..... Over one hundred and fifty and not exceeding four hundred miles.........

To come down from these figures to a uniform rule of 5 and 10 cents under and over three hundred miles was a great reduction, and met about as unreasonable opposition as is now manifested against penny It was warmly discussed in both Houses, eliciting the prophecies to which I have just referred. Among those voting for it in the Senate were Allen, Bayard (father of the present Senator), Barrow,

Senate were Allen, Bayard (father of the present Senator), Barrow, Benton, Berrien, Buchanan (afterward President), Choate, Crittenden, Dix, Dickinson, Niles, Porter, Rives, Walker, and Woodbury. Among the nays were Hannegan, Lewis, and Mangum.

Among the yeas in the House were Burke, Collamer, Garrett Davis, Douglas, Fish, Foot, Giddings, Hale, Hamlin, Kennedy, Marsh, E. Joy Morris, Henry C. Murphy, Robert Dale Owen, Ramsey, Schenck, Thomas H. Seymour, John Slidell, John Wentworth, and Robert C. Winthrop. Among the nays were Thomas Haynes Bayly, Aaron V. Brown, William J. Brown, Clingman, Howell Cobb, Dromgoole, Haralson, C. J. Ingersoll, Cave Johnson (immediately afterward Postmaster-General), Andrew Johnson (afterward President), Rayner, D. S. Reid, R. Barnwell-Rhett, and William L. Yancey.

So furious were some of the Representatives against this reduction that Mr. Jacob Thompson, of Mississippi, a native of North Carolina, then a member of this House and afterward Secretary of the Interior in Buchanan's Cabinet, moved to amend the title of the bill so a make it read: "A bill to make the Post-Office Department a nuisance and to guarantee the tariff of 1842." How ridiculous the opponents of a 1-cent postage will appear twenty years hence.

of a 1-cent postage will appear twenty years hence.

LOW RATES AND HIGH INCOME. Diminished cost uniformly leads to increased consumption. Reduce

The reduction of the rate of the price and you increase the revenue. postage in the United States in July, 1845, led to an increase of revenue beyond all hope. The number of chargeable letters passing through the mail in 1843 was 24,267,552, yielding the sum of \$3,525,268. In the year ending June 30, 1847, the number was 52,173,480, yielding \$3,188,957. A reduction of one-half in rates doubled the correspondence The average number of letters passing through the British post-office was 77,000,000 per annum before the reduction. For the year 1847, after the reduction, the number of letters was 320,000,000.

A reduction of the price three-fourths increased the consumption fourfold. A reduction of the duty on newspapers in England increased the revenue. A reduction of the duty on advertisements also increased the revenue. The reduction of the fee of admission to the armory of the Tower of London, at different times, from three shillings to sixincreased the receipts at each reduction of the admission fee-

A fall of one-eighth in the price of soap increased the consumption one-third; the falling of tea one-sixth increased consumption one-half; the fall in silks one-fifth, doubled the consumption; of coffee one-fourth, trebled it; and of cotton goods one-half, quadrupled it. The reduction of our postage two-thirds would quintuple the number of letters. A gentleman exhibiting a panorama at 25 cents was losing money; he put it down to 121 cents and cleared a hundred dollars a week. You may put it down as a settled law in economies that a reduction of price in articles of general use and necessity increases the amount of money in articles of general use and necessity increases the amount of honey received. The people will expend more money in low prices than in high prices for the same article. You will collect more money on letters at 1 cent than on letters at 2 or 3 or 10 cents. If you want to keep up a deficiency, keep up your postage at 2 cents; if you want a surplus, put the postage at 1 cent.

HIGH POSTAGE IMMORAL High postage injures the morals of a people. If you put p down to our lowest coin you stop all frauds on the service. Thou of persons will use illegal means to save a penny on each letter. If you put postage stated that on the first steamship, the Sirius, from England to America there were only five letters put on board to pay postage, and that at least 10,000 letters came over on that voyage without paying postage. A person wishing to convey to an absent member of the family information concerning the children, about whose health some anxiety existed, sketched on the margin of a newspaper a drawing of two little girls, a cobbler's awl, and an old-fashioned well, which being translated read, "Children all well." The drawing of the sketches occupied some time Had the postage been 1 cent the news would have come in a letter. Rather than pay 3 or 5 cents a newspaper was sent with a 1-cent stamp, and a drawing sketched at the sacrifice of time and trouble. Mr. Cob-den declared that not one-sixth of the letters, under high postage, be-tween Manchester and London paid postage. In England women used to go around collecting letters at 2 pence per hundred to send by illicit means. These were collected, carried to their destination, and distribmeans. These were collected, carried to their destination, and distributed at 1 penny. The postage was 4 pence. At penny postage all would have gone by the regular mail. The reduction to 2 pence on letters would not cure the evil, for private carriers would deliver at 1 penny. The reduction of the regular postage to 1 penny cut up the illicit business by the roots. Before the reduction of postage in this country in 1845 not more than one-half of the letters passed through the next offer. the post-office. The number of letters going through the offices of the United States was only about 24,000,000, while in England, under cheap postage, there were over 200,000,000. The number now passing through the United States post-offices isover a thousand millions a year.

FOSTAL HISTORY.

The struggle for cheap postage has been an unceasing fight for centuries of the many against the few. Invented originally for the service of despotism it has become the handmaid of democracy. The Assyrian and Persian monarchs had their servants ready with saddled horses at convenient distances and at all hours to carry the decrees of the despot. King Darius was at one time a postmaster-general. The Romans sent couriers on fleet horses with imperial edicts to their distant provinces. Private messages were generally conveyed by slaves. Charlemagne established stations and sent couriers to carry letters, packets, and decrees to all parts of his empire. At his death the service was very much reduced, but in 1464 Louis XI restored it, placing mounted posts within four miles of each other, and required them to be always in readiness to convey government messages. In the thir-teenth century riders who were called nuncii were organized for the quick conveyance (post-haste) of government dispatches. Butchers and drovers traveling the country to buy cattle were the principal let-Butchers carriers for poorer people, and in early times the universities created a demand for pedestrian messengers to carry the letters of the students home and bring back funds for their sustenance and education. In time posting passengers was added to the conveyance of letters and decrees, and thus came into use post-coaches. Roger, Count of Thurn and Taxis, established posts in the Tyrol early in the sixteenth century, connecting Germany and Italy. Venice, Genoa, Naples, and Leghorn came in postal communion with Lubeck, Hamburg, Bremen, and Frankfort-on-the-Main. In 1524 the French posts were permitted to convey other letters besides the messages of kings and nobles biblical, chinese, and other postage.

Perhaps the earliest letter-writer mentioned is Jezebel, and her let-

ters were forgeries, for we are informed that she "wrote letters in Alab's name and scaled them with hisseal." Solomon, Hiram, Xerxes, and Cleopatra are also mentioned as letter-writers. So were Esther, Mordecai, and Haman. In early times they did not use ciphers, and all kinds of schemes were laid to conceal important messages from public perusal. It is said that on one occasion an inventive master had a letter which he wished to convey secretly branded on the shaved head of his bondman and sent him off after the hair had grown sufficiently to conceal it.

The Chinese were perhaps the earliest and best patrons of the postal system. They had laws to prevent the use of the mail for fraudulent purposes and severe punishment for mail robbery. Chinese posts were called jambs, and Marco Polo estimates their number at 10,000, employing 200,000 horses. They were located twenty-five miles apart, and furnished excellent entertainment for travelers. The Aztecs had early and regular postal facilities for the conveyance of their hieroglyphical correspondence. Birds of strong wing and dogs of swift foot were used in ancient times in postal service. A Bashaw on his travels usually carried with him a basket of pigeons, bred in the seraglio, and they were labeled and liberated when he wanted to send a message home.

In early times letters were in the form of rolls, wound on a stick, or two

sticks, round which they were rolled from either end till they met in the middle. They were literally volumes. They were usually written only on one side, and were generally unsealed. Those written to distinguished persons were sometimes placed in a valuable purse, which was tied and closed with clay or wax and stamped with the author's signet.

ENGLISH POSTAL HISTORY

The United States, France, and Great Britain have been most promirance, and Great Britain have been most promment in the development of the postal system and the too tardy reform of cheap postage. It is just four hundred years ago that post-houses were established in England. Her postal expenses in the reign of Queen Elizabeth were only £5,000. The first chief postmaster was Thomas Randolph. James I improved the postal system. Matthew Le Quester was appointed chief postmaster, and he appointed William Frizell and Thomas Witherings deputy postmasters.

Thomas Witherings deputy postmasters.

The latter deputy succeeded to the chieftaincy, and in 1635 was ordered to establish a post between London and Edinburgh, to go night and day and return in six days. In 1644 Edmund Prideaux, then a wember of the House of Commons, became postmaster and organized a veekly mail to all parts of the nation. In 1656 an act was passed to a range the posts and fix their rates between England, Ireland, and Scota.range the posts and nx their rates between England, Ireland, and Scotland. It fixed the rates from 14 pence for a distance over three hundred miles to 2 pence for seven miles or under. Down to 1838 over one hundred and fifty acts were passed on postal affairs, but without materially reducing the rates. During the early history of postal service the "common people" made little use of it. Palmers and gypsies were frequently their postmasters-general. The mails were carried in saddle heart and the heart of the service of the s dle-bags, and the carrier's approach was announced by the blowing of a ram's horn, which in an earlier period of the world's history would have

brought Jericho to a speedy surrender.

Under Cromwell the letters passing through the post were frequently opened and persons prosecuted on information acquired through this disgraceful practice, which is even now continued on American letters under Gladstone and his detectives.

As early as 1683 there was a penny postage established for London The honor of that reform is due to an upholsterer named Murray. This was a great success and brought in much revenue. The Duke of York, on whom and his heirs the postal revenues had been settled in perpetuity, when that duke came to the throne as James II commenced granting pensions out of the postal revenues, one of which was bestowed to the amount of nearly \$30,000 a year on one of the disreputable characters connected with his brother's court, who founded one of the chief houses of English nobility, whose titled representatives still enjoy the disreputable pension.

disreputable pension.

In Queen Anne's reign the postal system extended over all Her Majesty's dominions, and offices were established in Edinburgh, Dublin, New York, and the West Indies. In 1720 Ralph Allen, postmaster at Bath, suggested cross-posts, or star routes, intersecting the long lines. He got a life lease of the privilege, for which he paid \$30,000 a lines. He government, and held it for forty-three years, clearing for himself a yearly fortune of \$50,000. If any post-office contractor ever deserved success it was Ralph Allen. He was the benefactor of needy men of letters. It was of him that Pope drew the picture of one who devoted his life to—

devoted his life to

Do good by stealth and blush to find it fame.

Few contractors nowadays can be charged with doing good, or if ever detected, with much blushing at the discovery! In 1799 the profits of Allen's cross posts had reached a million of dollars a year.

THE MAIL-COACH.

The beginning of the conveyance of the mail by coaches was in 1746. The originator of the stage-coach was John Palmer, a brewer and the atrical manager of Bath. He made the journey from London to Edinburgh in sixty hours less than by the carrier known up to that time. His coaches were well guarded and escaped the depredations of highway men, then so common. He had an annual procession on the King's birth day, with his coachmen and guards in new red livery. They are still

running and defying the encroachments of railroads. I see them still coming over Old Town Hill in Cookstown, bound for Dungannon, with one or two passengers on the front seat with the muffled coachman with his long whip, and one on the back with the scarlet-clad guard, well-armed with holsters, and playing some favorite tune on his bugle with many breaks between the bars from the joltings of the heavy coach as the foaming horses gallop to their waiting grooms and welcome oats.

The first conveyance of mails by railroad occurred only about fifty years ago between Liverpool and Manchester.

The great postal reform in England was inaugurated by Rowland Hill in 1837. His plan was adopted in 1839, and went into operation in 1840.

The postage on single letters to all parts of the nation was put at 1 penny. All franking privilege was abolished and the mails were dispatched more frequently and at increased speed. In 1848 it was provided that books could be posted at sixpence sterling the pound. The money-order system copied from Germany was adopted in 1840. I need not go into further history of the English postal system. Rowland Hill's eternal monument with its increasing revenue and swelling surplus of twelve or fifteen millions of dollars a year I would not imitate,

but it is sometimes proper to learn even from an enemy.

I need not enlarge upon the postal history of other countries, nor need I dwell at length upon our own.

HISTORY OF AMERICAN POSTAL SERVICE.

Dr. Benjamin Franklin was appointed general deputy postmaster of the Colonies in 1753 at a salary of £600 between himself and his confederate, "if they could get it." This experiment brought him in debt £900. In 1754 he gave notice that the mail to New England, which had previously started but once a fortnight, should be dispatched once a week, "whereby answers might be obtained to letters between Philadelphia and Boston in three weeks, which used to require six weeks."
He was removed by the British ministry from office on account of his independent notions; but in 1775 the Continental Congress, having assumed practical sovereignty, appointed a committee to devise a system of post-office communication, who reported on the 20th of July a plan, which on the same day was adopted, and Dr. Franklin was unanimously appointed Postmaster-General, at an annual salary of \$1,000. This amount was doubled in April, 1779, and in December of the same year was increased to five thousand. An inspector of dead letters was also appointed at a salary of \$100, who was sworn to keep the secrets and not to take copies of the dead letters nor to divulge their contents, and not to take copies of the dead letters nor to divulge their contents, except to Congress or those appointed by Congress for the purpose. In November, 1776, Dr. Franklin was succeeded by Richard Bache, who had married his only daughter. He remained in office till January, 1782, and was succeeded by Ebenezer Hazard, who was the last head of the Post-Office Department under the Confederacy.

In 1790 there were but 75 post-offices and 1,875 miles of post-routes. The general office was in New York, and Samuel Osgood, of Massachusetts, was the first Postmaster-General under the Federal Government. He recommended that the Postmaster-General should keep himself in

He recommended that the Postmaster-General should keep himself in the office when the mail was opened and distributed, that his presence the office when the mail was opened and distributed, that his presence should prevent irregularities. In fact, that the Postmaster-General, his assistant, and then one clerk, should all be accommodated with office room in the city post-office. Mr. Osgood's salary was \$1,500. In August, 1791, Timothy Pickering was appointed by Washington at an increased salary of \$2,000. Joseph Habersham was the last Postmaster-General appointed by Washington, and commissioned in April, 1795, at a salary of \$2,400. In 1796 the office was located in Philadelphia, and when the Government came to Washington it was transferred to this city. In 1802 the United States ran their own coaches between New

York and Philadelphia, and cleared in the year \$11,000.

On the 18th day of September, 1882, I addressed a letter to the editor of The New York Sun, which appeared in that paper on the 24th of that month, and as it recites the history of our postal system I insert it here as part of my speech:

it here as part of my speech:

ONE-CENT POSTAGE FOR LETTEES—CONGRESSMAN ROBINSON'S VIEWS ON THE PRACTICABILITY OF THE CHANGE.

SIR: Allow me say that I indorse your proposition to reduce the rates of postage, and ask you to go with me one step further. You advocate a reduction of postage an letters from 3 cents to 2. Why pouse at 2 cents? Can you produce a single argument in favor of a uniform 2-cent postage that does not apply with additional force to penny postage? On the first day of the last session for the introduced a bill to reduce the postage on all letters weighing half an ounce or less to 1 cent. The same day Mr. Hill, of New Jersey, introduced a bill reducing it to 2 cents. Upon two or three occasions he and I have made brief speeches in favor of our several propositions. I intend to make my proposition the chief object of my work in the next session. Does any one doubt that very few years will elapse before we have a penny postage? Every reduction of postage has resulted, and will result, in an increase of revenue, and the larger the reduction the larger the increase. A reduction to 2 cents would result in two letters to one; a reduction to 1 cent would result in ten to one.

I believe the first post-office in this country was established in New York city two hundred and ten years ago. Sixty-eight years after that a path for a horse-back mail was marked out by blazed trees from Jersey City to Philadelphia, by which mails were conveyed at irregular intervals; and fifteen years later Benjamin Franklin was made Deputy Postmaster-General for the Colonies. At the establishment of the constitutional Government of the United States Samuel Osgood was appointed Postmaster-General, with one clerk to assist him. There were then seventy-five post-offices, 1800 miles of post-routes, and a revenue of nearly \$57,000.00, with Postmaster-General and \$60 clerks and assistants, and over \$61,000 employes throughout the country.

Postage laws were enacted in 1789, 1790, and 1791, the latter allowing the franking for the

is the Secretary's assistant, on letters on the public service. But there was no rate of postage fixed till the act of February 20, 1792, which provided nine different rates of postage on single letters according to distance by land, from 6 cents for thirty miles to 25 cents for distances over four hundred and fifty miles, and for double and triple letters, and the service of th

distances.

The act of December 23, 1814, increases the rates of postage 50 per cent. This was soon abandoned and repealed by the act of April 9, 1816, which provided that after May 1 of that year single-sheet letters should be 6, 10, 12], and 18] cents for distances under thirty, eighty, one hundred and fifty, and four hundred miles, respectively, and over that distance, 25 cents.

These rates continued till 1845, when, by act of March 3, letters of half an ounce or under were charged 5 and 10 cents postage, for distances under and over 300 cents.

miles.

The act of August 14, 1848, establishes certain post-offices on our newly acquired possessions on the Pacific, and fixes postage on letters thither from the Eastern States at 40 cents, and on letters between Pacific post-offices at 12½ cents.

The act of March 3, 1851, provides that after the 30th of June in that year postage on single letters of half an ounce or under, and under 3,000 miles, should be 3 cents prepaid, 5 cents unpaid—and over 3,000 miles double these rates; every single letter to a foreign country, 10 cents under 2,500 miles, and 20 cents over that distance. It fixed a complicated postage rate on newspapers, &c., payable in advance quarterly.

single letter to a foreign country, 10 cents under 2,000 mines, acc., payable that distance. It fixed a complicated postage rate on newspapers, &c., payable in advance quarterly.

The act of March 3, 1855, fixed the postage on single letters not exceeding half an ounce at 3 and 10 cents prepaid, under and over 3,000 miles.

The act of March 3, 1863, fixes the maximum standard weight for the single rate of letter postage at one-half ounce avoirdupois, and for each additional half ounce or fraction thereof an additional rate at 3 cents each on all domestic letters, without respect to distance; drop letters at 2 cents, all to be prepaid by postagestamps affixed.

The act of June 3, 1872, provides for the issue and transmission by mail of postal cards at 1 cent each.

Numerous changes have been made, more or less, almost every year, but the foregoing are the substantial changes. As the postage rates now exist there are four classes of mallable matter:

1. Letters or sealed packages to any part of the United States, 3 cents for each half-ounce or fraction thereof; drop-letters, 2 cents at free-delivery offlees, I cent at other offices, all prepaid by postage-stamps affixed; weight of package not itmited. Postal cards, 1 cent to any part of the Union. Registered letters, 10 cents in addition to proper postage. To foreign countries generally which are in the Postal Union, 5 cents each half-ounce, 2 cents for each postal card, and 1 cent for each two-ounce newspaper. To Canada, letters 3 cents, newspapers 1 cent.

imited. Postal cards, I cent to 'any part of the Union. Registered letters, lo cents in addition to proper postage. To foreign countries generally which are in the Postal Union, 5 cents each half-ounce, 2 cents for each postal card, and I cent for each two-ounce newspaper. To Canada, letters 3 cents, newspapers 1 cent.

2. Newspapers and periodicals, regularly issued from known offices, 2 cents as pound, or fraction thereof; weight of package not limited.

3. Books, transient newspapers, circulars, proof-sheets, hand-bills, engravings, printed matter, &c., package to be open at side or end, I cent for each two ounces, or fraction thereof, prepaid; limitation 4 pounds, except for single volumes of both of the pounds, except for single volumes of both of the pounds, except for single volumes of both of the pounds, except for single volumes of both of the pounds, package, 4 pounds, except for single volumes of both of the pounds, package, 4 pounds, except for single volumes of both of the property of the prope

the same box? Would not sixteen times as much answer the most grasping injustice?

The leasewight is far less than half of the weight of matter conveyed. The leasewight is far less than half of the weight of matter conveyed. The leasewight is far less than half of the weight of matter conveyed. The leasewight is far less than half of the weight of matter conveyed. The letters are unjustly taxed to make up of the set of the property of these nearly 350,00,000, or twenty-five for each person; of these nearly 350,00,000 were person every weight in the property of the set of the property week. This increase, if not achieved in the first year after the reduction, would certainly come in the second and third, and largely increase every year by increased population, increased into the first year after the reduction, would certainly come in the second and third, and largely increase every year by increased population, increased into the property of the property week. This increase, if not achieved in the first year after the reduction, would certainly come in the second and third, and largely increase every year by increased population, increased into the property of the second and the property of the property of the property of the second and the property of the second and the property of the second and the s

penny postage. Very respectfully,

W. E. ROBINSON.

Since the publication of that letter I have received several letters from distinguished gentlemen urging me to persevere in keeping the subject before Congress. One of them is from a venerable gentleman who forty years ago was active in public life in New York, as he is now honored in venerable and vigorous old age, now in his eighty-first year. I take pleasure in quoting his letter and to say that I have a promise from him of a statement of the entire question, which I shall present to Congress at some future day and ask attention to his suggestions:

My Dear Sir: I have read over with much interest your valuable paper in the Sun of yesterday on postal matters, and am delighted at the conclusion to which you arrived, to give your whole attention in the next ensuing session of Congress to the reduction of letter postage throughout the United States to I cent. I am an octogenarian, and long since memorialized Congress to adopt that course. In addition to that which you notice and observe I brought to view that every Postmaster-General, commencing with Franklin, tried to make the Post-Office Department self-sustaining. I ridiculed that idea and urged that you might as well make the Navy Department self-sustaining by authorizing it to send out small piratical cruisers on the ocean, and the same with the War Department, by authorizing it to make incursions into adjoining territory. I further brought forward a proposition, which you would at once approve of, by which every foreign country would consent that our foreign postage might to every foreign country be but I cent an ounce, that our foreign mails to Europe might be carried at mere nominal rates, etc. If you would like any further clucidation of the matters command, most truly, yours,

WM. COVENTRY H. WADDELL.

Hon. W. E. ROBINSON, M. C., Brooklyn, N. Y. NEW YORK, September 25, 1882,

Another letter which I received from a gentleman in Tennessee is, I think, worthy of attention, from the suggestions it makes about new inventions in postal cards:

think, worthy of attention, from the suggestions it makes about new inventions in postal cards:

\*\*Nashville.Tenn.\*\*, September 30, 1882.\*\*

Shr.: I have read with much interest your letter published in the New York Sun of September 24, advocating I-cent postage on letters. It is a subject of wast importance to the people of the United States, and I am glad to know that a gentleman of your distinguished position in Congress is advocating a matter of such universal good to the millions who appreciate cheap postage.

Some time since I conceived the idea that a postal card, combining all the elements of secrecy now obtained by sealed envelopes, together with the additional recommendation of cheaper postage, might be made; and finally succeeded in inventing an improved postal card, and have applied for a patent.

By means of my invention the space now allowed for writing on a postal card has been much enlarged, and may be extended to a much greater area, without materially increasing in weight.

The postal card now in use contains fifteen square inches of space for writing. The model sent to the Patent Office with my application for a patent contains ninety square inches, or about six times as much as the present card, and can be scaled like an envelope. The great value of this improvement may be realized when you consider that the number of square inches of superficial area contained on one side of a half sheet of ordinary letter paper measures about eighty square inches.

My postal card is of the same size and general style of those now in use, and with additional space obtained weighs less than one-fourth ounce, and if adopted by the Post-Office Department might be sold at 1 cent and carried through the mails without increasing expenses of transportation.

I have the honor to be, very respectfully,

R. O. CROWLEY.

R. O. CROWLEY.

Hon. W. E. ROBINSON, Brooklyn, N. Y.

OCEAN PENNY POSTAGE.

Another reform referred to in Mr. Waddell's letter can not be carried Another reform referred to in Mr. Waddell's letter can not be carried out by Congress alone, but by postal treaties between the United States and all foreign nations, which I hope yet to see accomplished, and that is that 1 cent shall pay the postage on a single letter to any part of the world with which we can come into postal communion. We must have occan penny postage, and it will amply pay. My old friend Elihu Burritt, better known as "the learned blacksmith," devoted much of his time to the subject of cheap ocean postage, and urged it upon the English Government with a wonderful display of argument and pertinactive. He calculated the number of letters sent to and from England English Government with a wonderful display of argument and pertinacity. He calculated the number of letters sent to and from England and the United States as 744,108 and the postage on letters and papers as £46,568. That was when letters were charged 8 pence by sailing vessels and 1 shilling by steam packets. The uniform rate is now 5 cents, and what is the result? The Cunard steamer Scythia, just leaving New York to-day, December 20, will carry out 245,840 ordinary letters and over 12,000 registered letters, besides 318 sacks of newspapers. Take the ordinary letters alone at, say, 250,000 of less than half an ounce each at 5 cents each, and you have \$12,500 for a weight of a little more than four tons. Now, is there any reason why these letters should not go at 1 cent each, amounting to \$2,500 or over \$600 a ton, while ordinary freight is not a hundredth part of that amount? But at \$600 a ton the profits must be enormous. One-cent postage will amply pay for the transportation and delivery of letters from any part of the United States to any part of Europe and leave large profits, and it is only a question of transportation.

of transportation.

The revenue from 1-cent letters would be greater than from 5-cent letters. Our business correspondence with Europe is growing immensely. More than one-fifth of the people of these United States are immigrants or of the first generation by descent from immigrants. Millions more are coming to yearly swell the throbbing increase of our population. These millions for two or three years will write to those they left behind, and there is no reason why, with ocean postage at 1 cent, there should not be conveyed between the two continents a hundred million of letters yearly, which would be a million of dollars; more than half of which would be clear profit after all cost of handling and transportation. Why are we still blindly plodding behind the speed of our age? Why indeed should not the correspondence between the entire people of the Old and New Worlds reach the number of the domestic letters, which is over a thousand millions, which at one penny domestic letters, which is over a thousand millions, which at one penny each would be ten millions of dollars, affording subsidies enough to keep

a fleet of iron ocean steamers flying the American flag over the Atlantic? During the year ending June 30, 1882, the weight of mails dispatched to Europe was over 1,000 tons; the weight of letter mails only about 200 tons; but even that at the regular rate, 5 cents a single letter, was over \$128,000. The profits on that over ordinary freight at \$4 a ton were \$127,200. Less than half of this letter mail was for Great Britain. We paid for foreign-mail transportation \$280,000. We sent over 26,000,000 letters and received less than 25,000,000. We prepaid about \$2,000,000 on postal matter.

THE MEAN POSTAL CARD,

I demand penny postage in the name of American manhood. The postal card as a means of conveying private information among the American people is an insult to the poor. Why compel the mother or daughter to lay open the secrets of her heart to every prurient eye that gets a glance into the mail-bag? There is no reason, there is base injustice, in telling a poor woman that she can convey a private mes-sage for 1 cent if she will consent that every curious eye may read it before it reaches the one for whom it is intended; but that if she wished to keep her heart secrets to herself and her child she must pay 3 or 2 cents. We acknowledge by the use of the postal card that letters can be sent and pay expenses at 1 cent postage. Let the Government convey them scaled, if of the same weight, and keep the people's

secrets for themselves. Postal cards will still be required perhaps to the number now used for circulars, notices of meetings, advertising, and other uses; but let the people of the United States have the priviand other uses; but let the people of the United States have the privil-lege of sending their private messages under seal at the same rate for the same weight as we now convey them if exposed. What a fiendish government it is that compels its people to publish their heart secrets if they would have them conveyed through the mails, even at paying

I call the attention of the House to the letter from William B. Thompon, general superintendent of railway mail service, to the gentleman from Illinois, chairman of the Committee on Expenditures in the Post-Office Department [Mr. Cannon], dated March 23, 1882, and published in the proceedings of this House of April 11, 1882.

It appears from this letter that during the year ending June 30, 1881, there passed through the Post-Office:

POSTAL FIGURES.

enero passeu entough ene i ost-Onice.	
	Number
Letters	1,053,252,876
Postal cards	324, 556, 440
Packages of transient matter (class 3)	468, 728, 312
Packages of merchandise (class 4)	21, 515, 832

Let us now see the weight of these different matters:

	Pounds.
Weight of letters	35, 218, 143
Weight of postal cards	2, 028, 478
Weight of transient matter (class 3)	58, 591, 039
Weight of merchandise (class 4)	8,548,849
Weight of newspapers and periodicals (class 2)	69, 952, 438
Weight of letters and postal cards	37, 246, 622
Weight of transient newspapers and merchandise	137, 092, 311
Aggregate weight of all matter	174, 338, 940

Thus the weight of printed matter and merchandise was over three and a half times as great as that of all the letters and postal cards.

and a half times as great as that of all the letters and postal cards.

Upon nearly seventy millions of pounds of newspapers you charged
2 cents a pound, or \$1,399,048, while on a little over 35,000,000 pounds
of letters you charged 96 cents a pound, or \$30,809,417; on nearly
60,000,000 pounds of printed matter you charged at 8 cents a pound
only about \$4,687,283; while on a little over 2,000,000 pounds of postal cards at about \$1.28 a pound you charged \$3,245,564.

Newspapers and periodicals sent by publishers amount to 40 per cent.
of the expenses of transportation, while they pay only a little over 3
per cent. of the cost. The third-class matter of transient newspapers and
printed matter amounts to 33 per cent. of the expenses of transportation.

printed matter amounts to 33 per cent. of the expenses of transportation, while it pays only 12 per cent. of the cost. The two classes of printed

while it pays only 12 per cent. of the cost. The two classes of printed matter cost the postal service of the country nearly three-fourths of the entire expenditure of the Department and does not pay more than a sixth of the expenses. Was ever such inequality or iniquity known as this? This is giving the franking privilege to publishers and printers and making the writers of letters pay for their privileges.

The aggregate number of packages passing through the mails in the year ending June 30, 1881, was 2,720,234,252. If each package had paid 1 cent, the revenue would have been over \$27,000,000, which ought to pay the entire expenses of the Government. The total weight of mail matter was 174,338,940 pounds. One cent an ounce on this matter would have paid nearly \$28,000,000. Yet you insist upon letters paying 6 cents an ounce.

paying 6 cents an ounce

I have had considerable correspondence with the Postmaster-General I have had considerable correspondence with the Postmaster-General on this subject, without, perhaps, much progress in my work of converting him to my way of thinking; but I can afford to wait, and in less than five years, if he and I live, we shall be more in accord. I had intended to publish the correspondence, but it would add considerably to the length of these remarks, already sufficiently voluminous. The following table among the materials which he furnished me I give for general information:

Fiscal year.	Postage value of 1, 2, and 3 cent stamps and en- velopes issued.	Increase over preceding year.	Per cent- age of in- crease.
1871	*19,685,833 00 *21,024,054 50	\$1, 226, 024 25 1, 187, 475 75 1, 240, 666 90 1, 170, 063 00 1, 338, 221 50 1, 385, 626 50 †298, 667 00 1, 545, 194 00	8. 2- 7. 3- 7. 1- 6. 3- 6. 7- 6. 5- 11. 3-

<sup>\*</sup>These amounts include the value of postal cards issued. +Decrease

Postal cards were put into use at the beginning of the fiscal year ending June 1, 1874. The annual average rate of increase before their introduction in the 2, and 3 cent stamps and stamped envelopes was 7.5 per cent. After their introduction the average rate of increase, including postal cards, to 1878, was 5 per

Penny postage, then, for all who correspond at home throughout our boundless territory! Penny postage also for all who write to those abroad! Let oceans roll and mountains rise between the children of men, but let their messages of joy and sorrow, of love and sympathy, of business and pleasure, cross those seas and mountains, occans and continents, at the lowest rate possible, under the most approved modes of transportation known to the world.

#### Naval Appropriation Bill.

#### SPEECH

## HON. J. PROCTOR KNOTT.

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 20, 1883,

On the bill (H. R. 7314) making appropriations for the naval service for the fiscal year ending June 30, 1884, and for other purposes.

Mr. KNOTT said:

Mr. CHAIRMAN: No one could possibly appreciate more fully than I do the force of the old maxim, ne autor ultra crepidam. It is with the utmost diffidence, therefore, that I venture to submit any remarks whatever in relation to the pending bill. It is certainly no part of my purpose to inflict upon the committee anything like a lengthy or labored speech, as my physical condition is such as to prevent my attempting an elabrelation to the pending bill. as my physical condition is such as to prevent my accompting an elaborate discussion of the various features of the measure under consideration, even if I had the disposition to do so. Since the bill has been laid on our desks, however, I have been looking over the Naval Register to some extent, and rise now merely for the purpose of calling attention as briefly as possible to some curious facts disclosed by that attenuous as briefly as possible to some curious facts disclosed by that document, which it seems to me the honorable Committee on Appropriations have failed to consider with that careful deliberation which their significance demands. I infer so because I am fully satisfied that each of the distinguished gentlemen composing that committee is fully inspired by that commendable spirit of retrenchment and reform which inspired by that commendaties spire of retrenchment and reform which from the prevalent clamorous pretension one would suppose to have seized upon every department of the public service, while the facts to which I allude appear to indicate in the clearest possible manner one of the points at which retrenchment may be justly as well as conveniently inaugurated, and where reform is certainly demanded.

Much complaint has been heard, Mr. Chairman, of the personnel of the Navy being "top-heavy," and it is unquestionably true that this branch of the public service is loaded down with a vast redundancy of officers. We have in commission, according to the last Naval Register, a copy of which I hold in my hand, thirty steaming vessels, and as the committee was informed by my distinguished friend from Indiana [Mr. Calkins], in his very able and interesting remarks this morning, we have for those thirty vessels two hundred and ninety-three engineer officers, supposed at least to be competent to do anything coming legitimately within their line of duty. The sea-pay of this corps, so disproportioned to the number and character of vessels on which their

services are required, aggregates over \$642,000 per annum; their pay for shore-duty over \$569,000, and for "waiting orders" over \$453,000, that is, for standing around and doing nothing.

That the gentlemen composing this corps are men of the highest character, morally and socially, I most cheerfully admit. Nor am I here to deny that they are theoretically proficient in all the various duties of their profession; but I undertake to say, sir, that with the exception of a few men like Melville, who were graduated from a machine-shop, and who are not afraid of hardening their velvety palms by handling the hammer and the cold chisel, not one in twenty of them ever entered the man-head of a boiler in his life, or has clinched a rivet, or had a monkey-wrench or an oil-can in his hand a half dozen times since he has been in the service. The fact is that in a large majority of instances the actual duties which I have always supposed, and which the world supposes, to be performed by steam-engineers are really performed on shipboard by artificers—machinists, more or less skilled, who are not afraid of soiling their horny hands with grease or soot, men who put on their check shirts, lubricate the engine, take hold of the lever, run the machine, patch the boiler, and make other repairs that may be necessary, while the engineer officer, the gentleman in uniform, who wears a sword and draws a large selary, stands by and sees him do the weak

sword and draws a large salary, stands by and sees him do the work.

But this is not all, sir. We are informed that twenty-five officers of
this corps have grown to such enormous proportions, and are so loaded down with rank and dignity that there is not a ship in the entire Navy big enough to hold one of them; that nothing short of a whole fleet, or a first-class navy-yard is at all worthy of their gigantic powers, and that consequently those of them who can not get an opportunity to dazzle the gaze of foreign countries as "fleet engineers" are assigned to sinecure

But, Mr. Chairman, this branch of the naval service is by no means singular in this respect. There are fifteen medical directors, fifteen medical inspectors, thirteen pay directors, and thirteen pay inspectors who have attained the same enormous growth with these twenty-five tremendous chief-engineers, and I could but think while the gentleman from Indiana was speaking of them this morning, what a calamity would ensue if some ill-advised, incompetent, or treacherous Secretary of the Navy should take it into his head to order all these colossal staff officers to sea at once. Why, sir, it would inevitably swamp every ship in the service. [Laughter.] Or suppose he should accidentally assign a chief-

engineer, a medical director, and a pay inspector all to duty on the same ship. There is not a craft afloat that could sustain such a ponderous weight of official rank for a single moment. [Laughter.] I am glad to say, however, sir, that our Secretaries have so far appreciated the perils that would accrue to the service by freighting our men-of-war with such mountains of official dignity, and have consequently taken care to assign these overgrown staff officers to soft billets on shore, some of them in our various navy-yards and others to "special duty;" and here, sir, I can but

various navy-yards and others to "special duty;" and here, sir, I can but echo the exclamation of one of the gentlemen who have just preceded me—"What that is the Lord Almighty knows!" [Laughter.]

But this is not all, sir. Attention has already been called to the fact that the Pay Corps of the Navy numbers, all told, a hundred and twenty-five, and I find from the pay tables in the Register before me that there aggregate sea-pay is about \$376,000. Now, sir, for gentlemen of this corps, as for gentlemen of the corps of engineers, it is impossible that I should entertain any but the kindest possible feelings. Nevertheless candor compels me to say that the office of pay director pay inspector. candor compels me to say that the office of pay director, pay inspector, paymaster, passed assistant or assistant paymaster is just as superfluous in our naval service as the fifth wheel would be to a wagon. not a solitary duty of any kind that can possibly devolve upon an officer of this corps anywhere or under any circumstances which could not be just as well or perhaps better performed by any intelligent officer of corresponding or even inferior grade in the line. I repeat, sir, that there is not an intelligent master in the service who could not discharge any of the ordinary functions of the Pay Corps with as much satisfaction to the country and endit to hiscalf. the country and credit to himself as any paymaster in the Navy

Then, sir, there is another corps belonging to this arm of the public service about which the country has heard a great deal, and for which I confess I have the highest admiration. I refer to what is known as the Marine Corps. [Laughter.] That corps is officered as follows: one colonel commandant and one colonel, who seems to have no other appendage to his name but just plain colonel, but who I suppose in justice to his position and the nature of the duties devolving upon him should be styled colonel ornamental [laughter]; two lieutenant-colonels, be styled colonel ornamental [laughter]; two lieutenant-colonels, seven majors, line and staff, twenty-two captains, thirty first lieutenants, and fourteen second lieutenants, at an annual cost to the Government of \$135,000. And yet, sir, I challenge any gentleman to indicate a single duty now devolving upon any of these officers, from colonel down to second lieutenant, that could not be as well performed by a naval officer detailed from the line. Tactics is, I believe, one of the things which the Naval School at Annapolis was especially designed to teach; and I undertake to say that there is not a midshipman in the service who is not as proficient in the arts and mysteries of military discipline and drill as any first lieutenant in the Marine Corps, whose modifficult and responsible duty at present seems to be to drill a squad of difficult and responsible duty at present seems to be to drill a squad of marines occasionally on the deck of some vessel, ornament a review now and then in a navy-yard, or parade up and down Pennsylvania avenue on one of your swell occasions. [Laughter.] But, sir, the most singular facts yet remain to be stated. As I have

already said, since this bill has been reported to the House I have been at some pains to look through the Register and pay tables of the Navy, and I have been astonished to find the most remarkable, not to say startling and unjust disparity between the compensation paid to officers of the line, who have won their rank on the quarter-deck, buffeting the tempest and braving the terrors of the battle, and those gentlemen of the staff, who as Senator Benton once said, seem to have been born sim-

to consume the fruits of the earth.

Make your calculations from the data furnished in this document, sir, and you will find that captains in the line, with an average sea-service of eighteen years and four months, are allowed \$4,500 a year for sea-duty, \$3,500 a year for shore-duty, and \$2,800 on leave or waiting orders. While the average pay allowed to medical directors of the same relative rank and an average sea-service of only twelve years and five months, is \$4,400 for sea-duty, \$4,000 for shore-duty, and \$3,000 on leave or waiting orders. From the same data you will find, sir, that the pay director, of the same relative rank and with an average of only eight years and ten months sea-service, gets \$4,400 a year sea-pay, \$3,877 for shore-duty, and \$2,938 on leave or waiting orders. So that while the old captain, upon whom devolves the entire responsibility for the proper management of the ship and everything on board, is allowed \$100 more than staff officers of the same relative rank while at sea, the staff officers of the same relative grade but far less sea-service get from a hundred and thirty-eight to five hundred dollars per annum more than he does on shore; and it must be remembered that this class are nearly always found on shore, since nothing less than a whole fleet is sufficient

to take any one of them to sea. [Laughter.]

But the discrepancy becomes still more glaring when we come to the next grade. Here we find that the average sea-pay of the medical inspector, pay inspector, and chief-engineer, with the relative rank of commander, is \$900 per annum more than that of the commander from whom they borrow their title. While their average pay for shore-duty is not only from six hundred to a thousand dollars a year more than that of a commander, but from one hundred to five hundred dollars more than that allowed a captain standing one full grade higher, and you will find a discrimination in favor of staff officers in every grade down to the bottom of the list with the exception of that of lieutenant.

But, sir, the glaring injustice of this singular inequality of the pay of the line and staff will become more conspicuous if we take a look at the administration of our several navy-yards as shown by this Register. For instance, the commodore commanding the navy-yard at Portsmouth entered the service in 1840, and is paid \$4,000, while the chief-engineer who entered the service nine years later and occupies the relative rank of commander, two full grades below, receives precisely the same pay, and \$500 more than the captain of the yard who entered the service ten years before he did and stands one grade higher in rank. Or take the navy-yard here in Washington, where the chief-engineer, with the relative rank of commander, receives precisely the same pay as the commodore commanding who entered the service thirteen years before he did, and \$500 per annum more than the captain of the yard who has seen eleven years more service and stands a full grade above him in rank. But a stands instance of this singular and inexcusable disparity may be found at the Norfolk navy-yard, where the chief-engineer, with the relative rank of commander, receives the same pay as the commodore commanding who entered the service fifteen years before he did, and \$500 more than his senior in rank, the captain of the yard, who has seen five years of service more than himself.

seen five years of service more than himself.

Not to weary the committee, however, with a further recital of these details, I will simply add that this Register shows that the chief-engineer at each of our navy-yards entered the service long after the commodores commanding and captains of the yards; that in five out of the cight they are only of the relative rank of commander, but are, not withstanding, each paid the same as the commodores and \$500 per annum more than captains in the line. In two others the chief-engineers have the relative rank of captain, but while they each receive the same pay with the commodore, and \$500 more than the line officer with whom they hold relative rank, strange as it may seem they get no more than officers of their own corps a full grade below them in rank. In the remaining instance the chief-engineer has the rank of lieutenant-commander, but true to the principle which makes fish of one and flesh of another corps of officers in the same branch of the public service, he gets \$200 a year more than the captain of the yard, who is not only his senior in rank but seven years his senior in service.

I call particular attention, sir, to the comparative length of service of the officers of the line and staff in these instances, because it is not unusual to hear the great length of service of the latter urged as a pretext for giving them such remarkable advantages over the former in the way of pay. And it should be borne in mind also that necessary expenses, duties, and responsibilities of the chief-engineer bear no kind of proportion to those which devolve upon the commodore in command.

ortion to those which devolve upon the commodore in command.

Now, sir, I ask honorable, fair-minded gentlemen around me if the state of things which I have so imperfectly presented to their view is just? Is it right? Is it fair dealing between man and man? Is it economical? Is it conducive to the harmony and well-being of the service? In my judgment it is not; it can not be. And if I shall have an opportunity I will move to amend the bill so as to entitle officers of the several staff corps to the same pay as that now allowed by law under similar circumstances to officers of the line with whom they respectively hold relative rank, and no more. I shall do so not only as a matter of sheer justice, but as a matter of economy; for, unless I have made a mistake in my calculations, by this simple process of equalizing the pay of the several corps of the Navy there will be a clear annual saving of overa hundred and ten thousand dollars, now not only uselessly but most inequitably squandered. But if I could have my way, Mr. Chairman, I would go much further than this. I would provide for the abolition of every officer in the Engineer, Marine, and Pay Corps altogether as absolutely useless and unnecessary.

I would do away entirely with the various grades in the engineer serv-

I would do away entirely with the various grades in the engineer service, and employ a sufficient number of practical machinists, sufficiently skilled to keep the machinery in repair and run the engines, and who should perform just precisely what they were engaged to do, namely, the actual duties of engineers, and not merely to sit by while some one else did the work, while a competent line officer should be detailed to take charge of and be responsible for the economy and administration of the engine-room under the direction of the commanding officer. It is idle to say, sir, that this could not be done successfully and satisfactorily. Engines are run and costly machinery properly cared for in business establishments all over the country by men who never wore an epaulet or sword in their lives, and who crave no other rank than that of honest men who are not afraid or ashamed to do the work they are paid to perform; and it can be just as easily done in our navy-yards and on our men-of-war. I would not propose, however, to inaugurate such a radical reform by an amendment to this bill, but if I shall have the opportunity, I will offer an amendment reducing the corps by stopping promotion to the higher grades until they are reduced to a maximum greatly below their present number, after the plan proposed by the distinguished gentleman from New Jersey, at the last session, for cutting down the line.

down the line.

As for officers of the Marine and Pay Corps, I would do for them just precisely what the bill proposes to do for the commodores. I would not interfere with the commission or emoluments of one of them, but simply let them die out, let them quietly and peacefully "go the way of all the earth," and their rank and titles with them. And to that end

I would provide that there should hereafter be no promotions or appointments to any of the grades in either, but that whenever a vacancy should occur in any grade of either corps a competent officer should be detailed from the line to discharge the duties thereof, if necessary, under proper regulations to be prescribed by the Secretary of the Navy.

proper regulations to be prescribed by the Secretary of the Navy.

One of the results of these changes, sir, would be the saving of nearly a million dollars annually, which might be applied if necessary to the building of new and approved vessels of war. I commend this fact to the serious consideration of gentlemen who seem to be so much excited over the present deplorable condition of our Navy. Cut off these supernumeraries, and apply the amount that would thus be saved to the building of fast-sailing steel-clad cruisers, and you will find in less than ten years that you will have a navy by no means so contemptible as gentlemen represent it to be at present.

Another, and a most important consequence of such changes as I sug-

Another, and a most important consequence of such changes as I suggest in the administration of these three corps, would be a compact, homogeneous, harmonious, and efficient service; the dispensing with vast amount of circumlocution and red tape, a convenient distribution of duty, and a certainty in the responsibilities of officers throughout all the various grades from Admiral down to midshipman; the total and lasting suppression of the thousand and one petty jealousies invariably existing between different corps in the same arm of the service, and the elimination of useless, unnecessary, and unsuitable material from the active list of the line itself. You would hear no more, sir, of the personnel of your Navy being top-heavy or of your ships being loaded down to the gunwales with supernumerary officials. You would no longer hear the ungenerous taunt thrown into the teeth of gallant and meritorious men, who have no means of controlling the circumstances by which they are surrounded, that the streets of the capital are so thronged by naval officers on waiting orders that you can not throw a rock at a dog without crippling some of them, for you would find a large majority if not all of them always with something to do. There would be no need of your strangling those brave and ambitious young fellows down here at the Naval Academy at Annapolis, in their very birth into official life, as you would a litter of blind kitttens, simply because there were too many of them, but you would find room, for years at least, for every young graduate in the various corps where they would become thoroughly trained in every possible duty that can devolve upon a naval officer from that of the paymaster's clerk to the construction and equipment of a steel-clad steamer or the command of a man-of-war. In view of these considerations, sir, I would most earnestly suggest to gentlemen who claim and so justly claim that this branch of the public service should be thoroughly pruned, that the knife should be first put to the parasites whic

But, sir, although I have already spoken longer than I intended and feel that my strength will not justify my detaining you longer, there is one other point to which I desire to briefly allude. I refer to what is commonly known as the selection clause in this bill. That the present method of promotion in the Navy may not at all times produce the best results to the service I am not here to deny, but I very much doubt whether the remedy proposed in the case of promotions to the rank of rear-admiral will correct any evil that may possibly occur in that regard. Nor can I see why, if it is necessary in that particular instance, it should not apply to all the inferior grades.

I will not deny that in some instances the best possible selection might be made even if made from the rank of captain; but all men are fallible, and it is just as liable to turn out the other way, and that a captain low down upon the list, with no special recommendation arising from length of sea-service, superior talents, or any other cause, save perhaps an intimate relationship with the powers that be, may be promoted over the heads of his superiors in age and experience as well as in rank. Such a thing, it is needless to say, would be unjust even if it should result from an honest mistake of judgment in those making the selection, but it would lead to interminable jealousies, discontent, and complaints upon the part of other officers, and finally result in the demoralization of the entire service. And moreover, Mr. Chairman, the plan proposed in the bill would, in my judgment, lead to other results very much to be deprecated. I know it is provided that those from whom the selection is to be made are to be named by a board of officers not below the grade of rear-admiral; but, sir, will those comprising that board show no deference to the will of him who selected them? Sir, no man is more inclined than I am to give my fellow-man credit for the highest honor and the strictest fidelity to the requirements of justice and law, but there is not a gentleman around me who has occupied his seat for one Congressional term who does not know what is implied in the word "influence," who has not observed something of the bland-ishments of what is styled "society," or who has not seen patient merit thrust aside in the interest of the mere court favorite. I do not say that such things have been or are likely to be done out of sheer venality, but all know that—

Mankind is unco' weak, And little to be trusted. If self the wavering balance shake, It's rarely right adjusted.

I think, therefore, sir, it would be wise in us to pause at least before

we do anything that might tempt an officer to neglect his duties in order to resort to any of the manifold appliances that might be used to pro-cure his own advancement, or that might give him reasonable grounds for dissatisfaction and complaint in case another should be promoted over his head.

With profoundest thanks to gentlemen who have given my ill-digested remarks such polite and flattering attention, I will yield the remainder of my time to my friend from Georgia [Mr. BLOUNT]

Table A.—Compiled from the Naval Register of 1882, showing the difference in the average pay of line and staff officers, United States Navy.

Names of grades.	Average pay on sea service of all in grade.	Average pay on shore duty of all in grade.	Average pay on leave or waiting orders of all in grade.

The Tariff.

SPEECH

# HON. WILLIAM MCKINLEY, JR.,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 27, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other pur-

Mr. McKINLEY said:

Mr. CHAIRMAN: I shall occupy but little time in this debate. It was not my purpose until to-day to participate in the general discussion on this bill, intending to reserve whatever I might have occasion to say until the bill shall be read section by section for the final action of the Committee of the Whole. In what I shall say to-day I will not speak on the general propositions showing the benefits of a protective tariff and the evil results of the doctrine of free trade, for upon that subject at the first session of this Congress I expressed myselfvery fully. I have seen nothing since and learned of nothing since to change my convictions then uttered, but have witnessed much in the consideration of this question before the Committee on Ways and Means to confirm and strengthen

There is a general demand, Mr. Chairman, for a revision of the tariff. All parties agree that the present tariff laws require revision, amendment and simplification, and the majority of this House at its first session, conceding the necessity of a revision, created a commission of men of learning and business experience, and required that commission to make its report to this Congress on the first day of the present session. All its report to this Congress on the first day of the present session. All phases, then, of tariff sentiment believe in a revision of the tariff; the only question upon which there is any difference of opinion in this House or throughout the country is the question upon what principle that revision shall be made. On this side of the House it is insisted that the revision shall be made not upon the principle which recognizes revenue and revenue only, but upon the principle which shall recognize a fair and just protection to American interests and to American labor; while the majority on the other side of this Chamber, conceding that revision is necessary, insist that the revision shall be made upon the basis vision is necessary, insist that the revision shall be made upon the basis of a recognition of revenue and revenue only; and it is there that the two parties practically divide in the House and throughout the country.

The majority sentiment in this House is in favor of the former principle, and believes not only in a tariff for revenue but in a tariff for protection as well. The Committee on Ways and Means as at present constituted represents that dominant sentiment, and the bill which that committee has brought to this House and recommends for its adoption recognizes fully—and I desire to make no concealment—recognizes fully the doctrine of protection. While the bill is protective in its character, yet recognizing the reasonable demand of the country for a reduction of the revenues of the Government, the committee has in its bill, wherever it could be done without injustice to existing interests, made reductions in the interest of a diminished revenue. While these reductions may not be all that every member of this House or of this side of the House could desire, still it must be borne in mind that

in approaching the national revenues members of Congress, the representatives of the people, should be cautious and conservative.

It must be remembered, Mr. Chairman, that it is much easier to reduce duties than it is to impose them; and we ought to be very sure of what the necessities of this Government will be in the near future, and how much less of the present revenues will be required, before we make any very radical reduction in the revenues derived from the existing tariff. And in this connection it is proper I should say that we are justified in believing that the Senate of the United States, which has the internal-revenue bill of this House passed at our last session, a bill which reduces internal-revenue taxation more than \$26,000,000, will send back that bill to this House with added reductions, which together with the reductions made by the tariff bill now before the committee will aggregate

more than \$50,000,000.

Much comment has been indulged in concerning the reduction shown by this bill. But if gentlemen have taken the pains to examine the schedule of reductions as shown by the figures of the experts of the Treasury Department, and which have been provided for members in form convenient for reference, they will find that in every single schedule from the first to the last, saving and except two, to which I will hereafter refer, there is a reduction of duties and therefore a corresponding diminution in the revenues. These two exceptions are cotton and cotton goods, earthen-ware and glass-ware, and exceptions are cotton and cotton goods, earthen-ware and glass-ware, and excepting these very considerable reductions have been made in every schedule of the tariff list and the aggregate will exceed in my judgment more than \$23,000,000. I believe too that if this bill shall be enacted into a law it will be found in its administration to very considerably add to these reductions. Another thing will be observed, Mr. Chairman, that we have followed very

closely the schedules recommended by the Tariff Commission. I have no desire to follow gentlemen upon the other side who have discussed this question in their criticism of the personnel of that commission or of its composition nor of the personal views and interests of the gentle-

men who constituted it.

It is sufficient for me to say that so far as my knowledge goes, and it extends to a number of those who constituted that commission, they are intelligent, conscientious, capable men, and peers of the best men on the floor of this House. Their work was well and I believe conscientiously performed. I say we have followed the commission's schedules largely. We have made some increases, it is true, but in the large majority of cases where any deviation has been made from the sugges-tions of the Tariff Commission they have been in the direction of reduction of the duties and not of increase, and if you will run over the different schedules of the bill as brought in by the committee and compare item for item with the report of the Tariff Commission, you will find in a considerable number of cases that the Committee on Ways and Means have recommended a reduction below the report of the commission. It seems to me that from the standpoint of the other side of this Chamber any reduction should be hailed with approval rather than op-If we have honestly decreased the revenues twenty-two millions of dollars by tariff reductions, we have certainly made a step in the right direction, and if we have not made all the reductions which should have been made, with experience and a knowledge of the necessities of this Government to be learned hereafter the next Congress or some subsequent Congress can make still further reduction.

Again, it will be found that the present law has been greatly simplified, classifications have been carefully made, and every safeguard has been raised to prevent evasions, and make undervaluations difficult and hazardous. The customs court provided for will save the Treasury Department from its long docket of contested cases, will give all interested parties a speedy hearing, and secure uniformity of decision. can be made without defects and errors, and none can be framed which will satisfy every interest. This never has been the case and never will be. This bill is no exception to the rule, but I believe that with all of its imperfections it will prove easy of administration, equitable in its ratings of duty, and as nearly just to American interests as possible.

Much criticism has been indulged in because of the increase of the duty on cotton-ties, and gentlemen who have heard this discussion would be led to believe, and gentlemen who have participated in it on the other side have presumed that the only people in the United States to be consulted as to the rate of duty to be levied are the sugar and cotton planters of the South. They have spoken freely and complained continually of the enormity of the increase upon cotton-ties and the iniquity of the reduction upon sugar. Cotton-ties must be reduced and sugar, which is the necessity of every household, must pay a high duty. This is the

Democratic doctrine of a revenue tariff.

Now, what is this cotton-tie question? For I think it is very much misunderstood. The cotton-tie is a piece of hoop-iron, a piece of ordinary hoop-iron cut into a length just long enough to go round a bale of cotton. Under existing law hoop-iron, which is used in the making of cotton-ties, pays a duty of 1½ cents a pound. The Treasury Department of this Government held that a piece of hoop-iron cut into lengths of the size sufficient to go around a bale of cotton, with a loop attached to fasten it, was not hoop-iron, but was a manufacture of iron not provided for, and held it to be dutiable at 35 per cent. ad valorem, which was equivalent to about three-fourths of 1 cent a pound. Now, all this bill proposes to do is to declare that hoop-iron in any length employed for any purpose shall pay the same duty that is levied upon the plain article known as hoop-iron; and that is all there is in the outery about an increase of the duty upon cotton-ties which has been raised by the cotton planters of the South, and repeated in nearly every speech yet made by gentlemen on the other side. Now, what is this cotton-tie question? For I think it is very much mis

gentlemen on the other side.

I would like any gentleman on the other side of the House to give me any substantial reason why a cotton-tie made of hoop-iron should not pay the same duty as the hoop-iron itself. It costs the same amount of labor and requires the same material. It is hoop-iron; it is nothing else; and the device of cutting that hoop into lengths the size to go around a bale of cotton and punching the holes in the end of it or putting a buckle at the end is only to avoid the duty imposed by law; and now that we propose to correct that and place this article in its proper relation with hoop-iron the cry is set up on the other side that we are trying to destroy the cotton industry of the South.

There is another thing. These gentlemen who cry about the insatiate greed of the manufacturers of hoop-iron, who denominate them robbers these same poor cotton-planters who pay 4 cents a pound for iron to bale their cotton sell the hoop-iron that goes about that cotton not as hoop-iron, but they sell it as cotton. They pay 4 cents a pound for the iron and they sell it to cotton manufacturers as cotton at 11 cents a pound.

Mr. CARLISLE. Will the gentleman permit me to ask him a question.

Mr. McKINLEY. Yes, sir; with pleasure.
Mr. CARLISLE. Does the gentleman make that statement of his

own knowledge?

Mr. McKINLEY. I make that statement upon information and belief. And I invite my friend from Rhode Island [Mr. CHACE], whom

I see sitting before me, a manufacturer of cotton goods, to state what the truth is about it.

There is no question about it. Mr. CHACE.

Mr. AIKEN ro

The CHAIRMAN (Mr. McCook). Does the gentleman from Ohio Mr. McKinley] yield to the gentleman from South Carolina?

Mr. Alken. I deny the gentleman's assertion. I say, sir—

Mr. McKinley. I yield only for a question.

Mr. Alken. I simply want to correct the statement of the gentle-

The CHAIRMAN. If the gentleman from Ohio yields for that purpose the gentleman from South Carolina will be heard.

The price of cotton is settled beyond the Atlantic. It Mr. AIKEN. is set by the English and not the Rhode Island manufacturer, and the Englishman in setting that price takes off the tare, amounting on a bale of cotton to twenty-two pounds, which is the exact weight of the bagging and ties. Thus when he receives a bale of four hundred and twenty-two pounds, he pays for four hundred pounds of cotton. He buys cotton; he buys lint and every colored man who puts up a bale of cotton in the South is defrauded out of the amount of money he pays for his ties. I ask the gentleman in whose interest it is he desires to raise the duty on the cotton-tie three-quarters of a cent to one and a half cents per pound? Is it in the interest of the American laborer? Is it in the inter-

est of the wards of this great nation? [Applause.]
Mr. McKINLEY. I ask my friend from Rhode Island [Mr. CHACE], who is a cotton manufacturer and who buys cotton, to answer my ques

Mr. CHACE. This is a very simple question. The cotton manufacturers of the United States buy about 1,200,000 bales of cotton per an-They pay for it the market price and they buy the hoops as cotton.

Mr. AIKEN. Who sets the price?
Mr. CHACE. They pay for those hoops as cotton. You gentlemen of the South buy the hoops for 3½ cents to 4 cents a pound, and you sell them to us at from 10 to 11 cents a pound. That amounts to 70 cents per bale, or \$840,000 per annum that goes into your pockets from our pockets. And yet you complain.
Mr. King and Mr. Cook rose.
The CHAIRMAN. The gentleman from Ohio [Mr. McKinley] is entitled to the floor.

entitled to the floor.

Mr. McKINLEY. I do not care what they do in England— Mr. KING. The gentleman is entirely mistaken and I want to set

him right.

Mr. McKINLEY. The gentleman from Rhode Island [Mr. Chace], who is a manufacturer of and buys cotton, declares on the floor of this House that for the cotton-tie which you buy at  $3\frac{1}{2}$  cents a pound you charge him 10 to 11 cents a pound.

Mr. CRAPO rose.

Mr. KASSON. Let us hear from Massachusetts.
Mr. McKINLEY. I yield to the gentleman from Massachusetts [Mr.

CRAPO] to bear his testimony.

Mr. CRAPO. The bale of cotton is put upon the scale and it is weighed, cotton, iron, hoops, and all; and on that total gross weight we 10 or 11 cents a pound.

Mr. AlKEN. I ask to be permitted to say one word in reply.
Mr. McKINLEY. I can prove that assertion of mine by witnesses all about me, who tell me they do precisely the same thing.

Mr. AIKEN and Mr. CARLISLE rose.
Mr. McKINLEY. I do not yield for further interruptions. ntlemen in the galleries who applauded my friend from South Carolina are not interested in American manufacturers and American labor.

Mr. KING. Will the gentleman allow me a word?

Mr. McKinley. There is a lobby here from the other side wanting to get legislation from the Democratic side of this House to enhance English manufacturing, enrich the coffers of English lords, destroy American industries, and degrade American labor.

Mr. KING ro

The CHAIRMAN. Does the gentleman from Ohio yield?

Mr. McKINLEY. I decline to yield. I have said so already and I trust I am understood. This debate must be closed at 5 o'clock. The other side have had more hours of this general discussion than we have had on our side. They should be content.

I do not want false statements to go uncontradicted. Mr. MING. I do not want raise statements to go uncontradicted.

Mr. McKINLEY. They are not false statements; but when I stated
a fact about cotton-ties I was not making any complaint against the
cotton-planters of the South. I do not want to interfere with their business regulations or their profits. I do not care how much they get for
the hoop-iron that goes around their cotton-bale. But when they come here and call American manufacturers robbers because they want a cot-ton-tie to pay the same duty as hoop-iron out of which it is made, it comes with a poor grace from men who buy iron from robbers of the North at 4 cents a pound and sell it to the New England factories as cotton for 11. [Applause.] Yes, to the same robbers of the North. And that is all there is in this cotton-tie proposition.

It is to make hoop-iron of any length, under any name, in any disguise, pay the same duty that the hoop-iron you buy in your stores at

home, which is imported, is now required to pay. The proposition is just, logical, and unanswerable, and should be maintained by this House.

Ah, but they say, you have increased the duty on earthen-ware.

Every speech that has been made on the other side of the House has cried out against the increase of duty on the earthen and glass ware used in the United States. Now, let us look into that matter. We admit there the United States. Now, let us look into that matter. the United States. Now, let us look into that matter. We admit there has been an increase; nobody denies that. But it will be found upon investigation that the increase has been grossly exaggerated by gentlemen on the other side of the House.

What is the increase? The present duty on plain white granite-ware and on painted, decorated, and printed ware is 40 per cent. ad valorem. The proposed duty upon plain white granite-ware is 55 per cent. ad valorem. lerem, and on plain white granite-ware painted or decorated 65 per cent. ad valorem. That looks upon its face like a great increase, in the one case 15 per cent., and in the other case 25 per cent.; but it will be found

upon examination that that increase is not real.

Let me show you, for you want the facts and only the facts. bill which is brought to this House by the Committee on Ways and Means there is a proposition to repeal what is denominated in Heyl's Digest, section 516. Now, this bill proposes to repeal that section. Let me read it.

In determining the dutiable value of merchandise hereafter imported, the shall be added to the cost, or to the actual wholesale price or general marvalue at the time of exportation in the principal market of the country freshence the same has been imported into the United States—

Now here are the items which are dutiable under that section-Any nere are the nears which are dutuable under that section—
the cost of transportation, shipment and transshipment, with all the expenses
included, from the place of growth, production, or manufacture, whether by
land or water, to the vessel in which shipment is made to the United States; the
value of the sack, box, or covering of any kind in which such merchandise is
contained; commission at the usual rates, but in no case less than 2½ per cent;
and brokerage, export duty, and all other actual or usual charges for putting up,
preparing, and packing for transportation or shipment.

Under our bill that section is to be wiped out. duty on commissions; there is to be no duty on inland charges; there are to be no dutiable charges whatever. The duty is to be assessed upon the actual cost of the merchandise.

Now, what difference does that make in the cost of a crate of crock-ery-ware? Let me call attention to an actual invoice which I have before me. I will take first an actual invoice of four average crates of the common white ware used by the people of this country generally. Of this grade of ware four crates cost in England \$117.85, and with

the discounts that are given to the American buyer, the four crates will cost \$79.77. The common earthen-ware which the majority of the peo-ple of this country use on their tables will cost on the average in Enland \$19.94 per crate. That is the cost in England to the American

Now, add to that the various items mentioned in the section which I have just read. The package costs \$3.97; inland freight and charges \$2.04; marine insurance, consul fees, and certificates, 54 cents; making a total of \$6.73.

Now, add to that the commission of  $2\frac{1}{2}$  per cent. provided in this section which we propose to repeal, and we will have 60 cents more, making the total duty and the cost of the goods including charges amount to \$27.33 per crate. Now, that is the whole amount which is dutiable under the existing law.

The present duty is 40 per cent., and 40 per cent. of \$27.33 is \$10.93. That is the duty which the importer would pay under the present law

upon a crate of common earthen-ware.

What will he pay under the proposed law? The duty under the proposed law is 55 per cent. On what? On the actual cost of the goods in England. What is that? It is \$19.94; and 55 per cent. of \$19.94 is \$10.97. So that the duty under the proposed law will be \$10.97, while under the present law it is \$10.93.

Now, in the light of that actual invoice what becomes of the howl from that side of the Hall about the extravagant duties upon the plates of the poor people of this country?

Does anybody in this House know what one hundred and twenty-five pieces of cream-colored crockery-ware, such as is used by the masses in this country, are sold at by retail now? A dinner-set of one hundred and twenty-five pieces costs the consumer the enormous sum of \$10. And take the iron-stone china, a still higher grade, and it will cost the consumer for the same number of pieces \$12.50 to \$14.

Before we had a 40 per cent. duty in the United States, before ous pottery manufactories had started, the consumers of the United Stater.

were paying to the English potters at Staffordshire, England, 50 per cent. more than they are paying to-day. The result of the competition by American potters has brought down the price of common crockeryware to the low rate at which we find it to-day. It never was so cheap

to the consumer as now. Now, I appeal to this side of the House and to the protectionists of the other side to stand by this young industry in the United States. It is not twenty years old to-day. We practically manufactured no

white ware in this country until 1862 and 1863, and the only way that our potteries were then established was by the aid of the gold premium before resumption, which added a large incidental protection to that in-It can not continue unless the duty asked for by this bill is

I admit that on the higher class of goods, those that are painted, decorated, or printed, and which the rich and luxurious use, the proposed duty in the bill is an increase over existing rates. But that increase is necessary. We are developing the art industry in the United States, and it must be fostered and nourished. Art schools are spring-

ing up all over the country.

We have one in Cincinnati that decorates nothing but plain earthen-The gentleman from Pennsylvania, the distinguished chairman ware. The gentleman from Pennsylvania, the distinguished chairman of the Committee of Ways and Means, has a notable one in his own city. It is in the interest of art, it is in the interest of the women and the girls who are pursuing this art for a livelihood, that I appeal to this House to stand by the duty proposed in this bill. The bill makes painted and decorated earthen-ware pay the same duty as decorated china-ware, and this is right. It costs just as much of labor, skill, and materials to decorate earthen-ware as china-ware, and it is often very difficult to detect the difference between the one and the other.

It is surprising the amount of labor required and the number of hands

It is surprising the amount of labor required and the number of hands through which this ware must pass before completion.

In the growth of a single plate there are twenty-one process detailed statement may be of interest:

First. Combining, mixing, sifting, and bolting materials in liquid

Second. Filtering this slip by means of hydraulic presses to a plastic, putty-like consistence

Third. Tempering, kneading, or wedging to a uniform consistence for

Fourth. Batting out into circular sheets. Fifth. Laying on and forming by means of jigger or jolley. Sixth. Running molds to and from drying-room.

Seventh. Fettling, sponging, finishing, and carrying to green-ware

Eighth. Carrying to green placing-room, placing in seggars, and setting in kilns or ovens. Ninth. Firing.

Tenth. Drawing from bisque-oven and carrying to bisque-ware rooms. Eleventh. Brushing and sand-papering, and selecting bisque-ware. Twelfth. Stamping with trade-print on bottom.

Thirteenth. Carrying bisque-ware to dipping-rooms

Fourteenth. Dipping ware to give a coating of glazing.

Fifteenth. Carrying to placing-room, placing in seggars, setting the same in glost-oven, and luting between to seal same to protect from

Sixteenth. Firing glost-oven.
Seventeenth. "Drawing" glost-oven and carrying ware to glost drawing-room."

Eighteenth. Dressing glost-ware. Nineteenth. Selecting glost-ware and placing on shelves or in bins. Twentieth. Selecting out and carrying to packing-room in executing orders.

Twenty-first, Packing in crates or hogsheads with straw for ship-

Each of the above is a distinct department, operated by different work-men, and each of these departments has several handlings; and this regular, every-day size, good quality plate is sold for 5 cents each, or 60 cents per dozen. The imperfect ones, of which there are about one-half, are sold at a large reduction from above.

Mr. Chairman, I wish to show from a paper published in Stafford-shire, the city of the great potteries of England, how they are seeking to take the American market, and how the rivalry is ruinous to the in-I read now from the arbitration between dustries of the United States. the werkmen and the potters of Staffordshire, concerning a request of the workmen for increased wages. The manufacturers before the arbitration were showing why they could not pay the demanded rates. Let me read an extract or two. This is from Mr. Akerill, secretary of the

mie read an extract or two. This is from Mr. Akerill, secretary of the employers:

The potting trade was divided into several kinds—American trade, general foreign and colonial trade, and continental and home trades. In the evidence given by the employers in 1879 it was stated that there was very small prospect of their being able to get an advance in selling prices in the American trade. Owing to the increased price in coal, borax, and other materials, those engaged in that market endeavored in the spring of this year to obtain the moderate advance of 5 per cent, on selling prices on this account, and also because their business was unremunerative; but after a struggle of some months' duration they failed in their efforts, as the supply of goods was more than equal to the demand, and they found that American manufacturers were taking their trade, as they eontimued to sell at old prices, while their English competitors were asking for an advance. The position of the English manufacturers was worse now than it was when the award of \$\frac{1}{2}\$ per cent, was made in their favor, as they had had to give more for coal, borax, and oxide of cobalt, with the prospect also of being unable to get an advance in selling prices. In the employers' evidence on the last occasion it was said that they had no desire to reduce wages, except it was ununally advantageous; and they contended that such had been the result, for it had assisted the master to find more work, and for the workman to earn more wages. They further contended that to the majority of workmen the reduction of \$\frac{1}{2}\$ per cent, had not been a serious loss, if any; for by increased diligence they had been enabled to earn fair wages, if not quite equal in amount to what they had been enabled to earn fair wages, if not quite equal in amount to what they had been enabled to earn fair wages, if not quite equal in amount to what they had been enabled to earn fair wages, if not quite equal in amount to what they had been enabled to earn fair wages, if not quit

Hatnerton.

If the business of the country and of the world generally should improve during the next year, and the manufacturers at Martimas next find themselves able

to obtain better prices than they could now do, they would not hesitate to let the men share in that advance, without troubling an umpire to decide the question. But to force up labor, and, in consequence the selling prices of goods just now, could not but have a disastrous result for both masters and men. In this, as in the American trade, the foreigners were their rivals, and they only waited for the labor market to be forced up here to take again the orders which should come to this district.

That is to say, on the other side they have reduced the wages of their laboring people in order to capture the American market; and they do not want to increase wages, because if they do our American potteries will have a portion of our own market. We have only 40 per cent. of it to-day; 60 per cent. of the American market, as to pottery, goes to England, while we ought to control the whole of it, and will with proper protection, and to the ultimate benefit of the consumer.

Then Mr. John Maddock, one of the most extensive English manufactthen Mr. John Maddock, one of the most extensive English manufacturers of pottery, says that he has a brother over in New York watching the American trade, and if they can get a reduction of the duties on pottery, then they will be able to capture and hold the American market. I am told—indeed I know—that this brother has been in the city of Washington; and I have no doubt he is in some of these galleries today; and I doubt not that a speech to be made hereafter—not by my friend from Illinois [Mr. MORRISON] who stands before me, for he said in his speech yesterday that he conceded on crockery there was about  $17\frac{1}{2}$  per cent. growing out of these dutiable charges for commissions and inland transportation—but there will be inspired for somebody else a speech to be made to show why in the interest of American consumers, not in the interest of English potters (of course), this duty should be reduced. Hear what Mr. Maddock says:

reduced. Hear what Mr. Maddock says:

Mr. John Maddock was the first witness called on behalf of the manufacturers, and was examined by Mr. E. Powell. He said he was a manufacturer of white granite, engaged in the American trade. In his opinion the trade at the present time was better as regarded the men and worse as regarded prices; that was to say, that in consequence of his having more work to do the men were kept more fully employed than they were a year ago, while the prices obtained for the ware was unremunerative. It was a fact that he was selling these goods now in order to meet American competition, at a less price than he was doing at this time last year, and he thought it was the duty of manufacturers to continue selling their goods at the present price in order to keep the trade. At the beginning of last year he was a member of a committee of white-granite manufacturers, and at a meeting called to consider the position of the trade it was resolved, in consequence of certain increases in the cost of production, to make an effort to increase the selling price of goods. The manufacturers then resolved to reduce their discounts 2½ per cent. As one of that committee he had endeavored to carry out that resolve but failed to accomplish his object. Indeed, not only did he fail in reducing the discount to the amount stated, but he was actually compelled to lengthen the discount a further 2½ per cent. He had two manufactories engaged in this particular trade, and from the fact that he had a brother living in New York and was consequently kept familiar with the trade of that country, he concluded that they would feel more and more the competition they were subjected to.

They had been looking toward the probability of having a President in favor of free trade, but as the result of the recent election they were doomed to disappointment, though they might eventually obtain some relief from the present heavy tariff.

How the English manufacturer is looking to the Democratic party for help, and how he sighs for a free-trade President! They want to keep our trade for the better prices which are to come with a reduction of duty. They are selling at a loss, upon their own confession, to keep the trade for future profits. Our friends on the other side of the House say that reduced duty means reduced cost to the consumer. This is not the opinion of their Englishallies. Reduction of duty means their profit

the opinion of their Englishallies. Reduction of duty means their profit and a corresponding injury to our consumer.

Mr. Chairman, I must hasten on. I believe that it is the duty of American Congressmen to legislate for American citizens, and not for foreign manufacturers. Let us take care of our own interests, and look to the well-being of our own citizens first. [Applause.] Let me show you how England is watching the growth of free-trade sentiment in the United States. I read in the Pottery Gazette, published in England, in its number of May 7, 1882, that they have sent a special agent over here to look into our industries. That gentleman says that while in New York he attended the meeting of a free-trade league; and I wish gentlemen to hear what he says about it. He says:

I was informed by an importer—

I was informed by an importer

Of course by an importer-

Of course by an importer—
that a large public meeting was to be held in the Chickering Hall to "consider the necessity of an immediate reform in the unjust, unequal, and iniquitous system of taxation called a protective tariff." This meeting was called by the New York Free-Trade Club.

I attended this meeting, and since doing so my hopes of the eventual abolition of the tariffs on raw materials and the considerably reducing of the duties on manufactured goods have been increased tenfold. The trouble which we had in England some thirty-five years ago is now commencing in real carnest here. The work of the Cobden and Bright Corn-Law League is repeating itself throughout the States. It would be impossible in England to have found a more intelligent and enthusiastic audience, and composed exactly of the class most interested in this question. Manufacturers, importers, and the working-class consumers. A Senator from North Carolina was present, and gave one of the best speeches on the subject that it was ever my pleasure to listen to. The club is disseminating literature, organizing lectures, and at the next Presidential election this can not fail to be felt. Some argue that the tariffs benefit the manufacturers, but are prejudicial to the working classes; others argue that the working classes are alone benefited, and some again that it benefits both equally. It is not for us now to discuss who are most benefited. The vital part of the question lies fur above that. The consumers are vastly in the majority, and it is unjust to tax the many for the benefit of the few.

The processes of educating the working classes on the subject itself are more difficult than they were in England. The immensity of the country and the indifference of the working classes to politics are serious drawbacks in the way, but nevertheless the work is rapidly advancing, and these trades, in conjunction

with other leading industries in England, will, at no very distant date, see, 1 believe, a change. The question is one of such great importance to English manufacturers that it is impossible for us to give too much attention to it, and we shall closely watch the progress of events and the work of the New York Free-Trade Club, to which subscriptions are pouring in for the providing of the sinews of war.

"The sinews of war," subscriptions of money, flowing in to defeat the doctrine of protection in the United States, to overturn the American system founded by that great Whig leader, Henry Clay. But more:

It will be for some years impossible for American manufacturers to produce all that is required by her 50,000,000 people, and the market lying so near us and being an offshoot of our own people, and speaking our own language, is for these reasons a market that must be closely watched.

I may mention incidentally, as an evidence of the warm feeling to-ward England, that the British national anthem was played on the large organ after the first leading speech was concluded.

[Laughter and applause.]
And if we could only have had the Marine Band of this city here yes rerday upon the conclusion of the speeches of my honored friends from Virginia and Texas [Messrs. Tucker and Mills], and had them play the "British national anthem," how beautifully appropriate such concluding service would have been. [Laughter and applause.]

But in the absence of that there were ripples of applause from every free-trader on that side of the House and murmurs of approbation from the account of the state of the House and murmurs of approbation from the account of the state of the House and murmurs of approbation from the account of the House and murmurs of approbation from the account of the House and murmurs of approbation from the account of the House and murmurs of the large in the all relief the account of the House and murmurs of the large in the all relief the account of the House and murmurs of the large in the account of the House and murmurs of the large in the account of the House and murmurs of the large in the account of the House and murmurs of the large in the account of the House and murmurs of the large in the large in the large in the account of the House and murmurs of the large in th

the agents of every importer who held places in the galleries of this

Mr. Chairman, my time has about expired. I did not intend to occupy so much time as I have already. I would have been glad to have shown this House the condition of the workingmen in some of the districts of England which the other side of this House would seem willing to transfer here. Hear me while I read that vivid description of the degradation of English labor as furnished by Mr. Porter, the corthe degradation of English Buod as furnished by Afr. Forcer, the correspondent of the New York Tribune, which appeared in that great paper last Monday. He tells you how the women and the children work there from early morn until late at night in the iron furnaces and founderies in the Black District and the compensation they receive:

paper last Monday. He tells you how the women and the children work there from early morn until late at night in the iron furnaces and founderies in the Black District and the compensation they receive:

The most startling account of the degradation of a branch of English labor comes from the Back Country, a region which I shall not reach for three or four weeks. The facts, however, which I shall present in advance of going there are from the most trustworthy source and were actually witnessed a few days ago, white slave-drivers of the manufacturing districts of England to stopy using women as beasts of burden in the coal-pits of this same region. I had expected to find poverty and distress and squalld misery in these great centers of industry, for we have that at home in a land where the laborer is not obliged to work for 10 or 12 shillings a week. I did not expect to read such a rectial of man's greed as one that has just been made public as "a simple narrative of truth" from the Black Country. Carly, in spite of "factory act" and "school board," Housands of the country. Carly, in spite of "factory act" and "school board," Housands of the country. Carly, in spite of "factory act" and "school board," Housands of the city of Birmingham—the home of Bright and Chamberlain. In this gloomy district about 24,000 people are engaged in making nails and rivets. If they were men and boys the lowness of the wages would not seem so bad. But this account brings out the fact that 16,000 females are engaged day after day in the occupation. They are not all mature women; daughters work by the side of mothers, daughters who, in their tender years, ought to be at home, if they have any home, or in bed, instead of working their weary arms in shaping, in the still small hours of the morning, molited in the fact that the bedieves which is always to be noticed in the faces of child-workers. The gazety of youth, its fraid of the hearth of the still of the country of the morning and the country is the still of the country of the more

who would rather elevate than degrade labor, and who do not want cheapness at such a fearful cost. Women, it is said (and in a few weeks I shall go through this entire region and verify the words of my informants) within a few days or their confinement have been to work in the agony of exhaustion, in order to said a few pence, at the "hearth"—not the "hearth" of home which England especially at this season of the year so fondly boasts of, but the "hearth" of the forge. They have been known to return to work in a day or two after childbirth, "emaclasted in constitution, weak and weary for the want of simple nour-ishment." Their children, ragged and ill-fed, have had to lead miscrable and wretched lives, with no hope before them but a life of wickedness and vice. What more dismal picture can be drawn than the following description of the cheerless homes of these poor creatures?

The houses, if they deserve to be dignified with the word, are wretched in construction; in many instances they are more like hovels than human dwelling places; they seem to be devoid of all those ordinary conveniences which are to be seen in houses occupied by a better class of work people; they certainly shelter, and that is all, the toilers who for a few hours rest within their rickety walls.

This picture needs no comment or elaboration. Happily it has no counterpart in American civilization, and its introduction here would

be abhorent and un-American.

The laboring men of this country understand this question and its I beg to read from one of the petitions from relation to their wages. relation to their wages. I beg to read from one of the petitions from my district, signed by the men engaged in the mills, mines, factories, and furnaces, and I have many of them; and our record daily shows like petitions from all sections of the country. They want no free trade; they want no revenue reform which means reduced wages, and they declare it with no uncertain sound:

To the honorable the Senate and the House of Representatives of the United States of America in Congress assembled:

of the United States of America in Congress assembled:

The petition of the undersigned workingmen, employés of The Ohio Iron and Steel Company at Lowellville, Ohio, respectfully sets forth the following facts: In common with other workingmen they have been prepared to acquiesce in the schedules of duties on foreign products recommended by the Tariff Commission, although not approving of all of the provisions of the schedules, their principal reason for accepting the schedules arising from a strong desire to see the tariff question settled upon a basis that would offer some hope of permanence, and that would also offer some hope of stability to the industries of the country.

principal reason for accepting the schedules arising from a strong desire to see the tariff question settled upon a basis that would offer some hope of permanence, and that would also offer some hope of stability to the industries of the country.

They have, however, viewed with alarm the effects upon general business of the mere proposition of the commission to reduce duties, and of the widespread apprehension that Congress may go even further in the work of reduction than the commission has recommended, and they point to the recent stoppage of milis and factories and workshops, to the enforced idleness of many workingmen, to the shrinkage in values and the decline in prices, to the largely-increased number of financial failures, to the tendency toward lower wages for labor, to the hesitation of capital to engage in new enterprises, and to the withholding of orders for supplies by railroad companies and other great eorporations, as conclusive proofs of the depressed condition of many of our leading industries and of the great shock which our whole industrial system has experienced.

They believe that this serious and threatening condition of our industrial interests can only be changed, and confidence and prosperity be restored to the country, by the firm refusal of Congress at its present session to do anything that will tend to increase the importation of foreign goods, or that will make competition between the manufacturers of this country and of other countries for the supply of our markets so severe that the wages of American workingmen must be still further and permanently reduced.

Duties, therefore, should not be seriously decreased on any articles of iron or steel, and they should be increased on tin-plates, steel-wire rods, steel blooms, pig-iron, cotton-ties, and all "non-enumerated" articles. To decrease the duties on many iron and steel products which could be named could only result in an increase of importations and a consequent increase of revenue or else in a great reduction of wages, to be fo

Shall their appeals go unheeded? This side answers no, thrice no. The fine-spun theories of the free-traders weigh lightly with me against the hard facts gained by these men in the school of experience. Many of them know from realization the hardships which result to labor from free trade, and their voice has been steadily against its inauguration

Mr. Chairman, we can have the Democratic doctrine of free trade whenever the Democratic party can make of our laboring men slaves, but not until then. [Applause on the Republican side.] Why, if labor was equal on this side of the Atlantic with the other we might compete with the best manufactories of the world in any market. No lover of his race, no friend of humanity, wants reduced wages. I do not speak for control of the con for capital. Capital can take care of itself. Rob it of its profits in any of the so-called protected industries, and it will seek other avenues of investment and profit. I speak for the workingmen of my district, the workingmen of Ohio, and the country.

Mr. SPRINGER. They did not speak for you very largely at the

Mr. McKINLEY. Ah, my friend, my fidelity to my constituents is Mr. McKINLEY. Ah, my friend, my fidelity to my constituents is not measured by the support they give me. [Great applause.] I have convictions upon this subject which I would not surrender or refrain from advocating if 10,000 majority had been entered up against me last October [renewed applause], and if that is the standard of political morality and conviction and fidelity to duty which is practiced by the gentleman from Illinois, I trust that the next House will not do what I'know they will not do, make him Speaker of the House. [Laughter and applause]. And I trust another thing, that that general remark interjected, coming from a man who has to sit in the next House, does

not mean that he has already prejudged my case which is to come before him as a judge. Mr. SPRINGER.

Mr. SPRINGER. Your constituents have done that for you.

Mr. McKinley. For if he has, then he would be subject to be taken from the panel of jurors, because he had already expressed an opinion in the case which was to be tried before him. [Applause.]

No interest in this country is asking for a revenue tariff. Not a single petition has come to us for a tariff bill to be based upon Democratic

principles. The farmers, for whose special interests the Democratic party assumes to speak, have not asked for it. They want to produce and want the laboring men in the factories to consume their products and pay a good price for the same. They have no wish to break down manufacturing and transfer the vast army of men who are consumers and who work in the shops to the ranks of producers, and therefore competitors with them. They want a market, and protection enables them to have it. The wool-grower wants no free trade or revenue tariif. He wants and should have full and adequate protection with all other interests. All interests want a settlement of this question, and it would interests. All interests want a settlement of this question, and it would be an irreparable wrong to permit this Congress to adjourn without passing a tariff bill recognizing fully the principles I have announced. Agitation is paralyzing business, creating uncertainty and distrust of the future, and the highest statesmanship will be illustrated and enforced by a prompt and speedy disposition of this whole question.

Now, Mr. Chairman, I close, not with my own words, but the words of one whose memory we revere. I close this rambling speech with the last words that were ever uttered on the floor of this House on a tariff bill and in a tariff discussion by the lamented Garifeld whose successor.

bill and in a tariff discussion by the lamented Garfield, whose succe

[Mr. TAYLOR] sits on my left.

Standing there where the gentleman from Kansas [Mr. HASKELL] sits to-day, that magnificent man closed his great speech on the tariff debate with these patriotic words, which sounded out through this Chamber and thrilled us all:

ber and thrilled us all:

For the present the world is divided into separate nationalities, and that Divine command still applies: "He that provideth not for his own household has denied the faith, and is worse than an infidel." And until that era arrives described by the gentleman from Virginia, patriotism must supply the place of universal brotherhood. For the present Gortschakoff can do more good for the world by taking care of Russia. The great Bismarck can accomplish more for his era by being as he is a German to the core and promoting the welfare of the German Empire. Let Beaconsfield take care of England; let McMahon take care of France; and let Americans devote themselves to the welfare of America. When each does his part for his own nation to promote prosperity, justice, and peace, all will have done more for the world than if all had attempted to be cosmopolitans rather than patriots. [Loud and prolonged applause.]

The Tariff.

SPEECH

#### HON. GEORGE L. CONVERSE, OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 27, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other purpos

Mr. CONVERSE said:

Mr. CONVERSE said:
Mr. CHAIRMAN: Not desiring to express any opinions at this time
on the particular provisions of the pending bill, I will make a few suggestions upon the question of constitutional power which seems to be
involved in the general subject of the tariff.

There can be no question of greater importance than the settlement of differences in regard to the constitutional powers of the Government under which we live. Erroneous opinions on that subject entertained and promulgated by the leading men of the country mislead the public judgment. The evils increase and multiply with the lapse of time and are liable, as in our own recent history, to culminate in political convulsions, the consequences of which may last for generations.

It has been asserted during this discussion that the Constitution

It has been asserted during this discussion that the Constitution grants authority to Congress to pass laws for the protection of domestic products. That claim has been repeatedly denied during this debate and the one that occurred in May on this subject. Which of these claims is well founded and which false? Where is the line of authority and of power on this subject? I understood the gentleman who addressed the committee yesterday afternoon [Mr. McLane, of Maryland] to trace this authority which he deemed existed in the Congress of the United States for the protection of American industries to that clause of the Constitution which authorizes the laying of taxes, duties, and imposts. In my judgment the power does not lie there. The language of that provision, section 8 of the first article of the Constituguage of that provision, section 8 of the first article of the Constitu-

The Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States.

Power is there given to Congress to lay and collect taxes, duties, and imposts. What for? The clause itself furnishes the answer in plain and explicit language, "to pay the debts and provide for the common defense and general welfare of the United States." If the power to protect American manufactures is conferred on Congress by that provision it must be embraced in the words, "provide \* \* \* for the general welfare of the United States." It would require a forced and unnatural construction to place such a meaning on such language.

That provision of the Constitution, in my humble judgment, simply authorizes the enactment of a tax law for the purpose of raising revenue to carry on the Government. All tax laws are mere revenue land this provision names the purposes for which such revenue shall be

and this provision names the purposes for which such revenue shall be raised. All will admit that the power to protect the products of American labor has been exercised, whether rightfully or not, by the Congress of the United States, and such laws have been enforced for a very long period of time and are still on the statute-books. If the power to protect is not conferred in the clause authorizing the raising of revenue, where is it to be found? The only other clause relating to this subject is the power to regulate commerce. The language of the Constitution is as follows:

The Congress shall have power \* \* \* to regulate commerce nations, and among the several States, and with the Indian tribes.

In my humble judgment, the power and authority to enact such laws discriminating against foreign imports in favor of our own industries, whether commercial, agricultural, manufacturing, or mining, and thus indirectly protecting our own similar industries from foreign competition, is conferred by the language "to regulate commerce with foreign

I desire in my few suggestions to make broad and distinct the line between the question of power to protect as a mere naked legal question, and the question of public policy of protecting, which is an entirely different, distinct, and separate question. The one contemplates a question of constitutional authority, the other a question of expediency calling for the exercise of statesmanship. What is the meaning of the phrase "to regulate." It means to enact rules under which or in purpose of which we have the states and the states and the states are the states are the states and the states are t suance of which commerce with foreign nations, between the States, and with Indian tribes may be carried on.

What is the commerce that is to be regulated? It embraces not only trade but also intercourse. It covers not only all articles of commerce and all intercourse between foreign nations and our own, but even the vehicle through which the trade or commerce shall be carried on, whether it be among the States or with foreign nations or with the Indian tribes. It covers the article and the means employed for its transportation, and may extend to the mode of payment, including the regulation of foreign bills of exchange. That provision of the Constitution confers authority bills of exchange. That provision of the Constitution confers authority to exercise a wide discretion to discourage the importation of some articles from foreign countries and to prohibit altogether other articles. or it may encourage certain imports while it leaves other articles, or it may encourage certain imports while it leaves others to be controlled by the laws of trade. Under this provision Congress exercises its authority not only upon the broad ocean and on the bays and inlets of our coast where the tide ebbs and flows, but upon the lakes and rivers and along the arteries of commerce, wherever found, extending from valley to valley and from State to State, throbbing with the giant industry of the millions of free more free more constraints.

industry of fifty millions of freemen.

It may be asked what reasoning or proofs are at hand aside from the plain and natural meaning of the words employed in this provision of the Constitution to show that it includes authority to discourage and even prohibit the importation of foreign articles of industry, and thereby

discriminate in favor of those of our own country and people.

The first item of proof to which I desire to call the attention of the House is that our entire system of navigation laws which the country has enjoyed for nearly a hundred years has no other constitutional support than the clause "to regulate commerce." The whole system rests there. We have under it passed our registry laws, and laws regulating tonnage dues. We have discriminated in favor of our own carrying industry to the absolute exclusion and prohibition of all foreign competition

try to the absolute exclusion and prohibition of all foreign competition in the coastwise trade. No foreign vessel is permitted to engage in it. The industry is limited to American-built ships, bearing the American flag and commanded by American seamen.

Here is an example of absolute and complete protection of two American industries—ship-building and the coastwise carrying business—under this provision. The power has been exercised by Congress to exclude foreign-built ships from registry or license and from engaging in the coastwise trade ever since the formation of the Government, and so far as my knowledge extends no one has ever overtioned the constiso far as my knowledge extends no one has ever questioned the consti-tutionality of such laws. Neither has any one to my knowledge ever proposed a change so as to admit foreign competition in the coastwise

carrying trade. Mr. CARLISLE. Will the gentleman from Ohio allow me to ask

him a question? Mr. CONVERSE. Yes, sir.

Mr. CARLISLE. Can the gentleman point to a single instance in which the Supreme Court of the United States in defining the extent of the constitutional power to regulate commerce has included under that delegation of power the right to impose a tax upon imported goods? Has it not confined it entirely to the making of regulations concerning the carrying trade, &c.?

Mr. CONVERSE. No, sir. There has been no such decision. Mr. CONVERSE. No, sir. There has been no such decision. The question whether Congress could regulate commerce by laying and collecting imposts has never to my knowledge been directly submitted to the court. The court has never held by a direct decision that Congress could regulate commerce by levying imposts. Neither has it held that Congress could not do so. The power of Congress to regulate commerce by imposing duties has never been authoritatively denied to my knowledge. The court has not limited the power of Congress under the clause "to regulate commerce" to the making of regulations concerning the carrying trade. cerning the carrying trade.

Story on the Constitution (volume 2, page 23) says:

Story on the Constitution (volume 2, page 23) says:

Many of the like powers have been applied in the regulation of foreign commerce. The commercial system of the United States has also been employed sometimes for the purpose of revenue: sometimes for the purpose of prohibition; sometimes for the purpose of retailation and commercial reciprocity; sometimes to lay embargoes; sometimes to encourage domestic navigation, and the shipping and mercantile interest, by bounties, by discriminating duties, and by special preferences and privileges; and sometimes to regulate intercourse with a view to mere political objects, such as to repel aggressions, increase the pressure of war or vindicate the rights of neutral sovereignty. In all these cases, the right and duty have been conceded to the National Government by the unequivocal voice of the people.

When interrupted I was presenting in my own language the substance of the decision in the case of Gibbons vs. Ogden, 9 Wheaton's Reports, where it was held that the only constitutional authority possessed by Congress to pass navigation laws under which this protection is given which I have mentioned is found in the clause "to regulate commerce with foreign nations, and among the several States."

Chief-Justice Marshall, in delivering the opinion in that celebrated

case, alludes to the subject of regulating commerce by imposing duties. In speaking of the framers of the Constitution, he says:

Those illustrious statesmen and patriots had been, many of them, deeply engaged in the discussions which preceded the war of our Revolution, and all of them were well read in those discussions. The right to regulate commerce even by the imposition of duties was not controverted; but the right to impose a duty for the purpose of revenue produced a war as important, perhaps, in its consequences to the human race as any the world has ever witnessed.

Mr. HASKELL. Will the gentleman permit me to ask him a ques-

Mr. HASKELL. After one hundred years of protective tariff during nine-tenths of the time in the United States, after all the declarations of the fathers, is it not late to-day to be raising the constitutional ques-tion of the right to discriminate in duties?

Mr. CONVERSE. I will reach that point in the course of my remarks, if time permits.

The Constitution enumerates the subjects which shall fall under the jurisdiction of Congress, and when thus enumerated Congress has ple-nary and sovereign power over those subjects. The regulation of commerce with foreign nations and among the States has been confided to Congress. The means whereby and the extent to which it shall be regulated is left to the discretion of the Congress.

Chief-Justice Marshall, in the case already quoted, on this point says Chief-Justice Marshail, in the case already quoted, on this point says: If, as has always been understood, the sovereignty of Congress, though limited to specified objects is plenary as to those objects, the power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States. The wisdom and the discretion of Congress, their identity with the people, and the influence which their constituents passess at elections, are in this as in many other instances, as that, for example, of declaring war, the sole restraints on which they have relied to secure them from its abuse. They are the restraints on which the people must often rely solely in all representative governments.

In the ship-building industry and the coastwise carrying business are examples, however, where the power of Congress, under the authority "to regulate commerce," has been exercised without question for a long period of time, and it has been exercised to the exclusion of all competition whatever. I invite the attention of gentlemen to the fact that there is no other provision of the Constitution authorizing Congress thus to protect these industries.

To regulate then must imply the power to prohibit some branches of foreign industry from competing with our own; and to prohibit some branch of industry must imply the power to discourage it as well as to prohibit. The one includes partial protection of our own industry from competition, and the other embraces full and absolute protection. If the United States permitted absolute free trade with all nations, thus leaving the business of commerce to take care of and regulate itself, there would be ample ground for argument that no regulations were necessary to be enacted on the subject of commerce with foreign nations. Indeed, it is difficult to perceive that any laws would be processary on the Indeed it is difficult to perceive that any laws would be necessary on the subject beyond a few for the punishment of crime.

subject beyond a few for the punishment of crime.

For the second item of proof showing the power of Congress to discourage or prohibit particular items of foreign commerce, or all commerce with any foreign nation, I call attention to the embargo laws previous to the last war with Great Britain. Sometimes such measures are resorted to as war measures, but in this instance to prevent war, and with the view of regulating our commerce with the Government.

Mr. TUCKER. I do not desire to take up the time of my friend from Ohio, but will he allow me to ask him a question?

Mr. CONVERSE. With pleasure.

Mr. TUCKER. If the power to regulate commerce with foreign

nations involves the power of prohibiting importations from foreign nations into this country, does the gentleman maintain the power to regulate commerce among the States, which is in the same terms, includes or gives the power to Congress to forbid importations from one State to another?

Mr. CONVERSE. I do not, as to all proper articles of commerce. The Constitution says that no tax or duty shall be laid on articles exported from any State, and if imported from one State to another they would by the same act be exported from one State to another. Besides, the relations between the General Government and the several States is very different from what it is with foreign nations. We have no community of interest and no legal relations whatever with foreign nations, while the States and the Government of the Union together form one

government, under which we live, and which unites us as one people.

I will now ask my friend from Virginia where is the power to exclude foreign vessels from participating in the coastwise trade unless it be in the clause to regulate commerce? There is none. There is an example of the exercise of that exclusion under this very constitutional provision for the protection of our own American industry. Therefore the question of exclusion is a question of discretion and not a question of question of exclusion is a question of discretion and not a question of power. I am saying nothing upon the advisability of either partial or total exclusion, and present only the question of constitutional power. Yet it is apparent that only one portion of our people can engage in that particular carrying industry, namely, those who live on the seaboard; but no one has to my knowledge proposed a change, denounced it as a monopoly, or denied the constitutional authority.

The third reason in support of the original proposition that Congress.

The third reason in support of the original proposition, that Congress, having constitutional authority to regulate commerce with foreign nations, possesses plenary power over the whole subject and may regulate it by laying import duties in the interest of domestic industry, is that those words "to regulate commerce" at the time of the adoption of the Constitution were understood to embrace that meaning. All other maritime powers, and especially England, from whom we derived most of our customs, laws, and language, at and before that time regulated commerce between her own people and foreign countries and her own colonies by duties and imposts with a view to benefiting her manufactnres. In support of that fact, that it was so understood, I have already cited Judge Marshall's statement made in 1824, and will now cite the statement of James Madison in his Cabell letter in 1828, as follows:

the statement of James Madison in his Cabell letter in 1828, as follows:

It is a simple question under the Constitution of the United States whether the power to regulate trade with foreign nations as a distinct and substantive item in the enumerated powers embraces the object of encouraging by duties, restrictions, and prohibitions the manufactures and products of the country. And the affirmative must be inferred from the following considerations: The meaning of the phrase to regulate trade must be sought in the general use of it; in other words, in the objects to which the power was generally understood to be applicable when the phrase was inserted in the Constitution.

The power has been understood and used by all commercial and manufacturing nations as embracing the object of encouraging manufactures. It is believed that not a single exception can be named. This has been particularly the case with Great Britain, whose commercial vocabulary is the parent of ours. A primary object of her commercial regulations is well known to have been the protection and encouragement of her manufactures.

Such was understood to be a proper use of the power by the States most prepared for manufacturing industry while retaining the power over their foreign trade.

trade.

Such a use of the power by Congress accords with the intention and expectation of the States in transferring the power over trade from themselves to the
Government of the United States. This was emphatically the case in the Eastern, the more manufacturing members of the confederacy.

The fourth reason is that the laying and collecting of duties and imposts is a most simple, effective, inexpensive, and reasonable mode of regulating commerce with foreign nations. Under it foreign imports ray be discouraged to any degree of discouragement without prohibi-tion; and domestic industry may be protected much or but slightly, as expediency may determine. It has always been and still is the favorite mode among all the civilized nations of the earth for regulating com-In case any foreign nation should discriminate against our industry or shipping by heavy discriminating taxes it would be only in the exercise of this particular constitutional authority that we could s and enforce countervailing tax laws upon their industries or ships, and thus protect our own.

Fifth. If the power to protect domestic industries, whether commercial, agricultural, mining, or manufacturing, is not conferred by the Constitu-tion on the Congress, then it does not exist under this Government. No one will deny that the several States after they won their independence and before the Union was formed under the Constitution respectively enjoyed and exercised the power to protect their own industries, and each did it in as full and perfect a manner as any nation of the earth by tax on imports.

The laws being different in the several States, the tax on imports and the domestic industry of each was differently affected. There was no harmony on this point between the States, and thus divided they could not command a fa vorable reception abroad for their own industries were discriminated against in foreign ports. This condition of things was one of the principal reasons for adopting the Constitution and granting to Congress full and exclusive authority over commerce with foreign nations. The States possessed and exercised the power to regulate commerce, and by duties and imposts protected their respective industries. They transferred all of that power to the Government of the United States, reserving none of it to themselves. Therefore the United States do now possess and may exercise the power unless it has been lost. On this

point I desire to quote from an authority which by Democrats will be regarded as conclusive. Upon the subject of the power of Congress under the Constitution of the United States to establish a tariff for even protection (the policy of its exercise being quite another question) Andrew Jackson, in his message to Congress on the 7th of December, 1830,

Said:

The object of the tariff is objected to by some as unconstitutional and it is considered by almost all as defective in many of its parts. The power to impose duties on imports originally belonged to the several States. The right to adjust these duties with a view to the encouragement of domestic branches of industry is so completely identical with that power that it is difficult to suppose the existence of the one without the other. The States have delegated their whole such ority over imports to the General Government without limitation or restrictions saving the very inconsiderable reservation relating to their inspection laws. This authority having thus entirely passed from the States, the right to exercise it for the purpose of protection does not exist in them, and consequently if it be not possessed by the General Government it must be extinct.

Our polical system would thus present the anomaly of a people stripped of the right to foster their own industry and to counteract the most selfish and destructive policy which might be adopted by foreign nations. This surely can not be the case; this indispensable power thus surrendered by the States must be within the scope of the authority on the subject expressly delegated to Congress. In this conclusion I am confirmed as well by the opinions of Presidents Washington, Jefferson, Madison, and Monroe, who have each repeatedly recommended the exercise of this right under the Constitution, as by the uniform practice of Congress, the continued acquiescence of the States, and the general understanding of the people.

The last item of proof which I propose to submit in support of the

The last item of proof which I propose to submit in support of the proposition is that the first Congress under the Constitution enacted a law for the protection of domestic industry by laying duties on imports. The preamble in the act recited that as one of the objects of its enactment, and the next year the same Congress passed another law on the same subject, and recited in the preamble to that also that one of its objects was protection to American manufactures. There were in that Congress eighteen men who were members of the constitutional convention, ten of whom—William Samuel Johnson, Oliver Ellsworth, George Read, William Few, Caleb Strong, John Langdon, William Patterson, Rufus King, Robert Morris, and Pierce Butler—were members of the Senate, and eight—Roger Sherman, Abraham Baldwin, Elbridge Gerry, Nicholas Gilman, Hugh Williamson, George Clymer, Thomas Fitzsimmons, and James Madison, jr.—members of the House. There were also quite a number who had participated as members of the Legisla-There were

tures of the respective States in the ratification of the Constitution.

These bills were signed by George Washington as President of the United States, who was also president of the constitutional convention, and signed the Constitution. It is fair to presume that these patriotic and experienced men who sat in the convention and participated in its debates had a fair knowledge of the provisions of the instrument and the power conferred by it on Congress. The debates in the Senate during that Congress were never published, though there are three very interesting volumes of private notes on the debates and events of that body now in possession of a descendant of one of its members in Philadelphia. In the House no suggestion was made by any one of want of constitutional power in the regulation of commerce with foreign nations to protect domestic industries. The Representatives from Virginia on this floor will be interested to know that three propositions in that body came from their State to amend the bill-one for a duty on coal, to protest her coal-pits; one on hemp, to encourage the growth of that article; and one to exclude beef, for the benefit of the cattle interest. The objects of these amendments were not revenue, but protection. The contemporaneous evidence of the power of Congress under this commerce clause is clear and convincing.

Mr. REAGAN. Does the gentleman assume that was a law for protection?

Mr. CONVERSE. It so recited, and I think the protection amounted Mr. REAGAN. Does the gentleman remember the average rate of

I think it was about 5 per cent.

Mr. CONVERSE. I think it was abo Mr. TUCKER. We will accept that. Mr. CONVERSE. Then if the gentle

Mr. TUCKER. We will accept that.

Mr. CONVERSE. Then if the gentleman accepts that he accepts my construction and yields the question of power.

Mr. HASKELL. That is it.

Mr. CONVERSE. If he admits that Congress has the power to lay a protection tax of 5 per cent. it may in its discretion fix it at any other rate; where is the line? Even 5 per cent. might in some cases be full restriction. When the power is once admitted to exist your growt the rate; where is the line? Even 5 per cent. might in some cases be full protection. When the power is once admitted to exist you cross the line and there is no retreat. It requires as much power in Congress to

me and there is no feeten. To require as in would 50.

Mr. REAGAN. The line, it seems to me, if the gentleman will permit me to interrupt him, is established very clearly at that point which fixes the maximum rate of revenue by imposts. When you pass that you give protection pure and simple, and there you violate the Consti-

Mr. CONVERSE. That is simply a question of discretion. The gentleman by his statement admits that revenue under his construction is not the sole object contemplated in levying taxes on imports. Does not that admit the power to protect? On this point Story on the Consti-Does not tution, volume 2, page 26, says:

Indeed the advocates of the opposite doctrine admit that the power may be applied so as incidentally to give protection to manufactures when revenue is the principal design, and that it may also be applied to countervail the injurious

regulations of foreign powers when there is no design of revenue. These concessions admit, then, that the regulations of commerce are not wholly for purposes of revenue, or wholly contined to the purposes of commerce considered per se. If this betrue, then other objects may enter into commercial regulations; and if so, what restraint is there as to the nature or extent of the objects to which they may reach, which does resolve itself into a question of expediency and policy? It may be admitted that a power given for one purpose can not be perverted to purposes wholly opposite or beside its legitimate scope. But what perversion is there in applying a power to the very purposes to which it has been usually applied? Under such circumstances does not the grant of the power without restriction concede that it may be legitimately applied to such purposes? If a different intent had existed, would not that intent be manifested by some corresponding limitation?

But, as I said in the outset, I have nothing to do now with the question of discretion in fixing the amount or extent of protection; I am only arguing that this grand Government of ours possesses a certain power which it may exercise or not as it chooses to do. Recurring to the suggestion made by the gentleman from Kansas [Mr. HASKELL], we must bear in mind that for nearly a hundred years laws enacted for the protection of domestic industry, under the power to regulate commerce, have been on the statute-books without question. There have been enactments passed solely for the protection of particular industries by the levying of dutics to the practical exclusion of such foreign articles from the country. Now, if Congress had no power to pass such laws, and the country. Now, if Congress had no power to pass such laws, and was in fact violating the Constitution thereby, why have not the lawyers of the country taken that question into the courts and procured a decision upon the constitutional question, thus limiting the power of Con-

gress in that respect?

Mr. REAGAN. Allow me to say to the gentleman that the que tion has been before the courts and they have held that it is a political question and not a judicial question; that it addresses itself to the consciences of members who have taken an oath to support the Consti-

Mr. CONVERSE. How could the exercise of a power not granted to Congress by the Constitution be a political question, and limited only by the elastic consciences of its members? No, sir; whenever Congress undertakes to exercise a power not granted in the Constitution the courts have the authority to step in and stop it. There is no doubt about that proposition.

Mr. CARLISLE. But the courts can not inquire into the purpose of

Mr. CONVERSE. Certainly not. But there is the naked fact. Take a case in which protection is borne upon the face of the statute; in which the foreign article is excluded for the benefit of the domestic; in which no revenue whatever is collected or intended to be collected. The courts certainly could inquire into the constitutionality of such a law. If the subject has been before it, as gentlemen assert, and the court has failed to pronounce such acts void for want of constitutional power to pass them, it may be fairly inferred that Congress has the

What is the use of deceiving ourselves or each other, or the people who confide in us, as to the powers of the Government? The good name of the United States is involved in this charge that the Governname of the United States is involved in this charge that the Government has for nearly a century and now continues to exercise powers not granted to it by the States and people in the Constitution. What do gentlemen mean by charging violations of the Constitution upon the men who made it? Did they not know its meaning? If so, did they knowingly and purposely break it from the beginning? It can not be true. The mind revolts at such perfidy as the suggestion implies. plies. The contemporaneous interpretation, together with the enjoyment and exercise of the power for a hundred years with the acquiescence of the States and the courts, ought to settle the controversy by

way of estoppel, if in no other way.

Mr. REAGAN. Allow me again. It seems to me that it is a strange assumption that an average duty of 8 per cent. for the purpose of obtaining revenue is a violation of that portion of the Constitution which authorizes the levying of duties to secure revenue.

Mr. CONVERSE. Yes, but Congress recited in the act that it levied

Mr. CONVERSE. Yes, but Congress recited in the act that it le those duties for protection. Mr. SPRINGER. The reasoning was bad; the fact is the same.

Mr. CONVERSE. Not only has this power been exercised for a hundred years, but George Washington, Thomas Jefferson, James Madison, James Monroe, and Andrew Jackson, all of them, recommended to Congress the propriety of nourishing, fostering, and protecting the domestic industries of the United States. They were not guilty of bad reasoning industries of the United States. They were not guilty of bad reasoning in weighty matters affecting the powers of the Government and the welfare of the American people, and can not be accused of a desire to wrong any section of this Union or any class of their fellow-citizens.

Mr. HEWITT, of Alabama. If the gentleman will permit me, I will say that Madison said that for thirty years after the formation of the Government the power was never questioned in Congress to lay duties for the restortion of American industries.

for the protection of American industries.

Mr. CONVERSE. Certainly; he did so say in the Cabell letter, if I

member aright.

Having given an extract from President Jackson, I desire now to give one from a message to Congress sent by each of the Presidents, Washington, Jefferson, Madison, and Monroe, in support of their belief in the constitutionality of such measures:

Congress have repeatedly, and not without success, directed their attention to the encouragement of manufactures. The object is of too much consequence

not to insure a continuance of their efforts in every way which shall appear eligible.—Washington's speech to both Houses of Congress, December 7, 1796.

The suspension of our foreign commerce produced by the injustice of the beligerent powers and the consequent losses and sacrifices of our citizen are subjects of just concern. The situation into which we have thus been forced has impelled us to apply a portion of our industry and capital to internal manufactures and improvements. The extent of this conversion is daily increasing, and ittle doubt remains that the establishments formed and forming will, under the auspices of cheaper materials and subsistence, the freedom of labor from taxation with us, and of protecting duties and prohiotions, become permanent—Jefferson's message, November 8, 1808.

There is no subject which can enter with greater force into the deliberations of Congress than the consideration of the means to preserve and promote the manufactures which have sprung into existence and attained an upprantelled maturity throughout the United States during the period of the European wars. This source of national independence and wealth I anxiously recommend, therefore, to the prompt and constant guardianship of Congress.—Madison's message, February 18, 1815.

Our manufactures will likewise require the systematic and fostering care of the Government. Possessing as we do all the raw materials, the fruit of our own soil and industry, we ought not to depend in the degree we have done on the supplies from other countries. While we are thus dependent, the sudden event of war, unsought and unexpected, can not fail to plunge us into the most serious difficulties. It is important, too, that the capital which nourishes our manufactures should be domestic, and its influence in that case, instead of exhausting, as it may do in foreign hands, would be felt advantageously on agriculture and every other branch of industry. Equally important is it to provide at home a market for our raw materials, as by extending th

If the weight of other great names is needed in support of this constitutional authority they could be given.

Mr. SPRINGER. Will the gentleman permit me to ask him a ques-

Mr. CONVERSE. Certainly.
Mr. SPRINGER. Do I understand the gentleman to claim that Congress has the power to prevent the shipment of wheat from the State of Ohio into the State of Pennsylvania under this power to regulate commerce among the States?

Mr. CONVERSE. I will ask the gentleman a counter-question.

Mr. SPRINGER. Answer mine first. Mr. CONVERSE. I will answer it. Mr. CONVERSE. I will answer it. The same clause of the Constitution also provides that Congress shall have power to regulate commerce with the Indian tribes. Does the gentleman deny that Congress has the power to prevent shipments to the Indians?

Mr. SPRINGER. Answer my question and then I will answer yours. I will say that it has not the right. Now answer my question.

Mr. CONVERSE. Congress does prohibit shipments to the Indian tribes, and even prevents trade, except what is carried on by licensed traders and agents of the United States. There might be an occasion when Congress would have the right to stop trade from a State. The same clause of the Con-

hen Congress would have the right to stop trade from a State.

Mr. SPRINGER. I say it has not the right.

Mr. CONVERSE. It may not have now, but there may be circum-

Mr. CONVERSE. It may not have now, but there may be circumstances which would call for the exercise of such power. Congress exercised that power during the late rebellion, and the Southern States were never out of the Union. Congress now exercises that power, I believe, as to the shipment of diseased cattle. Commerce might be stopped in cases of epidemic cholera, yellow fever, and the like. But Congress could not tax articles of trade in passing from one State to another to the Union, because the Constitution forbids it. Exports from a State can not be taxed, and there is a community of privileges and immunity hetween the citizens of the several States guaranteed by that instrument.

between the citizens of the several States guaranteed by that instrument.

Mr. HASKELL. Suppose that some State was infected with a contagious disease, could not Congress stop commerce with that State? Mr. SPRINGER. No; they could not stop it. The gentleman is claiming a power which would authorize Congress to prevent the States of the West from competing with the State of Pennsylvania and the

States of the East

Mr. CONVERSE. All the nations of the earth have from the begin-Mr. CONVERSE. All the flations of the earth mare from the degree ning exercised the power to regulate their own commerce with foreign nations, and to regulate it by imposing duties. Great Britain did it at the time of the formation of our Constitution, the country from which we derived our language and to a large extent our laws. The States of we derived our language and to a large extent our laws. The States of this Union after the close of the Revolutionary war exercised, each for itself, this power to regulate its own commerce by the imposition of duties. There was never any claim, or even pretense, that it was for any other purpose than to protect their domestic industries. When the Union was formed under the Constitution all that power which the States then had was conferred upon the General Government. There is no pretense that the States still enjoy that power.

At the time of the adoption of the Constitution all the States had on their statute hooks laws regulating treads and imposing imposts upon

their statute-books laws regulating trade and imposing imposts upon foreign commodities. Upon the adoption of the Constitution those laws foreign commodities. Upon the adoption of the Constitution those laws fell without even the form of a repeal. So unanimous was the opinion that the Constitution conferred this power upon the General Government that those State statutes dropped without repeal; no one ever supposed them to have any force after the adoption of the Constitution of the United States.

Mr. REAGAN. Was not the object of the provision of the Consti-

tution to facilitate commerce among the States, not destroy it?

Mr. CONVERSE. I will ask my friend whether the regulation of commerce with foreign nations means only to facilitate? Does he put

that meaning upon it? Mr. REAGAN. No, sir.

Mr. CONVERSE. Why, then, does the gentleman put his question to me? We are discussing the power of Congress to protect home industries by taxing foreign, in regulating commerce. The power to regulate implies the power to discourage as well as the power to encourage. It is simply a question of power under the Constitution which all other nations enjoy in regulating commerce. If the gentleman acknowledges the authority to protect by discriminating duties, and claims that within the limits of revenue which can be imposed on commerce or within the limits of revenue needed for the economical administration of the Government and the payments of its debts, there is room for ample protection to domestic industry, I agree with him.

ministration of the observation and the psymbols of its death, there is room for ample protection to domestic industry, I agree with him.

Mr. REAGAN. At this point I would like to inquire of the gentleman where he derives the power under the Constitution to take property from one private citizen and give it to another or from one class of the community and give it to another without compensation?

man where he derives the power under tine Constitution to take property from one private citizen and give it to another or from one class of the community and give it to another without compensation?

Mr. CONVERSE. There is no such thing in the Constitution; and it is not done. All these tariff laws are in their operation simply a discouragement upon the importation of foreign produce, leaving our own commercial, agricultural, manufacturing, and mining industries to find a common level of profit by competing among themselves and each other in a country where every person, citizen or foreigner, may choose his employment and change it as interest may dictate. When a ship-load of goods comes here from France or Germany or any other country, our laws say they shall not come in and find a market here unless a duty of 5 per cent., 10 per cent., or 30 per cent., as the case may be, is first paid into the Treasury. This power is exercised under the clause "to regulate commerce with foreign nations" in order to discourage the importation of goods. It is not to promote commerce. It operates to discourage commerce and to protect the domestic industries of the United States, enabling our own producers to undersell in the market those from abroad.

#### Nicaragua Canal.

#### SPEECH

---

# HON. M. C. GEORGE,

OF OREGON,

#### IN THE HOUSE OF REPRESENTATIVES,

Monday, February 5, 1883,

On the motion to suspend the rules and fix a day for the consideration of the bill in relation to the Nicaraguan Canal and the memorial of the Legislature of the State of Oregon relative thereto.

Mr. GEORGE said:

Mr. Speaker: Over three hundred years ago the eyes of the bold adventurers from the Old World first rested upon the waters of the Pacific. Soon thereafter, and long before the weary pilgrims landed at Plymouth, engineering parties from continental Europe were exploring the West and surveying for a ship-canal way through the narrow harrier between the two great occurs.

barrier between the two great oceans.

As long ago as in 1797 the governing mind of a Pitt entered with promptness into a scheme presented to the British Government for the emancipation of the Spanish colonies, which contained a stipulation for the opening of navigation between the Atlantic and Pacific oceans by the Isthmus of Panama or by Lake Nicaragua, and from Jefferson's time down the subject has attracted the attention of the statesmen of America.

To unite the waters of the East with those of the West, in the interest of the commerce of the world, has been the dream of centuries, and we of to-day hope to see it realized. To reduce the distance by abolishing the entire circumnavigation of the South American Continent is so manifestly important as to require, as has been stated, nothing more than a mere statement of the purpose to secure its approval. The capital of the moneyed centers of the world is to-day deeply interested, as is evidenced by the success thus far of a De Lesseps and an Eads. The subject opens up a wide field for investigation—questions on the practicability and cost of an interoceanic canal; the probable amount of tonnage and value of commerce that would seek the new avenue; its relative commercial importance as compared with the great Suez canal—questions involving changes in the channel or means of trade, nautical conditions affecting the courses of vessels, the power of our Government in extra-territorial jurisdiction over such a canal—patriotic considerations affecting the welfare and peace and future prosperity of our nation. All these and many others demand our attention.

our nation. All these and many others demand our attention.

The Legislature of the State which I have the honor to represent upon this floor passed at its recent session a concurrent resolution, already presented to this House, urging upon Congress the necessity for immediate and favorable action upon the act incorporating the Maritime Canal Company of Nicaragua, in order that the beneficent work may be promptly commenced and carried to a successful conclusion. I desire

as a representative from the far-off Pacific to call the attention of this House to a few matters of special interest to our section of the country. The wheat-growers of the Pacific are intensely interested in this sub-

The wheat-growers of the Pacific are intensely intensted in this subject. In the last half of 1881 three hundred and three ships of various nationalities sailed from the Pacific ports grain-laden for European ports. This magnificent fleet, carrying cargoes from 1,200 to 4,000 tons each, sailed a distance 13,710 miles around Cape Horn before reaching their destination. Nicaragua, for instance, would save 6,500 miles, or nearly one-half of the distance, a burden which our wheat-producers now have to bear. It will save two-thirds of the distance between San Francisco and New York.

Last year our grain for exportation amounted to over 1,500,000 tons, nearly as much as the grain exports of the entire United States in 1850. The European freights alone to and from San Francisco last year amounted to \$16,069,789 and the foreign ocean freights for our whole coast to about \$25,000,000; and it has been estimated that in the moving of a single wheat crop of California alone a canal would save over twelve millions of dollars to its wheat-producers, saying nothing of the present loss of interest on account of time in wheat transportation. The cost of transporting our grain is a vital one to our interests. Grave doubts arise as to the continuation of this now leading industry—doubts growing solely out of the cost of transportation. In addition to being compelled to transportour wheat and flour almost half way around the globe to our only market, England, to the only consumers upon whom we can depend, we are brought into a direct competition with the Empire of India, now rapidly being penetrated by railroads built under the control of the British Government, and with opening wheat-fields of the territory to the North and from the Red River country.

The port of Bombay this last year exported 680,000 tons, more than half as much as we furnished England, and it is calculated that their surplus this year will equal 1,000,000 tons. At this rapid increase the home food supply of England will soon prove ample, unless by cheapening our transportation we can successfully compete. The difference in the cost of a single cent per bushel in laying down our grain upon the docks of Queenstown or Liverpool may determine whether the food supply shall come from us or be drawn from competing fields in Hungary or Russia or India or Manitoba. A trouble long and sorely felt by our wheat-producers is a lack of tonnage to carry our exports to market.

The distance is so great that the time consumed in calling for ships in the long voyage to our ports and return to a port of discharge, consuming the greater portion of a year, operates as a heavy burden upon our productions, and vessels that do reach us charge enormous rates because of competition, amounting to millions of excess upon a single crop. In the last two years the charges have substantially consumed the profits. With a canal available, the distance and time decreased three-fourths, we could easily telegraph or cable for tonnage, to our great relief.

In a few remarks offered in this House on the 4th of April of last year I attempted to give some faint idea of the wonderful development yet in store for the Pacific coast north of California. I there quoted the estimate that the wheat products of that northwest section would, ere many years, load 1,500 vessels per year, and this from a country promising many, very many, other great industries and resources. In no country are they so varied as in Oregon and Washington and Idaho. With all its other resources it is most emphatically a food-producing region; its low lands for grasses and vegetables; its prairies for grains of all kinds; its uplands for fruits of almost every variety; its rolling bunch-grass plains for beef and mutton; its rivers and bays for bountiful supplies of finest salmon and fish of all kinds—food for the consumers of the world.

The transcontinental lines of railroad will soon open our door to the influx of a mighty immigration. Our production will most rapidly augment in quantity, and cheap transportation is an imperative necessity. We suffer through its want and are retarded to-day in our onward march of industrial and commercial development, and the interoceanic canal is believed to be the available project which holds out the prospect of permanent relief. The day the canal is opened the farmer will find his acres enhanced in value. The merchant will be many days nearer the commercial marts of the Atlantic and of Europe; and when the time arrives that we can land the varied products of our soil in Baltimore and Philadelphia and New York and Boston in eighteen days and Liverpool and Queenstown and Glasgow and Hamburg and Bremen in thirty days without breaking bulk and at reasonable rates, there will be witnessed an impetus given our growth unequaled in the history of our country.

The millions of consumers in Europe and you people of the Atlantic seaboard need what we produce; but the expanse of a continent and the dangers around the "Cape of Storms" intervenes and bars the exchange. Your ship-yards on the Atlantic need the splendid spars and timber from my State and from Puget Sound and Alaska. Your manufactories want our wool and other products in exchange for your materials. To you, my friends of the valley of the Mississippi—a valley so wonderfully productive; an area greater than the valleys of all the rivers emptying from Europe into the Atlantic and the Mediterranean, with many of those emptying into the Indian Ocean, and where, ac-

cording to Carlisle, enough corn can be raised to feed ten times the present population of the world; a valley with its marvelous net-work of rivers, inland-water transportation of continuous navigation of over 20,000 miles, ramifying a territory larger than the combined areas of Germany, Austria, France, Spain, Italy, Great Britain, and the Netherlands, capable of supporting, if peopled as densely as Holland, at least 400,000,000 souls—remember that your natural outlet is the Gulf of Mexico, and mark the prospect when we can have cheap and rapid interchange of your varied products with those of the Pacific. It would be as it were the drawing together of the mouth of the Columbia of the Northwest and the Golden Gate of California with the mouth of the Mississippi—the father of waters. It will bind more closely in bonds of common nationality the West with the East. Pause but a moment and reflect upon the fact that our Pacific exports last year amounted to 1,750,000 tons. To decrease that distance traveled must necessarily develop our coastwise commerce and operate to vastly increase our mercantile marine.

Not only will the trade and commerce of the valley of the Mississippi

Not only will the trade and commerce of the valley of the Mississippi with other sections of our common country be vastly stimulated, but the prospective growth with other countries will be very great. Take the cotton-goods trade with China as an illustration. China has her 400,-000,000 of people to be clothed. They are very partial to cotton goods. No country can compete with the Southern States in the yield or the quality of cotton textile fiber, and we are rapidly developing in its manufacture. Already we can successfully compete with England in the cotton-goods trade with China, and as our nation becomes older the inevitable tendency will be toward cheapness in manufactures, and with our superior facilities for cotton production and skill and energy in its manufacture; with our geographical proximity to this great Chinese market, and with the present distance decreased by the construction of this canal, America will permanently control the trade in cotton goods.

The opening of direct water communication from Pacific ports to New York will, at least in slow or heavy freight, operate as a powerful competitor and regulator of transcontinental railroads; more especially, however, in through freights, as the mission of railroads is rather as carriers between the coast and the interior; yet in the general bearing it will have on the trade and commerce of the country, in the improvement of the lands of the West, when European emigration reaches our western shores in thirty days at a cost of only \$35 per head, and in the enhancement of trade between America and the Orient, it will demonstrate that the usefulness of these transcontinental lines will be largely supplemented and their interests greatly promoted. Since the completion of these roads under the operation of the laws of trade, the teas and silks of China and Japan have sought land transportation from San Francisco east.

The general trade with these countries is immense and must rapidly augment; and with direct lines of steamships from New York and Baltimore and Boston and Philadelphia and New Orleans through the proposed canal, and touching at Acapulco and Mazatlan, San Diego, San Francisco, the Columbia River, and Puget Sound, connecting with proposed Mexican railroad lines and with the Southern, Central, and the Northern Pacific Railroads, and thence to Yolsohama, Shanghai, and Hong Kong, commerce and trade will spring up as if by magic, with all their great and beneficial results. This work becomes a greater necessity since the completion of the Suez Canal. That new transit-way, aside from its advantage to European commerce, actually shortens the distance between New York and Hong Kong and to a certain extent diverts trade over that new route; and this intercocanic canal will still more shorten the distance and cause the deflected trade and commerce once more to return.

more shorten the distance and cause the deflected trade and commerce once more to return.

The existing tonnage likely to seek this new avenue annually is variously estimated. Mr. Nimmo, Statistician of the Treasury Department, estimated it some time since as 1,625,000 tons. It is claimed on good authority that his data corrected would give 3,706,000 tons. Captain to S. Phelps's estimate is 3,500,000 tons; the committee on statistics of the Paris canal congress, 3,762,000; Admiral Davis, in response to a Senate resolution, estimated it at 4,000,000 tons; the San Francisco Board of Trade at 5,000,000. But all statistics are limited to facts as they now exist. Grand as they are in the present commercial and political aspect, yet when we turn to contemplate the possibilities of the future, with its sure progress and development, with distance largely annihilated, with hazards and dangers of voyages removed, who can foresee or who can foretell the grandeur of the results?

can foretell the grandeur of the results?

The authority under the Constitution to carry out such an undertaking is ample. Congress has power "to lay and collect taxes, duties, imposts, and excises; to pay the debts and provide for the defense and general welfare of the United States;" "to regulate commerce with foreign nations and among the several States;" and "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof;" and these, coupled with the treaty-making power vested in the President and Senate to determine the relation between the citizens of our country with those of foreign nations, construed as they have been by a long line of judicial decisions affirming the constitutionality

of all legitimate and incidental means necessary to carrying into execution these given powers as inherent attributes of sovereign authority with the acquiescence of the people and all branches of our Government for years, settles this question in my mind beyond controversy.

Ten surveys and examinations of proposed routes across the Isthmus under the authority of our Government have been made during the past quarter of a century. The Nicaraguan route has been carefully examined and the estimated cost with certain contingencies may approach a maximum sum of \$75,000,000. It will be through a country of great resources and abounding in nearly all the materials required for the construction. It will be several hundreds of miles shorter in route for American coast commerce than the contemplated canal at Panama.

Far be it, however, from my intention to disparage in the least the energy or ability displayed by the great originators of that canal or the project for ship transit on rail. All success to them if they can be carried through. I for one must say, however, that I prefer more of American and less of French control of the canal at Panama.

While manifestly it never was the intention of the Monroe doctrine to interfere with any purely commercial enterprise by European money on this continent, yet we of the Pacific coast may well apprehend the effect of a concentration of French capital at Panama protected by the French Government landing occasionally as emergencies require, and afterward easily and naturally transferred into a per-aanent post for French soldiers in case of a war with that country. The great gateway for ships for defense for our coast would be liable to be closed against us and open to those who would injure us; and there are far too many grave political and commercial matters involved to permit the contemplated establishment of foreign influence and power at that point to be viewed with disinterested serenity.

England and France and Germany are greatly interested, and their eyes are now upon the passage-way of the West. It would bring them within easy commercial relations with the western coast of South America, the eastern coast of Australia and New Zealand, China and Japan, the Hawaiian Islands and British Columbia, and the Pacific coast of North and Central America. It would relieve their out-bound voyages of head winds, giving them instead a shorter distance with favorable winds and fair weather, and will cheapeu and make less fluctuating the price of breadstuffs—an incalculable advantage for the masses of such a manufacturing and commercial country as England.

a manufacturing and commercial country as England.

England, with her centralized government, quick to conceive and prompt and ready to execute, may, ere the masses in our Republic become united and aroused to action, grasp and hold a power that should belong to us.

This great Government has given of its treasure and of its broad domain that railroads might span this continent. Can it not, will it not, give, in the interest of competition, in the interest of commerce, in aid of agreat, deep water-way, with its vast competitive influence and regulating power? This wealthy and powerful country should build and own and control this national highway and make it free to American commerce; for when we take into account the physical circumstances of the globe and the present commerce likely to seek this avenue of trade, all must admit that the successful completion of a canal from the Pacific to the Atlantic on the highway of nations would be the grandest occurrence in the enterprise of man. As was truly claimed over two centuries ago by the founder of the Bank of England, the passage-way through Central America will be the gateway of the universe, and its governors will give law to the Atlantic and Pacific Oceans. Napoleon Bonaparte, years ago, when contemplating the situation of our country midway between Europe and Asia, said that the day would surely come when no nation would dare to fire a gun without the permission of the United States.

Of course there is opposition to this movement. Such has ever been and probably ever will be the case in all great and important national undertakings. English opposition to the Suez Canal is to-day repeating itself in American opposition to the Nicaragua Canal. As England subsequently obtained financial control of that gateway of the East, so history will repeat itself in the ultimate extension of American power over this gateway of the West. Possibly so long as the world is at peace the financial interests of the company may protect themselves; but when war becomes imminent and American interests are at stake Mcaragua will no more control the canal than did Egypt the one at Suez.

No nation has been so vitally interested in Suez as England, and no

No nation has been so vitally interested in Suez as England, and no nation has such important interests at stake at Nicaragua as America. English trade and commerce has ever been aggressive; so must be ours. The foundations for British rule in India over people of great advancement in civilization and of an ancient and wealthy government was laid in what Macaulay termed "a purely trading corporation," occupying originally but a trifting area, until under combined commercial aggression, with the arts of diplomacy protected by English power, it expanded until a vast empire was established. While England by force has asserted her control over Suez, America will, it is to be hoped, provide for the same at Nicaragua by agreement. This interoceanic highway should be under our exclusive control and protection. Let us interest ourselves, let us invest of our capital, let us guarantee of our strength, and let all the world learn that in this vast undertaking America stands as the power that backs the enterprise.

### Removal of Actions by Corporations from State to Federal Courts.

#### SPEECH

OF

## HON. WALPOLE G. COLERICK,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1883,

On the bill (H. R. 3123) to amend sections I, 2, 3, and 10 of an act entitled "An act to determine the jurisdiction of the circuit courts of the United States, and to regulate the removal of causes from State courts, and for other purposes," approved March 3, 1875.

Mr. COLERICK said:

Mr. SPEAKER: At the first session of this Congress, and at the earliest opportunity, I introduced a bill relating to the removal of actions to the Federal courts, the purpose of which was to destroy the power now possessed by corporations, under existing statutes, to remove to those courts actions instituted by or against them in the courts of those States wherein they transact business and exercise corporate powers. The bill so presented by me is as follows:

A bill prohibiting the circuit courts of the United States from taking cognizance of civil actions between a corporation created by the laws of any State and a citizen of any State in which such corporation transacts business, and forbidding the removal of actions between such parties to said courts from the State

courts.

In a macted, &c., That the circuit courts of the United States shall not take original cognizance of any suit of a civil nature, either at common law or in equity, between a corporation created or organized by or under the laws of any State in which such corporation, at the time the cause of action accrued, may have been carrying on any business authorized by the law creating it, except in like cases in which said courts are authorized to take original cognizance of suits between citizens of the same State; nor shall any such suit between such a corporation and a citizen of a State in which it may be doing business be removed to any circuit court of the United States, except in like cases in which such removal is authorized in suits between citizens of the same State.

SEC. 2. That all acts and parts of acts in conflict herewith are hereby repealed.

The subject-matter of the bill is substantially embraced in one of the provisions of the bill now under consideration.

It is manifest that the bill reported by the committee has been carefully prepared and has received that thoughtful consideration which its importance required. It is so wise, just, and non-partisan in its provisions that it ought to receive our cordial approval and zealous

The time allotted to me for discussion will be confined to that provision in the bill which relates to the removal of actions by corporations from State to Federal courts. It provides:

That the circuit courts of the United States shall not take original cognizance of any suit of a civil nature, either at common law or in equity, between a corporation created or organized by or under the laws of any State and a citizen of any State in which such corporation at the time the cause of action accrued may have been carrying on any business authorized by the law creating it, except in cases arising under the patent or copyright laws, and in like cases in which said courts are authorized by this act to take original cognizance of suits between citizens of the same State; nor shall any such suit between such a corporation and a citizen or citizens of a State in which it may be doing business be removed to any circuit court of the United States, except in like cases in which such removal is authorized by the foregoing provision in suits between citizens of the same State.

Cases embraced within the exceptions named will rarely occur, as the only instance in which an action between citizens of the same State can be removed to the Federal court is, where a controversy arises between such citizens claiming lands under grants of different States such an action may be transferred to the Federal court, and the only other exception named in the bill are cases arising under the patent and copyright laws. Under existing statutes a corporation created by the laws of a State other than that in which it is sued may, when sued in a court of the State, transfer the action so instituted, if it involves the sum of \$500 or more, to the Federal court, by merely showing that the corporation was created or organized under and by virtue of the laws of some other State. This power, by reason of the manner in which it has been and may be exercised, creates a wrong which should no longer be authorized, sanctioned, or perpetuated by law.

Why, sir, in nearly every city, town, and hamlet in this vast country innumerable foreign railroad, express, telegraph, and other corporations have offices in which they transact the business in which they are engaged, and by and through their authorized agents make contracts and otherwise exercise their corporate powers in the same manner and to the same extent as they do in the States where they were created, and when sued in the State courts upon contracts made in those States, or for torts committed or other liabilities incurred therein by them, they cause these actions when the amount involved is within the jurisdiction of the Federal courts to be transferred to those tribunals. Why? Is it because they are apprehensive that otherwise injustice will be done to them? Oh, no; it is to prevent justice from being done.

We all know that many meritorious actions instituted in the judicial

tribunals of the State against foreign corporations, so called, are abandoned when certified to the Federal courts, by reason of the inability of the plaintiffs to bear and pay the increased expenses occasioned thereby, and these corporations knowing this fact avail themselves of this power so as to discourage litigation against them and thereby prevent and defeat the collection of just and honest claims or compel their adjustment upon such terms as they may dictate. In this manner these opulent and powerful corporations, in the exercise of this power, may and do by and under the forms and sanction of law unjustly oppress the poor, who by reason of their poverty are unable to contend in those forums with their formidable adversaries and are compelled to abandou or sacrifice their just and meritorious claims.

Corporations for the purpose of suing and being sued should be treated and considered as citizens of each and every State in which they have offices and transact the business in which they are engaged. They are fully protected in the complete enjoyment of all their rights and powers by the different States the same as corporations of their own creation, and if they dwell in the State and there exercise the privileges of citizenship, as they are held to be citizens, they should be comileges of citizenship, as they are held to be citizens, they should be compelled to respond to the process of the courts of the State and submit to their jurisdiction. It looks like a perversion of language to construe the word "citizen" as used in the statute to embrace a corporation. Webster defines the word citizen as "an inhabitant of a city, a freeman." To dignify an inanimate, heartless, and soulless corporation as a citizen and clothe it with the attributes of citizenship is the purest fiction and most barren ideality, and yet by the decisions of our courts they now enjoy that exalted title and occupy that fictitious and mythical character. Judge Dillon, in his work on the "Removal of Causes," says that says that-

Corporations created by the States are within all the removal acts under consideration, and after much uncertainty and fluctuation of opinion in the Supreme Court of the United States the settled rule now is that a corporation for all purposes of Federal jurisdiction is conclusively considered as if it were a citizen of the State which created it.

The power now possessed by these corporations to remove their actions to the Federal courts was conferred by Congress, and the same body that gave them this power can take it from them. The power was probably granted for good and salutary purposes; but it has been so shamefully abused that it now becomes a necessity to deprive them of it. It has been truthfully said that the best mode of securing the repeal of a bad law is to enforce it. The wisdom of this assertion has been aptly and foreither that it is the second of the securing the repeal of a bad law is to enforce it. forcibly illustrated in the enforcement of this statute, and furnishes the

strongest argument for its repeal.

The Federal courts, in the acquisition of additional jurisdiction, have made within a brief space of time rapid and gigantic strides, until they now absorb to an alarming extent the litigation of the country. The people are justly complaining of the extensive jurisdiction given to and exercised by these courts in civil actions, and bitterly protest against being dragged away from their farms, work-shops, and places of business to attend in the Federal courts, which are held at great distances ness to attend in the Federal courts, which are held at great distances from their homes and among strangers, actions merely involving the collection of claims, which can be tried as impartially and more promptly in their county courts, thereby avoiding the great and unnecessary expense now imposed upon them in prosecuting and defending actions in the Federal courts. The expenses incurred by parties in traveling with their witnesses to and from these courts, and for hotel bills incurred while waiting for and attending the trial of such actions, and for the fees of additional attorneys rendered necessary by the removal of their causes to those courts, far exceeds in many cases the amount involved, and often, by reason of the inability of the parties to pay these extraordinary expenses, they are compelled when suing to dismiss their actions or submit to unreasonable and unjust compromises of them, and when sued they are from like causes compelled to pay under protest unjust claims, against the collection of which complete defenses exist. These are burdens and hardships which the law ought not to impose.

To illustrate the manner in which the law authorizing the removal of such actions has been abused I will state a case within my own knowledge. A short time ago a poor man whose home had been destroyed by fire instituted an action against an insurance company upon a policy of insurance that had been issued to him by the company and which fully covered the value of the property insured, which was about \$800. No controversy existed as to the amount of his damages, yet the company applied to the court for the removal of the action to the Federal court, because it was a citizen of another State and the amount involved exceeded \$500. This man, by reason of his poverty, was compelled either to abandon his case for the want of means to prosecute it or reduce his demand to a sum less than \$500, so as to defeat the jurisdiction of the Federal court and thereby secure a trial of his case at home where his witnesses resided. He accordingly reduced his claim, and the company then settled the case, thereby compelling this poor man to accept \$300 less than was justly due him; and in this manner the statute is constantly abused and rendered an instrument for the perpe-

tration of the grossest wrongs.

Corporations of every kind, when occupying the fictitious character of citizens of other states, when sued in the State courts, take advantage of this statute for the purpose to which I have referred, and cases

equally unjust as the one to which I have specially alluded are of daily occurrence. Why should such privileges be granted to them? Why should they be permitted by the law to defeat meritorious actions at their pleasure, in defiance of justice? We should by our laws protect, when justice requires it, the weak against the strong, the poor against the wealthy; otherwise they in their helplessness will always suffer in such unequal contests. Strip these corporations of the unjust power now enjoyed by them under this statute and you will place the contending parties on terms of greater equality, although the advantages of wealth and power over poverty and obscurity will still exist.

Mr. Speaker, on a former occasion in this House, when a like bill was under consideration, the distinguished gentleman from Massachusetts [Mr. Robinson] deemed it proper to criticise with unmerited severitions upon foreign corporations as conditions precedent to the lawful exercise by them of their corporate powers in that State by requiring them to consent that all actions instituted by and against them should be tried and determined in the courts of the State. The passage of this act simply evinced and expressed the popular sentiment of the people of Indiana on the question of the removal of actions by corporations from the State to the Federal courts. It did not emanate from any spirit of hostility against these corporations, as they have always been amply and fully protected by the laws of that State. It was merely designed as a protective measure against the further infliction by corporations of the wrongs to which I have alluded and of which the people have been the victims.

Universal complaint was loudly heard all over the State against the have been the victims.

Universal complaint was loudly heard all over the State against the system so generally adopted and persistently pursued by these corpora-tions in removing their actions to the Federal courts for the sole purpose of avoiding and defeating the collection of meritorious claims. This power was so extensively and shamefully abused as to outrage public sentiment. It had become an intolerable wrong. The people

public sentiment. It had become an intolerable wrong. The people anxiously and patiently waited for Congress to redress this grievance until longer forbearance ceased to be a virtue, and then secured for their own protection the passage of the act. Waiving any question that may arise as to its constitutionality, I heartily indorse its spirit and purpose in operating as a salutary restraint on these corporations from exercising a power which they have heretofore so flagrantly abused.

It is urged as an objection to this bill that it makes a discrimination between citizens in this, that it permits an individual possessing all the attributes of citizenship to remove his action to the Federal courts, and denies that privilege to the artificial, fictitious, and mythical citizen popularly and properly known as a corporation. It is proper than on discrimination should be made between citizens on account of race, color, creed, or present or previous condition in life, and that every right and privilege granted or guaranteed to them by the Constitution and the laws of the land shall be sacredly respected, fully protected, and rigidly enforced. Justice and law, both human and divine, require this. If we accept the modern construction of the word citizen, as judicially defined, and embrace within its definition corporations and treat them

defined, and embrace within its definition corporations and treat them as citizens, still I submit that no discrimination is made against them. We do not deprive or divest them of their new-born title of citizen, We do not deprive or divest them of their new-born title of citizen, or abridge any of their rights or privileges of citizenship. We merely make them, for the purposes of suing or being sued, citizens of every State in which they reside and transact business, in lieu of limiting, as now, their recognition as citizens for those purposes to the States in which they were created. An individual can have but one place of residence, and if he leaves that residence on business or for pleasure, without any intention of changing or abandoning it, and while thus abroad is sued in one of the courts of a State in which he may be temporarily staying by a citizen of that State, he may transfer his cause to the Federal court, if the amount involved is within its jurisdiction, by showing that he resides in another State.

A corporation that dwells in many States and there constantly exercises every privilege of citizenship that it is capable of exercising, when sued in the courts of a State in which it so dwells and enjoys these privileges may even in an action upon a contract which it made in that State, or for a tort which it committed therein, transfer such action to the Federal court by showing that it is a citizen of another State by birth, although a resident of the State where sued. Here we have two birth, although a resident of the State where such. Here we have two rules by which citizenship is determined—one to be applied to the individual and the other to the corporation. As to the individual citizenship is determined by the place of his residence; and as to the corporation by the place of its birth. This discrimination is removed by this bill, which creates as the sole test of citizenship the place of residence and not brink to the Federal court. to the Federal court

But, sir, if it is true that this provision in the bill is subject to the criticism that it creates a discrimination between citizens in the manner pointed out by those who oppose its passage, then the question arises, has Congress the power to make the discrimination? The power The power of creating and defining the jurisdiction of the Federal courts, other than the Supreme Court of the United States, is solely vested in Con-gress. While Congress can not extend the limits of their jurisdiction beyond those named in the Constitution, it may contract or diminish their jurisdiction. This has been often decided by the Supreme Court

of the United States. In one of the cases so decided, Carey vs. Curtis, 3 Howard R., 245, the court said:

3 Howard R., 245, the court said:

Secondly, in the doctrine so often ruled in this court, that the judicial power of the United States, although it has its origin in the Constitution, is (except in enumerated instances, applicable exclusively to this court) dependent for its distribution and organization, and for the modes of its exercise, entirely upon the action of Congress, who possess the sole power of creating the tribunals (inferior to the Supreme Court) for the exercise of the judicial power, and of investing them with jurisdiction either limited, concurrent, or exclusive, and of withholding jurisdiction from them in the exact degrees and character which to Congress may seem proper for the public good. To deny this position would be to elevate the judicial over the legislative branch of the Government and to give to the former powers limited by its own discretion merely. It follows, then, that he courts created by statute must look to the statute as the warrant for their authority; certainly they can not go beyond the statute and assert an authority with which they may not be invested by it, or which may be clearly denied to them. This argument is in no wise impaired by admitting that the judicial power shall extend to all cases arising under the Constitution and laws of the United States. Perfectly consistent with such an admission is the truth that the organization of the judicial power, the definition and distribution of the subjects of jurisdiction in the Federal tribunals, and the modes of their action and authority have been, and of right must be, the work of the Legislature. The existence of the judicial act itself, with its several supplements, furnishes proof unanswerable on this point. The courts of the United States are all limited in their nature and constitution, and have not the powers inherent in courts existence of the judicial act itself, with its several supplements in courts existence of the prescription or by the common law.

That we have the power to divest or withhold from the Federal courts the jurisdiction now possessed by them to hear and determine by removal actions instituted by or against corporations in the judicial tribunals of the States, and which are now subject to removal to the

tribunals of the States, and which are now subject to removal to the Federal courts, is clearly and conclusively established by these authorities. Shall we preserve this jurisdiction in the interest of corporations, or destroy it in the interest of the people?

Sir, this bill is so eminently just as to command our support. We proudly boast of the matchless form of our government, and the justness and perfection of our laws, and that our courts are open for the prompt and certain redress of all grievances, and that no individual, however humble or obscure, can complain of a single violation of his rights, even committed by the highest dignitary in the land, that may not be vindicated by the majesty and supremacy of the law. But how not be vindicated by the majesty and supremacy of the law. But how vain is this boast and false this assertion when we allow this law, rendered odious to the people by reason of the judicial construction which it has received and the manner in which it has been abused by rich and nowerful corporations against their poor and humble creditors, resulting in many cases in a denial of justice to remain on our statute-book. By repealing it, as proposed by this bill, we will perform a duty which we owe to the people, and for which they will hold us in grateful remem-

The Tariff.

SPEECH

#### HON. THOMAS M. BAYNE. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 22, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other pur-

Mr. BAYNE said: Mr. Chairman: The fiscal system of the United States, with respect to its operation and effects, is an entirety. It is composed of two subsystems, the tariff system and the finance system. Change the one and you change the other. Strike down the one and you strike down the other. Uphold the one and you uphold the other.

FINANCE SYSTEM

The composition of the finance system is the laws relating to the national banks, to the Treasury notes or greenbacks, and to the gold and silver coinage. The product of these laws, as stated by the Comptroller of the Company (Mr. Knox), was an November 1 1989.

of the Currency (Mr. Knox), was on November 1, 1002:	
	\$346,681,016
National-bank notes outstanding	362, 727, 747
Gold in the Treasury less certificates held by the banks	148, 435, 473
Standard silver dollars in the Treasury	92, 414, 977
Subsidiary silver coin and silver bullion in the Treasury	30, 761, 985
Coin in the national banks	102, 362, 063
Coin in State and savings banks	17, 892, 500
Estimated amount of coin held by the people.	387, 562, 793

Total. It is apparent that we have nearly \$30 per capita within the United States. But of this vast aggregate \$779,449,791 are gold and silver coin, \$567,105,456 being gold and \$210,324,335 being silver. It never happened in the history of our country before that we had so large a proportion of gold and silver coin. It never happened until within the last two years that our coin exceeded our paper circulation. What brought about this condition of things?

#### TARIFF SYSTEM

The reply of any fair-minded student of our history will be, "It was the protective tariff under which we have been living for the last twentyyears that did it."

How? In this way: It fostered and protected our industries, and thus enabled us to produce and manufacture the supplies for our wants and keep our money among ourselves. It curtailed and limited importations, and thus prevented foreign countries from absorbing our gold and silver. During the last ten years we have sold to foreign countries \$1,205,904,761 more than we have bought from them. If we had bought \$1,200,000,000 more than we sold to them, where would the gold and silver we now have be?

## MONEY STIMULATES INDUSTRY.

What effect has the presence of this large amount of money? It has stimulated all kinds of industry. The agricultural, manufacturing, mining, and commercial industries have respectively been impelled into the greatest activity by it. Railroads have been constructed, telegraph lines extended, mines have been opened, mills and factories have been busy, lands have been tilled, and prosperity has abounded on all hands. Better dwelling houses, better schools, better churches, better newspapers, better books have followed as the night the day. For it is a sociological law that material prosperity must forerun the higher developments of the sciences and arts.

#### THE CONSUMER.

During the progress of the debate on this bill much rhetoric has been expended on behalf of the consumer. Who is the consumer? Every-body is a consumer. The free-trade Representative of an agricultural district has kept before our eyes the hardships of the farmer under the protective policy; while the free-trade Representative of a city district has ever in mind the sufferings of the toiling millions. Now, instead of asking a free-trade politician to decide between protection and free trade, I propose to submit the matter to the farmer himself, and I will agree beforehand to abide by his decision.

agree beforehand to abide by his decision.

Now, the farmer will admit that an abundance of good money in the country is a good thing. I have shown that we are indebted to the protective policy for that boon. He will admit, too, that as the volume of money increases the prices of things will rise. Well, now, I ask the farmer how much he paid for his wagon, his plow, his trace-chains, the woolen goods and cotton goods he bought for himself and his family twenty-five years ago? And, Mr. Farmer, how much do you pay for these things now? I venture to say that you buy them for one-half of what you had to nay for them twenty-five or more years ago. Now what you had to pay for them twenty-five or more years ago. Now, how much more do you get for your cattle, your horses, your hogs, your hay, your wheat, your oats, your corn, your potatoes, your butter, and

wour cheese than you did twenty-five years ago? I venture to say that you get double now what you got at that time.

Now, is not it a little singular that the free-trade Representative should feel so badly about this? Take care of him at the next election.

But the city free-trade Representative thinks his constituents are But the city free-trade Representative thinks his constituents are oppressed by the protective policy. Now let us see. The master carpenter is a large consumer. I will make the carpenter a witness, and not a free-trade politician. Now, Mr. Carpenter, how much did you pay for your nails, your glass, your saws, and the various implements you use, your hinges, your locks, your gas-fixtures, &c., twenty-five years ago, and how much do you pay for them now; and how much more do your journeymen get to-day than they did before the protective tariff of 1861?

No with the blacksmith.

So with the blacksmith. Twenty-five years ago the blacksmith would put a new set of shoes on your horse for less than \$1; now he will charge you in most places \$2; yet he gets the iron that makes the shoes and nails for far less money now.

It runs in this way through the whole line of avocations. No man

It runs in this way through the whole line of avocations. No man is excepted from the benefits of protection. The capitalists of the United States could in all probability carry on some businesses with more or less profit under free trade. But it would be in special industries, and it would involve the reduction of the wages of labor to the standard obtaining among their rivals, who under free trade would be the cheapest producing nations.

No American who understands the bearings and consequences of free trade can favor it and at the same time sympathize with the workingmen of his own country. There are advocates of free trade or low duties who doubtless believe that they are right; they are not right. Such men ignore the experience of every highly civilized country of the world. They ignore the lesson taught by our own vicissitudes. Haunted by a theory, they will not consider figures and facts. With these free-trade doctrinaires it is not what has been or what is, but what would have been or will be. They give play to their imaginawhat would have been or will be. They give play to their imagina-tions instead of their reasoning faculties, and prefer the phantoms they create to the realities that everywhere environ them. At times they seem to think that there is something in the principle of protection. When sugar or rice or barytes or jute is under consideration they look askant for the nonce at their bête noire, but the moment iron or steel or cotton goods or woolen goods are reached their solicitude for their pet theory asserts itself with a vigor and a zeal worthy a good cause.

and Representatives to the Forty-ninth Congress will be chosen by the American people. Let me say to those who are so anxious to strike down our protective tariff that that election will put an effectual quietus on their design, if I am not fearfully mistaken as to the sentiments and purposes of a large majority of the voters of the country. The workingmen are the voters who make Presidents and Congressmen, and they will show you that they know their rights and interest, and knowing them they will certainly maintain them.

#### The Tariff.

## SPEECH

OF

# HON. JOHN P. JONES,

OF NEVADA,

IN THE SENATE OF THE UNITED STATES,

Monday, February 19, 1883,

On the bill (H. R. 5538) to reduce internal-revenue taxation.

Mr. JONES, of Nevada, said:

Mr. PRESIDENT: There are not produced within the limits of the State which I have the honor in part to represent upon this floor more than one or two articles in the long line of protected articles in the schedules of this tariff. Her people may be said not to be the direct beneficiaries of this tariff; but indirectly they are vastly interested in maintaining the protective policy of this country. They believe that in the direction of protection will be found the prosperity, progress, and civilization of the country. I shall therefore not direct my remarks to any particular amendment, to the increase or the lowering of the duty on any particular article, but with the indulgence of the Senate I will submit a few reflections upon the general reasons which, in my judgment, underlie and justify the policy of protection.

During the discussions of economic questions which followed the publication of Adam Smith's Wealth of Nations, those who sustained the general theory of free trade almost universally admitted that there were two exceptional cases in which sound policy dictated a tariff discrimination in favor of home production. The first is that of articles essential to national safety and independence, and for the supply of which it might be hazardous to rely upon foreign imports. The second is that of articles the production of which could only be started under the stimulus of protective duties, but in respect to which there was good the stimulus of protective duties, but in respect to which there was good ground for believing that when sufficient capital should be invested and skill acquired the articles could be as well and as cheaply produced at home as abroad. Protection is doubtless a sound policy in both these cases, but the statement of them does not cover all the circumstances and conditions in which it is wise. The rule for granting it is in my opinion a much broader one.

Protection to any extent necessary to effect the object ought to be given to every industry to which this country has such natural adaptation that the product will cost no more labor—that is to say, no greater tion that the product will cost no more labor—that is to say, no greater expenditure of mental and physical force—here than elsewhere; and provided always that there is no obstruction, legal or otherwise, to a full and free competition among home producers. In the case thus stated I should look only to an equality in the actual amount of labor required and not to the money price or wages paid to the laborer, and I should be in no wise deterred from giving protection from the probability that the product could be permanently imported at a lower money price. No industry should be protected which is monopolized under a patent, or where the raw material can be monopolized by reason of its scarce-

or where the raw material can be monopolized by reason of its scarceness, or when it is not open to the fullest and freest competition. But I would give protection to all industries where the situation is such that capital and labor can be freely engaged in them over large sections of the country, which is true of iron, the raw materials of which are widely diffused, and also of cotton and woolen cloth, which can be advantageously spun and woven in all our latitudes and climates and in every one of our States and Territories.

Protection should never be extended to any industry in which other countries have such an invincible superiority in climate or other natural advantage that we can never hope to achieve equal results with equal amounts of labor.

amounts of labor.

No one would propose, for example, to stimulate by tariff duties the growth of coffee or bananas in this country, or a hot-house production of spices or india-rubber trees. In such and in similar cases the best policy is to appropriate to our own use the special advantages of other regions, and we effectually do that by free importation; because, in fact, the producers are only remunerated for their labor, and but scantilly at that, while we participate equally with them in the bounties of nature which they enjoy. We recover in that way a part of the loss which we have sustained in selling to foreign countries the wheat and There will be an election in 1884. A President and Vice-President many other agricultural staples raised upon our virgin lands at prices

which simply paid for the labor of producing them, and left nothing to compensate for the exhaustion of the soil. This country, with all its circumstances and conditions, natural and

acquired, its land, climate, waters, forests, and mines, and the genius, education, and aspirations of its people, its government, social order, and accumulations of capital, constitute the possession and patrimony of its citizens, whether born here or admitted by our free consent, it being our undoubted right to exclude whom we will, as it is clearly our highest duty to exclude all men and all races whose common citizenship with us would be injurious to our own interests. This country has been rewould be injurious to our own interests. This country has been re-claimed from the wilderness and the savage, defended against foreign ememies, and endowed with a free government and with all the appli-ances of a high civilization, by ourselves and by our ancestors; and not for others, but only for ourselves, for our posterity, and for those whom we may for our own advantage admit into a participation in our inher-itance. Such as it is, with all its incidents and surroundings, it is a commonwealth in which the rights of persons and of property, however sacred, are not absolute and sovereign, but are held in a certain degree of subjection to or of relation to the rights and interests of all.

Even the fee-simple of lands, the highest of all forms of property, is not an unrestricted dominion, but may be controlled and appropriated to public uses by what the lawyers call "the right of eminent domain," which resides always in the sovereign power, and which may in extreme cases be exerted in new and unexpected directions, as has been

extreme cases be exerted in new and unexpected directions, as has been recently illustrated in the Irish land laws.

Capital of every kind, and land, including under that term all realestate rights, such as water-powers and mines, are held subject not 
merely to the taxing power which determines without appeal how 
much of their property shall be appropriated to the public use, but to 
a proper relation to those whose only possession is their labor. The persons in this latter class are members of that community which we call 
the nation, and have rights in it which aliens can not claim.

Their valor in war has belied to sustain the country against all enemies

Their valor in war has helped to sustain the country against all enemies in times past and will serve as a bulwark of defense upon which we can rely in times to come. And we know well that without a certain degree of material well-being they can not possess the educated intelligence and civic virtues which will fit them to do their part in maintaining good

social order and good political government.

The laborers and artisans of this country have that rightful interest in it which entitles them to the ratio of wages resulting from all the advantages, natural and acquired, which it possesses, among which are the freedom of its institutions, the fruitfulness of its soil, the salubrity of its climate, its natural productions of all kinds, its facilities of intercompanies in acquired production of all kinds, its facilities of intercompanies in acquired to the salubrity of the salubri munication, accumulations of capital, and proportion of population to capital and to areas of arable land. To some of these they have mainly capital and to areas of arable land. To some of these they have mainly contributed and to all they are the rightful co-heirs with every other class. They ought not to have their wages lowered to the standard of less favored countries by the free importation of the same kind of products which cost no more labor at home than abroad. To permit this to be done inflicts an injury and an injustice upon labor, the corner-stone

upon which rest our freedom and prosperity.

The free-traders hope to be able to receive the same income from their lands and investments and the same prices for their products which they now receive under the policy of protection, and at the same time enjoy the advantages of free trade in making their purchases. Their hope is not only a selfish but a delusive one. vast army of people now engaged in manufacturing into agricultural pursuits, and change them from consumers into producers of raw maserials, by breaking down the protective system, foreign markets would soon be glutted with raw materials and their prices would fall, while the prices of manufactures would rise and the producers of raw materials. rial would discover too late that the exchange power of their products would be far below what it now is. In order to continue manufacturing in this country under free trade the operatives must accept the conditions, privations, and scale of living of foreign operatives, which they will never do so long as there is in this country an unoccupied acre of tillable land.

It is my foremost, fundamental, and irremovable objection to any such policy that it is not based upon fair play as between different interests and classes. The artisans and laboring men of this country have berests and classes. The artisans and laboring men of this country have always filled the ranks of our armies with a ready and patriotic zeal, but they can not be expected to do so hereafter if they are to have no advantage over aliens when they sell their labor or the products of their labor in the markets of the country. If it is really a disadvantage to land-owners and capitalists to pay only so much more for an American than a foreign article as will equalize the conditions here and abroad, it is a disadvantage more than counterbalanced by the benefits they then really sent the protective system.

themselves derive from the protective system.

But while I advocate protection to labor in this country as a measure of justice to all classes and interests, I fully believe it is advantageous to those who buy labor and the products of labor. The dearest thing in the world is cheap labor, as all experience proves. It has been a delusion and a failure in every form in which it has been tried. The enslaved African labor of our Southern States was as ruinous economically and the introduction of Chinese. ically as it was socially and politically; and the introduction of Chinese labor into this country, if it had not been arrested by Congress, would have been even more disastrous.

Good wages enable the laborer to live in a degree of comfort which Good wages enable the laborer to live in a degree of comfort which maintains his self-respect, heightens his aspirations for improvement, gives him some leisure for reflection and the acquisition of knowledge, and stimulates his creative faculties, which results in inventions and discoveries that economize labor and make it more effective. It is high wages and not low wages that has enabled American farmers to overcome in the markets of Western Europe the competition of the boundless wheat-fields of Russia, worked until recently by serfs, and will weaked by a year peoply noid labor.

boundless wheat-needs of Russia, worked until recently by seris, and still worked by a very poorly paid labor.

All the tools and appliances with which grain is produced, transported, and loaded into ships; the improved plows, sowing, hoeing, thrashing, and reaping machines, headers, and elevators are American inventions. Probably none of them would have been made if free trade instead of protection had been the policy of this country. Such inven-tions are always made by artisans, and not by agricultural laborers, who have no familiarity with mechanical problems and no opportunity to apply scientific principles to the production of mechanical results. This fact is signally illustrated by the official records of the Patent-Office.

In the report of the Commissioner of Patents for 1882 it is found that

upon a comparison of the manufacturing with the agricultural States the proportion of patents to population, excluding the colored race for the States formerly slave-holding, was as follows:

the States formerly slave-holding, was as follows:
In Connecticut there was 1 inventor to 782 inhabitants; in Massachusetts, 1 to 982; Rhode Island, 1 to 980; New Jersey, 1 to 1,354; New York, 1 to 1,345; California, 1 to 1,758; Alabama, 1 to 14,395; Arkansas, 1 to 11,161; Florida, 1 to 7,923; Mississippi, 1 to 8,551; North Carolina, 1 to 12,045; South Carolina, 1 to 8,691; Tennessee, 1 to 10,447; West Virginia, 1 to 10,043; Georgia, 1 to 6,588.

This comparative statement furnishes a satisfactory explanation of

the difference in material prosperity between the States of varied indus try and those devoted almost exclusively to agriculture, if a country be rich in the proportion that it is able to subordinate the forces of nature to its own wants. The small number of inventions made in the Southern States is entirely attributable to the almost exclusive atten-Southern States is entirely attributable to the almost exclusive attention which their people have paid to the single primitive industry of cultivating the soil, and is in no degree chargeable to mental incapacity or to the want of inventive faculty. Their vigor has been too signally illustrated in politics and war to leave any doubt that their achievements will be distinguished in any direction to which their efforts may hereaster be turned.

hereafter be turned.

The soil and climate of the Southern States are adapted to the growth of their great staple, cotton; but they are indebted to the New England inventor of the cotton-gin for the possibility of producing it with that degree of cheapness which gives it so conspicuous a place among the materials for textile fabrics, and without which it would lose its commercial pre-eminence. This invention alone built up the great cotton interests of the South, and has repaid a hundred-fold all that the Southern planter has ever claimed that the tariff has cost him.

The recourses of inventive skill are not exhausted with the cotton-

The resources of inventive skill are not exhausted with the cotton-gin, and the Southern States are now extracting great wealth from the cotton-seed—which, until lately, was regarded as worthless—by obtain-ing from it oils and other valuable products, and they are constantly giving new value to the cotton fiber by spinning it into yarn and weaving it into cloth in the vicinity of its growth and by improving and cheapening the means of transporting it to market. It is thus true that their best guarantee of continued supremacy in cotton cultivation as against the vast regions in Asia and Africa, which are equally well a lapted to its growth, is not their soil and climate, but the superior skill of American artisans

Human intelligence is a much greater force than human muscle in the production of wealth. No individual or country ever became rich through hand labor. Such labor can furnish scarcely anything beyond the absolute necessities of life. It can furnish but few of its comforts

and none of its luxuries.

Very little more than a century ago the hand-woven shawls and cotton cloths of the East supplied the markets of England and the Continent of Europe. The current of that trade has been reversed by the spinning jenny, leom, and steam-engine, all of which were the creation of the better paid artisans of the Western World.

The inventions of a little more than a century, and all of them made in countries where labor has been the best paid, enable the common laborer of to-day to enjoy more comforts and luxuries, to wear better clothes, to sleep in better beds, and to eat better food than the titled and privileged classes were before that time able to command.

The stimulus to labor-saving inventions increases in proportion as labor commands a higher price and is more worth saving. As such inventions nearly always originate among the industrial classes, the probability that they will be made becomes greater precisely in proportion as they are elevated by education and inspired with hope by the possibility of bettering their condition.

It is a great merit of the protective system that it is the means of educating large classes of the people. Even should it involve some degree of cost to the country, it is defensible on the same ground upon which it is deemed good policy to provide educational facilities for the rising generation at the public charge. It is approved American doctrine that children and youth are worth a good deal more to the country in consequence of the instruction given to them at the expense of the tax-

payers than it costs to provide such instruction. But the period of education does not by any means terminate with the age of minority; in fact, it is then only just beginning. It may and does continue throughout the whole of active life. And no education is more real and effective than that which comes in connection with such of the industries of man as employ and exercise his mental faculties.

It is only the first steps in education which are taken in schools for the

young. The more important schools and colleges are the workshops, the chemical laboratories, and the great practical enterprises of engi-

neering.

There can be no danger of the permanent dearness in our markets as compared with foreign markets, of any commodity for which this country has natural adaptations, and in the production of which there is no impediment to the free and full competition of home producers. The labor of American artisans is not really a dear labor in the long run.

If well-paid workmen can be relied upon to make such inventions and create such appliances in aid of industries that their labor is really the cheapest labor and the only labor which has cheapened production, it may be asked why it is necessary to give them protection against the products of countries in which wages are low. The necessity would not exist if the use of labor-saving appliances was confined to the country in which they originated. It would be contrary to modern ideas to deny the right of skilled laborers to expatriate themselves, or of manufacturers of tools and machinery to sell them in the markets of the In former times it was common to forbid either the export of word. In the times to was contained to lost a trace the expect of machinery or the departure from their own country of skilled artisans, or of persons who possessed the secrets of profitable trades and arts. England maintained the policy of retaining in this way a monopoly of all the arts in which its people excelled until about fifty years ago. At the present time all labor-saving inventions soon become the common property of the world. We know, in our own case, that our reapers, mowers, improved plows, locomotives, sewing-machines, elevators, and many other inventions, are found in every other country which is sufficiently civilized to utilize them.

The danger to well-paid labor with which inventions originate comes

from the competition of countries in which laborers are cheap and re-liably steady and made effective by the importation and use of improved tools and machinery, which they did not and could not invent, and which they could not maintain and operate without the superintendence of inventive workmen. In a certain sense inventive and highly advanced countries furnish the means for their own destruction to less civilized and underpaid populations. If we had been able and had chosen to keep for our own exclusive use the machinery and tools which

have been invented here to save labor in agriculture, the competition of Russia with us in raising wheat would not exist.

It is to-day seriously apprehended in England that British cotton spinning and weaving machinery, worked by the abundant, cheap, and docile labor of India, will wrest from the English cotton manufacturers their monopoly of the markets not only of India itself but of China and the entire East. The London Economist, which seems alive to this danger published recently a letter from India, describing the new and great cotton factories in operation at Ahmedahan, spoken of as "the chief rural center of cotton-spinning in Western in India." The writer says:

Each of the chief factories employs about 1,000 hands, of whom only two are Europeans. They are owned, financed, and worked entirely by natives, excepting one engineer and a highly skilled Englishman, who superintends repairs of the machinery. The cotton and all other raw material are much cheaper than in England, the labor is very much cheaper, and the European engineer told me it was steadier, and nearly as effective, man for man. The extra cost of the machinery is to some extent balanced by the cheapness of building.

As long as the inventions and industrial appliances of each country are left to become the common possession of all countries capable of using them, the only permanent advantage enjoyed by the more civilized over the less civilized people is their power of constantly maintaining and improving machinery. But only well-paid workmen can keep themselves always in advance of a poorly-paid people like the inhabitants of India, and in order that workmen who are well paid may continue to be so, it is necessary to give them tariff protection against the products of the cheaper labor which has been made effective by their own inven-

There is no danger that extravagant profits can be realized by manufacturers where there are no conditions existing which give them a monopoly. When men are at liberty to transfer their capital and industry from one pursuit to another, and when new investments of capital and industry are constantly being made, the tendency to an equaliza-tion of profits and wages in all pursuits is strong, active, and constantly operating. Nothing is more certain than that competition will prevent the profits of any one industry from rising above the average standard of profits in all industrial avocations of the country. As there is the same tendency to an equalization of wages as to an equalization of profits, all classes of laborers derive a benefit from the maintenance of a fair scale of remuneration to labor in the protected lines of production; and all classes of laborers would suffer if this scale of remuneration was broken down by a withdrawal of protection, because the persons whose wages are thereby reduced would necessarily invade and overcrowd other and more remunerative employments.

There is no necessity for foreign importations as a means of holding

in check a tendency to excess in the prices of protected articles, after time enough has elapsed to bring into the home production capital and skill enough to supply the home market. If, however, there is an absolute exclusion of the foreign article before the home production is properly developed, there would be a danger of exorbitant prices and profits. Under these circumstances the tariff eight to be raised gradually and not to the point of absolute exclusion suddenly, but by degrees, and only as the home production and home competition become sufficient to supply the market and regulate prices.

But, after that the only mistake possible is that of making the protective duty too low; and no injury can result from any height to which it may be carried after it is made high enough to keep out the foreign article. Nothing more can be said against a higher rate than that it is superfluous and useless. Until the tariff is prohibitory prices are controlled by foreign competition. After that, no matter to what height it is carried, they are then regulated as they should be by the free trade and active competition of the fifty millions of our own enterprising people. This competition is all that is necessary to insure fair prices and to render undue profits and exercity to the profits and exercity the profits are the profits and exercity the profits and exercity the profits are the profits and exercity that the profits are the profits and exercity the profits and exercity the profits are the profits and exercity the profits and exercity that the profits are the profits and exercity the profits and exercity the profits and exercity the profits and exercity the profits are the profits and the profits are the profits and the profits are the profits and the profits are the profits are the profits are the profits and the profits are the profits a

The discussion of the various features of the tariff bill has already been quite protracted, and even, perhaps, tedious. I can not at this time trespass upon the patience of the Senate for anything beyond a statement of principles in outline and in very general terms. Statements made in that way are liable to be misunderstood; and to avoid that in some measure I will endeavor to illustrate them by a reference to gold and silver and to petroleum. All the gold and silver in the mines and all the oil in the wells are the property of the owners of the land in which they are found. Neither of these products require tariff protection, nor are susceptible under present conditions of receiving any. Their production is in excess of the domestic demand. Gold and silver, being everywhere accepted materials of money, are always sure of a market abroad. Petroleum will also be sure of a foreign sale until foreign production is very much increased, which may never happen. The producers of these articles, thus needing no protection in the home market, and with an assured demand abroad for any surplus production, might think it for their interest to make their own purchases of every thing they need in cheap foreign markets. Indeed, upon the theories of free trade as currently expounded, they might insist that it is their natural right to buy in the cheapest market and that it would be tyrannical to deprive them of it. But I do not admit either that they have any just claim to an unrestricted trade in foreign goods, or that such trade would be for their advantage.

Petroleum, gold, and silver are a part of the natural resources of the

puntry, and in many respects they are still a part of the inheritance of all the people of the country, acquired by the efforts, struggles, and sacrifices of their ancestors or of themselves. It is true those substances are now mainly segregated for individual use; but it is for that use in subordination to the general good of the community. It is the good fortune of the present inhabitants of Pennsylvania and West Virginia that their territory was unexpectedly found twenty years ago to contain oil; and it is the good fortune of the people of the Rocky Mountain region and of the Pacific slope that they have discovered rich mines of

gold and silver.

The trans-Alleghany region was conquered from the native Indians by many bloody battles, and wrested from the British crown by a seven years' war. It has been made accessible and endowed with the improvements of civilization at the expense of the whole country. The Pacific slope was in part purchased from the first Napoleon for a sum of money great in that day, paid from the National Treasury, and in part won from Mexico in our own times by the the valor of American armies. By the English common law which was brought here by the founders of the country gold and silver were deemed noble and royal metals because they were the exclusive material of coined money, and mines of them did not belong to the owners of the land on and under which they are

found, but to the Crown. The same rule has prevailed in nearly all countries, and during all periods.

It prevails to-day in the Spanish-American countries south of us. It was changed in this country from mixed motives of public policy and a generous consideration for the miners, who, on the average, endure more hardships and privations than any other class of laborers, and for a poorer remuneration. But though I represent an exclusively mining people, I disclaim for them, and I am sure they will sustain me in disclaiming, the pretension that they are entitled to treat their gold and silver as a meritorious acquisition of their own, to be managed and enjoyed without reference to the common interests of the whole coun-

There can be no doubt that the producers of gold and silver have been signally benefited by the system of protection which has been so long the settled policy of this country.

The Comstock lode is famous for its richness in gold and silver, but except in its outcroppings and near the surface it would have been ut-terly valueless in countries like Mexico or Peru.

The part of nature in depositing its treasures was an indispensable one, but the part performed by the art of man in unlocking them has been equally indispensable. It may be said that the ponderous engines by which its 3,000-foot levels are kept clear of the constantly incoming waters, and vast masses of by no means rich ores are hoisted from the depths of the earth and the cunning and potent machinery by which those ores are crushed and prepared for amalgamation might have been imported from foreign countries. But machinery must be repaired as well as purchased, and without skilled workmen on the spot, always ready to meet perpetually recurring new difficulties with new expedients, it is practically impossible to conduct such a business as that of mining except at an enormous disadvantage; and it is of course true of that business, as it is of any other, that if we had looked solely to foreigners for our tools and machinery we should have wholly lost all the improvements which come from the inventive ingenuity of domestic artisans.

Comparing San Francisco with the Atlantic coast cities in respect to the elements of the cost of fabricating any given piece of iron machinery, there can be no doubt that it can be produced more cheaply in the latter, where the raw material, labor, and interest upon capital are all lower, and where the current rate of profit expected upon business enterprises is also lower. Nevertheless, the people of the Western slope find it to be to their interest to go to San Francisco for the engines, hoisting apparatus, crushing and pulverizing machinery, and the various other appliances needed in the business of mining. This can only be explained by supposing, what is actually the fact, that they can find in San Francisco what is most serviceable in use and best adapted to their wants. The reason is that the proprietors of founderies and machineshops in San Francisco and the workmen employed in them are in constant personal intercourse with the mining classes, and learn in that way what works best in practice, at what points special difficulties are encountered, and what are the best means of overcoming them.

If these San Francisco establishments did not exist, with their auxiliary establishments in nearly every town on the Pacific coast, and if the miners were obliged to deal for their mining appliances at arm's length with Eastern machinists, from whom they are separated by nearly a month's time in the transport of freight, they could never have approximated the mining results which they have actually attained. And this illustrates in what way and to what extent all such industries of the country as require or are facilitated by mechanical appliances would have been kept back if we had consented to a policy under which all our tools and machinery would have been imported from Europe. We should have had no workmen on the spot by whom machinery could be repaired; and as all machinery is subject to breakage and to getting out of order, the users would suffer constant losses from long suspensions of their operations.

Furthermore, the country would have lost the benefit of all the improvements in tools and machinery and of all the adaptations of them to our special wants which have been made by our own artisans. The rapid building up of a great manufacturing industry in that distant region illustrates the wisdom not of a tariff for revenue, but of a high protective tariff. The machine-shops of San Francisco and the Pacific coast would never have been started but for the great cost and delays of freight from the East before the completion of the Pacific Railroad, which, in fact, operated as a tariff much higher than has ever protected the machine-shops of the Atlantic coast.

The people of the Pacific coast are second to no people in energetic self-reliance; but I am sure that they have no wish and do not believe that it is for their interest to divorce themselves from the arts and civilization of America for the sake of delusively cheaper foreign markets to buy in.

Our oil-wells would have remained undeveloped as they have remained up to the present time throughout the rest of the world if protection had not stimulated and built up a great iron industry, with founderies, machine-shops, and especially skilled and ingenious work-

No extensive explorations for oil in the bowels of the earth are economically practicable without appliances which were first discovered in America, and which never would have been discovered here if the iron industry had not been previously brought into vigorous existence with ample establishments, well-furnished shops, and above all with a body of mechanics of training, skill, and aptitude. The oil-wells of Pennsylvania and West Virginia are not naturally richer than those of the region between the Black and Caspian Seas, or of various other portions of the world. Indications of petroleum are found in almost every country. It is not improbable that there now exist many other richer regions which are wholly unknown from the lack of the science, tools, and machinery wherewith to explore them and treat their products.

What makes the American oil-fields commercially and practically richer than those found elsewhere is the superiority of American arts and artisans, which provide cheaper and better methods of exploring for, pumping, storing, transporting, and refining oil, and extracting from it by chemical manipulations more valuable products.

The people of the agricultural regions, especially of the West, are urged to resist all tariff impositions upon the theory that the money price of their cereals, beef, and pork is fixed by the money price of the surplus sold abroad; that their own prosperity is absolutely independent of that of any other interest and of all other interests in this country; and that they should insist on buying where and of whom they can buy cheapest for the time being, and with entire indifference as to

whether the cheapest markets are found at home or abroad. Appeals of this kind have so far been made in vain. The people of the granary States of the West know that the acres which they till have been substantially a free gift from the nation, which has scarcely received the expense of surveying the public domain, under the policy of schoolland, graduation, homestead, soldiers' bounty-land, swamp-land, timber-cultivation, desert-land, and railroad land-grant laws, which has prevailed during the last half century. They know that they are to-day producing the beef which they bring to market in part by the free use of cattle-ranges of which the title remains in the Government. It is a monstrous suggestion, and by nobody is it rejected with a more patriotic disdain than by the Western agriculturists themselves, that they owe no duty to a country which has not only given them an empire of unbounded fertility and extent, but has aided in the construction of railroads to and through it by munificent grants of credit as well as of lands.

It is a monstrous suggestion, and by nobody is it rejected with a more patriotic disdain than by the Western agriculturists themselves, that they owe no duty to a country which has not only given them an empire of unbounded fertility and extent, but has aided in the construction of railroads to and through it by munificent grants of credit as well as of lands, and has always employed, and does now employ, more than half its Army and at an enormous cost in protecting the pioneers against the aborignal savage. Nor are they for a moment deceived by that oft-repeated platitude that British markets fix the prices of their grain or of any other thing they produce. They know that neither the markets in England or anywhere else ever did or ever can fix the price of anything; that the office of markets is not to fix prices but merely to ascertain and register them, just as it is the office of the thermometer to indicate temperatures and not to create them; that the prices of everything are fixed by the play against each other of forces of demand and supply, not in any one market, but in all markets which are commercially connected; and no more in one market than another, except as one market is larger than another. They know, of course, that the British demand for grain, beef, and pork is a very large one, and has a corresponding weight in determining their prices; but they know also that large as it is it is much smaller than the demand of the far more numerous population of the United States. They know that any given surplus of either our grain or beef or pork must necessarily be exported and take its fate in foreign markets, to be determined by the total demand of all those markets acting upon their total supply. But they know also that what the amount of any surplus exported by us shall be, or whether there shall be any surplus at all, does not depend upon the policy of other nations, but solely upon our own. They know that if we choose by abandoning our protective policy to force our whole population into farming o

We are often told that there should be no other protection except what is incidental to duties imposed for revenue. That as a matter of fact revenue duties upon articles which this country is capable of producing necessarily involves some degree of protection is undoubtedly true, but that duties should be imposed for no other direct purpose than revenue is entirely unsound. The tariff bill passed by the First Congress under the present Constitution of the United States expressly declared that protection to manufactures was one of its purposes. That protection, not as an incidental result of revenue duties but as a direct and primary object, is within the powers and obligations of this Government is settled by now nearly a century of uninterrupted practical construction and administration.

In fixing the scale of tariff duties there is an incongruity between the two objects. The degree of protection is measured by the degree of the exclusion of the foreign article, while revenue increases as importations increase, and in the proportion in which a duty proves to be more protective it yields less revenue. It is a haphazard and wholly unscientific proceeding to leave protection to follow as a mere incident of duties levied for another and only distinct numbers.

of duties levied for another and quite distinct purpose.

Protection as an incident of a duty imposed primarily for revenue is precisely the same thing in principle, although less in the degree of its effects, as protection by means of a tariff framed for the express purpose of protection. If protection is injurious, it is of no consequence how it is given, whether indirectly and as an incident of something else, or directly and as an avowed object. The free-traders, who constantly insist that protection imposes taxes which do not go into the public Treasury, but inure to the benefit of manufacturers by raising the prices of the protected articles, stultify themselves when they favor revenue duties with what they call incidental protection, but with what they ought, if protection does not protect, to denounce as a tariff for revenue with incidental injury, incidental ruin, incidental robbery of the many for the benefit of the few.

I may here remark that there can be no doubt that many Senators sincerely entertain the belief that manufacturers, operatives, and all classes of the community would be more prosperous under a free trade than under the protective policy, that protection is destructive of the objects sought, and that it injures the protected classes themselves. The willingness, nay even the alacrity, with which a majority of the Senators holding these views have accepted and in some cases even demanded for the industries of their own States their full share and even more than their share of the injury which lurks under protection, evinces a

self-sacrificing, fraternal, generous spirit which is as gratifying as it is commendable.

commendable.

There never was in American politics a more blind, halting, and illogical platform than that of a tariff for revenue with incidental protection. It was devised to please both sides of the tariff controversy. To the protectionists this platform suggests that with our war debt, pension lists, and large expenditures generally, a revenue tariff will give them for an indefinitely long period as high duties as they need to desire. To the free-traders the same platform holds out the idea that duties shall be levied only for revenue, and that if protection results from them it is something which can not be escaped and for which nobody is responsible. The fallacy of the last suggestion consists in this, that while protection is really an unavoidable incident of duties imposed upon articles produced in this country, it is not an incident of duties imposed upon articles not produced here.

It is quite possible to look one way and row another, but it is not possible to look two opposite ways at one and the same time. No man can intelligently and sincerely say that he is in favor of imposing duties first of all for revenue, when he votes for a duty upon articles produced in this country, and therefore necessarily giving incidental protection upon such articles, until he has first imposed or endeavored to impose a duty upon every article not produced here, and in respect to which there could be no incidental protection so that every dollar of the tax would go into the public Treasury. And yet, during the six weary weeks that this bill has occupied the whole time of Congress, not a single one of the free-traders who insist that it is only for revenue that duties can be imposed, has suggested the taxation of tea, coffee, and numerous other articles on the free-list which would yield abundant revenue, while they would involve none of that protection which those free-traders so violently denounce when it is primarily sought after, but so greatly admire as an incident. By no possibility can they escape the charge, that while affecting to look to revenue as the only justifiable and constitutional object of a tarif, they make no effort to collect it by taxes of which the whole proceeds would go into the Treasury, and that while affecting to denounce protection in the abstract they go for it in every possible way as the foreseen incident of other taxes which command their ready support.

Among the reasons for imposing taxes for revenue upon articles not

Among the reasons for imposing taxes for revenue upon articles not produced here is the very important one that such revenue is tolerably steady and reliable in amount, which is a very essential point as affecting the stability of the public finances. The fluctuations in the revenue under these conditions will not exceed the fluctuations in the amount of the consumption of the articles which will show a substantially steady increase from year to year. Duties on tea and coffee, for example, would vary in their yield only as the consumption of those articles varied. But in respect to taxes upon articles produced here, their yield varies as their home production varies, and they will cease to yield anything whenever the home production becomes equal to the consumption. Taxes upon such articles should be imposed for protection, and if revenue results from them it is something which is incidental and rather to be deprecated than desired. Taxes designed for revenue should be imposed upon articles not produced at home, and for the purpose of avoiding incidental protection, which reduces revenue.

avoiding incidental protection, which reduces revenue.

In consequence of the diversity between nations as respects climates, natural resources, density of population, methods of governmental administration, and established social and personal ideas, habits, and customs, there are differences and often very great and marked differences in the scale of comfort in which their people are accustomed to live, and below which they can not fall without suffering and a sense of degradation. The competitions of international free trade, which must constantly tend to equalize the wages of labor in all countries, are therefore essentially unfair, and must be intolerable to the people of countries in which workmen have been habituated to a decent scale of living for themselves and their families. They can not endure conditions with which those are content who have never known anything better.

with which those are content who have never known anything better. There is no real equality in free trade between men on one side who have been bred to being the taskmasters of their women and who are unable to conceive of such a thing as expenditure for the education of their children, and men on the other side who are cheered in their labor by nothing so much as the motive of supporting their wives in comfort and of rearing their children and qualifying them for the duties and opportunities of life. Free trade between nations is in its nature and effects wholly unlike free trade between citizens of the same country among whom there is a substantial homogeneity of habits and ideas and where the scale of comfort is nearly the same in all parts of it.

The same general course of reasoning which governs us in determining

The same general course of reasoning which governs us in determining what laborers we will admit into this country and what laborers we will exclude from it is applicable to and ought to govern the question of admitting the products of foreign labor. We admit European laborers because we know that they are of the same race as ourselves and have the same aspirations, and that with the wages obtainable in this country they will soon advance their standard of living to our own. We exclude the Chinese, as we ought to exclude them, because we know that from the immobility and tenacity of their national habits they will very slowly, if at all, rise above the standard of living which is wrought into their very natures by centuries of servile poverty, and that their presence

and competition here will degrade the standard to which our laborers are accustomed.

We are not insensible to the fact that there are differences between different classes of European extraction in respect both to their living at home and to the degree of rapidity or slowness with which they advance it to our own standard after they arrive here. Complaint is made in New England of the Canadian French and in New York of the immigrants from certain parts of Italy, that they remain here in a state of isolation from the community around them and with very little change in their standards of living from what they were at home. Doubtless differences of religion and language have something to do with the evils complained of in these cases, and with retarding their absorption into our body-politic by intermarriages and otherwise.

The possible number of such immigrants is, however, very small, whereas the number of Chinese, if we permit them to come, is enormous and incalculable. Nevertheless, the fact that New England and New York are so sensitive in respect to the Canadian French and Italian immigration strikingly illustrates the clearness with which it is seen and felt that American labor ought not to be subjected here and on our soil to any competition which will diminish its earnings and degrade its scale of comfortable living. But it is surely too plain to require argument that the free admission of the products of the degraded labor of foreign countries is as fatal to American labor as the admission of such foreign laborers as are not likely to adopt readily the customs, manners, and habits of life of our own laborers. Indeed, it is far more disastrous, because the Chinese and all foreigners will work for less in their native homes than after they have immigrated into this country, so that the competition of their imported products is more severe than that of their labor on our own soil.

It has been complained of in times past in respect to certain manufactures, notably of the textile fabrics and of iron, that they were so confined to parrow localities as to amount to geographical monopolies.

confined to narrow localities as to amount to geographical monopolies. New England has been the favorite target for attacks of this kind in reference to textile fabrics, boots and shoes, and various minor industries, but in none of these cases was there really one single feature of natural and permanent monopoly. It was to be expected that the people of a region in which the soil was poor and the natural resources small, while the population was comparatively dense, would be the first to turn their attention to manufactures, from the necessity of looking to new pursuits for subsistence and wealth. But not only the manufactures but the manufacturers of New England began a long time ago to spread over the West, and have now begun to spread southward. It is profit that these manufacturers are after, and they will go where the greatest profit is to be found; that is to say, nearest to the raw materials and to the most numerous consumers, and where food, which is a very important element in the cost of labor, is the cheapest. Ohio, Indiana, and Illinois are bristling with varied manufactories.

The population of Chicago is increasing to-day more from the expansion of its internal industries than from the growth of its commerce in raw material, great as that undoubtedly is. Saint Paul and Minneapolia in the far Northwest are hives of industrial activity. So is Denver, at the western extremity of the great plains; San Francisco on the Pacific coast; Richmond, Louisville, Atlanta, Chattanooga, and numerous other cities in the South. It is impossible that there should be sectional or other monopolies in any industries in such a country as this, whose vast population is homogeneous and speculative, with no deep-rooted attachments to any particular spot, ready at all times to change their residence with the hope of bettering their condition, and where the communications are rapid and easy, and where capital is enterprising to an extraordinary degree.

Down to quite recent times the iron industry was denounced as a monopoly of the single State of Pennsylvania. To-day this industry is prosecuted on a great scale in many States, some of them in the far West and some of them in the South.

Chicago is to-day the leading point for the manufacture of iron and steel rails; a Southern State, Alabama, is generally supposed to possess the greatest combination of natural advantages for the production of iron; and even the youngest of the States, Colorado, has extensive steel-rail mills supplied from its own ores.

rail mills supplied from its own ores.

With a steady adherence to the policy of protection this diffusion of the arts and the industries will go on until every part of the country is overspread by them. I rejoice to believe so, because it is among aggregations of men and in centers of population that the comforts and enjoyments of life are obtained with the greatest economy, and indeed there are many of them not otherwise obtainable at all. Macadamized roads, paved and lighted streets, sidewalks and horse-cars, are not possible in a pastoral country, and it is only by the multiplication of cities and villages that libraries and exhibitions of art and taste can be made readily accessible to all. It is by a diversification of industries, which, under the protection system, are certain to spread in the near future over all parts of the country, that the humanizing influences of civilization will reach everywhere.

zation will reach everywhere.

This country should produce everything for which it has natural adaptation, so that the great bulk of our exchanges may be made at home on the basis of a genuine and rational free trade, where competition will be only between those who are on a common plane as to their standard of

living and to whom equality of profits will be assured by the right and power of a free transfer of labor and capital from the least profitable to the more profitable pursuits. It is in that way that the industrial inde-pendence of the country will be established and fortified, and that there will be a just and safe distribution of the population among the differ-

ent branches of production.

The policy of exchanging raw products for foreign manufactures is wasteful and extravagant in every way and in some ways not generally noticed. The raw products exported must necessarily be such staples as will bear repeated handlings and will not be injured by being kept for some considerable time, like cotton, tobacco, and wheat. The finer and The finer and more perishable fruits of the orchard, of the vine, and of horticulture can not be transported across oceans. The effect of a policy which discourages the building up of numerous towns, cities, and manufacturing centers, which serve as markets for the sale and consumption of the delicate products of fruit-raisers and gardeners, must be to confine agriculture to a few great staples, with all the necessarily accompanying conditions of sparseness of population and rudeness of labor. We know, as a fact of sparseness of population and rudeness of labor. We know, as a fact of observation, that those engaged in the production of great staples very rarely produce the finer fruits even for their own use, the stimulus of convenient markets being wanting. Among the bad consequences of such a policy are the general lowering of the standard of the comfort in which the people of a country live, and the loss to the population of the valuable element of thrifty and intelligent gardeners and fruit-raisers. It is true that there will still be leftsome few and scattered consumers and purchasers of the finer fruits of the land, but the small quantities produced to supply them will always be greatly enhanced in price and deteriorated in quality by a long carriage from the producer to the consumer. Very many of the more delicate products can not be transported long distances at all, and so much of even the more hardy varieties is spoiled by transportation as to raise the cost of the remainder so high as to be be-yond the reach of the artisans and laborers of a country, thus inflicting a double loss, the loss of a reliable market to the producer and the loss of a cheap market to the consumer.

The maximum wealth of a country, either in the aggregate or per capita, can not be obtained without a certain aggregation of population. This is shown by any comparison which can be made between regions which are exclusively agricultural and other regions in which varied industries are carried on. Lands, including under that term all their appurtenances, such as mines, timber, and water-power, have no value except what is prospective without population, and their value increases very nearly in proportion to the increase of the density of population. Even in such countries as the United States and Great Britain, where the accumulations of personal property are considerable, a very large proportion of their present wealth is in lands, and of the value of their real estate it is only the smaller part which arises from the structures

real estate it is only the smaller part which arises from the structures upon it, while the larger part consists of the lands themselves, and is due to the density of the population occupying them.

This value of lands, due to density of population, is in no sense artificial and unreal, as it is sometimes said to be. As people become numerous lands sell for more because they yield more income, and because occupiers can afford to pay more for their use. The aggregate appreciation of the lands of the Northeast, in cities, towns, and villages, in suburban districts, and in their timber, minerals, and other appurent pages, has been enormous. tenances, has been enormous. At the South it has been comparatively trifling, and it is from that difference between the two classes of States that a large part of the present disparity of their wealth has actually

The population of this country can be made greater and richer by the rotective system and the resulting diversification of industries. In the different situation of Great Britain forty years ago, when its corn laws were repealed, it was only by the contrary policy of free trade that its population could be increased. But in the British case, while the free-trade policy has been followed by a large increase of the population and of the rental and value of lands, a great risk has been taken in swelling the numbers of the people beyond any possible home supply of food, from which a great catastrophe may some day result. In our case, the protective policy involves no such hazard, because its tendency will be to bring about a just proportion between the home producers and consumers of both food and manufactured goods. Under the protective policy there can not be in this country an excess of any one element of the population. There may be in the distant future a tendency to an ex-cess in its aggregate population, but that will be restrained by economic

laws which will keep the numbers of an enlightened people within the limits of their natural and acquired resources. The advantages of exchanging raw materials and food for foreign manufactures are illusive and temporary. The advantages of bringing together those who manufacture and those who produce food and raw materials are real and permanent. A just proportion will be established between the numbers engaged in the several branches of agriculture and the numbers engaged in the several branches of manufactures, if the interchanges are made at home, so as not to be affected by the violent

changes which are constantly occurring in foreign markets.

How large an amount of wheat Europe may be obliged to import from America in any given year depends upon European harvests, which are as fluctuating as the seasons, but how much wheat will be consumed

by the manufacturing industries in America itself depends upon the numbers engaged in it, which are either constant or increasing. If raw materials, food, and manufactures are exchanged at home, where can the loss be? Certainly not in any unfair advantage gained by labor and capital engaged in any one pursuit over any other, because capital and labor can move freely from each pursuit into any other. Where is the gain? Clearly in the general advantage of having raw materials worked up and food consumed at or near the points of production, and in not having the prices of manufactured goods swollen by the charges of long carriage and by the exorbitant profit always gained out of them when they pass through many hands

am opposed to a free trade which subjects the people of this country to the very competition to avoid which either they themselves or their ancestors underwent the hazards and hardships of migrating hither.

I am opposed to a free trade which gives to foreigners all the advanages of this country without subjecting them to any of its responsi-

I am opposed to a free trade which reduces the wages of the American laborer to the level of the poorest country in the world, whereas he is entitled to such wages as would result from the natural resources and wealth of his own country.

I am opposed to a free trade which deprives any of the people of their full share of the advantages of living in a country the soil of which is fertile and large portions of which are still open to occupation, and lowers their condition to that of old and worn-out countries, where the population is so excessive that its further increase is rendered impossible by starvation and chronic famine.

in favor of free trade among our own citizens, where the only competition is between persons whose standard of comfort is the same.

I am in favor of protection because it diversifies industries, brings

producers and consumers nearer together, and establishes a just distri-bution of the population among different pursuits, and enables us to es-cape the transportation charges and other wastes of foreign trade, except as to the very few articles to the production of which this country is not adapted but which we have acquired the habit of using.

I am in favor of protection because it tends to the elevation of the people, the improvement of machinery, and the ultimate cheapening of products, whereas free trade tends to cheapen the wages rather than the products of labor. Protection cheapens products, while free trade cheap-

ens producers

I am in favor of the high protective duties which have existed since the beginning of the civil war, because they have stood the best test, that of experience. At no time in our history has the country been so prosperous as it is to-day, and its labor and capital have as a whole never been before so actively and profitably employed. This is proved by the unprecedented immigration of laborers from Europe, and by the extra-

ordinarily rapid accumulation of wealth in all sections.

I am in favor of the protective policy because it sustains the country with all the pillars, buttresses, and girders of civilization, promotes the arts and sciences, and tends to build up such numerous cities, towns, and centers of population as will bring schools, colleges, libraries, exhibitions of art, and all the social enjoyments within the easy reach of the people

in all localities

I am in favor of the protective policy, because, instead of leaving the several sections of the country to be each devoted to the production of some single raw material or class of raw materials, and to rely for the greater part of what they consume upon exchanges with foreign nations, it will finally carry nearly all the industries into every section, so that the bulk of the exchanges of each may be made within itself, and therefore to the best advantage, and by transactions between producers and consumers with the smallest possible number of intermediaries

I am in favor of the protective system, because it is specially recommended to this country by the greatness of its area, which is equal to that of all Europe, and includes all the habitable latitudes except the intertropical, and every conceivable resource of mines, forests, fisheries, and soils, thus exempting us from any real necessity of encountering the risks, entanglements, fluctuations, and unavoidable costs of foreign

In the discussions upon this bill it has been assumed in many quarters In the discussions upon this bill it has been assumed in many quarters that it is a sufficient reason for lowering or repealing the duty upon any article that it is an article of universal consumption, and that consequently the public interest demands that it should be cheapened in its money price. To deal with a protective system in that way is to its money price. To deal with a protective system in that way is to destroy it in detail, because in respect to every given article the consumers are always more numerous than the producers, and a majority will be sure to be against a tariff, item by item, until the whole of it is overthrown. It is necessary to protect all the articles coming within the proper rule of protection. To suppose that anything is to be gained by cheapening the money price of particular articles, is to overlook the fact that the purchasing power of the people will decline with any cheapening of prices which is brought about by diminishing the sum of home industries. If it is proper as it is sometimes said to be, to home industries. If it is proper, as it is sometimes said to be, to cheapen articles of prime necessity by importations, it is equally proper to cheapen the prices of all articles by the same method and for the same reasons. The theory of protection is, that whatever may be its

effect upon money prices it increases the purchasing power of the people by promoting all industries in a just proportion as between themselves, so that they mutually support and sustain each other.

If the rule is sound that everything should be produced at home which can be produced here with as small an amount of physical and mental force as is necessary to produce it elsewhere, the only thing to be considered in fixing the rate of a duty is the keeping out of the foreign article. It is conclusive evidence that tariff duties have not been placed high enough on any article which comes within the rule, so long as the importation continues. No duty should be lowered as long as the foreign article is being imported; but on the contrary the duty should be raised until it becomes unprofitable to bring it in, care being taken not to advance the duties too rapidly nor until the home production has become sufficiently developed to supply the wants of the country.

Prohibitive duties may be and are denounced as "a Chinese wall" around the country; but it is just such a wall as we want-broad enough, around the country; but it is just such a wall as we want—broad enough, high enough, and strong enough to keep for our own enjoyment the prosperity and scale of comfort which properly belong to our natural and acquired resources, and to shut out the poverty and the products of the scanty, pinching wages of less favored countries.

It is wholly immaterial whether money prices inside of this wall are high or low. It is sufficient to know that they will be such prices as will result from perfectly free and unrestricted trade between citizens

of our own country and from the free exchanges of the product of each industry for the products of all other industries under circumstances which exclude monopoly or special privilege. It is sufficient to know which exclude monopoly or special privilege. It is sufficient to know that they will be such prices as will arise from an equalization of profits and wages and opportunities, as between our own people in all their varied pursuits, which insures the only species of competition which is either fair or endurable—the competition between those who are on the same plane as to the scale of comforts to which they are accustomed

and of taxes to which they are subjected.

And, finally, it is sufficient to know that they will be such prices as will arise from the highest attainable civilization and from the greatest possible advancement of the arts and sciences and from the just distribution of population and industry. Or, in other words, they will be such prices as arise from the most complete control which man can obtain over the hidden forces of nature, through which more, incomparably more than by the mere exertion of human muscle, are the objects of human desire cheapened and riches multiplied.

objects of human desire cheapened and riches multiplied.

Of the pastoral condition, which was that of the primitive ages of the race, the poets have given us pleasing pictures. Nevertheless, it is through the diversification of industries and aggregations of population that the highest civilization is attainable, and that man is most advanced morally, socially, and intellectually, as well as in material wealth. If his vices are not extirpated they become less gross and his selfishness loses some of its repulsive features. Arcadian simplicity is an attractive phrase, but what is described as the state of nature, instead of being the condition in which it is natural for man tremain, is a condition from which all his highest and best aspirations remain, is a condition from which all his highest and best aspirations

The movement of the race in the path of civilization is not a retrograde but a forward movement. This country should tread in that path with a firm and unfaltering step, until it becomes what its geographical position, its natural resources, and the genius of its people fit it to be, the central and chief seat of all the sciences, arts, and industries which multiple the onicements college the processing and dustries which multiply the enjoyments, enlarge the capacities, and cultivate the moral and social sentiments of man.

## Reduction of Internal Revenue.

# SPEECH

## HON. J. RANDOLPH TUCKER, OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1883,

On the bill to reduce internal-revenue taxation.

Mr. TUCKER said:

Mr. SPEAKER: This bill proposes to reduce revenue by relieving the banks of certain taxes and by taking off taxes on matches, checks, patent medicines, &c. Thus far it is the bill passed by this House at the last session, against which I voted because it did not go far enough. It now proposes to add a reduction of tax on tobacco from 16 to 8 cents per pound and a corresponding reduction on cigars, &c.

The reduction of revenue to be effected by this bill, estimating the revenue for the year 1881-'82, will be for those subjects embraced in the bill as at first proposed \$18,777,983.77.

The reduction upon tobacco and cigars, &c., will be about \$23,600,000. This would afford a great relief to the tobacco-planting interests. But it does not go far enough. I desired to amend the bill by moving an amendment for an entire repeal of all taxes on tobacco and cigars and on all dealers in either. There is no reason why there should be a disturbance of the tobacco trade to make this reduction, to be followed by another disturbance as the inevitable result of a future and final repeal. I believe the whole tax should be repealed in the interests of the consumer, the manufacturer, and the planter.

The only possible objection to a total repeal is the need of revenue. Let me examine this.

The Secretary of the Treasury estimates as the revenue for the current year of 1882-'83 as follows:

Customs Internal revenue Public lands. All other sources.	4, 500, 000
Total	415 000 000

Against this enormous revenue we must charge the expenses as fol-

1	lows:	
	Interest on debt	859, 500, 000 85, 000, 000 135, 000, 000
	Total	279 500 000

This would leave a surplus of over \$135,000,000. Now, taking off the taxes proposed by this bill and we reduce revenue about \$41,000,000. Taking off the whole tobacco tax, including cigars, &c., and the total reduction would be about \$65,000,000, and this would leave a surplus

still of \$70,000,000—more than enough to pay all expenses of Government and a just amount due to the sinking fund.

I object to the bill as it is, because it gives stinted relief to the tobacco interest while it entirely relieves the banks and other interests from all taxation. The time has come for a repeal of this burden on tobacco and for cutting off one limb of this colossal system of internal revenue, whose patronage, influence, and power are sources of individual oppression to citizens and of corruption in elections of the people.

The Democrats of this House in solid phalanx voted for total repeal at the last session against the almost as solid phalanx of Republicans. Partial reduction is not our policy. Total repeal is what the country demands and our tobacco interest needs.

But I can not refuse, as the right to propose an amendment has been depictly me by the phalanx of the propose and according to the propose according to the propose and according to the propose accordi

denied to me by the chairman of the committee [Mr. Kelley] interposing his objection, which, by the rules of the House, suffices to exclude my amendment, to vote to relieve the tobacco section from this heavy burden resting on it for more than twenty years. I shall vote for it as partial relief to the tax-burdened people of the country, and hope in some way to achieve the entire relief hereafter so much desired.

I more deeply regret that the persistent efforts of the protectionists of this House to keep up the duties on imports menaces the country with a continuance of the tariff system for another year. I have striven with others during this session and the last to lessen the weight of taxation on the people, not by decreasing revenue so much as by decreasing taxation, for tariff taxation has two reservoirs to fill; the one the Treasury, the other the coffers of the protected classes. When you lessen the revenue to the Government by increasing the tariff, you increase the burden of the citizen by augmenting the bounty he pays to the privileged monopolists.

the privileged monopolists.

Let not the people be deceived. When a tariff is so laid as to decrease the revenue it may be done, as the gentleman from Pennsylvania [Mr. Kelley] said the other day, not by lowering but by increasing the duty. That increase puts into the pockets of the protected classes money which would have gone into the Treasury if the tax had been decreased. Thus the Government would get more by a less burden on the man, and the monopolist only would suffer a decrease of his dividends.

We are willing now to pass any tariff bill which will give substantial relief. But we will not help the passage of any hill which keeps the

relief. But we will not help the passage of any bill which keeps the word of promise to the ear and breaks it to the hope; which does not diminish the revenues of the Government as well as the profits of the manufacturers, and keeps up a system under whose malign influence the consumers of the country are made to pay heavy tribute to the privileged caste, built up and fostered by a government which claims to be one of equal laws under a constitution framed to establish justice and to do right to all.

But if I can not get all the relief the people have a right to demand I must take all that can be wrung from the iron grasp of the greedy horde who use the power of the Government to feed and fatten on the hard-earned means of the mass of the people, under unequal and unjust legislation. For this reason I shall vote for this bill. The following is the amendment I desired to offer to this bill:

SEC. —. That from and after the 1st day of May, 1883, all laws imposing taxes on dealers in leaf-tobacco, on dealers in manufactured tobacco, on all manufacturers of tobacco, on manufacturers of cigars, on peddlers of tobacco, snuff, and cigars, and on retail dealers in leaf-tobacco, shall be and are hereby repealed; and all laws prohibiting farmers and producers of tobacco from selling tobacco of their own growth and raising shall be and are hereby repealed.

SEC. —. That from and after July 1, 1883, all laws assessing and imposing inter-

nal taxes on snuff, smoking and manufactured tobacco, and on cigars which shall be manufactured and sold or removed for consumption or sale on and after the 1st day of July, 1883, shall be and are hereby repealed: Provided, That on all original and unbroken factory packages of smoking and manufactured tobacco and snuff, cigars, cheroots, and cigarettes held by manufacturers or dealers at the time such repeal shall go into effect, upon which the tax has been paid, there shall be allowed a drawback or rebate of the full amount of the tax hereby repealed, but the same shall not apply in any case where the claim is less than \$10 and has not been ascertained or presented within thirty days following the date of the reduction; and such rebate to manufacturers may be paid in stamps at the repealed rate. It shall be the duty of the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, to adopt such rules and regulations and to prescribe and furnish such blanks and forms as may be necessary to carry this section into effect.

Death of Hon. R. M. A. Hawk.

SPEECH

# HON. JOSEPH WHEELER.

OF ALABAMA.

## IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 6, 1883,

On the announcement of the death of Hon, Robert M. A. HAWK, late a member from Illinois.

Mr. WHEELER said:

Mr. SPEAKER: When a few hours ago I was honored by the gentlemen of the Illinos delegation with an invitation to participate in these mournful ceremonies I felt embarrassed for the reason that I apprehended that without preparation I would be unequal to the task. This reflection inspired me with reluctance to assume so prominent an attitude. But when I recalled the shock which I felt when I heard of the death of our lamented friend, and the circumstances under which I made his acquaintance, which though brief was of the most pleasant

made his acquaintance, which though brief was of the most pleasant character, I could not hesitate in my reply.

In December, 1881, when the Forty-seventh Congress assembled in this Hall, a manly, commanding form could be seen in the row of seats directly in front of the Speaker's desk. There was much in his appearance to attract attention. Ever at his post of duty, he carried with him a sad reminder of the past which he could not conceal—the evidence of heroic service, the badge of honor won on the field of battle.

But now we miss him in his wonted place, And search in vain for that congenial face

Mr. Speaker, there is an overwhelming sadness in the contemplation of the image of a dead friend, whom we can see in all the vividness of reality, as he lived and moved in our midst, while we know certainly that he has gone away from us forever, that we shall meet him never again upon this earth. But in the language of the sacred preacher:

"Man goeth to his long home, and the mourners go about the streets." And in these touching lines we are reminded that nowhere is there exemption from the inevitable decree:

"There is no flock, however watched and tended, But one dead lamb is there; There is no fireside, howsoe'er defended, But has one vacant chair."

By the providence of God it is so ordered that time gradually throws the veil of oblivion over melancholy memories, while it opens up in dewy freshness all the joyous recollections of the past. So the wounded

soldier whose virtues we commemorate to-day, forgetting the gloomy sufferings and agonies of war, cherished only the flower-crowned memories of the march, the bivouac, and the battle.

I hold in my hand a history of the regiment in which Major HAWK was one of the highest officers, and certainly one of its leading spirits. My hurried perusal of this volume shows that our late competer was two of the hyper man who led the few tim that almost continuous buttle. one of the brave men who led the front in that almost continuous battle from the Ohio through Kentucky, from the Cumberland through Tennessee, and from the Tennessee through Georgia to the Atlantic Ocean.

With the gallant ROSECRANS he breasted the storm of death at Mur-

freesborough and under the same intrepid commander led the van in the

historic conflict at Chickamauga.

His troops were part of the surging line which charged with such desperation on that bright sunny morning at Kenesaw.

He was in the terrible onslaught at Atlanta, and in the leading col-umn in the march preceding the battle at Jonesborough. In that en-gagement he fought with unusual bravery, and in the march to the sea, fighting at every step, he earned the commendation of General Sherman, his distinguished commander.

At Macon, Buckhead Church, Waynesborough, Aiken, Averysborough, and on hundreds of other fields, towered the portly form of him who was so lately with us in this Hall; and with the sound of victory upon

his ears he fell wounded in one of the last battles of his gallant chieftain, the present honored commander of our Army

Much that I read in this work I heard from Major HAWK's own lips, Much that I read in this work I heard from Major HAWK Sown Hps, who, on our first meeting, spoke of me as one who had often been very near him during the conflicts to which I have referred—on opposite sides, of course, but still near each other on American fields of battle—and this very fact seemed to awaken our mutual sympathies and tended

gently but surely to draw us together into cordial relations.

Let no man doubt the real cause of this almost instantaneous cordiality. It is this: We had in fact never been enemies. The word enemy is not the word to use in reference to our differences of position. We had simply been arrayed in opposing attitudes. Between the individual people of the North and the South there was no real enmity. Let the historian, the philosopher, the statesman, while he pauses with amazement and admiration, as he contemplates these great, lately-contending hosts laying down their arms and assuming so readily and even gracefully the most friendly relations, find his answer here: There had been no real enmity

Our war has no parallel in military literature. It is unlike all other wars in many of its leading features.

The most sanguinary of the English wars comes down to us in history under the softest and sweetest of names. It is called the War of the Roses. Under that gentle and poetic designation lie concealed the hideous features of a strife the most feroclous of any in the annals of modern warfare, waged as it was by brothers and kinsmen. It was, nevertheless, so wholly unlike our war that the distinguishing characteristics of the two may be profitably contemplated, contrasted, and studied.

That too, it is true, was a civil war, a war rendered the more terrific by the personal hostility of the combatants, for into that war entered all the fiercer and darker passions of the human heart, envy, jealousy, hatred, malevolence, malignity, and revenge, the most aspiring pretensions and the most inordinate ambitions, all prompted and urged by the family pride of the nobility and the autocratic prerogatives of roy-

It was a war waged for nobility, the nobility of persons where titles and place, manors and earldoms, crowns and kingdoms were the stakes; where the result was the tyrannical dominance of family on the one side and individual extermination on the other. While titles and crowns awaited the victors, the frowning executioner stood hard by with his keen ax eager and anxious to chop off the heads of the vanquished.

Let us contrast this picture of war for a single moment with this more

cent one of ours

Our civil war, while it was one of the most sanguinary and terrific that ever employed the arm of the soldier or engaged the pen of the his-torian, was at the same time one of the most singular and remarkable ever recorded, in this one distinctive characteristic: that, as between ever recorded, in this one distinctive characteristic: that, as between the soldiers who met and fought each other so desperately, there was not and never had been, and from the nature of things never could be any individual personal hostility, none of that despicable feeling known as hatred. No revenge, no ambition, no malice, no blood-thirstiness. They had marched and fought and triumphed under the same flag for pearly a century. They had seen their recordington grow from these to They had marcuest their population grow from the content of the co

of anger but in the fulfillment of duty.

It was a war built upon abstractions; not made nor sought nor wished for by the people at large, but rendered inevitable by extraor-dinary circumstances and by the irreconcilable conflict of opinions. Hence, when this people met each other face to face as foes in war they were amazed, perplexed, and confounded at the most unnatural aspect and felt in their hearts more reluctance than hostility, more regret than revenge, more sorrow than anger.

In such a war the savage instincts of ferocity could have no place, and hence, upon the close of such a war, there could be no revenges to gratify. Hence, also, the instantaneous national reconciliation which so

gratify. Hence, also, the instantaneous national reconciliation which so puzzles mankind in the outside world is but the natural result of the reunion of that sentiment (broken but for a moment) which is the real characteristic of American civilization, that is, the design to work out the problem of human liberty and to establish the rights of man by the unity of labor, the unity of mind, and the union of the States. People of Ilbinois, allow me to plant the rose and the laurel upon the grave of your departed hero, a soldier brave and determined in war, a citizen loved and respected by all who knew him, and a servant to his people, faithful to every duty. Paladin of an hundred battles, yet the pride and pomp and triumphs of war had not so carried him away as to make him lose sight of the humbler callings of good citizenship; and consequently we see in his career in civil life the same unerring integconsequently we see in his career in civil life the same unerring integrity that carried him successfully through the war marking his demeanor as the industrious official, ever at the post of labor, thus commanding confidence and trust and assuring success amid the plaudits of his fellow-citizens, eminently exemplifying Pope's often quoted, but most true weekle. true words:

Honor and shame from no condition rise Act well your part, there all the honor li

## Reduction of Internal-Revenue Taxation.

## SPEECH

# HON. WILLIAM R. COX.

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 20, 1883,

On the bill to reduce internal-revenue taxation.

Mr. COX, of North Carolina, said :

Mr. COA, or North Carolina, said:

Mr. SPEAKER: The bill presented for our consideration is one passed at the first session of the present Congress, with an additional section proposing a reduction of the tax on tobacco of about \$23,000,000.

As it passed the House at the last session it simply removed the tax on

As it passed the House at the last session it simply removed the tax on capital and deposits of banks and bankers, stamps on checks, &c., medicines, perfumery, and matches, making a reduction of about \$18,000,000. That bill was opposed by myself and others entertaining similar views, inasmuch as it failed to give relief to the laborer and producer, while it sought to relieve those best enabled to bear the burdens of taxation.

it sought to relieve those best enabled to bear the burdens of taxation. It was supported by distinguished gentlemen on the other side who to-day oppose this bill upon the ground that it proposes to remove the tax in part from tobacco, a product not grown in their localities.

As is well known, I have always been an earnest advocate for the repeal of all internal-revenue taxation, believing it to be anti-republican in its tendency and burdensome and oppressive in its mode of collection. It has never been resorted to in this country except in cases of extreme emergency, and surely when this repeal is recommended by the President in his annual message as well as hy the Segretary of the President in his annual message, as well as by the Secretary of the Treasury, and there is a surplus revenue of over \$150,000,000 annually collected, there can be no valid reason urged for its continuance.

The bill under consideration is not altogether satisfactory. It does not go sufficiently far in its measures for relief. It still proposes to leave the present cumbrous and irritating machinery for collecting these taxes in existence. It continues a system of espionage, information, and oppressive agencies which frequently leads to conflicts and even bloodshed, and proves most oppressive to that class who are least able to bear the expenses of litigation.

But I will not dwell on that subject at present. Suffice it to say that amidst numerous propositions which have been for months discussed looking to a relief from taxation this bill comes nearer relieving the farmer, the producer, and those directly connected with him than any other one proposed. It grants to manufacturers and dealers a drawon all original and unbroken packages on hand at the time the law shall go into effect where the claim shall amount to \$10. It permits farmers and producers to sell tobacco of their own raising to consumers to an amount not exceeding \$100 annually, and reduces the amount of

tax on retail dealers and peddlers.

There is no industry of my State which has suffered more in conse-There is no industry of my State which has suffered more in consequence of this agitation of tax relief without some final action than the tobacco interest. With the continual agitation of the proposition to remove the present tax of 16 cents per pound on tobacco the manufacturer has been virtually paralyzed. His factory hands were necessarily discharged or continued on meager wages, and great suffering followed. The farmer has found great difficulty in finding a purchaser when the manufacturer was left in doubt at what time the tax might be removed and a large stock left on his hands with the uncertainty of a rebate being allowed.

allowed.

Now, while this bill does not afford the relief demanded by the country, yet it is a movement in the right direction, and wisdom would died. tate that in such an exigency when you can not get the whole you had better accept the half loaf. There is but one voice among all parties in my State in regard to the question of internal-revenue taxation, and that voice demands its total abolition. While there are subjects taxed under this system in which they are not interested, yet on principle they desire to see them relieved, recognizing the justice of granting the same measure of relief to others which they demand for themselves. The Republican party in this Congress has shown itself incapable of dealing with the problem of tax reform, and I fear unless we accept this inad-

equate measure of relief none whatever will be secured at their hands. The session is now drawing to a close; but few more working days remain. Appropriation bills and other important matters of legislation now stand in our way, and what right have we to expect that a party which consumed eight months without effecting any reform, only appointing a Tariff Commission to roam about the country to gather testimony and formulate a plan for our action, which when brought forward was at once repudiated, while the very committee which was declared in the last Congress incapable of dealing with this question presented a substitute for the action of the commission which has been discussed up to this time without a conclusion—I repeat, what right have we to expect any other relief at the hands of this party? If this measure should be adopted the present revenue machinery and officers may be

dispensed with at the meeting of the next Congress, and if they are not we will have at least reduced the surplus revenue of the Treasury, which stands as a continual invitation to corruption and extravagance. In view of the foregoing I can see but one thoroughfare of escape, which is to support the bill and leave to a Congress fresh from the people, in harmony with their views, and selected for reform the matter of making such additional modifications of the present system of the country demand.

ter of making such additional modifications of the present system of taxation as the necessities of the country demand.

I have purposely refrained from consuming the time of this session in a discussion of the various propositions in regard to taxation which have from time to time been presented for our consideration, but have been content to express my approbation or disapprobation of measures by my vote. The Republican party is responsible for the legislation of this Congress. I was willing for it to have full rope, to aid it in every just measure of relief, and not to obstruct it in its efforts to secure proper legislation. It is a matter of regret that thus far it has not done more to command support. While I have grave doubts as to any good it may accomplish, yet I trust it may still do more to relieve the burdens of the people than it has thus far given promise of.

## Death of R. M. A. Hawk.

# SPEECH

# HON. ANDREW G. CURTIN.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 6, 1883,

On the announcement of the death of Hon, Robert M. A. Hawk, late a member from Illinois.

Mr. CURTIN said:

SPEAKER: The story of the life of our dead colleague has been faithfully told, and in the few remarks I have to make I shall not at-tempt to repeat it.

learned to know Major HAWK early on my first entrance into this Hall as a member and knew him well and was honored by his friend-ship. It would be false to his memory if I were to attempt to exalt him into a great orator or statesman or philosopher. Much better and more useful in all the avocations of life, he was an honest, pure-minded, upright man of broad common sense and gentle, kind-nature.

I am quite sure it is proper for me to refer to one circumstance in his offi-cial conduct which illustrates his unselfishness and his delicate estimate of propriety when he had a personal interest in the result of his action.

When the committee of which I was a member had under considera-When the committee of which I was a member had under consideration the bill introduced into this House, and to the honor of its members passed unanimously, to give a pension of \$40 a month to those who had lost an arm or a leg in the military service in the late unhappy civil war Major HAWK refused to vote. I tried to persuade him that he was quite too sensitive; but, offering as a reason that it would add to his income \$200 a year, he refused. And that bill was carried through the committee and reported to this House in his absence.

It was a pleasant exhibition here, which we have just had given us [referring to the remarks of Mr. WHEELER] from a gallant soldier below the line who has just haid a triphte so beautiful and trutful to

low the line, who has just paid a tribute so beautiful and truthful to the memory of our late colleague, supplemented by the eulogy of his commander (General Rosecrans), soldiers who were enemies and now in friendship paying the homage of respect soldiers must feel for mar-tial virtues. The history of his life and his services, the exhibition of the purity of his character is creditable to his colleagues and his friends

and has been fitly spoken.

His attachment to his family, the sorrow of that home circle, is a subject quite too sacred for the formal demonstration on this occasion.

There we should not enter. God struck the husband and father and God will pour balsam and balm into the wounds he has inflicted on the bereaved family, and nothing that can be said here can in the least relieve their deep sorrow.

is for mortal man to die, as we have been frequently reminded during this Congress. It is for those who live to so discharge their duties, personal and relative, that when they die their memory will be preserved. When a good man dies there is a void in society, an aching void which it seems impossible to fill. But when a man dies who has failed to fulfill his duties to man and his country and those who surrounded him in life there is but a modicum of regret at his departure, and he is soon forgotten. But whether high or low, whether statesman or peasant, whether rich or poor, the man is to be most remembered who patiently works in his allotted phere and faithfully discharges his

I found Major HAWK to be a man of that kind, and this House properly honors the memory of a Representative who was honest and faithful and true in all the relations of life; who had strong convictions

and pursued them; who had the courage to perform his duty and follow the right, and well he knew what was the right. Over his grave, from a short acquaintance with him, I desire to express sorrow at his death and gratification that his memory is to be embalmed, as we are told, in the community where he lived and by a constituency he faith-

fully served on this floor.

I say that we have been called often in this Congress to mourn the dead taken from this Chamber, so many during these short two years, men of long, useful, public service, and some who had scarcely reached the meridian of life. Who can tell when the portals of this Hall shall again open to the great destroyer who may enter and seize another victim? Who knows who that victim will be, whether old or young, whom we may be called upon again to mourn and pay these formal fitting ceremonies? When that time shall come I trust that over the dead body of another member of this House it may be said, he died an honest man, the noblest work of God, a sentiment never too old to be repeated.

Mr. Speaker, all humanity is made of one family—the living and the dead. Those who go before us shed their benefactions upon us by their

good works. If they have worked patiently in their allotment, if they have discharged their duties, personal and relative, if they have dealt honestly with their fellow-men, if they have sustained and supported the Government of their country as did our dead colleague in its dark hours of distress and necessity, and have acknowledged their allegiance to Almighty God, they will shed their benefactions upon us.

When we have filled our allotted time and the destroyer comes to us, may it be said that we have so discharged our duties that when we are

gone we will leave something that posterity may imitate. That is all of life; it is all of death; it is all of humanity. Well did Major HAWK fulfill his duties and leave to his family the priceless legacy of a useful

and blameless life.

I render this brief tribute to his memory; a generous, kind-hearted, upright man. He was maimed in the service of his country and day and night he suffered constant pain, which he bore with the fortitude of a soldier and resignation of a Christian. To his memory as a soldier, as a member of this House, and higher and holier emotion of the heart, to his memory I yield the homage of my respect, because he was my friend.

Commercial Relations with Central and South America.

SPEECH

## HON. JAMES B. BELFORD. OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 15, 1883

On the bill (H. R. 7529) to promote our commercial relations with Central and South America.

Mr. Speaker: On the 5th day of the present month I had the honor of introducing in this House a bill to promote our commercial relations with Central and South America. The bill itself is in all respects identical with the one contained in Mr. Hinton R. Helper's memorial to Congress which, with the fullest approbation and pleasure, I had previously introduced in this House, as may be seen by reference to our proceedings

here on the 17th day of January.

The memorial and the bill, both of which should be considered in connection with each other, are characterized by a length and breadth and depth of meaning and purpose which amid many other matters of more than ordinary interest and importance may not as yet have secured merited attention. The objects ultimately sought to be achieved by the bill are supremely commercial and pre-eminently American; and by the use of the word "American" in this case I have reference to all the countries and all the peoples of the two great continents which, so far as land is concerned, constitute the bulk of the Western Hemisphere. According to the geographical designations found in our best maps and atlases, the three grand divisions, or rather sections, of land to which I allude are specifically known as the three Americas, North America, Central America, and South America.

Railway intercommunication between all the independent and contiguous countries of the two great American continents, as a measure indispensably necessary to the full development of their wonderful natural resources and their perfect rescue and future freedom from a species of commercial thralldom to which they are still subjected, as they have always been subjected, by certain portions of the Eastern Hemisphere, is substantially what the memorial and the bill seek to accomplish. I have already, in other places and on other occasions, professed myself warmly in favor of the intercontinental highway thus projected because I believe it will bring about a more perfect assimilation of the

legitimate aims and aspirations and secure a more thorough unification of the individual and national interests of all the peoples of the western world. It will impart new zest to the intercourse and comity of nations, and its influence will be universally favorable to the successful incep-

and its influence will be universally favorable to the successful inception and prosecution of internal improvements of every sort.

While it will greatly facilitate direct and rapid communication between the inhabitants of distant sections of our own continent, it will also open avenues, everywhere ornamented on both sides with the delightful and enduring evidences of peaceful industry, to the still more distant dwellers of our sister continent. Besides creating large demands for our manufactures and other commodities, it will stimulate the growth and increase the strength of our sadly crippled mercantile marine. It will more clearly and conspicuously than ever before demonstrate the incommarble superiority of civil mysnits and creatly diminish the transpire of the superiority of civil mysnits and creatly diminish the transpired mercantile marine. will more clearly and conspicuously than ever before demonstrate the incomparable superiority of civil pursuits and greatly diminish the tumultuous and deleterious incentives to war. By gentle methods and friendly examples, rather than by rash or violent proceedings, it will afford far better protection and security to life and property, and its civilizing effects will be recognized and appreciated in the remotest as also in the nearest abodes of all kindly-hearted and thoughtful men. Shall the feasibility of this gigantic enterprise, its desirability, or its indispensability, viewed from the standpoint of enlightened prudence and patriotism, be seriously called in question? It has been stated as a fact that from the very dawn of history the most beneficial and unselfish undertakings have been almost invariably regarded at first with per-

undertakings have been almost invariably regarded at first with peculiar distrust and shyness, principally perhaps for the reason that they were but imperfectly comprehended. A few notable instances of human incredulity, not of ancient nor of mediæval times, but of very modern occurrence, may be fitly alluded to in connection with the propo-

sition now made for opening railway communication between the United States and Central and South America. Benjamin Franklin was slandered and shunned as an impious man because he boldly attempted to control and utilize the electric forces of atmospheric and ethereal space, it being feared that he was profanely atmospheric and ethereal space, it being leared that he was profanely intrenching on one of the mysterious and sacred properties of heaven. Later, while more successfully engaged in the same line of investigation and experiment, Professor Samuel F. B. Morse was looked upon with profound pity, if not contempt; and one of the grave and benevolent statesmen of the day, to whom the electrician had respectfully appealed for reasonable co-operation in his efforts, was considerate enough to suggest that a permeant home should be previded for the Professoria. gest that a permanent home should be provided for the Professor in a lunatic asylum. Robert Fulton believed and declared that he could successfully apply steam to the purposes of river navigation; wherefore it was said that the man was evidently crazy, and the question arose whether it might not be unsafe to permit him to go at large.

whether it might not be unsafe to permit him to go at large.

Dr. Dionysius Lardner, able and eminent as he was in several branches of science, solemnly warned the world against the wiles of the evil one in whispering steam as a substitute for wind in ocean navigation. When the learned and practical chemists of London and Edinburgh first asserted the possibility of illuminating those cities well and cheaply with gas, Sir Walter Scott laughed at them and ridiculed and denounced them as no better than alchemists or mountebanks, who, under plausible but following their scott plausible gas to the processor of making their scott plausible and the processor of making their scott plausible and the plausible gas the processor of making their scott plausible gas the plausible gas the plausible gas the processor of making their scott plausible gas the but fallacious representations, harbored sinister designs of making their own fortunes out of smoke! George Stephenson, the first projector and builder of a railroad, was for a long while thought to be the victim of a hopeless self-delusion. Early in the year 1845, Asa Whitney, one of the most worthy and far-sighted patriots of his day, projected and earnestly advocated the Pacific railroad; but being regarded as a semidemented enthusiast, he failed, through no fault of his own. but through demented enthusiast, he failed, through no fault of his own, but through the fault of his countrymen to enlist proper attention to his most meritorious scheme. Less than thirty years ago Cyrus W. Field bravely and wisely undertook to establish a line of submarine telegraphy between the United States and Great Britian. People shook their heads and smiled, and complacently repeated the old proverb, that "a fool and his money are soon parted." But the fool in that case was certainly not found in the person of the daring and successful layer of the Atlantic cable; for he still lives in health and honor, and his wealth to-day, though possibly overestimated, has been figured out at not less than though possibly overestimated, has been figured out at not less than \$50,000,000.

According to William Appleton, of Boston, the Legislature of Massi-chusetts, in 1829, when Stephenson's projected iron road from Liver-pool to Manchester was still incomplete, appointed a survey to ascertain whether it was practicable to construct a railroad from Boston to Lowell; the distance, over a comparatively level country, being only about twenty-five miles. Another duty imposed upon the surveying party was to estimate and make known the probable cost of building the road, provided it could be built at all, so as to carry freight and ressengers with research the cost of the cost passengers with reasonable safety and expedition. To defray the expenses of the survey, the Legislature was liberal enough to appropriate the sum of \$250! The surveyors, who, for those railroadless days, must have been good engineers, reported the scheme as feasible, and estimated that the cost would not exceed \$400,000. New surveys and estimated were demanded by the promoters of the enterprise, who appointed a committee of their own to perform the desired services. In 1831, two years after the action of the Legislature, the private committee virtually confirmed the report of the State officials; but so marked and gen-

eral was the lack of confidence on the part of capitalists at that time touching a project of this kind that the requisite amount of stock was not sabscribed until long after the books for that purpose had been opened.

From 1845 to 1862, during the progress of the discussion in Congress of questions affecting the proposed Pacific Railroad, many of the ablest of questions affecting the proposed Pacific Railroad, many of the ablest speeches and reports made upon the subject, in point of mere intellectual ability, were extremely hostile to the measure. It was argued that the project was neither desirable, feasible, nor politic; that the plains between the Mississippi River and the Pacific Ocean were bewilderingly monotonous, sterile, uninhabited, and uninhabitable; that the mountains were perilously elevated, irregular, rugged, and insurmountable; that the valleys were devoid and always would be devoid of water, that the lighter reals of the rest. that the valleys were devoid and always would be devoid of water, fuel, soil, food, and population; that the higher peaks of the mountains, some of which would need to be ascended and passed over by the road, were covered with snow eight months in the year; that for a distance of 1,500 miles or more there would be no "way business;" that the enormous sum of at least \$400,000,000 would be required to build the road; that the whole enterprise was only a scheme of financial absurdity, if not something worse; that utter bankruptcy would surely overtake the project, and that if persisted in it would inevitably entail upon the Government of the United States an ever-increasing and ruin-

Yet notwithstanding all the raven-like croakings and discourage ments uttered by even the ablest enemies of progress, the good common sense of our people finally prevailed, the Central Pacific Railroad was built, and it has been in most successful operation ever since 1869. Not only so, but it was soon found that one transcontinental road alone was quite insufficient for the amount of largely increasing business bewas quite insumeient for the amount of largery increasing business between the great and growing West and the gorgeous East. A second leading latitudinal line, the Southern Pacific, has but recently been completed; a third, the Northern Pacific, is in rapid progress of construction; and a fourth, the Canada Pacific, will be ready to convey freight and passengers from ocean to ocean within the next three or four years. Mexico, too, an adolescent giant of splendid promise in the family of nations, will soon have in operation at least one Pacific rail. family of nations, will soon have in operation at least one Pacific railroad.

It may be safely inferred that it is only a question of a few years when from Mexico to the Argentine Republic, inclusive, every Spanish-American commonwealth, following the example of the United States, will have its Atlantic and Pacific outlets for trade and travel by rail, all the latitudinal lines tapping or crossing the great longitudinal line already denominated the Three Americas Railway. To hasten that day, a day not of small things but of great things, is the object of the day, a day not of small things but of great things, is the object of the memorial and the bill for which I am now speaking. That glorious day which will be certain to render the long-mooted Monroe doctrine a grand reality will indeed be a day for the mutual rejoicing of two continents, for the joint jubilation of seventeen nationalities, for the uplifting of the harmonious and happy voices of 100,000,000 of free, enlightened, and progressive American citizens, as if bedecked in holiday attire and holding each other hand in hand in a sort of merry-goround, from Chili to Alaska. This expression, Mr. Speaker, may sound alightly poetical, but it is less so in fact than will be fore us; for in this case, as in so many others, truth will again prove itself to be stranger case, as in so many others, truth will again prove itself to be stranger than fiction and deeds infinitely more weighty and worthy than words.

What are some of the most important results which have followed the building of so many railroads in the United States, and what will probably be the effect upon other American nationalities by undertaking and carrying out successfully corresponding improvements? An excel-lent reply to the first part of this inquiry, and inferentially a good re-ply to the second, is contained in the last edition of Poor's Railroad ply to the second, is contained in the last carrier Manual, from which I make the following quotation:

Manual, from which I make the following quotation:

The enormous increase of our foreign commerce is due almost wholly to the increased exports of provisions and breadstuffs, the products of those portions of the country most distant from markets and in which railroads have had their widest and most rapid development. In 1880 our exports amounted to \$23,946,-353, which shows an increase of about \$447,000,000 over our exports in 1870.

Of this great increase the sum of \$330,000,000 was made up of the provisions, breadstuffs, and other products of our Western States, whose wonderful prosperity and progress are almost wholly due to the construction of railroads within them. These deductions might be carried to almost any length without losing any of the interest attached to them. They afford a striking illustration of the resources of the country and of the enterprise and material thrift of the people. Their eagerness to construct railroads arises from the peculiarity of their position. As they moved inland, and they have been constantly moving inland, their markets have always remained within a narrow belt of territory extending along the Atlantic coast from Baltimore northward. Within this belt, with two exceptions, New Orleans and San Francisco, are all the great sea-ports through which our agricultural products, except cotton, chiefly find their way to foreign lands. The reaching of these sea-ports cheaply and expeditiously hase consequently been a matter of prime importance with our people at every stage of their progress.

The internal commerce of the country, in all its vast magnitude, is a direct creation of our railroads through the reduction they have effected in the cost of transportation. \*\* \* The great Rocky Mountain region presents no carterodinary obstacles to the construction within it of railroads, and its mineral wealth bids fair to compensate for any lack of agricultural resources. The total extent of lines of railroad constructed and to be constructed for the whole country may be safely estimat

roads in 1881 (the number of miles now amounting to about 115,000), our people appear to have only begun the construction of works which are to be their common highways. Railroads in this country now precede the movement inland of our population, in order to provide the means for such movement and outlets for its products. The gross earnings of all the railroads in operation in the country in the past year, 1881, were \$725,325,119, being an increase over the previous year of \$110,000,000, the rate of increase having been nearly 16 per cent. The earnings equaled \$13.00 per head of our population. Their net earnings were \$276,654,119, an increase of \$21,500,000 over those of 1880.

The amount of interest paid during the year on their funded debts was \$123,887,002; the amount paid in dividends was \$83,344,200. The cost of operating our railroads for the year 1881 was \$449,565,071, or 62 per cent. of their gross earnings. The total amount expended in the construction of new lines and in operating and improving the old roads was over \$750,000,000; the greater part of which wast sum was paid in wages. The number of persons employed in operating the roads during the year aweraged fully twelve to the mile of operated line, or 1,200,000 in all. The number employed in the mere construction of our railroads equaled 400,000, increasing the total number of employés to 1,600,000. The freight transported on all the railroads in the country in 1881, though not ascertainable with definite exactness, can not have been less than 3,500 tons to the mile, or a total of 350,000,000 tons. At an assumed value of \$50 per ton the value of the tonnage moved, on all the railroads of the United States the past year, less one-third for duplication, was, say, \$12,000,000,000,000, or more than \$200 per head of our whole population.

Too great significance can scarcely be ascribed to Mr. Poor's declaration, backed as it is by incontrovertible statistics, that "the internal commerce of the country, in all its vast magnitude, is a direct creation of our railroads, through the reduction they have effected in the cost of transportation." This is a feature of the general subject deserving special consideration in connection with the proposed Three Americas Railway, the very idea of which is based upon calculations in perfect accord with the eminently satisfactory experiences and results announced in the extract just read.

The importance of cultivating more intimate relations of trade and of social and political intercourse with Mexico, and with Central and South America, is, or soon will be, a proposition too plain to be argued; and to state that a larger share of the commerce of those natious than we now enjoy is highly desirable were only the utterance of a truism. Yet there is much reason to apprehend that few among us fully realize the present and prospective magnitude of the interests involved. We are too prone to think of Spanish America as hopelessly anarchical, or to form our estimates of the resources of those vast regions from the little we have seen of them.

It is now but little more than sixty years since these young republics threw off the colonial yoke of old Spain. It was the policy of that country to monopolize the commerce of all her colonies, and to exclude almost entirely their direct intercourse with the outer world. three centuries their trade had run in the groove that was cut for it by the mother country. Their raw products were sent to Spain in Spanish ships, and were then exchanged for Spanish manufactures. Habit is said to constitute a sort of second nature; and this routine of trade, is said to constitute a sort of second nature; and this routine of trade, and this colonial dependence upon Europe, was only interrupted, not broken, by the revolution which separated the Iberian colonies from Castile. It is true that the trade was mostly transferred from Spain to England and other European countries; but the habit of dependence upon the Eastern continent for whatever is the product of skilled labor still remains. At the epoch of the Spanish-American revolutions the people of the United States had not yet entered upon a career of manufacturing. The great and peculiar interests of New England were commerce and the fisheries. Mr. Webster was himself a free-trader, and made able and eloquent speeches in opposition to the protective nolicy which was championed by Mr. Clay and Mr. Calboun. This policy which was championed by Mr. Clay and Mr. Calhoun. country was not, therefore, in a situation to supply the demands of the South and Central American republics for manufactured goods; and their trade naturally fell into the hands of the Europeans, chiefly the English.

Prior to our late civil war the commercial development of this country was proceeding at a rate perhaps never before equaled in the history of the world; and our mercantile marine was second only to, and rapidly gaining upon, that of Great Britain. Our rising manufactures, which had kept pace with the general progress of the country, had then a fair chance to be distributed over the globe, and they were gradually making their way into many of the largest and most distant markets. But the confederate cruisers, countenanced and encouraged by the ungenerous and sinister policy of England and France, destroyed or blighted our splendid commercial prospects; and although it is now almost eighteen years since the last defiant flag was furled or sunk beneath the waves, yet we seem almost as far as ever from the period of perfect recuperation. In all else the devastations of the war have been

The country at large is twofold, perhaps threefold, more wealthy to-day than it was before Fort Sumter was fired upon, in 1861. Even the Southern States themselves have well recovered from their overthrow, and from the hasty and violent destruction of slavery; but our American commerce, or more properly speaking, our American shipping, sinks lower in rank from year to year as compared with that of other nations. Our commerce in truth has ceased to be our own; and, humiliating as is the fact, it both comes and goes to enrich the foreigner. Of our total exports of domestic merchandise in 1882, amounting in value to \$733,239,732, the comparatively pitiful sum of only \$94,162,013 was exported in American vessels! The total value of our imports of merchandise during the year 1882 was \$724,639,574; of which large

merchandise during the year 1882 was \$724,639,574; of which large amount only \$130,266,826 was brought in American bottoms.

Still, the sturdy character of our people has not changed. The same resolute and daring energy is yet active among us, and there is now throughout the country vastly more capital, at a lower rate of interest, seeking profitable investment. The failure as yet to recuperate our commercial marine must therefore be traced to other reasons. The obstructive causes which have conspired to retard and keep down our commercial aspirations are said to be twofold, the one originating in the policy pursued by the Government and the other in a change of the material of ship-building. As an alleged encouragement and protection to American ship-building the Government has seen fit to prohibit the registration of foreign-built ships, while, at the same time, wooden ships have ceased to be highly valued in competition with those constructed of iron. It is true that America has more iron and coal in her mitch than all the rest of the known or civilized world, but owing to the high wages necessarily paid for labor in this country it has thus far been wages necessarily paid for labor in this country it has thus far been found to be impracticable to build iron ships as cheaply as they can be

Another hinderance to successful American commercial competition with Great Britain and other European countries is the fact that they pay large subsidies to lines of ocean steamships, which are thus enabled to carry on commerce with countries whose trade, without such extraneous support, would not justify the venture. By force of long usage and by virtue of full and undisputed possession of the field the English, French, and German merchants have strongly intrenched themselves in the channels of southern trade, and it would now be very difficult for Americans, even with the aid of subsidized lines of steam-ships, to compete successfully with their European rivals. Experience has shown that in this country subsidized lines of steamers have but a feeble hold on the popular confidence. They are almost certain to come into disfavor and to bring odium upon the party which yields to

their overtures.

Justly or unjustly they furnish prolific themes for clamor and de-Justly or unjustly they furnish prolific themes for clamor and denunciation by ambitious politicians; and sooner or later they are abandoned by the very party that voted the subsidies or they are unceremoniously put aside by the opposing party in triumph. If it were a question of commercial intercourse with a country or countries entirely separated from us by wide seas, the reliance upon subsidized lines of steamships would or night be an absolute necessity in competition with similar devices of other nations. But as regards North and South America no such valid plea can be advanced. The views and language of the prejector of railway communication with Central and South America, as found on the fourteenth page of his printed memorial to Congress, are wholly pertinent in this connection. He says:

rial to Congress, are wholly pertinent in this connection. He says:

Europe, with her large, long-established, and liberally-subsidized lines of ocean steumers, is now, as has already been stated, far ahead of us on the high seas, and may continue so for generations to come; but the land itself, the very basis of all solid things in this world, is open to us, as it is not and acver can be to Europe; and herein and hereon, if we will but avail of the vast vantage ground which nature herself has so kindly given us, we shall indubitably achieve the grand success at which we aim. Our own shipping interests, our water-way possibilities, no less than our railway extensions, will be greatly stimulated and advanced by carrying out the intercontinental enterprise thus advocated. Orders for our manufactures and other commodities will in most cases be given in person or by letter speedily brought by railway, but much of the heaview kinds of merchandise so ordered will doubtless be freighted to its final destination, or taken far on its way thitherward, by steamers or by ships under sail. This increased and ever-increasing business between American merchants and between Americans in general—between Americans of the far South, Americans of the far North, and Americans of intermediate latitudes—will, in the very nature of things, create such a demand for American bottoms as never existed before and which will doubtless soon afterward be supplied from our own ship-yards.

The obvious dictate of common sense is to invest the subsidy in a

The obvious dictate of common sense is to invest the subsidy in a The obvious dictate of common sense is to invest the subsidy in a form which will be permanent. Subsidies paid to lines of steamers perish in the using. They are as evanescent as the ephemeral track of the ship itself over the sea. Like the horse-leech, their cry is unabatedly, "Give! give!" But a subsidy to a railroad (if subsidy it shall be called) is fixed, and is once for all. If granted at all, it need be granted only once. Its effect is to nourish a perennial plant which will fairly and continuously compensate the authors of its existence. In addition to certain valuable land grants, the Government of the United States advanced \$16,000 per mile to aid in the construction of the Pacific Railwood. certain valuable and grants, the Government of the United States advanced \$16,000 per mile to aid in the construction of the Pacific Railroad; advanced it once only, not twice nor oftener, not annually for a period of twenty or thirty or forty years, as aid to lines of occan steamers must generally be given. Nor was the advance of money to the railroad by any means an unconditional gift; it was only a loan, which is now being

properly repaid.

I have said that we are too apt to underrate the great value and importance of commercial intercourse with the Spanish-American countries; and in this remark I may include Brazil, whose dominant race is of Portuguese origin. The most recent official statistics of the foreign trade of those countries are highly interesting and encouraging, since they give evidence at once of the improvement in the social and business conditions of the peoples, of greater stability in their governments, and of a constant but still too limited increase of our trade with them. This is particularly true as regards Mexico, our nearest neighbor. This is particularly true as regards Mexico, our nearest neighbor, in whose welfare on every account we have the greatest interest; and whose

people are now beginning to realize the fact that, whatever their griev

people are now beginning to realize the fact that, whatever their grievances may have been in the past, they have no longer any reason to look upon the American people otherwise than as sincere friends.

Between the United States and Mexico there has been a marked improvement in commercial intercourse within the last dozen years, and especially so within the last four or five years. It is besides a most encouraging and gratifying fact that this improvement has been the consequence of the construction and operation of railroads within her own borders. These enterprises there, though, are still in their infancy. No perfect connection has yet been found between the roads of that counky and the roads of the United States; but a vigorous impulse has been imparted to the spirit of trade and friendly intercourse by the approximation of the termini of the American and Mexican iron highways; just as the electric spark leaps from the end of one wire to that of anjust as the electric spark leaps from the end of one wire to that of another before they are brought in actual contact.

The following tables, made up from official reports, will exhibit conditions of trade which have existed between the United States and the several countries named from the year 1867 to the present time. The tables in the Statistical Abstract of the United States from which these are abridged contain the returns of each successive year, but to avoid are abridged contain the returns of each successive years in too much detail I have taken the returns of only four or five years in the tables each case at intervals of three or five years from each other. The tables show the value of merchandise imported into and exported from the United States, Mexico, Central America, and the several countries respectively of South America. Mexico being our nearest neighbor, she will be placed first in order. For the same reason the trade with that republic will be given with somewhat greater detail than will be exhibited with the other countries.

Mexico and the United States.

	Mexico.	
Year.	Exports to.	Imports from.
1867	\$5, 395, 796 6, 264, 901 7, 460, 704 7, 966, 493 11, 171, 238 15, 482, 582	\$1,071,926 4,276,165 5,251,502 7,209,593 8,317,802 8,461,899

The foregoing table of exports and imports to and from Mexico includes only merchandise, as contradistinguished from gold and silver and precious stones. The latter commodities, gold and silver especially, go backward and forward from country to country, like water seeking its level; and they should not be taken as exponents of the balance of trade, since such balances are often settled by a triangular trade with another or several other countries. We generally export gold and silver to Great Britain, because we produce great quantities of those metals, and yet the balance of trade is generally largely in our favor. In like manrou Mexico is a large producer of the precious metals.

In 1871 she exported to us more than fifteen millions of gold and cilvers while the large of trade in our favor as grainst her was only

In 1871 she exported to us more than fifteen millions or gold and silver; while the balance of trade in our favor as against her was only a fraction over four millions. A hundred or more such illustrations might be given. In exhibiting the commerce of the two nations it is unnecessary, therefore, to include the exports and imports of the precious metals. The table given exhibits an almost uniform growth of trade between the two countries during the past fifteen years, which has been principally due doubtless to the better and more stable government of the Mexican people; but during the last three or four years the very rapid growth of the trade can be reasonably accounted for only by the introduction of railroads south of the Rio Grande.

Next in order comes the table of our commerce with the Central American republics. In the (official) "Statistical Abstract of the United States" the five small republics known as Guatemala, Honduras, Salvador, Nicaragua, and Costa Rica are all lumped together as Central America.

Central America and the United States.

	Central Ame	merica.
Year.	Exports to.	Imports from.
1867	\$618, 448 961, 810 1, 254, 757 1, 625, 738	\$907, 752 1, 974, 968 2, 968, 996 3, 159, 786

These figures, like those relating to Mexico, show a rapid development of our commercial relations with Central America; but unlike those, they present a very considerable balance of trade against us. Both at the beginning and at the end of the series of years this was the case; while the proportionate balance is larger in 1881 than it was in

The extension of railroad communication through those republies would very soon equalize the accounts of exports and imports; while in all probability it would augment them tem or fifteen fold. Colombia now claims our attention:

Colombia and the United States.

	Colombia.	
Year.	Exports to.	Imports from,
1867	\$4,207,739 5,373,773 4,495,322 5,383,138	\$1,990,040 6,148,840 5,848,043 5,991,890

This table, showing our commercial relations with Colombia, exhibits a steady and promising trade with that republic, with a healthy re-eiprocity in the enterchange of commodities.

Now comes Venezuela:

Venezuela and the United States.

	Venezuela.	
Year.	Exports to.	Imports from.
1867 	\$904,690 1,573,647 2,804,665 2,768,604	\$1,754,548 5,512,910 7,310,297 6,601,817

It thus appears that there has been during the last fifteen years con-

it thus appears that there has been during the last lifteen years considerable improvement in our trade with Venezuela, notwithstanding the fact that the balance is too greatly against us.

Of Ecuador our Secretary of State, Mr. Frelinghuysen, in his recently published lengthy letter upon "the commerce of the world and the share of the United States therein," says:

As far as our customs returns are concerned, it would appear as if there were no direct commercial relations between the United States and Ecuador. The name of that republic does not appear in the reports of the Treasury Department showing our imports from and our exports to the various countries of the world. It is doubtless principally owing to this omission that Ecuador, up to a very recent period, was almost wholly neglected by the manufacturers and exporters of the United States, thus leaving the field almost clear for European manufacturers and traders.

The Secretary adds, however, that-

Notwithstanding the fact that our customs show no direct trade with Ecuador, Consul McLean gave a long list of American imports received at Guayaquil, during the year 1879, consisting principally of manufactured articles, to the value of \$1,50,000, while he computed the value of exports therefrom to the United States at more than \$1,000,000.

Trade with Bolivia since she has been at war with Chili is carried on chiefly through the ports of the Argentine Republic; and Secretary Frelinghuysen is able to hazard only conjectures as to the foreign commerce of that republic. Yet no tangible or definite guess is ventured as to the extent of Bolivia's trade with the United States. It is said, however, on the authority of Consul Baker, at Buenos Ayres, that during the year 1880 there was considerable demand for cotton goods from Bolivian merchants, the orders coming direct to Buenos Ayres, instead of going to the Pacific ports, as in ante bellum days. In most cases these Bolivian merchants asked for American cottons, which could not be had, because in consequence of the brisk demand for the same fabrics in the United States the American cotton manufacturers refused to fill orders

The table in regard to Peru shows a declining state of trade with that country, owing, it may be safely inferred, to the terrible war which has prevailed there with Chili during the last several years.

Peru and the United States.

	Peru.	
Year.	Exports to.	Imports from.
1867 1873 1878 1860	\$1,730,914 2,864,948 1,005,638 97,530	\$1,701,987 1,186,161 1,531,591 760,536

The commercial and other civil pursuits of both Peru and Bolivia have been seriously crippled by the war with Chili, and it is for this reason that such commerce as the Bolivians have recently kept up with the outer world has been carried on for the most part through the Argentine Republic, bordering on the River Plata and the Atlantic coast. Our

commerce with Chili, though she has been victorious in the war, has suffered seriously, as appears from the following table:

Chili and the United States

	Chili.	
Year,	Exportsto,	Imports from.
1867	\$2,891,559 2,308,236 1,989,961 967,776 1,614,836	\$1,287,176 1,070,007 670,466 1,254,736 1,435,970

The commerce between the United States and Brazil, as appears from the table of exports and imports, is, to our own disadvantage, quite a one-sided affair. We import from that country at least five times the value of the merchandise which she imports from us. Brazil has an Atlantic coast thousands of miles in length, and her ports of entry are nearer to New Orleans, Baltimore, and New York than to any European port. Yet England, France, and Germany send to Brazil almost an equivalent of manufactured goods for her raw products and for her coffee and sugar.

Brazil and the United States.

Year.	Brazil.	
	Exports to.	Imports from.
1867	\$5,099,387 7,197,722 8,686,704 9,252,415	\$19, 100, 300 38, 540, 376 42, 968, 973 52, 782, 536

In the Argentine Republic the balance of trade is also against the United States, but not to anything like the extent that is so humiliatingly apparent in the case of Brazil.

The Argentine Republic and the United States.

	Argentina.	
Year.	Exports to.	Imports from.
1867	\$2,591,506 3,234,992 2,152,109 2,427,813	\$5,842,717 7,587,843 4,948,616 5,669,240

Uruguay, which is a small republic situated at the mouth of the River Plate (in Spanish El Rio de la Plata), has a considerable and growing trade with the United States, and, like most of her neighbors. she has a large balance in her favor.

Uruguay and the United States.

	Uruguay.	
Year.	Exports to.	Imports from.
1867 1873 1878 1881		\$1,518,488 3,571,376 2,437,102 4,164,663

Paraguay, owing to the prolonged and wofully ruinous war which several years ago she waged single-handed against the Argentine Republic, Uruguay, and Brazil, is still so disorganized in her civil vocations that she has now but little trade beyond her own boundaries. Of the very limited foreign commerce of this country no statistics have been tabulated. As regards soil and climate, Paraguay is one of the richest and loveliest countries upon the face of the earth.

I now offer some general statements in regard to the foreign commerce of the Central and South American commonwealths and the distinctive nature of much of that commerce. It is remarked by our Section 1.

tinctive nature of much of that commerce. It is remarked by our Secretary of State, in his elaborate report on "the commerce of the world and the share of the United States therein," to which reference has already been made, that no aggregate statement of the commerce of Mexico is attainable; but from the returns of the British, French, and American officials it appears that their aggregate exports to that country in 1879 amounted to \$16,737,000, of which the share of the United States was \$7,866,000, or nearly equal to that of both her great rivals.

In 1880 the aggregate exports of these three countries to Mexico was \$23,381,000, of which the United States furnished \$11,191,000, or nearly pas, 351, 400, of which and France. To the American these are gratifying facts. In 1882, as has already been shown, the exports of the United States to Mexico amounted to \$15,482,582. Our imports from Mexico consist of a variety of articles, of which the principal are hides and skins, coffee, jute and other grasses. Our principal exports to Mexico consist of cotton goods, metals, hardware, machinery, and mill materials, and latterly almost everything pertaining to the building and equipping of railroads.

The estimated value of the foreign commerce of the Central Ameriare commerce of the certain commerce of the Central American republics in 1880–'81 was, of imports, \$10,100,000, and of exports, \$14,328,000. The share of the United States in this trade has been stated in a table already given. Great Britain exported to and imported from those republics about twice as much in value as this country. The principal exports are coffee, sugar, indigo, gums, and dye-

During the same year, 1880–'81, the trade of Great Britain, France, and the United States with Colombia amounted to \$15,696,000 of imports and \$16,385,000 of exports. This trade was nearly equally divided between the countries named. Our own country excelled slightly in the value of imports, and France in exports. Colombia exports Peruvian bark, raw cotton, india-rubber, ivory-nuts, silver ore, coffee, and many other articles.

In 1877, according to our Secretary of State, the imports of Venezuela were estimated at \$13,990,000 and the exports at \$14,985,000. In supplying Venezuela with her imports, England had the largest share; next

plying Venezuela with her imports, England had the largest share; hext in order came the United States, then France, and then Germany. The largest value of exports from Venezuela came to the United States. Coffee and hides are among the articles chiefly exported from Venezuela. It has already been stated—and we should feel the full weight of the statement—that the people of the United States import from Brazil at least five times the value of all the merchandise which they send back in return. The Americans are great coffee-drinkers, and took from Brazil in 1881 nearly 316,000,000 pounds of coffee, free of duty, at a cost of \$29,520,151. This of course is by far the largest item in the trade; but we also purchased and brought from that country \$8,193,000 worth of crude india-rubber, and \$8,446,000 worth of sugar. The English generally are not a coffee-drinking people. Their favorite table beverages are tea and beer; and hence the imports of coffee by Great Britain from Brazil are insignificant in amount as compared with ours, while her exports of manufactured goods to that country are threefold greater than ours. The French have the balance of trade against the Brazilians, while the Germans enjoy an almost reciprocal trade. The Brazilian balance of trade against Great Britain amounts to about 25 per cent.

The foreign trade of the Argentine Republic in 1880 is stated to have amounted in value to \$44,067,000 of imports and \$56,497,000 of exports. Of the imports, \$8,025,000 were furnished by France, \$12,103,000 by Great Britain, and only \$3,121,000 by the United States. Belgium, Germany, and Italy were but a little way behind us. The exports from Argentine went in larger measure to France and Belgium than to other

countries

The imports into Chili in 1880 amounted to \$27,000,000, of which \$12,200,000 came from Great Britain, more than four millions from France, and a like amount from Germany. The United States contributed only one and a half million.

The foreign commerce of Peru in 1879 is estimated to have consisted of imports of the value of \$28,000,000 and exports of the value of \$44,600,000. Great Britain had, as usual, the lion's share of this trade.

The bill now before the House looks to the early establishment of regular and continuous railway communication from the northernmost settlements in the British American provinces and in the United States to and through Mexico, through Central America, and also through South America, down almost to the southernmost settlements in the Argentine Republic. When the suggestion of such extended railway Argentine Republic. When the suggestion of such extended failway communication was first made, or the thought conceived, some sixteen years ago, we had no finished lines of railroad west of the Mississippi and the Missouri Rivers, spanning the continent from north to south, from near the British line to the borders of Mexico. Then the Union and the Central Pacific Railroads were still in embryo; and the idea of penetrating Mexico and our still more southerly sisters with railroads was too remote from realization to engage the attention of practical

But behold what has been accomplished within half a generation! More than one-third of Mr. Helper's magnificent prophecy and project of an intercontinental railway is on the point of fulfillment; perhaps not precisely as it was first outlined and announced to the world, but still in substantial accordance with the original proposition. Even now we have railroads penetrating the far northern regions, where they will soon connect with the Canada Pacific, west of Lake Superior, and, running southward to the Rio Grande, they will ere long meet and unite with a road leading to the City of Mexico. The Mexican road will be pushed forward within a few years to the southern boundary of that republic, there to spread onward the salutary and delightful impulsions to corresponding progress in Control and South America. to corresponding progress in Central and South America

In view of these startling yet cheerful facts already, as we may say, more than half accomplished, it were treason to the true spirit of the age to doubt the timely realization of the design of opening a line of continuous railway communication through North and Central and South America; ay, and a generation or two later on all the way from Alaska down even to the most austral limits of civilization. Already the Three Americas Railway has been brought within the range of the practical common sense and business calculations of the American peo-Whatever obstacles may have hitherto been deemed insuperable in the way of engineering have disappeared in the presence of the actual results of railroad building in South America itself. The mighty Andes have been scaled, and are traversed daily by the iron horse. In illustra-tion of this truth I will here read a brief passage from the brilliant es-say of William W. Archer, written in vindication and advocacy of this

say of William W. Archer, written in vindication and advocacy of this splendid enterprise. He says:

Upon the very threshold of the entrance to Colombia, the first obstacle deserving the name presents itself, for here the Andes are to be crossed. But this can not be deemed impracticable; for Peru, alone and unaided, has achieved the more gigantic feat of crossing the towering range where its height is much greater. At half past 7 o'clock every morning the train leaves the Pacific coast for Lake Titicaca, 12,300 feet above the sea. On the route passengers take dinner at Vincamayo, the highest village in the world, at an elevation of 14,435 feet.

The Oraya Railroad from Callao, on the coast of Peru, to Chicla, its present Andean terminus, has already overcome an altitude of more than 12,000 feet. This cloud-reaching road is to be extended to the rich silver mines of Cerro de Pasco, which are still 2,000 feet above the rich saver limited of chicla. It is idle, therefore, it is vain, it is silly to talk of impossibilities in connection with the proposition to unite by means of railways the remotest habitable portions of North and South America.

As has already been suggested, however, there is a proneness in the human mind to regard every uncommon enterprise as well as every new invention the object of which is to make machinery do the work of human hands as altogether visionary and impracticable. Yet there would seem to be but little excuse for this species of mental shortsightedness in an age and country wherein have been witnessed so many miracles of progress in the subjugation of the elements to the will of man. But if there be present any skeptics of this kind, permit me to point them to the wonderful events of recent date. Marvels of genius and marvels of science have followed each other in such rapid succession that the generous and sympathetic mind, in full sympathy with the ameliorating tendencies of the times, is ready to believe in the feasibility of almost any scheme or device of human acumen that is not physically impossible.

During the present century many great things have been achieved which the foremost minds of less than one hundred years ago would have

declared to be utterly impracticable. To say nothing of the remarkable triumphs of steam by sea and by land, who would have thought it really possible to "girdle the earth in forty minutes" by the delicate adjustments of scientific discovery and invention? Who but the incomparable Bard of Avon, born in 1564, would ever have even dreamed in his own day of the daily and hourly and ever-continuous realization nearly three hundred years afterward of such an astounding yet verita-

ble miracle?

The youngest man in this House can remember when the feasibility of building and operating a railroad across the continent of North America from the Atlantic to the Pacific was persistently doubted, ridiculed, and denied by many otherwise intelligent and practical statesmen. Indeed, most of our practical and common-sense men of a generation or two back of us were but too apt to regard their indifference and incredulity in opposition to new enterprises as a sterling virtue. Fortunately, though, both for the present and for the future, the young men of our own day are being educated out of strange and dogged adherence to the inadequate things of the past.

A brief recurrence to the history of railroad building in the United States should at once dispel every doubt in relation to the feasibility and the prospective advantages of the grand scheme which is contemplated by the bill now before the House. It is only about fifty-two or fifty-three years since the first mile of railroad was operated in this country. At the end of the year 1830 there were but twenty-three miles in operation; in 1846, when the war with Mexico was declared, there were but 4,930 miles; in 1861, when our own great war began, there were in operation only 31,286 miles; so late as 1870 there were but 52,914 miles; the same being less than half the present number. At the close of the year 1881 there were 104,813 miles, to which was added during the year 1882 about 11,000 miles, making an aggregate of more than 115,000 miles at the beginning of the present year. It further appears 115,000 miles at the beginning of the present year. It further appears that in the United States we have nearly as many miles of railway as all the other countries combined. In this most essential element of modern progress the New World is indisputably ahead of the Old World. In view of all these incontrovertible facts can it be intelligently

In view of all these incontrovertible facts can it be intelligency doubted that our grand North American railway system, which, from first to last, has already cost our people nearly or quite \$6,000,000,000, will, under a sort of irresistible destiny, prudently push itself forward through Mexico, through Central America, and through South America? Where else can American capital and American energy and enterprise so fitly go? Where else can our people find at once on so large a scale peaceful, equitable, and remunerative occupation? In casting

about for honorable business, mutually advantageous to themselves and others, where are they so likely to secure it as in the beautiful and balmy southland, whose inexhaustible fertility of soil and limitless resources of mineral wealth have been the inspiriting themes of explorers from Humboldt to the latest adventurous travelers who have penetrated and passed over the vast interior on muleback? It were an endless and overpowering task to enter upon the subject of the vast undeveloped wealth of Central and South America. With unstinted beneficence nature has endowed those tropical and transtropical regions with soils of unsurpassed fertility, with forests and fruits and flowers of unrivaled excellence for all the uses of man, and with mines of wealth unimagined until they were actually discovered and opened through the un-

faltering energies of a conquering and invincible race.

The benefits and blessings which railway communication between North and South America is destined to confer will be, as they should be, reciprocal. Among them will be immense if not incalculable additions to the commercial, the manufacturing, and the agricultural interests of all the nations through which the grand longitudinal railway and its numerous branches will pass. Relatively the less developed countries will be the greatest gainers. They will find good markets for their superabundant products of the soil, for the flesh as well as for the skins of their countless herds of cattle, which in many places are now killed only for their hides and horns, or are permitted to roam at random over the grassy plains without ever contributing in the least to the comfort or well-being of mankind. Then, too, the inconceivably rich mines of the precious metals in those countries will be worked to far greater advantage to their owners and to the people in general than they have ever been worked heretofore.

Capital from the United States and from Europe will constantly seek investment in those countries, in mining, in railroad building, in merchandising, in the mechanic arts, in agriculture, and also in many branches of manufacturing industry, especially by machiney which can be very economically and profitably used where the raw material itself is first obtained. Best of all, the masses of the Central and South Americans will find infinitely more desirable and elevating occupations than fraternal strife. Their governments will gradually acquire permanent strength and dignity. Assiduity in the various vocations of civil life will lead to the general accumulation of wealth, and the potential voice of well-ordered society will everywhere demand and receive protection against that class of lawless and desperate men who have hitherto been accustomed to rob in the name of revolution.

Among all classes of the people education and literature will be honored and diffused, and a liberal and tolerant spirit, ready at all times to welcome the stranger of whatever clime or religion, will take the place of the narrowness and bigotry which are inseparable from the isolation in which largely preponderating majorities of the good people of Central and South America have lived for so many generations. I need not dwell longer upon the varied and comprehensive benefits which American commerce, manufactures, and general industry will undoubtedly derive from the very extensive international communication thus sought. It is not so much that we shall obtain a vastly larger share of Spanish-American trade than other northern nations will be able to secure, but the intercontinental railway, with its many branches and connections, will probably increase the present value of the trade at least tenfold, so that the United States, while deserving and receiving the greatest share, will perhaps still leave the Europeans in possession of even a larger amount of business with the southern continent than they now enjoy.

than they now enjoy.

Finally, Mr. Chairman, the more than ordinarily careful thought and investigation which I have bestowed upon this subject leads me to make an emphatic expression of the opinion that the bill before us ought to be passed; it ought to be passed very soon; it ought to be passed now. Procrastination in this case, as in so many other cases, is both unwise and perilous, not to say imbecile. Europe is every day strengthening her hold upon the great and growing commerce of Central and South America, and if we ever succeed in securing for ourselves the large, if not the largest, share of that commerce which naturally belongs to us, we must first earn it; and our most prudent and vigorous efforts in that direction should not be any longer delayed.

Let us learn a lesson or two from one or more of the European nations. Only a few days are a telegraphic dispatch from Berlin and

Let us learn a lesson or two from one or more of the European nations. Only a few days ago a telegraphic dispatch from Berlin announced the fact that the German Reichstag had just voted 100,000 marks for exploring a portion of Central Africa. On the 27th of last December the committee in the French Chamber of Deputies at Paris, having under consideration the proposed De Brazza expedition to the Upper Congo, in Africa, reported favorably, estimating that the work in contemplation could be finished within two years, and asking an appropriation of 1,275,400 francs (about \$255,000) for the successful carrying out of the enterprise. On the very next day every franc asked for was voted almost unanimously; and De Brazza is already on his way to the Upper Congo, or, in any event, will soon be there.

In that timely and statesmanlike action of France, where the prospects for profitable returns are so small in comparison with the liberal grant, we should experience no difficulty at all in finding a precedent—if we need a precedent—for similar promptness of proceeding where the advantages in prospect are at least twenty times greater and far more

likely to be realized, but where, notwithstanding, the amount asked for the requisite service is very nearly ten times less. For a special commercial and railway commissioner and assistant to Spanish America for a period of two years, a sum of only \$26,000 is necessary; not for only one country, and that a savage country, destitute of any sort of intelligent or peaceful industry; but for fifteen fairly civilized and enlightened countries, having organized governments, civil methods, and regular pursuits. In the name of American commerce, American manufactures, American progress, American statesmanship, American honor, and all American interests, I again ask for the early consideration and passage of the bill.

The Tariff.

SPEECH

OF

# HON. JOHN S. RICHARDSON,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 10, 1883.

The Committee of the Whole having under consideration the tariff bill (H. R. 7313), the question being the tax on iron and steel cotton-ties—

Mr. RICHARDSON, of South Carolina, said:

Mr. Chairman: I will not at this time undertake to discuss the question before the committee on its merits. To do so would only be to repeat what has already been said over and over again during this discussion. I shall confine my remarks to a single point, on the decision of which the action of the committee seems to depend.

cussion. I shall confine my remarks to a single point, on the decision of which the action of the committee seems to depend.

It has been asserted by those in favor of the high tax asked for by the manufacturers on cotton-ties that the tax is not paid by the producers of cotton, but on the contrary that the producers pay only 4 or 5 cents per pound for the ties and sell them for whatever they get per pound for their cotton, 8, 10, or 12 cents, as the case may be. While at first sight this may appear to be the case, it is in reality not so. This error has been exposed by several members, but so far as I know no one has mentioned a most important fact, which, if considered, will at once expose this fallacy of the advocates of the high-tax theory. It is known and admitted that three-fourths of our cotton finds its market in Europe and that the price of cotton is fixed in that market. Now, the producer of cotton in this country has to have his cotton baled before he can ship its he has to buy his cotton-ties before he can prepare his cotton market. He pays the cash for his cotton-ties, and that expense comes out of his pocket before it reaches the market. It is then shipped to Liverpool and there it has to compete with cotton which has no such tax imposed on it. The cotton from the East Indies has no tax on its cotton-ties, is in short free cotton, and the price for our cotton is there fixed by the price paid for this free cotton. This being the case (and no one can deny it), it seems to me to be too plain for argument that the price paid for our cotton-ties is a dead expense to the cotton producer.

I might say much upon the injustice of putting this burden upon the whole laboring class of the South for the sake of a half-dozen manufacturers and at most a few hundred operatives, but this has been fully commented upon and exposed.

I conclude what I have to say on this question with asking the Republican majority, who seem determined to impose this tax upon the South, if they do not see that their course on the question now under consideration must convince and satisfy the country that the charge is true which is now being made by the press of the country that it is the purpose of that party that no tariff bill shall become a law; that they do not want the tariff changed, and they do not intend that the people shall have any relief from the enormous burdens which have robbed them so long of their hard earnings.

I do not say that your tariff bill would or could command many votes

I do not say that your tariff bill would or could command many votes from the members representing the cotton belt. That would depend upon how much relief it gave to the people when we get through with it. But I can tell you now that if your bill, which professedly is one to reduce and equalize the burdens of taxation, shall instead of reducing the burdens imposed on the producers of cotton increase the tax on cotton-ties to more than double what it now is, you will assuredly drive off every one who may be disposed to pass some tax bill. You force them to vote against your bill. It may be true that this is what you want. If it is, you are insuring it by raising the tax on cotton-ties. No member from the cotton belt can afford to go home to his constituents and tell them that while all other sections and all other laborers had their-burdens lightened, they voted to increase the burdens on the producers of cotton.

Signal Service.

SPEECH

# HON. FRANK E. BELTZHOOVER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 3, 1883,

On the bill (H. R. 7190) fixing and defining duties of the Signal Service.

Mr. BELTZHOOVER said :

Mr. SPEAKER: I introduced a bill some time ago "fixing and defining the duties of the Signal Service." It provides that so much of the business of the Signal Service of the Army as relates to meteorological observations, storm signaling, and forecasts, together with the civilian employes engaged therein, be transferred to the Interior Department, and the en-listed men now in the Signal Service shall be discharged and their places filled by their employment as civilians, or the employment of other persons in their stead at rates of compensation not to exceed those paid to sons in their stead at rates of compensation not to exceed those paid to the enlisted men now doing signal duty. It also provides that there shall be one chief signal officer of the Army, with the rank of colonel, and one assistant, whose duties shall relate solely to military duty and telegraphing; and the lieutenants now in the service of the Signal Corps shall be assigned to regiments of the line before June 1, 1883.

The object of the bill is to separate the Signal Service and the Weather

Bureau which are now operated under one head, and relegate the work and duties of each to the legitimate and proper sphere to which they belong. The Signal Service of the Army is as distinct and independent of the weather and meteorological bureau as any other two departments under the Government. There is no natural relationship between the two and no reason why they should be combined. contrary plain and convincing reasons why they should be separated.

IS IT CONSTITUTIONAL?

The first question which arises with any honest and intelligent legis lator in the discussion of any public measure is, Does the Constitution authorize it? The Signal Service is so plainly and appropriately a part of the Army, and therefore authorized under the power to raise and maintain an Army, that it would be useless to argue it. The right,

therefore, to legislate in every reasonable way to promote the efficiency of the Signal Service is undisputed and clear.

How is it with the establishment and support of a great scientific meteorological department for the study and classification of weather and all the multifarious questions which are immediately and remotely connected with it? Does the Constitution give us the power to vote the people's money out of the Treasury for such a purpose? Does the Constitution commit the subject of meteorology and electricity and their kindred sciences to Congress? If it does we then have the power to establish and maintain a bureau of mathematics and astronomy and navigation and law and theology. The question of constitutional power and construction has received the most elaborate and exhaustive discussion in the judicial and parliamentary history of the country, and

it would be a work of supercrogation to repeat the arguments.

The greatest legal luminaries have ranged themselves on both sides of the question as they severally contended for a liberal or strict construction of our fundamental law. I desire to be found with those who seek to contract rather than enlarge the sphere of objects for which to spend the people's money. I believe this view is in conformity with spend the people's money. I believe this view is in comoranty with the genius and spirit of our institutions, which authorize the taxation of the people solely and exclusively for the purposes of government and the exercise of the necessarily incidental functions of government which relate to the regulation of those subjects committed to it by the Constitution. The only clause in the Constitution on which a meteorological and scientific bureau could be reasonably claimed to be supported is that which provides for the regulation of commerce. But in our interest in the computer of commerce. is that which provides for the regulation of commerce. But in no in-stance has that power ever been stretched to cover the establishment of any such institution as the weather bureau as it is now run, and with the wide and ever expanding power which it claims and the great and ever increasing sums of money which it expends. This bureau, as it is now constituted and operated, is grasping within its scope all the natural sciences and aims to become a great educational and experimental institution, in which, at the expense of the National Government, all the great mysterics of nature shall be unraveled. Surely on the theory on which our Government is founded its functions do not extend to and embrace such subjects. I do not believe that we have the right to vote money for the support of such an institution.

But waiving the question of constitutionality for the purposes of this

discussion, is it not a fraud and false pretense to annually vote a million and a half of dollars for a Weather Bureau which is purely civil and wholly unmilitary under the disguise of the power conferred on us by the Constitution to raise and support an army? If a great scientific institution is to be maintained at the expense of the Government, let it be done in such a way that the people may know under what authority

of law their money is taken. If we are to assume under an utterly unlimited construction of the Constitution that we have the power to legis late on the subject, let us assert and exercise it in a fair, open, honest way like men. Let us make the Army responsible only for the control way like men. Let us make the Army responsible only for the control and management of the departments and duties which properly belong to it under the law. Do not let us smuggle in under the skirts of the power to support the Army a purely civil bureau which hangs around the neck of the Army like the old man of the sea and which all real soldiers pray, in the name of God, we may deliver them from. THE REASONS FOR A TRANSFER.

THE REASONS FOR A TRANSFER.

If the Weather Bureau is to be maintained, every argument is in favor of its transfer to some civil department. This transfer will put it where it naturally and properly belongs; it will immensly cheapen its cost of management; it will largely increase its efficiency and usefulness; it will correct the almost incredible frauds and abuses which have constantly attended its management as a military bureau; it will meet the almost universal demand of the Army, which does not want the incubus, and satisfy scientists, to whom its principal duties should be committed; it will be in the interest of honest and fair legislation, which should not tolerate the support of one measure under the thin dismise

should not tolerate the support of one measure under the thin disguise

and name of another.

It needs no argument to prove that all the duties of the bureau are eivil and scientific and wholly unmilitary, and that there can be no earthly reason, therefore, why they should be committed to soldiers. Its proper study is the meteorology of the country. This is one of the great unexplored sciences, the outer boundaries of which have barely been touched by scientists. To ever understand the mysteries of weather nature must be watched long and faithfully in all her fitful, varying moveds. Spies must be set upon her daily action when ill follows: varying moods. varying moods. Spies must be set upon her daily action, who will fol-low and shadow her for long years and glean from her the secret lines low and shadow her for long years and glean from her the secret lines which, after patient watching, it is supposed she will be found to follow. Civilians do all the important work in the bureau now and must of necessity continue to do it. It requires students and scholars who make their life's work to delve into the mine of knowledge and bring up from the depths the treasures which are hidden from the every-day gaze of the world. Those who argue for the continuance of the military system forget that the life and habits and character of the soldier do not fit him for such work. The pursuits of the soldier and those of the student and scientist are widely apart in all their characteristics. The life of the one is stormy and turbulent, and filled with the passions of revolution; the other courts the silence and repose of seclusion and peace. The very last argument printed and issued by the Signal Burean in behalf of the military system which it wishes to maintain declares. It is further necessary that such a corps should be composed of men of more intelligence than are willing to enlist in the line of the Army, for it can not be created in a day; it must be the result of study, selection, and practice.

created in a day; it must be the result of study, selection, and practice.

If it is to be composed in all respects of better men than enlist in the Army, why keep the bureau there? If it can not be created in a day but must be the result of study and practice, why not intrust it exclusively to those whose education and life's pursuits fit them for it? The country is swarming with thousands of bright, earnest, and intelligent young men who come from our hundreds of colleges annually, who are thoroughly equipped and ready for just such work. Besides, if it is so that the men of the bureau can only become efficient by years of study and practice, what becomes of it in time of war? Are men of long study and intelligence, who have spent years in the investigation of seigner, to be intelligence, who have spent years in the investigation of science, to be torn away to swing flags on battlefields when there are thousands of men in active service in the Army all the time who can do it better, and thouands more who can be taught to do it in a few weeks? Is it not a fact sands more who can be taught to do it in a few weeks? Is to not a fact that a few military martinets who want to slink away from their duty in the field are trying to hide this gorgeous military Weather Bureau under the thin disguise of the Signal Service? It is an insult to every intelligent man in the Signal Bureau to say that the observers will not do their duty except under the constraint of military law and discipline

Is it credible that these ebservers whom the Chief Signal Officer has said are men of "excellent character," of a "superior class," "carefully selected," "graduates of colleges," &c., are so devoid of principle, so lacking in sense of duty, so deficient in conscience that nothing but fear of punishment prevents them from neglecting their duty? It is an insolent slander on the class of men who are qualified for the duties of such a great scientific service to say that they know no law of duty but that of brute force and compulsion. The mysteries of nature never have been and never will be unveiled by those who are sent to their work like dumb driven cattle. There are thousands of men competent and anxious and willing to undertake the work of the Weather Bureau at the same compressive power paid who will work for the love of science. at the same compensation now paid who will work for the love of science, who will watch nature in her marvelous moods because they earnestly desire to know her secrets. Nine-tenths of the best school-teachers in desire to know her secrets. Nine-tenths of the best school-teachers in the country to-day do not get as much pay as the weather observers do. The volunteers who go to the north pole and accompany the expedition to Lady Franklin Bay go with their lives in their hands; but even with this extreme and unusual peril there are thousands who would voluntarily go for the love of science alone.

What kind of observations do you suppose come from Alaska and Pike's Peak and Mount Washington, made usually under the present system, by men who are banished to those inclement regions for petty

offenses or because they do not bow and truckle at the beck and nod of the petty autocrat who struts in all his military glory at the head of the Signal Bureau? What kind of scientific work can you expect any-where from men who are willing to bear the insolence of such military domination? Just such work as the Signal Bureau has been giving to the country for the last few years. Such work as makes it the laughing-stock and the by-word of the people and the disgrace of the Army, on whose skirts it hangs, and the jest of scientists everywhere. It is conceded on all hands that a Canadian adventurer, unaided and alone, hits the weather oftener and infinitely better than our million-and-a-half-dollar shoulder-strapped and brass-buttoned concern.

The life and discipline which are necessary and proper in the highest

degree for the efficiency and strength of the Army should be confined to the Army. The instincts and culture of the age are against the exthe Army. The instincts and culture of the age are against the extension of the sphere of that arbitrary and summary law which must of necessity govern in war. War is a science and occupation of its own, and there is nothing in common between it and any of the other

peaceful pursuits of the world.

We next maintain that a civil administration of the Weather Bureau, besides being clearly more convenient and better adapted to its duties would also be vastly cheaper and more economical. It is no reflection in any degree on the integrity and honor of the Army to say that it is not adapted to and does not like the duty of disbursing or managing any funds but its own. Military administration is the very last one which should be saddled with the performance of civil duties, and especially so when there are so many other departments which are constituted for the care of the commercial, financial, agricultural, and other interests of the people. It is the constant challenge of the Signal Bureau to compare it with those of other countries and mark the difference between our military system and their civil ones. We answer, compare the cost. The Admiral-Fitzroy system, established in England in 1862, is purely civil, has as many stations as we have, and gives great satisfaction, and only costs \$50,000 per annum. Ours costs \$1,550,000. The one is cheap and adapted to its duties; the other is a grand military pageant for the glorification of a few officers who like hanging

around Washington better than fighting.

What would the English system, controlled by its brains and sustained by a million and a half dollars, do when compared with the complacent idiocy which runs the machine here? There is no nation on the face of the earth that ever dreamed of spending such a vast sum of money on meteorology. England, the greatest commercial nation of all the ages, contents herself with moderate meteorological service, but has the grandest navy and the bulk of the commerce of the world, and leaves to us to spend countless millions upon the rottenest frauds of ships and a Weather Bureau even rottener and weaker than our ships, all in the interest of commerce. That a mighty progressive, energetic, erratic, and restless people should run foolishly after Oscar Wilde and Mrs. Langtry, estheticism and its very opposite, within the same moon its perhaps to be expected in a popular government; but that a great is perhaps to be expected in a popular government; but that a great legislative body like this should vote millions to a fraudulent institution to look after the interests of commerce and not have any commerce of their own to be interested in surpasses even the folly of the people. The system is utterly extravagant and foolish in its expenditures. It is known that President Orton, of the Western Union, said in his lifetime that their company could run the whole business, take all the observations, and give all the information with infinitely greater accuracy and certainty at a cost of \$200,000 per annum, less than oneseventh of the present expense.

At present the pay of officers and men, their food, and room allow-

ances, their medical bills, their transportation expenses from place to place, the cost of maintaining Fort Myer, the rent of the Signal Office buildings, &c., all are drawn from the sum appropriated for the Army. The specific yearly appropriations of several hundred thousand dollars; erroneously believed by many Congressmen to be the entire cost of the Signal Service, pay for instruments, telegraphing, &c. As a civic bureau it could be much more efficiently conducted with the same equipment in all respects at a cost not much greater than \$500,000 per annum.

The expensive military telegraph lines, now operated by enlisted observers, should go to the Quartermaster's Department. Their business being very light, they could be operated by soldiers at an expense of \$13 per month for salaries, instead of from \$80 to \$100 as at present. As a rule, the soldiers in the Territories, which these lines traverse, have little to do, and would welcome the new work. As it is, many operators and repairmen on these lines are soldiers temporarily detached from their command. No reason can be advanced why the Quarter-master's Department could not operate these lines. At present each little station on them, only a few miles apart, is fully equipped with expensive instruments for meteorological work that is entirely unnecessary. A few meteorological stations, about one to every ten of those now established, could be judiciously located and would answer all the needs of the Weather Bureau. In difference of salaries paid, reduced cost of equipping, transportation, &c., an annual saving of from \$150,000 to \$300,000 would be effected by the transfer of these lines. The coast telegraph lines properly belong to the Life-Saving Service. They could be operated, when necessary, by its employés, who could also attend to the limited amount of signaling done on the coast. It is

absurd and expensive to have two different sets of Government employes absurd and expensive to have two different sets of Government employes stationed in the same locality, often dwelling in the same building, and engaged in almost identically the same pursuit, namely, the protection of engaged in almost identically the same pursuit, namely, the protection of life and property. By this transfer an annual saving of from \$50,000 to \$75,000 per year in salaries, equipments, &c., could be effected. This does not include some \$50,000 or \$60,000 annually paid the Western Union Telegraph Company for the lease of their Washington and Norfolk line

Fort Myer is a very costly toy. It is a rendezvous for some forty men and half dozen officers. It is maintained ostensibly as a "school of instruction," but in reality it is a place for the keeping of private horses, cows, pigs, chickens, conservatories, &c., by those who should

be ashamed to so pettily defraud the Government.

be ashamed to so pettily derraud the Government.

This fact is a strictly military feature of the Signal Service, and its maintenance costs, salaries of officers, stablemen, gardeners, milkmaids, cooks, laborers, &c., included, not less than \$50,000 per annum. A tremendous price to pay for running this summer resort, and nothing is said either about the enormous value of this property and the yearly stable the covernment might stop by religing the interest thereon, which the Government might save by renting the property.

A general reduction in the salaries of employes should be effected, which can not be done under a military system. Minors are not enlisted in the Signal Service. At many stations a boy living with his parents could be employed at from \$15 to \$20 per month to perform work that an enlisted man is now paid \$65 for doing. Some \$50,000 a

year could be saved in this manner.

There should be a large reduction in the number of stations of the Signal Service. They are too closely located in many instances. One station in every two hundred and fifty miles square is ample for me-teorological purposes. Such stations as Port Huron, Toledo, Sandusky, Newport, Wood's Hole, and Port Eads could be placed in charge of displaymen who would, upon orders, hoist and lower the storm-flag. These displaymen would receive a small compensation for services when rendered. It is estimated that with a force of two hundred and fifty men and with not more than one hundred stations the meteorological work of the Signal Service could be performed by the Interior Department with far greater efficiency than is now the case. The experiment is worth trying at all events. With no reduction in the number of ob-The experiment servers or stations, no transfer of military telegraph lines, with Fort Myer remaining a "school of instruction," still the proposed transfer of the control of the bureau would effect a saving, inasmuch as the appropriations would be more wisely expended. Certainly nothing that can be done with the bureau will render it more valueless to the general public than it is, will increase the general dissatisfaction felt at its methods of management, or add one misery to those now endured by its ob-servers who for years have prayed for deliverance from despotism, who have mourned at the prostitution of the bureau for the base uses of its officials, and have viewed with apprehension the increasing boldness and selfishness of the military priesthood in the office of the Chief Signal Officer of the Army.

THE COST FOR THE NEXT YEAR.

Let us look at the demands of the Signal Bureau for the coming tiscal year. They ask-

For miscellaneous. For printing For building. For Office Chief Signal Officer For buildings, Signal Office For salaries at Signal Office	\$1, 234, 299 35, 000 150, 000 10, 500 8, 540 116, 800
Total	1 555 130

Let us examine in detail some of the items of these expenditures. For clerical and other work under head of salaries at Signal Office to be performed at Signal Office, \$116,800. One hundred and twelve civilian employés are asked for. These are to be exclusive of such enlisted men of the corps as the Chief Signal Officer may see fit to detail at his office. Why this necessity for so many civilian clerks? How can discipline be maintained according to the arguments of the Chief Signal Officer in advocating the necessity of a military organization for the corps if so large a body of non-enlisted men are on duty in his office? Why is it not necessary that military laws shall govern the men on duty in his office as well as those on station?

The argument that the observers of the Signal Corps must be held to their duty by oaths of enlistment is effectually answered by the Chief Signal Officer when he proposes to fill his office with civilians. If one hundred and twelve civilian clerks, closely associated in their daily work under circumstances where the temptation to idle is great and residing in a city where the temptations are proportionately greater than in any other city in the country, can be kept under good discipline with-out being amenable to army rules and regulations, why can not the out being amenable to army rules and regulations, why can not the several hundred observers scattered over the country, one here, one there, most of them married and settled in life, be kept under equally good discipline as civilians? It is proposed to create fifty clerkships for this office but not to decrease the number of enlisted men. In other words, to add fifty men to the present unnecessarily large force in this service. A mere dodge to increase the force through the popularity with which the proposition for civilian clerks would generally be received. Six of these civilians are to be "professors and computers." What necessity exists for these? The Chief Signal Officer says that his present officers are indispensable to the Weather Bureau. It could not survive without are indispensable to the Weather Bureau. It could not survive without them. They have become "learned and proficient in meteorology," and their places could not be supplied. What does this "learning and proficiency" amount to, after these ten or twelve years they have spent on detached duty, if six "professors and computers," at an average annual salary of \$2,200 each, must be employed to perform the scientific work of this bureau? What are these officers for? What has been gained, scientifically, by their many years' retention on meteorological duty? More than four hundred civilians are now employed, directly or indirectly, by the Signal Service. To this force fifty more well salaried

elerks are to be added. Nearly as many civilians in the service as elisted men, and yet we are told that thirty-five generals, majors, and captains must be assigned to their charge to maintain discipline among the enlisted half of the force. their charge to maintain discipline among the enlisted half of the force. This discipline is to be maintained among men scattered from Maine to Oregon, from Michigan to Texas, by a few officers located here in Washington. How absurd the idea. These "skilled and efficient military scientists" do not exist for the benefit of the Weather Bureau but the Weather Bureau exists for their benefit. A very little dog is trying to wag a very big tail. In a nutshell, nothing but personal influence, socially exerted, has kept the Weather Bureau in the Army and nothing but self-interest has kept up this continued opposition to a transfer on the part of the officers who have been detailed on duty in the bureau the part of the officers who have been detailed on duty in the bureau for many years. It shows the weakness of the position taken by them when their yearly struggles against judicious legislation for the bureau are remembered. Their false arguments, so frantically repeated each year, show how unstable is the ground they take.

Six press boys are asked for. What is the nature of and necessity for the printing done at the Office of the Chief Signal Officer that its greentity requires six boys to feed presses?

quantity requires six boys to feed presses?

The clerical force, it is true, has been increased some 25 per cent., but there is no evidence that the benefits of the service have been increased What necessity exists for this increase of office aceven that much. What necessity exists for this increase of omce accommodations? Is it true, as charged, that the military system of conducting office work and a desire for greater show and more luxurious surroundings have increased the cost of rent 100 per cent.?

Under head of Office Chief Signal Officer, purchase, equipment, and repair of field electric telegraph, instruments, &c., \$10,500. Four thou

sand dollars for a field telegraph. When and where is this telegraph used in time of peace that \$4,000 should be required merely to keep it in order? Six thousand five hundred dollars for field-service apparatus. Where, when, and by whom are these instruments used? Is not \$10,500 a large sum to spend annually upon the repair and preservation of Signal Service equipments, when it is considered that there is no war, no necessity for signaling, and not a member of the Signal Corps is engaged upon signal duty? How is this sum expended?

Is the necessity for so large a force of printers explained by the deluge

of pamphlets that are being constantly sent out, in penalty envelopes, from the Office of the Chief Signal Officer to block, through newspaper and other influence, proposed wise legislation for this service?

Rent of office buildings, \$7,000.

Why has the rent paid for office buildings by this bureau doubled itself under the present administration? Two years ago but \$3,580 were annually paid for rent,\* and now \$7,000 is asked for.

Signal Office building, \$150,000.

Rent of such a building, as rents are estimated, \$15,000 per annum One hundred and fifty thousand dollars for accommodations for 140 clerks, or more than a thousand dollars' worth of building per clerk. The Pension Bureau employs 1,530 clerks and stores a much greater amount of records than the Signal Service. To accommodate 140 clerks the Chief Signal Officer proposes to pay rental of \$15,000 per annum, while for 1,500 clerks the Pension Bureau pays a rental of \$38,000, and there is light, air, and comfort for everybody.

Printing, \$35,000.

In addition to his large printing division, employing some thirty men, equipped with a steam printing and steam lithograph press, the Chief Signal Officer makes a modest request for \$35,000 of Government printing. Thirty-five thousand dollars asked for out of \$170,000 estimated for the whole War Department with its ten bureaus! Nearly twice the estimate made by the Quartermaster or Chief of Ordnance more than is asked for by either the Adjutant or Surgeon General, as much as is asked for by the Secretary of War, Quartermaster, Commissary, and Paymaster-General combined. What is the necessity for so much printing? To whom do these publications go and what is their nature?

Observation and report of storms, \$310,000,

This is the legitimate work of this bureau and the work for which it How small a proportion this sum bears to the others

\*1720 G street, \$180; 1732 G street, \$500; 1718 Pennsylvania avanus (1 room in his building rented during Myer's time), \$258; 1741 G street, \$720; 2021 H street, \$36; 1731 Pennsylvania avenue, \$420; 1 room 1719 Pennsylvania avenue, \$25; 1 nom extre, \$203; total, \$3,420. These have all been rented since Myer's death

asked for! Seven hundred thousand dollars for military show and

\$300,000 for meteorolog

For five hundred and eighty-four enlisted men, pay and allowances aggregating \$568,941, or \$974 per annum each, are requested. For thirty-five officers \$126,186, or \$3,605 each, are requested. The officer ges four times as much as the enlisted man, and yet we are told the Signal Service observers are men of intelligence, education, and scientific attainments. We know that there are among them the graduates of academies and colleges, members of families of high social position, and we know that the requirements for Signal Service work bar out the ignorant and the immoral. Out of about \$700,000 required for officers and men, thirty-five officers receive nearly one-fifth of the entire amount. We can see now why the "Weather Bureau must be kept in amount. We can see now why the "Weather Bureau must be kept in the Army," and why it is necessary that these "old and experienced officers" should be permanently retained in the bureau and promoted to higher grades, with much greater salaries, as is provided for by the "M. and C." bill. It is readily seen why these officers find it profitable to yearly spend time and money to thwart legislation that would place this important bureau under control of scientists and return them to their regiments.

HOWGATE AND HAZEN.

This bureau should be transerred, because its past and present history and management do not justify the belief that it is honestly and economically conducted.

The administration of the bureau under Howgate is now conceded to have been the most disgracefully and vulgarly corrupt and felonious and wicked that has ever existed in the annals of government, civil or military. Howgate's larcenies were large and bold and defiant. They were committed under the very noses of men who pretend to be intelligent and sagacious. Their fruits were notoriously expended on yachts and houses and prostitutes, &c., under the daily gaze of men who were close to him and still retain their places. They amount to \$200,000 at least, and God only knows how much more. Why do we not know? Why have we no audit? Why have we no account? It is boldly charged in the public prints, and never has been denied, that a Congressional committee appointed to investigate Howgate was bought up, and that the work of that committee was assigned to a clerk who was borne on the rolls of the Signal Office for years at \$125 per month, and never did any work for that bureau but to aid in that fraudulent investigation.

It is charged that \$3,000 was paid at one time to a member of Congress for professional services. Now, how is this relevant to the matter in hand? I will tell you: The whole Department is run now exactly as it was under Howgate. It is run on the same system and under the same laws and by the same men as it was when Howgate ruled and reigned. What change has been made in men or measures or management since Howgate left? Every assistant he had is there still; all his right bowers are on hand. Do intelligent, honest, candid men believe that in all that reign of riotous living and larceny and licentiousness and forgery and fraud and crime that no one of the prominent officials around the Signal Bureau headquarters knew of these things? It would be an insult to common sense and common intelligence to harbor such a belief. And yet when General Myer died we have Lieutenant Greely printing the most fulsome eulogy of Howgate's brilliant career in the management of the finances and affairs of the bureau. This eulogy was printed at the Signal Bureau headquarters at the expense of the Government and circulated by thousands all over the land, asking to have Howgate

put in Myer's place. Read the Greely circular.

What had all the other men around the Signal Office to say in regard to these matters? Why did they not cryout instead of joining in such a circular? Why in the midst of such a career did they stand mute? Why are they all kept in their places now? We need not name them; any one can take the list and read it. They are all there, these adjutants and aids and compeers of Howgate. But why is Howgate not prosecuted? Ay, there's the rub! With the bureau all smothered in prosecuted? Ay, there's the rub! With the bureau all smothered in fraud, with the newspapers of the capital teeming with flagrant charges, with the reputation of the whole establishment at stake, why no sign of bringing the great culprit to trial? Nay, much more than that. Why does the whole headquarters of this institution tremble in its boots when it is proposed to investigate Howgate? For no other offense than that I tried to probe this Howgate sore, the Chief of the Signal Bureau sent one of his miserable underlings as a spy to my room to carry thence a silly tale, which he publishes at the expense of the Government, and thrusts upon the attention of Congress and the country. Fear is always mean.

Why does this hero of Shiloh fly into a frenzy because I try to bring Howgate to justice? Why does this petty shoulder-strapped legatee of Howgate tremble like a felon and grow green with rage when the notorious name of his fugitive predecessor is mentioned? I never attacked Hazen, and yet he violates the laws of war of which he seems to know as little as he does of war itself, and drags my name into his petty, truckling, begging circulars to Congress. I neither sought nor want a quarrel with this military martinet who is universally despised and loathed by every respectable soldier in the country; this general without a bistory; this commander without a history; this soldier who compromised the charge of base and ignoble cowardice and struts upon the stage and wears the muniments of war shorn of all that makes it honorable or justifies a soldier's life. "God made him, and therefore let him nass for a man. HAZEN'S "COMMERCIAL" AGENTS.

But the Signal Bureau has not only forfeited the confidence of the But the signal but has not only interest and control of the people and of Congress and justifies its transfer to another Department and the placing it under a new head and honest administration, but it and the placing is thuse a new head and nonest administration, but it corruptly spends thousands of dollars annually appropriated for its legitimate duties in blowing its own horn and lauding the pre-eminent greatness of its petty chief. In the fall of 1881 the Chief Signal Officer called ness of its petty cnief. In the fall of 1881 the Chief Signal Officer called upon the Secretary of War for a detail of four regular Army officers to make trips around the country and to the principal cities "for the benefit of commerce and agriculture." When four were refused, he asked earnestly for one to visit the principal cities "to look after certain commercial interests." What did Hazen want these officers for and what will these down by the principal cities and these officers for and what did those do who went out in the interest of commerce and agriculture? They were wanted and Hazen sent them out to bore and importune boards of trade and chambers of commerce and prominent men and to work uppublic sentiment in this way and through the newspapers in the interest of corrupt legislation which he then had pending before Congress. There never was a baser and more contemptible and criminal false pretense practiced on the country or attempted to be practiced and palmed of on Congress than this. Under the guise and pretext that he wanted to look after the interests of commerce and agriculture he asks the Secre tary of War for a detail of United States Army officers, whom he intended to use as manipulators and electioneerers and political managers, supes and log-rollers to impose on Congress the belief that the country was crying out for more signal service. Read Hazen's own confidential letters. Read the marvelous letters of his "commercial" agents, Powell and Allen and Swift, and compare them with the resolutions of chambers of commerce, &c., of which they severally give the history.

I will print all the letters in full in the appendix, but it may be in-

resting to give a very brief outline of their contents and drift.

It must be remembered that the majors and captains' bill was before Congress and the chief had set his heart on passing it. Powell was out and working like a beaver in all the larger towns of the country. The time for action had arrived with the meeting of Congress and the work

had to be hurried up. Therefore it was thought best to re-enforce Story, who was "to look after certain commercial interests" in the principal cities, and the great chief writes:

[Confidential.]

CLAPP: Get word to Powell to work up our friends in the four large cities of few York, Boston, Philadelphia, and Baltimore, without regard to Story's ex-ected visit. W. B. HAZEN.

And Powell did "work 'em' up in good style.
From Pittsburgh he writes, November 11, 1881, that he was doing his level best with the chamber of commerce, and particularly requires that "all action should appear spontaneous on their part." From Chicago, November 22, 1881, he writes:

Papers will at time of convening of Congress publish editorials. I have left rurd for the editorials to be sent to you, and thought after we got them all in ou could have copies printed and sent to each member of Congress.

He then gives the whole method of his operations, and says he requests members of board of trade, &c., "not only to vote with the committee of board, but to make individual effort with their member of Congress to secure desired result."

From Indianapolis, November 24, 1881, Allen writes:

The Signal Corps has done no end of begging, and when we only want resoutions and no dinners they respond heartily.

This is rather humble work for a first lieutenant of the Third Cavalry, United States Army.
At Toledo, December 5, 1881, Powell says:

I have left nothing undone to put our case in the best light. It is somewhat of a job to overhaul every one, and in some cases argue for an hour or more as to the wisdom of keeping the service under military control.

Here Powell had hard work, but succeeded after long and arduous labor in capturing an editor. He concluded, however, that "everything is swimming." thing is swimming.

Powell's letter from Erie, December 11, 1881, is a sad one, but worth rading. "Some of the zeal was taken out of him."

At Buffalo, December 13, 1881, he was "working day and night" and moving on Vermont in the grand Signal Service spontaneous crusade. He succeeded here, however, in "changing the tune of a hard-headed editor, who intended pushing them a little in an unfavorable

Three days later he writes from Buffalo, December 14, 1881, that the resolutions which are being passed at various places have "too much shop" in them. This should be stopped, he thinks. He says:

My aim has been to make these resolutions appear as spontaneous action of

On December 15, 1881, Allen struck Montgomery, Alabama, the worst place he had found that year. He calls for the military commit-

wouse place he had been decided and Senate.

At Rochester, December 16, 1881, Powell saw editor of Express, "who had intended to go for the service," but "after a long conversation

bound him to our interests." The "other papers he had no trouble with." He says:

We have certainly reached the delegations from Wisconsin, Michigan, Illinois, Ohio, Pennsylvania, and New York.

Pretty good work.

From Albany, December 24, 1881: Powell writes that he is "glad Story intends visiting these cities." Hazen had named them to Story. He thinks he could have saved Story his Boston trip. He says: I think we will certainly deluge the delegates from this State (New York) with

He believes there are thirty-eight members from New York, but he

was a little at fault in that; but then he is only a second lieutenant.

At Portland, January 2, 1882, he ran afoul of "a chairman of a meteorological committee," This was bad. The Signal Bureau does not prosper among meteorological people, and Powell here "swallowed a

At Salem, Massachusetts, June 11, 1882, Powell found out that the Portland meteorological man was a "consummate ass," and referred him to General Hazen.

At Boston, January 16, 1882, Powell saw "Tom, Dick, and Harry," and also that there was a "little feeling here against offering anything before the board relative to the bureau," He says:

They got themselves into a box with Howgate and are a little timid

He inclosed Hazen "some real good editorials which, with my [his] usual good luck, I was able to 'wheedle' out of the papers." This is a little hard on the Boston editors if we understand this word "wheedle." He would like to have staid at Boston a few days, but he knew they were "all desirous for him to reach New York." He found his "ammunition" short here also, and reports that he is good at 'shouting,' but wants something to back it." A li for more "ammunition." A little call

At Newport, January 20, 1882, he suggested the man who could do the resolution business at Galveston, Texas. Here, he says, he could only "reach two Senators and two Representatives, but every little helps." Here he met, also, Hon. Mr. Mitchell, who said he "controlled Anthony and Aldrich and the two Representatives." From New Haven, January 30, 1882, Powell writes that "he ought to be in New York, Philadelphia, and Baltimore." He also says he wrote Glassford, and warns the Department a little against "Swift." Glassford, it seems, was not wholly loyal and Powell began to suspect Swift.

From New York, February 2, 1882, Powell predicts "that there will be some hard fighting, and thinks he could help if he was in Washington, especially with the men." He says:

I have laid my wires so well that if resolutions are not passed at every station where I have asked them I know the men had something to do with it.

Powell does not seem to have as much confidence in the men as

Hazen's last circular would seem to justify.

Powell's next letter is from the Saint Nicholas Hotel, New York,
February 3, 1882, and must be read in full to be appreciated. Among other things, he says:

The president of the board of underwriters is an old fossil, to whom I had to ive about two hours of valuable time of explanation. He was afraid it was omething would do him an injury. He turned me over to the vice-president.

The vice-president attended promptly to the whole matter of resolutions, and promised to throw into the bargain the distinguished member of Congress from his district on the Military Committee.

Here he got a letter from Story telling him to vary the resolutions,

and describes what reams of paper he used up in attempting to get a change of phraseology and prevent too much "shop" in these spontaneous effusions from chambers of commerce, &c.

On February 3, 1882, the great chief himself writes to Captain Clapp and directs him to "write Powell that the third section is necessary,

but the men on the corps will come in first when they deserve it, as he certainly will. Also that after visiting Philadelphia to keep us informed, and when time for action comes I will have him come here, finishing his tour afterward." The faithful Powell had become dissatisfied with the bill he was working so hard to help, and the chief wanted

to encourage him.
On February 4, 1882, Powell writes from New York again that "the on February 4, 1882, Powell writes from New York again that "the board of underwriters had prepared a most magnificent resolution [letter] \* \* \* addressed to McCook." This whole letter of Powell should be read and compared with the letter and resolutions of the board of underwriters, which bear the same date.

The crowning letter of the lot is from Lieutenant Swift, whose loyalty had been doubted. He writes to Hazen from Fort Myer, February 7, Swift is only a second lieutenant, but he says

I can pull a pretty heavy oar in both the Senate and the Hous

He names a large number of prominent Senators and Representatives whom he holds in hand, and several Congressional delegations. He not only has the Rhode Island Senators, but says, "I can pull their solid

Powell's last letter is from Philadelphia and is addressed to Story, February 8, 1882, wherein he seems to have fixed up the New York Herald and got a solid hold on Kelley and Randall, &c. This is a

good letter from Hazen's faithful mercantile agent. He concludes by admonishing Story as follows:

I tell you, Story, a bottle of wine and a dinner go a long way someti

These very brief extracts from the letters, which I give in full in the appendix, afford but a bird's-eye view of the influences which Hazen and his aids brought to bear all over the United States for the majors and

Here are regular Army officers, while they are drawing large salaries from the Government for services to the public, who prostitute their places to the infamous work of getting up bogus resolutions to impose upon Congress and induce it to vote more money to build up a grand soft nest for just such scalawags to creep into. They can not themselves, but they bring reproach upon the most distinguished service in the world. Howgate stole the people's money like any ordinary forger and thief; but here is a refinement of rascality by which the "commercial" agents of the Signal Bureau steal the appropriations in working upon Congress for still larger sums to be again stolen, with a zeal and offensiveness hardly equaled by Mr. Randolph's "rotten mackerel by moonlight, which shines and stinks and stinks and shines."

SOME PETTY FRAUDS.

But this is not all. These bogus resolutions are printed at the Gov ernment's expense, and mailed in Government envelopes at the cost of the Government. Buncombe articles are published in newspapers indorsing the Signal Bureau, and paid for as advertisements Signal Service fund. One of these laudatory frauds was published in a paper in France called Nature, at a cost of 2,000 francs, which was paid out of the storm fund. This article from Nature, and similar ones from other papers, are republished in pamphlet form by thousands, under the direction of Hazen, to prove to an admiring country what a great weather prophet and rival of Vennor we have? Hazen and Vennor—par nobile fratrum. Besides these things, a paid editor is employed to arrange and varnish up these stale puffs of the Signal Bureau. What is Sergeant Finley doing at Johns Hopkins University in Baltimore? What is Sergeant Spriggs doing at Morgantown College, and Sergeant West at the University of Champaign, Illinois? What law authorizes Hazen in his discretion to send young men to college? Perhaps this is what he wants \$4,000 for incidentals for. What does he want with the electric clock, which cost \$1,000, in the cellar of his unique establishment? But it would be a fruitless task to specify all the petty frauds and misappropriations of this remarkable bureau. The Secretary of War, General Sherman, and every military man of any distinction scouts the idea of the Weather Bureau being any part of the Signal Service. They all say it is eminently scientific and wholly unmilitary. They protest in the strongest possible language that it should be disconnected and divorced from the Army. They are tired of the company and the lonfrom other papers, are republished in pamphlet form by thousands, un-

divorced from the Army. They are tired of the company and the longer the bond of union is continued the more irksome it will become.

Army signaling is learned in a few weeks, and there are 5,000 men in the Army to-day who are better signalmen than those in the Signal Corps. The teaching of signaling is not the purpose, and certainly not the practice of the bureau which passes under that name. The Signal Service proper was a necessary and legitimate outgrowth of the late

In 1866, by the act of 28th July of that year, putting the Army on a cace footing, it was enacted that the Signal Service should have a chief with the rank of a colonel of cavalry, six officers of engineers, and not to exceed one hundred privates. The appropriation for the service of that year did not exceed \$100,000. In the sixteen years that have intervened between that time and the present current year it has grown by the most devious and sneaking "rider" legislation until it cost in 1882 \$1,141,629, and demands for 1883 the sum of \$1,555,000. Where is the thing going to end? From very small beginnings it has grown until with its immense appropriations it has been enabled to establish advertising bureaus, control boards of trade, invade Congress and ex-

pect almost anything it may ask.

If we are to have a splendid and expensive Weather Bureau which will be the pride of the country and the glory of science let us establish one on an intelligent and statesmanlike basis so that we will have reason one on an intelligent and statesmanlike basis so that we will have reason to expect results beneficial to the commerce and agriculture of the nation as well as to the knowledge of the world. Not one step has been made forward in the last ten years of the existence of our shoulder-strapped toy. What work has Hazen or any of the men under him published during his administration except petitions, resolutions, &c.? Hazen and Abbe and Upton and Waldo et id genus omne, in the receipt of enormous salaries, have not given to the world one single new development in the science of their department. Old Commodore Maury, almost unaided, did more for meterological science in a few years and at absolutely inconsiderable expense than our shoddy military Weather Bureau has done in many years or is likely to do forever. Bureau has done in many years or is likely to do forever

## APPENDIX

The following letters from General Hazen and Lieutenants Powell, Allen, and Swift show how boards of trade, chambers of commerce, &c., were induced to pass spontaneous indorsements of the Signal Bureau and how public sentiment was worked up so as to affect legisla-

tion favorably to said bureau, and particularly the majors' and captains

To facilitate the understanding of said letters it may be proper to that the following are officers on duty with the Signal Service: W. B. Hazen, brigadier-general and chief of bureau; Joseph S. Powell, second lieutenant, Signal Corps; J. Allen, first lieutenant, Third Cavalry; W. H. Clapp, captain, Sixteenth Infantry; L. V. Caziarc, first lieutenant, Second Artillery; J. A. Swift, second lieutenant, Signal Corps; W. A. Glassford, second lieutenant, Signal Corps; J. P. Story, first lieutenant, Fourth Artillery. Fourth Artillery.

[Confidential.]

CLAPP: Get word to Powell to work up our friends in the four large cities. New York, Boston, Philadelphia, and Baltimore, without regard to Story's expected visit. W. B. HAZEN

PITTSBURGH, PA., November 11, 1881.

My Dear General: I have been extremely fortunate with the matter of organization at this place. If I meet with such success at other places there can be no doubt of the result.

I have been promised a resolution by the chamber of commerce, the city council, and the Boatmen's Protective Association, the latter a very influential body. Not only this but individual influence will be brought to bear.

The papers here are enthusiastic about the matter, and will publish editorials from time to time calling attention to the matter. In my conversation with various parties I have clearly defined your position, and in few words, so as to avoid misunderstanding. I have also impressed them with the idea that allaction should appear as spontaneous on their part, believing that more could be accomplished in that way. I will keep you informed of my success elsewhere. Trusting everything is moving smoothly, and that you are in good health, Iam, Very sincerely, yours.

PITTSBURGH, PA., November 11, 1881.

My Dear Captain [Clapp]: Have secured promises of resolutions by chamber of commerce, city council, and an influential body here called Boatmen's Protective Association. Newspapers are going to keep ball rolling. Have been more successful than I anticipated. Hope you are well and having as much work as you can do. Yours, very truly,

MR.WAUKEE, Wis., November 18, 1881.

MR.WAUKEE, W15., November 18, 1881.

MY DEAR CAPTAIN: Am glad you sent me those tables. Have made good use of them and they are appreciated by all. The chamber of commerce at its next meeting will pass resolutions in our cause. Newspapers will also take a hand, Hope you are well and remember a poor devil up here in the cold work when you take your afternoon nip. Give regards to Story, Caziare, Judge, and Craig. Tell Caziare I saw an interview in the Post which I suppose represented him. I will some day repay him for the interest he takes in us.

Sincerely yours,

GIBSON HOUSE, CINCINNATI, November 19, 1881.

Dear Captain: I find out that as usual when one wants anything they must know exactly what they want and then ask for it. Both boards here are willing to pass such resolutions as we want, but they would like to have them written

to pass such resolutions as we want, but they would like to have them written out.

I wish you would attend to this for this city, and send me a copy to Indianapolis, and if you can send me several different ones, so that I can have a variety for the different cities, I would like it. John J. Pearce, care of J. T. Blackburn, secretary Board of Trade and Transportation Company, will attend to that instruction. He says "make it strong." In writing call attention to my having interviewed him, and that it is sent because he desired us to state definitely what we wanted. He says he "can pass anything." For the merchants' exchange write to C. L. Howe, room 6, Fike's Building, Fourth street. He called on me this a. m. at signal office, and said if I would write out what we wanted passed he would put it through. He said, "we will give Hazen a lift if we can." In case there is any hitch, write Sergeant Watkins. He is well liked. He was with me at West Point, I think, eight years ago, and is reliable, I believe. Or if you don't feel like writing him send me what you want said to him. Don't forget to send me a variety of resolutions.

Yours, sincerely,

Chrosco I.L., November 22, 1881.

CHICAGO, ILL., November 22, 1881.

My Dear Captain: Received your letter yesterday, which was addressed to me at Milwaukee. In regard to the names of parties at Pittsburgh who will take action relative to our organization, I am sorry I can not remember them, with the exception of the secretary of the chamber of commerce, Mr. McHenry; but I am sure there will be no necessity for writing them. I have received information from that station that resolutions were presented by Mr. McHenry to the chamber of commerce and referred to a special committee for action. The protective (boatmen's) association has also passed resolutions. The coal dealers exchange will do so at its next meeting. The papers will at the time of the convening of Congress publish editorials. I have left word for these editorials to be sent you, and thought after we get them all in you could have copies printed and sent each member of Congress.

At Milwaukee the whole meteorological committee, Colonel Hathaway, Mr. Merrill, and the secretary of the chamber, Mr. Langsley, will push the matter. You may rest assured I have left no station without placing matters in such a way that there can be no getting out of the action being taken which we desire. For instance, I prepare carefully a set of resolutions all ready for passage by the chamber. I then visit as many of that body as possible and explain the whole thing verbally or else in writing, and tell them the committee have these resolutions in hand and will present them at next meeting, and want them not only to vote with committee but make individual effort with their members of Congress to secure the desired result. This gives them an opportunity to "spread' themselves on a subject which before they knew very little about, and as all mankind are ambitious, they will endeavor to push the matter to show their familiarity with science. Thus far I have been exceedingly successful. The meteorological committee here, composed of Mr. Walker, Mr. Trench, and Me hamiltons. They have told me that they could

Inclosed are slips cut from Inter-Ocean, one of which is an editorial. Other papers will follow example. I have had copies of the editorials printed here and will use them at other stations. All papers have published tables sent me. Everything upon the subject will be sent you. Estween Abbe's desire to get correct elevations and this matter it keeps me on the run all the time, so your little reference wishing me a pleasant time, though appreciated, might be construed as containing a wee bit of sarcasm; but I know your good, generous soul had no such thought. Please let me know, when I get further on, the stations in the East which have been visited, so I will not rehash the business. With kindest regards,

I am, sincerely, yours.

Grand Hotel, Indianapolis, Ind., November 24, 1881.

Dear Captain: That interesting compilation, "Proposed Legislation for the signal Corps," was just the thing. I can now give them all the "whereases" and "resolves" they want; I will attend to the Cincinnati and Louisville matter, as I judged from your letter that you would not want them. I will send quarded epistles, though I do not think it will do any harm to have people know what we intend to do. I tell these people it is bound to go through any way, but that we want their help to "fix it sure." The Signal Corps has done no end of begging, and when we only want resolutions and no dinners they respond heartily. I met two members of Congress yesterday. One of these asked me if I was "working the boys up," and said it ought to go through, as he had no doubt it would.

I leave to morrow for Saint Louis. oubt it would.
I leave to-morrow for Saint Louis.
Kind regards to the future captains and majors of the Signal Corps.
Very truly, your friend,

BOODY HOUSE, TOLEDO, OHIO, December 5, 1881.

MY DEAR CAPTAIN: Received your letter at Port Huron. You may rest assured that I leave nothing undone to put our case in the best light. It is somewhat of a job to overhaul every one and in some cases argue for an hour or more as to the wisdom of keeping the service under military control. Thus far I have been more than successful in coming out ahead. In Detroit, for instance, an editor of the "Post" I only won over after about an hour's work. His editorial I inclose. You may think it strange that I go for the papers, but it is in just such cases where I desire to close their mouths, if, after the passage of resolutions, they should want to take the opposite stand, which I am sure some would do. After coming out in an editorial favoring our organization they could not "eat their own words." Don't you think I am right? I met nearly all the board of trade in Detroit, and the president, i. K. Norton, gave me his word the resolutions would be passed there to-day and copies forwarded you and members of Congress.

Resolutions will be passed here in a day or two. It would take too much paper to give you full particulars, but I think everything is swimming. Inclose resolutions passed in Chicago and editorials of Detroit papers. Please print me some copies of each and forward me; the resolutions especially.

ERIE, PA., December 11, 1881.

ERIE, PA., December 11, 1881.

My Dear Clapp: I inclose copies of resolutions passed at Detroit and Toledo.
To-morrow the Cleveland Board of Trade will take action. Mr. R. K. Winslow will present them. I know from conversation with other members they will go through all right. I understand Milwaukee has passed resolutions, but have no copies. Have you heard from Pittsburgh? Thus far we have Chicago, Milwaukee, Detroit, Toledo, and I may say Cleveland, to my certain knowledge. I wish you would tell the general for me that I have worked faithfully in this matter, but had no idea when I started I was signing my death-warrant. Have just seen in the Republican, of Washington, a copy of bill to be introduced. The fourth section says "that second lieutenants of the Signal Corps may be transferred to the line of the Army." Well, that means, I suppose, "step down and out."

formed to the line of the Army." Well, that means, I suppose, "step down and out."

If I had known the general desired it I would long ago have made request for transferral. I do not want to be an obstacle to the advance of the service and will most willingly take a back seat. But I think it is a little rough on a fellow who has tried as hard as I have to please—and the work I have done I believe will bear witness of the fact—to be set adrift just at the time he imagined his future would be secured. The third section of the bill says "that after the appointments have been under section I (that is, by transferral) from appointments of civilians and appointments of the first lieutenants now serving with the corps, vacancies in the grade of first lieutenants shall be filled by competitive examination of the second lieutenants in the corps and of other corps and regiments," or in other words, "a free race for all." I have served my time in examinations and stated the last one would finish me. I think I have have about six since I entered the service, and if I did remain in the corps would not feel it to be just to require me to go through another competitive examination to secure promotion. But the general is boss of the ship and knows what he wants, so there is no use of complaining. If they will allow me three months' leave before joining regiment, will be satisfied.

I have written freely to you about this matter and will never refer to it again, but I feel that some of the zeal has been taken out of me. You may rest assured that whether I am to remain in the corps or not I will at every station during the remainder of my trip exert the same energy to secure action to meet the general's wishes on the part of chambers of commerce, boards of trade, &c., as I have done heretofore. As soon as I get Cleveland resolutions will forward them.

Very sincerely yours,

JOS, S. POWELL.

BUFFALO, N. Y., December 13, 1881.

My Dear Claff: I received your kind letter here, inclosing printed copiesof resolutions passed at Chicago and also informing me that the bill printed in
newspapers is not the one proposed to bring before Congress. I am glad this is
not the case, as it is a most unjust thing. This bill has been extensively copied by
newspapers and is provoking very unfavorable comment, so much so I am in
receipt of two letters from sergeants stating that under the circumstances if I
said so they could secure from chamber of commerce resolutions deprecating
the passage of that measure. I understand that a paper in this city has published an editorial upon the subject, viewing it in the light of unjust discrimination. Now, nearly all of our observers have considerable influence, both with
newspapers and members of board of trade, and they can make it warm for us
in a quiet way if they felt so disposed, and I think some statement from the
Chief Signal Officer to the press that this bill purporting to come from him is not
true. I am afraid its publication has hurt us, to what extent I know not, but
leave it to your better judgment to take such steps as you think best to remedy
the evil. This is confidential between us. I suppose that damned fool Commegys
had his finger in the pie.

At Eric I secured the promise of members of the board of trade to pass resolutions, which will be done this week; will name Mr. Messinger, Mr. Beckman, and Mr. Rindernecht. Here I have good reason to believe everything will go smoothly, and will let you know result when I finish.

In one of my letters I asked you to let me know what eastern stations had been approached in this matter, so I would not put my foot in it. Please do not forget to so advise me. I am working night and day at each station in order to push ahead and get as manystations through as possible. By this means I think I will reach Burlington, Vermont, and have resolutions passed there before bill is acted on, giving us Buffalo, Rochester, Oswego, and Albany, in this State. It would be wise, I should think, when I arrive in Albany to drop down to New York on this business alone, if some one has not been there already. I can make it by or before Xmas.

I inclose an editorial cut from a Toledo paper which has been sent me by Sergeant Buell. Perhaps the general would like to see it. To-morrow I have got to go down and have a talk with an editor of a paper here who intends pusing us a little in an unfavorable way. I have succeeded thus far with some of these hard-headed fellows in changing their tune in our behalf, and I hope to have the same success with this fellow. I hope that the parties you mentioned in your letter will get along amicably. They are both excellent men, and I am sorry they fall out so often. Give my kind regards to the general and all of the boys. Tell the latter I hope they will keep a warm place in their hearts for the absent. Tell Story I have had presented to me a book entitled "Memoirs of Catharine of Russin," and if he would like it will send it to him. I selected him because I know he is not a wooden man.

Very truly, yours,

BUFFALO, N. Y., December 14, 1881.

BUFFALO, N. Y., December 14, 1881.

My Dear Claff: Have just received copy of resolutions to be introduced in Saint Louis. A stop should be made to this, as it partakes too much of "shop," and does not look like resolutions drafted by business men. I am afraid it will make us look ridiculous; of course you and others may have different opinions in regard to it. My aim has been to make resolutions appear as spontaneous action of business men.

Yours,

Montgomery, Ala, December 15, 1881.

MONTGOMERY, ALA, December 15, 1881.

DEAR CLAPP: I have not heard from you for some time, but I trust everything is going along O. K. You ought to begin to receive some returns from the different boards by this time. I have received promises of hearty support everywhere. I will soon be back and in time to stir them up if they do not respond. I leave to-nightfor Atlanta. This is the worst place I ve struck on the trip. How does it look in D. C.? Please send me names of both military committees. Give my regards to the majors.

Very truly, yours,

ROCHESTER, N. Y., December 16, 1881.

Rochester, N. Y., December 16, 1881.

My Dear Captain: Have just received your kind letter. I am very thankful for the kind feeling expressed by you in regard to my letter from Erie. I took matters in a general light and not individual. I am promised at Buffalo the cordial support of the entire board of trade. Mr. Alouzo Richmond will present resolutions this week, and I know they will pass O. K. Saw the editor of the Express, who had intended to go for the service, and after a long conversation bound him to our interests. He will publish from time to time editorials upon the subject until matter is settled. The other papers I had no trouble with.

You speak of resolutions coming in slowly. I thought they were, as far as I was concerned, going through quite rapidly. I inclose action taken by Cleveland board and expect to hear in a day or two from Erie and Buffalo. I have written about the matter to Pittsburgh and believe by this time it has been passed. We have certainly reached the delegations from Wisconsin, Michigan, Illinois, Ohio, Pennsylvania, and New York shortly. I don't know how Allen is making out, but presume he is doing well. He is a fellow that will take with every one, and I feel certain he is making a success.

In reading your letter I am filled with regret that you should have missed your calling. Theology blooms in every word, and I know if you had only followed the dictates of your heart you would now he a parson saving (ahem?) many souls from perdition. Inclosed you will find editorials from Cleveland papers. I don't remain,

Yours, sincerely,

Oswego, N. Y., December 21, 1881.

OSWEGO, N. Y., December 21, 1881.

My Dear Captain: There being no regularly organized board of trade or chamber of commerce at Rochester, I size the chairman of meteorological committee of the city, and he promised to have resolutions signed by a number of prominent business men and copies forwarded to Congress. I have just left the members of board of trade here and they promise to take action to-morrow or next day. Have received news from Pittsburgh. Inclose copy of resolutions. Milwaukee you have doubtless heard from. Sincerely wishing you a merry x-mas, I am,
Yours, very truly.

ALBANY, N. Y., December 24, 1881.

ALBANY, N. Y., December 24, 1881.

My Dear Captain: The board of trade here will pass resolutions next Tuesday. Am glad Story intends visiting those cities. I could have saved him his Boston trip, as I will reach there in time. I believe all that remains for me are Burlington, Portland, Bangor. Will Springfield, Newport, New Haven, and New London be of service—that is, in point of time? You had better give me some points at Portland about this. I think we will certainly deluge the delegations from this State with resolutions. I believe there are thirty-eigh members, and when they receive Buffalo, Rochester, Oswego, Albany, and New York they will think the people of this State are for us. Inclosed are newspaper slips. Yours, very truly,

PORTLAND, ME., January 2, 1882.

My Dear Captain: I have had considerable work here owing to an animosity existing toward the service on the part of a Mr. Farley, chairman of meteorological committee. I was told that it would be useless to have any resolutions presented before the board of trade which did not emanate with or were backed by Farley. So I swallowed the bitter pill and went to see him. After two hours' work he consented to introduce resolutions and guaranteed their pasage. Other members have given me their word should farley not come to time they will take the matter in hand. The trouble with this man is, we had an office in his building and removed it. I am sure we have him all right. He is a prominent man in the board and I was desirous of securing him and used extra exertion to do so. I made the trip to Mount Washington and it has nearly killed

me. I have made no complaints, and General Hazen and no one else will ever know how much I have suffered from this most unnecessary hardship. I inclose newspaper slips of date unknown and Oswego resolutions.

Yours, truly,

ESSEX HOUSE, SALEM, MASS., January 11, 1882.

ESSEX HOUSE, SALEM, MASS., January 11, 1882.

My Dear General: On my return to Portland, en route from Thatcher's Island, I saw in a paper the proceedings of the board of trade at Portland and the report of the meteorological committee of which a Mr. Farley is the chairman. I directed our observer to forward you the paper. I saw this Mr. Farley when I visited station and assured him that the complaints made by him would be submitted to you, and anything practicable you would attend to. On the back of his he presented to the board of trade a report purporting to be report of meteorological committee, but which I ascertained was not signed by any one but himself. In plain words, this man is a consummate ass, and his animosity toward the service has arisen from the removal of our office from his building to the custom-house. He had promised me on his honor, after about two hours' conversation, wherein I had explained many things, and contradicted and proved the absurdity of others, that at this meeting he would present resolutions relative to our organization and his action incensed me somewhat. Yesterday I saw him, but found him very obstinate. I have well supplied other members of the board with data and copies of resolutions, and they have assured me at the next meeting they will be passed. I will reach Boston on the 13th.

Very truly, yours,

JOSEPH S. POWELL.

JOSEPH S. POWELL

Boston, Mass., January 16, 1882.

Boston, Mass., January 16, 1882.

My Dear Captain: I have seen Tom, Dick, and Harry of the merchants' exchange here, and am promised that our resolutions will be passed at the next meeting. There is a little feeling here against offering anything before the board relative to the service. They got themselves into a box with Howgate and are a little timid now. I feel confident that resolutions will go through all right. They may have a meeting to-morrow or next week, just as it happens. Mr. Howard, the secretary, and Mr. Burt and Captain Spooner are the principal parties who will look after the matter. This merchants' exchange is the only organization here or I would secure action by others. I inclose some real good editorials which, with my usual good luck, I was able to "wheedle" out of the papers. They no doubt will be of service to you.

I would like to stop over here just one day when I have nothing to do but to look around; but I know you are all desirous for me to reach New York as speedily as possible; so I will forego the pleasure of a day of recreation and hasten on. Don't forget to send me at New York at least a dozen of those pamphlets. I have hard work keeping up ammunition, and am often compelled to write out copies of certain things. Any data you may have which will be of service send me, for I am in need of it. I am pretty good at "shouting," but want something to back it.

Yours, truly,

JOS. S. POWELL.

JOS. S. POWELL.

NEWPORT, R. I., January 20, 1882.

Newfort, R. I., January 20, 1882.

Dear Captain; Received your kind note here. Have acted upon your suggestion and written Sergeani McInerney at Galveston. He will do anything in the world for me, and you may rest assured of the action of the board of trade there. I saw in a paper where the President of the Senate submitted resolutions of Board of Trade of Portland. "So you got those fellows, after all," Mr. Farley said. I feel prouder of that, because it was so much work calling for extracertion to overcome the influence of Farley. Doubtless Boston has taken action ere this. The meteorological committee here promise a speedy passage of resolutions. They will reach only two Representatives and two Senators, but, as you say, "every little helps."

While at Boston I wrote to the observer at Indianapolis, and also to some friends of mine belonging to the board of trade, and expect you will hear from that board soon. Must Eurry to catch boat for Block Island. With kind regards to all, particularly to yourself,

Yours, most truly,

NEWPORT, R. I., January 24, 1882.

Newfort, R. I., January 24, 1882.

My Bear Captain: Have just returned here and have found meteorological committee signing their names to resolutions which will be sent off to-night to members of Congress and Senators. Will have sergeant to send you a copy. I met several members and senators of the Legislature, one of whom, Hon. B. B. Mitchell, says he can get resolutions passed by Legislature, but as he controls both anythory and Aldrich and the two Representatives he would write them personally, and says that their votes may be counted upon.

SPRINGFIELD, MASS., January 28, 1882.

My Dear Captain: Have the promise of pussage of resolutions by the Business Men's Association here on Monday or Tuesday. This organization is similar to board of trade in other cities. General H. C. Lee and Mr. Demey, the secretary, will push the matter. I have worked around members, so I believe there will be no opposition. I guess you are getting tired of my notes, but I have no other way of keeping you advised. Give kind regards to all.

Yours, very truly,

POWELL.

POWELL.

NEW HAVEN, January 30, 1882.

My Dear Captain: The chamber of commerce here will take action on our matter this week. They were very anxious to see resolutions of other chambers before their meeting, and that is the reason I telegraphed for one of those pamphlets. I inclose a slip from New York Tribune of to-day's date.

I ought to be in New York now, and from there should go to Philadelphia and Baltimore instead of traveling down the New Jersey coast. Some places, such as Barnegat, Delaware Breakwater, and Chincoteague, are not on the mainland, and I may be detained several days at these places, waiting for an opportunity ocross. I came near being laid up crossing to Thatcher's Island in a row-boat. The wind was blowing thirty-six miles an hour. Will hurry along as fast as possible and get through with what has been a pretty hard job. I telegraphed to Glassford and have also written him. Saw article in Washington Gazette. I think I could find out the man if I was there. Between us, unless you have explained bill to him, look out a little for Swift. At Thatcher's Island I heard he had written the sergeant asking if Hon. B. B. Mitchell was there. Now, Mitchell is the man who promised to assure Rhode Island delegation for us, and Swift became quite intimate with him when laying cable. His idea in writing and asking that question may be only an ordinary one or may be to secure Mitchell's favorable action for passage of bill, and perhaps I may do him wrong in supposing it might have been to oppose it. I did not think anything about it until this

affair of Glassford's came out, and it has made me suspicious that perhaps Swift is following in his footsteps. I hope I am wrong. With regards, Yours,

NEW YORK, February 2, 1882.

New York, February 2, 1882.

Dear Captain: These letters will explain themselves (accompanying letters from Sergeants Finn and Schutze). Have written to Indianapolis giving all necessary directions. The newspaper slip is from Boston Traveller of 27th ultimo. Had you not better have copies printed? I also send a pamphlet which you may not have seen. I would give \$100 to know who the man who wrote it is. Can you not send me some more of those pamphlets? I am doing first rate here and will give you agood report in a day or two. A good portion of my time is taken up with answering letters from observers. I did not imagine I have so much influence with the men. Must say I don't like the third section of that bill. It sticks in my throat, but I won't let my private opinion as to its justness interfere with giving the bill all the help I can. Be sure to let me know if any stations have missed fire, and send pamphlets or anything you may have. I tell you candidly there will be some hard fighting, and I think I could help things along if I was in Washington, especially with the men.

The articles in Gazette have been sent to every station, and the men on station believe they represent the feelings of the entire force at O. C. S. O. I have laid my wires so well that if resolutions are not passed at every station, where I have asked them I know the men have had something to do with it. I wish you would send Schutze one of those pamphlets if you could spare one. He will do all he van.

would sen all he can. Yours,

SAINT NICHOLAS HOTEL, NEW YORK, February 3, 1882.

SAINT NICHOLAS HOTEL, New YORK, February 3, 1882.

MY DEAR CAPTAIN: The chamber of commerce will pass resolutions about the 1st of March. They have monthly meetings. Yesterday they had one and 1 did not know of it until about an hour before meeting. I tried to rush them through, but had not time. Cotton exchange will act on Monday; the maritime exchange on the 13th; the produce exchange meeting time next week, but they want a copy of the bill, so you had better send one to the superintendent produce exchange, New York. I met a number of them, but do not remember initials of their names. The superintendent's name is Grant, but a letter directed to him as I have given will reach him.

I saw the president and vice-president of the board of underwriters to-day. The former is an old fossil, to whom I had to give about two hours of valuable time of explanation, &c. He seemed afraid it was something that would do him an injury. After seeing him he turned me over to the vice-president. The vice-president was very pleasant and said he would have matter put into shape this afternoon, and I could come around to-morrow and make any necessary changes. He said to not feel alarmed about McCook. He would bring influence to bear on him. Please tell Story this. I think I have seen nearly everybody; but if there are any more organizations you wish action taken by let me know. Story wrote me to vary resolutions. If you only knew how many sheets of paper I have wasted you would think I had endeavored to do so. They all want to see resolutions passed by some other body, and then they throw my poor manuscript away and follow the set example. I think there will be sufficient change here. You must keep me supplied with some of those pamphlets. Story sent me a good one. Am about played out to-night and long for a rest at home.

Kind regards to all.

CLAFF: Write Powell that the third section is necessary, but the men in the corps will come in first when they deserve it, as he certainly will. Also, that after visiting Philadelphia to keep us informed and when time for action comes I will have him come here, finishing his tour afterward.

NEW YORK CITY, February 4, 1882.

NEW YORK CITY, February 4, 1882.

MY DEAR CAPTAIN: Have just left board of underwriters. They have prepared a most magnificent letter, which is now being sent round for signatures by members of the board. Mr. Dennis, the vice-president, had it addressed to McCook and will have certain prominent merchants, political as well as personal friends of McCook, sign it. He says McCook can not well get out of giving the measure his carnest support. This letter will be sent to General Hazen on Monday. They suggest he have copies printed and furnished each member of Congress, but send original to McCook. They also request that six of the printed copies be sent to Mr. Dennis for file in records. They want the general informed they take a live interest in the service, and anything he would like done to call upon them. The letter will speak for itself, and I think will strike McCook in the right place. done to call upon them. 'McCook in the right place Yours, hastily,

Will leave here Monday for Philadelphia, as I believe the general wants me

FORT MYER, VA., February 7, 1882

FORT MYER, VA., Fibruary 7, 1882.

My Dear General: I can pull a pretty heavy car in both the Senate and House for the bill, but I do not know your line of action or wishes in the matter. I do not even know that you approve the pending bill, therefore I have remained silent and quiet. Senators Maxey, Sewell, Gorman, Groome, Vance, and Ransom; Representatives Spooner, Crapo, Townshend, and the Maryland delegation, also Senators Anthony and Aldrich, are very friendly to me. Besides, can pull their solid constituents. It seems to me that you should bring all pressure possible to bear, in order to get the bill through. In this I would like take a hand, as you well know I will stand by you through thick and thin. A man that would not stand by his chief would have but little respect from me. Yours, very truly,

JOS. A. SWIFT

PHILADELPHIA. February 8, 1882.

MY DEAR STORY: Your letter received, and I thank you for the contents. I did not want my orders changed, but simply to come to Washington on my own hook should the general desire me to proceed from here to Baltimore. I am afraid just at this time to do anything which the War Department might think was disobedience of orders, which it certainly is coming to Philadelphis from New York, instead of going to Sandy Hook. I have written the inclosed letter, which you can hold or file, just as you think best. It will be my authority for coming to Washington for a few days. Also inclosed is a copy of resolutions passed at Albany. Please give it to Clapp.

I saw in New York Heraid of last Sunday an article opposed to our bill. Have taken the matter in hand, and am promised a favorable editorial in a few days. I think Randall and Kelley will offer no opposition. My letter to Clapp will explain. The delegation leaving here to-day will make an ersonal appeal to Senstors and Representatives for passage of bill, and certain particular friends of

Randall will "do" him. I tell you, Story, a bottle of wine and a dinner go a long way sometimes. Inclosed find newspaper article published in Boston Herald of February 3, 1882. Anything you have to suggest, why send it along. Clapp did not set d me sufficient copies of bill. Have him send me some more at Baltimore. Am surprised that certain organizations passed resolutions without knowing for what they were petitioning. Can't do that any more, as they seem to know a bill has been presented and want to see copies. Trusting I will see you soon, I am, Yours, hastily,

The following are some of the fruits of the conspiracy and negotiations fully explained in the foregoing letters. The resolutions are reprinted bodily, head lines and all, from a pamphlet printed by the Signal Bureau and widely circulated by it:

RECENT RESOLUTIONS AND COMMENTS ON THE SIGNAL SERVICE OF THE ARMY.

METEOROLOGICAL COMMITTEE, CITY OF NEWPORT,
Newport, R. I., January 24, 1882.

In recognition of the valuable services rendered by the Signal Service in the
past, and believing that greater efficiency can be secured by the permanent organization of the Signal Corps on the same basis as the Engineer and Ordanace
Corps: It is, therefore,
Resolved by the Meteorological Committee of the City of Newport, That we signify
our desire for the said permanent organization, and request the Senators and
Representatives of the State of Rhode Island in Congress to take such action as
will secure the desired result.

That copies of these resolutions be furnished to each Senator and Representative from this State.

SAM. C. BAILEY, Chairman, S. W. MAOY, STEPHEN H. NORMAN, THOS. COGGESHALL, Meteorological Committee.

Portland Board of Trade, Portland, Me., February 6, 1882.

The following resolutions were adopted:

In recognition of the valuable services rendered by the Signal Service in the past, and believing that greater efficiency can be secured by the permanent organization of the Signal Corps on the same basis as the Engineer and Ordnance Corps: Be it, therefore,

Resolved by the Portland Board of Trade, That we signify our desire for the said permanent organization, and request the Senators and Representatives of the State of Maine in Congress to take such action as will secure such desired result. That copies of these resolutions be furnished to each Senator and Representative from this State.

New Haven Chamber of Commerce,
New Haven, Conn., February 14, 1882.

An interesting and important meeting of the chamber of commerce was held this noon at the office of the Security Insurance Company, President Thomas R. Trowbridge in the chair. It was a special meeting called apparently at the suggestion of ex-Mayor Lewis, who made a somewhat lengthy speech on the advantages which the Signal Service had been to the commerce of this port, and the still further advantage it would be were its facilities more extended. At the conclusion of his remarks Mr. Lewis introduced the following:

Resolved, That in our opinion the Signal Service has fully demonstrated its usefulness and importance, and we ask that its efficiency may be increased by its reorganization as a permanent bureau and by increased appropriations, to the end that a large number of stations may be established.

Resolved, That the secretary be requested to send a copy of these resolutions to each Senator and Representative from this State in Congress.

The resolution was discussed, there being but one opinion expressed, and that was in favor of the passage of the resolutions. They were then unanimously passed.

HENRY PRESCOTT, Secretary.

ALBANY, N. Y., February 6, 1882.

ALBANY, N. Y., February 6, 1882.

Recognizing the valuable services rendered by the Signal Service, and believing that the efficiency of the service would be greatly increased by Congress adopting an act effecting a permanent organization on the same basis as the Engineer and Ordnance Corps: It is, therefore,

Resolved by the Albany Board of Trade, That we signify our desire for said pera in organization, and request the Senators and Representatives from the State of New York to take such action as will secure the desired result.

That the secretary of this board be, and is hereby, directed to furnish a copy of these resolutions to each Senator and Representative from this State.

E. A. DURANT, Jr., President.

H. LACY, Secretary.

OFFICE OF THE BOARD OF UNDERWRITERS,

New York, February 4, 1882.

Dear Sir: The undersigned, underwriters and merchants of the city of New York, sak your particular attention to the importance of securing the permanency and success of the United States Signal Service.

The great importance and incalculable benefits of this service to the commercial and agricultural interests of the country have already been fully demonstrated, and the service is now regarded as a public necessity.

The request is made of you as representing the interests of this city—the chief commercial and shipping port of the United States—and in view of our experiences of the practical benefits of the work to ourselves and to the nation at large.

It is our opinion that this service should be established and maintained upon a permanent basis, and it is believed that this can best be done by establishing it as a separate branch or corps of the Army, such as the Engineer Corps or the Ordnance Corps.

It is also our opinion that such appropriations should be made as may be necessary to maintain this branch of the public service at the highest point of efficiency.

essary to maintain this branch of the public service at the highest point of efficiency.

The undersigned especially deprecate any want of care in permitting this service to fail or to be emburrassed or crippled by want of proper support at this important juncture of its progress; and they respectfully urge upon you and the other Representatives of this city, and the Representatives of the State generally, to give their attention and best efforts to guard and advance the interests of this service as one which has done well and is deserving of support.

We have the honor to be, respectfully, your obedient servants, Charles Dennis, Vice-President Atlantic Mutual Insurance Company; Alfred Ogden, Vice-President Orient Mutual Insurance Company; John P. Paulison, President Sun Mutual Insurance Company; T. B. Bleecker, jr., President New York Mutual Insurance Company; W. J. Comes, President Commercial Mutual Insurance Company; J. Raymond Smith, Vice-President Great Western Insurance Company; Higgins & Cox, attorneys for subscribers at U. 3. Lloyds'; H. & C.

L. Despard, Agents for Boylston Mutual Insurance Company; Catlin & Satter-thwaite, Attorneys for Insurance Company of North America and China Insurance Company; J. Bertschmann, Attorney Switzerland Marine Insurance Company of Zurich and General Insurance Company of Dresden; R. M. C. Graham, Manufacturers' Insurance Company, Boston; H. H. Thayer, Manager Thames & Mersey Marine Insurance Company, Boston; H. H. Thayer, Manager Thames & Mersey Marine Insurance Company; Herbert Fuller, Vice-President Boston Marine Insurance Company; Herbert Fuller, Vice-President Boston Marine Insurance Company; Whipple & de Bermingham, Attorneys for South and North American Lloyds'; Willoughby Powell, Agent Providence & Washington Insurance Company; S. G. Smith, Agent Security Insurance Company of New Haven, Connecticut, Equitable Fire and Marine Insurance Company of Providence, Rhode Island; Hugo Menzel, General Agent Swiss Lloyds'; Panl William Cussur, Agent Rhenish Westfalian Lloyds'; Jones & Whitlock, Agents Union Marine Insurance Company; G. Hon. Anson G. McCook,
House of Representatives, Washington, D. C.

OFFICE OF THE BOARD OF MARINE UNDERWRITERS, Boston, Mass., February 7, 1822.

The great value of the United States Signal Service to the shipping and other interests of the country has been amply demonstrated by experience.

In its present condition it is greatly embarrassed for want of a sufficient number of experienced, permanent officers, which want the passage of the bill for the organization of the Signal Service, as now introduced in Congress, would overcome.

the organization of the Signal Service, as now introduced in Congress, would overcome.

Believing that the almost universal acknowledgment of the usefulness of the Signal Service is the strongest argument in favor of its permanent organization and extension, and that its value would be greatly enhanced and the scope of its usefulness be greatly enlarged if a permanent organization could be given it, the undersigned, marine insurers of Boston, beg respectfully to urge on Congress the passage of this bill.

Toward the attainment of this end they ask the co-operation of every member of Congress from Massachusetts.

China Mutual Insurance Company, by William Perkins, President; American Insurance Company, by Francis Peabody, Pręsident; Mercantile Fire and Marine Insurance Company, by Samuel Appleton, President; India Mutual Insurance Company, by John H. Dane, President; Boylston Mutual Insurance Company, by T. W. Balch, President; Boston Marine Insurance Company, by R. B. Fuller, President; Washington Fire and Marine Insurance Company, by Frank E. Sweetser, Vice-President; Neptune Fire and Marine Insurance Company, by Frank E. Sweetser, Vice-President.

OFFICE OF THE MARINE UNDERWRITERS, Baltimore, February 10, 1882.

To the Senators and Representatives of the State of Maryland:

The undersigned, underwriters of the city of Baltimore, Rebruary 10, 1882.

The undersigned, underwriters of the city of Baltimore, ask your particular attention to the importance of securing the permanency and success of the United States Signal Corps.

The great importance and invaluable benefits of this service to the commercial and agricultural interests of the country have already been fully demonstrated, and the service is now a public necessity.

The request is made of you as representing the interests of this State, and in view of our experiences of the practical benefits of the work to ourselves and to the nation at large.

It is our opinion this service should be established and maintained upon a permanent basis, and it is believed this can best be done by establishing it upon the same basis as the Engineer or Ordnance Corps.

The undersigned especially deprecate any want of care in permitting the service to fail or be embarrassed by the want of proper support at this important juncture of its progress, and they respectfully urge upon you, the representatives of the city, and the representatives of the State generally, to give your attention and best efforts to guard this service as one which has done well and is deserving of support.

Very respectfully, your obedient servants.

and best efforts to guard this service as one which has done wen and is descriving of support.

Very respectfully, your obedient servants,
Jas. Carey Coale & Cunningham, Marine Insurance Agents; F. W. Wilson & Sen: Birckhead & Son, Agents Insurance Company of Philadelphia; C. Morton Stewart, Agent Orient Mutual Insurance Company; Wilkinson & Sirick, Agents Boston Marine Insurance Company; Harry Gilmor, Agent Shoe and Leather Insurance Company; George B. Coale, president Merchants' Mutual Insurance Company of Baltimore; Charles H. Reeves, Agent Insurance Company of North America, of Philadelphia.

Boston Scientific Society, Boston, Mass., January 25, 1882.

[Extract from records of meeting, January 25, 1882.]

Mr. E. F. Sawyer then put the following motion: That the opinion of the members of the Boston Scientific Society be expressed as favoring the adoption of such measures as shall secure to the Signal Service the permanent attachment of those officers into whose charge the important departments of the service

snall be given.

After comments by other members the question was voted upon and passed by a unanimous vote. GEO. H. ELSON, Secretary Boston Scientific Society.

GULF, COLORADO AND SANTA FÉ RAILWAY, Galveston, Tex., February 18, 1882.

SIE: In connection with the bill now before Congress for the permanent organization and consequently increased efficiency of the Signal Service Bureau, I take pleasure in informing you, on behalf of the Gulf, Colorado and Santa Fé

Railway, that any legislation in that direction will be very heartily indorsed by the officers of this road. Very truly, yours,

A. G. M. and Secretary, G., C. and S. F. Railway.

General HAZEN, Chief Signal Officer, United States Army.

Galveston Cotton Exchange, Galveston, Tex., February 17, 1882.

Sir.: Seeing that Congress is about to enact some law for the permanent organization of the Signal Service, I am authorized to express to you the hearty approval of the members of the Cotton Exchange of this city for any legislation that secures the permanent organization of a branch of the public service that is now indispensable to the country. There is no interest more deeply concerned than the cotton; hence our desire to see the Signal Service placed on an enduring basis. It may, perhaps, not ise out of place to let committees having this matter in hand know what the sentiments of the cotton merchants of this city are on this subject. If this view meets your approval you will much oblige the gentlemen for whom I speak, as well as myself, by using this communication in such manner as to you seems best.

Yours, respectfully,

J. D. SKINNER, Chairman Committee of Information and Statistics, Galveston Cotton Exchange.

General HAZEN, Chief Signal Officer of the Army.

COTTON EXCHANGE, NEW YORK CITY, February 24, 1882.

In view of the fact that a bill is now pending before Congress which has for its object permanent organization of the Signal Service as a branch of the War Department and which provides for a permanent assignment of its officers, we, the undersigned, representing the Cotton Exchange of the city of New York, do hereby recommend the passage of said bill, believing that such an organization and equipment of this important branch of the public service would increase its efficiency and would render still more valuable in the future that work which it has so well performed in the past.

ROB'T TANNAHILL, President.
J. YEOMAN, Vice-President.
WALTER T. MILLER, Treasurer.
G. E. MOORE, Secretary.

BUFFALO BOARD OF TRADE.
Buffalo, N. Y., February 27, 1882.
Whereas this board of trade fully recognizes the valuable services rendered by the United States Signal Service in the past, and believing that greater efficiency can be secured by the permanent organization of the Signal Corps on the same basis as the Eugineer and Ordnance Corps: Therefore,
Be it resolved, That we signify our desire for the said permanent organization, and request our Senators and Representatives in Congress to take such action as will secure such desired result.

Resolved, That copies of this preamble and resolution be furnished to our Senators and Representatives in Congress.

OFFICE PHILADELPHIA BOARD OF MARINE UNDERWRITERS,

Philadelphia, February 20, 1882.

The Philadelphia Board of Marine Underwriters, recognizing and appreciating the great benefit which the United States Signal Service has rendered to the maritime and commercial interests of the country, is of opinion that the establishment of this service upon a more permanent basis would increase its efficiency, and is, moreover, much gratified to learn that there is a bill now before Congress having this end in view: Therefore,

Resolved, That this board heartily approves the said bill, and hopes that it will receive the favorable action of Congress.

Resolved, That the secretary be requested to transmit a copy hereof to each of the Senators from this State and each of the Representatives in Congress from this city.

this city.
A true copy from the minutes

HENRY D. SHERRERD, Secretary.

Vessel Owners and Captains' Association, Philadelphia, March 3, 1882

Philadelphia, March 3, 1882.

At the annual meeting of the Vessel Owners and Captains' Association, held March 1, 1882, the following resolutions were unanimously adopted, namely: Resolved, By the Vessel Owners and Captains' Association that they recognize the importance of the services of the United States Signal Corps to commerce, and regard it as of the greatest benefit to the maritime interests of the country to have that corps enlarged and improved in the status and attainments of the officers conducting the Signal Service.

Resolved, That, carnestly holding these views, this association respectfully urge upon Congress the importance of passing the bill now pending before the Military Committee of the House for increasing the efficiency of the United States Signal Corps.

gnal Corps. Extract from the minutes.

CHAS. LAWRENCE, President.

CHAS. H. STEELMAN, Secretary.

COMMERCIAL EXCHANGE OF PHILADELPHIA. COMMERCIAL EXCHANGE OF PHILADELPHIA.

Resolved, That we recognize in the Signal Corps a most valuable organization in protecting the interests of commerce, agriculture, and the industries generally, by forecasting the approach of storms and other important meteorological changes.

Resolved, That we believe greater efficiency can be secured by placing the corps upon a permanent basis, similar to the Engineer and Ordnance Corps, and preventing changes in its officers, under present laws likely to occur at any time.

Resolved, That we urge upon Congress the pussage of a law making said corps a permanent organization.

Resolved, That printed copies of these resolutions be sent to the Senators and Representatives of Pennsylvania, with request that they will individually assist any measure to secure desired result.

Passed Pebruary 9, 1882.

GEO, W. PIERIE, Secretary.

GEO. W. PIERIE, Secretary.

PHILADELPHIA BOARD OF TRADE.

Philadelphia, February 20, 1882.

The United States Signal Service having been, under its present organization, of much benefit to our country generally, and, what is more especially within our knowledge, of great use and benefit to its maritime interests, this board is decidedly of opinion that the organization of the service should be strengthened and perfected so that its usefulness may be increased and extended: Therefore,

\*\*Resolved\*\*, That the Senators and Representatives of our State in Congress be,

and hereby are, requested to support and aid in the passage of a bill (H. R. 2253) "to increase the efficiency of the Signal Corps of the Army," introduced in the House by Mr. Henderson, January 9, 1882.

Resolved, That the secretary be instructed to send to each of the said Senators and Representatives a copy of the foregoing resolutions and preamble.

GEORGE L. BUZBY, Secretary.

Galveston, Houston and Henderson Railroad Company, Galveston, Tex., February 23, 1882. General Hazen, Chief Signal Officer, U.S. A., Washington, D. C.:

Siz. Seeing that Congress is invited to pass a law for the permanent organiza-tion of the Signal Service, I take this opportunity to state that the passage of any law designed to increase the efficiency of that useful and popular branch of the public service will meet with the hearty approval of the officers of this company. Yours, very respectfully,

W. H. HARDING, President.

MEXICAN NATIONAL CONSTRUCTION Co., NORTHERN DIVISION, Galveston, Tex., February 23, 1882.

General Hazen, Chief Signal Officer, U. S. A., Washington, D. C.:

Sir: Understanding that there is bill now before Congress intended to increase the efficiency of the Signal Service Department, I wish to convey to you my appreciation as to the great advantage that branch of the service has already been to our people here and how earnestly we desire that such legislation may be had as tends to still further perfect it.

Very respectfully, yours, 

M. QUIN. General Apost

M. QUIN, General Agent,

HOUSTON AND TEXAS CENTRAL RAILWAY COMPANY, Houston, Tex., February 23, 1882

Sir: Learning that a bill has been presented to Congress with a view of increasing the efficiency of the Signal Service Department, I desire to convey to you my appreciation of the importance to the people in the cotton-belt of having every facility afforded them by furnishing correct meteorological information to govern their actions. Fully realizing the benefits already derived, I believe it to be the earnest desire of all intelligent producers that such legislative enactments be made to still further tend to fully develop the agricultural interest. Very truly, yours,

A. H. SWANSON,

General HAZEN,
Chief Signal Officer, U. S. A., Washington, D. C.

BALTIMORE BOARD OF TRADE, Baltimore, Md., March 7, 1882. At the monthly meeting of the board, held yesterday, the following report was excepted and the resolutions annexed adopted.

GEO. U. PORTER, Secretary.

Report of Committee.

The meteorological committee beg leave to report that the United States Signal Service is of great benefit to the commercial and agricultural interests of the country, and it is important to secure its permanency and continued success, and they therefore submit the annexed resolutions.

R. W. CATOR, D. L. BARTLETT, FRANK JENKINS, GERMAN H. HUNT,

Resolutions adopted, as submitted by the committee, are as follows:

Resolved, That this board fully appreciates the great value of the Signal Service to the commercial and agricultural and other interests of the country, and desire that it shall be placed upon a permanent basis and organized as a separate corps of the Army, similar to the Engineer and Ordnanee Corps, believing that changes in the officers, as now under present laws liable to take place, will materially injure its efficiency.

Resolved, That the Senators and Representatives from Maryland be requested to take such action as will secure a permanent organization of the corps.

Resolved, That copies of these resolutions be furnished each Senator and Representative from this State; also the Chief Signal Officer.

Letter of General Sherman.

HEADQUARTERS ARMY OF THE UNITED STATES, Washington, D. C., December 30, 1881.

Headquarters Army of the United States.

Sir: I beg to acknowledge receipt of the letter of General W.B. Hazen, Chief Signal Officer, of December 12 instant, referred to me by indorsement of your office of December 16, calling for report and my opinion of the merits of the several recommendations therein made.

I now avail myself of this opportunity to invite your special attention to the ruinous effect on the Army of having the Chief Signal Officer scanning the list of our officers, picking out the best for signal duty, and exalting that duty above the legitimate office of the line officer. General Hazen refers to the enlarged sphere of action of the Signal Office since last spring, and the consequent necessity for more officers. The law provides only one signal officer for the whole Army, with a provision to promote annually two second lieutenants from his enlisted force, yet at this moment he has sixteen captains and lieutenants of the line, whose proper companies suffer in discipline and care for want of these very officers. No part of the enlarged sphere of action referred to is in any sense military, but purely civil or scientific. All that is military in the Signal Bureau is in conveying orders by signals, and this art is now taught at West Point, at Fortescand Source, and Fort Leavenworth, so that as far as the Army is concerned the establishment at Fort Myer is superfluous and should be abolished. It has outlived its usefulness, and since of being of advantage to the Army it is a detriment by drawing from the Army officers who are needed with their companies.

If the Signal Service be of such infinite use to the agriculture, commerce, and civil interests of the country as claimed by its friends, surely Congress will provide the necessary agents, military and civil, without making so large a draft on the Army affects who are needed with their companies.

If the Signal Service be of such infinite use to be easy that our best youn of ficers are tempted to escape duty to find employment in these fancy corp

Hon. R. T. LINCOLN, Secretary of War, Washington, D. C.

Letter of Secretary Lincoln.

SIE: I have the honor to acknowledge the receipt of your communication of the 4th instant, asking my opinion as to the propriety of maintaining the Signal Service establishment entirely from appropriations to be made in the sundry

civil bill, and affirmatively providing that no moneys appropriated in the Army appropriation bill shall be expended in its support, and requesting also to be advised in what amount the appropriations for the support of the Army can be reduced, in the event of such action by Congress, and from what branches of the appropriations in the Army bill the reductions can be made. In reply, I beg to inclose to you a copy of a letter addressed by me on the 20th of February ultimo, to Hon. S. D. MAXEV, of the Committee on Military Affairs, United States Senate, in which this general subject is discussed somewhat at length.

It is my opinion that the Weather Bureau should be wholly separated from the Army, and that this could be accomplished by the simple process of a legislative enactment so directing, with an appropriation equal to the present actual expenses of the service. The callisted men are now compensated under several heads—current pay, pay on discharge, rations, commutation of rations, commutation of quarters, medicines, and clothing, all of which could more easily be paid in one item as salary.

The persons in the service other than enlisted men who have special knowledge of Weather Bureau work are, I understand, only eight in number, of whom Professor Cleveland Abbé is the chief. All other officers are merely administrative. Such of them as belong to the military service could, I think, be easily replaced by civilians within a limited period. I have learned, since my letter of 20th February last was written, that the actual force is much larger than I then supposed. I have procured returns which show that on the 1st of April last there were maintained under the Chief Signal Officer; is officers of the Signal Corps, lofficers detailed from the Army, 398 civilians in various capacities, making, with the Chief Signal Officer; 599 persons.

If, however, the "Signal Service is to be maintained as now constituted, in the reiterated words of the annual appropriation bills, I think it important that the appropriation

I have recently learned that an extraordinary blunder, or series of blunders, was committed by the clerk in my office who compiled the consolidated table printed in H. R. Document 128, present session, which was made up of many fragmentary reports from various bureaus. In some cases, after giving various items, he added a separate general item, which was, in fact, a footing of certain previous items already inserted. These errors have been corrected in a communication which I addressed to the Speaker of the House, and which was, on yesterday, ordered to be printed.

In response to your request I inclose an estimate in the usual form for so much of the expenses of the service as are now paid out of Army appropriations, based on the expenditures out of those funds for the year ISSI. This estimate amounts to 5597,129.96, and would be required in addition to the special appropriations asked by the Chief Signal Officer for the next fiscal year, aggregating 534,500, the items of which may be found on pages 69, ISI, and IS2 of estimates for the next fiscal year, these together making estimates for the Signal Service in all its branches, as now conducted, of \$1,141,629,16.

In answer to your inquiry as to the extent to which the regular appropriation for the support of the Army could be reduced, in the event of the action by Congress suggested in your letter, I have the honor to state that the reductions would be as follows:

Pay, &c., of the Army. Subsistence of the Army. Regular supplies, Quartermaster's Department. Incidental expenses. Burracks and quarters. Army transportation.	142,000 55,600 20,150 80,879 57,000	00 00 00 96 00	
Medical and hospital department	5,000	00	
Total	597, 129	96	

Hon. Frank Hiscock, Chairman Committee on Apprepriations, House of Representatives,

Hazen-Stanley court-martial.

WAR DEPARTMENT, Washington City, February 6, 1883.

Sir.: In accordance with your request under date of the 1st instant, I have the bonor to inclose herewith a copy of General Court-Martial Orders No. 35, Adutant-General's Office, June 18, 1879, publishing the findings, sentence, &c., in be case of D. S. Stanley, colonel Twenty-second United States Infantry.

The proceedings in the case have not been published.

Very respectfully, your obedient servant,

ROBERT T. LINCOLN, Secretary of War.

Hon. F. E. BELTZHOOVER, House of Representatives.

HEADQUARTERS OF THE ARMY, ADJUTANT-GENERAL'S OFFICE,
Washington, June 18, 1879.

[General Court-Martial Orders No. 35.] 1. Before a general court-martial Orders AG. 98.1

1. Before a general court-martial which convened at Governor's Island, New York Harbor, April 10, 1879, pursuant to Special Orders No. 66, dated March 20, and No. 69, dated March 22, and at New York city, April 12, 1879, pursuant to Special Orders No. 85, dated April 9, 1879, Headquarters of the Army, Adjutant-General's Office, and of which Major-General W. 8. Hancbek, United States Army, is president, was arraigned and tried Colonel D. S. Stanley, Twenty-second Infantry.

CHARGE I.—Conduct unbecoming an officer and a gentleman.

Specification 1.—In this: that the said D. S. Stanley, colonel Twenty-second
United States Infantry, on or about the 6th day of September, 1877, to wit, at
the city of New York, did write a certain letter of and concerning W. B. Hazen,
colonel Sixth United States Infantry, and did then and there address to the said
W. B. Hazen, at Vienna, in the Empire of Austria, and transmit the same to him
through and by the mail, which said letter is in words and figures following, to
wife.

Gen; W. B. HAZEN,
"Colonel Sixth Infantry, Vienna:

"Colonel Sixth Infantry, Vienna:

"I have seen the decision of the President upon the charges I preferred against you, 'that the service would not be conserved by convening a general courtmartial to try you at this time."

"I am not disappointed. You know just as well as I do that your trial could have only resulted in your conviction, and you already stand convicted before those who heard you testify.

"I now give you fair warning that I am fully informed of your disgraceful conduct at Shiloh, and when proper occasion offers will use the information to stop your career of imposture.

"Your obedient servant,"

"D. S. STANLEY.

NEW YORK CITY, September 6, 1877."

"D. S. STANLEY.

Specification 2.—In this; that the said D. S. Stanley, colonel Twenty-second United States Infantry, on or about the 6th day of September, A. D. 1877, to wit,

at the city of New York, did write a certain letter of and concerning W. B. Hazen, colonel Sixth United States Infantry, and did then and there address the same to the said W. B. Hazen, at Vienna, in the Empire of Austria, and transmit the same to him through and by the mail, intending thereby willfully, wantonly, and maliciously to personally affront and insult the said Hazen, which said letter is in words and figures following, to wit:

"Gen. W. B. HAZEN, "Colonel Sixth Infantry, Vienna:

"Colonel Sixth Infantry, Vienna:

"I have seen the decision of the President upon the charges I preferred against you, 'that the service would not be conserved by convening a general courtmartial to try you at this time."

"I am not disappointed. You know just as well as I do that your trial could have only resulved in your conviction, and you already stand convicted before those who heard you testify.

"I now give you fair warning that I am fully informed of your disgraceful conduct at Shiloh, and when proper occasion offers will use the information to stop your career of imposture.

"Your obedient servant,

"D, S. STANLEY.

"D. S. STANLEY.

"NEW YORK CITY, September 6, 1877."

"Your obedient servant,
"New York Cirry, September 6, 1877."

Specification 3.—In this: that the said D. S. Stanley, colonel Twenty-second United States Infantry, on or about the 6th day of September, A. D. 1877, to wit, at the city of New York, did write a certain letter of and concerning W. B. Hazen, colonel Sixth United States Infantry, and did then and there address the same to the said W. B. Hazen, as Vienna, in the Empire of constraint, and transmit the same to the said W. B. Hazen, as Follows: "You know just as well as I do that your trial could have only resulted in your conviction, and you already stand convicted before those who heard you testify," meaning thereby to allege and charge that the said Hazen, as follows: "You know just as well as I do that your trial could have only resulted in your conviction, and you already stand convicted before those who heard you testify," meaning thereby to allege and charge that the said Hazen had been guilty of the crime of perjury and false swaring in giving his testimony on the trial of W. W. Belknap, late Secretary of War, on articles of impeachment before the Senate of the United States, which said charge and allegation was and is unfounded, false, and malicious, and was wickedly devised by the said Stanley, and made to said Hazen, wantonly, willfully, and maliciously to affront and personally insult him, the said Hazen.

Specification 4.—In this: that the said D. S. Stanley, colon Twenty-second United States Infantry, on or about the 6th day of September, A. D. W. T. to wind the said W. B. Hazen, at Vienna, in the Empire of Austria, and transmit the same to him through and by the mail, therein alleging of him, the said Hazen, with the said Hazen and the said Hazen had, at the battle of Shiloh, been guilty of conduct which should subject him to disgrace as an officer in the Army of the United States which said allegation is unfounded, malicious, and false, and was wickedly devised by the said Stanley and malicious, and false, and was wickedly devised by the s

directed, 'W. W. Belknap, Hon. Secretary of War,' Colonel W. B. Hazen, Sixth United States Infantry, did write as follows: 'I was summoned to Washington to give evidence upon staff organization of the French and German candidates.' After finishing on these subjects I was questioned upon the subject of post-traders. I at first remonstrated on the ground that I had not reported the matter to you,' t. e. the Secretary of War.

"Specification 3—In this: that Colonel W. B. Hazen, Sixth United States Infantry, being a duly sworn witness before the Senate of the United States, organized as a court of impeachment, on the 10th of July, 1876, did testify as follows: "Specification about which we been reflering to communications by your eventual communications you have been reflering to communications by your eventual to communications from the secretary of War? (Meaning the communication on post-traderships.)

"A. They were communication from me, written officially. They referred to the farming out of post-traderships generally.

"Q. Have you any recollection about writing the letters?

"A. I have, every distinctly.

"Q. Did it go through the regular channels. I never heard from it.

"A. Yes, sir."

"A. Yes, sir."

"A. Yes, sir.

"A. Yes, si

sind liazer, that he was an "impostor," and one devising said witch, faise, and the construction referred to in that letter is not understaid liazer, that he was an "impostor," and to devising said witch, faise, and the construction referred to in that letter is not understain that he was an "impostor," and the devision of the property of the prope

court of impeachment in the trial of W. W. Belknap, 10th of July, 1876, did testify: 'I wish also to testify with regard to my testimony before the Military Committee four years ago. I was called then principally, to testify with regard to the German and French staff organizations, and the other was a branch of the subject,' which statement Colonel W. B. Hazen knew to be false at the time he made it.

made it.

"D. S. STANLEY.

"Colonel Twenty-second United States Infantry."

And said letter of said Stanley in regard to said charges further states as follows: "You know just as well as I do that your trial could only have resulted in your conviction," meaning thereby that the said Hazen would have been convicted on said charges, and that said charges were true; whereas, in fact, said charges were and are, each and all of them, wantou, malicious, and false, in so far as the same alleged or stated any missconduct on the part of the said Hazen. Specification 7.—In this; that the said D. S. Stanley, colonel Twenty-second United States Infantry, did, on about the 1st day of December, A. D. 1877, cause to be published, and did aid and abet in the publication, in one of the public ournals of the country, to wit, the Saint Paul Pioncer Press, of and concerning W. B. Hazen, colonel Sixth United States Infantry, a certain malicious and scandalous statement, to wit:

"WILLIAM B. HAZEN.

"WILLIAM B. HAZEN,
"Colonel of the Sixth Infantry, Brevet Major-General:

"I have received the decision of the President of the United States upon the charges I preferred against you, that the interest of the service' would not be subserved' by convening a general court-martial to try you. I am just as well satisfied. You know just as well as I do that your trial could only have resulted in your conviction, and where your case is known you are already convicted in the public opinion. I now give you fair warning that I am fully informed of your disgraceful conduct at Shiloh, and your shameful exit from your command at Fort Buford, and, when proper occasion offers, will use the information to stop your career of imposture.

"Your obedient servant,

"D. S. STANLEY.

"D S STANLEY

"NEW YORK CITY, September 6, 1877."

"New York City, September 6, 1877."

Specification 8.—In this: that the said D. S. Stanley, colonel Twenty-second United States Infantry, did, on or about the Ist day of December, A. D. 1877, cause to be published, and aid and abet in publishing, in one of the public journals of the country, to wit, the Saint Paul Pioneer Press, of and concerning the said W. B. Hazen, colonel Sixth United States Infantry, a certain false, malicious, and scandalous statement, as follows, to wit: "I have seen the decision of the President of the United States upon the charges I preferred against you, that "the interest of the service would not be subserved" by convening a general courtmartial to try you. I am not disappointed. You know just as well as I do that your trial could only have resulted in your conviction, and where your case is known you are already convicted in public opinion," the said Stanley well knowing at the time that said Hazen was on special duty beyond the limits of the United States and in a foreign country, and designing by such publication to injure and damage the character of the said Hazen, and impair his efficiency in the performance of the duty with which he was so engaged.

Specification 9.—In this: that the said D. S. Stanley, colonel Twenty-second United States Infantry, did, on or about the 1st day of December, A. D. 1877, cause to be published, and did aid and abet in publishing, in one of the public journals of the country, to wit, the Saint Paul Pioneer Press, of and concerning the said W. B. Hazen, colonel Sixth United States Infantry, a certain malicious, false, and scandalous statement, as follows, to wit: "You know just as well as I do that your trial could only have resulted in your conviction, and where your case is known you are already convicted in public opinion," meaning thereby that said Hazen was guilty of certain charges and specifications, preferred against him by said Stanley, for perjury and false swearing alleged to have been committed by the said Hazen in giving his testimony o

"WILLIAM B. HAZEN, "Colonel of Sixth Infantry, Brevet Major-General:

"Colone of Sixth Infantry, Brevet Major-General:

"I have received the decision of the President of the United States upon the charges I preferred against you that the interest of the service 'would not be subserved' by convening a general court-martial to try you. I am just as well satisfied. You know just as well as I do that your trial could only have resulted in your conviction, and where your case is known you are already convicted in public opinion. I now give you fair warning that I am fully informed of your disgraceful conduct at Shiloh and your shameful exit from your command at Fort Buford, and, when proper occasion offers, will use the information to stop your career of imposture.

"Your obedient servant,"

"D. S. STANLEY.

"D S STANLEY

"New York City, September 6, 1877."

Specification 12.—In this: that David S. Stauley, colonel of the Twenty-second lufantry, United States Army, did cause and allow to be published in a certain public newspaper published at New York city, to wit, the New York Times, certain false and malicious statements and imputations concerning and against Colonel William B. Hazen, Sixth Infantry, United States Army, which said statements and imputations were contained in an article published in said newspaper and expressed in the words and figures following, to wit:

"It is a matter of common report at Washington and elsewhere that General W. B. Hazen is an aspirant for the position of Quartermaster-General of the United States and that he has a number of warm supporters of his claim. Many persons are disposed to argue that General Hazen has already received better treatment than he deserves, and that if he had received justice during the war of the rebellion, he would not have retained his place in the Army. At present he is colonel commanding the Sixth Regiment United States Infantry, stationed at Fort Buford, Dakota Territory. General D. S. Stanley, who possesses damaging facts against General Hazen, is one of those who is determined to prevent his appointment if possible, and if this fails he proposes to bring serious charges against General Hazen before the Senate committee. General Stanley said to a reporter of the Times yesterday, when interrogated about the matter, that 'as far as the general public is concerned,' he thought 'that Hazen had kept it pretty

well informed, and it was hardly necessary for him to say anything." 'Hazen,' he continued, 'Wash, McLean (his father-in-law), his sister, his cousins, his aunts, his editor, and his lawyer, "Dick." Merrick, are now in 'Washington, and have been for some time, with the sole object of making Hazen a hero, a martyr, and Quartermaster-General. I don't know what progress they re making, but I do know what they're afraid of—that is, that if his name ever comes before the United States Senate he will meet charges of perjury and cowardice which I have made to his face, to the newspapers, and in official statements."

"General Stanley said he thought it inadvisable at the present time to state specifically the charges he had preferred against General Hazen in view of probable judicial action. The principle charge, however, is, that on the second day of the battle of Shiloh, April, 1862, somewhere between 10 a. m. and 12 m., Hazen 'separated himself, got away, or skulked' from his brigade, which was in Nelson's division of Buell's Army of the Ohio, and fied to the Tennessee River, four miles from where his command made a gailant fight, and that he remained away until some time in the night. His officers had been searching the field for his dead or wounded body, and were astonished at his sudden appearance. It is asserted that General Hazen was seen by several persons while he was loitering near the river away from his brigade, and that in answer to a question asked by one of them as to what he was doing there, he replied that his men 'had deserted him' when in fact the gallant brigade was at that moment engaged in the battle. The charge of perjury, made by General Stanley, is in regard to General Hazen's testimony in the Belknapimpeachment case. There are cleves specifications in this charge. General Stanley are those of falsehood and conduct unbecoming an officer and a gentleman. In this connection it is said that General Stennent as a court-martial may direct. General Stanley are those of falsehood and conduct unbecom

expressed in the words and figures following, to wit:

"WILLIAM B. HAZEN,
"Colonel of the Sixth Infantry, Brevet Major-General:
"I have received the decision of the President of the United States upon the charges I preferred against you, that the interest of the service "would not be subserved" by convening a general court-martial to try you. I am just as well satisfied. You know just as well as I do that your trial could only have resulted in your conviction, and where your case is known you are already convicted in the public opinion. I now give you fair warning that I am fully informed of your disgraceful conduct at Shiloh, and your shameful exit from your command at Fort Buford, and, when proper occasion offers, will use the information to stop your career of imposture.

"Your obedient servant,

"D. S. STANLEY.

To the oharge, "Not guilty."

PINDING

The court, having maturely considered the evidence adduced, finds the acused, Colonel D. S. Stanley, Twenty-second Infantry, as follows: CHARGE I.

cused, Colonel D. S. Stanley, Twenty-second Infantry, as follows:

CHARGE I.

Of the first specification, "Confirms the plea of the accused, but attach no criminality thereto."

Of the second specification, "Guilty, except the words 'willfully, wantonly, and maliciously,' and of the excepted words not guilty."

Of the third specification, "Guilty, except the words 'meaning thereby to allege and charge that said Hazen had been guilty of the crime of perjury and fulse swearing in giving his testimony on the trial of W. W. Belknap, late Secretary of War, on articles of impeachment before the Senate of the United States, which said charge and allegation was and is unfounded, false, and malicious, with the words 'wickedly devised by the said Stanley, and,' and the words 'wantonly, willfully, and maliciously,' and of the excepted words not guilty."

Of the fourth specification, "Cuilty, except the words 'meaning thereby to allege and charge that the said Hazen had, at the battle of Shiloh, been guilty of conduct which should subject him to disgrace as an officer in the Army of the United States,' anz' except the words 'is unfounded, malicious, and false, and was wickedly devised by the said Stanley, and except the words 'wantonly, willfully, and maliciously to affront and personally insult him, the said Hazen, substituting therefor the words 'which said allegation tended to personally affront and injure the said Hazen; of the excepted words not guilty; of the substituted word guilty."

Of the fifth specification, "Guilty, except the words 'and by devising said wicked, false, and malicious charge, and making the same to and against the said Hazen,' and except the words 'and designing,' and except the words 'willfully, wantonly, and maliciously; of the excepted words 'not guilty.''

Of the sixth specification, "Guilty, except the words 'whereas, in fact, said charges were and are, each and all of them, wanton, malicious, and false, in soft as the same alleged or stated any misconduct on the part of the said Hazen; of t

Of the twelfth specification, "Guilty, except the words 'cause and,' and except the words 'false and malicious,' and except the words 'false and malicious,' and except the words 'the effect of said false and malicious statements and inputations, so caused and allowed to be published by the said Stanley, being to injure and defame the said Hazen and to degrade him before the public and the Army, 'substituting therefor the words 'the said statements tending to the injury of the said Hazen;' of the excepted words 'not guilty;' of the substituted word 'cruilty.'

guilty."

Of the charge, "Not guilty, but guilty of 'conduct to the prejudice of good order and military discipline.'"

CHARGE II.

Of the first specification, "Not guilty."

Of the second specification, "Not guilty."

Of the second specification, "Guilty, except the words 'procure and,' and except the words 'malicious and libelous,' and except the words 'and imputations,' and except the words 'hand imputations,' and except the words 'hand imputations, and except the words 'he, the said Stanley, in and by the said false and malicious statements and imputations, intending and contriving to injure and defame the said Hazen, and to degrade him before the public and the Army,' and substituting therefor the words 'the said statements tending to the injury of the said Hazen;' of the excepted words 'not guilty,' of the substituted words 'guilty."

Of the charge, "Guilty."

SENTENCE,

And the court does therefore sentence him, the said Colonel D. S. Stanley, Twenty-Second Infantry, "To be admonished in general orders by the General of the Army."

II. The following are the orders in the case

HEADQUARTERS OF THE ARMY, Washington, D. C., May 22, 1879.

Washington, D. C., May 22, 1879.

Washington, D. C., May 22, 1879.

The proceedings, findings, and sentence of the general court-martial in the foregoing case of Colonel D. S. Stanley are approved. Colonel Stanley will resume command of his regiment.

The general court-martial convened by Special Orders No. 66 of March 20, 1879, is hereby dissolved. The members and military witnesses, including Colonel Hazen, will return to their respective posts of duty.

In reviewing the voluminous record of this case the General of the Army affirms the judgment of the court that Colonel Stanley in writing to Colonel Hazen, then abroad, the threatening letter of September 6, 1877, and afterward in allowing the publication of the article in the New York Times of March 14, 1879, committed a breach of discipline. He had a perfect right to prefer the charges and specifications which he had done from New York on the 6th day of July, 1877; but when advised that the President of the United States had considered them, and had decided that the best interests of the service would not be advanced by a general court-martial, it was his plain duty to have submitted gracefully. The law officers of the Government have decided that the United States can not arraign for trial any officer for offenses committed more than two years before the order for the assembling of the court. For this reason the charges against Colonel Hazen can not be inquired into by a general court-martial, so that this trial and judgment of Colonel Stanley must stand as the final decision of all the matters raised in the controversy. Both parties will be careful that the service be not injured by a revival of this subject.

By command of General Sherman:

By command of General Sherman:

E. D. TOWNSEND, Adjutant-General,

The Tariff.

SPEECH

# HON. CAMPBELL P. BERRY.

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 17, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other purposes

Mr. BERRY said:

Mr. CHAIRMAN: At the opening of the Forty-seventh Congress it was claimed by the Republican party that the revenues of our country were excessive; that only a small portion of the public debt was within our reach, and hence it was proper that the revenue should be reduced. that end the Republican party then determined to make large reductions in our internal revenue. In fact, as I remember, the present chairman of the Committee on Ways and Means announced himself in favor of abolishing entirely the internal-revenue tax. During the first session of the present Congress several bills were introduced looking to its reduction and abolition. They even went so far as to caucus upon the proposition. In a speech I made during that session I charged the Republican party that their object in proposing to abolish the internalrevenue tax and especially the tax upon whisky and tobace was that they might keep up their high-tariff taxes. I charged that it was the purpose of the Republican part: to raise the entire revenue of the Government by high tariffs in the interest of the manufacturer; stop paying the public debt, to perpetuate that debt in the interest of the bondholder and banker. Before the first session of the Forty-seventh Congress had expired, upon more thorough examination. I presume, they found that if the internal-revenue tax was abolished they would have to reduce the tariff rates low enough so that there would be large importations of foreign goods to furnish the necessary revenues for the Government. But the manufacturing interest would not submit to such action, as it would interfere with their monopoly and curtail their coormous profits

We found before that session had expired their loud professions to make large reductions dwindled down to a little insignificant bill re-

moving the tax from bank checks, bank circulations, bank deposits, matches, and a few other articles, and all the efforts of the Democratic party to induce them to readjust our tariff laws and make a reduction of the high protective daties now prevailing were unavailing. The Republicaus insisted that we had not sufficient knowledge upon the subject, that we were not competent to do so. They insisted that a tariff commission should be appointed as they claimed for the purpose of obtaining information to lay before Congress at the opening of this session in order that we might act intelligently upon the subject.

The results of the investigations of that commission have been laid before Congress. It seems that the great manufacturing interests of this country which were consulted by the commission were unwilling that the tariff rates should be reduced to a revenue standard and still insist (if we are to judge by the work of the commission and the measure presented by the Committee on Ways and Means for our consideration) upon high protective duties, so high in fact that we will receive much less revenue from our customs duties. In obedience. therefore, to this view, the Republican party seems to have changed its tactics and have concluded to let the internal-revenue taxes stand substantially as they now are, and by which about \$140,000,000 come into the Treasury per annum, and to cut down the \$220,000,000 we are now receiving from tariff taxes by placing the rate so high that many of the articles of com.non necessity used by the people of this country will be entirely prohibited. In fact, the measure proposed by the commission as well as the bill reported to the House by that committee has put the rate so high that in my judgment importations will be materially reduced. Consequently the Treasury of the United States will receive a much less revenue from that source. Their effort seems to be by prohibitive rates to so adjust our customs dues as to meet the deficiency which will exist after the revenues have been derived from internal taxation, thereby giving a complete monopoly of the home market to our manufacturers, by not allowing any competition from abroad except to meet the actual necessities of the Government.

It was supposed by the people that the measure brought forward at the beginning of this session of Congress would be for the purpose not only of reducing the revenues of the Government, but to reduce the burdens now resting so heavily upon the people of this country. Such a measure is what has been demanded by the people. The people are demanding to be relieved from the burdens which are depriving them of the results of their labor and forcing them to a condition of poverty. Upon a fair examination of the measure presented by the Committee on Ways and Means it will be found that no such object has been accomplished. In fact, it is plain that the committee have had no such purpose in view.

Their sole purpose has been (if we are permitted to judge by this bill) to reduce the revenues of the Government and at the same time increase those burdens of which the people are now complaining. And here it is well for us to bear in mind that there is such a thing as a reduction of revenue and an increase of burdens; also, that there is such a thing as a reduction of burdens and an increase of revenue; also, that there is such a thing as a reduction of burdens and a reduction of revenue. This latter is what the people have been demanding. There is a standard in laying our impost duties known as a revenue standard, above which the duties become so high that importations diminish or cease, and below which the revenues diminish because of the low rate of duties. The point known as the revenue standard is the point at which more revenue would be derived than above or below it, and as you depart from this point ascending your revenues become less and burdens greater, and as you depart from it descending the revenues also become less and the burdens less.

The increased rate of duty, by increasing the cost of the article and prohibiting its importation, gives the control of the home market to our manufacturers, and the burdens of the people become greater while the revenues become less. When our tariff laws are as they now are, in a large measure prohibitory, and consequently burdensome to the people, a reduction of the tariff would reduce the burdens and increase the revenues as it descended toward the revenue point. Below the revenue point, a reduction would cause both reduced revenue and reduced burdens. The theory upon which this bill is constructed is to so increase impost duties as to amount almost to a prohibition, thereby lessening our revenues.

The claim is made that the proposed measure will decrease the receipts of the Treasury somewhere about \$20,000,000. In my judgment it will decrease the revenues much more. As has been well said by Mr. Tucker, of Virginia:

It is obvious, therefore, that when the country lifts its hands and cries for relief from the burdens under which it has been laboring by being tributary to the manufacturers of this country, it is idle and delusive for the gentlemen on the other side to say. "Why, do not you see we have decreased the burdens? The revenues under this tariff will be \$29,000,000 less than they are under the existing tariff." True, if that be the fact, the burden which the citizen bears in contributing to the support of the Government is lessened; but if along with the lessening of the duty which would go into the Treasury you increase the duties which are for the benefit of the manufacturer, and by prohibiting importations increase the bounty paid by the consumer, is it not plain that while you reedit the Government with a diminution of burdens on the score of revenue to it you must charge the Government and this bill with the increase of burdens which comes from the amount the consumer is made to pay to the monopolies of the manufactures?

It is in this manner that the Republican party propose to prevent an inflow of revenues into our Treasury. In so doing it is plain that they have increased the price of all articles of consumption, and the consumers are not only compelled to pay the price that all manufactured articles bear in the European and foreign markets, but must pay that price with this high tariff added. I know that gentlemen argue, and it seems to be one of the pet arguments of the protectionist, that high protection reduces the cost of articles of consumption to the consumer.

They say that where the price is raised by an import duty, and our home market preserved to the manufacturers of this country, capital is drawn into the manufacturing business, competition with each other springs up, and thereby the cost of the articles is reduced. The fallacy of this argument is too plain to deceive for one moment. If it be true that our home manufacturers by competition reduce the manufactured article to a price, as is claimed by the protectionists, in many instances cheaper than anywhere else in the world, why do our manufacturers object to foreign competition? Why do they object to foreigners entering the field? Certainly, if our home manufacturers so compete with each other as to bring the price of the commodity down to the price which it can be obtained for in the European and other markets of the world, a foreigner entering and competing could do nothing more; and why do they seek to exclude him? No, Mr. Chairman, the evidence is too plain that such would not be the result.

It is patent to every observer that the manufacturers and protectionists know that no such result will follow the passage of this bill. If it were true, why is it that all of the manufacturing interests of this country are now thronging our lobbies and galleries urging its passage? It is only a pretense put forward for the purpose of deceiving the people while they are being robbed in the name of protection by these greedy cormorants. The truth is, if these high duties protect the manufacturer by enabling him to obtain a higher price for his articles than he otherwise could, it robs the people; and if it does not protect him thus, it is of no benefit to him.

There is not an intelligent Republican but knows that tariff taxes add to the cost of the article the amount of the tax imposed, and that the consumer paysit. When hard pressed in argument they admit the fact, but say it is necessary to build up our home manufactures, which can not be done in any other way. They say, further, if it was not for our home manufactories the British manufactories would control our markets and put up prices. In order, therefore, to save us from being monopolized by the British manufacturer, they by these protective laws exclude him, and at the same time and by the same laws build up an American monopoly of manufacturers equally hard-hearted, tyrannical, and possessed of that keen-scented Yankee shrewdness in devising ways and means to wring the last penny out of an enterprise that would bring the Britisher to shame. What is the difference to the consumer whether he is robbed by an American monopoly or a British monopoly? In either case he is wronged and despoiled. But they say that competition among American manufacturers will put down prices and cheapen commodities. If that be true, will not competition among British manufacturers produce the same results? For my part I had as soon trust the one as the other for low prices. If you want reasonable prices and also to prevent monopolies, place your tariff taxes at a revenue rate and let all compete upon terms of equality.

The protectionists cite the fact of the great reduction of prices in manufactured articles during the last thirty or forty years as an evidence that protection does reduce the price of the commodities. It is true, and within the memory of every man, that during the three or four last decades manufactured articles have decreased in price wonderfully in this country; in many instances two and three and four hundred per cent. While this is true, it is equally true, and gentlemen should remember it, that an equal or greater reduction in prices has occurred during the same period in free-trade England as well as all civilized countries. The facts are that this reduction in prices has been brought about by improved machinery, new inventions, cheaper processes of manufacturing, and increased intelligence of workmen, and can not be attributed in any sense whatever to the tariff, as every intelligent man knows. It is an argument put forth by the protected interests to deceive the people that they may continue their extortions.

Mr. Chairman, the extent of the burdens imposed upon the people under our present high protective system and that would be imposed under the still higher protection proposed by this bill can be better realized when you remember that more than four-fifths of the manufactured articles consumed in this country are from American manufacturers. Last year upon articles imported there was collected and paid into the Treasury about \$220,000,000 from our custom dues. Taking the importation as one-fifth of our consumption, and taking it for granted that the American article was enhanced to the price of the imported article by reason of the tariff, you will see that the American consumer was taxed altogether in increased price about \$1,100,000,000, \$220,000,000 of which, as before stated, went into the public Treasury, \$880,000,000 of he pockets of the manufacturers. But making a liberal discount for a reduction of the American manufactured article of more than 25 per cent, you will see that at least \$600,000,000 was given to the American manufacturers as a honty read by the consumers.

facturers as a bounty paid by the consumers.

Now, what is desired by the American people is that the enormous

profits of the manufacturers be reduced, and it was expected that this Congress in the readjustment of our tariff duties would so levy it as to remove at least a portion of the burdens now resting so heavily upon When the Democratic party upon this floor have been insisting that the rights of the consumers should be recognized, when we have asked only a fair consideration at the hands of the Republican party in arranging this tariff, when we have asked for reductions in the interest of the consumer, we have been denominated and denounced "free-traders" and seeking to destroy our manufacturing interest.

What Democrats demand and insist upon is that our customs duties shall be levied for the purpose of revenue, and that protection shall be We insist that the incidental protection when our tariff is at a revenue standard will give all the protection necessary to foster and encourage, build up and maintain, our manufactories. But protectionists insist that the duties must be laid for the purpose of protection, and that the collection of revenue is an incidental matter. Their doctrine would demand of this Government the prohibition of importations entirely if it were necessary to protect our manufacturing interest. This doctrine, if carried to its logical results, would destroy our commerce, for commerce is nothing but barter.

Other nations can not buy of us unless we buy of them. And here permit me to say that in my judgment our high duties have had more to do than anything else in destroying our commerce and driving our ships and merchant marine from the ocean.

Mr. Chairman, the power vested in Congress by the Constitution of the United States to levy import duties was given to it for the purpose of "raising revenue, paying our debts, and providing for the general welfare." And, while I am not a lawyer nor an expounder of the Constitution, I claim that we have no power to levy impost duties for any other purpose. The purpose of this measure, brought forward for any other purpose. The purpose of this measure, brought forward by the Committee of Ways and Means and now under consideration, is to protect the manufacturing interest of this country, which is to be

done at the expense of the agriculturist and consumer.

The friends of this measure do not disguise their object. They boldly proclaim it a protection measure. They have provided rates of duties on many articlesso high as to totally prohibit and exclude their importation. I claim, sir, that the proposed measure has exceeded the limits of power conferred upon Congress by the Constitution. But I do not propose to discuss the legal or constitutional grounds involved. I merely wish to enter my protest against this cunningly devised scheme of robbery which proposes to lay tribute upon more than 40,000,000 of people for the benefit of less than 10,000,000. I shall not enter into an examination of this bill nor attempt to unravel its many intricacies. been truthfully remarked by the New York Herald that it is both infamous and incomprehensible.

That metropolitan journal, in speaking of the bill now under con-

sideration and of its counterpart in the Senate, after speaking of excessive taxation and the large surplus in the United States Treasury, uses

the following strong and graphic language:

sive taxation and the large surplus in the United States Treasury, uses the following strong and graphic language:

What have the Republican majority done to remedy this gross abuse?

Nothing, absolutely nothing. On the contrary, they have produced two tariff bills which are now, on examination, seen to be cunningly designed to increase the taxes, and therefore the burdens of the people, even though they reduce the revenue somewhat. These bills laying taxes on the people, and in many items heavily increasing the present war taxes, are deliberately and carefully frames oo that not one citizen in 500,000 can understand their provisions. We do not exaggerate in the least when we assert that there are not fifty men in the country, including experts, who can go over either the House or the Senate tariff bill and say, without the most elaborate study and careful calculations, what its numerous provisions mean, or in which of them the present rate of taxeiton is increased and in which lowered. Even an expert in iron and steel finds the wool and woolens schedule totally unintelligible to him; an expert in woolens can not comprehend the metal schedule, and as to the average citizen at least two-thirds of both these bills would be as unintelligible to him as Hebrew or Arabic. And this is a law under which we are all to live.

So cumbrous, so involved, so cunningly complicated are the provisions of these tariff bills that it is a fact that no two of the several Government experts who have been asked to calculate the effect of their provisions upon the revenue have so far agreed in their results. Only one thing is certain—these bills do not reduce the burden of taxes at all, for they increase the taxes in many ways. They lessen the revenue somewhat, but accomplish that mainly by so raising various duties as to lessen or prohibit importations. If one should veature to speak plainly about them he would be compelled to call these two tax bills infamous swindies on the nation for the benefit of a small number of capitalist mon

I shall not enter into an examination of the specific and ad valorem duties levied by this bill further than to say that the committee has sought to make by these compound duties more complex and difficult of comprehension rather than to simplify our revenue system. One of the chief objections to the present law is its complexity, and one of the

objects desired in a revision of the tariff is that it should be simplified All revenue laws should be as simple as possible, that they may be easily comprehended by the great mass of the people, as well as just and I might in this connection state that no system of taxation ever devised by human ingenuity can or will impose equal burdens upon all. And while an indirect tax seems to be more cheerfully borne by the people, because the burdens laid upon them are not so manifest. yet, in my humble judgment, it is the most unjust system of taxation ever devised. In other words, it is my conviction that the true theory

of taxation is direct taxation.

By direct taxation taxes can be more uniformly laid than by any Indirect taxes are laid upon consumption. Direct taxa other hierard. Indirect taxes are tast upon consumption. Direct taxation being laid upon property takes from each individual a certain percentage of all of his wealth. It is the manner of raising taxes in all our States, counties, and municipal governments. It levies a rate percent. upon all the property of the country. Objection has been raised to this system of taxation because there are many people in our country without property. That class under a system of direct taxation would escape entirely. It is said that as all enjoy the protection and benefits of the Government (governments being founded for the protection of persons and property), therefore each and all should contribute something to the maintenance of the Government. To meet this objection the custom prevails in many States, if not all, of levying a capitation or poll-tax, and when such a tax is reasonable I regard it as n just one. On the other hand, an indirect tax levied upon articles of consumption bears heavier upon the poor than upon the wealthy, and often forces him to contribute as largely to the extinguishment of our debts and the support of the General Government.

For instance, a poor man with a family of six is compelled to pur chase about an equal amount of clothing—hats, boots, and wear generally, as the rich man. It is true that the articles are not so costly or of so fine a material as those purchased by the more wealthy, but it is also true that in the arrangement of this bill in particular, and of our system of tariff in general, articles of cheaper quality are taxed at a higher rate comparatively than those of a finer quality, as for instance, our cheap woolens, our common blankets, and cloths, and coarse cottons bear a much higher rate of duty in proportion to value than do the finer alpacas, silks, satins, and broadcloths. The system of indirect taxation permits of these impositions being practiced upon the people while they are unaware of it. Hence it is that they rest more contentedly under their burdens, whereas if a system of direct taxation prevailed every man would know just what he is contributing and also could inform himself of the amount his neighbor was paying toward our com-

mon expenses and defenses.

I do not wish to be understood, however, as advocating a system of direct taxation. That under our present circumstances is wholly impossible for the reason that all of our business relations are adjusted upon the basis of indirect taxation. Our institutions and our manufacturing interests have grown up under it, and a change at the present time could not be made without great destruction of interests and a serious blow to all business. Furthermore a system of direct taxation can never be resorted to in this country while our Constitution remains as it is, because that instrument requires that "representatives and direct taxes shall be apportioned among the several States which may be included within this Union, according to their respective num-

Therefore to lay a direct tax upon the people to support the Federal Government it must be apportioned among the States in proportion to their population. Taxes imposed upon that basis would be more unjust than our present system of indirect taxation. To illustrate: Should the General Government apportion the taxes among the several States of the Union in accordance with that provision of the Constitution, Alabama, which has nearly five times the population of Rhode Island, has less than one-half the wealth; therefore Alabama would be compelled to pay five times the amount of money into the Federal Treasury that Rhode Island would, while Rhode Island is twice as wealthy. Hence, it is plain that a system of direct taxation can never prevail in this country until our Constitution is first amended. As I have said, I do not favor a system of direct taxation under our present circumstances. I have only alluded to these systems of taxation in order that our present manner of raising revenue may be more clearly understood.

Mr. Chairman, gentlemen upon the other side of the House during the Mr. Chairman, gentlemen upon the other side of the House during the discussion upon this bill have been continually lauding and extolling the doctrine of protection, and claiming that it has built up our country and is the chief cause of our prosperity. It is alluded to as "our American system." The Republican party seem to be the special champions of this doctrine. They are continually asserting that it is equal protection, and that all our people are equally benefited by it. Now, Mr. Chairman, I wish to say, if I understand what is meant by protection, it is that the party who is protected enjoys some privileges which others do not. In other words, equal protection, as I understand

which others do not. In other words, equal protection, as I understand it, protects all alike, which is equivalent to protecting no one. If all are protected alike where is the advantage? Would not all be equally well off without protection? It seems to me that this is a self-evident proposition. While their claim sets up that all are benefited by a protective terminal proposition. While their claim sets up that all are benefited by a protective tariff, they especially claim that the American system is devised chiefly in the interest of the laboring classes of our country. Upon this proposition they expatiate in glowing terms. They assert that by reaproposition they expand the glowing terms. They assert that by reason of protection they are able to pay our laborers higher wages than they receive in any other country. In fact, the advocates of this bill never fail to present this view. It is the chief argument why it should become a law.

Mr. Chairman, in my judgment protection has nothing to do whatever with the amount of wages paid the laboring classes of this country. The high wages our operatives and laborers receive are produced by other causes. Our great undeveloped resources, our large tracts of unoccupied and fertile lands, inviting labor to it, which by occupation and cultivation are more productive and remunerative under the hand of the laborer than anywhere else, are the causes of higher wages and not our tariff laws. And were it true that the laborers and operatives who are engaged in the manufacturing industries of this country did receive a higher compensation because of protection it should be remembered that they are small in comparison with those engaged in other pursuits; that less than 1,000,000 of laborers are engaged in the manufacturing industries, with less than 5,000,000 dependent upon them, while nearly 8,000,000 are engaged in agricultural pursuits, producing the raw material, with more than 40,000,000 directly dependent upon them—in fact, they are the producers of all wealth. If, therefore, the operatives in our factories do receive higher wages by reason of these protective laws it must be at the expense of those engaged in other pursuits not protected.

The protectionists are constantly asserting that the farmers of this country are equally benefited by reason of the tariff for protection with the manufacturers. They argue that it furnishes a better home market for their farm products. They cite statistics to show that 90 per cent. of our products are consumed at home, and that we ship less than 10 per cent. abroad. They seem to lose sight of the fact that the London and Liverpool market controls the markets of the world; that the advance or decline of a fraction of a cent a pound on cotton in Liverpool is responded to immediately in this country; or the advance or decline of a fraction of a shilling a quarter in wheat is responded to in the wheat markets of this country—New York, Boston, Baltimore, Chicago, New Orleans, and San Francisco, in fact in all of our ports. Therefore the price of the products of the laborer who is engaged in producing these great staples which constitute the wealth of our country is regulated abroad, and the consumers of our country buy at that standard, less the freight. Hence it is clear that our agricultural people are brought in direct contact with the cheap labor of the entire world-Russia, India, and all of Europe, Asia, and Africa—and have the price of their products regulated by the law of supply and demand. Therefore it is sheer nonsense to say that our tariff laws increase the wages of our people engaged in those pursuits.

This is not the case, however, with the manufacturers. The price of his products, as before stated, is the price of those articles abroad, with the import duty added, and that is the price as a rule which the consumers of this country must pay. At least this is true up to the point where the demand of the home market is supplied. It is nonsense for gentlemen to argue that the manufacturers will not demand from the consumer the full market value as long as there is a sale for the commodities and until the wants of the consumer are fully supplied. If those engaged in manufacturing produce more than the home market can consume the surplus then must seek a market elsewhere, and will be governed by the law of supply and demand to the extent of the surplus.

all

But tariff legislation fixes what might properly be determined a minimum price on all manufactured articles to the extent of the home market, and the home market is secured by these tariff laws to our home manufacturers. Not so with our laborers who produce our great agri-There is no law to secure to them the home market. They hold the market because they produce cheaper. There is no law to fix a minimum price upon their products. They are wholly governed by the law of supply and demand for their entire products, and must take the rates established by the world's surplus. The producer of our great staples, such as cotton, corn, wheat, rye, cattle, whisky, petroleum, butter, cheese, &c., all articles of which this country produces a surplus, would be on an equal footing with the manufacturer and enjoy the same protection and receive the same benefits provided we had what is known s an export duty and by which a price was fixed upon his products which the consumer of this country should pay until the home demand was supplied; or, to make the proposition more clear, if we had an export duty the producer could compel the consumer to pay the price of our farm products abroad with the export duty added, less the freight. Now, we supply the home market at the foreign price less the freight. Such a law would be a protective export tariff and would operate to protect the

producer as our present tariff operates to protect the manufacturer.

From these statements it may be seen that our agriculturists are forced into the markets of the world in competition with the labor of all countries in the sale of their products. Yet, when they come to purchase their supplies they are forced into the highest market, compelled to purchase from those who are securing bounties through the Government. The fact should never be lost sight of that the tribute paid to our manufacturing interest under the name of a tariff is nothing more nor less than a bounty; and the wonder is that our country has so long

enjoyed a reasonable degree of prosperity under such unjust and discriminating legislation.

It compels more than 40,000,000 of people to sell their products in competition with the world, governed by the law of supply and demand, at the same time forcing the 40,000,000 to purchase the product of less than 10,000,000 people who are receiving bounties at the hands of the Government, and whose products have their price fixed by law. No wonder, sir, that New England has waxed fat upon the wealth of the land. No wonder we are building up wealthy and moneyed aristocra-No wonder we have millionaires by the score. No other result could follow a system of legislation that lays tribute upon one portion of the people for the benefit of another; that takes the earnings of the horny-handed sons of toil and transfers it to the coffers of the luxurious gentlemen of leisure.

I have before adverted to the argument used by the advocates of this bill and by protectionists generally, whereby they claim that competi-tion compels our manufacturers to reduce the price of the manufactured article and by which they attempt to prove that high duties will result in cheaper commodities than free trade. This is a fallacy that deceives no one, in the light of passing events. The common every-day experience teaches that such is not the case. The manufacturers will combine, pool their interest, or manage in some way to secure the bounty allowed by law. I can not set this fact forth more clearly and succinctly than in the language of the distinguished Senator Morgan, of Alabama, in a speech delivered in the Senate of the United States a few days ago, wherein he says:

days ago, wherein he says:

If the cost of producing any article of common necessity in England is \$1 and we add a bounty of \$1 as a specific duty to any American who will make it here, the price will be \$2 for that article in this country until our necessities compel us to buy, the surplus will remain here to be sold at a reduced price or it will be shipped to some foreign market. Why should there be a surplus under such circumstanees? Will there be a surplus? Unless the manufacturer should make a miscalculation as to the quantity required to supply the home demand, how else could there reasonably be a surplus? Unless the manufacturer should make a miscalculation as to the quantity required to supply the home demand, how else could there reasonably be a surplus but what becomes of it? If it is shipped to a cheaper market where there is a demand for it, this is done only because the owner can not afford to hold it; and he prefers to pocket the loss that is mistake in overproduction has caused him to make, and profit in future by his costly experience. He has, however, another resource, to which he commonly resorts, that is far more advantageous to him, but it is ruinous to the welfare and even to the peace of the country: which is to shut up his factory, or run it on shortened time or reduced expense for wages, and wait until the necessities of the people force them again into the market as buyers.

In one way or another, and sooner or later, he gets his \$2 for the article, \$1 of which is cost and \$1 is bounty. Statesmen can not afford to argue or act upon the argument that men will not demand and ultimately take the full measure of the advantage secured to them by the laws. If the law gives them the power to make \$1 clear profit on an article of manufacture that it costs them \$1 to produce, they will do it. It is no answer to this vicious method of giving subsidies that the eagerness of men to grasp the bounty will create competition and thereby reduce the price. It may or it may not so happen.

Every member u

Every member upon this floor knows the truth of this statement. Every member knows that the great corporations of this country, all of the protected interest and those enjoying special privileges and franchises are constantly combining, law or no law, so as to secure every advantage possible of the great producing masses. This power of combining capital seems to be practically without limit. A forcible illustration is had in the management of the great railroad corporations of this country, and a still stronger illustration, if possible, is beheld in the spectacle now transpiring in these Halls, wherein the great manufacturing and monoply interests are combining and pooling their interests, resorting to every means to secure the passage of this measure by which 50,000,000 of people are to be made tributary to a few manufacturing establishments. The farmers and planters of this country, under this bill, as well as under the present law, and in fact under all protective-tariff legislation, are made the legitimate prey of a favored few.

To illustrate the disadvantages under which the great producing interests of this country labor, take the wheat-grower as an instance. before stated, while the greater portion of the farmer's wheat is consumed by our home market, yet the price of his entire crop is regulated by the surplus shipped abroad. He receives the same price for the three-fourths consumed here (that being about the amount consumed at home) minus the freight that he receives for the one-fourth shipped abroad. After he has supplied the home market he ships the remainder to Liverpool and sells it in the open markets of the world; and then, instead of being permitted to buy his supplies in those cheap markets, where he can buy them from 50 to 100 per cent, cheaper than in this country, he is compelled to sail back empty (our country having no commerce) and buy his needed supplies in this the highest market in the world, and from those who are enjoying a bounty which he pays. This is the hardship under which the great producing classes of our country labor and of which they complain. These are the burdens country labor and of which they complain. These are the burdens which they are demanding of this Congress to remove, at least, in part. The farmer is willing to contribute of his earnings to the full extent

of the necessities of this Government. He is willing to do more; he is willing that tariff laws should be fixed at a reasonable point above the revenue standard if by so doing his bounty thus contributed will tend to increase the price of labor and benefit the laboring classes. But he is unwilling longer to submit to robbery in the name of protection and under the false pretense that the laborers of this country are benefited by it, and to be thus robbed of his hard earnings to increase the already plethoric coffers of the powerful monopolies which have been built up under this system. I have before stated that the tariff had nothing to do with the price of wages in this country, but that higher wages arise from other causes. Mr. TUCKEE, of Virginia, a few days ago, in addressing the House, used the following language:

ing the House, used the following language:

I wish to show that the idea that a protective tariff can have any effect in increasing the wages of labor in a country is absolutely unfounded. If you will ask a man why he wants a protective tariff he will tell you because labor is so much higher in this country than abroad that he can not pay the wages demanded and manufacture the article at apposit. Suppose there were no tariff, would the protective-tariff man demand a tariff? Yes. Why? Because under free trade, as labor here would be so much higher than it is abroad, capitalists in certain branches of industry could not afford to carry them on, could not go into these manufactures without a protection which would enable them to pay the wages demanded. Thus it will be seen that so far from the tariff being the cause of the high wages, it is the fact of high wages the occasion and creates the need for a tariff. Men want protection because, as they say, the laborer demands higher wages here than he does in England, and they can not afford to carry on manufactures unless they get enough protection to give such price to the products as will leave a profit after paying the wages demanded by labor. Yet the protectionist turns the argument right around, and holds that the tariff is the cause of high wages, when in fact the high rate of wages in this country is the cause of manufactures wanting and demanding a tariff for protection.

From this quotation it will be seen that this distinguished statesman

From this quotation it will be seen that this distinguished statesman holds also to the doctrine that the tariff has nothing to do with wages, but that by reason of our higher wages the tariff is claimed as a necessity in order to make up the difference of wages that the manufactur-

ers in this country have to pay.

Mr. Chairman, under the pretext of securing higher wages to the workingmen of our country the manufacturers are carrying on a system of plunder and robbery which if the consumers understood and comprehended would cause them to rise in open revolt. By their sophistries and fallacies they are deceiving the workingman while they are plundering him. The facts are that wages, like everything else, are governed by the law of supply and demand. You find the farmer and those engaged in those pursuits which are not protected paying substantially

as high wages as are paid to the operatives in the factories.

The truth is that the great agricultural interests are compelled to ay as high wages as the manufacturers or else the laborer would abandon the farm and go to the factories; and, vice versa, the manufacturers are compelled to pay wages equal to those earned upon the farm or the operatives in the factories would abandon their shops and enter the field. If high protective-tariff laws would secure higher wages to the wage laborer surely the operatives in our factories in this country ought to be a prosperous and contented class. Is it so? By no means. Under our high-protective system we are constantly witnessing strikes and Why is it that we find workmen often in open rebellion with their employers? Why is it that our laborers are complaining of the inefficiency of their wages to supply their wants? Why is it that they are constantly organizing themselves into labor leagues and unions? And why, Mr. Chairman, is it that the laboring element generally feel and realize that they are not obtaining a just proportion of the joint product of capital and labor? It is because he is not protected but must compete with his labor with all the labor of the world. No, Mr. Chairman, the tariff has nothing to do with the increased wages which our workmen receive, and I lay down this proposition: that no law which Congress can enact can protect the laboring men of this country, unless it be a law which prevents the immigration of other laborers who compete with him—some such law as was enacted with reference to the Chinaman. You may protect the products of labor, but as long as the laborers of our country are compelled to be governed by the law of supply and demand and our doors are left open for the influx of laborers from the crowded hives of Europe they are not nor can they be protected. In this country, as in all others, whenever the supply of labor is in excess of the demand the laborer must expect lower wages or go unemployed. He is subject to that inexorable law. I have said that the tariff laws had nothing to do with the wages of the laborer. That is true. Yet I wish it not to be understood that the laborer of this country is not interested in tariff laws, because they do affect him very seriously
These laws increase the price of every article of consumption; increase

every manufactured article upon which the poor man as well as the rich must live. Clothing is increased from 50 to 150 per cent; his implements of labor are heavily taxed. Everything which enters into the necessities and comforts of home are largely increased, and hence it is that notwithstanding our laborer receives a higher rate of wages in this country than in any other he finds that his increased wages will not supply his needs. This is by reason of the increased cost of his living. We hear gentlemen on the Republican side continually prating about the high wages which our workmen receive. They exdeavor to make the laborer believe that he is the especial object of their care. let me say to them, it is mockery to give the laboring man \$2 per day and then take back \$1 of it by your unjust and excessive tariff taxes in the increased cost of the articles he is compelled to have. It is a fact that in England the price of a day's labor will purchase more of the necessities which enter into the living of the poor man than the price of a

day's labor will purchase in this country.

I am not sure that it would be unjust to charge the manufacturers of this country and the employers of labor with deliberately conspiring to wring from the laboring man the last cent possible, and merely to permit him to live that he may continue to labor, knowing full well

that they can not reduce his wages by cutting them down below those paid by the great agricultural industries of the country, because, as before stated, it is those industries which regulate the price of labor. They seek to obtain from him the earnings of his labor by piling up enormous duties upon the articles of necessity, so that in the end, if they are compelled to pay him \$2 per day, they rob him of \$1 in these excessive

The manufacturers, corporations, and monopolists of our country who are loudest in their professions of tender solicitude about the wages of the laborer care nothing for him. These professions are all pretenses. We often behold these gentlemen combining upon the great necessities of life. We witness wheat corners, corners upon meats and breadstuffs which the poor man is compelled to purchase, arbitrarily raising the price, thereby wringing from him the last cent which it is possible to obtain, holding him down to a condition of poverty and serfdom; and if he attempts to extricate himself from their grasp by the formation of labor organizations, or if he demands a fair compensation for a faithful day's labor, by which he may be enabled to pay these excessive prices brought about by the monopolists and the wealthy, he is locked out. and many times they send abroad and import laborers from foreign countries to fill his place. No, gentlemen, your professions of interest in the laboring man of this country are buld hypocrisies. You care nothing for him except to the extent that you can make him build up your wealth and pay tribute to your imperial desires.

Mr. Chairman, it has been charged time and again by the Republicans during the progress of this debate that the Democrats do not desire legislation upon the tariff at this time, and that we are seeking by every means in our power to defeat all legislation. I defounce the charge as We have been ready at all times to enter upon an honest revision and reduction of the tariff taxes in the interest whole people, recognizing the interest of the consumers as well as the manufacturers. We invited you to this work during the Forty-sixth Congress. We urged it upon you at the first session of the Forty-seventh You declined, but filed a motion of continuance in the ap-

pointment of what is known as the Tariff Commission.

In view of these facts it comes with bad grace from you to charge the Democrats with a desire to defeat legislation upon this subject. The facts prove that the desire for no legislation comes from your side of the House, unless it be such legislation as shall continue the present system of plunder, fastened upon the people during the war. Your every acof plunder, fastened upon the people during the war. tion upon this question shows conclusively that you intend that the toiling millions of the American people shall have no relief. Your purpose has been recognized by them, and last November they sat in judgment upon you and found you guilty of treachery to their every interest; guilty of "binding them hand and foot" by unjust legislation and delivering them over to the money-power (your confederates in treachery) to be plundered to the utmost farthing.

No, gentlemen, you have been weighed in the balance and found wanting; you confessed yourselves unequal to the task of framing legis-lation upon this subject at the last session of Congress; you have been taken at your word. The people, the sovereigns of this Government, have bid you retire, and now in your last moments, with truckling ser spoliation by the passage of this infamous measure, which has justly been denominated by the leading press of the country as a cheat and a fraud. It is patent that you want no reform in this direction. You have brought forward a measure so unjust in its provisions that you knew it could not become a law. An intelligent public recognize the fact that you intend no relief. Your action in bringing forward such a measure at this late day of this Congress has been construed as intended for no other purpose than to try to place the Democratic party in the attifor no other purpose than to try to place the Democratic party in the activated before the country of having defeated the needed tariff legislation. Your masquerading performances here are "too thin." The people are not as easily hoodwinked now as heretofore when intelligence was less generally diffused. They comprehend your purposes. The people are already calling upon the Democratic party to defeat this bill unless it can be made just in its provisions. They prefer to bear their present ills rather than they have they know not of ills rather than fly to those they know not of.

You have overreached yourselves in this measure. You knew that the people demanded a revision of the tariff; you knew also that the Democratic members of this Congress and the Democratic party of the country were with the people in this demand. You knew that so anxious were we to pass legislation that we were ready to accept almost any bill which carried any measure of fairness and relief in its provisions. Hence, you did not dare present any such measure. In your fear lest you might bring forward a measure which would give the people some relief and which would be the people some you highe bright would be accepted by the Democrats, you have presented such a monstrosity that it has been repudiated by the people. So hideous does it appear when subjected to analysis and criticism that I verily believe that many of the more moderate Republican members are now heartily ashamed of the work of their own hands. Instead of this bill being a measure for raising revenue, with protection as an incident, as it should have been, it is purely a protective measure with revenue as an incident. Hence we have heard nothing during its discussion but the cry of "protection, protection!" The object of the taxing power vested in Congress—that of raising revenue for an econom-

ical administration of the Government-has been lost sight of in the scramble for still greater protection by certain interests, now highly protected, which have fastened themselves upon the public Treasury during the last twenty years and there stick like leeches

Gentlemen upon this floor seem to have forgotten that there are any interests in this country except the manufacturing interests. say to them that there are other people in this great Republic interested in and to be affected by this legislation save and except New England with her cotton and woolen mills, New Jersey with her pottery, glass, and silk establishments, and Pennsylvania with her iron and coal

Gentlemen should remember that the jealous care manifested by them in looking out for and guarding their pet industries is attracting the attention of the great laboring classes of our people, who receive no special favors at the hands of the Government, and enjoy no special privileges except the high privilege of bearing the enormous burdens imposed upon them. They are coming to understand that the legislation of this country is molded in the interest of the rich and powerful. through the influence of paid attorneys and experts and under the pressure of strong lobbies. They are now demanding "even-handed justice to all and special privileges to none," and their aroused intelligence will sooner or later find a way to enforce their demand.

In this connection I can not refrain from reading an extract from a speech delivered in the Senate of the United States on the 11th instant by that broad-minded and profound thinker, Senator LAMAR, of Mississippi. He was addressing the Senate on the tariff question. In the course of his remarks, while speaking of the opposition of the manufacturers to a material reduction of the present high rates of duties, he uses the following significant language by way of counsel and warning:

If they would listen to me I would say to them that wisdom would dictate concessions material and large upon this question. I believe that the movement for revenue reform and lower taxation can be largely guided by them so as to enase no shock to existing interests if they will deal with it in a wise and sober spirit of concession and compromise. If we could on the one hand have a bill which would bring the duties down to a revenue standard, arrangements in the details looking to protection as an incident would find, I apprehend, but few

details looking to protection as an incident would find, I apprehend, but lew opponents.

But I would warn them (in the kindest spirit) that it is impossible for any combination of capital or labor to resist a popular movement animated by a strong sentiment of moral right and justice.

Macaulay in one of his speeches—I think it was on this very subject of the tariff—one warned the monopolists of Great Britain, eiting two signal events in history as containing for them lessons of wisdom and admonition. One was the wisdom, sagacity, and forecast with which the English aristocracy adapted themselves to the great popular movement of parliamentary reform. By taking part in it they were enabled to direct its movement safely and wisely for themselves, thereby retaining to this day their moral and intellectual ascendancy. He showed the reverse in the case of the French nobility, who, with dogged obstinacy, made a vain resistance to the great popular movement there, which resulted in their overthrow and banishment, eking out the remnants of their miserable existence as dancing-masters and music-teachers in countries where they were strangers and aliens.

Alluding to the institution of slavery, he continues:

I, sir, have seen something of this in my own experience. I saw a great institution which was more firmly intrenched in statutes and organic law than the manufacturers are in this tariff law become an object of popular uprising. I was among those, sir, who shared in the attempt to resist it, and I saw that institution go down with all its vast capital, with all the political privileges which it conferred, with all the constitutional rights by which it was guaranteed, go down beneath the irreversible flat of the American people. Sir, I warn the manufacturers of this country. The handwriting is upon the wall of this protective system, and I trust they will have the intelligence to comprehend its import.

Under Republican rule during the last twenty years the people have witnessed millionaire after millionaire rise up in our country until they are numbered by the hundreds. They have beheld mammoth corporations spring into existence on every hand as if by magic, reaching out their arms to every portion of this country, gathering into their folds all the wealth of the land. They see this while they find themselves harder pressed day by day to secure for themselves and families the common necessaries of life. This unequal distribution of wealth, brought about in a large measure by this protective system, and the deep solicitude still manifested by their representatives to serve the monopoly interests, whose agents throng our halls and corridors, they view with

I ask gentlemen to pause and avoid even the appearance of lending themselves to this unfair, unequal, and unjust legislation, by and through which we are piling up wealth mountain high in the hands of a few, by which princely fortunes are amassed in a few years, by which the rich are growing in wealth and the masses are becoming more helpless and sinking down to greater depths of poverty. This kind of legislation is breeding discontent among our people. It is causing the eds of communism and agrarianism to germinate and take root in this fair land of freedom.

The great laboring masses of the country are fast coming to the conclusion that this Government (as are the monarchical and imperial governments of Europe) is a government administered in the interest of the rich and a privileged few, and in which they have no lot or part except as "hewers of wood and drawers of water."

Let me say to gentlemen that a people who have been reared in a land of liberty and enjoyed the blessings of freedom will not long submit to be robbed of the fruits of their labor by the legerdemain of legislation. Such acts of tyranny and oppression as the proposed measure now under consideration, although clothed with the sanctity of law, will not have fell to the consideration. will not when fully understood be held sacred by an outraged and de-

spoiled people. Such legislation is piling up "wrath against the day of wrath." It is "sowing to the wind from which we will ultimately reap the whirlwind." Now, in conclusion permit me to say what I conceive to be our duty as representatives of all the people in regard to our present protective-tariff system. We should place upon the freelist at least three-fourths of the two thousand or more articles now dutiable, among which should be included all the articles of necessity which enter into the living of the poor man. We should place a revenue tariff upon the remainder, which should include all articles of luxury, and we should abolish all internal taxes except upon whisky and tobacco.

If this were done the revenues of our country would be ample for all purposes. We could continue to pay the public debt at the rapid rate we are now paying it. Every industry that should be protected would have all the protection necessary, and the people would be relieved in a large measure of the crushing burdens now resting upon them. Were this done the languishing business of our great country, being relieved of its shackles, would leap forward like a "strong man to run a race." Our drooping industries would revive; the hum of the spindle and the sound of the implements of all labor would be heard from one end of our land to the other; a new era of prosperity would dawn upon us. American commerce would once more grace the ocean, and the varied products of our busy people would be borne in American vessels to every mart of the world and return ladened with the products of other lands and add to the wealth, happiness, and prosperity of our people.

#### Reduction of Internal-Revenue Taxes.

## SPEECH

# HON. LOUIS C. LATHAM.

OF NORTH CAROLINA,

## IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 20, 1883,

On the bill to reduce internal-revenue taxation.

Mr. LATHAM said:

Mr. SPEAKER: The question presented to this side of the House by the pending bill is one not easy of solution. We are anxious to do our full duty to our constituents and to the country at large, but the matter comes "in such a questionable shape" that it is difficult to decide what that duty is. We do an exceedingly hard crust. We demanded bread, and the other side offers us

The question, briefly stated, is whether suffering as we are and have been for years under the grinding oppression of the internal-revenue system we should accept the small measure of relief now offered us, coupled with other legislation that is distasteful and wrong, or should

wait the assembling of another Congress.

The present bill, Mr. Speaker, removes in toto the tax on matches, on proprietary medicines, on perfumery, on bank checks, on bank deposits, on savings-bank deposits, on bank capital, on capital of national banks, and on deposits of national banks, aggregating about \$20,000,000, and reduces the tax upon tobacco, cigars and eigarettes about the same amount. It will be observed that we are not allowed to vote separately upon these propositions, but must accept them all or not at all.

The first part of the bill, excepting that portion which removes the tax upon matches, is an outrage upon the country so long as any part of the internal-revenue system remains. The banks of the country, whose extensive vaults are overflowing with gold, that have grown rich at the expense of the best interests of the masses of the people, that enjoy valuable privileges for which they do not pay one dollar of consideration, that can pay at any moment in the year the taxes assessed against them without feeling it, are the very last parties that ought to be relieved from the burdens they bear, if burdens they can be called. For one, if the proposition stood alone, uncoupled with any other, I would never under any circumstances short of the abolition of this form of taxation, vote for it. Nor, taken alone, would I support a proposition to remove the tax from perfumery, an article of luxury that those who use can well afford to pay for.

Another most serious objection to the bill in its present shape is, that

while it professes to relieve the people of a large amount of taxes it affects only that portion of the internal revenue which is collected by the use of stamps; so that while we are reducing the ordinary revenues of the country more than \$40,000,000 annually, we still keep in office and pay out of the public Treasury the horde of office-holders who are a

disgrace and a curse to the country and the age in which we live. But, Mr. Speaker, coupled with all this vicious legislation, they offer to one of the most important industries of the South some measure of relief. It is not what we have a right to demand. In view of the fact that there is now in the Treasury a surplus of nearly \$150,000,000, the whole tax upon tobacco ought to be removed, and the proposition ought to be submitted to us as a substantive one. The majority of this House, however, will not permit this. The present bill is presented as an entirety under a suspension of the rules, and is not subject to the slightest amendment. We must take it or leave it, according to our best judg-

After a careful consideration of the entire matter, with the most sincere and earnest desire to serve my people, I do not believe I would be justified in withholding from them this partial and tardy measure of justice and relief. I do so, protesting against the manner in which the bill has been forced upon us, and trusting that some subsequent Congress will come up to the full measure of its duty and wipe the infamous internal-revenue laws from our statute-books

## Naval Appropriations.

#### SPEECH

# HON. BENJAMIN W. HARRIS,

OF MASSACHUSETTS,

## IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 20, 1883.

The House being in Committee of the Whole and having under consideration he naval appropriation bill—

Mr. HARRIS, of Massachusetts, said:

Mr. CHAIRMAN: In what I have to say I shall be very brief, for two reasons, the first of which is that I am suffering from a painfully sore throat, and the second is that much which I had intended to say has been said by others better than I can say it. I desire, however, to present before the House so far as I may be able some of the views of the Committee on Naval Affairs upon certain provisions of this bill.

Mr. Chairman, after a service of nearly ten years as a member of this House, and a service of nearly eight years as a member of the Committee on Naval Affairs, I had hoped now, in the closing session of this Congress and during the few remaining days of my Congressional life, to be able to secure the passage of some of the measures reported by my committee, and some of the fruits of earnest and honest effort which I

have made for the building up and improving of the American Navy.

But that hope must be practically abandoned. The bill for the reconstruction of the navy, which was prepared with so much labor after careful investigation at the last session of Congress, lies buried upon the Calendar as No. 65, and can of course never be reached. Gen-tlemen upon the other side have arisen during this debate and expressed in strong terms their regret at the admitted disgraceful condition of I can not but remember, however, that the Committee on Naval Affairs appealed to them in vain for their assistance to secure a single hour during the last session in which it might bring before the House for consideration the bill which it had carefully prepared for the reconstruction of the Navy, or rather for the beginning of that desirable work.

The condition of our Navy has been portrayed from time to time during the last six years according to the real facts. It has been my duty three times, twice as a member of the Naval Committee of a Democratic House, and again as chairman of the Committee on Naval Affairs of this House, to put on permanent record, for the benefit of Congress and for the instruction and enlightenment of the American people on this subject, so important to their welfare, honor, and safety, a statement of the condition of our Navy. No one has ever undertaken here or elsewhere, to my knowledge, to deny the substantial accuracy of the reports thus

In this respect I have the satisfaction of feeling that a duty has been discharged with fidelity. It is for Congress now or hereafter to say whether we shall have a navy worthy of our country, and to provide for its construction. I venture to hope that the time is not far distant when the work will be entered upon and prosecuted to success. have to-day as our whole naval power on the ocean only about thirty-eight cruising vessels. Of these all are of wood except two. There are two iron vessels, the smallest in the Navy, the Alert and Ranger.

Not only are we deficient in ships, but we are unable properly to arm

The Secretary of the Navy in his late report to Congress has put in official form a statement of the number and character of the guns now on hand adapted for naval use. It is as follows:

ORDNANCE.

The guns of the Navy are, 2,233 smooth-bore muzzle-loading cannon of various calibers, 77 Purrott muzzle-loading 40-pound rifles, 26 are similar 80-pound rifles, 51 muzzle-loading 180-pound converted rifles, 26 breech-loading 40-pound converted rifles, and 10 breech-loading 80-pound converted rifles.

The eighty-seven converted rifles have fair power and may be considered useful for the present. The Parrott rifles were made during and immediately after the rebellion; they might in an emergency serve a subordinate purpose as par

of our armament, but are in no real sense suited to the needs of the present day. The smooth-bore guns are incapable of contending with rifled guns throwing one-half their weight of shot.

With not one modern high-powered cannon in the Navy, and with only eighty-seven guns worth retaining, the importance of action for the procurement of naval ordnance seems apparent, if the Navy is to longer survive.

Our total naval force affoat is thirty-eight cruising vessels of an inferior character, all of which must soon become unfit for naval purposes; and for harbor and coast defense we have fourteen single-turposes; and for harbor and coast detense we have fourteen single-turreted ironclads, armed with smooth-bore guns of an antiquated type,
and according to the Secretary of the Navy "only eighty-seven guns
worth retaining." This is a spectacle demanding the serious attention
of Congress and the people. The remedy is in the hands of Congress.
For this condition of affairs I insist that Congress, and Congress alone,
is responsible. The policy of permitting and even compelling the naval
authorities to spend large sums of money annually in keeping in repair

old and obsolete wooden vessels, and of refusing to make appropriations adequate to the building and arming of ships of the most approved modern type, though a most wasteful and extravagant policy, is and has been since the close of our late civil war the policy of Congress, and Congress has not followed this policy blindly or for want of informa tion. It has been warned by every Secretary of the true condition and the pressing needs of the Navy at almost every session for the past ten vears at least

I can not believe that the people of this great country if they could directly express their will would indorse such a policy or permit its

The gentlemen who have preceded me have discussed to a very great extent things which are not in this bill; and I myself must necessarily discuss some things which are not in the bill. But I propose to discuss only those subjects which the Committee on Naval Affairs has had the honor to bring to the attention of the Committee on Appropriations. And I propose to show to the House, for this is my only opportunity, what the Committee on Naval Affairs has recommended.

In the first place, Congress at its last session authorized the Secretary of the Navy to commence the construction of two steel cruisers of war, designed to be armed with the most powerful modern guns. The Committee on Naval Affairs, after very long and arduous labor, the results of which were laid before the House at its last session in report No. 653, have shown the necessity of our adopting instead of wood or iron the best material known for naval architecture—that is, steel. We recommended the construction of two of the largest-sized steel cruisers of war, recommended by the naval advisory board organized by the late Secre-

recommended by the naval advisory board organized by the late Secretary of the Navy, Mr. Hunt.

That board consisted of the following gentlemen, all distinguished officers of our Navy: John Rogers, rear-admiral, president; William G. Temple, commodore; P. C. Johnson, captain; Charles H. Loring, chief engineer; H. L. Howison, commander; R. D. Evans, commander; A. S. Crowninshield, commander; Charles H. Manning, passed assistant engineer; M. R. S. Mackenzie, lieutenant; Edward W. Very, lieutenant. In their report made to the Secretary of the Navy they recommended the be-ginning of the construction of a navy which, when completed, would comprise a fleet of some seventy-two vessels of all classes, at a contem-plated cost of about \$30,000,000. It was supposed that ten years of moderate annual appropriation would secure such a fleet. That board recommended the construction of the following vessels:

SUMMARY OF THE NUMBER, CLASS, TYPE, AND COST OF THE VESSELS THAT THE BOARD RECOMMEND NOW BE BUILT.

Two first-rate steel, double-decked, unarmored cruisers, having a displacement of about 5,873 tons, an average sea speed of 15 knots, and a battery of four 8-inch and twenty-one 6-inch guns. Cost, \$3,560,000.

Six first-rate steel, double-decked, unarmored cruisers, having a displacement of about 4,560 tons, an average sea speed of 14 knots, and a battery of four 8-inch and fifteen 6-inch guns. Cost, \$3,552,000.

Ten second-rate steel, single-decked, unarmored cruisers, having a displacement of about 3,043 tons, an a average sea speed of 13 knots, and a battery of twelve 6-inch guns. Cost, \$9,300,000.

Twenty fourth-rate wooden cruisers, having a displacement of about seven hundred and ninety-three tons, an average sea speed of 10 knots, and a battery of one 6-inch and two 60-pounders. Cost, \$4,360,000.

Five steel rams of about 2,000 tons displacement, and an average sea speed of 13 knots. Cost, \$2,500,000.

Five torpedo gunboats of about four hundred and fifty tons displacement, a maximum sea speed of not less than 13 knots, and one heavy-powered rifled gun. Cost, \$725,000.

Cost, \$725,000.

Ten cruising torpedo-boats, about one hundred feet long, and having a maximum speed of not less than 21 knots per hour. Cost, \$380,000.

Ten harbor torpedo-boats, about seventy feet long, and having a maximum speed of not less than 17 knots per hour. Cost, \$250,000.

Total cost of vessels recommended now to be built, \$29,607,000.

The Committee on Naval Affairs, from the evidence laid before it, was impelled to adopt the plan of building the best and fastest ships that could be made. We felt that even if the ships were not put in commission and manned, it would be wisdom for the Government to have a few ships, which, in the case of sudden war or threat of war, could take the sea and show a speed equal to that of the best ships in any navy in the world. Great speed can only be attained by ships of great size and great motive power. We therefore recommended the construction of two ships of the largest size.

We also recommended the construction of four steel cruisers of the second class having a displacement of from 4 200 to 4 700 tons to be

second class, having a displacement of from 4,300 to 4,700 tons, to be alike armed with the best guns which could be made.

The Committee on Naval Affairs were never reached at the last session of Congress, and the Committee on Appropriations took but a portion of our work, and authorized the construction of one each of these classes of vessels and made an appropriation for the purpose of simply what might be left out of a very meager appropriation for construction and repair and steam-engineering.

Mr. BLOUNT. There were two of those large steel cruisers. Mr. HARRIS, of Massachusetts. No; one large one and one smaller.

Mr. ROBESON. One of 5,000 tons and one of 4,300.

Mr. HARRIS, of Massachusetts. The Committee on Appropriations provided for one of each. The Committee on Naval Affairs recom-

ended two of the former and four of the latter class

Now, it has been the habit here to complain of the Appropriations Committee. Gentlemen in this debate have objected to the Appropriations Committee absorbing the powers of the Committee on Naval Affairs and other committees of this House. On the other hand, I have to thank the Appropriations Committee for having given us any chance at all. If I have any complaint to make, it is that the rules of this House are such as to lodge in the hands of the Appropriations Committee the power to crush out every other committee of this House. This is not the fault of the Appropriations Committee; it ought not to be laid to their door. The Appropriations Committee might, if they had pleased,

Mr. CALKINS. Will the gentleman allow me a moment?

Mr. CALKINS. Will the gentleman allow me a moment?

Mr. CALKINS. I wish to say that the Appropriations Committee are not obliged to enter upon the domain of general legislation. They can report their appropriations without absorbing the powers which belong to other committees.

Mr. REED. Under the rules of the House it is necessary for that

ommittee to present legislation; it is the only way it can be got through.

Mr. McCOOK. It is "Hobson's choice."

Mr. HARRIS, of Massachusetts. The Appropriations Committee could, by their action on this bill, have rendered it absolutely impossible for this House to vote a dollar for a new ship of war, simply by leaving out of this appropriation bill any reference to the subject

Now, the ships authorized last year should have been begun; and I have been asked this afternoon why they were not begun. Why, sir, we limited the expenditure upon those ships to the amount estimated by the late advisory board; and the law said that those ships should not be commenced unless they could be completed within the estimate made by that board. The Secretary of the Navy, before laying down the keel of any one of those vessels, caused to be made, carefully as I think and properly, a re-estimate of the cost. He found that within the former estimate he could not build either of these ships. Therefore he comes to Congress now and very properly says, "If that is your limit, I desire now not to build the big ship at all, but to build a ship of the second class, or rather a ship of three hundred tons less displacement than the one of the second size authorized; I desire also to build three cruisers of 2,500 tons each." His communication was referred to us by the Honse

We could not agree to the Secretary's proposition; but after careful examination by the full committee it was agreed that while we would adhere to the big ship, which we believe the United States Government ought to build, we would recommend a reduction of the size of the second ship, and recommend the building of three cruisers of 2,500 tons displacement, a torpedo-boat, and a cruising dispatch-boat of great speed, to be armed with a single high-power gun as recommended by the Secretary. We not only recommended that these ships be authorized, but we did what I think the Appropriations Committee ought to have done, we recommended an appropriation large enough to build and complete those ships and arm them with the best guns.

Mr. Chairman, I know what the tendency of the Appropriations Committee always is. They must keep down the aggregate of the appropriations; that is their office and duty, I suppose. What do they propose in this case? Authorize the commencement of these ships, and give not half money enough to finish one of them, thus putting the Secretary of the Navy in such a condition that he can not even make a contract for the vessels. Our committee has recommended an appropriation for each vessel named in this bill large enough to construct and complete it; and then for ordnance we have recommended an appropriation of \$1,160,000, which will be sufficient to arm them all. Our recommendations have not been adopted by the Committee on Appropriations. They have seen fit to authorize the commencement of the construction of one vessel of 4,300 tons, two vessels of 2,500 tons, and a small clipper of 1,500 tons. And they have made an appropriation so small that it will not complete one of the vessels authorized unless it may be the dispatch-boat or clip-

I desire here to say that I believe all these ships and their engines should be built by private contract. I believe they can be built for one-half the money which they will cost in our navy-yards under our present wasteful and, as I believe, thoroughly bad system. We could hold parties contracting for ship or engines to some accountability as to the performance of the finished ship. We have no security now. By the contract system we should have the benefit of knowledge and experi-ence outside the bureaus.

Now, Mr. Chairman, of what use is it for this House or Congress to do anything more in respect to building ships unless at the same time we do something for guns? You may build a ship perhaps in two You can not arm it with the means we have in this country today in the same time. Why not make provision for guns at the same time you begin the construction of the ships?

But, Mr. Chairman, what does this bill appropriate for ordnance?

One hundred thousand dollars for ordnance for the Navy. What does

it mean? It means that the Ordnance Department of the Navy wants \$100,000 to experiment with, and is not ready to tell Congress what

sort of guns the service requires.

But what is being done, Mr. Chairman? I understand that five Ginch guns are being constructed in the Washington navy-yard on the appropriation of \$100,000 of last year. That is being done for the purpose of finding out what kind of a gun to build. The absurdity is manifest. I have no longer any patience with such an administration of the Bureau of Ordnance. England has armed herself with the Armstrong and other guns, and the nations of Europe have armed themselves with the Krupp gun, while the American vessels have no guns worthy the

Mr. HISCOCK. I desire to ask the gentleman a single question in eference to that. My understanding in reference to that appropriation reference to that. of \$100,000 made last year is that it has not been expended, on account of the difficulty of getting metal. Now I should like to hear from the gentleman from Massachusetts on that point.

Mr. HARRIS, of Massachusetts. Mr. Chairman, the American manufacturers of steel only desire to have an opportunity given to them to furnish all the steel which may be required for the American Navy. And they can do it at short notice. The evidence is before us, Mr. Chairman, that these American manufacturers can furnish as good steel as can be found anywhere in the world. There is no trouble about it. as can be found anywhere in the works.

The trouble is that the Ordnance Bureau of the Navy went to sleep at the close of the war and has never yet waked up. We do not want any the close of the war and has never yet waked up. We do not want any more gun inventors in the Navy Department. We do not want any more ordnance officers learning the art of gun-making at the expense of the Government. The process is too slow. We want guns, and there are men outside of the Ordnance Bureau who have already learned the trade and art of making them. What it will cost for line officers to learn how to make guns would furnish a good many finished guns of high power. I think the time has come when Congress should say to the Navy Department, "We must have guns, and here is the money with which to provide them. It is given you to ascertain what kinds and sizes are required, and to proceed at once to procure them."

If the ordnance officers of the Navy are not able to advise the Secretary of the Navy in this matter that bureau had better be reorganized or abolished. It stands in my opinion as an obstruction to all progress, and will do nothing itself and prevents others from doing anything It assumes to possess all knowledge and thus far exhibits none. seems to assume that all knowledge of the subject is centered in itself and shuts the door against all knowledge from the whole world outside. If in the past we had relied wholly upon the knowledge and inventive owers of naval men in the art of naval warfare we should now be ages behind our present condition. Progress does not come from bureaus and close organizations of that kind. The Monitor was condemned by the bureaus, and her utter failure was confidently predicted by naval

officers who might and should have known better.

Mr. Chairman, there are only two great gun manufacturers in the nited States. One is at South Boston and the other at West Point, United States. These establishments have made nearly all the guns, both for the Army and the Navy, for the past fifty years or more. They have served the country well and have never failed it in time of need. These founderies have been standing almost idle since the close of the war The one at South Boston, now almost idle, has for want of patronage. a plant of nearly \$1,000,000 in value. It has kept its works in order great cost and at great loss, hoping again to be able to serve the Government. If the Navy wants guns of cast-iron in whole or in part, they can be made there. If cast-steel guns would better serve the purpose, as some believe, they could soon be produced there. If guns of wrought iron or steel are required, they can not now be made there or elsewhere in this country. But these companies would gladly undertake to prepare their works with such aid as the Government alone is able to furnish for the construction of wrought-steel guns of the largest sizes required for the service.

These two companies in January last came to the War Department and offered to combine their establishments and all their capital, experience, and ability under one management, and prepare themselves to make steel wrought guns and to put the whole at the disposal of the Government if it would assist in the construction of a steam-hammer of the required size. Their offer met with favor and approval, as the

following correspondence shows:

ORDNANCE OFFICE, WAR DEPARTMENT, Washington, January 16, 1882.

Washington, January 16, 1882.

SIR: I have the honor to inclose a letter from the President of the South Booston Iron Company, of January, 1882, requesting assistance in his efforts to "obtain proper Government aid to enable me (him) to construct and complete a creditable ordnance manufactory in this country," and giving his reasons therefor.

It is a well-known fact that the proper facilities for heavy-gun constructions on modern types are not to be found in this country. The plant and mechanical experience are confined mainly to the casting and finishing of simple cast-iron guns. The preparation and manipulation of steel in large masses suitable for heavy ordnance are beyond the resources of our private founderies. But steel in some form must enter into the construction of guns, and constitute part, if not all, of the gun itself. At present all such steel has to be procured abroad, and is not always of the required quality.

Recently the breech receivers for the 12-inch rifles, under contract, were rejected, the steel not being up its standard.

Constant and careful official supervision on the part of the Government is essential to the attainment of uniform and reliable results in the production of any metal for gun construction, and particularly so with a metal so subject to variation as steel; but such supervision is only practicable in the founderies of this country. That we should not depend on foreign workshops for this indispensable material, but depend on home enterprise, is in accordance to the spirit of the laws.

The advantage of using steel exclusively in gun construction is amounted.

tion as steel; but such supervision is only practicable in the founderies of this country. That we should not depend on foreign workshops for this indispensable material, but depend on home enterprise, is in accordance to the spirit of the laws.

The advantage of using steel exclusively in gun construction is apparent when European authorities claim that an all-steel gun, having a thickness of walls of one caliber, processes greater strength than a cast-iron gun hooped and tubed with steel, having much thicker walls. This advantage over simple cast-iron is still more signal as it admits of the production of a much lighter steel gun with superior power for the same diameter of bore.

In the commencement of its manufacture it would not perhaps be practicable to produce steel of a suitable quality in larger masses than are required for hoops or light tubes, such as are employed in France, Italy, and other European states where cast-iron enters largely into the system of gun construction. For the production of the large ingots required in the manufacture of heavy steel guns abroad steam-hammers are employed of forty, sixty, and one hundred tons weight, or hydraulic presses of thousands of tons power. Even with steel-wire or steel-riband guns, a system of construction that is now attracting the serious attention of artillerists in France and in Eugland, the inner steel tube is required to be of very considerable size and weight.

There are but two ways to meet the case: First, by the establishment of a national foundery, being exclusively under governmental control; second, by assisting and fostering one or more of our private faunderies, to enable them to prepare their plant, &c.

The South Boston Iron Company and the West Point Foundery are the only ones that have now any portion of the plantand experience. Both of these have made guns for the United States during the last half a century, and have always given satisfaction. All the states of Europe, with the exception, perhaps, of Russia, are dependent upon privat

S. V. BENÉT, Brigadier-General, Chief of Ordno The honorable THE SECRETARY OF WAR.

[First indorsement.]

Respectfully referred to Colonel George W. Getty, president of the board on heavy ordnance, New York city, for an expression of the opinion of the board upon the subject presented by the Chief of Ordnance in this communication.

By order of the Secretary of War.

WAR DEPARTMENT, January 18, 1882.

H. T. CROSBY, Chief Clerk

OFFICE OF SOUTH BOSTON IRON COMPANY, Boston, January, 1882

OFFICE OF SOUTH BOSTON IRON COMPANY,
Boston, January, 1882.

Sie: With a view to enlist your sympathy and assistance in my efforts to obtain proper Government aid to enable me to construct and complete a creditable ordnance manufactory in this country, I beg to call your attention to the following facts and my resulting proposal:
The South Boston Iron Company has been actively engaged in the manufacture of ordnance for the United States Government for more than half a century. During this long period of service its record has been of the highest character, and at all times it has faithfully executed its engagements with the Government It has added largely from time to time to its machinery and fixtures, until it is in condition to fabricate cannon of the largest caliber without delay, and until the value of its plant is more than a miltion dollars. I am aware, however, that such facilities as we have are entirely inadequate to the demand likely to be made for the armament of our Navy and for our coast defenses.

Desiring to continue the leading position we hold in the line of our business, and believing that we have the experience and ability at command to successfully produce cannon of large caliber of iron or steel from American ores, I beg to submit the following proposal and petition:

I propose to erect blast-furnaces, steel-producing plant, steam-hammers of large size, machine-shops with facilities for finishing cannon from eighteen to a hundred tons weight at the rate of one per day, furnaces and rolling-mill for the manufacture of armor-plates, foundery for the casting of guns and projectiles, and shops for the manufacture of gun-carriages.

The details of construction to be subject to the approval of the War and Navy Departments, with right to representation on the board of direction, the United States Government to have the right to take possession of the entire works, at such rate of compensation as shall not exceed the percentage of profit herefolore paid for similar work.

I set the Government to f

highest degree.
Very respectfully, your obedient servant,

WM. P. HUNT, President

General S. V. BENÉT, United States Army, Chief of Ordnance, Washington, D. C.

L. R., No. 229.]

WEST POINT FOUNDERY, Cold Spring, January 18, 1892.

Siz: Mr. William P. Hunt has sent us a copy of his communication to you in regard to the establishment of a manufactory of ordnance with the aid of the Government.

As we are the only other firm engaged in the business we think proper to say that we coincide with Mr. Hunt's views, and that in our judgment there is no other way to erraite the necessary "plant" to manufacture such ordnance as is now required.

We would also say that having, like the South Boston Iron Company, furnished ordnance to the Government for more than fifty years, and having, we believe, the confidence of the Crdnance Department, should it be decided to furnish means to establish a manufactory we would have equal claims on the patronage of the United States.

It would probably, however, not be deemed advisable to assist two establishments, and no doubt it would be considered best to do all the work in one. Should this be the case, we would say that we think the interests of the West Point Foundery and the South Boston Iron Company could no doubt be consolidated on a basis which would be for their mutual advantage, thereby creating one establishment of large capacity, which would form an excellent basis on which to build up such a "plant" as is now required by the Government. It seems to us that such an arrangement would promote the interest of the United States as well as the manufacturers, and create a suitable "plant" in as short a time as the nature of the work will admit.

Very respectfully, your obedient servants,

PAULDING, KEMBLE & CO.

General S. V. BENÉT, U. S. A., Chief of Ordnance, Washington, D. C.

[First indorsement.]

OEDNANCE OFFICE, WAE DEPARTMENT, Washington, July 13, 1882.
Respectfully submitted to the Secretary of War in connection with my letter on the same subject of 16th instant, transmitting a letter from the South Boston Iron Company. I respectfully recommend that this letter be referred to the board on heavy ordnance, New York.

S. V. BENÉT, Brigadier-General, Chief of Ordna

[Second indorsement.]

Respectfully referred to Colonel George W. Getty, president of the board on eavy ordnance, New York city, in connection with previous papers subheavy ordnance, New York city, is mitted the 18th instant. By order of the Secretary of War.

H. T. CROSBY, Chief Clerk.

WAR DEPARTMENT, January 21, 1882.

Office of Board on Heavy Ordnance and Projectiles, New York City, January 24, 1882.

OFFICE OF BOARD ON HEAVY ORDNANCE AND PROJECTILES,
New York City, January 24, 1882.

Siz: This board, to whom have been referred the letters of Mr. W. P. Hunt, president of the South Boston Iron Company, and of Paulding, Kemble & Co., proprietors of the West Point Foundery, to the chief of ordnance, asking, governmental aid to enlarge the facilities of their establishments for the manufacture of large guns involving the use of steel, together with the letter of General Benét, transmitting the same with his views thereon to the Secretary of War, has the honor to present its opinion upon the subject set forth in those communications, as follows:

For the past twenty years the demand for suitable naval and seacoast arma ments to meet the problem of national defense has taxed the mechanical skill and resources not only of the governmental authorities of the warlike powers of the Old World, but also of their leading gun manufacturing establishments, During that period we have witnessed the advance of heavy ordnance from the twelve to the one hundred-ton gun, with corresponding increase in the weights of projectiles, while improvements in powder and the chambering of the more recent rified cannon have permitted the use of charges so largely augmented as to add nearly one-half to the initial velocities of their projectiles. Whether or not a gun satisfactory in its method of construction and in the perfection of material used has been reached, there can be no doubt that valuable experience has been gained and very marked improvements arrived at from year to year. While the large establishments at Woolwich and at Elswich on the Tyne have been developing a method of built-up wrought-iron cannon on the English system, the vast Essen founderies have produced a steel breech-loading rifled gun of great power and strength, which has given to Herr Krupp a world-wide reputation.

France and Italy, in the mean time, have experimented, with more or less suc-

or great power and strength, which has given to hier artuph a world-wide resultation.

France and Italy, in the mean time, have experimented, with more or less success, largely in the use of cast-iron and steel combined, for heavy ordnance, as a cheaper method of construction.

Though we have not the information to determine absolutely what will be the final method and material of construction adopted for heavy cannon as the resultant of past experience and progressive trials, it now seems probable tracted, by reason of its superior tenacity and limit of elasticity, will be largely used in the system of built-up guns.

In view of the great demand for heavy ordnance for our seacoast defenses, involving the probable use of 2,000 guns, for the most part of large caliber, and the insufficient preparation and development of the leading iron manufactories of this country for constructing heavy guns of other material than cast-iron, it seems probable that any attempt on their part to meet the national demand without Government aid will result in both guaterial and financial failure.

This board therefore concurs with the Chief of Ordnance in his views of the question of assisting some of our leading cannon factories to enable them to commence successfully the construction of a suitable armament for our seacoast defenses.

GEO. W. GETTY.

Brevet Major-General, U. S. A., President of the Board.
Z. B. TOWER,
Colonel of Engineers, Broot-Major-General, U. S. A.
A. R. BUFFINGTON,
Lieutenant-Colonel of Ordnance.
F. H. PARKER,
Major of Ordnance.
JOHN MENDENHALL,
Major First Artillery, Brevet Colonel, U. S. A.

The Adjutant-General, United States Abmy, Washington, D. C.

The men who make these offers know how to make guns. They have no trade to learn. They have no reputations to make. The companies which they represent have served the country faithfully and with honesty for more than half a century. They ought to receive the aid and encouragement which they ask, and they should be employed steadily in the fabrication of guns of which we are so sorely in need.

I do not believe it to be either wisdom or economy for us to wait until

some line officer of the Navy who may happen to have been placed temporarily at the head of the Bureau of Ordnance of the Navy shall have learned the art of constructing heavy ordnance before we are to take a step in the direction of securing an armament for our naval vessels worthy of the name.

And yet the truth is we wait to-day; Congress waits until this Ord-nance Bureau shall learn enough to be competent to give some proper advice upon this important subject. I would wait no longer, but would

seek advice from men competent now to give it.

ek advice from men competent now to give it.

Now, I call attention to another item in this bill. We have here an

Now, I call attention to another item in this bill. We have here an

'' Purchase' is the item of \$100,000 for the purchase of torpedoes. "Purchase" is the word. Now, as I have pursued for the last eight years a pretty careful inquiry into this subject, as careful as a member of Congress, with the means at his command and in the time at his disposal, can well make, and know something of the torpedoes of this class (the auto-mobile, as the bill calls them), which have been adopted among the different nations, I protest against this item as it stands in the bill, and for this reason: Because I believe, and have good reason for that belief, that it is the intention of the Bureau of Ordnance to expend the whole sum for the purchase of what is known as the Whitehead torpedo. This is a foreign invention which has been long known and widely trumpeted and industriously puffed and advertised, and upon which large sums have been expended, and which has been used in war, but which has never proved practically successful. Mr. Whitehead claims no patent rights, but covers his invention by claiming it as a secret, and he will sell us his secret for a great price and furnish a few torpedoes to serve us as models for their manufacture and for experiment.

Mr. HISCOCK. I would like to say to my friend from Massachusetts that at his suggestion the committee have agreed to put in "for the

purchase or manufacture of torpedoes."

Mr. HARRIS, of Massachusetts. Yes, that is so; but I would like to add something more, so as to carry out fully my suggestion made to the committee, and that is that the torpedoes should be of American in-

Now, the torpedo is the creation of American genius. successful torpedo of any kind now in use in the world which did not originate here, or which does not depend mainly on some prior American invention. If our Navy Department could be authorized and instructed to invite the inventors of torpedoes in this country to go to work and produce an auto-mobile torpedo of the most effective kind, and insure to the successful competitor a fair remuneration for his service, I am fully persuaded that for less money than it is now proposed to pay this foreigner we should have a weapon which would render his ridicu-lous. The Whitehead secret is an expensive thing to buy, and when it has been purchased and you have the torpedoes, you must furnish your ships with expensive apparatus for their use, and besides all that they require great care and expense to keep them in order.

Mr. McCOOK. Is the Lay torpedo used?
Mr. HARRIS, of Massachusetts. Yes, to some extent, I am informed.
believe we have several of them. They are known as the "movable controllable" torpedo. Originally they were very cumbersome and slow in speed. It has been very greatly improved, until now I am informed it has a speed equal to that of the Whitehead, and has much greater certainty of action. It is a fine piece of mechanism, and is somewhat expensive, though less so than the Whitehead, as it can be used on any How far other countries

ship without expensive especial apparatus. have adopted it I am not prepared to state.

But, Mr. Chairman, there is an inventor in this country quite as worthy of consideration as this foreigner, Whitehead. He has devoted more than sixteen years in perfecting the torpedo system of warfare for the sole benefit of the United States. The Government is to-day in possession and in the sole use of all his work. For many years he has been asking recognition at the hands of Congress and compensation for his time and expenses. He has thus far found no response for what he has done during the last eight years. I refer to Mr. Asa Weeks, of course. For six years there has been a bill on the Calendar of the House to pay him for his services and expenses upon the assignment of his inventions to the Government. The naval committees have waited from time to time for the results of experiments and tests which were going on under the direction of the Bureau of Ordnance before urging action upon the But the tests have not yet been so far completed as to elicit from that bureau any final report, and I suppose now all further test is to be postponed until Mr. Whitehead is provided for.

The history of Mr. Weeks's labors were fully given in a report made to this House on the 24th of February, 1882, No. 484.

I will briefly refer to the facts:

After the close of the late war, in May, 1857, having invented a system for the use of the spar torpedo, he offered it to the Government. Secretary Welles invited him to submit his plans and models for inspection. He did so, and a board was organized to examine and report. That board reported the invention "deserving of consideration," and recommended "that the inventions of Mr. Weeks be tested." In 1868 Mr. Weeks submitted improved plans and models, and a new board was organized. That board reported that they were "of opinion that the principles involved therein eminently justifies its being kept secret under the exceptions of the Grant of the G clusive control of the Government."

In May, 1869, the Navy Department applied to Mr. Weeks for permission to apply the invention to a vessel of the Navy. He consented, came to the Government ship-yard, and the little tug Nina was fitted up with the invention under his direction to test it, and to prove the effect of a torpedo exploded upon a bar extended from the hull of the

boat under water. That test was so successful and conclusive that when Admiral Porter commenced to build the Alarm this gentleman was invited to supervise the construction of the torpedo machinery for that ship. That vessel is provided with this instrument of warfare, and would be one of the most effective ships in the Navy if it was not defective in other respects; but this principle of torpedo warfare has been successfully demonstrated by it. The torpedo device is in all respects atisfactory and fully equal to expectations of the Department

When this work was done this gentleman was asked by Admiral Porter to produce a torpedo which could make rapid speed upon the water, carry its charge of gunpowder or dynamite and explode it on contact, either at the surface or at any desired depth under water. This was a difficult problem which he was given to solve, but it was given to him, and for the last eight years he has done nothing else but experiment with it. He has waited upon officers of the ordnance bureau and obeyed their orders and heeded their wishes. He has directed the workmen in the work-shops and superintended the work as it has progressed. He has submitted patiently to all sorts of delay. The torpedo of small size has been tested in still water in the Potomac River, and also at Newport, and as far as I understand it promises to be a most formidable and dangerous weapon. It has been found to attain a velocity of seventy-five feet per second on the water, and goes absolutely straight to the point directed. Now, during the last year it was determined to be worthy to be tested in a full-sized torpedo and in rough water. completed and now there is a torpedo boat all finished and ready to be tested. But the Bureau of Ordnance has suddenly become indifferent to the Weeks auto-mobile torpedo, and delays the final test in rough water in the open sea (where no other auto-mobile torpedo, including the Whitewas ever tested or will ever be used), which it has heretofore deemed essential and had determined on and provided for. The reason for this delay and sudden indifference is simple to understand. Mr. Weeks, after having worked for so many years, and having offered all his inventions for the sole use of his own country, found that he was being delayed and hindered in his work at the whim and caprice of the officers at whose beek and call he found himself, and saw that it might turn out that having been squeezed dry like a sponge he might lose his invention and then be turned away without any reward.

Like a prudent man he provided against such a possibilty by patent-ag his invention both in this and other countries. When it was found ing his invention both in this and other countries. When it was found that he did not intend to allow the Bureau of Ordnance to claim his invention and deprive him of his rights he was treated with coldner

to say no more, and the proposed test in rough water was postponed to suit the convenience of the bureau.

Now comes the proposition to spend \$100,000 to purchase the automobile torpedo of Mr. Whitehead, and nothing is said about testing it

in rough water or in competition with any other torpedo.

Now, sir, I object to spending a dollar for any foreign torpedo until our own inventors have had a fair chance to compete. Let the Weeks torpedo, on which the Government has expended several thousand dollars, be tested in good faith. If it shall prove a failure we may try some other. If it should prove successful we should not take Mr. Whitehead's secret as a gift. It will be time enough to buy his secret when American inventors having a fair chance have failed to produce

With reference to the new legislation in the bill I wish to call attention for a moment to the provision for the retirements of officers. This new provision, from line 32 to line 50, has been referred to by other gentlemen, and therefore I will not stop to read it now. I had designed to make some remarks upon other features of the bill, but will be compelled to hurry through very rapidly, as the time allowed for the dis-cussion of the bill must necessarily be brief.

This new provision from line 32 to line 50 may be right with a single If I could see no danger of officers being prevented from being assigned to sea-service by favoritism or personal solicitation or by social or political influence I should feel that it was eminently wise But if a good, faithful, and worthy officer may for lack of favor or influence be shut out from sea-service in his grade as this bill requires, and then retired because he has not performed that service which he is competent and anxious to perform, then such compulsory retirement is wrong and will work injustice in practice, and jealousy and bitter feuds will result to even a greater degree than now exist

The exception to which I refer is the omission of a sea-service to be required of captains before promotion to the rank of rear-admiral. should not a captain serve as captain one or two years at sea before he leaps to the rank of rear-admiral? As the bill now stands a captain who has never done an hour's duty at sea as a captain may be raised over the heads of all the other captains and commodores to the rank of rear-admiral, and that, too, by mere selection. There is some reason for

this not yet explained.

Before I can consent to this apparent omission I must be satisfied that there is good reason for it. If it be said that all captains must have been commanders and lieutenants, and must therefore have seen sea-service and held commands, so as to be altogether qualified for the duties of rear-admirals, I have to say that this may be a good reason-if all the captains now on the list to whom this door is to swing open so widely have each served four years at sea

before promotion to a lieutenancy, six years at sea as a lieutenant, four years as lieutenant-commander, and three years as commander in com-

mand of United States vessels of war.

mand of United States vessels of war.

Now, then, have all the captains in the Navy served at sea in all the grades seventeen years, the time required by this bill for the future? I find some who have not. Among them are Captain John G. Walker, now at the head of the Bureau of Navigation and holding temporarily the rank of commodore; Captain F. S. Ramsey, now at the head of the Naval Academy; Captain Henry Erben, and Captain R.W. Meade.

Mr. BLOUNT. Will the gentleman yield to me for a moment?

Mr. HARRIS, of Massachusetts. Yes, sir.

Mr. BLOUNT. I simply desire to say in reference to Captain Meade.

Mr. BLOUNT. I simply desire to say in reference to Captain Meade that that gentleman has complained for years he could not get the seaservice that now meems to be necessary, although he was importuning

Mr. HARRIS, of Massachusetts. I know that. I know all these gentlemen except Captain Erben, and know them to be good, competent officers and men whom I should be very glad to aid in every possible way; and doubtless they would have had sea-service before if they could have They have all commanded vessels during war. the bill should be amended in this particular, and that this provision should be added, "that no captain who had not seen four years' service at sen in command of a vessel or vessels of the United States should be promoted to a rear-admiral."

Mr. ROBINSON, of Massachusetts. Otherwise the bill would seem

to be to favor captains.
Mr. HARRIS, of Massachusetts. Yes, sir.

Mr. ROBINSON, of Massachusetts. I do not want it open to any

Mr. HARRIS, of Massachusetts. I do not want it to appear that there is any possible favoritism here or that any man is to be especially provided for. I have no doubt that all of these four gentlemen, if this bill should pass, would speedily become rear-admirals, and I doubt not the wisdom of a measure which will permit their promotion, which does no harm to the service in other respects.

I next come to the provision of lines 50 to 57 inclusive. This provision, which retires officers arbitrarily and without reference to their worth or service before arriving at the legal retiring age of 62, seems to me to be most unjust and indefensible. No officer can now be promoted until his physical and professional fitness to perform the duties of the higher grade has been tested by an examining board. No danger exists, therefore, that any of these officers who are unworthy will secure pro-

By the operation of this clause it is proposed to remove blindly and by brute force, without reference to merit or demerit, certain officers now on the active-list to make room for promotion of their juniors in service

and inferiors in rank. Age alone is to govern, and merit or service will not count in their favor or save them from dishonor.

This measure will do the work, but who will it thus blindly remove? It will strike down about thirty officers, many of whom are active, trustworthy, and in the full vigor of health and energy, who can now render valuable service to the country. A few are commodores who will soon reach the age of retirement and who have served honorably and faith-The majority, however, are officers from the volunteer service, who in every case, as a recognition of and as a reward for gallant service in war, were permitted to compete in a most rigorous if not unfriendly professional examination for commissions in the regular naval service. It is a matter of strong belief and common notoriety, if not of record, that by unworthy intrigues at the time of transferring these officers they were placed much lower on the register than was just or honest or was intended by Congress; and now comes this effort from the "regulars," so called, to force them out of the service altogether and into retirement on half-pay, to make room for others who have thus far earned nothing of reward for service in war.

There are two classes of retired officers in the Navy. One class, to whose names stars are affixed in the Navy Register, are considered as honorably retired, having served forty years, or reached the age of 62, when all officers must retire, and retire of course honorably (for no man not worthy to retire with honor can be supposed to remain in active

service to this extreme limit), and those retired from having been disabled by wounds received or disease contracted in the line of duty.

Officers who have been forty years in the service, officers who have reached the retiring age of 62, and officers who have been wounded or have contracted disease in the service and have a star placed against their name belong to this first class.

Now, the law which makes this provision is section 1588 of the Residucion of the law which makes the provision is section 1588.

vised Statutes, and it provides that officers of this class, as a reward for faithful service, shall be entitled to three-fourths of the sea-pay of their

grade. It also provides that all other officers shall be retired on half-pay.

This other class of officers on the retired-list to whose names no stars are fixed have been retired for causes more or less discreditable to themare nixed have been retried for causes more or less discremiable to themselves, such as mental or professional incapacity arising from intemperate habits, &c. To this far less honorable class only half the sea-pay of their grade is allowed. It is to this latter list that the officers to be forcibly retired by the provisions of this bill must go, for on this point section 1588 of the Revised Statutes is absolutely imperative.

On the 1st day of July next, when this law shall go into effect if enacted, Commodores Baldwin, Shufeldt, Rhinds, Patterson, Phelps, enacted, Commodores Baldwin, Shufeldt, Rhinds, Patterson, Phelps, Wells, and Quackenbush, Lieutenant-Commanders Green and Nelson, and Lieutenants McRitchie, Tanner, and Baldwin will go onto the retired-list on half-pay, no matter howactive, competent, and worthy they may be and without any reference to their past honorable and gallant service in the cause of their country in the time of its greatest peril.

This is to be done in order that officers of a lower grade who have never rendered any valuable service to their country may take their places. It seems to me that however much the Committee on Appropriations may be justified in seeking to reduce the number of the officers of the control of the officers of the control of the con

priations may be justified in seeking to reduce the number of the officers of the Navy, they ought to see to it that these men who have earned all they are now receiving from the Government should not be treated with this rank injustice. I do not think this House will deliberately con-

sent to such an act of ingratitude as would be involved in the passage of this portion of the bill.

Mr. BLOUNT. I would like to ask my friend from Massachusetts [Mr. HARRIS] if he thinks the provision putting the commodores on the retired-list would result in the promotion of captains to the rank

of rear-admirals? I have heared it so argued.

Mr. HARRIS, of Massachusetts. I have no doubt of it. I desire now to call the attention of the committee to the proposition which makes captains and commodores eligible to promotion to rear-admirals by selection.

Suppose that you provide that they be promoted by selection. A board of rear-admirals will get together, and they may say here are five men (the lowest captains on the list, if you please) whom we will recommend to the President for promotion. The President is to have the option of selecting one of the five for rear-admiral. If this law passes and shall be held to be binding on the Executive he must appoint one of the officers so selected for him, no matter how much he may doubt either the wisdom or the justice of the selection.

Now, if we adopt this provision of the bill we will have to provide another civil-service-reform bill instantly, or else the Presidential mansion will be besieged from all quarters for the purpose of inducing him to make a selection favorable to somebody's friend. I do not think it

s wise to adopt that plan.

I mightask, has an instance ever occurred of any man ever being made rear-admiral by promotion according to seniority who failed worthily to discharge the duties of his office?

I admit, however, that too many men become rear-admirals at so late a period that they can perform no valuable service in that grade, and often go onto the retired-list almost immediately. I agree that some just method should be adopted by which younger men may become rearadmirals, and so that the officers at the top may be active and competent for the arduous duty of their high commands. But if you introduce the principle of selection why should it not apply in every grade, so that the favored doctrine of the survival of the fittest shall prevail all the

way up from the naval cadet to rear-admiral. If this will give us the best rear-admirals, why not also the best officers in every grade below?

Had such a rule as this obtained when our war of the rebellion commenced, Commanders Farragut, Foot, Davis, Dupont, and Goldsborough, and Lieutenant D. D. Porter, the latter of whom now holds the rank of Admiral, would have been on the retired-list at half-pay instead of on the active-list ready to commence those great careers which have added so much to the honor of their country, and which have made

their names justly famous in the annals of war.

In closing I desire to say a word with reference to the system of deflective armor, about which the gentleman from Tennessee [Mr. Whit-THORNE] has spoken. I agree with him on what he has said of the late experiments in France with steel-faced armor. There were three descriptions of armor tested in the experiments re-

cently made in France to which the gentleman refers.

One specimen was of iron having a steel facing cast on the iron. other was a plate of iron having a rolled steel facing which was united to the iron by means of melted cast-steel poured between the two. In other words, it had an iron backing, to which was united or cemented by means of melted cast-steel a facing of rolled or hammered steel, as I understand the descriptions which I have read. Each of these specimens was 18.9 feet thick.

The other specimen, the French specimen, was a piece of pure steel, 35 inches thick, I believe, when first put under the hammer, and reduced to a thickness of 18.9 inches. That piece of steel was hardened in the oil to the depth of 6 inches of its face surface. That steel stood three shots, and, although damaged, was not perforated, while an iron plate 23 or 24 inches thick would have been entirely perforated by those shots. The shots used against this plate crumbled into fragments. The other plates were entirely broken up at the second shot.

These plates were entirely broken up at the second shot.

These plates, however, were designed for vertical armor. It is possible that the time has come or is near at hand when a better and less cumbersome system of armor may be found practicable. This leads me in conclusion to say a word in relation to the provision of the bill appropriating \$20,000 for the purpose of testing the deflective system of Passed Assistant Engineer N. B. Clark. This gentleman is most unfortunate—from injuries received in some railroad disaster I believe; he is unable even to stand; he lies day after day and week after week

stretched upon his rolling-chair. But he has considered it his duty, notwithstanding his great disability, to devote himself so long as he may be able to the service of his country. He has produced and laid before the advisory board a system of steel deflecting armor—an interior shield about six or seven inches thick covering the entire vital part of the ship. This, if made of any such steel as my friend from Tennessee has adverted to, he believes could never be penetrated by the largest and most powerful guns in the world. He also offers to the Government his plans for deflective turrets, so constructed that six inches of steel will be worth more for defence than twenty-two or twenty-four inches of vertical iron. Upon the recommendation of the Secretary of the Navy we have asked that \$20,000 be applied to testing these inventions; and I wish to say that no more worthy object could

have been provided for by the Committee on Appropriations.

Mr. ROBESON. We have put that in the bill.

Mr. HARRIS, of Massachusetts. It is in the bill. I only the Committee on Appropriations had gone a little farther and provided that the iron-clad Miantonomoh, which is now completed and aftest, lacking only guns and turrets, might be completed with turrets of this description, according to the plans therefor now in the hands of the advisory board, if approved after full experiment and test

#### The Tariff.

#### SPEECH

# HON. HENRY S. NEAL.

OF OHIO.

#### IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 15, 1883.

On the bill (H. R. 7313) to impose duties on foreign imports, and for other pur-

Mr. NEAL said:

Mr. CHAIRMAN: I should have been glad to have participated somewhat, in the discussion of the schedule of the tariff bill relating to the duties upon metals. The district which I have the honor to represent, is largely engaged in the manufacture of iron in its various forms, from the digging of ore to the making of the finest qualities of crucible steel; but the great anxiety upon the part of the people that some revision should be made in the present tariff, the limited time, which admonishes us all that we should vote oftener and talk less, and the great familiarity which the Committee on Ways and Means display in dealing with every item of the bill, alike creditable to their intelligence and their industry, has thus far constrained me to keep silent. I will now, however, avail myself of the kindness of the committee, and express my views upon some of the questions which have been more or less generally discussed during the debate upon this bill.

First, then, I believe in protection for the sake of protection, not protecting simply the iron industries, in which the people I have the honor of representing upon this floor are so largely and vitally interested, but every other industry which the climate, soil, and other causes give our people the natural advantages necessary for successful prosecution, and which in time can be so far developed as to fully supply all the needs and demands of our people. I do not, however, advocate this principle of protecting American industries because of any sympathy I have for capital. On the contrary, I know well the ability of capital to take care of itself. Naturally conservative, the capitalist makes no ventures until he has satisfied himself that it is likely to be remunerative, and when he finds he has made a mistake he changes his investments to those

more profitable.

It is, however, for the workingman that my sympathies are aroused. He who has no resources but his hands, who has nothing to sell but his labor, is to a great extent at the mercy of capital, and can not, when there is an oversupply of labor, fix his own price for the commodity he sells, but must come into competition with his fellow-work-Competition begets low prices, and consequently the workingman receives an insufficient consideration. The workingman fully understands this, and endeavors to destroy competition by limiting the number who shall engage in any particular branch of industry. For him, therefore, a diversity of industries is of supreme importance, for the more numerous the sources of employment, the greater the resources of labor, the less competition among workingmen, and hence

In a private conversation with a distinguished gentleman on the other side of this House, a free-trade Democrat, I remarked the men who are engaged in the iron industries of my district can not work for less wages than they now do and comfortably support and maintain their families. He replied, let them seek employment in other avocations in life. Mr. Chairman, I commend the gentleman for his frankness, and at the same time admonish the workingmen of my district of their inevitable fate

if the people of this country shall ever be guilty of the insane folly of

intrusting the Government to that gentleman and his political friends. Sir, in the Forty-fifth Congress I took occasion to express my views somewhat at length upon the interesting question we have been considering. I then stated, and I desire here to reiterate and emphasize what I then said, that in my opinion wages should be natural; and natural wages I defined to be such as would enable the industrious, sober workingman, first, to support his family comfortably; second, to educate his children so as to enable them to perform well their part in life; and third, to lay up something for old age when his hands longer refused to do that which had been required of them. Wages lower than these are unnatural; and it is a shame to ask our workingmen to accept them if the condition of industry will justify the payment of more. say anything unkindly of our Democratic brethren; but they are in gross error upon these great questions, and I would fain persuade them to open their eyes, behold their faults, and like honest men, as they are. open their eyes, behold their lattis, and like honest men, as they arri-forsake their errors; but as long as they continue to advocate the perni-cious principle of "buying where we can buy the cheapest," without reference to national needs and requirements, without considering the personal interest of the great army of laborers in this country, and of the great neccessity there is for making ourselves as thoroughly independent of the other nations of the earth as it is possible for us to be, they are, unwittingly perhaps, but none the less truly, the enemies of the workingmen of the United States.

Mr. Chairman, our free-trade Democratic friends seem fond of de-nouncing manufacturers as "monopolists," "robbers of the people," &c., leading us to infer, that in their opinion it is a very reprehensible proceeding for a man of means and enterprise to embark his capital and proceeding for a man of means and enterprise to embark his capital and talents in a business which is likely to develop the material resources of the country and give employment to labor. Even the cultivated, scholarly, and talented member from Virginia [Mr. Tucker] used such demagogical claptrap in speaking of the manufacturers of quinine. I expected better things from him, and was, I confess, somewhat surprised; but I console myself with the philosophical reflection that we are all human and nature gross out excessionally no metter how much are all human, and nature crops out occasionally no matter how much we may have done to conceal it. Now, what are the facts about quinine? Prices are lower now than four years ago all over the world. But do consumers receive the benefit? Not to any material extent, I venture to state. The physicians charge just as much for their prescriptions and the apothecary charges just as much for filling them. There is no difference to the patient—the sick person. It is, then, only dealers who have been benefited, while a great and growing industry has been crippled if not destroyed.

The repeal of the duty upon quinine was a characteristic specimen of Democratic statesmanship. The law imposed a duty upon cinchona and also upon quinine. The Democratic Congress repealed the duty upon quinine but left it upon cinchona, thereby discriminating against the

American manufacturer and workingman.

Several years ago a gentleman of means and enterprise in the neighborhood where I live, joining with other like persons, invested largely in iron-ore lands in Virginia and erected thereon a large blast-furnace for the manufacture of pig-iron. He probably gives employment to several hundred laborers and furnishes a market for the farmers and gardeners in the vicinity of the furnace much more certain and desirable than that of Liverpool or Birmingham would be. I suppose the gentleman from Virginia [Mr. TUCKER], in whose district this furnace is erected I believe, looks upon these gentlemen as "bloated monopolists," "robbers of the people," whose end should be ignominious expulsion from the sacred soil of his native State. I doubt, however, whether the people who are largely benefited by this material development of the natural resources of their State will sympathize with him. On the contrary, if their voice could have any potential influence with him, he would to-day be an earnest and efficient advocate of that policy which will bring about the most extensive development of the natural resources of his district, if not of the whole country. I am not sure, however, but that he and others who sympathize with him are of the same opinion that a very good, but rather illiterate, Christian once entertained, who thought it a sin to dig the coal out of the bowels of the earth, because God had put it there to aid in the final conflagration of all things.

Mr. Chairman, if I could adjust a tariff to conform to my own ideas of public polity, with a view solely to enhance the material prosperity of this entire people, I would admit duty-free every article which we have not the natural facilities for producing and manufacturing, and I would levy duties upon those articles which the natural resources of the country enable us to grow or manufacture in such way as to produce the most rapid and permanent development, so that home competition would reduce prices to the very lowest limits consistent with fair wages and a suitable return for the capital invested. In this way we would only be dependent upon other countries for such articles as we can neither produce nor manufacture. Sir, we should so shape our legislation as to make the United States as practically independent of all the

world beside as it is possible for us to be.

To be a wealthy, prosperous, and independent people we must develop every natural resource, and, as far as possible, diversify labor. We must sell more than we buy. Not raw materials only, for all agricultural people are, comparatively speaking, poor, but the raw ma-

terials manufactured, or in as concentrated a form as possible. The individual who purchases more than he sells soon becomes impoverished, and as with the individual so with the nation. For a series of years we purchased more than we sold; the consequence was the financial That crisis compelled us to retrench our expenditures, to husband our resources, which, together with a series of good , enabled us, by the good providence of God, to sell more than bought; thus to accumulate capital, pay our debts, and inaugurate the most prosperous era this country has ever experienced.

But, say the free-traders, you do injustice to the consumer if you impose duties upon imports. Everybody ought to be permitted to buy where they can purchase the cheapest. Not so fast, my friend. Notwithstanding your assertion that the amount of the duty is added to the article sold, experience has demonstrated that such is far from being the fact, and I am glad to notice, that not even the gentleman from Illinois has seen fit to make a statement, which would have done so little justice to his intelligence.

The duty of the Government is legislation for the greatest good to the greatest number, consistent with its independence and its future well-being. Now, while it may be true that for the time being high duties may enhance prices, yet eventually, as the past abundantly demonstrates, home competition reduces prices, oftentimes below what is healthy condition for the continuance of that branch of business. To-day the iron business is in a depressed condition. Why? Because there is so much iron manufactured in this country that the supply exceeds the demand. Consequently manufacturers seek customers, not buyers the sellers. If there was an absolutely prohibitory duty on iron I am of opinion there would be no material enhancement of prices through out the country, because of the great production of our own mines and furnaces. Why, sir, up to 1860 there had never been produced more than 900,000 tons in any one year, while this year there will be produced not less than 4,500,000 tons. Is not this truly wonderful prog-

Now, sir, what is pig-iron? Let us see. It is an ore in the hill—an earth, utterly valueless in its native state. The charcoal or the stone-coal which is used to smelt it are likewise of but little value. In Southern Ohio the owners of land away from markets have been obliged to burn the timber in order to clear their lands to render them suitable for farming purposes. In the iron regions, however, the timber is valuable for the purpose of smelting the ore. Iron ore in the hill is worth 50 cents per ton royalty, if situated near a furnace. it is not, it is, comparatively speaking, valueless. To dig it costs, in my county, from \$1 to \$1.50 per ton. Then to haul it to the furnace makes the total cost about \$3 per ton. The charcoal costs about 6 cents makes the total cost about \$3 per ton. The charcoal costs about 6 cents per bushel, and the amount required will average from one hundred and fifty to two hundred bushels for each ton of iron. \$5 per ton of iron to manufacture it. Then there must be added commissions, interest on capital invested, and other items, so that the cost of charcoal-iron in my immediate neighborhood is over \$20 per ton, and of coke-iron near the same amount. Now, it will be seen that the total cost of the raw material does not exceed from \$3 to \$4 per ton, and as all the rest is labor the only item which can be reduced so as to lessen the cost of production is labor. Labor is now as cheap as it could be consistent with the well-being of the laborer and his family, so that the cost of iron can not be reduced without the impoverishment of the workingman.

But, sir, if it were true that the tariff enhances prices, it does not necessarily follow that it is an evil which should be abated. Every man, woman, and child in the United States is a consumer to a greater or less extent, and each should likewise be a producer, if he fills a useful place in the public economy. So that it would seem that higher prices benefits all to a certain extent. Suppose that the 4,000,000 tons of iron we now produce could be purchased in Europe at \$5 per ton cheaper. Why, says the free-trader, don't you see you would save to the consumers \$20,000,000? By no means. Immediately, that might be the case, but then the amount paid for that pig-iron would be sent to Europe to pay for the labor of producing it, and it would be wholly lost to the laborers of America. Suppose it cost \$75,000,000 to produce that iron here. Instead of being spent at home, it would be sent abroad, and there would be that much loss to be expended among the producers of iron for food, clothing, houses, homes, &c. The prices of these articles, by reason of this diminished demand, would be reduced probably below the duty of \$20,000,000, which, it is claimed, would

be saved to the consumer

But, again, destroy all the iron industries, dampen down the fires of our furnaces, close their doors, discharge the tens of thousands of labor-ers new supporting themselves and their families in comfort, and what would be the result? No sooner would the British manufacturer and the importer obtain control of our markets, with no home competition to disturb or frighten them, than prices would again advance until they would likely exceed those which would enable the American iron-master to operate his works with profit, paying fair wages to his employés.

How would the closing up of the furnaces affect other industries?

The tens of thousands of workingmen now engaged at them would be compelled to seek employment elsewhere and in other avocations. They would come in competition with labor engaged in other industries.

The price of labor would be reduced; the ability of the laborer to purchase largely diminished; the markets would be dull and the value of all commodities fall proportionately; so that all producers would be injured. But, says the free-trader, we would sell our products in Europe. Yes; you would so far as Europe needed them; no further. Europe will only buy of us such articles as she needs, and she will buy no more, no matter how much we may urge her to do so. If they have good crops they buy less; if poor crops, more; so that it is a very uncertain market. Even now when we are purchasing so largely from her she only takes about 8 per cent. of our productions, while we consume within our own borders the remaining 90 per cent. In other words, the workingmen of America furnish a market much more reliable, much more remunerative, and far larger than we obtain elsewhere. And yet for the sake of buying where we can buy cheapest we would destroy this sure market and impoverish our workingmen. Was ever such folly exhibited by sensible men? And those who propose this ruinous scheme claim to be political economists and statesmen. I am persuaded if Chancellor Oxenstein were here to-day he would find occasion to repeat his celebrated remark, "With what little wisdom this world is governed!" And would be astonished at the blindness of our publicists and

Mr. Chairman, I venture to assert, without fear of contradiction, that 1,000 workingmen of the United States, with their families, furnish a betthe garden than 2,000, ay 3,000, of the working classes of Europe with their families furnish. Why? do you inquire. Because they wear better clothing and consume better and more food. They are better clothed and better fed. Contrast the European laborer with the American, and behold the difference! Who here would wish to see the American reduced to the condition of the European? Ah, how many burning tears will be poured out like rain; how many bright hopes go out in the darkness of an everlasting night! And yet, says the free-trade Democrat: "Oh, we must not heed the well-being of the laborer; trade Democrat: "Oh, we must not heed the well-being of the laborer; we must buy where we can buy the cheapest, and if the American workman can not work as cheaply as his European brother, why, then, he must go at something else—that is all." Sir, that is not all; we must be influenced by a wiser political economy than that. At the risk of not buying where we can buy the cheapest, we must, by wise legislation, develop our material resources, foster our manufacturing interests, furnish employment to our working classes at remunerative prices, and practically make ourselves independent of the whole world

Mr. Chairman, if the Southern States had acted wisely years ago, and encouraged the development of their mines of iron and coal and salt— if they had invited capital to come within their borders and erect fur-naces, founderies, and factories, the result of the late struggle might have been far different from what it was. Fortunately wisdom did not characterize the counsels of their leaders. Brave, chivalrous, energetic, they could not fashion for themselves the material of war, and ergetic, they could not fashion for themselves the material of war, and consequently were compelled to succumb to those whom they had affected to despise as "greasy mechanics," "mudsills of society," &c. Fortunate for the North, ay, fortunate for the South, yes, fortunate for the whole country, unwise counsels had prevailed, and the South, practically heeding the teachings of free trade, that the raw material must alone be produced upon its sunny fields, while the working of it up must be intrusted to Northern or European hands, were powerless to help themselves in the hour of their direct need.

help themselves in the hour of their direst need.

It is surprising our Southern brethren can not see in what direction their true interests lie. With such immense, inexhaustible natural resources, with a mild climate, a rich soil, capable of producing all the grains and fruits of the temperate zone with those of the torrid zone, there is no reason why the South should not be the most prosperous, the most populous, and the richest portion of our country, in a comparatively short space of time, except for the short-sighted policy of its statesmen and leaders, who still cling with great tenacity to the policies which characterized its people prior to the great rebellion. It may so become. It will, however, require a new generation of people, with new leaders and enlightened statesmen to emancipate that section from the political and economic heresies which have retarded its growth and the political and economic heresies which have retarded its growth and brought it almost to the verge of ruin. Then a new South will spring up. Phenix-like, from the ashes of the old, and like a young giant stride rapidly forward in a wise and prudent course, until in time it shall become the great, populous, and rich country it is designed by nature finally to become. The people of the North will regard with admiration, interest, and affection this wondrous change, and will assist in the their weet the archive restrictions. in it by their wealth, and by sending them their most enterprising citizens and their most industrious and skillful workingmen.

Mr. Chairman, before closing I wish to call the attention of the committee to one more item in this schedule, which has received most thorough consideration from both sides of this House. I refer to cotton-ties. I have been surprised at some of the statements made by gentlemen of free-trade proclivities, which have satisfied me they are not as well informed as they might have been upon this subject. For instance, the gentleman from Texas [Mr. MILLS] stated this duty was imposed for the benefit of a half dozen manufacturers who employ only about two hundred and fifty workingmen. This may be the exact truth at this time. I neither affirm or deny; but admitting it to be true, how long does the gentleman suppose it will be, should we impose a protective duty, before mills will be erected or put into operation with the capacity to manufacture all the cotton-ties that the South may need?

Why, sir, let me state one single incident. Before that strangely singular decision of the Treasury Department, confirmed afterward by the courts presided over by lawyers and not by practical business men, by which hoop-iron cut into lengths was held to be no longer hoop-iron, subject to the specific duty which is now imposed upon that article, but one of the unenumerated articles, subject only to the advalorem duty of 35 per cent., a number of capitalists of my city, Ironton, erected a mill for the express purpose of manufacturing cotton-They gave employment to many iron-workers and made thousands of tons annually. That unfortunate decision was made. They could not sufficiently reduce the wages of their employés, and consequently they were compelled to close up, dampen down their fires, dismiss their workingmen, and to-day that mill is idle. Impose protective duties and in less than sixty-days it will be in active operation, furnishing employment to a large number of persons. And what is true of my own city is true also of other iron centers. Sir, I hazard nothing in saying that in less than six months there will be cotton-tie mills in operation sufficient to produce an active and healthy home competition that will reduce the price of that article to the lowest limit consistent with a successful prosecution of the business.

consistent with a successful prosecution of the business.

Now, who pays for these cotton-ties? The manufacturer? Nay, verily; it is the consumer. Why, sir, my colleague, Major McKinley, has demonstrated this fact by the most incontrovertible testimony. He shows that the planters sell these ties at the same price they do their cotton, and while they pay 3 to 4 cents per pound for the ties they sell them at, say, 10 cents per pound; it seems to me that it is a little cheeky, to say the least, for them to complain of the small duty which it is proposed to impose in order, to enable our workingmen to manufacture them in our own country, when they are making about 300 per cent, in buying and selling. But if this were not so, how much additional cost does it impose upon the planter? My colleague [Mr. Townsend] says about 1 cent per bale of cotton. Now, is this not a terrible burden, one grievous to be borne? For the sake of saving this sum of 1 cent per bale our Southern free-trade friends, aided by their Northern allies, would destroy the cotton-tie manufacture in this country and depend upon Great Britain for our entire supply.

ever such short-sighted policy as this; such supreme folly?

Mr. Chairman, the principles involved in this bill of protection and free trade, interesting and practical as they are to our entire people, have been so often and so thoroughly discussed that I cannot hope to add anything new. I have only desired to bear my testimony, to the substantial advantages and benefits to be derived from the protective system, based upon an experience of fifty years, in which I have given some consideration and study to this important subject. I have satisfied myself that the prosperity of not only our wage-workers, but of every class of our people is enhanced when prices are such as to furnish fair wages for a full day's work, and that in reference to labor the maxim of "buying where we can buy the cheapest" is most pernicious and de-

structive

Our workingmen must be well fed, well clothed, and comfortably housed. Their children must be educated so as to be enabled to discharge intelligently their duties as free citizens of this great and mighty Republic, and it is not only wise but absolutely necessary we should give them employment at remunerative wages, instead of going to Europe and employing the ill-paid laborers there, who are compelled to work for any price offered. We should welcome the poor and opsed of every clime to come to America and help us to work out the glorious destiny which is in store for us, if we are only true to ourselves, true to the teachings of experience, and are controlled by that enlightened selfishness which makes us seek our own good in prefer-

ence to the good of other nations.

In short, Mr. Chairman, if we are capable of learning anything, we should have learned that until there is an equality of wages the world over we can not adopt free trade as a correct system of public policy in our dealings with sister nations, unless we are willing to make them prosperous at our expense and build up their manufactures of wool, iron,

and clay at the tremendous sacrifice of our own.

Mr. Chairman, one consideration more and I will no longer occupy the attention of the committee. We are compelled to raise from duties upon imports about the sum of \$250,000,000 annually, or else we must collect that sum by direct taxation. There is not a member upon this floor who represents an intelligent, reflecting constituency who would dare to propose the latter method of collecting the revenues necessary for the purposes of Government. Now, how shall we levy the duties so as to produce this sum and at the same time not make them unnecessarily burdensome upon the people. If we had a uniform ad valorem duty upon all imports the rate would be about 50 per cent. This would afford protection to most of our manufactures, ample and sufficient, and is considerably above the duties fixed by the committee upon manufactures of iron, the most important, extensive, and varied of all employments in the United States. The free-trade Democrat, or, as he prefers to be called, the revenue reformer, says, levy the duties for revenue only; it is a wrong upon the consumer to make them protective in their character. This would compel us to tax coffees, teas, and such other articles as are not, and can not be, pro-

duced in this country, while we must admit substantially duty-free articles we can manufacture, because the imposition of a duty necessarily affords protection. The doctrine of the Republican party is directly the contrary of this. We would levy duties upon those articles for the production of which we have the natural facilities in the climate, soil, and productions of the country, and we would admit duty free, or with low duties, such articles as we can not produce or manufacture. Which is the wisest statesmanship?

Sir, the Republican party took possession of the Government in all its branches in March, 1861. I will not state the condition of the country at that time. I will only state that financial ruin stared all our business men in the face, and stagnation and general depression in business characterized every industrial enterprise; wages were very low and the workingman of the country vainly sought employment in any labor that would "keep the wolf from the door" and prevent his wife and children from starving. Now, after twenty-two years of Republican scendency, mark the contrast!

I will close what I have to say by quoting from the remarks of the honorable gentleman from Iowa [Mr. Kasson]. He expresses my views so much better than I can myself that I am sure he and the committee

will pardon me for adopting them as my own. He said:

honorable gentleman from Iowa [Mr. KASSON]. He expresses my views so much better than I can myself that I am sure he and the committee will pardon me for adopting them as my own. He said:

Sir, I am for protection in the sense in which I have spoken, because I am for maintaining two things, the independence of foreign country for its necessary supplies, its independence of foreign countries and foreign control, and also because I am for giving bread and shelter and clothing to the poor men in the United States of America who depend upon their daily labor for their daily bread. And I can not do that if I allow by my action in legislation all the money earned in this country to go to the workshops of Europe for the supplies which we need and which we consume. I can not do it if I adopt a pure revenue standard which ignores utterly the question of the cost of our home materials and labor. When I force our manufactures to the alternative to perish or to reduce the wages of their labor, I take, in either case, that much of the bread from the mouths of my fellow-citizens who perform that labor. Sir, we have had these laborers before us. The commission had them also before it. If you ask why I take their statement instead of accepting the statements of free-trade orators on this floor my answer is that I trust the man who has been employed in the workshops of Europe and is now employed in the workshops of America as a better witness of what concerns his welfare and his prosperity than the orator who maintains on this floor any theory resting ou logic instead of facts. And they have been not only singly but in companies before the commission. We have heard them in the room of the Committee on Ways and Means. And when you tell me that the laborer's interest is to take off duties on account of his consumption instead of maintaining them on account of wages for his labor, I appeal from orators and professors to the laboring man himself.

If there be one certain duty of government recognized in every country of the globe w

Tariff-Sumatra Tobacco-Restrictive Legislation a Necessity.

#### SPEECH

# HON. A. HERR SMITH,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 24, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other pur-

Mr. SMITH, of Pennsylvania, said:

Mr. Chairman: A few years ago some wealthy merchants in Amsterdam conceived the idea of cultivating tobacco on the Island of Sumatra, a dependency of Holland. A rich soil and genial climate, aided by the cheapest kind of cheap labor—cooly labor—made the experiment a complete success. In 1881 the crop yielded 82,356 bales, and official records show that there was imported into the United States of this tobacco, up to June 30, 1881, 200, 602 pounds, and during the months of July, August, September, October, and November, 1882, 610,519

These excessive importations naturally alarmed the American tobacco-grower. An examination of the Sumatra tobacco proved that it was

a new and peculiar variety. The leaf is oval in shape, soft and pliable as tissue paper, uniform in color, and being free from large stems is admirably adapted for cigar-wrappers. The American seed-leaf, as all know, is long and tapering, with heavy central and side stems. These, at an expense of at least from 10 to 12 cents per pound, have to be removed before the leaf can be used for wrapper purposes. leaf, on the contrary, is fit for a wrapper in its natural state. It is, moreover, agreed by eigar manufacturers that one pound of Sumatra will go as far as four pounds of seed-leaf.

In a letter dated December 23, 1882, addressed to Mr. Joseph Nimmo, Government statistician, E. Hoffman & Son, of New York, the recognized agents of the Amsterdam Sumatra tobacco brokers, say the "yielding qualities of Sumatra is four to one of our domestic tobacco, one pound covering as much as four pounds of our domestic leaf."

The Sumatra tobacco, Mr. Chairman, is worth in New York from 90 cents to \$1.25 per pound, making an average of \$1.07 per pound. Add to this 40 cents, the difference between 35 cents, the present duty, and 75 cents, the duty proposed by the Committee on Ways and Means, and we have \$1.47 as the price of one pound of Sumatra. A pound of and we have \$1.47 as the price of one pound of Sumatra. A pound of seed-leaf prepared for wrappers is worth 40 cents, but it takes four pounds to equal one pound of Sumatra, which would make the equivalent in seed-leaf cost \$1.60, a difference of 13 cents in favor of its foreign competitor. It is evident, therefore, to protect our home-grown product, it is necessary to make the duty \$1, as suggested, and this would

product, it is necessary to make the duty \$1, as suggested, and this would only give the seed-leaf the benefit of 12 cents, a difference the Sumatra grower could easily overcome by advantage of cheap land and cheap labor.

Over seven thousand persons, Mr. Chairman, embracing growers and manufacturers of tobacco, from my district, by petition ask protection against this foreign product, the importation of which if not checked by restrictive legislation will certainly ere long entirely supersede the home-grown product. Already it has embarrassed dealers and growers and caused many failures. Even the agents of the Amsterdam house before reputiened. Title a fundament that dealers are required as the foreign and course that does then credit say in the before mentioned, with a frankness that does them credit, say in the aforesaid letter-

That the importation of Sumatra tobacco under the present duty of 35 cents per pound is working great evil to our producers or farmers is an indisputable fact, and the failures and losses in our trade verify this assertion.

The circular of Binger & Herschel, sworn tobacco brokers of Amsterdam, just issued and sent to their correspondents in the United States, and from which I now read, with equal frankness admits the losses which must follow to the American grower from these excessive importations, and concedes the propriety of legislative interference. Hear what they say:

If the importations really increased in such proportions, everybody would of course understand that in a few years the American planters would be the loser by the falling off in the demand for several thousand cases of seed-leaf, and who would blame them if in that case they sought to get their interests protected by their government, in the form of an additional duty on the imports of Sumatra

But we need not go abroad for instruction. The American people understand their rights and know how to protect their interests, and the legislator who presumes upon their ignorance will learn, to his sorrow, that he has made a fatal mistake.

The tobacco industry, Mr. Chairman, in my district has become a specialty. The seed-leaf, which originally came from Connecticut—and I like it none the less because first grown on New England soil—has been either from our soil or our climate or both combined greatly improved by the change of locality. From nothing within a few years past our tobaccorp has grown to be worth annually from two to three million dollars. My city, Lancaster, is annually, in the spring of the year, a great to-bacco mart, crowded with buyers from all parts of our country, from New York to California. It is estimated that the capital invested in my county in necessary tobacco buildings, &c., exclusive of land amounts to \$2,200,000—thus: tobacco barns, \$1,500,000; tobacco warehouses, \$600,000; tobacco wagons, laths, &c., \$100,000.

From the report of the State agricultural department it appears that

the acreage of tobacco in my county is 16,992.

Official records show that there are now in the county 478 cigar manufactories in operation, employing 2,868 persons, who made during the last year 115,719,650 cigars, on which there was paid into the United States Treasury a revenue tax of \$694,317.95, and in the whole revenue district, made up of the counties of Laucaster, York, Cumberland, and Perry, on cigars, \$1,256,803.10. By way of parenthesis, and for the information of my friend Mr. Chapman, of Maryland, I may state that by our method of cultivating tobacco we do not exhaust the soil. Quite the contrary. The crop that by rotation succeeds tobacco is usually better, and a comparison of the census reports for 1870 and 1880 proves that our great staples have not been neglected. The following shows the cereals in Lancaster County for 1870 and 1880:

	1870.	1880.
Wheat	Bushels, 2,097,413 88,245 1,943,577 2,820,825	Bushela. 1,929,767 77,818 1,412,694 3,293,292

From the above it appears that, except corn, the production of wheat oats, and rye has not been increased during the last decade, but we bear this loss quite philosophically in view of the fact that we have made a gain of 21,253,742 pounds in tobacco, the crop of 1870 only having yielded 2,692,584 pounds.

having yielded 2,692,584 pounds.

But I urge this additional duty also in the interests of my State.

Out of sixty-seven counties in the State, sixty-four are engaged more or less in the cultivation of tobacco. The crop in the State for 1882 is estimated at 28,750,000 pounds, and its value at \$3,450,000. For the year ending December 31, 1881, there were in the State 3,956 cigar factories in operation, in which were made 555,949,256 cigars.

But this industry is not local but eminently national. While Pennsylvania, Connecticut, New York, and Wisconsin are mainly growers of the seed-leaf, all the States use more or less of the same in the man.

of the seed-leaf, all the States use more or less of the same in the manor the seed-lead, all the States use more or less of the same in the manufacture of cigars. From the last census it appears there were in the United States in 1879, 638,841 acres in tobacco, which yielded 472,661,157 pounds. Pennsylvania had 27,566 acres, yielding 36,943,272 pounds; Connecticut, 8,666 acres, yielding 14,044,652 pounds; New York, 4,937 acres, yielding 6,481,431 pounds; Wisconsin, 8,810 acres, yielding 10,608,423 pounds.

The following table shows the number of fectories in sort fitting the shows the number of fectories in sort fitting.

The following table shows the number of factories in each State and Territory and that nearly 3,000,000,000 cigars have been made in the

United States in 1881:

The capital employed in the cigar industry in the United States is \$22,787,891; the average number of hands employed, 54,831; the total amount paid in wages during the year, \$18,635,433; value of material, \$30,987,335; and value of the products, \$65,877,110.

I have made no estimate of the number of laborers engaged in cultivating the leaf-tobacco in the United States, but I believe it safe to affirm that there are 10,000 persons engaged in cultivating the leaf in

The tax paid into the United States Treasury on tobacco amounts to \$47,391,986.91, of which in round numbers \$18,000,000 comes from cigars. From 1862 to 1882, as I learn from a speech of my friend Mr. TURNER, of Kentucky, there was paid into the United States Treasury, as a tax on tobacco, \$589,750,447.04.

Nor will this duty interfere with the importation of Havana tobacco, as it is used chiefly as a filler. There is no conflict between it and the seed-leaf wrapper. Unless, however, the seed-leaf wrapper is protected the Sumatra would supersede it, and in that event our tobacco-growers would be entirely at the mercy of foreign capitalists, who could then control both Cuba and Sumatra; for our farmers can not possibly grow

tobacco for the sake of furnishing fillers.

Mr. Chairman, local, State, and national interests therefore unite in demanding protection for this valuable industry, the revenue from which has contributed so materially to make us among the nations of

the world the first in financial credit.

In place of brilliant metaphors and rounded periods I have furnished

facts and figures, as more conclusive to support the position advocated. Our duty therefore under these circumstances is plain. We must check these excessive importations unless we are ready to witness the destruction of this national industry, and with it, as a consequence, the ruin of thousands of our farmers and laborers, and the loss to the na-tional Treasury of many millions of dollars in the shape of internal To avoid these dire consequences we must grant the relief su carnestly demanded and grant it promptly, so that we may not give point, by our conduct, to the proverbial folly of locking the stable after the horse is stolen.

But, Mr. Chairman, it is said there is a lion in the way. Our legislation may provoke retaliation. There is no foundation for this fear. Nothing of the kind has been threatened, and from the extract already Nothing of the kind has been threatened, and from the extract arready cited in the Amsterdam circular, our action is anticipated and commended. If any party has cause to complain, Mr. Chairman, it is the United States. When the duty of 35 cents per pound was imposed this Sumatra product was unknown. If it were in all essential qualities like other tobacco the duty would be regulated accordingly, but as it like other tobacco the duty would be regulated accordingly, but as it is an entirely new variety—one pound being equal to four pounds of domestic seed-leaf—the duty, to be protective, must be discriminatingly increased. To now subject this new product only to this old duty would be a fraud both upon the United States and the American seed-leaf

Let us do our full duty and not allow ourselves to be frightened by this belte noire, ever ready to spring upon Congress when protection is sought for American industries and American workingmen.

sought for American industries and American workingmen.

In this effort it is true we are protecting a luxury, but a luxury opposed to a foreign luxury. It is home against cheap foreign labor, individual enterprise against foreign monopolies. In a word, Mr. Chairman, in this struggle for life I am now, as heretofore and always, for our own products, our own industries, our own people, and for all lawful measures necessary to protect the same against domestic or foreign foes.

The Signal Service.

SPEECH

# HON. EZRA B. TAYLOR.

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 10, 1883,

On the bill (H. R. 7190) fixing and defining the duties of the Signal Service.

Mr. EZRA B. TAYLOR said:

Mr. SPEAKER: The question of transferring the Signal Service from the War Department to the Department of the Interior has, per se, interested me but little, though in my judgment economy and efficiency

require it to remain where it now is.

Had the discussion involved only the questions properly belonging to the subject I should have remained silent, but the speech of the honorable gentleman from Pennsylvania [Mr. BELTZHOOVER] was of a character so extraordinary, containing statements concerning the workings of the Signal Service Bureau so incorrect and unfounded, and charges against the Chief Signal Officer so cruelly unjust and so absolutely untrue that I feel called upon to say a few words in reply. I do not charge the honorable gentleman with any intentional injustice or knowledge of the incorrectness of any of the statements concerning the

bureau or the chief officer.

Still, the charges made against General Hazen are so foreign to any proper discussion of the bill he was advocating and so utterly unconnected with any necessary consideration of the subject that one can

hardly refrain from believing that a personal object actuated the gentleman in making use of the language he employed.

The facts to which I shall allude touching the operations of the Weather Bureau I get from its reports and publications, its records, and the data on file in the office and those connected with the chief officer. His character and achievements are taken from the history of the

country, open to all readers.

I may be permitted, however, Mr. Speaker, to say that my personal acquaintance with General Hazen began with his early boyhood and has continued till now; that for some of that time he and I were on relations of closest daily intimacy, and that during all that time I had personal means of knowing what he did and of what stuff he was made.

To me charges against him, from whatever quarter they may come, importing did not be a support of the support of

importing dishonorable conduct or motives are defamatory and slanderous, because I think I know him incapable of such conduct or motives. He is not only my constituent, but I am proud to regard him

The honorable gentleman from Pennsylvania [Mr. Beltzhoover] in speaking of General Hazen in his speech in the House uses the following language:

I neither sought nor want a quarrel with this military martinet, who is universally despised and loathed by every respectable soldier in the country; this XIV-242

general without a battle; this commander without a history; this soldier who compromised the charge of base and ignoble cowardice and strutsupon the stage and wears the muniments of war shorn of all that makes it honorable or justifies a soldier's life.

Precisely how the general wears the "muniments" of war we are not told, nor yet just what the "muniments of war are."

It is doubtless very naughty for him to wear such things, especially as they are, or the general is (it is hard to say which), "shorn of all that makes it honorable or justifies a soldier's life."

My incapacity to understand the moral guilt alleged in this part of

the paragraph precludes me from making any defense; but I wish to exss my regret that General Hazen persists, if he does, in wearing any-

thing that is not in good taste.

The charge made that General Hazen is universally despised and loathed by every respectable soldier in the country is a broad, frantic statement that needs no denial. That he compromised the charge of base and ignoble cowardice I deny in its length and breadth. As to the charge that he is a general without a battle, a commander without a history, I call upon the records of the country to decide between the gentleman from Pennsylvania and myself.

Who, then, is General Hazen? And what has he done for the coun-

try?

He was graduated at West Point in June, 1855, was appointed brevet second-lieutenant in the Fourth Infantry, and joined his regiment then serving on the Pacific coast. He served through the Indian war raging that year in Oregon, and was made second-lieutenant in the Eighth Infantry, and for the next two years was engaged almost constantly on the plains of Western Texas and New Mexico against maurading Indians, and was four times complimented in general orders from head-

Quarters of the Army for bravery and good conduct.

On the 3d day of November, while in a hand-to-hand conflict with a Comanche chief during an engagement, he received a severe wound through his left hand and right side. The rifle bullet making the wound

bis wound he dispatched his antagonist.

He was presented with a sword by the people of Texas in recognition of his services. In 1860 he was brevetted as first lieutenant for gallant services in Texas, and in 1861 was promoted to a full first lieutenancy. In May following he received the appointment of captain.

On the breaking out of the war he was appointed colonel of the Forty-first Ohio Volunteer Infantry, and on the 6th of January, 1862, to the command of the nineteenth brigade of the Army of the Ohio. He washotly engaged at Pittsburgh Landing, where he led his brigade in a successful charge; he fought at Perryville, and at Murfreesborough he received and repulsed four well-conducted assaults and held the position behind which the army reformed; he fought at Readyville; also both days at Chickamauga, on which occasion his was the last organized command to leave the field.

At 2 o'clock a. m. on the 27th day of October, with 1,300 picked men in fifty-two boats, he floated past Lookout Mountain along seven miles of the rebel picket-line, landed at Brown's Ferry at about 5 o'clock a. m., and surprised a rebel picket-post and seized a ridge of hills. The Richmond press, referring to the affair, said:

By the admirably executed coup on the morning of the 27th of October at Brown's Ferry the confederacy loses the fruits of the battle of Chickamauga, The occupation of Chattanooga by the Federal Army is no longer problematical.

General Hazen's brigade was among the first to reach the crest of Mission Ridge, and captured eighteen pieces of artillery and hundreds of prisoners. On reaching the summit General Hazen in person gathered four or five hundred men from the fragments of several regiments and cleared the crest of the masses of the enemy gathered about Bragg's headquarters.

Hazen's brigade, with other troops, went to the relief of Knoxille, and afterwards fought in the Atlanta campaign at Pocky Pass Ridge, Resaca, Pickett's Mills, and Jonesborough, and he was engaged almost daily till the 17th of August. He marched from Atlanta to the sea, captured Fort McAllister with his division alone, and fought and marched from Savannah to Goldsborough. General Hazen has been under hostile fire more than one hundred times. He was made major-general to date from the capture of Fort McAllister. A historian says of him:

So long as Stone River, Chickamauga, Brown's Ferry, Orchard Knob, Mission. Ridge, Atlanta, and McAllister are remembered—and can they ever be forgotten?—the memory of General Hazen will be preserved and cherished.

This is the record of a Union soldier who is stigmatized as a "general without a battle, a commander without a history," by the gentle-

I now proceed to consider topics more legitimately belonging to this discussion, concerning which we shall find abundant inaccuracies of statement on the part of the gentleman from Pennsylvania.

The attack on the Signal Service is made up from untruthful state-

ments first printed anonymously. The gentleman has been deceived, whether willingly or unwillingly he alone knows. At any rate, he has made no investigation of the subject of which he speaks so confidently. He has taken his information from persons who are discredited at the outset, because they are the cowardly writers of anonymous articles, and the purloiners of private letters. He has not tried to find the truth, but has been content to ally himself with a disgraceful association composed mainly of defamers.

Hardly one pretended fact in the gentleman's speech is true. He says: "Civilians do all the important work of the bureau now, and must of necessity continue to do it." This is not true. All those who make weather predictions for the bureau are officers of the Army, and all who take observations on which predictions are based are soldiers. There are twenty-three officers and five hundred enlisted men in the corps. With the exception of a few who are necessarily engaged in the management of property, and in clerical labor, all these are engaged in There are only six civilians who work at the scientific scientific work. There are only six civilians who work at the scientific problems of the bureau. But they do not make weather predictions; they study the data collected by the observers and endeavor to deduce general laws from the facts that the weather observers have added to the world's knowledge.

He says that there are more than four hundred civilians now employed, directly or indirectly, by the Signal Service. As a matter of fact, a large proportion of these civilian employés are engaged in services that occupy but very few minutes a day. Of the four hundred referred to, eighty-eight receive 25 cents a day, and one hundred and

twenty-five 20 cents a day. They are river and cotton-belt observers.

The gentleman wonders why the observers should be in the Army if
it is necessary to secure the services of men who are more intelligent
than those found in the line.

There are two reasons why better men will enlist in the Signal Corps than in the line of the Army; one is that they receive a certain amount of scientific instruction in the corps, and an other is that it is the only military service in the country in which enlisted men must receive commissions every year.

The gentleman from Pennsylvania, who is constantly giving amusing as well as annoying illustrations of his ignorance of the Weather Service and its work, grows eloquent over the question of having civilian weather observers. A few of his sentences, taken here and there, will illustrate how fatal a gift is beauty of speech when joined with misinformation and malice:

This (meteorology) is one of the great unexplored sciences, the outer boundaries of which have barely been touched by scientists. To ever understand the mysteries of weather nature must be watched long and faithfully in all herfitful, varying moods. Spies must be set upon her daily action, who will follow and shadow her for long years and glean from her the secret lines which after patient watching it is supposed she will be found to follow.

The mysteries of nature never have been and never will be unveiled by those who are sent to their work like dumb driven cattle. There are thousands of men competent and anxious and willing to undertake the work of the Weather Bureau at the same compensation now paid who will work for the love of science, will watch nature in her marvelous moods because they carnestly desire to know her secrets.

This is all so pretty that it is painful to be obliged to reveal its untruth. The enlisted men of the Signal Corps are merely intelligent young men who can read correctly their barometers and dry and wet bulb thermometers, and ascertain the force and direction of winds, and who can then telegraph or signal the result in cipher. There are not, not-withstanding the assertion already quoted, thousands of men competent and willing to do the work of the Weather Bureau for the compensation now paid to the culisted men. The argument made in behalf of retaining the bureau in the Army, which has been prepared by General Hazen, to which the gentleman has alluded, is as follows:

Hazen, to which the gentleman has alluded, is as follows:

The first question that arises is: Is it best that the corps should remain part of the Army? It is now a military organization, and has been successful in its practical meteorological work. Before its organization shall be changed and the corps made a civil bureau, Congress ought to be assured that the same work can be done better and cheaper by civilians.

The service can not be properly maintained without a military organization. The course of instruction at Fort Myer has been arranged and perfected under the best meteorological authorities in the country. The corps has an established school for the instruction of men who are to become observers and of the officers who are to make predictions. In order to make a civil bureau successful the Government would be obliged to establish and maintain a school under civil authority. There would, of course, be no difficulty experienced in obtaining students for the meteorological course. The difficulty would be to retain the services of those who had finished it, and who had thus become fitted for the work of observation. One of the advantages of the enlistment of the men who are taught at Fort Myer is that they are compelled to serve the Government in return for their instruction.

Practical meteorology is taught nowhere except at Fort Myer. For years to come it must continue to be taught at the Government school and for the propose of the Government weather service. Will the Government consent to give up the hold on the men whom it educates and which it has only through their enlistment? It would be absolutely impossible to maintain the service by trusting to volunteers from the men it had instructed. It is one thing to secure unequeated men to promise to serve on weather work in return for the education they are to receive, and quite another thing to secure the same men for practical weather work after their commercial value has been added to at Fort Myer. Under a civil organization at least double the numbe

a few now connected with the corps, who are at all fitted to give instruction in practical meteorology.

The men are sent on duty at stations immediately after finishing the course at Fort Myer. Here the implicit obedience of orders given by none but soldiers is essential to the successful conduct of the work of the Weather Bureau. Inorder to obtain proper data for weather predictions exposed stations must be occupied by young men to whom the Government has given a training that makes them valuable to business men and corporations. They have acquired methodical business habits, they are good telegraph operators, they have become good mathematicians. It is a fact that at present the Government holds out very little temptation to many of these men compared with the inducements offered by private corporations and persons. If the Weather Bureau were activil ordered still when the service would lose some of its most valuable men. This will be trueratill when the school at Fort Myer is improved and the course advanced, as they

must be before long, if the service is to grow with the growing demands of the country. During the last fiscal year seventy-nine-culisted men applied for disputations that they wished to accept better or more heard and the property of the country. During the last fiscal year seventy-nine-culisted men applied for disputations of the country. During the last fiscal year seventy-nine culisted men applied for disputation of the country of th

As every report is carefully studied, these figures give some idea of the labors of the force on duty at this office.

Warnings against frosts are now given to tobacco and cotton growers, and it is expected that as soon as Congress shall provide the necessary mean special warnings will be given to the grain-growers of the northwest. The means of giving warnings of the approach of "northers" to the cattle-raisers of fexas have been improved within the last year. From the character of all this work military men will see that military discipline is absolutely needed for it.

The fact, however, that stands out most prominently is that the service itself can not be maintained without a military organization, so that it becomes unnecessary to argue the question of comparative efficiency.

A few authorities in favor of a military organization may be of interest.

"A rigor less than that of military discipline would fail to insure the accuracy and strict obedience to orders which have been necessary." (Annual Report, Secretary of War, 1871, page 13.)

To the same effect see "Révue Scientifique de la France et de l'étranger," Paris, April 22, 1876, page 397. (See post, page —)

Opinion of M. De Verrier in "Notice sur le service Météorologique aux Etats-Unis," by M. Malézieux, Paris, 1873, page 5.

In an address "Sur l'état actuel de la météorologique départmentale," delivered in 1876, at the annual meeting of the society of agriculture, sciences, letters and fine arts of the department of "Indre-et-Loir," M. de Tastes, speaking of the difference between the French and American services (the French being civilian), said: "Its [France's] army of observers is to that of America what the national guard is to the regular army. Figure to yourselves a general directed of dislodge an enemy from an important point, and delivering the following discourse to his soldiers: 'Gentlemen volunteers, will you be kind enough to take up your arms, and if you think well of it, try to drive the enemy from that position." The attack badly di

again; if the general complains the soldiers threaten to desert, and address him with that terrible phrase beginning. If you are not satisfied, —the rest varying according to the politeness and degree of education of the speaker. Here is where we are." (Address, page 16.)

Herr C. Jelineck, director of the Imperial Meteorological Institute of Vienna, said in 1874; "The progress of meteorological work in North America is such that its chief can point to the system with pride. The American organization has not only come to equal the older European systems with marvelous rapidity, but by reason of the large territory and liberal resources of the country, the strict military training of its observers, and the energy of its management, it has in many respects surpassed them."

In a "Vou pour la réorganization de la météorologie Francaise," presented by the meteorological section of the "Congrès de Clermont-Fernand," of 1877, the military system of the United States and Algerian services is commended as the model on which that of France should be reorganized. (See post, page 8.)

The late Professor Henry, of the Smithsonian Institution, heartily approved of the resolution of 1870, giving the weather service in a rarge of the War Department, and willingly surrendered the great accumulation of material gathered by the institution for the practical weather work then about to be undertaken. (Smithsonian Report, 1870, pages 43, 44.)

The evils attending a service depending on civilians is well illustrated by the difficulties under which the British service has labored. It is with very great difficulty that exactness and punctuality in taking observations are obtained. (British Met. Rep., passim.)

The following extract from Nature, September 19, 1878, is both a tribute to the men of the service and a testimonial to the value of a military organization: "In the terrible panic which has seized the Southern States under the epidemic of yellow fever, we are glad to see that science has been pressed into service and stuck brav

The gentleman says:

It is conceded on all hands that a Canadian adventurer, unaided and alone, his the weather oftener and infinitely better than our million and a half dollar shoulder-strapped and brass-buttoned concern.

The gentleman who uttered this forgot that a moment before he had said that "civilians do all the important work of the bureau." Which untruth will be stand by? For one statement is as untrue as the other. No one who is in a position to make concessions on this subject has ever made such a statement, and no one who is sufficiently informed to be heard about the Weather Service can truthfully make such an assertion. The fact is that all meteorologists know that the Weather Service of the United States is the best in the world.

The following, printed in the Western newspapers of the 11th of this month, is very pertinent:

The people of Southern Ohio thought the floods were over, in spite of the warning sent to them from the Signal Service Bureau at Washington, but last Wednesday the waters began to rise, thus fully illustrating the invaluable services which the Government department in question is rendering. It is worth more every fifteen seconds of the day to mankind than all the weather Isaiahs from now till kingdom come.

The men who make predictions now are those who have always made them, and the percentage of verifications has increased since 1871 from 60 to 88 per cent.

Many people judge of the success or non-success of weather predictions by the thunder showers in which they are caught. just, for predictions are made to warn the country against the approach of great storms. How much value the service is to commerce can best be shown from some tables that were carefully prepared a year or so ago.

The following table, compiled from the annual reports of the Secretary of the Treasury on the commerce and navigation of the United States, exhibits the losses to American vessels on the lakes, by years, for a period of four years prior to a display of cautionary signals at lake ports, and for two equal periods since then. While the tonnage on the lakes has been reduced during these twelve years from various causes, chief of which is the diversion of freight by the railways, it is also true that disasters have been much more carefully reported since 1874 than before that year, until at present all, of whatever character,

and the resulting losses, even when triffing, are now reported. this been the case during the earlier period, the aggregate of losses would be shown to have been greater. The table, however, is sufficiently instructive, and shows the astonishing facts that while prior to the establishment of the cautionary-signal system the loss to vessels was at the rate of \$2.43 per ton, it decreased during the next period, and while the system was imperfect, to \$1.46 per ton, and during the last period to \$1.15 per ton, showing a saving in value of vessels alone as between the first and last periods of nearly \$1,000,000 per annum

Table No. 1.—Table showing the tonnage of American vessels engaged in the commerce of the Great Lakes; the number of disasters (stranding, foundering, &c.) to American vessels and the total loss therefrom during the years 1868 to 1879, inclusive, with the loss per ton of the commerce engaged and the number of cautionary signal stations at lake parts.

When it is remembered that the coasting trade of the United States is much greater than that of the lakes, it may with safety be asserted that the saving in vessels and cargoes on the great lakes and on the coasts, resulting from the present system of cautionary signals, is not less than \$2,000,000 per year.

It is found that there is no record of data from which a table similar to that above given can be made showing in detail the losses before and since the exhibition of cautionary signals along the Atlantic and Gulf coasts, no official record of such disasters having been kept until

Table No. 2, compiled from the annual reports of the Superintendent of the Life-Saving Service, shows that at the fifteen principal lake ports at which cautionary signal stations are established the disasters during the years 1868 to 1879, inclusive, decreased from eighty-nine during the four years preceding the exhibition of cautionary signals to forty-five during the last four years, when the system had become fully established.

TABLE No. 2.—Table showing the number of disasters occurring to vessels at the principal lake ports where cautionary signals are displayed for the 4-year period prior to the complete establishment of the cautionary-signal system on the Great Lakes, during the last year of which cautionary-signal stations were first established, and the two 4-year periods subsequent thereto.

Probably the best, because the most recent, illustration of the advantages of the Signal Service to commerce is afforded by the history of the two very severe cyclones of last September and October. The first cyclone was felt by the signal officer in charge in Washington when it was still in the Gulf of Mexico, and before it was seen or felt by any one else on shore. Warnings were at once given to the Gulf ports, and signals were flying long before the breeze had freshened. The cyclone advanced around the western end of Cuba and struck Port Eads on the 8th Its center traveled across the country in a northeasterly of September. direction, the wind blowing from thirty to fifty-six miles an hour at all the South Atlantic ports. The storm-center left the country south of Norfolk on the 11th, and traveled with wonderful speed to Nova Scotia. Every Atlantic port was visited by its heavy wind, and at all except Eastport, Maine, the winds were dangerous. Every port had from two to three days' warning of the approach of the storm, and millions of dollars' worth of property was saved. Speaking of this storm, the New York Maritime Register says:

Owing to the work of the Signal Service timely warning was given of the approach of this cyclone, and to this fact alone may be attributed the comparatively small casualty list among the shipping on that occasion. In years past such a cyclone was generally accompanied by enormous loss of life and property, but thanks to the vigilance and good work of the Signal Service such a catastrophy can now be largely abated. \* \* \* General Hazen certainly deserves the thanks of ship-owners and underwriters for what he has done for them, and the officers who have aided him in this, by their invaluable reports, show that they understand the full duties of their position. They are to be commended for their share in furthering this good cause. Without them the work could not go on. It is evident, however, to the most unobservant that were all, or nearly all, the officers of the merchant service engaged in this work, the data thus furnished to the Signal Service would be returned by it to shipping in a form which would make the navigation of the ocean far safer than it is at present.

The New York Herald of October 9, 1862, speaking of this storm,

The statement published on Friday showing the large value of shipping along our Gulf and Atlantic coasts prevented from going to sea during the September cyclone by the Signal Service storm warnings strikingly illustrates the value of these warnings. The saving of life and property accomplished by a timely storm warning is never fully known, for those who profit by it are not careful to report the fact. \* \* \* \* \* \* \* t is not difficult to see how, if the entire shipping on our seacoasts had acted in ignorance of the approach of the September hurricane or had had no forewarning of its existence, its intensity and the track it would probably pursue from its tropical birthplace to the higher latitudes, there might have been an actual loss of property worth many millions of dollars.

An attempt has been made to gather the statistics of the values of vessels and cargoes detained in port by the display of the signals of the service. Complete statistics, however, could not be obtained, because no one is charged with the duty of gathering them. At New York, Baltimore, and Philadelphia, for instance, the harbors are long, and, on the approach of a storm, vessels go as far down the bays and river on the approach of a storm, vessels go as far down the bays and river as possible, anchoring in safe places, in order that they may take advantage of the clearing off-shore wind. There are, therefore, no statistics for these important points for this September cyclone, although at New York, undoubtedly, more large vessels were prevented from putting to sea than at any other two ports in the country. The statistics obtained for Boston Harbor are incomplete. The statistics from other points, however, show that property of the value of \$6,500,000 was prevented from going to sea during the continuance of the

The report of the observer at New York of the October cyclone is very interesting, although it was impossible for him to obtain statistics of the value of the property detained from going into the cyclone. One brig, two barks, and one hundred and forty schooners anchored at Hell Gate. These were mostly coasters, but \$900,000 is a very low estimate of their value, without considering their cargoes. The larger vessels anchored in "the Narrows," and it is estimated that, besides several steamers, there were two hundred ships, barks, and brigs, and one hundred and fifty schooners, all worth at least from \$8,000,000 to \$10,000,000. The observer, who had the assistance of the secretary of the New York

The observer, who had the assistance of the secretary of the New York Maritime Association, estimates that many millions of property was saved from jeopardy by observing the warnings.

The experience of the September cyclone impelled ship-masters to pay unusual heed to the signals. The storm outside the harbor was of great severity. The captains of the Long Island Sound steamers report it "the severest on record;" they were compelled to seek harbor. Three coastwise steamers that put to sea were obliged to return to port, and the only sailing vessel, a brig, that, sailed in disregard of the signals. coastwise steamers that put to sea were obliged to return to port, and the only sailing vessel, a brig, that sailed in disregard of the signals, between the 11th and 13th, was forced back. When the storm was over and the signals were lowered, so many vessels left the harbor together that people went to see them sail. The beautiful and unusual sight was described in the daily newspapers, the Telegram stating that fifteen steamers and two hundred sailing vessels passed through "the Narrows" on the 14th.

Property of the value of at least \$30,000,000 is known to have remained in port in obedience to the warnings given of this storm.

These facts, that are but repetitions of the yearly history of the Sig-

nal Service, make a complete answer to the baseless statement of the gentleman from Pennsylvania.

The gentleman puts the cost of the Signal Service under civil management at not more than \$500,000 a year. Here is simply another

illustration of his misinformation. The cost of the service for the current year, leaving out the military establishment, is as follows:

Here is a total of \$325,520, without an estimate for salaries. On the calculation made by the gentleman from Pennsylvania, the five hundred men, the Chief, and all the experts under civil management are to receive less than \$175,000, or less than \$350 per annum each. It may be said that fewer men will do the work of the service. As a matter of fact there are too few men in the service. The work is delayed and the office is overburdened. Very few persons understand how the labors of this service have grown, and their growth is one of the evidences

of its popularity.

In 1871 there were fifty-five stations; now there are two hundred and wenty. Ten years ago the reports from stations for three months were bound together in a single thin volume of 138 pages; now the reports for a single month fill two volumes of 1,197 larger pages. The correspondence of the office has greatly increased. Even within two years the communications sent from the office have increased from 31,390 to 69,996, and the letters received from 20,209 to 32,329. All this increase of labor devolves new work upon the property and disbursing division of this office also; yet there are fewer offices now than there have been for sev-Officers who are instructed meteorologists are compelled to neglect the duties for which they have been prepared to attend to administrative duties. Officers who are not instructed in meteorology are so occupied with the business of the corps that they can not devote any time to preparation for scientific work.

There are now only nineteen officers on duty where there were twentythree in 1880 and twenty-eight in 1881. With this reduced number of officers the Chief Signal Officer has undertaken the additional task of giving special warnings against frosts to the cotton and tobacco-growers of the country, and of improving the methods of giving warnings against the approach of "northers" to the cattle-growers of Texas. The people of the country demand that the service shall advance, and these additions were made in obedience to the demand. Agriculturists and ship-masters have faith in the weather predictions and desire a more extensive application of the information received daily at the central office. The grain-growers of the Northwest are asking for special predictions, similar to those now furnished the cotton and tobacco regions.

More men are needed for the growing work, and the statement made by the gentleman from Pennsylvania that nine-tenths of the stations of the service can be profitably abandoned will be news to all who know anything of the subject on which he speaks. The merest tyro in this science knows that the fuller the data received the more accurate will be the predictions; and the truth is that there is hardly a day passes when the Chief Signal Officer is not asked to establish one or more new stations in addition to those which are now for the first time asserted to be too numerous.

The statements made by the gentleman about Fort Myer are untrue. It is not only a school of instruction, but it is the only school of me-

teorology in the country.

The gentleman asks what the computers at the office in Washington do? They do the theoretical scientific work. They make tables on which barometric pressures are reduced to a sea-level; the data gathered by the observers are studied here, and all this must be done by civilian computers, because there are not officers enough in the service to attend to more than the practical work of making predictions and

summarizing the results.

summarizing the results.

The gentleman from Pennsylvanta charges that 2,000 francs were paid for what he calls a "literary fraud," published in a French paper entitled Nature. The gentleman probably refers to the most important English scientific periodical published. It is, however, untrue that 2,000 francs, or any sum of money, was ever paid for any article on this service in Nature, or in any French publication. The gentleman objects to enlisted men of the Signal Corps pursuing studies in meteorology at universities and colleges. He charges that General Hazen sends these young men to college, presumably at the expense of the sends these young men to college, presumably at the expense of the Government. These men attend the universities and colleges at their own expense, and their studies are pursued during the intervals when they are not employed in the duties of the service. The gentleman

says that there are 5,000 men in the Army who are better signal men than those in the Signal Corps. This is as untrue as it is absurd.

When the present Chief Signal Officer assumed charge, by the direction of the then Secretary of War he undertook to find out the author of a series of slanderous and insubordinate letters, written by some

enlisted men of the corps and printed in the Sunday Capital.

This investigation led not only to the discovery of the author, but that he had many confederates among the men in the chief office. He learned now that a series of thefts of money had taken place. He caused the arrest and indictment of the thief and has done all in his power ever

since to secure his trial.

He did more, he confined in the guard-house at Fort Myer the chief author of the Capital letters given him by the Secretary of War. These letters were in the last degree scandalous, false, and abusive of the Chief and other officers of the Signal Bureau, such as no man could for

a moment tolerate in his subordinate and expect decent administration. But before trial great pressure was brought to bear in favor of the person chiefly charged, who was a sergeant, Van Heusen, and upon his repeated denial of having any part in these writings he was restored to duty and again given a place of trust. The Chief Signal Officer especially endeavored to befriend him, doing for him whatever friendly office he could, even addressing him a note of regrets that he had arrested him. This letter he now flourishes as a proof of innocence.

Soon after this it was found that some person in the office was in the

Soon after this it was found that some person in the office was in the habit, at night, and at other times when officers were absent, of searching through desks of the Chief Signal Officer and others and abstracting papers and taking copies of others, and after careful and patient search it was discovered that Van Heusen was the person doing this.

This was not the mere taking a copy of a letter accidentally exposed,

This was not the mere taking a copy of a letter accidentally exposed, but a systematic course, extending through weeks. This fact was not only proven by detectives, but by employés of this office, and later by his own written letters. He was then discharged the service, but reemployed in the Pension Bureau, where he now is, and, as he has said, for the sole purpose of making this attack through the gentleman from Pennsylvania.

It can scarcely be doubted that he has been deceived in this man, as the officers of the Signal Service were after Van Heusen's first arrest.

The interview, published in the New York Times of the 11th, with the gentleman from Pennsylvania shows, by the perversion of all things there stated as facts, that he is a victim of Sergeant Van Heu-

In that letter he does not rely upon other sources of information than those furnished by Van Heusen. The record of the letter is that of a man who while in the service was notorious as a writer and publisher of annonymous letters containing just enough misstatement regarding things that happened to give them the appearance of truths. He could never be caught until he wrote a letter to Representative HYATT SMITH, of New York, which was referred to by the gentleman from Pennsylvania. This letter embodied many of these misstatements, and an opportunity was sought to bring Van Heusen to trial for these before a general court-martial, and for a time Mr. SMITH's consent to the use of the letter was had.

But when Van Heusen found the letter was in the possession of the Chief Signal Officer, he begged Mr. SMITH to secure its return and to withdraw his consent to its use for the trial, on the ground that it was not intended to be seen at the office. The commonest courtesies required a full compliance with Mr. SMITH's request, and though charges were being drafted they were destroyed. The letter to Mr. SMITH solicited his assistance in connection with official matters, and is of such a character that it could not be regarded as other than an official

The gentleman's assumption that there was any parallel between such a letter and the scrutiny and the theft of private letters from the desk of an officer who long and earnestly befriended Van Heusen only shows that he has been as grossly imposed upon as was the officer in the Signal Office.

The gentleman's frank avowal that he draws all his information from Van Heusen, therefore, would seem to show him to intend no wrong, but makes it perfectly clear that he is the victim of misplaced confi-

The first part of this assault contains little besides extracts written and published in the Sunday Gazette during the past summer by Van Heusen, and the charges were mainly false. Particularly is this so in his charge that the "Signal Corps is run now exactly as it was under Howgate," and that it has not tried to secure Howgate's arrest and trial, and that it seeks to prevent an investigation, and it is difficult to see how he could make such a statement, since ample evidence to the contary was in Congress, called for by his own resolution.

It is also an error in the statement that the Signal Service is always

It is also an error in the statement that the Signal Service is always adding to its expenditures, for during the two years the present Chief Signal Officer has conducted it, after deducting the cost of the Arctic work, which was added by Congress, and which forms no part of the current expense of this bureau, there were spent for the year 1881 \$134,000 less than in 1880, \$176,000 less than in 1879, and for the year 1882, when fully 40 per cent, had been added to the work, there were

spent \$56,000 less than in 1880 and \$98,000 less than in 1879.
The second part of this assault is composed of a set of stolen private letters furnished to the gentleman by the person already described.

Boards of trade and other mercantile associations of the country are, from the relation of this bureau to commerce and trade, closely associated with the Signal Service, they having in each ameteorological committee, which inspects and reports upon its station work, and in many other ways gives it valuable support and information. These stolen letters are the expressions of young men who, when on the duty of inspecting stations, are required to confer with these associations to learn their wishes regarding our service; and the statement in his attack that expense was incurred, except for the usual and necessary purpose of this inspection of stations, is not true.

These inspecting officers are required to report in writing as to the sense of these boards upon all subjects of special interest to them and

the Signal Bureau. These are sometimes in the form of simple letters, and sometimes as formal resolutions. At the time referred to there was a hope of securing an independent organization, and that the Signal Service be relieved of the great embarrassment of being dependent upon details from regiments for officers, and it was to this subject that the special inquiries of the inspectors, after their regular inspections, chiefly referred.

The advisability of learning the wishes of those organizations upon the subject of a permanent continuance of the Signal Service was discussed with members of the Military Committee when the subject was first brought up, and was then approved. But these persons, hostile to the Signal Corps, always on the alert for something on which to hang a complaint, have represented that these officers were sent out to solicit these resolutions, and that money was spent for that purpose. This is unqualifiedly false. These tours were the ordinary ones which are of necessity made every year to secure and test with standard instruments accuracy of observations. They were made as all other tours are made, and not one cent was expended for the purpose stated.

necessity made every year to secure and test with standard instruments accuracy of observations. They were made as all other tours are made, and not one cent was expended for the purpose stated.

With a few confederates this person who stole these letters has ever since been preparing this attack, and mutterings of its coming have been reaching the office of the Chief Signal Officer for many months, all the way from Boston to San Francisco, with the boast of the exact number and the names of the newspapers they had engaged to aid

From San Francisco the word came on the 11th of January that one of these discharged persons was preparing a case that "seemed very damaging," "paying money for lobbying" being alleged, and a dozen other charges equally false, and that he proposed to "send a copy to Congressman Beltzhover."

On the 15th of January there came from Saint Louis similar warning. The communication goes on to say, referring to the few parties of this class still remaining in the chief office, "you are surrounded by persons who copy your private letters for certain purposes" (meaning for the uses here seen).

What was all this for? Because the present Chief Signal Officer found on assuming his office that there had been, and there was still in it, men who stole its money, and were trying through falsehood and disloyalty to steal and destroy its reputation, and for detecting and arresting the parties to this double villainy he is now arraigned in this House

Since the arrest of Howgate, which was secured solely by the Signal Bureau, there has been no dishonesty there. There is now nothing in that bureau that any one in it is afraid for the whole world to know. The officers there did all in their power to bring Howgate to trial, with the direct object in addition to bringing him to punishment that the investigation would show the whole world that the office he had disgraced was purged of the obloquy he had brought upon it, and which the gentleman now states remains there.

A great deal is said in these attacks about Fort Myer; that officers there have cows and chickens and horses and flowers and gardens. So they have, and so have they at every military post in all countries, and the innuendo that it is here an abuse and wrong is not true.

Among the most recent acts of this man was his pretense to speak for the Signal Corps in a printed pamphlet, averring that the corps was dissatisfied with a military organization and that the Chief Signal Officer misrepresented them in saying that they preferred it. This was a falsehood and a forgery. Excepting half a dozen, out of a hundred and sixty men, there never was a more loyal body to their work and their chief than the men now in the Signal Corps. They voluntarily state their denunciation of this last-named falsehood in the following most marked and proper terms:

We most emphatically deny the truth of the statements contained in the pamphlet entitled "An answer to General Hazen's circular criticising Secretary Lincoln's right and competency to judge what is the best interest of his Department!"

Inneon's right and comprehens.

We also deny in toto that they represent our views and opinions. On the contrary, we declare them to be willful lies, and that the pamphlet assuming to give the views of the weather observers is a forgery, calculated to deceive and mislead, and is wholly false in the most minute particular.

The authors of this attack even falsely say the foregoing was secured by coercion, and is not spontaneous or genuine. The observers can speak for themselves.

I repeat that the gentleman from Pennsylvania is only the mouthpiece of those men, and has been deceived by them.

There is scarcely a sentence in his speech that is not recognized by any one who has watched these men as an old acquaintance transferred from some of the many abusive letters that have been published in the Sunday Gazette during the past season.

Sunday Gazette during the past season.

It matters not what the few supporters of General Stanley say, the old Army of the Cumberland says this is a base slander and false-hood.

The bringing into this attack the findings in the case of General Stanley, a matter that had no relation whatever to it, is an act that needs only an allusion here to show to any fair man its true character. In its general sense it was a falsehood as base and wrong as was ever perpetrated upon a man.

Suppression of Lotteries.

#### SPEECH

## HON, EDWARD W. ROBERTSON,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 23, 1883,

On the bill (H. R. 7563) for the more effectual suppressing and preventing of lot-teries by prohibiting the transmission through the mails of publications con-taining lottery advertisements.

Mr. ROBERTSON said:

Mr. Speaker: The question of depriving lotteries the use of the mails is one of serious import to the good people of my State, as also to the law-abiding population of the whole country. Deprive the Louisiana State Lottery Company of the right to carry on its false and fraudulent schemes and devices to deceive and defraud the public as it is now doing every day through its monopoly of the United States mails, and it will be effectually crushed out of existence.

The people of Louisiana will no longer be cursed with the infamy of its debasing influence so notoriously exhibited in our legislative halls and elsewhere during the past three years. Forbid it to enter the United States mail and "its occupation's gone." It will die the death of all such gambling institutions, or, restricted to such narrow limits in its nefarious operations, it will cease to exercise its corrupting influence in politics. Through the connivance of the Postmaster-General in a plain, palpable violation of existing postal laws, which his predecessor enforced and was sustained by the courts, the Louisiana State Lottery Company now enjoys the exclusive privilege of the mails, while all other lotteries are prohibited. Before entering into a discussion on this particular point, it may be well to take a cursory glance of these institutions as they have previously existed in England and this country.

The history of lotteries as a measure of government finance is com-

paratively of modern origin. Menestrier, who wrote on this subject toward the close of the seventeenth century, ascribes to the Republic of Genoa the invidious distinction of first originating the institution as an adjunct of taxation of the masses. Certainly it spread with frightful rapidity, as we find it domesticated in France early in the sixteenth century, and with its usual concomitants, crime, misery, and poverty. From France it crossed the Channel to England, and the first drawing, it is said, took place at the west door of the cathedral of St. Paul, in London, about the middle of the sixteenth century. Maitland of Stowe informs us of the existence of three offices in the kingdom as early as 1569. It is a lamentable fact that the colonization of America was first attempted by the mother country through the means of these institu-The earliest statute to be found on this subject was passed by the English Parliament, temp. Jac. I, for the purpose of the colonization of Virginia. To the honor of Massachusetts, before the close of the seventeenth century we meet with the proceedings at a meeting held at Boston in the last year of that century in which the ministers "denounce the lottery as a cheat and its agents as pillagers of the people.

The different sects of the Protestant religion have ever since, with singular unanimity, denounced this species of gambling, and though legislative sanctions, under the guise of public works and the pretense of fostering public education or the support of charitable institutions, have granted charters "to pillage the people," yet the influence of the better classes have always been thrown in the scale on the side of stiffing

such potent measures for the degradation and eventual ruin of the people.

As early as 1762 the Assembly of the Colony of Pennsylvania passed a law under severe penalties prohibiting any and all lotteries, and now in nearly every State in this Union that existed formerly as colonies under the Crown of Great Britain we find laws of similar import dating about or subsequent to that period. As this act of the Assembly, passed on the 17th day of February, 1762, was the beginning of subsequent legislation on the subject in the different States, I give it in full as the best exposition of the sentiments of our ancestors in expressing their abhorrence of this great adjunct in reducing the people all to the same dead level of wretchedness, pauperism, and crime

An act for the more effectual suppressing and preventing of lotteries

An act for the more effectual suppressing and preventing of lotteries. Whereas many mischievous and unla wful games, called lotteries, have been set up in this province, which tend to the manifest corruption of youth and the ruin and impoverishment of many poor families; and Whereas such pernicious practices may not only give opportunities to evildisposed persons to cheat and defraud the honest inhabitants of this province, but prove introductive of vice, idleness, and immorality, injurious to trade, commerce, and industry, and against the common good, welfare, and peace of this province: For remedy whereof, be it enacted, that—

1. SecTion 1. All lotteries whatsoever, whether public or private, are common and public nuisances, and against the common good and welfare of this province.

fince.
SEC. 2. No person or persons whatsoever shall publicly or privately set up, erect, make, exercise, keep open, show, or expose to be played at, drawn, or thrown at, any lottery, play, or device, or shall cause or procure the same to be done either by dice, lots, cards, balls, tickets, or any other manner or way whatsoever, and every person or persons that shall set up, erect, make, exercise, keep

open, show, or expose to be played at, drawn, or thrown at, any such lottery, play, or device, or that shall cause or procure the same to be done, after the publication of this act, and shall be thereof legally convicted in any court of quarter sessions within the jurisdiction whereof the said offenses shall be committed, or in the supreme court if thereunto removed from any of the inferior courts, within this province, shall forfeit and pay the sum of £500 lawful moneyof Pennsylvania.

2. Sec. 3. All and every person and persons whatever that shall buy, sell, or expose to sale, or that shall advertise or cause to be advertised the sale of any ticket or tickets, or device whatsoever, in such lotteries, plays, or devices, or that shall be aiding, assisting, or in any wise concerned in managing, conducting, or carrying on such lotteries, plays, and devices, by whatsoever name the same may be called, and be legally convicted thereof in either of the courts aforesaid, shall forfeit and pay the sum of £20, lawful money of Pennsylvania, for every such offense.

shall forfeit and pay the sum of £20, lawful money of Pennsylvania, for every such offense.

3. Sec. 4. All and every person and persons whatsoever that shall within this province buy, sell, or expose to sale, or shall advertise, or cause to be advertised, the sale of any ticket or tickets, or other device whatsoever, in any lottery, play, or device whatsoever, which shall be hereafter set up, erected, made, exercised, kept open, shown, or exposed, to be drawn at, played at, or thrown at, in or at any place or places out of this province (State lotteries erected and licensed by the act of Parliament in Great Britain only excepted and foreprized), and be thereof legally convicted in manner aforesaid, shall forfeit and pay the sum of £20, lawful money of Pennsylvania, for every such offense.

Sec. 5. All the fines, forfeitures, and penalties hereby inflicted shall be paid to the overseers of the poor of the city, borough, or township, where any of the said offenses shall be committed.

perusal of this act will show how our ancestors regarded this pest to all moral social obligations of the people. The proviso which saved from the general prohibition "all State lotteries enacted and licensed act of Parliament in Great Britain" only shows the involuntary servitude in which the colonial assemblies were kept by the mother country.

These state lotteries continued in Great Britain down to the beginning of this century, when a combined attack was made in Parliament to prevail upon the government to discontinue this manner of raising a reve-Though chancellor after chancellor of the exchequer fought to retain this mode of taxation which produced several millions sterling annually toward the budget, yet, by the efforts of Wilberforce, Canning, and Buxton in the House of Commons, and Lyttleton and Castlereagh before and after their elevation to the House of Peers, Eldon, Wellington, Peel, and their other opponents were silenced, and the last drawing took place in October, 1826, and this fruitful source of crime, poverty, and wretchedness was effectually suppressed, never again to rear its head in the territory of Great Britain. During this long contest it was clearly demonstrated that no greater enemy ever existed than lotteries to prethe monstrated that have a large representation of wealth by the poorer and middle classes, and in every country where they exist savings-banks have always proved a failure. The night of the drawing of one lottery, capital prize £100,000, as signalized with over fifty suicides of unlucky purchasers of tickets.

The facts elicited by the examinations of the different committees of the House of Commons, taken at the solicitation of philanthropists deeply interested in putting an end to the crying evils engendered by lotteries, are almost incredible to any one but who has lived in scenes where the curse exists. The magistrate on the bench, the preacher in the pulpit, the guardian of the peace, the collector of the poor rates, the warden of the prison, the custodian of pledges pawned, were all with singular unanimity denunciatory of the frightful injury that came under their cognizance, and which affected all the different walks of life. It made bad husbands, bad wives, bad children, and bad servants, the most fruitful source of suicide, and hardly a day passed that one of its votaries did not hang himself or cut his throat from disappointment and impotent rage. Such was the testimony obtained from disinterested witnesses drawn from every class of life, and it was particularly noted that women and minors were the most easily tempted to invest their savings in this maelstrom in which honor and virtue was frequently

One of the reports on this subject by a committee of the House of Commons thus closes:

Your committee are conscious that they are far from having exhausted the grounds which might be urged, that the lottery ought not to be resorted to as a financial resource. The reasoning upon them appears to your committee to apply with peculisir force to the situation, the habits, and all the circumstances of a great manufacturing and commercial nation, in which it must be dangerous in the highest degree to diffuse a spirit of speculation, whereby the mind is insieled from those habits of continued industry which insure the acquisition of control and independence, to delusive dreams of sudden and enormous wealth, which most generally end in abject poverty and complete misery.

We now return to the history of lotteries in this country. In 1834 We now return to the instory of lotteries in this country. In the the Pennsylvania Society for the Suppression of Lotteries was formed at Philadelphia and issued an address to the people of Pennsylvania and the United States, and chiefly by its indefatigable and untiring efforts this species of gambling, with the exception of some few triffing enterprise of the people of pennsylvania and the Union prises for local improvements, was suppressed in every State of the Union when the late civil war was so unfortunately inaugurated in this country.

In a report of individual cases collected and published by this so ciety in 1837, the following forms the introduction:

If a committee were appointed by each of the State Legislatures to ascertain from living witnesses the effects of lotteries within their respective jurisdictions a mass of private distress and public injury would be brought to light the magnitude of which it is difficult to conceive. We should witness the severance of the closest and dearest connections of life, the violation of the sacred vows of wedlock, and the disruption of the tender ties of consanguinity and nature. Woe would meet our gaze in the various forms of hopeless bankruptcy, cheerless and unmitigated penury, incurable intemperance and infamous vice. Buttimay be well for the reputation of the country that some of these dread consequences may still be concealed. The colors of the picture would be too sombethe scene, in its collected deformity, too hideous for exposure to the open day.

In attempting, therefore, a miniature sketch from private sources of the results which this engine of human misery and debasement has effected, we shall do all that is within our power in ranging and grouping together a few examples

Then follows several hundred cases under the heads of frauds, larcenies mbberies, embezzlements, fraudulent bankruptcies, intemperance, and suicide, and presenting the same sad features of private history that was brought to light in the investigations instituted by the British Parlia-The lottery speculator in both countries meets with the same

Bed late:

He becomes poor by successive losses. His poverty leads him to petty villainies. He slowly proceeds from one impropriety to another, till at last his feelings become blunted and his reputation is tarnished. Low dissipation and idle phantasms of golden showers, from being long indulged, have so impaired his faculties and weakened his character as wholly to destroy his ability for any useful pursuit. He looks around for assistance, but the avenues are closed. He is in debt beyond the hope of extrication. His native energy is gone, and his respectability is wasted. Thus prepared for some reckless effort to repair his fortunes, where can he seek refuge but in the principles he has imbibed? What counsellors can he listen to but his desperation and necessities?

On this subject I can not withstand the temptation to quote the words of that eminent divine, Dr. Rankin, of this city, as delivered in a sermon recently on "the inability of the law:

a sermon recently on "the inability of the law:"

Good laws are easily made, but to enforce a good law requires good men, men in sympathy with it, men who will not wink at its violation. The laws in this District against gambling are openly infringed every day of the year.

There is nothing more destructive to habits of honest industry where a man earns his bread by square, solid labor, where for every day's work comes a day's pay, than any appeal to chance. Industry can pit itself against wages, but not against chance. The daily papers which advertise the great lotteries of the Southwest and South are doing an immense injury to the workingmen of this country. You get your \$10,000 prize. It sets you on your feet. But do not be too exhilerated. Where does it come from? It comes from 1,000 men whose wives and children needed it for the comforts and blessings of daily life. Every one of those thousand expected that \$10,000. Spend every dollar of it, as of course you intend to do, for benevolences and charities, you can not put it back where it belongs; you can not undo the harm which has been done to those 1,000 families. You can not undo the harm which has been done the morals of society.

An article on the "lottery business" appeared recently in an evening journal of this city, which gives but a faint idea of the extent of evil as existing in the District of Columbia. I give the following extracts:

extracts:

The recent police raids on the alleged agents of the lottery companies furnish some interesting facts as to the extent of the lottery business in this city, and the number and classes of persons who deal in it. The paraphernalia of the offices is confiscated by the police, and consists principally of tickets in envelopes addressed to persons and those which have not been sold, also order books and the correspondence of customers.

The information gleaned from these documents shows that the lottery business is becoming quite an institution of this city, and it is stated by those who have investigated the subject that more tickets are sold in this city in proportion to the population than in any other city in the country. It is estimated that \$20,000 would be a low estimate for the amount that is monthly paid in this city for lottery tickets. This unusual large traffic in lottery tickets here is explained by those well posted in the business to be due to the large percentage of our people being employées of the Government who have more money to spend than the average citizen. The traffic is not, however, confined to those who have considerable money or make comfortable salaries, for the order-books and other information show that there is almost an incredible number of comparatively poor people who deal regularly if not largely in lottery. The well-to-do class as that they can invest a small sum every month and never miss it.

The next class is the clerks who do not generally accumulate much wealth, but who, as a rule, spend all they get; say that they can spare the price of a teleke without missing it, and thereby stand a chance of drawing large prizes. A list of the names on the books and correspondence of an office recently raided shows that the people in every walk of life are trying to make a fortune out of the lottery. There were even names of ministers of the Gospel and judges who had bought tickets and took the same chances of winning prizes as other mortals. The heaviest individual buyers are principally merchants, some of whom buy largely every month.

The largest number of names of any one class on the books are those of Department clerks. Names of mechanics form no small portion of the list, and the old pensioner often tries his luck. In a recent drawing an inmate of the Soldiers' Home held twelve tickets. Even the name of the poor washerwoman is not absent from the list, and often when people of this class can not raise sufficient money to get a whole ticket they chip in and buy one jointly. Comparatively few, of course, get prizes, but the game has a strange infatuation for many of them. They have a great deal of confidence in it and keep on buying with the hope of ultimately getting a large prize.

On August 11, 1868, the Legislature of Louisiana passed an act entitled "An act to increase the revenues of the State and to authorize the incorporation and establishment of the Louisiana State Lottery Company, and to repeal certain acts now in force." This act was approved and took effect as act No. 25 on August 23, 1868.

The following are sections to which I wish to call particular attention: Section 1. Be it enacted, &c., That whereas many millions of dollars have been withdrawn and lost to this State by the sale of Havana, Kentucky, Madrid, and other lottery tickets, policies, combinations, and devices and fractional parts thereof, it shall hereafter be unlawful to sell, offer or expose for sale any of them or of any other lottery, policy, or combination ticket or tickets, devices, or certificates, or fractional parts thereof, except in such manner or by such persons, their heirs, executors, and assigns, as shall be hereinafter authorized.

Sec. 2. That the following-named persons, to wit, Robert Bloomer, Jesse R. Frwin, John Considine, Charles H. Murray, F. F. Wilder, C. T. Howard, Philip N. Luckett be, and they are hereby, constituted and declared a corporation for the objects and purposes, and with the powers and privileges hereinafter specified and set forth:

ARTICLES OF INCORPORATION

Article I. The name and title of this corporation shall be the Louisiana State Lattery Company, and the domicile thereof shall be in the city of New Orleans, in the State of Louisiana.

Article 2. The objects and purposes of this corporation are:

First. The protection of the State against the great losses heretofore incurred by sending large amounts of money to other States and foreign countries for the purposes of lottery tickets and devices, thereby impoverishing our own people. Second. To establish a solvent and reliable home institution for the sale of lottery policies and combination tickets, devices and certificates, fractional parts thereof, at terms and prices in just proportion to the prizes to be drawn, and to insure perfect fairness and justice in the distribution of such prizes.

Third. To provide the means to raise a fund for educational and charitable purposes for the citizens of Louistana.

Article 2. The capital stock of this corporation shall be \$1,000,000, represented by 10,000 shares of \$100 cach.

Article 4, section 1. The company shall have the right to commence operations when \$100,000 of stock is subscribed and paid in.

Section 2. All powers of this corporation shall be vested in a board of directors, to consist of seven persons, each of whom shall own at least ten shares of the capital stock.

Section 3. The corporation shall have the right to sue and be sued, to plead

capital stock.

Section 3. The corporation shall have the right to sue and be sued, to plead and be impleaded, and to appear in any court of justice, and to do any other lawful act such as any person or persons might do for their own defense, inter-

est, or safety.

Section 4. The president of the board of directors shall be the proper person upon whom to serve citatious, notices, and other legal process wherein this corporation may be interested.

Article 5, section 1. The corporation shall pay to the State of Louisiana the sum of \$40,000 per annum, which sum shall be payable quarterly in advance, from and after the lst day of January, 189, to the State auditor, who shall deposit the same in the treasury of the State, and which sum shall be credited to the educational fund, and said corporation shall be exempt from all other taxes and licenses of any kind whatever, whether from State, parish, or municipal authorities.

authorities.

Section 2. The corporation shall furnish bonds to the auditor in the sum of \$50,000 as security for prompt and punctual payment of the sums set forth in

\$50,000 as security for prompt and punctual payment of the sums set forth in the preceding section.

Section 3. That any person or persons selling, or offering or exposing for sale, after the 31st day of December, 1868, any lottery, policy, or combination tickets, devices or certificates, or fractional parts thereof, in violation of this act and of the rights and privileges herein granted to this corporation, shall be liable to said corporation in damages in a sum not exceeding \$5,000, nor less than \$1,000 for each offense, recoverable by suit before any court of competent jurisdiction.

Section 4. That this corporation shall be and continue for and during the term of twenty-five years from the 1st day of January, 1869, for which time it shall have the sole and exclusive privilege of establishing and authorizing a lottery, or series of lotteries, and selling and disposing of lottery tickets, policy, combination devices and certificates, and fractional parts thereof.

It was maintained by the Louisiana State Lottery Company in a number of cases, for they were soon embarked on the sea of litigation to uphold the extraordinary powers which they claimed:

First. That neither the constitution of 1864 or 1868 forbid lotteries, but left the matter to the discretion of the Legislature.

Second. The creation of a corporation by a State Legislature, for any purpose not prohibited by the constitution, was a contract between the State and the corporation.

Third. The mere franchise to be a corporation was a contract between the State and the corporation.

Fourth. The lottery franchise granted by the Legislature was a valid contract.

Fifth. The contract was that the company should have a corporate existence for twenty-five years and that it should have during that pe-

riod the exclusive right to set up lotteries and sell lottery tickets.

All these points in a series of decisions in both the State and Federal courts were decided in their favor.

We challenge the world to produce legislation more infamous than The records of no government in ancient or modern times the above. contain a law more atrocious in every feature or so complete an abdica-tion of the law-making power. The human mind can scarce realize the grant of such unlimited power as is conferred by this statute. It is a permit to inflict every injury to the property and liberty of the citizen by the utterly irresponsible agency of a soulless corporation. No supervision could be exercised over its extraordinary powers of monopoly, and it was even excused from making any statement to the grantor If such a grant had been made to carry on a legitimate whatsoever. It such a grant had been had even made to carry on a regitimate branch of business it would have been bad enough in all conscience; but fancy these extraordinary powers being intrusted to exercise a notoriously theiring, swindling, and cheating manner to plunder the people. No check was prescribed as to the mode of swindle, either by the issue of fictitious combinations, prizes offered but never drawn, policy numbers played without a chance to win, every variety of invention which the craft of men might use to rob his fellow-man—all these were permissi-

ble under this extraordinary grant.

Thus it will be seen the Louisiana State Lottery Company was incorporated under an act of the Legislature with the rather anomalous title, "An act to increase the revenues of the State and to authorize the incorporation and establishment of the Louisiana State Lottery Company, and to repeal certain acts now in force." This act to authorize the incorporation and establishment of a State lottery company really established the institution, a fact which the reader of the title is not apprised of, but which he is supposed to know by intuition. Howell, J., in disenting opinion expressed in the case of the Louisiana State Lottery Company cs. Richoux (23 La. Ann., 746), says

I am not prepared to concur in the opinion of the court maintaining the constitutionality of the act of the Legislature by which, it is claimed, the Louisiana State Lottery Company was incorporated. Its title does not in my opinion conform to the one hundred and fourteenth article of the constitution.

The supreme court of the State of Louisiana having then declared the act constitutional, it organized, under the extraordinary privileges granted therein, a private detective police force, and proceeded to arrest all parties who interfered with its special right of monopoly. The State virtually abandoned to this irresponsible institution the highest prerogatives of sovereignty, and the sanctity of the dwelling was ruthlessly

invaded under the pretense of searching for lottery tickets.

At the session of the General Assembly which began in January, 1879, an act was passed, which was approved March 27, for the purpose of repealing the charter of the lottery company and also to make the business authorized thereby unlawful.

Section 1 of this act repealed the act approved August 23, 1868, by which the lottery company was incorporated and all other laws passed in the interest of the said institution.

Section 2 declared-

That the Louisiana State Lottery Company be, and the same is hereby, abolished and prohibited from drawing any and all lotteries, or selling lottery tickets, either in its corporate capacity or through its officers, directors, stockholders, members, or agents, directly or indirectly.

Section 3 declared-

Section 3 declared—
That whoever shall sell, barter, or exchange, give or otherwise dispose of, or offer to sell, barter, or exchange, give or otherwise dispose of, directly or indirectly, personally or through an agent or agents, either for himself or others, or shall draw any lottery, or have any connection with or interest in the drawing of any lottery in this State, or shall have in his possession within this State, with intent to sell or offer for sale, or with intent to barter or exchange, or give or otherwise dispose of any lottery tickets or shares, or fractional part thereof, or lottery policy or combination, device or any other writing, certificate or token, intended or purporting to entitle the holder or bearer, or any other person, to any prize, or share or interest in any prize drawn, or to be drawn, in any lottery, shall be deemed guilty of a misdemeanor, and upon conviction thereof, shall be condemned for each offense to, and shall suffer imprisonment in, the parish prison or jail, as the case may be, not exceeding sixty days, or fined not exceeding \$100, or both, at the discretion of the court; one-half of such fine to go to the informer, and the other half to the city of New Orleans, or the parish in which said offense is committed, as the case may be.

Section 4 declared-

Section 4 declared—
That every person who shall set up or promote any lottery in this State, or shall assist or be interested therein, or shall aid by printing or writing, or shall in any way be concerned in the setting up, promoting, managing, or drawing of any lottery, or shall, in any house, shop, or building owned or occupied by him or under his control, knowingly permit the setting up, managing, or drawing any such lottery, or the sale of any lottery tickets or share of a ticket, or any other writing, certificate, bill, token, or other device, purporting or intended in entitle the holder, bearer, or any other person, to any prize, or share of or interest in any prize to be drawn in a lottery, shall be guilty of a misdemeanor, and on conviction shall suffer imprisonment not to exceed sixty days, or a fine not exceeding \$500, or both, at the discretion of the court, for each offense; one-half of such fine to go to the informer and the other half to the parish or the city of New Orleans, as the case may be, in which such offense is committed.

Imprediately after the passage of this bill the officers of State at-

Immediately after the passage of this bill the officers of State attempted to enforce the penal provisions of the act, but were met by the action of the United States circuit court for the district of Louisiana, at the instance of the Louisiana State Lottery Company, Charles T. Howard, a citizen of Mississippi, and John A. Morris, a citizen of New York. On the 1st day of April, 1879, a bill of complaint was filed by State anditor, and twelve other citizens of the State of Louisiana, and against the city of New Orleans. The charge of the bill was that this repealing act was an impairment of the obligation of the contract between the lottery company and the State of Louisiana contained in the act of August 11, 1868, and was in violation of the Constitution of the United States, and therefore null and void. The bill further alleged as follows:

The several defendants are officers of the State, concerned in the enforcement of the laws of the State, without regard to the supreme law of the land, and unliess restrained by order of the court they will engage in the arrest of every agent, servant, clerk, or tenant of the lottery company, and that the machinery of the penal code will be by them set in motion to enforce the said repealing act of March 27, 1879, and destroy the rights of the lottery company under an act of August 11, 1869.

The prayer of the bill was that the charter granted by the act of August 11, 1868, to the lottery company might be established and declared valid and operative and binding as a contract between the State of Louisiana and the lottery company; that the said repealing act of March 27, 1879, might be declared inoperative to impair the force and effect of said contract and charter, or the franchises, rights, and faculties therein conferred; that the penal enactments contained in said repealing act might be declared unconstitutional, invalid, and inoperative, and that all the defendants might be enjoined from ordering or allowing any prosecution, arrest, or seizure of the plaintiffs or any of their servants or agents, customers, or persons in any manner connected with the lottery company for doing or performing or being concerned in any act or acts of the drawing of lotteries or the sale or purchase of tickets of said lottery company, and from interfering with them by prosecution or otherwise in the doing of any act or carrying out any purpose authorized by the charter of the lottery company

This bill on its merits was never heard, but Judge Billings granted an injunction pendente lite. A grave responsibility rests upon the officers of the State government for not filing an answer and carrying the case up to the Supreme Court of the United States if unsuccessful in the lower court. By their dereliction of duty the lottery company was enabled to deceive the constitutional convention of 1879 into the belief that this mere interlocutory order was an acknowledgment by the United States court that their charter was a binding contract between the State and the corporation. To allow the case to rest in the attitude of granting provisionally an injunction pendente lite by the lower court

was virtually to abandon all defense on the part of the State, and leads

but to one conclusion in my mind.

The Legislature can not bargain away the police power of the State; and to suppress lotteries, with other forms of gambling, is within the police power. Hence an act of a State Legislature chartering a lottery ponce power. Hence an act of a State Legislature chartering a lottery for a specified term, in consideration of payments to be made to the State treasury, is not a contract protected by the constitutional provision against impairing obligations of contracts. Lotteries are net mala in se, but may properly be made mala prohibita. They are a species of gambling and wrong in their influences. The right to stop them is governmental, and to be exercised at all times by those in power at their discretion. Any one who accepts a lottery charter does so with the implied understanding that the people, through their properly constituted agen cies, may take it back at any time when the public good requires, and this whether it be paid for or not. Such charter is simply a permit, good as against existing laws, but subject to future legislative and constitutional control or withdrawal. (Stone vs. Mississippi, 101 U. S., 814.

I feel not the slightest hesitation in asserting that if the officers of the State government that had charge of conducting the above case of Louisiana State Lottery Company et al. vs. Fitzpatrick et al., (reported in 3 Woods, 222) had done their duty in carrying out the litigation to a legitimate conclusion, the repealing act would have been declared constitutional and the lottery company, with all its infamous surroundings, would have been swept off the face of the earth. On their heads lies the blame.

I now come to the infamous swindle perpetrated on the members of the constitutional convention of 1879. As already stated, they were the constitutional convention of 1879. As already stated, they were made to believe that the Federal court had decided that the charter made to believe that the rederal court and wested that the charter granted by the act of August 11, 1868, was impregnable, and that it was their duty to make the best bargain under the circumstances with the lottery company. The following is the article of the constitution which was the result of this mistaken idea of the validity of the charter as it then existed:

The General Assembly shall have authority to grant lottery charters or privileges, provided each charter or privilege shall pay not less than \$40,000 per annum in money into the treasury of the State, and provided further that all charters shall ceases and expire on the lat of January, 1895, from which time all lotteries are prohibited in the State. The \$40,000 per annum now provided by law to be paid by the Louisianas State Lottery Company, according to the provisions of its charter granted in the year 1868, shall belong to the Charity Hospital of New Orleans, and the charter of said company is recognized as a contract binding on said State for the period therein specified, except its monopoly clause, which is hereby abrogated, and all laws contrary to the provisions of this article are hereby declared null and void: Provided, Said company shall file a written renunciation of all its monopoly features in the office of the secretary of state within sixty days after the ratification of this constitution.

It is on this article and the granting of an injunction pendente life by Judge Billings, in the case of Louisiana State Lottery Company vs. Fitzpatrick, that the lottery company bases its claim to possessing a charter. It is a well-settled principle that legislative power can not be delegated or transferred from the Legislature to the people at large. Our governments are republican and not democratic. Laws must be Our governments are republican and not democratic. Laws must be enacted by the representatives of the people, and not by the people themselves. Nor can any State change this. Every State must have a "republican form of government." This is the requirement of the national Constitution, and it is complied with only by that form of State government which vests the law-making power in the representatives of the people. (Rice vs. Foster, 4 Harrington (Del.) 479; Parker vs. Commonwealth, 6 Pa. State R., 507; Barto vs. Heinrod, 8 N. Y., 483; Cinn., Wilm. and Zanesville R. R. Co. vs. Commrs., 1 Ohio State R., 84; Geebrick vs. State, 5 Iowa, 491.)

I consequently maintain that the lottery company has had no legal existence since the repealing act of March 27, 1879; that it has no right

existence since the repealing act of March 27, 1879; that it has no right to do a lottery business since that date; that its stockholders are bound in solido for every ticket issued since that date, and liable to refund the amount paid for such ticket; and that its agents, servants, cus-tomers, and all persons connected with it are liable to the penal provisions of said act, in accordance with the ruling of the supreme court of the State of Louisiana in a recent case which I will notice further on.

I now arrive at a stage in the history of this bogus institution which should cause the blush of shame to mantle the cheek of every patriotic citizen of this great Republic. I refer to the defense of this palpable and unmitigated fraud by a Department of the National Government.

The following are the particulars:

As every State in the Union has laws against lotteries, the only manner in which the Louisiana State Lottery Company could ply its nefarious business was by using the United States mails. It was thus enabled to violate with impunity all local statutes, and to extend the ramifications of its extensive swindling all through the land. The abuse of the mails became so great that the Postmaster-General was appealed to with the following results:

The following order was issued by the Postmaster-General to the

postmaster at New Orleans, Louisiana, in these words:

POST-OFFICE DEPARTMENT, Washington, D. C., November 13, 1879.

To the POSTMASTER, New Orleans, Louisiana:

It having been represented to me that a certain M. A. Dauphin at New Orleans,
Louisiana, is engaged in conducting a scheme or device for obtaining money

through the mails by means of false and fraudulent pretenses, misrepresentations, and promises, and being satisfied from the evidence before me that the said M. A. Dauphin is so engaged, I do hereby forbid the payment by the postmaster at New Orleans, Louisiana, of any postal money-order drawn to the order of the said M. A. Dauphin, or M. A. Dauphin, post-office box No. 592. And the said postmaster is hereby directed to inform the remitter of said postal money-order that the payment thereof has been forbidden and that the sum of said money-order will be returned upon the presentation of a duplicate money-order, applied for and obtained under the regulations of the Department. And upon the same evidence the postmaster at New Orleans, Louisiana, aforesaid, is hereby instructed to return all registered letters which shall arrive at his office directed to the said M. A. Dauphin, M. A. Dauphin, secretary, or M. A. Dauphin, post-office box No. 622, to the postmasters at the office at which they were originally mailed, with the word "fraudulent" plainly written or stamped on the outside of such letters.

D. M. KEY, Postmaster-General.

D. M. KEY. Postmaster-General

Post-Office Department,

Washington, D. C., February 27, 1880,

Sire: On the 13th of November, 1879, I issued an order addressed to you forbidding the payment of any postal money-order to M. A. Dauphin, or M. A.
Dauphin, secretary, or M. A. Dauphin, post-office box 692, and 319 Broadway,
New York, and the return of all registered letters addressed to them to the postmasters at whose offices they were mailed.

This party having brought suit against me to enjoin the performance of this
order, and having appealed the same to the Supreme Court of the United States,
and having this day presented the certificate of the governor and State officers
of the State of Louisiana that he has compiled with all the legal requirements
of that State, and other evidence, and not being satisfied from the evidence
submitted to me fhat the said M. A. Dauphin is engaged in conducting scheme
or device for obtaining money through the mails by means of false and fraudulent pretenses, representations, and promises, I hereby authorize and direct until the case shall have been heard and determined by the Supreme Court of
the United States.

D. M. KEY. Postmaster Court

D. M. KEY, Postmaster-General.

To POSTMASTER, New Orleans, La., and POSTMASTER, New York, N. Y.

The case referred to was Dauphin vs. Key, instituted in the supreme court of the District of Columbia, in which the Postmaster-General submitted a demurrer, which was held by the court sitting in banc as good in substance. Dauphin, who was secretary of the lottery company, appealed the case then to the Supreme Court of the United States. Postmaster-General Key then suspended the first order "until the case shall have been heard and determined by the Supreme Court of the United States," and then immediately afterward agrees to a stipulation dismissing the appeal under rule 28, thereby rendering the hear-

ing an impossibility. Could duplicity proceed any further?

The appeal having been dismissed at the cost of the lottery company, the judgment of the lower court dismissing the case stands as a vindication of the Postmaster-General to issue such order.

The present Postmaster-General, Judge Timothy O. Howe, having falled to enforce the order of his predecessor, the House of Representa-tives on the 29th of March last adopted a resolution, introduced by Mr. Manning of Mississippi, directing him to inform it on the subject of the enforcement of this order. He replied to this resolution informing the House that he had not enforced it. The whole subject has been referred to the Committee on Post-Offices and Post-Roads, but no report has yet been made

The following is the resolution introduced by Mr. MANNING, as

Resolved, That the Postmaster-General be directed to inform the House of Representatives whether an order was issued by the Post-Office Department forbidding the payment of any postal money-order or the delivery of any registered letter to M. A. Dauphin or any other agent of the Louisiana Lottery Company, and directing the return of the same to the post-offices where first obtained or deposited; if said order was issued, has there been any enforcement thereof, and, if so, for what period of time was it enforced and what was the character of the enforcement? If such an order was issued has there been any subsequent order issued by the Post-Office Department suspending the first mamed order, and, if so, when was it issued and for what purpose? Is it operative now as the rule of the Department, and what are the limitations affecting it?

Deeming the reply of the Postmaster-General evasive and unsatisfactory, I addressed him several letters. The replies to two of them, which embody the two of mine answered, I now give:

POST-OFFICE DEPARTMENT, July 19, 1882.

Sin: I have the honor to acknowledge your communication, which reads as follows:

House of Representatives,

Washington, D. C., July 10, 1882.

Sir: I have the honor to call your attention to the fact that the Louisiana State
Lottery Company is, under cover of this license granted to them to use the United
States mails by your Department, violating the laws of the United States.

This institution is an unmitigated fraud. It has no legal status, as its charter
was repealed by act of the Louisiana Legislature, by act No. 44, promulgated
March 28, 1879, entitled "An act to repeal act No. 25 of the Legislature of 1885 ensitled 'An act to increase the revenues of the State and to authorize the incorporation and establishment of the Louisiana State Lottery Company, 'and to repeal
ecrtain acts now in force and to abolish the Louisiana State Lottery Company,'
&c., which act will be found published in the acts of Louisiana for 1880.

As I must suppose that your Department would not knowingly lend itself to
such an open violation of the law, I would ask that the proper means be immediately taken to enforce the execution of the United States statutes in such case
made and provided.

I am, sir, very respectfully,

E. W. ROBERTSON M. C.

E. W. ROBERTSON, M. C.

To Hon. T. O. Howe, Postmaster-General.

In answer to your statement that this company "is under cover of this license granted to them to use the United States mails by your Department, violating the laws of the United States," I must answer that no license has ever been granted to this company or any other lottery company by the Post-Office Department to use the mails for the purpose of carrying on its business. Section 3894, Revised Statutes, is in these words:

"No letter or circular concerning illegal lotteries, so-called gift-concerts, or other similar enterprises, offering prizes, or concerning schemes devised and intended to deceive and defraud the public for the purpose of obtaining money under false pretenses, shall be carried in the mail. Any person who shall knowingly deposit or send anything to be conveyed by mail in violation of this section shall be punishable by a fine of not more than 500 nor less than \$100, with costs of prosecution."

It would therefore not be in the power of this Department to authorize the use of the mails by any lottery company, whether legally organized or whether an illegal and fraudulent company, for the purpose of distributing letters and circulars concerning lotteries.

The error into which you seem to have fallen doubtless results from the fact that on the 13th day of November, 1879, Postmaster-General Key issued an order forbidding the payment of any postal money-order to M. A. Dauphin, and directed the return of all registered letters addressed to him to the postmaster at whose office they were mailed. This order was issued under authority conferred upon the Postmaster-General by section 3929 and section 404 of the Kevised Statutes.

On the 27th day of February, 1889, the following order was issued:

ised Statutes. On the 27th day of February, 1883, the following order was issued:

POST-OFFICE DEPARTMENT, Washington, D. C., February 27, 1880.

To Postmasters at New Orleans, La., and New York, N. Y.

To Postmasters at New Orleans, La., and New York, N. V.:

On the 13th day of November, 1873, I issued an order addressed to you forbidding the payment of any postal money-order to M. A. Dauphin, or M. A. Dauphin, secretary, or M. A. Dauphin, post-office box 692, or 319 Broadway, New York, and directing the return of all registered letters addressed to them to the postmaster at whose office they were mailed.

This party having brought suit against me to enjoin the performance of this order, and having appealed the same to the Supreme Court of the United States, and having this day presented the certificate of the governor and State officers of the State of Louisiana that he has complied with all the legal requirements of that State, and other evidence; and not being satisfied from the evidence submitted to me that said M. A. Dauphin is engaged in conducting a seleme of device for obtaining money through the mails by means of false and fraudulent pretenses, representations, and promises, I hereby authorize and direct the suspension of said order of November 13, 1879, so far as relates to said Dauphin, until the case shall have been heard and determined by the Supreme Court of the United States.

D. M. KEY, Postmaster-General.

You will observe that this suspension of the order of November 13, 1879, against the registered letters and money orders of M. A. Dauphin left him in exactly the position which he had occupied prior to the issue of the order. It was a declaration by the Postmaster-General that he was not satisfied from the evidence submitted to him that said M. A. Dauphin was engaged in conducting a scheme or device for obtaining money through the mails by means of false pretenses, representations, and promises.

the position which he had occupied priot to the issue of the order. It was a declaration by the Postmaster-General that he was not satisfied from the evidence submitted to him that said M. A. Dauphin was engaged in conducting ascheme or device for obtaining money through the mails by means of false pretenses, representations, and promises.

Post supported by the promises of the Revised Statutes had never a consumer of the Revised Statutes had never been no license granted to any person, company, or corporation to send any letter or circular concerning lotteries through the mails.

In regard to the further statement made by you of the Louisiana State Lottery Company that "this institution is an unmitigated fraud," I must only answer that not proof has been furnished to me of this fact, and I am not authorized to act upon the simple statement unaccompanied by evidence which shall satisfy me that it is "a fraudulent lottery." Company has no legal status, as its charter was repealed by act of the Louisiana State Legislature, I must refer you to the decision of the supreme court of the State of Louisiana, which is contained in volume 38, commencing at page 719 of the Louisiana, which is contained in volume 38, commencing at page 719 of the Louisiana, annual Reports, 1880. This decision was rendered in the "State of Louisiana, which is contained in you have referred, and which was approved March 27, 1873, is fully considered, and it is held, that white "its evident object was to forbid absolutely the vending of lottery tickets in the State, and to accomplish that object." \*\* It was not so far as to withdraw the charter of a corporation, up to then in testence, and it is held, that white "its evident object was to forbid absolutely the vending of lottery tickets in the State, and to accomplish that object." \*\* It was not accomplish that object. \*\* It was a formation of the certification of the corporation named in the article proposition in the state, and to accomplish the folgent vendent of the people at the election

auditor of state that this company has paid into the treasury the sum required by law.

The company having thus brought itself within the express terms of the decision of the supreme court of the State of Louisiana, recognizing its existence and declaring that it is authorized to do business until the year 1895, I can not, however willing I might be, bring my mind to accept your conclusion regarding this company that "it has no legal status."

Until, therefore, it can be shown by evidence to be a "fraudulent lottery" I have no official jurisdiction over it.

Your verbal reference to the decision pronounced by the Supreme Court of the United States, in the case of Stone vs. The State of Mississippi, wherein it was held that the charter granted to the lottery company was not protected from hostile subsequent legislation on the ground that the charter constituted a contract between the State and the company, has no application to the present case, inasmuch as the latest action of the authorities of the State of Louisiana has, under the opinion of the supreme court of that State, been favorable to the continued existence of that corporation.

Very respectfully,

T. O. HOWE, Postmaster-General.

T. O. HOWE, Postmaster-General,

Hon. E. W. ROBERTSON,
House of Representatives.

Post-Office Department, Washington, D. C., August 1, 1882.

Sin: I have the honor to acknowledge the receipt of the communication of which the following is a copy:

House of Representatives, Washington, D. C., July 28, 1882.

Post of this date as evidence: First, that section 3894, R. S., is not enforced, the inclosed being a circular addressed to the public (act March 3, 1879, chapter 108, section 18, 20 Statutes at Large, 390) and circulated by newspapers carried in the mail; second, that neither section 3929 nor 4041, R. S., are enforced, as the within shows that "M. A. Dauphin" is engaged in conducting a (new and improved) scheme for the distribution of money (see price of ticket and capital prizes) by drawing (at New Orleans, August 8, 1882) and solicits orders to be sent by registered letter or money-order by mail, to be addressed to the said M. A. Dauphin, New Orleans, Louisiana.

In conclusion I respectfully reiterate my request that proper means be taken to enforce the execution of the statutes of the United States in such case made and provided.

and provided. Very respectfully,

E. W. ROBERTSON, M. C. Sixth District Louisi

Hon. T. O. Howe, Postmaster-General.

Postmaster-General.

The slip you inclose is an advertisement published in a daily newspaper, and does not, in the judgment of this Department, when thus published come within section 3994, Revised Statutes, which reads as follows:

"No letter or circular concerning illegal lotteries, so-called gift-concerts, or other similar enterprises, offering prizes, or concerning schemes devised and intended to deceive and defraud the public for the purpose of obtaining money under false pretenses, shall be carried in the mail. Any person who shall knowingly deposit or send anything to be conveyed by mail in violation of this section shall be punishable by a fine of not more than \$500 nor less than \$100, with costs of prosecution."

A "letter or circular" is defined in section 18, act of March 3, 1879, 20 Statutes, page 390, which section is in this language:

"The term 'circular' is defined to be a printed letter which, according to internal evidence, is being sent in identical terms to several persons. A circular shall not lose its character as such when the date and the name of the addressed and of the sender shall be written therein, nor by the correction of mere typographical errors in writing."

and of the sender shall be written therein, nor by the correction of mere typographical errors in writing."

This Department would not feel itself authorized to exclude from the mails under the statute in question a regular legitimate newspaper because it contained among the numerous other advertisements that of a lottery company. This section, as you will observe, imposes a penalty when a letter or circular concerning lotteries is knowingly deposited to be conveyed by mail. That penity of course can only be enforced in a court. It can not be enforced by the Post-Office Department.

Your reference to sections 3929 and 4041, Revised Statutes, is not understood. These sections, as you are aware, apply only to a person who is "engaged in conducting any fraudulent lottery," &c.

In my former letter I advised you that this Department was without "evidence satisfactory" to the Postmaster-General that the Louisiana State Lottery is a fraudulent lottery, and you were advised that upon presenting proof that such was the case the Department would act under the statute. The mere fact that a lottery company advertises in a public newspaper, and solicits the sending of orders by registered letters or of money-orders by mail, does not authorize the Postmaster-General to issue his order directing the return of such registered letters to the sender, or the refusal to pay money-orders thus sent. The additional fact that a lottery company so advertising is a fraudulent lottery must be proved

by satisfactory evidence before the Postmaster-General has jurisdiction of the Very respectfully,

T. O. HOWE, Postmaster-General.

Hon. E. W. Robertson,
House of Representatives, Washington, D. C.

House of Representatives, Washington, D. C.

House of Representatives, Washington, D. C., August 5, 1882.

Sir: I have the honor to acknowledge the receipt of your communication of 1st instant, and in reply would beg to state that I most emphatically protest against the construction of your Department of section 3894, Revised Statutes, as contained in said communication.

It has never been my intention of asking you to construe section 3894 as a penal statute. This I am very well aware is totally out of your province, and can only be done by the judiciary branch of the Government. I maintain wherever it is made your duty to construct his statute in accordance with the intent which appears to have actuated Congress in passing same, this intent has been declared by the highest judicial tribunal of the United States. Chief-Justice Waite, speaking for the court, uses this language in rendering the decision in Stone ex. Mississippi, 101 United States, 819:

"There is now scarcely a State in the Union where lotteries are tolerated, and Congress has emacted a special statute, the object of which is to close the mails against them." (Revised Statutes, section 3894; 19 Statutes at Large 90, section 2.)

When the Supreme Court of the United States pronounced this as law, names this identical statute, and declares the intent of Congress in enacting same "to close the mails against them," (to wit, "lotteries," I can not but be surprised that your Department pursues a course which, while barring the mail against a slight infraction of the letter of the law, yet utterly disregards the spirit by allowing the evil to be practiced with impunity so long as it is done on the most extensive scale and wholesale plan. It is emphatically "straining at a gnat and swallowing the eamel."

swallowing the camel."

There is no principle better established by a long series of decisions of the Supreme Court of the United States than that the features of a particular course of legislation shall always be regarded to make apparent the intentions of Congress in enacting any special statute, such as the above decision declares this to be. Now, can you deny that Congress could have had any other intention, namely, "to close the mails against them," and in allowing their advertisements to go through the mails are you not plainly permitting not only a violation of the law in the spirit of the enactment, but as construed by the highest authority in the land?

in the spirit of the enactment, but as construed by the highest authority in the land?

The imposition of the penalty was to make the previous words of the statute still more strong as an express prohibition, and not to allow by a strained and false technical construction what the law forbids to be done directly to be made lawful by being done indirectly. The slip inclosed is an open printed circular letter addressed to the public, and signed by M. A. Dauphin, and that it is a paid advertisement in a "regular legitimate newspaper," only increases the turpitude of the transaction. It is not only an open defiance of the statute, but in no other way could such a communication reach so large a number of persons and exert a greater demoralizing influence upon the people. Does the fact of inserting said communication in a newspaper do away with the policy of the law as distinctly enunciated by a statutory prohibition? Is it your intention to crush the circulation when confined to a form which can only reach comparatively the few, yet allow free scope in the use of the great channel of communication to the many?

In regard to sections 3829 and 4041, Revised Statutes, please state wherein you do not understand me. Your limitation as to the construction of these statutes "to apply only to a person who is conducting any fraudulent lottery, &c.," is too indefinite, and I await further explanation on your part before replying to that part of your communication.

In conclusion, I would beg to state that such is my confidence in the justice of my position that I feel convinced that on an order being issued from your Department that such journals as contained lottery advertisements would be excluded from the mails, there is not a court in the country possessing jurisdiction that would listen to an application for relief until such advertisements were withdrawn.

Very respectfully, your obedient servant.

that would listen to an approximate withdrawn.

Very respectfully, your obedient servant,

E. W. ROBERTSON, M. C.,

Sixth District Lousian

Hon, Timothy O. Howe, Podmaster-General.

This last letter still remains unanswered, and this fact we deem an

admission of the justice of our cause.

"As the Postmaster-General quotes extensively the latter part of the opinion of Bermudez, C. J., in the "State ex rel. Carcasse es. Judge of the First District Court of Orleans (38 La. Ann., 719), we append that portion of the opinion omitted:

State ex rel. Carcasse, Judge of the First District Court, 32 La. Ann., 719 et seq.

State ex rel. Carcasse, Judge of the First District Court, 32 La. Ann., 719 et seq. Bermudez, C. J.: The relator was prosecuted before the first district court for the parish of Orleans for having in his possession, with intent of selling the same, a fractional part of a lottery ticket, the sale of which, it is alleged, is forbidden in this State under penalty of law.

He pleaded guilty, subsequently moved to withdraw his plea, but was not allowed that privilege. Sentence was about to be passed upon him when he applied to this court for relief. The case not being one appealable in character, the court granted a certiorari, a provisional restraining order, and a rule to show cause why a perpetual prohibition should not issue. The object of the restraining order was to prevent the judge of the first district court from passing sentence on the relator.

The relator alleged, in justification of the complaint lodged here and of relief sought, that the law under which he was prosecuted, pleaded guilty, and was about to be sentenced, and which he had believed was in force when he refused to defend himself and admitted the charge, had become a dead letter ever since the adoption of the present constitution, which has effectually repealed it in its entirety.

the adoption of the present constitution, which has effectually repealed it in its entirety.

The law in question was approved March 27, 1879, and bears No. 44 of the acts of that year. It contains six sections. Its evident object was to forbid absolutely the vending of lottery tickets in this State, and in orderto accomplish that purpose it provided for the infliction of fine and imprisonment on the violators of its prohibitions. It was intended to have a general effect throughout the State, and made no exceptions whatever. It went so far as to withdraw the charter of a corporation up to then in existence, and which had legal authority to deal in the lottery business.

The article of the constitution relied on as repealing this law is in the words following:

The article of the constitution retied on a repeat of the following:

"The General Assembly shall have authority to grant lottery charters or privileges: Provided, Each charter or privilege shall pay not less than \$40,000 per annum in money into the treasury of the State: And provided further, That all charters shall cease and expire on the 1st of January, 1835, from which time all lotteries are prohibited in the State. The \$40,000 per annum now provided by law to be paid

by the Louisiana State Lottery Company, according to the provisions of its charter, granted in the year 1868, shall belong to the Charity Hospital of New Orleans, and the charter of said company is recognized as a compact binding on said State for the period therein specified, except its monopoly clause, which is hereby abrogated; and all laws contrary to the provisions of this article are here by declared null and void: Provided, Said company shall file a written renunciation of all its monopoly features in the office of the secretary of state within sixty days after the ratification of this constitution."

The intention of the convention of 1879 was clearly to repeal that portion of the act which contemplated the destruction of the corporation named in the article and which was previously authorized to deal in lottery tickets, to authorize the further existence up to 1825 of that institution, but to strip it altogether of its pretensions to a monopoly apparently accorded it by the act under which it was organized. It was the intention of the convention to place on a footing of equality with this corporation all other individuals who might desire to deal in the same business, but on condition, upon being chartered by the State, of the payment of an annual license of not less than \$60,000 to the State. In order to render compliance with this condition obligatory and effectual it was necessary that there should be attached a sanction to the law. The convention thought it unnecessary to embody one expressly in the article in question, for the reason that it already was in existence in a statute then in force, i. c., in the act of 1878 already mentioned.

It is expressly provided by that article 167 that all laws contrary to its provisions are declared null and void.

that it already was in existence in a statute then in force, i. e., in the act of 1879 already mentioned.

It is expressly provided by that article 167 that all laws contrary to its provisions are declared null and void.

Of course such portions of that law as were inconsistent with the article of the constitution were repealed, but is the act of 1879 in each and all of its parts repugnant to the article of the constitution under consideration? The portions which it is claimed were repealed are those which prohibited absolutely, without any exception, and under all circumstances, the vending of lottery tickets, and which inflicted a penalty for an infringement of prohibition.

The law does not favor repeals by implication.

The insertion in article 167 declaring null and void all laws contrary to its provisions must be viewed as intended to retain in force the act of 1879, in so far as it was not derogated from by that constitutional encetment, and to lend assistance to its enforcement for protection of organizations chartered by the State, which shall, as a prerequisite, have paid the required license, for the relief of the State and of its charitable institutions.

This court has no power to express any opinion or comment upon the morality or immorality of this constitutional provision. Its duty is to construe and apply the law as it finds it in the organic and statutory enactments.

We find no irreconcilable discrepancy between the act and the article of the constitution. We find that the constitution has merely derogated from the general prohibitory provisions of the act by making exceptions and conceding authority to the General Assembly to grant lottery charters or privileges on terms to be complied with as conditions precedent and sine quibus non, placing them all on a footing of equality after such chartering and fulfillment of terms and conditions.

conditions.

Construing the act of 1879 and the article of the constitution together, so as to give full effect to each and all the parts of both, and blending them together, we consider that the law of Louisiana on the subject of vending of lottery tickets

we consider that the law of Louisiana on the subject of velocity of simply is:

The sale of lottery tickets in this State is absolutely prohibited unless by organizations chartered by the State which, before dealing in that kind of speculation, shall have paid an annual licence of not less than \$00,000 to the State. There shall exist no monopoly for the sale of such tickets or doing of such business, Individuals violating the law by selling lottery tickets or dealing in the lottery business without having previously obtained a charter and paid the required license in the manner provided by law shall be prosecuted and punished by fine and imprisonment. The Louisiana State Lottery Company previously in existence shall continue its operations on abdicating all its pretensions to a monopoly and on complying with the requirements touching the payment of the license.

license.

Finding as we do that the punitory section of the act of 1879 has not been abrogated as far as it affects individuals selling lottery tickets, or dealing in the lottery business, who have not previously obtained a charter and paid the required license, we conclude that the relator is not entitled to protection for the reasons alleged by him against the apprehended sentence of fine and imprisonment.

ment.

It would be truly unjust to permit individuals who have not formed themselves into a corporation chartered by the State and not paid any license to enjoy the same privileges as those awarded to a corporation chartered by the State and which has paid the required license.

It is therefore adjudged that the restraining order heretofore made be dissolved, and that the application for a perpetual prohibition be refused at the cost of relator.

This case of State ex. rel. Carcasse rs. Judge of First District Court, reported in 32 La. Ann., 719, which the Postmaster-General quotes with ported in 32 La. Ann., 719, which the Postmaster-General quotes with such gusto in his defense of this unmitigated fraud and swindle, was a suit got up for the purpose, through a decision by the supreme court of the State of Louisiana, to give a quasi-legal status to the lottery company. It utterly failed in its object, as the point of charter or no charter was not before the court. The syllabus contains the only matter which was settled, that "the punitory section of act No. 44 of the Legislature of 1879 relative to the sale of lottery tickets in this State was not abrogated by article 167 of the constitution." This is undoubted law as the constitution under no republican form of the government. doubted law, as the constitution under no republican form of the government can abrogate any act of a Legislature. In such a case it can not enforce itself, and, as already explained, the only manner in which the constitution could be enforced is by an act of the Legislature.

It is a well-settled principle of law that the abrogation of the repeal of a statute does not revive the original statute, even if the abrogation was legal and constitutional, which in this case we have shown that it was not. I defy the lottery company through any process of legal reasoning to prove that it has ever had a legal existence since March 27, 1879, the date of the repealing statute, and this it well knows and has tried "to galvanize the corpse" through an interlocutory order of a Federal Judge and an article of a State constitution obtained after it So convinced is it of this, that in a recent suit which it instituted against Commissioner Morgan, of the District of Columbia, for damages for closing its agency in Washington, that it has itself asked that a demurrer filed by defendant be sustained, and from which it has taken an appeal to the Supreme Court of the United States. There it will play the same game as it did in the case of Dauphin es,

Key, and by suggesting at the proper time that defendant has gone out of office will have the appeal dismissed. It is by such subterfuges that it attempts to keep up its credit by the semblance of being a valid institution having a legal existence with the right to plead and be impleaded.

There is a feature of the lottery which has deluded many in submitting to its exactions. I refer to the tax which it pays to the State as a license to transact its nefarious business. But when we reflect on the paltry sum thus paid and the enormous amount stoler from the community under cover of such payment, we stand appalled at the gross ignorance displayed in granting such a franchise for the ostensible pose of raising revenue to defray the expenses of government. Where the State receives thousands, millions are paid to the lottery by the votaries of this unfortunate species of gambling. The money though thus extracted represents but a small value when we remember the greater evil of idleness, dissipation, licentiousness, and crimes entailed on the community by the existence of this baneful institution.

The Louisiana State Lottery Company during the past fourteen years has paid the sum of but \$560,000 to the State; but think of what an amount of misery and wretchedness has it caused during that period of This paltry sum sinks into insignificance when we regard this amount as payment for the privilege of extracting millions from that portion of the community which can least afford to part with the fruits of their hard-earned toil and labor.

Such is the history of this institution which has brought the fair name of a great Commonwealth to be but a by-word of contempt to her sister States and of hissing and scorn to all the good people throughout the length and breadth of this great Republic. Knowing no party fealty, but managed with consummate political ability, its president has boasted 'that there was not a man in the State of Louisiana that he could not buy;" and it has extended the field of that proud vaunt by invading the capital of the nation. With one hand it bids defiance to the judicial power of the District, while with the other it corrupts the officials of a Department, and this under the eyes of an Executive who is sworn to see that the laws of the United States are executed. Defeated in the lower court, it has through the connivance of the officers of the Depart-ment of Justice succeeded in making a mockery and delusion the great

remedy of an appellate court

The doctrine of State rights, which has deluged this continent with blood, it invokes only to place it in a position that it may the more easily violate with impunity the laws of every State in the Union. It would be supposed that in this career of lawlessness and rapine it would seek assistance from its sister institutions of like infamy, but no entangling alliance is allowed to impede its course of meteoric effulgence. It stands alone in its infamy, and has succeeded in crushing every rival, not only in its own domain, where, imperium in imperio, it rules with an iron hand, but throughout the breadth of the land it has secured by the use of the mails a virtual monopoly of its nefarious business. In its rapacity of power it is as ready to face the whole power of the General Government in all its might as to stifle the charitable efforts to raise funds to support the widows and orphans of the dead soldiers of the recent civil conflict. It looms up in solitary grandeur amid the wrecks of carpet-bag rule as the last surviving institution made more powerful by a revolution which was inaugurated under the banner-cry or resona-the futility of which it makes by its continued existence so hideously apparent. Caring for no principle of honesty, basing its own existence on corruption and bribery, it ruthlessly slaughters politically every opby a revolution which was inaugurated under the banner-cry of reform, ponent who has the independence and manliness to place himself

An honest administration in the State of its original creation it hurled from power, and a convention which was called for this purpose by its influence deliberately repudiated the debt of the same State at its imperious dictation. Outraging every sense of honor and propriety in its own action, it was jealous of the fair name of the Commonwealth and never rested until it was brought to its own dead level of degradation. In its original formation it reversed the adage of "honor among thieves," as its first action was to allege its own turpitude to escape the payment of money advanced to procure a charter by bribing the members of a carpet-bag legislature. It has now existed as a blot on the body-corporate for over fifteen years, and no cause so mighty has ever operated to bring every branch of government, both State and national, into more general disrepute. The reports of the courts, both State and namore general disrepute. The reports of the courts, both State and national, show the general demoralization: the ermine of the judge sullied, the administration of justice prostituted to the most unworthy ends; the press, that palladium of liberty, bought up or muzzled by fear or ignorance; the official head from governor to constable dependent on its good-will; every office-seeker at its beck; the whole Commonwealth prostrate at its feet; no institution existing but at its mercy.

not an exaggerated condition of a once powerful sovereignty.

Employing the very highest talent, counting in the ranks of its advocates, from a former justice of the Supreme Court of the United States whose judical reputation is only equaled by the vastness of his judicial knowledge of the great principles of equity down to the ambitious young practitioner of but yesterday's standing at the bar, can we be astonished in contemplating this array of legal talent, that if when reduced to extremity of the efforts of conscientious and virtuous citizens, who wished to remove the stigma from the State, that it has triumphed and plucked victory from the very jaws of defeat? Let an opponent dare assert himself and its well-drilled cohorts move as an irresistible phalanx to crush him. If his candidature is not strangled in the nominating convention, the whole power of the institution is straightway carried over to the other party to effect his defeat. Acknowledging no other object than the perpetuation of its rule, it rides over every law, human and divine, to effect its nurnesse and its proud boast that no man of either party can to effect its purpose and its proud boast that no man of either party can have a political future in the State of Louisiana that refuses to obey its behests or that does not bear it hearty and unswerving allegiand

There are gentlemen in this House who affect to be surprised at my statement that the State of Louisiana is completely in the power of this swindling institution. They would insinuate that this state of affairs which I have attempted to portray is only the creation of a diseased and distorted imagination. But remember that one of the greatest levers by which it acts is the total ignorance that the people are kept as to its workings. Its unscrupulcus audacity is only equalled by the secrecy of its counsels. It acts without warning, it strikes without premonition, and the cries of its victims are drowned in the arrogant exultations over its success. It possesses the power, which it ruthlessly exerts, to plunder the ignorant and unwary of sixty millions, and its dupes may be found in every corner of this vast empire. A monopoly of the worst description, and backed by both national and State authority, it laughs to scorn the impotent efforts of its enemies to arrest it in its course. Every official, judicial, legislative, and executive, is at its beck, and those who dispute its power are soon removed to give place to more pliant tools. Where gold can not reach it finds in a venal press the way to crush and destroy

No power is too high to attack, no means too low to use, when it suits the policy of its action after being once determined. It illustrates the saying of Lord Coke, "it not only possesses no soul, but it is equally destitute of all pity, all mercy, and all remorse." Once entangled in its meshes there is no escape for its dupes. A bribe once accepted, the threat forever hangs over the devoted head of its victim. And strangest of all, the momentum of its power, contracted by a long series of years of all, the momentum of its power, contracted by a long series of years of wrong-doing with impunity, has been so great that it can exist in defiance of all law and defies the proof that it exists without a charter; it makes no public statements of its affairs, permits no inspection of its books, and in its grasp of monopoly exercises all the police functions of an independent sovereignty, allied with the inquisitorial power of a secret tribunal. It is a jealous mistress and allows no rival within the fair domain of the State. None can plunder its subjects; it keeps their goods and possessions under guard against the attacks of kindred institutions.

But if the press is venal, gentlemen may point to the pulpit as the forum on which the attack on this hydra-headed monster may be urged. I can dismiss this subject with but a single sentence. This institution has been in existence for over fifteen years, and I have yet to hear of the first sermon preached against this crying sin. If one has been delivered in my State I have neither read nor heard of it. The right reverend father in God the archbishop and through all the grades of the ecclesiastical hierarchy down to the humble preacher of the circuit all ignore the existence of this great evil gnawing at the very vitals of all revealed religion. I have been arraigned as a troubler in Israel, my action de-nounced as an outrage on the doctrine of State rights in bringing the influence of the General Government to bear on a State institution in depriving it of the use of the mails. They forget that by this use of the mails this bogus State institution has put at defiance the power of every other State in the Union by violating with impunity the laws enacted to bridle its ungovernable license.

In conclusion, I reiterate the assertion that the lottery company has

had no legal existence since March 27, 1879; that its charter was then had no legal existence since March 27, 1879; that its charter was then repealed by the Legislature in the exercise of its police powers, and which it had a perfect right to do in accordance with decisions of the Supreme Court of the United States. This charter can only be revived in the same manner that it was repealed, by an act of the Legislature, and which has never been passed. The idea that an interlocutory order of a judge in a Federal court or an article of the State constitution could effect this is preposterous. Even if the article had legislative force, which it has not, the repeal of the act of 1879 did not revive the act of 1868. These are self-evident facts, and which would soon solve the question on an information filed by the attorney-general of the State of Louisiana in the nature of a writ of quo warranto.

We thus see that this lottery company is only sustained by the use of the mails in transacting its nefarious business, which supplies the means to employ a horde of counsel to conceal their utter want of legal entity,

to employ a horde of counsel to conceal their utter want of legal entity, as also through its extensive advertising to evade exposure of the manner in which that business is conducted. I close with the hope that my unhappy State will soon be delivered from the poisonous fangs of the deadly reptile which has been fastened upon the body-corporate through so many dreary years, and that brighter prospects await her in the immediate future. "Bow thy heavens, O Lord " " cast country the control thine arrays and destrey forth lightning, and scatter them; shoot out thine arrows, and destroy

The Tariff.

#### SPEECH

## HON. MILTON G. URNER. OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other purposes.

Mr. URNER said :

Mr. URNER said:

Mr. CHAIRMAN: I have not prior to this taken part in the prolonged discussion of the tariff question during this session, mainly because I recognized the fact that the country expected some tariff legislation at the hands of this Congress, and I was unwilling to do anything that would interfere with a realization of that expectation, as I plainly saw was being done, unintentionally of course, by those who consumed so much time in profitless discussion. In my opinion the tariff bill has been talked to death, and I now desire to submit a few remarks in memory of the deceased. I am compelled to differ with the great majority of the members of this House. I have a theory of my own which is in conflict with the theory upon which the Tariff Commission bill was predicated, in conflict with the theory of the represent of the compusion and in conflict with the bill to the composition of the composi of the report of the commission, and in conflict with the theory of the report of the commission, and in conflict with the bill reported by the Committee on Ways and Means, now before the House. I concede that the country has desired a general tariff revision, but that desire was due mainly to the fact that the revenues of the govthat desire was due mainly to the fact that the revenues of the government are in excess of its necessities. A too-full treasury of the government, like a too-full pocket of the individual, begets extravagance and lavish expenditure, and so the people have properly demanded that the revenues should be curtailed. Now, I claim that cam be better done in another and more simple and better way than by a general reduction of the tariff duties. The Secretary of the Treasury, in his last report, gives the estimated receipts and expenditures for the fiscal year ending June 30, 1884, as follows:

FISCAL YEAR 1884.

The revenues of the fiscal year ending June 30, 1884, estimated up of existing laws, will be—	oon the basis
From customs From internal revenue. From sales of public lands. From tax on circulation and deposits of national banks From repeyment of interest and sinking fund, Pacific Raiiway Com-	145, 000, 000 5, 500, 000 9, 000, 000

Total ......146, 523, 273 72

Of this amount, it will be seen \$86,027,328.60 are collected from spirituous and fermented liquors, and from all other sources the amount of \$60,495,945.12 is collected. If the whole of the internal-revenue tax is abolished, except that on spirituous and fermented liquors, the revenue is at once reduced more than sixty millions of dollars. And why should this not be done? No good reason can be assigned against it. It is said tobacce is a luxury. If it is, it is the poor man's luxury, and should be given him as cheap as possible.

It is an agricultural product, and there is no reason why this one article of all the agricultural products of the country should be singled out and taxed and hampered, while its growth and manu-

facture are just as legitimate as any other vocations.

But it may be said that, according to the Secretary's report, after this reduction in revenue is made there would still be a surplus. That is true, and I would still further reduce by tariff revision. Not that kind of revision now proposed, which will in all probability disturb values and bring disaster and ruin to many industries, but I would revise the tariff upon such articles only as will afford relief to the people. I firmly believe in the principle of protection, and since the present tariff law was enacted industries have sprung up that were not in existence then, and which are not properly pro-tected by the present law and the Treasury rulings thereunder. In such cases there should be revision to give more ample protection.

That revision would be an increase of duty instead of a reduction.

I do not wish to be understood as not favoring reduction in certain cases. My theory is this: wherever it shall be made to appear that any industry is in its nature and of necessity limited, so that it does not and cannot hope to employ any considerable number of persons, or the investment of any considerable amount of capital, and the product is of general use, upon the principle of doing the greatest good to the greatest number, the tariff upon such product should be reduced or placed upon the free list. In other words, where there is no hope of the production being so increased as to approximate a supply of the demand for the article in this country, so that home competition would reduce the price, I would not consider such article entitled to special protection, and would impose a minimum duty. But where there is reason to believe that the industry, if fostered and encouraged, would grow and give employment to the people, so that the domestic competition would ultimately reduce the price to the consumer, in such case a tariff should be imposed that would

the consumer, in such case a tariff should be imposed that would give the amplest protection.

A reduction of duty does not necessarily reduce revenue; on the other hand, the tendency is to increase it. The revenue from customs, now estimated by the Secretary of the Treasury at \$235,000,000, is regulated by the importations. The effect of a reduction of duty would be to increase importations, and an increase of importations would increase the revenue, unless the duty is very greatly reduced, in which case our own manufacturers, employing the well-paid labor of America, could not compete in the markets of the United States with foreign manufacturers employing the poorly paid labor of Enwith foreign manufacturers employing the poorly paid labor of Europe. That would result in a destruction of our industries, in the closing of our machine-shops and furnaces, in disaster to all of our manufacturing interests, in sending the honest laborer wandering as a tramp in search of employment for the support of himself and loved ones, in financial panic and ruin; and the foreign manufacturer no longer having a rival here in our markets, would be master of the situation and fix the prices of his goods to suit his own inclination. That a protective duty is a tax upon the people and necessarily increases the cost of the article to the consumer, is a monstrous, though somewhat popular fallacy. That protection, when it promotes home competition, reduces prices, is strikingly illustrated in the case of steel rails, which have been reduced in price more than one-half since the

imposition of a protective duty.

The country has now lived for twenty years under a protective tariff, and that time has been an era of unexampled prosperity and progress. Why should there be a change of policy now? With our vast domain and its exhaustless resources we should have a fixed and settled policy of protection known as the American system, that would cultivate that domain and develop those resources until we can be as we should be practically independent of the world. With our mountains filled with coal and iron and our forests teeming with the best of lumber, and with a population of industrious, energetic, and intelligent yeomen ready to explore and develop the hidden wealth of the country, why should coal, iron ore, and scrap-iron be imported, the product of cheap labor abroad, and our own people be permitted to be idle or work for half pay? What prudent

parent does not try to encourage industry in his children? He may educate them however highly, he may give them line upon line and precept upon precept, yet if he does not encourage them to be industrious, he may expect to have a family of drones. What is true of the individual is true of the Government. It should be the duty of

every Government to encourage industry with parental care.

It had been my intention to submit some statistics of the coal and iron industries of my own district, but that seems now to be useless. I will only say that I represent a mining, manufacturing, and agricultural people, all of whom are interested in protection. For by the employment of the people at well-paid labor the farmer has a good and reliable market for his produce, which my section so bountifully yields. But I believe in and favor protection upon principle, and in my acts and votes as a member of the American Congress have taken a broader view than one circumscribed by the limits of my own district or State. I see no prospect of the passage of this bill, and I can conceive of greater disasters that might befall this nation than the failure to pass this bill. It is well known that the Senate has about completed a tariff revision as an amendment to the internal-revenue bill passed this House at the first session of this Congress. Without knowing all of the particulars of that bill, and without attempting to discuss its merits, I respectfully submit that in my judgment that body has transcended its constitutional functions in attempting to originate tariff legislation. It is true the Constitution says:

All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills.

It is interesting to study the history of the ingrafting of that provision in the fundamental law. The debates of the framers of the Constitution throw great light upon the true intent and meaning of that instrument. It was contended that the money-raising power of the government should be with the representatives of the people and not the representatives of the States. The revenues of the government come from the people, and it is presumed they are appropriated for the benefit of the people, and so it was intended the people's representatives should originate all bills for raising and appropriating the revenues of the government. Upon a fair ratio of representation, the people of Rhode Island have no more nor no less voice through their representatives than the people of New York. But how is it in the Senate? There the little State of Rhode Island with its two Senators is just as potent as the great Empire State of New York with its two Senators. This is no new question. It has frequently engaged the attention of the greatest statesmen of the country, and they have always held against this right of the Senate. In the Fortyfirst Congress, when this question was raised, Mr. Garfield, then a member, in an exhaustive speech, reviewed and discussed the ques-tion in his masterly and inimitable manner, and after reviewing the history of this legislation in this country and England, summarized as follows:

history of this legislation in this country and England, summarized as follows:

The results of the investigation are:
First. That the exclusive right of the House of Commons of Great Britain to originate money bills is so old that the date of its origin is unknown; that it has always been regarded as one of the strongest bulwarks of British freedom against usurpations of the King and of the House of Lords, and bas been guarded with the most jealous care; that in the many contests which havearisen on this subject between the Lords and Commons during the last three hundred years the Commons have never given way, but have rather enlarged than diminished their jurisdiction on this subject, and that since the year 1678 the Lords have conceded, with scarcely a struggle, that the Commons had the exclusive right to originate not only bills for raising revenue, but for decreasing it; not only for imposing, 6th also for repealing taxes, and that the same exclusive right extended also to all general appropriations of money.

Second. The clause of our Constitution now under debate was borrowed from England, and was intended to have the same force and effect in all respects as the corresponding feature of the British constitution, with this single exception, that our Senate is permitted to offer amendments, as the House of Lords is not.

Third. In addition to the influence of the British example is the further fact that this clause was placed in our Constitution to counterbalance some special privileges granted to the Senate. It was the compensating weight thrown into the scale to make the two branches of Congress equal in authority and power. It was first put into the Constitution to compensate the large States for the alvantages given to the small States, in allowing them an equal representation in the Senate; and when, subsequently, it was thrown out of the original draft, it came nearly given to the small States, in allowing them an equal representation in the Senate; and when, subsequently, it was thrown out of the or

But in the Forty-second Congress the question arose in a manner that placed it on "all fours" with the present case. Then the Sen-ate sought, by way of amendment to a bill to repeal duties on tea and coffee, to make a general revision of the tariff. If there is any difference, the amendments then proposed were more germane than in the present case. Then, the bill amended was one affecting impost duties. In this case, the bill proposed to be amended is one that affects internal revenue alone. Mr. Garfield then also made an able speech against the right of the Senate to so amend, and the House,

properly jealous of its rights, agreed with him in his views. Mr. Garfield then said:

Garfield then said:

The case now before us is new and difficult. I think the same point has never before come into controversy. It raises the question how far the Senate may go in asserting their right to propose or concur with amendments as in other bills.

We must not construe our rights so as to destroy theirs; and we must take care they do not so construe their rights as to destroy ours. If their right to amendment is unlimited, then our right amounts to nothing whatever. It is the merest mockery to assert any right. What, then, is the reasonable limit to this right of amendment! It is clear to my mind that the Senate's power to amend is limited to the subject-matter of the bill. That limit is natural, is definite, and can be clearly shown. If there had been no precedent in the case, I should say that a House bill relating solely to revenue on ealt could not be amended by adding to it clauses raising revenue on textile fabrics, but that all the amendments of the Senate should relate to the duty on sait. To admit that the Senate can take a House bill consisting of two lines, relating specifically and solely to a single article, and can graft upon that bill in the name of an amendment a whole system of tariff and internal taxation, is to say that they may exploit all the meaning out of the clause of the Constitution which we are considering, and may rob the House of the last vestige of its rights under that clause. I am sure that this House, remembering the precedents which have been set from the First Congress until now, will not permit this right to be invaded on such a technicality.

I do not see how this House, as the repository of the peoples'

not permit this right to be invaded on such a technicality.

I do not see how this House, as the repository of the peoples' rights, can, with a due regard to its responsibilities, treat the proposed revision of the Senate, in the shape of an amendment to the internal-revenue bill, as anything else than an infraction of the spirit of the Constitution, not to be permitted, and which might be made a precedent for repeated and further infractions in the future. The people can afford to live longer under a tariff system that has made them the richest and most prosperous nation in the world, but they cannot afford to stand by and see a violation of that Constitution which is the palladium of all their liberties.

#### Lee vs. Richardson.

#### SPEECH

## HON. JOHN S. RICHARDSON,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the contested-election case from the first Congressional district of South

Mr. RICHARDSON, of South Carolina, said:

Mr. RICHARDSON, of South Carolina, said:
Mr. Speaker: Availing myself of the privilege granted me by the
House to print some additional remarks upon the contested-election
case of Lee vs. Richardson, I shall attempt to reply to some of the
strictures that were made during the debate on this case.
I think I shall be able to show that the attempt has been made to
have this case decided upon prejudices unfairly and unwarrantably conjured up. The gentleman from Tennessee [Mr. Pettieone], in order
to carry his point by any means, whether fair or foul, lugged into the
debate on the case (which by the conception of all, as well as by the report of the Committee on Elections turned upon the rejection or retenport of the Committee on Elections, turned upon the rejection or retention of the Darlington poll) questions which had no more to do with the Darlington poll than they had to do with the transit of Venus or the apostolic succession. He very well knew that unless the House, in the hurry of its closing hours and the limited time it had for the dission, could be misled by presenting to it false issues there would be no hope of overriding the majority report. And the contestant, following the example set by the gentleman from Tennessee [Mr. Pettibone], raised and waived the "bloody shirt."

This has been the contestant's only stock in trade for years, and it was not to be expected he could give up the last plank left to his for-

In justice to my constituents, who I know will feel themselves slan-dered and traduced by these uncalled-for aspersions on their good name

and character, I desire to notice some of their operations.

This case was most patiently, carefully, and laboriously considered by the Committee on Elections. The sub-committee gave it the most careful consideration, and after several arguments, pro and con, arrived at its conclusion. Then the full committee carefully and maturely insidered it, and as the result decided that the conteste to retain the seat.

This committee (the Committee on Elections), as is known, is composed of nine Republicans, of some at least of whom it can well be said they are "Stalwarts among the Stalwarts," of one Greenbacker, one Readjuster, and four Democrats. Of these, two Republicans (Chairman Calkins and Mr. Miller), the Greenback member, the Readjuster member, and all four Democrats united in declaring the contestee entitled to the seat. Name other than the clearest and strongest case could tled to the seat. None other than the clearest and strongest case could have commanded or obtained such a decision. The minority report, after reducing the contestee's majority by illegal and heretofore unheard-of methods, in order to give the seat to the contestant has still to throw out the entire vote given at the Darlington poll. This report (the minority report) was written by the gentleman from Tenne

The majority report, without going into all the points raised in the minority report, joins issue with the minority report as to the Darlington poll. And why on that point only? Because if you can not throw out the Darlington poll, though you concede all the other points raised in the minority report, you can not seat the contestant. Those of the out the Darlington poll, though you concede all the other points raised in the minority report, you can not seat the contestant. Those of the Elections Committee who believe the contestee entitled to the seat were willing to rest the case on that issue alone; not because there were not other conclusions reached in the minority report to which they did not agree and which could not be contravened and easily upset, but because the case of the Darlington poll was so clear and strong that there was no use in wasting time in looking further. No one knew better than the gentleman from Tennessee that this was the point and the only noint at issue as presented in the majority and minority reserve.

than the gentleman from Tennessee that this was the point and the only point at issue as presented in the majority and minority reports. And yet how does that gentleman proceed to discuss this point?

Without informing the House that he was speaking of transactions which in the testimony were alleged to have occurred over fifty miles away from the Darlington poll, he proceeded to discuss the question of "tissue ballots," and endeavored to make the House believe that the vote at the Darlington poll was affected by the use of "tissue ballots." He went even further than this. He not only left the House to infer he was speaking of "tissue ballots" as used at the Darlington poll, but when asked what county he referred to he in terms stated to the House that "this occurred in all the counties."

No one knew better than this gentleman that he then and there deliberately stated what was not true. There is no charge made in the contestant's notice of contest that there were any "tissue ballots" used anywhere in Darlington County, and none that there were any used at the Darlington poll. There is not a single witness out of the five or six hundred witnesses examined for the contestant as to Darlington County who anywhere makes such a charge. The contestant himself has never made it, and it has been left for the gentleman from Tennescounty who anywhere makes such a charge. The contestant himself has never made it, and it has been left for the gentleman from Tennessee alone to resort to this unfair and untrue declaration. If this was the only instance in his short speech in which he has applied to the Darlington poll things that had no possible connection with that poll we might, in charity, conclude it was done by mistake. But he made but two points in his speech, and both were equally unfortunate in their application and their truthfulness.

After arguing the case, which, by his own report as well as by his admission, turned upon the legality or illegality of the Darlington poll, and applying to that poll the tissue ballots used in Georgetown County, and applying to that poil the assue ballots used in Georgetown county, he then proceeds to persuade the House to throw out that poll and unseat the contestee on account of "ballot-box stuffing." And he brings up a case of "ballot-box stuffing" which he, on being questioned, is forced to admit did not occur at the Darlington poll or in Darlington

County

County.

Without following this gentleman any further in the methods he resorted to to accomplish his purpose, I will simply repeat that there is not in the notice of contest or in all the testimony one single word of "tissue ballots" or "ballot-box stuffing," as applied to the Darlington poll. The ballots in the box at that poll corresponded precisely with the number of names on the poll-list, and nowhere in that county was a single "tissue ballot" voted or used.

The contestant, following the example set him by the distinguished Tennesseean, raised the "bloody shirt" and made the declaration that the "Republicans of South Carolina had met those rifles (Winchester rifles) at midnight as well as at noonday." If such a declaration was to have any force if it could or nught to influence at all the decision of this

to have any force, if it could or ought to influence at all the decision of this case, the declaration must be meant to apply to the campaign which preceded this election, or to the election itself. Now, no one knew better than the contestant himself that there never was a more peaceable, quiet, and orderly campaign than the one out of which this contest

Not a single Republican meeting was prevented. Free discussion was had everywhere, and nowhere during the campaign or on the day of the election were there any Winchester rides or other guns or rides displayed or used. That there had been such displays of fire-arms in former elections could have no possible bearing on this election, and the least regard for fairness or truth would have compelled the contestant to have regard to the House have repeaking of some former election. to have said to the House he was speaking of some former election. And had he done so, truth would have compelled him to have added that these rifles were used at the polls in South Carolina in former elections as much, if not more by the Republicans than by the Dem-

But I will not consume time in commenting upon such injustice and unfairness. Perhaps it was to have been expected and ought not to excite surprise. It was the only chance left by which to mislead the House and draw it off from the point at issue and have the case decided in favor of the contestant at any cost, by fair or foul means. I will now content myself with printing as a part of my remarks the report in my favor made by the sub-committee. It embraces all the points at issue as made by Mr. Pettibone's report, and embodies my views thereon as presented by me in the discussion of this case before the sub-committee. sub-committee.

Among other points it fully discusses the Darlington poll and excess the utter groundlessness of the claim that it should be rejected. am willing that my claim to the seat and the justification of myself

and my constituents shall rest on the argument and the facts presented in this report:

The Congressional district comprises eight counties, as follows: Georgetown Sumter, Williamsburgh, Horry, Darlington, Malborough, Marion, and Chester field. The pleadings in the case are as follows: "Notice of contest.

"To Hon. JOHN S. RICHARDSON, Sumler, S. C., :
"SUMTER, S. C., December 15, 1880, "SUMTER, S. C., December 15, 1880, a seat in ! "SIB: You are hereby notified that I will contest your right to a seat in the Forty-seventh Congress of the United States as a member of the House of Representatives from the first district of South Carolina, for the following reasons:

"First. That a majority of the legal votes polled at the election held on the 2d day of November, 1880, in the first Congressional district of South Carolina were cast for me.

"Second. That owing to frauds, violence, and intimidation committed in your interest by your partisans and supporters in each and every county in the Congressional district, the true result of the election was defeated and a pretended and fraudulent majority made to appear for you.

"Third. That the returns made to the State board of canvassers by the commissioners of elections of Sumter, Williamsburgh, Georgetown, and Horry Counties do not contain true and correct statements of the votes cast for a member of Congress in said counties.

"Fourth, That according to the returns of the election made by the managers of election of the several voting precincts in the counties of Sumter, Williamsburgh, and Georgetown, I received a majority of the votes east in each of the said counties.

"Fifth. That in Sumter County the commissioners of election illegally refused."

said counties.
Fifth. That in Sumter County the commissioners of election illegally refused count and canvass and include in their statement of the result of the election vote cast, canvassed, and duly returned for a member of Congress at the owing voting precincts, to wit, Sunter No. 1, Carter's Crossing, and Rafting

the vote cast, canvassed, and duly returned for a member of Congress at the following voting precinets, to wit, Sumter No. 1, Carter's Crossing, and Rafting Creek.

"Sixth. That in Williamsburgh County the commissioners of election illegally refused to count and canvass and include in their statement of the result of the election the vote cast, canvassed, and duly returned for a member of Congress at the following voting precincts, to wit, Salters, Gourdins, and Midway.

"Seventh. That in Georgetown County the commissioners of election illegally refused to count and canvass and include in their statement of the result of the election the vote cast, canvassed, and duly returned for a member of Congress at the following voting precincts, to wit, Upper Waccamaw, Lower Waccamaw, Santes, Sampit, Choppee, and Pee Dee, or Birdfield.

"Eighth. That in Horry County the commissioners of election illegally refused to count and canvassed, and duly returned for a member of Congress at the voting precinct of Martin Hill.

"Ninth. That in Sumter, Williamsburgh, and Georgetown Counties at the following voting precincts, to wit, Lynchburgh, Mayesville, Shiloh, and Privateer, in the county of Sumter, and Kingstree, Gourdins, Black Mingo, Greelyville, Salters, Cedar Swamp, Prospect Church, Pipkins, Anderson's, Seranton, and Graham's, in the county of Williamsburgh, and Georgetown, Upper Waccamaw, Sampit, and Carver's Bay, in the county of Georgetown, the vote actually cast for me was larger and the vote actually ast for you was simaler than appears on the face of the returns made by the managers of election at the voting precincts aforesaid; that the difference between the vote as actually cast and the vote are turned by the managers aforesaid arises from the fact that at each of the aforesaid polls, numerous ballots bearing your name for Congress, were fraudulently placed in the ballot-box, for the purpose of creating an excess of votes over voters and thereby compelling the managers to draw out and destroyed, and in their place

we returned for you at each of the polls aforesaid should be deducted a corresponding number.

"Eleventh. That the polls required by law to be held at Stateburgh, in Sumter County, and at Griers, in Georgetown County, were not opened, because the managers of election, who were your partisans and supporters, and members of the political party whose nominee you were for Congress, neglected and refused to act, in consequence of which numerous voters who went to said polls for the purpose of casting their ballots for me for Congress were deprived of the opportunity to vote for me for Congress, as they intended and desired.

"Twelfth. That at Black River or Brown's Ferry voting precinet, in Georgetown County, two hundred and seventy-six votes were cast for me and twenty votes were cast for you; that at the close of the poll, upon opening the ballotox and counting the votes therein, the managers found that there were six hundred and two tickets in the box; that this excess of three hundred and six ballots was caused by your partisans and supporters fraudulently placing in the ballot-box that number of small tissue ballot-box had been stuffed as aforesaid, a controversy arose between the United States supervisors and the managers the managers scaled up the box and delivered the same to one of the supervisors without making a canvass and return of the votes required by law; wherefore, the vote cast as aforesaid at said precinct should be added to the vote returned for you and for me respectively by the commissioners of election of Georgetown County, to-wit, twenty for you and two hundred and seventy-six for me.

"Thirteenth. That at Cheraw voting precinct, in Chesterfield County, the

for me, "Thirteenth. That at Cheraw voting precinct, in Chesterfield County, the poll-list kept by the managers of election and their clerk was falsified in your interest by the insertion thereon of one hundred and sixteen fictitious names, and for the names thus fraudulently placed on the poll-list a number of ballots bearing your name for Congress were surreptitiously placed in the ballot-box and counted, canvassed, and returned for you; wherefore, from the vote returned for you at said precinct should be deducted the number of ballots so illegally counted, canvassed, and returned for you. "Fourteenth. That in each and every voting precinct in the counties of Chesterfield, Horry, Marlboro', Williamsburgh, Darlington, and Marion numerous illegally

legal votes were east for you by persons not qualified to vote and by persons who voted more than once.

"Fifeenth. That at each and every precinct in the counties comprising the first Congressional district a large number of colored voters who desired and intended to vote for me for Congres swere denied that right, without good and sufficie it eause, by the managers of election.

"Sixteenth. That throughout the Congressional district the supervisors appointed by the circuit court of the United States to represent the Republican party, whose nominee for Congress I was, and the deputy marshal of the United States were obstructed, hindered, and prevented by your partisans and supporters from fully and freely performing the duties required of them by the laws of the United States.

"Seventeenth. That at each and every voting precinet in the cight counties comprising the first Congressional district all the managers of the election were known to be your political partisans and supporters, and members of the political party whose candidate for Congress you were; that in the reception and rejection of yotes and in the general management and conduct of the election the managers of election aforesaid at each and every poll acted in your interest and for your benefit; that at each and every precine where there was an excess of ballots in the box the managers of election as aforesaid in drawing out such excess acted in your interest and prevented in your interest, and prevented in your interest, and under the prevente where there was an excess of ballots in the box the managers of election as aforesaid in drawing out such excess acted in your interest and by your partisans and supporters at each and every voting precinct in the county; second, to at Darlington Court-House poll, Florence, Edingham, James Cross Roads, Gum Branch, and Timmonsville, by the poll-list being falsified by the insertion thereon of fictitious names, repeating, violence, intimidation, itlegal voting, and by the rejection of a large number of qualif

follows:
"Sin: In reply to your notice of intention to contest my seat in the Fortyseventh Congress of the United States as a member from the first district of the
State of South Carolina, served on me on the 20th day of December, 1880, I have

State of South Carolina, served on me on the 20th day of December, ISS, I have to say—

"I. That I deny and except to your right to contest my seat, either in your own behalf or in the interest of the voters of the first Congressional district of the State of South Carolina, for the reason that you were not at the time of the general election on the 2d of November, ISSO, either a legal voter or a citizen of the said district or State. I allege that two years previous to said election, with the intention of removing from South Carolina, you sold whatever property you owned in South Carolina and removed with your family beyond the borders of said State, and returned to the said State less than twelve months previous to said election.

"II. I object and except to your notice so far as you charge force and intimidation on the part of my supporters, because you do not specify, as the law and practice require, or pretend to specify, a single instance of force or intimidation committed by any of my supporters anywhere in the Congressional district on any of the voters of said district. Nowhere in your notice do you state who was forced to vote for me, or who was intimidated by my supporters and prevented from voting for you, or in what manner, place, or town such intimidation was had, or by whom it was done.

"III. Because your specifications of grounds of contest are insufficient in law, and do not set forth facts sufficient or of such a character as to enable you to contest my right to said seaf. And not waiving my aforesaid exceptions, but expressly reserving and relying on the same, I do hereby expressly deny, on information and belief, all the charges and allegations in your said notice contained and set forth, and require you to prove the same, except as hereinafter admitted, "To the first ground of your contest I deny the same, and each and every allegation therein contained. On the contrary, I allege that my official majority, as found by the State board of canvassers for the State of South Carolina, was 8,468

as found by the State board of canvassers for the State of South Carolina, was 8,468.

"To the second ground of your coatest I deny the same, and each and every allegation therein contained.

"To the third and fourth grounds of your contest I object, and except to them as indefinite and insufficient in law. If true, as alleged by you, they do not show or allege that I am not entitled to said seat, or that you are; and they do not state how or wherein the said returns are not true and correct, or what would be your majority in said counties if the said returns were corrected as claimed by you. In reference to your allegation in said third ground of contest, while I do not admit it because I do not know it to be true, but on the contrary require you to prove it, I claim and allege if true, as alleged by you, I would still have a large majority of the votes cast at said election, and be entitled to said seat.

"In reference to the fourth ground of your contest, I answer that I believe it is true, as alleged by you therein, that a majority of the votes cast in said counties of Samter, Williamsburgh, and Georgetown were cast for you, but I object and except to your specification as indefinite and insufficient in law. It does not state what returns, from what voting precinct, how or wherein the said returns are not true or correct, or what would be your majorities in said counties and I expressly and emphatically deny that you would, if your said allegations were true, thereby or by reason of anything alleged in said third and fourth grounds of contest, have a majority of the votes cast in said district or be entitled to said seat.

"To the fifth yound of your contest I answer that I do not know or admit."

To the fifth ground of your contest I answer that I do not know or admit that in Sumter County the commissioners of elections illegally refused to count and include in their statement the votes cast and returned at Sumter precinet No. I, Carter's Crossing, and Rafting Creek. I admit that the votes cast at said voting precincts were refused and excluded. As to the votes cast at Sumter precinet No. I, I waive the question as to whether the same were legally or illegally refused and excluded by said commissioners, and agree that the same may be counted. And I allege and claim, if they be counted, I would still have a large majority of all the votes cast in said district. As to the votes cast at Carter's Crossing and Rafting Creek, I deny, on information and belief, that they were illegally refused and excluded from the said statement, and I allege and claim, if they be counted, I would still have a large majority of all the votes cast in said election.

"To your sixth, seventh, eighth, ninth, and tenth grounds of contest, on in-rmation and bylief, I deny the same and each and every allegation therein con-

"To your sixth, seventh, eighth, ninth, and tenth grounds of contest, on information and belief, I deny the same and each and every allegation therein contained.

"As to so much of the allegation contained in your ninth ground of contest as alleges that there is such a voting precinct as Mayesville in Sunter County, I deny the same; and though I received a majority of the votes polled at said supposed precinct, I allege that there is no such voting precinct established by law, and ask that the vote returned and counted from said supposed voting precinct be excluded.

"To your eleventh ground of contest, on information and belief, I deny that the poll at Stateburgh, in Sumter County, and at Grier's, in Georgetown County, were not opened. I deny that said poils were not held because the managers neglected or refused to set. I deny that because said polls were not held numerous voters who desired to vote for you were thereby deprived of the opportunity to vote for you.

"On the contrary, on information and belief, I allege that the poll at Grier's, in Georgetown County, was held, and I charge and allege that your partisans and supporters, with force and arms, took from the possession of the managers of said poll the box containing the ballots sais for a member to Congress and carried off the same, refusing to allow the said managers to count the ballots and ascertain the result. And I further allege that no one was prevented from voting for you who desired to do so, by anything that was done at either of said voting precincts by my partisans and supporters, or by the managers at said precincts.

"To your twelfth ground of contest, on information and belief, I deny the same, and each and every allegation therein contained; and I charge and allege, on information and belief, if they the managers of said Black River, or Brown's Ferry precinct the box containing the ballots cast at said voting precinct, and refused to allow the same to be counted by the managers of said flack River, or Brown's Ferry precinct the box c

which I belong have not altered, altered, a report of the content of the content

established by law as Mount Clio, in Sumter County, and claims that the vote counted and canvassed as polled at said supposed voting precinct should be excluded.

"The undersigned further denies that if the irregularities alleged by you to have been committed did occur (of which he has no knowledge or information), they were of a character in any degree to affect or invalidate his true and lawful election. On the contrary, he alleges and claims that, counting the entire vote polled at every voting precinct in the Congressional district, and accepting the returns made by the Republican supervisors, wherever they made returns, as to the number of such votes and the persons for whom they were east, the contestee received a large majority of all the votes cast for a member to Congress from the first district of the State of South Carolina at the election held for such member on the 2d day of November, 1880.

"While the undersigned denies that there was any 'force or intimidation' whatever used or practiced anywhere in the Congressional district by his partisons and supporters, he alleges and charges that there was great force, undue influence, violence, and intimidation practiced by you and your partisans and supporters, he alleges and charges that there was great force, undue influence, violence, and intimidation practiced by you and your partisans and supporters upon and over a large number of colored voters who desired to vote for him, and who in consequence of such force, violence, undue influence, and intimidation were prevented from voting for him, and forced by fear of violence and injury to their persons or property to vote against their wishes for you. That this was notably the case at each and every voting precinct in the counties of Sumter, Williamsburgh, and Georgetown. That to render this intimidation more complete and effectual you and your partisans and supporters of the colored people to be formed into clubs and appointed captains over them, who were charged to march their squads in a body to the po

purpose of entering therein the names of all colored men who voted the hepublican ticket, to be returned to the said authorities as evidence that they had an voted.

"The undersigned further alleges and charges that you intimidated a large number of colored voters and prevented them from voting for contestee by procuring yourself to be appointed a United States deputy marshal, and acting as such in the interest of your own election. That you and your partisans and supporters procured the appointment of a large number of special deputy marshals, whom you and your partisans and supporters of special deputy marshals, whom you and your partisans and supporters of special deputy marshals, whom you and your partisans and supporters of special deputy marshals, whom you and your partisans and supporters of special deputy marshals, whom you and your partisans and supporters of special deputy marshals, whom you and your partisans supporters of the sumarshals had displayed on their persons the badges of their authority obtained from the United States authorities, and were active partisans and supporters of your would otherwise have voted for him.

"The undersigned further alleges and charges that in order the more effectually to intimidate and force the colored voters to vote for you you caused your name as a candidate for member to Congress to be printed on a thick, stiff, and striped-back eard, easily-discerned at a considerable distance, thereby seeking to prevent, and in a great many instances did prevent, the colored voters from your partisans and supporters of the undersigned as a candidate, and would have done so could they have voted it without its being known to your partisans and supporters of the undersigned and stated that they intended and desired to vote the Democratic ticket, but could not do so, for fear of your partisans and supporters of the undersigned and stated that they intended and desired to vote the Democratic ticket, but could not do so, for fear of your partisans and supporters of the undersigne

went to the polls so armed and equipped, and there threatened and intimidated many colored voters who intended and desired to vote the Democratic ticket, and prevented them from so doing; that this was so done at each and every voting precinct in the counties of Georgetown and Williamsburgh, and at Sumter Court House, Carter's Crossing, and Rafting Creek, in Sumter Courty."

The issues raised by the pleadings and the arguments of counsel on both sides present the following prominent points:

First. The district comprises eight counties, in which were located and hundred and one voting precincts, at which the election was held on the 2d of November, 1880.

Second. The election and the result thereof, as ascertained and returned by the officers or managers at seventy precincts, is not contested in the testimony or in the arguments by either party, and is, therefore, not in issue, but is admitted and accepted as lawful and just by both parties to this contest.

Third. The election and the result thereof, as found by the officers of the law at the thirty-one remaining precincts, is attacked in the pleadings upon the ground of fraud, violence, and intimidation, and various irregularities in the conduct and return of the same.

The result of the election, as lawfully ascertained at the seventy uncontested precincts, is as follows:

Counties.	Precincts.	As returned by officers	election

	SUMMARY OF UNCONTESTED PO	LLS.	
-	Counties,	Richardson.	Lee.
Sumter County Williamsburgh Darlington County Marion County Marlborough C	County	142	1, 33 3, 42 1, 56 1, 56 33 66 77

The aggregate vote found at the foregoing seventy uncontested precincts comprises more than two-thirds of the votes cast in the entire district.

At the remaining thirty-one precincts the result of the election as ascertained and returned by the managers of the election differs widely from the result claimed by contestant.

At two of these precincts, Darlington Court House and Florence, the contestant claims there was intimidation and violence sufficient to exclude these polls from the count, and at Cheraw poll that there was fraud in falsifying the poll-list, and for that reason it should be excluded.

At twenty-eight of these precincts the testimony in the record discloses the fact that there were found in the ballot-boxes an excess of ballots over the names on the poll-list, and contestant complains that in the process of drawing out this excess, in purging the boxes, under the statute of South Carolina, injustice was done to him.

excess, in purging the boxes, under the statute of South Carolina, injustice was done to him.

Much of the contest in this case has rested on the correct ascertainment of the rote at these twenty-eight precincts, but after argument the vote at nineteen out of these twenty-eight polls has been virtually settled. As to some of these nineteen polls, Mr. PETTIBONE, for the contestant, has decided not to disturb the returns made by the precinct managers, and in the others the contestee, while protesting against the mode adopted to purge the boxes, agrees that the vote shall stand and be counted as corrected by Mr. PETTIBONE.

The following is the vote at the polls thus settled as above stated, to wit:

	Total	4, 453	4,65

Majority for Lee in the twenty polls agreed on, 201.

Contestant complains that a number of precincts were rejected on merely technical ground, and not counted by the managers, at which he received a majority of the votes cast. It is not necessary to consider the sufficiency of the reasons raised by the county and State boards of canvassers to the counting of these precincts, as the contestee has insisted that all votes cast and legally or sufficiently ascertained shall be counted without reference to technical objections. Your committee has therefore restored and counted these rejected precincts throughout the district. out the district.

out the district.

There remain now in contest, first, nine polls at which there was an excess of ballots in the box over names on the poll-list; second, the Cheraw poll, contested for fraud; and, third, the Florence and Darlington polls, contested for violence and intimidation. The questions at issue in this case are thus limited to the above twelve polls.

Now, as to the first class, to wit, the nine polls contested on account of an excess of ballots in the box over the names on the poll-list. Five out of these nine polls are in Georgetown County; one in Sumter County, to wit, Lynchburgh; one in Marlborough County, to wit, Brownsville; two in Darlington County, Timmonsville and Society Hill.

#### GEORGETOWN COUNTY.

In this county the State board of canvassers rejected all the polls except one. Why they did this does not appear in the record, but it may be stated that this was the only county in which a real tissue ballot was used, and they were found in a number of the boxes. Why they agreed to count only one box, and that one a box at which tissue ballots were found, is not explained. But it may be said unless they had done this no county officers could have been declared elected. The box they agreed to count and did count gave the offices to the Republicans and a majority to the contestant. The contestant asks to have all these boxes counted, and the conteste has insisted that all precincts shall be counted without reference to technical objections. We have therefore reinstated them.

Now, as to the five contested polls in Georgetown County. The precinct mangers returned the vote at these five contested precincts in this county as fol-

In addition to the above, Mr. PETTIBONE, for the contestant, insists that the contestant shall have given to him and added to his majority every Republican vote that was withdrawn in pursuance of the statute of South Carolina requiring the

"Mr. Pettibone decides in his report to count this poll as it was returned by the managers. It was returned by the managers as 309 for Richardson, but by mistake Mr. Pettibone carries to his table only 305.

XIV-243

withdrawal of the ballots in excess of the names on the poll-lists, and that contestee shall have the same number subtracted from his vote, to-wit, as follows:

	Richard- son sub- tracted.	Lee added.
Carver's Bay	19 18 48 169	19 18 48 169
Total	254	254

Is there a particle of legal evidence on which this claim is based? Let us see.

Career's Bay poil.

Take the evidence relating to Carver's Bay poil. At this poil 283 votes were cast. Three hundred and seventy-seven ballots were found in the box. There is no evidence in the record to show that the stuffing of this ballot-box was done more by one party than by the other. The Republican United States supervisor in his official report (see record, page 822) says in reference to this poil:

"The number of Republican ballots found with one or more Republican ballots folded within the same was 31.

"The number of Democratic ballots found with one or more Democratic ballots within the same was 24."

Here is evidence, unquestioned and uncontradicted, submitted by the contestant, and given by one of his own witnesses, which plainly shows that Republicans so well as by the Democratic, and the stuffing was done by the Republicans so well as by the Democratic, From the evidence it appears that the managers destroyed all the ballots that were inclosed in others, and that there was an excess of 39 ballots left in the box. These were withdrawn, and 20 Democratic and 19 Republican ballots were drawn out and destroyed. To say that all the managers were Democratic amounts to nothing, unless there is some evidence to show that they had a hand in this stuffing of the ballot-box. By the law of South Carolina the voters deposited their own ballots, and the managers have nothing to do with placing them therein. The officers are strongly presumed to have done their duty, and the box having been purged, in pursuance of the statute law, of the excess, the result thus obtained should stand. We therefore decline to deduct 19 votes from the contestee's and add them to the contestent's vote, and this box will therefore stand for Richardson 183 and for Lee 97.

Sampit poil.

#### Sampit poll

Take the evidence relating to Sampit poll.

Take the evidence relating to Sampit poll.

The poll-list showed 437 ballots, and 495 ballots were found inclosed in the ballot-box. Twenty ballots called "tissue ballots" were found in the box. The managers promptly destroyed them.

Four Democratic ballots were folded together. The 3 inclosed ballots were also destroyed. This left an excess of 37 ballots in the box. That excess was drawn out and destroyed in pursuance of law; 18 were Republican and 19 were Democratic.

There were double the number of Republican ballots in the box that there were of Democratic ballots, and yet a majority drawn out were Democratic.

Not a syllable of direct or positive proof was offered to show who put this excess in the box. But the proof introduced in the record by the contestant tends to show that it was done fully as much by Republicans as by Democrats. The two United States supervisors (Republican and Democratic), page 810 of the record, make their official report, in which they say:

"The number of mixed ballots found with one or more Republican ballots folded within the same was 20 tissue.

"The number of Democratic ballots found with one or more Democratic ballots within the same was 4."

There is no evidence in the record to contradict this sworn return of the United States supervisor. Here again Republicans are found voting more ballots than one.

Has not Richardson just as much reason to presume Republicans committed

one.

Has not Richardson just as much reason to presume Republicans committed the fraud as Lee to insist that Democrats stuffed the box?

It is enough to say here, as we did as to Carver's Bay, that without proof no presumption can be made either way, and the box having been purged, according to the statute law of South Carolina, of the excess, the result thus obtained must stand—Richardson, 176; Lee, 256.

Mr. PETIBONE says in his report that 18 "tissue ballots" were counted for Richardson. The record shows that every tissue ballot was eliminated and rejected. His suggestion, therefore, is wholly without proof.

#### Upper Waccamaw.

In this precinct there was on the poll-list 422, and 482 ballots were found in the box. There was also found one Democratic ballot with 12 ballots inside, and one Republican ballot with one inside (record, page 812). These were destroyed, except the outside ballot in each case. Then the balance of the excess, 50, were drawn out and destroyed, leaving the vote stand 341 for Lee and 90 for Richard-

drawn out and destroyed, leaving the vote stand 31 for Lee and 30 for Richardson.

Not a word of evidence is adduced to show how these ballots in excess got in the box. There is no more evidence on which a guess could be made that one party did it rather than the other.

Complaint is made that in drawing the excess 48 Republican ballots were drawn out and only 2 Democratic.

But remember when the drawing commenced there were in the box 339 Republican and only 92 Democratic ballots. And if they had been drawn in that proportion there would have been drawn 40 Republican and 12 Democratic ballots.

But at Sampit they drew just about as many ballots in excess of the proportion against the Democrats, showing that in both cases it probably arose from the operation of chance in drawing by lot. We can find no evidence as to this poll in the record which can justify us in changing the return made by the precinct managers. This box should stand—Richardson, 90; Lee, 341.

## Georgetown Court House poll.

At this precinct it appears from the evidence that there were 169 tissue ballots in the box and 169 ballots in the box in excess of names on the poll-list, and that these tissue ballots were not destroyed by the managers, but returned to the box and mixed with the other ballots and then the excess withdrawn. The contestee thinks that they should have been destroyed, and therefore we eliminate them, and then this poll will stand as corrected by Mr. Pettibone for the contestant—for Richardson 190, and for Lee 729.

## Brown's Ferry poll.

The result of the vote at this precinct was never ascertained by the manager any of them. The vote was never counted or reported by any one authorize count or report the result. The ballot-box was seized by an infuriated method in the second of the result is a second of the result. The ballot-box was seized by an infuriated method is the result of the republican supervisor, we seem that the result is the result of the result is a second of the result of the re

says he kept it in his room for months with the door unlocked and the aperture

The contestant proposes to take the statement of a bystander, who says he saw two hundred and one persons vote the Republican ticket and ninety-five verte the Democratic ticket; but this is not the way in which the law requires a box to be counted nor the way by which a vote can be proved. Besides, by this law of South Carolina, the ballot must be voted folded so that it can not be seen, and as the witness did not and could not examine the face of the ballot to see who they were for or whether any of them were scratched, it is impossible for the witness to say who they were for. How many may have been scratched no one knows. It seems therefore impossible to legally ascertain the actual result at this box, and we therefore reject it.

The result, therefore, at the five contested polls in Georgetown County will stand:

Precincts.	Richardson.	Lee.
Sampit poll. Upper Waccamaw. Carver's Bay. Court House. Brown's Ferry.	183 190	256 341 97 729
Total	639 142	1,423 1,392
Majority for Lee	781	2,815 2,034

It is worthy of notice that the evidence (see record, page 677) shows that in 1876, in a hotly contested election, when all the election officers were Republicans, and Richardson ran for Congress against Joseph H. Rainey, a native and resident of Georgetown Cour, a Richardson received in this county 1,152 votes against 2,864 for Rainey, Rainey's majority being 1,532. In this case we give Lee 2,034 majority, and Richardson 371 less than he received according to the returns of Republican massagers.

It is also worthy of notice that in 1876 Richardson received at the Georgetown Court House poll (see record, page 677) 302 votes, the exact number he was given in this election by the Democratic managers. It is true that at his request we have reduced his vote at this poll to 180.

Next, as to the contested poll in Sumter County, to wit:

#### SUMTER COUNTY.

SUMTER COUNTY.

Lynchburgh poll.

The precinct managers and State board of canvassers give Mr. Richardson 319 vules and to Mr. Lee 181 at this poll. There were 107 more ballots in the ballots than names on the poll-list. These were withdrawn and destroyed, as the statute of South Carolina requires. There is no evidence in the record to show how many Republican tickets or how many Democratic tickets were withdrawn and destroyed. Doubtless some of each kind were destroyed, but there is no evidence to show how many of each. Mr. FETTIBONE says "the record is silent as to who they were for." In his report he says that all the managers being Democrats, "it is difficult, not to say impossible, to believe that the fraud was perpetrated in favor of Mr. Lee." Is not this begging the question?

There is no proof that the fraud was committed by the managers—not one word of such proof in the record; and the officers are presumed to have discharged their duty. No presumption can be raised against them in the absence of proof. The ballots in excess of the poll-list were doubtless deposited in the box, in this instance, as in others proved in the record, by the voters; but whether it was done by the Democrats or the Republicans there is not one word of proof in the record to show, unless it be the testimony of James Levy, to which we shall refer. Mr. Petitibone complains that the managers did not let the United flastes supervisor see the tickets they destroyed. We must not forget that the law of South Carolina requires that the ballots withdrawn "shall be immediately destroyed" without being seen by any one, and we can not unite in censuring them for doing their duty. If the law is wrong it is one thing, but whether the law is right or wrong the officers were bound to obey it.

But it is claimed in that report that the contestant shall have his vote increased to 242, and that the contestee shall have his vote decreased to 258. This claim is made on the testimony, as we are told in the report, of one James Levy, (record, page 2

Brownsville poll.

This poll is located in Marlborough County. The precinct managers and the State board of canvassers both return the vote as being 290 for Richardson and 90 few Lee.

There was not a single witness examined as to the vote at this poll, and there is no evidence at all in the testimony to question the accuracy of the precinct managers' returns; but it seems the contestant put into the record, while he was taking testimony in another (Darlington) county, and before he took testimony in Marborough County, a private letter of the Republican supervisor to the chief supervisor, and also a statement purporting to be the report of the two supervisors for this poll.

This letter and so-called report were not proved ar attempted to be proved, and they were inserted in the record without the knowledge ar consent of the contestee or his counsel (Mr. Knox Livingston), for the county and poll to which they relate, and after objection and protest of his counsel for Darlington County. The question naturally arises, why was the letter and so-called report not reserved and offered along with the other reports which contestant put in evidence, and introduced in the testimony when and while he was taking his testimony in Marlborough County, in which this poll is located, and where contestee's counsel for that county would then have thereby had notice of it.

The first question is, is such a paper evidence? We think not. But upon

inspection of the original of this so-called report it is evident, from marks and erasures appearing on its face, that it has been tampered with and altered. No one who inspects this paper can for a moment doubt this.

The contestee offered in evidence before the sub-committee the affidavit of both supervisors, whose names are attached to this report, declaring that the report as published in the record is not the report they signed; and though, perhaps, it may not be safe to rely on this affidavit if it stood alone, for the reason for deciding that the said report is not evidence, or at least not such reliable evidence as to justify the committee in relying on it is after the return of the officers of the law, yet as the said report bears on its flow the marks of having been altered and tampered with, and was never proved or attempted to be proved, but was inserted in the testimony under the circumstances referred to, we insert the said affidavit here for what it is worth:

United States of America, State of South Carolina, first Congressional district:

Samuel Lee, contestant, vs. John S. Richardson, contestee.—Contested election,

Samuel Lee, contestant, vs. John S. Richardson, contestee.—Contested election. Personally appeared before me William B. Drake and Moses W. Pearson, who, upon being severally sworn, says, each for himself, that he was United States supervisor of elections at the general election in 1880 as Brownsville poling precinct, in the county of Mariborough, in the State of South Carolina, the former acting as the Democratic supervisor and the latter as Republican; that he enacting as the Democratic supervisor and the latter as Republican; that he endeavored faithfully to perform the duties imposed upon him by law, and in obedience to instructions inclosed with his commission the two supervisors united in a report to the chief supervisor of elections for said State.

Deponents further say, on oath, that, owing to the manner in which the excess of ballots found in the box were drawn out and destroyed, deponents did not and could not see or tell the number that bore the names of the Republican and Democratic candidates, respectively, and consequently in their report to the chief supervisor they did not, because they could not, designate the number of ballots drawn out of the ballot-box and destroyed by the managers because reacting candidates.

Deponents further say that they have been informed that while contestant was taking testimony in another county he introduced in evidence a report purporting to be the report made by these deponents as supervisors, in which the number of ballots drawn out and destroyed for the Republican and Democratic candidates, respectively, are designated. Deponents as up or such statement was contained in the report made by them, and that the report contained in the printed testimony, and purporting to be a true copy of their report, is not in fact such a copy, but has been altered and changed since it left their hands.

W. B. DRAKE,
MOSES W. PEARSON,
Sworn to and subscribed before me May 9, 1882.

Sworn to and subscribed before me May 9, 1882.

T. E. DUDLEY, Notary Public.

Upon the strength of this so-called report alone, without one word of proof even tending to show who or what party stuffed the ballot-box, if it was stuffed, Mr. PETTHONE in his report deducts 126 votes from the contestee and adds that number to the vote of the contestant. We can find no law or evidence in the record on which we can come to any such conclusion. This poll must stand as returned by the managers—for Richardson, 230; for Lee, 30.

#### Cheraw poll.

Cheraw poll.

This poll is returned as 483 for Richardson and 458 for Lee.
The vote at this poll and throughout this county shows that a full vote was polled. The contestant received several hundred more votes in the county than the Republican candidate for Congress did in 1876, when all the election officers were Republicans, and no one is produced who says he was refused the right to vote. The only charge made in the notice of contest is as follows:

"That at Cheraw voting precinct, in Cesterfield County, the poll-list kept by the managers of the election and their clerk was falsified in your interest by the insertion thereon of 116 fictitious names, and for the names thus fraudulently placed on the poll-list a number of ballots bearing your mame for Congress were sureptitiously placed in the ballot-box and counted, canvassed, and returned for you; wherefore, from the vote returned for you at said precinct should be deducted the number of ballots so illegally counted, canvassed, and returned for you."

ducted the number of ballots so llegally counter, carrasses, sale you."

There is no law which authorizes the committee to examine into any other matters. We are confined by the pleadings to this single charge. Is it true? The contestant examines but one single witness as to this poil, to wit, Thomas E. Smith, page 164. He testifies on this point as follows:
"Question. State the irregularities that you witnessed at that poll at the close of the election.
"Answer. There was a great many more names on the poll-list than there were ballots in the box; how many I don't recollect."

Not one word beyond this is found in all contestant's testimony to substantiate this charge.

"Answer. There was agreat many more names on the poll-list than there were ballots in the box; how many I don't recoilect."

Not one word beyond this is found in all contestant's testimony to substantiate this charge.

In regard to the deficiency of ballots, as compared with poll-lists, there is no evidence as to numbers. No one says whether the excess was five or ten. Perhaps, as is often the case, elerks write down the name of a voter when he approaches the polls, thinking he will vote, but for some cause his vote is rejected, but his name stands upon the list. The presumption is, the returning officers did their duty and can not be held responsible because the ballots which they did not handle until counted were short the names on the poll-list. How many persons may have presented themselves to vote, and their names taken down by the clerk, and then on being challenged may have been refused, but their names not erased from the list, no one knows. It is usual for the voting to be principally done during the forenoon; but we do find from Mr. A. A. Polleck's testimony, page 582, that after 1 o'clock p. m. a good many such instances happened at this poll, and out of the number some five or six were refused.

A. A. Pollock (record, page 582):

"About 1 o'clock I was called into the hall in which the election was held, and from that time forward I was principally in that room. I witnessed the voting from that time forward, and all that I saw I thought proper. There were some voters challenged for cause; some as non-residents; sums were challenged as minors; some, upon being challenged, satisfied the managers that they were entitled to vote, and were then allowed to vote; others again were rejected, the managers being satisfied they were not entitled to wote; and I do not think there were more than five or six rejected, if that many."

How can the committee tell how many ballots there were lacking? The contestant should have furnished the evidence if he expected the committee to sustain him in the charge quoted abo

They state that the ticket furnished by the executive committee did not have on it the name of one of the candidates running for a county office, and the ticket complained of was printed by the local committee to correct this defect. They further state that this ticket was generally voted. No one contradicts this statement on the part of these witnesses. The contestant had the reply in evidence and did not attempt to contradict it.

We do not see how this committee can come to the conclusion that these witnesses have borne false testimony, and if they did not there is nothing left on which we could stand to authorize any interference with this box. We let it stand.

Let us now go to

#### DARLINGTON COUNTY.

There is a discrepancy between the result in this county as certified by the State board of canvassers and the vote as shown by the certificate of the clerk of the county, and without a word of evidence, so far as we can see, Mr. Pettiboxe charges that "Richardson's majority grew to the number of 104 votes by his own testimony after the polls were closed and the result declared."

There seems to be no excuse for this charge. Mr. Richardson has nowhere asked or claimed that the vote should be counted as certified by the State board of canvassers; he was neither a witness in his own behalf in this case before the State board of canvassers nor during the taking of testimony, nor did he introduce any witnesses' returns or papers before the State board of canvassers; and the certificate referred to by Mr. Pettiboxe, as found on page 223 of the reord, was put in evidence by the contestant. We are content, as the contestee has been, to take the figures most unfavorable to Richardson, and have elicited enough not to charge an honorable man for a gross fraud without proof.

Socially Hill hell.

The precinct managers give Richardson 198 and Lee 337. There were 44 ballots in the ballot-box in excess of the names on the poll-list. (See United States supervisors' returns, page 293.) This excess was drawn out by the managers and destroyed. There is no evidence to show who or which party placed them in the box. In Mr. Pettibone's report he refers to the report made by the two United States supervisors, who unite in their report—and from that report he finds that there were 12 ballots drawn out and destroyed "which had Richardson's name on them"—but he fails to state that by same report (see record, page 253) it is shown that there were 22 Republican ballots drawn out and destroyed. We can not see how, if this report is good and sufficient evidence on which to find that 12 Democratic ballots were drawn out, why it is not equally good evidence to show that 28 Republican ballots were withdrawn.

If the method adopted by Mr. Pettibone for purging the ballot-box was followed here, of course only 32 votes should be deducted from contestee, to wit. We have a sufficient evidence of the method adopted by Mr. Pettibone 2 believed to the states supervisors out with Richardson's name on them there were 64 Lee ballots were drawn out. This is only inferential and is not positive proof. Whereas we have positive proof in the joint report of the Republican and Democratic United States supervisors that 32 Lee ballots were withdrawn. If, then, the vote as returned by the precinct managers is to be altered at all, it should stand, for Richardson, 166, and for Lee, 369; but in the absence of any proof to show who placed the excess in the ballot-box, and of any charge in the testimony of any unfairness in the withdrawal of the excess we must let this poll stand as returned by the managers, to wit, for Richardson, 198; for Lee, 337.

#### Timmonsville poll.

Timmonsville poll.

The precinct managers return 533 votes for Richardson and 75 for Lee. Mr. Pettenate says in his report that "United States supervisor (record, pages 68 and 69) reports 608 votes as counted for Representatives in Congress," but he omits to say that the same supervisor (pages 68 and 69) in the report he quotes from confirms the return of the precinct managers, and reports that 533 votes were counted for Richardson and 75 votes for Lee. Mr. Pettinoxe further states that "the ballot-box was stuffed at Timmonsville, and the excess drawn out and destroyed;" but though he had the report of the United States supervisor (he refers to) before him he fails to say that the excess, as shown by that report, was only eleven ballots, and that in drawing out this excess only four Republican ballots were withdrawn, and seven Democrats.

1. O. Byrd (record, page 568) also says:

"Question. Was there present on that day a Republican supervisor who witnessed the balloting and the count at the poll?

"Answer. Yes, there was—Townsend Rafra. He told me that it was the fairest election he had ever seen in Timmonsville.

"Q. When the ballots were counted, did they tally with the number of names on the poll-list?

"A. There were a few in excess.

"Q. What was done about that excess?

"A. They were dealt with according to law; that is, according to the instructions the managers received. They were all put back into the box and stirred up and the excess were drawn out and destroyed."

"The number of ballots drawn out of the ballot-box and destroyed by the managers of elections because of the excess of the Express of votes over names on the poll-list was 11:

"Of which 4 ballots bore the names of the Republican candidates.

"The number of ballots drawn out of the recess of votes over names on the poll-list managers of elections because of the recess of votes over names on the poll-list was 11:

"Of which 4 ballots bore the names of the Democratic candidates.
"The whole number of votes counted by the managers of elections for member of Congress was 608:

"Of which 75 votes were counted for Samuel Lee.
"Of which 175 votes were counted for John S. Richardson.
"The whole number of votes counted by the managers of elections for Presidential electors was 609:
"Of which 75 votes were counted for T. B. Johnston.
"Of which 75 votes were counted for A. S. Wallace.
"Of which 75 votes were counted for W. A. Hayne.
"Of which 75 votes were counted for T. N. Tolbert.
"Of which 75 votes were counted for T. N. Tolbert.
"Of which 75 votes were counted for B. P. Chaffield.
"Of which 75 votes were counted for B. P. Chaffield.
"Of which 534 votes were counted for E. W. Moise.
"Of which 534 votes were counted for Samuel Dibble.
"Of which 534 votes were counted for J. S. Murray.
"Of which 534 votes were counted for G. W. Croft.
"Of which 534 votes were counted for G. W. Croft.
"Of which 534 votes were counted for G. W. Croft.
"Of which 534 votes were counted for G. W. Croft.
"Of which 534 votes were counted for John L. Manning,
"Of which 534 votes were counted for William Elliott.

J. T. RAFRA, Supervisor."
But Mr. Pettibone claims that this sworn return of the election officers and of But Mr. Pettibone claims that this sworn return of the election officers and of But Mr. Pettibone claims that this sworn return of the election officers and of But Mr. Pettibone claims that this sworn return of the election officers and of But Mr. Pettibone claims that this sworn return of the election officers and of But Mr. Pettibone claims that this sworn return of the election officers and of But Mr. Pettibone claims that this sworn return of the election officers and of But Mr.

J. T. RAFRA, Supervisor."

But Mr. PETTIBONE claims that this sworn return of the election officers and of the Republican United States supervisor should be set aside and the statement of a bystander, one J. E. Keeler (record, page 373), who it sems kept a list of those he thought voted the Republican ticket, taken in their stead. This man Keeler says he kept a list of those who voted the Republican ticket, and that there were 199. Upon this testimony alone he sets aside the returns of the managers and the United States supervisor, and deducts 124 ballots from Richardson and adds that number to Lee, making a difference of 248 votes in the count.

There were only four Republican ballots drawn out when the box was purged of the excess, and surely the actual count of the vote in the box is better evidence than the list kept by a bystander, especially when there is no charge in the evidence as to any unfairness in the election at this poll in the count or in the purging of the box.

But let us look a moment at the testimony of this J. E. Keeler.

But let us look a moment at the testimony of this J. E. Keeler,

"Question, Where did you reside at the last general election?
"Answer. At Timmonsville, Darlington County.
"Q. Were you present at the polls; if so, in what capacity?
"A. I was present from the time it opened until it closed. I was assistant supervisor a part of the day.
"Q. What do you mean when you say you were assistant supervisor?
"A. I mean that I assisted the supervisor in putting down the names of the roters in general.

in general. Did you keep a list of the voters, both Democrats and Republicans?

Did you keep a list of the vote No, sir.
What list did you keep?
A Republican list.
Have you that list with you?
I have.
Will you turn to that book?
Yes, sir, I will.
Is that the list you kept?
Yes, sir.

"A. Yes, sir."
"Q. Does that contain the Republican votes cast at Timmonsville?
"A. It does, of those I saw vote myself."

'A. It does, of those I saw vote myself."

On his cross-examination he says:

'Q. Where did you get this book?

'A. It was given to me.

'Q. When and by whom?

'A. It was given to me the day before election by Mr. E. H. Deas, I think,

'Q. Were you at the polls all day?

'A. Yes, sir.

'Q. Did you keep a full list of all Republican votes?

'A. I did from the time I got the book."

Here is a witness—a bystander—who says he began to make up his list "from e time he got the book," and he says he got the book the day before the elec
on.

tion.
Will it be safe to rely on such evidence to set aside the returns of the managers and supervisors? We can not see our way to do this, and this box must stand as returned by the managers—533 for Richardson and 75 for Lee.

#### Florence poll.

Mr. Pettinone recommends that this poll be rejected— First. Because the clerk of court did not certify to the correctness of the re-

Second. Because the United States supervisor was unlawfully interfered with

second. Because the United States supervisor was unlawfully interfered with and prevented from discharging his duties.

Third. Because the poll-list was falsified by the managers by the insertion thereon of fictitious names.

Fourth. Because men who voted at Timmonsville voted there for Richardson. Fifth. Because 208 of Lee's supporters were prevented from voting there.

To the first and second grounds stated by Mr. PETTHONE it would be a sufficient reason to say that there are no such charges alleged against this poll in the pleadings, and by law we are not allowed to raise such issues as we may select, but are confined to those raised in the pleadings. But it is perhaps best to say, as to these two charges—

First, that there is no charge made in the pleadings, in the testimony, or in the briefs against the correctness of the count or the returns as made by the managers; secondly, that the clerk of court could not and never does certify to the "correctness" of returns filed in his office. All he can do or is allowed by law to do is to certify that the copy of the returns furnished by him from the clerk did in this instance. And, thirdly, that the proof contradicts the charge that the United States supervisor was unlawfully interfered with. Lemuel W. Gadsden was the supervisor and Edmund Deas was one of the Republican leaders. From Gudsden's own testimony it is shown what interference he met with.

Lemuel W. Gadsden sworn (page 365):

Lemuel W. Gadsden sworn (page 365):

"Question. What position did you hold on the day of the last general election?"

"Answer. United States supervisor at Florence precinct.

"Q. Please state what occurred at the poll during the day."

"A. I arrived at the guard-house lot where the poll was held about a few minutes after 5 o'clock a.m.; the managers were there then; the door was guarded leading to where the poll was; the place was crowded with a lot of Democrats; I could not get within ten feet of the door; a few minutes before the time for the poll to open I attempted to go to the guard-house to go in that I might witness the opening of the poll and examine the box, but I was obstructed from getting in where the box was by a crowd of town authorities or policemen; I pulled out my commission as United States supervisor and showed it to them and told them I was going in; they said I should not; they said no one was allowed to go in but constables and policemen; that time Captain Gaillaid came up and asked what was the matter; I told that I was United States supervisor, and that I was prevented from going to the poll.

"Q. Did you get in?

"A. Yes, sir; I got in afterwards. Captain Gaillaid told me that I must wait until he saw Captain Blackwell to find out whether I had any right in there or not. He came back and told me that it was all right, I could go in. I started and was stopped again. Captain Gaillaid then got in front of me and told me to follow him, and I went to the poll with him. When I got there the box was locked, and the voting had been going on for about ten or fifteen minutes. Six persons had voted up to that time."

Surely this interference, not by the officers of the election, is too slight to affect the polls.

Z. T. Kershaw, a Northern man, who says he does not belong to either the Democratic or Remublican nearty but even had to the or the poll of the pollogies.

feet the polls.

Z. T. Kershaw, a Northern man, who says he does not belong to either the Democratic or Republican party, but says he voted the Republican ticket where he lived, in Paterson, New York (record, page 524), testifies as follows. The last paragraph of his testimony, as quoted, is very pertinent:

"Question. What poll did you attend on the day of the last general election?" Answer. Florence poll.

"Q. State what was your official character on that day?

"A. I was State constable.

"Q. Were you at the polls when Edmund Deas came up? State whether he came by himself or with others, and what he did.

"A. He marched in the yard with a large crowd of colored men and started to take possession of the gulard-house where the polls were; he ordered those in advance to take possession of the polls; he with them attempted to take possession of the polls.

"Q. Was he checked by the proper authorities?"

"A. He was,

ession of the beautiful and removed, was there any further attempt to "A. He was,
"A. He was,
"Q. When he was restrained and removed, was there any further attempt to ake possession of the polls?

"A. There was not.

"Q. Was there any other disorder at that poll that day except that caused by his attempt to take possession of the polls?

"A. There was no further disturbance during the day.

"Q. State whether there were sticks or scanding held at that poll on that day, by whom they were held, and for what purpose?

"A. There was such a large crowd trying to get to the polls that it was found necessary to putsome bar in front of the door. There were some scantling procured and they were held up by the voters themselves, the marshals standing inside of the circle composed by the scantling, and allowing the voters to enter as fast as the managers could vote them.

"A. They belonged to both parties. As they came up to vote they took hold

"Q. Was this scantling held up by men of any particular party?"
"A. They belonged to both parties. As they came up to vote they took hold of the scantling, and Republicans and Democrats alike held it up.
"Q. Did that arrangement facilitate Republican and Democratic voters alike in reaching the box and casting their ballots?
"A. It did.
"Q. Was there any violence or intimidation on the part of any Democrats against any Republicans at the poils on that day?
"A. I saw none and heard none. I was at the poil all day.
"Q. In their efforts to keep the entrance to the polling place clear was there any discrimination by the constabulary and the marshals against Republican voters?

voters?
"A. None that I know of. I was there all day, and was one of the State con-

anies. "Q. How long did you remain at that poll on that day? "A. I remained until the final count was made and announced by the mana

gers.

"Q. Was Lemuel W. Gadsden there when the count was finished; and in what capacity was he there?

"A. He was there as United States supervisor.

"Q. Did he say anything in regard to the result? And, if so, state what it

was.

(Contestant objects to the question because it is hearsay, and because L. W. Gadsden has testified himself.)

"Q. After the count was closed, Mr. Gadsden, who seemed to be in very good humor, said to the managers that he was very glad that everything had passed off so peaceably and fairly."

humor, said to the managers that he was very glad that everything had passed off so peaceably and fairly."

Jerome P. Chase (page 516):

"Question. What poll did you attend on the day of the last general election?

"Answer. Florence poll.

"Q. Was there any violence or intimidation on the part of Democrats against Republicans then and there?

"A. None that I saw or heard of.

"Q. Was there any discrimination against Republican voters by the constabulary or police force?

"A. It was currently reported here that the colored people had been told from the pulpits in their churches to get possession of the polls here the afternoon or night before the election and hold them, and that the Republican vote would be massed at this place; the Democrats, in order to get a chance to vote, went to the polls about half past 12 or 1 o'clock the night before, built fires, and staid there until daylight; the Republicans tried to get possession of the polls and the constabulary had to hold them back in order to protect the polls. The Republicans came in a body and marched around; they came up between 4 and 5 in the morning.

"Q. Was not this disorder caused by that attempt of the Republicans to take possession of the polls?

"A. Yes; this disorder took place before the polls were opened.

"Q. Was not Edmund Deas at the head of this body of Republicans?

"A. Yes; sir; he seemed to be in command of them.

"Q. When he was restrained and checked by the proper authorities did not the threatened trouble on the part of the crowd then and thereafter cease?

"A. So far as I know, it did."

Theodore S. Gaillard (record, page 514):

"Question. State your age, residence, and occupation.

A. So lay law 1 know, in du.
Theodore S. Gaillard (record, page 514):
"Question, State your age, residence, and occupation.
"Answer. Thirty-seven years old; Darlington County; express agent.
"Q. What poll did you attend on the day of the last general election?
"A. Florence precinct.
"Q. Was there not an unusually large number of Republicans at that poll on

"Answer. Thirty-seven years old; Darlington County; express agent.

"Q. What poll did you attend on the day of the last general election?

"A. Florence precinct.

"Q. Was there not an unusually large number of Republicans at that poll on that day?

"A. Yes; they massed here.

"Q. Did you draw a pistol at any man during that day?

"A. I did not.

"Q. State whether you had one at the polls.

"A. I have not owned a pistol since the late election of Hampton, and I had none with me on that day.

"Q. Did those Republicans have in their hands sticks and clubs?

"A. Most of them had fresh-out clubs.

"Q. Was there any disorder at that poll on that day? And, if so, state its cause.

"A. There was but one effort at disorder, caused by one E. H. Deas attempting to get to the polls.

"Q. Did he not with a crowd of colored Republicans attempt to take possession of the poll?

"A. He did.

"Q. Was there any violence or intimidation on the part of Democrats against Republicans?

"A. None whatever."

The record contains much similar testimony, from pages 507 to 525. We do not think the evidence sustains these charges if we could consider them.

To the third charge made against this poll it is enough to say there is no proof in the record whatever that a false list was prepared beforehand, or designedly made during the election. It is not shown that any particular names were flectitious. There were only a few names in excess of the ballots, according to the testimony, and this may have occurred without being designed. The proof is there was a very large crowd present and great crowding about the polls—1,000 persons voted and 208 could not vote. Persons may have presented themselves at the polls and offered to vote, their names taken down by the clerk, and on a challenge and investigation they may have been refused and their names on the poll-list not erased.

To the fourth charge there is no legal evidence that a single man who voted at Timmonsville voted at Florence. There are only six men who are named and charged as having vo

Lemuel W. Gadsden, the witness, referred to by Mr. Pettibone (page 365),

Says:

"Question. Did you not keep any record of the voting that day?

"Answer, I did of a few names of persons that came from Timmonsville in the evening.

"Q. Who were these parties that came from Timmonsville and voted here?

"A. Alexander Taylor, Yanty Byrd, H. M. Oliver, Wm. Hand, W. J. Stradford, Geo. Montgomery, and several others I can not recollect."

This charge is flatly denied in the testimony of the contestee.

J. T. Jordon sworn (record, page 557):

"Question. State your age, residence, and occupation.
"Answer. Thirty-nine; Darlington County; farmer.
"Q. Were you at the Timmonsville poll on the day of the election in 1880?
"A. Yes, sir.
"Q. Did you with a party of others on that day go on the evening freighttrain from Timmonsville to Florence?
"A. I did.
"Q. Why did you go?
"A. We had heard that the Republicans were about to take the Florence poll and not allow the white men to vote.
"Q. When you got there did you find that that was true?
"A. No; everything was quiet.
"Q. What time did that train reach Florence?
"A. About 4, I think,
"Q. Did you go immediately near the poll?
"A. Yes; we went immediately near the poll. After we got to Florence everything was quiet.

"A. Yes; we went immediately near the poll. After we got to Florence everything was quiet.

"Q. Was there any violence or intimidation, or any interference whatever, on the part of those men that were with you against any class of voters at the Florence poll?

"A. There was none.

"Q. Did you vote at the Florence poll that day?
"A. I did not. I voted at Timmonsville, before I left there.

"Q. Did you stand in a position near the Florence poll where you could see voters cast their ballots?

"A. I did.

ters cast their ballots:

'A. I did.

'Q. Did you know all of the men who went on that train from Timmonsle to Florence?

'A. Very nearly every one of them.

'Q. Did you see any of those men vote at the Florence poll?

'A. No; not one.

'A. No; not one.

'Q. If they had voted there, do you think you necessarily would have known

'Q. If they had voted there, do you think you necessarily would have known.

"A. I think I would."

"A. I think I would."

W. A. Lester sworn (page 558):
"Question. What poll did you attend on the day of the last general election?
"Answer. I attended the poll at Timmonsville and voted there.
"Q. Did you, with a party of others, go on the evening freight train that day from Timmonsville to Florence?
"A. I did.
"Q. Why did you go?
"A We heard that the Radical party had gathered around the polls and were preventing the white voters from voting.
"Q. When you reached Florence did you find that to be the case?
"A. I did not.
"Q. Did you or your party commit any act of violence or intimidation against any class of voters at Florence, or in any manner interfere with the voters at that poll?

"A. We did not.
"Q. Did you vote at the Florence poll?

"A. We did not.
"Q. Did you vote at the Florence poll?
"A. I did not.
"Q. Did you know any of that party to vote at the Florence poll?
"A. No."
"A. No."

Reddick Langston sworn (page 559):
"Question. State your age, residence, and occupation.
"Answer. Sixty-two; Parlington County; farmer.
"Q. What poll did you attend and vote at on the day of the last general elec-

tion?

"A. Timmonsville.

"Q. Were you one of the party who went on the evening freight train from Timmonsville to Florence on that day?

"A. I was one of a party of about seventy-five or eighty.

"Q. Why did you and that party go to Florence that evening?

"A. We heard that the whites were not having a fair showing at the polls and we went to see that all, both white and colored, had a fair showing.

"Q. When you reached Florence did you find everything quiet and orderly?

"A. Yes.

"Q. When you reached Florence did you find everything quiet and orderly?
"A. Yes.
"Q. Did you or your party commit any act of violence or intimidation against any class of voters or in any manner interfere with any voter or voters at the Florence poll?
"A. I did not, and if any of the rest did I do not know of it.
"Q. Did you vote at the Florence poll?
"A. I did not.
"Q. Do you know that any of that party voted at the Florence poll?
"A. I do not."

"A. I do not."

J. H. Stokres sworn (page 560):
"Question. What poll did you attend and vote at on the day of the last general election?
"Answer. Timmonsville.

"Q. Did you with a party of others go on the evening freight train from Timmonsville to Florence on that day?

"A. Yes; I went with a party of about seventy-five.

"Q. Why did you go?
"A. We heard that the polls were crowded with the voters there.

"Q. Did you hear that they were crowded in such a manner that any class of voters were crowded out?

"A. Yes, the Democrats were crowded out, we heard.

"Q. What did you go for?

"A. To have a fair election.

"Q. Did you vote there?

"A. No.

"A. No.
"Q. Do you know that any other of that party voted there?
"A. I do not.
"Q. Did you find when you reached there that the Democrats were crowded away from the polls, or was it quiet and orderly?
"A. It was quiet and orderly."

"A. It was quiet and orderly."

"A. It was quiet and orderly."

W. F. Morris and J. R. Morris (page 561), K. R. Charles (page 568), and J. C. Byrd (page 568), all testify to the same effect.

This charge seems to be utterly unfounded.

Seeing "seventy-five men on the top of box-cars going in the direction of Florence" does not raise an inference that they voted at Florence is no evidence they voted at Timmonsville. To prove that persons voted at both Timmonsville and Florence the persons who did so must be named and they must be proved to have actually voted at both places. There is no such proof in the record.

Fifth. If voters are shown to have been ready and prepared to vote at Florence for Lee and could not do so, and have not voted elsewhere, give Mr. Lee their votes; but the vote of the precinct should not be rejected because they could not vote there. One thousand and thirty electors should not lose their votes because two hundred and eight persons could not vote.

Let the box be counted, but give Mr. Lee the 208 votes he has proven. The vote will then stand: for Richardson, 582; for Lee, 647.

#### Darlington Court-House poll.

The vote at this poll, as shown by the return of the precinct managers, as certified to by the clerk of court for Darlington County, was: for Richardson, 1,271; for Lee, 117.

This certified statement was introduced in evidence by both the contestant and the contestee—by the contestant as shown on page 406, and by contestee as shown on page 571 of the record—and is as follows:

STATE OF SOUTH CAROLINA, County of Darlington:

Returns of precinct managers of results of the general election of 1880 in the county of Darlington.

	Congressional

"Returns of county canvassers to the office of clerk of the court "Congressional.—Total co. vote, 6,788: Richardson, 4,671; Lee, 2,117.

"STATE OF SOUTH CAROLINA, "County of Darlington:

"I, J. N. Garner, clerk of the court of common pleas and general sessions in and for the county and State aforesaid, do hereby certify that the boxes returned to my custody by the board of county canvassers for said county subsequent to the general election of 1880 contained the several returns of the precinct managers at each and every polling-place in the said county of Darlington, and that the foregoing schedule represents truly and correctly the result of the balloting for member of the Forty-seventh Congress by the voters of said county, as shown by the said precinct managers' returns.

"In testimony whereof I have hereunto set my hand and affixed my official seal this 12th day of January. A. D. 1881.

"SEAL.]

"STATE OF SOUTH CARALLYA.

"STATE OF SOUTH CAROLINA, "County of Darlington:

"I, J. N. Garner, clerk of the court of common pleas and general sessions in and for the county and State aforesaid, do hereby certify that the certified return of the county board of canvassers for the said county of Darlington was duly filed in my office, as required by law, on the 10th day of November, A. D. 1880; that the same is made in proper form, and shows the result of the Congressional election at the general election of 1880 to be 4,671 votes cast for John S. Richardson, and 2,117 votes cast for Samuel Lee.

"In testimony whereof I have hereunto set my hand and affixed my official scal this 12th day of January, A. D. 1881.

J. N. GARNER, C. C. P. & G. S."

Ms. Presymptony claims in his report that the dark of court dip not "certify to."

seal this 12th day of January, A. D. 1881.

"[SEAL.]

"[SEAL.]

Mr. Pettidone claims in his report that the elerk of court did not "certify to" this statement of votes, and for that reason the box should be rejected. The box stands on the same basis as regards this objection as the other boxes of the county, and as all the boxes of Georgebown and Williamsburgh Counties, where none of the precinct returns were forwarded to the secretary of state, and where the contestant received and has had given him large majorities. In order to count these boxes which were rejected by the State board of canvassers the contestean in sisted on disregarding all technical objections, and we have done so, and it will not do now to adhere to technical objections where it affects the contestant and disregard them where the contestee is concerned.

If we are now to regard these mere technical objections to the counting of the Florence and Darlington boxes, we should, in common deceney and justice, retrace our steps and inquire whether the technical objections urged against the eight boxes in Georgetown County, three in Sumter, three in Williamsburgh, and one in Horry by the county and State boards of canvassers are valid and sufficient. But we can not think that this technical objection can be seriously insisted on. Our answer to it is, that the foregoing certificates show what he did much better and more correctly than he (Garner) can explain. We repeat here, as we did in reference to the vote at Florence poll, that the clerk is never required or allowed by law to certify to the "correctness" of any paper on file in his office. All he does is to certify that it is a correct or true copy of a paper or statement on file in his office. That is just what the clerk did in this instance, and we do not understand him anywhere in his testimony to say the statement he certified to is not a true copy of the returns on file in his office. The ballotboxes are one thing, and the returns are made out by the managers, and a copy of them filed with

I. N. Garner (page 737):

"Question. Please state what, if anything, was filed in your office by the county canvassers, or either of them, bearing upon the last general election for member of Congress in Darlington County?

"Answer. Election papers were filed in my office by the commissioner of election, J. G. McCall.

"Answer. Election papers were filed in my office by the community of the filed in a community of the filed in your office?

"A. I can not; I did not examine them.

"Q. Have you not had occasion to examine those papers since they have been filed in your office?

"A. I have not.

"Q. Then you have no idea of what papers are filed in your office bearing upon the election of member of Congress in Darlington County at the last election?

"A. I know there were election returns bearing upon the last election. They have been examined repeatedly by others, but not by myself.

"Q. Do you know if those returns in your office are correct or not?

"A. I do not know anything about them."

"Q. Were those returns filed in your office delivered to you in or out of the ballot-boxes?

ballot-boxes?
"A. They were delivered to me in an envelope outside of the ballot-boxes.

"Q. Have you not had occasion to certify to the correctness of the precinct returns, from the various precincts in Darlington County, touching the last election for member of Congress?

"A. I don't think I did, because I could not certify to the correctness of the returns, as it seems to me that commissioner ought to d) that,

"Q. Did you or not?"

"A. I did not.

"A. I did not.

"Cross-examined by George W. Brown, Esq.:

"Q. You were asked about the correctness of the returns made to your office by the commissioners of election, and also as to the correctness of the precinct managers' returns in the boxes. While you could not certify to the correctness of either, are not the characters of the commissioners of election and of the several precinct managers sufficiently strong to give you faith in the honesty and fidelity of all of their official or private acts?

"A. Yes.

"Q. Are you, or not, generally acquainted with the whole voting population of Darlington County?

"A. I am not thoroughly acquainted, but perhaps know as many people as any man in the county.

"Q. Do you, or not, know that the commissioners and several precinct managers of the last election in this county were men of the highest probity and integrity in the communities in which they respectively live?

"A. I don't recollect who all of the commissioners were except Mr. McCall, I know them, but I can not think of their names. As far as I can recollect their names they were. Mr. McCall is a gentleman of the highest type in this community.

munity.
"Q. Have you a deputy clerk?

A. I have. Q. Is he, or not, authorized by law to do all acts which the clerk himself can

o?

"A. I have forgotten the law; I feel almost sure that he is.

"Q. Does he, or not, do the elerical work of that office and have general superision of it?

"A. He has general supervision, and does the elerical work of the office.

"Q. Does he, or not, generally prepare certificates of records and compare the opies of such record to the originals for verifications, and then submit them to out for your signature and scal?

"A. He does.

"Q. Your deputy is under oath, is he not?

voir for your signature and seal?

"A. He does,

"Q. Your deputy is under oath, is he not?

"A. He is.

"Q. When he has thus prepared a certificate of a record or passes upon the correctness of a copy, do you further question such certificate or copy, or do you sign and seal it as a matter of course?

"A. I sign and seal it without further question."

What he says about the ballot-boxes is not material, but here is the sum and substance of what he says:

"Q. Were the ballot-boxes ever filed or deposited in your office?

"A. They were, as they usually have been, in my office."

We can see no cause for rejecting this poll for this reason, as urged by Mr. Pettiboxe, if we could consider it; but it has not been charged as an objection to the counting of this poll in the pleadings. The contestee has had no notice that there was, or would be, any objection to the counting of this poll for any such reason. If he had had notice, doubtless he could have proved aliunde what the vote was; and, such being the case, we can not make up a pleading for the contestant of which he gave no notice.

We proceed, then, to consider the objections alleged in the pleadings against this poll, and shall confine ourselves to them.

In the notice of the contestant he alleges against this poll that the "poll-list was falsified by the insertion thereon of fictitious names, repeating," and illegal voting; "but there is no evidence in the record to sustain these charges, and they have been abandoned, and are not insisted on. It is also charged that there was—

First, "Violence and intimidation."

was—
First, "Violence and intimidation."
Second, "The rejection of a large number of qualified voters who desired and offered to vote for the contestant."
These are the only two charges made in the pleadings that are insisted on, and to these we must confine our consideration.
First, then, as to the charge of violence and intimidation.
This charge is based in the evidence and in the briefs and arguments as well as in Mr. Pettibone's report on two distinct allegations, which we will examine separately.

as in Mr. Pertitione's report on two distinct allegations, which we will examine separately.

First. That there were arms at or near the polls, and that this prevented Republicans from voting for the contestant.

If the arms were there and did not prevent any one from voting, it would amount to nothing.

What is the testimony as to arms being at or near the polls?

One Aimwell Western, jr. (record, p. 92) says that—

"On the night before the election two wagons loaded with guns came on the back street, and they were earried down the street next to the court-house. A portion was placed in the store of one Early and some were put in the court-house, where the ballot-box was."

This witness, on cross-examination, says the arms were "tied up in blankets harge bales." When asked how many were put in the court-house he said, "That I could not tell;" and then, on further cross-examination, he says:

"Q. How many did they put in John Early's store?

"A. The best portion was put in John Early's store, and what was left was carried over to Barry Early's.

"Q. Did they take the blankets from around them or not?

"A. They had them tied up in bundles, with blankets around them, and carried them in."

"Q. Did they take the blankets from around them or not?

"A. They had them tied up in bundles, with blankets around them, and carried them in."

In the first part of his cross-examination, he says:

"Q. Will you swear that within three feet of those wagons you could discern with what they were loaded, and are unable to tell whether the drivers were white or black?

"A. I say I was busy looking after the wagons; my idea was they were black men; the wagons were loaded with guns.

"Q. How many men were with those wagons?

"A. There was two with each wagon that I seen."
On further cross-examination, he says:

"Q. How many men did it take to unload those wagons?

"A. There was about eighteen or twenty to the two wagons, Democrat niggers and Democrat poor buckrers unloading the wagon; Dorsey Lewis and others shooting anyis with powder, calling the attention of the rest of the people, while these men were unloading the wagons.

"Q. You watched the wagons, did you not?

"A. You bet I did.

"Q. How long did it take them to unload those wagons?

"A. I did not time them; I had no watch."

At first he says there were two men with each wagon and then that there were eighteen or twenty to the two wagons.

One other witness (Burrell McIver, record, page 335), and only one other, testifies to having seen arms at Darlington Court House, as follows:

"Question. Did you see any men with guns, and to what political party did they belong?

"Answer, The Democratic; I saw no arms but theirs.

"Q. Where were these men with their guns?

"A. In a store in front of the court-house."

Mr. Perfisone, in his report, quotes this witness, but he neglects to say that on cross-examination he says:

"Q. Who were those men that you saw with guns?

"A. I could not tell that; I saw them through the window."

Now, this is all the evidence in the record as to arms being seen by any one at Darlington Court House. Arms, then, are claimed to have been seen by one man the night before the election "wrapped up in blankets," and carried secretly through the streets, and on the day of election by one other man in "a store," and he saw them "through the window."

Suppose this was all true. Is this such a display of arms at the polls as "to deter men of ordinary firmness from voting?" If the testimony of these two witnesses is to be believed, the effort seems to have been to conceal the arms, not to display them. Who could possibly be deterred from voting by the arms referred to? Certainly no one, unless those who saw them, and the seeing of rams was confined to two men. There were no arms seen by these two men, or any one else, at or about the polls; no witness says there were. If there were arms in a store it must have been some distance from the polls. The court-house is described as in the center of a public square with a street running all around it, and stores on the opposite side of the street from the court-house. If, therefore, Burrell McIver saw any arms, they were some distance from the polls, and they arms, it is strongly denied in the testimony for the contestee that there were any arms, even those referred to, about the polls. Here are some extracts on this point from the testimony:

It will be remembered that the witness, Ainswell Weston, jr. (page 92), stated that the arms were carried to Mr. Earley's store, and the witness, Burrell McIver (record, page 351):

"Onesting the court-house."

record, page 335), says that he saw men with arms through the window, "in a store opposite the court-house."

Dr. B. C. Normets (record, page 351):
"Question. State your age, residence, and occupation.
"Answer. Forty-eight; Parlington Court House; physician.
"Q. What poll did you attend on the day of the last general election?
"A. Darlington poll. Just before sunrise I was waked up by a messenger from a man who was very sick at John Earley's store, to come and see him. I went to see the sick man about sunrise; I went in to see Mr. McSween.
"Q. It is what is known as John Earley's store, a building just opposite the front of the court-house?
"A. Yes, sir.
"Q. State who the sick man was, and whether you went into that store more than once during that day?
"A. The man was William McSween, and I went into the store three times during that day.

"Q. Did you see any arms in that store on that day?
"A. I did not."
On his cross-examination, he says:
"Q. Could there not have been guns stored in Mr. Earley's store and you not have seen them?

"A. I was in the three rooms of the store, and saw none; it is possible that they may have been stored there and still I might not have seen them; I was in the store half an hour at one time, and went into all three of the rooms; still I did not look for guns, and saw none.

"Q. Was there not a current rumor that there were such guns stored away?
"A. None, to my knowledge.
"A. None, to my knowledge.
"A. None, to my knowledge.
"A. I heard such rumors subsequent to the election."

Philip Lewenthol (page 545):
"Overtical state of the course of the course of the course."

"Out the such that there were such guns stored away?
"A. I heard such rumors subsequent to the election."

"A. I heard such rumors subsequent to the election."

Philip Lewenthol (page 545):
"Question. State your age, residence, and occupation.
"Answer. Thirty-five; Darlington Court House; merchant.
"Q. What poil did you attend on the day of the last election?
"A. Darlington Court House poll.
"Q. In what capacity did you attend that poll?
"A. Clerk of board of managers.
"Q. Were there any Democratic arms stored away at any place within the polling-place?
"A. There were none.
"Q. Do you know of any Democratic arms being stowed away, and where, within the vicinity of the polls?
"A. I do not know of any.
"Cross-evamined by Samuel Lee:

"A. I do not know of any.

"Cross-examined by Sanuel Lee:

"Q. Will you swear that there were no Democratic arms stored away in the rooms of the court-house on the day of the election?

"A. I will most positively swear it.

"Q. Did you go into each and every room in the court-house during that day?

"A. There are but two rooms, and I went into both of them."

W. P. Cole, the sheriff of the county, on page 529 of the record, says:

"Q. If you had believed that any particular class of citizens had stored away arms in the town of Darlington on the day of the last general election, for the purpose of violating the public peace, or otherwise to do injury is any other class of citizens, would you or not, as the chief executive officer of the county, have regarded it your duty to investigate the truth and prevent impending trouble?

"A. I did on that night, as soon as I heard the rumor, examine either place, and was satisfied that there were no arms in either of them."

C. S. McColloch, page 527, says, in answer to Mr. Lee, on his cross-examination:

C. S. McColloch, page 527, says, in answer to Mr. Lee, on his cross-examination:

"Question. Will you state positively that there were no arms stored in the court-house or any part of it on the day of election?

"Answer. There were none up there, and, as far as I know, none elsewhere." There is much more testimony of a similar kind on this point in the record, but this is crough.

We can not conclude from the evidence that there was such a display or use of arms at this poll as will bring this case within the rule as laid down by McCrary. SEC. 416. The true rule is this: "The violence or intimidation should be shown to have been sufficient either to change the result, or that by reason of it the true results can not be ascertained with certainty from the returns. To vacate an election on this ground, if the election were not in fact arrested, it must clearly appear that there was such a display of force as ought to have intimidated men of ordinary firmness."

We come now to the only remaining objection to the counting of this poll, to wit, "That a large number of qualified voters who desired and offered to vote for contestant" were refused or prevented from doing so by the supporters and adherents of the contestee. What says the testimony on this point as shown in the record? It is not denied that there was a large crowd of colored people assembled very early in the morning at and around the store where they expected the polls to be opened, and that they had complete possession of the supposed poll. But the poll was not opened at the place they expected it to be. It was opened at the court-house, and it was fully a half hour after the poll was opened before the colored people were aware that it was being held at the court-house, and by that time the whites were assembled there in considerable crowds, and were not voting. As soon as the colered people knew where the poll was being

held they tried to get to the box to vote, but the whites were already at the polls in such numbers that the colored people could not get to them at that time. Great excitement among them ensued and increased with the difficulty to get to the polls. About this time a difficulty occurred somewhere out on the public square between "two lads," as the witness for the contestant asys—a white man or a boy and a colored man or a boy, about some private matter not connected with polities. Blows were struck and the police interferred and arrested both offenders; and while taking them to the guard-house some resistance to their being carried to jail was made on the part of their friends, and certain persons drew their pistols in support of the police; but the offenders were lodged in the guard-house and the whole fuss was over in a few moments and no further disturbance occurred during the election. During this little disturbance there was considerable excitement, especially among the negroes, and just then J. A. Smith, the Republican county chairman, got upon a cart or wagon and ordered the colored people to gu home, saying, "they could not vote there that day." Thereupon the colored people, in a considerable crowd, left the polls and went off. This occurred about half past 9 or 10 o'clock a. m. Now, as to the facts stated above, there is no dispute in the testimony. The contestant, however, claims that his supporters left because it was evident that they could not vote, or would not be allowed to do so, and the contestee denies that such was the case, and claims that had they remained all could have voted who cared to do so, and all would have been allowed to do so who presented themselves to vote. This is the point at issue, and it can only be determined by the evidence, and we therefore quote it.

E. C. Baker (record, page 537):

we therefore quote it.

E. C. Baker (record, page 537):

"Question. State your age, residence, and occupation.

"Answer. Fifty years old; Darlington Court House; lawyer.

"Q. How long have you resided in the town of Darlington?

"A. I came here in the fall of 1899.

"Q. Where did you reside prior to that time?

"A. Massachusetts.

"Q. Did you hold any official position in Massachusetts?

"A. Yes, sir; I was a member of both branches of the State Legislature at different times, and was president of the Massachusetts State senate in 1856, and subsequently about three years a member of the State bard of insurance companies, and practiced as a lawyer for ten years in the State and Federal courts.

"Q. Do you hold any commission under the United States Government, and what is it?

"A. Yes; I am United States commissioner.

"Q. What poll did you attend on the day of the last election?
"A. Darlington poll; I got there about 10 o'clock.
"Q. In what condition did you find the court-house steps when you came to

"Q. In what condition did you find the court-noise steps where them?

"A. There was no one on them at all when I came here?

"Q. Was there not then ample opportunity for any class of voters to come up and vote?

"A. Yes; I came up the steps on one side of the door; there was nobody on them then. I voted and stood and talked with managers for a few minutes, and to my recollection there was nobody in front of the door while I was there. I then went down the steps on the other side and saw nobody there.

"Q. Did you know of any violence or intimidation on the part of Democrats toward the Republicans?

"A. I saw nothing of that kind. There was plenty of time from that time until the polls closed for any one to have voted who had chosen.

"Q. To your best knowledge and information and belief were there not many colored men who voted the Democratic ticket here on that day?

"A. I think so, sir.

"A. I think so, sir.

"Q. Were you in your office the night prior to the last general election?

"A. I do not think I was; but I was there on Saturday night preceding the election at the request of one Edmund II. Deas, as being United States commissioner, to qualify various parties who had been commissioned as United States deputy marshals and United States supervisors of election in this county. Mr. Deas came in about dark with several parties; six or eight; I don't remember now. Their commissions were produced, and I qualified them. After that Mr. Deas proceeded to give them instructions. After making explanations of their printed instructions he proceeded to develop his plan for election morning, and among other things he stated that the colored people as they came in on different roads were to halt and concentrate, and as soon as it was daylight or at crack of day, as he said, the word would be passed to gather in, and then they were to lose no time, but rush for the poils and surround them. He explained to them where the ballot-box was to be at the market-house. They were to gather round the window in a solid body and stand their ground. He had a very large came with him and advised them all to get good, large, tough sticks. He then showed them how to take hold of their sticks and form a line around the ballot-box. He told them to stand steady, and under no circumstances allow their line to be broken."

C. S. McCollough (record, page 526) is asked what he save that the states and the save that the process of the save that the save that

C. S. McCollough (record, page 526) is asked what he waw when he went to the lace where the polls had been held in 1878, and he answers:
"I saw two or three hundred colored men gathered around the window.
"Question. Was that just before the opening of the polls?
"Answer. Yes; they gathered there about 5 o'clock.
"Q. If the poll had opened at that time, would they not have had entire posession of it?

session of it?

"A. Yes; it looked like the whole window was crowded.

"Q. Was the voting early in the morning rapid?

"A. Yes, very rapid until 10 o'clock; after 10 o'clock any one could have voted who had chosen; about 8 o'clock the box was crowded by colored men.

"Q. After 6 o'clock the polls closed; did the number of ballots in the box tally with the poll-list?

"A. Yes, sir.

"Q. Was the count fair, and the return made by the managers in accordance with that result?

"A. It was."

"Q. Do you not know that a large number of colored men left without voting?
"A. No; I do not know it; but I heard that Jack Smith advised the colored people to go home and not vote. They could have voted if they had wanted to do so."

-

W. P. Cole (page 528):
"Question. State your age, residence, and occupation.

"Answer. Age, thirty-five; Darlington Court-House; and occupation, sheriff of Darlington County.

"Q. Did Jack Smith, the county chairman, ever make any remark in your presence in regard to the result of that election; and, if so, state what it was?

"A. I recollect a conversation between Rufus Vaun and Jack Smith, in which Jack admitted to Rufus that from 9 o'clock until the polls closed every man had an opportunity to vote, and that the election was fair.

"Q. Did you have occasion at any time before the opening of the poll to pass near the market-house, where the polls were held in 1878?

"A. There were about two hundred colored people in front of the window of the market-house, in two or three lines, and in between each line I noticed that they held large sticks, and what the sticks were for I do not know.

"Q. Did they occupy half of the space or the whole space in front of that window?

ow? The whole space. After the polls had been opened at that place would they not have had possession of it?

ntire possession of it?

"A. Yes, sir.

"Q. Has it or not been the custom or practice of Republicans in this county at revious elections to reach the polls before daylight in the morning and take ossession of them?

"A. It always has."

I. I. Ward (page 590):
"Question. Did you go into the vicinity of the market-house, were the poll was held in 1878?"

"Question. Did you go into the vicinity of the market-house, were the poll was held in 1878?"

"Answer. I did.

"Q. State what you saw there.

"A. Atabout half past 5 o'clock a very large body of colored persons marched into the public square, each with a large cudgel in his hand. They formed around the window where the polls were held in 1878 and extended back to the drug-store. They formed in two ranks and crossed their clubs, which they had previously held on their shoulders as they marched.

"Q. How many men do you suppose were around that window?

"A. Taking those who were formed in ranks and others around, I suppose there were between four and five hundred.

"Q. Did they occupy the whole space or only half the space?

"A. The whole space. No one could have voted at that poll except by violence without their consent.

"Q. When the polls opened at the court-house door, was there not a crowd in the early part of the day at the polls?

"A. The polls were opened at 6 o'clock, and were crowded about two hours and a half before they were accessible to every one who wanted to vote.

"Q. Were you in front of the market-house.

"Q. Were you in front of the market-house.

"Q. Whout what time did the press of voters cease at the Darlington Court-House poll?

"A. About what time did the press of voters cease at the Darlington Court-

"Q. About what time did the press of voters cease at the Darlington Court-House poll?

"A. About two hours and a half after they were opened. I left the poll at 8 o'clock, and got back at half past 8, and when I got back any one could have voted that had wished.

"Q. Did you hear any order given by Jack Smith to colored Republicans on the dark."

4. Did you hear any the stage is a day?

A. Yes; he told them to go home about 8 o'clock, as near as I can recollect, now it was before 10 o'clock.

Q. Did you talk to any colored Republicans here on that day in regard to the order?

'A. Yes: I told them to go back and vote; that I had no doubt that their leaders had ordered them to go away, but that they could vote if they wanted to, and it would not benefit them to refuse. They replied, some of them, that they were not allowed to vote and they were going home. They did not vote after that in a body, but individuals of them did. They said they were not allowed to vote when they wanted to and they would not vote at all."

allowed to vote when they wanted to and they would not vote at all."

On his cross-examination he says:

"Q. Do you swear that the Democrats did not take possession of both steps leading to the polls and prevent a large number of Republicans from reaching the polls to cast their vote?

"A. When the polls were opened the Democrats were nearest to them and they made a rush for them, and both steps were crowded with Democratic voters for the space of about two hours; during that time I doubt if any Republican votes were cast, and I am sure no Republican made any effort to get to the box after that time; they had every opportunity to vote until the polls closed; the crowd upon the steps voted as rapidly as possible, and made room for others; the body of Republicans stood off during that time, paying very little attention the what was going on."

J. A. Law (page 532) the Democratic county chairman:

the body of Republicans stood off during that time, paying very little attention to what was going on."

J. A. Law (page 532) the Democratic county chairman:

"Question. Immediately after the polls were open did you go to or in the vicinity of Trial Justice Warley's office, where the polls were held in 1878?

"Answer. I did. I heard a good many men laughing and going toward Capain Warley's window, and I asked if they were still holding the window. I then went around to the window and saw them standing there with their sticks crossed, and I heard several say: 'Close up and hold fast, boys, the Democrats are just trying to fool you. The polls are going to open here.' While I was standing there J. A. Smith, the Republican county chairman, and several other prominent Republicans came from that direction, walking near by me. I said to Smith: 'Why don't you tell your people that it is no use to stay at that window, for the polls have already been opened for some time at the court-house.' He replied, pointing to the court-house, 'Look yonder. Is there any chance for a Republican to vote there?' I pointed to Captain Warley's office and said: 'Look yonder, if that had been the right place, what chance would there be for a Democrat to vote there?'

"Q. What time did the press of voters on the court-house steps cease?

"A. Before 9 o'clock. As soon as I saw that the press upon the steps was about over I went up home to breakfast. When I came back, about half past 9, there was no press at all any more than at any ordinary election. They seemed to be voting about as fast as the managers could take them in.

"Q. From half-past 9 o'clock during the remainder of that day were the polls easy of access?

"A. They were. There was steady voting up to about 2 o'clock. The polls were not blocked at all.

"Q. Jid you hear any order given by Jack Smith to Republicans on that day?

"A. No, I did not; I did hear him say that he would advise the Republicans to go home. I told him not to do so, for I would see that every man had chance to

to vote; that the Democrats now were voting, and the Republicans that afterward.

"Q. If the Republicans had remained at the polls, contrary to the advice of their leaders, could they not all have voted without difficulty?

"A. I think they could; the polls were almost clear from 2 to 6 o'clock.

"Q. Did you hear any of them say why they would not vote after they had an opportunity to do so?

"A. Yes, sir; as I was coming from breakfast I saw a great many Republicans on Pearl street. As I came through them I remarked, 'Why do you not go back and vote?' They said, 'We have agreed not to vote.' I agreed at the time that if they would go back I would see that they had a fair chance to east any vote they pleased. They refused to go, giving me the same answer as before.

"Q. Was there any violence or intimidation on the part of the Democrats gainst Republicans at the Darlington poll on that day?

"A. None at all.

"Q. Did you know of any Democratic arms being stored away in the town of Darlington for the purposes of that election?

"A. I did not.

"Q. Did you at any time during that day go into what is known as John Early's store, opposite the court-house?

"A. I did once.

"A. I did not."

"A. I did not."

"A. I did once.

"Q. Did you see any arms there?

"A. I did not."

I, Gregg McCall (page 110), one of contestant's witnesses:

"Question. Did all Republicans, who wished to do so, have an opportunity of casting their ballots at this poll on that day?

"Answer. Yes, sir; I considered that everybody here on that day had ample time and opportunity to vote. Because the white people happened to get charge of the polls that morning first, they could not vote at the very time they came up, and they were advised by Jack Smith, just after that little difficulty, to go home. I considered the polls was clear from about 9 o'clock in the morning; the white folks had charge of them up to that time, and any one could have voted after that time if he wanted to."

Other witnesses for conteste testify to the same facts and state of things. Their testimony is found in the record from page 526 to 554.

The contestant examines two hundred and forty witnesses to prove they could not vote at this poll. They nearly all say so, but none of these witnesses say they remained at the polls and tried to vote until it closed. One of them says he staid until 2 o'clock. A few say they staid until 1 o'clock, and a few until 12 o'clock, but nearly all say they left the polls before or about 10 o'clock a. m

The law nowhere guarantees to the citizen that he shall vote at or before any particular hour of the day, but it does undertake that he shall have the opportunity to vote some time between the opening and closing of the polls, that is, some time between 6 o'clock in the morning and 6 o'clock in the evening, but he muss endeavor to exercise that right diligently during the hours the polls are open. It will not do for the voter to leave the polls before they are closed and then say he was deprived of the opportunity to vote.

As to this poll, no witness says that these two hundred and forty persons could not have had the opportunity to vote had they remained. None of them went to the polls and tendered their votes and were refused. Many witness

Wesley Dargan (page 359):
"Question. Did you vote?"
"Answer. No, sir.
"Q. Why not?"
"A. There seemed to be a

"A. There seemed to be a fuss, and as I met the Republicans going back home who said they could not vote, and when I got here I did not try. "Cross-examined:

Q. Could you have voted if you had tried?
A. I think I could have if I had tried."

"A. I think I could make it I had tried."

Henry Perkins (page 360):
"Question. Could you have voted after 12 o'clock had you tried?
"Answer. I could have, but it was too late.
"Q. Why was it too late?
"A. Everybody had cut out and gone home."

Samuel Marshall (page 361):
"Answer. I did not stay around the polls all the time; do not know if there was a chance to vote or not."

Dallas Dargan (page 362);
"Question, Why did you not try?
"Answer. Because I had been prevented the first part of the day."

Simeon Jackson (page 385):
"Question. Was it impossible for a Republican to vote?"
Answer. I did not notice the poll to that effect."

Toney Rhodes (page 396):
"Answer. After I heard what Mr. Smith said (Smith was the Republican chairman who told them to go home) I never tried to go up the steps."

Peter Singleton (page 397):
"Answer. The cause of that order was a scuffle between two lads, one colred and one white."

Caltin McIver (page 131):

"Question. Was it impossible to reach the polls?

"Answer. No; it was not so all the time."

Jacob McIver (page 133):

"Answer. The steps were not so crowded all the time; sometimes it was vasant."

Alexander Thomas (page 319):
"Answer, I never tried but once."

Moses Wilds (page 322):
"Answer. Was crowded about 12 o'clock, but in the afternoon they did not hinder any one.

Joseph Marks (page 352):

"Answer. I will not swear it, for they left the steps some time during the day.
"Question. When they left the steps could not Republicans vote?
"A. Some few of them could have, but the most of them had been gone home."

Ned Evans (page 358): "Answer. I didn't try.

Andrew Gitson (page 115):
"Question. Were you obstructed in getting upon the steps to get to the ballet-"Question. Were you obstructed in getting upon the steps to get to box to vote?"
"Answer. I did not make any effort, for the steps were crowded."

Ben Alexander (page 309):
"Question. Did you try to get to the ballot-box?
"Answer. I did not go near the court-house, as I saw no chance of voting."
John Freeman (page 318):
"Question. Did you make an attempt?
"Answer. I went to the bottom steps.

<sup>\*</sup> The "order" referred to was I. A. Smith's order to the colored people to go

"Q. Did that crowd of Democrats prevent you from reaching the ballot-box and casting your ballot?
"A. I wheeled away."

Henry James (page 324):
"Question. What prevented you from voting?"
"Answer. A fight took place betwirt a white man and a colored man.
"Q. Tell me what prevented you?"
"A. One of our leading men told me it was the best for us to go home."

"Q. Tell me what prevented you?

"A. One of our leading men told me it was the best for us to go home."

Entrum Pooler (page 328):

"Question. Why not?

"Answer. I heard the order after I got to Darlington that it was not worth while, and I did not persevere.

"Q. From whom did those orders come?

"A. I heard them from the Republican party, that we couldn't."

After such evidence as this from so many of these two hundred and forty witnesses of the contestant, can it be seriously contended that there was no opportunity to vote?

There is no proof that any one who offered to vote was denied or refused that right, and the returns for the poll show that 117 Republicans actually voted.

We can not conclude from the testimony that there was such an exclusion of or purpose to exclude Republicans from voting as will justify us in rejecting this poll on this allegation.

These two hundred and forty men at Darlington who testify that they were prevented from voting no doubt lost their votes, but not by being rejected at the polls by the managers.

The facts disclosed by the testimony are that they never approached the polls for the purpose of voting. They made no effort to vote, but, having failed to get to the poll first in the morning, on account of the crowal already there, they acted upon the advice of one of their leaders, Jack Smith, and went away before 10 o'clock in the day. They made no "diligent effort" to vote, and by their own act disfranchised themselves. But that is certainly no just cause for disfranchising the Lass legal voters who did succeed in casting their ballots at that poll. But your committee does not consider it necessary to decide whether or not to count these 240 votes, as it will not change the result of the election in the district. The vote cast at Darlington, as returned, was as follows: Total vote, 1,388, of which Mr. Richardson received 1,271, and Mr. Lee 117. Majority for Richardson, 1,154.

Let us now see how the vote of the district stands as corrected by the committee:

Polls.	For Richardson.	For Lee.
Total vote in seventy uncontested precincts		10, 211 4, 654
Vote at Lynchburgh poll.	639 319	1,423
Vote at Brownsville poll	290 483	90 458
Vote at Society HillVote at Timmonsville	533	337 75
Vote at Florence	582 1,271	647
Total vote in the district	19, 997	18,198 1,806

### Rivers and Harbors.

## SPEECH

## HON. JOHN VAN VOORHIS, OF NEW YORK,

## IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 28, 1883,

On the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on riversand harbors, and for other purposes.

Mr. VAN VOORHIS said:

Mr. VAN VOORHIS said:
Mr. Speaker: The River and Harbor bill has for years been the great log-rolling bill of this House. It is composed, usually, of three hundred, more or less, independent measures, grouped together in one bill, in order to make its passage sure.

It would seem that in preparing a river and harbor bill the first duty of the Committee on Commerce is to allot to each member of that committee the amount that he desires for his State or locality, and the next duty is to apportion the remainder of the bill in such a way as to secure votes enough to pass it. It is on this account that so many useless and worthless and illegal appropriations find their way into the bill.

I am in favor of proper appropriations for those rivers and harbors

way into the bill.

I am in favor of proper appropriations for those rivers and harbors which are of national importance. I believe the sentiment of the country is in favor of such improvements. It is the dishonest features of these bills and the more than questionable methods adopted to pass them which has brought the whole river and harbor appropriation business into disrepute. At an earlier day an appropriation for a river or a harbor was made upon its merits. Now the case is quite different. The river and harbor bill of the last session had in it items for many important and much needed improvements. While that is true, it is also true that more than half of the items of that bill were appropriations not fit to be made. Members of the Committee on Commerce complain that the metropolitan press

is against the river and harbor bill. They might have included almost the entire press of the country. Does it follow that a bill is a good one because the press is against it? In my judgment the press speaks the voice of the people on this measure.

The press is the great exponent of public opinion. It may sometimes be wrong, but, generally speaking, when the press is substantially unanimous, there can be no doubt but that it is right, and that the people are with it. The trouble with the last river and harbor bill is that there were too many Cheesequake Creeks and too many Sacramento Rivers in it. The chairman of the committee complains that the country is against improving the rivers and harbors. That gentleman knows well where the trouble lies. For example, there is found in the river and harbor bill of the last session an item of \$250,000 to begin a work estimated by the engineers to cost a million and a half of dollars. And what is this great work—this great national improvement. It is simply a job to take out of the Sacramento River the detritus which the miners of California put in and are continuing to put in. In order to get so odious an approthe Sacramento River the detrius which the miners of California put in and are continuing to put in. In order to get so odious an appropriation as that, one hundred and fifty items, or thereabouts, were put in, equally dishonest, and each of those was supposed to command a vote for the bill.

The President, in mild but unmistakable language, in his veto message expressed his disapproval of that bill. But there were votes enough secured for it to pass it over his veto. The press of the country and the public sentiment of the country approved the President's section.

When the present session of the House convened, the chairman of this committee, with a manner approaching to insolence, sought to catechise the Secretary of War in respect of some views that officer was supposed to entertain concerning the river and harbor appropriations of the last session; and on his motion, on the 9th of December, 1882, this House passed a resolution requesting the Secretary of War to report to the House, among other things, the following information:

Whether any moneys appropriated by the act of August 2, 1882, "making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes," were appropriated for works or objects that are not in the interest of or do not benefit commerce and navigation, and, if so, to name such works or objects, and the respective amounts so appropriated.

whether any of the moneys appropriated by said act have been or are being used or expended under its provisions upon works or objects that are not in the interest of or do not benefit commerce or navigation; and, if so, to name such works or objects and the respective amounts so used or expended.

It had been bruited that the Secretary of War held views adverse to the propriety of some portions at least of the river and harbor bill, and the chairman of the Committee on Commerce thought to get the War Department in a corner by the astuteness of his questions. The letter of the Secretary in reply shows how utterly he failed. The Secretary says:

My wish to give a satisfactory answer to the inquiries of the House has compelled me to make a new and very extended examination of the subjects covered by the act.

Having done this, it has appeared to me that, in many instances, the results of substantial benefit to general commerce were so obscure and apparently insignificant as to vindicate the doubt on the part of the House of Representatives indicated by the inqury presented in the resolution.

He gives a list of ninety-one works appropriated for which are of the character mentioned in the resolution. Among these is the improvement of the Sacramento and Feather Rivers.

This is, as I said before, an appropriation of \$250,000 to enable the United States to begin a work which will, in the opinion of the Secretary of War, cost one and a half millions of dollars. It is a sample of the bad items of that river and harbor bill. The Secretary receiving to their works extreme receiving to their works extreme receiving to their works extreme. tary, referring to that work, states:

## IMPROVING SACRAMENTO RIVER, CALIFORNIA.

IMPROVING SACRAMENTO RIVER, CALIFORNIA.

For improving and protecting gavigable channels of Sacramento and Feather Rivers

Scott as appears from the reports of the engineers the main part of this appropriation, and of expected appropriations for each one of eight years to come, would seem to be intended to be expended in the protection not only of the Sacramento and Feather Rivers, but of large areas of adjacent arable land from the effect of hydraulic mining; but this particular item will be made the subject of some remarks in another part of this response. If it was the intention of Congress to protect these lands from the flow of detritus it would be, in my opinion to that extent a local work and not in any way in the interest of commerce and navigation. Balance in Treasury July 1, 1882

\$5,000
Appropriated act of Angust 2, 1882

250,000
Drawn on requisition, July 1 to December 31, 1882

15,000

And the Secretary remarks upon it, in another place, as follows:

And the Secretary remarks upon it, in another place, as follows:

The matter of the improvement and protection of the channels of the Sacramento and Feather Rivers in California requires a special remark. Previous appropriations for the improvement of the Sacramento River have been mostly expended in dredging the channel, and of the present appropriation \$40,000 have been allotted for the continuation of this particular kind of work. The project submitted to me for the expenditure of the remaining part of the appropriation is for the erection of restraining barriers upon the Yuba, American, and Bear Rivers, tributaries of the Sacramento and Feather, to hold back the flow of detritus caused by hydraulified recommendation, and I have therefore been led to examine with some care the papers in this Department relating to the project, which is the result of careful consideration by the Engineer Bureau. The problem seems to be to prevent the injury caused by the downflow of about 38,000,000 cubic yards of deritus annually, caused by the artificial washing away of gold-bearing gravel-banks, in deing which 870,000,000 cubic yards of deritus annually which 870,000,000 cubic yards of water are annually used. The records indi-

cate that this downflow is injurious, not only to the navigable streams below, but enormously destructive to agricultural lands, both directly and by raising the flood levels of the rivers, and that the owners of these lands are equally if not more than any other class of citizens interested in preventive measures.

The streams and the mining works are within the State of California, and it seems that in at least one instance a mining enterprise has been enjoined by a local court from prosecuting its work in such way as to cause the injuries complained of, but I have not learned that it has been decided by the highest court whether the injury to navigation and agricultural interests can be prevented by judicial

of, but I have not learned that it has been decided by the highest court whether the injury to mavigation and agricultural interests can be prevented by judicial action.

The act of the Legislature of California, passed in 1880, the purpose of which was the raising of funds by taxation for certain objects, described as "the control of dibris from mining and other operations, the improvement and rectification of river channels, and the erection of embankments or dikes necessary for the protection of lands, towns, or cities, from inundation," was, in the next year declared unconstitutional by the supreme court of the State upon several grounds. One of them, as stated in the leading opinion, was—

"That the storage of debris is, in its nature, a private enterprise, in which the few only are interested. " " To promote a public purpose by a tax levy upon the property within the State is within the power of the legislature, but the legislature has no power to impose taxes for the benefit of individuals connected with a private enterprise, even though the private enterprise might benefit the local public in a remote or collateral way."

Consequently the efforts of the State authorities of California to impound the detrius from hydraulic mining enterprises were brought to an end.

The work projected would involve the expenditure, within the next eight years, of nearly a million and a half of dollars, with doubtful results; and, as the exact character of the work to be done is not indicated in the act, in my hesitation as to approving the project I have thought proper to refer to the debate in the House upon the passage of the particular clause in question. I have gathered from remarks made in the debate, which seemed to receive the unqualified assent of the chairman of the Committee on Commerce reporting the bill, that it was not the intention to commit the Government to the policy of providing reservoirs for the storage of detritus from future mining operations, it being thought that they were but a partial remedy, an

This is but a sample of the ninety-one items criticised by the Secretary of War. I have not time or space to give specific attention to each item of the ninety-one. There are many other items in that bill equally bad with the ninety-one mentioned that are not referred bill equally bad with the ninety-one mentioned that are not referred to in the Secretary's letter, probably because the records of the War Department do not show their character. The ninety-one cases are shown by the records in the War Department to be of the character stated in the resolution. They are, in the opinion of the War Secretary, of no substantial benefit to general commerce.

This letter is carefully considered, is based upon the records of the War Department and the opinions of the engineers, and is a conclusive condemnation of the river and harbor bill of 1882.

Instead of compalling the young but sale Secretary of Wartown.

Instead of compelling the young but able Secretary of War to sur-render, the Committee on Commerce were compelled to retire before his Gatling guns, routed and discomfited.

his Gatling guns, routed and discomfited.
But there seems to be no end to the ambition of that committee. Notwithstanding the adverse sentiment of the country; notwithstanding the adverse opinion of the Secretary of War; notwithstanding the adverse advice of the President, expressed in his message and in his veto, that committee, with a sort of unpleasant bravado, as much as to say "we know how to get the votes, and we defy you," have reported the present bill calling for about eight millions of dollars, a bill only better than the bill of last year because the amount appropriated is ten millions of dollars less. I have had some experience with this Committee on Commerce; I know its "tricks and its manners." its manners.

To illustrate the powers which that committee has sought to ex-

ercise I will state an incident of that experience which is in point.

I had the misfortune to incur the displeasure of that committee I had the misfortune to incur the displeasure of that committee in the last session, because I opposed the passage of their river and harbor bill. Happening to be concerned in a personal controversy with a member of the House, arising out of matters which occurred on the floor of the House, the Committee on Commerce took up this controversy, usurping jurisdiction over it, and, without notice to me, placed upon its records a resolution, which it, ignorantly, thought would determine the matter in controversy. That action was communicated to me by letter, to which I replied on the 27th of July. My reply, which will explain the whole matter, is as follows:

House of Representatives, Committee on Mines and Mining, Washington, July 27, 1882.

To the Committee on Commerce of the House of Representatives:

To the Committee on Commerce of the House of Representatives:

GINTLEMEN: I have the honor to acknowledge the receipt of your letter, signed by your clerk, dated July 20, 1882, informing me officially of the passage by you on the 7th instant of certain resolutions relating to what you are pleased to call an "attack" by me upon one of you (Mr. Reagan) on the floor of the House of Representatives. The text of the resolutions is as follows:

"Resolved, That the Committee on Commerce consider it a duty to take formal notice of the unprovoked and unjustifiable attack upon their colleague, Mr. Reagan, by Mr. VAN VOORHIS. They desire to record their recognition of Mr. Reagan, by Mr. VAN VOORHIS. They desire to record their recognition of Mr. Reagan, by Mr. VAN VOORHIS. and appreciation of the dignity orbearance, and ability characterizing his conclusive, unanswerable, and truthful refutation of the statements made by the member from New York, in connection with the bill to regulate emigration.

"Resolved, That these resolutions be entered upon the journal of the committee, and copies of the same be sent to Messrs. Reagan and Van Voorhis."

In answer to this communication I have to say:

First. I had seen some time ago in the public newspapers these resolutions, with the statement that you had authorized them. I preferred to wait until officially informed before taking notice of them. I did not feel warranted in assum-

ing, in the absence of official notification, that you had committed so high a breach of the privileges of the House. Your action seems to have been informed with ignorance and falsehood and inspired by malice.

Secondly, I feel bound to say that I believe most of you were ignorant that the Constitution of the United States prohibits you from calling me to account for words spoken in debate in the House of Representatives. For your information I respectfully call your attention to section 6, article 1, of the Constitution, which treats of the privileges of Senators and Representatives, and which contains this clause: "And for any speech or debate in either house, they shall not be questioned in any other place."

The attack which you charge me with making on Mr. REAGAN is in my speech in the House on the 27th of June last. In violation of the Constitution you organize yourselves into a tribunal, you sit in judgment secrety on my speech, and the first notice you give me of your proceeding is through the associated press, which announces your verdict. You took no testimony. You heard no argument. You allowed your impulses to travel off with your judgment. You did what cannot be justified by anybody who believes in fair play. I made my speech and Mr. REAGAN took an hour to answer me. I had no opportunity to reply to him or his many misstatements. He was not satisfied, but, as I am told, vexed the committee so continuously that you took this action in order to get rid of his importunities.

Again, you seem to be utterly ignorant of your powers under the rules of the House. Your committee is a creature of the rules. You have and can have no powers not conferred by law. The rules give you jurisdiction over "subjects" referred to your relating "to commerce, life-saving service, and light-houses." That is all. You ignorantly supposed that you could settle a controversy which arose in the House of Representatives between Mr. REAGAN and myself by the fiat of your committee, although it had never been referred to you. Aga

"The river Rhine, it is well known, Doth wash your city of Cologne, But tell me, nymphs, what power divine Shall henceforth wash the river Rhine!"

You have constructed the wickedest river and harbor bill ever presented to the House of Representatives. You have also doubtless killed the immigration bill. Beyond these exploits I know nothing except "cheek" that entitles you to bedeek yourselves with such airs. It is my bumble opinion that your indorsement will be taken for just what it is worth. It is REAGAN indorsing REAGAN, and that is all there is of it. It is a base use to which you have brought the Committee on Commerce.

merce.
Fourthly. In your resolution you assert that I made an "unprovoked and unjustifiable attack" on your colleague, Mr. REAGAN. It is plain that you don't understand the case. You are ignorant of the issue. I was not the attacking party. Let me state the issue raised by Mr. REAGAN, and I will state accurately from the record.

instifiable attack" on your colleague, Mr. Reagan. It is plain that you don't understand the case. You are ignorant of the issue I was not the attacking party. Let me state the issue raised by Mr. Reagan, and I will state accurately from the record.

The immigration bill passed on June 19th. On June 21st Mr. Reagan arose in the House and said:

"Trise to aquestion of privilege. House bill No. 6596, to regulate immigration, was referred to the Committee on Commerce, considered by that committee and amended. The gentleman from New York, [Mr. Richanbsox, a member of the committee, was authorized to report the amended bill as a substitute for the original bill. In his absence the amended bill was brought to me purporting to be the substitute bill with the report of Mr. Richanbsox, with the request that in his absence I should report the bill to the House. Acting on that suggestion, and after conference with some members of the committee, I reported the bill to the House, and it was passed under a suspension of the rules. The committee, on examining the bill passed by the House, have ascertained it is different in some respects which they deemed material from the bill reported by them, and they have instructed me to offer a resolution requesting the Senate to return the bill."

Mr. Rragan here charges that the amended bill was brought to him purporting to be the substitute bill, &c. The committee on examining the bill "have ascertained it is different in some respects from the bill reported by them."

Although my name was not mentioned, it was made known and charged that I had given the bill to Mr. Rragans, and that he supposed it was the identical bill which the committee lad ordered reported. There is no intimation that Mr. Rragans was a member, made a report or statement, which was given to the associated press and published the next day. In that report Mr. Rragans states the issue which he makes with me explicitly. He says:

"On the following Monday, during Mr. Richanbox's absence, Mr. Van Voormins, with the con

mended and asked that the House by unanimous consent do substitute the true bill, now in possession of the committee, for the one passed."

Here the charge is repeated in a modified form, but it is just as obnoxious as before. It is that the bill which I gave Mr. REAGAN "purported to be the bill agreed to by the Committee on Commerce" and that Mr. REAGAN was "mislead in regard to the bill, supposing it to be a true copy of the bill agreed to by the committee." The charge was three times repeated before I said anything. The question is, did I state to Mr. REAGAN that the bill he offered "vas s correct "way of the bill agreed to by the committee," and did Mr. REAGAN suppose that the bill he offered was a "true copy of the bill agreed to by the committee;" and with the bill I gave him was "a correct copy of the bill agreed to by the committee," and Mr. REAGAN knew when he offered due bill that it was not such copy. If I did deceive Mr. REAGAN with such a statement, then I deserve all the censure that can be heaped upon me. If I did not, then how unjust is your action in the premises!

The evidence is clear, and se strong that I did not doubt that if Mr. REAGAN should swear to his statement, in any proceeding where false swearing is perjury, I could convict him of perjury before any impartial jury of twelve men.

If Mr. REAGAN did agree to a change of the bill before he offered it, in any particular, then his charge is false. I assert that he did. I will refer to two items of evidence.

First, I quote from his speech (see RECORD of January 28, page 34):

The evidence is clost, and se strong that I did not doubt that if Mr. REAGAN should swear to his statement, in any proceeding where false swearing is pecijury, I could convict him of periory before any impartial jury of twelve men.

If Mr. REAGAN did agree to a change of the bill before he offered it, in any particular of the bill select that of the I will refer to two items of wild the committee and brought here has been all the did. I will refer to two items of the wild the committee and brought here has been been proposed at writing by the forecommittee and brought here for the committee and throught here has been proposed in writing by the committee and brought here for the committee of the committee and brought here has been agreed to be changed from the committee, or members of the committee, been agreed to be changed from the committee, it reports it is said. We did not a support the committee of the committee is said. The said is supported by the committee of the commit

"The Confederate Government \* \* \* never paid a dollar to a contractor which had become due before the 1st of June, 1861."
If this statement were true the proviso was, as he asserted, unnecessary. But it was utterly false.

Mr. REAGAN's statement on the floor of the House that the confederate government had never paid any of these claims was not credited. A postponement was had and its falsity conclusively established by his own reports, vouchers and records, found in the confederate archives at the War Department, papers which he

had and its falsity conclusively established by his own reports, vouchers and records, found in the confederate archives at the War Department, papers which he supposed were not in existence.

The joint resolution ignominiously failed. But for the sagacity, the ability, and the diligence of a distinguished lawyer and member of the House from Michigan, Judge Willers, who examined the records and exposed the fraud, the Treasury would have been mulcted in the sum of \$575,000, which, according to agreement, would have to be paid over to the confederate government, and the Texas gentleman seems to be all there is left of that, and of course he would get the money. I will quote from the debate on that resolution a few words:

"Mr. CONCER. Now, sir, if I remember my remarks of the other day, I said that it did seem strange to me that a law appropriating \$800,000 passed by the confederate government, and a public report printed by the postmaster-general of that government, saying that he had appropriated over half a million of that \$800,000 to the payment of mail contractors for services prior to May 31, 1881, could have existed without coming within the knowledge or memory of my friend, the late postmaster-general of the confederacy, or of gentlemen who were then members of the confederate congress. " "The gentlemen who were then members of the confederate congress. " "The gentlemen who were then members such a law or such a report is the denial of one man, but the circumstance is still just as strong, just as unaccountable. And when we find that portion of the eighteen claims audited by the auditor of the confederacy and paid by the postmaster-general of the confederacy out of the \$800,000 appropriated by that government; when I find that fourteen of those claims (I have a list of them here and will have it printed with my remarks) are on file in the auditor's department, and are among the very class of claims which this resolution proposes to pay, having been paid once by the confederate government, it does seem to

me inquiry!

"Mr. REAGAN. The gentleman will allow me to say that this very resolution rovides that these payments shall be made under the previous law, which itself clared that no one who had already been paid should be paid again.

"Mr. CONGE. But in this resolution that limitation is stricken out.

"Mr. REAGAN. But the resolution directs payment to be made under the law

"Mr. Reagan. But the resolution directs payment to be made under the law already passed.

"Mr. CONGER. The very agreement of the contractors whose names I have here provided, that if they could get this money from the United States they should pay it back to the confederate government, and, therefore, it is a duty for them to follow into the Government of the United States their claim, and recover it from the United States again according to their contract, in order that they may pay it back to the lost cause or some one clse. [Laughter.]

"I do not blame the contractors, for they pledged themselves to the confederate government that if it paid out the \$500,000 to them they would get it out of the United States and pay it back. They are acting honorably. [Laughter.]

"Mr. TOWNERIN, of New York. That is high-toned—clear up. (Great laughter.]

"Mr. CONGER. Under the law passed last year, which provided that these claims should not be paid if they had already been paid, these claims were presented and filed for payment by the Government, and they had to swear that they had not been once paid. Here are the papers to which I have referred and which wish to make part of my remarks. I hear no objection. [Here follows the list of claims.]

wish to make part of my remarks. I hear no objection. [Here follows the list of claims.]

"Mr. CONGER. There is the list of 'the twice-told take' of what came so near being 'the twice-paid claims.' There also is the circular of our Government, quoting both the law of Congress and the opinion of the Solicitor of the Treasury, and, in addition, the rules of the Department respecting these very claims, and yet these claims are filed, sworn to, and payment demanded. I have said enough. The matter tells its own story."

I allude to this incident of Mr. Reagan's record only because it bears upon your action—you were, without doubt, ignorant of it, all but one of you. You can see that Mr. Reagan's integrity needed some indorsement.

Sixthly. Mr. Reagan, in his speech, said that he had offered the immigration bill as a favor to me. If that were so, the presumption follows that it was the bill as I desired it to be. I could hardly be expected to ask him, as a favor to me, to pass a bill I was opposed to. The bill, as I offered it, contained a provision to prevent the immigration of paupers into this country through Canada. Mr. Reagan's amendment struck this all out. It thus became Reagan's bill, and not mine. I might be supposed to be anxious to keep that provision in the bill, but if Mr. Reagan's amendment struck this all out. It thus became Reagan's bill, and not mine. I might be was doing use a favor. If he thought he was favoring me it was because he knew the bill had been made satisfactory to me.

Seventhly. You seem to have organized your committee into a "school for scandal," or literary bureau, for supplying the newspapers with news that emanates from you. Perhaps you will give this brief communication an airing in the same manner. Perhaps you will give this brief communication an airing in the same manner. Perhaps you will enter it upon the journal of your committee in order that it may enjoy an equal immortality with your resolutions.

Upon this letter the Democrat and Chronicle contained the following editorial: MEL VAN VOORHIS'S LETTER.

Elsewhere is published the letter of the Hon. John Van Voorhis in reply to the resolution of the Commerce Committee of the House, virtually censuring him for his action on the immigration bill. It is a caustic analysis of the impertinence and the injustice of the action of the committee and a most searching review of the record of Mr. Ragan, not only in reference to the chief issue involved, but also in reference to certain other matters which do not confirm whatever reputation for veracity that gentleman may have achieved.

Mr. Van Voorhis, in that vigorous language of which he is a master, makes a strong, and, as we believe, an impregnable showing for his side of the case. As has been before stated in these columns, the issue is one simply of veracity between Mr. Reagan and Mr. Van Voorhis, with the circumstantial evidence in favor of the version of the latter gentleman. This view is fortified by the presentation which Mr. Van Voorhis mow makes, and which should commend itself to the judgment of fair-minded men; and certainly the usurpation of power on the part of the committee in attempting to censure Mr. Van Voorhis is clearly demonstrated.

To that letter the Committee on Commerce made no reply. It has

by its silence admitted all that it contains.

It is no compliment to the Speaker of this Houses that he made the mistake of placing the important powers and trusts of this House which relate to the commerce of the country in incompetent hands.

Mr. Speaker, I have not the slightest personal feeling against any

member of that committee; neither the bulldozing of the chairman of the committee, nor the drivel of the gentleman from Maryland, now in his second childhood, has disturbed me. All this is to be expected from this committee. I oppose this river and harbor bill because it is not needed. I oppose it because it is an unnecessary burden upon the laborers of the country, who are taxed to raise the money which we are squandering. I oppose it because the people of my district and of my State are opposed to it.

#### The Tariff.

#### SPEECH

# HON. RICHARD W. TOWNSHEND.

OF ILLINOIS,

### IN THE HOUSE OF REPRESENTATIVES.

Saturday, March 3, 1883.

On the bill (H. R. 5538) to reduce internal-revenue taxation.

Mr. TOWNSHEND, of Illinois, said:

Mr. SPEAKER: In the expiring hours of this session I feel no hesitation in hazarding the assertion that this Congress will go down into history as having done more harm and less good than any which has assembled since the Government was founded. The evil influence of mongoly has hung over it and exerted a powerful influence over its action from its incoming down to this hour of its outgoing. The hired agents of bank, railroad, and tariff monopolies have constantly crowded our lobbies and committee-rooms, and besieged members upon questions

deeply affecting the public welfare.

The fell spirit of monopoly has paralyzed and defeated the most salutary and just measures in the interest of the people. I shall not dwell upon other measures but at once call attention to this. We are now brought directly to the consideration of the crowning act of wrong and injustice of a Republican majority in this Congress. This conference committee has aimed a fatal blow at the public good, and in its subserviency to the protected classes has exceeded its duty as a conference committee. Instead of confining its action to an adjustment of differences between the two Houses, it has disregarded its instructions and set at defiance the action of both Houses. I will not stop to examine details, but for a moment will ask your attention to one or two items in the metal schedule in order to show how it has exceeded its duty.

Let it not be forgotten that the authority conferred on this commit-tee was that it should seek to harmonize the matters of difference be-tween the two Houses. Now, see how it has discharged its duty. The Senate fixed the duty on iron ore at 50 cents per ton; the House did the same. There was of course no difference between the two Houses for this committee to adjust, but this committee, without any ground for its action, raised the duty to 75 cents per ton. In whose interest was this done? Was it in the interest of the people? Of course not. It was solely in the interest of the owners of iron ore. When we remember that iron ore lies at the foundation of all our iron industries, and all the articles so universally used which are made from that metal, we can easily see how much the cost of iron ore affects the public inter-

Take steel rails. The House fixed the duty at \$15 per ton, the Senate at \$15.68. Now, did this committee, in the interest of harmony between the two bodies, divide the difference or adjust it? No. The committee, in the interest of the steel monopoly, raised the amount of tax over and above that established by the two Houses and placed it at \$17 per ton.
Sir, the members of this committee have ignored the will of the ma-

jority in both Houses. In a star-chamber proceeding they have struck down the rights of the people. They have repudiated the action of the

Tariff Commission and of both Houses of Congress.

It is claimed by the advocates of this bill that it greatly reduces taxation; but where does the reduction fall? The first lines of the first section read as follows:

That the taxes herein specified imposed by the laws now in force be, and the same are hereby, repealed, as hereinafter provided, namely: On capital and deposits of banks, bankers, and national banking associations, except such taxes as are now due and payable; and on and after the 1st day of July, 1883, the stamptax su bank checks, drafts, orders, and vouchers, and the tax on matches, perfumery, medicinal preparations, and other articles imposed by Schedule A following section 3437 of the Revised Statutes.

You talk about relief to the poor. Is there any relief in that section You talk about relief to the poor. Is there any relief in that section for the poor man or the laborer. Do they own banks. Do they manufacture matches or medical preparations. Do they manufacture or use perfumery. Money will be just as hard to borrow at just as high rates; matches and medical preparations will cost just as much after the stamp-taxes are off as now. None but the manufacturers and bankers will be benefited by this reduction.

This section takes the tax off playing-cards, and the fifth section imposes a tax of 25 per cent. on Bibles and school books. Does a bill afford wholesome relief to the masses which makes gambling free and taxes Christianity and knowledge?

The first section takes twenty-two millions off of banks and the manufactures I have mentioned, while other sections leave onerous burdens

on food, clothing, and necessaries of life.

But this bill to a most grievous extent burdens all agricultural interests. As I have heretofore asserted, there is no relief or protection for the farmer. It is well known you can not protect or enhance the value of farm products. Their price is fixed in Liverpool and the markets of the world, far beyond the limits of your power. Wheat, corn, and provisions are only worth in my district what they will bring in Liverpool, after deducting the cost of transportation, insurance, com-

missions, &c.
Every farmer in the West understands this. You can not humbug him into the belief that he is protected because you place a duty on wheat. He knows as well as you that but a trifling amount of wheat is imported into this country and that is confined to the Canada border.

Our wheat is exported to the European and other markets of the world.

Our farmers have no fear that England, France, or Germany will bring their wheat across the Atlantic and undersell them on our shores, because they know full well those countries do not produce enough for their own consumption and that they depend greatly on the American

producer for grain supplies.

I am amazed at Republican members hailing from the West when I them day by day casting their votes in favor of manufacturing which lives and thrives upon bounties extorted from their farming con-stituents by the legerdemain of this tariff system. Those who so cast

their votes can not escape the charge of infidelity to their trust and will be held to a strict accountability for such action. Now, sir, let us for a moment consider the effect of a protective tariff upon different communities or States, as shown by the census reports of 1880. We will, as an illustration, take the agricultural State of Kansas and compare it with the manufacturing States of Rhode Island and Connecticut—the aggregate population of the two latter being within a hundred thousand of the former.

The members from Kansas represent a State which has:

Population Number of farms Total value farming interest Number mechanics of all sorts	996, 096 138, 561 \$364, 728, 149 11, 139
Manufacturing establishments which are really protected (iron and steel)  Number of workmen in these two establishments' employ	\$166,500
\$7	

Now, compare Kansas with the States of Rhode Island and Connecticut and you will find the representatives of the two latter States rep-

ì	Population	899, 231
Į	Number of farms	36,814
1	Total value farming interest	
I	Number manufacturing establishments	6,693
I	Capital invested	
J	Number of laborers	175, 683
1	Wages paid	\$64,857 137

These figures need no explanation. They plainly show how very small the protected interest of Kansas is in comparison to that of farming, which is not protected; and on the other hand how enormous is the protected interest of Rhode Island and Connecticut in comparison to their agricultural interest and to that of Kansas. It is easy to understand from the foregoing figures why the members from Rhode Island and Connecticut can vote for a bill like this, which builds up and enriches the owners and parties interested in the great manufacturing establishments of those States at the expense of the Western farmers. But I find it difficult to discover the loyalty to his trust of the representative whom the farmers of the West send here when I find that representative giving his vote to those who plunder his constituents.

Rhode Island and Connecticut are royally protected and enriched by this bill, but Kansas enjoys but a very insignificant amount of protec-tion, being mainly confined to that of two establishments, and indeed her distance from all foreign markets, cost of transportation, &c., furnish sufficient protection for all her domestic manufactures. Yet in nish sunction for all ner domestic manufactures. Fet in the face of these figures you find Republican members from the Wint zealously advocating a protective tariff on this floor who represent con-stituencies that are daily plundered by that system. I shall not pause to criticise their motives but leave their constituents

to judge whether they desire to continue the employment of Representatives who enact laws which, quoting the suggestion of Webster, increase the price of "everything the farmer buys and diminish the price of everything he has to sell." Sir, this is a system of laws which does not distribute the burdens of Government with an impartial hand but makes it an instrument of oppression to the many for the benefit of the few, a system which by artificial sophistry gulls the masses while they are plundered of their substance in order to fatten and pamper a privi-

leged class.

Mr. Speaker, the faithful representatives of the people who sit on the

Democratic side of this House have courageously resisted such legisla-tion with all the power left them under the rules, not in a factious spirit and not by obstructive or dilatory action, but by fair argument exposing the injustice and iniquity of this system, and by their votes; yet they have been censured and calumniated by the advocates of monopolies who are actuated by no motive of public welfare, but who clamor for measures under plausible pretexts which conduce to their selfish inter-

We have been venomously pursued with misrepresentation and vitu-peration by their agents and advocates. But, sir, we are conscious that this is a part of the penalty paid by those whose regard for the general welfare raise them above the plane of selfish personal interest, and who possess the courage to denounce injustice in high places. We feel, however, as Sir Robert Peel expressed himself, that we shall not go unrewarded when cherishing the reflection that we will "be remembered with the expressions of good-will in the abodes of those whose lot it is to labor and to earn their daily bread by the sweat of their brow when they shall recruit their exhausted strength with abundant and untaxed food; the sweeter because it is no longer leavened by a sense of injus-

This bill could not pass if it were opened to debate. It would signally fail if sufficient time could be had to expose the iniquities contained in it. Those who concocted it and who have inspired its adoptained in it. Those who concocted it and who have inspired its adoption by the conference committee knew full well they dared not permit the representatives of the people to discuss this bill beyond the two hours which have been allowed us for debate, and therefore they have resorted to the desperate expedient of gagging the members of this House and by the use of party lash, tyrannically force a majority of this House to vote for a bill which they must know is an edict of the lobby and an outrage upon the rights and freedom of the people, and which I now predict will be followed by such atrain of evils as will make it not only odious to the people, but to most of those it is designed to benefit, and

odious to the people, but to most of those it is designed to benefit, and which will in the next national election contribute largely to the downfall of the party which has enacted it.

Tariff-Wool Interest of Ohio-Necessity of Protection.

#### SPEECH

# HON. ADDISON S. McCLURE,

OF OHIO.

## IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1883,

On the bill (H. R. 7313) to impose duties on foreign imports, and for other pur-

Mr. CHAIRMAN: The long and exhaustive discussion of the tariff, both this session and last, would lead one to suppose that the two great interests of the country, the agricultural and manufacturing interests, had locked horns in this Hall and were engaged in a deadly war of extermination; that the legislation that would be beneficial to the one would necessarily be destructive of the other; that they are essentially repugnant and irreconcilable, and that the one was attempting to overreach the other by foul and unlawful methods. Nothing can be further from the truth.

These two great interests, the one producing over \$7,000,000,000 of agricultural products and the other over \$5,000,000,000 of manufactured articles in 1880, are not only not hostile, but friendly, cordial, and interdependent. A blow struck at the one hurts the other. Disorinterdependent. A now struck at the one nurs the other. Disorganize and unroof the manufacturing interest of the country—an interest which in 1880 employed 2,700,000 hands, paid \$947,953,000 in wages, used \$3,396,000,000 in materials, and produced \$5,399,595,000 in manufactured articles—by destructive tariff legislation, and you will inflict a blow on agriculture that will be felt in every corner of the Union.

Let the agricultural interests, on the other hand, suffer through the proportion of nature, by heat or cold, drought or flood, by the rayages.

operations of nature, by heat or cold, drought or flood, by the ravages of innumerable insects that feed on the vegetable kingdom, or from any other cause, and the manufacturing interests will feel it at once. The grain grows more golden in the light of the furnace and the corn lifts up a prouder head in the music of the grim industries. The prosperity of these two great interests is inseparable, and their calamities can not be disunited. He who seeks to array them in hostility to each other, to sow seeds of discord distraction and alignation between the extractions. to sow seeds of discord, distraction, and alienation between them, to

to sow seeds of discord, distraction, and alienation between them, to reprobate the one by eulogizing the other, is the true friend of neither, but the dangerous enemy of both.

Within the last twenty years this nation, in spite of the enormous waste of the war, has bounded almost at a single leap to be the first agricultural and manufacturing nation in the world. This double marvel is unquestionably the result of the protective policy so happily inaugurated in 1861. I believe in the sound, economic philosophy of

protection. I believe in the protection of home labor against the competition of foreign labor, and that protection should be proximate rather than incidental, direct rather than oblique. I believe in the protection of our agricultural interests where they come into competition with

of our agricultural interests where they come into competition with foreign production, and I am therefore inflexibly opposed to any reduction whatever in the existing tariff on wool and woolen goods.

This country has already had a most disastrous experience from the inadequate protection of its wool interest. The civil war stimulated this interest in a most unexampled manner. The national Army, numbering over a million of soldiers, was clothed in wool—woolen blankets, weeden great courts, wealen dress courts, wealen shower weeden blankets. woolen great-coats, woolen dress-coats, woolen blouses, woolen pants, woolen shirts, woolen drawers, and woolen socks. Martial patriotism was clad in wool. When the war ended this stimulation to production was withdrawn. The Government ceased to be a buyer. The blockade of the Southern ports was removed and the cotton of the South was restored to the commerce and consumption of the world. This conjunction of events caused the wool interest of the country to experience a most damaging stagnation.

The matter was discussed in Congress in 1865, 1866, and the legis lation of 1867 was the fruit of this discussion.

That legislation was most opportune in its provisions and beneficial in its effects. It rescued the wool-growers from impending calamity, and visibly reinvigorated a noble industry. Under its beneficent operations our flocks, from less than 25,000,000 in 1867, multiplied to over 35,000,000 in 1880. For the first time in the history of our country, the 400,000 American flock-owners received adequate tariff protection; and in 1880, of the 300,000,000 pounds of wool consumed by American looms, 155,000,000 pounds were furnished by domestic production. wholesome competition was established between foreign and domestic wools, and to-day you can buy for \$25 a home-made woolen suit fit to appear on Pennsylvania avenue, Broadway, or the boulevards of Paris.

appear on Pennsylvania avenue, Broadway, or the boulevards of Paris.

Ohio is the leading wool-producing State in the Union. Her farmers, with a native aptitude for progress, grow thoroughbred sheep. The sweetest mutton and the finest wool in the United States are produced in the valleys of the Killbuck and Muskingum. Ohio produces nearly one-sixth of the aggregate wool clip of the country. There are more sheep in Ohio than in Maine, Vermont, New Hampshire, Connecticut, Rhode Island, New York, New Jersey, Maryland, Virginia, North Carolina, South Carolina, Georgia, and Florida combined, with over a half million to spare. Thus, in the single State of Ohio, our flocks outnumber the flocks in all the States, exclusive of Pennsylvania, east of the Alleghanies, south of the Saint John's River, and north vania, east of the Alleghanies, south of the Saint John's River, and north of the Gulf of Mexico.

We are ready to compete with the flocks that feed on the vast prairies ries of Texas and New Mexico. We are willing to cross swords with Colorado with its golden climate; a State ably represented on this floor by my genial, impetuous, bimetallic friend [Mr. Belford]. We challenge the rivalry of California, where the sun shines, the birds sing, and the grass grows through all the revolutions of the seasons.

Ohio, hugging Lake Erie on the north, swept by polar storms for five months in the year, with the snow lying deep on her frozen hillsides, with no music of birds in her leafless trees, fears no rival in the United

States in sheep husbandry.

But we do most emphatically object to competition with Australia.

That great continental island, situated between the tenth and fortieth degrees of south latitude, divided in the center by the Tropic of Capri-corn, is the Eldorado of the sheep-grower. There its flocks need no roof in the winter but the sky, and no food but its luxuriant pastures. They multiply with abundant vigor, and are subsisted at a cost insignificant in comparison with the cost of subsistence in Ohio.

nificant in comparison with the cost of subsistence in Ohio. The flocks of Australia in 1880 numbered 73,000,000; of the United State 35,000,000. In the next decade Australia will astonish the world with its pastoral resources, and I would not be surprised that the census of her sheep attained the enormous figure of 150,000,000 head. Competition, therefore, with Australia is unequal. Tariff legislation alone can correct that inequality. The bill of the Senate, now on the Speaker's table, would strike a million of dollars from the profits of the Ohio wool-growers each year, and cause the wool-growers of Queen's Land, New South Wales, and South Australia to rejoice with exceeding great joy. I, for one, object.

I have listened, Mr. Chairman, for days to the heated declamation of the professed champions of the farmers on the other side of this Cham-

the professed champions of the farmers on the other side of this Chamber. Here is a case fit to wake up some agricultural Demosthenes on the other side and cause him to make this Hall ring with the silvery notes of pastoral eloquence. I notice, however, that when the real interests of the farmers are at stake, involving the practical application of the oconomic principle of protection, that the loudest champions of that interest do not embrace the opportunity with the alacrity and relish that should distinguish them. While Ohio is the first State in the Union in the magnitude of wool interest, it ranks second in the magnitude of its iron and steel interests. The Senate bill, in my judgment, would so seriously cripple the iron, steel, and wool interests of Ohio and of the whole country as to invite commercial disaster and ruin. If our great agricultural and manufacturing interests are to be disorganized and stricken down by injudicious tariff legislation, I insist that the Democratic party shall bear the sole responsibility. Civil Service.

## SPEECH

OF

# HON. WILLIAM H. CALKINS,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 4, 1883

The House having under consideration the bill (8, 133) to regulate and improve the civil service of the United States, Mr. Kasson yielded three minutes to Mr. Calkins.

Mr. CALKINS said:

Mr. SPEAKER: In three minutes' time one will not be expected to discuss the merits of a bill such as this is, or such as this is designed to be. There must be a turning-point some time in the history of this country in its civil service. I hope the passage of this bill will be the milestone that marks the turning point for the reformation of the entire civil

service of the country.

If our Democratic friends can afford to vote for a civil-service bill, we on this side can. They have been out of power for twenty-five years; their followers are clamorous for a chance to be appointed, and a distinguished member of their party at the other end of the Capitol recently said if this bill passes it will bind the Democrats hand and foot.

Mr. ATHERTON. Is that not the reason why you are in favor of

Mr. CALKINS. Oh, no; not by any means. Of course the Democrats will vote for the bill. Mr. PENDLETON is its author and it must

But seriously, Mr. Speaker, I should have been very glad to have had a bill thoroughly considered by the committee of the House and put in such a shape as would have accomplished the purposes of its authors. I do not believe they will. I shall vote for it as a step in the

The SPEAKER. The time of the gentleman from Indiana has ex-

Mr. ATHERTON (addressing Mr. CALKINS). You have fixed my vote on this matter by your speech.

The Tariff.

## SPEECH

# HON. JAMES F. BRIGGS.

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES, Friday, February 16, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other pur-

Mr. CHAIRMAN: On yesterday I struggled for some time to get the eye of the Chair and the ear of the House, but failed. To-day, having been more successful, I will trespass briefly upon your time and patience while I submit a few suggestions upon the subject under consideration. If there is any one sentiment that pervades the public mind, any one

opinion upon which all are agreed, any one great and universal demand coming up to us from the people of every section, it is for a material reduction of the revenues and substantial relief from the burdens of tax-

The revenues from all sources for the fiscal year ended June 30, 1882, were \$403,525,250.28. The ordinary expenditures for the same period were \$257,981,439.57, leaving a surplus of revenue \$145,543,810.71, which, with an amount drawn from the cash balance in the Treasury of \$20,737,694.84, made a total surplus for that year of \$166,281,505,55, which sum was applied to the redemption of the bonds, currency, and other obligations of the Government. The estimated revenues for the fiscal year ending June 30, 1884, based upon existing laws, will be:

A manage and and a manage after a manage and and	*****
From customs	\$235,000,000
From internal revenue	145,000,000
From sales of public lands	5,500,000
From tax on circulation and deposits of national banks	9,000,000
From repayment of interest and sinking fund, Pacific Railway	
Companies	1,750,000
From customs fees, fines, penalties, &c	1,400,000
From fees-consular, letters patent, and lands	2,650,000
Prome was a last in the patent, and minds	
From proceeds of sales of Government property	1,000,000
From profits on coinage, &c	4, 200, 000
From deposits for surveying public lands	2,400,000
From revenues of the District of Columbia	1,730,000
From misselleneous commen	
From miscellaneous sources	5, 370, 000
Total estimated ordinary receipts	415,000,000
	220,000,000

The estimated expenditures for the same period will be as follows:

Legislative Executive Judicial Foreign intercourse Military establishment Naval establishment Indian affairs Pensions Public works:	23, 481, 078 54 6, 725, 731 54
Legislative	
Miscellaneous   District of Columbia   Permanent annual appropriations	3,550,299 08
	117,018,038 26
Total estimated expenditures, including sinking fund	340, 280, 162 22
Or an estimated surplus of	74,719,837 78

In view of our prosperous condition as thus shown, justice requires us to listen to this demand of the people, and the wisdom of Congress should be evoked to secure the necessary legislation to accomplish the

An examination of the sources from which the bulk of these large revenues are derived will suggest at once to the careful and prudent legislator upon what articles the necessary reductions should be made to relator upon what articles the necessary reductions should be made to relieve the people of the country. During the last fiscal year there was collected from impost duties upon sugar, melada, and molasses, \$47,-198,312; upon wool and its manufactures, \$29,253,016; upon iron and steel and the manufactures thereof, \$24,175,547; upon the manufactures of silk, \$22,633,137; upon the manufactures of cotton, \$12,227,103; and upon spirits, \$6,771,483; making a grand total from these six sources alone of \$144,258,899, being nearly two-thirds of all the revenue collected from impost duties. For the same year the collections under the internal-revenue system were as follows: From spirits, \$69,873,408,18; from tobacco, \$47,391,988.91; from fermented liquors, \$16,153,920.42; from banks and bankers, \$5,253,458,47; from adhesive stamps, &c. from banks and bankers, \$5,253,458.47; from adhesive stamps, &c., \$7,569,108.70; from penalties, \$199,830.04; and from all collections not otherwise provided for, \$81,559; making a total of \$146,523,273.72.

From a mere glance at these figures I believe you will concur with me in the conviction that there is no place where reduction can be made

so well for every interest and for the good of all the people as in the reduction of the revenues derived from sugar. The average duty imposed by the present law, under which \$50,000,000 have been collected during the past year, is equal to 2½ cents per pound, or almost 53 per cent. ad valorem.

Sugar, as has been frequently stated upon this floor, is an article of prime necessity. It enters every household and is consumed by all people; it yields to the Government a larger revenue than is derived from any other source, either under our impost duties or under our internal-revenue system, except that from distilled spirits.

Why is it sought to continue the high rate of duty upon this article?

For myself, I would be willing to see it placed upon the free-list. We have placed tea and coffee there, and I would place sugar beside them, and thus give every man a "free breakfast-table."

What, sir, is the objection to the removal of the duties upon sugar? The answer is made that it is making war upon the doctrine of protec-We are told that this sugar industry must be protected in the Southern States! But, Mr. Chairman, we were assured yesterday by the gentleman from Louisiana [Mr. Ellis] that-

"This industry has been fostered from the time that the very first hut was erected at New Orleans; from the time that adventurous Frenchmen and Germans went up the coast to what is still called the German settlement and began the production of sugar. The French government, at a time when Louisiana was the child and nursling of France, was the first to advance bounties for the development of this industry. Louisiana became a Territory, and then by your mandate stepped into the Union with all the rights and dignity of a sovereign State. From that time to this, under every administration—Federal, Democratic, Whig, Republican—this industry has been steadily encouraged."

And by other gentlemen, that from that State alone the entire wants of the country can be supplied.

of the country can be supplied.

I wish the bright pictures painted by gentlemen who favor a continuation of these high duties, of the ability of the Southern country to produce all the sugar needed by the nation, were warranted by the facts in this case and were verified by the history of the growth and development of this industry. We have been informed by the gentleman from Louisiana [Mr. GIBSON] that in 1861 more than 50 per cent. of all the sugar consumed in this country was produced in the State of Louisiana. The product of 1861, to which the gentleman alluded, was the largest yield in any one year in the history of this industry, and conceding, for the sake of argument, that in that year Louisiana did produce over 50 per cent. of the entire consumption of the country,

yet the increase in the production has not kept pace with the increased consumption. During the past year the entire production of the country was 200,000,000 pounds, while the entire consumption was 2,200,000,000 pounds.

If the product of 1861 was 50 per cent. of the amount consumed, and the product of the whole country was only 10 per cent. of the consumption for the past year, at this ratio of increase will the advocates of high protection tell us in about how many years we shall be able to produce all the sugar consumed in the country?

all the sugar consumed in the country?

For the purpose of comparison, I will here insert a table of statistics of the product of the sugar industry in Louisiana from 1849-'50 to 1881-'82, covering a period of thirty-three years:

Quantities of sugar and molasses produced in the State of Louisiana during the years from 1850 to 1881, inclusive.

Year.	Su	Molasses.	
	Hogsheads.	Pounds.	Gallons.
849~'50	247, 923	269, 769, 600	12,000,000
850-'51	211, 203	231, 194, 000	10, 500, 600

a No data.

NOTE.—The production of sugar and molasses in Louisiana is stated upon the authority of M. Champoiner for the period prior to 1861, and for the later years upon the authority of M. Louis Bouchereau and A. Bouchereau.

These statistics form a far safer basis for legislation than the beautiful pictures and the extravagant rhetoric of the gentlemen who urge the continuation of high duties upon this article. They are not only interesting but instructive. They show conclusively that this industry is fluctuating and uncertain, the product of one year being no indication of what the next will be. The largest product was in 1861–'62, when it reached 459,410 hogsheads of sugar. The next largest product was in 1853–'54, when it reached 449,324 hogsheads and 31,000,000 gallons of molasses. In 1856–'57, within the two periods above named, the product was only 73,976 hogsheads of sugar and 4,882,330 gallons of molasses. The product in 1849–'50 was 247,923 hogsheads of sugar and 12,000,000 gallons of molasses; while in 1881–'82, with all the protection we have afforded, the product was only 122,982 hogsheads of sugar and 9,691,104 gallons of molasses, showing an actual decrease of 124,941 hogsheads of sugar and 2,308,896 gallons of molasses. The product of 1849–'50 has not been equaled in any one year within the last twenty years.

I have not time, Mr. Chairman, to dwell longer upon this table, and it is not necessary that I should; it speaks for itself, and illustrates how uncertain and unreliable the sugar product of Louisiana is, and how feeble this industry remains, notwithstanding the protection, encouragement, and fostering care it has received from the hands of the

General Government.

No person, unless he has made this matter a study or given to it particular attention, can have any conception of the vast sums which the people have paid out in duties upon the articles of sugar and molasses. The amount is truly startling. The duties paid upon these articles within the last twenty years have amounted to nearly one-half of the present bonded debt of the Republic. It is stated in the report of the Commissioner of Internal Revenue for the current year to be over \$51,000,000, or a dollar a head for every man, woman, and child in the Republic.

in the Republic.

From the tables furnished me by Joseph Nimmo, jr., Chief of the Bureau of Statistics of the Treasury Department, which I append to my remarks, it will be seen that the estimated duty collected on sugar alone from 1863 to 1882, inclusive, amounts to the enormous sum of

\$636,610,201.42; that the average annual rate of specific duty for that term was 2.53 cents per pound, ranging from 1.98 to 3.08 cents per pound; that the equivalent ad valorem rate has run from 37.53 to 76.29 per cent., or an average rate for the twenty years of 56.75 per cent.; that the gross revenue for that period from importation of sugar was \$636,610,201.42; from molasses, melada, and sirup of sugar-cane, \$52,715,204.33, discriminating duties on the same, \$15,256.30; molasses, concentrated, tank-bottoms, sirup of sugar-cane, and melada, \$14,204,149.88, discriminating duties on the same, \$1,756.86; making a grand total paid by the people of this nation to protect this uncertain and precarious industry of \$703,546,568.79.

It appears from the census of 1880 that the valuation of property for the purposes of taxation in Louisiana was as follows: Real estate, \$122, 362,297; personal estate, \$37,800,142; a total of \$160,162,249; being less than one-fourth of the amount of duties paid upon sugar and mo-

lasses during the last twenty years.

Now, I disclaim any hostility to the sugar-producing sections of this country. My desire is to relieve an overflowing Treasury and an overtaxed people, and I find no source from which our revenues are derived that can be so easily and justly dispensed with as this; and I ask the careful attention of the House and the country to the cold, naked, and stubborn facts which I have presented, and leave the correctness of my conclusions to the considerate judgment of the American people.

Support of Common Schools.

### SPEECH

OF

# HON. NEWTON C. BLANCHARD.

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1883,

On the bill (H. R. 6158) to aid in the support of common schools.

Mr. BLANCHARD said

Mr. BLANCHARD said:

Mr. SPEAKER: This subject is a growing one in the popular mind.

For some time it has attracted the favorable attention of many of
the best and most cultured of our people, including ministers of
the Gospel, statesmen, philanthropists, and educators. The committee which reported the bill embody in their report the memorial of the National Educational Association, and many eminent
educators appeared before the committee and submitted their views,
all favorable to the enactment of a measure similar to the one under
consideration. As early as 1871 the National Teachers' association. consideration. As early as 1871 the National Teachers' Association, at a meeting in Saint Louis, passed the following resolution:

That this association will look with favor upon any plan giving pecuniary aid to the struggling educational system of the South that the General Government may deem judicious.

In his last report, that of 1879, the late Dr. Barnard Sears, agent of the Peabody fund, stated there were about two million children in the Southern States without instruction; and the committee of the trustees of the Peabody fund, to which was referred the subject of the special needs of education in the South, presented a report at the annual meeting, February 13, 1880, and offered the following resolution:

Resolved. That it is expedient that this board should present a memorial to DEGRESS, praying that it may grant such aid as may be required to secure to the lored population of the Southern States the education which is necessary to fit tem for the discharge of their duties as citizens of the United States.

Other evidences of the agitation of this subject by eminent men might be cited, but the foregoing will suffice. Mr. Speaker, I hold as a proposition that ignorence is not a local but a national question. It may be confined to localities, or rather may prevail only in localities, but its effect is far-reaching, and permeates every part of the body-nolitie.

ties, but its effect is far-reaching, and permeates every part of the body-politic.

As another proposition, I maintain that all history, and all experience prove that the individual is not able to educate his children. He has never done it in the history of the world. The State must come in and aid him in the work. A glance, sir, at the condition of the Southern States, as respects illiteracy, is alone sufficient to determine every representative from that section on this floor to support this bill, provided he sees no constitutional objection to it.

Now, what is that condition?

213 80

By the census of 1880 there are in Louisiana 216,787 voters. Of these, 102,932 cannot write, and the number of those who can write is only 10,923 greater than those who cannot write.

Of the 102,932 voters in Louisiana who cannot write 86,555 are colored and 16,377 are white.

It thus appears that nearly fifty per cent. of the voting population of Louisiana cannot write.

The number who cannot weed is not so great. Still it is great.

of Louisiana cannot write.

The number who cannot read is not so great. Still, it is great enough to be alarming, the census of 1880 showing that there are 297,312 persons in the State ten years of age and over, out of a total population of 939,946, who cannot read.

South Carolina makes even a worse showing. With 205,789 voters, it appears that 106,934, or 4.040, more than half, cannot write. Of these 106,934 voters who cannot write, 93,010 are colored and 13,924 are white. More than 50 per cent, therefore, of the adult population of that State cannot write.

Mississippi and Alabama come part with pearly 47 per cent of

Mississippi and Alabama come next, with nearly 47 per cent. of their adult male population unable to write, three-fourths of which

Then Georgia, with more than 45 per cent. of her adult male pop-Then Georgia, with more than 45 per cent. of her adult male population, or more than one-third unable to write. North Carolina with more than 42 per cent. Tennessee and Virginia with more than 39 per cent. Florida with nearly 39 per cent. Arkansas with more than 30 per cent. And so on down the list of the Southern States, Missouri making the best showing with 11 per cent. of her adult population unable to write.

The committee show in their report that more than 32 per cent. of the adult males of the Southern States are illiterate, and that nearly half a million of the white, and almost a million of the colored voters in the South cannot read the ballots which they cast.

Mr. Speaker, upon this million of illiterate voters citizenship has been bestowed by national enactment. Now, add to citizenship the gift of instruction.

been bestowed by national enactment. Now, add to citizenship the gift of instruction.

Having given the ballot, let us now follow it up with the blazing of the way to an intelligent use of the ballot, and the only true sign-boards to mark the path in that direction are school-houses. And school-houses cannot be erected and filled with scholars and provided with competent teachers without means—money—and that the South, where all this illiteracy is, cannot supply equal to the necessities of the case.

the South, where all this illiteracy is, cannot supply equal to the necessities of the case.

The voting of this appropriation would be an act of tardy justice to the lately enfranchised people of the South. Who here will claim that it would be just to them to stop short at the bestowal of the ballot? Who here will deny that a full measure of justice to them includes the providing of means for the acquisition of the intelligence requisite to the proper use of the ballot? The intention of this bill is not to supplant or supersede the efforts of the States and local communities in the cause of education, but to supplement those efforts, to encourage and aid the States and local communities, to strengthen their hands, to re-enforce them.

In the South the States are battling in the cause of education against a vast army of ignorance, and are hard pressed and unequal to the task. The General Government is a friendly force, an ally, near at hand watching the conflict from the vantage-ground it occupies, ready upon the first signs of wavering to go to the support of its friends. A weakening of the line is perceptible, and this bill is the trumpet sounding to the rescue.

The support which the measure offers is only temporary. It is only to last during five years, at the end of which time it is believed such headway will have been made that all the States will find themselves able to cope single handed, and without further aid from the Government, with the ignorance and illiteracy within their borders.

By this bill the Federal Government undertakes in the States no system of public-school education. It makes no pretense of interfering with the States in the matter of education. The money is to

system of public-school education. It makes no pretense of inter-fering with the States in the matter of education. The money is to be paid to the proper officer of each State, and is to be expended by State officials under State laws, and in accordance with the system of public instruction peculiar to each State respectively, the only exactions being (and wise ones they are) that the money shall be used in the education of children without distinction of color; that it must be divided proportionally between white and colored schools and pupils; and that none of it shall be used to build or repair school-houses, or to purchase sites, or to pay the salary of any officials except teachers.

The measure contains in it no element of offense to any class of citizens, for a clause in the bill considerately provides that separate schools for white and colored children shall not be considered a dis-

schools for white and constitute and constitute and constitute a very important addition to the public school funds of

This large preponderance to the South, for the education of the illiterate, is for negro illiteracy; less than one-fourth because of white illiteracy. Were there no other illiteracy in the South except what the census shows to be white, I for one would not ask this, for the white people of the South, constituting, as they do, 90 per cent. of the property-holding classes, could easily take care of their own illiterates. But when to these be added the millions of illiterates among the colored people, the task is too great for the communities

of the South, impoverished by the war and not yet recovered from it, to undertake. The States of the South are doing all in their power for public education, but it is impossible for them, in their im-poverished condition, to furnish adequate means for the education of the masses of the children.

the masses of the children.

Hon. J. H. Smart, superintendent of schools in Indiana, bears willing testimony of the sentiment in the South on this question of the education of the colored people. He states he had made several visits to the South, had inquired into the matter of schools there, and expresses the opinion that the Southern people are willing to do all they can to cure this great evil, (illiteracy,) and that so far as he had observed, the work that has been done, under existing circumters are the states as a recovery of the search. stances, has been a marvelous work. Continuing, he says:

stances, has been a marvelous work. Continuing, he says:

The Southern people have made a heroic effort, certainly in three or four States
that I have visited, to do the best that could be done for these colored people. I
want to say that throughout the length and brendth of the Southern States, without one exception, the colored people are given the same advantages that the
white people are given. No distinction whatever is made; and, so far as I was
able to find out, there is an almost unanimous, certainly an overwhelming, sentiment in favor of educating the colored children equally with the white children.

Rev. A. D. Mayo, D. D., told the committee that he was pretty well acquainted with the condition of education in our country and to ther countries, and that he had no hesitation in saying that, "never within ten years in the history of the world, has an effort so great, so persistent, so absolutely heroic been made by a people for the education of the children as by the leading class of the people in our Southern States." "There is no minority of people working so hard to overcome this terrible calamity of illiteracy anywhere in the world to-day as in the South. I give this as the deliberate result of two years of observation in twelve States."

But, Mr. Speaker, while we of the South have the will to educate the colored people in our midst, we have not the means commensurate Rev. A. D. Mayo, D. D., told the committee that he was pretty

But, Mr. Speaker, while we of the South have the will to educate the colored people in our midst, we have not the means commensurate with it. There is no trouble on the score of the purpose to do so, but the ability to execute is lacking. And unless the Federal Government comes to our aid in the manner provided in this bill, or in some other way, I fear this generation will have passed away without any perceptible impression having been made on the ignorance in that section—an ignorance which is a power in the land, in that it wields the ballot, a blind power, which, as long as it continues in its present condition, must needs remain a standing menace to our institutions. Take care it may not in its blindness grapple, Samson-like, the pillars of our political edifice, and shake the whole to its very foundation.

foundation.

It has been a long time since William Penn uttered the words which I shall quote, but the observation is as true to-day as it was then.

That which makes a good constitution must keep it, namely, men of wisdom and virtue; qualities which, because they descend not with worldly inheritance, must be carefully propagated by a virtuous education of youth, for which spare no cost, for by such parsimony all that is saved is lost.

Hearken, legislators, to that!

Hear, also, what was said by an eminent divine, Bishop Doane, to the people of New Jersey in 1838—words as true now as when ut-tered, and as forcibly apposite to this occasion as to that. Said he:

tered, and as forcibly apposite to this occasion as to that. Said he:

We say that knowledge is the universal right of man; and we need bring no clearer demonstration than that intellectual nature capable of it, thirsting for it expanding and aspiring with it, which is God's own argument in every living soul. We say that the assertion for himself of this inherent right, to the full measure of his abilities and opportunities, is the universal duty of man; and that wheev fails of it thwarts the design of his Creator, and, in proportion as he neglects the gift of God, dwarfs and enslaves and brutifies the high capacity for truth and liberty which he inherits. And all experience and every page of history confirm the assertion, in the close kindred which has everwhere been proved of ignorance and vice with wrethedness and slavery. And we say further that the security of this inherent right to every individual, and its extension in the fullest measure to the greatest number, is the universal interest of man; so that they who deny or abridge it to their fellows, or who encourage, or from want of proper influence permit them to neglect it, are undermining the foundations of government, weakening the held of society, and preparing the way for that unsettling and dissolving of all human institutions which must result in anarchy and ruin, and in which they who have the greatest stake must be the greatest sufferers.

Mr. Speaker, a well-authenticated account comes down to use of

Mr. Speaker, a well-authenticated account comes down to us of the opinions held on this subject by the illustrious hero of the Pee-dee, General Francis Marion, a patriot leader in the American Revo-

In an interview, after the war, with General Horry, the great warrior excessed his fears "lest the fruits of independence might be lost through the connued ignorance of the masses of the people."

In that conversation General Marion said:

In that conversation General Marion said:

We fought for self-government, and God hath pleased to give us a government better calculated, perhaps, to protect our rights, to foster our virtues, to call forth our energies, and to advance our condition nearer to perfection and happiness than any government that was ever framed under the sun.

But what signifies even this government, divine as it is, if it be not known and prized as it deserves? General Horry saked him how he thought this was best to be done. "Why, certainly," said he, "by free schools." General Horry shook his head, and remarked that he was afraid the Legislature (if it were to-day he would say Congress) would look to their popularity and dread the expense. General Marion exclaimed: "God preserve our Legislature from such 'penny wise and pound foelishness!' What, sir, keep a nation in ignorance rather than vote money for education? " "" God created men to be happy; to be happy they must have virtue; virtue is not to be attained without knowledge, nor knowledge without instruction, nor public instruction without free schools, nor free schools without legislative order. In short, my dear sir, men will always fight for their Government, according to their sense of its value. To value it aright they must anderstand it. This they cannot do without education. And as a large portion

of the citizens are poor and can never attain that inestimable blessing without the aid of Government, it is plainly the first duty of Government to beston it treels are

What salutary truths were those uttered by the old patriot hero in What salutary truths were those intered by the out patriot hero in 1779. And how they have descended to us through the flight of more than one hundred years, as pregnant with wise significance, with wholesome suggestion, and as pertinent to-day as at that historic time. Let us, his countrymen of three and four generations later, heed the lesson he taught, the rehearsal of which is as applicable and neces-

lesson he taught, the rehearsal of which is an applicable and necessary to-day as when expounded by him.

Mr. Speaker, we appropriate millions upon millions for the support of our military and naval establishments. We do this as a matter of course, and it is generally accepted as all right. I utter no complaint against it, but recall the memorable words of Lord Broug-

Let the soldier be abroad if he will: he can do nothing in this age

And he added:

There is another personage abroad, a person less imposing: in the eyes of some insignificant. The schoolmaster is abroad, and I trust him, armed with his primer against the soldier in full uniform arrayed.

Mr. Speaker, the schoolmaster was abroad in England, and he is abroad in numbers in certain favored sections of our common country; but he is abroad in a very limited sense, and in small and to tally inadequate force to the southward, and where he is most needed, too. The purpose of this bill is to send him broadcast throughout that section. Will you not do it? I ask this of the friends of education, of progress, of enlightenment on this floor. I ask it of the Representatives of the great American people. The necessity for doing it exists. On this all are agreed. The ignorance and illiteracy to dispel are there. The ability to do it, in the sense of an abundance of means, exists. Why not do it, then? If you hesitate it must be because of some constitutional objection. Let us see as to that. Are there doubts of the constitutional power of Congress to make this appropriation? If made, would it, in any sense, be an invasion of the reserved rights of the States, or an intermeddling with the States or local communities? Is it that you are afraid of?

Mr. Speaker, I believe as strongly as any man living in that good

Mr. Speaker, I believe as strongly as any man living in that good old Democratic doctrine that nothing should be done by the General old Democratic doctrine that nothing should be done by the General Government which the States are competent to do, and nothing by any governmental power which individuals can do for themselves; and if the bill under consideration violated that (to me) cardinal principle of polity, I would have nothing to do with it, and should be among the first to condemn it.

But this bill does not violate that principle. It has already believe that it would not be among the first to condemn it.

But this bill does not violate that principle. It has already been shown that it merely proposes to appropriate money to the States, to be expended by the States, through State officials, under State laws, and to advance the efficiency of the system of public-school education adopted by the States respectively. There can therefore be no intermeddling with the States in educational concerns if the bill be passed. It is, purely and simply, a donation to the States in aid of a great cause. Let us now glance briefly at the constitutional phase of the subject. of the subject.

It is well known, Mr. Speaker, that the chief source of the permanent public-school funds in many States has been the Federal Gov-

nent public-school funds in many States has been the Federal Government.

The United States has largely contributed already to the general enlightenment as a liberal patron of literature, science, and culture; the great school fund of most of the States; the endowments of State universities and agricultural colleges have come from the beneficence of the national hand.

From the days of the American Confederation, antedating the present form of government, until now, the use of the national domain in support of popular education, at the will of Congress, has been unquestioned. Mr. Clay aided in the passage of a bill for the use of the receipts from land sales to a certain extent for the special benefit of certain specified States. Stephen A. Douglas, in the act for the organization of the Territory of Oregon, August 14, 1848, inserted an additional grant for school purposes of the thirty-sixth section in each township, with indemnity for all public-land States thereafter to be admitted, making the reservation for school purposes the sixteenth and thirty-sixth sections, or 1,280 acres in each township of six miles square, reserved in the public-land States and Territories, and confirmed by grant in terms in the act of admission of such State or Territory into the Union.

And JUSTIN S. MORRILL, of Vermont, championed in the Senate the act of July 2, 1862, whereby Congress enlarged the national educational endowment system by the donation to each State of 30,000 acres of public land for each Senator and Representative under the apportionment of 1860, for the support of colleges for the cultivation of agricultural and mechanical science and art.

acres of public land for each Senator and Representative under the apportionment of 1860, for the support of colleges for the cultivation of agricultural and mechanical science and art.

Thus have a great Whig leader, a great Democratic leader, and a great Republican leader, respectively, committed themselves and their party by the passage of those acts to this question of national aid to the cause of public instruction.

The lands granted in the States and reserved in the Territories for educational purposes by acts of Congress from 1785 to June 30, 1880.

educational purposes by acts of Congress from 1785 to June 30, 1880, were: For public or common schools, 67,893,919 acres (estimated). For seminaries or universities, 1,165,520 acres (estimated). For agricultural and mechanical colleges: land in place, 1,770,000 acres; land

serip, 7,830,000 acres; total, 9,600,000 acres. In all, 78,659,439 acres for educational purposes under the heads above set out to June 30,

The above figures are taken from chapter XIII of Mr. Thomas Don-

The above figures are taken from chapter XIII of Mr. Thomas Donaldson's valuable monograph on The Public Domain.

Considering these precedents, it is rather late to now raise a constitutional objection against the extension of aid to the States by the General Government in the cause of education. Sir, the fourteenth amendment to the Constitution of the United States confers citizenship upon the colored people of the South, and the fifteenth amendment is, in effect, a perpetual grant of the ballot to them; and from the terms of these amendments I deduce the authority as well as the obligation of Congress to make appropriations, when and where needed, to the States to enable them to fit for a proper use of the ballot the newly-enfranchised people within their jurisdictions. I regret I have not the time now to elaborate this point.

#### River and Harbor Bill.

#### SPEECH

OF

## HON. HENRY L. MOREY,

OF OHIO.

### IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1883,

On the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. MOREY said:

Mr. MOREY said:
Mr. SPEAKER: Improvement of the great water-ways of the country, and of the harbors on our great lake and sea-shores, is the settled policy of our Government. For more than eighty years Congress has made appropriations for this purpose, without regard to the political party in power. On April 17, 1882, President Arthur, by special message, urged upon Congress the pressing importance of improving the great water-ways of the West, upon which the wealth of the great States which border upon them are destined to float to the sea, and thence to the markets of the world. The constitution-live of such legislation in the interest of compares and chear transality of such legislation, in the interest of commerce and cheap trans portation for works of national character, is not questioned. Ohio is a part of the great and fertile valley, which is watered by the great rivers of the Northwest, and its shores on the north are washed by the waters of the great inland seas.

The improvement of these great highways is of vital importance to the farmers and all engaged in the great industries in Ohio and in the other States of the Northwest, and, indeed, to the whole

The vast surplus of these States is sufficient to supply the wants of the great cities of our own country and to send abroad millions of bushels of grain and millions in value of other products of her soil to supply the deficiencies of the nations beyond the seas.

Cheap transportation for this great surplus, which must be carried long distances to reach its market, is an achievement worthy of integraphic

The rivers and lakes are nature's highways, and they are free to all the people. They are the only competing lines to the great rail-road corporations of the country. Destroy that competition, and the farmers and shippers of the country, and especially of the West, would lay prostrate in the grasp of the railroad monopolists.

Mr. Speaker, every legitimate appropriation for works of a national

Mr. Speaker, every legitimate appropriation for works of a national and general character, promoting the convenience of the people and cheapening the transportation of their products, would have the sanction of my vote. Or, if great works of like character, already commenced by the Government, and partly finished, needed appropriations for their preservation and continuation until further provision could be made therefor by a succeeding Congress, I would feel it to be my duty to my constituents, who are a producing people, to give them my support. But, Mr. Speaker, I apprehend that an appropriation is not needed at this time to carry out this policy, or to protect and continue the great works already commenced by the Government.

the Government.

the Government.

A report made to this House by the Secretary of War, January 4, 1883, shows that of the appropriation made for this purpose, August 2, 1882, there will remain unexpended on June 30, 1883, the end of the fiscal year, the sum of \$4,949,612.06, and that the same will not be expended, on an average, until about December, 1883. At this time Congress will again be in session, and can make necessary appropriations for the continuance of necessary works of national importance. Mr. Speaker, I have examined the provisions of the bill, with a view to ascertain the condition of various works therein provided for, and the funds now available for their preservation and continuation. I find, sir, that in few cases, if any, will said works XIV——244

suffer for want of further appropriations between now and the next

convening of Congress.

For improving the harbor at Portland, Males, the sum of \$15,000 is asked for. The Secretary of War reports than on June 30, 1883, \$10,000 of unexpended appropriation will remain to the elemn of this improvement, and that it is sufficient to continue the work until November 1, 1883.

November 1, 1883.

For improving Nantucket Harbor, Massachusetts, \$5,000 is asked for. The Secretary of War reports that on June 30, 1883, \$15,000 will remain to the credit of that improvement, and that it is sufficient to continue the work to December, 31, 1883.

The following table contains such instances of this character as I have been able to discover in the bill, and to my mind justifies the opinion that the appropriation is not demanded at this session of Congress either to project new works or to replace and continue old. Congress either to project new works or to protect and continue old

I have the honor to represent a district in this Congress, and to be I have the honor to represent a district in this Congress, and to be, elected to represent a district in the Forty-eighth Congress, whose aggregate counties contain a population and resources which are a high type of all that is great in the progress, prosperity, and civilization of our country. I shall never hesitate to give my voice and my vote for any and all lawful and needful measures which will enhance their prosperity, and contribute to the prosperity of the whole country and to the happiness of all our people.

Long-delayed Justice-Mexican Soldiers.

#### SPEECH

OF

## HON. ROBERT KLOTZ, OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES.

Friday, March 2, 1883,

On the bill (H. R. 7135) granting pensions to the survivors of the Mexican and Indian wars.

Mr. KLOTZ said:

Mr. Speaker: I do not propose to occupy the limited time allowed for my remarks by repeating the oft-told tale of the hardships and exposure endured by our countrymen who volunteered under the call of the President to chastise a foreign foe in accordance with an act of Congress passed thirty-seven years ago. I have no desire to recapitulate the immense advantages resulting from the war with Mexico to the material prosperity of the nation by the acquisition of the richest territory on the face of the earth, nor to advert to the valor of our troops and the military renown of their leaders who shed undying luster upon the name

and fame of American soldiers.

All these things have passed into history, and recent discussions on this proposition to pension the aged survivors have familiarized the present generation with the facts. Every sensible man will concede, even if he denies the justice of that war with our sister republic, that the interests of civilization demanded at the time the absorption of the vast territory stretching to the Pacific Ocean by a nation capable of controlling its savage inhabitants, and utilizing its vast mineral and agricultural resources for the benefit of the Christian world. The Government of Mexico was impotent for such an undertaking, and the hand of the Great Controller of human affairs is visible in every act from the inception of the war to its close. England would have done it and reaped the reward if the United States had not.

Nearly ten years ago a convention of representative men of the survivors assembled here at the Capitol and petitioned for the same recognition of their services that had been granted to other soldiers of previous foreign wars—the heroes of the Revolution and the survivors of 1812. The proposition would have doubtless been at once acceded to, had not the Pension Commissioner come to the rescue of the opposition with an absurdly extravagant estimate of the probable number of bene-ficiaries, stated at over 50,000. The calculation was based on a supponctaries, stated at over 30,000. The calculation was based on a supposition that one-half of all the men employed in the war were then still living, because he alleged the estimate of the survivors of 1812, prepared by the clerks in his office, showed that three-eighths was the ratio adopted in that case, when his office was called upon for an estimate, and that subsequent applications for pensions under the law of February 14, 1871, proved, as he alleged, this ratio approximately correct, there being 42,000 applicants, while the estimate predicted 40,100.

The Commissioner argued from these false premises that four-eighths would be a reasonable allowance considering the difference in time that

intervened before the soldiers of 1812 were pensioned. But when the report of the Commissioner was subsequently analyzed by the friends of the petitioners, it was discovered that his alleged ratio of three-eighths was grossly erroneous in the 1812 case; that this ratio would have produced far in excess of 200,000 survivors of that war, instead of 40,100. There were over half a million of men employed in the war of 1812. blunder having been exposed, the Pension Office receded from that method of calculation, and has been ever since trying to cover up its

mistake by other methods of interpellation.

The latest document, No. 137, of last May, in reply to an inquiry of the probable number of survivors of the Mexican war who have attained to the age of sixty-five years exhibits an equally absurd total of 49,085 at that advanced age, when according to the data contained in the same document there were only about 66,000 living when the war closed. document there were only about 66,000 living when the war closed. The best and the briefest answer to this estimate may be found in a series of tables prepared by Captain George W. Davis, United States Army, compiled from the records of the War Department, showing the mortality among the officers of the Army for the period between 1828 and 1878. These tables were printed in connection with a speech of my friend from Indiana [Mr. Steele] and published in the CONGRESSIONAL RECORD of the 5th of April, 1882, pages 12 to 20. From table No. 2 the following facts are culled:

Of forty-two officers entering the service at 19, all but four had died before attaining the age of 62. Of one hundred and ninety-nine entering at 22 years, but nine survived at 62. Of one hundred and twenty entering at 25 years, but four survived at 62. Of forty-two entering at 29 years none reached 29 years. Of twenty-four entering at 32 years none reached 62 years. Of thirteen entering at 36 years, none reached 62 years. Of thirteen entering at 36 years, none reached 62 years, or almost exactly six in one hundred.

The men who served in Mexico were of various ages, ranging from 17 to 60 years, and a reasonable ratio for estimating the survivors would be six in one hundred. The Commissioner of Pensions, however, esti-

mates the average age of the soldiers who served in that war at 25 years at time of service, which would make the average age at this time (thirty-seven years from the commencement of the war) 62 years, or

DEAR SIR: The following table showing relative forces enlisted from the free and slave States during the Mexican war is compiled from tables published in Executive Document No. 24, House of Representatives, Thirty-first Congress, first session, and Executive Document No. 38, Thirtieth Congress, second session, the latter tables relating especially to the regular Army, and the first to the volunteer and regulars. The first states the aggregate of regular and volunteer forces (exclusive of the naval force) at 100,454 officers and men. The naval forces have been stated by the Pension Office at 5,000 officers and men, and were probably nearly all enlisted in the free States.

States.	Volunteers.	Regulars,
Californía Connecticut	6,123 4,585 838 1,057 1,103 425 2,336 5,536 2,503	231 1, 133 1, 478 233 672 1, 499 821 440 295 8, 655 2, 321 4, 365 188 390 517
	26, 127	28, 29 26, 12
Total from free States	**************	54, 42

Taking the aggregate (including Navy) at 105,454, and deducting enlistments as above, 54,424, leaves for enlistments in the South 51,030; showing a preponderance of 3,594, in favor of the free States, notwithstanding the close proximity of the Southern States to the seat of war. In the lists of the survivors ascertained by the national association for the past ten years, fully two-thirds are residing in the Northern and Western States—the Southern States from various causes being decimated in point of numbers.

It is proper to deduct from the aggregate of men mustered into service to obtain a basis for estimating probable survivors 9,749 persons discharged for disability (since dead or pensioned), 12,896 deaths from all causes during the war, 3,893 wounded in battle (who probably, if alive, are pensioners), 2,778 discharged without proceeding to Mexico, 6,725 desertions not eligible to pension, 13,221 vointeers, &c., who re-enlisted and whose names are duplicated; making a total of 48,762, which, deducted from 105,454, leaves 56,692 as a basis of estimate. But my individual opinion is that the aggregate forces who served in Mexico for fourteen days (the length of service required for a land-warrant) do not exceed 88,251, including Army and Navy, as those figures from an official source show the whole number of land-warrants since issued. And from this aggregate those should be deducted, if a correct basis is desired on which to build an estimate of beneficiaries, the figures representing the persons discharged for disability, deaths, from all causes, wounded pensioners, and the vast majority of those who served two enlistments and drew two land-warrants under the old rules, to say nothing about the wagon-masters and teamsters, who, it appears, are not included in the present bill.

Yours, very respectfully,

A. M. KENADAY, Secretary National Association of V. M. W.

Hon. ROBERT KLOTZ, M. C.

The gentleman from Indiana [Mr. BROWNE] stated in his remarks. The gentleman from Indiana [Mr. Browne] stated in his remarks, when the resolution of the committee fixing to-day for the consideration of this bill was under discussion, that 106,000 men were in the Mexican war alone (the Commissioner states it 105,000), and that the bill would place 50,000 men on the pension-roll. Now, the best evidence of an official character as to the number of individuals who participated in that war may be found in a report of the Commissioner of Pensions, furnished to the gentleman from Ohio [Mr. Young], showing the number of bounty land-warrants issued for the Mexican war prior to May 1,1882, in which it is stated that 80,668 warrants for one hundred and sixty acres and 7,583 warrants for forty acres were issued, a total of 88,251, including every officer, soldier, sailor, waron-master. a total of 88,251, including every officer, soldier, sailor, wagon-master, and teamster, living and dead, very many of the warrants being duplicated to men who served more than one term, the issue having been made before the rule was adopted forbidding more than one warrant to an indi-

This reduces the aggregate stated by the gentleman from Indiana [Mr. Browne] 18,000 men in round numbers. Further reduction may be found in a report of the Commissioner in 1877, to the Senate Combe found in a report of the Commissioner in 1877, to the Senate Committee on Pensions, of 6,458 pensioners on the rolls prior to 1861, and the War Department reported the number of deaths in Mexico from all causes, 12,896; and 6,725 desertions. This reduces the survivors at the close of the war, in 1848, thirty-five years ago, to 62,072, and 6 per cent. of that number would be a rational estimate of the number still living, according to the tables compiled by Captain Davis, to which I have referred. But leaving out Captain Davis' estimate, and adopting as the ratio information that I have from five or six companies that went from Pennsylvania, who report an average of one-seventh of the members yet living, the whole number still alive would not exceed 15,000 in round numbers. in round numbers

But this may be deemed an extremely high estimate, because Pennsylvania is known to be one of the healthiest regions of country on the sylvania is above to be one of the healthiest regions of country on the continent, and her sons are among the hardiest of the population of the United States. From these should be deducted a number who served in the late war and are now on the pension-rolls for disabilities incurred in the war for the Union.

The gentleman from Indiana [Mr. BROWNE] refers to the Revolu-The gentleman from Indiana [Mr. Browne] refers to the Revolutionary heroes not being pensioned until fifty years after their term of service expired. The fact is they received a service pension in 1818, about thirty-five years after the close of the war. There was a total of 289,715 soldiers employed in the Revolution—largely more than three times as many as were engaged in the Mexican war, taking the issue of land-warrants as a basis. The number of survivors found under that law amounted to 57,623, with none of the causes which operated to decimate the ranks of the survivors of Mexico like the male relationship. decimate the ranks of the survivors of Mexico, like the malarial disease which the latter brought home with them and which carried them off by hundreds, and the great rebellion which attracted most of the sur-

vivors again into active service.

The gentleman from Indiana also spoke of this bill as requiring \$100,000,000 before the last would be heard of this legislation. I would beg to refer him to the report of the Commissioner of Pensions, which shows that \$46,177,845 only were required to pay the entire Revolutionary pensions (57,623) during a period of fifty-one years after the passage of their relief, and much less than one-third of that sum would suffice for the Mexican soldiers, even should one veteran survive fiftyone years after the passage of this bill; or in other words, if the same proportion of longevity prevailed with the survivors of Mexico and the last man received his pension fifty-one years from the passage of this bill it would only take about \$12,000,000 to pay the 15,000 pensioners. A bill similar to this passed the House without opposition from any

source in 1877, and a much more liberal bill passed the Senate in 1879, extending the provisions of the act of March 9, 1878, to the soldiers and widows of the Mexican war (which is ascertained were about five to a company at the close of the war—those maimed since the close of the war are not included in this bill), though it was subsequently rescinded on the specious pretext that it would be of some benefit to Jefferson Davis. The refusal to do justice to these old soldiers, in view of all the money that has been lavished on others no better entitled to the nation's gratitude, will be regarded as an act of injustice on the part of this House. The Legislatures of twenty-eight States have formally requested their representatives in Congress to favor its passage, and public opinion everywhere regards it as a just proposition.

#### Education.

A state without king or nobles; a church without a bishop; a people governed by grave magistrates whom it had selected and by equal laws which it had framed.—Eufus Choate,

## SPEECH

# HON. JAMES M. TYLER.

OF VERMONT,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 22, 1883,

The House having under consideration the bill (H. R. 6158) to aid in the support of common schools—

Mr. TYLER said

Mr. SPEAKER: This bill proposes to apportion \$10,000,000 annually for five years to the several States and Territories, according to their for ne years to the several States and Territories, according to their respective population, 10 years of age and over, who are illiterate as shown by the last census. The distribution is to be made on condition that the States and Territories provide at least three months' schooling at their own expense for all their children of school age without distinction of color; and further, that no State or Territory shall receive a greater sum in any year from the Government than it expended in the year next preceding from its own means, exclusive of the amount expended on school-houses and grounds. Also, if any State or Territory shall misappropriate any money received under this act it shall thereby forfeit its right to all subsequent appropriations.

forfeit its right to all subsequent appropriations.

I had prepared an amendment to the bill to restrict the appropriation to the sixteen Southern States and reduce the entire amount to \$7,000,000, which is substantially what they would receive under the bill as their

share of \$10,000,000.

share of \$10,000,000.

The bill was drawn to meet an urgent demand of the people, and is of the gravest consideration. Of higher importance than internal improvements, than finance or the tariff, is the question what the people shall be, what degree of intelligence they shall possess. A distinguished writer said: "The true test of civilization is not the census, nor the size of cities, nor the crops, but the kind of men the country turns out." The extent of illiteracy in this country is sufficient to give

apprehension to all lovers of free government. The subject is receiving wide and carnest attention, and is being pressed upon the consideration of Congress with great force and in a spirit of the broadest philanthropy. The demand to-day is for the better and more universal education of the people, upon which subject there is no diversity of opinion except as to the means by which the work shall be accomplished

THE COLORED RACE.

No nation ever guarded its liberties more jealously than the South guarded her slaves from every ray of the light of education. It would guarded her slaves from every ray of the right of education. It would be idle for any one to deny that a condition of enforced ignorance ex-isted in the South previous to the war, for it has often been frankly, admitted by representative men of that section in both Houses of Con-gress while pleading for governmental aid in the cause of public edu-cation. An eminent Southern statesman said on the subject:

We had the large slave population, amounting in round numbers to four millions at the time they were emancipated. Under our system as long as we kept and used them as slaves it was regarded unsafe to educate them.

I mention this fact only to make it clear that when the emancipation proclamation found this race of men and gave them liberty they were, with but few exceptions, in a state of the most abject ignorance.

It would be of very little service now to discuss the question whether it was an act of justice to the white men of this country, whether it was due to the colored people themselves, or whether it was wise as a matter of policy on the part of the Government to invest the emancipated peo-ple at once with all the rights of citizenship. That matter is forever settled by the fourteenth amendment to the Constitution, which desettled by the fourteenth amendment to the Constitution, which de-clares that "all persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside," and forbids any State to abridge the privileges and immunities of such citizens; and by the fifteenth amend-ment, which declares that "the right of citizens of the United States to work about not be depied or abridged by the United States or by any

ment, which declares that "the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude."

The ignorance of the enfranchised race was equaled only by their poverty. Into the new world of freedom they brought nothing but health and an ability to labor. And when we remember their condition at the time of their emancipation and the fact that they began their new life without the co-operation or good will of the white race among whom they were cast, we can but wonder that they have accomplished so much as they have done in the accomplished proporty the accomplished. so much as they have done in the accumulation of property, the ac-quisition of knowledge, and the improvement of their condition. There are no reliable statistics to be obtained showing the valuation of the property now owned by the blacks in the Southern States. It has been estimated, however, that in Georgia their property valuation is about six million dollars, and in all the Southern States from thirty to thirty five millions

The following table shows the number and kinds of schools in the country for the colored people, and the number of scholars enrolled in

Class of institutions.	Schools.	Enroll- ment.
Public schools	36 15 22 3 2	784,709 7,408 5,237 1,717 800 33 87 109
Total	16,793	800, 100

THE WHITE RACE

But illiteracy was by no means confined to the blacks. It was an inheritance from slavery and fell alike to both races. One of the most harmful results of the institution was to create a land-holding aristocracy, to place the lands, either by inheritance or purchase, in the possession of a few who represented the wealth and the intelligence of the country, while the poor whites were made more hopelessly poor, and consequently ignorant, by the system that degraded them and caused them to despise labor. Besides, general education and intelligence among the whites were deemed dangerous to the permanence of the in-stitution. There was no common-school system in any of the Southern States previous to the war, and education was practically beyond the reach of the poor classes, even had public sentiment favored their efforts in that direction.

I have thus referred to the condition of the South at the time the right of suffrage was given to the freedmen, to show that the interests of slavery were directly opposed to the rectmen, to show that the interests of slavery were directly opposed to the education of the blacks, and that, if the same interests were not equally opposed to the instruction of the whites, the inevitable result was to keep the masses in ignorance, and that none of the blessings that flow from universal education were enjoyed or known in that fair section of our land.

The following table will show the relative population of the two races in certain States under the recent census. In three of the States the blacks considerably outnumber the whites, and in several others the former nearly equal the latter in population. The colored people have become so large an element in the country and are increasing with such

rapidity that they must be recognized as a powerful factor for good or evil.

The saying that a republican government depends upon the intelligence of the people has become a political maxim, and yet the census discloses the startling fact that of the entire 50,155,783 population of the United States and Territories, including the District of Columbia, there are 6,239,958 illiterate persons over ten years of age, as follows:

Whites in the twenty-two Northern States	
Whites in the eight Territories	150 644
Blacks in the twenty-two Northern States and eight Territorie Whites in the sixteen Southern States and District of Colum	bia(2, 1, 676, 939
Blacks in the sixteen Southern States and District of Colum Illiterate voters in the thirty-eight States.	bia 3,064,234
Hiterate voters in the thirty-eight States	

The illiterate white population in the States and Territories nearly equals the population of the whole country at the time of the adoption of the Federal Constitution. Even in New England, the seat of learning, the home of the arts and sciences, there are 204,000 persons over ten years of age unable to write.

Of course the great mass of illiterates in the North are of foreign birth, and therefore all the more dangerous because they come here with no knowledge of our traditions and are animated by none of the spirit of our institutions, and under our laws it is easy for them to be naturalized and admitted to the right of suffrage. In this connection I invite special attention to a table, furnished by the Census Office, showing the per cent. of both native white and foreign-born white persons over ten years of age in the several States and Territories who can not write:

States and Terri- tories,			ite person age and up		Foreign-born white persons of 10 years of age and up- ward.

The total colored population of the sixteen Southern States and this District over 10 years of age is 4,085,571, of whom only 1,021,337 can read and write; the remainder, 3,064,234, are illiterate.

The tables from the Census Office show that the whole number of persons unable to read is some 1,300,000 less than the number unable to write, but the former are not divided, as are the latter, between whites and blacks.

I next call the attention of the House to the illiteracy of voters, first, in the sixteen late slave-holding States, and then in the twenty-two Northern States:

INTELLIGENCE THE SAFEGUARD OF LIBERTY.

We boast of the strength and trust in the perpetuity of republican institutions, and we sometimes seem to think that their strength and perpetuity consist in the largest liberty of the people to be and do whatperpetuity consist in the largest merry of the people to be and downardever they please, while we are in danger of neglecting the essential conditions upon which the permanence of those institutions depends. The fact that the Government has recently endured so severe a trial has inspired us with such confidence in its stability that we may forget that the security of its foundations rests in the intelligence of its people.

The nations of the Old World have their sovereigns, who succeed to add held their royal titles by inhoritance independently of the vector.

and hold their royal titles by inheritance independently of the vote or wishes of the people. But here the people are sovereigns; from them emanates all power, and their public officers, from the humblest to the Chief Magistrate of the nation, are their servants, by them created for the purpose of making and executing the laws and aiding in the per-

formance of the vast and varied functions of the Government.

As the Republic depends on the people for its existence and its operative power, so it depends upon their intelligence and an enlightened

public sentiment for the character and quality of its institutions.

The Puritans had the sagacity to foresee that if they bequeathed to their children intelligence and virtue they left them a good inheritance, and from a rugged soil they wrested the means of establishing and maintaining a system of public schools from which have flowed many

of the blessings we now enjoy.

The early statesmen were fully conscious of the importance of the education of the young. President Washington in his carliest message said, "Knowledge is in every country the surest basis of public happiness;" and, in his farewell message he used these words that should never be forgotten:

Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion it is essential that public opinion should be enlightened.

## President Madison said:

The best service that can be rendered to a country next to that of giving it liberty is in diffusing the mental improvement essential to the preservation and enjoyment of the blessing.

## Again he said:

Knowledge will forever govern ignorance, and a people who mean to be their own governors must arm themselves with the power that knowledge gives.

Equally direct and emphatic is the language of President Monroe: Let us by all wise and constitutional measures promote intelligence among the people as the best means of preserving our liberties.

I might also quote from the messages of Jefferson and the Adamses, and from many other statesmen who have endeavored to enforce upon the country the self-evident truth that the intelligence of a free people is the best safeguard of their liberty. I will add the following impressive words from President Garfield's inaugural address:

But the danger which arises from ignorance in the voter can not be denied. It covers a field far wider than that of negro suffrage and the present condition

of the race. It is a danger that lurks and hides in the sources and fountains of power in every State. We have no standard by which to measure the disaster that may be brought upon us by ignorance and vice in the citizen when joined to corruption and fraud in the suffrage.

The voters of the Union, who make and unmake constitutions, and upon whose will hange the destinies of our governments, can transmit their supreme authority to no successors save the coming generation of voters, who are the sole heirs of sovereign power. If that generation comes to its inheritance blinded by ignorance and corrupted by vice, the fall of the Republic will be certain and remediless.

In his message to Congress on the 6th of December, 1881, President

There is now a special reason why, by setting apart the proceeds of the sale of public lands, or by some other course, the Government should aid the work of education. \* \* All that can be done by local legislation and generosity should be supplemented by such aid as can be constitutionally afforded by the National Government.

This Government is constructed with wheels within wheels, republies within republies, school districts within towns, towns within counties, counties within districts, districts within States, and States composing the grand Federal Union. Good citizenship requires that the people should not only understand the rudimental branches taught in the public schools, but also the Constitution of the Government and the relation of the various departments thereof to each other. They should have a knowledge of the political history of the country and of the general scope and tendency of public measures as affecting the public welfare. It is their duty to understand something of the science public welfare. It is their duty to understand something of the science and system and policy of the Government, and to take an active hand in its administration. It is of great importance to them who are the officers of the Government, from lowest to highest; and it is their duty to participate in their elections and to acquaint themselves with the requirements of each office. Citizenship, then, implies intelligence; it implies patriotism; it implies a broad philanthropy that can comprehend the wants of all and prompt us to lift up the manhood of the poor. Conceding, then, the fact that an illiterate man may possess good com-

conceaning, then, the fact that an illiterate man may possess good common sense, have a quick appreciation of the qualities of other men, and gather some knowledge of public affairs, yet masses of ignorant men are always easily deceived, liable to be blown about by every wind of political doctrine, and are a dangerous element in a republic. The danger is too great to be long incurred. An able author wrote a quarter of a century ago:

Popular education renders a people morally incapable of adopting any other than republican institutions. The qualities which belong to high culture and which may be dangerous when confined to a few, are of unspeakable advantage when dispersed among the many. Demagogues are disarmed when constituencies are enlightened.

It is needless for me to occupy time in showing by history, by statisties and by argument, that ignorance is in every country the propagator of vice and that the surest way to save men from crime is to cultivate their minds and awaken their nobler aspirations. Much has been written on this subject and much more might be said to prove that, aside from the higher considerations, on mere economic grounds, every nation should insure the education of its people. A sagacious stateman said, "Parsimony in education is prodigality in crime."

I firmly believe, that had the common white people of the South been better educated, the civil war, with all its direful consequences, would have been impossible.

Were half the power that fills the world with terror, Were half the wealth bestowed on camps and courts, Given to redeem the human mind from error, There were no need of arsenals and forts.

#### THE POVERTY OF THE SOUTH.

The Southern States, unaided, are powerless to cope with this monster of ignorance. The people are comparatively poor. They lost two billions of property by the emancipation of their slaves and two billions more in the support of their armies. They are burdened with debts and are heavily taxed to maintain their local and State governments, and they also have to contribute to the Federal Treasury. Those States were the theater of the great war, and when that conflict was ended their furrowed and devastated fields, with such buildings as had escaped destruction, were all that were left to them. But during the last few years the people have manifested commendable enterprise in last few years the people have manifested commendable enterprise in restoring the industries of their country and in developing its resources. Among other things they have established a system of public schools in nearly all of the States. Each year marks an increase in the number of school-houses and teachers, in the attendance of scholars, and in the amount of money raised for school purposes. But with only about two-fifths as large a white population and with more than three times the illiteracy of the North, the South has not a tithe of the means of the North with which to overcome the evil. While Massachusetts can peoply raise \$15 per centre to educate her children and other Northern North with which to overcome the evil. While Massachusetts can easily raise \$15 per capita to educate her children, and other Northern States from \$6 to \$12, it is difficult for Arkansas to raise 90 cents, Alabama 96 cents, North Carolina 98 cents, and Georgia \$1.08 for the same purpose. If the South had only her white children to educate she might be equal to the task; but add to these the colored children, whose parents can contribute very little to their education, and she finds he means inclosure. finds her means inadequate.

The following valuable table was compiled by the Commissioner of

		White.		Colored.			e for
States.	School popula-	Enrollment.	Percentage en- rolled.	School popula-	Enrollment,	Percentage en- rolled.	Total expenditure both races.

In several States named above the school age extends to twenty-one years, and it is presumable that a considerable portion of the school population, not enrolled, has been in the schools and passed therefrom; also that many of the white children, not enrolled, are in private schools

schools.

The following table, taken from the last report of the Commissioner of Education, shows the amount expended by the several States for school purposes in 1880, which, including some ten millions expended for lands and buildings, aggregates nearly \$80,000,000. The table also shows the share of \$10,000,000 which each State and Territory would receive on the basis of illiteracy.

States and Territories,	Expenditure in 1880.	Share of each in \$10,000,000.

The immediate wants of the South are more schools and longer terms for those already established. Nine of those States have schools of from eleven to sixteen weeks' duration, others from twenty to twentyfour weeks, when every school should have terms of at least thirty-six

weeks annually. The small villages and country districts are in the greatest need of assistance, where teachers' wages are from twenty-five

to fifty dollars a month.

The assistance should be granted immediately, for hundreds of thou-The assistance should be granted immediately, for hundreds of thousands of children are annually passing beyond the reach of public instruction. The assistance should be temporary. Eventually the States and their towns and school districts must support their own schools. Aid is only required to lift the people out of the slough into which they have fallen, and place them on the highway of progress. On this subject I quote from a memorial to Congress by some very earnest and able gentlemen who are engaged in the cause of education in the South:

We respectfully suggest:

1. The help should be so given that it will stimulate rather than supersede the necessity of State effort.

2. It should be help for the common schools; temporary aid in the training of teachers, perhaps, but chiefly in giving them opportunity to teach.

"The safety of the Republic is the supreme law of the land." This is the maxim which not only justifies but demands action on the part of the General Government; and it should also suggest the limitations under which the action should be taken.

3. The help should be immediate out.

ment; and it should also suggest the limitations under which the action should be taken.

3. The help should be immediate and not remote. The fortunes of war, and the necessities of legislative action, have made citizens of a large mass of ignorant men whose votes are to shape for weal or we the character of our laws. Education alone can convert this mass of ignorance and element of danger into one of enlightened strength and safety.

Largely more than one-half of a fund for the education of the illiterate would go to the South for negro illiteracy; less than one-fourth because of white illiteracy. If Congress should create a fund which would give \$\mathbb{S}\$ per anum per capita for the education of this class alone, it will require an aggregate annual sum of \$\mathbb{S}\$,719,988. Of this, Mississippi, e.g., would receive \$\mathbb{S}\$, 119,603, but of this \$\mathbb{S}\$95,529 would be for colored illiterates, and \$\mathbb{S}\$60,344 for white illiterates.

Representing an educational work in the South chiefly for the negro race, in which have been expended about \$\mathbb{S}\$10,000,000, and speaking with a wide knowledge of facts, we emphatically assert the impossibility of accomplishing this great work unless the General Government shall come to the assistance of those States in which this illiteracy is chiefly found.

Every dollar we have expended expresses the conscientious and earnest desire of the donor that this work shall be done, and is an emphatic vote for the action for which we ask.

In the name of the millions of Christian citizens whom we represent, we carnestly urge Congress to help qualify the ignorant voters who are intrusted largely by Congressional action with the ballot for the duties with which they are charged, believing the power to do this is co-ordinate with the power that enfranchised them.

WASHINGTON, D. C., March, 1882.

The above-named gentlemen and other leading educators, including Northern men who have spent years in the South, express the confident belief that the money will be faithfully applied to the purpose for which it is appropriated and that no discrimination will be made against the colored children. The bill is as well guarded in this respect as it can be without the employment of Government agents in the several States to manage the distribution of the fund, the expense and machinery of which should, if possible, be avoided. It is in the power of Congress, however, to protect this fund by ample safeguards.

In illustration of the amount of good that can be accomplished by comparatively small means, fifteen years ago Rev. Dr. Porter, of Charles-

ton, South Carolina, being oppressed by the fact that the sons of the best families of the country around him were growing up in ignorance for want of means to obtain an education, opened a school for them in that city and invoked aid from the North and from friends in England in its support. Now, in review of his work he finds that he has educated 2,150 boys and equipped them for the business of life. He expresses the belief that without his school at least 1,800 of them would have been in no school at all.

The income from the Peabody fund from 1868 to 1879, inclusive, was from \$100,000 to \$150,000 annually. As a means of awakening an educational spirit and setting good influences in operation its benefits are immeasurable.

The colored people are readily taught and are anxious for education. If this were otherwise the duty of the Government to qualify them for the intelligent exercise of the right of suffrage and other rights of citizenship would only be the more imperative. In the North they hold respectable rank in the various professions and pursuits, and we note with pride the fact that in the South many men born in slavery have overcome the most adverse circumstances and reached positions of respectables. sponsibility and distinction, and are examples before the country of the capabilities of their race. The masses should emulate such examples, and understand that what they now require are habits of industry and economy, lands and homes, mental and moral elevation, which se-cured, social and political recognition will be theirs.

THE BILL CONSTITUTIONAL

If the proposition were that the Government should establish a sys-

tem of schools, or interfere with State systems already existing, it would of course encounter constitutional objection. I shall not enter upon of course encounter constitutional objection. I shall not enter upon any argument to prove that the Government has a right to aid in the work of education and that this is not left exclusively to the States. It would seem idle to address such an argument to a House that at its last session wisely and humanely voted hundreds of thousands of dollars for the relief of the sufferers from the overflow of the Mississippi River. Each year there is paid from the Federal Treasury from six to ten million dollars for the improvement of rivers and harbors (this year ten million dollars for the improvement of rivers and harbors (this year nearly \$20,000,000), and as much more for the erection of public buildings in various parts of the country. Congress has made grants of lands more extensive than the whole area of France in aid of the construction of railroads and canals. Whence comes the right to make these and like appropriations of money from the public Treasury and grants of lands from the public domain? It comes from the power given to Congress by the Constitution and the duty therein implied to provide for the general welfare of the United States, which power is exercised upon the ground that such appropriations are for the public benefit and not for the exclusive benefit of the people of any particular State or section. In the year 1880 the trustees of the Peabody educational fund referred

the subject of invoking national aid for the education of the colored pop ulation of the South to a committee consisting of Hon. Alexander H. H. Stewart, Chief-Justice Waite, and Hon. William M. Evarts. In their report to the trustees those learned and distinguished gentlemen fully considered this question. I have not time or space to quote their entire opinion on this point, but the following extract there from will suffice:

opinion on this point, but the ioliowing extract there from will suffice:

The next point which your committee have felt it to be their duty to consider is, does Congress possess the constitutional power, not to control, but to contribute to the education of citizens of the States?

If doubts were entertained as to the existence of such a power in an unqualified form, it might well be contended that the case of the colored population is surrounded by such peculiar circumstances as to take it out of the influence of any general rule. But fortunately this question, even in its general aspect, is not a new one, presented now for the first time to be decided. It may be regarded as res adjudicata. The laws of the United States present innumerable precedents in which Congress has exercised the power to contribute toward the general education of citizens of the new States, and in no instance has its constitutional right to do so been questioned.

If any authority is required to establish so plain a proposition I can content myself with the high authority just cited.

Then, to summarize the arguments for this bill, the extent of illiteracy in certain sections of this country has been shown by facts and figures to It is alarming in view of the theory that this is a govern-

ment by the people and that its stability depends on their intelligence.

It has been shown with equal clearness that the Southern States have not the means to provide a common-school education for their children; that they are hardly able to educate the white children, much less the blacks in addition who have been cast upon them.

It has been shown beyond all question that Congress has the consti-tutional power to aid the States in this work of vital importance to the nation and that no greater duty rests upon it than to grant such aid.

If the appropriation proposed is too large or too long continued the bill can easily be amended to conform to the judgment of the House. The committee are less strenuous as to the sum appropriated than they are that Congress shall give this subject its attention, trusting as they do that it will appropriate a sum adequate to the wants of the country

The revenues to the Government during the last fiscal year from spirits, fermented liquors, and tobacco were \$123,000,000, and as these articles are mainly used as luxuries the taxes that produced this vast sum oppressed no one. And yet there are men on this side of the House who believe that all these taxes should be removed and that the internal-revenue system should be abolished. Though I believe that both the internal-revenue and the customs duties should be reduced, they should be maintained at a rate that will enable the Government to appropriate money for popular education.

am not one of that number who fear they will incur the dipleasure of the country by advocating the expenditure of a large sum of money for this purpose. Though the people of this country desire and demand for this purpose. Though the people of this country desire and demand economy, they do not desire parsimony in the public expenditure nor the withholding of it from any purpose that is necessary and that will inure to the public welfare.

We expend \$80,000,000 annually in pensions to those men now disabled who once composed the Army of the Republic and defended and maintained it by their valor on the field of battle; let us now expend something to qualify for intelligent citizenship the army of children to

whom must soon be committed the destinies of the nation.

Is it objected that this bill will distribute money to New England, New York, Pennsylvania, and the States of the fertile West that do not require it? If this is a valid objection, let the bill be amended, as I would propose, so that aid will be granted only to those States that absolutely require it. The opinion prevailed in the committee that if the Government bestowed its bounty upon any States at should bestow it upon all and upon the basis named in the bill. As the Northern States contribute more largely to the revenues of the Government than do the Southern, it seemed to a majority of the committee equitable that the former should have the small share of the fund that would fall to them under this apportionment. I can see no good ground for an apportionment of money to the rich and prosperous States of the North

that neither ask nor require it. The demand for aid is in the South, and mainly by the colored people who are temporarily the wards of the nation and unable to educate themselves. The whites certainly would not ask aid in their own behalf alone

What, then, is the objection to granting this aid? Is it because there exists in some minds the feeling that men in ignorance are more likely to follow the behests of party than if intelligent? I will impute such motives to no man for his action. I will cast on no man such suspicion

The press, the pulpit, the educators, all the best public sentiment of the country demand an appropriation of money for this purpose The people in great numbers have petitioned for it. The Legislature of several States have by resolution invoked this aid from Congress The Legislatures More than this, the condition of two millions of children in the South demands the interposition of Congress in their behalf. The platforms of both political parties have declared in favor of some measure of this kind. Presidents in their messages have recommended it, and yet the resentatives of the people, who alone have power to grant this aid, withhold it.

Near the close of last session a leading journal in Massachusetts forcibly stated the case as follows:

cibly stated the case as follows:

Among the important measures which Congress apparently purposes to leave until cooler weather and a more convenient season is the matter of providing for national aid to education. This subject lies somewhat outside the domain of what is known in the current phrase as "practical politics;" it is in the region of broad and far-sighted statesmanship, and involves one of the most momentous questions we have been called upon to face. When there are 5,000,000 our population of 10 years of age and upward unable to read or write, when four-fifths of this tremendous mass of illiteracy is contained in a single section of the country, comprising the States lately in rebellion; when there are States in which holy one child in five of school age is enrolled in any school, and other States in which the expenditures foreducation average less than adollar for each pupil, it is pretty clear not only that this great load of ignorance is a perilous thing, but that the evil is growing a good deal faster than the means devised to cope with it. To shut our eyes to the existence and magnitude of this evil, and to refuse to do anything to abate it, is to expose our institutions to a strain hardly less serious than that which came to them from slavery and the civil war. It will be an ominous day for the Republic when men who can not read the ballots which they cast come to hold the belance of power.

This measure is by no means a mere local one. It concerns New

This measure is by no means a mere local one. It concerns New England, it concerns the North as well as the South, because it involves the highest interests of the Republic. Let no man oppose it because the money appropriated will be distributed largely to a particular section of the country. If the North will be less directly benefited by it than the South she should be thankful that the spirit of freedom, "which has a thousand charms to show," has always dwelt within her borders, has prospered her industries, and rendered it both possible and easy for her to educate her children and placed her above the need and easy for her to educate her children and placed her above the need of governmental aid; and grateful for the high privileges she has enjoyed, she should now from her abundance extend assistance to the South, which has so recently emerged from the barbarism of slavery and been scourged by the demon of war.

I am aware that there are gentlemen here who, remembering the wrongs that the Southern whites have perpetrated on the blacks since the war, are inclined, if not determined, to vote against this bill, claiming that the South should educate her own people. For those wrongs I have no words of defense, excuse, or palliation. To my mind they constitute one of the darkest chapters in American history. And yet it is easy to understand that a race proud of their ancestral blood and lands, to whom a white skin was a patent of nobility, should revolt at nands, to whom a white skin was a patent of noonity, should revoit at another race, who had recently been their slaves, being suddenly made their political equals. It was a wonderful change which Southern men were called upon to witness and endure when the freedmen carried State elections and controlled State affairs; and the change was not the more endurable on account of the ignorance and unfitness of the blacks for the political duties which they assumed. For all this the white people should have remembered the causes which led to the inversion of their social system, submitted to the enfranchisement of the blacks, and, as a matter of wise policy as well as of right, accorded to them the enjoy-ment of their political privileges.

And certainly we of the North, who have always lived with freedom's soil beneath our feet and freedom's banner streaming o'er us, must not now neglect the colored race to whom until twenty years ago freedom was only a vision. It is enough for us to know that there are millions of colored children in the South without education and without the means to obtain it.

Neither should we forget the white people of that section, who seem to be earnestly struggling to rise above the cloud of ignorance that darkens their land. We must take the condition of society as it is, and as legislators, having in view the highest interests of the people, forget the things that are behind, comprehend and meet this great want for the elevation of the people in order that the Republic may move onward to the high position it is entitled to occupy among the nations of the earth.

Prussia learned that national greatness lay in the intellect of her people; hence she watched her children, discovered their aptitudes, and educated them in the direction of their fitness, whether for war for literature, the arts or sciences, or the other pursuits of peace; and Prussia, from being an insignificant nation, has become a dreaded power in Europe. France places schools within the reach of all her children

and compels their education. Denmark, with a population of 2,000,000, and compels their education. Denmark, with a population of 2,000,000, has 200,000 school children, all of whom are in attendance except such as are mentally or physically incapacitated. Japan is studying the best school systems of other countries, and striving to keep abreast with the best sentiment of the age on this great subject. America gives freedom and citizenship to 4,000,000 of people, and leaves them in ignorance and poverty, with no provision for their education. We are intense in our devotion to material interests. We build 10,000 miles of railroad in a year and develop an immense internal commerce by means of the network of water ways that are spread over the country. We explore the heart of the earth for its treasures of coal and iron, and the mountains pour out for us their wealth of silver and gold. The hum of our factories fills the land; the products of our soil

gold. The hum of our factories fills the land; the products of our soil feed the nations of the world. After payment of all annual expenses there is a surplus revenue in the Federal Treasury of nearly a hundred and fifty million dollars to apply to the reduction of the national debt.

And yet with all this material prosperity and progress we suffer millions of human minds, with all their latent faculties, with all their possibilities for development and for good, to lie waste and barren, waiting-let them not wait in vain-for the transforming power that can quicken them to life.
One remark further and I close.

The Republican party has always been the avowed friend of the colored race. It is now neither kind nor wise for that party to lock up the doors of an overflowing Treasury, turn with indifference to the colored men who are struggling to acquire something they can call their own upon the earth and to improve their men-tal condition, and say to them that each State must provide for the ed-ucation of its people and that the General Government can not interfere in this matter, when we know that they have not the means and can not obtain them from their respective States to educate themselves and their children.

Note.—As the committee of which I am a member has been unable to get the bill before the House for final consideration, by the courtesy of the House I have printed the above remarks in the hope that the facts recited may be of some public service.

#### The Tariff.

### REMARKS

## HON. COLUMBUS UPSON,

OF TEXAS.

## IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 24, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other pur-poses.

Mr. UPSON said:

Mr. CHAIRMAN: I confess that I have not reached or discovered that exalted height of unselfish statesmanship which would justify me in forgetting, disregarding, or in being indifferent to important interests which particularly concern the people I have the honor to represent. Regarding this to be a representative Government, I believe the people of this country through their respective representatives have a right to speak and be heard as to legislation which concerns their particular to speak and be heard as to legislation which concerns their particular interests. I do not, however, regard the obligations of a representative to his constituents as requiring the advocacy or support of any local measure contrary to sound public policy or detrimental to the general good. Nor do I subscribe to the doctrine that the property of the many can be properly taxed to enrich the few, or that private enterprises can be built up and made monopolies by the Government, legitimately, at the expense and injury of the people at large. Class legislation also, as well as favoritism in legislation, can not be too strongly deprecated. deprecated.

PRESENT TARIFF SHOULD BE RETAINED.

I advocate a retention of the present tariff duty on wool because I believe it to be upon a revenue basis and within that limit will tend to preserve and encourage an important American industry and promote the general welfare, and because it is demanded by a large number of my constituents.

It is my desire to have the tariff reduced to a revenue standard in such

It is my desire to have the tariff reduced to a revenue standard in such manner as will not seriously injure or destroy any American industry, but, as far as may be practicable, fairly and wisely preserve the same. With that object in view, my votes on this bill, which have been cast in almost every instance for a reduction below the rates reported by the Ways and Means Committee, have been governed.

I desire to say here that I most emphatically dissent from the policy advocted in the interest of manufacturers that all raw material should be admitted free of duty. I insist that the American producers of raw materials should receive a fair proportion of the benefits to be given or arising from the incidental protection resulting from a revenue tariff as well as the manufacturers. These benefits should be distributed among

all classes of our people as justly and wisely as may be, and not bestowed upon a favored few

As long as the system of protection to American manufactures by or under impost duties is maintained, I can not subscribe to the doctrine under impost duties is maintained, I can not subscribe to the doctrine of free raw materials contended for as correct in principle or sound in policy. The adoption of that policy by law I would regard as special legislation in the interest of one class of our citizens to the injury of another class, equally deserving of the fostering care of the Government, and as of the most odious and objectionable character of the protective system. The object of the high protectionist, as I understand it, is to give to American manufacturers, to the extent at least of their manufactured products, a monopoly and control of the American market.

To effectually accomplish this object, the manufacturers must have the raw materials, out of which their fabrics are made, free of duty and high prohibitory duties imposed on the imported article to prevent foreign competition. While the American manufacturer would shut out the for-eign competitor, he would have the home market under his exclusive control, with his chance at the outside markets of the world left free and open; but would leave the American producer of the raw material practically confined to the home market in an unequal competition with foreign cheap labor and subject to the manufacturer's will. Under such circumstances the American woolen manufacturer would be secure behind his wall of protection with the accumulating advantages which experience, new inventions, and improvements might give him, while the American wool-grower, unaided and unprotected, with no possible advantages of machinery, human inventions, or superior intelligence over the bar-barian in the method of producing wool, which must grow in the same old natural way on the sheep's skin, must contend with the wool-growers of the world.

AMERICAN SHEEP HUSBANDRY.

Sheep husbandry has become a very important interest in this country, and is rapidly increasing.

Domestic wool productions in the United States during three decades, from 1850 to 1880.

An increase of 111.7 per cent. Of this amount Iowa, Missouri, Minnesota, and States east of the Mis-Of this amount Iowa, Missouri, Minnesota, and States east of the Mississippi produced, in 1866, 120,000,000 pounds; in 1881, 164,000,000 pounds. California, Oregon, Colorado, New Mexico, and other Western States and Territories produced, in 1866, 9,000,000 pounds; in 1881, 87,200,000 pounds. Georgia and Lake and Southern States produced, in 1866, 2,000,000 pounds; in 1881, 12,200,000 pounds.

Texas produced in 1866, 6,000,000 pounds; in 1881, 26,000,000 pounds; in 1882, estimated, 28,000,000 pounds—an increase of 466 ger cent. It will be seen that Texas now produces about one-tenth of the wood product of the United States; fully one-half this amount is grown in

It will be seen that Texas now produces about one-tenth of the wool product of the United States; fully one-half this amount is grown in the district I now represent. The wool interest in Texas, including the value of lands used in the wool-growing industry, is estimated to exceed in value \$50,000,000. This interest in Texas has increased in the last fifteen years over 450 per cent. With the natural advantages in climate, soil, grasses, and herbage which Texas possesses for wool-growing, her people look forward to the day in the near future when Texas will lead every other State or section of the Union in this great industry, and perchance bid defiance to all foreign competition.

Sheen husbandry, however is not confined to any particular State sec-

Sheep husbandry, however, is not confined to any particular State, section, or locality in this country. It is carried on to some extent in every State and Territory of the Union, although more advantageously and profitably in some sections than in others, consequent upon cheaper lands, more favorable climate, and less expense in feeding and in caring for sheep in some sections than in others.

It is an industry in which the farmers of the country are directly and to a great extent interested.

It is estimated that there are from 400,000 to 800,000 persons who

own flocks of sheep in this country, and that about \$300,000,000,000 are invested in the production of wool in the United States.

The popular cry "the favored few"—"rich corporations" can not be raised against the hundreds of thousands of industrious and hard-working American wool-growers scattered over the whole country from Maine to California and Texas, nor can the odious stigma of "monopoly" be attached to this extended and individualized industry. The flocks of the greater work of the december of the country any physical by the state of the december of the country any physical by the state of the december of the country any physical by of the greater part of the sheep-owners of this country are numbered by

the tens and twenties and by the hundreds, and but few by the many thousands. Their habitations are not of palatial grandeur or regal splendor so much decried against, but humble farm cottages, rude cabins and huts, and rough jackals. Their paths do not run amid beds of flowers, but wind their dreary way over the wild prairies and through the mountain gorges. The bleating of the timid lamb, the howling of the hungry wolf, and the whoop of the savage Indian often greet our shepherds' ears in quick succession.

According to the statements before the Florica Communication of the statements before the Florica Communication.

According to the statements before the Tariff Commission there are in one county, Washington, in Pennsylvania about 600,000 sheep, with investment in sheep husbandry in that county alone of about \$3,000,000.

Number of sheep in the United States

182, estimated	. 50,000,000

Increase by decades, 1850 to 1860, 739,395=3½ per cent.; 1860 to 1870, 6,006,682=28 per cent.; 1870 to 1880, 13,903,432=48 per cent. Number of sheep in Texas estimated at from 5,000,000 to 7,000,000.

We have foreign competitors in this great enterprise, who up to this time have kept far in the lead in the amount and quality of wool products, and may continue to do so unless we duly guard and promote this growing and important home industry. But of foreign wool-growing

I will speak hereafter.

From the data already given it will be seen that the wool industry of the United States is of vast and rapidly-growing importance; not yet equal, however, to our demands for home consumption by an average of 60,000,000 pounds imported into the United States annually, not taking into account the many millions of pounds necessary to manufact-ure the large amount of woolen goods imported into this country annually, in value many millions of dollars.

QUESTIONS TO CONSIDER

Without entering at this time into the disputation as to the opposing and conflicting theories on the tariff, I propose to discuss very briefly two questions, namely:

First. Is the present tariff on wool a revenue tariff, or a tariff for revenue?

Second. Should this tariff be retained, reduced, or abolished?

The examination of these questions may disclose apparently some anomalies and seeming inconsistencies. If so, it may show to some ex-

tent the intricacies, and, I may say, strange and incomprehensible workings of our tariff system.

The prices given of wool in the United States and in Europe are so varying and conflicting that I have found it quite impossible to obtain accurate or entirely reliable information in regard to the same. Hence it is very difficult, and, I may say, impossible, from the data within the reach of the public to determine with accuracy the effect of the tariff upon the price of wools. I will, notwithstanding, submit some

statements which are entitled to credit, from which we may approximate the actual prices of wool.

It is proper to state, also, that the great varieties in the kinds, qualities, and conditions of foreign wools also add to the difficulty of ascertaining accurate prices, as well as the fraudulent undervaluations. which are believed to be carried on to a great extent, in consequence o which our wool-growers believe they suffer no little damage.

TARIFF ON WOOLS.

The first tariff on wool in this country was laid, I believe, in 1824. Duty on wool.

Duty on wool.

1824—Not exceeding 10 cents per pound, 15 per cent.; exceeding 10 cents per pound, 20, 25, and 30 per cent. ad valorem.

1828—4 cents per pound and 40 per cent. ad valorem to June 30, 1829; after tha time 5 per cent. additional annually until the whole ad valorem duty shal amount to 50 per cent.

1832—Under 8 cents in value, free; exceeding 8 cents in value, 4 cents per pound and 40 per cent. ad valorem.

1836—Under 8 cents, free; exceeding 8 cents, 4 cents per pound, and 38 per cent ad valorem.

d valorem. d valorem. 1841—Under 8 cents, free; exceeding 8 cents, 4 cents per pound, and 32 per cent

1842—Under 8 cents, free; exceeding 8 cents, 4 cents per pound, and 26 per cent

1842—Under 8 cents, free; exceeding 8 cents, 4 cents per pound, and 25 per cent. ad valorem.

1842—Under 7 cents in value, 5 per cent.; exceeding 7 cents, 3 cents per pound and 30 per cent. ad valorem.

1846—30 per cent. ad valorem.

1857—Not exceeding 20 cents per pound in value, free; exceeding 20 cents per pound, 24 per cent. ad valorem.

1861, 1862, and 1863—Value less than 18 cents, 5 per cent.; value 18 to 24 cents 8 cents; exceeding 24 cents, 9 cents per pound.

1864, 1865, and 1865—Not exceeding 12 cents, 3 cents; 12 to 24 cents value, 6 cent per pound; 24 to 32 cents value, 10 cents per pound and 10 per cent.; exceeding 22 cents value, 12 cents and 10 per cent. ad valorem.

1867—First class, 10 cents per pound and 11 per cent. ad valorem; second class 12 cents per pound and 10 per cent. ad valorem; 1867—First class, 10 cents per pound and 11 per cent. ad valorem; cents or less per pound in value, 3 cents per pound; exceeding 12 cents in value, 6 cents per pound. On the principal binds of wool immorted the rates of the present duty.

On the principal kinds of wool imported the rates of the present dut are on coarse wools 25.4 to 31.3, and on clothing and combing wools 4 and 55.7 per cent. ad valorem; average on coarse wools about 28½ per cent.; on first and second classes about 51½ per cent. ad valorem.

PRICES OF WOOL.

The prices of wool given below in New York are compiled from the reports of the Secretary of the Treasury, the reports of the New York

Chamber of Commerce, and the New York Shipping List and Price Current, by Anisworth R. Spofford, Librarian of Congress. The average prices given embrace each period covered by the different tariffs from the first laid on wool in 1824 down to 1881, excluding the period of the late war and the time directly affected by it, from 1861 to 1865

I submit a tabulated statement of the average prices of American washed clothing fleece wools from 1824 to 1881, inclusive, as given by General Springer in his speech on the tariff delivered in the House, May 3, 1882, from which it will be seen that the medium prices given Mr. Springer considerably exceed the highest prices given by Mr. Spofford during the same periods.

Statement showing the average price of medium American washed clothing fleece wool from 1824 to 1881, inclusive.

[United States Economist and Dry Goods Reporter, January 31, 1880, data furnished by Mauger & Avery, 49 West Broadway, New York city.]

As to the fair market prices in London of the qualities and kinds of the first and second classes of wool which are imported into the United States, I have been unable to obtain satisfactory information. According to the table submitted to the Tariff Commission by Mr. William Whitman, of Philadelphia, representing the National Association of Wool Manufacturers, the average prices of these wools in London were as follows: 1868 to 1882, inclusive, average 26.8 to 38.8 cents; general average, 32.8 cents. According to the statement given by Mr. Spofford the prices of American wools in New York were as follows: 1868 to 1880. inclusive, average, 31 to 45 cents; general average, 38.2 cents; making a difference in favor of American wool of 5.4 cents. The manager of some large mills at Stroud, England, for the manufacture of woolen cloths, states in a private letter dated August 28, 1882, which I have in my

Wools used by us vary much in price. We pay as low as 8d. (16 cents) per pound for some heavy wasting wools, which lose in scouring some 60 to 70 per cent. Australian wools range from 1s. 3d. (30 cents) to 2s. 4d. (56 cents) per pound; fine German wool from 2s. (48 cents) to 3s. 6d. (84 cents) per pound. These fine wools seldom weigh more than 16 ounces, to, say, 1½ pounds to the fiece; the finest only 12 ounces to the fieces. From these wools we manufacture a variety of cloth, and on the other side I give you the wholesale prices of the leading makes. Our finer and best goods are dyed in the wool.

Wool black cloth, 63 inches wide, 11s. to 26s., equal to \$2.62 to \$6.24.

Wool blue cloth, 12s. to 26s., equal to \$2.88 to \$6.24.

Doeskin, 28 inches wide, 5s. 9d. to 8s., equal to \$1.38 to \$1.92.

Browns, black, blue, middling, &c., 59 inches wide, 12s. 6d. to 15s., equal to \$3.60.

Wool blue cloth, 2s. to 26s., equal to \$2.8t to 86.24.

Doeskin, 28 inches wide, 5s. 9d. to 8s., equal to \$1.38 to \$1.92.

Browns, black, blue, middling, &c., 59 inches wide, 12s. 6d. to 15s., equal to \$3.60.

Worsted coatings, 59 inches wide, 10s. 6d. to 14s. 6d., equal to \$2.52 to \$3.68.

Piece-dyed goods, cloth 60 inches wide, 9s. to 12s., equal to \$2.52 to \$3.68.

Piece-dyed goods, cloth 60 inches wide, 9s. to 12s., equal to \$2.52 to \$3.68.

Piece-dyed goods, cloth 60 inches wide, 9s. to 12s., equal to \$2.52 to \$3.68.

Doeskins, 28 inches wide, 3s. 9d. to 5s., equal to 90 cents to \$1.20.

Beavers, 59 inches wide, 9s. 6d. to 10s. 6d., equal to \$2.28 to \$2.52.

Worsted contings, 58 inches wide, 6d. to 10s. 6d., equal to \$2.00 to \$2.52.

The wages we pay are given below. We have a foreman in each room or department, whose wages average from 25s. to 3s. per week, equal to \$6 to \$7.20.

Our hours of work are from 7 s. m. to 6p. m., one-half hour breakfast and one-half hour dinner, making thus a working day of ten hours. On Saturday we close the factory at 2 o'clock for cleaning up and repairs.

Wool-sorters, 30s. per week, equal to \$7.20.

Carding-room; Foreman, 30s. per week, equal to \$7.20; under helps, 12s. to 15s. per week, equal to \$2.80 to \$2.85 to \$3.60; feeders, 7s. to 8s. per week, equal to \$1.68 to \$1.92.

Spinning-room; Foreman, 25s. to 35s. per week, equal to \$6 to \$7.20; men spinners, 15s. to 18s. per week, equal to \$2.40 to \$2.88

Weaving; Foremen or timers, 30s. per week, equal to \$7.20; men weavers, 15s. to 18s. per week, equal to \$3.60 to \$4.32; women weavers, 10s. to 12s. per week, equal to \$2.80 to \$2.88

Weaving; Foremen or timers, 30s. per week, equal to \$7.20; men weavers, 15s. to 15s. per week, equal to \$3.60; boys, 8s. per week, equal to \$7.20; men, 15s. per week, equal to \$3.60; boys, 8s. per week, equal to \$7.20; men, 15s. per week, equal to \$3.60; boys, 8s. to 10s. per week, equal to \$7.20; men, 15s. per week, equal to \$3.60; boys, 8s. to 10s. per week, equal to \$7.20; men, 15s. per we

The writer of the letter just quoted from I am advised is a gentleman of high standing and that his statements are entirely reliable. According to his statement Australian wools rate in the English market from 30 to 56 cents per pound, while, American wools rate in the New York market from 31 to 45.

In Consular Report No. 18, page 518, the prices of wool in Bedford,

England, January, 1882, are as follows:

Merinos: Washed, 32 to 48 cents and 32 to 60 cents; greasy, 18 to 24 cents and 20 to 32 cents; making an average of 53 cents and 22\(\psi\) per pound.

Cross breeds: Greasy, 11 to 14, and 36 to 44; greasy 16 to 19, and 24 to 34.

The average prices of wool in Texas do not exceed for six months' clips 22 cents per pound, and for 12 months from 28 to 30 cents per pound. Whatever the true difference in the prices of the same character of wool may be between the home and the foreign market, I am confident the price of American wool is not increased to the amount of the tariff levid on foreign wool. confident the price of American wool is not increased to the amount of the tariff levied on foreign wool. As to clothing and combing wools of like kind and quality the American price does not exceed the foreign more than from 5 to 6 cents per pound—about 8 cents per pound less than the amount of the duty. The average price of wool, it would appear, for the first three years under the high tariff of 1867 exceeded the price under the low tariff of 1857 only five-sixths of a cent per pound, and that for thirteen years, under the tariff of 1867, the average price of American wool exceeded the price under the tariff of 1857 by 4½ cents per pound, according to the Spofford table, and 3 cents by the Springer table.

Total amount of wool imported since 1867, 212 508 794 pounds:

Total amount of wool imported since 1867, 912,508,794 pounds; total duty collected on the same, \$62,189,027.72. First and second classes of total import, estimated to be about one-third, 304,169,598

pounds; total duty on same, first and second classes, say from 12 to 14 cents per pound, estimated to be about \$39,000,000.

Admitting that the effect of the tariff has been to increase the price of

wool from 4 to 6 cents per pound, which is disputed, since 1867 there would be of the duties collected to be credited to the wool interest \$24,000,000, and chargeable \$15,000,000, showing a balance in favor of the wool industry of \$9,000,000, and establishing wools imported of the first and econd classes even, to be a revenue-paying article to the advanta the Government and the country generally. The present tariff on these classes of wool pays into the Treasury at the rate of about 8 cents per pound, as appears over and above any increase of the cost of wool added by the tariff duty, while the low tariff of 1857 only paid about 6 or 6}

cents per pound.

It would seem that since 1824, excluding the period of the late war, for over fifty years there have been from time to time fluctuations in prices, but no great changes in the general average price of wools in this country, but a slight and gradual increase. May not this gradual increase in the price of wool be attributable more to the improved quality of our wools, to the increased cost of living and labor, and to the increased demand for manufacturing purposes and for consumption, than to the

effect of our tariff laws

I find no warrant for the assertion that the price of wool generally is materially decreasing either in this country or in Europe. The third materially decreasing either in this country or in Europe. The third class, or coarse wools, principally used in making carpets, are not grown in this country to any considerable extent. Ninety per cent. of our carpet wools are of foreign production, and therefore are almost wholly revenue-paying articles. They may also be classed among luxuries, and therefore should be subjected to a maximum duty for revenue. It is the rich and "well to do" who mainly use carpets, and I see no reason why they should be relieved of this burden, which to the amount of several the analysis of the Carpets and the millions annually goes toward the support of the Government and the payment of the public debt.

EFFECT OF THE TARIFF.

Aside from yielding the revenue derived from these coarse wools the duty is a safeguard to our wool-growers in preventing our markets from being flooded and overstocked with the coarse, dirty, and inferior wools of South America, Turkey, Asia, Africa, and other coarse-wool growing countries, which, if admitted free, would to a considerable extent in manufactures of an inferior and undesirable quality take the place of our finer, better, and stronger wools, to the great injury of our wool in-About two-thirds of the wool now imported into this country is of the character just stated. From all the information I have been able to obtain, and from the thoughtful study I have given this question, in my candid judgment the benefits derived from a tariff on imported wools are not so much in increasing the price of our wools by preventing a healthy competition, if it does increase the price at all, which is seriously denied by many (besides the reason just stated as to coarse wools), as in giving our wool-growers a steady and reliable market and in preventing sudden influxes or extraordinary shipments of wools from foreign countries, which would greatly cripple if not injure this at present prosperous,

important, and growing industry.

Whether or not the tariff of 1867 has contributed in any degree to ward the prosperity of the great wool-growing industry of the United States, it is a significant fact that it gave confidence and cheer to our growers and encouraged many to engage in the business, and that since that time sheep husbandry in the United States has continued to prosper. It is believed that any reduction in the tariff on wool may endanger the prosperity of, if not prove disastrous to, that industry, especially in the States where the sheep must be fed on hay and small grain and sheltered for from three to five months in the year. Notwithstanding the advantages of the present tariff, the wool-growers in the States last referred to, in consequence of the sharp competition forced upon them by the importers of foreign wools, are doubtful whether or not they will be able to continue this business much longer. They watch with great anxiety the action of Congress as to the tariff revision. believing that a material reduction of the present duty on wool will force them at a great sacrifice to abandon their enterprise of wool-grow-I grant that the sheep-raisers of Texas do not run an equal risk of losses by a reduction of the tariff on wool as those in the Eastern and Middle and in some of the Western States; but they are also greatly alarmed at the proposed reduction of the present tariff on wool, believ ing that it will greatly cripple their enterprise and may make it un-

It must be borne in mind that the United States afford our woolgrowers their only market for the sale of wool, while for our beef and pork and farm products Europe besides the United States furnishes a

ready market.

Without the safeguards and protection which a tariff for revenue gives to this industry, can it, under free trade, stand or survive the unequal foreign competition? The answer is at least problematical.

In all Europe, Asia, Africa, North and South America the number of sheep is estimated at about 600,000,000; in the United States (1880) about 42,500,000. Total wool production of the world, estimated, 2,000,000 pounds; of the United States, 300,000,000 pounds. Total amount shipped from Australia in 1881, 329,000,000 pounds; exceeding our whole wool product by 29.000.000 pounds. About one-fourth of the our whole wool product by 29,000,000 pounds. About one-fourth of the

wool consumed in the United States is imported-in 1882, 67,861,744

pounds, averaging annually about 60,000,000 pounds.

England, with her seven Australasian colonies, far outrivals the United States in the great industry of sheep husbandry. In England proper, including Ireland and Scotland, the sheep in 1880 numbered about 35,000,000; in the Australasian colonies, about 75,000,000; in Canada, about 2,000,000; total, 112,000,000.

Australia, in the production of wool, both as to rapid increase and quality, is taking the lead of every other country. Some of the Australasian colonies have superior advantages as to soil, climate, grasses, and water combined over any other country in the raising of sheep and in the production of wool, particularly New Zealand. The climate is mild and even, the land rich, producing fine grasses, capable of maintaining, without culture or cutting, from five to seven large sheep on one acre a whole year, while in Texas, Colorado, and New Mexico it requires nearly as many acres-estimated from three to five acresfurnish the necessary food in the native grasses and herbs for one sheep an entire year; and no covering or sheltering is required for the pro-tection of the sheep in those English colonies. The country is well watered. Artesian pipes are driven into the ground from fifty to one hundred feet, and pure water gushes forth in the greatest abundance. Some owners have as many as 212,000 sheep on a single run, the runs averaging from 5,000 to 12,000 acres.

Hon. Robert Campbell sheared there in 1881, 363,000 sheep; Mr. Allen McLane sheared there in 1881, 516,000 sheep.

It is not only important to understand that at present the greater portion of the sheep of the United States must be hand-fed and housed or provided with shed covering for several months in the year, but that they are raised upon farms worth from \$25 to \$100 per acre. It must be evident that the sheep-raisers of this character can not compete in a free mar-ket with the fine-wool growers of Australia or Buenos Ayres, where lands and labor are cheap and the climate and grasses are well adapted

to the extensive and successful growing of wool at low prices.

It is true that during the past fifteen years the sheep-growing s of this country have been rapidly changing from the Eastern, Middle, and Western States to California, the Northwestern States and Territories, and to Texas, by reason of their superior advantages over the old States for wool-growing in cheap lands and mild climate. But in connection with this fact it should be noted that the lands of the States and Territories to which this industry is being transferred are rapidly increasing in value, that provisions and labor are becoming more expensive, and many of these new lands will soon have to be fenced. All these are important items to be considered in the determination of the tariff question

We are told by some that the tariff does not increase the price of wool or in any manner benefit the wool-grower, that it only adds to the burdens of the consumer by increasing the price of his clothing. insisted that past experience has demonstrated that wool in this coun-

try brings a higher price under a very low than under a high tariff.

It is also contended by some of our manufacturers, and was so represented by Mr. William Whitman before the Tariff Commission, that "no foreign wools compete with our medium combing and clothing wools which are grown largely in the United States." (See note, page 2437, (See note, page 2437,

Tariff Commission Report, volume 2.)

If that in fact, or logically, be true, let me ask how and wherein a wiff on wool adds to the burdens of the consumer or injures any one? If it does not, or it is shown that wool under the present tariff is a proper revenue-paying article, I submit that the present tariff on wool should not be disturbed, and that that great industry, under the fostering care of incidental protection within a tariff for revenue, should be left unharmed to continue its increasing prosperity and adding wealth,

comfort, and greatness to our glorious country

comfort, and greatness to our glorious country.

Mr. J. B. Killebrew, of Tennessee, in his late work on Sheep Husbandry, reminds us in some beautiful and touching allusions that the sheep is the first animal spoken of in the Bible as kept by man; that Abel found favor in the sight of God by offering up the firstlings of his country. flocks; that Abraham, the father of the Jews, was a shepherd; that Rachel, the beautiful daughter of Laban and the mother of Joseph, attended her father's flocks; that Jacob was a wealthy shepherd; that Moses, the great lawgiver, attended the flocks of Jethro; that David, the sweet singer of Israel, the greatest king of the Jews, kept his father's sheep; that the coming of the Saviour, who is called the Lamb of God, was first made known to the shepherds; that kings and princes prided themselves in the number and vastness of their flocks; that the shepherds watching their flocks were made the theme of some of the sweetest pastoral songs; that the Asiatics raised sheep principally for food; that the ancients used sheep-skins as clothing for their bodies and as shoes for their feet, and, after the fig-leaves, were among the first things used by man to cover his nakedness and protect him from the cold of winter. Job, whom the Lord answered out of the whirl-wind, the greatest of all the men of the East, who was perfect and upright, feared God and eschewed evil, had 7,000 sheep.

Dating back to the earliest history of man, and having been signally

recognized by the Angels from Heaven as the first to whom they appeared and announced the "glad tidings of great joy," and selected of all men

as the chosen instruments to proclaim to a "fallen world" the glorious news of the birth of Christ the Redeemer, may we not regard the shepherds, the keepers of sheep, with peculiar favor, and their calling, if not sacred, at least as deserving of "incidental protection?"

Sheep were first introduced into the American Colonies in 1609, at Jamestown, Virginia. To prevent them from destruction by wolves and Iudians required the greatest care. The growth of sheep in the Colonies was deemed of the greatest care. The growth of sheep in the special encouragement and solicitude. On the 14th of May, 1645, the general court of Massachusetts declared its desire that, "having an eye to the good of posterity," "all towns in general and every one in particular will endeavor the preservation and increase of such sheep as they have already, as also to procure more with all convenient speed into the veral towns by all such lawful ways and means as God shall put into

their hands.

To protect sheep from being destroyed a premium of £4 was offered for every wolf's head. In 1657 the Assembly of Virginia prohibited the exportation of sheep, and in 1762 ordered that no wool should be exported under a penalty of fifty pounds of tobacco for every pound of wool exported. In 1774 the General Congress passed resolutions requesting the people to use their utmost endeavors to improve the breed and increase the number of sheep, killing as few as possible and not exporting any. In 1775 the Assembly of Pennsylvania recommended the cople to abstain from eating and the butchers from the killing of sheep In 1774 the Congress of Deputies which met at Annapolis resolved to encourage the breeding of sheep and to promote the manufacture of wool. Likewise did the Provincial Congress of Massachusetts in the same year, as well as the Convention of Virginia in the year following. At this early date we find the American Colonies encouraging and fos-

At this early date we find the American Colonies encouraging and fos-tering the growing of wool and woolen manufactures.

I set up no plea of "infant industry" in behalf of this interest. It was born at the creation "when the morning stars sang together and all the sons of God shouted for joy," but rather as an industry vener-able for its patriarchal and sacred antiquity—handed down from the "fathers of old" to the "fathers of the American Colonies," and by them transmitted to us, deserving of our filial fostering care, conveniently denominated the "American system" of "incidental protection."

Congressional Library.

SPEECH

# HON. JOSEPH WHEELER.

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1883,

On the motion to suspend the rules and pass the bill (H. R. 3843) authorizing the construction of a building for the accommodation of the Congressional Li-

Mr. WHEELER said:

Mr. SPEAKER: When the motion was made to suspend the rules so as to take up the Library bill for consideration I voted against it, for the reason, chiefly, that the site of the building was not designated, but left to a commission instructed to locate the building somewhere on Government property. I am not willing to this; and upon further examination of this subject I am the more convinced of the unadvisability of so leaving this most important question. It should not be left to the discretion of any commission; neither should it be restricted to Government grounds.

I am in favor of a separate library building, commensurate with the growing demands of this great people, to be projected and commenced at once upon a scale, as to dimensions and proportions, as large as the present and prospective conditions and necessities of the library may authorize and require.

From the best information I can get upon inquiry, I do not believe that there is a piece of ground now belonging to the Government within reasonable reach of this Capitol in this District, not otherwise appropriated or occupied, fit for the site of this new library building. For I maintain that the building should be conveniently contiguous to the Capitol, and not placed afar off out of the reach of the Senators and Representatives for ready examination, easy and quick references. Neither should it be put upon low grounds nor in marshy or forgy bottoms, as should it be put upon low grounds, nor in marshy or foggy bottoms, as it might be if left to a commission; and I am advised that most of the Government ground not otherwise occupied, employed, or devoted, or intended to be devoted, lies in low, marshy, and foggy bottoms, some of itsubject to everflow and consequent mildew and dampness, elements the most mischievous and destructive to books, papers, and charts. Such a location should be the very last to be selected for library pur-

This new building should be on high ground, contiguous to the Capitol, and such is the site recommended to us by the bill from the Sens tol, and such is the site recommended to us by the bill from the senate, east of the Capitol, suited for many reasons, not the least of which is its requisite dimensions; for, as I propose to show, this library building, to be at all equal to the demands of the country, should not be confined to a small lot of ground nor jammed in a corner. But before I go into this question of locality I call attention to other very material consid-

GLOOMY CONDITION OF THE PRESENT SITUATION OF THE LIBEARY INTERNALLY.

Mr. Speaker, this new library building is one of the absolute neces-This want is universally admitted, and its pressing necessity may be best illustrated and demonstrated by a visit to and an observation of the condition of the present library apartments. But before visiting the locality let us take a glimpse of the situation through Mr. Spofford's glasses. Mr. Spofford in his last report says:

glasses. Mr. Spofford in his last report says:

The enumeration has been attended with greatly increased difficulties, owing to the rapidly growing embarrassments in counting books and other publications, which can not be accommodated upon shelves. Upward of 130,000 volumes are now necessarily stored in heaps in various rooms connected with the Library, or are placed in double rows. The daily increasing obstacles to the proper administration of the Library service have now reached a point which actually obstructs the prompt apply of books and information to both Houses of Congress, to the courts and Departments, to the many scientific bureaus of the Government, and to the public, who resort in increasing numbers to the Capitol to make use of the rich repository of authorities in the Library. To render these collections in the highest degree useful it is absolutely necessary that adequate room should be provided in a building planned and specially constructed for the purpose. To render them measurably useless no surer method could be devised than the attempt to crowd half a million of books into quarters plainly inadequate for the proper arrangement and classification of half that number.

These observations of the learned Librarian show to a great extent the present condition of the Library; but the demonstration would be more satisfactory by a visitation, for whoever attempts this visitation will find that it is extremely difficult to get through the intricate and labyrinthine aisles of the Library departments—so choked up they are with mountain piles of literary lumber. Few of us are at leisure just now to penetrate into its mysterious recesses. Therefore, in order to relieve to penetrate into its mysterious recesses. Therefore, in order to relieve the members of this House from the tedious labor necessary to make this visit of observation, I take the liberty to lay before the House an exact description of an ancient library, and beg the House to take this as a miniature picture of the present Congressional Library of the United States.

MAGLIABECHI'S LIBRARY.

Magliabechi was a distinguished collector of books. An authentic literary history gives us concerning him and his library the following

Heymen, a celebrated Dutch professor, visited this crudite librarian who was considered as an ornament to Florence. He found him among his books, of which the number was prodigious. Two or three rooms in the first story were crowded with them, not only along their sides but piled in heaps on the floor so that it was difficult to sit and more to walk. A narrow space was contrived indeed, so that by walking sideways you might extricate yourself from one room to another. This was not all. The passage below stairs was full of books, and the staircase from the top to the bottom was lined with books. When you reached the second story you saw with astonishment three rooms similar to those below equally full, so crowded that two good beds in these chambers were also crammed with books.

Such is the graphic description of Magliabechi's library. here wishes to see the library above described on a somewhat grander scale he has only to call at Mr. Spofford's great lumber-house of litera-

Now, there is some excuse for Magliabechi. He had a perfect right to keep his library as he pleased. It was his private property. Every man, in private matters, is entitled to his taste. But besides this he must have been a poor man, his books perhaps his only or at least his chief possession. It is said of him that—

He ate on his books, slept on his books, and quitted them as rarely as possily A little bread, a few eggs, and some water was his ordinary food. His drequally denoted his disposition and his poverty. A black doublet which seemded to his knees; large, long breeches, an old, patched black cost, a very much worn and ragged at the edges; a large neck-cloth of coarse stuff as smeared with snuff; a dirty shirt which he always wore as long as it last and to finish this inventory, a pair of ruffles which did not belong to the shirt

This picture of the keeper of this old library is by no means a reflex on our accomplished Librarian; and it is here given only to show that it was the poverty of the man that prevented him from preparing proper accommodations for his books. I will not say that Mr. Spofford "eats on his books;" but it would be no scandal to suppose that like this learned antiquarian "he sleeps on his books." Perhaps the fact that he sleeps on his books may account for his very intimate acquaintance with them.

Now, it is further said of Magliabechi—and this description fits Mr Spofford admirably well:

This apparent confusion did not, however, hinder Magliabechi from immediately finding the books he wanted. He knew them all so well that even to the least of them it was sufficient to see its outside to say what it was.

It was Magliabechi's poverty that caused him to leave his books in the condition we have described. The Government of the United States can not set up that as an excuse. Magliabechi's books were his own private property, and he had a right to have them as he pleased. The

Government of the United States dare not say this. I assert that the books in the Congressional Library are the people's books. The Congress is their trusted custodian, and is in duty bound to take proper care of them and to provide for them adequate apartments, or else to be

wisited with censure for the violation of a most sacred trust.

With the amazing increase of books I propose to present some considerations as to the size and architecture of the projected building.

On this subject I submit some observations.

The rapid accumulation of books since the discovery or invention of

the art of printing is amazing. A curious bibliognoste in 1816 made a calculation and found that up to that time in Europe there were in print 3,641,960 works. Upon this he remarks:

Taking each work, on an average, to consist of three volumes, and reckoning each impression at 300 copies, which is too little, the actual amount from the presses in Europe will give [1816] 32,776,410 volumes, each of which being an inch thick, if placed in a line would cover 6,096 leagues!

Now, it is reasonable to conclude that if in 1816 there were 3,641,960 works in print, the number of works would be double that in twenty-five years, so that in 1841 there were 7,283,980; in 1866 there were 14,567,960; in 1883 there are 21,851,940 works. This is not by any 14,567,960; in 1883 there are 21,851,940 works. This is not by any means an overestimate, as will hereafter appear in these observations.

Now, Mr. Speaker, it is not easy to conceive how much shelf-room it

would require to accommodate such a library as that.

THE RAPID GROWTH OF OUR NATIONAL LIBRARY From Mr. Spofford's last report I take the following table:

The aggregate of the collections in the Library now numbers 480,076 volumes, besides about 160,000 pamphlets. At the date of the last enumeration, one year ago, the number of books in the Library was 420,092, besides about 145,000 pamphlets. The law department of the Library now numbers 57,233 volumes, included in the above aggregate, being an increase of 4,642 volumes in the law library.

library.

The entire additions to the collections during 1882 embrace 59,884 volumes of books and 27,310 pamphlets, which were acquired from the following sources:

	Books,	Pam- phiets.
From purchases From copyright From deposit by the Smithsonian Institution From donations From exchanges Toner collection (presented to the Government)	11, 160 12, 297 2, 310 6, 712 460 27, 045	1, 242 9, 845 3, 352 525 343 12, 000
Total	59,984	27, 310

From this table it appears that the increase for the last year in books and pamphlets is 87,294. With this proportion of annual increase this Library would more than double itself in eight years. Now, for the sake of even numbers and to give more force to the figures, I will assume that this library, at present 600,000, will in ten years have accumulated to 1,200,000; that would be cutting off 40,000 in the calculation as to volumes, and also shortening by two years of the period of duplication.

Taking, then, as a basis that the Library doubles itself every decade

in 1903 we have of volumes 2,400,000; in 1913, 4,800,000; in 1923, 9,600,000; in 1933, just fifty years, 19,200,000.

It would be absolutely frightful to continue this calculation up to 1983, one hundred years. So we will look forward only fifty years. If the present accommodations are totally unequal to the exigencies of 600,000 volumes, as is self-evident, where are we to find space for 19,000,000 of volumes?

ACCUMULATION OF COPYRIGHTED BOOKS ALONE.

From Mr. Spofford's last report I take the following table:

There has been a steady increase in the business of the copyright department during the year. The whole number of copyright entries in the office of the Librarian was 22,918, being an increase of 1,843 publications entered for copyright beyond those of the preceding year.

The following is a statement of the special classes of publications, with the number of each entered for copyright in 1882:

Books Periodicals Periodicals Dramatic compositions. Musical compositions.	7, 82 4, 61 45
Periodicals	
Dramatic compositions	45
fusical compositions	
	6, 14
hotographs	68
hromos and engravings	1.70
laps and charts	84
rinte	
Designs	5
aintings	1
Prawings	

Now, judging from the past, our population duplicates itself every twenty-five years. If we have 50,000,000 now we must have 100,000,000 in 1908.

Book-making is a craft, and the book-makers increase in proportion as the population grows. Then if 50,000,000 of population furnish 22,000 books as copyrighted books, 100,000,000 must furnish 44,000. Taking this as a basis, in 1908 we have for that year alone 44,000; in 1908 to 1909, in 1909, the 1909 of the population of the populat

1933, 88,000; in 1968, 176,000; in 1983, 352,000. In order to find the aggregate accumulation of copyrighted books for

one hundred years embracing the annual accumulations, we will take one hundred years embracing the annual accumulations, we will take the half of 352,000, that is, 176,000, and multiply it by 100, which gives us of copyrighted books alone in 1983, 17,600,000. In this annual growth of our Library it will appear from Mr. Spofford's reports that the copyrighted books are less, on an average, than one-third of the whole; so that adding the books purchased and otherwise acquired by the Library in its annual growth to 17,600,000 of copyrighted books, in 1982 was large of volumes 52,800,000. in 1983 you have of volumes 52,800,000k

Now, sir, it is difficult to conceive the existence of such a mass of

It would be preposterous for this Congress now to attempt to plan, or even imagine the plan, of an edifice containing the space they would occupy. But if you cut down the figures to one-fourth you still have 13,200,000 volumes; and the British library, which now covers eight acres of ground—three times the inside space of this capitol—has not more within its space than nine or perhaps ten millions of vol-

SIZE, ARCHITECTURE, AND DIMENSIONS OF THE BRITISH LIBRARY.

The buildings occupied by the British Museum library cover eight acres of ground [just the dimensions of the proposed eastern site]. This Capitol covers, I believe, three and a half acres. Then, it appears that this British library, in buildings, occupies more than twice the space of this Capitol; and yet some men talk of finding room for the library within this building!

I take it for granted that this British library, with all its space, is now crowded. It has always been crowded; its history is the very best illustration of he r a great nation can crowd things at home, when at

the same time they do not allow themselves to be crowded abroad.

Now, this British library, as I am advised, is scattered over and among houses not all built or put together originally for the purposes of a library, but selected and adapted from year to year and from century to century, as the growing exigencies of the library might demand. As a matter of course it has neither beauty of architecture nor convenience of arrangement. It is a huge conglomerate heap, made up of many small piles of brick and mortar, wood and plaster, stone and marble, as accident and circumstance may have occasioned, and as the buildings happening to be adjacent may have been rearranged and adapted—old storehouses, old warehouses, old hotels, inns and temples; old theaters, and some old church edifices reconstructed, perhaps, in certain ways.

These, it would appear, constitute to a certain extent the buildings of
the British Museum library, as it covers its eight acres of ground. It must be a most unsightly mass to one whose eye is finely educated in the beauties of architecture.

Now, Mr. Speaker, let us profit by the blundering experience of the British, for they blundered because they did not then know or dream of the pending growth of their library—facts that we do know. Let us, I say, profit by this, and so begin our contemplated structure on a scale of dimensions and proportions at least—if not of grandeur—commensurate with the magnitude of the uses to which it is to be applied.

THE GROUND THE CHIEF ORJECT OF INTERE

We are now grown wise in book-craft, and if we blunder we will be without excus-

Let us begin this building, not to be carried to its completion in a Let us begin this building, not to be carried to its completion in a year, nor in twenty years, nor even in fifty years, but let us build for all time. But before we begin to lay our foundations we must have adequate space. If your plan is perfect you may be centuries at the work without disturbing the architectural harmonies of the design. It required three hundred years to bring Saint Peter's at Rome to its present state of magnificent incompleteness, and yet in all that time the harmonies of the great original labels are accounted.

mony of the grand original plan has never been disturbed.

As an apt illustration of the development of American genius, and to show how this great American man demands elbow-room, as he exerts his ever-active brain power in sweeping along his career in this (to him) apparently very short life, I refer you to your own Patent Office.

PROBABLE INADEQUACY OF THE PATENT OFFICE FOR ITS USES.

This is really a grand structure. It was built for all time, and the original building, the central part—only about one-fourth of it as it now stands—was thought a wonderful edifice. So it was. It was supposed then to be adequate to the wants of a century. What a mistake! It now covers two entire blocks of ground, and though it is not yet half a century old, it is even now crowded! If 50,000,000 of people have crowded the Patent Office, as they grew up in less than half a century, what will be the demands of 800,000,000?

POST-OFFICE DEPARTMENT AND ITS GREAT BRIDGE

The Post-Office building is another grand edifice, covering one entire block of ground, erected on a magnificent scale as to dimensions, and is really a splendid piece of tasteful architecture. But the demands of that Department have so grown that it has become necessary to connect it with adjacent buildings, and it is worth a visit of observation to the curious traveler to go and note how cunningly these Post-Office people can expedite their business over a bridge! It is very possible that this idea of the bridge over a street is borrowed from the British library buildings.

THE CONGRESSIONAL BOOK FACTORY

In speaking of the accumulation of American books in this our day and generation I have made no reference to Uncle Sam's great literary

emporium-the Congress of the United States. Not to mention this would be a mistake in me, especially as I am attempting to account for the marvelous growth of American libraries. The honest truth is that in addition to our other important labors it would seem that one element in our business here is the manufacture of books. By day and by night we are turning out books. We dream books, we speak books, and we preach books. If I were to put up a table of figures exhibiting the annual manufacture of books by Congress, mankind would be amazed; but not wishing to take the world by storm I will confine my estimates to one single book—certainly a most useful one—

THE CONGRESSIONAL RECORD.

and leave the rest to the imagination.

We print now over 10,000 copies of this work for each Congre perhaps many more-but I shall confine myself to 10,000 copies as the pasis of my calculations.

Now, if 50,000,000 of people in 1883 require 10,000 copies of the

CONGRESSIONAL RECORD, what will 800,000,000 require in 1983?
The answer is—for one year only—160,000. Now to ascertain the aggregate accumulation of RECORDs for the century, up to 1983, we multiply 80,000 by 50 (inasmuch as we furnish the RECORD biennially) and we have of CONGRESSIONAL RECORDS accumulated for the century 4,000,000.

Each copy of a complete RECORD measures about two cubic feet, so that in building materials we have of the RECORD 8,000,000 cubic feet.

Now suppose we build an edifice out of these blocks of books, in the

manner of laying bricks or stone, one upon the other. We can hardly

conceive the immensity of the structure.

In the presence of such a pile, the old pyramid of Egypt would hide its diminished head. In height it would out-Babel Babel; and Mount Blanc, celebrated by the poet as being the

Monarch of mountains

would have to strip off his purple robes of royal magnificence and submit to subside into mediocrity, while the song and the shout would be Mount Books is the monarch of mountains.

A HOUSE OF VAST DIMENSIONS.

I think I have said enough to prove that it will require a house of vast dimensions to accommodate this American National Library. Certainly the propriety of collecting a great library for this great nation is no longer an open question. Wisdom is wealth, and every good book is equivalent to a wise head—the head may die, but the book may live

The man Homer, the man Demosthenes, the man Plato, the man Burke, the man Clay, and the man Webster may die, but their books will live forever.

PUBLIC EXPENDITURES.

The wise economist, when he invests his money, wishes first to be safe. There is no safer investment, for a private or a public man, than books A good book, in the hands of a studious and ambitious boy, is better for him than money at interest in a bank.

We are throwing off millions of money daily. Many of these millions go down into the waters of oblivion. We have millions of money for rivers and harbors; let us make one safe investment for books. We can do this by laying the foundation of this contemplated structure so deep and solid that it will endure for all time and still subserve the purposes for which it was erected.

You give millions of money for a great ship of war; that is a public eccessity. No patriot complains at the cost. Yet that ship is a thing necessity. No patriot complains at the cost. Yet was supplied of frailty, and goes upon the waters with its doom written in advance, "in gurgite vasto." It may or it may not make a history and save a little but history or no history, its end is inevitable—to be buried in state; but history or no history, its end is inevitable—to be buried in the deep or to rot in a dock. The millions that built it are gone forever, and there is absolutely nothing left of it but its name and the history of its cruises

Not so with a great temple whose foundation is upon a solid rock, and whose materials are of imperishable substance. Old Cheops lives in every slab that, inch by inch, rears the colossal pyramid. Nor winds, nor rains, nor storms, nor wars can move it from its base. There stands nor rains, nor storms, nor wars can move it from its base. There stands the original investment. Give us,—not such a temple as that, to be forever shrouded in impenetrable mystery,—but give a grand, solid, colossal structure, within whose marble arms we may safely hope to see, still preserved, in 1983, 17,000,000 of copyrighted American books.

I have counted our population for an hundred years in advance. That seems to be a lower time yet there are more living to deep the problem.

seems to be a long time, yet there are men living to-day who breathed the breath of life an hundred years ago. This is over the ordinary, al-lotted period of life, but it is no stretch of probability to say that in 1983 there may be men living whose fathers now form a part of this Congress. And as we now look forward at the figured prospects of that day and speculate as to what may then be, so they with equal curiosity may recall the statistics of 1883 with as much amazement at the retrospect as we feel in the prospect.

NATIONAL MAGNANIZITY OF THE PEOPLE

The magnanimity of the American people is such that they applaud instead of condemning judicious expenditures of the public money. As they abhor reckless wastefulness, so they admire judicious investments,

either for public good or the national grandeur. constituents in voting for this Library building. The love of learning is deeply seated in the American heart; and the young and the old in all the quarters of the nation will heartily indorse this tribute to science and learning.

I hope this Congress will be impressed with the necessity of giving this important subject the consideration it should command, and that before the completion of its present duties it will make a proper provision for this long-neglected need of the country.

The Tariff.

REMARKS

HON. RANDALL L. GIBSON, OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 15, 1883.

The House having under consideration in Committee of the Whole on the ate of the Union the bill (H. R. 7313) to impose duties upon foreign imports, and

Mr. GIBSON said

Mr. CHAIRMAN: The sugar industry in Louisiana was the offspring of the war of 1812. In order to meet the burdens put upon the country by that war a tariff rate of 5 cents per pound was imposed by the Government upon imported common sugar and 18 cents a pound upon refined sugar. From that time until 1846 the rate upon the lowest grade of sugar never fell below 2½ cents a pound, and upon the higher grade 5 cents a pound. In the year 1846 the Robert J. Walker tariff was adopted and 30 per cent. ad valorem was imposed upon all the protected industries of the United States. In 1857 24 per cent. ad valorem was imposed upon all the protected industries. Under the protective policy of the tariff of 1816 capital and labor entered into this industry, and, notwithstanding the Robert J. Walker tariff, until 1861 more than 50 per cent. of the sugar consumed in this country was produced in the State of Louisiana—a rapid and unprecedented development of an industry originating in and maintained by the fiscal policy of the Govern-

We know the history of legislation since 1860. From 1862 to 1870, in order to meet the obligations of the Government, to maintain its redit, 3 cents a pound was levied on the very lowest grade of sugar and 4 cents on the higher grade. That was the war rate—3 cents a pound. Gentlemen talk about the present tariff on sugar being a war tariff. It is not true. I hope never to hear this incorrect and misleading statement made to this House. Three cents a pound was imposed upon the nent made to this House. Three cents a pound was imposed upon the commonest sugar by the Federal Government during the civil war. But in 1870, five years after the close of the war, the rate was reduced to I cents upon the commonest article of sugar, and in March, 1875, the duty was advanced 25 per cent., and to-day the rate on the commonest article of sugar is 2.18 cents per pound.

I repeat, the rate under all the tariffs prior to the free-trade policy of Robert J. Walker was never below 2.50 cents; that during the late civil war it was 3 cents per pound; that in 1870 it was reduced to 1.75 cents per pound; and that in 1875 it was raised to 2.18 cents per pound upon the commonest article of sugar; that is, on sugar not above No. 7 Dutch standard.

The Tariff Commission proposed to reduce this to 1.50, and so it stood until their final session when the Ways and Means Committee of this House, ascertaining that they had not made sufficient reduction of the revenues, cut down the rate on sugar from 1.50 as proposed by the commission to 1.25. This was rendered necessary in order to keep up the rates upon glass, iron, wool, and cotton manufactures.
Why was no proportionate reduction made by the Ways and Means

Committee upon these protected articles? More than half of the entire Committee upon these protected articles? More than half of the entire reduction of all the revenues of the Government it is proposed by the committee to be borne by the single article of sugar, and yet this is the only article that at the present time has already been reduced from the war rates which the committee insist shall still be maintained for the most part upon all manufactures of wool, iron, and cotton, and earthenware and other necessaries of life.

I wish the Committee of the Whole to observe a very important fact, namely, that the cost of the whole to observe a very important lact, namely, that the cost of the production of all common sugars, all sugars below No. 13 Dutch standard, is the same. It requires the same machinery, the same labor, the same land and climate, the same apparatus to make all sugars under No. 13, however much their market price may now differ. The differences in price are created by the discriminations of our tariff and the refiners who have changed their machinery to profit by the tariff. profit by the tariff.

Hence, from the foundation of the Government until 1870 but two grades were recognized in sugar, the common and refined, for these may

be said to be the natural distinctions, while the others are created artificially. So that from 1789 until 1870 the same rate of duty was laid upon all common sugar, and this rate was never lower than 2½ cents a pound until 1870, when it was reduced from 3 cents to 1.75, and itstands to-day at 2.18 cents per pound. I hope gentlemen will not overlook these facts when discussing the tariff.

But, sir, we have had this question before Congress at every session for many years. How have the revenue reformers dealt with it? In the Wood tariff bill, reported to the Forty-fifth Congress, the duty on the lowest grade of sugar was laid at 2.30.

In the special bill, reported from the Ways and Means after the failure

f the Wood bill, to regulate the duties on sugar, which I may call the Robbins bill," for it was reported from the committee by Mr. Robbins, a distinguished revenue reformer, the rate was laid at 2.40. And again, in the Forty-sixth Congress, the whole subject was thoroughly discussed in the Ways and Means Committee, and a bill was agreed upon by Messrs. Garfield, FRYE, TUCKER, CARLISLE, and MORRISON and GIBSON, and it was reported through Mr. TUCKER to this House with a report which the late President Garfield declared was the most philo report which the late President Garheid declared was the most philosophical and satisfactory he had ever read. The rate levied on the commonest article of sugar was 2.18, just where it is in the existing tariff. The only changes made were in the higher grades fit for consumption. These were reduced with the hope that the consumer might be able to buy some sugars imported direct and not through the refiners

The present tariff on sugar and the tariff proposed by the Committee on Ways and Means, while reducing the rates on the common article so low as to afford the labor and capital engaged in the production of sugar wholly inadequate protection against slave and cooly labor, takes care to afford the refiners the highest possible protection, in fact, to continue the prohibitory rates upon all sugars fit for consumption and to secure to the refiners an absolute monopoly of the American market.

Why is it that the revenue reformers are more friendly to the sugar interests of Louisiana than the protectionists for the sake of protection? I can not state their position better than to borrow the language of the distinguished gentleman from Illinois [Mr. MORRISON]. He said last

session: Session:

The whole increase in cost to the consumer resulting from the tariff, which on sugar and molasses is largely a revenue tariff, was \$48,820,418, which was so divided that the Treasury received \$7.51 of revenue while the planter received \$1 of bounty. The requirements of the Government neither demand nor justify the collection of such a tax on sugar, an article so generally used by all classes. The duty ought to be largely reduced; but it would be little less than a crime to reduce this duty which gives the Treasury \$7 to \$1 in bounty while we retain daties which give \$7 in bounty and but \$1 to the Treasury.

These are the sentiments of a statesman who grasps the principles of political economy and has the courage to insist upon their application

in the true interest of the people.

We are willing to make a reduction; we are willing to have this tax reduced from 3 cents, the war rate, not to 2.18 only, the rate established ten years after the war, the present rate, but we are willing to accept 1.50 or even 1.40, an unprecedented reduction. But what are you willing to do, you gentlemen who represent wool and woolen goods, the state of the present was and should be precessitive of the coats and blankets and socks and shoes, the absolute necessities of the poor; and you gentleman who represent iron and the manufactures thereof and cotton goods and glass and earthen ware? Do you yield to the demands of the consumers? No, you have in many instances raised the rates and piled up the burdens upon the shivering poor, raising the rates upon clothing and blankets and plates and saucers and even the window-panes of their humble dwellings. The ad valorem rates you now propose are over 60 per cent. upon some woolen goods, over 45 on some cotton goods, over 75 on glass goods, over 65 on earthen-ware, and as high as 75 on some iron goods, and over 50 on common spool thread.

Mr. Chairman, the revenue from sugar was not only the mainstay of the Federal Government in the second war of independence as well as during the civil war, but it is the mainstay of the revenues of every civilized government except one on the face of the earth; and the tariff on sugar to-day in the United States is lower than it is in France or Germany or the Netherlands. It is 5.73 a pound on the lowest grade in France, 3.33 in the Netherlands, 3.25 in Germany, 4.20 in Belgium, according to the official tables. But gentlemen insist that this industry to-day is insignificant. I admit, sir, that under the strokes of the civil war production fell from 250,000 tons to 5,000 tons. There is no part of this land which suffered so much as the sugar region in Louisiana during the civil strife. The garden spot of that State was made a scene of desolation, because, in addition to fire and sword, there came the floods, and the accumulations of many generations were swept away

forever, almost in the twinkle of the eye.

The CHAIRMAN. The gentleman's time has expired.

Mr. KASSON. I will take the floor and yield my time-tleman from Louisiana [Mr. GIBSON].

Mr. GIBSON. I am obliged to the gentleman from Iowa.

I setend of 3 cents a pound or 2½ cents. I will take the floor and yield my time to the gen-

Now, Mr. Chairman, instead of 3 cents a pound or 21 cents a pound or the Robert J. Walker tariff of 30 per. cent. ad valorem, which gave us our machinery and all we consumed, our hats, our clothing, our boots, our shoes, and everything we consumed, at 30 per cent. ad valorem, we have had 1.75 cents only a pound from 1870 to 1875 on the lowest grade and only 2.18 since then

I submit if it is reasonable to expect that a people who had been exhausted by civil contentions and whose whole social system was shat-tered and revolutionized should in a few years recover and keep step with the progressive developments of rich, prosperous, and homogeneous and triumphant communities? But already there is \$100,000,000 invested in this industry and more than half a million people engaged in its pursuit. I beg gentlemen to remark how unequal the tariff system has been applied since 1870, and how largely this industry has been discriminated against, and how steadily the rates have been re duced upon it, and how largely the importations have increased and the consequent revenues; while the rates have been steadily maintained upon iron and wool and cotton and all the other protected and bountied manufactures. Reduce the rates upon them as you have and propose again to do upon sugar and see how the revenues will increase. But even under this unfriendly policy to the producers, inaugurated to afford a monopoly to the refiners, and really adverse to the consumers, instead of one-tenth, as stated by the gentleman from Indiana [Mr. Browne], fully one-sixth of the sugar consumed in this country during the past year was produced in Louisiana, although there was a loss of one-third or one-fourth of the crop by the floods last spring.

There are not less than a million and a half acres ready for the plow

and adapted to the cultivation of cane in Louisiana. Not wild lands, but a million and a half acres that in a few years might be converted into broad fields of waving cane if you would give them protection, or even the Robert J. Walker tariff on everything, for our compensation under this system would be in an increase of consumption and in getting all we consume at a lower price. The purchasing power of our sugar would

be greater.

Do you gentlemen from New England and from Pennsylvania and Ohio, who constitute almost the majority of the Committee on Ways and Means, who framed this bill, intend that all you produce shall be and Means, who framed this bill, intend that all you produce shall be protected at the highest rates and all you consume shall be free? Is that your doctrine? Can you afford to stand on so narrow a platform and expect the people of this country to commit its destinies to your keeping? Will the sacrifice of Louisiana meet the demand for reduction of taxation? I warn my friend [Mr. CANDLER] from New England, who is seeking here to apply the advalorem system to the other end of the continent—25 per cent. for the producer in Louisiana and 35 per cent. for the refiner in Boston-

Mr. CANDLER.—I should like to ask the gentleman a question.—I say the refiners have but 10 per cent., and you charge them 25 per cent.

the raw material. All we ask is 10 per cent, protection.

Mr. GIBSON. There is no raw material in this thing. I wish to y to the gentleman the pig-iron, the iron ore, here is the sugar-cane. We ask no protection on the raw material; but the lowest grades of sugar require immense capital to produce them, costly apparatus, and they are in no sense raw material. It is a question with the Cuban planter whether he boils his sugar to one grade or another. There is no raw material in it. The lower grades of sugar may be lifted in no raw material in it. The lower grades of sugar may be lifted in Boston as cheaply as in Cuba to the higher grades, and no differences of protection are needed and none have ever been given in the history of

the country. The same ad valorem should apply to all.

After the emancipation of slavery in Jamaica and the other English possessions in 1834 \$100,000,000 was voted the planters; and when the question was presented to the English Parliament whether there should be discrimination in favor of free sugar and against slave sugar, there was no hesitation in determining it. I wish gentlemen would read the de-bate—Hansard's Parliamentary Debates—I hold in my hand upon this I should like to read the ringing words of Thomas Clarkson, the great leader of the Emancipation party in England. I should like to read from Gladstone, whose father was a sugar planter, when he insisted on discriminating in favor of the free sugars of Jamaica. I should like to read from Disraeli and from Lord Broughan and Hume and Peel and Bentinck, if my time permitted. They all united in the establishment of differential duties between foreign produce reared by manacled and fettered hands, and the produce of their colonies—the industry of free-men. They declared that if there was any conscience in emancipation they must discriminate; that the relation between Jamaica free and Cuba slave lifted the question out of the domain of political economy into the higher plane of morality.
Daniel O'Connell say?
The CHAIRMAN. The gentlems What did the great Irish orator

The gentleman's time has expired.

Mr. CANDLER. I will take the floor and yield my time to my col-

Mr. GIBSON. I thank my colleague. What did the Irish orator

O'Connell say?

Mr. BAYNE. I do not object to the gentleman going on, but I want to say that those who are opposed to putting a duty on sugar desire to

Mr. TUCKER. They will have full time to be heard.

Mr. BROWNE. I do not want to object; but I hope, when my friend from Louisiana has concluded, opportunity will be given to the gentleman from Virginia [Mr. Tucker] and the gentleman from Kentucky [Mr. Carlisle] to oppose this amendment. [Laughter.]

Mr. GIBSON. I hope, sir, that the gentleman from old Virginia and the gentleman from Kentucky will be heard. But if they are heard I

think they will be heard speaking in the language of Gladstone and Robert Peel, and in the language of all the great statesmen and leaders who have illustrated the annals of British history, and of the veteran gentleman from Pennsylvania [Mr. Kelley].

Mr. CALKINS. Let me ask the gentleman a question.

Mr. GIBSON. I would like very much for the gentleman from Indiana to give me his attention while I read the remarks of O'Connell:

The question, he said, is cheap sugar with slavery or dearer sugar without it. It is nothing else than the repetition of the children's fable—the large loaf and the father's curse upon it. It is a farce to propose to let in the sugar of Cuba and of Brazil and at the same time to continue emancipation in Jamaica.

Sir, the gentleman from Indiana [Mr. CALKINS] said that he was in favor "of stopping the gap" between the free labor of the United States and the oppressed labor of England, Germany, and France. But States and the oppressed labor of England, Germany, and France. But where is the gentleman found when it is proposed now "to stop the gap" between slave labor abroad and his own countrymen, the poor, benighted freed people that are holding up their hands in appeal to this House not to sacrifice them to the degrading and cruel competition of the slave and the cooly in the tropics, not to deprive them by this raid upon their industry of their hard-earned competency and the opportunity to fit themselves to discharge intelligently and with fidelity the duties of American citizenship? What is the response?

Will not the gentleman from Indiana always so fair aid up to exect

Will not the gentleman from Indiana, always so fair, aid us to erect or rather to maintain a barrier against the product of slave labor, and that labor that is the most cruel form of oppression the ingenuity of man has ever devised—I mean cooly labor? We will keep the cooly out of California, but admit the productions of his labor from the Pacific Islands from the coppress and everywhelm one open constructions. free, to oppress and overwhelm our own countrymen engaged in the sugar culture. We will keep peonage out of our own country, but by a treaty build up a vast industry in Mexico to compete with our own countrymen in sugar, an industry of peons and Chinese to be imported. We stood by California in her contest for free and educated and Christian labor. I know my candid and distinguished colleague [Mr. Page] will

I will say to the gentleman from Massachusetts, beware how you touch the system of equality as between the States in their burdens and privileges. I have seen at the wharf at the port of New Orleans freights offered under the British flag for one-half of what they were offered under the American flag to convey our produce to the Eastern seaports, but the navigation act, passed in the interest of New England, compelled us to ship every pound of sugar and molasses on New England bottoms.

and bottoms. What a bounty to our friends in the East!

The CHAIRMAN. The time of the gentleman from Louisiana has

Mr. WASHBURN. If I can be recognized I will yield the floor to

the gentleman from Louisiana.

Mr. BROWNE. Oh, well; let us have something like an equal chance

The CHAIRMAN. Is there objection to the suggestion of the gentleman from Minnesota, that he yield his time to the gentleman from Louisiana?

Mr. BRIGGS. 1 object

Mr. BRIGGS. I object.

The CHAIRMAN. The gentleman from New Hampshire objects.

[Cries of "Oh, no!"]

Mr. BRIGGS. I think we have had enough of this debate already.

Mr. CALKINS. Then I will take the floor for the purpose of asking a question for information in my own time, and I think the gentleman will not withhold the information now, inasmuch as I can not yield to him all of the time allotted to me under the objection which has been made. I want to know what the cost is, if he can give the information of producing sugar in Chia under the present system in information, of producing sugar in Cuba under the present system in comparison with the cost in this country?

Mr. GIBSON. I was about to come to that.
Mr. CALKINS. I will yield so much of my time as is necessary to enable the gentleman to answer that question.
Mr. GIBSON. I have a statement, and as this is the business attitude of the question I will dwell upon it somewhat in detail. I have here a statement made by the Committee on Ways and Means of the Forty-sixth Congress; and I think perhaps I will not violate any of the preprieties in saying it was made by a sub-committee of which General Garfield was a member. He said it was the most philosophical and satisfactory treatment of the sugar question that he had ever seen. I will say it was made by my friend from Virginia [Mr. Tucker]. I will therefore state, because this discussion is all idle unless we know wantly what the unit of value is the increase. exactly what the unit of value is, this in response to the inquiry of the gentleman from Indian

Mr. CALKINS. That is exactly what I want to know, because if I can know what that is then I will be able to determine how we can

regulate the duty upon it. Mr. GIBSON. It costs to make melada in the producing countries, as shown by an investigation of the matter for eleven years, 3.3 cents; it costs to make No. 7 sugar, 3.9; it costs 4.5—but I will publish this table in my remarks and quote also from the report of the Committee on Ways and Means of the last Congress:

By evidence before the committee, as well as from the report of the late Pro-ssor Henry, the test of average saccharine strength of sugar naturally of No. 7

and under, by color, is 82°. One authority places it as high as 84°. But, comparing this with the test of the superior classes, the committee felt justified in providing that any sugar of No. 7 and under by Dutch standard testing over 50° of strength should be cutiable in the next highest class.

The committee thought that, as the refining sugars now were dutiable at specific rates nearly equivalent to about 50 per cent, ad valorem, and as the refined sugars are at a rate ranging up to 61, 64, and 68 per cent, ad valorem, the reduction of duties on the distributive or consumable sugars above 13 to a specific duty equivalent to 50 per cent, ad valorem would secure against fraud, give ample revenue, reduce prices of the consumable sugars to the people, and settle this much-vexed question on fair terms to all parties.

The committee will now compare the present and proposed rates of duty on the various classes:

Per 100 pounds.	Melada.	No. 7 and under.	No. 10 and under.	No: 13 and under.	No. 16 and under,	No. 20 and under.	Per cent.
Present	1.87½	2.18	2,50	2.811	3.431	4.064	5
Proposed	1.87½	2.18	2,50	2.50	2.81	8.17	3,67

There were alternative propositions to this bill, proposed as a substitute therefor, of an ad valorem duty of 50, 45, and 40 per cent., and also for a reduction of specific duty to an equivalent of these lower rates. These were rejected in com-

specific duty to an equivalent of these lower rands.

initiee.

Another proposition was made to put the same duty on all sugars of No. 43

Dutch standard and under. The objection to this, which had many advocates, was that thus the same duty was imposed on sugars ranging from 3 cents up to 6 cents per pound. This was a flagrant departure from the ad valorem principle.

iple. The committee, therefore, report the accompanying bill to the House with a worshle recommendation.

Prices verified by Bureau of Statistics.

Date.	Melada.	No. 7 and under.	No. 10 and under,	No. 13 and under.	No. 16 and under.	No. 20 and under.	Over 20.

Mr. BRUMM. Where is the gentleman referring to?

Mr. GIBSON. In Cuba. It costs between 5 and 5.5 cents to make it in Louisiana

Mr. CALKINS. And about 3.5 in Cuba?

Mr. GIBSON. Yes; between 3 and 4 in Cuba.
Mr. CALKINS. Now I want to ask the gentleman from Louisiana another question: whether or not the sugar-planter in Louisiana or the

laborer that works in the field wants a higher tariff than that which closes up the difference between the two?

Mr. GIBSON. The price of labor in Cuba and in the countries which produce the sugar that competes with ours is 25 cents a day. The price we pay for labor on the sugar plantations in Louisiana is about a dol-

lar aday.

Mr. CALKINS. Now, what will be the difference so as to put the sugars of those other countries and the sugars of Louisiana in the mar-

ket exactly on an equality?

Mr. GIBSON. I think we should have a protection of about 50 per cent, ad valorem or 2½ cents a pound upon all sugars below 13, and 3 on all above

Mr. CALKINS. That is on sugary below 13 Dutch standard? Mr. GIBSON. On all sugars. This is the rate, you will observe from

the report and bill presented in the last Congress, allowed by the Ways and Means Committee after a full hearing.

I think the refiners should have an equal protection, so that the rates

should be uniform and just to all.

Some gentlemen have contended that sugar is a perishing product in Louisiana. They are in error. The sugar-plant has become acclimated and yields nearly twice as much to the acre in Louisiana as in Cuba.

Mr. CALKINS. I want this information if the gentleman can give: I want to know if in his calculation he includes simply the price of labor, or whether he includes the price of lands, the difference in climate, the difference in the cost of machinery, and the like; whether his estimate of 45 per cent. ad valorem covers all this or only the price

Mr. GIBSON. I spoke of the difference in the price of labor.

Mr. GIBSON. I spoke of the difference in the price of labor. Seventy per cent. of every pound of every ton of sugar represents labor. Gentlemen can readily ascertain the true and exact ad valorem rates on sugar, say, No. 7, worth, according to the above table, about 4 cents per pound, with the tariff at 1.25, or 1.40, or at 1.50. Instead of 50 per cent. ad valorem, it will be seen the rate is much lower. Some of the imprudent agents and attorneys of the refiners have sought to make it appear, in conflict with these carefully prepared tables, that the cost of production of these very No. 7 sugars, the lowest grade, is not over 2 or 2½ cents a pound, with the view to influence the action of Congress and to force down the tariff on common sugar, and at the same time to secure prohibitory rates upon the refined grades. time to secure prohibitory rates upon the refined grades.

Mr. David A. Wells estimated the value of foreign sugars as follows:

Raw-Cost per pound in producing country.

(c	7660.
Melada	3
No. 7	3.5
No. 10	
No. 13	4.5

It will be observed that Mr. Wells puts the lowest grade of sugar, No. 7, at 3.50 per pound. It will not do now for the purposes of this legislation to throw aside values established by the Ways and Means Committee of the House and verified by the Departments, or to ignore the estimates of Mr. Wells in a paper prepared by him at the request of the refiners themselves and in their interest. We may safely assume that these estimates are correct.

that these estimates are correct.

The gentleman from Massachusetts [Mr. CANDLER], my colleague in committee and for whom I entertain the most cordial respect, would have us believe that labor is dearer in Cuba than in Louisiana, and that therefore the discrimination is not necessary, or at all events it should be slight. What is the condition of Cuba? The last census, that of 1880, shows the population to be—whites, 980,066; colored, 485,397; Asiatics, 43,228; total, 1,508,761. The statistics show that the Asiatics or Chinese are all males and that they are steadily increasing by importation—I will not say by immigration. And as under our policy the Sandwich Islands have swarmed with coolies, chained to the cupidity of the sugar-planters, so I predict that under the same policy about to be applied by the dominant party in this country in order to build up and foster great manufacturing monopolies at the expense of the consumers and the producers in our own country, you will see cooly labor, the severest form of slavery, thoroughly and widely established in Mexico and Cuba, in all the southern islands, as a substitute for African slavery.

and Cuba, in all the southern islands, as a substitute for African slavery. Sir, civil war in Cuba began with the proclamation of Yara in 1868, and was ended by the treaty made by the captain-general, Martinez Campos, a statesman and soldier of equal humanity, firmness, and moderation, in 1878. One of the results of this rebellion, which was partly against slavery and partly against the oppressions and exactions of Spain, was the declaration for emancipation by the Spanish Cortes, which received the royal signature on February 13, 1880. For slavery was substituted a patronate, which is to continue nine years from May 8, 1880, when the legal tie of enforced labor is to be dissolved, unless longer provided for by law. Under this patronate, which may be bought and sold in the open market, and which is in fact but another name for slavery, the patron or master is obliged to nay to the laborers \$3 per month slavery, the patron or master is obliged to pay to the laborers \$3 per month wages, and to find food and clothing; but he may dock their wages for absence or neglect, and he may even inflict corporal punishment with

the assent of the local magistrate.

Now, sir, this is the law and it will not do for gentlemen to institute a comparison between such a system and that which prevails in the Southern States of this Union. I sympathize with the people of Cuba and I applaud the growing liberality of the Spanish Government. But what is the present policy of that Government toward the people of this country? It is one of rigid exclusion. An immense burden, a debt of one hundred and fifty millions, rests upon Cuba, and a costly civil and military establishment weighs upon the energies of the ever-faith-ful isle. Hence the moment you reduce the tariff on sugar the export tax has been increased and you can not and you will not cheapen the price of sugar to the consumers in our country. The difference of reduction, whether it be eleven or twenty millions, instead of going into

duction, whether it be eleven or twenty millions, instead of going into our own Treasury will go into the treasury of Spain and the price of sugar will remain the same, controlled by the law of supply and demand.

The export duty was only \$3 a hogshead, but when you reduced the rate on sugar it was increased and it is now \$6 a hogshead. The tax on cigars was 75 cents per thousand; is now \$2.25. There is also a tax of 10 per cent. upon the net yield of each plantation. Notwithstanding the free-trade policy of England nineteen-twentieths of the crops are imported into the United States and consumed here and these enormous export taxes increase as you diminish the tariff on sucar and rice. mous export taxes increase as you diminish the tariff on sugar and, vice terse, are really levied upon and paid by the consumers of this country into the coffers of the Spanish treasury. But while everything produced in the island and imported into this country is thus ladened with taxation, what is the policy with regard to the productions of this country that might go into Cuba for consumption by the people XIV-245

there? It is one of absolute prohibition. The Cuban sells all he raises to us, but is permitted to buy little or nothing from us. I quote from a distinguished American who recently visited the island. Mr. Dana

But where he sells his crop, he naturally looks for his supplies; yet the Spanish colonial monopoly comes in to prevent his buying in this convenient and natural market, or to compel him, when he buys there, to do so under the oppression of enormous and almost intolerable duties. For instance—I give the figures from an official copy of the tariff of 1873; but the rates on many articles have since been made higher—while Spanish flour imported into Cuba in a Spanish research and a spanish part of the spanish flour in an American vessel pays \$2.25 a barrel import duty, American flour in an American vessel pays \$5.50. Spanish lard pays 2 cents and three-quarters a kilogramme; American lard 144 cents. Spanish cheese pays 3 cents and seven-twentieths per kilogramme; American cheese, II cents and four-fifths. From Spain, household furniture pays 9 cents per kilogramme; from the United States, 32 cents. Corned beef from Spain pays seven-tenths of a cent; from America, 8 cents and seven-twentieths. Salt fish from Spain pays seven-tenths of a cent; from America 2 cents and nine-twentieths. Window-gloss from Spain pays 1 cent and three-tenths; from America, 4 cents and seven-twentieths. A carriage with four wheels and four seats from Spain pays \$72 duty; from America, \$256, and so on through a tariff as minute and almost as extensive as human ingenuity is able to devise.

The very latest report issued from the office of the State Department.

The very latest report issued from the office of the State Department during the present year shows that the total imports from the Spanish West Indies is \$66,864,000, and exports to the Spanish West Indies, \$13,128,000. Are you prepared as American statesmen to adopt a policy that shall intensify and consolidate this odious colonial system, resting like a blight upon one of the fairest islands in all the seas? Will you join hands with Spain in the attempt to establish the baleful cooly system, or even a modified form of African slavery, encourage the productions of these forms of human contrivance, in the vain and futile attempt to reduce the price of sugar and discriminate against your own countrymen in Louisiana who are endeavoring to build up their disordered society, to establish free schools, to erect churches, to elevate and

reward and dignify labor and the laborer?

According to the report of the Sugar Planters' Association the sugar and molasses produced the last year in Louisiana were worth in the open market \$25,000,000, and had an interchangeable value of fifty millions. This industry offers a market for the machinery, farming utensils, all the manufactured goods from the North and the mules, horses, live stock, wheat and corn and meat, the food crop from the West, an interstate trade that promises to reach enormous proportions, to retain at home the eighty millions in gold, paid out of the country every year for imported sugar to people who buy little or nothing from us, to afford steady and profitable employment for millions of our country-men, and to render this nation in peace and in war independent of British or Spanish colonial dependencies for its supply of an article of cessary food for our whole people. Such a trade Great Britain would go to war to gain or retain.

But I say to gentlemen as long as Spain fastens her rigid colonial policy upon Cuba you can not, if you would, discriminate against Louisiana in favor of Cuba. You can only discriminate against our own and in favor of the treasury of Spain. Louisiana will find her protection in this blind policy and in the energies and sagacity of her own people, in spite of your efforts to reduce her free laborers to the level of slaves and

coolies

Mr. Chairman, while I would myself have preferred the old-fashioned tariff, the schedule that prevailed, as I have before said, from the establishment of our first tariff in 1789 until 1870, with one rate upon all common sugar and another upon all refined sugar, I am willing in a spirit of fair adjustment to accept the tariff proposed either by the Committee on Ways and Means through Mr. Tucker to the Forty-sixth Congress, or that proposed by the Tariff Commission to the present Congress. Congress, or that proposed by the Tariff Commission to the present congress. I well recollect that in the winter of 1879, when I had the honor to serve on the Ways and Means Committee, the honorable gentleman [Mr. Candler] who has so ably addressed the Committee of the Whole then appeared before the Ways and Means Committee to present a memorial containing resolutions adopted by the importers, refiners, and dealers in sugar in Boston, signed by sixty-six firms. I beg ers, and dealers in sugar in Boston, signed by sixty-six firms. leave to insert the memorial and call attention to it:

At an adjourned meeting of the importers, refiners, and dealers in sugar, held this day, the following resolution was unanimously adopted:

"Resolved, That the duties on sugar should be assessed by a graduated scale of specific rates, adjusted as nearly as possible to the advalorem principle, and that this can be done by the use of the polariscope better than in any other way. Its general use in buying and selling in all eivilized countries proves that it is less complicated and more reliable than any other method of determining the actual value of sugar."

JOHN W. CANDLER, Chairman, WM. H. GREELY, Secretary.

This was the first introduction of the polariscope. It is the plan now proposed. It is the Boston plan brought here by the honorable gentleman from Boston, and yet he now disowns and repudiates it. Instead of this plan he now urges us to adopt an ad valorem tariff upon all sugars, but insists that while the rate should be only 35 per cent. on common sugar it should be 45 per cent. on refined sugar, upon the ground that the refiners require a higher degree of protection against the British refiners, 3,000 miles from our markets, than the Louisiana planters against the Cuban producers, quite as near to the centers of trade and consumption in our own country-nearer to Boston than Louisiana and with cheaper freights.

In the first place, such a discrimination would be both unprecedented and unjust, and would create, or rather uphold, the existing monopoly of the refiners.

When the ad valorem system was adopted in this country, from 1846 to 1861, the same rate—30 per cent. to 1857, and after that 24 per cent. until 1861—was applied to all sugars, common and fine alike. The ad valorem rises with increased price in an ever-ascending ratio; 30 per cent. ad valorem on common sugars, worth say 4 cents per pound, would be 1.20 cents a pound, but on sugars worth 8 cents it would be 2.40 cents, double as much on the refined as on the unrefined sugars. Is not that enough? Is not that fair and just? Will nothing less than prohibition satisfy the refiners, nothing short of a monopoly of the American market? Shall all sugars fit to eat be banished from the commerce of our country in order to satisfy the handful of refiners whose work is mainly done by machinery? Such a policy can not possess a table foundation, for it violates all our notions of the fitness of things and of the freedom of trade and commerce. No article of necessity should be thus eliminated from the field of commercial enterprise or denied admission to the consumers who may desire to purchase it.

But, Mr. Chairman, I call to witness against the gentleman [Mr. CANDLER] the gentleman himself. For at the very time of which I have been speaking, the gentleman [Mr. CANDLER] declared before the Committee on Ways and Means—

We can manufacture sugars from No. 10 Dutch standard up at less than they can be made in any other country.

Mr. Spaulding, of Boston, said:

We refine cheaper than in any other country. The refiners of the United States do not ask protection. If you repeal all duties we can supply the world.

Mr. Theodore Havemeyer, of New York, who must be accepted as a high authority both on account of his success, his intelligence, and character, and wide experience, declared:

Refineries can give a cheaper refined article than it can be imported at.

Mr. David A. Wells said:

Refined sugars can be sold here cheaper than anywhere else.

Mr. Perot said:

The producer abroad can not manufacture high-grade sugars as cheaply as they can be manufactured here.

These gentlemen are competent judges and witnesses. They can not be contradicted.

But while I might be disposed to adopt the ad valorem as the universal principle upon which to base a tariff system, it would be grossly unjust to apply it to one article only. In the first place, it would open the door to frauds innumerable and keep the sugar trade in constant ferment, while above all things stability is desired. How easy it would be (as has been done) for the planters to establish commission-houses in New York and to make up their own invoices of value on their own plantations and consign the sugar to their own agents in New York? These would be the controlling evidences of the cost of production upon which the value of the sugar would be determined.

which the value of the sugar would be determined.

Then, again, this system would afford the Louisiana industry high protection against Cuba when prices were high, when no protection would be needed, and afford little or no protection when prices were low and when protection would be required, if required at all. When sugar is worth 3 cents per pound with the tariff at 30 per cent. the tariff would be ninety-hundredths of a cent per pound, but when the price of the same sugar was 6 cents per pound the tariff would be 1.80, just double.

only be ninety-hundredths of a cent per pound, but when the price of the same sugar was 6 cents per pound the tariff would be 1.80, just double. The compensation to the producer of anything when the price of his produce is low is that everything else is low in price also, and the ad valorem system while it cheapens the produce of one tends to cheapen the produce of all, and thus the benefits or disadvantages are equalized and made uniform.

Mr. Chairman, gentlemen have sought to create throughout the country a vast amount of prejudice against the tax on sugar, and these efforts are put forth seriously by the representatives of industries that claim the highest rates of taxation and impose the heaviest burdens upon the people of the country. The statement has been made that the cost of sugar per capita and to every household is as great as the cost of flour, of bread. No statement could be more false and delusive. I find by reference to the regulations for the Army that a daily ration of flour or soft broad is eighteen ounces, while fifteen pounds of sugar are allowed to every one hundred rations of flour, showing that the proportion of sugar to bread or flour is as fifteen is to one hundred. If we adopt 4 cents per pound as the average price of flour, or of equivalent breadstuffs, which is a low estimate, and one pound as the average daily consumption, we have three hundred and sixty-five days—\$14.60. While the average retail price of sugar is 10 cents per pound—the Louisiana crop does not average 5½ cents per pound—the cost of sugar per capita is about \$4 per annum, the consumption being, as I have shown, forty pounds per capita every year.

have shown, forty pounds per capita every year.

The fact is sugar is not an absolute necessity to the poor; but blankets and clothes are. In winter many a poor man would dispense and does dispense with sugar entirely in order to save up from month to month little by little his hard-earned wages to pay the additional tax your tariff imposes upon the blankets with which to cover the limbs of his little ones, articles are doubled in price by the tariff. And while

gentlemen are commiserating the poor man because his cup of sugar costs him the twentieth of a cent more, an infinitesimal amount, incapable of being reckoned in our money, they do not hesitate to tax the cup itself, so as to double its price, and the plain dishes and saucers, knives, and spoons upon his table, as well as the coat on his back and the shawl on his wife's and the spools of thread in her lap. There is not an article the price of which is so little affected by the tariff as sugar or one on which the duty is so easily collected or which affords so certain a revenue and so little a bounty.

The consumption in our country, owing to its cheapness and the general prosperity, is rapidly increasing. It is already over forty pounds per capita, and I venture to say to the people of Louisiana that they will find in the widely expanding American markets and in more economical methods and better machinery and by raising as much as possible of what they consume, a safer foundation for their industry than the uncertain policy of this Government, controlled, as it may too often be, by more powerful interests ready at any time to sacrifice one another in order to gain greater advantages and larger bounties. The consumption is greater at present in England, over sixty pounds per capita, but it must be borne in mind that sugars from the distant East, half dirt, are often imported in ballast and fed to cattle, and that immense quantities are also consumed in making beer and in manufactures; but, after making allowances for these differences, I find a margin in the home markets yet to be filled. With peace and prosperity the total consumption in this country will double in the next decade at the present rate, for there will be also a great increase of nounlation.

for there will be also a great increase of population.

Our political situation is settled and improving, our laborers becoming more helpful and intelligent; better systems of cultivation and manufacture are coming into use, and our lands are unsurpassed in fertility, while the countries competing with us are depending upon a form of labor that must sooner or later involve their whole social organization in serious disorders and losses. No party can long maintain itself which proposes to establish or support by bounties out of the common treasury of the people of our country, either in the Hawaiian Islands or in Mexico or in Cuba, the cooly system of slavery. They will be condemned by the moral sentiment of the people of this country, who will demand that whenever the treaties of this Government extend special bounties the principles of free labor and of political liberty shall be recognized, and any alliance between the manufacturess of this country and the slave-owners or cooly-owners of the tropics will surely bring discredit and losses to both. If sugar is to come in free from Mexico or the Hawaiian Islands let all grades come in, so that the consumers may be benefited, and do not attempt while imposing all the burdens upon the planters to limit the benefits to the refiners alone by excluding the sugars really fit for consumption. Let us have fair play.

Support of Common Schools—A National System of Compulsory Education.

## SPEECH

OF

# HON. WILLIAM R. MOORE,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 28, 1883,

On the bill (H. R. 6158) to aid in the support of common schools.

Mr. MOORE said:

Mr. Speakee: Whether we shall educate, even imperfectly, the prodigious masses of dense ignorance now located in many States of our American Union—notably in the late slave States—or whether we shall permit these ignorant and unlettered masses, already provided (wisely or unwisely) with the high prerogative of the freeman's ballot, to dangerously shape and mold the legislation of a great nation like ours of which we are in the habit of so loudly boasting, is a question so vast in its bearings that no man can fully estimate its ultimate importance. I shall therefore, without undertaking to occupy the valuable time of this House in making extended argument, merely content myself with announcing my approval of the present bill in its general scope and nurrosces.

It is not contended, I believe, even by its supporters, that its provisions comprehend all that the friends of education desire; I am sure that it is not by any means what my own views would suggest. I, however, occupy more advanced ground than many upon the subject of American education. If in my power, I would, in brief, inaugurate a purely national system of compulsory education, to be placed and held exclusively under the national control, with a national series of primary text-books, in which the national idea should be kept always at the front. The late national arbitrament—the arbitrament of the sword—the last and highest mode of arbitration known to nations and

to mankind, decided, if it decided anything, that this is a nation, a single supreme sovereignty, and not, as our Bourbon "State-rights" friends so ardently advocate, an agglomeration of petty sovereignties. I would have our primary text-books written in harmony with this high

decision, and our children taught to acquiesce in it.

As it is to-day there are localities in our land where this decision is ig. nored; where children are being daily taught to antagonize the national sentiment; where the vicious and dangerous heresy is taught that the State is greater than the nation, of which it is only a very inconsiderable State is greater than the nation, of which it is only a very inconsiderable part, and where teachers deem it to be their first duty to inculcate in the schools under their charge local political theories wholly at variance with the idea of the future integrity and stability of this great nation. I would prohibit all this by a well-regulated national law. While, therefore, I shall vote for this bill, I shall do so only because I may consider it to be a step in the direction of promoting that intelligence which is now so urgently demanded in many portions of our common country, and which can only be hoped for through the wise and generous inter-

and which can only be hoped for through the wise and generous intervention of a beneficent national and paternal Government.

Let not any part of this grand Republic, no matter how seemingly safe, rest in fancied security while other portions of it are being dominated by the twin sisters of illiteracy and superstition. All are but parts of one stupendous whole, and it were worse than folly to even hope for a healthy body-politic while its legs and arms are being insidiously poisoned by the deadly upas tree of ignorance.

While under the provisions of this bill the late slave States may, if so inclined, receive the larger share of the benefits to be conferred by it, the other States are none the less interested in its provisions. What is good for one in this case is good for all. It will enable especially the negro race in the United States to become comparatively intelligent and

negro race in the United States to become comparatively intelligent and educated, and if their education shall have, as it is believed it will, the effect to jostle its million and a quarter voters into the ranks of both political parties instead of substantially only into one of them as now, this single result alone would be a sufficient argument for the passage of the bill, to say nothing of the higher reason that it would tend powerfully to strengthen the safety and stability of our noble and free in-

No thoughtful man can contemplate without alarm under our form of government the solid and undivided permanent vote of a whole race of people for a particular political party; and any legislation tending, as this inevitably must, to encourage among the people a free discussion and personal investigation of all questions affecting their political welfare, can not but in the very nature of things result in benefit to all the people of the whole nation. These, therefore, Mr. Speaker, are a few and only a few of the many reasons why I am heartily in favor of the passage of the pending bill.

## River and Harbor Bill.

## SPEECH

OF

#### OSCAR TURNER. HON.

OF KENTUCKY,

## IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 28, 1883.

The House, in Committee of the Whole on the state of the Union, having under consideration the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes, Mr. Turner, of Kentucky, offered the following amendment:

After the word "dollars," in line 372, add "\$50,000 of said \$250,000 to be expended at the Grand Chain, or so much thereof as may be necessary to provide five feet of water at low-water mark."

Mr. TURNER, of Kentucky, said:
Mr. CHAIEMAN: Knowing the impatience of the committee to get through the consideration of this bill, I would not trespass upon their time if it were not that I regard the amendment which I have offered am of great importance to the commerce of the country. It is not local in its effects. It is to promote the navigation of not only the Ohio River, but the Cumberland and the Tennessee. I am opposed to expending the public money upon streams that are local and not of a national character and that do not benefit the commerce of the country. character and that do not benefit the commerce of the country, many of which have been included in river and harbor bills since I have been a member of Congress, and many of which are included in this bill, and some of which have been condemned by the Secretary of War in his late letter in response to the resolution of inquiry of this Congress in regard to the insignificant streams included in the last river and har-bor bill, which excited the indignation of the tax-payers of the country and caused the veto of the President.

I am in favor of improving the great navigable rivers of the country that will give us cheap water transportation and break down the railroad monopolies, and for that reason I shall vote for the improvement of the Mississippi, Ohio, Cumberland, and other navigable rivers men-

tioned in this bill; but when it comes to voting for the improvement of the creeks mentioned in this bill, which are not navigable and which never will be, I shall vote against them, and if they are not stricken out I shall be compelled to vote against the bill on constitutional grounds.

I believe, sir, in the democratic doctrines in regard to internal im-

provement by the Federal Government, the doctrines laid down in the veto message of President Polk which has been referred to in this de-

bate, and in the views entertained by General Jackson.

But, sir, the amendment which I offer is not subject to these objections.

Let us look at it for a few moments, and I want the attention of those who are not familiar with the Ohio River. The Ohio River is of a national character; it bears the commerce of many great States; it is over 1,000 miles in length. The Grand Chain is a ledge of rocks in of a national character; it bears the commerce of many great States; it is over 1,000 miles in length. The Grand Chain is a ledge of rocks in the Ohio River, beginning eighteen miles from its mouth and extending several miles up the river. It is below the mouth of the Tennessee and the Cumberland. This barrier, as I have stated before, locks upnot only the commerce of the Ohio, but that of the Tennessee and Cumberland. Hundreds of boats and barges have been sunk on that ledge of rocks. Saint Louis, Louisville, Cincinnati, Evansville, Paducah, and all the cities on the Ohio and Cumberland are interested in removing this barrier or impediment to the navigation of the Ohio.

this barrier or impediment to the navigation of the Ohio.

The farmers in the valleys of these rivers are forced to ship their produce in low water upon railroads that charge high and exorbitant freight, and have a deep interest in removing this barrier, and I hope yet to see the day when large boats can pass through this chain in low It is practicable to improve it, and it ought to be done. urged it upon Congress at every session. It is true we have had some appropriations for this purpose, but the work is not yet finished. Now, gentleman, look at this bill: only \$250,000 are given by this bill for the improvement of the whole Ohio River, over eight hundred miles in length, and it is left discretionary with the engineers where they will

spend this money.

We know, sir, that the improvement of the Davis Island Dam, six miles from Pittsburgh, has been for years the pet scheme of the engineers. Why I do not know; but we know it is so. At every session for five years the attempt has been made to swallow up the whole appropriation for the Ohio River, or nearly so, for that improvement near Pittsburgh, and I and other members have fought it time and again on this floor. In this bill, it is true, it is not said where this money shall be expended; but, sir, we have every reason to believe that it will go to Davis Island Dam. I do not want it left discretionary with the engineers; I want it to be imperative upon them to expend at least \$50,000 this year toward the improvement at the Grand Chain; and I hope the amendment which I have offered will be adopted. I have urged upon Congress at every session the removal of this barrier. It is no wild project of speculation; it is practicable, and can be done. sary is to complete the dikes and blow out a channel. All that is neces

Mr. Chairman, I shall append to my remarks the bill under consideration, for I desire that the country may see what its provisions are, and that I represent the bill fairly when I say it includes creeks and streams, local, insignificant, and of no benefit to the general commerce of the country. The bill will pass, but I can not indorse such appropriations by my vote, and I regret that the committee should tack on to appropriations for meritorious items such as the Mississippi, Ohio, Cumberland, and other great rivers useful to the people and commerce, such appropriations as the one to Cheesequake's Creek.

I will also append an extract from the letter of the Secretary of War

in regard to Cheesequake's Creek, New Jersey, an item in the bill and a specimen of the character of the other items in this bill to which I have referred as local and insignificant. It is as follows:

## IMPROVING CHEESEQUAKE'S CREEK, NEW JERSEY.

	Continuing improvement\$15,000
1	The purpose of this appropriation is to improve about three miles of creek by
1	such dredging operations as will secure a navigable channel four feet deep and

such dredging operations as will secure a navigable channel four feet deep and one hundred feet wide as far back as Whitehead.

The report of the Chief of Engineers shows that the original condition of the channel from the bar or jetty at the mouth gives a depth of one foot at mean low water for about three-fourths of the length to be improved, and for the remaining portion a depth of from four feet to one and one-half feet at low water. The course of the creek is very crooked and requires to be straightened.

The project is a change of the outlet into a direction at right angles to the beach, to sustain this direction by jetties of stone, and to straighten the course of the creek and increase its depth in the upper portions.

The official reports furnish no definite information as to the amount of com-

1	merce to be benefited.	DI C	om-
1	Balance in Treasury July 1, 1882		,000
1	Drawn on requisition, July 1 to December 31, 1882	1.5	,000

IMPROVING MATTAWAN CREEK, NEW JERSEY. Continuing improvement...

From the report of the local engineer it would appear that the object of this improvement is to increase local developments.

The present commerce is small, but he states that "by the proposed enlargement of the channel-way and increased facility for shipping goods it is computed that there would be a growth in the commerce of from one-third to one-half, and that a large portion of Monmouth County would be benefited. Manufacturers would also be induced to locate there, as inquiries have already been made as to whether the creek is easy of access by water."

made as to whether the ereck is cary or access of water.	
Balance in Treasury July 1, 1882	8
Appropriated act August 2, 1882	6,000
Drawn on requisition, July 1 to December 31, 1882	6,000

An act making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United Butes of America in Congress assembled, That the following sums of money be, and are hereby, appropriated, to be paid out of any money in the Treasury not otherwise appropriated, and to be expended under the direction of the Secretary of War, for the construction, completion, repair, and preservation of the public works hereinafter named:

Improving harbor at Portland, Maine: Continuing improvement, \$15,000. Improving harbor at Rockland, Maine: Continuing improvement, \$20,000. Improving harbor at Burlington, Vernont: Continuing improvement, \$4,000. Improving harbor at Nantucket, Massachusette: Continuing improvement,

1,000.
Improving harbor at Newburyport, Massachusetts: Continuing improvement, 30,000.
Improving harbor at Plymouth, Massachusetts: Continuing improvement, 1,000.

Improving harborat Provincetown, Massachusetts: Continuing improvement, Improving harbor at Wareham, Massachusetts: Continuing improvement, \$4.000.

Improving harbor and breakwater at Block Island, Rhode Island, extending main breakwater to afford increased shelter, \$10,000. Improving Little Narragansett Bay, Rhode Island: Continuing improvement, \$3,000.

Improving harbor at Newport, Rhode Island: Continuing improvement, \$15,000. Improving harbor at Bridgeport, Connecticut: Continuing improvement, \$10,000.

0,000. Improving harbor at Milford, Connecticut; Continuing improvement, \$3,000. Breakwater at New Haven, Connecticut: Continuing construction, \$50,000. Improving harbor at New Haven, Connecticut: Continuing improvement,

Improving Monongahela River: Continuing improvement, \$25,000. That the officer of the United States engineers in charge of the improvement of the Tennessee River at Muscle Shoals and other points between the towns of Bridgeport, Jackson County, Alabama, and Eastport, Mississippl, be required, from the surveys heretofore made and by such additional surveys as he may be able to have made by the force under his charge without interference with the progress of his present work in his next annual report, to give a statement of the condition of the streams which empty into the Tennessee River between the towns above mentioned and the cost of their improvement and the depth of water therein and their commerce.

That the Secretary of War shall prescribe such rules and regulations as may be necessary to secure a judicious and economical expenditure of said sums, and shall cause to be made and submitted to Congress annual reports on or before January 1, giving detailed statements of the work done, the expenditures made, and the effect of such work, together with such recommendations as he may deem it proper to lay before Congress. It shall be the duty of the Secretary of War to apply the money he

melarge said harbor or river is worthy of improvement, and that the work is a public necessity.

That such parts of the money appropriated by this or any previous act for any particular improvement, whether requiring locks or dams or otherwise, as may be necessary in the prosecution of such improvement, may be expended in the purchase, voluntary or by condemnation, as the case may be, of necessary sites: Provided, That such expenditure shall be under the direction of the Secretary of War: And provided further, That if the owners of such lands shall refuse to sell them at reasonable prices, then the prices to be paid shall be determined and the title and jurisdiction procured in the manner prescribed by the laws of the State in which such lands or sites are situated.

That all moneys hereby appropriated shall be immediately available. Passed the House of Representatives March 1, 1883.

Attest:

EWD. McPHERSON, Clerk,

American Shipping.

SPEECH

# HON. JOHN R. THOMAS,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 11, 1883.

The House having under consideration the bill (H. R. 7061) to remove certain burdens on the American merchant marine, to encourage the American foreign carrying trade, and to amend the laws relating to the shipment and discharge

Mr. THOMAS said: Mr. Speaker: When this bill was reported to the House, after giving Mr. Speaker: When this bill was reported to the House, after giving it a cursory examination, I was disposed to support it. But upon further investigation of the question I see that it is simply a question of free trade or protection, that question that divides the two great parties as they are represented upon the floor of this House; and it is for the purpose of demonstrating this that I have been led to indulge in a few philosophic reflections, and will now give the House the benefit of them.

In looking back over the history of this country and of parties in years agone by I find that there were two different civilizations one known

gone by I find that there were two different civilizations, one known

as the Southern civilization and the other known as the Northern civilization. The Southern civilization was built upon (and its politics follows). lowed as a necessary consequence) the theory or idea of cheap slave labor, and that labor was degrading and dishonorable. Upon that theory the Democratic party of the South grew up. Upon that foundation the free-trade principles of the Southern section of this country were built. On the other hand, the civilization of the North was built upon the idea

that labor was creditable and honorable.

The North built itself up into grand proportions by following the idea that education and honorable labor went hand in hand, and that with nations as with men educated ideas were more profitable to the mation than any other kind of wealth. And so we see how that civilization spread and grew strong. The Republican party laid its foundation upon the fundamental idea of the elevation of the laboring dation upon the fundamental idea of the elevation of the laboring classes of this country. When the Southern Democracy discovered that the foundation stones of the structure they had erected were knocked away by the abolition of slavery, it picked up the crutch of English free trade, and we now find Democratic Representatives from all parts of the South hobbling along in the great race of life, supported by all that is left of their ideas of government, civilization, and politics; that is, English free trade. And we find them here to-day, as we have found this same Democratic party throughout its whole history, striking at the very heart of the development of this country. We find them striking at the laboring men, the producers of this country. ing at the laboring men, the producers of this country. We find them striking at everything that tends to aggrandize and to develop this great country of ours, and are attempting here to defeat this most wholesome measure by raising the false cry of "subsidy." In order to make this measure offensive, a stench in the nostrils of the American people, in the hope of defeating that which would protect and encourage the labor of this country, they denounce it as a subsidy. Mr. Speaker, I denounce their statement, and say it is not only not true, but is in keeping with the action, charges, and doctrines of the Democratic party made under the influence of British agents of free trade from time immemorial. While they have not the courage to wear that banner openly, the "gridiron" of the English Government, the Democrats as a party wear beneath their coat lapels the English flag, representing free trade and the degradation of labor,
For these and other reasons I shall vote for this bill and shall oppose

free ships. We are asked what ought to be done to aid the American carrying trade? In the olden time, Mr. Speaker, ships were built of wood, and America was in a position and condition where she could build them more cheaply than any other nation, for the timber on our coast was bountiful and could be cheaply obtained; therefore there was necessarily little expense in building ships. But a new order of things was entered upon during the war. The old system of ship-building has been changed, and the vessels of the present day are constructed of iron. Now, let us see the difference in the cost between England and our-selves in reference to the manufacture of iron. The raw materials out of which iron is manufactured are the iron ore itself, coal, and limeto be freighted and brought together for the manufacture of iron in England is only eight miles. That is for the transportation of the crude materials. How is it in this country? The average distance apart here of the ore, the coal, and the limestone is one hundred and twenty miles.

The SPEAKER. The time of the gentleman has expired.
Mr. THOMAS. I ask unanimous consent that I may have a few This is the first time with the exception of five minminutes longer. ntes on a former occasion that I have sought the indulgence of the

The SPEAKER. The Chair hears no objection to permitting the

gentleman to proceed.

Mr. THOMAS. I was saying, Mr. Speaker, that the average distance that the materials of which iron is manufactured have to be freighted in this country is one hundred and twenty miles. Hence we have a dif-ference in the cost of the transportation of the raw material as between England and this country of eight miles in her case against one hundred and twenty in ours. This is one of the causes of the breaking down of the American ship-carrying trade in iron vessels propelled by steam,

cause as a necessary consequence their iron is cheaper than ours.

On the other hand when the iron is manufactured in England the average distance it has to be transported to the seacoast is but thirty miles. After it is manufactured in the United States the average distance it has to be transported to the seacoast where ships are built is

five hundred miles.

Here, then, we have the difference in the cost of transportation be tween thirty miles in England and five hundred miles in the United States. Is it necessary to ask further what causes the decay in the carrying trade of the commerce of the United States in American botcarrying trade of the commerce of the United States in American bottoms as compared with the era of wooden ships? It is simply the difference in the cost of the material out of which you build ships to-day and the cost of the material that they were built of when we claimed the proud distinction of being the Queen of the Seas.

But, sir, I hope to see the American carrying trade restored in a measure by the adoption of this bill. It is a more in the right direction. It is prompted by the proper spirit. It encourages American labor, fosters American manufactures, is in opposition to the aggressian

sion of England that solicits trade at the point of the bayonet and demands purchasers with cannon-balls and with shells.

Sir, I want our people to be in such a condition, should war arise, that

we can build within our own ship-yards such vessels of war as we may need, or convert the vessels constructed within our own dominions into fast cruisers; and that can only be done by fostering the building of ships within our own limits and the possession thereby of a merchant marine which may be converted into cruisers in time of war.

#### Originating Revenue Bills.

## SPEECH

## HON. BENJAMIN BUTTERWORTH. OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1883.

The House having under consideration the following resolution:

Resolved, That if this bill shall be referred to a committee of conference it shall be the duty of the conferees on the part of the House on said committee to consider fully the constitutional objections to said bill as amended by the Senate and herein referred to, and to bring the same, together with the opinion of the House in regard thereto, before said committee of conference; and if necessary in their opinion, after having conferred with the Senate conferees, said conferees in said committee may make report to the House in regard to the objections to said bill hereinbefore referred to—

Mr. BUTTERWORTH said:

Mr. SPEAKER: I desire to say a word upon the pending question, not that I expect to change the vote of any gentleman. An eminent member of the British Parliament once said that he had often heard arguments which changed his judgment, but never heard one that had changed his vote. I do not expect, therefore, to change a vote; but I wish now to have the attention of the House a moment, because it has been whispered around among certain anxious brethren that the members of this House from Obigo and certain actions of the Mouse of the States. bers of this House from Ohio and certain gentlemen from other States press this question of constitutional privilege with the view ultimately to defeat the Senate bill; and for no other reason do they press this constitutional question. If it is intended by that statement to say that the Representatives upon this floor from the State of Ohio oppose the revision of the tariff, that they are not anxious to secure a revision, then I challenge the correctness of that assertion. If it is intended simply to say that we would prefer no revision of the tariff to such a revision, ion as would leave no flocks upon our hills or in our valleys, which would send us home to stand amid the wreck of ruined industries, then let me say to the gentlemen that they may be correct. We desire a revision that will foster, and not destroy, our industries. Unfortunately we may be left to choose between two evils: either to vote against a revision of the tariff and thus continue the business stagnation which now prevails, or vote for a bill which will injure some one of our great industries. We will choose when the occasion requires.

But this, Mr. Speaker, is a question above and beyond the mere passage or defeat of any bill pending here. I am astonished at the carnest language of my friend from Kentucky, who suggests that even an idiot can see that his construction of the Constitution, namely, that the Senate has the right to amend, to alter, to add to any bill originating in the House, even to the extent and in the manner presented in the bill I hold in my hand, in which the Senate has been pleased to add to a short revenue bill, containing a few items covering in all two pages, socalled amendments revising the whole tariff system of the country, striking out all the House did and originating an entirely new bill.

If idiots who run may read what he states, it is because idiots are accustomed to see things which do not exist and read that which is not

I wish to call attention to the fact that the men whose names I shall read differ from the gentleman in his construction of that clause of the Constitution to which he has called attention; and if this House may be guided by the lights along the highway of precedent, there can be no doubt as to what our decision will be touching the question as to whether out as to what our decision will be touching the question as to whether in the case under consideration the Senate has been guilty of infringement of the rights, privileges, and prerogatives of the House in the matter of right to originate money bills. Sir, Hamilton, Franklin, Mason of Virginia, Gerry, Sherman, Randolph, Webster, Clay, Benton, Mangum, Forsythe, Sumner, Wilson, Seward, Garfield, and a host of others all along the line of distinguished statesmen have insisted that what has been done by the Senate in this bill is a plain organ palpable vice. has been done by the Senate in this bill is a plain, open, palpable relation of the constitutional prerogatives of this House to originate money bills. What are we to understand by the term "money bills?" It is used, sir, as it was used in the debates on the resolution fixing the relations between the English House of Commons and the House of Lords. "Revenue bills," "appropriation bills," and "money bills" are synonymous and express precisely the same idea. The House of Lords among this in the latest from over a mending in any remains the latest hills the prohibited from even amending in any manner a money bill; while the Senate claim and has the right to amend such bills. I hold that the of the Constitution under consideration should be construed in the light of precedent and in the light of the debates which took place when that clause of the Constitution was adopted. The considerations which led to the adoption of the clause must serve as a valuable guide in determining the measure and limit of authority intended to be conferred and fixed by it.

The provision of the seventh section of article 1 of the Constitution was adopted as a compromise and adjustment of a controversy between the larger and the smaller States as to the power each should wield in controlling the legislation of the country in matters of taxation, &c. The larger States objected to the small States having an equal voice in the Senate, Rhode Island and Delaware having the same power as Pennsylvania and New York. It was finally agreed that the smaller States should have the same voice and vote in the Senate as the large States, and in consideration of this concession the House had conferred upon it the exclusive right to originate "money bills." In other words, quoting the Constitution, "All bills for raising revenue shall originate in the House but the Senate was respected to the senate was respected. House, but the Senate may propose or concur with amendments as on other bills.

It is claimed that the Senate has not infringed the exclusive prerogative of the House in the matter of the bill now before us, but has simply exercised the right of that body "to propose or concur with amendments as on other bills."

If this view is sound the prerogative which the House boasts and

which was secured to it after a long and bitter struggle is not worth the

ink used in writing it.

If the House in the exercise of its high prerogative—which implies, "if there be any meaning in that part of the Constitution which requires that revenue bills shall be originated in the House, it is supposed to mean that the immediate representatives of the people shall be as well the judges of the proper objects of taxation as of the amount of revenue, the selection of the objects of taxation being not only the most undoubted but in fact the most important power of the House of Representatives"—I say if the House in its wisdom is pleased to originate and pass a revenue bill repealing the law imposing a stamptax on bank checks, and the Senate may, in the exercise of the right of the Senate "to propose or concur with amendments as on other bills," strike out the item contained in the House bill, and proceed to revise the internal-revenue system and also the entire tariff system of the country, thus determining both the objects to be taxed and fixing the rate and the amount of revenue, the mere right to originate the bill would be of no value; and if such a proceeding would not, in the sense of the Constitution, be originating, practically originating, a rev-

enue bill, it would be difficult to determine what would.

The history of the clause in the Constitution which secures to the House the exclusive right to originate "money bills" leaves no doubt as to the end sought, which was to secure to the immediate representatives of the people the determination not only of the amount of nevenue

to be raised, but the objects which shall be taxed to raise that revenue. But it is urged that the words "as on other bills" extends the limit of the authority conferred by the clause, so that the Senate may in fact substitute another bill for that which originated in the House with possibly a single item, or a dozen items, if you please, and in that substitute revise the internal-revenue and tariff laws of the country, changing and fixing rates and objects of taxation as they will. I am not clear what "amendments" were allowed on other bills, when the Constitution was adopted. But one thing is clear, and that is, that it was the express purpose and intent of the convention which adopted the Constitution to withhold from the Senate the very power which that body has exercised in its action on this bill.

Will it be claimed that the revision of the tariff as it appears in the

bill sent to us by the Senate originated in this House. Is not the action of the Senate a plain, palpable violation of the spirit of the clause which denies to that body the right to originate revenue bills. The provisions inserted in the bill by the House have not been concurred in, but struck out entirely. Those provisions and items have in no proper sense been out entirely. Those provisions and items had out entirely. Those provisions and items had amended. Such a claim borders on the absurdamented to the House

The prerogative which is secured to the House by the clause of the Constitution in question is referred to by Mr. Justice Story (section 876, Story on the Constitution) in the following language:

That it is fit the House should possess the exclusive right to originate money bills, since it may be presumed to possess more ample means of local information, and it more directly represents the opinions, feelings, and wishes of the people; and being directly dependent on them for support, it will be more watchful and cautious in the imposition of taxes than a body which emanates exclusively from the States in their political capacity.

In the same behalf, Judge Tucker (1 Tucker's Blackstone, Appendix 195) says:

Now, as the relation between taxation and representation in one branch of the Legislature was fixed by an invariable standard, and as that branch of the Legislature possesses the exclusive right of originating bills on the subject of revenue, the undue weight of the smaller States is guarded against effectually in the imposition of burdens.

But what becomes of this right if the Senate may, in the form of what by grace is called an amendment to the House bill, which contains a single paragraph reducing the import duty on a single article, proceed

to add to the list of articles subject to taxation under the existing law, a hundred other and additional articles, and in the same bill provide a system of internal-revenue taxation?

a system of internal-revenue (axation? Can it be doubted that the Senate, in the sense in which the term is used in the Constitution, does originate a revenue bill? Why, sir, there is not a trace of the House bill left. I repeat, in conclusion, that the spirit of the Constitution if not its letter is clearly violated by the Senate in its action upon the bill now before the House. This must be so, unless the exclusive right to "originate money bills" is in its practical pregation a delugion and a sware. For perfecting to maintain this inoperation a delusion and a snare. For neglecting to maintain this in-estimable right of the representatives of the people to control the pub-

lic purse we will be called to a severe account.

It is the people's prerogative, and we can not surrender it as against them if we would. They will sooner or later assert it even, if need be, them if we would. They will sooned to the abolition of the Senate itself.

The SPEAKER. The time of the gentleman has expired.

#### Importation of Works of Art.

#### SPEECH

OF

## HON. PERRY BELMONT.

OF NEW YORK,

## IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1883,

On the bill (H. R. 7417) in relation to the importation of works of art.

Mr. BELMONT said:

Mr. SPEAKER: In order that the House may see who are asking Congress to aid and encourage American art by permitting the importation of foreign works of art free of duty, I desire to print in the RECORD the following names, comprising a few of the artists, painters, sculptors, engravers, art students, manufacturers of art work, and designers who are petitioning for the passage by Congress of the bill in relation to the importation of works of art, H. R. 7417:

In order to meet the only objection that has been made against the bill, I would favor an amendment striking out the word "lithographs" from the second section.

## Internal-Revenue Taxes.

## SPEECH

#### GUNTER, HON. THOMAS M.

OF ARKANSAS,

#### IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 20, 1883,

On the motion to suspend the rules and pass a bill to reduce internal-revenue taxes.

Mr. GUNTER said:
Mr. SPEAKER: On the 4th of March next, after ten years' continuous
service, I shall retire from this House. After having been honored by
the people of my district—a brave, generous, and intelligent people—
with five successive elections as their Representative, I declined to again become a candidate, and desire here and now to express my profound gratitude to my constituents for their more than deserved favors.

I came here, Mr. Speaker, as a Democrat, representing a district where

the Democrats are in a majority of at least four to one, and while I have mever failed to advocate the principles of my party and advance its interests, I have always felt that they were subordinate to my duty to my

terests, I have always felt that they were subordinate to my duty to my country, and were only worthy of support because, carried into effect, formulated into laws, these principles would make the country still greater and more glorious.

Now, Mr. Speaker, in the close of my career as a member of this House, I desire to say a few words as to the present and future condition of the country, of its needs, and what I believe should be done to advance the interests of the people.

There are but three great questions before the people, and the first of these, of which I shall speak and that but briefly, is the improvement of the navigation of the Mississippi River. This is no local matter. It is one in which the people of the Eastern seaboard, "the toilers by the sea;" the men and women who work in the cotton and woolen mills and shoe shops of New England; who delve in the iron and coal mines of Pennsylvania, Maryland, and Ohio; who labor in the baleful light of their forge fires; the hardy lumbermen of Maine; the tobacco and cotton growers and manufacturers of Virginia and the Carolinas, all accounts and the carolinas, all accounts the fertile soil of the great West and from the teeming bosom of mother earth gather the breadstuffs to feed the world.

bosom of mother earth gather the breadstuffs to feed the world.

A cheap method of transportation will cheapen the food of those who have to buy and at the same time increase the earnings of those who produce the food. The improvement of the navigation of the Mississippi River will give that cheap method. It will not only provide one cheap route, but many—for the railroads which now control the transportation will lower their prices to connecte with the river parts and portation will lower their prices to compete with the river route, and five men can no longer meet as now in a luxuriously furnished chamber in New York and levy a tax of fifty cents or a dollar a barrel upon every barrel of flour consumed by the laborers of the Eastern States.

But a few months ago the butchers in Chicago found it would be profit-

able for them to slaughter beeves, hogs, and sheep in that city and send the beef, pork, and mutton to the Eastern cities in refrigerator cars, as the freight was much cheaper on the meat than it was on the live animals. This difference in freight enabled them to sell at but little more than this difference in freight character them to sent at but fittle more than half the price required by those who transported the live animals. But it decreased the profits of the railroads, and they at once put up the charges on the refrigerator cars, and in doing it added from 5 to 10 cents per pound to the prices of beef, pork, and mutton.

With the Mississippi River made navigable for boats of heavy draught

at all times and seasons the railroad monopolists could not do this. Hence it is a great duty we owe to the people of the country to make

it navigable at any cost.

The second great question in politics is the regulation of the tariff, the placing of such duties on imports as will at the same time produce the greatest amount of revenue to the Government, and will not oppress those who labor either in the workshops and mines or upon the farms

those who labor either in the workshops and mines or upon the farms in the forests or stores of the country.

Ourduty, Mr. Speaker, is to legislate to protect the poor; the rich can care for themselves. I do not say this in any agrarian or communistic sense, for I am as far from entertaining communistic or agrarian ideas as any gentleman on this floor, but we all know that capital cares for itself. I am not one of those who believe that it is our duty to legislate money out of the pockets of men who have honestly made it, but I de believe that we should so legislate that capital can not oppress labor, the rich grow richer upon the labor of the poor, while the poor grow poorer and have to labor harder for the mere necessaries of life.

Why, sir, what did it mean when but a few days ago the amendment

Why, sir, what did it mean when but a few days ago the amendment offered by the gentleman from Indiana [Mr. HOLMAN] was voted

down.

It was claimed and shown that the duties on material entering into the building of a first-class iron steamship averaged \$34 per ton, and it was proposed that to any one building a 4,000-ton steamship of American materials a subsidy should be given from the Treasury of the amount of the duties; that is, \$136,000. These duties, it is claimed, are to protect the American laborer from the competition of the poorly-paid labor of Europe.

Mr. Holman's amendment provided that one-half the amount of this subsidy should be divided between the laborers who built the ship, the sons of toil who forged the iron from which the mighty traverser of the sons of toil who lorged the iron from which the mighty traverser of the seas was made, the artisans who wrought it into shape and under whose skillful hands the unsightly ore blossomed into the magnificent vessel. But that amendment was voted down. The gentlemen on the other side of the House—the Republicans, who advocate "a tariff to protect the laboring man"—were unanimous in opposing it, and I am sorry to say were re-enforced by two calling themselves Democrats, and to my creat actions when the proceedings of the special educated as the special

to say were re-enforced by two calling themselves Democrats, and to my great astonishment by one elected as the special advocate and representative of the laboring man.

This vote proves the falsity of the Republican claim that that party represents the interests of the laboring; men when it advocates a tariff. The tariff as it stands is a monstrosity it oppresses the people to such an extent-that it is a matter of wonder they have not risen in revolution against it; it protects the rich manufacturer and leaves the poor artisan to protect himself, to work at such wages as his master chooses to concede or starve: it taxes the many for the benefit of the few: it to concede or starve; it taxes the many for the benefit of the few; it impoverishes the great West, the granary of the world, and the South, which produces the material for clothing the world, that the New England and Middle States may grow rich; not that the masses of the people of these States grow rich; but that the few who are rich may grow

The tariff should be changed, and that can only be done through the triumph of the Democratic party. I would not, Mr. Speaker, strike down one single industry in this country. I would not vote to deprive one man of the means of earning an honest competence by honest toil. I would rather diversify labor, make our country so that everything the world needs could be produced from its soil and its workshops; but I do not believe that the present tariff leads to that end, and therefore I am in favor of changing it; not tinkering it as has been proposed in this Congress, but making such radical changes as will do justice to all the people of the country, will provide a revenue sufficient for the wants of the Government and at the same time levy the smallest possible tax upon the people. Such a tariff will be one based upon the principle of ecuring revenue with the incidental protection that such a tariff would

But there is another question greater than these that must be disposed of. When all the citizens of the great republics of ancient times were alike poor, while there were no millionaires and no tramps, the people were free. In Rome when great wealth was acquired by some and the masse: became poor dependents upon the bounty of the rich the republic fell. And such has been the history of the world through

all ages. The accumulation of wealth in the hands of the few impoverished the many.

Louis the Magnificent, as he loved to be called, concentrated all the wealth and power of France into the hands of the king and the nobles. He was warned, but only answered, "After me, the deluge." Luxury such as the world never saw before and has not seen since until now meet the rule with the rich. Poverty, grinding poverty, was the lot of was the rule with the wich. Poverty, grinding poverty, was the lot of

This continued for a time. The French people had never enjoyed the blessings of liberty and competence, and they merely groaned under their burdens. The world had not advanced as it has now, when the harnessed lightning flashes intelligence around the globe and Shakspeare's Ariel is no longer a dream; the tamed fire-fiend works the mighty press and then with headlong speed carries the wet sheets whereon are press and the vigorous words of the world's best thinkers into every hamlet; and it took years for the people to realize their strength.

But they did, and then the deluge came. It was a deluge of blood.

Europe was almost a charnel-house, but from it has sprung the beautiful Republic of France.

ful Republic of France.

Now, sir, but a few years ago the millionaires of this country could be counted without exhausting the fingers of one hand, while the tramps would not have required the thumbs. Now we have millionaires by the score and tramps by the thousand. Why is it? Why is wealth being concentrated in the hands of the few? The answer can be found in our statute-books. Vicious legislation is the sole cause. The legislation to which I have already alluded—the unequal and unjust tariff laws are partly the cause, but there is another class of laws which are more directly responsible. When this Government was first formed and was growing through two-thirds of a century to its present grand proportions, it was rich in lands and poor in all else.

portions, it was rich in lands and poor in all else.

The great West and South were so sparsely settled that the people had no means of communication with each other or with "the balance of mankind." The teeming soil gave forth its abundant fruits, but they were valueless; there were no mouths to eat them and no means they were valueless; there were no mouths to eat them and no means of transporting them to where there were mouths. Neither the people nor the Government had money to provide routes for transportation or to improve those which nature had provided. But the Government was rich in lands, and it at once inaugurated the system of giving lands to the States—mind you, Mr. Speaker, to the States—to aid in the construction of wagon-roads and canals. Six million acres of land were given to five States of the West—Ohio, Indiana, Illinois, Wisconsin, and Michigan—for these purposes

given to five States of the West—Onto, Indiana, Illinois, Wisconsin, and Michigan—for these purposes.

But soon railroads came. It is not the life of an ordinary man, Mr. Speaker, since the whistle of the first locomotive was heard in this country; since the first mile of railroad was laid. It is not a generation since the Government of the United States made its first grant of land to a State to aid in building a railroad.

The Democratic party inaugurated that policy and it may be proud of the results. From the time the first grant was made in July, 1850, to the State of Illinois to aid in building the Illinois Central Railroad, from the great lakes of the north to Cairo, and to the States of Alabama and Mississippi, to aid in building the continuation of that road, the Mobile Mississippi, to aid in building the continuation of that road, the Mobile and Ohio Railroad from Cairo to the Gulf, the party continued that policy until it went out of power in blood and fire, and during the eleven succeeding years there had been granted to the States of Missouri, Arkansas, Louisiana, Mississippi, Alabama, Florida, Wisconsin, Iowa, Michigan, and Minnesota 35,000,000 acres of land, six sections to mile, to aid these States in securing railways through their borders, and the result more than justified the anticipations of the grantors. The the result more than justified the anticipations of the grantors. The railroads in aid of which land was given were built, and thousands of miles of other roads were built because of these. That my words may be verified, let me here present a table of the States to which grants were made by Democratic Congresses, the number of miles of landgrant railways in each State, the number of acres of land patented or certified to each State, the number of acres of land to each mile of landgrant railway, and the number of miles of railways in the States.

State.	Land grant to State.	Miles of road built by land grantto State.	Number of acres to each mile of road.	Miles of railroad in State.
Missouri Arkansas. Plorida. Alabama Louisiana. Wisconsin Michigan Minnesota Mississippi Lowa Kansas.	2, 595, 053 1, 764, 710 2, 381, 650 1, 760, 468 2, 825, 932 1, 472, 405 3, 413, 650 2, 580, 020 7, 360, 000 935, 158 4, 695, 490 4, 153, 470	1,320 584 542 247 822 152 633 1,005 1,800 406 2,250 1,210	1,960 3,900 7,000 3,430 7,000 5,400 2,600 4,100 2,300 2,090 3,430	7,780 3,740 1,100 600 1,932 950 2,896 2,692 3,270 1,140 4,898 3,101
Total	35, 938, 006	10,971	********	34,099

Average number of acres for mile of railway, 3,273.

But, sir, the Democratic party passed out of power, the scepter departed from Judah, and the Republicans came into absolute control of the legislative, executive, and judicial functions of the Government. A new system was inaugurated; corporations were created to whom immense subsidies were given in money and lands to enrich individuals. Where the Democrats had given six sections of land per mile to the States

to aid in road-building the Republicans gave twenty and forty sections

per mile, and added to this immense bounties in money.

I have shown the amounts given by the Democrats, and the results; now, sir, I will show you the amounts given by the Republicans, and the results in miles of railroad.

The Union and Central Pacific Railway and their branches received 33,000,000 acres of land, over \$100,000,000 in money, and for this outlay we have 4,454 miles of railway. The States to whom land was lay we have 4,454 miles of railway. The States to whom land was granted by Democrats gave us a mile of railway for 3,300 acres of land; these Republican corporations gave us one mile of railway to each 7,500 acres of land and \$25,000 in money.

But there are eight other corporations created under this Republican plan; they were to give 6,500 miles of railway for 111,000,000 acres of land, that is one mile for each 17,000 acres, but in fact they only gave us 1,000 miles according to contract, and now demand the land, 110,000 acres per mile

Observe, Mr. Speaker, the difference between the true policy of the Democratic party in giving to the States and the false policy of the Republican party in building up rich corporations to receive its favors.

But, sir, I hear Republicans say that it was the liberal and wise policy of the Republican party that secured for us our transcontinental railways. It is not true. This was the Democratic policy. A Democrat, one of the greetest polylest and payest who were received a security in the content. ways. It is not true. This was the Democratic policy. A Democrat, one of the greatest, noblest, and purest who ever occupied a seat within the walls of this building, Stephen A. Douglas, introduced the first bill granting lands to aid in building a railway from the great lakes to the Pacific. A Democratic Secretary of War, a man whose name I shall ever revere as that of a patriot and statesman, Jefferson Davis, ordered the first surveys and examinations by engineers for railway routes across the

Go to your library, sir, and there you will find thirteen quarto volumes containing the examinations made and the reports upon the practicability of railways across the continent, and then, sir, take a map of the United States and you will find upon every route examined by the order of this Democrat a railway built or rapidly being built. There, sir, you will see the Northern Pacific route, the Union and Central Pacific, the Kansas Pacific, the Atlantic and Pacific, and the Southern Pacific; the forty-ninth, the forty-first, the thirty-eighth, the thirtyfifth, and the thirty-second parallel routes were all selected by him and surveyed under his orders.

But, sir, those railways were not built under the Democratic policy The last Democratic President of the United States, in advocating the policy of giving aid toward building a transcontinental railway, said, "The construction of this road ought therefore to be committed to companies incorporated by the States; Congress might then assist them in the work by grants of land or money, or both." This was in accordance with the precedents set and with the Constitution. But the Republicans disregarded the precedents and violated the Constitution, and in so doing inaugurated a saturnalia of robbery. They not only permitted but they encouraged and invited robbery, until the very floors of this House were reeking with the corruption that had overflowed from

the corridors and contaminated the members.

The Credit Mobilier has gone into history. But the world does not know a tithe of the corruption that was caused by these land grants to corporations. Mr. Speaker, you can not descend from you chair now, sir, and pass out into either of the corridors of this House without finding the agent or representative of a land-grant railway ready to greet you with a cordial smile and shake of the hand, ready to whisper in your ear some word of advice as to what should be done in regard to them. They come in more shapes than Proteus; they stand like Satan at the apple tree handing you the fruit; they even penetrate, as ex-members, upon the floor of this House; they infest your hotels and residences; are as numerous as the lice and repulsive as the frogs that came upon Egypt at the command of Moses, and they all grew out of this system inaugurated by Republicans of building up monster corpora-

tions and fathering them upon the people's money and land.

Mr. Speaker, there is danger to the American people while this condition of affairs exists, and the representatives of the American people in Congress assembled should remove the cause of alarm. It is their bounden duty to the people and to themselves. This threatening cloud is the great political question of the time. We must recognize it as is the great political question of the time. We resuch; we must accept and meet the responsibility.

Briefly, Mr. Speaker, I have alluded to what I consider the questions of moment before the country. They are all cognate to each other and revert back to the one great question of taxation and revenue. With the Mississippi River navigable, railroad charges will be reduced. With railroad charges reduced the products of the farmer and manufacturer can be delivered to each other at lower prices with a greater profit to each. With the public domain rescued from the monopolists, who are trying to seize it, and restored to the people, taxation will be lightened still further and prosperity accordingly enhanced.

Sir, in rising for the last time, perhaps, in this House I desire to return my thanks for the uniform courtesy shown to me alike by political friends and foes, assuring you that in returning to my home and to the pursuits of private life I shall carry with me many pleasant recollections of my service here and many warm friendships that will continue during life. tinue during life.

Fitz-John Porter.

SPEECH

OF

## HON. RUFUS R. DAWES. or onio.

IN THE HOUSE OF REPRESENTATIVES.

Thursday, February 15, 1883,

On the bill (S. 1844) for the relief of Fitz-John Porter.

Mr. DAWES said:

Mr. Speaker: In the record of the proceedings of this House for Monday, January 15, 1883, occurs the following:

Mr. Braco. I move to take from the Speaker's table the bill (S. 1844) for the slief of Fitz-John Porter.
Mr. Dawes. I object. [Cries of "Regular order!"]

Mr. Bragg. I move to take from the Speaker's table the bill (S. 1844) for the relief of Fitz-John Porter.

Mr. Dawes. I object. [Cries of "Regular order!"]

Owing to its parliamentary status this objection probably is, as it was intended to be, the death of the bill so far as the Forty-seventh Congress is concerned. It has always been my conviction that Fitz-John Porter interposed the "regular order," to say the least, against the appeal for consideration sounding from the cannon and crashing from the muskets of his fellow soldiers engaged in deadly struggle on the field of battle. Justice to Fitz-John Porter in the way of relief from the penalties imposed by the court-martial that condemned him will be, I think, more poetic at the hands of the Forty-eighth Congress. I desire that that Congress shall have the satisfaction and the glory of granting such justice, if it is so inclined. The poetic justice due him from a soldier in the army of General Pope it was my desire to place upon the record.

On the 27th Cay of November, 1862, a court-martial convened in Washington for the trial of General Fitz-John Porter. The court consisted of the following-named officers: Major-General D. Hunter, Major-General E. A. Hitchcock, Brigadier-General Rufus King, Brigadier-General B. M. Prentiss, Brigadier-General James B. Ricketts, Brigadier-General Silas Casey, Brigadier-General James B. Ricketts, Brigadier-General Ja Porter, the accused, was represented by Hon. Reverdy Johnson and Charles Eames, eeq., as counsel.

The court attracted the attention of the whole country to its deliberations on account of the distinguished character of the accused, and on account also, of the grave crime against his country and his comrades in battle with which an efficer of unquestioned fidelity and approved valor on other fields of battle stood charged. The court sat about forty-five days. It sat with open doors and in the sunlight of public criticism. I find it impossible to doubt that there was willingness on the part of the court-martial to

that the men constituting that court would be willing to do less than justice on the side of mercy. In the name of the best, the wisest, the truest, and most charitable of the great men who stood our leaders in those dark days, I repel the degrading suggestion that this court was organized to convict. General Porter had, therefore, a trial according to the custom of war in like cases—a fair trial and by a court of the highest possible standing as to intelligence, character, and integrity. He had before this court a powerful defense. Every witness important to his defense and accessible to the court was summoned, appeared, and testified. Only persons engaged in armed rebellion and restrained from attendance by that fact are lacking from the list of witnesses desired by the accused. If such witnesses could have appeared they would have known absolutely nothing of the animus or personal action of General Porter, for the plain reason that he did not get near enough for them to see him. It was his first duty as commander of an army corps moving toward a field of battle where cannon were sounding and musketry crashing to possess himself by armed reconnaissance of information as to the force and position of the enemy in his front.

But he had halted his column before a cloud of dust and recoiled from a slight and bloodless encounter with the enemy. For this very

But he had halted his column before a cloud of dust and recoiled from a slight and bloodless encounter with the enemy. For this very reason he was unable to prove to the satisfaction of the court his allegations as to the presence of Longstreet in superior force. His failure to have this knowledge was an essence of the crime of which he stood accused. It was what he had not known that condemned him. The fact that he could not prove his allegations by a cloud of witnesses from his own line of battle, but was forced to rely in part upon a cloud of dust, was one vital point against his case. Had he shown the spirit, action, and inspiration of the soldier he was known to be, all would have been well for him before that court-martial of true patriots and gallant soldiers. An excellent soldier of that same campaign, when criticised as to his battle action, answered:

My justification must rest solely upon the circumstances as they existed to my

My justification must rest solely upon the circumstances as they existed to my nowledge at the time. If these do not justify me nothing can.

The court-martial convicted General Porter of criminal insubordination and disobedience of orders on the battle-field. The sentence was that he be cashiered and forever disqualified from holding any

office of trust or profit under the Government of the United States. It is the tradition of the court that the question was not between dismissal and a lighter sentence, but between dismissal and death. The sentence was approved by Abraham Lincoln, President of the United States. Hon. Robert T. Lincoln, in his testimony upon the subject, says:

My father was exceedingly severe in his condemnation

As a soldier of the army of General Pope, and afterwards in the Army of the Potomac, I then accepted this action of the court-martial as conclusive upon the subject. It was sustained by impression, observation, and knowledge of events as they existed all around us. I am proud to claim the honorable gentleman from Wisconsin [Mr. Bragg], who champions this bill, as my instructor in the battle duty of a soldier. He never flinched in battle nor in getting into battle, and woe to the man under his command who did. From an old letter of my own, written from our camp near Belle Plain, April 8, 1863, I take these words as expressing the sense and indignant feeling at that time of the soldiers of the regiment with which I was connected, and which the gentleman commanded:

shot to death by musketry for Fitz-John Porter would have been poor penance for the thousands slaughtered at Bull Run, and we, their surviving comrades and friends, would for their sakes rejeice at it.

Lapse of time has cooled my feelings, but reconsideration has not

changed my judgment.

But, unless my memory plays me false, a reconsideration has changed the judgment of my honorable friend, the gentleman from Wisconsin.

He was my leader on many fields of bloody endeavor, and my Nestor the judgment of my honorable friend, the gentleman from Wisconsin. He was my leader on many fields of bloody endeavor, and my Nestor in military law. It is my recollection that our opinions upon this case were not different in 1863. From his emphasis I think I drew in part my inspiration. The Army wanted victory, not a victim. Political discussions and disrespectful and treasonable language toward the Government and superior officers had proved a bane to the discipline of the Army of the Potomac, which a vigorous enforcement of the penalties could alone correct. In this conspicuous case the Army believed the crisis demanded the most vigorous exaction of the penalty. Perhaps we were mistaken, and soldierly instinct on the spot must give way to legal acumen at long range in passing judgment upon battle action.

Sixteen years after these events the case was opened for rehearing before a board of three officers of the Army. They were gentlemen of high character, and distinguished in history. But this tribunal of three men, far removed from the events, of questionable legality in its constitution, anomalous in its character, without power to compel attendance of witnesses, is, I submit, not entitled to the respect due to the original court-martial whose conclusions it reverses with entire completeness. Before this board General Porter came with an exparte case, carefully prepared by sixteen years of devotion to the subject—a devotion that is touching in its sincerity and carnestness—and he was represented by the strongest legal tends. "Without power to the proper to the subject—a devotion that is touching in its sincerity and carnestness—and he was represented by the strongest legal tends." "Without power to the subject—a devotion to the subject—a devotion that is touching in its sincerity and carnestness—and he was represented by the strongest legal tends." "Without power to the subject—a devotion to the subject—a devotion that is touching in its sincerity and carnestness—and he was represented by the strongest leg

devotion to the subject—a devotion that is touching in its sincerity and carnestness—and he was represented by the strongest legal talent—"three skillful, able, and learned counsel." With all respect for the recorder of this board, and admiration for his heroic struggle against odds, and full appreciation of his excellent conduct of the case, I must still say the Government had an unequal hearing compared with the trial of the issue before the original court-martial. A harsh criticism has said, "This board was a whitewash for Porter and a drag-net for McDowell." The board found Porter's conduct worthy of high encomium. It was ready to canonize him as a martyr, and to place his name on the scroll of fame as a hero—God save the mark!—who saved an army by not fighting! It reached, also, the conclusion that General Porter's animus toward his commander, General Pope, which was granted bad, was of no importance in the case.

What a proposition in military jurisprudence! The spirit and intention of the actor to be eliminated from consideration in passing judgment on the nature of the act. On this point I will quote a dis-

tinguished soldier and jurist. He says:

The spirit and intention constitute the difference between a man's being foolishly captured by the enemy and his being a deserter deserving death. It constitutes the essential difference between an officer's doing some blundering or timid thing deserving only censure or contempt, and his being guilty of the highest of military crimes. The stern law of war punishes even cowardice with death when it sets a dangerous example; but if a hostile spirit of hatred and insubordination toward the commander produces the same results as cowardice would, the crime is exaggerated. In the one case it may be physical weakness, which we pity and despise while we punish it; in the other it is a purposed and willful wrong, allied closely to treachery. To say that malice makes no difference in offenses is merely to invert all rules.

The animus of Porter will be the controlling consideration in the debate before the American people, as it was before the court-martial that condemned him. Says one whose judgment carries weight before

It requires no oral testimony to establish that, as their intrigues, dispatches, and intercourse at that time establish that fact beyond any possible controversy.

There was no darker epoch in the war than the summer and fall of 1862. The grand campaign against Richmond was a flat failure. Upon the Army of the Potomac, the finest, most elaborately equipped, and completely organized army of the land, had been centered and lavished the resources, the hopes—yes, the agonized prayers of our people. The power that swept the eagles of France to irresistible victory in the name of Napoleon had been invoked for its

commander by the worshipful devotion of his soldiers and the loud acclaim of a people new in war and hungry for a hero. The net result of its campaign of the fall of 1861 was a grand review at Ball's Cross-Roads. The people were disappointed; but the summer of 1862 had added disaster to disappointment. In the campaign upon the Peninsula priceless time had been lost in the ditches at Yorktown, and when the grand shock came in front of Richmond the army was found straddled across the Chickahominy, as President Lincoln said, "like an ox half jumped over a fence that could neither hook one way nor kick the other." In this form McClellan had been attacked by his masters in war, Lee and Jackson, and despite the valor of his soldiers and the heroism and skill of his generals, Fitz-John Porter most faithful and conspicuous of them all in the desperate struggles, he had been driven back from Richmond and was on commander by the worshipful devotion of his soldiers and the loud John Porter most faithful and conspicuous of them all in the desperate struggles, he had been driven back from Richmond and was on his defense at Harrison's Landing on the James. Still McClellan's soldiers and most of his officers clung to him with an unfaltering faith and an unchilled devotion. But "Mac's star" had set. The people could not be fed on husks; their hearts had turned elsewhere. The banners of the undrilled and undecorated Army of the West had flashed from Fort Donelson, and by vigorous action that army had wrested victory from the bloody field of Shiloh, and pushed southward the lines of invasion. The President, recognizing the stern logic of events, had looked to the West for a commander to defend the capital, threatened by the failure of the Peninsula campaign, and he now ordered the humbled commander of the Army of the Potomac to bring his army back to Washington, a rear guard for Pope. Let the here and martyr, General Philip Kearney, tell in his own words the story of the situation, as one portion of the army and of the people regarded it at this juneture: of the people regarded it at this juncture:

[From Wilkes' Spirit of the Times.]

[From Wilkes' Spirit of the Times.]

HARRISON'S LANDING, August 4, 1862.

DEAR PET: I thank you for your kind, long letter. You extend to me hope. You suggest withdrawing me and my division out of this ignoble position. With Pope's army I could breathe again. \* \* For McClellan, he is burntout. Nover once on a battle-field, you have nothing to hope from him as a leader of a column. How do they expect Pope to beat with a very inferior force the veterans of Ewell and Jackson † Peace! peace! but there is no peace. No, not even with a disrupted Union. Let the North cast away that delusion. Draft we must, or the disciplined thousands of the South will redeem scrip in Philadelphia, and yet the North must accept it, and quickly, to a man, or the moment it draggles in debut Maryland, Tennessee, and Kentucky will cast past victories to the winds and rise with their nearly allied rebelkin. \* \* Adieu. Get me and my fighting division with Pope. With best regards,

To Mr. O. S. HALSTEAD, Jr., Newark, N. J.

Kearney may speak for those who distrusted McClellan. Fitz-John Porter clung to McClellan, as his record abundantly shows, with a devotion passing the love of woman. With an unexampled indiscretion, General Pope had recognized this McClellanism of the Army of the Potomac, and defied it. In the following order he as-sailed both the Army of the Potomac and its commander:

WASHINGTON, D. C., July 14, 1862.

To the officers and soldiers of the Army of Virginia:

By special assignment of the President of the United States, I have assumed command of this army. I have come to you from the West, where we have always seen the backs of our enemies, from an army whose business it has been to seek the adversary and beat him when found; whose policy has been attack, not defense.

\* Meantime I desire you to dismiss from your minds certain phrases which I am sorry to find much in vogue amongst you. I hear constantly of "taking strong positions and holding them," of "lines of retreat," and "bases of supplies." Let us discard such ideas. The strongest position a soldier should desire to occupy is one from which he can most easily advance upon the enemy. Let us study the probable lines of retreat of our opponents, and leave our own to take care of themselves. Let us look before and not behind. Disaster and shame lurk in the rear.

JOHN POPE Major-General Co

This was accepted and resented as an uncalled-for taunt by the Army of the Potomae, smarting already under unjust criticisms, jealous of its honor as an army, and still swift to resent an insult to its commander. If General Pope could have economized combativeness to the extent of sparing the Army of the Potomac from this ungracious assault it would have been better to have done so. The legic of the situation now became this: If Pope's Army of Virginia, aided by the Army of the Potomac, should defeat the enemy, should relieve the capital, and should lift the dark cloud from the despairing hopes of the people, this "braggart" Pope would displace McClellan in command of the Army of the East and send him to the The iconoclasm of a victory by Pope would shatter the idol

rear. The iconoclasm of a victory by rope weather army.

To Kearney with his "fighting division" and to Fitz-John Porter with his splendid corps came alike the orders to leave the Army of the Potomac and go to Pope. Kearney, with enthusiasm and a sense of relief to escape a "pent up Utica that restrained his powers," hastened with soldierly alacrity to duty and to death with Pope. Fitz-John Porter, with bitterness and gall toward Pope, moved in abediance of orders in the same direction. In the light of history I Fitz-John Porter, with bitterness and gall toward Pope, moved in obedience of orders in the same direction. In the light of history I have endeavored to define and restore the issue. On the part of some officers of the Army of the Potomac there was criticism of orders, expressed contempt for Pope, snail-like marching, excuses, haltings, delays, sneers for Pope's soldiers, and a dull ear for the booming cannon of battle pleading for comrades to fly to the rescue. On the part of others, like Kearney, Hooker, and Reno, there was zeal to act and anquestioning faithfulness to obey. History will recognize this de-

moralization as an important factor in shaping great events. say that a better union of the two armies was possible by more vigorous effort of the commander of the Army of the Potomac and certain of his corps commanders. It will say that the armies, so united, had power to defeat the enemy and prevent the invasion of Maryland with all its bloody consequences; and it will say that the tardiness and heartlessness of commanders of their own fellow-soldiers betrayed to slaughter and defeat the faithful and gallant army of General Pone which had tailed and struggled with efficient army of say that a better union of the two armies was ness and heartlessness of commanders of their own fellow-soldiers betrayed to slaughter and defeat the faithful and gallant army of General Pope which had toiled and struggled with unflinching valor and unquestioning fidelity. Here there were no wagons; there it was all wagons. Here mud was too deep; there the dust was too thick. There was nothing to eat; there was nothing to drink; they were so tired; the moon would not shine, and the nights were too dark, and Pope ought to be "left to get out of his scrape" the best he could. It was not their funeral. Oh! my bleeding country! We captured a straggler from Stonewall Jackson's Flying Corps, which was now creating all the trouble. He said "old Jackson gave us a gum blanket and a hundred rounds, and he druv us so like hell on parched corn that I couldn't stand it." Rain or shine, night or day, through dust and mud, "old Jackson druv" his column in that campaign, and his faithful vigor as a soldier stands in contrast to illuminate the dark record by showing what true men might have done, if they had tried, for our cause. I have devoted so much effort to restore the existing conditions of history to show that when the Schofield board ruled that "evidence of bad animus in Porter's case was not material," it undertook a large contract. It reversed the judgment considerately formed, under direct responsibility, by Abraham Lincoln and James A. Garfield, our two martyred Presidents; it reversed the judgment of hundreds of 4eading men of that day, and ham Lincoln and James A. Garneld, our two martyred Presidents; it reversed the judgment of hundreds of feading men of that day, and thousands of soldiers, and it directly and severely censured the courtmartial that convicted Porter. On February 13th, 1880, General Garfield, then a Member of Congress, and gathering material for a speech upon the pending bill for the relief of Fitz-John Porter, wrote as fol-

It is now perfectly evident that the Fitz-John Porter debate will arouse more bad feeling and awaken more war memories than anything that has occurred in Congress in a long time. We are now called upon to defend the honor of the living and the memory of the dead heroes of the war who fought with a spirit of an questioning loyalty, not only to their country, but to their commanders. If the Fitz-John Porter bill passes it condemns hundreds of leading men from Lincoln down, and leaves a blot on their names.

General Porter says that he willingly acknowledges that he was one of those who did not think that the Army of the Potomac should be removed from the Peninsula, and that he shared with others distrist of Pope's capacity to command.

trust of Pope's capacity to command.

But he says his opinions on this subject were not asked by the authorities; that circumstance did not restrain him from giving them with great liberality. There was certainly nothing mean about him in that direction. Let us follow the naked record of his official communication. He first reported to General Pope by note on August 26, and in person on the morning of August 27, 1862, at Warrenton Junction. In a brief and cordial (?) interview he acquired his knowledge of General Pope's plans of campaign, purposes, and strategy. If we may judge by his complete and ready disclosures of them, his power as a "soul reader" was quite equal to that of Lieutenant-Colonel T. C. H. Smith, of whom he bitterly complains for being impressed by his own manners and bearing. What seems to strike him first by his own manners and bearing. What seems to strike him first are the excellent jokes on Pope, swiftly communicated to General Burnside in his first dispatch after the interview. General Porter says he was giving Burnside his "impressions:"

Everything here is at sixes and sevens, and I find I am to take care of myself in every respect. Our line of communications has taken care of itself in compliance with orders. The army has not three days provisions. The enemy captured all Pope's and other clothing, and from McDowell the same, including liquors; [McDowell was known to be a total abstainer]; no guard accompanying the trains and small ones guard bridges. The wagons are rolling on, and I shall be here to-morrow. Good-night.

F. J. PORTER, Major General.

The true inwardness of the whole situation, according to his "impressions," is given in a fuller dispatch on the same day, as follows:

To General BURNSIDE, Falmouth, Va. :

To General Burnside, Falmouth, Va.:

\* \* \* Wagons are rolling along rapidly to the rear as if a nighty power was propelling them. I see no cause of alarm, though this may cause it. McDowell is moving to Gaineswille, where Sigel now is. The latter got to Buckland bridge in time to put out the fire and kick the enemy, who is pursuing his route unmolested to the Shenandoah or Loudoun County. \* \* Everything has moved up north. I found a vast difference between these troops and ours, but I suppose they were new, as to-day they burned their clothes, &c., when there was not the leset cause. I hear that they are much demoralized and needed some good troops to give them heart, and, I think, head. We are working now to get behind Bull Run, and I presume will be there in a few days, if strategy don't use us up. The strategy is magnificent, and tactics in the inverse proportion. I would like some of my ambulances. I would like, also, to be ordered to return to Frederickaburg, to push toward Hanover, or, with a larger force, to push toward Orange Court-House. I wish Sumer was at Washington, and up near the Monocacy, with good batteries. I do not doubt the enemy have a large amount of supplies provided for them, and I believe they have a contempt for the Army of Virginia. I wish myself away from it, with all our old Army of the Potomac, and so do our companions. I was informed to-day by the best authority that, in opposition to General Pope's views, this army was pushed out to save the Army of the Potomac, an army that could take care of itself. Pope says he long since wanted to go behind the Occoquan.

\* \* \* I hear many of the sick of my corps are in houses on the road—very sick, I think. There is no fear of an enemy crossing the Rappahannock. The cavarian to-night, please do so, direct to this place. There is no grain here or anywhere,

and this army is wretchedly supplied in that line. Pope says he never could get enough. Most of this is private, but if you can get me away, please do so. Make what use of this you choose, so it does good. Don't let the alarm here disturb you. If you had a good force you could go to Richmond. A force should at once be pushed on to Manassas to open the road. Our provisions are very short.

F. J. PORTER.

In another dispatch to General Burnside, on the 27th of August,

Please hasten back the wagons I sent down, and inform McClellan, that I may know I am doing right.

And at 2 p. m., on the 25th of August, he dispatches-

All that talk about bagging Jackson, &c., was bosh. That enormous gap Manassas, was left open, and the enemy jumped through; and the story of McDowell having cut oil Longstreet has no good foundation. \* \* The enemy destroyed an immense amount of property at Manasses—cars and supplies. I expect the next thing will be a raid on our rear by Longstreet, who was

Also, in another dispatch, on the 28th, he says:

I hope for the best: my lucky star is always up about my birthday, the 31st, and hope Mc's is up also. You will hear of us soon by way of Alexandria.

At six o'clock in the morning of August 29th he telegraphs to Burnside-

Haintzelman and Reno are at Centreville, where they marched yesterday, and Pope went to Centreville with the last two as a body-guard, at the time not knowing where was the enemy, and when Sigel was fighting within eight miles of him and in sight. Comment is unnecessary. I hope Mac's at work, and we will soon get ordered out of this. It would seem from proper statements of the enemy that he was wandering around loose; but I expect they know what they are doing, which is more than any one here or anywhere knows.

At risk of throwing some defender of General Porter into the usual rage occasioned by it, I will again place before the country for a rehearing the conclusion drawn by Judge Advocate General Joseph Holt in his review of the case made for President Lincoln, at the President's written request:

President's written request:

The precise import of these remarkable words in their connection cannot be mistaken, nor can it fail to be observed how harshly they jar upon the proprieties of military life. It may be safely affirmed that they express, on the part of the accused, as intense scorn and contempt for the strategy and movements of the Army of Virginia, a weariness and disgust for his association with it, added to a bitter fling at his commanding general, as found in the extraordinary declaration that he had taken two divisions of his army as a "body-grand to Centreville." The words, as quoted, disclose also a looking by the accused not to General Pope, but to General McClellan, as his guide, and a reliance upon his exertion and influence to relieve him from his connection with the Army of Virginia, and an expectation, if not a hope, that they would all soon arrive at Alexandria. This, it strue, would involve the discomfiture of that army, but it would also involve the discomfiture of that army, but it would also involve the discomfiture of that army, but it would also involve the discomfiture of that extraordinary declaration, and such certainly was the result.

This is the officer who commanded ten thousand veteran soldiers.

tainly was the result.

This is the officer who commanded ten thousand veteran soldiers, the freshest, best fed, best equipped, and highest-toned corps, on that day, at General Pope's disposal. His column closed on Warrenton Junction early in the evening of August 27, portions of the corps arriving during the afternoon. On that day General Joe Hooker had fired away, in battle with the enemy at Bristoe, all but five rounds of cartridge to the man. To the ears of the Fifth Army Corps and their commander the breezes had doubtless wafted the sound of this distant battle. This is the man who was nine miles away, and who, at 10 o'clock that night, received from the commander of his army this order:

HEADQUARTERS ARMY OF VIRGINIA, Bristoe Station, August 27, 1862, 6, 30 p. m

Bristoe Station, August 27, 1862, 6. 30 p. m.

General: The Major-General commanding directs that you start at 1 o'clock to-night and come forward with your whole corps, or such part of it as is with you, so as to be here by daylight to-morrow morning. Hooker has had a very severe action with the enemy, with a loss of about three hundred killed and wounded. The enemy has been driven back, but is retiring along the railroad. We must drive him from Manassas, and clear the country between that place and Gaines-ville, where McDowell is. If Morell has not joined you, send word to him to push forward immediately; also send word to Banks to hurry forward at all speed to take your place at Warrenton Junction. It is necessary, on all accounts, that you should be here by daylight.

I send an officer with this dispatch who will conduct you to this place. Be sure to send word to Banks, who is on the road from Fayetteville, probably in the direction of Bealeton. Say to Banks, also, that he had best run back the railroad trains to this side of Cedar Run. If he is not with you, write him to that effect.

By command of Major-General Pope.

GEORGE D. RUGGLES, Colonel and Chief of Staff.

P. S.—If Banks is not at Warrenton Junction, leave a regiment of infantry and two pieces of artillery, as a guard, till he comes up, with instructions to follow you immediately upon his doing so. If Banks is not at the Junction, instruct Col. Clary to run the trains back to this side of Cedar Run, and post a regiment and a section of artillery with it.

By command of Major-General Porz.

GEORGE D. RUGGLES

Major-General PORTER, Warrenton Junction

Major-General Porter, Warrenton Junction.

The judgment of the court-martial was that General Porter "did then and there disobey the said order, being at that time in the face of the enemy." It is urged vehemently by the defenders of General Porter that it would have made no difference in results if he had obeyed or tried to obey the order. All that elaboration does not touch the case. The order to march was urgent and imperative, explicit, and glowing with the urgency of a call to battle. The excuses are briefly summarized: "The night was too dark;" "the road was bad and obstructed;" "the troops were tired;" the subordinate generals, "our companions," advised against it. It was a foolish order anyhow, from a general who did not know what he was about.

Let us consider whether General Porter could have marched in the darkness that night, approximately, according to his orders, if he had tried. The rebel army could march and did march that night in its efforts to destroy our country. Do not say to me, a member of that corps who marched with it on the awful night of May 13, 1864, in obedience to orders of General Grant at Spottsylvania, that the old Fifth Army Corps could not march to save their country on any night the enemy was moving to destroy it. As a soldier, afterward attached to that corps and having an interest in the glory of its name, I resent the imputation as an insult to its history. I cannot encumber the Record in my limited space with thrice-told tales of historic evidence, but it is not, cannot be denied that almost the entire rebel army in that same campaign marched on the night of August 27 General Taliaferro's division, of Jackson's corps, taking along a wagon train captured from the rear of our army. It was because they could march at night, and did march at night, that the enemy were able to so completely surround and defeat General Pope's disjointed and paralyzed army. Let me compare the march of the Fifth Army Corps, in obedience to the orders of General Grant, on the night of May 13, 1864, at Spottsylvania, with Porter's pitiful record. That corps was under heavy fire on May 8, and also on May 9, and engaged in bloody assaults on May 10, and under fire on May 11, and in two desperate assaults upon the enemy's intrenchments on May 12, 1864. After this continuous and bloody service by day, accompanied by digging of trenches by night, with men living on half rations, and no fires to "cook coffee," God knows they were tired and hungry. But I will give the naked record from official reports and history of what soldiers of the Fifth Army Corps could do. I quote from the official report of a regiment of that corps, the Sixth Wisconsin Volunteers:

About dark (May 12) we moved back again two miles toward the right, and Let us consider whether General Porter could have marched in the consin Volunteers:

consin Volunteers:

About dark (May 12) we moved back again two miles toward the right, and the brigade was ordered to construct works. \* \* In the midst of darkness and a driving rain-storm I proceeded to construct breastworks. In a short time we were ordered to leave this work and march back to our position in support troops fighting along the line of captured intreuchments. My regiment was sent forward to relieve troops firing upon the enemy's works at the salient. In compliance with instructions my regiment stood in mud more than six inches deep, and kept a continuous fire upon the enemy's work during the entire night.

This night, at the so-called "angle of death," on the line of Spottsylvania, was the most horrible conceivable. The mud was full of dead hodies of our own soldiers; and yet the report continues:

sylvania, was the most horrible conceivable. The mud was fi dead bodies of our own soldiers; and yet the report continues:

During the night of May 13 we were on the march.

Notice this is after five days of battle and nights of restless toil.

The night was very dark, the roads exceedingly muddy, and the men were obliged to wade swollen streams, passing through water three feet deep.

This regiment had been educated to soldierly obedience and faithful This regiment had been educated to soldierly obedience and faithful performance of duty by my friend, the honorable gentleman from Wisconsin [Mr. Bragg], who was then its colonel. Now let us turn to Swinton's History, page 455, for what the Fifth Army Corps, in which my friend was commanding a brigade, essayed to do that night of May 13, 1864, after a campaign so continuous, so exhausting, and so trying, as I have shown, and then think of the insult implied upon that noble band of unflinching heroes, by the intimation that they could not march on the night of August 27, 1862, for the flimsy reasons given:

The Fifth Corps, during the night of the 13th, was ordered to march from its position on the extreme right, take post on the extreme left to the left of Burnside's corps, and assault in conjunction with that corps at 4 a.m. on the 14th. The march began at 10 p. m. The wet weather, however, had badly broken up the roads, and the night being one of Egyptian darkness, the move was made with immense difficulty. The route of march was past the Landrum House to the Ny River, which had to be waded. The narrow route afforded no road, but traversed the fields and a piece of woods where a track had been cut. Here, midway of the journey, a dense fog arose and covered the ground so that not even the numerous fires that had been built to guide the column could be seen. The men, exhausted with wading through mud knee-deep and in the darkness, fell asleep all along the way.

I will counte the closing sentences of the official report of the Sixth.

I will quote the closing sentences of the official report of the Sixth Wisconsin Volunteers, as to all this service:

These operations were the most exhaustive to the energies of the men, and perhaps the most trying to their morale, of anything in the experience of the oldest in service. But the hardships and dangers were undergone with fortitude, and the men were always ready to put forth their best effort in the most perilous

Knowing so well his record, I may safely say that had my honorable friend from Wisconsin [Mr. Brace] had command of the Fifth Corps, they would have marched on that night of August 27, 1862, if he was then an officer in the "demoralized army of Virginia," that needed some "good troops to give them heart." I have no doubt that that night was dark; nights are apt to be when there is no moon. There is unimpeachable evidence that the night was dark. I find evidence that it was "very dark," given by my gallant leader who fell at Gettysburg, General John F. Reynolds. He testifies:

It was a very dark night, as was the succeeding night. I recollect both of them

It was a very dark night, as was the succeeding night. I recollect both of them distinctly from having been about a good deal until after 12 o'clock on each night.

Ah, on the succeeding night I was about myself, and so was my honorable friend from Wisconsin. We can swear it was dark—very dark. At 6.30 p. m., August 28, General John Gibbon attacked two divisions of Jackson's corps. In that battle six regiments of Pope's "demoralized" Army of Virginia, as history now shows, grappled and fiercely battled with thirty regiments of the enemy—regiments that were the flower of the rebel army—that formed the corps of

Stonewall Jackson. Go read the Confederate reports for tributes to their valor. Far into the night the desperate and unequal struggle raged. We lost a thousand men, but we held our ground. After this batile then, "at 1 o'clock, a. m.," we marched for Manassas Junction, "aine miles." How strangely similar this sounds to the situation of Fitz-John Porter on the night before, only he had fought no battle. We reached the Junction, nine miles away, "at daylight." My friend, the honorable gentleman from Wisconsin, marched that night at the head of our column. There are others in this hall who marched that night. Hugh Lewis, an employé of this House, whose arm is off at the shoulder-joint, carried on that midnight march his shattered arm destroyed in the fight. Ask him whether soldiers could march on those nights. Ask the one-legged doorkeeper, Williams, now in attendance in your galleries, who crawled over that road, coming safely through, whether soldiers could march on those nights. Take what lines of defense you can, but do not justify your recreant generals by impeaching the willingness and devotion of the soldiers of the line; and do not say the Fifth Army Corps could not accomplish in 1862 what it did in 1864. The difference was not in the men, but in the leaders of the men. I fancy that such excuse as I take from the record, as follows, would not have been accepted by General Grant for failure to march on the part of the brigade commanded by my honorable friend from Wisconsin [Mr. Bragg] on the night of May Stonewall Jackson. Go read the Confederate reports for tributes to onorable friend from Wisconsin [Mr. BRAGG] on the night of May

It will not be necessary for me to explain to a soldier that every ditch, every bad place on the road, every bridge, every ford, operates as a serious impediment to a march at night. Soldiers stretch out into single file and pick their way carefully at the slightest obstruction. If there was a little stream to wade, and a log lay across it above or below the ford, they will take to the log in single file until the officers, finding the column broken, ride to the rear for the cause and force them across the stream even at the risk of muddying their boots. The same result follows the miring of a battery.

Yet this is the gentleman's excuse for Porter

It is not the consequences of disobedience that we are considering. I care not whether they were damaging or not. It is the fact of disobedience that is in question. Does any one suppose that if the soldiers had had the order to march at 1 a. m. they would have refused or hesitated? They did not have the order, and General Porter alone is responsible for the disobedience involved in that fact. I do not suppose that a general with the true spirit and inspiration of a soldier and the true devotion of a patriot would have withheld the true of the true devotion of a patriot would have withheld the true devotion. of a soldier and the true devotion of a patriot would have withheld that order. Ah! but you argue he consulted his generals, took testimony, sought it, I think, as to the terrible darkness and formidable wagons in the road. I cannot forget that ugly sentence in Porter's dispatch about "our companions," but I will do justice to these generals. They were heroes on other fields. So were Pope's soldiers heroes on other fields, and on this field too where they became, in a measure, victims of their own heroism. General Porter in this midnight council of war that did not march, did not utter or make known to his generals of brigade anything but the single fact that he was directed to march at I o'clock:

He named the hour and invited their counsel, but said nothing of the urgency, and he encouraged them to the counsel he wished by adding to his mention of the hour the sneering or indifferent remark, "There is something for you to sleep on." He handed the order to one of his generals with whom he was nost intimate, with this remark, and the result was that the one who received it, if he looked at it at all, glanced at it so slightly that he remained unacquainted with its terms.

General Sykes testified:

General Porter informed me that he had received an order directing his corps to

march at I o'clock.

Question by the Judge-Advocate. Do you remember whether you were made acquainted with the urgent language of the order, stating that by all means General Porter must be at Bristoe Station by daylight the next morning?

Answer. No, sir, I did not; for I am satisfied that if the emergency had been made known to us we would have moved at the hour prescribed.

General Butterfield said:

Question by the accused. Will you state what was said by General Porter in relation to that order, and what the order was?

Answer. The order, I believe, was for General Porter to move his forces at 1 o'clock to Bristoe.

Question by Judge-Advocate. Did you see the order, the 27th, from General Pope, or know anything about the urgency of its terms?

Answer. I did not read it.

General Morell says, in answer to the question as to "what oc-

General Porter said to us that he had received this order to march at 1 o'clock that night; we immediately spoke of the condition of our troops, they being much fatigued, and the darkness of the night, and said that we did not believe that we could make any better progress attempting to start at that hour than had we waited until daylight. After some little conversation General Porter said, "Well, we will start at 3 o'clock—get ready." I immediately left his tent, &c.

It is quite evident that General Morell was not stimulated to march. They got ready at 3 o'clock, but they did not go. This kind of alac-rity to obey battle orders reminds one of the tempestuous bully who

stripped himself to the skin for fight and then said, "Just wait until I spit on my hands." Ah! gentlemen, your action creates a bad impression as to what might have been your animus.

Great merriment is made of the psychological powers of the witness, Colonel Thomas C. H. Smith, who met General Porter on the afternoon of August the 28th, after this failure to march. Colonel Smith chatted with him for only ten minutes. It is not denied at all that General Porter said to Smith that the ammunition was on the road to Alexandria, "where we were all going," and used other like

complimentary allusions to the strategy of the army commander to a member of that commander's personal staff. I incline to believe that while Colonel Smith was emphatic in expression, he was all too near the truth in his "impressions." I can safely say that Colonel Smith told General Pope what he believed to be the exact truth, for I have personally known the gentleman for many years. I will quote from his testimony:

from his testimony:

"General, I saw General Porter on my way here," said he. "Well, sir," I said, "General, he will fail you." "Fail me," said he; "what do you mean! What did he say!" Said I, "It is not so much what he said, though he said enough; he is going to fail you." These expressions I repeat. I think I remember them with exactness, for I was excited at the time from the impression that had been made upon me. Said General Pope, "How can he fail me! He will fight where I put him; he must flight where I put him; "or, "He must fight where I put him; he must flight where I put him "—one of these expressions. This General Pope said with a great deal of feeling and impetuously, and perhaps overbearingly, and in an excited manner. I replied in the same way, saying that I was certain that Fitz-John Porter was a traitor; that I would shoot him that night, so far as any crime before God was concerned, if the law would allow me to do it.

I speak of this to show the conviction that I received from General Porter's manner and expressions in that interview. I have only to add that my prepossessions of him were favorable, as it was at headquarters, up to that time. I never had entertained any impressions against him until that conversation. I knew nothing with regard to his orders to move up to Kettle Run; I knew nothing of any failure on his part to comply with any orders.

Let me give some facts concerning this witness at that time. He was a lawyer by profession, a Democrat, a graduate of Yale College, I believe, an earnest, sincere, devoted friend to the Government, and he was a gentleman of fine ability. He had convictions, and the courage of a man who had. Psychologist or prophet, call him what you choose, he had the courage to say exactly what he believed. "Ay, there's the rub." It cuts too near the line. Always toward Alexandria General Porter turns his longing eyes. There his star, McClellan, was to rise; and if Pope, meanwhile, gained no victory to intrench him in the gratitude of his country, the commander of the Army of the Potomac, under the sixty-second Article of War, upon arrival at Alexandria, where he was slowly moving, might become commander of the united armies. It did not suit such cherished plans for General Pope to win a battle. A battle is an emphatic time. Give me emphatic men for such a crisis. All honor to Colonel Smith, who braved the incredulity of his harsh commander by denouncing a laggard whom he had found, as he believed, when the lines were gathering for battle. Let me give some facts concerning this witness at that time lines were gathering for battle

Writing in haste and earnestness it might well be expected that a soldier on the field of battle would lay himself open to criticism in his documentary order. It strikes me that the order is very clear and explicit; that General Pope wanted General Porter's whole corps at Bristoe by daylight in the morning. It is argued that because he could not get his whole corps to Bristoe Porter was justified in not trying to get any of it there. This is fine logic for peace, but it wins no battles in war. If the artilery stuck in the mud the infantry were not therefore necessarily and absolutely obstructed and detained, according to my experience in night marching. There was room enough in that country to get around all such obstructions, and there was wood enough in that country to build fires, as we did on the night of May enough in that country to build fires, as we did on the night of May 13, 1864, at Spottsylvania. The true soldier exercises discretion on the side of action, not delay, when he is called toward the field of battle. General Washington laid down the rules of obedience to orders, as understood in the British army, from whence came the American Articles of War and customs of the service. Said he:

It is not for every officer to know the principles upon which every order is issued and to judge how they may, or may not, be dispensed with or suspended, but their duty is to carry them into execution with the utmost punctuality and exactness. They are to consider that military movements are like the working of a clock, and they will go quickly, regularly, and easily, if every officer does his duty; but without it, be as easily disordered, because neglect from any cause, like the stopping of a wheel, disorders the whole.

Mr. Samuel, in his historical account of the British army and of the law military, says:

Whether the orders of the superior enjoin an active or a passive conduct the officer or soldier subject to them is equally obliged to obey; otherwise, every military operation or enterprise would be made to depend not on the prudence or counsel of the commander but upon the caprice of the soldiery, either for the furtherance or destruction of its object.

The prompt, ready, unhesitating obedience in soldiers to those who are set over them is so necessary to the military state and to the success of every njilitary achievement that it would be pernicious to have it understood that military disobedience, in any instance, may go unquestioned.

Let us see exactly how General Porter obeyed his orders. I now quote from evidence given for his defense:

We had reveille about I o'clock, \* \* \* ordered to move at 3, and moved between 3 and 4 across the run, less than a mile from camp, and halted there and remained until after daybreak. \* \* I only knew there was some artillery and teams we had to pass by going through the field as we passed over that road. \* \* \* We encountered a difficulty in getting out of camp in the darkness, and getting many ofour earriages stuck in the run near the edge of camp. Some of them were not got out until after daylight, especially one battery wagon.

General Sykes speaking of the march from Warrenton Junction, says (court-martial record, pages 170, 171):

Reveille in my own division was beaten at 2 or 2.30 o'clock a. m., and the advance was sounded as soon as I could distinguish the road, \* \* \* Before I directed the advance to be sounded I sent an aid-de-cump to find the road, so as to lead the column upon it. He returned in a short time and told me the darkness was so great that he could not distinguish the road. He also told me he was assisted in that search by several soldiers. \* \* \* As I anticipated, we

ran upon this train of wagons within two miles of my camp; they encumbered the road for miles.

Now let us have evidence as to the road and its condition. Captain De Kay, of General Pope's staff, testified (court-martial record,

page 47):

The road runs through the woods part of the way, through an undulating country of small hills and valleys, so that I could not tell whether troops were closed up or not. \* \* \* General Porter then asked me how the road was. I told him the road was good, though I had difficulty in getting down on horse-back owing to the number of wagons on the road; but I told him I had passed the last wagon a little beyond Catlett from this direction, and as they were moving slowly he would probably get up with them by daylight.

General Heintzelman, commanding a division in Pope's army, who was over the road on August 27, testifies:

It was a narrow road, in tolerably good condition. A part of it ran through some woods. \* \* Troops could only march in one line. There were a few little ditches that were bad crossings, and I think the road crossed the railroad once or twice. These crossings were bad. I do not recollect distinctly about the road. It was not a very good road, however. There was a large train of wagons behind us—a considerable obstruction. The wagons were in front of the as-

Colonel T. C. H. Smith testifies:

Colonel T. C. H. Smith testifies:

For the first mile and a half until you go to Cedar Run the road was bordered on either side by open fields or open woods over which troops could march easily in great part without going on the road. Indeed, I doubt if there is any regular road a good part of the way up. The troops marched through the fields to Bristoe Station; a road has been worn by the troops, I suppose. At Cedar Run, on the west, just above the railroad, there is a bridge and a ford with it, and men coming from this side of Cedar Run soon struck a small piece of woods, which is, perhaps, less than a quarter of a mile. I give these things as I remember; I may be mistaken on this point. \* \* \* At Kettle Run there was another bad place. There was, however, a very practicable ford there; a narrow ravine, the road running down with high banks to it on either side. I should say that there was half or three-quarters of a mile of the road in which if there was a wagon train the march of troops would be badly impeded. The railroad track was good, all that I may of it; men could march upon it.

I find also that the Sixth Wisconsin Volunteers marched all night over this route June 14, 1863, on the way to Gettysburgh. We had no trouble, but we wanted to get there. I quote from the journal of that march:

We marched at daylight Saturday and camped for night near Bealton Station. Marched Sunday morning and all day Sunday and all night and until the middle of the afternoon to-day, when we reached this point (Centreville), tired, sore, sleepy, hungry, dusty, and as dirty as pigs. Our army is in a great hurry for something.

There is great similarity in the conditions attending this night march, There is great similarity in the conditions attending this night march, but great dissimilarity between the march itself and that essayed by General Porter. But then Porter had those terrible mules—stubborn and dangerous—in the way. He knew they were there, for had he not sent out for information as to the presence of this enemy in force. Mules and McDowell barred every road to action and to victory for poor Porter. A soldier with a "brilliant career" behind him and a battlefield before would rush forward to "glory or the grave," but mules were in the way. How it touches our hearts and appeals to our weeping symmathy. Why did not the commander of the Army get his mules out of the way. How it touches our hearts and appeals to our weeping sympathy. Why did not the commander of the Army get his mules out of the way of this impetuous hero? Porter's idea of "strategy and tactics" was that the Army commander should get the mules out of the "Wishes only one parallel that I know of in history, and that is way. This has only one parallel that I know of in history, and that is when General McClellan sent word to General Pope that he would reenforce him with a wagon train if he (Pope) would send cavalry from the battle front to escort it. It seems that some generals of that day had wagons on the brain; they thought of them twice while they thought of their country once. Now, if one of Pope's "demoralized regiments" had been there I could swear that they would have cleared the road if they had had orders to attack, or it would have been bad for the mules. They were no more appalled at mules than they were at rebels. There was plenty of time for one regiment to have cleared that road after Genwas pienty of time for one regiment to have cleared that roat after ceneral Porter got his orders and before it was time to march under them. Three hours would have been enough for one regiment of "good" troops to have cleaned the mules out. Ah, but says an experienced soldier, what would you have done with the train? I would have driven it into the fields, of course. Anywhere out of the road to let the column pass forward toward the battle ground. That narrow road was not all the territory in Virginia. There is abundant evidence of troops and ambulances marching in the fields, which shows that trains could have been everywhere driven off the road, at least until the column passed. No; history will say that General Porter surrendered to mules without an

The second branch of excuse, that the road was bad and obstructed, in the light of such facts as I have given, only brings us to the conclusion that it was General Porter's business to act vigorously and clear it of obstructions and get along as fast as possible with his column.

The third branch of excuse, that the troops were tired, I dismiss as an insult to the troops themselves.

The fourth branch of excuse, that it was a foolish order from a foolish

general, has been sufficiently considered.
While the consequences of General Porter's failure to march exactly at 1 o'clock on the night of August 27 may not have been serious in affecting the final results of the campaign, they are very serious in affecting a proper judgment upon his animus in the campaign. The gravamen of the crime charged was unwillingness to act and captious and obstructive tardiness to obey. That other generals under Pope in

that campaign may have failed is quite probable. It was a general fail-ure all around, so far as results are concerned. No other general failed purposely, and none other gave ground for even such suspicion. To assail other generals does not defend Porter. No one suspected that assail other generals does not defend Porter. No one suspected that General Porter meant to be a traitor to his country. It has only been thought that if he had been such he could have hardly acted more in accord with such a feeling. Now, if loyalty to McClellan and disloyalty to Pope, which in a moment of haste General Porter acknowledged, influenced him to act against the interest of his country and his comrades, fine lines will not be drawn as to original motives.

Let us now proceed to the action of August 29. Porter's corps had a good rest all day and all night on the 28th of August, at Bristoe Station. I allude to this to show their fresh condition. General Pope, it seems, had curtly ordered him to stay there until he was called for. Early on the morning of August 29 he was called and moved toward Centreville until arrested by this order. General Gibbon said:

General Pope on the morning of the 29th gave me a written order which I delivered to General Porter.

This is the order:

HEADQUARTERS, ARMY OF VIRGINIA, Centreville, August 29, 1862.

Push forward with your corps and King's division, which you will take with you, upon Gainesville. 1 am following the enemy down the Warrenton turnpike. Be expeditious or we lose much.

Now, let us see about King's division. For here this division of Pope's "demoralized" troops come into their first direct contact with Porter's corps. I quote from a personal record made very shortly after the events:

About midnight of the 28th, after the battle was fairly over and the wounded (all that could be found) cared for, the troops of King's division marched for Manassas Junction. We moved very rapidly, reaching the junction about daylight. The fatigue, together with the excitement and horror produced by the first bloody battle in which the troops ever took part, almost prostrated them. The men looked haggard and worn out. Fresh beef was issued and cooked for breakfast, and everybody laid down for a little rest. About 9 o'clock a. m. the corps of General Fitz-John Porter came hurrying along by us toward the Bull Run battlefield, where now the canaon were roaring loudly. The troops looked splendidly that morning,

Other little circumstances connected with this passing of Fitz-John Porter's corps on that fateful day are remembered. Chaff like this came occasionally from their ranks to us soldiers of Pope's army: "Where's your man with his headquarters where his hindquarters ought to be?" The reference is to Pope's fulminations about headquarters in the saddle.

This is not evidence illustrative Devices the property of the pro

This is not evidence illustrating Porter's action; it is only an incident of the feeling toward General Pope and his army that prevailed in the Army of the Potomac. How they imbibed it the country may judge. It broke out into loud and open jeers at General Pope himself after his defeat, for I saw and heard the exhibition. It is an incident of the issue between the two armies, or rather between certain generals of the issue between the two armies, or rather between certain generals of the two armies, which was avowedly eliminated from the rehearing of the case. There is not the least in this to indicate that the soldiers of Fitz-John Porter were not ready to fight, for in their pride as superior soldiers they said, "We'll show you how to fight." Every man in that column expected to fight, and every man of them heard the cannon roaring and saw, as we did, the smoke of battle rising.

The first important question bearing upon General Porter's action during the whole of that day is that of whether a battle was raging. The evidences that there was were plain and palpable to every general and every soldier in the line. It is not my recollection that the army stood in quaking apprehension of the approach of Longstreet. There was nothing in the general knowledge of the situation that justified General Porter exercising any discretion against vigorous, aggressive action, which was the well-known purpose of General Pope, the commander of the army. The joint order says:

You will please move forward with your joint command toward Gainesville, sent General Porter written orders to that effect an hour and a half ago.

What General Pope had sent an hour and a half ago it will be remembered was this:

Push forward with your corps and King's division, which you will take with you, upon Gainesville. Be expeditious, or we lose much.

With the announcement that he was following the enemy. The joint order proceeds:

I desire that as soon as communication is established between this force and your own the whole command shall halt.

But not halt until communication is established is the clear inference. The order continues:

ence. The order continues:

It may be necessary to fall back behind Bull Run at Centreville to-night. I presume it will be so, on account of our supplies. I have sent no orders of any description to Ricketts, and none to interfere in any way with the movements of McDowell's troops, except what I sent by his aid-de-camp last night, which were to hold his position on the Warrenton pike until the troops from here should fall on the enemy's flank and rear. I do not even know Ricketts's position, as I have not been able to find out where General McDowell was until a late hour this morning. General McDowell will take immediate steps to communicate with General Ricketts and instruct him to rejoin the other divisions of his corps as soon as possible.

If any considerable advantages are to be gained by departing from this order it will not be strictly carried out. One thing must be had in view, that the

troops must occupy a position from which they can reach Bull Run to-night or by morning. The indications are that the whole force of the enemy is moving in this direction at a pace that will bring them here by to-morrow night or next day. My own headquarters will be, for the present, with Heintzelman's Corps, or at this place.

Major-General,

Stripped of all but the naked language, and the attendant circumstances of a progressive battle, it is perfectly clear that General Pope expected of General Porter a general advance of his lines in force until communication was established. But General Porter never deployed his corps in line of battle. I quote in full from the record an excellent account of his approach upon the enemy with 10,000 men at least under his control, whether King's division was with him or not:

I ask you to join the Fifth Corps on its march from Manassas Junction. General Morell leads the column, followed by Sykes, Sturges, and King's division; an effective force of fifteen thousand men ready and willing to fight under a corps commander, whose name was a prestige of victory. We meet a mounted man just from Gainesville; he tells us the enemy's skirmishers were there to the number of about four hundred, and their main body was not far behind them. If we are to reach Gainesville it is apparent the sooner we get to work and clear the road the more likely we will be to reach the point of our destination, for we know that every moment increases the force in our front. Without hesitation Griffin's brigade halts, throws four companies of the Sixty-second Pennsylvania to the front with instructions to move on in advance about half a mile, throwing out finakers to the side and skirmishers to the front. We then move on until we reach a cleared place, about five miles from Manassas Junction. Our skirmishers have found the enemy's pickets and firing commences; the other cight companies of the Sixty-second Pennsylvania are ordered out to the front to support their comrades—there are twelve companies in this regiment. Our skirmishers capture and send in to us three mounted prisoners. We are now on the crest above Dawkins Branch, and it is at least 11 o'clock, and General Porter immediately formed line of battle on the crest. General Porter examines the prisoners and learns they are Longstreet's men. Griffin puts a battery in position, and General Porter receives the joint order.

There has been nobody hurt as yet under the first order. But now along comes McDowell and takes General King's division away, and the joint order is in operation.

There have been maps and maps made of this battlefield, but the position occupied by General Porter's corps, now in the face of alleged, enormous, and accruing forces of the enemy, very much resembles in appearance on the Government map a 10-penny nail with the head toward the enemy and the troops strung along the road, stretching away to the rear, with their arms stacked, and the corps commander with his headquarters at Bethlehem Church, the rear of the column. A few skirmishers are scattered along the front, who fired a few shots during the day, and a few shots were fired by Porter's artillery, which is the battle service, and the extraordinary record of strategic service, which I quote from General Porter's own statement, was made during the day:

General McDowell decided to separate from me and turn his troops up the Sudley Springs road toward Grovetown. Soon after I o'clock I sent Colonel Locke, my assistant adjutant-general, to King's division with instructions for it not to go away, intending to use it in extending my march to the Warrenton pike. I received the following rerbal reply.

[The italics are mine.]

From General McDowell to Porter, on Manassas road, delivered by Colonel Locke, between 1 and 2 o'clock:

Give my compliments to General Porter, and say to him that I am going to the right, and will take King with me. I think he had better remain where he is; but if it is necessary to fall back, to do so upon my left.

The following was given early in the afternoon, and was followed by the dispatches and indorsements in the order now arranged, at various hours up to 6.35 p. m., 29th August:

[No. 30.]

GENERAL: Colonel Marshall reports that two batteries have come down in the woods on our right toward the railroad, and two regiments of infantry on the read. If this be so, it will be not here in the morning. GEO. W. MORELL, Major-General.

Now, see what General Porter sends back to his commander at the battle-front:

Move the infantry and everything behind the crest and conceal the guns. We must hold that place and make it too hot for them. Come the same game over them they do over us and get your men out of sight.

F. J. PORTER.

Now comes word from the commander at the battle-front:

[No. 31.]

GENERAL POETER: I can more everything out of sight except Hazlitt's battery. Griffin is supporting it and is on its right, principally in the pine bushes. The other batteries and brigades are retired out of sight. Is this what you mean by everything? GEO, W. MORELL, Major-General,

Now from the commander of the Army corps to the commander at the battle front:

GENERAL MORELL: I think you can move Hazlitt's or the most of it, and post in in the bushes with the others so as to deceive. I would get everything if possile in ambuscade. All goes well with the other troops.

[No. 29.]

Generals McDowell and King: I found it impossible to communicate by crossing the woods to Groveton. The enemy are in force on this road, and as they appear to have driven our forces back, the fire of the enemy having advanced and ours retired, I have determined to withdraw to Manassas. I have attempted to communicate with McDowell and Sigel, but my messages have run into the enemy. They have gathered artillery and eavairy and infantry, and the advancing masses of dust show the enemy coming in force. I am now going

to the head of the column to see what is passing and how affairs are going, and I will communicate with you. Had you not better send your train back? F. J. PORTER, Major-General.

Here is another dispatch of the same purport :

Here is another dispatch of the same purpore:

General McDowell: The firing on my right has so far retired that, as I can not advance, and have failed to get over to you, except by the route taken by King, I shall withdraw to Manassas. If you have anything to communicate, please do so. I have sent many messengers to you and General Sigel, and get nothing.

F. J. PORTER, Major-General.

An artillery duel is going on now; been skirmishing for a long time.
F. J. P.

Now he sends to the commander at the battle front who has not yet been hurt by the enemy by the little trifling and contemptible skirmishing and artillery firing that has been going on:

GENERAL MORELL: Push over to the aid of Sigel and strike in his rear. If you reach a road up which King is moving, and he has got ahead of you, let him pass, but see if you can not give help to Sigel. If you find him retiring, move back toward Manassas, and should necessity require it, and you do not hear from me, push to Centreville. If you find the direct road filled, take the one via Union Mills, which is to the right as you return.

F. J. PORTER, Major-General,

If all this does not indicate a clear and settled purpose to fall back and If all this does not indicate a clear and settled purpose to fall back and go to the rear without further communication with or information from the commander of the army, what does it indicate? The part of the joint order that looks toward retreat he energetically seeks to enforce. The part that looks to forcing a communication with Pope who is "following the enemy" he enforces with the energy of a sucking

is "following the enemy" he enforces with the energy of a sucking dove. Now, General Porter says:

But soon, finding he was mistaken as to the main army retiring, and before anything was done by Morell in execution of it, I sent him the following:

"General Morelle: Hold on, if you can, to your present place. What is passing?

"F. J. PORTER." "General Mobell: Tell me what is passing, quickly. If the enemy is coming, hold to him, and I will come up. Post your men to oppose him.
"F. J. PORTER, Major-General."

GENERAL MOBELL: The enemy must be in a much larger force than I can see; from the commands of the officers, I should judge abrigade. They are endeavoring to come in on our left, and have been advancing. Have also heard the noise on left as the movement of artillery. Their advance is quite close. E. G. MARSHALL, Colonel Thirteenth New York,

This was the officer in command of the skirmish line, and the only officer who on that day came in contact with the enemy at all. Now, General Morell in swift haste sends back to General Porter upon this

GENERAL PORTER: Colonel Marshall reports a movement in front of his left. I think we had better retire. No infantry in sight, and I am continuing the movement. Stay where you are to aid me if necessary.

General Morell: I have all within reach of you. I wish you to give the end a good shelling without wasting ammunition, and push at the same time a pover to see what is going on. We cannot retire while McDowell holds his or F. J.

Five o'clock and forty-five minutes in the afternoon has now come. and this is the record of the strategy of the commander of the magniticent Fifth Army Corps from the time he came in contact with the enemy at about 11 o'clock in the forenoon:

GENERAL SYKES: I received an order from Mr. Cutting to advance and support Morell. I faced about and did so. I soon met Griffin's brigade withdrawing by order of General Morell, who was not pushed out, but returning. I faced about and marched back two hundred yards or so. I met then an orderly from General Porter to General Morell, saying he must push on and press the enemy; that all was going well for us, and he was returning. Griffin then faced about, and I am following him to support General Morell asordered. None of the batteries are closed un to me.

G. K. WARREN.

GENERAL MORELL: Put your men in position to remain during the night, and have out your pickets. Put them so that they will be in position to resist anything. I am about a mile from you. McDowell says all goes well and we are getting the best of the field.

How this sounds like "Betsey and I killed the bear."

I wish you would send me a dozen men from the cavalry. Troops are passing up to Gainesville pushing the enemy.

Thank God, there was somebody willing to push the enemy on that

Ricketts has gone, also King.

F. J. PORTER, Major-Geaeral.

GENERAL McDowell or King: I have been wandering over the woods and failed to get a communication to you. Tell how matters go with you. The enemy is in strong force in front of me, and I wish to know your designs for to-night. If left to me I shall have to retire for food and water, which I can not get here. How goes the battle? It seems to go to our rear.

How anxious our friend seems to have things advance toward the rear. The enemy are getting to our left.

F. J. PORTER, Major-General, GENERAL McDowell: Failed in getting Morell over to you. After wandering about the woods for a time I withdrew him, and, while doing so, artillery opened upon us. My scouts could not get through. Each one found the enemy between us, and I believe some have been captured. Infantry are also in front. I am trying to get a battery, but have not succeeded as yet. From the masses of dust on our left, and from reports of scouts, think the enemy are moving largely in that way. Please communicate the way this messenger came. I have no cavalry or messengers now. Please let me know your designs, whether you retire or not. I can not get water and am out of provisions. Have lost a few men from infantry firing.

F. J. PORTER, Major-General.

Meanwhile the commander of the Army of Virginia had been anxiously watching and waiting for the sound of artillery from the splendid corps—the flower of the Army of the Potomac—under command of its best corps commander, whom he believed to be on the flank of the enemy, as he himself had secured as yet no reliable information to the contrary, for Porter had used time enough toget to where Pope supposed him to be, and no sound of battle resistance reached the commander's ears. General Pope can scarcely be criticised for sending at 4.30 p. m. this order on the ground that Porter was checked. There was no battle notice given of such a fact nor any other notice.

Major-General Porter: Your line of march brings you in on the enemy's flank. I desire you to push forward into action at once on the enemy's flank, and, if possible, on his rear, keeping your right in communication with General Reynolds.

The enemy is massed in the woods in front of us, but can be shelled out as soon as you engage their flank.

Keep heavy reserves and use your batteries, keeping well closed to your right at the time. In case you are obliged to fall back, do so to your right and rear, so as to keep you in close communication with the right wing.

JOHN POPE,

Major-General, Commanding.

As a matter of course this officer did not attack. If anybody finds the least reason to suspect that he would after reading over the bare record of his communications with his generals of brigade and his action

record of his communications with his generals of brigade and his action of that day, he must draw different conclusions from those I have been obliged to reach. It was too late for him to fight.

Soldiers of Shiloh, of Cold Harbor, of Kenesaw, and of Mission Ridge, read this record of the service of a corps sent against an enemy with the battle roaring in their sight; remember your own service in like conditions and restrain your condemnation for this commander if your condemnation for this can. This is the hero who, as we see, first gallantly helted and hero-ically engaged in a bloodless reconnaissance of a cloud of dust; who next laid hour after hour under the shade of the trees two miles from the front, sending word to his troops to hide in the bushes, and who finally pocketed the express order from the commander of his army to finally pocketed the express order from the commander of his army to attack the enemy, an order received before sunset on a summer evening. This is the hero who is crowned with glory for the service of that day by the Schofield Board because he "saved the army."

Well might Pope's army retort to the fling in the Burnside dispatches. "We did take care of ourselves," and we had to for all the good you rendered us. That army acknowledges its own good muskets as its saviors, not Fitz-John Porter's pine-bush strategy.

The night before, precisely as the sun was dipping below the hills, General John Gibbon commenced his attack upon the two divisions of

The night before, precisely as the sun was dipping below the hills, General John Gibbon commenced his attack upon the two divisions of Jackson's corps. I need not repeat the history of that gallant struggle. Far into the night the battle raged. It illustrates what a few determined men could do after half past 6 p. m. when properly led by a determined and devoted soldier. I cast aside all such excuses as that the ground in front of Porter was impracticable, when over the same ground the rebel army moved with unbroken line to our attack and discomfiture on August 30. I remember also that on the night of September 14, 1862, starting into action just as the sun was dipping behind the South Mountain, a line of battle was pushed right up the steep and stony slope, fighting for every inch of ground, reaching at midnight and carrying the crest. I remember that this action was under the personal observation of General McClellan, the commander of the the personal observation of General McClellan, the commander of the Army of the Potomac, and that he pronounced the troops engaged in it "equal to the best troops of any army in the world." It was the same equal to the best troops of any army in the world." It was the same brigade that fought with Gibbon on the night of August 28, 1862, the Iron Brigade of Wisconsin. I well remember that the resolute spirit who pushed the line up the slope of South Mountain, who held longest his line in front of the fierce assaults of Jackson the night of Gibbon's battle, was none other than the honorable gentleman from Wisconsin [Mr. Bragg], who stands upon this floor and before the country as the apologist for and defender of Fitz-John Porter. I can not agree with

Achilles' wrath to Greece, the direful spring of woes unnumbered, heavenly goddess sing; That wrath which lurled to Pluto's gloomy reign The souls of mighty chiefs untimely slain, Whose bones unburied on the bending shore Devouring dogs and hungry vultures tore.

In the old story of Troy there is too much of the history of this illthe outstory of troy there is too much of the history of this ill-starred campaign of General Pope. The fact that we found our poor dead upon the field of Gibbon's woods, some of them rooted from their shallow trenches and torn by hogs, completes the sad similarity. Is it surprising that the soldiers of the Iron Brigade of King's division felt deeply on this question?

I have spoken not for General Pope. History must attend to his case; it is not here for trial. I have no concern as to the plots or machinations of General Irvin McDowell. I know nothing of his personal schemes, plans, or purposes in that campaign. I have spoken only as a soldier in the line of an army that obeyed cheerfully, toiled

faithfully, and asked only to be led to battle to place their lives freely in faithfully, and asked only to be led to caute to place their lives freely in peril for their cause and for their country. I respect General Porter for his valor on other fields, but for his failure on this field I condemn him. I hold, indeed, the general condition of jealousy, intrigue, and disaffection more responsible than Porter personally. That he is the one victim in no sense abates the justice of the decree against him. I one victim in no sense abates the justice of the decree against him. I remember that Benedict Arnold could not be restrained from leading the line in face of flaming death over the intrenchments of Saratoga and winning the finest victory of the Revolution. But in a moment of chagrin and disappointment he cast away every jewel of honor, faith and patriotism, and history brands him with eternal condemnation. I draw no comparisons, and would make no harsh judgments; but the cold calculation of General Porter, to put it mildly, so contrasts with the earnest, unselfish enthusiasm of the friends and comrades of my young manhood who died in battle at Bull Run, the second, that I dedicate this protest against Senate bill 1844, for the relief of Fitz-John Porter, to their memory. Porter, to their memory.

The Tariff.

SPEECH

# HON. WILLIAM H. CALKINS.

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1883.

The House, in Committee of the Whole on the state of the Union, having under consideration the bill (H. R. 7313) to impose duties upon foreign imports, and for other purposes—

Mr. CALKINS said :

Mr. CHAIRNAN! If this question is to be determined under the light of precedents which have occurred in this House, we have a line for a hundred years of unbroken authority one way; and while the Senate has often disagreed with the House in reference to the construction of the constitutional clause in question on certain bills, it will be found on examination that they have often agreed that to this House belongs the precentive of originating all reverse hills.

the prerogative of originating all revenue bills.

There is respectable authority aside from the precedents of this House for the position assumed by the gentleman from Kentucky [Mr. KNOTT] and others in reference to the power of the Senate over the matternow under discussion. The whole question in this discussion and the propunder discussion. The whole question in this discussion and the proposition before the House, and the construction of this clause of the Constitution is, Where does the power of the Senate end in making amendments to revenue bills proposed by the House? That is a line at once narrow and hard to define, but it has always been held that it was the prerogative of this House to say when the Senate had gone beyond their continuitional limit. This House has the evelusive right to decide that constitutional limit. This House has the exclusive right to decide that question.

Now take an extreme case. Suppose this House originated a bill to reduce the postage on third-class mail matter and sent it to the Senate, does anybody say under the clause of the Constitution it gives it the right to propose and concur in amendments as on other bills not re-lating to the subject-matter of the bill thus sent? If so the Senate can not only revise the whole postal system, but add to it the internal-revenue system, and the tariff system, and all other systems of taxation. That is an extreme case, but if the doctrine that the Senate can propose amendments and concur as on other bills without limit and are unre strained except by their own will be true, then they can go the whole

This clause in the Constitution by the framers of that instrument was a matter of anxious solicitude, and it is called in contemporaneous history the first great compromise of the constitutional convention. First, the amendment allowing the Senate to propose and concur in amendments was offered for the purpose of compensating the larger States for equal representation with the smaller States in the Senate. This was stricken out after debate. A month of debate followed, and, as was well expressed, it came well-nigh stopping the whole process of the formation of the Constitution. And after a month's anxious debate it

formation of the Constitution. And after a month's anxious debate it was again restored, as a compensatory measure, by giving to the Senate the sole right to ratify treaties; the sole right to try impeachments; and to the House was given the exclusive right to originate all measures for raising revenue. That right has been asserted in many forms and guises by the House ever since, and, as I said, there has been one continuous, unbroken line of precedents from the foundation of the Government to this time in this direction. We ought not to yield this question or shrink from the responsibility committed to us by the Constitution. [Here the hammer fell.]

[Here the hammer fell.]

length, as I have suggested.

#### The Tariff.

## SPEECH

OF

## HON. WILLIAM PITT KELLOGG.

OF LOUISIANA,

IN THE SENATE OF THE UNITED STATES.

Tuesday, January 30, 1883.

The Senate having under consideration the bill (H. R. 5538) to reduce internal-revenue taxation—

Mr. KELLOGG said:

Mr. PRESIDENT: I understand that the Senator from Rhode Island, by his amendment, aims to reduce the rate of duty, as proposed by the nate bill, one-hundredth of 1 per cent. on a degree.

Mr. ALDRICH. On a degree.

Mr. KELLOGG. It does not refer to any other grade of sugar than

that below No. 13 Dutch standard.
Mr. ALDRICH. Not at present. As I stated and reiterated several times, I intend to follow that up with an amendment reducing pro rata

the other grades.

Mr. KELLOGG. I should like to hear what measure of reduction the Senator proposes, because his present amendment strikes directly and exclusively at the interest of the producer, the planter, and does not affect the refiner or any other interest.

Mr. ALDRICH. The amount would be about 2.45, to preserve the same proportions between 13 and 16, and 2.95 between 16 and 20, and 3.25 above 20.

Mr. KELLOGG. Mr. President, I wish the Senate to bear in mind that the proposition to reduce the present duty of  $2\frac{1}{2}$  cents on sugar strikes directly at the planting interest not only of Louisiana but of other States, including all the growing and increasing sorghum interest in all the States of the Union.

Sir, I think the Senate will be surprised at the extent to which the sorghum-producing interest has grown. In nearly every State of the Union it is beginning to be an important industry. The Senator from Illinois [Mr. LOGAN] suggests that I show the extent of this industry now. I do not know any better way than by referring to an extract from a lecture delivered by our Commissioner of Agriculture recently in Saint Louis, and I ask the Secretary to read it:

The Secretary read as follows:

in Saint Louis, and I ask the Secretary to read it:

The Secretary read as follows:

During the season of 1882 twenty-four counties in Arkansas have produced 729,500 galloas of sirup and no sugar, as returned; twelve counties in Alabama have produced 120,125 gallons of molasses and no sugar; five counties in Dakota have produced 120,468 gallons of molasses and no sugar; five counties in Indiana have produced 680,623 gallons of molasses and no sugar; thirty-two counties in Indiana have produced 684,100 gallons of molasses and no sugar; thirty-two counties in Illinois have produced 680,633 gallons of molasses and 18,200 pounds of sugar; thirty-two counties in Kentucky flavor of molasses and 18,200 pounds of sugar; thirty-two counties in Kentucky have produced 81,800 gallons of molasses and no sugar; the counties in Kentucky have produced 81,800 gallons of molasses and no sugar; the counties in Louisiana have produced 81,800 gallons of molasses and no sugar; the counties in Louisiana have produced 81,800 gallons of molasses and no sugar; thirty-seven counties in Missouri have produced 1,408,350 gallons of molasses and 100 pounds of sugar; sixteen counties in Michigan have produced 46,503 gallons of molasses and no sugar; thirty-in seven counties in Michigan have produced 46,503 gallons of molasses and no sugar; thirty-in Maryland has produced 1,200 gallons of molasses and 319,000 pounds of sugar; one county in Maryland has produced 12,000 gallons of molasses and 319,000 pounds of sugar; increte counties in New Jersey have produced 42,000 gallons of molasses and 519,000 pounds of sugar; increte counties in New Jersey have produced 42,000 gallons of molasses and 519,000 pounds of sugar; increte counties in New Jersey have produced 371,300 gallons of molasses and 519,000 pounds of sugar; increte counties in New Jersey have produced 371,300 gallons of molasses and 519,000 pounds of sugar; thirty-one counties in New Jersey have produced 42,200 gallons of molasses and 51,200 gallons of molasses and 51,200 gallons of mol

Mr. KELLOGG. Dr. Loring, our Commissioner of Agriculture, further says:

The prospect of the business in Kansas, Minnesota, Wisconsin, and Illinois is accuraging.

He further says:

The fact that sugar can be made from sorghum has been proved. That it can be profitably made Professors Weber and Scoville have demonstrated, and have so declared to this association with their figures before them. That there is a market for the product no man doubts. Who can say, as yet, that this crop will take its place among the special crops of our extreme Northern and Eastern States or will occupy the place now filled by the sugar-cane of the South?

A recent report made by a committee of the National Academy of Sciences says:

It is from the States of New Jersey and Illinois that we are able to cite examples of success on so large a scale and attended with such an unequivocal result as fairly puts to rest any doubts as to the production of sugar on a great cale in a northern climate with a commercial profit,

Mr. President, within the last four or five years in the State of New Jersey there has been a refinery erected called, I believe, the Rio Grande, which is doing a very important refinery business, devoted exclusively to making sugar from sorghum. In the State of Illinois, at Champaign, I am told, there is also a large refinery called the Champaign Sugar Sor-

mr. McPHERSON. If the Senator will allow me, I will say that we have commenced in New Jersey a large sorghum-sugar industry. The State pays a bounty of \$1 per ton upon sorghum-cane and 1 cent per pound upon sugar manufactured from the cane. We have devoted for that purpose in the past two or three years 7,000 acres of land upon which sorghum is now being successfully raised, and it is fast becoming one of the great industries of the State, but largely under the bounty

offered and given by the State itself.

Mr. KELLOGG. I am informed that the question is being agitated in several of the States of paying bounties to encourage this industry. Just before the war Louisiana raised nearly one-half of all the sugar consumed in this country. That State raises nearly \$25,000,000 alone Just before the war Louisiana raised hearly she had on all one consumed in this country. That State raises nearly \$25,000,000 alone this year. Encourage this industry as France encourages her sugar industry and in ten years there will be large growers of sorghum in nearly all the different States of the Union. And this with the sugar that can be raised in Louisiana, Florida, and Texas will supply the entire

country with a home product.

The war so nearly ruined this industry that only about 5,000 tons were produced the last year of the war in Louisiana. Of course the plantations were deserted, sugar-houses destroyed, levees dilapidated, and the whole labor system changed by the abolition of slavery. This was the opportunity of Cuba and other slave-growing countries to find a ready market here for their products, and for a time this country afforded a market for all the sugar produced in Cuba and its dependencies. The necessity of protecting the production of sugar was so apparent that Congress wisely imposed a duty of 3 cents per pound upon the lower grades of sugar. The protection thus afforded this important industry was so manifest that in 1866 the crop increased to 20,000 tons, and in 1870 75,000 tons were raised in Louisiana alone. The work of rehabilitation then commenced, and the planters began to extensively cultivate the land and purchase mules and machinery and build sugar-houses and improve their plantations.

improve their plantations.

The duties on the lower grades were cut down in 1870, as the Senator from Ohio [Mr. SHERMAN], who was, I believe, their chairman of the Committee on Finance, will recollect. This reduction of a cent very much crippled the planters, and besides they were embarrassed by the new problem of free labor growing out of the results of the war. The crop of 75,000 tons, produced in 1875, fell to 45,000 tons in three years. This result very seriously crippled not only the planter, but many sugar commission houses in New Orleans, and it largely depreciated the value of all the sugar plantations of the State. It was impossible for the planter to produce sugar with free labor and pay good wages to the laborer and successfully compete with sugar grown abroad by slave and cooly labor. But Congress again in 1875 advanced the duty on sugar But Congress again in 1875 advanced the duty on sugar This 25 per cent, protection immediately raised the droopcooly labor. 25 per cent. ing fortunes of the sugar-planter occasioned by the reduction of 1 per cent. by the law of 1870. To such an extent was the beneficent influence of this protecting law of 1875 felt that the crop amounted to 110,000 tons

in 1880 and 124,000 tons in 1882.

Mr. President, it is the sugar below No. 13 that I wish the Senate to understand as the grade the Louisiana planter is especially interested in. Upon nearly all sugars above No. 13 the duties have always been practically prohibitory. Under the law of 1875 the duty was made

what it now is, 2½ cents per pound on sugars below No. 13.

Louisiana sugars are now bringing about 2½ cents a pound more than sugars grown in Cuba and elsewhere abroad of corresponding strength. As I have said, the chief protection the Louisiana planter has is upon the lower grades. The Senator from Rhode Island [Mr. Aldrich], it will be remembered, admitted a short time since that his amendment now pending strikes directly at these lower grades of sugars; that is to say, below No. 13.

The wise protection afforded by Congress has enabled the Louisiana planter to increase his planting interest largely, until to-day that interest employs over ninety millions of capital, and supports directly or indirectly over 400,000 people. The amount of sugar machinery is represented by more than \$10,000,000 in Louisiana alone, and there is a resented by more than \$10,000,000 in Louisiana atone, and there is a constantly-growing demand for machinery and supplies under the influence of this protection thus afforded the sugar-planters, the effect of which is felt all through the country. Their machinery was purchased from the North, principally Pittsburgh, Cincinnati, and elsewhere.

Besides all this our planters use enormous quantities of Pennsylvania coal, cotton fabrics of all kinds manufactured in the North, and of food

coal, cotton fabrics of all kinds manufactured in the North, and of food supplies grown in the Northwest.

The crop of this year is estimated at \$25,000,000. Here is the producing interest of this amount which reciprocates for the protection afforded it by sending the value of its products to the North, chiefly in payment of sugar machinery, cotton goods, agricultural implements, mules, corn, and other articles of subsistence. Massachusetts, Pennsylvania, New York, New Jersey, Kentucky, Ohio, and all the Northwestern States have thus a community interest and this interest is conwestern States have thus a community interest and this interest is con-

XIV-246

The value of foreign sugars consumed in this country is between ninety and one hundred millions. The Senator from Rhode Island [Mr. Aldrich] has stated that it is about eighty-five millions, but I think it will reach nearly one hundred millions. There is no reason why in the near future this treasure should not be retained by a proper system of protection to the Louisiana and other producers of sugar, developing a commerce between the States of nearly \$150,000,000. Why should not the same protection be afforded to the Louisiana planter, to these agricultural interests, and for the protection of free labor as against slave labor that is given to the manufacturers of New England and to other great interests? This bill proposes, as I could show if I had the time, in the different schedules, with the exception of the metal schedule, a protection equivalent to or more than would be given to the Louisiana planter if the recommendations of the Tariff Commission were adopted. Indeed, so far as the schedule of pottery and glass-ware is concerned, the ad valorem rates are above that which is given to the sugar producer under the present tariff of 21 cents per pound.

Sir, there is another aspect of this case that commends itself to the consideration of the Senate. Of the twenty-five millions of the estimated crop of the present year it is calculated 70 per cent., or nearly seventeen millions, has been expended for labor, and has been the principal support of nearly 400,000 people that are directly or indirectly maintained by this industry. These supplies come mainly from the Northern States, and, of course, contribute to the support, as they afford labor for hundreds of thousands of people engaged in the manufacture of the articles used by the planters, or supplies of corn, pork, &c., consumed by the planter and his laborers. Thus there are 700,000 or 800,000 people directly or indirectly interested in this industry. Again, by withdrawing the protection afforded by the duty on sugar from the Lousiana planter, and thus aiming a blow directly at the wages of the recomment you put the interest of slave labor in antagonism to the freedman, you put the interest of slave labor in antagonism to free

Take the manufacture of sugar in the British West Indies, commencing at Demerara and ending with Porto Rico. Here are twelve or fifteen islands, the population of which amounts to hundreds of thousands. Take Demerara, for instance, which has a system of cooly labor, authorized by Parliament. These coolies are sent to Demerara at the rate of ized by Parliament. These coolies are sent to Demerara at the rate of two to five thousand every year. They are paid one shilling for a woman and one and one-half for a man. They are let out by the colonial authorities to each planter and sugar estate. It costs them little to live. They wear scarcely any clothing. It does not cost a sugar-maker in South America \$5 a year for clothing. They live on rice and pork chiefly. Take the labor of Brazil, which is slave. Take the labor of Cuba and its dependencies, which is purely slave labor; the amount paid a month by Cuban planters does not exceed 10 cents per day, or for labor and subsistence inclusive only \$84 per year for each laborer. The standard wages for free laborers is only 25 cents per day in the West India Islands.

Mr. BLAIR. How much is paid for labor by the Louisiana planter?

Mr. KELLOGG. The standard wages of Louisiana are from \$5 cents

Mr. KELLOGG. The standard wages of Louisiana are from 85 cents to \$1.25 per day. I will read an estimate given me the other day by Governor Warmoth, who works a large plantation below New Orleans, of the wages paid by him; of course skilled and mechanical laborers are paid a larger amount:

	Per	day.
For plowmen	**********	\$1.00
For hee hands		
For women		85
During the rolling season they pay:		
	Per	r day.
Cane-cutters		\$1 00
Loaders		1 25
Cartmen		1 25
Constant In the control of the contr	Ø1 or	E 0 E0

This does not include rations. The planters provide only horses ardens, and fuel. Some planters pay cane-cutters \$1.25 per day and 75 cents a watch.

the average cost of the production of Louisiana sugar is, I am told, fully 5½ cents. For much of this information that I am now giving the Senate I am indebted to a printed statement made some time since by a committee of planters of Louisiana, composed of John Dymond, Edward J. Gay, H. C. Warmoth, and F. M. Ames, which I had laid upon the desks of every Senator, and which has, I trust, fallen under the observation of Senators. The gentlemen say

A careful analysis of our expenses develops the fact that the cost of produc-tion is composed of 70 per cent. human labor and 30 per cent. supplies—such as feed, oil, coal, tools, implements, and machinery.

They say further:

With the average cost of production at 5j cents, 70 per cent, thereof would show 3.85 cents per pound invested in human labor, and, as we have shown before, our free labor costs us three and one-half times as much as the slave and other labor of Cuba and the tropics, the Cuban would pay but two-sevenths of this 3.85 cents per pound expended in human labor, and five-sevenths of it, or 2d cents per pound, is the excess we pay, as compared with their slave and semi-slave labor.

This committee go on to say in their statement:

The Government is now collecting a shade under 2¢ cents on the foreign su-ars imported, and hence we now get less protection by one-fourth cent per ound than the excess of the east of our free American labor ever the cost of the lave and semi-slave labor of Cuba and the tropics.

There is another consideration I desire to call to the attention of the Senate, and that is the disadvantage the planter labors under in point of expense and labor in producing his sugar as against the expense incurred by the foreign producer with slave labor in the production of curred by the foreign producer with slave labor in the production of his crop. The Louisiana planter is compelled to go through the various seasons in this country, winter, fall, spring, and summer, and they require different clothes for their laborers. It is not so in the tropical climates of Cuba and South America. There no more clothing is required in January to make sugar than in July. There is still another point I desire to make. Is the Senate aware of the fact that all the sugar-producing countries tax our products and domestic goods to the utmost? I doubt if you could find in all the West Indies \$50,000 of domestic American goods. A barrel of flour is taxed \$1; a barrel of pork, \$3.50; a barrel of salmon, \$2; a barrel of mackerel, \$2; clapboards are taxed, per thousand, \$1.50; cordage is taxed, per hundred pounds, \$1; hoop (wood), per thousand, \$1.50; rice, per hundred pounds, 25 cents; donkeys, per head, \$1; mules, per head, \$5; malt liquor, per hogshead, \$5; cordials or bitters, per gallon, \$2; resin, per barrel, 50 cents; oils, per gallon, \$3; slates, per thousand, \$1; staves of every description, per thousand, \$1.50; varnish, per gallon, \$2; muskets and guns, each, \$2; pistols, each, \$1. For every case containing a gross of matches we pay pistols, each, \$1. For every case containing a gross of matches we pay a tax of \$3.75. All other merchandise is taxed ad valorem at the rate

of 5 per cent., or \$5 upon every \$100 of goods at the place of shipment.

The sugar plantations of Demerara and of the West India Islands are largely owned in England. The owners have agents or overseers there. while they themselves live in grandeur in London. They never do business in this country; never have business relations with the United States. unless it be that they and their interests are often on the alert striving for the reduction of the tariff on sugar as well as on other commodities through their American connections.

Sir, are we under any obligation to aid them in striking a blow at the laborer and producer of this country?

Again the home producer has to encounter the opposition of the importers and refiners of this country, some of whom are said to be interested in plantations in Cuba; I am told that one firm of refiners has several hundred thousand dollars' worth of sugar property in Cuba. These refiners want a lower rate of duty on sugars below No. 13; at the same time they ask for higher rates on the manufactured article. They want high they ask for higher rates on the manufactured article. They want high rates of duties on grades above No. 13 and low rates of duty on grades below No. 13. This is what the Louisiana planter does not want. He is interested in low grades. The Louisiana planter gets for all his sugar only the price paid to the Cuban planter for sugars of the same test, with the addition of a duty of  $2\frac{1}{2}$  cents per pound.

These foreign producers have been, as the gentleman from Ohio [Mr. Sugars of the same test, which is the same test of the same test of the same test.

SHERMAN] knows, coloring their sugars down, so that sugar producing 98° comes in at a duty of 2½ cents.

The only time that sugars are cheap in this country is when the Louisiana crop is being marketed. The refiners are trying to make it appear that the duties are for the benefit of the Louisiana planter. They talk about high duties on a prime necessity of life which should be removed. They are sending their circulars to Senators and deluging the Senate and House with petitions, which have been sent out headed in the same manner and printed with the same type, and you will find the first name on every petition from a city like Chicago and other large cities of the country to be the name of some large sugar importer or dealer.

See the effect of the refining interest on the Pacific slope. Sugars are higher there than in New York, notwithstanding sugar comes into the Pacific slope from the Sandwich Islands free of duty. The refiners con-trol the market absolutely there. The Louisiana product does not reach trol the market absolutely there. The Louisiana product does not reach the Pacific slope. It is the production of this country that keeps down the price and the competition which grows out of that which keeps down the price of the refined article in the East. To show how absolutely the refiner has the market under his control, and how the sugar produced abroad and by slave labor comes in competition directly with the home-produced sugar, I call the attention of the Senate to the fact that there was imported during the year ending June 30, 1882, tank-bottoms, melada, &c., 14,135,435 pounds; of sugar Dutch standard in color not above No. 7, 485,476,825; above No. 7 and not above No. 10, 1,305,991,757 pounds; above No. 10 and not above No. 13, 119,982,153; of sugars 300 No. 13 and not above No. 16 Dutch standard, 1.891,213 pounds; of sugars No. 13 and not above No. 16 Dutch standard, 1,891,213 pounds; of sugarabove No. 16 and not above No. 20 Dutch standard, 4,075 pounds; of sugars above No. 20 Dutch standard, refined, loaf, crushed, and granulated, 50,432 pounds. From this it will be seen that nearly two billions of the lower grades of sugars are imported, while of the higher grades? little over 54,000 pounds only are imported. The latter comes in direct competition with the sugars produced by the refiner, while the two bill-

ions imported comes in competition with the producer.

It is estimated, I believe, that the entire tariff bill will reduce the revenues from thirty-five to forty millions of dollars, and it is proposed to make this home-producing industry bear the burden of nearly eleven millions of this reduction; I am told by some Senators and by some mem-

bers of the House that the entire reduction proposed by the bill will not exceed twenty millions.

Mr. MORRILL. I think that is the estimate of the bill of the House, and not of the bill as reported by the Committee on Finance.

Mr. KELLOGG. What does the Senator from Vermont estimate to

Mr. MORRILL. More than twice the amount the Senator has named. The Senator stated it at \$45,000,000 in his speech at the outset and when he reported the Senate bill, but at the same time he admitted, if I recollect aright, that the reduction on sugar would be \$15,000,000.

Mr. MORRILL. I am free to say that I made an error in the calculation on sugar, and did not discover it until after I had made my re-

If it is \$11,000,000 it is a quarter of the amount Mr. KELLOGG.

Mr. RELLOGG. It it is \$11,000,000 it is a quarter of the amount stated as the total reductions contemplated by the Senate bill.

Mr. President, other manufacturing interests have been protected to the extent of at least 50 per cent. ad valorem duty, or it is proposed by the Senate bill to give them that amount of protection; and here is an industry that from its peculiar nature and its surroundings labors under disadvantages that the manufacturing interests of the country do not have to contend with, difficulties which will readily suggest themselves. The manufacturing interests have great advantages in the matter of a better and more economical system of labor, they are supplied with better facilities for transportation, and yet it is proposed to reduce the protection afforded this agricultural interest below that afforded to these other manufacturing interests. Is this right? Is it right to compel other manufacturing interests. Is this right? Is it right to compete this industry to bear one-fourth or even one-fifth of the reduction contemplated by this bill? I have not examined the matter carefully, but I believe that at no time except under the Robert J. Walker schedule of tariff has the tariff been lower than that proposed by the Tariff Commission—21 cents per pound for the lower grades of sugar.

The Senate bill proposes a still lower reduction, and the Senator from

Rhode Island [Mr. ALDRICH] now proposes to reduce it in conformity, as I understand, with the bill reported by the Ways and Means Committee of the House, namely: one-hundredth of 1 per cent. upon every degree.

Mr. ALDRICH. The amount is correct.

Mr. KELLOGG. The Senator from Vermont [Mr. MORRILL] has offered an amendment which changes the Senate bill in regard to the

higher grades, and it is altogether in the interest of refiners, I have shown, that the tariff on the higher grades, those which compete with the sugar manufactured by the refiners, is practically prohibitory, and that the refiner is interested while the duty is kept prohibitory on the higher grades in seeing the duty on lower grades of sugar reduced.

Mr. FRYE. If the Senator will allow me right there. I never yet

have seen a refiner in an investigation covering now nearly three years, and I have seen about all of them in the country, who did not say promptly that the duty on sugar in his judgment ought to come down

ne-half at least.

Mr. KELLOGG. Precisely. The refiner is laboring with Congress to reduce the rates upon sugars, knowing well that if the duty on the lower grades of sugar is largely reduced it will strike down the producing interest of the country; but if only a proportionate reduction is had on refined sugar, as proposed by the Senator from Vermont [Mr. Morrill], the duty upon sugar above No. 16 will still be practically pro-

Now, is this right? Is it right to discriminate in favor of the refiner? Now, is this right? Is it right to discriminate in layor of the refiner? We down the price of the high grades of sugar and do not sacrifice the producer by unwisely reducing largely the duties on the lower grades in which he is interested. Tell the refiner to keep his hands off. Tell him that Congress is more interested in looking after the laborer in conformity with the grand principles of the Republican party; that it will give the benefit of the doubt and the advantage of the rate of protection to the producer, who earns his living by the sweat of his brow

Mr. DAWES. That is right.

Mr. KELLOGG. Yes; but my friend from Rhode Island [Mr. Aldeld Said that he thought the manufacturing interests of the refiners ought to be protected. Why? Because they work so many men? Because so many interests are involved? There are 400,000 people in Louisiana alone who subsist chiefly or exclusively upon this product.

Mr. SLATER. If the Senator will allow me to interrupt him right

there, I ask him if he has estimated or knows the cost of refining sugar, the comparison of flavor, the wages paid, or the amount of the

Mr. KELLOGG. I have not the data before me in regard to the question asked by the Senator from Oregon, but I am quite certain that the refiners are very anxious to retain the tariff which is practically prohibitory, and under this operation their business is very remunerative

Mr. FRYE. I deny that emphatically. The refiners of this country are entirely content with one-eighth of 1 cent profit.

Mr. KELLOGG. Well, do you suppose that they would be contented with an amendment which proposes to make the rate 2\{\} cents, or about what the Tariff Commission proposed upon all grades of sugar?

Mr. ALDRICH. Will the Senator from Louisiana allow me to ask

him a question?

Mr. KELLOGG. Certainly; but I will ask the Senator from Rhode
Island, as he rises to put a question to me, to answer the question, will they be content with that rate of duty?

Mr. ALDRICH. If the Senator will allow me, I will put to him a

Mr. KELLOGG. Certainly. Mr. ALDRICH. Will the Senator state how many people are actually gaged upon plantations in his State in the business of raising sugar? Mr. KELLOGG. I believe there are 30,000 men laborers in Louisi-There are probably 60,000 men, women, and children en-

ana alone. There are probably 60,000 men, women, and children engaged in this industry, and there are, as I have stated, nearly 400,000 persons directly or indirectly supported by it.

Mr. ALDRICH. The number of acres of land used in the cultivation of sugar-cane in Louisiana is 181,000. If there are 60,000 people em-

ployed, that is one person to every three acres.

Mr. KELLOGG. That is a disputed fact.
Mr. ALDRICH. I do not think the farmers of the North are in the habit of employing as many men as that upon farms

Mr. JOYAS The Senator is mistaken about the number of acres of

Mr. ALDRICH. I am taking the figure in the census report.
Mr. JONAS. I have not seen that census report, but it must be incurate. There are between 1,100 and 1,200 sugar-planters in Louisiana, and every man who knows anything about sugar-planting knows that a plantation of four hundred or five hundred acres is a small plantation; so that it is absolutely impossible that the number of acres stated by the Senator is correct. The plantations would average according to the Senator's figure about eighteen acres apiece. There is no such plantation in the State of Louisiana. Every colored laborer has a bigger

Mr. KELLOGG. However the case may be these acres grew 125,000 tons of sugar in 1882 and have turned out a crop valued at about \$25,000,000 this year. The statement made by the Senator from Rhode Island [Mr. Aldrich] I think is a mistake. Besides he is to take into account the industry not only in Louisiana but throughout the whole country, including the sorghum industry. This sugar interest involves

and is connected with every material interest.

Mr. ALDRICH. If the Senator will allow me, I would like to sa the census reports show the number of acres in Louisiana to be 181,592

used in raising sugar-cane.

Mr. BLAIR. I should like to ask the Senator [Mr. Kellogg] a question, because he is informed upon this matter. The question to the consumer of the country is how he is to get the sugar any cheaper. As I understand, the consumer buys of the refiner. The sugar goes from the producer, whether it comes from abroad or from the planta-tions of Louisiana, to the refiner. As the tariff now is it goes to the American refiner and the consumer buys of him at his price. No foreign refined sugar comes in. There is no competition at the present between the foreign refiner and the domestic refiner. The refiner in all cases is the man next to the consumer. What I want to understand is how, except by a reduction of the tariff, any competition is to be created between the foreign refiner and the American refiner, so that there

will be a chance for the American consumer to buy his sugar cheaper.

Mr. KELLOGG. How is the American consumer to buy it cheaper while he consumes chiefly what the refiner furnishes the market, and the refiner has the benefit of a rate of duty which, as I have shown, is

the renner has the benefit of a rate of duty which, as I have shown, is practically prohibitory?

Mr. BLAIR. He has got to buy it from the refiner after it is subjected to the process of refining. He now buys of the American refiner, and until there is such legislation as will secure competition either between American refiners or between American and foreign refiners the American purchaser or consumer can never get his sugar any cheaper.

Mr. JONAS. If the Senator from New Hampshire will permit me,

will answer the question.

Mr. BLAIR. Certainly; all I want is an answer.
Mr. JONAS. That competition can be effected by reducing the tariff
upon refined grades of sugar so as to permit free importation. It will never be effected by retaining the duty on the manufactured product of the refiner and permitting only raw sugars to come in.

Then I understand the Senator is in favor of a reduction of the tariff upon the high grades of sugar-that is, refined sugars-

so that they may come in free.

Mr. JONAS. I am not here, I will say to the Senator, to fight or make war upon any particular industry, but I say to the Senator, and I say to the country, that the reason why sugar is dear and why we have dear sugar, and probably always will have it, is because the duties are prohibitory or practically so upon the importation of refund success. prohibitory or practically so upon the importation of refined sugar, and

cause the American refiner controls the sugar market.

Mr. BLAIR. I should like to ask the Senator if he believes that a reduction of tariff upon the low-grade sugars, enabling the American refiner to purchase cheaper abroad than he can of the American producer, would result in the cheapening of the article of sugar to the

American consumer

Mr. JONAS. I do not believe it will.
Mr. BLAIR. Will not the effect be as it was when we removed the duty on tea and coffee?

Mr. JONAS. Exactly.

Mr. KELLOGG. Do you not know that when we removed the duty on coffee the Brazilian Government immediately imposed an export duty? What have we to hope for from the West India Islands and its duty? What have we to hope for from the West India Islands and its thirty-one dependencies? They tax every barrel of flour now, as I have already shown, \$1; every barrel of pork \$3.50, and other articles in the same proportion; and still you propose to put a premium upon their products and say that they may import their products grown by slave labor at a low rate of duty against our free-labor products. But the result will not be the reduction of the price of sugar. It can not be. As I have said, the duty imposed upon all the high-grade sugars is absolutely prohibitory, and it is really proposed to keep it so. That will not be denied, I think.

Now, Mr. President, I have said about all I desire to say at this stage of the discussion. It is evident that this subject is to be discussed pretty.

of the discussion. It is evident that this subject is to be discussed pretty fully, and my object at the present time has been chiefly to call the attention of the Senate to some distinctive points connected with this great agricultural industry. I wish to say to the Senate that the duty on sugar below No. 13, in which the Louisiana planters are chiefly interested, is, I believe, barely sufficient to properly protect that industry; ested, is, I believe, barely sufficient to properly protect that industry; that when the tariff was low the sugar industry languished and was nearly destroyed; as the fluty was increased this great industry improved, and with it a corresponding benefit accrued to all parts of the country. This increasing production if fostered will produce in the near fluture a great interstate commerce that all parts of the country are directly interested in promoting. The present duty of 2½ cents, as I have said, is not a large protection, but the Senate bill proposes to reduce the protection to 2 cents per pound for sugars below No. 13.

There is an amendment which the Senate will probably be called upon to consider before this schedule is disposed of embracing the rate of 2½ cents fixed by the Tariff Commission. With this rate and with the

cents fixed by the Tariff Commission. With this rate and with the improved machinery and improved facilities for transportation and the better disciplined system of labor which is coming in vogue the Louisiana better disciplined system of labor which is coming in vogue the Louisiana planter may be able to maintain himself; but I fear a reduction below that will be a great hardship if it does not work great disaster to the Louisiana planter. The amendment of the Senator from Rhode Island [Mr. Aldrich], as I stated in the outset and as he admits, strikes directly at sugar below No. 13, and consequently strikes directly at the interests of the producer, while, as I have shown, the amendment of the Senator from Vermont [Mr. Morrill] from the Committee on Finance now proposes to increase the duty on the higher grades in the interest of the refiners. This I submit is unjust. of the refiners. This I submit is unjust.
Sir, what we ask at the hands of the Senate is that kind of protection

only which will enable the Louisiana planter to maintain this great industry which is now just beginning to fairly develop itself under the beneficent influence of the tariff that Congress has wisely given it during the last lifteen or twenty years, which has enabled the planter to increase his production in a few years from 5,000 tons to 125,000 tons, and from four or five million dollars to twenty-five million dollars, and has created a great trade with the North and Northwest—a trade which

is constantly growing.

Do not reduce the present duty, which is barely sufficient to protect this great industry, and thus strike a blow at the immense interests involved in it; do not set a premium upon foreign against domestic productions; do not give slave labor an advantage over free labor.

The Tariff.

REMARKS

# HON. R. P. FLOWER.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the report of the conference committee on the bill (H. R. 5538) to reduce internal revenue taxation.

Mr. FLOWER said:

Mr. Speaker: As is well known I am heartily and earnestly in favor of a reduction of taxation and of the revenues. I will go almost any I will go almost any of a reduction of taxation and of the revenues. I will go almost any length to that end, and I have repeatedly voted for measures which did not meet my views of what ought to be done and could be done simply because they were in the line of reduction. But, sir, although I am for reduction of revenue and of taxes, although I have been told that this bill materially reduces internal taxation, I can not give my consent to the tariff portion of it, of which I know nothing beyond the fact that it increases the hydrogen of the recycle in return is returned. that it increases the burdens of the people in some instances and de-prives labor of its employment in others.

The bill which has been brought to us from the conference committee is neither the Senate nor the House bill, nor a modification of either to suit the provisions of the other. It is something new, something which we have had no hand in making, which we are not allowed to amend, and which we are asked to vote for without a due consideration of its contents. This is too important a measure to be decided without the most careful scrutiny of its provisions. The responsibility for its pass

must rest with those who are acquainted with its details, and who have forced it upon us in obedience to the wishes of a powerful lobby and in direct opposition to the expressed dictates of both Houses of Congress. I shall not vote for it.

The Tariff.

SPEECH

#### UPSON, HON. COLUMBUS OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other pur

Mr. CHAIRMAN: Feeling constrained by a sense of public duty to oppose this bill, I avail myself of this opportunity to place upon record some of the reasons which, in my judgment, justify such action on my part. I desire also to refer to past legislation and to the settled opinions of a number of the most distinguished American statesmen in the past and present history of this country to show the position of the Democratic party, and to express some of my own views and determined convictions upon the tariff question.

I regret that the work of the Tariff Commission has not resulted in the maturing of a bill which, if not to the full extent warranted and converted by each arbitish.

demanded by sound public policy, would substantially remove all, or

the greater part, of the unnecessary and unequal burdens of taxation from the people, and to which I could give my hearty support.

My opposition to this bill is not of a factious or pretended character. Impressed with the great necessity of a thorough revision of the tariff and a substantial reduction of the duties on imports, and sincerely hoping that such a result might be brought about through a commission, when no other method seemed practicable, I voted for the creation of the commission. While in many respects I do not approve of the bill recommended by the Tariff Commission, I am pleased to say that its work is justly entitled to much credit for the valuable information furnished thereby to Congress and the country, and that from the facts contained in the report of the commission and within the possession of the Ways and Means Committee a fair tariff bill could and should have been presented. This bill, in my judgment, has been framed upon erroneous principles.

The leading and controlling purpose of the bill seems to be protection to private industries and not revenue for the support of the Government. The true rule which should govern the framing of a tariff bill, as I understand it, has been reversed. Protection has been made the object and revenue the incident.

DEMOCRATIC DOCTRINE.

The well-settled theory of the Democratic party on this subject, which I believe to be correct in principle, looks to the raising of the revenue necessary for the support of the Government, economically administered: for the payment of the public debt; for the common defense and general welfare of the United States; to the equal distribution of the burdens of taxation; and to the just promotion of the interest of each and every American citizen. As was stated by President James K. Polk in his inaugural address March 4, 1845, substantially as follows: It is the duty of the Government to extend, as far as it may be practi-

cable to do so, by its revenue laws, and all other means within its power, fair and just protection to all the great interests of the whole Union. embracing agriculture, manufactures, the mechanic arts, commerce, and navigation. A tariff should be for revenue, in adjusting which there should be such "moderate discriminating duties as will produce the amount of revenue needed, and at the same time afford reasonable incidental protection to our home industries;" a tariff should not be for protection merely, and not for revenue. "The raising of revenue should be the object and protection the incident;" "within the revenue limit there is a discretion to discriminate; beyond that limit the rightful exercise of the power is not conceded." "In making discriminations all home intractives to hould see far as precitively be concluded." home interests should, as far as practicable, be equallyprotected."

Regarding the doctrine announced by Mr. Polk as embodying the

true constitutional principles and a sound policy on the tariff, I have taken it as a guide in voting upon the various provisions and amendments offered thereto of this bill which have already been acted on. ments offered thereto of this bill which have already been acted on, and deeming the rates of duty proposed by the bill as too high, I have in almost every instance voted for a reduction. I am reductantly forced to the candid conclusion that the bill as reported by the Committee of Ways and Means, and as it now stands after being amended, materially violates the principles and policy which I have indicated as my guide, and that I can not, therefore, give it my support. Between the Democratic doctrine as indicated of "a tariff for revenue with incidental protection" and the Republican doctrine of "a tariff for protection" or a "protective tariff" there is a plain, broad, and unmistakable issue upon which the Democratic party should present a bold, solid, and unbroken front and wage an aggressive and an unrelenting warfare until the tariff is established upon correct principles and the people are thereby relieved from the unequal and unjust burdens of taxa-tion, which under the Republican system of "high protection" are now inflicted upon them.

It has been asserted that there was practically no difference between the doctrine of "a tariff for revenue with incidental protection" and the doctrine of "a protective tariff." This statement, admitting the same to have been candidly made, has arisen from not clearly understanding or in confusing the two theories.

#### HIGH PROTECTION.

I understand the doctrine of the "protectionists," in effect, if not so broadly and openly declared, is in substance this: To lay such rates of duties on such foreign imports as will protect American industries, principally manufactures, against foreign competition, or, in other words, as will give American manufacturers the exclusive control and privilege of the American market, to the extent at least of the entire amount of their products. This character of protection the protectionist would give by a rate of duty sufficiently high to prevent or to destroy foreign competition, regardless of the amount of revenue to be raised, or if no revenue at all was needed for the support of the Government. The high protective system is designed and intended to give to Americans a monopoly of the American or home trade. It builds up home monopolies in part—I will not say wholly—at the expense of the many. It is a system of indirect taxation which forces contributions from the people for the benefit of a few without corresponding benefits being returned to the many. It is protection of private interests by indirect taxation to the many. It is protection of private interests by indirect taxation for the purpose and for the sake of protection, and not taxation for revenue necessary to support the Government, which should be borne equally by all of the people in proportion to the property owned by each individual, corporation, or association.

I will not deny that high tariff duties create and stimulate home competition, as well as raise the price of labor to some extent, and that

thereby the prices of manufactured products are reduced below what they otherwise would be without such stimulation in connection with foreign competition; but by the destruction of foreign competition the cost of the manufactured articles consumed by our people would not be reduced to the extent they otherwise would be under the system which enables the American manufacturer to obtain fair living profits in his business, and at the same time gives to the American consumer the benefits of a healthy competition between the home and the for-

eign manufacturer.
The "protectionists" in order to carry out their theory of protecting American industries to the extent of giving them virtually the control of the home market for the full amount of their products, and at the same time raise revenue sufficient to meet the wants of the Government, would adjust the rates of duty as not to be entirely prohibitory of the introduction of the foreign article, but at such rates as would give the American manufacturer a profit far above the profit of the foreign manufacturer. Leaving, however, to the foreigner, who will take the lowest if he can not get the highest profit, sufficient inducement to import such an amount as by the duties on the same would raise the

required revenue.

In illustration of the propositions stated I submit some tabulated

statements upon an assumed state of facts:	lated
A revenue tariff equalizing the cost of the foreign and domestic article Cost of article to foreign manufacturer	\$5 00
Value in foreign market	. 3 00
Cost of foreign article in American market	
Cost of domestic article to American manufacturer	
Prohibitory duty giving 30 per cent, profit to the American manufacturer:	
Value of article in foreign market, as above	6 00
Cost of article delivered in American market	
Cost to manufacturer of domestic article	
Value in American market	13 00
High protective tariff, not prohibitory, but giving 30 per cent. at vantage to American manufacturers over foreign importers: Value of article in foreign market, as above. 100 per cent, import duty Cost of importation—freight, &c	6 00
Cost delivered in American market	13 00
Price in American market	
Cost to manufacturer of domestic article	10 00
30 per cent, advantage over importer	3 00

High protection, giving 74 per cent. profit to the American manufact-
urer and 30 per cent, to the importer:

urer and 30 per cent, to the importer:		
Value of article in foreign market.  125 per cent. import duty	\$6 7 1	00 50 00
Cost delivered in American market	14	50 90
Price in American market	17	40
Cost of domestic article	7	40
45 per cent, advantage over foreign importer		.50
A tariff below the revenue point, which gives an advantage to the foreign importer:		

Value of article in foreign market Twenty-five per cent. import duty. Cost of importation—freight, &c.	1	00 50 00	3
Cost delivered in American market		50	

st of foreign article delivered in the American marketless than he cost of the American article......

It will be seen that as the rates of duty are increased above the reve-To will be seen that as the rates of duty are increased above the revenue point the tariff becomes proportionately more protective and prohibitory, and to the extent of the increase would give undue advantage to and enrich American manufacturers at the expense of the people at large. On the other hand, in proportion to the reduction of that rate below the point which places home manufactures on an equality with foreign imports the tariff would be injurious to and destructive of American industries, and to that extent would be detrimental to the general interest of the country.

#### REVENUE SHOULD NOT BE LEVIED REGARDLESS OF EFFECT

The doctrine contended for by some that a tariff should be levied for revenue, independent or regardless of its effect upon home industries, is equally erroneous and unsound with that of levying a tariff for pro-

It is an admitted and an undisputed fact that duties levied on imports coming in competition with articles either produced or manufact ured in this country give more or less incidental protection to the latter. That being conceded, and as it must be likewise admitted that tariff duties may be so laid as to afford little or no protection or wholly in-adequate protection to equalize the cost of the home-product with the foreign product, there is no more warrant, right, or justification for laying a tariff for revenue in such manner or at such rates as will directly or indirectly injure, seriously cripple, or destroy important private do-mestic industries which have been built up under our tariff system than there is to lay a tariff directly for the protection and benefit of private industries at the expense of the consumers.

#### RIGHT OF DISCRIMINATING DUTIES.

The right of discrimination was clearly asserted by General Jackson in his second message to Congress, December 7, 1830, by the following

The right to adjust these duties with the view to the encouragement of the domestic branches of industry is so completely identical with that power that it is difficult to suppose the existence of the one without the other.

This doctrine of discrimination is very forcibly maintained by Senator Pugh, of Alabama, in his speech in the Senate January 26, 1883, which I heartily approve. He said:

which I heartily approve. He said:

The important question is, shall Congress levy the lowest duty that will produce the same amount of revenue as the higher rate without reference to the degree of protection the duty affords? In deciding this question we enter the field where Democrats meet each other on what I consider mere definitions of distinctions, which amount to nothing in principle or substance. \* \* The right and duty of Congress to discriminate between the articles imported in selecting those to be taxed are founded on public considerations of justice, humanity, and patriotism. No Senator, whatever may be his opinions as to the objects of tariff laws, whether they should be for the single purpose of raising revenue or for the double purpose of raising revenue, and also affording incidental protection to American industries, will close his eyes to the effect the duty will have upon the different classes who consume the articles we propose to fax.

We all agree that it is right just and humane that as Senators representing

when the constituents casses who consume the articles we propose to fax.

We all agree that it is right, just, and bumane that as Senators representing our constituents we should afford all the "protection" we can to the weaker and poorer classes by discriminating in their favor by selecting from the imports those articles of necessity everybody must consume more or less, and putting all of them we can on the free-list, and making the duty as practicable on those that must bear some tax for revenue "only." We further discriminate to ascertain what articles imported are raw material and what articles are manufactured, and to what extent they are produced or manufactured abrond and in this country. Why do we make this examination? Is it for the sole purpose of seeing how much revenue "only" the lowest rate of duty will produce from the article imported, whether it be a necessity or a luxury or raw material or manufactured, or whether produced or manufactured more or less in Europe or America?

America?

After discriminating to acquire this information do we shut our eyes to the effect the duty we impose will have upon the wants of our country in times of war, or the industries or pursuits of our people in times of peace? If revenue "only" was our sole aim, without regard to any other effect the duty would produce, our work would be short and simple in passing tariff laws. Ten articles imported that enter into general and necessary use would carry by compulsion a duty sufficient to raise all the revenue needed for the support of the Government. Then it is untrue and misleading to assert that there is any political party in this country, or any considerable number of people who have any favor for tariff laws passed to have no other effect than to raise revenue enough to support the Government. The power to tax is a revenue power only.

But in exercising this power we, as law-makers, must open our eyes and sur-

vey with care and judgment the circumstances, conditions, wants, necessities, pursuits, and interests of the people to be affected by our tariff legislation.

It must be admitted as beyond successful contradiction that no law imposing duties on foreign imports has ever been enacted in this counsolely and exclusively for revenue without the exercise of any dis crimination in adjusting the rates of duty for the purpose of affording protection and encouragement to American industries.

The incidental protection which inevitably follows a tariff for revenue Ine incidental protection which inevitably follows a tariff for revenue levied on any article of import coming in competition with any other article manufactured or produced in this country has never been, and in reason never will be, disregarded or left to haphazard in the framing of a tariff bill for revenue. It has always been considered, estimated, and regulated with reference to the real or alleged protection or encouragement needed by the particular industry to be affected by it. Often, we doubt and prehave in most instances as in the proceed bill in rich. agement needed by the partial interest in the proposed bill, in vio-lation of the true principle, "within a revenue standard." It is a noted fact that in all of the tariff discussions in Congress, including the pres It is a noted ent, the condition and needs of our industries to be affected by the tariff have been considered. No one has openly advocated the reduction or levying of duties in such manner or at such low rates as would seriously injure or destroy any important American industry, at least admittingly knowing such would be the result. On the contrary, all of the advocates of a tariff for revenue, and those favoring or inclined toward the doctrine of free trade, have acknowledged the great importance of American manufactures and industries, and expressed the strongest desire to do them no harm by tariff legislation, but to aid their prosperity by all legitimate means within the limits of a tariff for revenue. In no instance has the effect of the tariff, aside from the raising of revenue, been admittedly ignored or lost sight of.

Both theories of "high protection" and "free trade" are at war with

the best interest of the whole country, and the adoption of either, if carried out to the fullest extent, would be destructive of the general welfare and prosperity of the whole people. One would build up vast monopolists of home manufactures, unrestrained in their greed of gain and unconscionable exactions to oppress and impoverish the people; the other would give a monopoly of our markets to foreigners, to cat out our substance and absorb the untold wealth springing from the endless prod-ucts of our hard labor and rich fields, and create at our seaboards a moneyed aristocracy of a few princely import merchants to manipulate a

nation's commerce, and fatten upon a nation's riches.

The advocates of a tariff for revenue, adjusted with a wise and moderate discrimination, strictly within the limits of that standard, insist that that is the only protection warranted; that it will afford all of the protection needed or required to give American labor constant employment, with fair remunerative and saving wages far exceeding those of any other country; that it will foster and maintain, fairly prosperous and profitable, every important or desirable American industry, as against the competition of the world, and will likewise distribute the burdens of taxation more equally and fairly, and make them more easily borne, more certain of collection, and less annoying and harassing to the people than any other system.

#### FREE TRADE.

Those favoring free trade should remember that upon the adoption of free trade direct taxation must be resorted to, which, under the Federal Constitution, would require the taxes to be apportioned among the several States according to their respective populations. This would be a most unjust system of taxation, as each State would be forced to pay its apportioned share of the taxes to support the General Government according to the number and not according to the value of the taxable property, of its people. Hence, under free trade, the people of one State might be required to pay a 10 per cent. tax on all of their taxable property, while the people of another State having double the wealth according to population would only pay a 5 per cent. tax.

Furthermore, the millions of our people having no taxable property,

Furthermore, the millions of our people having no taxable property, such as spendthrifts, gamblers, sports, allowanced extravagants, and the "spend as you go" class, who squander their entire means in fine clothes, high living, gewgaws, costly trappings, debauchery, and articles of luxury or fancy, who thereby under our present system pay indirectly many millions of dollars for the support of the Government, under free trade would not pay one cent toward that object. In which case additional burdens of taxation would be thrown upon the thrifty and sav-

ing property-holders.

# ADJUSTMENT THE PROBLEM-LABOR THE KEY.

As stated by Senator CALL, of Florida:

I regard the present question as one of adjustment and not of the adoption of a system.

Labor, in my judgment, is the key to the solution of that question. Labor, the greatest source of all wealth, constitutes about 90 per cent. of the cost of the great body of all products; hence the equalization of the difference in the cost of American and foreign labor is the principal and controlling factor to be considered in adjusting the tariff as to the articles to be taxed and the rates of duty to be levied within a revenue standard. As was very forcibly stated by the distinguished gentleman from Pennsylvania, Mr. RANDALL, when he said-

I recognize the fact that there can be no free trade between nations where the rages of labor vary. And in so far as this tariff is concerned, I desire to say that

I wish to make it so that it will cover the gap between the foreign labor and the labor of the United States. \* \* \* Having taken care of our own labor which comes into competition with foreign labor, we can then remit the manufacturer to the advantages of distance, freight, and the inconveniences of transportation

That the cost of labor in this country exceeds that of foreign countries from 50 to 100 per cent., after taking into account the differences in the cost of living, the advantages of machinery I believe can not be successfully denied. Hence American manufacturers depending on the higher wage-labor for the operation of their works must either have the cost of their fabrics equalized through the adjustment of the tariff to enable them to fairly compete with foreign imports, or the wages of labor in this country must be brought down to a level with the de-based labor of Europe. A misfortune I earnestly hope may never befall American laborers. Beyond that point of equalization within the limits of a tariff for revenue I would not go and see no necessity of going

#### MY BURFOSE

I purpose to review at some length and with some particularity the history of our tariff legislation and to present what I understand to be the position of the Democratic party on the tariff question, as declared in national and State Democratic conventions and as expressed by some of the most eminent Democratic statesmen and leaders of the past and present, confidently believing that I shall thereby fully sustain the correctness of the views I have heretofore expressed on this subject.

To the oft-garnered field of the past and contemporaneous history of this vexed and much-controverted question I invite the careful study and candid judgment of all fair-minded men in vindication of the con sistency of my course and the Democratic orthodoxy of my principles

In this connection a word more personal to myself may not be out of

place, as I have been charged with being a protectionist.

My position upon the tariff has been positive and outspoken, is spread upon the public records of the country, and admits of no misunderstanding. While I have favored and do now favor the fostering of such domestic industries as will profit the whole country by a wise and just discrimination under and within the limits of a tariff for revenue, I never have been a protectionist or favored the doctrine of protection-

#### TARIFF HISTORY.

Since the adoption of the Federal Constitution in 1789 there have been passed eighty tariff laws, including general, special, and amend-atory laws, under all of which more or less protection has been given to American industries, and the protective features or principle of the same, in some form, have been recognized by all political parties; although as to the rate of duty to be levied and the amount of revenue to be collected there has been at all times a great diversity of opinion.

Nineteen of these laws have been general tariff laws, intended to

Nineteen of these laws have been general tariff laws, intended to cover the entire list of articles to be subjected to import duties, of which nine only are usually referred to as of special interest and importance in the disputations upon the tariff policy of this country. These were passed in the years 1789, 1816, 1824, 1828, 1832, 1842, 1846, 1857, and 1861; four of which were passed under the administrations of Democratic Presidents, three under Whig Presidents, and one under a Republican President; in the latter, however, should be included several general acts passed during and since the war under Republican administrations.

#### ORIGIN OF THE WORD.

The term tariff is said to have been derived from a town by the name of Tarifa, on the Barbary coast, where imports on goods passing were exacted. It is also said that the royal house of Hohenzollern, or "upper toll-takers," takes its name from the tariff system, as the ancient lords of that house kept the upper toll on the Rhine, from which they

TARIFF DISCUSSION.

After the adoption of the present Constitution in 1789, as has been said, "the necessity of providing a national revenue was the first con-

sideration with the new Congress."

The questions of "free trade" and "protection" are no new topics in this country; the discussion upon them opened within seventy hours of the organization of the First Congress, and has been continued down to the present time. With but few exceptions all of our public men have favored a system of raising a revenue by duties on imports necessary for the support of the Government and to discharge the national Although some of the members of the First Congress desired debts. Although some of the members of the lidea as soon as practicable of free commerce with all nations, others at that time openly advocated a permanent system of laying discriminating duties for rev enue so as to give encouragement and protection to American manu-

The power of the Government to give such protection was not, I believe, at that time questioned by any.

In the discussion on the first tariff bill under the Constitution, Mr. Madison, one of the fathers of Democracy, who drafted the bill, said:

I own myself the friend of a very free system of commerce. \* \* \* \* If my general principle is a good one—that commerce ought to be free, and labor and industry left at large to find its proper object—the only thing which remains will be to discover the exceptions that do come within the rule I have laid down. I agree \* \* \* that there are exceptions important to themselves, and which claim the particular attention of the committee. Duties laid on imported articles may have an effect which comes within the idea of national prudence.

may happen that materials for manufactures may grow up without any encouragement for this purpose. It has been the ease in some of the States, but in others regulations have been provided, and have succeeded in producing some establishments which ought not to be allowed to perish from the alteration which has taken place; it would be cruel to neglect them and divert their industry to other channels. \*\* \*\* There may be some manufactures which being once others, for want of the fostering hand of government, will be unable to go on at all. Legislative attention will therefore be necessary to collect the proper objects for this purpose, and this will form another exception to my general principle. \*\* \*\* The import laid on trade for the purpose of obtaining revenue may likewise be considered as an exception. So far, therefore, as revenue can be more conveniently and certainly raised by this than any other method, without injury to the community, \*\* \*\* I think sound policy dictates to use this means. \*\* \*\* So far as we can enumerate the proper objects and apply specific duties to them we conform to the practice prevalent in many of the States, and adopt the most laudable method of collecting revenue, at least preferable to sitions may be productive of revenue and some may protect our domestic manufactures, though the latter subject ought not to be too confusedly blended with the former.

Mr. Madison also said:

The States that are most advanced in population are ripe for manufactures, and ought to have their particular interests attended to in some degree. While these States retained the power of making regulations of trade they had the power to protect and cherish such institutions; by adopting the present constitution they have thrown this power into other hands; they must have done this with an expectation that those interests would not be neglected here.

It would not be unreasonable to construe this language of Mr. Madison as an admission that the power of protective legislation was granted in the Federal Constitution, or at least that it was so understood by its framers. But subsequently, in 1828, in his celebrated letter to Mr. Cabell, he left no doubt as to his views on this subject when he said:

The Constitution vests in Congress expressly "the power to lay and collect taxes, duties, imposts, and excises," and "the power to regulate trade."

taxes, duties, imposts, and excises," and "the power to regulate trade."

It is a simple question under the Constitution of the United States whether "the power to regulate trade with foreign nations" as a distinct and substantive item in the enumerated powers embraces the object of encouraging by duties, restrictions, and prohibitions the manufactures and products of the country? And the affirmative must be inferred from the following considerations:

1. The meaning of the phrase "to regulate trade" must be sought in the general use of it; in other words, in the objects to which the power was generally understood to be applicable when the phrase was inserted in the Constitution.

2. The power has been understood and used by all commercial and manufacturing nations as embracing the object of encouraging manufactures. It is believed that not a single exception can be named.

3. This has been particularly the case with Great Britain, whose commercial regulations is well known to have been the protection and encouragement of her manufactures.

4. Such was understood to be a proper use of the power by the States most prepared for manufacturing industry, while retaining the power over their foreign trade.

But ample evidence may be found elsewhere that regulations of trade for the encouragement of manufactures were considered as within the power to be granted to the new Congress, as well as within the scope of the national policy.

encouragement of manufactures were considered as within the power to be granted to the new Congress, as well as within the scope of the national policy.

If Congress has not the power it is annihilated for the nation; a policy without example in any other nation, and not within the reason of the solitary one in our own. \*\*

If revenue be the sole object of a legitimate impost, and the encouragement of domestic articles be not within the power of regulating trade, it would follow that no monopolizing or unequal regulations of foreign nations could be counteracted; that neither the staple articles of subsistence nor the essential implements for the public safety could under any circumstances be insured or fostered at home by regulations of commerce, the usual and most convenient mode of providing for both. \*\*

That the encouragement of manufactures was an object of the power to regulate trade is proved by the use made of the power for that object in the first session of the First Congress under the Constitution, when among the members present were so many who had been members of the Federal convention which framed the Constitution and of the State conventions which ratified it. \*\*

It does not appear from the printed proceedings of Congress on that occasion that the power was denied by any of them.

A further evidence in support of the constitutional power to protect and foster manufactures by regulations of trade, an evidence that ought of itself to settle the question, is the uniform and practical sanction given to the power by the General Government for nearly forty years with a concurrence or acquiescence of every State government hroughout the same period, and it may be added through all the vicissitudes of party which marked the period. No novel centrous, on withstand the weight of such authorities or the unbroken current of so long and universal a practice. And well it is that this can not be done without the intervention of the same authority which made the Constitution, if it could be so done there would

If Mr. Madison intended to lay down the doctrine of a tariff for the protection of private interests independent of the raising of revenue, in my judgment he went beyond the admitted doctrine of the Democratic party. In ascertaining the powers granted to the Federal Government on this subject, we should bear in mind as a very important fact that previous to the adoption of the Constitution, when the several States had the sovereign power to regulate commerce, prohibit importations, protect trade and industries, as concerned themselves, respectively, important manufactures in the States had grown up. Can it be believed that the States would have knowingly surrendered all legislative power to encourage, foster, and protect their home industries and at the same time have withheld that power from the General Government, thereby leaving them helpless in this respect?

WASHINGTON'S ADMINISTRATION.

The first tariff act was approved July 4, 1789. It contained the following preamble:

Whereas it is necessary for the support of the Government, for the discharge of the debt of the United States, and the encouragement and protection of manufactures, that duties be laid, &c.

Under this act duties were laid on some seventy-five different articles, among them boots, shoes and slippers, tallow candles, wool and cotton cards, cheese, cider, coffee, tea, fish, hemp, iron chains, nails, spikes, salt,

soap, steel, sugar, tobacco, snuff, twine, carriages, buckles, glass-ware, stone-ware, buttons, clothing, hats, iron, leather, saddlery, &c.

The second tariff act, passed in 1790, added some articles to the dutiable list and increased the rate about 2½ per cent. It passed the House by a vote of 39 to 13, all of the members from the Southern States, experience there from Marshad and one from South Crashing and the components. cepting two from Maryland and one from South Carolina, voting in the affirmative. The chief opposition was from Massachusetts.

The third tariff act, March 3, 1791, was mainly a modification or change in the mode of levying the duty on distilled spirits. Average rate of duty on dutiable imports for consumption in 1791 was 15.34 per

Mr. Hamilton, then Secretary of the Treasury, in his report said: The expediency of encouraging manufactures in the United States, which was not long since deemed very questionable, appears at this time to be pretty generally admitted.

From 1791 to 1809 some seven tariff acts of minor importance were

passed, but somewhat increasing the rates of duty.

President Washington, in his last annual address, December 7, 1796,

Congress have repeatedly, and not without success, directed their attention to the encouragement of manufactures. The object is of too much consequence not to insure a continuance of their efforts in every way which shall appear eligible.

THOMAS JEFFERSON

The great founder of Democracy, Mr. Jefferson, recognized the doctrine of protecting manufactures. In his message of 1802 he said:

To cultivate peace, maintain commerce and navigation, to foster our fisheries, and protect manufactures adapted to our circumstances, are the landmarks to guide ourselves in all our relations.

In his message of 1808, speaking of manufactures, Mr. Jefferson

And little doubt remains that establishments formed and forming will, under the auspices of cheaper materials and subsistence, the freedom of labor from taxation with us, and protecting duties and prohibitions, become permanent.

The tariff act of July 1, 1812, under

JAMES MADISON'S ADMINISTRATION,

increased previous duties 100 per cent. It passed the House by a vote of 76 to 48. Of the 48 nays, 32 were from New England States, 9 from Pennsylvania, and 15 from the South. It was passed in consequence of the pending declaration of war against Great Britain. From 1812 to 1816 there were three tariff acts passed, but temporary in their char-

The tariff act of April 1816, was a general tariff law. It was advocated by Mr. Calhoun and Clay, and passed as a protective tariff and considerably increased the average rates of duty. It passed the House by a vote of 88 yeas to 54 nays.

JAMES MONROE'S ADMINISTRATION.

. The tariff acts of 1818 and 1819 were modifications of the then existing laws as to a few articles only. Mr. Monroe said:

It is deemed of importance to encourage our domestic manufactures. \* \* \* There are strong reasons applicable to our situation and relations with other countries which impose on us the obligation to cherish and sustain our manu-

Mr. Monroe, in his message of December, 1823, recommended-

A revision of the tariff for the purpose of affording such additional protection to those articles which we are prepared to manufacture or which are immediately connected with the defense and independence of the country.

The tariff act of 1824 was a general revison of the tariff, increasing the duties to about 38.5 per cent. on dutiable goods and about 33.1 per cent. total imports. The Committee on Manufactures, to whom "had been referred sundry petitions and memorials praying for the adoption of measures calculated to afford encouragement and protection to the manufacturing interests of the country," reported a "bill to amend the several acts for imposing duties on imports."

Mr. Buchanan, in support of the bill, contended that the duties proposed were not prohibitory but protective and would at the same time increase the revenue. The bill was also supported by Mr. Clay. But Mr. Webster opposed the bill. While he contended that "commerce between nations has the same character as commerce between individuals." als and between parts of the same nation," and that the only object of commerce was to produce that exchange of commodities "between individuals and between nations which would conduce to the advantage and to the happiness of both," he admitted that protection and encouragement may be and doubtless are sometimes wise and beneficial if kept within proper limits. It will be remembered at this time Mr. Webster was a strong advocate of free trade.

After a determined opposition the bill passed the House by a vote of

107 to 102. It was afterward modified somewhat and became a law JOHN QUINCY ADAMS'S ADMINISTRATION,

The tariff of May, 1828, raised the duties on dutiable goods for consumption to an average of about 42 per cent., the highest before or since that time, until the Morrill tariff of 1861 and the other war tariffs which followed. From this and the act of 1824 in a great measure originated the doctrine of "nullification."

The "high protective tariff system" may be regarded as having been

inaugurated under the tariff of 1816, and although under a Democratic President, Mr. Madison, it never was the declared or recognized doctrine of the Democratic party.

From 1816 to 1828, by the respective tariff acts during that time, the tariff duties continued to augment and increase, until the popular and bitter outery against it resulted in the election of Old Hickory, General Andrew Jackson, as a triumph over the "high protective system." The Southern States as a section and the Democrats generally were

arrayed against the system, although some prominent Democrats favored the tariff bill of 1828, such as Silas Wright, of New York, one of the most eminent Democratic statesmen of that day, who in advocacy of the bill said:

of the bill said:

It has been the object of the majority of the committee to frame a bill which should have in view the protection of the leading interests of the country. They believe that in all laws having reference to the protection of the domestic interests of the country agriculture should be considered the paramount and leading interest. This was the basis upon which the other great interests rest and to which they are to be considered as subservient. Still this is not to be considered as entitled to protection, exclusive of the manufacturing interest. I do not believe that a law which would be injurious to manufactures would be beneficial to agriculture; but I do believe that protection to manufactures should be given with express reference to the effect upon agriculture.

If that was sound Democratic doctrine in 1828, is it not equally sound and orthodox in 1883?

Mr. Buchanan, of Pennsylvania, in supporting the same bill, said:

The American system consists in affording an equal and just legislative protection to all the great interests of the country. It is no respecter of persons. It does not distinguish between the farmer who plows the soil in Pennsylvania and the manufacturer of wool in New England.

Mr. Webster also supported the bill. A radical change had come over him; from a "free-trader" he had become an open advocate of high protection. In the debate on the bill he said:

New England has not been a leader in this policy. \* \* \* She felt a reluctance to trust great interests on the foundation of Government patronage. But the act of 1824 settled the policy of the country. What, then, was New England todo? Was she to deny herself the use of her advantages, natural and acquired? Was she to resist what she could no longer prevent, or, seeing the policy of the Government thus settled and fixed, to accommodate to it as well as she could her own pursuits and her own industries?

And may it not be asked with equal force, "The policy of a tariff for revenue, adjusted to give fair protection to American industries and labor

revenue, adjusted to give har protection to American industries and labor having been settled, what are the Southern States to do?"

Mr. Mallary, of Vermont, chairman of the Committee on Manufactures, from which the bill was reported, in his advocacy of it stated some significant conclusions, to which I call special attention, as solemn truths which should be heeded by the people living in the great interior of this country, not only in considering this important question but in the consideration of other great questions now agitating the public. lic. He said:

lie. He said:

I maintain that the tendency of protecting domestic manufactures is to prevent a most dangerous and powerful monopoly—a moneyed aristocracy—that would be resistless, overwhelming. I mean distinctly the mercantile interests on the seaboard. If this nation, great and extensive as it is and will be, were composed of farmers and merchants alone, what would be the consequence? The seaboard would be the place of exchange for domestic and foreign profite ions. This would be effected at a few points favorable by nature. Profits and gain would from necessity be confined to a few. \* \* \* On the seaboard, therefore, all the moneyed capital of the nation would concentrate. The interior would be in dependence, debt, and bondage. \* \* \* It is therefore sound policy to adopt such measures as will divide the moneyed capital of the nation. Instead of its remaining confined to a few places on the seaboard the good of the nation requires that it should be distributed.

#### JACKSON'S ADMINISTRATION.

Andrew Jackson, in his message to Congress on the 7th of December,

The object of the tariff is objected to by some as unconstitutional and it is considered by almost all as defective in many of its parts. The power to impose duties on imports originally belonged to the several States. The right to adjust these duties with a view to the encouragement of domestic branches of industry is so completely identical with that power that it is difficult to suppose the existence of the one without the other. The States have delegated their whole authority over imports to the General Government without limitation or restriction saving the very inconsiderable reservation relating to their inspection laws. This authority having thus entirely passed from the States, the right to exercise it for the purpose of protection does not exist in them and consequently if it be not possessed by the General Government it must be extinct.

Our political system would thus present the anomaly of a people stripped of the right to foster their own industry and to counteract the most selfish and destructive policy which might be adopted by foreign nations. This surely cannot be the case; this indispensable power thus surrendered by the States must be wishin the scope of the authority on the subject expressly delegated to Congress. In this conclusion I am confirmed as well by the opinions of Presidents Washington, Jefferson, Madison, and Monroe, who have each repeatedly recommended the exercise of this right under the Constitution, as by the uniform practice of Congress, the continued acquiescence of the States, and the general understanding of the people.

Mr. Clay's tariff resolution, submitted in the Senate December. 1831.

Mr. Clay's tariff resolution, submitted in the Senate December, 1831, was adopted after full discussion, namely:

Resolved, That the existing duties upon articles imported from foreign countries and not coming in competition with similar articles made or produced within the United States ought to be forthwith abolished, except the duties upon wines and silks, and that those ought to be reduced; and that the Committee on Finance be instructed to report a bill accordingly.

In discussing the resolution Mr. Clay said:

Free trade! Free trade! Gentlemen deceive themselves; it is not free trade that they are recommending to our acceptance; it is in affect the British celonial system that we are invited to adopt.

ENGLAND'S COLONIAL SYSTEM.

What was the colonial system to which Mr. Clay referred? Let the destructive commercial warfare waged by England through her chartered "East India Company" upon her Indian colonies and the acts of the British Parliament toward her American colonies answer. Mr. Clay's quesish Parliament toward her American colonies answer. Mr. Clay's question was very forcibly answered by Mr. Peter Cooper in a speech delivered as well as in a letter written by him a few years since, from which take the liberty of submitting in a summary way a few important

facts bearing upon England's commercial policy.

It has been said, and with too much truth to add to the glory of Old England, "that the wars of commercial interests carried on by England alone have led to and have caused a greater destruction of life and property during the last eighty years than has been occasioned by all the wars of conquest that have taken place in the civilized world during

that period of time." When the East India Company, "chartered and sustained by all the power of Great Britain," began its wild schemes of amassing fabulous fortunes through its commercial adventurers, by force, trickery, fraud, and deception in Hindostan, that country with its then 150,000,000 inhabitants was famed as the storehouse of the untold riches of the East nabitants was famed as the storehouse of the untold riches of the East and for its beautiful fabrics of the finest quality. "Though often overtaxed and plundered by invading armies, the country continued rich and prosperous," until invaded by English adventurers under the British policy, as Fox, in a speech on the East India bill, declared, "the country was laid waste with fire and sword, and the land once distinguished most above others by the cheerful face of fraternal government protected labor, the cheer west of cultivation and protected labor, the cheer west of cultivation and player, in the and protected labor, the chosen seat of cultivation and plenty, is now a dreary desert, covered with rushes and briers, jungles and wild beasts."

Macaulay says:

The misgovernment was carried on to such an extent as seemed hardly comatible with the existence of society. They forced the natives to buy dear and

sell cheap.

The English Government became as oppressive as the most oppressive form of barbarian despotism.

It is said that-

The poor Hindoo was not allowed to make salt from the waters of the ocean. Every form of taxation and exaction was forced on that people in order to drive hem to send all their cotton and wool to England (the great workshop of the world) to be converted and returned.

The great city of Dacea, that only seventy years since contained 90,000 houses and exported millions of pieces of the finest quality of goods, is now a mass of pieces.

The same authority says:

For the accomplishment of this work of destruction, the children of Lancashire, England, were employed fifteen to seventeen hours per day during the week and until 12 o'clock on Sunday, cleaning and oiling machinery, for which they received 2s. 9d. per week. The object was to underwork the poor Hindoo and drive him from the markets of the world.

Sir Robert Peel says:

Sir Robert Peel says:

The effects in India exhibit themselves in such ruin and distress that no parallel can be found in the annals of commerce.

Of all the 1,700,000 slaves imported into the British West India Islands only 660,000 were found living on the day of emancipation. This was the result of a war of commerce. The planters on those islands had been deprived by law of all right to "refine their own sugar, or to introduce a spindle or a loom, or to mine coal, or to smelt their own copper."

On the island of Jamaica, with a population of 320,000 black laborers, and with inexhaustible supplies of timber, that island has been without a saw-mill up to 1860.

Her policy toward the American colonies would have proved no less destructive of their commercial interests and general prosperity had they not timely resisted and achieved their independence of British oppression and rule.

The first attempt on the part of the American Colonies to, establish manufactories was followed by prohibitory acts on the part of the British Parliament

In 1710 the House of Commons declared that the erecting manufactories in the Colonies tended to lessen their dependence on Great Brit-

In 1732 the exportation of hats from province to province and the number of apprentices was limited.

In 1750 the erection of any mill or engine for slitting or rolling iron was prohibited.
In 1765 the exportation of artisans from Great Britain was prohib-

ited, under a heavy penalty.
In 1781 utensils required for the manufacture of wool and silk were

prohibited.

In 1782 the prohibition was extended to artificers in printing calicoes, muslins, or linens, or in making implements used in their man-

In 1785 the prohibition was extended to tools used in iron and steel manufacture, and to workmen so employed. In 1799 it was so extended as to embrace even colliers.

England, now so boastful of her pretended free trade, which is only in part free trade, her import duties amounting annually to about \$100,000,000, never hesitated to pass protective or prohibitory laws as to commerce when to her interest to do so.

Englishmen freely admit that protection is necessary to the existence of our iron industry. At a meeting of the National Miners' Conference held at the Old Town Hall, in King street, in Manchester, England, in January, 1881, Mr. Macdonald, a member of the British Parliament,

encouraged the British miners by the declaration that "if America encouraged the British limited by the declaration that I while to would remove her tariff of 29s. 4d. on our iron we should be able to close every iron-works east of Pittsburgh within three months."

English advice and solicitude, through her Cobden Club and press, for our commercial welfare should be received with some grains of allow-ance, when we remember her long list of unjust wars, acts of oppression, and deeply laid schemes to extend her trade and control the commerce of the world.

The tariff act of July 14, 1832, which went into operation March 3, 1833, put tea and coffee when imported in American vessels on the free-list, and made a reduction of duties from 20 to 25 per cent. ad valorem en a number of articles. This bill, as all former tariff bills had done, retained the protective principle. It was discussed at great length, with great ability and much sectional feeling, being the last tariff act prior to the ordinance of nullification passed by the convention of South Carolina, by which it was declared "that the tariff law of 1828 and the amendment to the same of 1832 are null and void, and no law, nor bind-ing upon this State, its officers or citizens." The bill passed the House by a vote of 132 to 65, and the Senate by a vote of 32 to 16.

MR. CLAY'S COMPROMISE BILL.

February 12, 1833, Mr. Clay introduced a bill to modify the various acts imposing duties on imports. It passed the Senate by a vote of 29 to 16, Mr. Calhoun voting in the affirmative. A bill was afterward introduced and passed in the House by a vote of 119 to 85. It is known as the compromise tariff act of 1833, which included "Mr. Clay's compromise bill," and was intended to gradually reduce the duties on imports and to serve as a compromise measure. It provided a sliding scale of reduction on all duties above 20 per cent., the excess over 20 per cent, to be entirely taken off by June 30, 1842. The average duties on imports for consumption by this act and the act of 1836 were reduced from about 42 to 31 per cent. ad valorem, and on the whole imports from about 35 to 16 per cent. ad valorem. Whether or not this reduction of tariff duties, in whole or in part, produced or contributed to the great financial crisis which swept over the United States in 1837, I leave to the disputation of the protection and free-trade theorists.

JOHN TYLER'S ADMINISTRATION.

The tariffact of September 11, 1841, provided that free articles and those at a duty of less than 20 per cent. ad valorem should pay 20 per cent. ad valorem, excepting certain specified articles; it fixed the duty on unenumerated articles the same as on enumerated which they most re-

sembled, and reduced duty on railroad-iron to 20 per cent. ad valorem.

The tariff act of August 30, 1842, increased the average of duties to about 32 per cent. The bill passed the House by 116 to 112, and the about 32½ per cent. Senate by 25 to 23.

Mr. Polk in his inaugural address of March 4, 1845, said:

Mr. Polk in his inaugural address of March 4, 1845, said:

I have heretofore declared to my fellow-citizens that in my judgment it is the duty of the Government to extend as far as it may be practicable to do so by its revenue laws and all other means within its power fair and just protection to all the great interests of the whole Union, embracing agriculture, manufactures, the mechanic arts, commerce, and navigation. I have also declared my opinion to be infavor of a tariff for revenue; and that in adjusting the details of such a tariff I have sanctioned such moderate discriminating duties as would produce the amount of revenue needed and at the same time afford reasonable incidental protection to our home industry; and that I was "opposed to a tariff for protection merely and not for revenue." \* \* The raising of revenue should be the object and protection the incident. \* \* \* Within the revenue littere is a discretion to discriminate; beyond that limit the rightful exercise of the power is not conceded.

The incidental protection afforded to our home interests by discriminations within the revenue range is believed to be ample. In making discriminations within the revenue afforded to be ample. In making discriminations within the revenue afforded to be apple. In making discriminations within the revenue afforded to a sefar as practicable, be equally and fairly favored.

The tariff of July 30, 1846, under James K. Polk's administration, is

The tariff of July 39, 1846, under James K. Polk's administration, is claimed as the model of a tariff for revenue. It was styled "An act re-

ducing the duties on imports, and for other purposes."

It was conceded by all that the revenue receipts were too large in amount for the good of the country and that the tariff should be modi-

amount for the good of the country and that the tariff should be modified so as to reduce the same. Hence by the act of 1857 tariff duties were reduced generally, from 20 to 25 per cent. ad valorem.

It passed the Senate by a vote of 27 to 27, the President of the Senate, Mr. Dallas, giving the casting vote in the affirmative. The vote in the House was 115 for to 92 against. The general average rate of duties upon the total imports under the act of 1846 as compared with the rates under the act of 1842 was decreased only about 2½ per cent. As to the duties on imports for consumption the decrease was about 8.4 per cent. Yet as a revenue tariff it not only surpassed all expectations but cent. Yet as a revenue tariff it not only surpassed all expectations but astonished its authors. It produced in revenue from customs duties, in the ten years from 1847 to 1856, inclusive, \$459,981,967, while the receipts from customs duties for the ten preceding years, from 1837 to 1846, inclusive, were only \$212,185,961, being an increase in the latter decade of \$247,000 cents.

decade of \$247,796,006; but this is to be accounted for mainly, if not entirely, from the great increase in imports, which from 1847 to 1856, inclusive, amounted to \$2,205,160,187, and from 1837 to 1846 to only \$1,164,183,732, an increase of \$1,040,976,455.

A glance at the classification of articles bearing the same rate of duty under the law of 1846 may cause some doubt as to its perfection. A mere recital of some of the many diversified articles grouped together under the same schedule, as well as a lower rate of duty on some luxuries than on necessaries, will carry with it its own argument without comment. comment.

Schedule C .- Beer, German silver, articles embroidered with gold or silver, asses skins, perfumes, bologna sausage, bracelets, ringlets, mo-saics, pickles, hats, shell boxes, souvenirs, carpets, carriages, pepper, cheese, clothing, coal, confectionery, cutlery; diamonds, gems, rubies, pearls, &c., set in gold or other metals; dolls, toys; earthen, china, and stone ware; epaulets, bonnets, hemp, honey, iron, jellies; manufactures of cotton, silk, linen, and wool, if embroidered; medicines, guns, fire arms, nuts, plated and gilt ware, potatoes, silver-plated metals, to-bacco, wool, &c., duty 30 per cent. ad valorem.

Schedule E.—Acids and other chemicals, bacon, blankets, vegetables books, soeks; ebony, mahogany, and other precious woods; copper articles, hats of silk and cotton, Indian corn, jalap, coral, manufactures of flax, drugs, bronze metals, whipgut or catgut, needles, oranges, lemons, paints, pork, slate-pencils, steel, velvet of cotton or silk, 20 per cent, ad valorem

The Morrill tariff, as to classification of articles, was certainly a great improvement over the tariff act of 1846.

#### TARIFF ISSUE

The issue between the high protectionists and the so-called free-traders may be said to have been fairly tendered upon the adoption of the tariff of 1816, but not fairly joined until after the tariffs of 1824 and

The issue may be stated on the side of the protectionists as succinctly out by Mr. Ingham, when, in the discussion of the tariff bill of 1816, he said "the revenue was only an incidental consideration," and upon the other side as afterward in 1845 formulated by Robert J. Walker, then Secretary of the Treasury under President Polk, in his celebrated report on the tariff, wherein he laid down six propositions, among them

First. That no more money should be collected than is necessary for the wants of the Government, economically administered.

Second. That no duty be imposed on any article above the lowest rate which will yield the largest amount of revenue.

\* \* \* \* \* \* \*

Sixth. That the duty should be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section.

Which propositions, it may be claimed, have been summarized in the Democratic platform of 1876 as "that all custom-house taxation shall be only for revenue," and in the Democratic platform of 1880 as "a tariff for revenue only."

THE TARIFF OF 1857 UNDER JAMES BUCHANAN'S ADMINISTRATION.

This reduced the duties on the greater number of imported articles from 20 to 25 per cent. ad valorem to an average rate on dutiable articles for consumption of about 19 per cent., almost as low as the average rate of duties from 1789 to 1811.

The principal object sought to be accomplished by the tariff of 1857 was the reduction of the revenue from duties on imports, and thereby prevent the accumulation of a large surplus in the Treasury exceeding the wants of the Government.

In advocating a reduction of the tariff Mr. Hunter, of Virginia, when eferring to the tariff of 1846, said:

Interests and investments have grown up under it, and it is our duty to proceed in modifying it as to respect those interests. \* \* \* Independently of considerations of justice, the dictates of policy should prevent us from doing anything to prostrate those interests by a sudden blow, as their ruin would lead to a great commercial revulsion and bring disaster upon all.

As to whether the tariff under the reduction proposed would produce the required quantity Mr. Hunter said that "the danger is, not that it will produce too little but too much. For it is obvious that when we come to reduce the duties the consumption will be increased, and this again will have the effect to add to the revenue." While this did not prove to be true under the tariff of 1857, there is no question but that the reduction of a tariff below the point affording fair protection will ordinarily greatly increase the amount of revenue over a tariff so high to be prohibitory in its effect.

In the four years, 1858, 1859, 1860, and 1861, the revenue from customs fell off a little over \$60,000,000 as compared with the four preceding years, leaving a deficit of some \$20,000,000 annually as to the expenditures of the Government. This deficit showed the necessity of a revision of the tariff for the purpose of increasing the revenue, and resulted in the Morrill tariff of March 2, 1861, which considerably increased the duties on imports. This tariff remained in operation but a few months, when in consequence of the late war the tariff duties were raised about 100 per cent. by the acts of August 5, 1861, December 24, 1861, July 14, 1862, March 3, 1863, and of April and June, 1864, to an average rate exceeding on dutiable goods for consumption by about 1 per cent. only the average rate from 1829 to 1832, inclusive.

Whether or not the reduction produced, or in any manner contributed to, the financial disasters of 1857, I again leave to be disputed by the advocates of high protection upon the one side and by free-trade theorists upon the oth

The act of March 2, 1867, was entitled "A bill to provide increased revenue from imported wool, and for other purposes."

The act of July 14, 1870, was entitled "An act to reduce internal taxes, and for other purposes." It reduced the rate of duty all along

from 12 to 75 per cent. on some forty different articles, among them

tea, coffee, sugar, spirits, wine, brandy, and iron.

The act of May 1, 1872, put tea and coffee on the free-list, reduced salt to 12 cents per one hundred pounds, and made a general reduction of 10 per cent., principally upon cotton and woolen manufactures, iron, and steel. Whether this reduction produced or contributed toward the great financial crisis which followed in 1873 I will again leave to be disputed pro and con by the contending theorists.

By the act of March 3, 1875, the 10 per cent. reduction provision of the act of May 1, 1872, was repealed. Whether or not the prosperous times which gradually followed the act of 1875 were in whole or in part brought about by that act I again leave to be disputed by the extreme theorists of "high protection and free trade." In my judgment the effects of a tariff, whether high or low, are too apt to be magnified, and are often greatly exaggerated.

#### DEMOCRATIC PLATFORMS.

The first national Democratic platform of which I have obtained any knowledge, adopted at a ratification meeting at Washington city, May 11, 1832, contained the following resolution:

Resolved, That an adequate protection to American industry is indispensable to the prosperity of the country, and that an abandonment of the policy at this period would be attended with consequences ruinous to the best interests of the nation.

The second Democratic platform, which was adopted at Baltimore, May 5, 1840, contained the following resolutions:

Resolved, That justice and sound policy forbid the Federal Government to 4. Resolved, That justice and sound policy forbid the Federal Government to obster one branch of industry to the detriment of another, or to cherish the interests of one portion to the injury of another portion of our common country; that every elitzen and every section of the country has a right to demand and insist upon an equality of rights and privileges; and to complete an ample protection of person and property from domestic violence or foreign aggression.
5. Resolved, That it is the duty of every branch of the Government to enforce and practice the most rigid economy in conducting our public affairs, and that no more revenue ought to be raised than is required to defray the necessary expenses of the Government.

In the Democratic platform adopted at Baltimore, May 27, 1844, the

above-recited resolutions 4 and 5 were reaffirmed.

In the Democratic platform adopted at Baltimore, May 22, 1848, said resolution 4 was reaffirmed, and for the eighth resolution of said platform the fifth resolution above quoted with this language added, namely, "and for the gradual but certain extinction of the debt created by the prosecution of a just and necessary war," was adopted. The twenty-first resolution of the platform of 1848 included the following as among the enumerations of the fruits of the election of Mr. Polk, namely:

In the noble impulse given to the cause of free trade by the repeal of the tarif of 1842, and the creation of the more equal, honest, and productive tariff of 1846

The Democratic platform of 1852, adopted at Baltimore, reaffirmed

and resolutions 4 and 5, and declared against "exclusive legislation for the benefit of the few at the expense of the many."

In the Democratic platform of June 6, 1856, adopted at Cincinnati, said resolution No. 4 was readopted, and as bearing upon the tariff the following was embraced in an additional resolution, namely:

The time has come for the people of the United States to declare themselves in favor of free seas and progressive free trade throughout the world.

The Douglas and Breckinridge Democratic platforms adopted at Charleston, April 23, and Baltimore, June 18, 1860, reaffirmed the Cincinnati platform.

The national Democratic platform adopted at New York, July 4, 1868,

declared-

A tariff for revenue upon foreign imports, and such equal taxation under the internal-revenue laws as will afford incidental protection to domestic manufactures and as will, without impairing the revenue, impose the least burden upon and best promote and encourage the great industrial interests of the coun-

The Democratic platform adopted at Baltimore, July 9, 1872, contained the following:

Recognizing that there are in our midst honest but irreconcilable differences of opinion with regard to the respective systems of protection and free trade, we remit the discussion of the subject to the people in their Congressional districts and the decision of Congress thereon, wholly free from executive interference or dictation.

The Democratic platform adopted at Louisville, Kentucky, September 3, 1872, repudiated the Baltimore platform last referred to and passed among other resolutions the following:

Resolved, That the interests of labor and capital should not be permitted to conflict, but should be harmonized by judicious legislation.

It was silent on the tariff.

The Democratic platform adopted at Saint Louis, June 27, 1876, contained the following:

We demand that all custom-house taxation shall be only for revenue

The Democratic platform adopted at Cincinnati, June 22, 1880, declared for "a tariff for revenue only." I believe the foregoing are all of the declarations relating to the tariff

of the Democratic party contained in national platforms.

A far greater variety of declarations may be found in the platforms of

the Democratic party of the different States In the Virginia Democratic platform of August, 1881, may be found:

That special efforts be made to foster and encourage the agricultural, me-banical, mining, manufacturing, and other industrial interests of the State.

In the North Carolina State platform, adopted in July, 1882, it is declared:

Resolved. That we are in favor of the entire and immediate abolition of the internal-revenue system, with its attendant corruptions, and that we denounce the present tariff laws as grossly unequal, unjust, and vicious. We favor such a revision of the tariff as will produce a revenue sufficient for the economical support of the Government, with such incidental protection as will give to domestic manufactures a fair competition with those of foreign production. That there should be an immediate repeal of all laws imposing a direct tax for the support of the Government of the United States.

The Democratic platform of Georgia for 1882 contained the following:

1. Resolved, That the Democratic party of Georgia, through its accredited representatives assembled, reaffirm with all emphasis and fervor the time-honored principles expounded by the sages, Jefferson and Madison, and illustrated and enforced by the pure and able men who have by their teachings and practical enforcement of their political faith advanced the glory and promoted the prosperity of this Union.

The Democracy of Georgia reaffirm with all emphasis and fervor the

principles expounded by Madison and Jefferson as their political faith.

The present Democratic governor of Georgia, the distinguished Alexander H. Stephens, in a speech delivered by him in the House at the last session (1882), thus stated his views on the tariff, in which I fully concur:

concur:

I think we ought to abolish the internal-revenue system of taxation entirely. I would extirpate it root and branch. Allow me to say to both sides of the House that except in time of war these internal-revenue taxes, excise and stamp duties, are in my judgment in principle anti-Republican, anti-Democratic, and anti-American. They are in opposition to the general principles or policy of this Government as taught by the fathers of the Republic.

The best way to raise revenue is by duties on imports. They bear less heavily on the tax-payers, and as legislators that is what we should look to. In levying duties on imports you can at the same time make foreign producers pay for the use of your markets, and in that way incidentally and properly give aid and protection to American industry. It is not true, as a general proposition, that the consumer pays all the duty imposed upon commodities brought from other countries. This is a question that I can not now argue. In most instances where the duties are judiciously laid they are borne partly by the importer and partly by the consumer.

To allow Congress thus to raise revenue by duties upon imports was one of the main objects in establishing the Federal Constitution of 1789.

The tariff plank adopted by the Vermont Democrats in 1882 was tariff for revenue with just discriminations favoring the agricultural, industrial, and commercial interests of the whole country."

The Democratic platform of Indiana for 1882 contained the following:

We demand a revision of the present unjust tariff. The Constitution of the United States confers upon Congress the power to establish a tariff for revenue, and as a just and proper exercise of that power we favor such an adjustment of its provisions, within the revenue standard, as will promote the industries of the country and the interests of labor, without creating monopolies.

Ex-Senator Joseph E. McDonald, one of the most prominent and distinguished Democrats of the day, was reported by the committee which framed the platform containing the above quotation as having participated in the deliberations of the committee.

The Ohio Democracy at their State convention, July 20, 1882, adopted

the following:

Resolved, That we favor a tariff levied to meet actual needs and so adjusted in ts details with the view to equality in the public burdens, so as to encourage productive industries and afford labor just compensation without creating monopolies.

In support of the views I maintain I again refer to the declarations of eminent Democrats

Thomas Benton in United States Senate in 1842:

A cry was got up to alarm the manufacturers with the chimera of total destruction if it had not been for the compromise. But no such thing. In abolishing and reducing duties and bringing down the revenue to the economical wants of the Government, General Jackson and his friends meant to stand upon the ground on which Jefferson and Madison had stood, and to make discrimination and incidental protection the basis of their policy. In that way they

rould have settled the question then; in that way only can it be settled now; and in that way the most sagacious of our public men have looked for it to be stilled at this time.

#### John C. Calhoun:

John C. Calhoun:

Every instance which has been cited may fairly be referred to the legitimate power of Congress to impose duties on imports for revenue. It is a necessary incident of such duties to act as an encouragement to manufacturers, whenever imposed on articles which may be manufactured in our own country. In this incidental manner Congress has the power of encouraging manufactures; and the committee readily concede that in the passage of an impost bill that body may, in modifying the details, so arrange the provisions of the bill as far as it may be done consistently with its proper object as to aid manufactures. To this extent Congress may constitutionally go, and have gone from the commencement of the Government, which will fully explain the precedents cited from the early stages of its operation.

### Free-trade convention held in Philadelphia in 1831:

A numerous and intelligent portion of the American people believe that this view is applicable to the tariff of 1828. They admit the power of Congress to lay and collect such duties as they may deem necessary for the purposes of revenue, and within these limits, so to arrange those duties as incidentally and to that extent to give protection to the manufacturer.

#### Andrew Jackson, letter to Dr. L. H. Coleman, of North Carolina, August 26, 1824:

gust 26, 1824:

Heaven smiled upon and gave us liberty and independence. The same Providence has blessed us with the means of national independence and national defense. If we omit or refuse to use the gifts which He has extended to us we deserve not the continuance of His blessings. He has filled our mountains and our plains with minerals—with lead, iron, and copper—and given us a climate and soil for the growing of hemp and wool. These being the great materials of our national defense, they ought to have extended to them adequate and fair protection, that our manufacturers and laborers may be placed in a fair competition with those of Europe, and that we may have within our country a supply of these leading and important articles so essential to war. \* \* \* In short, sir, we have been too long subject to the policy of British merchants. It is time we should become a little more Americanized, and, instead of feeding paupers and laborers of England, feed our own; or else, in a short time, by continuing our present policy, we shall be paupers ourselves.

#### Senator BECK, of Kentucky, in 1882:

In adjusting taxation on imports with a view only to obtain revenue, or "for revenue only," we never thought of discriminating against American industries or of depriving them of the incidental benefits or protection a proper revenue tariff would afford. I would adjust the revenue tax as far as possible to aid all of them in the proportion in which they could least bear foreign competition, especially as past legislation has been of a character to induce our citizens to embark in enterprises under the belief that they would be fostered by Concress.

#### Senator BECK, of Kentucky, February 19, 1883:

Senator DECK, of Kentucky, February 19, 1853:

I have shown as malice against any manufacturing establishment or against the manufacturers of this country. I voted, when the Senator from Massachusetts sought to reduce the tax on Russia from from 2; to 2 cents, against him, because I thought it was too low. When Senators sought to bring in machinery at 10 per cent. or lower rates, I voted against it, thinking that too low. I have sought to bring down no tax below the point where I believed the manufacturers of this country could live and manufacture their goods.

#### Senator BAYARD, of Delaware:

Senator BAYARD, of Delaware:

The power to tax by laying duties upon imports may be so exercised as to do what it has done ever since the foundation of the Government, and that is, to give an advantage equivalent to the amount of the tax to the American producer or manufacturer over his foreign competitors in the same line of production or manufacture, and this becomes his "protection." That is all that is justifiable; it is all that ever was claimed until these later days. It is all that is warranted by the exercise of the taxing power of the Government. Its justification and prime object must be, in thus compelling the payment of private moneys for public use, to pay the expenses of the Government, or, in the language of the Constitution, "To pay the debts and provide for the common decises and general welfare of the United States." The incidental results of such public measures, in fostering the industries of our own people, may be legitimately, wisely, and properly considered, not as the chief object or controlling motive in laying such a tax or duty, but as one of its incidental, inevitable, and proper results. \* \* \* We should consider the uniformity of the law, and its ustice to all interests alike. proper results.

ustice to all interests alike.

# Senator SAULSBURY, of Delaware, said:

I am certainly in favor of giving to our own industries any advantage which uch incidental protection can afford.

#### Senator GEORGE G. VEST, of Missouri, in the Senate of the United States, Saturday, July 22, 1882, said:

States, Saturday, July 22, 1882, said:

Within the scope of a tariff for revenue I shall vote to foster and protect by just discrimination in tariff duties the iron interests of Missouri. That is not only my duty, but one of paramount obligation, and I shall carnestly discharge it, but always and without exception I must adhere to the great principle that a tariff for protection to any interest over and above the limit of a tariff for revenue is in violation of the Constitution. The Government has no constitutional power to tax one class of its citizens simply to protect another. Congress has the power to impose tariff duties to raise sufficient revenue to carry on the Government, and within this limit can so impose these duties as to protect American industries and at the same time equalize the burdens of taxation: but the instant that duties are imposed beyond the necessity I have named, and only to protect certain class interests, the imposition is outside of the Constitution and antagonistic to the spirit of our institutions.

## Senator GARLAND, of Arkansas:

What I am after is a fair and open investigation into the operations of the tariff upon all conceivable plans and upon every particular branch of the industries of the country, so that when we come to make a tariff, having in view the revenue standard, we may make it advisedly; we may know just exactly what amount of tariff we need, and what requires protection and what not, because there is no concealing the fact that as every tax is discriminating in its nature, which can not be helped, so every tariff effort is to a certain extent protection, and it is the extent of that protection that it is as important to recognize and is to be ascertained in this investigation as anything else connected with the tariff.

### Senator Brown, of Georgia, says:

I confess I take a medium position here. I am neither a free-trade man, willing to collect all the money we have to raise by direct tax upon the people, nor

am I willing to lay a tax simply for protection when the Government does not need the money. But if I had it in my power I would raise all the money necessary to support the Government by tariff, and I would so adjust the tariff which we have to raise to meet the necessary expenses of the Government as to afford as far as possible an incidental protection to home industry and to American productions. It seems to me that is common sense, and that patriotism and statesmanship alike require it.

### Senator VANCE, of North Carolina, says:

A tariff for revenue can be rightfully laid; the exigencies of the public service require this. I am willing to aid in framing such a tariff. Such protection as this would afford to the industries of the country all they are fairly entitled to have. Let them learn to be therewith content and to know that "whatsoever is more than this cometh of evil."

#### Senator RICHARD COKE, of Texas:

No citizen can object to a tax on imported goods judiciously levied with an eye single to the raising and collection of revenue for the support of the Government. The Government must have revenue for its support, and the Constitution expressly grants to Congress the power to levy and collect such tax for that purpose. A tariff revenue, constructed in good faith only for the purpose of raising revenue, and which does raise revenue and place it in the National Treasury, is a legitimate and constitutional and necessary exercise of power. As an inevitable consequence domestic manufacturers or producers of the articles upon which such revenue-impost duties are laid are to that extent protected against foreign competition. This species or extent of protection is necessarily an incident, a corollary to every law which raises revenue through impost duties, but revenue should be the object and purpose in view and protection pro tanto only the incident.

# Governor Hendricks, of Indiana:

All parties agree that the best way for us to raise revenue is largely by the tariff. So far as we are concerned, therefore, all talk about free trade is folly. Congress can not look to revenue only, but must exercise judgment and discretion, and that in the exercise thereof regard must be had to the interests and welfare of each particular object of taxation and to its comparative importance in the country. The rates can not be uniform. A horizontal tariff is impossible.

#### Senator VOORHEES, of Indiana:

Senator Voorhees, of Indiana:

It is not within the range of human skill to so frame a tariff as to result in nothing but the collection of revenue, nor can human wisdom separate its direct and tremendous effects upon the industries and prosperity of the country from the bare, naked existence of a tariff. It is at this point that the extreme and contrary views now before the country begin to assert themselves. On the one hand there are those who declare their readiness to enact a system of tariff not so much with a view to revenue as to the promotion and protection of certain great pursuits in our midst; while on the other we hear a loud and persistent cry that nothing but revenue, revenue only, can possibly enter into the consideration of a subject, which in fact, however, embraces directly and indirectly, in addition to the collection of revenue, nearly all the myriad interests of the hand for interests of the base for its defense the wisest interpretations of the Constitution, the practices of the Government when it was administered by those who framed it, the clean dexplicit teachings of the fathers, the history of the great party to which I belong, the independence and strength of the country, and the welfare and happiness of its people.

Senator LAMAR, of Mississipni February 7, 1883 said.

#### Senator Lamar, of Mississippi, February 7, 1883, said:

If we could on the one hand have a bill which would bring the duties down to a revenue standard, arrangements in the details looking to protection as an incident would find, I apprehend, but few opponents.

# Senator James Z. George, of Mississippi, July 17, 1882, said:

We have fostered manufactories. I make no complaint now of that. We are certain to continue this policy for many years. The amount necessary to be raised to pay the national debt and for carrying on the Government is so large that it would be almost impossible to levy duties and imposts without protection to manufactures.

### Senator Morgan, of Alabama:

I am not in favor of the destruction of American industries or American prodets. I am in favor of assisting them to the extent we are compelled to raise a tariff for revenue

#### Hon. J. D. C. ATKINS, of Tennessee, May 5, 1882:

The Democracy freely admit, too, that in adjusting the details of any tariff law it must perforce afford incidental protection to many industries, but the purposes of the tariff laws are to obtain revenue, while, as they incidentally must afford protection to some industries, those details should be so adjusted, if practicable, as to apply to those industries which obviously most equitably recursive.

#### Hon. RICHARD P. BLAND, of Missouri, January 7, 1883:

We recognize the fact that under a system of protection capital has been invested—capital probably that might not have been invested under other circumstances. And governing ourselves by the circumstances, all that we demand is that this tariff shall be adjusted upon a system of raising revenues sufficient to support the Government and pay the debt, and in so adjusting that system to have due regard to the incidental protection that it will give.

### Hon. JAMES H. MCLEAN, of Maryland, January 27, 1883:

Hon. James H. McLean, of Maryland, January 27, 1883:

We can do everything this Government requires to have done on less than three hundred millions, and we can get that without going to the revenue standard. But below that you can discriminate in the interest and to protect the industries of the country. That is the doctrine I have been taught. I go back over my life, and I have said it several times before, and I never knew aday when I would lay a duty above the revenue standard. I have never knew aday when I would lay a duty above the revenue standard. I have never known a day you could not go below the maximum and discriminate for protection below that—that you could not go below and select the articles you mean to protect and give them sufficient protection; \* \* \* in tariff controversies between political parties in this country this was the policy of the Democratic party. \* \* 1 go to the country in opposition to the bill because it does not reduce taxes. I go there because in my judgment it accomplishes only the minimum of what it ought to accomplish. I go to the country in opposition because I believe in the future I have the hope of seeing a more complete revision, and I have indicated what character of a revision I think should be had. I have left that in no doubt. It is a revision which while constitutional—while give the manufacturer protection and in a political sense will unite this great body of men who have one-half of the voters of the country now.

General WILLIAM STARKE ROSECRANS, of California, chairman of the Democratic Congressional executive committee, January 27, 1883:

We believe that government exists in order to substitute the rule of reason and justice for the rule of the strongest, and that its duty is to afford all the protection to person and property which reason and justice demand. To that rule applied to our condition we appeal against the tyramnical theories of protection, the instrument of capitalists and monopolies on the one hand, and of arbitrary and regulated free trade on the other. \* \* \* I think the present tariff should be thoroughly revised, simplified, and reduced the the smallest rates of duties which will produce the revenue required for an economical administration of the Government, and so laid as to give just and reasonable protection to labor.

Hon. J. RANDOLPH TUCKER, January 26, 1883, in the House of Representatives:

Representatives:

Suppose there were no tariff, would the protective-tariff man demend a tariff? Yes. Why? Because under free trade, as labor here would be so much higher than it is abroad, capitalists in certain branches of industry could not afrord to carry them on, could not go into these manufactures without a protection which would enable them to pay the wages demanded. Thus it will be seen that so far from the tariff being the cause of the high wages, it is the fact of high wages that makes the occasion and creates the need for a tariff. Men want protection because, as they say, the laborer demands higher wages here than he does in England, and they can not afford to carry on manufactures unless they get enough protection to give such price to the products as will leave a profit after paying the wages demanded by labor. Yet the protectionist turns the argument right around, and holds that the tariff is the cause of high wages, when in fact the high rates of wages in this country is the cause of manufacturers wanting and demanding a tariff for protection.

But, Mr. Chairman, there is no man on the committee—and I speak not only for gentlemen on the other side, but for myself and I think for the distinguished friends who sat with me on this question—there is no man on the committee who is not willing in the present condition of things to accord such a duty upon all these manufactured articles as will enable the manufacturing interests to pay the full measure of wages that the American laborer has a right to demand But what we desire is that after we have made the tariff high enough to enable you to protect the laboring man in his wages you shall not under the color of getting a high tariff to protect the laboring man get, a tariff which will enormously increase profits of manufacturing capital.

Winfield S. Hancock, in letter to Theo. Randolph, Morristown, New

Winfield S. Hancock, in letter to Theo. Randolph, Morristown, New Jersey, October 12, 1880:

I am too sound an American to advocate any departure from the general features of a policy that has been largely instrumental in building up our industries and keeping Americans from the competition of the underpaid labor of Europe. All parties agree that the best way for us to raise revenue is largely by the tariff. So far as we are concerned, therefore, all talk about free trade is folly. But the tariff question will probably be treated with justice to all our interests and people by some such bill as Eaton's. I believe that a commission of intelligent experts, representing both the Government and American industries, will suggest suriff measures that will relieve us of any erudities and inconsistencies existing in our present laws, and confirm to us a system which will be judicious, just, harmonious, and incidentally protective as well as staple in its effect.

#### CONCLUSION.

I feel confident that my views on the tariff, as I have endeavored to clearly and distinctly set forth, are fully and overwhelmingly sustained

by the highest Democratic authorities

The true Democratic doctrine on the tariff may be thus formulated: Revenue should be the object and protection the incident. Under and within the limits of a tariff for revenue it is within the power and should be the policy of the General Government to foster and protect American industries and labor by a wise and moderate discrimination in the levying of tariff duties. The constitutional exercise of this power should not go beyond, but should be confined always within the limits

#### NO SUBSTANTIAL DIFFERENCE AMONG DEMOCRATS.

Stripped of the speculative and impracticable theory of "free trade," I can not see and do not believe that there is any substantial differences of opinion among Democrats as to what should be the true objects of, and the correct principles which should govern, the tariff system. seeming differences it appears to me to be more imaginary than real and may be wholly reconciled without the sacrifice of a single principle or of an honest conviction. I speak not of abstract and mere theoretical differences but of practical and substantial differences.

But, if it be true that the differences referred to are real and irrecon-

cilable, will true Democrats upon that ground alone disintegrate and disrupt the great Democratic party and seek new alliances with their political enemies as new converts and companions, or attempt the establishment of a new party with but one plank and one idea? Immortal spirits of the departed "fathers of Democracy" rebuke such

I have yet to learn that the tariff constitutes the only or the controlling issue between the two great political parties of this country. I have believed that there were, and I do now believe that there are, other greater and vastly more vital and important issues which have divided and which do now divide the Democratic and Republican parties; issues broad and distinct underlying and constituting the very foundation of our system of free government; issues which involve the liberty of the individual, the right of local self-government—constitutional law it-self—the Magna Charta of American freemen.

However important the tariff may be as an economic question which concerns the price of the clothes that cover the individual's shivering back or the food that feeds his hungry stomach, it dwarfs and debases into insignificant selfishness when contrasted with the great funda-mental questions of civil government, which concern the personal lib-

erty of the citizen and his rights as a freeman to a voice in its estab. lishment and administration.

The highest economic questions, necessarily temporary and varying in consequence of the constantly changing circumstances of a great and growing people, should not be forced into the lead and made to overshadow great cardinal principles of grovernment which should be in-flexable and preserved inviolate; nor should a lifelong devotion to, and the faithful services rendered in perilous times in the defense of, those great principles be swept away by a passing popular breeze, forgotten or despised amid the party struggles and selfish prejudices of the hour. While it is the undoubted, and should be the unquestioned, right of

every freeman in this country to speak, vote, and act against any pub-lic wrong or that which he may honestly believe to be an unwise or an unjust public policy, yet such opposition certainly should be limited by a due regard for the peace and good order of society and the general

#### SECTIONAL LINES AND OFFENSIVE EPITHETS.

In view of past sectional differences in this country, it is to be regretted that in the discussion of important questions, exciting great public interest, by the press, on the hustings, or in the forum, new party alliances, circumscribed by State or geographical lines, should be sug gested or thought of.

It is likewise to be deplored that in angry or deliberate debate upon national, party, or local measures irritating and taunting expressions. odious and offensive epithets, unpleasant reminders, criminations and recriminations, which tend to revive and keep alive old hatreds and animosities, or create new and irreconcilable differences and antagonisms

among the people, should be indulged in or encouraged.

The cry of "rebel brigadiers," "traitors and treason," and boastful pretensions to superior intelligence, virtue, and wisdom will no more restore "brotherly love" and cement the Union, than the jeers "iron-mongers," "Pig-Iron Kelley," "nabobs of the East," and the wholesale charges of "robbery" and "legalized plunder" will settle the tariff

question.

We can not be too strongly impressed with the necessity of a fair, candid, indulgent, and unimpassioned discussion of the tariff, when we remember that from the very adoption of the Federal Constitution it was the subject of much earnest and anxious debate, and has been the source of much bitter sectional feeling, which at a very memorable period in the history of this country almost culminated in an open rupture and actual armed hostility between a State and the General Government, and that it performed no insignificant part in bringing about the "fratricidal war of secession."

It is a question, without any other exciting cause than the personal pecuniary interests involved and directly concerning every individual in

the country, that naturally arouses the deepest public attention and stirs up the feelings of the whole people.

I must and would not otherwise believe that it is the settled determined to the settled mination of the great mass of our people in every section, State, and locality of this broad land that our past sectional controversies and the bloody "war between the States" whose "wager of battle" was the Union, which for near four long years tremulously oscillated amid the contending armies of the North men and the South men upon a thousand fields of combat, shall be forgotten and left undisturbed in the "track-

But let us step gently over the graves of the soldier dead, still too fresh to bear the heavy tread without leaving its impress; let us not expose too roughly the battle scars fast growing old, lest they might gape and bleed afresh; let us not blindly and foolishly nurse the delusion that human pride is less sensitive, human passions less strong, human projuss bitter, or human ambition less dangerous and daring than they were before our late conflict in arms began. No people on earth have greater cause or stronger inducements to be forbearing, charitable, repectful, and less intolerant, one to the other, than the American people These have become injunctions enjoined by bitter lessons in the past, and an inspiration begotten by the brightest and grandest hopes in the future. Far be it from me to draw aside the somber curtain draped in a nation's mourning; let it hang motionless and sacred from human touch, concealing from a fallen and a victorious people reunited the agonizing view of the rivulet and river crimsoned by brothers' blood, and the valley and plain, the hillside and mountain, dotted by the rude graves of a nation's sons. But we can not guard too closely against the errors and irritations of the past. If we would preserve the Union inviolate, we must have substantial, bona fide, and heartfelt reconciliation; deal with each other fairly and frankly, in a spirit of compromise and mutual concession, yielding due respect and consideration to the opinions and feelings of one another; sectional lines must be blotted out forever and left traceless in the hearts of the whole American people; sectional issues and sectional parties must be abandoned; sectional creeds and dispensations must no longer bar the way to the "holy communion" and the church altar; the servants of God must preach "Christ crucified," and not sectional politics; stirring up strife and hatred among men; sectional idolatry and sectional adoration must no longer be emulated among us.

I would that the fervid patriotism expressed by Mr. Webster, in his celebrated compromise speech of 1850, might sink deep and lastingly

into the heart of every son and daughter of America, native and foreign born, when he said :

born, when he salu:

Sir, my object is peace. My object is reconciliation. My purpose is not to make up a case for the North or to make a case for the South. My object is not to continue useless and iritating controversies. I am against agitators, North and South. I am against all narrow and local contests. I am an American, and I know no locality in America; that is, my country, my heart, my sentiments, my judgment, demand of me that Ishall pursue such a course as shall promote the good and the harmony and the union of the whole country. This I shall do, God willing, to the end of the chapter.

Yes, reconciliation! I would inscribe that hallowed word, big with meaning and freighted with every hope for the preservation of the Union, over the entrance, within and without, of every mansion, cottage, hamlet, and habitation in the land; I would stamp it upon every school-book, motto it upon the walls of every school-room and institution of learning in the land; I would letter it in every language upon every temple of justice and over every altar of worship in the land; with it I would encircle "in characters of living light" every star in the galaxy of States on every ensign, flag, and banner in the land; I would chisel it upon the tombstone and plantit in letters upon the grave of every dead soldier in the land; I would sink it deep into every living heart and proclaim it by every human tongue in the land; I would send it forth to every quarter of the world upon every outward-borne breeze, and bear it back upon every homeward-bound wind, gale, and storm; I would swear it in every oath, pronounce it in every benediction, and supplicate it in every prayer! I have not made these reflections as an alarmist or as a prophet of

evil, but being mindful of a growing tendency to divide our people into antagonistic classes, and of a disposition to encourage the formation of parties upon sectional lines, with the people of the Western, Pacific, and Southern States upon the one side, and the Northern, Middle, and Eastern States upon the other, on the ground of supposed irreconcilable differences as to local interests, I have made them from a deep sense of public duty as words of friendly caution and timely warning. To the scoffers at these utterances I have but to say, in the language of Job: "Hear diligently my speech, and let this be your consolation: suffer me that I may speak, and after that I have spoken, mock on."

The Tariff.

SPEECH

OF

# HON. MARK L. DE MOTTE,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the report of the committee of conference on the bill (H. R. 5538) to reduce internal-revenue taxation.

Mr. DE MOTTE said:

Mr. SPEAKER: I believe in the principle of protection, so far as it tends to develop our natural resources and build up our industries, that we may be independent of other nations for the necessaries of that we may be independent of other nations for the necessaries of life. I believe in it when it tends to give us control of the markets. There are some things in this bill which, in my judgment, do not contribute to either of these ends. The duty on sugar is one of them. I am not satisfied with the reduction on sugar, but would willingly stand for a tariff for revenue only upon that great necessity. The duty on lumber is another which does not contribute to either of those ends, and ought to be stricken off entirely.

those ends, and ought to be stricken off entirely.

The seventy millions of reduction is not enough; it should be double that. To reach that amount a reduction is made on tobacco, which, in my judgment, ought not to have been reduced. I would vote willingly to take everything in the nature of a license from the laborer in tobacco, and to relieve the producer as provided in this bill, but no further. If I could have moulded this bill, I would have made much larger reductions upon iron and steel and their manufactures—from sugar, and from woolen manufactures. But individual preferences must give way.

While the great State which I in part represent is interested in everything affected by this bill, I am glad she has no pet industry for which she demands the sacrifice of every other industry, as do some of the States.

some of the States.

I vote freely for this bill, because it reduces the revenues seventy millions of dollars. I wish it were twice as much, but because it is not I will not, with the other side of the House, say that no reduction shall be made.

It is apparent to the members of this House that but for factious

opposition from the Democratic members a better bill, securing a much greater reduction than that made by the present bill, would have been matured and passed, and I doubt not it is apparent also to

The Tariff.

SPEECH

HON. NATHANIEL J. HAMMOND,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the bill (H. R. 7313) to impose duties upon foreign imports, and for other purposes.

Mr. HAMMOND said:

Mr. SPEAKER: The constant sessions of the House day and night have allowed no time for quiet investigation, yet I wish to present a few thoughts upon a question of constitutional law which has arisen in the debate on this tariff bill.

On the 27th of January the gentleman from Maryland [Mr. McLane] made a speech upon the pending tariff bill in which he made the following remarks:

made the following remarks:

made the following remarks:

While my first and warmest sympathy is for the laborer, I have never anticipated the contingency in which I would be willing to injure, much less to destroy, those industries. And my opposition to this bill I base upon the fact that they are not protected in pursance of and in conformity with the Constitution, or in spirit of permanent and conservative equity. There is no difficulty about protecting them. There never has been any from the foundation of the Government to our day. They always have been protegted, and they always will be. The question is how they are to be protected. Shall the Government avail itself of its constitutional right to levy a particular kind of tax, that being the tax on imports shall it avail itself of that privilege in order to raise more money than the Government wants, and to raise it from a particular class of objects in order that it may protect a certain class of the community without raising revenue? My objection to this bill is that it does that, and I shall not vote for it. I prefer the original law, and when I say I prefer the original law it is but another form of expressing to the committee how odious the law is.

Soon after he ceased, Mr. Bland, of Missouri, and Mr. Russell, of

Soon after he ceased, Mr. Bland, of Missouri, and Mr. Russell, of Massachasetts, followed as to the policy of the bill proposed. The latter yielded to Mr. Converse, of Ohio. He declined discussing the policy, but joined issue with the gentleman from Maryland [Mr. McLane] as to the source of constitutional power to legislate for "protection."

His speech was published on the 6th of February. He said that he understood Mr. McLane to find the power only in section 8 of article 1 of the Constitution, namely:

The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

Commenting thereon, he said:

Power is there given to Congress to lay and collect taxes, duties, and imposts. What for ! The clause itself furnishes the answer in plain and explicit language, "to pay the debts and provide for the common defense and general welfare of the United States." If the power to protect American manufactures is conferred on Congress by that provision it must be embraced in the words, "provide \* \* for the general welfare of the United States." It would require a forced and unnatural construction to place such a meaning on such language.

Denying that such authority can be found there, he proceeded

The only other clause relating to this subject is the power to regulate commerce. The language of the Constitution is as follows:

"The Congress shall have power \* \* \* to regulate commerce with foreign nations, and among the several States, and with the Indian tribes."

In my humble judgment, the power and authority to enact such laws discriminating against foreign imports in favor of our own industries, whether commercial, agricultural, manufacturing, or mining, and thus indirectly protecting our own similar industries from foreign competition, is conferred by the language "to regulate commerce with foreign nations."

He was asked, Why raise a constitutional question at this time? He had answered that in his introductory remarks by this language:

There can be no question of greater importance than the settlement of differences in regard to the constitutional powers of the government under which we live. Erroneous opinions on that subject entertained and promulgated by the leading men of the country mislead the public judgment. The evils increase and multiply with the lapse of time, and are liable, as in our own recent history, to culminate in political convulsions, the consequences of which may last for generations.

Differing with him as to source of the power, but agreeing with him in the importance of "the settlement of differences in regard to the constitutional powers of the government under which we live," I wish to review his argument. First, by "power" we do not mean here capacity to do a thing by abuse or brute force. In that sense the commerce clause is broad enough for the purpose. But so also are others broad enough. Congress has the power "to coin money, regulate the value thereof," &c. Under that it might make gold or silver the sole standard of value to the exclusion of the other, and thereby affect the values of the gold mines of California or the silver mines of Nevada.

ver mines of Nevada.

Under the power "to establish post-offices and post-roads," postal facilities may be given to one place and denied to another without regard to the needs of either. "Tribunals inferior to the Supreme

Court" may be so located as to prove conveniences or burdens to the people. In all regulations of the Army and Navy favoritism might be practiced. For instance, the soldiers might be required to be clothed only in wool or only in linen, or in cotton, and fed only with bacon and corn bread, or only with beef and wheat bread. In either case some special industry would be helped and others injured. But by "power" we mean capacity to do according to the scheme of equality and justice set forth in our Constitution. I will not repeat the well-known argument as to the power incidentally to protect, under article 1, section 7, as contended for by the gentleman from Maryland [Mr. McLane]. My purpose is not to show where the power lies nor its extent, but to show that it does not lie in the commerce clause as contended for by the gentleman from not lie in the commerce clause as contended for by the gentleman from Ohio [Mr. CONVERSE].

Onto [Mr. CONVERSE].

That under the commerce clause Congress has power to pass navigation laws, and the like, may not be denied. But I submit that extracts from the opinion of Marshall, C. J., in Gibson vs. Ogden, 9 Wheaton's Reports, can have no relevancy here. That decision was simply that New York could not grant to Fulton and Livingston the right to navigate the Hudson and other rivers (over which New York changed in the results of the well-well.) York claimed jurisdiction) with steam-vessels to the exclusion of other steam-vessels licensed by the United States. The question here is, where is the constitutional power to pass this bill "to impose duties upon foreign imports?"

Nor should any weight be given to the inquiry why none has invoked the decisions of courts against protective statutes. It was answered by the suggestion of the gentleman from Kentucky [Mr. Carlisle], namely, "but the courts cannot inquire into the purposes of Congress." The gentleman from Ohio [Mr. Converse] replied: "Certainly not." But he cited one or more statutes in the last century, in the preambles of which it was stated that the statutes were to impose duties and to encourage manufactures, and his contention was that here was in the law an avowed purpose to protect, and there fore courts might be asked to enioin their enforcement. If courts could inquire into the purposes of Congress how could they say what part of such acts were for legitimate, and what parts for illegitimate purposes? Such an effort by a court would be absurd.

mate purposes? Such an effort by a court would be absurd.

Even could the matter be gotten before a court, there would be the rule that no act of Congress can be declared unconstitutional unless it is so beyond a doubt. And to that obstacle would be added the other grave difficulty of courts undertaking to control the taxsecond Congresses each passed an act in the preamble of which it was recited that such protection was "one of the objects of its enactment." But that fact throws no light upon the issue as to whether this power of protection is found in the taxing clause or only in the commerce clause, and citing the long list of names of eminent men who participated in passing those statutes has no relevancy to that issue; it dazzles, but does not enlighten.

The gentleman from Ohio [Mr. Converse] invoked the aid of Judge Story. I will show how carelessly he had read that eminent commentator; that he has attributed to Mr. Story words which he not only did not use as an expression of his own opinion but was guarded, before and after those quoted words, to say he was not giv-ing them as his opinion on the subject, but only as the arguments of

others.

Mr. Story, after reviewing the history of the contention about the granting the taxing power to Congress, began the criticism upon its meaning in his first volume at section 949. Having shown the distinctions between direct and indirect taxes, and that "duties, imposts, and excises" were indirect taxes, he proceeded to discuss why the Constitution required these to be "uniform throughout the United States." He said, "It was to cut off undue preferences of one State over another in the regulation of subjects affecting their common interests. Unless duties, imposts, and excises were uniform, the grossest and most oppressive inequalities, vitally affecting the purinterests. Unless duties, imposts, and excises were uniform, the grossest and most oppressive inequalities, vitally affecting the pursuits and employments of the people of different States, might exist. The agriculture, commerce, or manufactures of one State might be built up on the ruins of those of another; and the combination of a few States in Congress might secure a monopoly of certain branches of trade and business to themselves, to the injury if not to the destruction of their less-favored neighbors," &c. (Ib., § 957.)

In section 958 he first mentioned the question "whether Congress can lay taxes to protect and encourage domestic manufactures." In section 959 he said, "This subject has been already touched in considering what is the true reading and interpretation of the clause conferring the power to lay taxes. If the reading and interpretation there insisted on be correct, it furnishes additional means to resolve the question under consideration."

He continued, giving the alleged reasons pro and con, but no opinion of his own, down to section 974, and then said, "Such is a general summary of the reasoning on each side, so far as it refers to the power of laying taxes. It will be hereafter resumed in examining the nature and extent of the power to regulate commerce."

He then proceeded to discuss the powers as to the appropriation of money from the Treasury, questions as to internal improvements, &c., to the end of the first volume of his Commentaries on the Constitution.

His second volume began with the power of borrowing money (§ 1055), and considered regulating commerce, &c. (§ 1056, &c.), until

he reached § 1076, on page 23, quoted in full by the gentleman from Ohio [Mr. Converse]. Its pertinent point was, "Many of the like powers have been applied in the regulation of foreign commerce. The commercial system of the United States has also been employed for the purpose of revenue," &c. I will not stop to contend that Mr. Story was simply reciting history, nor that he did not then embrace the commerce clause as the basis of the commercial system of the United States. But surely he was not then discussing which of those clauses gave the right of protection. That had not been mentioned by them. But in the very next section he said: by them. But in the very next section he said:

A question has been recently made whether Congress have a constitutional authority to apply to the power to regulate commerce for the purpose of euconraging and protecting domestic manufactures.

Why did he say "recently made?" Sergeant, on the Constitution, published in 1822, had suggested no such thought. Rawle's work on the Constitution was published in 1825. There no such thought was suggested. He located the power in the taxing clause, and his language is pertinent to this bill:

Indirect taxes affect expenses or consumption. Those who reduce the imption of an article so taxed reduce the amount of their taxes. (Page 8)

Mr. Story presented the arguments contained in the protest of South Carolina in the winter of 1828 against the acts of Congress of May, 1824, the address of the free-trade convention at Philadelphia, in the winter of 1831, and Mr. Drayton's oration of July, 1831. That took him to § 1079. To that section was a note citing those documents, and this language, namely:

The above arguments and reasoning have been gathered as far as could be from ocuments admitted to be of high authority by those who maintain the restrictive

The § 1080 began thus:

The reasoning of those who maintain the doctrine that Congress has the anterity to apply the power to regulate commerce to the purpose of protecting and occuraging domestic manufactures is to the following effect &c.

Then came § 1081, in these words:

Then came § 1081, in these words:

Indeed, the advocates of the opposite doctrine admit that the power may be applied so as incidentally to give protection to manufactures when revenue is the principal design, and that it may also be applied to countervail the injurious regulations of foreign powers when there is no design of revenue. These concessions admit, then, that the regulations of commerce are not wholly for purposes of revenue, or wholly confined to the purposes of commerce considered per se. If this be true, then other objects may enter into commercial regulations; and it so what restraint is there as to the nature or extent of the objects to which they may be admitted that a power given for one purpose can not be perverted to purpose wholly opposite or beside its legitimate soope. But what perversion is there in applying a power to the very purposes to which it has been usually applied! In applying a power to the very purposes to which it has been usually applied! In der such circumstances does not the grant of the power without restriction concede that it may be legitimately applied to such purposes? If a different intent had existed, would not that intent be manifested by some corresponding limitation!

Mr. Story proceeded with the argument of those on the other side.

Mr. Story proceeded with the argument of those on the other side, citing Madison's letter of 28th September, 1828, to Mr. Cabell, Verplanck's reply to Drayton, and the address of the New York convention for the encouragement of domestic industries of 1831, &c. This history shows that Mr. Story meant that then "recently" a party had begin to contend for the Federal ideas of Hamilton in 1791. But when he had concluded giving their views he ended with \$\frac{1}{2}\$ (1981) when he had concluded giving their views, he ended with § 1095 as follows:

Such is a summary (necessarily imperfect) of the reasoning on each side of this contested doctrine. The reader will draw his own conclusions, and these commentaries have no further aim than to put him in possession of the materials for a proper exercise of his judgment.

The gentleman from Ohio [Mr. CONVERSE] paraded § 1081 thus: On this point Story on the Constitution, volume 2, page 26, says

It is plain that not only did not Story say that, but that in advance he announced he would give no opinion of his own, cited those whose opinions he gave, and when done reminded his readers that

he declined any opinion on the subject.

he declined any opinion on the subject.

Mr. CONVERSE's quotation from the message of President Jackson to Congress, on the 7th of December, 1830, serves no valuable purpose in this discussion. Jackson said, "The object of the tariff is objected to by some as unconstitutional, and it is considered by almost all as defective in many of its parts. The power to impose duties on imports originally belonged to the several States. The right to adjust these duties with a view to the encouragement of domestic branches of industry is accompletely identical with that prover that it is difthese duties with a view to the encouragement of domestic branches of industry is so completely identical with that power that it is difficult to suppose the existence of the one without the other." He proceeded to say it was surrendered to the General Government; that Washington, Jefferson, Madisen, and Monroe had "repeatedly recomended the exercise of the power under the Constitution," &c. But how does that show under which clause of the Constitution they thought the power must be formed? The gentleman from Maryland [Mr. McLane] admitted the power, and the only question is as to its source.

Nor does the letter of 28th September, 1828, from Mr. Madison to Mr. Cabell help the gentleman from Ohio. Mr. Madison used there the language quoted by the gentlemen from Ohio. But he began that letter by stating that he and Mr. Cabell had conversed "on the constitutionality of the power in Congress to impose a tariff for the encouragement of manufactures." He said, "The Constitution vests in Congress expressly" the power to lay and collect taxes, duties, imposts, and excises, and "the power to regulate trade," said the

latter included the former, and then used the language quoted. Later in that letter he said: "If revenue be the sole object of a legitimate impost, and the encouragement of domestic articles be not within the power to regulate trade, it would follow," &c. It is plain that he derived the power from both, and did not, as does the gentleman from Ohio, insist that it stood upon the commerce clause only. (3 Madison's Letters, 636.)

I wish to notice this correspondence of Mr. Madison a little further.
Mr. Cabell asked to publish that letter. Mr. Madison, on the 15th of October, 1828, declined because of the pending Presidential election, intimating that it was written for Mr. Cabell's private benefit, and concluding thus:

concluding thus:

Arguments and evidence which after that event might be heard with patience and even candor by those appealed to, would in their existing excitement be received with a prejudice and with perhaps hasty commitments very unfavorable to the result wished for.—Ib., 647.

the result wished for.—16., 647.

He wrote another letter to Mr. Cabell on the 30th of October, 1828. Professor Davis, professor of law in the University of Virginia, dedelivered a lecture which was afterwards published in 1832. It was a masterly review of Mr. Madison's letters to Cabell. To that Mr. Madison wrote a reply which has no date and was never sent off. In this last letter he discussed the relative status of citizens of the United States to their representatives and the duty of the latter in taxing the former. That letter had this language:

The Constitution must have had this in view when vesting in the representatives of the people, in exclusion of the representatives of the States, the right to originate bills of revenue.—4 Madison's Letters, 241.

Had he, like the gentleman from Ohio, claimed that this power to protect home industries came from the commerce clause, and not from the taxing clause, such language would have been absurd. And this last was a careful and exhaustive letter.

I will not say that no other commentator on the Constitution of the United States except Timothy Farrar, of Massachusetts, has con-tended for the doctrine of the gentleman from Ohio. I do not know.

tended for the doctrine of the gentleman from Ohio. I do not know. But I remember none other.

He does agree with the gentleman from Ohio. He says that Congress may regulate "under the commercial power of Congress what has been called the strictly internal traffic of the inhabitants of a State among themselves (Farrar on the Constitution, § 355)," and he cited the opinion of Hamilton on the United States Bank. The same author, by way of showing the absolute power of Congressional power to tax, quoted, "The power to tax involves the power to destroy," and cited Marshall, Chief-Justice, 4 Wheat., 431. The quotation is correct from McCullough vs. Maryland, but is made to mean exactly the opposite of what Mr. Marshall meant. Mr. Marshall added what the author suppressed: what the author suppressed:

To carry it to the excess of destruction would be an abuse to presume which would banish that confidence which is essential to all government.

I will say nothing more against this book than these two speci-I will say nothing more against this book than these two specimens convey. I may remark that it was published in 1867, when madness ruled the country. So far I have been answering the views of the gentleman from Ohio. A word or two more upon the issue between us. He says that the sole authority for this "protective policy" is in the power "to regulate commerce with foreign natious and among the several States and with the Indian tribes." If under that this doctrine may be supported, how far may Congress go in protecting the industries of one State or section in our Union against those of another State or section in that Union?

But, again, if this bill to levy imposts on foreign merchandize rests

But, again, if this bill to levy imposts on foreign merchandise rests upon the commerce clause and not upon the taxing clause, the Senate may originate such bills. A little history on that point will be valuable here.

In 1787 the House refused to report in favor of having the Secretary of the Treasury propose plans for raising revenue because they would keep that power intact in the hands of the representatives of the peo-

In 1833 Mr. Clay offered in the Senate a bill changing the tariff. Some sought to sustain the jurisdiction of the Senate to originate that bill because it reduced rather than "raised" revenue. Some said it was not "for raising revenue," but for protection. But Forsyth, Dickinson, and Webster brushed away such quibbling and the claimed invisidition was expressed as jurisdiction was surrendered.

jurisdiction was surrendered.

Senator McDuffie, by a bill in the Senate in 1843, sought to revive the tariff of 1833, but its own Finance Committee refused to sustain it, because such bills must originate in the House. In 1871 the House, for the same reason, refused to consider a Senate bill to repeal so much of the act of 1870 "to reduce internal taxes, and for other purposes," as continued beyond 1869 the income tax. In April, 1872 the Senate substituted for a House bill to repeal the existing duties on tea and coffee a bill to reduce other taxes. And when this came to the House Mr. DAWES (now Senator) moved a resolution that it violated the spirit of the clause giving the House exclusive that it violated the spirit of the clause giving the House exclusive right to originate such bills. It was carried by 153 to 9 votes. And of those voting in the affirmative seven are now in the United States Senate. (See Record, April 2, 1872.)

On one of these occasions Mr. Garfield prepared an elaborate speech, in which he used this language:

The whole history of the subject leads to the inevitable conclusion that this ause of the Constitution [the taxing clause] confers absolutely and exclusively

the right to inaugurate all measures for the imposition, regulation, increase diminution, or repeal of taxes.

In 1880 Mr. Kelley, of Pennsylvania, moved to suspend the rules and pass the following resolution:

Resolved. That it is the sense of the House that the negotiation by the executive department of the Government of a commercial treaty whereby the rates of duty to be imposed on foreign commodities entering the United States for consumption should be fixed, would, in view of the provisions of section 7 of article 1 of the Constitution of the United States, be an infraction of the Constitution and an invasion of one of the highest prerogatives of the House of Representatives.

It was agreed to by yeas 175, nays 62. And the gentleman from Ohio [Mr. Converse] voted in the affirmative. I mention this last to show how jealous the House has been of the Senate in these matters, and that, too, on the sole ground that such legislation invades "one of the highest prerogatives of the House of Representatives." And see the debate on this question, in the Record, on February 27,

None will have failed to see the importance of this issue. If the None will have failed to see the importance of this issue. If the gentleman from Ohio [Mr. CONVERSE] is right, there is no constitutional limit to the power of protection, for the Constitution puts no limit upon the power "to regulate commerce." But if the source of power is the taxing clause, there is the limit of uniformity, equality of burdens, and that the imposition shall be for "the general welfare," and not for particular persons or sections.

I make no apology for this tedious review. As plain as it seems to be that the power to pass a bill to "impose duties upon foreign imports" comes from the power to lay and collect taxes, imposts, duties, and excises" and from no other part of the Constitution, honorable gentlemen have contended otherwise.

With the issue between myself and the gentleman from Ohio [Mr.

With the issue between myself and the gentleman from Ohio [Mr.

ONVERSE] I am done.
But the gentleman from Ohio [Mr. CONVERSE], though disavowing ny purpose of advocating the policy of protection, made this closing remark:

Not only has this power been exercised for a hundred years, but George Washington, Thomas Jefferson, James Madison, James Monroe, and Andrew Jackson all of them, recommended to Congress the propriety of nonrishing, fostering, and protecting the domestic industries of the United States. They were not guilty of bad reasoning in weighty matters affecting the powers of the Government and the welfare of the American people, and can not be accused of a desire to wrong any section of this Union or any class of their fellow-citizens.

There is nothing in that to decide the source of the power to make arifflegislation. That is what he professed to be hunting for. That tariff legislation. entence (without his intention, I suppose) simply put the weight of sentence (without his interition, I suppose) simply put the weight of those names in the scales to overcome the opposition to this policy. I venture a word of comment: Washington leaned strongly to Federalism, yet he went not to the extent of the present protectionists. In his message of 1796 he did recommend to Congress the encouragement of manufactures; but why! His language was:

Ought our country to remain dependent on foreign supply, precarious because liable to be interrupted? If the necessary article should in this mode cost more in time of peace, will not the security and independence thence arising form an ample compensation?

This admitted that protection increased the prices to consumers, and it applied only to articles "necessary" in case of war; and that was the spirit if not the letter of the advocacy of protection by Jefferson, Madison, and Monroe in their messages, so far as I am informed.

Mr. Jefferson's opinions are fully set forth in "Views of the President of the United States on the subject of internal improvements," published in 1822. In 1825 he denounced the supporters of the tariff of 1824 in a letter to Mr. Giles. One sentence is quite apt in this

Under the power to regulate commerce they assumed indefinitely that also over griculture and manufacture; and called it regulation, too, to take the earnings of se of those branches of industry, and that, too, the next depressed, and put them into se pockets of others, the most flourishing of them all.

Protectionists are entitled to all the comfort which can be taken

from Mr. Jefferson's name.

I submit, that what might have been the views of those men as to a policy in the infancy of the country, when we were isolated by distance and in constant danger of war, might not be their views now (had they lived), when our normal condition is peace, and when steam and lightning have annihilated distances and made the nations of earth familiar neighbors. General Jackson would doubtless ex-press himself now with less warmth than in 1832, when he was opposing South Carolina's nullification.

In Madison's letter to Professor Davis, he said:

For myself, although my name has been seen on the ultra tariff list, I have adhered to the doctrine stated in my letters to Mr. Cabell, which concurred in the of free trade as a theoretic rule and subject to exceptions only not inconsistent with the principle of it. And I cannot but say that I have not met with any disproof of the correctness of such exceptions. Those who admit no exceptions to the rule, and those who multiply exceptions into the rule, equally forget the prudent rule of axiding extremes. avoiding extremes.

How like this were the remarks of Mr. Webster, in his speech of the 2d of October, 1820, at Faneuil Hall:

He certainly thought it might be doubted whether Congress would not be acting somewhat against the spirit and intention of the Constitution, in exercing a power to control essentially the pursuits and occupations of individuals in their private concerns, a power to force great and sadden changes both of occupation

and property upon individuals not as incidental to the exercise of any other power, but as a substantive and direct power. If such changes were wrought incidentally only, and were the necessary consequence of such impost as Congress for the leading purpose of recenue should emet, then they could not be complained of But be doubted whether Congress fairly possessed the powers of turning the incident iste the principal, and, instead of leaving manufactures to the protection of such laws as should be passed with a primary regard to revenue, of enacting laws with the avowed object of giving a preference to particular manufactures, with an entire disregard to all considerations of revenue; and instead of laying such imposts as would best answer the purpose of raising revenue with the least burden on the public, carrying the impost on certain articles to a burdensome excess with a full knowledge that the increase of duty will diminish the amount of revenue raised.

And how nearly does that express the opposition to the present bill. No man in the country advocates direct taxes. None advocate free trade. Most Democrats would greatly reduce internal taxation, and many would have it wholly repealed. All Democrats agree that protection will come under the taxing clause by duties and imposts. They only ask that the purpose shall be to raise revenue, and the incident be encouragement of domestic industries.

Rivers and Harbors.

SPEECH

# HON. HORACE F. PAGE.

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1883,

On the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. PAGE said:

Mr. Speaker: Called by your partiality, and without solicitation on my part, to the chairmanship of the Committee on Commerce at the opening of this Congress, I accepted the trust with a determination to discharge its duties according to my best abilities, in such a manner as to protect and forward the great public interests placed in that committee's charge. Animated by a like determination and zeal for the best interests of the Government, the committee met, and after four months of hard and incessant and studious labor, gave to the House a

For the first time in the history of the nation the Committee on Commerce had taken up and grappled with the various plans for the improvement of the Mississippi River, and had unanimously adopted the plan of the Mississippi River Improvement Commission, as indorsed by a previous Congress, which, however, failed to make sufficient appropriations to carry on that plan or even for the purchase of the "plant" needed for the work. The committee was now confronted on the one head by the fact that any appropriation to carry out the plans of the Mississippi River Commission would be the inauguration of a system of improvement on that great river involving an expenditure of from \$37,000,000 to \$38,000,000. On the other hand they had to face the facts that this great enterprise had been sanctioned and approved by a revious Congress; that it had been most emphatically indorsed by President in his special message of April, 1882, to the Senate; that the Senate had indorsed it with such unusual emphasis as to pass a Senate bill appropriating some \$6,000,000 for the Mississippi and Missouri Rivers; that the entire Mississippi Valley, through petitions referred to this committee, demanded liberal appropriations for the work, and that delegations representing almost every commercial interest, as well as all parts of the nation, appeared before the committee and passed res-

olutions urging immediate, favorable, and generous action.

Under this pressure, and in accordance with their own conscientious judgment of what was just and right and proper, the committee appropriated for the improvement of these two great arteries of commerce nearly \$7,000,000, which, added to the amounts appropriated for the river and harbor improvements through the Eastern, Middle, Southern, Northwestern, and Pacific coast States, and which were not proportionately greater than in the river and harbor act of 1881, made the bill an exceptionally large one. This bill having passed both Houses of Congress, was vetoed by the President, and subsequently, by a two-thirds vote of both Houses, became a law notwithstanding that veto. On its passage a howl went up from the metropolitan press of New York, Chicago, Cincinnati, and other great railroad centers, denouncing the river and harbor act as a "huge steal;" but, in my judgment, it evoked no responsive condemnation of that act by the people, although

everything that malignant perversion of that act by the people, although everything that malignant perversion of facts could do to mislead and inflame the public mind was done by that press.

When, therefore, the Committee on Commerce again met at this session they considered it none the less their duty, under the constitutional prerogative of this House, to originate all bills carrying appropriations, notwithstanding the assaults of the press and of those in power, to meet in some degree the demands of commerce for the proper improvement

of its great natural highways, and to prepare a river and harbor bill which, while it fell very far short of the requirements of the growth of the country and its fast increasing water commerce, was sufficient at least to protect what had already been accomplished, besides affording some little aid to the future improvement of our harbors and some of

some little aid to the future improvement of our nariors and some of our navigable water ways.

This bill, aggregating only \$8,000,000, after one of the severest struggles ever witnessed on the floor of the House of Representatives, was at last passed and sent to the Senate within three days of the time fixed by the Constitution for final adjournment. Owing to the obstructions of its enemies it thus reached that body too late to receive the consideration it required. As a direct consequence of this failure there will be scarcely any money to go on with on July 1, 1883, when the next fiscal year commences. Whatever there is of responsibility for this condition of things must fall upon those who obstructed the passage of the bill, and upon the Executive, who proclaimed that no more money was necessary for river and harbor improvements.

The time will come, Mr. Speaker, and at no far distant day, when the people of this country engaged in agricultural pursuits and productive industries of all sorts, whether in the great valleys of the Mississippi and Missouri, in the fertile regions of the Northern lakes and rivers, on the Pacific coast, around the Gulf of Mexico, and through all the Southern States of this Union, will, with no uncertain sound. demand of future Congresses improvements of the rivers and harbors of this country in the interest of cheap transportation, and of protection

from the undue exactions of railroad monopolists.

For that time I for one can wait with patience, in the full convis tion that the Committee on Commerce of this House, and all those who supported them, will yet receive a triumphant vindication which neither the clamor of a portion of the press nor the interference of others can Nothing can deprive them even now of the consciousness duty well done, nor can any one rob them now or hereafter of the knowledge that in the last river and harbor act, as also in the bill of this session, they embodied provisions so restrictive upon proposed surveys for new works that the effect was immediately felt to a most marked degree, obviating in fact the necessity of undertaking at this time more than one new work—and that a most important one to the general com-merce of the Columbia River—instead of the scores and scores of new works that had hitherto been pressed upon the committee. Had the committee done nothing further than this they would still be entitled to the lasting credit of inaugurating this great reform which will save to the Government the unnecessary expenditure of millions of dollars every year.

Rivers and Harbors.

SPEECH

#### HON. JOHN R. LYNCH,

OF MISSISSIPPI.

IN THE HOUSE OF REPRESENTATIVES, Thursday, March 1, 1883,

On the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. LYNCH said:

Mr. SPEAKER: Before the vote is taken upon the final passage of this bill I desire to make a few remarks in behalf of the section from which I come and in behalf of the constituency I have the honor to represent upon this floor. I desire to speak especially in behalf of the proposed appropriation for the improvement of the channel of the Mississippi River. This is a measure which deserves and should receive the united support of representatives of all parties and from all sections. Is it claimed that this appropriation is not warranted by the Constitution? My answer is that it is supported by some of the ablest constitutional lawyers in the country; but even if it is a doubtful question the people should be given the benefit of the doubt. Is it claimed that the appropriation should not be made for the reason that the owners of private property will be incidentally the beneficiaries thereof? My answer is that the owners of private property along the lines of the great Pacific railroads were no doubt the incidental beneficiaries of the construction of said roads, and yet no one, I presume, claimed that the Government should not aid the construction of these roads for that reason. This work, Mr. Speaker, is not local but national; not sectional, but

To the Democratic members of the House I feel that it is my duty address a few remarks. You have no doubt accepted the result of the late elections as an expression of confidence in your party, if not an indorsement of your principles. So thoroughly convinced are you of this that you will be sadly and seriously disappointed if the country is not turned over to your care and keeping at the next national election. Whether your expectations in this respect will be realized or not, all must admit that important trusts have been confided to your keeping and grave responsibilities have been placed upon you. So far as the colored peopleat the South are concerned, perhaps it is well that I should trankly tell you that nothing you may do or fail to do will be to them a serious disappointment. But with a large majority of the white people of that section it is different. They have supported you with a self-sacrificing devotion which entitles them to your gratitude, your friend-ship, and your support. They have supported you when they believed you deserved it, and they have stood by you when they believed it to be to their interest to do otherwise. They have been true and faithful to you even when you were false and faithless to them. They have rejoiced with you in the hour of your victory and they have sympathized must admit that important trusts have been confided to your keeping

to you even when you were false and faithless to them. They have rejoiced with you in the hour of your victory and they have sympathized with you in the hour of your adversity.

If it is possible for any people to have a claim upon a party which ought not, can not, and must not be ignored, it must be admitted by all that the Southern white people have that claim upon the Democratic party of this country. Will you ignore their wishes, disregard their claims, and reject their demands? If so, my prediction is that they will refuse to smile at the witticisms and facetious jokes of my friend from New York [Mr. Cox], nor will they be satisfied with the masterly eloquence of the gentleman from Kentucky [Mr. CARLISLE], nor will they follow the sagacious leadership of the gentleman from nor will they follow the sagacious leadership of the gentleman from Pennsylvania [Mr. RANDALL]. Already the murmuring sounds of discontent are distinctly heard and perceptibly felt throughout the Mississippi Valley. Southern white men did not receive the news of Democratic victories at the North at the late elections with the same satisfaction and delight as at previous elections. Why? Because they saw that prominent men in both parties at the North had been defeated because they voted at the last session of Congress for the passage of the river and harbor bill, which bill, in their opinion, contained a just, fair, and equitable recognition of the claims of their section. When they saw that their friends in both parties had been slaughtered they received the news with many misgivings, with serious apprehensions, and in many instances with deep regret. The impression was created upon their minds that the result was due in a great measure to hostility to and a war upon their section and its interests, not by Northern Republicans alone, but by Northern Democrats as well.

But again, they do not believe that the late election was an indorsement of the principles of the Democratic party, but that it was, in addition to a feeling of hostility to their action, a condemnation of the methods and practices of one party rather than an indorsement of the purposes and tendencies of the other. There are thousands of white purposes and tendencies of the other. There are thousands of white men at the South who have voted the Democratic ticket at every elec-tion since the war, not because they love Democracy but because they distrusted Republicanism. There are thousands of others who have voted the same way during the same time not because they are Demo-crats but because they believed, as between the two parties, the Democratic was more friendly to their section and to their interests. I speak whereof I know when I say that this state of affairs is being rapidly changed; and it must be admitted by all that in proportion as these things change the white as well as the colored man will become more independent and the attachment of either to any political party will de-

pend more upon the attitude of parties to the questions and issues of the day than upon the passions and prejudices of the past. To the Republican members, and especially those who through the partiality of your respective constituents will occupy seats in the Forty-eighth Congress, I feel that I should make a few parting admonitory remarks. Race prejudice and sectional hatred are not only on the wane throughout the South, but in spite of the fact that many grave frauds are committed in the management and conduct of elections in some localities there is a strong sentiment, which is growing in strength every year, in favor of fair and honest elections and in opposition to political intolerance and proscription. Do you ask me for evidences of the growth of this sentiment? I have only to point to the late election in the district where I had the honor of being the candidate of the Republican party. The registration books of the various counties in this district show that there are about 1,500 more white than colored voters, and previous elections show that the usual Democratic majority in the district is between 1,500 and 2,000; and yet at the late election one of the strongest and ablest Democrats in the district was elected by a majority of about 600. As the candidate of the Republican party, I am proud to be able to say that I was the recipient of the cordial and hearty support of some of the most substantial and respectable white

men in Southern Mississippi.

Let the leaders of the Republican party pursue such a course as will satisfy these men that, while the Republican party will defend and protect all citizens in the exercise and enjoyment of their rights as far as it has the power to do so, and while it will not under any circumstances countenance or encourage the commission of election frauds, yet under its administration justice will be done to all sections of our country and to all classes of our people—that the Republican party is national and not sectional, that it is as much the party of the South as it is the party of the North, that every man, without regard to race or color, who believes in the National Union, the equal rights of men, the purity of elections, and an economical government, will find in the Republican party his friend, his advocate, and his protector.

Southern Pacific Railroad.

#### SPEECH

OF

# HON. GEORGE W. CASSIDY.

OF NEVADA,

#### IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1883.

On the Southern Pacific Railroad,

Mr. CASSIDY said:

Mr. SPEAKER: No right of the people is affected by this bill. It sim-Mr. Speaker: No right of the people is affected by this bill. It simply seeks to extend to these corporations certain conveniences in the administration of their business. If it has a tendency at all it is in the direction of cheaper commerce between the Atlantic and Pacific Oceans. Seven or eight useless organizations and sets of officers are dispensed with in the event of the passage of the bill. These several organizations, I admit, are not highly expensive, but it costs something to maintain them. The question of monopoly or anti-monopoly has no proper place in this discussion. That question is not directly involved. These railroads are practically consolidated now. The bill merely authorizes an existing fact. It is to bestow upon an existing consolidation a name and nothing more. Shorn of all outside issues, this is the case. The and nothing more. Shorn of all outside issues, this is the case. The several links or roads recited in the bill now form integral portions of several links or roads recited in the bill how form integral portions of a continuous and operated line, practically under the same ownership and management. Manifestly when this line is consolidated it can not be a greater monopoly than it is to-day. Not a single power is conferred by this bill that these several roads do not enjoy to-day as to the matter of freight and passenger rates. In some of the States, and particularly the Territories, through which the line passes extraordinary rates are allowed by law.

Mr. Speaker, it has always been my aim in my capacity as a legis-

lator to be exactly just to corporations as well as individuals. We can all afford to be fair. None of us, I hope, can afford to be unfair. This bill, considered, therefore, independent of prejudice as to the grasping bill, considered, therefore, independent of prejudice as to the grasping tendencies of all great railway corporations, contains nothing that should alarm any one. As I have already said, the rights of the people are well guarded in every particular. By the express terms of the bill the land grant is left intact. Competing or parallel lines are forbidden to enter the consolidation. As amended the right is reserved to the States and Territories to regulate transportation charges within their respective borders. On through or interstate commerce Congress may exercise its undoubted power to regulate charges. The right to sue and be sued in all State courts is also specifically provided for. What more, then, can be required? In what sense are the rights of the people in What more, vaded or infringed? In my judgment the best interests of the people both East and West will be promoted by this consolidation. The Southern Pacific has many advantages over other transconti-

nental lines. The climate of the section through which it passes is unsurpassed. It can never be obstructed by the deep snows of winter. And in this connection it is pertinent to say that if generally accredited rumor be correct it is in contemplation by its managers to make this the great cheap route from ocean to ocean. California's great wheat and wine products are to be moved by this route to the Atlantic seaboard, and thence to Europe. It means cheaper freights than have

hitherto obtained across the Continent; at least this is what the man-

hitherto obtained across the Continent; at least this is what the managers assert through the newspaper press.

The sole object, Mr. Speaker, of this bill is one of convenience to the companies in question. They care not how many limitations you place upon the bill. Congress has certain powers over the Territories through which this line passes. The companies simply want to get under one name without injury or prejudice to anybody or any existing legal right held by any State or Territory. This is all they ask; and their object in desiring to form this consolidation is that they may stock and bond the whole route as one property. There is positively nothing else in the bill; and I submit that the request may be reasonably granted without injury of any character to any individual or secably granted without injury of any character to any individual or sec-tion. The stocking of the road in eight sections under different names is not desirable, nor can its bonds be made as readily available in the markets of the world. To surmount these difficulties is why the consolidation is sought, and no other power whatever is carried by the bill.

Mr. Speaker, if this were a proposition to regulate interstate commerce, that would be quite a different thing. Nothing would afford me greater pleasure than to give my voice and vote to the support of a greater pleasure than to give my voice and vote to the support of a measure having for its object the lowering of rates on the great trunk lines of this country. I stand pledged, sir, before the people of my State to vote for the Reagan bill or any kindred measure whenever the same shall be presented, and I shall ever hold myself in readiness to redeem that pledge. But the measure under consideration has nothing whatever to do with freight and passenger rates. It is in the direction of lower rates, if anything. It is the experience of the people of my State that a divided ownership in the great through lines is not in

the interest of cheap freights.

The Union Pacific and Central Pacific may be cited in illustration of this idea. Whenever we in Nevada have arraigned the Central Pacific for high rates the answer has always been that the fault rested with the Union Pacific. We want no room for pretexts. Hence I am strongly of the opinion that all interests will be best subserved by permitting this consolidation to take place. The Northern Pacific is a single company spanning the continent to the northward. Why not with equal propriety allow the Southern Pacific to become a continuous route in name as it is in fact between the Atlantic and Pacific along to the south-ward and then hold it to a strict accountability for the exercise of the extraordinary powers with which all of these corporations are clothed? I shall vote for the bill, Mr. Speaker, believing that there are no hidden dangers in its provisions

The Mississippi River.

SPEECH

# HON. WILLIAM R. MOORE.

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES.

Thursday, March 1, 1883,

On the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain rivers and harbors, and for other purposes.

Mr. MOORE said:

Mr. SPEAKER: At this late and very peculiar stage of the session I deem it unwise to occupy needlessly the time of the House; and yet, as a citizen, living directly on the banks of the great river, I can not resist the impulse, amounting to a duty, to say at least something. In treating of the Mississippi River we can not safely apply the ordinary rules which fit other rivers. It drains an area of country larger than half a dozen of the nations of Europe; and every drop of water that falls between the Alleghanies and the Rocky Mountains—the richest, the largest, and the grandest valley beneath the sun—finds its way to the Gulf of Mexico only through this most wonderful of all the wonderful rivers of the earth. If its course and current were through a gravelly or stony soil, like the Hudson, the Susquehanna, the Potomac, or some of the other ordinary rivers that run through the States farther to the north, then we might find an easy solution to the problem which is and has long been taxing the study and ingenuity of scientific men and engineers both of Europe and America; but such is not the case. Its whole length of thousands of miles, particularly the lower half, is through a rich, loamy, ashen soil, with not a stone or pebble the size of a pea for a thousand miles, and here comes in the difficulty which confronts those who would curb and control its gigantic currents.

I know not, I am free to confess, although living on its banks and realized as a supplier of the state of the peace of the state of the state

who would curb and control its gigantic currents.

I know not, I am free to confess, although living on its banks and making it a study for twenty-five years, the best thing to do for it; and, indeed, I think there are few men, if any, who do precisely know. I am persuaded, however, with great deference for the ability and attainments of those who differ from me, that a residence upon its banks and a daily study and observance of its phenomena for the past twenty-five years are calculated to fit at least as well for the formation of a correct theory concerning it as an accidental trip or two of certain gentlemen upon its waters under circumstances so hurried as to make it impossible for them to do more than make at most even a cursory observation concerning its local peculiarities, and especially when much of said trip was made during the darkness of the night.

most even a cursory observation concerning its local peculiarities, and especially when much of said trip was made during the darkness of the night.

Now, Mr. Speaker, this brings me to the point where I started for, viz, that inasmuch as no living man can solve this perplexing problem, we only know that there is an urgent public demand for a remedy of some kind, and that whatever may be done must be done largely, if not solely, as an experiment—an experiment that is likely to cost, indeed is certain to cost, very considerable sums of money. If this proposition be accepted, what is the experiment to be adopted? Some theorists insist upon a system of "levees;" others urge another theory, known as the "outlet" plan. I am not clear asto which one is the correct or likely to be the more successful theory; but am irresistibly inclined to the view that a combination of the two is to be the ultimate solution to this great national problem.

If it were possible to so build levees that there could be even a reasonable probability of their permanency, that they can be held firmly in their places, then I would have no doubt of the success of this generally-adopted plan; but when I know, as I do, from familiar personal observation, that a levee, no matter how well built upon the banks of its ashy, sugary soil, put up to-day, may, in a comparatively short time, have crumbled or fallen into the ever-changing river, and disappeared completely and forever from sight, I am forced to work to hunt up another theory to relieve my ever-inquiring anxieties. Besides, if we hold to the theories of levees only, we must

apply the system not only to the entire Mississippi River, but also to the numerous and large rivers emptying into it from both the east and west banks, else, these rivers, remaining unleveed, the water always seeking its own level must necessarily dam up back of and behind the Mississippi, and thereby produce the precise effect upon the adjacent territory as if the main river had never been leveed.

Discarding for the time being, therefore, the levee theory, let us for a moment speculate upon the "outlet" plan. Suppose it be practicable—and I do not assert it—that one, two, or more openings could be made at convenient points along the lower river, through which can run only such surplus waters as are now overflowing, and last year devastated the country from Cairo southward for a distance a thousand miles long and thirty miles wide, would or would not this be a means of relieving many thousand square miles of overflowed territory; and, if adopted, would it not greatly lessen the dangers of these annually recurring disastrous overflows?

The questions are so momentous, and the answer so difficult, that

these annually recurring disastrous overflows?

The questions are so momentous, and the answer so difficult, that I do no more than suggest them, leaving the subject to the wisdom of Congress, and feeling sure of my position upon only one proposition, namely, that every commercial interest of this nation and the outer world demands the free and unobstructed navigability of the Mississippi River, and that to certainly achieve and permanently maintain such navigability, large appropriations by Congress are now, and will continue to be, absolutely necessary in order to accomplish the grand and eminently national work, and, finally, that there can be no such thing as rounding up this question by a single legislative act or appropriation. The Mississippi River question is to be with the nation for all time. Congresses may come and Congresses may go, but it will abide with the American people forever.

Oleomargarine and Imitation Butter.

## REMARKS

# HON. A. X. PARKER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES, Saturday March 3, 1883,

On the bills (H. R. 4909 and 6685) in relation to olecunargarine, &c.

Mr. PARKER said:

Mr. SPEAKER: I wish in the only manner now left me so to do, to call attention to two bills relating to oleomargarine and imitation butter. I have no question of their passage if by the rules of the House they could be reached. But as our work is hampered by these restric-tive obstructions to legislation the friends of these bills are compelled to wait until another Congress can give that adequate protection which from the nature of the case can only be secured by national legislation.

The two bills to which I refer are among the seven hundred and sixty

bills favorably reported upon by committees and standing unreached upon the Calendars of the House.

The first bill (H. R. 4909) was introduced by Mr. JACOBS, of New York, March 6, and reported favorably July 26, 1882, from the Committee on Commerce.

It provides for the marking, stamping, and branding of all imitation dairy products shipped to foreign countries, and also provides for the inspection and consequently for the obtaining of full statistics of this commodity made in the semblance of dairy product and shipped abroad. The second bill (H. R. 6685) was reported by Mr. DUNNELL, of Wisconsin, from the Committee on Ways and Means, and provides for a tax

upon the manufacturers of cleomargarine and other imitation, so-called butters, and also a tax upon the dealers therein, and also a tax upon the commodity itself to be evidenced by a stamp to remain affixed to the package from which the thing is sold. Section 3 is as follows:

SEC. 3. That oleomargarine, or any other article or compound made in initation of butter, shall be sold or offered for sale only in parcels or packages bearing the special stamp denoting the payment of the tax thereon; and the absence of the proper internal-revenue stamp from any parcel or package of the said article when sold or offered for sale shall be prima facts evidence of the non-payment of the iax thereon, and in addition to the other penalties herein provided the said article so sold or offered for sale unstamped shall be forfeited to the United States: Provided, That nothing herein contained shall be held to prevent the sais of the article aforesaid at retail from a duly stamped firkin or other whole-sale package.

The principal elements of the fraud of palming off upon innocent dealers and upon consumers at home and abroad as genuine dairy product the vegetable oils and the grease of animals, are the studied secrecy and false pretenses of those handling the spurious article as to the amount manufactured and put upon the market, and as to the identity of the spurious article which the general consumer buys at retail as butter, not knowing the cheat to which he is subjected.

The enactment of these two bills will provide for full statistical information to the trade and the producer and honest notice to the con-

This legislation will establish a system giving the public full information of the amount of the spurious goods manufactured and the proportion shipped to foreign countries and that consumed at home.

It will notify all consumers what dealers sell the false butter, and furnish such proof in the stamp upon the package that every purchaser will know what he is buying.

The census of 1880 (preliminary statement) gives the number of oleomargarine establishments and the value of their products, as fol-

Cities.		Value.
New York Philadelphis Brooklyn Chicago Boston Baltimore Cincinnati Louisville	3 1 1 3 1 1 1	\$4,526,207 298,386 123,260 437,800 65,000 85,000 250,000
Total	12	6,035,753

Mr. F. B. Thurber, in an address at Cortland, New York, in December last, in trying to show the farmers that oleomargarine was not injuring the sale of butter, says:

Thinking that figures showing how much oleomargarine is really manufactured might prove interesting to your association, and also feeling curious to know myself, I applied a few days since to Mr. Deen, the superintendent of the company owning Mége patents, under which most of the oleomargarine butter is made, for an estimate showing the quantity of this article manufactured in 1881, and was kindly furnished with a statement as follows:

Estimate of the manufacture of oleomargarine butter under the Mege patent for the year 1881.

	Pounds.
Maryland	
Massachusetts	1,864,319
Connecticut	2, 892, 683
Kentucky	
Louisiana	
Ohio	
New York	4,646,063
Total	13, 072, 699
*Estimate.	

To this should be added the eleomargarine butter manufactured outside of the Mége process which, from inquiries I have made, amounts to perhaps 4,000,000 pounds, or say a grand total of 17,000,000 pounds of this form of artificial butter.

Yet the Treasury Bureau of Statistics discovered that in 1881 over 26,000,000 pounds "of this form of artificial butter" was exported, saying nothing about the immense home consumption.

Upon my suggestion a clause was placed in the agricultural appropriation act of 1882 calling upon the Department to procure imitationbutter statistics.

The following communication shows the results reached.

The Department has been as powerless to measure the depth or volume of this polluted stream as individuals have been.

united stream as individuals have been.

United States Department of Agriculture, Division of Statistics, Washington, D. C., February 1, 1883.

Sub: The letter of Hon. A. X. Parkee, inquiring for the statistics of production of oleomargarine, required under the appropriation for statistics in August last, having been referred to this division, I hasten to make reply.

Soon after the passage of the provision above mentioned, an effort was made to ascertain the place of business and address of proprietors of factories producing oleomargarine oil or butter. It was found difficult to obtain such necessary data, yet the effort was continued with some success, and is still in progress.

As fast as addresses were obtained, circulars were sent inquiring for the extent of production. Up to this date the sum of reported products of the year, in the places named below, are as follows:

Pounds.

	Pounds.
Boston	5,660,033
rawtucket, knode Island	1,090,200
New York	10,647,767
Philadelphia	1,083,837
Baltimore	1,100,130
Louisville	1,656,433

It is certain that this is but a small part of the product manufactured, as the export of oleomargarine oil for the year ended June 30, 1882, was 19,714,338 pounds, valued at \$2,703,038, of which 19,440,873 pounds were shipped for New

York.

The effort will be continued. If Congress would follow the demand with a penalty for refusal, as in the special work of the census, there might be a hope of ultimately hunting up the details of a sort of surreptitious manufacture, though there would still be an immense quantity of butterine, suine, and other forms of fats of beeves and swine, including the deodorized products of animals that have died of disease, that would fail to answer to the official call for "oleomargarine."

With a determination to do all that is possible to obtain the data required,
I am, yours, respectfully,

J. R. DODGE, Statistician.

Hon. GEO. B. LORING, Commissioner.

J. R. DODGE, Statistician,

These statements should be studied by the light they reflect on each other.

It will be noticed that Mr. Thurber omits Rhode Island and Pennsylvania, and the Department has evidently no reports from Connecti-cut or Louisiana, while both fail to name Illinois or Ohio, shown to be large manufacturers by the foregoing census report in 1880, and they make much more now.

Other cities and States producing large amounts are entirely omitted. For instance, in California is now going on a sharp contest with the Pacific Mége Commercial Company and they are charged by dairymen and consumers with fraud in selling spurious butter. They "hurl back" in the following language:

It is true, however, that there are frauds in eleomargarine; but they are committed by the very commission houses who are crying out loudest against the home manufactured eleomargarine. It consists in bringing out carleads of East ern eleomargarine to this city branded "butter," and selling it as Eastern but

We really get only samples of the manufacture. The great mass is We really get only samples of the manufacture. The great mass is made and moved silently and surreptitiously, and our watchful statisticians can give no approximate statement of the actual amount, its transit, or consumption. Like other counterfeits, it shans publicity. The practical, skilled men in the trade, as well informed upon the subject as it is possible for men to be, are as little able to give us the facts and figures of this "semblance butter" as the dairymen and government attributions.

ernmental statisticians.

As an example take the following letter from the New York Produce

NEW YORK, February 26, 1883.

DEAR SIE: Your communication of the 5th instant has been placed before the committee on information and statistics, and I have been requested to reply

thereto.

It is impossible to furnish any reliable estimate of the amount of eleomargarine, butterine, and other imitations of (so called) butters, manufactured in the United States within any period.

That the manufacture thereof is largely increasing can not be questioned. The manufacture, transportation, and to a large extent, the handling of it by dealers and retailers, are so secret and misleading that the dairy section throughout the United States, with traders in this and other cities in pure butters, are suffering severely.

suffering severely.

In fact the decreased export trade in butter may be largely laid at the door of

In fact the decreased export trade in butter may be largely laid at the door of imitation butters.

It would seem that nothing short of national legislation thereon, with severe penalties for the unlawfuland fraudulent issuance and representations, intended or otherwise, of these manufactured imitation butters, would suffice for the protection of producers and dealers in pure butters.

A communication has been sent to Mr. Loring by the butter committee of this exchange covering to some extent your queries in this matter, and to which you may have access.

Very truly, yours,

JNO. H. HODGSON, Secretary Committee on Information and Statistics.

Hon. A. X. Parker, House of Representatives, Washington, D. C.

Now here are some figures as to exports of this remarkable commodity. The American Dairyman, which seems to have a tender regard for the interests of the oleo-manufacturers, gives in March, 1882, the following statement of exports from New York:

#### EXPORTS OF OLEOMARGARINE.

The following are the exports of oleomargarine from New York to the undermentioned ports since May I, 1881, and for the week ending March 16, 1882, and for the same time last year:

Т	his week.	Total.	Same time last year.
Liverpool London Glasgow Bristol Rotterdam Antwerp Hamburg	451,774 79 13,165 6 1,641,553 1,38 47,080 17 25,000 5,856,667 5,36 1,447,665 49	Pounds, 790, 250 64, 180 1, 380, 500 179, 744 5, 360, 180 490, 875 75, 007	
Other ports	9,500	45,850 1,135,585	81,712 561,250
Total	34,500	10, 464, 769	8, 982, 668

Compare this with the report of Chief Nimmo, of the Bureau of Statistics, as follows:

Statement showing the quantity and value of butterine and oleomargarine exported from the United States during the fiscal year 1882, by customs dis-

JOSEPH NIMMO, Jr., Chief of Bureau,

TREASURY DEPARTMENT, BUREAU OF STATISTICS, January 18, 1883.

It must be apparent to any thoughtful man that the whole statistics of the country relating to the consumption and the shipment of butter are confused and unreliable by reason of being "mixed up" with the

spurious imitations.

The immense amount of this spurious product can not be even guessed, but is felt in the reduced prices and meager receipts on the part of the genuine producers, while the consumer pays for butter and eats grease, the origin of which he does not suspect and is powerless to ascertain. If any wish to make or use oleomargarine composed of wholesome ma-

But the great industry of the United States which furnishes the pure dairy product and the great mass of consumers who desire to use that product must be protected from the tricks of sharpers and the frauds of swindlers. This can be accomplished only by national legislation.

Alabama Mineral Lands.

SPEECH

OF

# HON. CHARLES H. VAN WYCK.

OF NEBRASKA.

IN THE SENATE OF THE UNITED STATES,

Friday, March 2, 1883.

The Senate having under consideration the bill (H. R. 4757) to exclude the public lands in Alabama from the operation of the laws relating to mineral lands—

Mr. VAN WYCK said :

Mr. President: I do not intend to occupy much time, and might not avail myself of the opportunity to make a few suggestions except for the fact that it seemed incidentally to grow out of something that was suggested by the Senator from Alabama [Mr. Morgan], probably more argumentatively than in regard to the merits of the pending bill.

The Senator was suggesting very properly that there were certain frauds connected with the administration either of the public surveys or the location of public lands. I agree with the Senator, and might sugor the location of public lands. I agree with the Senator, and might suggest that not only there but also other matters connected with the Government are subject to the same criticism. I would say incidentally that during the last session of Congress I was very much inclined to present a resolution looking to what were alleged to be some frauds in other Departments but desisted, fearing if I did an unjust motive might be attributed. Therefore it was that I delayed until this session and the state of the service until nearly its expiration before introducing a resolution calling upon the Secretary of the Treasury to inform the Senate how special district attorneys were appointed, by what authority appointed, and by what authority paid. From reports already printed it appeared that there was more money paid to special assistants than to regular assistant district actions are money paid to special assistants than to regular assistant dis-

While about \$95,000 was paid for regular assistants, over \$100,000 was paid for special attorneys, and then, strange as it may seem, of the \$100,000 for specials \$86,000 was in the District of Columbia. Hence it became an important question to know by what authority permission to hand a beginn them to are their hands in the Treasury of the United should be given them to put their hands in the Treasury of the United

States. That was one aspect of the case.

There was another. The newspapers had been proclaiming throughout the land, and charging impropriety on the part of the Department out the land, and charging impropriety on the part of the Department of Justice, as it was said the Department of Justice allowed special assistants in some cases to receive \$100 per day. I did not believe the charges to be true. I believed that the Attorney-General did not have time to answer all the injurious aspersions cast upon him, and therefore, as a friend to the Department I felt it my duty to ascertain the truth of that matter. True, it might have been obtained by a personal application to the Attorney-General, but I had learned that it was not often his duties allowed him to spend much time in his office, and it would be impressible probably to get information there. The only and it would be impossible probably to get information there. manner left was to apply by resolution, not to the Attorney-General, but to the Secretary of the Treasury, who audited the accounts, and yesterday the information was furnished. I desired it for the further purpose of removing aspersion which had been cast, from what motive I know not, upon the Department of Justice, and any aspersion cast upon I know not, upon the Department of Justice, and any aspersion cast upon him necessarily would reflect upon the administration with which he is connected, and also upon the great party of which he is a representative and to which I also belong. Therefore there was a double interest in this matter: first, to relieve the Attorney-General, next, to save these reflections from in any way attaching to the administration, and also to relieve the party, which would be injured thereby. I did not desire that every newspaper reporter should catch at it all over the land and that on every street-corner to hear made the statement that there was extravagance, that there was improvidence, that there was wastefulness in the management of public affairs. ness in the management of public affairs.

I desire this much in justice to myself. The information has been

given by the Secretary of the Treasury. I do not propose to read the whole; only enough to show its nature. The few vouchers referred to are samples merely of the large number on file in the Department. One point was by what authority the special assistants were appointed. The law authorizes the Attorney-General to appoint deputies to assist the district attorneys. That law really gave no power to the Attorney-General to appoint special assistants, but by the Department was construed as authorizing that to be done. In 1870, however, Congress enacted:

SEC. 365. No compensation shall hereafter be allowed to any person, besides the respective district attorneys and assistant district attorneys, for services as an attorney or counselor to the United States, or to any branch or Department of the Government thereof, except in cases specially authorized by law, and then only on the certificate of the Attorney-General that such services were actually rendered, and that the same could not be performed by the Attorney-General or Solicitor-General, or the officers of the Department of Justice, or by the district attorneys.

That was the law of 1870, passed to correct the abuse which had grown out of the construction of law of 1861 and 1869, to prevent this very thing which is being done now. The response was made by the Comptroller of the Treasury speaking of these two statutes, and in speaking of the one of 1861 and 1869 he says under that the appointment had been made when clearly it was not within the letter or spirit

Then in further answer to the resolution were also returned the vouchers. It had been said that attorneys were each receiving \$100 per day. I sought for these vouchers with a view of refuting and contradicting that charge, so that we might say to the representatives of the press that they were mistaken and that they had either intentionally or otherwise they were mistaken and that they had either intentionally or otherwise maligned one of the principal officers of this Government; but found, to my surprise, and probably to the surprise of the Attorney-General if he had read the paper before he signed it, that even more was paid.

I do not know that he did read it; I query whether these vouchers were really read; but there is the sign-manual emphatically "Brewster." Evidently, then, the signature must be correct. It has passed under his

Evidently, then, the signature must be correct. It has passed under his supervision, and I say in justice to him—

Mr. DAWES. Does he not repudiate them?

Mr. VAN WYCK. No, he certifies them, approves them. I will say in justice to him that he probably had not seen or could not have read over all these documents, but probably in his haste he gathered them up and signed "Brewster." It is not to be expected that the Attorney-General—for that would be entirely too much—with the great duties of his public office and the duties of his large private practice, could devote much time to running over these papers. explanation and in a measure as an excuse for him. I say this in

Mr. LOGAN. What is this?
Mr. VAN WYCK. I will explain in a moment. The gentleman is evidently as much surprised as I was.

Mr. LOGAN. I merely ask for information.
Mr. VAN WYCK. The Senator from Alabama has a very important bill pending, and in connection with that he undertook to arraign some persons by charging fraud upon either the administration of the land laws or some practices connected therewith, and I called his attention to the fact that there were frauds in other departments of the Govtion to the fact that there were frauds in other departments of the Government, and then I proceeded to explain how my attention had been called to this matter; that I had heard a similar aspersion cast upon the Attorney-General, that he employed special assistants, and they were paid \$100 per day. We denied it; we said it was mere abuse of the Attorney-General. It was the same cry the Senator from Alabama has made. In order to ascertain the facts and to know whether we were right in defending the Attorney-General, I sought this information. Now the Senator from Illinois will understand how this originated.

Here is a bill as presented by Mr. Bliss, to which the attention of the Senate is called. It may not accomplish all that we wish. I may be disappointed, not finding in it a full justification of the Attorney-General, but still we have the facts, and that is some satisfaction at least.

The United States to George Bliss: To services as counsel in United States against Brady, Dorsey, and others, including trial, involving one hundred and eight days, including Sundays, with opening and closing argument, preparation and examination of witnesses, \$15,000.

So that for one hundred and eight days, including Sundays, he gets \$150 a day instead of \$100. That led me further to examine, and Mr. Blisssays "including Sundays." When a gentleman of his legal ability demands \$150 a day, I do not exactly see the point of making out a bill including Sundays. Did he discharge labor to the Government Sundays for which he wanted a per diem? A lawyer worth \$150 per day must have known that under the common law services performed on Sunday can not be recovered for. If it were an allowance for his Sunday must have and Sunday devotions it was rather extravagant to ask day meditations and Sunday devotions it was rather extravagant to ask

day meditations and Sunday devotions it was rather extravagant to ask the people of the United States to pay \$150 per day for that.

At all events the bill is, "including Sundays," for \$15,000—\$150 per day. It seems, upon perusing further, that was not all. There was a charge for his expenses in coming from New York and going back and subsistence here at \$10 per day. And not only that, but postage everywhere, stamps, "stamps, 10 cents," in another case 5 cents; and an amount was charged for a fee to some messenger 21 cents, which was to

show that the amount was exact and 1 cent was added. Telegraphing was charged for, whether 25 or 30 cents, as it happened. And to show further the correctness and the honesty of this claim, on various occasions

further the correctness and the honesty of this claim, on various occasions there is "railroad-fare from Washington to New York, \$8.50; sleeping-car fare, \$2; fee to porter of sleeping-car, 50 cents."

A person large enough to be a special attorney of the United States and to receive \$150 a day, to have a parlor at the Arlington Hotel worth \$10 per day, of course must charge 25 cents for telegraphing and "fee to porter of the sleeping-car, 50 cents." There he suffered the dignity of this great Republic to drop. Had he given the porter a dollar it would have added respectability to the United States. [Laughter.]

But he was economical there.

So it runs along; the items were made and duly passed. so it runs along, the telms were made and dury passed. If the Ar-torney-General had the right to do this, the law said he should make a contract; but it does not anywhere appear that one was made. Strange as it may seem, the Treasury Department rendered a full indorsement of the various bills until they came so strong and heavy that it became weary and halted at some minor details. When that fact became apweary and halted at some minor details. When that fact became apparent my own judgment began to falter, because I was trying, as I said, to find something in vindication, and everything pointed the other way, and the further I proceeded the more I became satisfied that it was difficult really to defend or explain or justify the Attorney-General. At last the Treasury Department paused for a moment and demanded an explanation from Mr. Bliss, as follows:

Your account is herewith returned to be sworn to by you. You are also requested to give an itemized statement of charges for traveling between Washington and New York, as in their present form they are deemed excessive.

That was the first check after the accounts had been approved by the Department of Justice and the different branches of the Treasury Department; there for the first time it was intimated that they were excessive, and so Mr. Bliss mildly proceeds to verify his accounts and

excessive, and so Mr. Bilss mildly proceeds to verify his accounts and to explain why they were not excessive:

George Bliss being sworn, says: \*\* \* \* \* That the charge for expenses in traveling to and from Washington are made up as follows: Railroad fare in case, \$6.50; section in sleeping-car, \$4; carriage in Washington, \$1; that in New York when leaving there in the evening he is compelled to pay \$2 for a carriage, but on arriving there in the morning he pays only \$1.50; that this makes a total of \$13.50 in coming from New York and \$13 in going there; that he now presumes that in the annexed account he has amply distributed the items—

No doubt about that-

No doubt about that—
but the result is not changed. Deponent, however, begs to add that on four of
the excursions charged for in the annexed account he did not travel at night, and
a section should not have been charged for, but only a seat in parlor-car, being
\$1.25 instead of \$4. Against that, however, there should be on those occasions
charged 50 cents each time for carriages, making a net reduction each time of
\$2.25. Deponent further says that he is compelled to travel at night; he can not
do so unless he travels with such comfort as to be able to reach the same day;
that if it is held he should not be allowed for such expenses the only result will
be that he will travel in the day-time, which will render it necessary to charge
for one if not for two more days in each week.

The Depontment realized the favor of the approximant and evilted the

The Department realized the force of the argument and audited the, account because Mr. Bliss was able as Government attorney to satisfy the Treasury Department that if he could not be made comfortable by the payment of a few dollars while traveling at night then he would have to charge one or two more days in the week and the result would be \$150 for one day, or for two days \$300 extra for getting this attorney from here to New York and from New York back comfortably.

This will be sufficient to illustrate this branch of the case. It is to

This will be sufficient to illustrate this branch of the case. be regretted that we have not the power to say these stories are not true; I mean the reports that the Attorney-General was paying \$100 a

day for special assistants.

Here was a charge of \$150 a day for one hundred and eight days, including Sundays, \$15,000. Whereas the facts, under the sign-manual Brewster, clearly establish that the daily compensation was \$150 for one hundred and eight days including Sundays, \$15,000, with the hotel and traveling expenses, including postage-stamps and fees to porter on sleeping-car, making about \$170 per day.

Mr. SLATER. May I ask the Senator a question?

Mr. VAN WYCK. Certainly.

Mr. SLATER. How much per annum would that be if carried out?

Mr. VAN WYCK. From \$45,000 to \$50,000.

Mr. SLATER. Something over \$54,000 per annum, I make it.
Mr. VAN WYCK. Very likely. I did not proceed so far as that.
I thought possibly the Attorney-General might have time to aggregate the figures and give the amount in any explanation he might hereafter

There are other special attorneys employed; time will not permit reference to all; one is sufficient as illustration, namely, Mr. Merrick, who, fortunately for the Government, resides in Washington. Evidently his sense of justice did not allow him to charge for board, as it does not appear in the bill that follows:

To consultations as to new indictment, which was found by grand jury in To consultations as to new indictment, which was found by grand jury in To Lates to Lates to Brady, Dorsey, Vaile, et al., preparation and trial of said case, trial concluded September 11, 1882, argument of motion for new trial, and other services in matters arising out of said case, \$15,000.

The time involved in that is about one hundred days, including Sundays, so that really Mr. Merrick's per diem was a little more than Mr. Bliss's, while there was not this throwing in of expenses for board, travel back and forth, including now 5 cents, now 6, and now 10 for

postage-stamps, and at sundry times 50 cents to a porter on a sleepingcar, and at another time 21 cents for service of messenger; but that was probably made equal between these gentlemen in the mind of the Attorney-General by giving Mr. Merrick a trifle more per diem.

How many more persons were engaged in these prosecutions at this rate I do not know; but now it is perfectly plain why the suits continue as long as they do—six months to try an ordinary case with such able counsel. It is an invitation, an inducement to these men to continue them six months, and it is also a temptation to hang a jury as it is said they did. I do not say they did, but there would be a temptation to do it. If justice were decently administered in the District of Columbia or any other section of this country six months could hardly be required by the trial of a criminal cause. It is an outrage which ought not to be tolerated in any country, and here the American Congress is in session; here sit the President of the United States and his Cabinet

I deem it my duty to say this; the people should be protected from outrages committed here. It has always been our boast, I say to my Republican friends, that we punish our own thieves. I have not understood why it was that Howgate had the prison doors opened and invited to step out a free man. It seems Howgate is a Democrat, and as we are only under obligations to punish Republicans, Howgate was bid

to depart in peace

Washington is the best regulated city on the globe, we are told; yet a few days ago it was reported that there had been an indictment by the grand jury in that thieves and house-breakers had been invited by your police into this city, received with open arms, then escorted about in carriages, and aided to escape with their booty. Is it any wonder when those connected with the Department of Justice are robbing the Government in an equally infamous manner, incurring, however, less risk in the depredations because not exposing themselves to the hospitalities

of the penitentiary?

Mr. President, without any doubt such charges as we read here are equally as infamous, and will be so considered by the American people as the star-route methods. There was a conspiracy there to rob this nation by increasing and expediting the mail service. There is equally a conspiracy here the consequence whereof is to rob your Government in suits which ought to be forced to trial with the same energy

and expedition as ordinary criminal proceedings. In one case the plunder is by expediting, in the other by delay.

A platoon of lawyers are gathered together by the head of the Department of Justice and allowed to place their hands in the Treasury to any depth they choose and to any extent of time they may prefer, with nothing to limit them in their prices and nothing to limit them in the term of their continuance in the service. It was not believed when

the term of their continuance in the service. It was not believed when this statement was first made, and it seems almost incredible, but unfortunately for the Treasury it is true.

The resolution further demanded by what authority these amounts were paid. I venture no lawyer in this body will pretend that a district attorney has a right to call in assistants. I question if the Attorney-General, under the present law, has that power; yet we find that this very thing was done and the name of "Brewster," I suppose, is attached to those papers. [Examining.] Yes, here it is, "Brewster." It passed the accounting officers of the Treasury, and we find what? A member of Congress serving in the other branch was called from his duties in the month of May last, and in May, June, and July, while Congress was in session, and the Attorney-General knew that his duties required him here. The district attorney employing him knew that his duties required him here; the member of Congress himself knew that his duties required him here, and yet most of his services as special his duties required him here, and yet most of his services as special sistant was rendered during the actual session of Congress, and for his services and for his expenses \$6,000 were paid and the sign-manual "Brewster" appears on the voucher. That passed the accounting officers of the Treasury.

I have a right to allude to this. I ask you where is the protection of the Treasury, where is the protection of the people of this country when the head of the Department of Justice himself not only tolerates

but inaugurates this outrage and this fraud upon the people?

Mr. CAMERON, of Pennsylvania. Do you mean to say that he ever

Mr. VAN WYCK. Oh, no.
Mr. CAMERON, of Pennsylvania. Then be careful how you talk. The PRESIDING OFFICER. Does the Senator from Nebraska yield

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Pennsylvania?

Mr. VAN WYCK. Certainly; I am glad the Senator from Pennsylvania comes to the defense of his friend.

Mr. CAMERON, of Pennsylvania. I do not come to anybody's defense, except to say that the Attorney-General is an honest man; and

to accuse him as you are doing is not proper.

Mr. VAN WYCK. I accuse no one; the facts accuse him.

Mr. CAMERON, of Pennsylvania. Now, stop here.

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Pennsylvania?

Mr. VAN WYCK. Certainly. I like to hear the Senator.

Mr. CAMERON, of Pennsylvania. Then stop.

Mr. VAN WYCK. I am glad that my friend from Pennsylania comes

scue. I tried to do it, but the facts certified to by himself are to the re against him.

Mr. CAMERON, of Pennsylvania. Oh, you are a—I will not say it.
Mr. VAN WYCK. I have not said that the Attorney-General took any of this mone

Mr. CAMERON, of Pennsylvania. You have talked too much. Do

not talk any more. Mr. VAN WYCK. I do not pretend that the Attorney-General took any of this money, but I say when he made a contract, as he did or approved it, to pay \$15,000 for one hundred days' work including Sunday, that he did what he must have known to be wrong.

Mr. CAMERON, of Pennsylvania. He never did a thing in his life that he knew to be wrong, and he never did a thing in his life that any

other gentleman knew to be wrong.

The PRESIDING OFFICER. The Senator from Pennsylvania will not interrupt the Senator from Nebraska without addressing the Chair and asking whether the Senator from Nebraska will consent to be in-

Mr. VAN WYCK. I most cordially yield. I do not ask that the Senator from Pennsylvania shall go through the courtesy of first ad-dressing the Chair.

The PRESIDING OFFICER. The Chair sees proper to preserve the rules of the Senate.

Mr. CAMERON, of Pennsylvania. The Senator from Pennsylvania

means to make no harangue. He does not talk—

The PRESIDING OFFICER. The Senator from Pennsylvania will address the Chair, and let the Chair ask whether the Senator from Ne-

address the Chair, and let the Chair ask whether the Senator from Nebraska will consent to be interrupted.

Mr. VAN WYCK. I desire to be interrupted, for it is information that I am seeking. I said when the Attorney-General put his signmanual "Brewster" on the back of a voucher which gives only an ordinary attorney, if I may be allowed the term, \$150 per day, he did what he knew to be wrong. When he put his sign-manual to a voucher which in addition to \$150 a day allowed \$10 a day for hotel expenses; when he allowed 25 cents for telegrams and 5 and 10 cents for postage; when he allowed just 21 cents for a messenger; when he allowed him. when he allowed just 21 cents for a messenger; when he allowed him not only for his transportation to New York but his sleeping-car fare, and then 50 cents for the porter—when he does all that I say that no man in his senses does the thing that he knows to be right. I do not pretend that he obtained any of this money. He is placed there to protect the Treasury. I have said that this mode of extracting money from the Treasury is no better than the star-route methods.

Mr. CAMERON, of Pennsylvania. I am afraid you know more about it then others.

it than others

Mr. VAN WYCK. No, sir; only to communicate to the Senate and through the Senate to the country the facts in this matter approved and certified by "Brewster, Attorney-General."

Now I start another point, to which the Senator from Pennsylvania will please give equally as much attention. I was stating when he interrupted me that a member of Congress was taken from his place in the month of May and June and July into the State of New York, transported back and forth, and although a few days were employed in vacation yet most of the time was during the session of Congress, and in vacation yet most of the time was during the session of Congress, and for which about \$6,000 was appropriated. I said further that he was called into the service by an assistant district attorney, and here is the proof of it, if my friend from Pennsylvania will give me his attention for a moment:

For services in 1882

I call the attention of the Senator from Pennsylvania to the fact.
Mr. LOGAN. Call the attention of the Senate to it.
Mr. VAN WYCK. I call the attention of the Senator from Pennsylvania

sylvania, who will probably reply to this part of it. He may think he would prefer to do so:

For services in the above-entitled actions, commencing May 2, 1882: In appearing before United States Commissioner Scroggs, at Buffalo, New York, in preliminary examination, at the request of Hon. Martin I. Townsend, United States

This was done at the request of Martin I. Townsend, the United States district attorney, there being no pretext that he has any right to employ a special assistant.

Mr. EDMUNDS. He may make the request.
Mr. VAN WYCK. He may make the request to the Attorney-General, but that does not appear in this case. It is stated that he was called to the examination by Martin I. Townsend, the date May, June, and July, some in October and November.

Mr. LOGAN. I do not want to enter into this discussion at all, but this is so remarkable a proceeding, without any precedent whatever, that I must ask the Senator a question. Are these the original papers of the Attorney-General's office?

Mr. VAN WYCK. These are the papers which were sent from the Department

Mr. LOGAN. That is not the question. I merely want to ask a

question or two.

Mr. VAN WYCK. I will answer. The resolution required the Department to send copies of vouchers. It was a call on the Secretary of the Treasury, and the resolution required him to send vouchers, items, and how much he paid, and the reason why he paid them, under what

authority of law they were employed and paid; and he sends these papers as a reply to the resolution.

Mr. LOGAN. The Secretary of the Treasury?

Mr. LOGAN. The Secretary of the Treasury?
Mr. VAN WYCK. Yes, sir.
Mr. LOGAN. The resolution called for these papers?
Mr. VAN WYCK. Certainly. Copies of vouchers and items.
Mr. LOGAN. The resolution was introduced by the Senator?
Mr. VAN WYCK. Yes. I will read it to the Senator.

Mr. LOGAN. No; the Senator need not read it. These papers have not been referred to any committee?

Mr. VAN WYCK. They have not been referred to any committee.

Mr. LOGAN.
Is that the idea? They come to the possession of the Senator himself.

Mr. VAN WYCK. They have come to the possession of the Senate.

They are in the possession of the Senate.

Mr. LOGAN. I mean in the possession of the Senate. The Senator does not move to refer them to a committee to investigate the mat-

Mr. VAN WYCK. I intend to do so.

Mr. LOGAN. But he takes the opportunity of making a general attack upon the Attorney-General's Office, without reference to or any examination by a committee, without any report, without regard to anything whatever, except to get this harangue before the country, this attack on the Attorney-General. Is that it?

Mr. VAN WYCK. I will tell you what it is.

Mr. LOGAN. I want to know.

Mr. VAN WYCK. I will explain it.

Mr. LOGAN. I want to know, because this is, I will not say so undignified, but it is so far from the course that I have ever known pursued in the Senate of the United States. Without having anything to say, for I do not propose to enter into this discussion either to attack or defend any one, I must say that for a speech of this kind to be made without any investigation whatever, while this trial is going on here States—if a man outdoors had made the speech, the whole country would have understood that he was the attorney for the defendants.

Mr. VAN WYCK. I will explain it to the Senator. I said before he appeared in the Senate this afternoon that on two occasions at the

last session I felt it my duty to demand the same information that I have been seeking at this time, but I waited until nearly the end of this session hoping the Attorney-General himself would feel impelled to make answer to the many charges. Statements had been made as to the manner of conducting the Department of Justice in the payment of special assistants, and I desired to know the truth of these charges. If it were so that \$100 was being paid daily to three or four attorneys I wished to know it; and when I called upon the Treasury Department and they sent their vouchers indorsed by the Attorney-General, it needs no report from any committee. Here are the facts under his own signanual, and when they show that \$150 was paid daily to two or more attorneys it became my duty to make this "harangue," as the Senator chooses to term it, which I proposed to do and have done.

The Senator says that if this harangue was made outside, persons would

The Senator says that if this harangue was made outside, persons would suppose that it was made by one as an attorney for the defendant. Is it possible? Is that the way gentlemen would seek or that the Attorney-General would seek to meet the charges? If the statements I have read are true, and they are, because he signed them, if these charges which he admits the truth of affect his management of that Department, then he must submit to the consequences. He must subject himself to any arraignment, whatever that arraignment properly may be. And must we sit by and see the Treasury plundered, as plundered it is, no matter whether by the conspiracy of star-route men or in any other mode, and not raise our voice forsooth until the whole thing is ended?

I said in that connection that the payment of such a per diem was a temptation, an inducement, to protract the trial of a cause. I said fur-

temptation, an inducement, to protract the trial of a cause. I said further that in any country where justice was decently administered it could not possibly be that an ordinary criminal prosecution could pro-tract itself as long as this one has done. I speak in no connection, how-ever, with that matter. The star-route frauds were exposed by the en-

ever, with that matter. The star-route frauds were exposed by the energy of a former Postmaster-General, and not by the money taken by these fees of lawyers at \$150 a day. That is my position, and I am neady and prepared to stand by it. I desire this matter of taking these extravagant charges from the Treasury to stop.

Look at it a moment. Do you suppose that the Attorney-General in his own private business would employ an attorney at \$150 a day and then pay all his expenses, aggregating about \$170 per day? A public officer who will not administer his trust with the same fidelity, with the same honesty and the same didligence that he would his own private. the same honesty, and the same diligence that he would his own private matters is subject to the charges that may follow from pursuing such a course. This is the charge to be met.

There was not time to have the papers in response to the resolution referred to a committee so as to have a report made on them at this session. The only opportunity was to make just this explanation which has been made. I took occasion when the Senator from Illinois was not here to say that it was our boast that we had punished our own thieves, that we had stopped our own plunder, stopped our own peculation. Had we remained silent until this matter had ended, and then when it became known that these outrageous charges, these wasteful

expenditures, had been made, it would have been good reason to arraign expenditures, had been made, it would have been good reason to arraigh the Republican party, and men with an inquiring turn of mind would grope through dark and devious ways with a tallow dip in one hand and a microscope in the other trying to ascertain the cause of Repub-lican defeats. As the Senators from Pennsylvania and from Illinois lican defeats. As the senators from remay tvalue and from filmois made some question, I desire that my position shall be understood. The Senator from Illinois says that it would be supposed I was an attorney for the defendant. Will he tell us how these facts about the management of the Department of Justice can affect the trial of any criminal prosecution? Will gentlemen tell me, will any lawyer, will any judge, will any man of common comprehension tell me how this will affect injuriously any pending suits?

How will the continuance or cessation of these frauds in the Depart-

ment of Justice affect the administration of the laws in this city?

Whatever may be the result, for myself I insist such outrages as certified by "Brewster, Attorney-General," shall be ended.

When the Attorney-General is willing to have paid, from money drawn from the pockets of the people, for one year's service as much as he receives for his entire term of four years' service, to an attorney who certainly is not his superior, does not that affect disastrously the administration of justice? Under whatever exposure can it be worse by any possible means than it now is under the influences which surround it?
Without doubt when the attention of the President is directed to

this subject he will at least admonish his Cabinet officer and insist that prosecutions in behalf of the Government shall be conducted with more expedition and less expense

The Tariff.

### SPEECH

# HON. ANDREW G. CURTIN.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the report of the conference committee on the bill (H. R. 5538) to reduce internal-revenue taxation.

Mr. CURTIN said:

Mr. SPEAKER: If it were not for the reduction of the internal-revenue taxation this bill would not receive the serious consideration of this

I had the honor at the last session of Congress to address myself to the House when the bill was on passage for the reduction of internal revenue \$17,000,000, and to say at that time that I was the advocate of the entire abolition of internal taxation and the discharge of the public officers who are engaged in its collection, except the taxation on whisky, distilled spirits, and tobacco, and whatever revenues were necessary in that way should be collected as the ordinary taxes are and by proces which the people of this country are accustomed, and thus be relieved of the espionage and inducement to fraud which surround all of the laws

now in existence in the collection of such revenue.

This bill makes a much larger reduction, but does not in that respect approach the expectations of the people, but it is no doubt the inducement to the passage of the bill in hot haste and without the consideration due to a measure of such importance and magnitude. It is the sugar-coating to the pill more than one member has declared nauseous and hard to swallow. I will refer especially to that part of the bill which treats of iron in which charcoal is used as fuel and as found in and hard to swallow. which creats of from in which charcoal is used as fuel and as found in the metal schedule, and leave the examination of other items to the people of Pennsylvania. That part of the schedule in the House bill, which was abandoned, gave comparatively just protection to that production of American industry, capital, and labor. It was provided that a duty of \$22 a ton should be laid upon iron in which charcoal was used as fuel, and it fell under the clause in that bill which provided that in one event should the duty he less than 25 per cent advances. It was no event should the duty be less than 35 per cent. ad valorem. It was further provided in that bill where two or more rates of duties shall be applicable to one imported article it shall be classified for duty under the highest of such rates.

The citizens who were in Washington representing the charcoal-iron interest had repeated interviews with leading Senators during the consideration of this bill through that body. They found in the Senator from Michigan and in the senior Senator from Pennsylvania enlightened and zealous advocates of a just protection to their industry. The Senate bill as it passed that body provided that on all iron manufactured with charcoal as fuel more advanced in manufacture than pig there shall be charcoal as fuel more advanced in manufacture than pig there shall be imposed a duty of \$3 a ton more than on the same manufactured with other fuel, and that all iron in slabs, blooms, loops, or other forms more advanced than pig-iron shall not pay a less duty than 35 per cent. ad valorem, and then provided that on iron in which charcoal is used as fuel further advanced than pig there shall be \$3 additional to iron manufactured with other fuel. That was all that was asked, and to such moderate demand the Senate acceded.

In the report of the conference committee, the provision that there should be an additional duty of \$3 per ton on iron manufactured with charcoal as fuel is stricken out of the Senate bill. In the bill as reported by the conference the provision that all irons more advanced than pig except castings were to be rated as iron without any reference to the fuel used and to pay a duty accordingly, and that none of the above shall pay a less rate of duty than 35 per cent. ad valorem precedes the duty of \$22 per ton as settled upon iron manufactured with charcoal as fuel, as will be found on page 29, lines 562, 563, and 564, and can not be applicable to charcoal-iron. In line 549 iron less than one inch wide the duty is eight-tenths of 1 per cent. per pound, but in line 553 iron not less than three-fourths of one inch square, 1 cent per pound; and in line 558 iron less than seven-sixteenths of one inch in diameter or less line 558 iron less than seven-sixteenths of one inch in diameter or less than one inch square, 1.1 cents per pound. On the first the duty would be \$17.92 per ton; on the second \$22.45, and on the third \$26.76. A portion of them as provided in line 562 shall pay a less rate of duty than 35 per cent. ad valorem, that saving clause not being applicable to iron where charcoal is used as fuel. The Senate bill as it passed that body gave to iron manufactured with charcoal as fuel an additional protection of \$3 per ton and the benefit of the 35 per cent. ad valorem clause, which the conferees on the part of the House have abandoned. In line number 575 it will be noticed that iron rods less than seven-

In line number 575 it will be noticed that iron rods less than seven-sixteenths of an inch in diameter shall pay a duty 1.2 cents per pound, and the duty would therefore be \$26.88 per ton. Thus it will be noticed the duty would therefore be \$26.88 per ton. Thus it will be noticed that charcoal-iron, the most expensive to make and which commands the highest price in the market, the finest kind of iron manufactured in the United States—the pioneer iron business, and the cost of making which is nine-tenths labor, is denied the just protection which is only asked in the difference of the price of labor here and in the foreign countries where it is produced. It only asks the protection which meets the difference in the wages of labor in this country and Europe. It does not ask that there shall be duty to prohibit importation, but it does ask, and in justice, that it should have a protection adequate to the price of production and let competition lessen the price to the consumer, no matter whether that competition is in home or foreign production. This interest is largely diversified in this country. Charcoaliron is produced in many of the States. It is not monopolized; it is not controlled by large capital centralized or shielded by incorporated priv-

The American citizens engaged in this business only ask a just tax and a fair protection to their industry, and in this bill now pending be-fore this House instead of protection there seems to be a disposition to leave that interest, its usefulness, its employment of labor in addition to its wealth and power in this country to the tender mercies of the interests which I fear have controlled this revenue measure in all the

stages of its progress through Congress.

There are other interests of Pennsylvania which, in my judgment, are not properly protected in this bill, and it is to be hoped that inasmuch as the country has been waiting in expectation of some measure of relief, the interest I now advocate may struggle through the coming on and that the next Congress will correct the neglect of their inter season and that the next Congress will correct the neglect of their interests in this bill and provide for them a fair and reasonable protection. In justice to my constituents, in justice to the charcoal interest of my State and of other States of this Union, I protest against the injustice this bill does them. I would be unworthy to be their Representative if I remained silent when I see, through ignorance or design, such a heavy blow struck at their interest and the prosperity of the localities in which charcoal-iron is a staple production.

The Senate bill, although the duty on charcoal-iron is reduced below the rates of the existing tariff, seemed to be just considering the general reduction, and with it those engaged in the business were satisfied; but when the conference committee reported to this House the bill under consideration and virtually place this production below the rates of protection given to the coarser and cheaper qualities of iron, it is not strange they should complain of such unjust and unwise discrimination, or that members of this body should hesitate to fall into any combination of other interests as to do a serious injury to a large and useful business. Pennsylvania is not the only State to suffer in consequence of this legislation. Nearer the markets of the country, longer and more skilled in the business, her people engaged in it may survive what in my judgment may prove a calamity in other States where the business is now more distant from markets and less understood.

I have said that nine-tenths of the production of charcoal-iron is labor. The ingenuity which has so reduced cost of production of inferior qualities of iron by machinery has not reached this production, which is a necessity. It is produced now by the same processes as it was when our raw material was utilized with scarcely a change or material reduction of the manual labor employed in it, and I only ask for this interest an equalization of the labor here and in foreign countries where it is produced. Iron is one great staple production in Pennsylvania, and as our capabilities do not approach those of other States, the skill and enterprise of our people should excite admiration and challenge to the point of competition at home, instead of provoking the manifest injustice which I attempt to demonstrate from the provisions of this bill. I stand by the truth of my statements and believe in the logic of my couclusions, and awaiting results can not but feel that my position will meet the approbation of my constituents.

#### French Spoliations.

### SPEECH

# HON. WILLIAM W. GROUT.

OF VERMONT,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the bill (S. 1465) to provide for the ascertainment of claims of American citizens for spoliations committed by the French prior to the 31st day of July, 1801.

Mr. GROUT said:

Mr. SPEAKER: I intend to vote for this bill; but if it becomes a law it will take several millions from the Treasury, and the magnitude of the sum claimed, if not the difficulty of the questions involved in its allowance, is my excuse for a few words upon the subject.

LEGISLATIVE HISTORY OF THESE CLAIMS.

The French spoliation claims are historic. They accrued during the wars of the first French Republic under the Directory and Consulate, between the years 1792 and 1800. They are also intimately connected with our own Revolutionary period, as they grew out of an alleged breach on our part of the treaty between the French Government and the Colonies of 1778, under which France helped us in the struggle for independence.

These claims are almost one hundred years old. They have been before Congress continuously since 1801; and whatever else concerning them may be in doubt, this must be accepted as clear: it is high time they were disposed of. If just they should be paid. If unjust they should be refused by Congress and thus have an end of them in that way, though it is true if rejected by one Congress they might be presented to another. It is worthy of observation, however, that neither House has ever decided against these claims; but bills have repeatedly passed one or the other House allowing them, and on two occasions bills providing for their payment have passed both Houses concurrently, but each failed to become a law for want of the executive approval, withheld first by President Polk and then by President Pierce. These vetoes were principally upon the ground of an empty Treasury and insufficient revenues; reasons which are certainly no longer valid now that the Government receipts are just about one and one-half million dollars per day, and an overflowing Treasury is as much of an embarrassment as an empty one was under Polk and Pierce. These claims are almost one hundred years old. They have been before empty one was under Polk and Pierce.

During the eighty years these claims have been before Congress forty-three reports have been made by committees concerning them, all favorathree reports have been made by committees concerning them, all favorable but three. The three unfavorable reports were all made prior to the administration of John Quincy Adams, during which a careful collection of all the facts pertaining as well to the history as to the diplomacy connected with them was for the first time presented to Congress. Since then there have been thirty-eight reports, and every one favorable. Of these Edward Everett made three, Edward Livingston three, Daniel Webster one, Caleb Cushing three, Rufus Choate three, Hannibal Hamlin one, Homer E. Royce one, and Charles Sumner three. Between the years 1832 and 1858 all the Legislatures of the original thirteen States, and some of them a second time, passed resolutions requesting their delegations in Congress to vote for the payment of these claims: but they are still here. Such in brief is the legislative history claims; but they are still here. Such in brief is the legislative history of these remarkable claims; but in itself, except so far as it shows diligence on the part of the claimants, it is of no particular consequence in

deciding upon their merits now.

The opinion of the eminent public men just named, though uniformly in favor of a prompt settlement of these claims, can not be accepted by those charged with the duty of deciding upon them now as a present element in their favor. The opinion of these men, however, must always secure for them a respectful consideration both by Congress and by the country.

MUST STAND UPON THEIR MERITS

This bill has come over from the Senate upon the unanimous vote of that body; nevertheless these claims must stand, if at all, upon their merits. What are their merits? What is their history? They had their origin amid the great events of the French revolution, but would never have existed only for one of the great events of our own revolution, namely, the treaty of alliance with the French of 1778; and this opens to one of the darkest chapters of our revolutionary history. After three years of unsuccessful war the colonial forces under Washington went into winter quarters at Valley Forge for the unusually severe winter of 1777-78. The soldiers left blood from their bare feet upon the frozen ground as they marched thither from Whitemarsh. Here, the frozen ground as they marched thinner from whitemassi. Here half clad and half fed and without shelter except a rude covering of boughs, they spent the day gathering wood and the night without blankets by the great fires they built. Meanwhile the British army under Howe was wintering in the midst of plenty in the city of Philadelphia, whence the Continental Congress had fled, first to Lancaster, then to

The situation was indeed most dismal; Washington himself must have felt it when he wrote Congress as he did, January 10, 1778-

Unless some great and capital change takes place, the Army must inevitably be reduced to one or the other of three things—starve, dissolve, or disperse.

TREATY OF 1778.

But a "great and capital change" did take place.
Suddenly amid the gloom that everywhere prevailed, the camp at
Valley Forge, the Congress at York, and the whole American people
broke forth in rejoicing when they learned that Franklin, the American agent at Paris, had concluded a treaty with France by which that
powerful nation bound herself to "guarantee to the United States
their liberty and independence absolute and unlimited." This treaty
was signed February 6, 1778.
Under it France at once sent herea strong land and

Under it France at once sent here a strong land and naval force, which arrived in season for the campaign of the following summer. During the remaining four years of the war the French flag went resolutely into battle beside our own, and French blood ran freely.

France kept her treaty and stood by us to the last, the final surrender

at Yorktown being precipitated by the timely arrival of 5,000 fresh French troops from the West Indies, and the surrender being made to the allied American and French armies under Washington and Ro-chambeau, and to the French navy under De Grasse. What might have been the fate of American independence had not France assisted it were idle to speculate. It is sufficient for the purposes of this discussion that France kept her guarantee and the colonies took their place among the nations of the earth. This four years' war in America cost the French Government, according to Calonne, the minister of finance under Louis XVI, \$280,000,000, saying nothing of the valuable lives lost. Here the question naturally arises, what was the consideration that led France to enter into this treaty and make this heavy outlay? Neither sentiment nor traditional hatred of the English prompted her to assume these obligations and make this sacrifice. This treaty was purely a business transaction; one in which the United States assumed heavy obligations.

OBLIGATIONS ASSUMED BY UNITED STATES.

What were those obligations? In the first place the United States guaranteed to France forever her possessions in America at that time, which were the islands of St. Domingo, Martinique, Guadeloupe, St. Lucia, St. Vincent, Tobago, Deseada, Marie Galante, St. Pierre, Miquelon, Grenada, and on the mainland Cayenne. This guarantee was not only against England, but against the world, and was forever; and not only of the above, but of any future possessions which France might thereafter by treaty acquire upon this continent. Here is the language of the treaty:

The two parties guarantee, mutually, from the present time and forever, against all other powers, to wit, the United States to his most Christian Majesty, the present possessions of the crown of France in America, as well as those which it may acquire by the future treaty of peace. And his most Christian Majesty guarantees, on his part, to the United States their liberty, sovereignty, and independence, absolute and unlimited, as well in matters of government as commerce, and also their possessions, and the additions or conquests that their confederation may obtain during the war from any of the domains now or heretofore possessed by Great Britain in North America.—Treaty of alliance, article 2.

But this was not the only obligation assumed by the United States at that time; not the whole consideration. The United States further agreed in the treaty of amity and commerce signed at the same time to protect and defend by their ships of war any and all French vessels "against all attacks, force, and violence in the same manner as they ought to protect and defend the vessels and citizens of the United

ought to protect and derend the vessels and cattleds of the Christoff States." (Articles 6 and 7.)

They also agreed "to open their ports to French ships of war and privateers with their prizes and to close them against any power at war with France except when driven by stress of weather; and then all proper means were to be vigorously used that they go out and retire as soon as possible."

They also agreed "to allow French privateers to fit their ships, to sell what they had taken or in any other manner whatsoever to exchange their ships' merchandise or any other lading; but privateers at enmity with France were not to be allowed to victual in ports of the United States." (Article 17.)

These in brief were the obligations which the United States assumed in these two treaties, and which constituted the consideration upon which the French army and navy mustered in the cause of American which the French army and navy mustered in the cause of American independence. So long as France remained at peace these obligations slumbered, but in less than eight years from the surrender at Yorktown the French people, instructed by the successful establishment of free institutions upon this continent to which they had largely contributed, themselves rejected the divine authority of kings and asserted the right of self-government. Louis XVI was beheaded, and the Directory and Consulate followed. Royalty was alarmed, and England, Holland, Spain, Naples, Austria, Prussia, and Sweden combined to crush the French republic. To ordinary human judgment but one fate awaited her—she must be overwhelmed. her—she must be overwhelmed.

PERPLEXING SITUATION OF UNITED STATES

Then it was that American statesmanship was confronted with the perplexing fact that France was our ally, that the United States by solemn treaty had guaranteed forever her possessions in America. Should these possessions be attacked by some one of the powers in coalition

as they very soon were by England, the United States were bound to defend them. This is clear from the terms of the treaty; but let us see what view was taken of our duty by American statesmen

Mr. Jefferson, in a letter to Mr. Madison of April 3, 1794, says:

As to the guarantee of the French islands, whatever doubts may be entertained of the moment at which we ought to interpose, yet I have no doubt but that we ought to interpose at a proper time, and declare both to England and France that these islands are to rest with France, and that we will make a common cause with the latter for that object.—Jefferson's Works, volume 3, page 303.

In reference to the guarantee, Mr. Morris, our minister to France, fully comprehending the difficulties that were threatening this country, thus wrote to our Secretary of State, as early as December 21, 1792:

The circumstances of a war with Britain [by France] becomes important to us in more cases than one. The question respecting the guarantee of American possessions may, perhaps, be agitated, especially if France should attempt to defend her islands.

\*\* I will only pray your indulgence, while I express my wish that all our treaties (however onerous) may be strictly fulfilled, according to their true intent and meaning. The honest nation is that which, like the honest man—

"Hath to its plighted faith and vow forever firmly stood,
And, tho' it promise to its loss, yet makes that promise good."

—Senate Docume

We have already seen what the promise was and the circumstances under which it was made. Did we "make that promise good?" Alas, that this page of our history must forever show that we shrank from the fulfillment of the guarantee! Our Government evidently felt that it would be better to meet the claim for damages than to undertake to defend the French islands, which would require our whole land and naval force and involve us in certain war with some one if not all of the

naval force and involve us in certain war with some one if not all of the great powers which had combined against France. Accordingly, on the 22d day of April, 1793, President Washington issued his celebrated proclamation of neutrality.

This must have cost Washington a severe internal struggle as recollections of our desperate condition in the winter of 1778 and of the treaty of alliance and of the arrival of La Fayette at Valley Forge under that treaty came thronging back upon him; and no wonder that afterward in his farewell address he warned his fellow-countrymen against "entangling alliances" with foreign powers.

This proclamation in the face of the treaties of 1778 of course looks bad. Much, however, could be said in extenuation of this apparent want of faith on the part of the United States toward the French, but it would be foreign to this inquiry. It is enough to know that our Government saw fit to disregard both the treaty of alliance and of amity and commerce, and maintain a neutral position.

#### FRANCE ENRAGED COMMENCES SPOLIATIONS.

The French people were of course filled with disappointment and rage, and on the 9th of the following May the French Directory issued a decree authorizing the seizure of provisions in the ships of neutrals, on the plea of necessity and with the assurance of compensation to the

This at once let loose the French cruisers upon our defenseless merchant-ships, and, with the exception of some unintentional trespasses already committed, was the beginning of those spoliations of our commerce which, before an understanding was reached with France in the year 1801, resulted in the loss of millions of dollars to our citizens, not one dollar of which have the sufferers ever yet received. This was the beginning; but in order to a right understanding of the obligations of the Government to these claimants, it will be necessary to follow a little further the history of these spoliations and to observe particularly the attitude of the Government toward these claims at the time they accrued, and the use made of them by the Government in the treaty of 1801, when they ceased to be subsisting claims against the

POINTS STATED.

Now, to anticipate a little, this examination will show— First. That the claims arose from the refusal of our Government to keep the treaties of 1778.

Second. That our Government took charge of these claims for the professed purpose of collecting them for the benefit of the claimants.

Third. That in the negotiations which followed, the United States

were confronted by France with a heavy claim for damages for not keeping the treaties of 1778; and in settlement of this large claim against the United States as a nation for disregard of her treaty obligations, our Government released to the French these individual claims of her citizens; in other words, appropriated the private property of these citi-zens to her own use in discharge of heavy national obligations which

at one time seemed to threaten national ruin.

Fourth. It will be seen that to this day the Government has never compensated the individuals whose property was thus appropriated to her own use, but that in the persons of their heirs and representatives they are still appealing to Congress for relief.

the new French minister, had landed at Charleston. Charles Sumner. in his report upon this subject to the Forty-first Congress, says:

Chief-Justice Marshall, whose opportunities for information were unquestionable, has let us know that the proclamation was "intended to prevent the French minister from demanding the performance of the guarantee contained in the treaty of alliance."

As was suspected by our Government, Genet had come to look after

As was suspected by our Government, Genet had come to look after the guarantee. His instructions, dated January 17, 1793, were:

To penetrate profoundly the sense of the treaties of 1778, \* \* \* and to make the Americans consider engagements which might appear enerous as the just price of the independence which the French nation had secured to them, \* \* \* and to negotiate a supplementary treaty, to fix more surely "the reciprocal guarantee of the possessions of the two powers.—Gebhardl's American and French State Papers, volume 1, pages 9 and 10.

Genet was astonished and perplexed by the proclamation of neutrality. It was a complete surprise and had the effect intended by our Government to close the door against all negotiation or demand touching the guarantee. All he could do was to scold, which he did most vigorously.

ment to close the door against all negotiation or demand touching the guarantee. All he could do was to scold, which he did most vigorously. In writing our Secretary of State he charged—

That the President, before knowing what the minister had to communicate from the French Republic, was in a hurry "to proclaim sentiments on which decency and friendship should at least have drawn a veil;" "that he took on himself to give to our treaties arbitrary interpretations absolutely contrary to their true sense, and that he left no other indemnification to France for the blood she spilt, for the treasure she dissipated, in fighting for the independence of the United States, but the illusory advantage of bringing prizes into their ports without being able to sell them."—American State Papers, Foreign Affairs, volume 1, page 172.

About this time the English was a threatening the English English was a threatening the English English.

About this time the English were threatening the French West India Islands, the subject of the guarantee. The islands appealed through Genet to our Government for "divers necessary succors of provision, ammunition, and even men," and spoke of—

England coming to take possession of French colonies in the name of a king without dominions, and North America unable to lend a helping hand against the perfidy.—American State Papers, Foreign Affairs, volume 1, page 326.

In speaking of this application, Genet in a letter to our Secretary of State of September 18, 1793, petulantly said—

That the Secretary of War, to whom I communicated the wish of our Government of the Windward Islands, to receive promptly some fire-arms and some cannon, which might put into a state of defense possessions guaranteed by the United States, had the front to answer me, with an ironical carelessness, that the principle established by the President did not permit him to lend us so much as a pistol.—Ibid., page 219.

In another letter dated June 8, 1793, he reproached the United States

The Federal Government should observe the public engagements contracted and give to the world the example of a true neutrality, which does not consist in the cowardly abandonment of friends and at the moment when danger menaces.—French Spoliations, Executive Document, 1820, page 193.

And again, November 14, 1793, he made this demand of Mr. Jefferson, our Secretary of State:

I beg you to lay open to the President the decree and the inclosed note, and to obtain from him the earliest decision, either as to the guarantee I have claimed the fulfillment of for our colonies, or upon the mode of negotiation of the new treaty I was charged to propose to the United States, which would make of the two nations but one family,—Ibid., page 281.

Genet proved so turbulent and offensive that Washington dismissed him. But his successor, Mr. Adet, was hardly less imperative in his demands. He wrote our Secretary of State, November 15, 1796, as fol-

The undersigned, minister plenipotentiary of the French Republic, now fulfills to the Secretary of State of the United States a painful but sacred duty. He claims, in the name of American honor, in the name of the faith of treaties, the execution of that contract which assured to the United States their existence, and which France regarded as the pledge of the most sacred union between two people, the freest upon earth. In a word, he announces to the Secretary of State the resolution of agovernment terrible to its enemies but generous to its allies.—

American State Papers, volume 1, page 339.

Meanwhile England had captured all the French West India Islands, almost without resistance, enabling one of her historians afterward to

Thus, in little more than a month, the French were entirely dispossessed their West India possessions, with hardly any loss to the victorious nation. Alison's History, volume 3, page 396, chapter 16.

JAY'S TREATY

The neutrality of our Government and the consequent loss of their islands, coupled with the dismissal of Genet, was of course very irritating to the French; but when they learned of our treaty with Great Britain of November 19, 1794, known as Jay's treaty, their rage was ungovernable. Not to dwell upon this point, it is at least worthy of observation that the provisions of this treaty with England certainly appear quite remarkable when read in connection with the French treaty of amity and commerce of 1778 still in force at the time of the execution of the English treaty. The French treaty is as follows:

Fourth. It will be seen that to this day the Government has never impensated the individuals whose property was thus appropriated to er own use, but that in the persons of their heirs and representatives help are still appealing to Congress for relief.

FURTHER HISTORY.

Now let us see if the further history of these claims sustains these everal positions.

On the day of the proclamation of neutrality news came that Genet,

of weather or the dangers of the sea, all proper means shall be vigorously used that they go out and retire from thence as soon as possible.

ART. 22. It shall not be lawful for any foreign privateers not belonging to subjects of the Most Christian King nor citizens of the said United States who have commissions from any other prince or state in enmity with either nation to fit their ships in the ports of either the one or the other of the aforesaid parties, to sell what they have taken, or in any other manner whatsoever to exchange their ships, merchandises, or any other lading; neither shall they be allowed even to purchase victuals except such as shall be necessary for their going to the next port of that prince or state from which they have their commissions.

By article 17 we agreed that no shelter or refuge should be given in our ports of the enemies of France. By article 23 of the British treaty we agree that the ships of war of England, at that very time at war with France, shall at all times be hospitably received. It is as follows:

ART. 23. The ships of war of each of the contracting parties shall at all times be hospitably received in the ports of the other, their officers and crews paying due respect to the laws and government of the country.—Jay's Treaty.

In article 17 of the French treaty we had agreed that French ships of war and privateers might carry whithersoever they pleased the ships and goods taken from her enemies. In article 25 of the British treaty we agreed that no shelter or refuge shall be given in our ports to the ships of war or privateers of the enemies of England; and in article 24 that no privateers of any other nation shall arm their ships or sell their prizes in our ports. These articles are as follows:

prizes in our ports. These articles are as follows:

ART. 24. It shall not be lawful for any foreign privateers (not being subjects or citizens of either of the said parties), who have commissions from any other prince or state in enmity with either nation, to arm their ships in the ports of either of the said parties, nor to sell what they have taken, nor in any other manner to exchange the same; nor shall they be allowed to purchase more provisions than shall be necessary for their going to the nearest port of that prince or state from whom they obtained their commissions.

ART. 25. It shall be lawful for the ships of war and privateers belonging to the said parties, respectively, to carry whithersoever they please the ships and goods taken from their enemies without being obliged to pay any fee to the officers of the admiralty, or to any judges whatever; nor shall the said prizes when they arrive at and enter the ports of the said parties be detained or seized; neither shall the searchers or other officers of those places visit such prizes (except for the purpose of preventing the carrying of any part of the cargo thereof on shore in any manner contrary to the established laws of revenue, navigation, or commerce), nor shall such officers take cognizance of the validity of such prizes, but they shall be at liberty to hoist sail and depart as speedily as may be and carry their said prizes to the place mentioned in their commissions or patents, which the commanders of the said ships of war or privateers shall be obliged to show. No shelter or refuge shall be given in their ports to such as have made a prize upon the subjects or citizens of either of the said parties; but if forced by stress of weather or the dangers of the sea to enter therein particular care shall be taken to hasten their departure and to cause them to refire as soon as possible.—Jayi's Treaty.

From the foregoing it is perfectly clear that Jay's treaty was in plain

From the foregoing it is perfectly clear that Jay's treaty was in plain violation of the French treaty of amity and commerce. Yet our Government acted upon Jay's treaty and closed our ports to the armed vessels of France and their prizes at a time when the stipulated use of them became of vital importance in consequence of the loss of her West India possessions. It is apparent that our Government so acted from the following direction sent by the Secretary of State to Mr. Otis, district attorney at Boston, on the 12th of July, 1796:

Orders have been issued from the Treasury Department to the collectors not to admit to an energy any prizes taken by foreign privateers commissioned by any prince or state at enmity with Great Britain.—American State Papers, volume I, page 240.

Thus it appears that the privileges guaranteed to France were denied her after our treaty with her enemy.

It is a clear principle of international law that a sovereign or state can not rightfully make a treaty contrary to one by which they are already bound. Vattel says:

As the engagements of a treaty impose on the one hand a perfect obligs they produce on the other a perfect right. To violate a treaty is then to vi a perfect right of him with whom we have contracted, and thus to do him: inny. A sovereign already bound by a treaty can not make others contracted the first. (Book 4, chapter 3, section 9.)

But it seems our Government did make a treaty with England conreary to our existing treaty with France, whereat France was naturally enough thoroughly exasperated, the president of the French Directory, in a communication to Mr. Monroe, our minister at Paris, characterizing not only the treaty but our whole policy as "a condescension to the wishes of our ancient tyrant."

With the combined powers of Europe against her France was in 'no ondition to seek formal redress, but took revenge upon our commerce. She talked of necessity; and it is true she was in deep distress because of the British embargo and blockade, and to what extent this may have controlled her conduct, and to what extent revenge, is not very clear. Meanwhile the capture of our vessels increased.

NEW EDICTS AND FURTHER SPOLIATIONS

The Directory issued a new edict declaring that-

The French Republic will treat neutral vessels, either as to confiscation, searches, or capture, in the same manner as neutrals shall suffer the English to treat them—the French.—French Spoliations, Executive Document, No. 1826, page 434.

Our Government protested, but with no success. The French colonies caught this marauding spirit of the home government and took a hand themselves. The French agents at Cayenne reported "that having found no resource in finance, and knowing the unfriendly disposition of the Americans, and to avoid perishing in distress, they had armed for cruising, and that already eighty-seven cruisers were at sea; and

that for three months preceding the administration had subsisted and individuals been enriched out of those prizes." (Ibid., page 438.)

that for three months preceding the administration had subsisted and individuals been enriched out of those prizes." (*Ibid.*, page 438.) Not satisfied with the license already granted her privateers the French Government issued, March 2, 1779, still another edict, claiming as lawful prize all American ships if found without a rôle de equipage, or a circumstantial list of the crew. But the navigation laws of the United States did not require among a ship's papers any such list, and United States did not require among a ship's papers any such list, and of course every American vessel was without it, and under this arbitrary and wanton decree liable to seizure and confiscation. The havor that followed was fearful, but French ingenuity was not yet exhausted nor French malice satisfied, and still another of these barbarous decrees followed, January 17, 1798, which made subject to condemnation "every vessel laden in whole or in part with merchandise coming out of England or her possessions." (Executive Documents 1826, 483.) All these edicts against neutral ships were in plain violation of the law of nations and constituted at best but a system of nationalized piracy. The great powers of Europe from the first having combined against the French Republic, expected as belligerents that their shipping would suffer from French privateering.

fer from French privateering.

But our neutrality under international law should have kept inviolate our commerce and no doubt would only that the French were determined upon revenge for our disregard of the treaties of 1778; and by plundering our commerce they not only had their revenge, but helped themselves to the very things which in their beleaguered state they most needed.

AMOUNT OF LOSSES.

It should here be remarked that the losses resulting from these spoliations were very great, estimated at one time by our Government at \$15,000,000. (Wait's American State Papers, volume 3, page 497.)
Our Secretary of State in 1799 estimated them higher. In a report

made to Congress he spoke of them as-

Unjust and cruel depredations on American commerce, which have brought istress on multitudes and ruin on many of our citizens and occasioned a total oss of property to the United States of probably more than \$20,000,000.—French poliations, Executive Document 2826, page 480.

There were eight hundred and ninety-eight vessels and cargoes captured, and probably \$15,000,000 is a low estimate of the loss. It should be remembered that this loss was wholly by individuals; not a dollar of it came out of the National Treasury, but every dollar out of the pockets of individuals.

DUTY OF THE GOVERNMENT.

Now, what duty did the Government of the United States owe its eitizens whose property was thus taken from them upon the high seas by order of the French Government. These suffering citizens were wholly powerless to obtain redress without the intervention of their The only relief known in the practice of nations is for the government of the citizens thus despoiled to take the matter in hand and compel recompense from the government of the trespassing citizens. If restitution is not made it is just cause for war if the government of the injured citizens sees fit to carry it so far, or the government can if it so choose disregard the insult to its flag and take no notice of the robbery of its citizens; but who would want to live, and much less own ships under such a government?

Now, what did our Government do? It is true the position of the Government was a peculiar one. Here were spoliations by the French cruisers of our citizens for which, under the law of nations, the French Government were clearly liable, and to which our Government must give attention and have redressed if it would not forfeit the respect and devotion of its own people. But our public men of that day must have fore-seen that the moment they made claim upon France for these indi-vidual losses France would make claim upon our Government for viola-

tion of the treaties of 1778; and so it was

PROMISE TO OBTAIN REDRE But let us first see what our Government did. As early as August 27, 1793, Mr. Jefferson, our Secretary of State, addressed the merchants of the United States the following circular letter:

Of the United States the following circular letter:

GENTLEMEN: Complaint having been made to the Government of the United States of some instances of unjustifiable vexation and spoliation committed on our merchants' vessels by the privateers of the powers at war, and it being possible that other instances may have happened of which no information has been given to the Government, I have it in charge from the President (Washington) to assure the merchants of the United States concerned in foreign commerce or navigation that due attention will be paid to any injuries they may suffer on the high seas or in foreign countries contrary to the law of nations or to existing treaties; and that, on their forwarding hither well-authenticated evidence of the same, proper proceedings will be adopted for their relief.—Senate Documents, first seasion Nineleenth Congress, volume 5, page 216, document 102.

President Washington in his message to Congress of December 5.

President Washington, in his message to Congress of December 5, 1793, spoke of this subject as follows:

The vexations and spollations understood to have been committed on our vessels and commerce by the cruisers and officers of some of the belligerent powers appeared to require attention. The proof of these, however, not having been brought forward, the description of citizens supposed to have suffered were notified that, on furnishing them to the Executive, due measures would be taken to obtain redress of the past, and more effectual provisions against the future.—
French Spoliations, Executive Documents, 1826, page 253.

Thus did our Government, in the person of Washington, recognize its duty in the premises and promise these loses that on furnishing proofs "to the Executive due measures would be taken to obtain redress" of their losses. Proofs were promptly furnished.

In the mean time our relations with the French had become painful in the extreme. President Washington had sent away Minister Genet, as we have seen, and the French Directory in turn had recalled Minister Adet from Philadelphia, and refused to receive Mr. Monroe's successor, Charles Cotesworth Pinckney.

NEGOTIATIONS WITH THE FRENCH.

Diplomatic relations between the two governments thus ceased, but the spoliation of our commerce did not cease. The French cruisers still continued their relentless reprisals. For these our Government had promised "to obtain redress," and the "well-authenticated evidence promised "to obtain redress," and the "well-authenticated evidence of the same" having been furnished, three special envoys extraordinary, Charles Cotesworth Pinckney, John Marshall, and Elbridge Gerry, were dispatched to France and instructed specially as to these spoliations by the Secretary of State, July 15, 1797, as follows:

In respect to the depredations on our commerce, the principal object will be to agree on an equitable mode of examining and deciding the claims of our citizens, and the manner and periods of making the compensation.—Senate Documents, first session Nineteenth Congress, volume 5, pages 453-4, Document No. 102.

But our Government knew that when our envoys should reach Paris the subject of the reciprocal guarantee of the treaty of 1778 would be

the subject of the reciprocal guarantee of the treaty of 1778 would be sure to arise; hence the envoys were further instructed as follows:

But if France insists on the mutual guarantee, it will be necessary to aim at some modification of it. The existing engagement is of that kind which, by writers on the law of nations, is called a general guarantee: " " the nature of this obligation is understood to be that when a war really and truly defensive exists the engaging nation is bound to furnish an effectual and adequate defense, in co-operation with the power attacked; whence it follows that the nation may be required, in some circumstances, to bring forward its whole force.

The nature and extent of the succor demandable not being ascertained, engagements of this kind are dangerous on account of their uncertainty; there is always hazard of doing too much or too little, and of course of being involved in involuntary rupture. Specific succors have the advantage of certainty and are less liable to occasion war. On the other hand, a general guarantee allows a latitude for the exercise of judgment and discretion.

On the part of the United States, instead of troops or ships of war, it will be convenient to stipulate for a moderate sum of money or quantity of provisions, at the option of France; the provisions to be delivered atour own ports, in any future defensive wars. The sum of money, or its value in provisions, ought not toexceed \$200,000 a year during such wars.—Ibid.

The envoys reached France in September, but the Directory insolently

The envoys reached France in September, but the Directory insolently

The envoys reached r rance in september, but the Infectory insciently refused to receive them.

Napoleon, at the head of the army of Italy, was threatening the Austrian capital, and the Directory were busy with those negotiations by which, at Campo Formio, October 17, Austria ceded to the French Republic the Netherlands and Lombardy. They were intoxicated with success, and had no time to listen to the American envoys.

COUNTER-CLAIMS BY FRANCE.

Our envoys were not formally received, but Tallyrand, then at the head of French foreign affairs, communicated with them unofficially, from

head of French foreign affairs, communicated with them unofficially, from which it will be seen that he was prompt to claim for the French Republic "indemnities." In a letter to Mr. Gerry, June 15, 1789, he said: The French Republic desires to be restored to the rights which the treaties with your Republic confer upon it, and through these means it desires to assure yours. You claim indemnities; it equally demands them; and this disposition being as sincere on the part of the United States as it is on its part, will speedily remove all the difficulties."—French Spoliations, Executive Document, 1826, page 529

Meanwhile the spoliation of our commerce continued as before, and the United States began preparations for war. This restored the reason of the Directory, and our Government was informed that another embassy would be received.

Whereupon Oliver Ellsworth, William R. Davie, and William Van Murray were sent with the following instructions, under date of Octo-

First. At the opening of the negotiation you will inform the French ministers that the United States expects from France as an indispensable condition of the treaty a stipulation to make to the citizens of the United States full compensation for all losses and damages which they shall have sustained by reason of irregular or illegal captures or condemnations of their vessels and other property under color of authority or commissions from the French Republic or its

The following points are to be considered as ultimata:
First. That an article be inserted for establishing a board with suitable powers to hear and determine the claims of our citizens for the causes hereinbefore expressed, and binding France to pay or secure payment of the sums which shall be awarded.

Second. As the French Government have heretofore complained of infringements of the treaty of amity and commerce by the United States or their citizens, all claims for injuries thereby occasioned to France or its citizens are to be submitted to the same board; and whatever damages they award will be allowed by the United States and deducted from the sums awarded to be paid by France.—Senate Documents, first session Nineteenth Congress, volume 5, page 562.

OUR ENVOYS OFFER \$8,000,000 TO BE RELIEVED OF THE TREATIES OF 1778

The Directory had passed away and Napoleon was now First Consul. Our envoys were cordially received and negotiations commenced at once. Several propositions and counter-propositions were made by the plenipotentiaries of the two sides, and finally, August 29, 1800, the American envoys offered \$8,000,000 to be relieved from the treaties of 1778, and that a commission should be established to ascertain the indemnities due from the French Government to American citizens.

FRANCE WILLING TO SQUARE ACCOUNTS

In reply to this the French plenipotentiaries submitted the following, September 4:

The indemnities which shall be due by France to the citizens of the United tates shall be paid by the United States. And in return for which France

yields the exclusive privilege resulting from the seventeenth and twenty-second articles of the treaty of commerce, and from the rights of guarantee of the eleventh article of the treaty of alliance.—Executive Document, 1826, pages 615-629.

The French Government was willing to square accounts with the United States, and let the "indemnities which shall be due by France to the citizens of the United States be paid by the United States."

This the American envoys declared "inadmissible" under their instructions, but offered to leave the whole subject to a commission. The French plenipotentiaries urged this mutual set-off, "giving as one reason the utter inability of the republic to pay any money in the situation in which she would be left by the present war." (Ibid., page 633.)

This was precisely the trouble with our Government; we were still involved on account of our war debt, and in no condition to assume the payment of the large sum of money which these spoliation claims

the payment of the large sum of money which these spoliation claims called for. Our Government had promised "to obtain redress" for these sufferers, had taken charge of their claims for that purpose and demanded payment of the French; now, if the United States should barter these individual claims of her citizens to France in satisfaction of a claim which France had against us as a nation for the violation of treaties, then, upon the plainest principles of justice and law as well, our Government would be liable to these individual claimants for the claims thus appropriated to its own use, and in honor at least it would be obliged to pay them at once. No excuse could be offered for delay.

Our Government was not prepared to settle on this basis. Our envoys held the proposition "inadmissible," and yet we shall see that precisely this was the settlement at last.

At this juncture our envoys, seeing that no money could be obtained from France and not wishing to fasten liability upon the United States for these claims, proposed:

That the parties put off to another time the discussion of the indemnities and he treaties. -lbid., page 687.

Negotiations followed which resulted, September 30, 1800, in a new treaty—called convention—in which the difficulties between the two countries were for the time being amicably composed.

These spoliation claims were disposed of as follows:

ART. 2. The ministers plenipotentiary of the two parties not being able to agree at present respecting the treaty of alliance of February 6, 1778, the treaty of amity and commerce of the same date, and the convention of 14th of November, 1788, nor upon the indemnities mutually due or claimed, the parties will negotiate further on these subjects at a convenient time, and until they may have agreed upon these points the said treaties and convention shall have no operation, and the relations of the two countries shall be regulated as follows—
Statutes at Large, volume 8, page 178.

"Indemnities mutually due or claimed," namely, the claims of our retizens for ships and cargoes captured and the counter-claims of France for violated treaty obligations were postponed, indefinitely postponed, and until they should "be agreed upon" the old treaties were to have no operation. If never "agreed upon," then the treaties were forever abrogated. By this arrangement our commerce was relieved from further spoliations, our Government relieved from the treaties until it should free France from the claims due our citizens and France was rether spoliations, our Government reneved from the treatment should free France from the claims due our citizens, and France was relieved from these claims till she should demand of our Government compensation for failure to keep the reciprocal guarantee. Thus a temporary lieved from these claims till she should demand of our Government compensation for failure to keep the reciprocal guarantee. Thus a temporary understanding was reached which our envoys thought preferable to a final settlement by way of set-off, for then our Government could offer no excuse for not settling with these claimants. As it was the Government could pacify the claimants with the promise to reopen the matter at some more auspicious time. This convention was concluded at Morfortaine, the country seat of Joseph Bonaparte, the chairman of the French plenipotentiaries, and was made the occasion of an elegant entertainment, at which Napoleon, still First Consul, was present. La Fayette also, whose release from an Austrian prison Napoleon had just procured, was present and shared in the festivities over this initial step in the reconciliation of the two republics. The First Consul, however, it seems could not forbear reminding us of the treaty of alliance and of our early obligations. He proposed this toast: He proposed this toast:

The manes of the French and the Americans who died on the field of battle for the independence of the New World.—Memoires due Roi Joseph, tome 1, page 94.

This was the first convention of the consular government, and was closely followed by several others with the European powers which gave the Republic a brief day of peace. In speaking of this event, M. Thiers, as was the habit of Frenchmen of that generation, kept up in his history the reminder of Napoleon. He says:

It was natural that the reconciliation of France with the different powers of the globe should begin with that republic to which she had in a measure given birth.

Of the terms of the convention itself, he says:

The First Consul had allowed the difficulties relative to the treaty of alliance of 1778 to be adjourned; but, on the other hand, he had required the adjournment of the claims of the Americans relative to captured vessels.—Histoire du Consulate, tome 2, liv. 7.

FINAL SETTLEMENT BY SET-OFF.

Now, let us see what became of this convention. It was of course ratified by the First Consul and became binding upon France.

But when the convention was submitted to the United States Senate

for ratification that body thought article 2 quite too indefinite, and accordingly expunged it and added a provision that the convention should "be in force only eight years." (Statutes at Large, volume 8, page

The convention as amended was returned for the concurrence of the French Government, On the 31st of July, 1801, that government ratified it in the following language:

Bonaparte, First Consul, in the name of the French people, the consuls of the republic having seen and examined the convention, \* \* \* approves the above convention. \* \* \* The Government of the United States having added to its ratification that the convention should be in force for the space of eight years, and having omitted the second article, the Government of the French Republic consents to accept, ratify, and confirm the above convention with the addition importing that the convention shall be in force for the space of eight years, and with the retrenchment of the second article, provided that, by this retrenchment, the two states renounce the respective pretensions which are the object of the said article.—Laws United States.

Here was an important modification, "provided that by this retrench ment the two States renounce the respective pretensions which are the object of the said article." This was the old proposition of set-off submitted by the French plenipotentiaries September 4, 1800, which our envoys held inadmissible. What did our Government say to it now? Jefferson, then President, submitted the convention with Napoleon's proviso to the United States Senate, and it was ratified by 22 yeas to 4 nays; and December 21, 1801, the President issued proclamation enjoining observance of the same and "every clause and article thereof." (*Ibid.*)

Here was at last a settlement of this vexatious controversy which had seriously threatened the peace of our country. France released the United States from the burdensome treaties of 1778, and the United States released France from the large sums of money due our citizens for captured ships and cargoes. The Government of the United States for captured ships and cargoes. The Government of the United States thus appropriated to its own use in payment of a debt against itself these claims which were the private property of its citizens, and for which the Government had promised these citizens when it took possession of them "to obtain redress;" not simply "redress" of the French, but "redress" for claimants, precisely as our Government has since repeatedly "obtained redress" for our citizens from different foreign powers for similar spoliations of our commerce.

KIND OF REDRESS PROMISED

Since this treaty with the Frenchof 1801 we have collected of France for spoliations of our commerce, at one time, \$4,687,224, for 357 vessels captured; and at another time, \$3,748,928, for 361 vessels; every dollar of which was distributed to the losers. We have also collected since that time, of Denmark, \$664,872 for 112 vessels; of Naples, before its annexation to the kingdom of Italy, \$1,924,995 for 51 vessels; of Spain, at three different times, a total of \$5,385,440 for 380 vessels; of Mexico, \$1,127,112 for 64 vessels; of Colombia, \$57,372 for 5 vessels; of England, in 1806, \$6,314,724 for 217 vessels; and again, of England at Geneva, \$15,500,000 on account of her responsibility for the insurgent cruisers which left her ports and laid waste our commerce during our recent rebellion. In all these cases the money thus collected has been distributed to those suffering the loss, except a portion of the Geneva award, which is now in the hands of a commission and will soon be distributed. This is the kind of "redress" our Government promised when it took these claims, and the kind it has obtained for all other spoliations of our commerce. And yet these losers whose claims were bartered by our Government to France to buy up the treaties of 1778 Since this treaty with the French of 1801 we have collected of France bartered by our Government to France to buy up the treaties of 1778 have never received a dollar of their losses; and their grandchildren and great-grandchildren are now before Congress asking for what has been due since the year 1801. What would be thought of the lawyer who should settle some claim against himself with the claim of his client left for collection, and refuse to account for it; or what of the trustee who should convert to his own use trust funds and refuse to make restitution? And yet our Government has stood in this very attitude for the last eighty-two

In the cases supposed the law would give the injured party prompt redress. All these claimants can do, however, is to appeal to the sovereign power of the Government as vested in Congress and the President. This is their only way to relief. The Constitution may provide, as it does, that "private property shall not be taken for public use without just compensation." International law may declare, as Vattel says in book 4, chapter "private property shall not be taken for public use without just compensation." International law may declare, as Vattel says in book 4, chapter 2, section 12, "that when the property of a subject is disposed of by treaty, as the sovereign has a right to do, inasmuch as it is for the public advantage that he thus disposes of it, the state is bound to indemnify the citizens who are sufferers by the transaction." And yet these sufferers are powerless to obtain what the Constitution and public law thus plainly guarantee to them unless Congress provides the relief. If we refuse this relief we disregard not only the practice of nations but a plain provision of our Constitution. We refuse to be just to our own citizens. Can we affiord it?

we afford it?

This whole business is anything but creditable to the American name In the first place, our Government failed to keep its treaties, the obligations of which were solemnized by the blood and treasure of its ally and friend. And then when, as the result of this bad faith, our citizens were plundered by the privateers of the people thus outraged, our Government took the claims of these plundered citizens, promising to obtain for them indemnity, but instead of doing so used them to pay a debt of its own, and ever since has refused these citizens any satisfaction what-ever, in disregard not only of our promise but of our practice in all sim-ilar cases since the foundation of the Government; in disregard also of

the plain requirements of our Constitution and of public law, no less than of the plain dictates of common sense and common justice.

Here is a twofold national disgrace—first, because of our faithless con-

duct toward the French Republic; and, second, because of the dishon-orable treatment of those of our own citizens who were the unfortunate victims of that faithless conduct.

Can we longer afford this standing scandal against our Government? Can we longer afford to keep the brief volume of our history open at this unsavory chapter? For one, sir, I am in favor of speedily and forever closing it by a prompt settlement of these claims.

The Tariff.

SPEECH

# HON. ROBERT KLOTZ.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the report of the committee of conference on the bill (H. R. 5538) to reduce internal-revenue taxation.

Mr. KLOTZ said

Mr. Speakee: It appears by the action of the House this morning that the committee has abandoned the tariff bill. It has been discussed in this House during the two sessions of this Forty-seventh Congress, and by the business community in the States, especially the manufactur-ing portion thereof, who have had the Tariff Commission perambulatwer the whole United States taking the opinions of manufacturers and dealers, apparently endeavoring to collect such statistical informa-tion on all subjects, with a view to make an intelligent and impartial report to Congr

report to Congress.

Considering the irregularities and hardships connected with our present tariff system, made years ago, and which may at that time have suited the country well enough, I state now, what everybody knows, that the country has outlived the usefulness of the provisions of that law. Distances have been shortened, space has been annihilated, machinery has been improved, and cities have been built as if by magic. The introduction of railroads, telegraphs, and the indomitable spirit of American enterprise have altered the condition of things to such an extent that what was equity then is not satisfactory now.

tent that what was equity then is not satisfactory now.

Tariff, after all, is only a local question, for the States of Texas and Ohio want tariff on wool; the Carolinas, Louisiana, and Mississippi want tariff on sugar, cotton, and rice; the tobacco-growing States want tariff on tobacco, while the States bordering on the lakes want protections. tion on grain, lumber, and salt; the Eastern States on their manufactured goods of all descriptions, while Ohio, New Jersey, and Pennsylvania insist on a protective tariff on their great staples, such as iron and steel in all its branches, from the time it is taken out of the ground until it has passed through all its stages of manufacture.

Therefore I repeat that the tariff issue is a local matter, for each section or community seems to express a willingness to have a tariff on its own productions, but not on what they are obliged to purchase. This is one of the reasons why it is so difficult for this body law that will satisfy everybody, each one feeling honor-bound to advocate the interests of his own constituency. This, sir, has caused

much agitation and delay, and finally disheartened the committee so as to cause them to abandon the House bill. The necessities of a revision of the tariff are acknowledged on all sides, and we have therefore to look to the Senate bill for relief in order, if possible, to get a bill to come as near as possible satisfying the country and giving renewed confidence to the business community so that labor may be employed and prosperity may again reign in all our borders. The interests of the State which I have the honor in part to represent must not and dare not be overlooked by this great body of lawmakers.

While I am willing to concede the just claims of all interests represented in this great issue, I do insist that the schedule on iron and steel, in all its branches, is too low to permit of successful competition with

foreign manufacture

As no one within the sound of my voice is willing to bring the carnings of the laboring man and mechanic of this country on a par with that of those employed in Europe, why not, I ask, take up the Senate bill and see whether it can not be amended so as to avert the disaster which now threatens to destroy our enterprise in which millions of capital is invested and hundreds of thousands of men are employed? Although within a few days of the end of this Congress, I confidently believe we can yet be brought together to pass a satisfactory tariff bill, which will, I trust, protect both capital and labor, but which will be so framed as to prevent monopolies and other institutions which have for their object personal aggrandizement.

### Anti-Monopoly Transportation.

#### SPEECH

# HON. E. W. ROBERTSON,

OF LOUISIANA,

## IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 28, 1883,

On the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. ROBERTSON said:

Mr. CHAIRMAN: During the six years that I have been a member of Mr. Charlands. Buting the six years that I have been a member of this House it has been my pleasure to give special attention to the improvement of the Mississippi River—a subject of transcendent importance to the people of my State. In the performance of this pleasant duty I have favored and advocated separate consideration of the Mississippi and opposed the principle of the river and harbor bill. I still think the true theory is separate consideration of the Mississippi, for it is an exceptional river, governed by natural laws of its own and en-titled to exceptional treatment.

But theory and practice are two different things, particularly when the water ways of nature and cheap transportation are antagonized by railway monopolies. The savage warfare against the river and harbor bill which the press of New York and New England inaugurated last session, and which still continues, convinces me that a new principle

bill which the press of New York and New England inaugurated last session, and which still continues, convinces me that a new principle is involved, a conflict between monopolists and the people. I propose, therefore, to take a practical view of this question and act in harmony with the new circumstances.

Now, what are the facts? Take a recent map of the United States and you will find a network of railways spread over the length and breadth of this great country to the extent of about 110,000 miles. I make no complaint about this. On the contrary, I rejoice at the rapid advance of these agencies of development, commerce, and civilization. In themselves they are the greatest material blessing ever bestowed upon a young and ambitious nation. But I do complain at the abuse of this tremendous power by a band of grasping monopolists.

In the hands of these expert railway princes a transportation map of the United States is like a chess-board before an expert player or an army under the command of a great general; by skillful combinations they win every game in a contest with the producers and consumers. These combinations into great systems are not limited to States or sections, but are transcontinental in extent; their capital, influence, and power is so enormous as to affect the legislation of both the State and Federal Governments; at times they influence the judiciary; by subsidizing the press they even distort public opinion.

Until the people learn how to play a better game they must expect excessive burdens upon the transportation of their products. Thanks to the natural water ways of this country, the people have a transportation map of their own—a chess board on which they can successfully compete with the would-be monopolists. The Mississippi and its forty-two navigable tributaries offer facilities for cheap transportation to the extent of 16,000 miles, intersecting some twenty-one States and Territories. The other rivers of the United States are navigable to the extent of at least 10,000 miles more. To The other rivers of the United States are navigable to the extent of at least 10,000 miles more. To this we must add the great lakes, the coast lines, and the canals, and we have facilities for water trans-

portation to the extent of at least 50,000 miles.

These water lines may by wise management become the regulators of the railways and check their abuses in the shape of excessive transportation rates. Herein lies the power and usefulness of the river and harbor bill. It is a combination of the people's highways against a combination of the monopolists' highways. It is nature against art, cheap lines against costly ones. The people of this country know what they want, and are not afraid to ask for it, regardless of the clamor of

the press and veto messag

The representatives of the people during last session displayed a courage and strength truly magnificent when they almost instantly passed the river and harbor bill over the President's veto. Then was passed the river and harbor bill over the President's veto. Then was unsheathed an anti-monopoly weapon more effective than interstate-commerce bills, resolutions for regulation of railways, granger societies, or anti-monopoly leagues and platforms. It was the majesty of the people publicly displayed in the Halls of the National Legislature and before the eyes of the press and public. The people thereby proclaimed to the railway monopolists that they had transportation facilities of their own; that they would improve and protect them; that their products should no longer be taxed to death on the way to the markets of the world; that thereafter they would not be slaves of common carriers.

the world; that thereafter they would not be slaves of common carriers. Rejoicing as I do over this great victory of the people, I regret that the representatives of the Northern wing of the Democratic party—a party in name, theory, and long-continued practice devoted to the liberties and welfare of the people—did not participate in this victory, but with five or six exceptions blindly played into the hands of their great rival—the monopoly party. And, strange to say, many of the great

leaders of the Republican or monopoly party blindly played into the

hands of the people.

Had these Northern Democrats followed the teachings of their foreHad these Northern Democrats followed the teachings of their foremost and wisest leader, ex-Governor Horatio Seymour, whose earnest advocacy of free canals in New York State resulted in a wholesome restraint upon the railway monopolists of that great State, they would have seen in the river and harbor bill a similar check upon the transportation monopolists of the whole United States. If the people of a Government regulate national water ways, can not the General Government regulate national water ways? To ask the question is to answer it. The law upon this subject is clear and explicit, for the Supreme Court of the United States has said in unmistakable terms that the navigable rivers

Constitute navigable waters of the United States within the meaning of the acts of Congress, in contradistinction from the navigable waters of the States, where they form, in their ordinary condition by themselves, or by uniting with other waters, a continued highway over which commerce is or may be carried on with other States or foreign countries in the customary modes in which such commerce is conducted by water.

This language is most emphatically clear and conclusive as to the law. Northern Democrats can not dispute it, hence they must justify their opposition to the river and harbor bill on questions of policy. Can they do it? Is it policy, or good statesmanship, or Democratic to vote against the interests of the producers and consumers who comprise the Can they afford to stab the cause of cheap transportation, and

people? Can they afford to stab the cause of cheap transportation, and train in the ranks of the monopolists? I think not. It is undemocratic. It is a blow at the fundamental principles of their own party—a party which has always been proud to call itself the party of the people. He has studied the history of this country to little purpose who does not see in railway monopolies a gigantic and grasping power which, if left unrestrained by wholesome legislation, will continue to be an impending danger to Democratic theories of government. It is a power far more dangerous and alarming than that of the national banks—far more insidious and unscrupulous. Nature herself has supplied us with navigable rivers to restrain this power. If we are true to the welland of the people we will use the weapon thus given us to protect them from oppressive transportation rates upon their products and commerce. oppressive transportation rates upon their products and commerce

#### Rates of Pensions.

#### SPEECH

# HON. CHARLES H. VAN WYCK,

OF NEBRASKA,

IN THE SENATE OF THE UNITED STATES,

Wednesday, February 28, 1883.

The Senate having under consideration the bill (H. R. 1410) to amend the pension laws by increasing the pension of soldiers who have lost an arm or a leg in the service—

Mr. VAN WYCK said:
Mr. PRESIDENT: The Senate will indulge me in stating the reason, substantially, why a portion of the Committee on Pensions reported in favor of the House bill. A majority of the committee were in favor of an increase of pension to this class, and possibly to other classes of cases, while a minority of the committee proposed an indefinite postponement. Each of the other amendments has been fully explained. While the bill as passed by the House is so plain and simple as to need no explanation, the principal object of myself and colleague on the committee

nation, the principal object of myself and colleague on the committee who recommended the passage was that if there was any relief in this direction, if at this session there should be any increase, it could be

more certainly through the passage of the House bill.
Unfortunately this bill has been detained until the last days of the It should have been here earlier, and it is the fault of the majorsession. It should have been here earlier, and it is the fault of the majority of the committee, I admit; it is the fault of the friends of the measure on this side of the House that the bill was not promptly submitted for the consideration of this body during the last session. My friend from Delaware [Mr. SAULSBURY] says that there is not sufficient information and he wants still further delay. While not really opposing the principle of the measure, he thinks he is not sufficiently informed, whereas the committee have delayed, have sought all the information that could possibly be obtained, till we are near the end of a Congress, and no further information can be procured.

and no further information can be procured.

We have the facts and figures spread out in the different reports which have been presented. Then the only question that arises is, shall there have been presented. Then the only question that arises is, shall there be any relief of this kind, shall there be any increase of pensions? My friend from Kentucky [Mr. WILLIAMS] said very properly, and I cordially agree with him, that there is no animosity on his part; certainly not. It will not be found, because he and other gentlemen on that side of the Chamber from the South have voted with great liberality upon pension bills in special cases. I know my friend from Kentucky has been exprest in doing that. I know that he was so any ions to have special been earnest in doing that; I know that he was so anxious to have special

bills passed that he was ready to vote double pension, as in the case of General Burnett, and it was impossible to restrain him any more than it was the Attorney-General of the United States. So of course he has a

right to claim that and be proud of it.

The Senator says that pensions were not accorded to their soldiers, ertainly. They may be unfortunate; and I will say to my friend that Certainly. They may be unfortunate; and I will say to my friend that had the confederate army succeeded in establishing a confederacy in the South, had they planted themselves where their brave soldiers sought to plant them, and given them an independent existence among the nations of the earth, I say to him and to his friends on that side of the Chamber that such confederate nation would never have suffered a confederate soldier to have been begging for bread upon the streets; you never would have suffered the widow or orphan children of those who fell to linger through life without shelter and subsistence. You would never have allowed a crippled soldier with a hand-organ to be seeking a precarious subsistence upon the streets of your cities. While this misfortune may attach to the soldiers to which my friend refers, yet the chances of war were taken, and unfortunately for them, unfortunately for him also; yet we have a right to refer to the fact that the portion of the United States that was successful pledged to those who entered their armies they would take care of the orphans and the widows of those who fell. That was the nation's promise. The nation promised the soldiers when they went from their homes that those who came back crippled and maimed should be protected and saved from want during the remnant of their days. That promise which the nation made was honestly made, and all we ask is that it shall be faithfully kept.

The nation which made this promise exists to-day, and we have as much right to claim this promise shall be religiously kept as the faith

of this nation which was pledged to our public creditors. It will not do for gentlemen on either side of the Chamber to set down in figures, in dollars and cents, what it will cost to do justice to this class of our veteran soldiers. You did not do it when we were in the struggles of war. You stood up boldly and manfully here and in every corner of this nation, and you pledged the last man and the last dollar to carry on the war. We did it here; we did it at home. This nation understood it; the people of the South understood it; the nations of the earth understood it; and when the proposition was made looking toward a repudiation of a debt which saved our nation, which was looked upon at one time in the subjugation and defeat of the Southern army as imat one time in the subjugation and defeat of the Southern army as important almost as the soldiery upon the field, and when attempt after attempt was made to repudiate that debt, even by reducing the interest or in any other way, the allegation was that the solemn faith of the nation had been pledged. The solemn faith of the nation had been no more pledged to the payment of the public debt than it had been to the care and sustenance of the families of soldiers who might have fallen on the field or those who came home crippled and disabled from the war. We have a right now to ask this, because in the years gone by they needed not the same care as now. It is nearly twenty years from the battlefields where they lost limbs or incurred disability. Every recurring year adds to the disability and makes it still more impossible for them

year adds to the disability and makes it still more impossible for them to sustain themselves by the drudgery of labor. We promised them honorable positions in Government service. We have not kept that faith, although we on this side of the Chamber and our administrations have had the power to do it. That pledge, that promise, has not been kept. They have been turned away from the doors of our Departments when they were seeking positions which we honestly promised them.

Take the list of the employés of your Government to-day and see how meager is the number of those who have received a part of the

promise of this nation that after the war was closed they should be invited in to fill these places and occupy those seats. Now we are called on to fulfill the other part of the pledge. We can give them in money an addition to the pittance they are now receiving, so that they may be under no necessity to beg for bread. This much we can do, and in my judgment it is our duty.

Gentlemen claim it will cost a few millions. I would say to my friend from Delaware it may cost \$5,000,000. This Congress has been struggling in both branches for weeks and months to see how they could re-

lieve an overtaxed people, an overflowing Treasury, by reducing receipts from customs and internal-revenue duties.

A full Treasury has been the source of temptation for schemes of plunder, and the result was that at the last session \$20,000,000 was generously appropriated in the river and harbor bill. When the people set their seal of condemnation Congress turned penitently to them and said, "We will do so no more; we will remove the temptation; we will keep money from flowing into the Treasury." We have labored week after money from flowing into the Treasury." We have labored week after week to stop the inflow, and have not succeeded and probably shall not. As much will be collected from impost as has been in the years gone by. Unfortunately the money still flows into the Treasury. Let us make an effort to distribute it where it should properly go, redeeming the nation's pledge, and beyond corrupting influence.

Mr. President, it will not do for us to be higgling about the few million dollars these pensions will cost. With lapse of years should not come less appreciation.

Strange, the Committee on Military Affairs lately reported deriving

Strange, the Committee on Military Affairs lately reported denying the privilege of tents to the old veterans for reunions. The soldiers in some localities have reunions and are allowed the use of Government tents. At last these gentlemen discover it is expensive; it costs a few

thousand dollars yearly for repairs. They say to the veteran soldiers, twenty years after the war, "This must be stopped; it is costing some money; tents are injured." Gentlemen fail to remember the fact that these tents are mildewing and will injure more by mildew than by a

The Military Committee seemed to have thought this privilege, cost-The Military Committee seemed to have thought this privilege, costing the Government a few thousand dollars, must be denied at a time when money in the Treasury is abundant. These tents are used principally in the frontier States, where are no large rooms for assembling. You deny theold soldiers the enjoyment togather around their camp-fires and live over the years of war, and if the present tariff is retained on lumber it will be beyond their ability to build barracks for temporary

purposes.

Why now deny this privilege? Another twenty years from the war and this vast army of veterans will answer roll-call and gather in re-

unions with the patriots who have gone before.

It is no answer to say that the pension laws now are unjust. Un doubtedly they are. It is no answer to say that the pension laws now are unjust. Undoubtedly they are. It is no answer to say that there is improper discrimination in the pension laws; as certainly there are. That is no reason why there should be a denial of justice to those entitled. You say there have been frauds, frauds in the last pension act. Certainly, but that is no reason why there should be a denial of justice. There are frauds in the execution of all laws, and there may be in this.

The Senate will excuse me for having occupied so much time. I merely wished to call attention to the fact that this body, the House of Representatives, and the whole country should be willing that justice be done a class of soldiers in the war who have become almost to-tally disabled, whether from loss of limb or from any equivalent disability which renders them powerless to obtain sustenance during life.

#### Education.

#### SPEECH

# HON. JUDSON C. CLEMENTS.

OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 24, 1883.

The House having under consideration the bill (H. R. 6158) to aid in the support of common schools—

Mr. CLEMENTS said :

Mr. CLEMENTS said:

Mr. SPEAKER: I would be very glad if it were possible that we could act in accordance with the suggestion of the gentleman from Kentucky [Mr. WILLIS] who has just taken his seat, and that the House might take a vote this evening, if not on the bill, at least upon ordering the previous question, so as to secure final action upon the bill. It may be that we can not in good faith ask a vote to-day in view of the announcement made by the chairman of the Committee on Education and Labor [Mr. SHERWIN], who has charge of the bill. I did not hear that announcement, and do not know what it was, but unless the previous question is ordered this evening I very much fear that the measure will be antagonized by other bills having preference under the rules, and that we will not again be able to consider this bill in the few remaining days of the session.

I desire now briefly to discuss the general provisions and purposes of the proposed measure, and if it is intended that we vote this evening, I must not detain the House loss. For several years past there have

I must not detain the House loss. For several years past there have been measures proposed in each Congress looking to the education of the people. There has been a constant and growing public sentiment in favor of this cause, and especially in favor of providing the necessary facilities for curing the present appaining illiteracy in the Southern States. This sentiment is not confined to that section, the one more directly affected, but exists in all parts of the Union, if we may judge from the many numerously signed memorials from the people, the memorials of State Legislatures and intelligent bodies of the most efficient educators throughout the country, irrespective of political party bias, for this is a question far above political partisan considerations. It has not, therefore, become a hobby of any political party, but finds advocates among thoughtful, patriotic, and just men of all parties. The bill which has been read before the House proposes an appropriation of ten million dollars a year for five consecutive years to be appropriated among the States and Territoria. House proposes an appropriation of ten million dollars a year for five consecutive years, to be apportioned among the States and Territories and the District of Columbia on the basis of illiteracy. It provides that the share of each State shall be turned over to the proper State officials for application and disbursement by them under the State laws, wholly free from Federal supervision or interference; but requires the States to provide for the maintenance of schools for the free common-school education of all their children of school age for at least three months in each year. Then the bill requires reports to be made by the State authorities to the Commissioner of Education for the United States. These are the main provisions of the bill briefly stated. I will not now go into a more detailed statement of its provisions. ment of its provisions.

That this aid is sorely needed in the States of the South is not denied. That those States are unable to afford the necessary facilities for education to meet the necessities of the present in this respect will hardly be denied. The reasons for this inability on their

spect will hardly be denied. The reasons for this inability on their part must be patent to all.

That the Federal Government is morally and equitably bound to grant assistance I think cannot be successfully denied. To establish the first proposition, as to the necessity—pressing necessity—of aid, I need present no other evidence than the following statistics, showing the frightful percentage of illiteracy among the voters of those States, the number of voters who cannot write, and yet upon whose votes is to depend in a great measure the welfare of those States and of the whole country:

Table showing percentage of illiteracy among the voters in the Southern States.

The fearful and unprecedented loss of property by the people of The fearful and unprecedented loss of property by the people of those States during and following the late war, I need hardly say in this presence, left them without the means to provide adequate facilities for education. It is difficult for those who were not eyewitnesses to the condition of the people of that section to realize what that condition was at the close of the late struggle. Our currency was destroyed; in many instances houses and farms destroyed. Farmers were without the ordinary farming utensils or the means to buy them. Provisions were so exhausted in many localities traversed and re-traversed by the armies at different period during the war that there was suffering for want of the actual necessity. during the war that there was suffering for want of the actual neces-

Then followed the tortures of the reconstruction period, greatly retarding the recuperation of the States and involving them in debt and discredit. But it is not my purpose to dwell upon these points. The wreck of property by the war in those States has no parallel in the history of the country. In 1860 the aggregate value of their property, including slaves, was \$5,426,041,724. In 1870, \$3,553,757,900, showing a decrease of \$1,872,284,724. In 1860 the assessed value of all property in Georgia, as shown by the census, was \$618,232,387. In 1870 it had fallen to \$227,219,519, showing a decrease of \$391,012,868. This is a fair illustration of the general loss of property in those States. When we add to this the difficulties growing out of the great enhancement of the public indebtedness of those States, and the embarassments growing out of the same, as well as the embarassed condition of the individual tax-payers, especially the debtor class, it is not strange that these States have not been able to do more for the promotion of common schools within their borders. They are making commendable progress in this respect. In nearly everyone, if not in all of them, each year shows more gratifying results as to the amounts devoted to this purpose and the number of children tanget. Then followed the tortures of the reconstruction period, greatly

to the amounts devoted to this purpose and the number of children to the amounts devoted to this purpose and the number of children taught.

At the close of the war nearly one-third of the population of the States referred to had been suddenly transformed from a condition of slavery to that of freedom and citizenship; almost wholly illiterate and without the necessary preparation for an intelligent and proper discharge or appreciation of the duties, responsibilities, and privileges of their new condition. The South is not alone responsible for the former slavery of the colored people; it is certainly not responsible for their emancipation and citizenship. I wish to be understood. I am not referring to these things by way of complaint, but I am speaking plainly of them because we must deal with facts as they exist. The Southern States are making a bona fide effort for the education of this race, but I submit that, in view of the facts of history, it is not just to those States that the whole burden should be cast upon them, nor would it be reasonable to expect them very soon, in their impoverished condition, to accomplish the work.

It is objected that this would be a new departure on the part of the government, and that it is not authorized by the Constitution, but I will not discuss that question within the short time I wish to occupy the attention of the House, except to say that this is hardly

an open question in view of the many precedents donating public lands to the States for educational purposes. Where is the difference in principle between the appropriation of money for that purpose and the donation of lands which practically are equivalent to so much money, for the same purpose? We are not asking this appropriation merely as beggars, but we insist upon it on the broad ground of instice and equity.

Some of the older States which would share largely in the fund have peculiarly strong equitable grounds for asking for this appropriation. I refer to those States which have heretofore ceded large priation. I refer to those States which have heretofore ceded large areas of territory to the general government, as many of them have, notably Virginia and Georgia. Virginia ceded the great northwestern territory from which several great States have since been formed. Georgia once owned and ceded to the government nearly all of that territory now composing the States of Alabama and Mississippi. Thus, in their generosity and devotion to the government, these States, Virginia and Georgia, ceded these immense sources of income and wealth; but they did it for certain specific purposes, to which I desire to ask the attention of the House. The act of the General Assembly of Virginia of 1783, authorizing the cession of her territory, required the following to be incorporated in her deed of cession:

That the lands within the territory so ceded to the United States, and not reserved for or appropriated to any of the before-mentioned purposes, or disposed of in bounties to the officers and soldiers of the American army, shall be considered as a common fund for the use and benefit of such of the United States as have become or shall become members of the Confederation, or F-deral Alliance, of the said States (Virginia inclusive), according to their usual respective proportions of the general charge and expenditure, and shall be faithfully and bona fide disposed of for that purpose and for no other use or purpose whatsoever.—Act Dec. 20, 1783.

Georgia in her deed of cession incorporated the following:

Thirdly. That all the lands ceded by this agreement to the United States shall, after satisfying the above-mentioned payment of \$1,250,000 to the State of Georgia and the grants recognized by the preceding conditions, be considered as a common fund for the use and benefit of the United States, Georgia included, and shall be faithfully disposed of for that use and purpose, and for no other use and surpose challenges. purpose whatever

Notwithstanding the plain requirements in these clauses respectively, that in the uses and benefits of this public domain for all the States, those eading it were to share equally (but this they have not done), large quantities of it have again and again been given by the General Government to States formed upon it for educational and in-

ternal improvement purposes.

The following statement of the disposition of much of this public domain will show how unjustly the older States, including those that have ceded to the government so much, have been discrimirated against. It is true that under the act of 1862 Georgia and Virginia received their quota of the land-scrip, under a general distribution according to population in which all the States shared on equal terms, but this did not remedy the great inequality and injustice charge by these features. justice shown by these figures.

Lands in the Territories not granted, but reserved.

In addition to this there has been allowed from the proceeds of lands sold by the government to the States wherein they lie, what is known as the three and five per cent. fund, making in some of these new States a large revenue for educational purposes, but no equivalent has been given to the older States where there is no public land, not even to those making liberal cessions to the general government, upon express stipulations requiring a faithful disposition of the same for the equal benefit of all the States. Many millions

of acres have been given to railroad companies.

Let me appeal to every gentleman's sense of justice and ask if the Federal Government has faithfully performed its trust in a just disposition of these lands for the equal benefit of all the States! When we were trying to have a day set apart for the consideration of this bill, some of the gentlemen from Illinois and perhaps Indiana objecting to it stated that their States already had magnificent school systems and that they were able to take care of their own illiterates. I doubt not this statement, nor would I detract one iota from the magnificence of their school systems. I congratulate these gentlemen. These systems are a part of the national pride; but I would remind these gentlemen that their magnificent school systems have been in a great measure founded and built up and are fostered by the generous donations of lands from the government that were generously ceded by some of the older States. ceded by some of the older States.

I am not going to enter further into a general discussion of this bill, but wish to say a word in regard to one question which has been raised here. Some of our friends on this side of the House particularly, or from the Southern States, have objected that under the provisions or from the Southern States, have objected that under the provisions of the third section they would not perhaps be allowed to receive the amount they are entitled to, owing to the peculiar wording of that section. In order to remove any doubt upon that question, I desire to offer an amendment, which I now ask the Clerk to read.

The SPEAKER pro tempore. Does the gentleman offer the amendment for information or to be acted upon the manual of the second of the

The Clerk read the proposed amendment, as follows:

In section 8, between the word "the" and the word "laws," in the sixth line, insert the following: "general municipal, county, district, and parish." \*
Also, between the words "expended" and "during," in the eighth line, insert the following: "under such general and local laws."

Mr. CLEMENTS. Now, Mr. Speaker, that section, after being amended, if that amendment should be adopted, will read as follows:

amended, it that amendment should be adopted, will read as follows:

SEC. 3. That before any State or Territory shall be entitled to receive its after of said fund it shall have provided by law for the free common-school education of all its children of school age, without distinction of color, for at least three months in each year, from the funds provided for schools under the general, municipal, county, district, and parish laws of said State or Territory; and in me case shall any State or Territory be allowed out of said fund a greater sum than such State or Territory shall have expended under such general and local laws during the previous year for the common-school education of the children of such State or Territory. Sc.

Mr. DUNN. Will the gentleman from Georgia allow me to make a suggestion there i Mr. CLEMENTS. Yes, sir.

Mr. DUNN. I suggest to the gentleman that he add to his amendment also to strike out the words "for at least three months in each year"; for this reason: The States must under this section have provided by law for the education of their children for at least three months in each year. They must have a law requiring a three-months' school. Now, you may in fact have had schools open for six months or nine months under the local law when you have no provision

of State law requiring even a three-months' school; and you may thereby be cut out, though you may have had a six-months' school in fact. West Virginia has no law requiring schools to be kept for three months or any other period. Virginia has none, and a number of other States have no law requiring three months or any length of time; while in fact they have had more than three months of school. But under that section, unless the words I have indicated are stricken out, they will be deprived of their share of this fund on that account, when in fact they do comply with the spirit of the law. I sak the when in fast they do comply with the spirit of the law. I ask the gentleman to make that addition to his amendment.

gentleman to make that addition to his amendment.

Mr. DUNNELL. I desire to ask the gentleman from Georgia a question: Whether the section, as he proposes to amend it, goes to the extent that the State shall not only by law provide for a school for three months at least, but does it go to the extent of saying that the school shall have been taught that length of time? There may be a law requiring a three-months' school and a tax levied, and yet no school be kept during that time.

Mr. DUNN. Let me read:

Before any State or Territory shall be entitled to receive its share of said fund it shall have provided by law for the free common-school education of all its children of school age, without distinction of color, for at least three months in each year. It must provide by law for that school for at least three months. It

It must provided under local regulations sufficiently for such a school.

Mr. CLEMENTS. I do not yield further. I desire to say in response to the gentleman from Minnesota [Mr. DUNNELL] that the purpose of the committee was to require each State to maintain public schools free to all children of school age, without distinction of race or color, for three months, at least, as a condition. The intention of the committee was to have it done as a matter of fact, and not simply theoretically as a matter of law. Of course this does not imply mixed schools. It is possible the language of the bill may not be strong enough to cover that. So far as I know, every member of the committee will be glad to accept an amendment which will make it sufficiently strong, so as to require that in fact public schools shall be maintained.

strong, so as to require that in fact public schools shall be maintained within these States for three months in each year for all children of

within these States for three months in each year for all children of school age.

This amendment can easily be framed at the proper time to remove the difficulty suggested by the gentleman from West Virginia [Mr. Kenna] and the gentleman from Arkansas [Mr. Dunn]. I do not think the third section ought to be entirely stricken out. The States can afford to do their part. It was the purpose of this section to require that, Schools for less than three months are not likely to accomplish much good.

Mr. BUCHARDSON of South Carolina. I would suggest to the

likely to accomplish much good.

Mr. RICHARDSON, of South Carolina. I would suggest to the gentleman that the words "by law" might be stricken out, and then the provision will be "shall have provided for the free common school education, &c., for at least three months in a year."

Mr. McMILLIN. Allow me to call attention to section 5 of the bill, which expressly provides as a condition precedent that a report shall be made to the Commissioner of Education concerning the condition of the other in the States, and the number of data settled.

dition of the schools in the States, and the number of days actually taught in each State during the year.

Mr. DUNN. Allow me a moment to explain. Suppose that we pass this bill as it now stands. Those States not having a law to

pass this bill as it now stands. Those States not having a law to the effect that schools shall be maintained for three morths in each year will be deprived of the benefit of this fund for at least one year. They may during that time change their laws and conform to the provisions of this bill, but there is no provision making compensation for their loss of this appropriation for that year.

Mr. CLEMENTS. That can all be obviated by so framing the amendment as not to require any law to maintain these public schools, but merely to require the State to furnish evidence that schools have been maintained in fact for three months of the year.

Mr. STOCKSLAGER. Will the gentleman allow me to ask him a

Mr. STOCKSLAGER. Will the gentleman allow me to ask him a question for information?

Mr. CLEMENTS. Certainty. Mr. STOCKSLAGER. This bill provides-

That before any State or Territory shall be entitled to receive its share of said fund it shall have provided by law for the free common-school education of all its children of school age, without distinction of color, for at least three mouths in each year, from the funds provided for schools under the laws of said State or Territory, &c.

That ordinarily includes children of the ages between 6 and 21?

Mr. REAGAN. It would include children of whatever age the law of the State may declare to be school age.

Mr. STOCKSLAGER. I desire to inquire if this bill would require that all the children between these ages shall be kept at school for three months in each year?

Mr. CLEMENTS. This bill simply provides that the States shall themselves provide the means of education for children of school age for three months in each year. It is not intended to require that all such children shall attend the schools for that period. It simply requires that the States shall maintain public schools for the term of three months in each year. It does not provide for compulsory attendance, nor do I think it would be wise to do so. I submit that it would not be right for the Federal Government to give this assistit would not be right for the Federal Government to give this assistance to a State which was not willing to take upon itself the burden of maintaining its public schools for three months in each year.

Mr. KENNA. Allow me to say to the gentleman that a subsequent provision in the same section limits the amount to be contributed to

a State by the Federal Government to the amount which the State itself may expend of its own funds. Now, if the amount to be contributed by the Federal Government to the State is to be measured by the amount expended by the State, then what difference will it make whether the schools are maintained in the State for three months, or any other period? I shall, at the proper time, if I get the opportunity, move to strike out the words "for at least three months in each year."

months in each year."

Mr. CLEMENTS. That provision simply means that no State shall receive any of this assistance unless it shall itself provide facilities for at least three months' schooling each year. If the State desires to maintain schools for a longer time, all well and good; this bill will not prohibit that. But it provides that the State shall not receive assistance from the Federal Government without being willing to maintain its schools for three months.

Mr. MACKEY. Allow me to suggest an amendment. It is to strike out the words "provided by law" and to insert in lieu thereof the words "made provision," so that it will read, "shall have made provision for the free common-school education," &c.

Mr. CLEMENTS. I have already suggested, in response to the gentleman from Minnesota [Mr. DUNNELL], that I had no doubt the committee would be perfectly willing to accept an amendment which would require that public schools, as the result of State law, shall be maintained for three months in each year in fact. That covers the whole question suggested; there is no difficulty about it.

The purpose of the committee is clear, the purpose of the bill is clear; and if it needs any amendment so as to more effectually carry out that purpose, there will be no objection on the part of any member of the committee or any true friend of the bill to such an amendment.

Let me now call attention to a memorial from the General Assembly

Let me now call attention to a memorial from the General Assembly

of Georgia illustrative of the deep interest felt in that State in this subject

Whereas, as a result of the late war, the colored people of the South were set free and made citizens; and

Whereas, in the State of Georgia they were very nearly equal in numbers to the whites, and at the time of their emancipation were entirely destitute of property, and in very large numbers have continued so up to this time; and

Whereas, the white people themselves were greatly reduced, many of them to a state of destitution very nearly as extreme as that of the colored people; and Whereas, the facts herein recited have rendered it impossible, for the time being, for this State to make adequate provision for the education of our youth; and

Whereas, the facts herein recited have rendered it impossible, for the time being, for this State to make adequate provision for the education of our youth; and
Whereas, wide-spread illiteracy, conjoined with universal suffrage, have put the institutions of the whole country in peril: Therefore.

But resolved by the General Assembly of Georgia. That we hall with pleasure the movement now being made in the Congress of the United States to raise a fund for distribution for a term of years among the States in aid of popular education, the distribution to be made on the basis of illiteracy.

Resolved, That the proposition to have this fund applied under State laws, and by the regularly constituted State authorities, to the support of common schools, normal schools, and other agencies for securing an adequate corps of well qualified common school teachers, meets our hearty approval.

Resolved, That our Senators and Representatives in Congress are hereby requested to use their best endeavors to secure the passage of an educational bill, which shall be liberal in its monetary provisions, and which shall be calculated against improper Federal interference in the educational affairs of the States.

Resolved, That as our now limited fund is applied to the education of all the children without discrimination as to race, so shall any fund which may be furnished by Congress be applied with equal impartiality.

Resolved, That is excellency, the governor, is hereby requested to have copies of these resolutions made out and forwarded to Washington at once, to be laid before both Houses of Congress as early as practicable after the commencement of the approaching session.

Approved December 13, 1882.

The following statistics, contained in the committee's report, show the illiteracy of the States and Territories:

Illiteracy in the United States-Census of 1880.

Let me here present the views of some of the fathers of the republic, as briefly expressed by them, as to the importance of popular education as a means of preserving our free institutions, and as promotive of our happiness and prosperity as a people. Mr. Madison said:

A popular government without popular information, or the means of acquiring it, is but a prologue to a farce or tragedy, or perhaps both. Knowledge will forever govern ignorance, and a people who mean to be their own governors must arm themselves with the power which knowledge gives.

Again this same statesman said :

The best service that can be rendered to a country, next to that of giving it liberty, is in diffusing the mental improvement essential to the preservation and enjoyment of the blessing.

Mr. Monroe, in his inaugural address, March 4, 1817, said:

Had the people of the United States been educated in different principles, had they been less intelligent, less independent, or less virtuous, can it be believed that we should have maintained the same steady and consistent career, or been bless with the same success? While, then, the constituent body retains its present sound and healthful state, all will be safe. It is only when the people become ignorant and corrupt, when they degenerate into a populace, that they become incapable of exercising sovereignty. Usurpation is an easy attainment, and a neurper soon found. The people themselves become the willing instruments of their own debasement and ruin. Let us look to the great caines, and endeavor to preserve it in full force. Let us, by all whee and Constitutional measures, promote intelligence among the people, as the best means of preserving our liberties.

Washington, in his farewell address, says:

Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened.

In conclusion, let me state that it is not designed by this bill to permanently establish a system of Federal aid to the States, but the object of the measure is to meet the pressing needs of the present emergency brought about by the war. This aid is needed for the education of the white as well as the colored people. It is needed to remove the existing dangers of the appalling illiteracy that exists in some of the States, with its present and threatened evils, not to those States alone, but to all the States of the Union. Let me again repeat that we ask it, not as beggars, but as an act of sheer justice and equity.

Rivers and Harbors.

SPEECH

OF

# HON. J. W. DWIGHT,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1883,

On the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. DWIGHT said:

Mr. Speaker: I am opposed to this bill in its present shape and with many items in it, which are for harbors and streams too insignificant and unimportant to warrant any attempt at their improvement by the General Government. The Secretary of War, in his recent response to a resolution of the House, fitly characterized many of these streams as apparently so small that "the results of substantial benefit to general commerce" to arise from their improvement "were so obscure and apparently insignificant" as to "vindicate a doubt" whether appropriations for them were in the interest of commerce.

Appropriations for the improvement of rivers and harbors are defensible only when they are national, not local, in the benefits they afford to commerce. When an improvement is national in its character, so that the aid it affords to commerce affects such large areas or numbers of people as to distinguish it from a mere local convenience, Congress not only has the power, but a wise public policy makes it its duty, to devote a part of the public revenues to carry it out. But the cost to be incurred and the benefit to be afforded should be carefully considered. The power to regulate commerce reposed by the Constitution in Congress carries the power to regulate navigation, to protect it, and for that purpose to remove obstructions, to keep it free from dangers, and to improve facilities for carrying it on, not only on our ocean coasts but in our inland

But it seems clear to me that appropriations should only be made for the improvement of rivers that are in the larger sense navigable. Unless the stream is of such importance as to be recognized as a highway of commerce it should be the policy of our Government to leave its regulation to the State. It has been the rule that the States could permit dams to be built, bridges to be constructed, piers, booming works, fish-ways, and other hinderances to a general navigation. It seems to me too plain for argument that streams too small and insignificant to be under the exclusive control of Congress are also too small to be subjects of improvement at the general expense. Why is it proper to put-money into these streams while the States are permitted to undo all that the use of the money can do to aid navigation? It has been held that a river entirely in a State and not navigable in fact, by reason of dams, was not within the purview of national control; that no State could grant the exclusive navigation of the river, at least as to its upper waters, to a private company, and that such grant did not conflict with the Constitution. (Veazie vs. Moor, 14 Howard, 568.

It follows from this decision that the States have such control over

It follows from this decision that the States have such control over the rivers which constitute the larger number in this bill provided for that they can render nugatory to commerce or to general public use the very streams into which this bill pours money. This is true of many of the streams liberally cared for in this bill. The States have authorized them to be obstructed, and money is lavished in this bill to clear out those obstructions; the States have granted booming privileges of an exclusive character, and the bill is auxiliary to such private companies which are granted the privilege of obstructing and of use of an exclusive nature.

When we consider what in the light of judicial decision is a navigable stream worthy the aid of Congress, it is manifest that the small water ways which are hardly worthy of mention in our geographies and find record only in river and harbor bills are not among them. Chief-Justice Shaw well stated common sense as well as law when he said:

It is not every small creek in which a fishing-skiff or gunning-cance can be made to float at high water which is deemed navigable, but in order to give it the character of a navigable stream it must be generally or commonly useful to some purpose of trade or agriculture.

A later case decided in the Supreme Court of the United States stated the rule in determining what are navigable streams. Justice Field lays down the law thus:

Those rivers must be regarded as public navigable rivers in law which are navigable in fact. They are navigable in fact when they are used or are susceptible of being used in their ordinary condition as highways for commerce over which trade and travel are or may be conducted in the customary modes of trade and travel on water. And they constitute navigable waters of the United States within the meaning of the acts of Congress, in contradistinction to the navigable waters of the States, where they form in their ordinary condition by themselves or by uniting with other waters a continued highway over which commerce for may be carried on with other States or foreign countries in the customary modes in which such commerce is conducted by water. (The Daniel Ball, 10 Wallace, 557.)

Apply this test and some of the streams of which this bill takes care are hardly deserving the name of navigable rivers, much less of large appropriations.

The Secretary of War in a recent communication to this House (Executive Document No. 34, second session Forty-seventh Congress) has let in a flood of light upon this subject. A number of streams and harbors which figured prominently in the appropriations of last session have disappeared from this. But there are several, some two dozen in all, which I shall here mention, which the Secretary of War and the engineers regard as obscure and insignificant and which the Committee on Commerce have reported in this bill for further appropriations. They are the following:

#### WAREHAM HARBOR, MASSACHUSETTS.

The Secretary declares it to be the object of this improvement to afford a better approach to the town of Wareham, the commerce of which seems to be dependent on a few sailing vessels of a tonnage aggregating about 4,000 tons. The sum of \$6,000 was voted last session, and \$4,000 more by this bill.

#### HURON HARBOR, OHIO.

The engineers report that the records of the custom-house show that the amount of commerce to be benefited is very small, but as a new railroad is now being built, with its terminus at this harbor, it is expected that the commerce will rapidly increase. This harbor has had \$6,000 prior to 1882, wants \$22,000, and was given \$2,500 last session and \$4,000 by this bill. Its local character and object are too manifest for discussion. It is not to aid commerce, but to put out a lure to call it where it would not otherwise go.

#### PORT CLINTON, OHIO,

This harbor has a commerce that yielded in 1881 the sum of \$23.25 revenue to the Government. Thereupon the Government, grateful for this contribution, gave \$6,000 at the last session and \$4,000 are put into the pending bill. To nourish this commerce of twenty-eight small vessels clearing this port in one year, \$40,000 had been used prior to 1882 and \$45,000 are needed. Congress deems this majestic commerce of twenty-eight vessels of such vast interest to the nation that \$214 per vessel per year is not too much to pay to encourage it. And how unselfishly benign is the government which can cheerfully pay out \$6,000 and \$4,000 per year to aid a commerce that returns a revenue of \$23.25. Let it not be said that republics are ungrateful.

#### WAUKEGAN, ILLINOIS.

"Very little commerce is carried on by water here." There are now no harbor facilities, and the sums put in here are spent to create a harbor, so that there may a commerce be won from rail to water transportation. In this work \$20,000 were voted last session, and \$15,000 goes by this bill to develop a business that does not now exist owing to the absence of a harbor. There are four places on the shores of our great lakes which can not claim to have a harbor built for them out of whole cloth, as it were, for precisely the same reason. Give them a good harbor and possibly a commerce will be developed thereby. Fifteen thousand seven hundred and forty-three dollars and eighty-two cents have been spent here prior to the appropriations of 1882, and \$45,000 more are needed.

#### PORT WASHINGTON, WISCONSIN,

The Secretary tells us that this port has as small a commerce as Two Rivers. The benefits to be derived from expenditures here have only a local bearing. It has had, prior to 1882, \$134,768.25, got at the last session \$15,000, and wants \$27,000 more. To get at the vast immensity of its commerce we must refer to Two Rivers.

### TWO RIVERS, WISCONSIN

Of this place the engineer says: "Its harbor is of no importance to the commerce of the lakes, its value being entirely local. The commercial statistics show a great falling off" in the tonnage entering this harbor. Since 1879 steamers have not run to or called at this place." The commerce here and at Port Washington seem to dwindle under the nourishment of appropriations, and if \$174,982.64 given and expended prior to 1882, \$15,000 per last bill, and \$3,000 by this bill, can only serve to drive steamers away, how much will it require to drive off sailing vessels and fishing smacks?

#### CHEESEQUAKE'S CREEK.

The last session gave to this creek a prominence which neither geography nor commercial statistics could give it. Prior to last session it had had \$25,000 and \$15,000 was voted last summer; \$7,000 more are given by this bill. It is estimated that \$13,279 more will make the Cheesequake's one of the navigable highways of the country. At present it is about one foot deep at mean stages of low water for about three-fourths of its improvable length. The course of the creek is very crooked, but when it is straightened and a foot depth increased to four feet there will be afforded a navigable way for some 15,000 or 20,000 tons of clay and molding sand, and possibly a resulting increase of trade. But when we reflect how many millions of cubic feet of dredging must be done before this sand and clay can be floated sound economy would dictate that the Government could save money by hauling this clay and sand by land. This stream has had much publicity. It is one of those glaring cases which illustrate the vicious system of loading down a bill

with items for streams too ridiculously small to even approximate the name of navigable stream.

#### MATTAWAN CREEK, NEW JERSEY

Six thousand dollars last year, \$4,000 by this bill, making in all for Mattawan \$25,000, with an estimate that \$12,120 or more will be needed. "The present commerce is small." The object of the improvement is to increase local developments. The engineer says: "By the proposed enlargement of the present way and increased facility for shipping goods it is computed that there would be a growth in the commerce of from one-third to one-half," its present small dimensions. It is thought that "manufacturers would locate there" if the navigation were improved.

#### SOUTH RIVER, NEW JERSEY,

has had \$56,000, of which \$10,000 was given last summer, and \$10,000 is given by this bill. It will cost in all \$200,000 to help this little local trade in brick and molding-sand.

#### WOODBRIDGE CREEK, NEW JERSEY

got \$5,000 at last session, and \$1,000 more by this bill, in a little stream floating clay and sand. It has had \$19,000 and wants \$4,000 more to complete the improvements.

#### BRETON BAY, LEONARDTOWN, MARYLAND,

with a population of 1,200 souls, a tributary country of eighteen square miles. This town got for its harbor \$5,000 in 1882 to add to the \$15,000 previously appropriated, and is continued in the pending bill for \$3,000 more. The statistics of its trade for the year prior to last engineer's report show that the entire trade of this town, in all kinds of merchandise, amounted to only \$176,100. (See Engineer's Report for 1882, part 1, page 1011). Seven thousand dollars more are needed to complete the work on this little harbor.

#### OCONEE RIVER, GEORGIA.

Five thousand dollars were given in the act of 1882, and \$3,000 more are proposed in this bill to help out the little trade of the town of Dublin and vicinity. Fifteen thousand five hundred dollars have been given before, and the estimates to finish it are \$42,000 more.

#### CHOCTAWHATCHEE RIVER.

The Choctawhatchee River, in Florida and Alabama, received \$20,000 last year, and is given \$10,000 in this bill. The Secretary says that "there are from 1,500 to 2,000 bales of cotton sold at Newton, which would probably represent the local product seeking transportation down the Choctawhatchee River were it improved." The appropriations to keep a river of that kind in good order must of necessity be continuing, and if they average \$15,000 per year for the future, as by this bill and the last, it will cost the Government only \$10 a bale to furnish navigation for the cotton supply of Newton. Prior to the act of last session \$36,571.07 had been expended and \$16,400 are needed. The engineer says the river is not susceptible of a permanent and complete improvement owing to the continued washing of the banks.

#### ESCAMBIA AND CONECUR RIVERS.

Escambia and Conecuh Rivers, in Florida and Alabama, got \$1,200 last year and \$2,000 by this bill. The commerce to be benefited by these appropriations consists of the floating of about 5,000,000 feet of lumber yearly. The Government pays fully 10 per cent. of the value of this product in two years for the purpose of aiding it to get into the commerce of the country. There are trout brooks in the States of Wisconsin, Michigan, and Maine which float a larger crop of logs by means of flooding dams, which the loggers build at their own cost.

#### POURCHE LE FEVRE RIVER IN ARKANSAS.

We gave \$4,000 last year, and \$3,000 are put in this bill for this stream. The Secretary says: "Official reports state that this stream seems to be little more than a mountain torrent, and that it is not susceptible of an improvement admitting of a communication for stages approximating low water. There is not sufficient water in the river to justify any attempt to improve its navigability at the low stages." It will need an unusual appropriation and a freshet to utilize this mountain torrent.

# FOR IMPROVING THE MOUTH OF THE COQUILLE RIVER, OREGON.

Seven thousand dollars for the Coquille River; \$10,000 last year. The Secretary tells us that "the present commerce of this river appears to be insignificant. In the year 1881 it is reported that there were no exports or imports. Two small coasting schooners engage in the trade of that harbor. Heretofore the surplus produce of the valley has found a market through the neighboring harbor of Coos Bay. It is believed that if an entrance to the river can be made in the channel over the bar the valley of the Coquille will develop a valuable trade with southern ports, which will invite settlers from other parts of the country." The residents of Coquille Valley no doubt feel that it is the duty of the people of the United States to assist their local development by large appropriation. They reason that if they had a harbor they might have a trade and some immigration. Twenty thousand dollars have been appropriated to date, and \$144,200 are needed and \$60,000 asked for this year.

#### SACRAMENTO RIVER, CALIFORNIA.

For the improvement of this river and the protection of its channel we gave a quarter of a million last year, and \$60,000 more are given by this bill. This, as the Secretary of War reports, is in part used in

preventing the injury caused by the downflow of about 38,000,000 by miners, to the destruction of the navigability of the stream and the injury of the agricultural lands along shore. In other words, the miners lawlessly so use the stream as to injure others, in violation of well-settled legal principles, and the Government steps in with a large annual appropriation to permit the cause of and prevent the mischief. use of the river has been declared illegal by the courts of California, and it has been held that the State can not tax its citizens to remedy the evils caused by the use of this stream. Hence to shoulder the bur-den upon the United States is in an eminent degree "practical states-The Secretary says:

manship." The Secretary says:

The matter of the improvement and protection of the channels of the Sacramento and Feather Rivers in California requires a special remark. Previous appropriations for the improvement of the Sacramento River have been mostly expended in dredging the channel, and of the present appropriation \$40,000 have been allotted for the continuation of this particular kind of work. The project submitted to me for the expenditure of the remaining part of the appropriation is for the erection of restraining barriers upon the Yuba, American, and Bear Rivers, tributaries of the Sacramento and Feather, to hold back the flow of détritus caused by hydraulie mining. In submitting the project the Chief of Engineers makes a slightly qualified recommendation, and I have therefore been led to examine with some care the papers in this Department relating to the project, which is the result of careful consideration by the Engineer Bureau. The problem seems to be to prevent the injury caused by the downflow of about 39,000,000 cubic yards of détritus annually, caused by the artificial washing away of gold-bearing gravel banks, in doing which \$70,000,000 cubic yards of water are annually used. The records indicate that this downflow is injurious not only to the navigable streams below, but enormously destructive to agricultural lands, both directly and by raising the flood-levels of the rivers, and that the owners of these lands are equally with if not more than any other class of citizens interested in preventive measures.

The streams and the mining works are within the State of California, and it seems that in at least one instance a mining enterprise has been enjoined by a local court from prosecuting its work in such way as to cause the injuries complained of, but I have not learned that it has been decided by the highest court whether the injury to navigation and agricultural interests can be prevented by judicial action.

The act of the Legislature of California, passed in 1880, the purpose of which

plained of, but I have not learned that it has been decided by the highest court whether the injury to navigation and agricultural interests can be prevented by judicial action.

The act of the Legislature of California, passed in 1880, the purpose of which was the raising of funds by taxation for certain objects, described as "the control of débris from mining and other operations, the improvement and rectification of river channels, and the erection of embankments or dikes necessary for the protection of lands, towns, or cities from inundation," was, in the next year, declared unconstitutional by the supreme court of the State upon several agrounds. One of them, as stated in the leading opinion, was—

"That the storage of débris is, in its nature, a private enterprise, in which the few only are interested. \* \* \* To promote a public purpose by a tax levy upon the property within the State is within the power of the Legislature, but the Legislature has no power to impose taxes for the benefit of individuals connected with a private enterprise, even though the private enterprise might benefit the local public in a remote or collateral way."

Consequently the efforts of the State authorities of California to impound the détritus from hydraulie mining enterprises were brought to an end.

The work projected would involve the expenditure, within the next eight years, of nearly a million and a half of dollars, with doubtful results; and, as the exact character of the work to be done is not indicated in the act, in my hesitation as to approving the project, I have thought proper to refer to the debate in the House upon the passage of the particular clause in question. I have gathered from remarks made in the debate, which seemed to receive the unqualified assent of the chairman of the Committee on Commerce reporting the bill, that it was not the intention to commit the Government to the policy of providing reservoirs for the storage of détritus from future mining operations, it being thought that they were but a parti

It will doubtless be insisted that this appropriation is limited only to the improvement and protection of the navigable channel; but it will not, I think, be denied that the protection of the channel is from the downflow of this détritus deposited in the navigable channel. The Chief Engineer in his report made, since the last appropriation, and the expression of views of the committee that were made in debate indicate that the impounding of this détritus is essential to the protection of the navigable channel and that a portion of this outlay will be expended for such impounding; and in the remarks of the honorable gentlemen from California [Mr. Page and Mr. Berry], page 5046, Record, Forty-seventh Congress, first session, it was urged that hydraulic mining was published the write of this right. working the ruin of this river.

Mr. Speaker, such are some of the items included in this bill. They vere especially reported upon by the Secretary of War, and his report has satisfied the country that many of the appropriations made at last session ought never to have been made. The same reasons make it equally clear that they ought not to be continued in this bill.

To further illustrate the erroneous theory of such river and harbor appropriations I desire to make a few remarks more particularly perti-

nent to the act passed at last session I am aware that it is urged by the friends of the river and harbor bill passed at the last session that although many of its items were for appropriations of small characteristics. priations on small, obscure streams, whose commerce, if any they had, either prospectively or in fact was small, yet that as the commerce of the country is the aggregate of the commerce of all its localities, therefore all harbors and all streams, no matter how inconsiderable in size or capacity for navigable use, are proper subjects for improvement at the public expense, because all local commerce is part of the general commerce of the country.
